A year spent living with the Inuit (Eskimo) on Baffin Island, Canada, in the 1880s, and lifelong research with Kwakiutl and other native peoples in the Pacific Northwest, gave Boas firsthand experience of the sophisticated knowledge and morality of so-called “primitive” peoples. Boas and his students rejected evolutionary hierarchies and were skeptical about the possibility of identifying universal laws of societal development. Instead, they emphasized intensive study of particular groups through ethnographic research and historical reconstruction. Convinced that neither race nor environment explained human differences, they developed the concept of “culture” to explain why people have different beliefs and practices. Culture is the shared knowledge, habits, and patterns of behavior that individuals learn as members of a social group. It is not static tradition; rather, culture is fluid and dynamic, constantly changing and open to innovation.

Early anthropological work on Native American religions was mostly “salvage” ethnography, aimed at documenting traditions that were believed doomed to die out under the oppressive conditions of poverty and reservation life. One of Boas’s first, most influential students, Alfred Kroeber, became a leading scholar of native Californian religions and cultures. Like other early Boasians, Kroeber concentrated on recording traditions, myths, and stories and reconstructing how religious traits spread and changed as they moved from group to group. Other analyses of the origins and diffusion of religious ideas and ceremonial complexes included Robert Lowie’s study of Crow religion, Leslie Spier’s writings on the Plains Indians’ Sun Dance, Ruth Benedict’s analysis of the guardian spirit concept in Native North America, Weston La Barre’s study of the

Peyote Cult, and Cora DuBois’s work on the Ghost Dance movement of 1870.

Boas welcomed talented women into his circle of students. American cultural anthropology historically has included more prominent female scholars than other social sciences. Women’s distinct perspectives and approaches to ethnography have long been part of the anthropological conversation about religion in North America.

Ella Deloria (1888–1971), a Yankton Dakota Sioux who studied with Boas in the 1910s, was one of the first bilingual, bicultural anthropologists. Between 1927 and 1948, Deloria documented Lakota Sioux myths and sacred stories, focusing on the Sun Dance and other religious ceremonies.

Zora Neale Hurston (1891–1960) was an African American ethnographer, folklorist, and novelist who studied with Boas in the 1920s. Hurston researched religion in the southern United States and the Caribbean. She was especially interested in identifying West African and Caribbean elements in African American church traditions, such as similarities between ecstatic Christian worship and spirit possession in the Haitian religion, vodou (voodoo). Hurston’s writings presaged trends in late-twentieth-century ethnographic writing; she often brought herself into the narrative and carried on dialogs with the stories she recorded, creating texts composed of multiple voices and perspectives.

By the 1930s, the evident resilience of Native American communities, combined with new theoretical perspectives, reoriented American anthropology to more dynamic views of religion in society. Boasian analyses highlighted integration and internal consistency among cultural elements, especially religion’s links to language, emotion, aesthetics, morality, and social relations. In her studies of religion, myths, and dreams among the Zuni and other Pueblo peoples, Ruth Benedict (1887–1948) highlighted vision, imagination, beliefs, and rituals as key aspects of religion that she considered to be shaped by individuals’ need for a sense of security and their desires for transformation of the world. This concern with individual psychology, and recognition of religion as a context for envisioning social change, are part of the Boasian legacy in American anthropology’s approach to religion.

Psychological analyses emerged as a major mid-twentieth-century approach. Building on Benedict’s focus on the individual in society, the field of culture-and-personality studies examined how culture shapes thought and emotion. Children’s socialization and patterns in dreams, myths, and

individual biographies were central concerns. Culture-and-personality studies in North America included Clyde Kluckhohn's analyses of Navajo witchcraft beliefs, studies of the Hopi by Dorothy Eggan and Laura Thompson, and Esther Goldfrank's work on Hopi and Zuni socialization. Freudian psychology provided the framework for Weston LaBarre's analysis of the Ghost Dance and George Devereux's work on Mohave shamanism and ritual. Other writers analyzed psychological themes in the life stories of charismatic Native American religious leaders.

An emphasis on society and its institutions, rather than culture and the individual, oriented the approaches called *functionalism* and *structural-functionalism*, which dominated British social anthropology from the 1920s onward and were influential in North America as well. The ideas of French sociologist Emile Durkheim (1858–1917) were a major influence in functionalism; Durkheim is in fact a foundational influence in most anthropological and sociological theories of religion. Durkheim emphasized how religion reinforces social arrangements, authority, and collective norms. He saw rituals directed toward the sacred as activities that promote social solidarity and cohesion by giving people an experience of unity in a moral community.

Early-twentieth-century functionalism aimed to show how religion (especially “exotic” practices like magic, witchcraft, and rituals that look irrational to outsiders) fulfills useful purposes that benefit individuals or the group as a whole. Functionalist explanations (which continue to exert a pull in many contemporary analyses) can emphasize different purposes. Some explain religion in terms of its material effects (distributing resources or limiting population growth). Others emphasize religion's psychological effects (reducing anxiety, providing cognitively reassuring explanations) or its social effects (reinforcing solidarity, promoting equity and harmony, or, conversely, legitimating an inequitable social order). Mid-twentieth-century functionalism tended to demonstrate how particular religious practices helped to perpetuate existing social institutions and preserve the status quo.

From the 1930s onward, functionalism drew Boasian anthropologists toward seeing religion as a cultural institution that actively promotes cooperation and solidarity. In studies from the southwestern United States, Elsie Clews Parson analyzed how religion created a sense of common identity that helped unite various Pueblo communities with high rates of intermarriage. Ruth Murray

Underhill showed the role of ceremonials in promoting shared Native American regional identities. The power of religious movements to forge new forms of cultural cohesion and individual and collective revitalization was a theme in functionalist studies of Native American communities from the 1960s onward. These included Anthony Wallace's analysis of the Ghost Dance movement, Joseph Jorgensen's study of the Sun Dance, and Wolfgang Jilek's work on the role of guardian spirit rituals in promoting mental health among Coast Salish in British Columbia. The Native American Church and its Peyote Way rituals drew attention from a number of scholars, including Paul Radin, David Aberle, George Spindler, Nancy Lurie, James Slotkin, Omer Stewart, and others.

Separatist religions, and religious groups with distinct ethnic backgrounds, have been long-standing interests in U.S. and Canadian anthropology. Numerous ethnographers have examined beliefs and practices as well as issues of identity and group dynamics among the Amish, Hutterites, Mennonites, Orthodox Jews, utopian communes, and experimental spiritual communities.

Contemporary Theoretical Orientations

In the 1960s, political and cultural developments—including anticolonial independence movements in Africa and elsewhere, the U.S. civil rights movement, and cultural and political ferment on many fronts—intersected with academic dissatisfaction with functionalist approaches that treated culture as static and harmonious. Renewed attention to historical change and recognition of conflict, dissent, and protest as normal parts of social life called for more dynamic approaches.

Ritual and symbolic studies in the United States blossomed through the work of British anthropologist Victor Turner (1920–1983), who built on models proposed by Durkheim, Arnold Van Gennep, Mary Douglas, and others. Turner saw ritual as a social process with a dramatic structure that could transform participants' subjective experiences. In ritual, “structural” aspects of society (including hierarchy, division, and inequality) come into play in contrast to antistructural elements (including egalitarianism, community, and transgression). In a ritual's transitional phase, participants are in a “liminal” state, temporarily removed from their former identity and role, “betwixt and between” statuses. Liminality is conducive to *communitas*, an intense, transcendent experience of equality and unity. Turner came to believe that *communitas* and structure have

a neurophysiological basis corresponding to the right and left hemispheres of the brain.

Turner identified liminality and *communitas* in contemporary American contexts as diverse as the Franciscan order of Catholic friars, late-1960s “hippie” culture, and Catholic Church rituals. He coined the term *liminoid* to describe moments of *communitas* in secular activities such as sports events, rock concerts, carnival, and cultural performances such as theatre or art. Turner suggested that in complex, industrial societies, such experiences of transcendence often occur spontaneously, in activities that are not overtly religious. This idea exemplifies the anthropological tendency to see the sacred not as fixed and eternal but as a kind of consciousness and experience that can appear in various contexts. Anthropologists are attuned to recognize quasi-spiritual dimensions in secular practices such as “rave” dance parties, yoga, or the home birth movement. Turner’s recognition that rituals are not just repetitions of prescribed performances, but can effect personal transformation and social change, contributed to a shift toward seeing rituals and symbols as resources that people draw upon and modify to cope with life stresses, express protest, and forge alternative subjectivities and social dynamics.

In the 1970s, interpretive anthropology and political economy emerged as influential orientations. Political economy takes inspiration from Karl Marx and focuses on illuminating structures of power and inequality and their consequences. Interpretive approaches build on Max Weber’s ideas and emphasize issues of individual meaning.

American anthropologist Clifford Geertz (1926–2006) was a major influence on interpretive approaches to religion, which explore how people make sense of their world and how this meaning-making shapes their emotional orientations and creates a framework to guide their actions. Geertz was influenced by Weber’s ideas about how religious ideas and the psychological, emotional, and ethical orientations they promote correlate with particular economic and political systems. Geertz advocated a semantic approach that treats a religion as a cultural system, an organized set of inter-related meanings and symbols, beliefs, and practices that can be “read” like a text.

In Geertzian approaches, worldview and ethos are key elements that reinforce one another. A worldview is a set of beliefs that explain fundamental realities, a “model of” how the world works. An ethos is a “model for” behavior, a set of ideas that tell people how to act. Religious symbols fuse worldview and ethos into a congruent experience of reality.

Religion lends authority and emotional weight to a cultural interpretation of the world. The interpretive anthropologist’s job is to understand a cultural system from the point of view of people within it, to grasp “the native’s point of view.” Interpretive accounts examine what people say about what they do and think and how they use ideas and symbols. Analysis is not limited to what people say but extends to identifying unconscious meanings and patterns. Interpretive ethnography aims to understand how people use religious ideas and symbols to orient and legitimate their actions.

Where earlier generations saw belief as the dominant factor in religion, contemporary anthropology tends to emphasize praxis, the process by which ideas are translated into actions. *Practice theory* is a general term for various approaches concerned with identifying connections among systems of meaning, the habits and actions of daily life, and larger structures of power and processes of social change. French sociologists Pierre Bourdieu and Michel Foucault, British sociologist Anthony Giddens, and American anthropologists Marshall Sahlins and James Scott are major influences in practice theory.

In the 1980s, the body emerged as a focal theme in the humanities and social sciences. From Mary Douglas, sociologist Erving Goffman, Bourdieu, Foucault, and other theorists came models calling attention to the patterns and politics of categorizing, controlling, and channeling human bodies and bodily experiences. Phenomenological analyses aim to describe individuals’ lived experiences, with particular attention to nonlinguistic, nonsemantic dimensions, including sensory, aesthetic, and performative aspects of spirituality, ritual, and healing. Music; rhythm; artworks and altars; dramatic performances; and complexes of sights, sounds, smells, tastes, and tactile sensations are integral to the feel and psychoemotional impacts of religiosity and spirituality.

Ethnographies in North America direct attention to issues such as the physical arrangement of sacred spaces; ideas about purity and impurity; the postures and gestures of prayer, meditation, and worship; practices of meditation, fasting, feasting, song, and celebration; and the roles of gendered, sexual, racialized bodies in religious discourses. Embodied experience and cultural performances often resonate with and reinforce messages conveyed in the language and rhetoric of religious texts and rituals. Thomas Csordas’s work on ritual healing among Navajos and Charismatic Catholics exemplifies a phenomenological analysis at the intersection of religion, psychology, and medicine.

Spiritual healing is a major topic. Anthropology distinguishes between curing (focused on eradicating disease) and healing, which goes beyond physical health to include psychological and social well-being. The approach called *critical medical anthropology* emphasizes how individual experiences of bodily and emotional suffering are linked to political-economic structures of inequality. The concepts of structural violence and social suffering recognize that societal forces such as racism and inequalities of class, ethnicity, gender, and sexual orientation inflict pain and trauma that afflict not only bodies but also mind and spirit.

Where earlier approaches saw cultures as systems that people are socialized into and focused on analyzing how systems work, contemporary anthropology has shifted to emphasize more dynamic analyses of processes and discourses. Individuals (influenced by their gender, ethnicity, and class identities and other social locations) are recognized as active agents who shape and use knowledge and culture, including the resources of religion and spirituality.

Epistemological and Methodological Challenges

For North American ethnographers, studying people and issues “close to home” has advantages, but it also poses special challenges. Working in one’s own society reduces many difficulties of working in foreign countries; when researchers and those they study share a common language and certain cultural understandings, there is less culture shock (the discomfort of encountering unfamiliar practices) and fewer communication barriers. Ethnographers often focus on topics and settings with which they have some familiarity, and their initial contacts often come through personal networks. Familiarity can be a liability, however, if it leads a researcher to fail to inquire deeply into the reasons behind what people say and do, because he or she assumes the answer is obvious.

When ethnographers work in foreign societies, they struggle against the limitations of being outsiders, trying to get as close as possible to groups of which they are not members. For those who work in North America, the problem may be the opposite: not to simply participate as a member of the group but to strive for more distanced, objective perspectives.

Insider/outsider boundaries are often unclear. Much debate and discussion has examined issues of objectivity and subjectivity, power relations in research and writing, and ethnographers’ responsibilities to those they study. The 1970s

brought waves of critical self-reflection in anthropology, with streams of critique converging from several directions.

Feminist anthropology challenged scholarship that ignored or marginalized women’s distinctive concerns and forms of religious identity, experience, rituals, and agency and called for reexamining taken-for-granted concepts and analytic categories. Attention to gender (which later expanded to emphasize sexuality and sexual orientation) was invigorated by works by Margaret Mead, Simone de Beauvoir, Michelle Rosaldo, Louise Lamphere, Sherry Ortner, Marilyn Strathern, Nancy Scheper-Hughes, Judith Butler, and others that heightened awareness of how one’s background (religious, ethnic, class, gender/sexuality) can create blind spots and biases in scholarship. Such blind spots may be especially common regarding aspects of religious life that take place in private, within households (“domestic religion”) and other nonpublic, noninstitutional contexts.

Postcolonial scholarship criticized anthropological representations of marginalized groups. In 1969, scholar-activist Vine Deloria Jr. (1933–2005), who was Ella Deloria’s nephew, blasted anthropologists and their writings. Deloria denounced unequal power relations in the academic politics of research and writing about Native Americans and raised pointed questions about who has the right to speak for whom. These concerns are especially relevant in regard to spirituality and sacred cultural knowledge. These criticisms, and a growing consensus that indigenous people should have more control over representations of their own cultures, contributed to a shift away from the former focus on Native American studies in the anthropology of religion. Nonetheless, Native American intellectuals and activists continue to be prime interlocutors in anthropology’s continuing struggles to come to terms with its roles and responsibilities within and beyond the academy.

In the 1980s, epistemological concerns coalesced around issues of how ethnographic knowledge is produced, evaluated, and presented. Influential critiques by anthropologists George Marcus, James Clifford, Michael M. J. Fischer, and others examined how academic politics and theoretical and personal orientations affect the selection of research topics and methods, the conduct of fieldwork, interpretation of data, and styles of presentation in ethnographic writing. In response to these debates, anthropological ethics evolved to insist on an honest accounting of the research process, even when this entails uncomfortable self-revelations. For example, when Vincent Crapanzano, a leading contributor to

critiques of ethnographic writing, studied wealthy fundamentalist Christians in Los Angeles, he wrote about his personal struggles to understand and empathize with their perspectives.

Ethnographers increasingly acknowledge the complexity of their relations with people they study and the fluid boundaries that emerge among the roles of scientific observer, friend, and advocate. Research “subjects” often become teachers, mentors, and intellectual partners. Especially in North American settings, research “subjects” often read and respond to the scholarly work. This feedback can become part of the research process. Increasingly, ethnography is conceived not as a one-way act of studying “others” but as more of a process of collaboration based in mutual dialog, questioning, and learning.

Ethnographic writing involves translating other people’s worldviews into terms that readers can understand. Especially when dealing with subjective experiences of emotion, spirituality, and the sacred, academic language may be a poor fit. Writers of ethnographies have experimented with various techniques to include multiple voices and perspectives and convey more of the “feel” of events by encompassing other genres and techniques, including self-reflexive personal narratives and essays, dialogues, poetry, and other people’s eyewitness accounts (testimonios).

Earlier assumptions that field research can be an objective science that produces firm, noncontingent truths have given way to recognition that all knowledge, including scientific knowledge, is to some degree interpreted and constructed. Acknowledging the contingency of interpretation does not, as some critics have alleged, lead to moral relativism or purely subjective representations. Some interpretations are better than others. Good ethnography is based on systematic study, in-depth knowledge, expertise in local languages, comparative perspectives, and clear theoretical frameworks. James Spickard argues that although completely objective truth is impossible to attain, it remains a “regulative ideal” that pulls ethnography toward systematic methodology and critical, self-questioning awareness.

In their professional capacities, anthropologists try to avoid passing judgment on the truth, rationality, or value of the beliefs and practices they study. Instead, they try to understand how and why these make sense to the people involved. Cultural relativism is a methodological principle that requires researchers to take account of how their own biases and circumstances may influence or impair understanding. Relativism requires temporarily suspending

judgment and moral evaluation long enough to understand other people’s perspectives.

Cultural relativism is a method to attain better data and clearer understandings. It is often confused with moral relativism, which is the belief that all cultural practices must be considered equally good and valid. Anthropology affirms the value of cultural relativism as a research principle but rejects moral relativism. Anthropologists recognize that some cultural practices and political, economic, and social arrangements are harmful and should change.

When ethnographers develop expertise on an issue, they often are drawn into advocacy or activism, such as writing reports or presenting testimony to explain a group’s beliefs, practices, or situation to policy makers or the public. Applied anthropology and applied ethnography are subdisciplines that use ethnographic skills to address social problems and shape policy. Ethnographers increasingly are challenged to direct their research in ways that respond to the needs and concerns of the communities they study. “Engaged ethnography” is an emerging approach that sees ethnography as a tool for political activism in partnership with communities and social movements. The tension between activism and the “regulative ideal” of empirical research is a thorny issue.

Contemporary Ethnography of North American Religions

A classic work that encapsulated trends in interpretive ethnography and innovations in ethnographic writing was Barbara Myerhoff’s *Number Our Days: Culture and Community Among Elderly Jews in an American Ghetto* (1978). Myerhoff studied a group of Eastern European American Jews in Venice, California, most of whom were Holocaust survivors. Drawing on Turner’s ritual models, she showed how they coped with poverty, frailty, loneliness, and neglect by using stories, memories, rituals, symbols, and music to create community and fill life with meaning and celebration. Myerhoff used the concept of “domestic religion” to highlight how homes became spaces sanctified with meaning through rituals, devotions, and storytelling. Woven through the text are reflections on her own religious roots, her role as anthropologist, and her future identity as an elderly Jewish lady.

Life histories are another genre in interpretive ethnography. Instead of studying groups, life histories illuminate a religious system by examining an individual’s biography, knowledge, and practices. Karen McCarthy Brown’s *Mama Lola: A Vodou Priestess in Brooklyn* (1991) combined the life story of a charismatic Haitian American adept in the

African-based religion vodou and experimental literary techniques, including fictional stories and accounts of Brown's own initiation into vodou. Consistent with the call for transparency about the circumstances and effects of research, a later edition (in 2001) recounted how the book's publication changed Mama Lola's life.

With its commitment to portraying real individuals and events as accurately as possible, ethnography tends to reveal the "messier," more nuanced aspects of the spiritual lives of local communities. It often reveals gaps between doctrine and practice, tensions between competing values, and the creativity and flexibility with which people construct religious identities. For example, James L. Peacock and Ruel W. Tyson studied Primitive Baptist congregations in the Appalachian region of North Carolina where Max Weber observed American fundamentalist Protestantism in 1904. Their study highlighted contrasts between theology and practice. In a Calvinist theology that idealizes fellowship and dismisses the efficacy of ritual, congregations devoted elaborate attention to performing rituals and had long histories of internal conflict and schism. In the kind of recursive, mutually questioning process that is the heart of effective ethnography, church leaders challenged the ethnographers intellectually, forcing them to rethink their assumptions about issues such as the meaning of ritual and Weber's definition of charisma.

Ethnographic findings often contradict stereotypes and taken-for-granted assumptions. For example, Janet Benion's research with wives in polygamous (specifically, polygynous) marriages in a rigidly patriarchal Mormon sect found that women experienced their marriages as paths to upward mobility and personal autonomy. Susan Harding's work with fundamentalist Christians in the Virginia congregation of the influential preacher Jerry Falwell found that, in contrast to public images of doctrinal certainty and monolithic political positions on the religious right, lay believers entertained personal doubts about many issues. Melinda Bollar Wagner's study of conservative Christian schools revealed that despite an ideal and rhetoric of separation from American popular culture, there was a great deal of accommodation with secular society and many "gray" areas between religious and nonreligious education. Several studies in sociologists Penny Becker and Nancy Eiesland's *Contemporary American Religion: An Ethnographic Reader* (1997) demonstrate how the political labels "liberal" and "conservative" fail to capture the complexity of positions among laypeople in U.S. congregations. Other studies in this volume describe

religious phenomena that might look like oxymorons: evangelical feminists, Messianic Jews, and a Gospel Hour at a gay bar in Atlanta that confounds distinctions between the sacred and the secular.

Contemporary sociological and anthropological approaches to the ethnography of religion overlap considerably. Sociologists tend to focus more on organizational structures and issues such as social networks, while anthropologists place more emphasis on culture and individual experience.

The 1990s brought the so-called "ethnographic turn" in studies of religion in America. Increased attention to "lived religion," private devotional practices, and activities that integrate secular and spiritual goals led growing numbers of scholars in various disciplines to use ethnographic fieldwork methods. Religious studies scholars Robert Orsi and R. Marie Griffith, and sociologists Nancy Ammerman and Meredith McGuire, have been leading voices in this movement.

The fluidity of American religious identifications, in which people often move from one denomination to another, lends itself to ethnographic examination. Ethnography is well suited to studying on-the-ground processes of change and how religious meanings and identities shift as spiritual practices move into different contexts.

Religious syncretism, the fusion of elements from different belief systems, has been a long-running topic in anthropology. Examples include the mix of Christian and Native elements in the Native American Church's Peyote Way rituals, the Afro-Caribbean religions of Santería and vodou, and African influences in black church worship traditions. Some scholars interpret syncretism as a strategy for disempowered groups to develop identities, practices, and affiliations that help them adapt and survive. Others see this as forced accommodation to dominant powers or as a form of deception. Critics emphasize syncretism's connotations of blending and assimilation and the political implications of contrasting "pure," "authentic" traditions and "impure," mixed forms. Some propose alternative concepts such as hybridity, creolization, symbiosis, or mosaics to describe cultural mixtures that juxtapose elements without erasing their distinct sources and the agency of individuals who creatively combine them to create identities out of multiple sources.

Questions about authenticity and tradition have received considerable attention from anthropologists, who tend to view new American spiritual practices against the backdrop

of cross-cultural research. For example, after studying firewalking in the rural Greek Orthodox Anastenaria cult, ethnographer Loring Danforth was contacted by leaders of the American Firewalking movement. At first irritated by this New Age appropriation of a practice he knew in its “genuine” religious context, Danforth confronted his biases and tried to learn what firewalking means to its American practitioners. His analysis contrasts the individualistic empowerment attained in American firewalking with the therapeutic social support created in the Anastenarias’ place-based community. Michael F. Brown followed a similar trajectory, moving from studying native Amazonian shamanism to exploring New Age channeling, in which spirits speak through mediums. Brown analyzed how channeling reflects core cultural values and anxieties in contemporary American life.

As North American ethnic diversity has expanded with recent immigration from Africa, Asia, and the Middle East, ethnographers have examined the roles that religion plays in immigrants’ adaptation. Studies of Latino immigrants find frequent changes from Catholicism to Protestantism, or vice versa. Religious conversion can be part of an attempt to fit into the new society, or a strategy to disengage from the homeland. For example, Karen Richman found Haitian Americans converting to Protestantism partly as a way to distance themselves from the demands of family members in Haiti and the vodou spirits associated with them.

Concepts of religion as a bounded, coherent belief system are challenged by studies showing that many immigrants combine elements of different traditions. Asian immigrant converts to Christianity often continue to practice ancestor veneration; Haitian immigrant Christians may use elements of vodou. Ethnographies of the growing numbers of North American practitioners of Buddhism, Hinduism, Taoism, Confucianism, paganism, and neoshamanism highlight limitations in conventional definitions of religion based on belief in divine powers, worship, and separations between religious and secular activities. As globalization intensifies flows of people, ideas, and practices across national, ethnic, and religious boundaries, ethnographic attention to processes of constructing identities, meanings, discourses, and practices will track changes in this North American religious landscape characterized by pluralism and the coexistence and mixing of many peoples and faiths.

Evangelicals: Colonial America

Though Protestants had used *evangelical* as a self-descriptor from the sixteenth century, evangelicalism as a movement originated within the Atlantic world during the late seventeenth and early eighteenth centuries. It began within small groups of Protestants who sought a deeper spiritual experience than they were finding in their existing congregations and churches, individuals who thought that religion had grown too cold and formal and had little connection to their daily lives. These seekers were scattered in locations on both sides of the Atlantic, including English Independents and Methodists, Scottish Presbyterians, Saxon and Moravian Pietists, New England Congregationalists, and Pennsylvania and New Jersey Presbyterians. Though separated geographically, these sects shared a set of common convictions that would define evangelicalism. One scholar of evangelicalism, David Bebbington, identifies its defining attitudes as

biblicism, a particular regard for the Bible (for example, all spiritual truth is to be found in its pages); *crucicentrism*, a focus on the atoning work of Christ on the cross; *conversionism*, the belief that human beings need to be converted; and *activism*, the belief that the gospel needs to be expressed in effort. Historian Thomas Kidd has added a fifth distinction: a dramatically new emphasis on the role of the Holy Spirit in conversion, especially as manifested in periodic revivals, defined as special seasons of God's outpouring of grace.

Seventeenth Century: Puritan Origins

Though evangelicalism in colonial America was most evident in the early eighteenth century, particularly during the revivals known as the Great Awakening, its seeds were planted by the Puritans who arrived in Massachusetts Bay Colony in 1629. That tiny band of believers led by John Winthrop (1588–1649) expressed two central evangelical tenets. First, they believed that their lives needed to be changed and that they were on an “Errand into the Wilderness” to find God's grace. Indeed, they believed that their colony would be a “City upon a Hill,” a beacon to Protestants in Europe, not because of their efforts but because God's work in the desolate New England wilderness would dramatize that he alone was the dispenser of grace. Second, they believed that on occasion God poured out extraordinary showers of blessing and that Christians must be ever alert to signs of such outpourings.

Winthrop set forth an evangelical vision that not only inspired the Puritans on the *Arbella* but has continued to stir Americans in general and evangelicals in particular. He indicated that Protestants in England and in Europe had failed to complete the great work of God begun in the Reformation. He said, “whatsoever we did or ought to have done when we lived in England, we must do that and more.” It was no accident that the Puritans had come to America; through God's providence New England would be the arena for an extraordinary effusion of grace. Winthrop declared that “the work and end we aim at are extraordinary,” and, therefore, “we must not content ourselves with usual ordinary means.” Casting the Massachusetts Puritans as a special covenanted people of God, he called upon them to so live their lives that future generations would glorify their name as a New Israel.

But at least in the minds of the clergy, future generations did not live up to the evangelical ideal. Puritan sermons, known as jeremiads, abounded with lamentations about decline in spiritual commitment among the children and

grandchildren of those sturdy men and women of faith who envisioned a holy commonwealth in New England. Some Puritan divines believed that the quest for profit and the lure of material wealth overshadowed the original spiritual “errand into the wilderness.” Others decried the growing formalism that characterized worship services where form seemed to trump substance, where performance of routine substituted for life-changing conversion. By 1662, a synod of the churches of New England found that only a minority of congregants could point to a personal conversion experience and thus count themselves among the saints, that is, attest to divine election as evidenced by the indwelling Christ. The implications were dire; not only was a generation lost, but so were their children. Eager to keep all people under the aegis of the faith, the synod initiated the so-called Half-Way Covenant that granted partial membership to the grandchildren of saintly grandparents.

Some evangelicals denounced the Half-Way Covenant and insisted on genuine conversion. One such pastor was Solomon Stoddard (1643–1729) of Northampton, Massachusetts, on the Connecticut River. He believed that when spiritual light was at its dimmest, God sent the light of grace in dramatic and unusual dispensations. Such showers of grace to men and women, he maintained, came solely at God's discretion. “God is very Arbitrary in this Matter,” Stoddard wrote in *Efficacy of the Fear of Hell* (1713); “God takes his own time to Refresh their Hearts.” Evangelicals must be ever alert to signs of those “special seasons wherein God doth in a remarkable Manner revive Religion among his People.” When they see indications of revival, they must “preach the acceptable Year of the Lord” (pp. 185–186). Thus, the ordinary means of grace—praying and preaching—are to witness the extraordinary outpouring of grace. For Stoddard, that meant “preaching down” revival by scaring the hell out of people, that is, confronting them with the certainty of eternal damnation for those outside God's grace and the futility of individuals to win their own salvation.

The Great Awakening: Jonathan Edwards and George Whitefield

It was Stoddard's grandson, Jonathan Edwards (1703–1758), however, who became the most influential and best-known theologian of evangelical revivalism in the eighteenth century. After succeeding his grandfather as pastor at Northampton in 1729, Edwards led his congregation in a series of spiritual awakenings that by the 1730s spread to

other New England communities. Edwards insisted that revivals were the work of God and that signs of a revival were apparent to believers. Furthermore, in 1737 he published *A Faithful Narrative of the Surprising Work of God*, a revival narrative that described the Great Awakening that occurred in Northampton; circulated widely among evangelicals on both sides of the Atlantic; and inspired others to identify, describe, and publish similar works of God in their communities. Then in 1741 Edwards published *Distinguishing Marks of a Work of the Spirit of God*, both as a defense against those who dismissed the awakenings as enthusiasm of overheated imaginations and as a biblical guide for evangelicals to follow in detecting a genuine outpouring of God's grace. The last great work that Edwards wrote to define evangelicalism in general and revivalism in particular was *A Treatise concerning Religious Affections* (1746), a disquisition arguing that true religion was a matter of emotions or affections that attached the Christian to God.

While Jonathan Edwards was evangelicalism's leading theologian, George Whitefield (1714–1770) (pronounced *Whit-field*, with a short *i*) was its foremost preacher. As a student at Pembroke College, Oxford, Whitefield had joined John Wesley's "Holy Club," an informal gathering of students who were dissatisfied with what they regarded as the Church of England's dry formalism and who, through Bible reading, prayer, self-examination, and evangelical preaching, sought to make the gospel more central to their lives and, through them, to the wider community. Upon graduation, Whitefield began preaching in London, first in churches, and then, when his criticism of the Church of England resulted in his banishment from pulpits, in public spaces such as parks, race courses, and marketplaces. Crowds estimated as high as sixty thousand people gathered to hear the dynamic, twenty-one-year-old Methodist preacher declare the necessity of the "one thing needful," a spiritual new birth. When he announced his intentions to carry his message to Americans in late 1739, colonists awaited his arrival with great anticipation. For months prior to his disembarkation at Lewes, Delaware, in October, colonial newspapers reprinted accounts from English papers of the huge crowds that attended his outdoor preaching meetings in the coal fields of western England and the public parks of London. The arrival of George Whitefield in 1739 transformed the local revivals in British North America into an intercolonial evangelical awakening.

Both contemporaries and scholars have offered many explanations for Whitefield's popularity as well as for the

revivals he ignited. Some suggest that curiosity attracted many to his unconventional services. Indeed, many on both sides of the Atlantic testified that they were first drawn to Whitefield because of the huge crowds that gathered in such venues as public parks, market squares, race courses, and coal fields. Some find more convincing Whitefield's remarkable oratorical powers, arguing that many who attended his preaching services were entranced by his theatrical performances and his powerful oratory. London actor and playwright David Garrick was one who attended Whitefield's sermons for the sole purpose of studying his dramatic delivery of lines. He was reputed to have said that Whitefield's pronunciation of *Mesopotamia* was itself a theatrical tour de force. Others were attracted for more substantive reasons.

Whitefield's extemporaneous sermons were lively, fresh, and passionate. Frequently he turned current events—a hanging, an earthquake, a battle, a horse race—into occasions for driving home his message of the necessity of a new birth experience. Rather than stilted discourses on theological tenets read from manuscripts, Whitefield's sermons appealed to the heart, not the head. And thousands responded with powerful emotions, weeping and laughing and shouting and dancing as they experienced a conversion moment that first took them to the brink of eternal hell and then delivered them into the security of a saving God. With his dramatic flair, Whitefield transported his audiences to the horrors of eternal damnation and to the bliss of everlasting life in heaven. Still others note that Whitefield was an innovator, adopting the latest merchandising techniques of his day to promoting and "selling" his brand of evangelicalism.

Attacked by opponents for preaching a "new" message that came from his imagination rather than from the word of God, Whitefield insisted that his was not a new message but one that the Church of England had long neglected. His spiritual lineage, he asserted, was that of the New Testament, the Reformation, and Puritanism. What was new were the modern means of delivering his message. His traveling companion, William Seward, promoted Whitefield and his revivals through an aggressive advertising campaign centered on newspaper publicity. Moreover, Whitefield refused to confine his services to days and hours prescribed by the established ministry, preaching instead virtually every day of the week, often two or three times a day. He took his message to where people lived and worked rather than waiting for them to come to him. He preached in streets, markets, and commons as well as in churches and churchyards.

Whitefield's wide-ranging preaching tours knew no social, gender, racial, or ethnic boundaries. Indeed, he and other evangelicals took seriously the New Testament Great Commission of spreading the gospel to all people. They believed that they were under a divine mandate to carry the gospel to lost souls at home and around the world. Thus, in the 1740s and 1750s, when the Great Awakening was arousing white settlers to the indwelling Christ, some evangelicals undertook initiatives to convert Native Americans to a saving knowledge of Jesus Christ. In a 1758 letter to one of the leading missionaries, Eleazar Wheelock (1711–1779), Ebenezer Pemberton gave voice to the undertaking and its significance: “Nothing can be more Agreeable to our Christian Character tha[n to] send the Gospel to the benighted Pagans; Nothing more Conducive to our Civil Interests than to bring them to a Subjection to the Religion of Jesus” (in *Papers of Eleazar Wheelock*, 1971, no. 758618). Missionary results, however, never matched expectations. Evangelical missions led only small numbers of Native Americans to permanent commitments to Protestant Christianity, in part because of the confusing competition with Catholic missionaries and in part because of the mixed motives of missionaries, who were as eager to make the natives more pliable for political ends as to bring them into the kingdom of God. Moreover, natives resisted the Protestant message that called on them to throw aside their own religious traditions and embrace totally the new beliefs and practices of the arrogant and aggressive Europeans who claimed to possess superior knowledge and laws.

Evangelical missionaries had far greater success among slaves. Believing that the gospel should be preached to all persons, including those in bondage, evangelicals employed a wide range of strategies to convert slaves. German Moravians sent missionaries among slaves in the West Indies and in the southern mainland colonies. Itinerants of the Great Awakening exhorted blacks to experience the new birth and invited new converts to testify before racially mixed crowds. The message of evangelicalism proved to be a bridge for slaves of West African descent to cross from their animist heritage to the creation of a distinct African American religion. The supernatural played a central role in traditional African religion, just as it did in evangelical Christianity. Furthermore, attempts to relate to the spirit were similar, involving a free form of worship that included singing and dancing. Finally, the message of the new birth was liberating, loosening the bonds of sin and delivering converts to a promised land of freedom. To the dismay of

white evangelicals, some converted slaves placed their own construction on the new birth experience, giving it an interpretation that implied an earthly as well as a heavenly equality. When slaves revolted in New York City in 1741, some whites blamed George Whitefield and his evangelical followers for filling slaves' heads with notions of freedom and equality.

Conflict among Evangelicals: Moderates and Radicals

Though most eighteenth-century evangelicals took seriously the charge to preach the gospel to all people, they were far from being a monolithic group. While they all had in common the necessity of a spiritual conversion and the belief in periodic extraordinary outpourings of God's grace, they differed over how God's Spirit worked. Though evangelicals could be found along a broad spectrum of belief, they can for convenience be analyzed under two headings: moderates and radicals. Moderates, such as Jonathan Edwards, George Whitefield, and Gilbert Tennent (1703–1764), contended that God's grace operated according to recognizable scriptural signs. Edwards in particular took issue that personal experience based on inward impulses was taking precedence for some over the authority of God's revelation in scripture. While recognizing the validity of emotion and will in the drama of salvation, he maintained that in the end it was God's work as set forth in the Bible that was most important. He was particularly worried about the claims of “enthusiasts” who insisted that they had received direct, personal revelations from God, revelations that superseded those of sacred scripture.

Moderates also believed that God was a God of order who worked through human agents in an orderly way. That meant, for them, an educated and ordained ministry. Like Puritans before them, eighteenth-century moderate evangelicals believed in divine “calling.” God's general calling was that of election, whereby he called some to salvation and some to damnation. His special calling was that of vocation, wherein he called individuals to their work on earth, whether that of a farmer or merchant or lawyer or minister. The calling of minister was a special calling solemnly affirmed through the sacred ritual of ordination and prepared for through diligent study of the Bible, its doctrines and applications. Most moderate evangelical ministers in New England were graduates of Harvard or Yale, which at the time were primarily seminaries dedicated to training orthodox ministers.

Disputes between moderates and radicals became public in a print war that surfaced in the early 1740s. In 1742, Jonathan Dickinson (1688–1747), a New England Congregationalist who led his Elizabeth Town, New Jersey, congregation into the New Side (prorevival) Presbyterian camp, published a work that voiced moderate concerns about the radicals' teachings concerning salvation. His book, *A Display of God's Special Grace*, won the endorsement of such prominent moderates as Benjamin Colman (1673–1747) of Boston. Written in the form of a dialogue between a moderate and a radical evangelical, the book defended many of the revival behaviors denounced by the antirevivalists, particularly ecstatic outbursts by persons undergoing the new birth experience. Dickinson claimed that such emotional displays were part of the conversion process and should not be condemned. He did, however, voice concern about the radical notion that people could be saved instantly and that they could then receive immediate and absolute assurance of their salvation. Dickinson argued that salvation was a process that included a period of preparation as one first repented of sins before experiencing the joys of conversion. He attacked the radical position that the inner witness of the Spirit confirmed salvation and warned that such private impressions could be deceiving. The best proof of conversion, Dickinson contended, was a moral and holy life filled with good works.

Andrew Crosswell (1737–1796), a radical New Light from Groton, Connecticut, offered a scathing rebuttal of the moderate stance on salvation and assurance. In *Mr. Crosswell's Reply to a Book* (1742), he asserted that sinners could come to Christ immediately and that "God's grace flooded a sinner's soul in a flash." Moreover, the sinner could know for a certainty the moment of his or her salvation, claiming that it is "the greatest Absurdity in the World to suppose that the Soul should trust Jesus Christ for Salvation, and love him, and not be sensible of it." He denounced Dickinson's emphasis on moral works as "soul-destroying Arminianism," not faithful Calvinism (pp. 5–8, 18–23).

Some radicals concluded that the only way they could practice "pure and undefiled" evangelical faith was to withdraw from their congregations and start new churches. Known as Separatists, these radicals condemned "unconverted" ministers and formed new congregations headed by ministers who could testify to having had a new birth experience. By 1745 there were forty-five Separate congregations in New England alone. These radicals drew up confessions of faith that highlighted their differences with

moderate evangelicals, as the confession of the Mansfield, Massachusetts, Separatists attests. It avowed that "all doubting in a believer is sinful, being contrary to the command of God." Furthermore, it avowed that "every brother that is qualified by God for the essential qualification for preaching is wrought by the Spirit of God; and that the knowledge of the tongues and liberal sciences are not absolutely necessary" (quoted in Joseph Tracy, *The Great Awakening*, 1841, pp. 317–318).

Throughout the Separatist movement, and indeed in much of the entire evangelical movement, there was growing suspicion of an educated ministry, that is, one educated at such institutions as Harvard and Yale. Even to moderates like George Whitefield, those institutions had become tainted by a too-cozy relationship with nonevangelicals, such as revival critic Charles Chauncy (1705–1787), and with secular notions, especially those of the Enlightenment. In 1740, Whitefield wrote in his published *Journals* that "Discipline is at a low ebb" at Harvard. He charged that "Bad books are becoming fashionable among the tutors and students." By "bad" books, he meant those by Anglicans and nonevangelicals, rather than those by evangelicals, especially the "good old Puritans" such as Solomon Stoddard and Thomas Shepard. The danger of Harvard's abandoning the evangelical standard was a ministry that was grounded in rational propositions but knew little of personal faith. Whitefield charged that "many, nay most that preach, I fear, do not experimentally know Christ."

Responses to Evangelicalism

Such attacks by evangelicals did not go unchallenged. Indeed, the Great Awakening engendered powerful criticism of revivalist teachings and tactics, criticism that did not differentiate between moderates and radicals. In both New England and the middle colonies, sentiment among the clergy and laity was sharply divided between those who embraced evangelical revivalism and those who attacked it. Charles Chauncy, pastor of the First Church of Boston, was one of the awakening's severest critics, and he attacked it at the most basic level by disputing evangelical claims that it was a mighty "work of God." Indeed, he saw a huge gap between events taking place in the so-called revival and evangelical interpretations of those events. While evangelicals insisted that they were merely bearing witness to an extraordinary outpouring of God's grace, Chauncy portrayed the revival as primarily the work of overzealous, self-promoting enthusiasts. To him there was

much “Noise and little Connection” between the trumpeting of evangelicals and the work that they trumpeted. In response to one evangelical claim that New Englanders were witnessing a mighty work of God, Chauncy rejoined that not “*near so much hath been done, as to warrant this Gentleman’s high Encomium upon this Work.*” He concluded that if thoughtful people separated from the so-called revival all the “enthusiastic Impulses, and such-like Concomitants, . . . [they would] reduce it to a small Thing, that is, in Compare with what it is *made to be* by some who have wrote upon it” (*The Late Religious Commotions in New-England*, 1743, p. 2).

Chauncy was hardly alone in his criticism. A group of ministers from Massachusetts and Connecticut assembled in Boston in the summer of 1743 because of their concerns that the revival was creating disorders and divisions detrimental to the good order of the gospel. In their published critique, the seventy-odd ministers voiced grave concerns about the evangelicals’ central teaching: the “new birth” as the “one thing needful” for salvation. They charged revivalists with uncritically accepting individuals’ conversion accounts based on “secret impulses” rather than on “the *written Word* [and] the *Rule* of their Conduct.” If salvation is reduced to unverifiable private experience, then religion mocks the rule of “*Scripture and Reason*” that had guided the Puritans. To New England opponents of the revival, the so-called Great Awakening was nothing more than warmed-over antinomianism in which subjective claims of divine revelation take precedence over God’s revealed Word. Furthermore, persons who are truly awakened by God’s grace should demonstrate their new birth through good works. Charles Chauncy could find no evidence that the new birth espoused by evangelicals resulted in improved behavior. He saw much evidence of “*enthusiastic Heat*” and a “*Commotion in the Passions*” but saw none that “Men have been made better.” He added,

’Tis not evident to me, that Persons, generally, have a better Understanding of Religion, a better Government of their Passions, a more Christian Love to their Neighbour, or that they are more decent and regular in the Devotions towards God. Rather, they exhibit the same pride and Vanity, the same Luxury and Intemperance, the same lying and tricking and cheating, as before. (Quoted in *The Great Awakening: Documents*, edited by Richard Bushman, 1970, p. 120)

To him and other critics, the revival generated a lot of noise about faith but made little substantive difference in the lives of people.

Evangelicals during the Great Awakening both united and divided people across British North America. They united Protestants by declaring the same message in every part of the land and by publicizing similar responses in every region. Readers in New England, for instance, read accounts of revivals in Pennsylvania and New York that were strikingly similar to awakenings that they had experienced. Wherever they went, itinerants preached the same message of the heart, and those who had a spiritual conversion related a similar story of how the indwelling Christ had overwhelmed every part of their being, making them first aware of all human efforts to save themselves and second of God’s sufficient grace for transforming their lives. Moreover, evangelicals forged linguistic bonds that transcended regional dialects and sectarian vocabularies. New Lights everywhere began to speak a common evangelical language using such shared phrases as the new birth, the indwelling Christ, and heart religion.

At the same time, however, evangelicals during the Great Awakening caused fissures among Protestants. Their insistence on conversion as the only thing needed for salvation divided people into the converted and the unconverted. Either one had experienced the new birth or not, and it mattered not what other claims to Christian devotion one might make. Educated clergy with long and distinguished service as pastors were not exempt; if they could not or would not publicly relate a personal conversion account, then New Lights numbered them among the “unconverted clergy.” Then there were organic divisions, splits within particular denominations: New Light and Old Light Congregationalists, New Side and Old Side Presbyterians. After a period of rancorous debate between the latter groups when each group castigated the other, they went their separate ways, each forming synods and seminaries that promoted their beliefs and practices. Separation became competition as New Side Presbyterians sent itinerant missionaries throughout the land seeking converts among church members as well as those outside the church. It no longer mattered if one were a Presbyterian; one must subscribe to the right branch.

Evangelicalism, the Enlightenment, and the American Revolution

Evangelicals lived in a society that was secular as well as sacred and contended with new ideas, especially those of the

Enlightenment, which challenged the very bases of their beliefs. At the same time as the Great Awakening, Enlightenment ideas challenged revelation itself as an authority for understanding humans and their world. Like the awakening, the Enlightenment was imported from Europe. Inspired by the scientific worldview promoted by such men as Francis Bacon and Isaac Newton, the Enlightenment substituted a natural for a supernatural explanation of the world. Though most adherents acknowledged God as creator, they relegated God to the sidelines of human existence. God was the cosmic watchmaker who wound up the created order and allowed it to run on its own with no divine intervention. The world operated according to natural laws discernible to human reason. And the enlightened person used his or her reason to understand the natural order and bend its laws to human benefit. To some evangelicals, such reasoning if pushed too far could undermine biblical authority. Human observation and experimentation, not divine revelation, was authoritative for devotees of the Enlightenment, and that was a dangerous notion for evangelicals like Jonathan Edwards. Indeed, deism, the religion of the Enlightenment, represented a grave threat to revealed religion. Edwards described deists as those who

Wholly cast off the Christian religion, and are professed infidels. They are not like the Heretics, Arians, Socinians, and others, who own the Scriptures to be the word of God, and hold the Christian religion to be the true religion, but only deny these and these fundamental doctrines of the Christian religion: they deny the whole Christian religion. Indeed they own the being of a God; but they deny that Christ was the son of God, and say he was a mere cheat; and so they say all the prophets and apostles were; and they deny the whole Scripture. They deny that any of it is the word of God. They deny revealed religion, or any word of God at all; and say that God has given mankind no other light to walk by but their own reason. (*A History of the Work of Redemption*, 1773, pp. 281–282)

For Edwards, reason was a God-given faculty intended to aid men and women in understanding God's revealed truth, but he also placed great importance on what he called "holy affections" in the drama of salvation. Redemption came through the indwelling Christ, not at the end of deductive reasoning.

Although there were profound differences between the worldviews of evangelicals and devotees of the Enlightenment, there were also noteworthy similarities. Both rebelled against traditional authority, and each stressed the primacy of the individual. The Enlightenment encouraged people to think for themselves rather than blindly following the ideas of others, including political and ecclesiastical leaders. Knowledge of the world comes through observation and experimentation, not through received wisdom. Similarly, evangelicals were wary of those ministers, no matter how impressive their academic credentials, whose faith was rooted in anything other than a life-changing conversion experience. By stressing the importance of the individual, evangelicals taught a message that coincided with liberalism at its most fundamental level. Like Lockean liberals, evangelicals fought for political as well as ecclesiastical freedoms. Both the Enlightenment and evangelicalism would shape the responses of Americans to the ideas and events of the American Revolution.

Historians have debated evangelicalism's influence on the American Revolution. Some, like Alan Heimert, have argued that evangelicalism, perhaps more than the Enlightenment, shaped patriot responses to British tyranny. Jon Butler questions how the Great Awakening of the 1740s could have influenced political attitudes and events of the 1770s. There is an argument for a powerful indirect influence, that is, one that changed the political culture of British North America. As historian Gary Nash has noted, New Lights were empowered by their new birth experiences to challenge the authority of church leaders, and it was a short step to extend that challenge to the political arena. Moreover, the Great Awakening was a movement "out of doors," that is, a religious movement that protested the prevailing religious teachings and practices, a movement that literally took place outside the confines of established institutions, in streets, marketplaces, and parks. In Massachusetts, New Lights took to the streets in 1741 in support of the Land Bank, which would increase the money supply and ease the burdens of debtors. Those contending that evangelicals exercised considerable influence on the American Revolution argue that they contributed to a new, popular form of politics wherein empowered individuals challenged entrenched power.

Evangelicals played an important role in shaping political culture in the Revolutionary period. Like the Enlightenment, evangelicalism challenged all authority, ecclesiastical and civil, that interfered with the individual's religious

rights. Specifically, the teaching that salvation was experiential, that it occurred within the individual, meant that evangelicals were opposed to any authority who deigned to intrude on that most sacred of experiences. So when rumors surfaced that the King-in-Parliament was considering naming a resident bishop for the American colonies, evangelicals led the resistance in the name of religious liberty. Furthermore, they joined the opposition to the Quebec Act, which gave rights to Canadian Catholics, a move, Protestants claimed, that signaled a British design to make the thirteen colonies Catholic or at least to subvert religious freedom. But evangelicals did more than protest British actions; they also called on Americans to make their resistance a moral crusade. Believing that nothing happened without God's knowledge, they asked why God was visiting the British oppression on them. They concluded that it was because of their own moral laxity, expressed as growing worldliness manifested in the consumption of luxury goods and manifested in a complacency toward things of God. So evangelicals called on the nation's citizens to repent; only then could they expect divine approbation of their resistance to British tyranny.

Religious Freedom and Evangelicalism after the Revolution

Evangelicals also played a central role in the fight against religious establishments and the fight for religious liberty. While many historians have questioned the radicalism of the American Revolution, especially in comparison with, say, the French Revolution, all agree that the separation of church and state was truly revolutionary for the time. Evangelicals were in the forefront of the fight against advocates of religious establishment, first in state constitutions and then at the federal convention in 1787. Virginia was the scene of a decade-long battle over the question of religious liberty, and the final settlement, embodied in the *Virginia Statute for Religious Freedom*, became the model adopted for the federal government. In 1776, the Virginia Assembly was dominated by members of the Church of England, most of whom were sympathetic to the clergy's insistence that the establishment of a successor Episcopal Church would best serve the state. The clergy argued that religion was the foundation of republican virtue, and thus essential to society, and that moral teachings "can be best taught and preserved in their purity in an established church." Evangelicals disagreed. They took seriously the Great Commission and had been successful in spreading the gospel throughout Virginia.

Having arrived in Virginia in significant numbers only about forty years before the Revolution, evangelicals had experienced rapid growth, and by 1776, according to Thomas Jefferson, they constituted about two-thirds of Virginia Protestants. They believed that all sects would be well served in a free religious marketplace where the government had no say. To them, faith was a matter of conscience and a transaction between God and the individual.

So when the Virginia Assembly considered various measures calling for an Episcopal establishment, evangelicals demurred. With their tradition of supporting the separation of church and state, Baptists petitioned the legislators on behalf of unfettered religious liberty. A Baptist Association from Prince Edward County expressed the hope that "all church establishments might be pulled down, and every tax upon conscience and private judgment abolished, and each individual left to rise or sink by his own merit and the general laws of the land." Presbyterians joined in the antiestablishment movement. The Hanover County Presbytery petitioned for the rejection of any establishment, including that of the "Christian religion." Patrick Henry had proposed that Virginia endorse a nonsectarian establishment, that is, one that made Christianity itself the official religion in Virginia. The Presbyterians rejected such a notion. They explained,

There is no argument in favor of establishing the Christian religion but what may be pleaded, with equal propriety, for establishing the tenets of Mohammed by those who believe the Alcoran; or if this be not true, it is at least impossible for the magistrate to adjudge the right of preference among the various sects that profess the Christian faith, without erecting a chair of infallibility, which would lead us back to the Church of Rome. (Quoted in William Henry Foote, *Sketches of Virginia*, 1850, pp. 323–324)

To the Presbyterians, any state endorsement of religion is an endorsement of a *particular* faith based on a *particular* interpretation of biblical and ecclesiastical authority. Those are judgments that belong to the individual and God, not to politicians and the state.

After the Revolution, evangelicals flourished in the free marketplace of religion that they had been so instrumental in creating. Indeed, aided by another Great Awakening that began in the late 1790s on the Tennessee and Kentucky frontiers and still burned brightly in northern communities

well into the 1830s, evangelicals became the dominant churches in the United States. According to one estimate, by the mid-1800s, two-thirds of all Protestants were Baptists and Methodists. Whereas in 1775 Congregationalists had twice the number of ministers as any other American church, by 1845 Methodists had ten times more ministers than the Congregationalists. So dominant were evangelicals in American culture that one historian claims that in the first half of the nineteenth century evangelicalism emerged as the country's "functional equivalent of an established church." Another scholar calls the evangelicals' God of the period "America's God." Moreover, evangelicalism was at the center of what one historian has called the "democratization" of American Christianity. Evangelicals' message that salvation was a matter of individual choice, of persons' accepting Christ by faith, fit almost seamlessly in a democratic culture of individual freedom. And mass evangelism was expressive of American ebullience as the country expanded geographically and economically.

Evangelicalism's colonial roots are evident in the movement's ongoing vitality and growth in the present. With a continued emphasis on individual soul-winning and mass revivals, evangelicals enjoy dramatic growth, both in the number and size of congregations. Furthermore, like eighteenth-century evangelicals, their successors are innovative and adaptive. More than any other religious group, evangelicals have changed with the times, building, for example, megachurches with corporate structures that mobilize large numbers of people engaged in expansive programs of spiritual, social, and educational outreach. And just as Whitefield pioneered the exploitation of newspapers for promoting his services, modern-day evangelicals embraced the electronic media, especially the Internet and cable television, to reach wider audiences.

Evangelicals: Current Trends and Movements

At the turn of the twenty-first century, American evangelicalism bore all of the hallmarks of its rich and colorful history: an emphasis on the Bible as God's revelation to humanity, an acknowledgement of the centrality of conversion, and an impulse to evangelize, or bring others into the faith. Evangelicalism throughout its history has demonstrated an uncanny ability to speak the idiom of the culture, from the open-air preaching of George Whitefield in the eighteenth century to the circuit riders and the colporteurs of the nineteenth century to the radio and television evangelists of the twentieth century. As the idiom has shifted in recent years, so too have evangelical strategies.

The Megachurch Phenomenon

Megachurches (generally defined as congregations in excess of two thousand) emerged as a kind of evangelical franchise late in the twentieth century. Although Aimee Semple McPherson (1890–1944) built what was arguably the first megachurch in the 1920s, the Angelus Temple in the Echo Park neighborhood of Los Angeles, the trend expanded considerably in the ensuing decades. The question of whether Robert Schuller (1926–) qualifies as an evangelical might inspire a lively debate in some circles, but his techniques certainly fit the pattern of evangelical innovation. In 1955 Schuller, pastor of a Reformed Church in America

congregation in Riverside, Illinois, accepted what was essentially a missionary posting to Orange County, California. Very quickly Schuller discerned that postwar Southern California was a culture dominated by the automobile. He rented the Orange Drive-In Theater and circulated flyers inviting locals to “Worship as you are . . . in the family car.” Schuller perched himself on the roof of the concession stand and preached to the automobiles. Soon the congregation expanded, and Schuller relocated to a venue a couple of miles down Chapman Avenue and built the Garden Grove Community Church. After further expansion, aided by radio and television, he constructed a massive glass structure, designed by Philip Johnson, which Schuller dubbed the Crystal Cathedral.

In nearby Costa Mesa at the turn of the 1970s, Chuck Smith (1927–) transformed a congregation of twenty-five contentious souls, on the verge of disbanding, into another megachurch, Calvary Chapel. Smith, who had been part of Aimee Semple McPherson’s International Church of the Foursquare Gospel, tapped into the vestiges of the hippie movement, welcoming refugees from the counterculture to his church. As attendance swelled, the church moved to a larger property in Santa Ana, and many erstwhile hippies testified to deliverance, sometimes instantaneous, from drug and alcohol dependencies.

In 1975, a recent graduate of Trinity College in Deerfield, Illinois, sought to start a church in the northwest suburbs of Chicago. Bill Hybels (1951–) consulted with Schuller and others and then conducted a door-to-door market research survey to learn why suburbanites were staying away from church. On the basis of those findings—an aversion to religious symbols, a desire to remain anonymous, not wanting to be dunned for money—Hybels proceeded to design a church that would overcome those objections. By the turn of the twenty-first century, Willow Creek Community Church, in South Barrington, Illinois, was drawing close to twenty thousand suburbanites every weekend to its sprawling campus, where those in attendance can choose from hundreds of programs for a variety of interest groups in addition to the standard services, which generally feature musical and dramatic productions followed by a sermon from one of the church’s many pastors. A visitor would likely spend some time in the complex’s food court, modeled on shopping malls.

Willow Creek and other megachurches—Joel Osteen’s Lakewood Church in Houston, for instance, or Rick Warren’s Saddleback Church in Lake Forest, California—thrive

in part because of the variety of their offerings, a kind of cafeteria Christianity, and because of their market-friendly approach to churchmanship. Leaders of the congregations tinker with what they call the “worship experience,” and both the preaching and the underlying theology tend to be inoffensive and anodyne. The “What We Believe” tab on the Willow Creek Web site, for example, contains phrases like “we are among those Christ came to seek and save” and defines the church’s mission as turning “irreligious people into fully devoted followers of Christ.” The tab yields no insight whatsoever into the church’s position on the virgin birth, the resurrection of Jesus, or the role of sacraments in the life of the congregation.

Nondenominationalism

The popularity of megachurches among evangelicals also points to another characteristic: the lack of denominational identity. The fundamentalist-modernist controversies in the 1920s triggered a defection of many (though by no means all) evangelicals from mainline Protestant denominations. Some of the defectors joined explicitly evangelical denominations, but many remained suspicious of denominations of any sort.

This suspicion of institutional forms has even deeper roots in evangelicalism, arguably dating back to the Protestant Reformation of the sixteenth century. Both Continental Pietism and the Methodist movement within the Church of England were reactions to the kind of institutional calcification that evangelicals find inimical to piety. The holiness movement of the nineteenth century, in turn, sought to call Methodists away from their middle-class aspirations toward a more authentic, affective piety. Much of the suspicion that evangelicals directed toward denominations had to do with educational institutions. Among holiness people, there was a strong prejudice against educated clergy, the supposition being—and not entirely without warrant—that education crowds out piety. Many twentieth-century evangelicals were convinced that seminaries had proven to be theologically cancerous. It was no accident that one of the major defections of evangelicals from a mainline denomination was triggered when J. Gresham Machen (1881–1937), an evangelical, was forced out of Princeton Theological Seminary in 1929.

The other characteristic that militates against denominational affiliation for evangelicals is a weakness for a kind of cult of personality. In the absence of hierarchical structures, liturgical rubrics, creedal formulas, or strong polity,

evangelicals tend to coalesce around charismatic individuals who are skilled preachers and teachers. These evangelical leaders, in turn, tend to chafe at any sort of institutional constraint, such as those attending denominational structures. Chuck Smith of Calvary Chapel effectively left his denomination, the International Church of the Foursquare Gospel. Bill Hybels of Willow Creek Community Church holds no denominational ordination, nor does Joel Osteen (1963–). The single major exception is Rick Warren (1954–) at Saddleback Church. Both the pastor and the congregation are Southern Baptist, but Warren makes a point of not advertizing that fact.

The paradox—or, perhaps, the sociological inevitability—here is that as these megachurches grow, and as other ministers and congregations seek to emulate their success, they tend to form their own associations that bear a strong resemblance to denominations. Smith at Calvary Chapel insisted for years that the network of likeminded congregations for which he is a spiritual leader was not a denomination: “Calvary Chapel is a non-denominational church movement focused on the inerrancy of the Bible and the expository teaching from Genesis to Revelation.” But the organization allows that the congregations “are connected by the fellowship and like-mindedness of the men who serve as their senior pastors” (see www.calvarychapelcostamesa.com). Similarly, Hybels formed the Willow Creek Association in 1992, a federation of likeminded congregations and individuals, though he generally stops short of calling it a denomination.

Worship Styles

No discussion of current trends in evangelicalism would be complete without a reference to styles of worship. In the middle of the twentieth century, there were essentially two types of evangelical worship: fundamentalist and Pentecostal. Fundamentalist worship was sedate and dignified: congregational singing of hymns, some anthem from the (volunteer) choir, perhaps a song from a soloist or a musical ensemble, culminating in a sermon (often called a “message”) from the pastor or a visiting preacher. Such sermons were exegetical and, more often than not, very long in duration. Pentecostal worship included many of the same elements, but the principal differences were possibly a shorter sermon and a good deal more enthusiasm, including speaking in tongues and divine healing.

The rise of the Jesus Movement in the early 1970s, however, radically altered evangelical worship styles. Once again,

Calvary Chapel was pivotal to this transition. As Smith attracted erstwhile hippies to his church, many of them sought an outlet for their musical talents, and the result was a musical outpouring unmatched in the annals of evangelicalism, with the possible exception of the Isaac Watts and Charles Wesley era. A group that called itself Love Song became, effectively, the house band at Calvary Chapel; but other groups and individuals emerged as well, including Danny Lee and the Children of Truth, Larry Norman (1947–2008), John Fischer (1947–), and Randy Matthews (1951–). The new music ranged from Christian rock to the lilting melodies that became the basis for what would come to be called “praise music.”

The new music owed little to the traditional gospel songs found in hymnals. Because the music was new and unfamiliar (and *not* found in hymnals), the lyrics very often were projected onto a screen or simply a wall using an overhead projector. This, in turn, freed up the worshippers’ hands; no longer did they have to fumble with a hymnbook. In time, evangelicals began to raise their hands while singing, a posture more common among Pentecostals. Much of the music tended to be gentle and rhapsodic. It was simple and undemanding, with a fairly narrow range of notes, making it accessible to everyone—unlike, say, old standards like “Wonderful Grace of Jesus,” with its multiple parts and countermelodies. In time, the overhead projector gave way to PowerPoint, and the new “praise music” became ubiquitous in evangelical worship, thereby narrowing the gap between fundamentalist and Pentecostal worship to almost nothing.

Organs and pianos, the staples of evangelical worship accompaniment for most of the twentieth century, were rendered passé, often the objects of derision, especially to a younger generation of evangelicals. The new requirement for evangelical worship was what came to be called a “praise band” or a “worship team,” consisting of some combination of guitars (acoustic or electric, often both), drums and other percussion, keyboard (usually electronic), and an array of singers, whose task it became to lead the congregational singing by projecting their own voices into handheld microphones. Amplification was considered essential to any praise band or worship team, even in the smallest venues—and often to the consternation of older evangelicals, many of whom expressed nostalgia for the old hymns.

To a remarkable degree, preaching also came to reflect this new style of evangelical worship. Although any such generalizations are perilous, evangelical sermons around the

turn of the twentieth century tended to be less structured and theological, more anecdotal and topical.

Evangelicals and Politics

Since the late 1970s, the topicality of evangelical preaching has extended to politics, once considered taboo in most evangelical pulpits. For half a century following the Scopes trial of 1925, evangelicals by and large shied away from political engagement. Politics was considered a “worldly” endeavor, an enterprise so laden with compromise that any person of principle would be undone by its machinations. Also stoking this aversion was premillennialism, regnant among evangelicals since the late 1800s, the doctrine that Jesus would return to earth at any moment. This effectively absolved evangelicals of social engagement. This world, after all, was doomed and transitory. The best a believer could do was to ensure that he or she was ready for the return of Jesus—and try to bring others into the fold through evangelism.

For a variety of reasons, those insular attitudes began to change in the 1970s. Televangelists, taking advantage of changes in FCC regulations, saturated the airwaves, and a Southern Baptist Sunday school teacher mounted a successful, long-shot bid for the presidency in 1976. Jimmy Carter’s declaration in the course of the campaign that he was a “born again” Christian caught the attention of evangelicals, southerners especially, who helped propel him to the Democratic nomination and then to the presidency.

Paradoxically, however, many of these same evangelicals turned dramatically against Carter four years later. Although the leaders of the Religious Right would later claim that the United States Supreme Court’s *Roe v. Wade* decision of January 1973 provided the catalyst for their entry into politics, that account disintegrates on closer examination. No less a conservative force than the Southern Baptist Convention passed a resolution in 1971 calling for the legalization of abortion, a stance reaffirmed in 1974 (after the *Roe* decision) and again in 1976. When the *Roe v. Wade* ruling was handed down, several prominent evangelicals, including W. A. Criswell (1909–2003), pastor of First Baptist Church in Dallas, Texas, heralded the decision as marking an appropriate distinction between personal morality and public policy.

Rise and Fall of the Religious Right

The real catalyst for the rise of the Religious Right was another court ruling, decided in the district court for the

District of Columbia on June 30, 1970. In a case called *Green v. Connally*, the court instructed the Internal Revenue Service to withhold tax-exempt status from a religious school that practiced racial discrimination. In the succeeding years, the IRS applied that ruling to other schools, including Bob Jones University, a fundamentalist school in Greenville, South Carolina. When, after years of warnings, the IRS finally rescinded the tax status of Bob Jones University on January 19, 1976, evangelical leaders interpreted that action as an assault on the integrity and independence of evangelical institutions and mobilized to reverse it. In the latter years of the 1970s, they banded together to resist the IRS and, in so doing, found other issues to unite them: prayer in school; opposition to the proposed Equal Rights Amendment to the Constitution; and abortion, which until 1978 was regarded by most evangelicals as a Roman Catholic issue.

The Religious Right chose to anoint Ronald Reagan as its political savior in the 1980 presidential election, even though his status as a divorced and remarried man probably would have disqualified him from evangelical favor a generation earlier. Reagan also, in 1967, had signed into law, while governor of California, the most liberal abortion bill in the nation. Leaders of the Religious Right, however, shrugged that aside and helped to elect Reagan over two other candidates who also claimed to be evangelicals: Carter and John B. Anderson, a Republican member of Congress turned independent.

The Religious Right enjoyed a thirty-year run of extraordinary influence in American politics, from the United States Senate election in Iowa in 1978, when a little-known Republican edged out a popular Democratic incumbent, until the election of Barack Obama to the presidency in 2008. During those three decades, politically conservative evangelicals altered the American political landscape through such organizations as the Moral Majority, the Traditional Values Coalition, Focus on the Family, Vision America, the American Family Association, and the Christian Coalition. So confident was the Religious Right of its political muscle that one of its own, televangelist Pat Robertson (1930–), mounted a credible bid for the Republican presidential nomination in 1988.

The political machinations of conservative evangelicals, however, yielded mixed results. Judicial appointments by Reagan, George H. W. Bush, and George W. Bush undeniably tilted the federal bench in a more conservative direction. Legislative accomplishments, on the other hand, were sparse. Despite the campaign promises of all three Republican

presidents during this era, none of them made any serious effort to outlaw abortion. From February 1, 2006, when Samuel Alito was sworn on to the United States Supreme Court, until January 3, 2007, when the newly elected Democratic majorities took control of Congress, all three branches of the federal government were in the hands of the Republican–Religious Right coalition. The chief executive, the majority leader of the Senate, and the Speaker of the House of Representatives all claimed to be evangelical Christians and unalterably opposed to abortion. Yet during that eleven-month period, they made no effort whatsoever to outlaw abortion, their stated goal.

By the time of the 2008 presidential election, a generation gap was discernible among evangelicals. The older leadership of the Religious Right—James Dobson (1936–), Chuck Colson (1931–), Donald Wildmon (1938–), and others—continued to insist that the only salient moral issues were abortion and same-sex marriage. A growing number of younger evangelicals, by contrast, detected a much broader spectrum of issues with a moral valence: poverty, the environment, AIDS, war, and the George W. Bush administration's persistent and systematic use of torture against those it labeled “enemy combatants.” In addition, these younger evangelicals were relatively uninterested in the matter of sexual identity, the issue that so fixated their elders. As a consequence, many of these younger evangelicals—32 percent of those aged eighteen to twenty-nine, according to one survey—voted for Obama, double the percentage that had supported John Kerry, the Democratic nominee four years earlier.

Niche Evangelism

As the Religious Right voting bloc began to crumble, evangelicalism itself became less and less homogeneous. Immigrants, some of whom were evangelicals in their native lands and others who converted after coming to North America, began quite literally to change the complexion of evangelicalism in the decades surrounding the turn of the twenty-first century, and evangelicals adapted by devising a kind of “niche evangelism,” targeting their appeals to specific ethnic and interest groups

The changing face of evangelicalism together with changing cultural circumstances prompted a redirection of evangelistic efforts away from what was commonly known as mass evangelism in the twentieth century to this niche evangelism. In many respects, Billy Graham (1918–) personifies this transformation. Graham came to prominence at

a unique moment in history, when various new media technologies—radio, television, motion pictures—were just beginning to reach large audiences. Graham jumped on these media with a vengeance and made himself into the twentieth century's most recognized religious celebrity. Graham perfected the stadium rallies, which he called “crusades,” massive events that drew thousands in person and many times that through various forms of media.

As Graham began to wind down his remarkable career late in the twentieth century, however, there was no obvious successor, although some in the media anointed Rick Warren as Graham's heir, a designation that Warren himself resisted. Clearly, no single individual could approach Graham's unique combination of charisma, gravitas, and celebrity. Coincident with Graham's retirement, media also began to change. Whereas when Graham began his career there were three television networks, by the turn of the twenty-first century cable television and the Internet provided thousands of outlets for media.

Evangelicalism, the most protean religious movement in American history, has found ways to adapt. Instead of the massive stadium rally, evangelicals now target niche audiences, defined by age group, ethnicity, marital status, musical tastes, or interest: skateboarding, scrapbooking, the tattoo subculture.

Even the megachurches themselves, which have always used cells or special interest groups to draw visitors into deeper levels of involvement, face the challenge of remaining relevant to a newer generation and altered cultural circumstances. An intentionally loose movement called the Emergent Church arose, at least in part, as a protest against the bland, suburban-style consumerism of the megachurches. Led—or, more accurately, represented—by such individuals as Brian McLaren (1956–) and Tony Jones (1968–), the Emergent movement emphasizes decentralization. The worship is wildly eclectic, drawing on a diversity of liturgical forms, musical styles, and artistic expressions.

Niche evangelism, the targeting of specific audiences, represents merely the latest adaptation of evangelicals to shifting cultural currents. The movement that, throughout American history, has demonstrated time and again its ability to speak the idiom of the culture is finding new ways to refresh itself and remain relevant to American life in the twenty-first century.

Evangelicals: Nineteenth Century

Nineteenth-century evangelicalism was an amalgam of sometimes discordant Protestant submovements that nonetheless contained certain unifying characteristics inherited from eighteenth-century evangelical life and thought. It developed distinctions from earlier evangelicalism through the revivalism of the Second Great Awakening and reactions to late-century theological trends in Europe. Mark Noll has described evangelicals as displaying five core values: a Protestant attachment to the authority of scripture; a belief that true religion came from a personal experience of God; some level of bias against all institutions; a highly flexible ability to embrace, modify, or discard current strands of intellectual, political, social, and economic thought; and finally a belief in and practice of personal and social discipline. All evangelicals shared these traits but were far from monolithic. They could be Calvinists or anti-Calvinists, deeply political or apolitical, intellectuals or anti-intellectuals. During the century the term itself did not carry the modern connotation

of participation in a wider, supradenominational movement. Rather, it was a series of religious emphases and common experiences setting apart certain sets of Christians from the rest of Protestantism. Only after the fact, in the early twentieth century, did a self-consciously “evangelical” identity harden in such a way as to require definitions of who was “in” and who was “out.” By this time two distinct branches of evangelicalism had emerged and would blossom into the early-twentieth-century fundamentalists and Social Gospel evangelicals.

Theology and Thought

The Second Great Awakening, a revival movement that swept the North and West from the 1790s to the 1840s, did not create but rather permanently remolded American evangelicalism as a phenomenon distinct from the eighteenth century. The experience refashioned Protestant religious culture through revivals that focused on the individual, with special care taken to the atmosphere, methodology, and marketing of the revival meetings. Populist elements, empowering the poor and socially less influential to experience God in ways that flaunted establishment structures, created an evangelical culture that was of the people in reflection of the growing democratic spirit. The Awakening helped re-create evangelicalism in ways peculiarly suited for its time and place in America.

The early-nineteenth-century evangelical mind was firmly rooted in a combination of common sense realism (ethics emphasizing the individual’s ability to know truth), the Baconian method (inductive reasoning), and attachment to an infallible Bible. This intellectual mindset proved inadequate to the management of pre-Civil War controversies over revivalism and slavery as well as postwar challenges emanating from Europe such as positivism (the belief that truth is scientifically verifiable) and higher criticism (that scriptural texts must be scrutinized scientifically without regard to faith). When the century began, orthodox Calvinism in the mold of Jonathan Edwards was the preeminent theological bent of American evangelicalism, though its contours were being challenged in divinity schools such as Yale. This theology espoused God’s justice ontologically (based theoretically in who God is), human virtue (concern for the public welfare), human agency as a response to God’s predestined work, and freedom as one aspect of the human experience to share in government.

The aftereffects of the cultural creativity of nation building and the power of the revival movement forever changed

these definitions in ways that conformed to and in return informed the growing democratic spirit of America. Justice became something God used, not something the Divine Being was. Virtue became a private standard of morality. It ceased to be a participation in the public good but something that must be protected from outside corruption, such as a woman's virginity or a man's humility. Freedom was transformed from a participation in government to an innate human equality and became the key interpretive hermeneutic of the human soul. These theological alterations in evangelicalism created an American evangelicalism that was customized to its surroundings. Roadblocks to human agency were removed, and popular theology eventually centered on the people's ability to reason in commonsensical ways about God, the Bible, the world, and themselves. The resulting transition in focus, from God-centered to human-centered, created a religious environment that was ripe for public activism born of the desire for personal virtue and the redemption of collective society from individual vices. From midcentury onward participation in these kinds of reforms rose dramatically. Orthodox Calvinists, meanwhile, wrestled with the adoption of revivalist methods and adapted worship practices without abandoning the theology of Edwards.

After the Civil War the major theological issues and transitions came from the evangelical encounter with the philosophy of positivism, Darwinism, and the scientific examination of the Bible. These were collectively part of the phenomenon of modernism that questioned existing ways of thinking across all fields. Jeremiah Lewis Diman (1831–1881), professor of theology at Brown University, suggested in 1880 that the positivism of Auguste Comte had its greatest impact on theology. The encounter with modernism as a whole created several different evangelical responses and molded evangelicals into camps that have remained largely intact to the present day.

The early evangelical encounter with the theory of evolution was characterized by a general willingness to accept the concept so long as it was wedded to a belief in the providential hand of God. Evolution met most of its resistance from guilt by association with positivism, a philosophy that undercut the evangelical belief in divine revelation. Evangelical theologians experienced a similar phenomenon with biblical criticism, the process of which could glean exegetical insights but the positivism of which seemingly undermined the authority of the Bible itself, since it treated the Bible as no different than any other historical literature.

These associations in the popular consciousness, neither completely accurate nor entirely fallacious, created reactions that hardened or moved away from the older Baconian-based common sense reasoning of earlier evangelicals. As the extreme conservative reaction, early fundamentalists attached themselves strongly to the old philosophy that accepted divine revelation as beyond scientific questioning and yet able to withstand completely all common sense scrutiny. The emerging liberal movement moved toward philosophic idealism with emphasis on immanence, incarnation, the humanity of Jesus, and the social call of the gospel. Moderates such as Henry Boynton Smith, J. L. Diman, and James McCosh sought to espouse a middle way that kept the essence of common sense realism but modified approaches to apologetics (arguments that Christianity was true), their view of God to be less anthropomorphic, placed greater emphasis on social concern, and married Scottish and German philosophical tenets. In the coming century moderates were largely swallowed whole into the emerging liberal evangelical tradition as the hardening of fundamentalist and modernist camps occurred.

Evangelicalism experienced two slightly parallel but nonetheless counterpoised positions in regard to the Bible itself. The first was a desire to pursue a pure, original textual translation. This effort saw over thirty-five new biblical translations from 1808 to 1880 and almost two thousand different editions. The flood of differing renderings of Holy Writ was largely driven by the desire to clarify doctrinal and liturgical disputes through effective exegesis and aided by the boom of print culture that allowed varied colorful and picture-filled productions of the text itself to become a many-splendid thing. An unintended consequence was that the constant pursuit of the "true text" left many evangelicals' trust of biblical changelessness in doubt as awareness of the human element in biblical production became increasingly clear. The other significant transition in encountering the Bible occurred as evangelicals first confronted biblical criticism's claims to scientifically look at the origins of the text. Here the reaction was equally divergent, both undergirding the emerging Social Gospel and serving to crystallize an emerging conservatism as a cultural reaction.

Denominations

Historically it may be more accurate to understand evangelicals ideologically and experientially rather than denominationally. Primitivism, pietism, revivalism, antirevivalism, and fundamentalism were strands of evangelical life that

found their way into a broad spectrum of religious sects. However, each denomination's experience was unique in its encounter with these broader trends. The nineteenth century also saw an increase in individuals' identities being connected to denominational allegiance, called denominationalism. Although theology and revival played leading roles in this advancement, it was also a product of the extreme ethnic pluralism that saw a previously unimagined number of religious strands transplanted into the American landscape through European migration.

Nationally organized Protestant church bodies, especially Presbyterian, Congregational, Methodist, Episcopal, and Lutheran, were more than ecclesiastical entities. They also embodied and accentuated distinct identities. Historian Curtis Johnson organizes evangelicals into three categories in a typology of formalist (embracing traditional church structures), antiformalist (priority of function over form in church government and worship), and African American. Noll subsequently modified this typology. Noll proposes a grid in which axis Y runs from formalist to antiformalist while axis X moves from enthusiast (embracing emotional expression in worship) to antienthusiast (an aversion to outwardly emotive worship). His analysis allows for variations including the antienthusiast, antiformalist Baptists, enthusiast antiformalist African Americans and early Methodists, and High Church Methodists who were enthusiast formalists. Over time Methodists formed an expanding flexible circle in the middle between primitive early and modern High Church identities. Eventually, every American denomination would wrestle with the broad appeal of evangelicalism.

No denomination felt so completely the cultural shift of the century as did the early nation's largest denomination, the Presbyterians. The revivals' growing appeal to human agency and deemphasizing of the debilitating human depravity at the heart of Calvinism divided the Presbyterian Church into competing factions. The Old School, which gained most of its strength from the established Northeast and the South, advocated a strict adherence to the Westminster Confession and a wariness of the excess of revival. The New School Presbyterians, centered on Yale Divinity School, embraced the revivals and held an increasingly high view of human ability. They were not, however, theological innovators. Rather, they tended to subjugate doctrine to utilitarian applications. As these lines hardened, the two sides split in the schism of 1837–1838. Historians vigorously debate the degree to which the division was based in

theology or views of slavery. The New School movement is also significant because it remained tied to denominational identity when many other evangelicals were fleeing denominational strictures. The denomination reunited in the North in 1867. By century's close Presbyterianism had fallen far behind the Methodists and Baptists in adherents, and the once dominant role of Calvinism on the intellectual landscape had receded. Though the Presbyterian Church was still a significant Protestant body, wrestling with the emergence of a distinctly nineteenth-century form of evangelicalism rocked the church in a way from which it never fully recovered its earlier predominance in American Christianity.

Methodism's denominational identity followed its experiential one. As a pietistic Protestantism that emphasized the conversion of the heart through sensory experience within broadly orthodox theological boundaries, it became the heart and soul of American evangelicalism. In many ways the evangelicalism of other denominations was a response to and effort to keep up with Methodism. The Methodist message controverted Calvinists' claims of the human inability to act because of sin's corruption. Many Methodists also openly derided the theological schooling and bickering of Calvinists. Early Methodism was more a shared experience of the people than an institution. It was a liminal event, meaning a religious encounter where divisions of class, gender, and race were muted. It carried with it the hope for the re-creation of that liminal world on earth. The Methodists sought to remove all borders between the sinner and God, a desire dialectically informed from and informing their attachment to concepts of personal liberty as the extreme agency of the individual. Emphasis on personal holiness used individualism toward communal ends.

The Methodist movement thrived in the revivalist environment of the Second Great Awakening. Growth has been estimated at almost 300 percent between 1800 and 1820, and by 1830 it had become the largest denomination in the United States. In this period divergent theological emphases appeared within the movement itself: one a moral philosophy of humankind's accountability and the other a call to personal holiness. Culturally, Methodists followed the course of other evangelicals in the expanding civilizing process of the frontier. As outposts became towns and towns became prominent centers of cultural life, Methodist clergy and members sought increasing levels of respectability in areas of erudition, education, and social influence in reform movements. The move was largely successful and quick. The

Methodist condemnation of slavery was tempered, especially in the South. Methodists shared in the post–Civil War evangelical call for social reform but now did so as an established church rather than a continuing shared experience.

Historian Donald Mathews has argued that the liminal aspects of evangelicalism were most fully embraced by African American evangelicals whose evangelical experience brought present relief and future promise of a world without boundaries. Whereas white liminal religion offered increased agency in the current order, black Christianity offered a taste of an altogether different world. This was especially the case for early black Methodists, whose emphasis on preaching, experience, and tight-knit community fit well the needs of a community denied literacy, autonomous institutions, and free social interaction. Slave culture was, by necessity, extremely adaptable to new religious symbols and concepts.

Evangelicalism provided a key bridge between black and white cultures in the form of the conversion experience. Similar to the African concept of possession by the devout spirits, evangelical conversion allowed widespread entry into the Christian religion from an experiential place. Historians have speculated that the emphasis on self-doubt and personal sinfulness were less motivating factors than they were for whites, on the whole. The two cultures experienced evangelicalism in different ways but similar forms. Other forms, such as congregational singing and baptism, mirrored preexisting cultural references in the slave community. The differences were more than just of degree. As white evangelicalism became less radical and more culturally mainstream, slave evangelicalism became attractive for increasingly radical reasons—hope and freedom. Some have suggested that these differences are so severe that evangelicalism does not adequately describe black Christianity. However, both shared an emphasis on conversion and an emphasis on the work of the cross, and both created distinctive communities of shared faith in a personal encounter with God in some kind of Christian formulation. That white Christians emphasized the victory of Christ in the present, and slave Christians emphasized that hope for the future is not so fundamental a distinction as to preclude the possibility of antebellum black evangelicalism.

Slave- and free-blacks participated in white churches within strict social boundaries, especially primitive churches. Many slaves found their primary worship outlets in brush arbors, where slaves met in secret for worship. Slave Christianity was paradoxically institutionalized and without

structure, visible in the culture yet invisible to white eyes. Black preachers could receive licenses from white congregations for ministry, but other preachers found authority from spiritual anointing. During Reconstruction, black evangelicalism found a more institutional identity and was increasingly segregated from white religion. The predominantly black denominations became increasingly important within black communities. Mainstream black evangelicalism saw the gospel as a liberating message both spiritually and culturally, and the evangelistic mission took on increased cultural and social significance. Denominations that had evangelical roots include the African Methodist Episcopal Church, the African Methodist Episcopal Zion Church, and the National Baptist Convention of America, the National Baptist Convention USA, and the National Missionary and Progressive National Baptist Conventions.

The Baptist movement exploded as a result of the Second Great Awakening, especially in the South. Wary of denominational structures and committed to local congregational autonomy, many Baptists nonetheless created a loose coalition through the Triennial Convention in 1814 by joining together several eighteenth-century Baptist associations. Many southern churches left to form the Southern Baptist Convention in 1841 in large part over the slave question. Baptists functioned together primarily through voluntary missionary and publishing associations. Antebellum Baptists maintained a keen sense of exclusion from the secular world and developed a tradition of democratic tension between an extreme view of the liberty of conscience and the strict discipline of the democratic community of believers. This evangelical exclusivism demanded a conversion experience, commitment to orthodox purity, and submission to the discipline of fellow church members. Baptists were unique in the way they moderated the potentials for individual excess with the authority of the believing community. After the Civil War, church discipline waned with the push to enforce church norms on the larger society. More attainable with their increased size, reform movements trended away from a Baptist identity that was separate from the secular world. Church discipline became less necessary to clarify the purity of the church apart from the larger society.

Society and Culture

Historians debate the extent to which evangelicalism shaped the culture of America or evangelicalism was shaped by the culture. Most modern historians argue that both were true. While early evangelicals tended to be radical on issues such

as slavery and women's issues, it was only after later evangelicals dropped these views and sought social respectability that evangelicalism became a lasting force. Some speculate this transition happened before 1800. It is more likely that the transition was ongoing. As evangelicalism emerged, it increasingly sought acceptability, while its burgeoning acceptability increasingly helped it to grow.

The populist impulse that caused evangelicalism to explode gave way by midcentury to an earnest desire for middle-class social acceptability. Established churches slowly replaced frontier revivals as the center of religious community. College-educated pastors replaced passionate circuit-riding preachers in many congregations. Evangelicalism became respectable, often featuring the most prominent local leaders in politics, medicine, jurisprudence, and religion as adherents. But the formative events of the 1790s–1840s left three indelible marks on American Protestantism. First, in an effort to retain control of the religious marketplace in an egalitarian society, mainline churches increasingly incorporated elements of radical revival methodologies into worship parlance and practice. Second, former fringe groups now dominated the religious landscape, especially Methodist and Baptist churches. Third, since most evangelicals found in the movement an avenue of social mobility, the populist appeal moved to the evangelical periphery. This hardened antiformalist, anti-intellectual, and anti-Calvinist evangelical fringe paved the way for twentieth-century fundamentalism, whose roots lay in part in a militant attempt to maintain the peculiarities of nineteenth-century evangelicalism.

Evangelicals were key actors in social reform movements of the period. Whiggish New School Calvinists, for their part, pushed for a morally upright society that would be a model of republican citizenship, while in Nathan Hatch's scholarship democratic and Arminian evangelicals, Methodists prominent among them, preferred to promote more general populist advancement over a Calvinist program of moral reformation. These two competing emphases, on religious social control and extreme religious liberty, characterized most of the evangelical involvements with social reform for the remainder of the century. Reforms included temperance, Sabbath observance, literacy, slave literacy, and the abolitionist movement.

The evangelical encounter with slavery led to a crisis among evangelicals as to how to interpret the Bible, paving the way for future evangelical hermeneutical (biblical interpretation) approaches in the postwar era. Proslavery

evangelicals, as they increasingly sought respectability in the town centers of the South, abandoned eighteenth-century discomfort with slavery as a foible of the past. They committed headlong to a moderate proslavery millennialism that interpreted the institution, when in the hands of a pious master, as a humanizing and deeply spiritual force that offered salvation in the gospel and modernization to people in need of progress. Few southern evangelicals rejected slavery outright; rather, they sought to ameliorate it in ways that displayed their racialized notions of black inferiority. This impulse echoed what Noll calls the "reformed (that is, Calvinist) literal hermeneutic," proscribing an out-and-out rejection of slavery for fear of undermining even a surface reading of biblical passages referring to "slaves" and "servants." Northern adherents continued the traditional evangelical discomfort with slavery but found that the prevailing hermeneutic of the day favored the southern argument. Northern evangelicals therefore increasingly turned to new approaches of biblical interpretation, relying more on concepts of overarching thematic emphasis of liberty, equality, and value that would render certain proslavery verses applicable only in their ancient contexts.

Evangelicalism at times supported and at times undermined the exclusion of women from religious leadership. Although not everywhere, many women took on the role of "exhorter" at revivals. Some of these exhorters became preachers in their own right, especially in the Stone-Campbell Movement, Free Will Baptists, and Methodists. In contrast to such shifts, the rise of Victorian middle-class morality and the heritage of revival preaching created paradoxical religious tensions for women, whose spirituality was the crown jewel of the home but whose religious experience, especially in rural areas, occurred in the socially patriarchal community of faith. Written conversion testimonies of both sexes gradually discontinued use of the rapturous love language of God as bridegroom (popular in the eighteenth century) in favor of God as the generous fatherly presence. Men recorded these experiences as enlightening events that led to decisive personal actions. Women typically expressed being at the mercy of the guidance of the Spirit's leading and spoke of being led into counterculture actions such as religious leadership only out of passive obedience. Evangelicals reified Victorian morality with biblical language to formulate a view of the "Christian marriage," with highly distinct social roles of work and home. Work, which was virile, was to be done away from home by men. Women at home did homemaking and child rearing, which embodied

innocence and purity. As the century closed, gender roles were challenged through education, suffrage, and the increasing percentage of women who found leadership roles within the church. In some conservative circles this led to an increasing emphasis on the manliness of evangelicalism in an attempt to reach more male adherents. Revivalists and antimodernists were especially prone to characterize their struggle to evangelize the lost as a manly one and to spurn the growing freedom of women as dangerous to evangelical culture.

The evangelical emphasis on personal conversion and mobile revival naturally lent itself to a concern for evangelism on a broader, supranational scale known simply as “missions.” Most denominational evangelicals embraced this ethic of responsibility for what they called “domestic” as well as “foreign” missions. The sending of missionaries, often through voluntary contribution societies within and across denominational lines, grew substantially prior to the Civil War. The greatest period of growth in foreign missions activity occurred between 1880 and 1920. Primitive evangelicals (congregations that sought to avoid traditional ecclesiastical structures) spurned denominational bureaucracy and machinery and instead emphasized the work of their local, usually rural, churches over missions.

The expansion of college education became a major legacy of evangelicalism. Eastern colleges could not provide enough clergy for the expanding western populations. Smaller denominational colleges throughout the western states served as more accessible training grounds for potential clergy, but they also served the community as readily available means of social mobility. These institutions spread evangelical culture by emphasizing the reasonableness of Christian thought, classical education, and Baconian reasoning. They also served as the scene of periodic student revivals. The rapid expansion of education during the antebellum period included at least 117 evangelical-operated institutions of higher learning, meaning the expansion of college education in the antebellum United States was an explosion of specifically evangelical education. Dual traditions arose in evangelicalism regarding educated clergy. Across many denominations, town-based evangelicals increasingly sought social respectability and employed ministers who could function as local public intellectuals. Meanwhile, other evangelicals spurned the idea of an educated clergy, fearing its deleterious effects on spiritual vibrancy and a confusion of the distinctiveness of the church in the world.

Political Culture

Religion was rarely the primary factor in determining political engagement for evangelicals. Rather, it informed political perspectives and often hardened already existing social ties of ethnicity, class, gender, and ideology. The early evangelical encounter with politics in America was largely, but not exclusively, antagonistic. In the wake of the mass conversions of the early century, evangelicals increasingly sought social and political relevance. Lay evangelicals, now significant and often dominant in number, found the realistic prospect of cultural redemption a natural outgrowth of individual conversion. In the early South, historic tensions between authority and freedom, discipline and individualism, created a political and religious paradox that finally ended with the melding of an evangelical ethos and southern conservative political norms. These breakdowns were not exclusively regional.

The growing revivalist movement and the growing spirit of Jacksonian democracy mutually informed one another, emphasizing personal agency and individual liberty. Denominational adherents most likely to embrace the Democratic Party included those whose former status as religious minorities, such as Baptists and Methodists, made them wary of established religious influence on jurisprudence. Whig politics, both the creed of that political party in the age of Jackson as well as the intellectual legacy of the Revolution, focused on communal responsibility and liberty kept in check by self-discipline. Whiggish Protestantism later became the civil religion of the nineteenth century, enabling evangelicals to enter more fully into the national mainstream on issues such as Sabbath observance.

Even where most evangelicals agreed, as they did on public education, their reasons were divergent. Whig evangelicals desired to create a literate, model society of social reform. Jacksonian Democrats also desired literacy, but for equal access to advancement and power. Antebellum evangelicals divided over many issues, including temperance, Indian policy, and slavery. Most evangelicals were animated by a fierce anti-Catholicism, but many antiestablishment strains in Methodism and the Baptists made them equally fearful of the “church and state” Whiggish reformers and thus precluded any broad evangelical political alliance. As the Whig consensus fell apart in the wake of booming capitalistic individualism, nativism, and the crisis over slavery, sectionalism became the political order of the day. Southern evangelicals tended to find homes within the Democratic

Party's calls for social conservatism. Northern evangelical Congregationalists and New School Presbyterians formed the moral core of the emerging Republican Party. This in effect wedded competing evangelical elements—individualistic western revivalism and southern Calvinist orthodoxy—against the progressive postmillennial evangelicalism of the North. These allegiances lived on after the war. Northern evangelicals continued in the social reforming, progressive approach to politics, while they found staunch resistance from rural, government-wary southern evangelicals. In the South political power was primarily local. More often hierarchical than democratic, this localism provided an initial barrier to the social reform movements of northern evangelicals and a base of support for the post-Civil War Democratic Party.

A unique and lasting development of the nineteenth century was the evangelical attachment to the U.S. Constitution as a quasi-inspired document. Eighteenth-century evangelicals were largely anti-Federalists, a political position that opposed the Constitution's centralization of power and, for evangelicals, its failure to mention God. Most early Christian constitutional thinkers believed the Constitution to be a dialectical document open to revision from the people. However, in the early nineteenth century, as evangelicalism expanded and sought to ensconce the story of the nation within a peculiarly evangelical framework, a mythology grew up around the founding of the nation that was decidedly evangelical. Not coincidentally, this coincided with the emergence of evangelicalism as a significant cultural force in the young nation. Evangelicals Christianized their national memories. In the 1820s–1830s, the use of Benjamin Franklin's never realized call to prayer at the Constitutional Convention became commonplace in evangelical discussions that ascribed a special Christian nature to the United States. James Madison responded to this increasing rhetoric with the forceful reminder that Franklin's motion had been tabled. Some believe this equation of evangelical and American cultural values became so pervasive that the core ideology of the two became virtually indistinguishable: a belief in immutable natural or moral law, the freedom and power of the individual, and a belief in the redeeming work of the United States in history.

Prominent Leaders

Several key individuals were responsible for evangelicalism's increasing importance as a cultural force in the nineteenth century. The emphasis of evangelicals on the individual's

ability to understand the Bible, experience conversion, and become personally involved in religious activity led to the rise of several leaders whose message resonated with evangelical audiences.

Charles Grandison Finney (1792–1875) was a prominent evangelist, theologian, social reformer, and college professor. A former lawyer whose formal theological training was minimal, Finney was known as a fierce debater and persuasive preacher. His methods were a product of the growing wave of revival, but he also served to codify and further advances in approach to worship, evangelism, preaching, and church participation. His preaching in upstate New York contributed to the so-called Burned-Over District, an area so active in the fire of revival that there were few souls left to save. Finney was a Presbyterian who preached an adapted form of Calvinism. He emphasized the ability of preachers to create conversions with the right use of methods. This teaching, part of a larger movement called New School Presbyterianism, eventually was part of what split that denomination in 1837. Finney's "new measures" revivalism, as it was called, included an anxious bench for those contemplating conversion, protracted meetings, opening of public prayer to women, and the immediate admission of the converted to communicant membership. Prominent opponents of Finney, often called Old School Presbyterians for their emphasis on traditional Calvinist teachings, included Asahel Nettleton and Lyman Beecher. Finney became the unrivaled leading thinker of the New School Presbyterians, and his wealthy merchant allies underwrote his ministry. In his most influential writings, *Lectures on Revivals of Religion* (1835), he argued controversially that revivals were not miracles but the right use of constituted human means. He was an ardent social reformer, advocating literacy, temperance, and the refusal of communion to slaveholders. Finney traveled to Great Britain twice, helping to establish a direct tie between British and American evangelicalism. He, his followers, and his students at Oberlin College formed a network of like-minded evangelicals that would survive into the twentieth century.

Charles Hodge (1797–1878) was an Old School Presbyterian professor of theology and biblical languages at Princeton. He was the foremost thinker in orthodox Calvinism during the nineteenth century. In his fifty-year career he tutored more future clergy than any single seminary in the United States. As the primary proponent of Princeton theology, Hodge espoused a devotion to piety, belief in biblical inspiration, commitment to the Westminster Confession,

and continued reliance on common sense realism. He was the editor of the *Biblical Repertory and Princeton Review*, an academic journal known as the most prominent forum for evangelical theological debate. His defense of confessional Calvinism gave intellectual energy to the Old School church, and his was the most thoughtful evangelical voice against competing theologies and ideologies of the century.

Phoebe Worrall Palmer (1807–1874) was the most influential female evangelical of the nineteenth century. The daughter of Methodist lay parents in New York City, she married physician and Methodist lay preacher Walter Clark Palmer in 1827. Initially a religious poet, she traveled and spoke widely in collaboration with her husband. Her career as a religious feminist began as a speaker at women's prayer meetings and grew into a full-scale championing of women's ministries, among them the early settlement house movement. Although she did not consider herself a theologian, her seventeen books and her editorship of the *Guide to Holiness* from 1864–1874 reached hundreds of thousands with her message of entire sanctification through baptism into the Holy Spirit, emphasizing that all humankind could enjoy the instantaneous spiritual empowerment experienced at Pentecost. Not just Methodists but also Baptists, Presbyterians, Episcopalians, and Congregationalists in the United States flocked to her banner, and whole segments of the Protestant world—Wesleyans, Nazarenes, the Salvation Army, and the Keswick movement in Britain and America—subscribed to her Holiness movement.

Dwight Lyman Moody (1837–1899) was a Chicago-based revivalist who bridged the traditions of Finney out of the Reconstruction era and into the cusp of the twentieth century. Like Finney, he used a utilitarian approach to evangelism that addressed the voluntary nature of American religion by presenting a compelling message the consumer should purchase. A product of the booming urbanization of the nation and the anxieties and necessities that entailed, he became the most successful traveling evangelist in the English-speaking world. Moody imitated many aspects of Finney's success, including transcontinental and transatlantic revival tours and targeting respected business leaders for support. In response to this, his detractors often accused him of religious profiteering. Theologically he embraced premillennial dispensationalism, a belief that Christ's return would include a physical rapture of believers out of the earth to avoid the tribulations described in the Book of Revelation. Moody helped wed this belief to revivalism in a way that would formatively shape the coming wave of fundamentalist

thought and practice with an emphasis on avoiding the coming tribulation by becoming converted. It is speculated by some historians that the base of support he built became the core of the fundamentalist movement of the twentieth century.

Critical Assessment

Nineteenth-century evangelicalism in the United States was forged by the experience with and reaction to two major events, the Second Great Awakening and modernism. In the process the phenomenon itself was transformed into something vastly different from its eighteenth-century roots. The Second Great Awakening not only multiplied but also forever changed the nature of evangelicalism to fit booming capitalistic and republican ideologies. Though never a unified front, it changed the culture at large and was in turn shaped into the image of emerging American dynamics. Smuggled into this dialectic, however, were the seeds of cultural crisis. Evangelical thought retained from its earlier ideology a wedding of common sense realism to biblical interpretation. A supreme confidence in the plain comprehensible nature of the Bible proved ill equipped for the issue of slavery, where the "plain" reading of scripture was claimed by both sides. This intellectual foundation faltered further when it encountered the problems of positivism and higher biblical criticism. The authority of the Bible, previously considered to be itself a form of scientific proof, was now under attack. Unable to utilize common sense realism or a strictly Baconian reasoning to justify itself to the larger culture, evangelicalism moved in two directions. The first was inward on itself, into the profundamentalist movement that would be fully realized in the next century. This phenomenon was in many ways an attempt to maintain nineteenth-century evangelicalism by reverting to a stance of antagonism with the wider culture. The other direction was to leave behind the ideologies of the past without abandoning the central tenets of orthodoxy. These evangelicals, with their continued emphasis on the salvation of the culture through reform, became the nucleus of the Social Gospel evangelicalism of the twentieth century but left unresolved how orthodoxy and deductive science reconciled with one another.

Evangelicals: Twentieth Century

America's evangelicals—those who define themselves by fidelity to the Bible as God's revelation to humanity and who believe in the centrality of a conversion, or “born again” experience—entered the twentieth century tentatively and with a great deal of caution. Evangelicalism in America emerged from the confluence of three “Ps” in the eighteenth century: Continental Pietism, Scots-Irish Presbyterianism, and the remnants of New England Puritanism. These movements came together in what historians call the Great Awakening, a revival of religion in the 1730s and 1740s that swept along the Atlantic seaboard and contributed to the Patriot cause during the American Revolution.

Whereas evangelicalism had been the dominant religious expression of the nation for much of the nineteenth century, especially after the Second Great Awakening, evangelicals began to lose their hegemony after the Civil War.

Intellectually, the publication of *The Origin of Species* in 1859 cast doubt on literal interpretations of the Creation account at the beginning of Genesis, and the German discipline of higher criticism called into question the authorship of several books of the Bible.

Socially and economically, the United States was changing, and not in a way that evangelicals found congenial. Massive urbanization and industrialization dramatically altered the demographic landscape late in the nineteenth century. The influx of non-Protestant immigrants, most of whom did not share evangelical scruples about temperance, also represented a threat. And whereas evangelicals earlier in the nineteenth century worked feverishly to construct a millennial kingdom on earth—and, more particularly, here in North America—by the close of the nineteenth century the teeming, squalid tenements on the Lower East Side of Manhattan, for example, no longer resembled the precincts of Zion that evangelicals had so confidently predicted.

The Roots of Fundamentalism

In response to these changing circumstances, evangelicals glommed on to a new mode of biblical interpretation, dispensational premillennialism, imported from Great Britain. John Nelson Darby, a member of the Plymouth Brethren, first visited the United States in 1862, during the Civil War, with his teachings that Jesus would return to earth before the millennium, the one thousand years of righteousness predicted in the Book of Revelation. This contrasted with the regnant evangelical belief, called postmillennialism, which held that Jesus would come again to earth after his followers had constructed the millennial kingdom. In the midst of the social changes of late-nineteenth-century America, Darby's views (also called dispensationalism, because all of human history, he argued, could be divided into different ages, or “dispensations”) caught on. Reflecting this new dispensational premillennial scheme, Dwight L. Moody, the Chicago evangelist, famously declared, “I don't find any place where God says the world is to grow better and better, and that Christ is to have a spiritual reign on earth of a thousand years. I find that the earth is to grow worse and worse, and at length there is going to be a separation.”

Moody's sentiment came to typify evangelicals' attitudes at the turn of the twentieth century. No longer were they actively setting the social and political agenda for the nation, as they had in the antebellum period with abolitionism, temperance reform, the formation of common schools, and woman suffrage. The adoption of dispensationalism signaled

instead a readiness to retreat from the larger society. At the same time that more theologically liberal Protestants embraced the Social Gospel, the ideology that Jesus was capable of redeeming not only sinful individuals but sinful social institutions as well, evangelicals steadily retreated from the cities and from the arena of social reform. This would be their posture as they entered the twentieth century.

The perceived drift toward liberal theology, or “modernism,” on the part of mainline Protestants hastened the evangelical retreat. In an attempt to arrest that drift, two evangelical laymen, Lyman and Milton Stewart of Union Oil Company of California, established a fund of \$250,000 for the production and dissemination of twelve pamphlets to every pastor, missionary, and Sunday school superintendent throughout the English-speaking world. This series of twelve publications, known collectively as *The Fundamentals*, each contained several articles written by evangelical theologians who staked out very conservative theological positions on everything from the virgin birth of Jesus and his bodily resurrection to the authenticity of miracles and the inspiration of the Bible. Some evangelicals, anticipating the emergence of a doctrinal touchstone for even more evangelicals later in the twentieth century, affirmed that the scriptures—Genesis through Revelation—not only were inspired by the Holy Spirit but were also without error in the original autographs and that any apparent errors or contradictions had crept into the text through the agency of copyists throughout the centuries. This doctrine of “inerrancy,” though implicit in the writings of some earlier theologians, had been articulated with special force and clarity by A. A. Hodge and B. B. Warfield in the pages of the *Presbyterian Review* in 1881. *The Fundamentals*, which included strong statements affirming the reliability of the scriptures, appeared between 1910 and 1915 and gained wide circulation among theologically conservative Protestants. Those evangelicals who affirmed the conservative doctrinal statements contained in the pamphlets came to be known as “fundamentalists,” a term that has since been applied more broadly to conservatives in other religious traditions: Hinduism, Islam, Judaism, Mormonism, and others. The word, however, historically belongs to evangelicalism in North America.

Pentecostalism

Whereas the fundamentalists’ desire to maintain doctrinal purity impelled them to separate from those they regarded as unbelievers (including, at times, other evangelicals),

other strains of evangelicalism defined themselves quite differently. At the turn of the twentieth century a movement known as Pentecostalism emerged onto the evangelical scene. Pentecostalism, in turn, had evolved from a nineteenth-century evangelical impulse called the Holiness movement. With its emphasis on probity and a warm-hearted piety, the Holiness movement sought to revitalize various evangelical denominations, especially Methodism. By the end of the nineteenth century, however, Holiness people had been marginalized in those denominations, so many of them reorganized into their own Holiness groups, such as the Christian and Missionary Alliance, the Church of God, Anderson, Indiana, and the Church of the Nazarene.

Still other Holiness people were drawn to Pentecostalism, which represented, in effect, a radicalization of Holiness impulses with its insistent belief in the gifts of the Holy Spirit, including speaking in tongues (glossolalia). The gift of tongues, as it became known, initially descended as “tongues of fire” on the first-century Christians on the day of Pentecost, as recorded in the second chapter of the Acts of the Apostles. Various individuals and groups throughout church history, such as the Camisards, also spoke in tongues, but the impulse coalesced into a discernible movement around the turn of the twentieth century. Scholars and the faithful disagree about the modern origins of Pentecostalism, but one rather prominent venue is Topeka, Kansas, on the first day of the new century: January 1, 1901. There, students at Charles Fox Parham’s Bethel Bible College had been studying the gifts of the Holy Spirit, and on New Year’s Day one of the students, Agnes Ozman, began speaking in tongues. Others followed, and Parham, an itinerant evangelist, carried news of what became known as the Topeka Outpouring with him on his peregrinations.

One of the people Parham influenced was an African American hotel waiter named William Joseph Seymour, a member of a group called the Evening Light Saints. Seymour attended one of Parham’s classes in Houston, Texas (although because of segregation Seymour had to listen from the hallway). When Seymour headed west to Los Angeles several years later to interview for a position as pastor, he carried with him Parham’s teachings about the gifts of the Holy Spirit. While staying with friends at 216 North Bonnie Brae Street in Los Angeles, Seymour began to attract crowds of the faithful and the curious. Speaking in tongues broke out, and soon the gatherings were so large that the front porch collapsed. Seeking another venue, these

early Pentecostals located an abandoned African Methodist Episcopal Church building at 312 Azusa Street. The meetings commenced there, at what became known as the Apostolic Faith Gospel Mission, on April 14, 1906, and continued for years thereafter. People flocked to the Azusa Street revival from across the continent. The movement's newspaper, *The Apostolic Faith*, reported scores of people being healed of various maladies. Those in attendance spoke in tongues. "Meetings are held in a tumble-down shack on Azusa Street," the *Los Angeles Times* reported, "and the devotees of the weird doctrine practice the most fanatical rites, preach the wildest theories and work themselves into a state of mad excitement in their peculiar zeal. Colored people and a sprinkling of whites compose the congregation, and night is made hideous in the neighborhood by the howlings of the worshippers, who spend hours swaying forth and back in a nerve racking attitude of prayer and supplication. They claim to have the 'gift of tongues' and be able to understand the babel."

Indeed, one of the hallmarks of the Azusa Street revival was its interracial character—Seymour himself was African American—as well as its inclusion of women, many of whom went on to become important leaders in the Pentecostal movement. According to Frank Bartleman, a contemporary, "The color line was washed away in the blood of Jesus." Sadly, however, as Pentecostalism institutionalized into denominations, it became racially stratified; over the course of the twentieth century ordained women became increasingly rare and marginalized in such Pentecostal denominations as the Assemblies of God.

Although the immediate effect of the Azusa Street revival was personal transformation, the long-term effect was the Pentecostal missionary impulse. Pentecostals left Azusa Street and fanned out across North America and, eventually, the world, bringing with them not only the evangelical experience of conversion but also the "baptism of the Holy Spirit" as evidenced by speaking in tongues. The Pentecostal missionary enterprise would be felt throughout the world, especially in Africa and Latin America.

Evangelists

Throughout its history evangelicalism has benefited from the innovations of a series of evangelists, especially itinerant preachers. George Whitefield (1714–1770), an Anglican priest who had been trained in the London theater, swept through the Atlantic colonies in the mid-eighteenth century with his extemporaneous preaching. And in a culture

without a theatrical tradition, Whitefield was enormously successful with his stentorian voice and his dramatic flourishes; contemporaries said that he could bring tears to their eyes simply by saying, "Mesopotamia." During the Second Great Awakening, in the decades surrounding the turn of the nineteenth century, Charles Grandison Finney (1792–1875) introduced several techniques to the revival tradition, including advertising, protracted meetings, allowing women to testify, and the use of the "mourner's bench," or "anxious bench," where auditors could gather to contemplate the state of their souls.

Dwight Lyman Moody (1837–1899), a former shoe salesman in Boston, brought revivalism to the cities, especially his adopted home of Chicago. And William Ashley Sunday (1862–1935), better known as "Billy," a former outfielder for various major league baseball teams, including the Chicago White Stockings and the Pittsburgh Alleghenies, initially served as an advance man for another evangelist, J. Wilbur Chapman (1859–1918). Sunday began his independent revival career at the opera house in Garner, Iowa, in 1896 before moving beyond what he disparagingly called the "kerosene circuit" to America's burgeoning cities following the turn of the twentieth century. Sunday used vaudeville tactics to entertain his audiences, and he took particular delight in his anti-intellectualism. "I don't know any more about theology than a jackrabbit does about ping-pong," he'd declaim, "but I'm on the way to glory."

Equally flamboyant was Aimee Semple McPherson (1890–1944), a Pentecostal evangelist known almost universally as "Sister Aimee." Born in Ontario, Aimee married evangelist Robert Semple, and in 1910 they headed for China as missionaries. Robert died of typhoid fever, however; Aimee remained in Hong Kong for the birth of their daughter and then returned to North America. She cycled through various jobs and stints as a traveling evangelist before setting out for California in 1918 in her "Gospel Auto," stopping along the way to attract crowds, preach, collect an offering and head to the next town. By 1923 McPherson had dedicated her spectacular Angelus Temple in the Echo Park neighborhood of Los Angeles, an auditorium (arguably the original "megachurch") with a stage for her lavish sermon productions. She recognized that she was competing with Hollywood across town, and more often than not she held her own. McPherson also branched out into the new medium of radio with her own station, KFSG ("Kalling Four Square Gospel"), and she formed her own denomination, the International Church of the Foursquare

Gospel, dedicated to Jesus as “Savior, Baptizer, Healer, and Coming King.”

Billy Graham and Neoevangelicalism

By far the most influential evangelist of the twentieth century, however, was Billy Graham (1918–). Reared on a dairy farm in North Carolina, William Franklin Graham was converted during a 1934 revival meeting in Charlotte, North Carolina, conducted by Mordecai Ham (1877–1961). Graham spent a semester at Bob Jones College (now University) before transferring to Florida Bible Institute and then to Wheaton College, where he graduated in 1943. After a brief (and undistinguished) stint as a pastor, Graham was hired as a traveling evangelist for a new organization called Youth for Christ.

The young, charismatic evangelist soon established himself as an effective and crowd-pleasing preacher. His career received an enormous boost during his 1949 revival campaign in Los Angeles, where he preached beneath what he called the “canvas cathedral” on the corner of Washington and Vine in downtown Los Angeles. Newspaper magnate William Randolph Hearst, impressed with Graham’s anti-communist rhetoric and his ability to draw large audiences, instructed his papers to “puff Graham.” The nascent Graham organization, which would incorporate itself as the Billy Graham Evangelistic Association the following year, worked the machinery of publicity brilliantly, effectively making Graham into a religious celebrity by marketing him in print, radio, television, even motion pictures.

Early in his career, Graham, who had been reared as a fundamentalist, made a conscious decision to reject the narrow, sectarian fundamentalism of his past in favor of a broader, more inclusive evangelicalism (also known as neoevangelicalism). This suited Graham’s irenic nature, and it also ensured a greater audience for his preaching. He also rejected the challenge of his friend and fellow Youth for Christ evangelist Charles Templeton (1915–2000) to attend Princeton Theological Seminary. Graham, following a period of intensive prayer and soul-searching, decided while on a spiritual retreat in the San Bernardino Mountains of Southern California simply to accept the Bible at face value and “preach the gospel.” Templeton, on the other hand, attended Princeton, served briefly as an evangelist for the National Council of Churches, and then left the faith altogether. For many twentieth-century evangelicals, the divergent paths of Graham and Templeton served as a kind of morality play, a cautionary tale about the perils of unbridled intellectual pursuits.

North Carolinian Billy Graham is often cited as the most influential evangelist of the twentieth century.

Despite Graham’s own lack of seminary training, however, the neoevangelicalism he represented was not anti-intellectual. In 1947 several evangelical leaders led by Harold John Ockenga (1905–1985) of Boston’s Park Street Church, theologian Carl F. H. Henry (1913–2003), and others cooperated in the founding of Fuller Theological Seminary in Pasadena, California. Named for radio pioneer Charles E. Fuller (1887–1968), and funded in large measure by contributions solicited on his *Old Fashioned Revival Hour*, Fuller Seminary aspired to provide intellectually respectable and theologically sound education for evangelicals, a safe haven from what many evangelicals perceived as the entrenched liberalism at such places as Princeton Theological Seminary.

As his career and renown blossomed in the 1950s, Graham also recognized the importance of popular communications. Up until that point the magazine *Christian Century* was considered the standard publication for American Protestantism. In the mid-1950s Graham urged the

formation of an evangelical alternative to *Christian Century*. The magazine known as *Christianity Today* began publishing in 1956 and eventually surpassed *Christian Century* in circulation.

The Evangelical Subculture

Despite the efforts on the part of Graham and others to move evangelicalism beyond the narrow confines of fundamentalism, the sectarians still asserted a powerful hold for much of the twentieth century. When Graham enlisted the cooperation of mainline Protestant clergy during his famous 1957 Madison Square Garden crusade in New York City, for example, he earned the lifelong enmity of such fundamentalist leaders as Bob Jones Jr. (1911–1997), Jack Wyrzten (1913–1996), and Carl McIntire (1906–2002) for consorting with the (theologically liberal) enemy.

Indeed, many evangelicals in the twentieth century infinitely preferred to remain cosseted within the evangelical subculture, a vast and interlocking network of evangelical congregations, denominations, Bible camps, Bible institutes, seminaries, publishing houses, and missionary societies. The evangelical subculture was constructed in earnest during the middle decades of the twentieth century, and the catalyst (symbolically, at least) was the Scopes trial in 1925. After the Tennessee legislature passed the Butler Act, which forbade the teaching of evolution in public schools, civic boosters in Dayton, Tennessee, recruited a teacher from the local high school, John T. Scopes, to stand trial and test the constitutionality of such a law. Two of the most famous attorneys in the country, Clarence Darrow and William Jennings Bryan, three-time Democratic nominee for president, squared off in the second story of the Rhea County courthouse in a trial that attracted media attention throughout the nation. Although Bryan ostensibly won the case—Scopes was convicted of violating the Butler Act and fined \$100—Darrow had succeeded in making Bryan and, by extension, other evangelicals look foolish in the larger courtroom of public opinion.

Evangelicals responded to the Scopes trial by withdrawing from a world that they increasingly regarded as both corrupt and corrupting. The evangelical subculture became a refuge, a secure redoubt from the larger culture and, not incidentally, a safe haven for their children. Evangelical camps, colleges, and institutes flourished in these middle decades of the twentieth century. Many evangelicals, still looking for the imminent return of Jesus, forswore political activity as both a waste of a believer's time and as yet another

seduction of Satan. "Believing the Bible as I do," Jerry Falwell (1933–2007), pastor of the Thomas Road Baptist Church in Lynchburg, Virginia, famously preached on March 21, 1965, "I would find it impossible to stop preaching the pure saving gospel of Jesus Christ, and begin doing anything else—including fighting communism or engaging in civil rights reforms."

Evangelicals and Media

One of the most durable myths about evangelicals is that they are somehow suspicious of modernity and technology. Although evangelicals distrust modernity in the sense of a moral valence, as exemplified by moral relativism and ethical laxity, evangelicals in the twentieth century embraced technology, especially communications technology, with great enthusiasm. Evangelicals such as Lois Crawford, Aimee Semple McPherson, and Charles E. Fuller were pioneers in the use of radio as an evangelistic medium; similarly, Oral Roberts (1918–2009), Pat Robertson (1930–), Jerry Falwell, and others were pioneers in television.

Marion G. "Pat" Robertson, a graduate of Yale Law School who failed the bar exam and a graduate of Biblical Seminary of New York (now New York Theological Seminary), purchased a defunct television station in Portsmouth, Virginia, in 1961 and grandly dubbed it the Christian Broadcasting Network. Robertson hired a young couple, Jim (1940–) and Tammy Faye (1942–2007) Bakker, who were both Assemblies of God evangelists specializing in youth ministry. The Bakkers provided programming with puppets, and Jim Bakker added a talk show, modeled unabashedly on the *Tonight Show*. When seven hundred donors responded to Robertson's call for financial support, he named the show the *700 Club*. Soon, aided by a favorable ruling from the Federal Communications Commission, Robertson added affiliates and, eventually, a satellite.

Robertson decided to take over as host of the *700 Club*, whereupon the Bakkers left to help found the Trinity Broadcasting Network in Southern California with Paul and Jan Crouch. A boardroom putsch forced the Bakkers out once again; they returned east to the Carolinas, where they founded the PTL television network (short for "Praise the Lord" or "People That Love" or, according to critics, "Pass the Loot"). Jim and Tammy Faye proved remarkably successful at adding affiliates and attracting donors. They too secured a satellite and began construction on a massive theme park in Fort Mill, South Carolina, called Heritage USA.

At the height of its popularity, Heritage USA was the third most attractive tourist destination in the United States, after Walt Disney World and Disneyland. A sex scandal that came to light in 1987, however, involving Jim Bakker and a church secretary from Long Island brought the whole empire down. Bakker was eventually convicted of mail fraud in connection with his fund-raising for Heritage USA and sentenced to prison. Shortly thereafter, another scandal brought down Jimmy Swaggart (1935–), a fellow Assemblies of God televangelist, based in Baton Rouge, Louisiana.

The Politicization of Evangelicalism

Despite Billy Graham's very public friendships with a series of American presidents, beginning with Dwight Eisenhower, evangelicals remained profoundly suspicious of political engagement until the 1970s. By the mid-1970s, however, in part as a reaction to the corruptions of Richard M. Nixon (paradoxically, one of Graham's closest friends), many evangelicals responded to the candidacy of Jimmy Carter, a Southern Baptist Sunday school teacher and former one-term governor of Georgia. Evangelicals were heartened by Carter's open declaration, in the course of his 1976 run for the Democratic presidential nomination, that he was a "born-again" Christian. Although by no means did all evangelicals support him, Carter's successful campaign for the presidency in 1976 lured many evangelicals, southerners especially, into the political arena.

At the same time, however, other political operatives had very different designs on evangelical voters. As early as 1964, conservative organizer Paul Weyrich (1942–2008) recognized the untapped electoral potential of evangelicals. According to his own account, he tried various issues to interest evangelicals in the machinations of politics: prayer in public schools, pornography, abortion, and others. A court ruling in 1971, however, provided the opening that Weyrich sought. On June 30, 1971, the district court for the District of Columbia sided with the Internal Revenue Service in the case *Green v. Connolly*, ruling that any organization that engages in racial segregation or discrimination is not, by definition, a charitable organization and does not, therefore, qualify for tax-exempt status. In the ensuing years, the IRS sought to enforce the provisions of *Green v. Connolly*, seeking compliance from various so-called segregation academies but also targeting a fundamentalist school, Bob Jones University, in Greenville, South Carolina.

Until 1971, Bob Jones University refused to admit African Americans to its student body. Finally, after years of

warnings, the IRS rescinded the university's tax exemption on January 19, 1976, in an action that would eventually find its way all the way to the United States Supreme Court in the fall of 1982 (the Court upheld the IRS in an 8-1 decision). The perception on the part of evangelical leaders that the government was intruding into the affairs of the evangelical subculture, however, provided the presumed offense that Weyrich was able to translate into evangelical political activism late in the 1970s. The 1978 U.S. Senate race in Iowa, in which the Democratic incumbent, Dick Clark, narrowly lost to Roger Jepsen, the Republican challenger, demonstrated to Weyrich and other leaders of the incipient religious right the utility of abortion as a political issue. Two years later the religious right, led by Jerry Falwell, James Robison (1943–), Tim LaHaye (1926–), and others, used abortion to help defeat Carter, a fellow evangelical, in his bid for a second term.

Although *Newsweek* had designated 1976 as the "Year of the Evangelical," in large measure because of Carter's run for the presidency but also because of the popularity of a book entitled *Born Again* by convicted Watergate felon Charles Colson (1931–), the year 1980 was even more portentous for evangelicals. All three major candidates for president—Carter, the incumbent; John B. Anderson, Republican member of Congress from Illinois running as an independent; and Ronald Reagan, the Republican nominee and former governor of California—claimed to be evangelical Christians. Reagan, the man with arguably the most tenuous connection to the movement, won the majority of evangelical votes and swept into office.

Evangelicalism No Longer a Counterculture

When evangelicals operated almost entirely within their own subculture, especially during the middle decades of the twentieth century, their attitude toward the larger society was decidedly suspicious, especially on matters of affluence. With political success and media presence, however, that posture began to change. Evangelicals became more prominent in politics (with the rise of the religious right), in entertainment (with the success of such "crossover" artists as Amy Grant and Jars of Clay and the popularity of a genre called Contemporary Christian Music), even in the academy (with the emergence of several evangelical scholars and the academic study of evangelicalism itself).

As evangelicals emerged from their subculture and into the broader society, however, their attitude toward that larger world began to change. A movement called prosperity

theology, which had emerged in the 1940s but had always been an aberration among evangelicals, became popular during the Reagan era of the 1980s. This theological innovation, especially as propagated by the televangelists, promised worldly emoluments to the faithful—fine jewelry, fancy automobiles, vacation homes—especially if they channeled contributions to the televangelists themselves.

Some evangelical leaders, in particular, relished their own access to the councils of political power. The religious right's opposition to abortion, beginning in the late 1970s, and the castigation of what its leaders called "secular humanism" had transformed evangelicals into a potent political force, making them the backbone of the Republican Party, much the way that labor unions once supplied organization and volunteer efforts for the Democratic Party. Grateful politicians courted the support of politically conservative evangelicals, especially the leaders of the religious right.

Evangelicalism in the Twentieth Century

Evangelicals exited the twentieth century far differently from the way they entered. With only a small contrivance, evangelicalism's posture toward the wider society can be divided into four twenty-five-year periods. From 1901 until 1925 evangelicals were growing more and more *suspicious* toward the larger world, especially the theological and intellectual currents that threatened to overwhelm them. From 1926, the year after the Scopes trial, until 1950, evangelicalism was characterized by *separatism* from a culture that evangelicals came increasingly to regard as both corrupt and corrupting. Beginning at midcentury evangelicals began, albeit cautiously, a period of *engagement* with the larger society, an attitude of cooperation that was exemplified in many ways by Billy Graham, who adopted corporate-style management techniques and who initiated a series of very public friendships with American presidents. Finally, the campaign of Jimmy Carter in 1976, followed (paradoxically) by the rise of the religious right in the late 1970s, ushered in a period of *worldliness*, when evangelicals made their mark in politics, media, entertainment, and the academy.

By the turn of the twenty-first century, evangelicals had insinuated themselves into virtually every niche of American society and culture. In so doing, they restored the movement to a level of influence it had not enjoyed since the antebellum period.

Evolution, Creation Science, and Intelligent Design

In 1859 the British naturalist Charles Darwin (1809–1882) published *On the Origin of Species*, setting the scientific and religious worlds off in a still-vibrant debate. A work several decades in the making, *Origin* proposed a theory of undirected biological development in which all living things were related to each other and to a common ancestor. Further, Darwin asserted, this evolution occurred over a period of millions of years and through a process of natural selection, whereby natural forces selected from among the multiple variations of creatures the ones most fit for the environments in which they lived. The theory proved controversial in Darwin's England because it was seen as challenging existing religious understandings of humans' place in a divinely created and controlled universe. Such controversies have proven even more volatile and long-lived in the United States.

Scientists have investigated and refined biological theories of evolution since the 1860s, although the modern evolutionary synthesis accepted by the vast majority of working biologists builds largely on Darwin's theories. Creation science and intelligent design (ID) are both twentieth-century developments of an older philosophical tradition that argues for a divine or supernatural creation of all life. Creation science emerged in the 1960s when efforts were initiated to challenge the science and teaching of evolution by presenting conservative Protestant versions of narratives of creation from the biblical Book of Genesis sprinkled with scientific language. Drawing upon medieval Christian arguments for God from the design of the universe, intelligent design was born in the 1980s. By the early twenty-first century, it had emerged as the leading antievolutionary theory, arguing that scientific theories of evolution are insufficient for explaining the origins and complexity of biological life. The only recourse is to assign credit to an unidentified intelligent designer that many Christians could recognize as the God of Genesis.

Scientific Responses to Darwin

The practice of easily substituting the terms *Darwinism* and *evolution* for each other is complicated by at least three factors. First, Darwin's own theories changed over time. Second, many scientists who had embraced evolution by the early 1900s did so without fully embracing Darwin's understanding of how evolution operated. Third, the modern evolutionary synthesis that dates to the 1940s has greatly modified Darwin's original theory through continuing research and the development of new branches of science such as population genetics.

Before the appearance of *Origin*, several transmutation or development theses were circulating among Western scientists, but Darwin provided compelling evidence of development within existing species, the emergence of new species, and the common ancestry of many current life forms. In writing *Origin*, Darwin asserted he had two goals, the most important of which was to discredit understandings of a separate, divine creation of all life forms. Second, he offered the new and stunning argument for the mechanism of natural selection as the engine behind these developments. Early adopters of Darwin's evolutionary theories typically accepted his first argument but not his favored mechanism of natural selection.

Darwin's account of organic development proved attractive to biologists in the latter half of the nineteenth century, in part because of biologists' growing self-consciousness

about relying on divine intervention to explain the origins and speciation of biological forms. Earlier in the century, the science of geology had been remade through Charles Lyell's (1797–1875) and others' insistence on uniformitarianism, or the assertion that only forces of nature detectable at the present time could be invoked to explain geological history. Darwin's theory did not require divine intervention but instead relied on natural laws with observable results. By 1880 the majority of American scientists embraced the concept of evolutionary development.

The world after 1859 was increasingly marked by a cultural competition between science and religion for primacy in explaining the history and organization of the natural world. Christians in the nineteenth century and before had viewed science and theology working often in concert, not opposition. Working with the concept of a Creator God who revealed himself in two "books"—nature and scripture—most Christians assumed that the God revealed in the natural world and the God of the scriptures were the same. Given such a worldview, any apparent contradictions between the science and religion were assumed to arise from imperfect human understanding.

In the twentieth century, it became increasingly difficult to argue that evolution followed any sort of supernatural design or that biological history showed a divine purpose. Whereas Christian intellectuals had in centuries past pointed to the natural world for evidence of God's existence and creative power, they were forced by the implications of the evolutionary theory to reassess the relationship between religion and science.

Religious Responses to Darwin and Evolution

The transmission of Darwin's theories to North America meant that by the beginning of the twentieth century American Christianity would divide into two camps that disagreed not just about evolution but over the sources of truth and knowledge. One side viewed Darwin's hypothesis as incompatible with existing understandings of God and his creation as related in the Bible. They opposed the theory of naturally explainable organic development, fearing a dilution of human uniqueness. The other side (the greater number of religious intellectuals) assumed that natural scientists—the vast majority of whom by 1900 had embraced some version of evolution—were correct. Holding to their belief that science and theology did not ultimately conflict, they sought to reconstruct theology in light of the new science to see God's creation and thus relationship to the world as progressive and continuous.

In the 1860s scientists seemed divided, and many were even dismissive of Darwin's theories. But as the tide of scientific opinion turned toward his transmutation theory, by the 1870s American religious thinkers were forced to reconsider their alliance with scientists. Princeton's Charles Hodge perhaps best represents the small but influential ranks of Protestant intellectual opponents of evolution in the late nineteenth century, arguing in his 1874 book *What Is Darwinism?* that belief in evolution was nothing short of atheism. By denying the possibility of divine design in nature, evolutionists were in fact denying the existence of God.

While Hodge and his followers stood firm in their belief that the Bible provided a complete and inerrant guide to divine truth, Protestant intellectuals willing to accept the notion of evolution instead found in the revelations of science a new way to understand the divine's relationship with humans. Instead of believing that revelation ended with the events recorded in scriptures, progressive theologians put greater emphasis on human powers of reason, a continuing act of creation (through evolution), and an ongoing revelation of divine truth. Lyman Abbott was perhaps the most outspoken of these thinkers, arguing in *The Theology of an Evolutionist* (1897) that human evolution allowed an ever-greater ability to understand God.

The majority of Christian intellectuals and everyday believers sought some form of theistic evolution as an accommodation between the new sciences and old beliefs. Evolution of animals and plants was one thing, but the majority of American Protestants at the turn of the twentieth century sought to exclude humanity from evolutionary history, maintaining at least a special creation of mankind. Still, even most conservative Christians accepted the growing paleontological evidence for an ancient Earth. Science and scripture did not contradict, they argued, because the account of creation in Genesis could be interpreted by treating the "days" of creation as instead vast ages of time or by positing an immense chronological "gap" between the first ("In the beginning") and later verses that described the Edenic creation taking place in more traditionally understood days of twenty-four hours.

Organizing Creationism

The first half of the twentieth century would witness the rise to prominence of a number of religious critics of evolution who claimed scientific authority. Although opponents of evolution are sometimes labeled as "creationists," the great variety of theological and scientific beliefs held by

antievolutionists render the term a bit vague. Most opponents of evolution in the early twentieth century were willing to accept evidence of an ancient Earth, while others—a few at the time but many more by the end of the twentieth century—had a much more constrained timeline. Some accepted changes within species, but none allowed for the creation of new species. To accommodate the mounting evidence for an ancient Earth, believers in creation science could follow the "gap" theory presented in the Scofield Reference Bible, which posited a time lapse after the first verse of Genesis. Or they might believe, like attorney and antievolution crusader William Jennings Bryan, that each "day" of divine creation in the Genesis account of creation could actually be a longer geological "age." Antievolutionists would work—and find some success—in limiting the presence of evolution education in American classrooms, but their disagreements would forestall uniting around a theologically coherent and scientifically respectable account of creation.

Concerned that the divisions among evolution's religiously motivated opponents was blunting their message, a California farmer named Dudley Joseph Whitney organized the Religion and Science Association (RSA) in 1935 with the hope of harmonizing the various creationist interpretations of Genesis. His plan was to gather a number of like-minded scientist-theologians who could serve as an authoritative body for fundamentalists, but the RSA's board of directors included representatives of several different religious organizations (Missouri Synod Lutherans and Seventh-day Adventists, among others) who could not agree on a single interpretation of creation.

Although the organization sought the trappings of scientific legitimacy, ultimately the RSA founders were committed to an interpretation of Genesis that required a radical rejection of scientific evidence for an ancient Earth. Before 1925, Whitney had believed, along with many other conservative evangelicals, in a ruin-and-restoration theory (which held that life on Earth had been ruined and then restored as described in the Genesis account) that could explain the ancient age of fossils yet preserve a recent creation of humans as described in Genesis. While some members remained committed to ruin-and-restoration or the day-age or gap theories, Whitney and the RSA would later become advocates of flood geology. This theory was originally promoted by George McCready Price (1870–1963), a Canadian-born Seventh-day Adventist who in some six decades worth of publications argued against the mainstream

scientific understanding from fossils and their placement that the Earth was ancient. Instead of Lyell's uniformitarianism, Price advocated what he would call the "new catastrophism," arguing for a young Earth and a worldwide flood as described in Genesis that could explain the placement of fossils. Dismissed by scientists as a crank and kept at a distance by many fundamentalists because of his Adventist sectarianism, Price continued publishing his theories of flood geology and would find vindication in the late twentieth century, when the majority of creationists adopted his ideas as their own.

After the demise of the RSA, Price and some of his disciples persevered, forming the Deluge Geology Society in Los Angeles in 1938. Even though the society limited membership to believers in flood geology, it too foundered within a decade as members disagreed over the age of the Earth and how best to explain the diversity of life forms. As the middle of the twentieth century approached, mounting scientific evidence for evolution and an ancient Earth would increasingly trouble some Christian scientists. The American Scientific Affiliation (ASA), founded in 1941 by evangelical scientists, demonstrates the transition of many Christian scientists toward theistic evolution and the widening gulf between evangelicals and fundamentalists that would mark the second half of the century.

At their initiation, ASA members pledged an oath that harkened back to an older idea: God's word was written in both scripture and nature, and thus the two cannot conflict. While the pledge could read as an endorsement of biblical inerrancy, in reality its spirit seemed to allow or maybe even mandate that members reconsider not just the science of evolution but also their theology. Soon after the ASA founding, leading ASA members focused not just on evaluating evolutionary science but also on dismantling the patently unscientific claims of fellow Christian antievolutionists like George McCready Price. In the 1950s the organization was divided theologically, though the majority of the membership endorsed a theistic form of evolution that allowed for the natural, if divinely guided or inspired, development of all life, including humans.

Many antievolutionists are motivated by a sense that evolution and Christianity must conflict, yet the ASA was joined in the last decades of the twentieth century by an increasingly vocal generation of scientists who proclaim both Christianity and an acceptance of biological evolution. Kenneth R. Miller, author of one of the most widely used biology textbooks in American high schools in the early

2000s, a cell biologist at Brown University, and a devout American Catholic, promoted the ability to be both scientist and believer in his *Finding Darwin's God: A Scientist's Search for Common Ground between God and Evolution* (1999). Similarly, Dr. Francis Collins, who headed the Human Genome Project, has argued in print and numerous media appearances that the more he learned of human genetics the more he appreciated the divine role in evolution. Internationally, John Polkinghorne, a British particle physicist and ordained Anglican priest, has written widely on his continuing embrace of a unified truth available in both scientific investigations of the world and theological approaches to scriptures.

The Genesis Flood and a Creationist Revival

While the history of the American Scientific Affiliation suggests a victory of science and liberal Protestantism in the mid-1900s, fundamentalism was not dead. Indeed, in the late 1950s fundamentalism was poised for rebirth, springing to prominence with an updated version of flood geology, Price's new catastrophism that had once been on the fringe even within fundamentalist circles. This new wave was led by Old Testament scholar John C. Whitcomb Jr., who held undergraduate degrees in history from Princeton University and theology from Grace Theological Seminary, and hydraulic engineer Henry M. Morris, a Southern Baptist Phi Beta Kappa member who earned his PhD from the University of Minnesota before spending nearly two decades on the faculty at Virginia Tech. The two scholars cooperated in the production of *The Genesis Flood*, which first appeared in 1961. Opening with an affirmation of their belief in the inerrancy of scriptures, the authors revived, largely without direct attribution, Price's theory of deluge geology. Whitcomb explained the theology while the engineer Morris sought to explain the science. While the book did little to soothe the division among Christian scientists that was revealed in the ASA's struggles, its popularity among evangelical readers resulted in a steady growth of young Earth creationism among conservative American Protestants.

The publication of *The Genesis Flood* was the leading edge in a creationist revival that continues into the twenty-first century. Coauthor Henry Morris would band together with other committed creationists to found the Creation Research Society (CRS). Based in San Diego, California, around Morris's Institute for Creation Research, the CRS adopted a militant stance on the compromises that had

marked previous organizations like the ASA. The CRS began as a movement within the ASA, which had by the early 1960s moved toward an embrace of theistic evolution, the view that evolution was the method used by God in “creating” the universe and that God is the force behind evolution. CRS leaders included, in addition to Morris, young Earth creationists and flood geology advocates like Missouri Synod Lutheran, former member of the Deluge Geological Society, and PhD biologist Walter Lammerts. Like Lammerts and Morris, the leadership of CRS all had graduate science training, seven having earned doctorates in science or engineering. They sought to ground their creationism in science, stripping off biblical references from their antievolution arguments.

The flood geology and young Earth creationism of George McCready Price was very much alive in the work of the CRS, yet it now appeared as “scientific creationism” or “creation science.” At first the society focused on building a respectable scientific record for creationism. As new controversies over the place of evolution in public school classrooms erupted in the 1960s, Henry Morris saw an opportunity to retask the arguments of *The Genesis Flood* and the work of the CRS. When Texas antievolutionists objected to the state’s adoption of new biology texts that explicitly placed evolution at the center of the science, they searched in vain for alternative texts. Zondervan publishers brought out CRS’s *Biology: A Search for Order in Complexity* in 1970, quickly selling out its first printing when several states approved the text for use. But before the text could be widely adopted, it became mired in legal controversy as some parents objected to its explicit biblical references and arguments for creation. Undeterred, the CRS would use the royalties from book sales to fund some research in creation science and consider how to get its ideas into the broad public school market.

Evolution and Religion in the Legal Arena: The Scopes Era

The situation of the CRS textbook provides a good example of the legal context within which American creationists would most visibly struggle against evolution. At the same time that evolution was gaining acceptance in American scientific circles, the role of government in the lives of Americans was growing significantly. In the late nineteenth and early twentieth centuries, Progressive education reformers were working to formalize schooling by the state to reach more children. Gradually, in the place of

a nineteenth-century model of education based in the home or church, Progressive reforms substituted state-run schools with standardized curricula and compulsory attendance laws. Even as creationists continued to debate among themselves how best to interpret the Genesis account of creation, or how much to accommodate the findings of modern science, if they wanted to contest the presence of evolution in the American public square they would have to go to legislatures and courts.

The first tactic, when preaching against evolution had seemed to reach its limit of effectiveness, was to outlaw the teaching of evolution in public schools. The 1925 trial of Tennessee high school teacher John T. Scopes (*State v. John Scopes*) was central to the development of American understandings of the relationship between evolution and religion. Scopes, a young science teacher new to the small town of Dayton, Tennessee, agreed to help town leaders eager for publicity and a nascent American Civil Liberties Union (ACLU) test a recently enacted state law forbidding at any publicly supported school instruction that “denies the Story of Divine Creation of man as taught in the Bible, and to teach instead that man has descended from a lower order of animal” (Tennessee House Bill 185, 1925).

Tennessee had only recently expanded its public education system to include a high school in every county, thus introducing many more students and their parents than previously to what by the time had become scientific orthodoxy: biological evolution. Several other states, among them Oklahoma and Florida, had enacted antievolution laws in the preceding year, but Tennessee’s provision of punishment to an offending teacher raised the possibility of a legal challenge. Pitting two legal and political celebrities—three-time presidential candidate and prosecutor William Jennings Bryan squared off against the outspoken atheist defense attorney Clarence Darrow—the two-week trial captured a national audience. WGN radio broadcast the trial while a large pool of reporters telegraphed stories to newspapers across the country. In the end, to nobody’s surprise, Scopes was convicted and fined. His conviction would be overturned on appeal because of a technicality, but Tennessee’s law would remain on the books for more than four decades after the trial’s conclusion.

Despite the prosecution’s legal victory and the growing number of states that introduced antievolution legislation in the following years, some contemporary observers and a number of historians since have pointed to the 1925 trial as the death of the antievolution movement. In 1926 *The*

Christian Century pronounced (prematurely) the death of fundamentalism, and the midcentury stage play turned popular motion picture *Inherit the Wind* painted the end of the *Scopes* trial as a demise to the antievolution movement. William Jennings Bryan—the most visible spokesman against evolution—died in the days following the trial’s conclusion.

But even the critic H. L. Mencken, who disliked Bryan, predicted by October 1925 that Bryan’s work would continue and perhaps even grow. Antievolution measures would be introduced in fourteen different states in 1927, and Tennessee’s law remained on the books until 1967. Market forces and the caution of textbook publishers perhaps gave antievolution advocates their greatest victory.

High school biology books were new creations in the early twentieth century; they were written by the first generation of natural scientists to have grown up with evolutionary theories and thus they prominently featured Darwin’s ideas. Teacher Scopes was not sure he had taught the theory but in court pointed to the state-approved textbook, George W. Hunter’s *Civic Biology* and its explicit coverage of evolution—including human evolution—as proof. All high school science teachers in the state could have faced the same legal jeopardy as Scopes. To avoid controversy and thus sell more texts to the increasingly national school market, publishers decreased coverage of evolution or removed it altogether. The American Book Company produced a new version of Hunter’s text in 1926 that eliminated the use of the word *evolution* and downplayed most of the explicit coverage of the concept that had marked the previous version of the schoolbook.

The ALCU had orchestrated the challenge of the Tennessee antievolution law with the goal of reaching an appellate court that could rule on the law’s constitutional merits. When the trial judge set Scopes’s fine, instead of allowing the jury to do so, he unwittingly provided the means to overturn the conviction without having to address the constitutionality of the law itself. The U.S. Supreme Court had not yet begun to apply the religion clauses of the First Amendment to the actions of state governments, so it is not likely they would have ruled Tennessee’s law unconstitutional. Although the Supreme Court gradually incorporated these changes in the 1940s, it would not be until the late 1960s that it applied them directly to the issue of antievolution legislation by state governments. When Arkansas schoolteacher Susan Epperson, joined by several parents, challenged that state’s antievolution law (enacted 1928), the

Supreme Court moved unanimously to invalidate the statute (*Epperson v. Arkansas* [1968]). Choosing among several reasons to oppose the law, Justice Abe Fortas’s majority opinion focused on the U.S. Constitution’s establishment clause prohibition against laws having only a religious intent or primarily a religious effect.

A Cold War Creationist Revival

The Cold War environment proved a mixed blessing for conservative Christians: while the specter of “Godless Communism” would give new inspiration to a blending of patriotism and religion, the military threat implied by Russian rocket science would inspire greater emphasis on science education in American schools. In 1957, when the Soviet Union launched the satellite *Sputnik*, American defense and educational interests became more explicitly connected than ever before. Federal funding of scientific research, alongside efforts to improve science education, had more than tripled by 1959. The Biological Sciences Curriculum Study led to a series of textbooks that would feature evolution, including human evolution, at the center of biology. These books would introduce evolution to millions of Americans, but at the same time they would give new inspiration to antievolution efforts. In the ensuing decades what historian Ronald L. Numbers has termed a “creationist revival” would grow.

The new face of antievolution in the 1960s and beyond would show the marks of nearly a century of theological and legal struggle. Instead of seeing the Supreme Court *Epperson* verdict as a total defeat, antievolutionists saw in it a way to reach their goals. Although a ban on teaching evolution, or to require explicitly religious teaching, was no longer feasible, the new creationism of the 1960s and beyond would present itself not as religion but as a valid scientific alternative to evolution. Whitcomb and Morris’s *The Genesis Flood* provided an important center to this creationist revival of the 1960s and 1970s, and their “creation science” would dominate the antievolution platform through the 1980s.

Tennessee had only recently repealed its antievolution statute when the 1973 legislature mandated that public school textbooks give “equal space” to theories other than evolution “including, but not limited to, the Genesis account in the Bible.” The legislative debates leading to the law’s passage left no doubt of the law’s religious intent, and the Sixth Circuit Court of Appeals in *Daniel v. Waters* (1975) found that it violated the establishment clause. In the wake of this apparent defeat, antievolution continued to evolve, and its

promoters would strive to downplay or mask the religious intent or effect of their actions and instead to emphasize their scientific goals and impact. Yale Law School graduate Wendell Bird would join forces with Henry Morris's Institute for Creation Research to draft a model equal-time resolution for supporters to push in their own states. In 1981 Arkansas and Louisiana passed equal time laws, but despite Bird's improvements, these laws suffered the same legal fate as Tennessee's 1973 law.

The Supreme Court decision in *Edwards v. Aguillard* (1987), overturning Louisiana's equal time law as an unconstitutional attempt by the state to promote religion, still left room for a new generation of antievolutionist arguments. In general, these have moved in two complementary directions. Chastened by the failure of state laws to limit or balance the teaching of evolution, science opponents have concentrated on securing their goals at the level of local schools or state educational standards. Creationist readings of the *Edwards* decision seemed to allow schoolteachers to introduce critiques of evolution voluntarily, and polling from the 1990s suggests a significant number of teachers (as high as 69 percent in Kentucky) supported teaching some form of creation science. At the same time, these antievolutionists have continued to stress, at least in public, their nonreligious motivations for opposing the teaching of evolution in public schools.

The Era of Intelligent Design

While Morris and Whitcomb were the leading figures of the creationist revival of the 1970s and 1980s, University of California law professor Phillip Johnson was the leading figure or at least the strategic genius behind the cultural and legal assaults on evolution at the end of the twentieth century. Inspired by the extreme arguments of Richard Dawkins, a British evolutionary biologist (1941–) that evolution allowed or even necessitated atheism, Johnson argued in his 1991 book *Darwin on Trial* that the methodological naturalism of scientists was itself a religion. Early efforts to bar the teaching of evolution as an establishment clause violation have not successfully survived constitutional challenge, but Johnson's contentions that introducing students to critiques of evolution can further a secular educational goal has been of more lasting consequence. Antievolutionists have sought to discredit evolution as "only a theory" and to require the teaching of alternative theories of biological development in public schools. In 1996 the state of Alabama attached a warning label to public school

biology textbooks, which read in part, "No one was present when life first appeared on earth. Therefore, any statement about life's origins should be considered as theory, not fact." The Alabama stickers have been altered twice since 1996, but they remain in use. Similar stickers added to Cobb County, Georgia, biology texts in 2002 were removed as the result of a 2006 legal settlement.

Johnson was also closely connected to the rise of a new and potent form of antievolution: intelligent design theory. ID has some allegiance to the natural theology of Britain's William Paley (1743–1805). It maintains that the complexity of life and the universe point to the likelihood that there must be an intelligent designer behind their appearance. Proponents of ID not only challenge the modern evolutionary synthesis, at their most ambitious they argue that the naturalistic methodology that has driven science since the Enlightenment is inadequate for understanding the natural world. Lehigh University biochemist Michael Behe has been the scientific face of ID, touting what he terms the "irreducible complexity" of life systems, especially at the cellular level. Behe argues that the removal of any portion of some cells would make it impossible for them to survive; thus they either miraculously appeared all at once as an intact system or improbably evolved despite overwhelming odds. Evolutionary scientists dismiss ID as not a theory or scientific research program but rather a too simple and too quick conclusion that what science has not yet explained must be the result of divine design or intervention. Indeed, some of the questions Behe first raised in the 1990s have been answered by further molecular research. Johnson, an adult convert to conservative evangelicalism, and other ID proponents are usually careful not to specify who or what the intelligent designer might be, though they imply to some audiences that it could be the Christian God of previous generations of antievolutionists. Even as ID gained stature for its apparent legal viability, creationism continued the same disunity that has plagued the movement since the nineteenth century: creation science proponent Henry Morris has criticized ID proponents for not clearly identifying the designer as the Christian God.

While the intellectual origins of the movement have a long pedigree, in organization ID is a relatively recent phenomenon that bears the marks of the legal evolution of the creationist movement. In the mid-1980s, as Louisiana's equal time law was working its way through the appellate courts, a group of conservative Christian scientists questioned the

limitations of evolutionary science in books suggesting that evolution was a theory on the brink of collapse. The new movement aimed at popular audiences and, in particular, at public school children. Creationist scientists Dean Kenyon and Percival Davis originally titled their school text *Biology and Creation* but, in the immediate aftermath of the *Edwards* ruling, removed explicit references to a Creator and creationism from their draft, substituting in their place “designer” and “design theory.” Their renamed book, *Of Pandas and People: The Central Question of Biological Origins*, first appeared in 1989.

The growth of ID owes much to a Seattle think tank, the Discovery Institute, which in the 1990s established a Center for the Renewal of Science and Culture that has since provided more than \$1 million to support research in and publicity for ID. The Discovery Institute has sought to convince audiences that ID is a scientifically valid critique of evolution and that therefore public schools interested in good science and good scientific pedagogy should teach the controversy between evolution and ID. And they have enjoyed some success: on the state level, in the Kansas and Ohio education standards, and nationally in 2001 when Senator Rick Santorum (R-PA) attached a brief for ID to the No Child Left Behind bill.

Santorum’s home state of Pennsylvania in 2004 and 2005 provided intelligent design’s first major legal test, after the Dover Area School District Board required teachers to read a disclaimer before the lessons on evolution stating it was a “theory . . . not a fact,” naming ID alone as viable alternative, and pointing students to the sixty copies of *Of Pandas and People* in the high school library. The Discovery Institute initially supported the school board action, but as the prospects for victory dimmed it sought to limit the damage to its ID strategies. The school board’s case was argued by the Thomas More Law Center (a Christian law firm funded by conservative Catholic pizza magnate Thomas Monaghan) that had sought for years to find a school board willing to test ID and clear its path to mainstream education. The case (*Kitzmiller v. Dover* [2005]) in U.S. district court hinged, as had previous antievolution cases, on the establishment clause question of whether the board action was endorsing religion through its advocacy for ID. Several board members clearly had that intent, but more damaging to the cause of ID was the revelation during the trial of ID’s close relationship with creationism as demonstrated by the quick change of terminology from *creation* to *design* in the drafts of *Pandas* before and after *Edwards*. The judge in the case, a

conservative Lutheran and recent Republican appointee to the bench, ruled that ID was “not science” but religion and thus unconstitutional to include in public school curricula.

The Twenty-First-Century Scene

At the dawn of a new century, creationism is not just a legal strategy but a cultural movement. A \$27 million Creation Museum opened in northern Kentucky in the summer of 2007. A project of the international organization Answers in Genesis, the Petersburg, Kentucky, institution uses fossils, videos, and animatronic displays to present a creationist version of natural history. Dinosaurs and humans cohabitate the Earth, with a timeline of quick development driven by the organization’s commitment to biblical literalism and a young Earth little more than 6,000 years in age. The museum’s exhibits show an allegiance to the flood geology popularized by Whitcomb and Morris. The exhibits also portray belief in scientific evolution as the cause of many modern social ills. The creationists associated with the museum, as well as the proponents of intelligent design, go to great lengths to portray their work as science.

Antievolution is on the rise internationally. Yet, when compared with more than thirty other industrialized nations, U.S. citizens are far less likely to accept the science of evolution as probable (only Turkey boasts a higher percentage of doubters). Despite the defeat of ID at Dover, creationism—whether of the ID or young Earth variety—has continued to grow among Americans in the early twenty-first century. News stories in mainstream press outlets have unwittingly reinforced the Discovery Institute’s claims of an ongoing scientific controversy over evolution. In 2005 polling, nearly two-thirds of Americans supported teaching both evolution and challenges to the theory in public schools; this continued ambivalence about evolution seemingly guarantees future legal challenges and continues to drive the legal evolution of creationism.

F

Faith-Based Community Organizations

Faith-based community organizing is a form of social justice activism that works through religious congregations. Ecu- menical and sometimes interfaith federations of congrega- tions organize on their own behalf to gain improvements for their communities. Faith-based community organizing draws from concrete resources that congregations offer, such as stable organizations, money, organized members, pastoral and lay leaders, and meeting places. It also draws from their cultural resources such as public legitimacy, shared beliefs and values, solidarity, and religious motivation to sustain long and demanding campaigns. Although “faith-based community organizing” sounds general, its principles and methods are specific, drawn from Saul Alinsky’s organizing practices (see later) and linked to religious values.

Faith-based community organizations (FBCOs), which are federations of 501(c)(3) nonprofit organizations (religi- ous congregations), are also nonprofit. As such, FBCOs are prohibited from conducting partisan campaigns, includ- ing running or endorsing candidates for office. However, they can lobby, advocate, and inform members and the pub- lic about issues and candidates. They concentrate on improving their cities and neighborhoods through pressur- ing decision makers (public officials or private corporations) to enact programs in areas such as health care, housing, jobs, public safety, transportation, and education. FBCOs are multi-issue organizations. Their ultimate goal is to gain the power that low- to moderate-income people need to advo- cate for themselves. They gain power by winning issue

campaigns. Members are empowered by beginning with relatively modest goals, such as getting a stop sign installed at a dangerous intersection, and gradually gain the skills to help lead multiple-organization statewide campaigns: for example, state bonds for new school construction or broad- ened health care for working families. Issues both train members in civic and political skills and gain improvements for poor, working-class, and even middle-class people and their communities.

FBCOs may collaborate with single-issue-based groups on common goals. For example, in 1999 the San Jose People Acting in Community Together (PACT) (then fifteen churches) joined the California Nurses Association and the Consumers Union to pressure a hospital that converted to for-profit status to establish a \$14 million charity care fund. In 2000, PACT joined a labor think tank to win guaranteed health care for all children in Santa Clara County, California (Swarts 2008). This required pressuring a county legislature as well as the San Jose City Council to prevail over hostile mayor Ron Gonzalez. PACT exerts pressure by organizing “actions” (sometimes rallies, sometimes formally run meet- ings with officials) of several thousand church members, which demonstrate PACT’s influence and voting power; by lobbying recalcitrant city council members; and by using all the tools that interest groups use, except that PACT’s power is rooted in organized people rather than in money.

The goals of FBCOs differ starkly from those of the reli- gious right. FBCOs seek greater political and economic democracy and pursue redistributive campaigns that place them on the religious left. FBCOs avoid issues that are likely to divide their members (for example, homosexuality and

abortion). Instead, they address broadly shared needs. This allows Catholic and black Protestant churches that are economically liberal but socially conservative to unite with mainline churches that are socially liberal. Organizing congregations allows organizers to reach into all communities—urban, suburban, and rural—and across lines of race, class, and religion.

FBCOs are also known as “congregation-based,” “broad-based,” and “institution-based” organizations. Practitioners prefer the terms *congregation* and *faith* to *church*-based because the groups sometimes include Jewish, Muslim, and other congregations. Most member congregations are Christian (both Protestant and Catholic), with many Unitarian-Universalist congregations also. Some include nonreligious groups such as labor unions.

Some local FBCOs are independent, but most are members of national or regional “networks”—linked umbrella organizations of local federations. Local FBCOs may start from the top down or bottom up: An FBCO network may initiate an organization, or local pastors who seek to meet parishioners’ needs may approach a network to help them start a local group. The national networks provide local affiliates with trained organizers, national training sessions for members, senior consultants with strategic expertise, and opportunities to undertake coordinated action with their other affiliates. In this, FBCOs are somewhat similar to union locals affiliated with an international union that supplies organizers, strategic direction, and coordinated campaigns.

History

The Industrial Areas Foundation (IAF) developed the FBCO method of organizing through churches after thirty years of community organizing. The IAF was founded in 1939 by famed organizer Saul David Alinsky (1909–1972). As organizer Heather Booth put it, “Alinsky is to community organizing as Freud is to psychoanalysis” (Boyte 1980).

Alinsky was born in Chicago to Russian Jewish immigrant parents. A U.S. populist, Alinsky was influenced by Chicago machine politics, founding fathers Thomas Jefferson and James Madison, homegrown radicals such as Samuel Adams and Thomas Paine, and the strategy and tactics of labor leader John L. Lewis. Alinsky entered the University of Chicago in 1926. “Chicago School” sociologists taught him that cities were organized systems shaped by larger structures and processes. Therefore, the first phase of organizing

was researching the social relations and power brokers of the community. The depression helped politicize Alinsky, but he was never a dogmatic leftist. Conservatives often attack Alinsky inaccurately as a Marxist, whereas leftists criticize him as insufficiently Marxist because he believed democracy was possible within capitalism.

Alinsky founded his first organization, the Back of the [Stock]Yards Neighborhood Council, in 1939 to support the union drive in the stockyards made famous by Upton Sinclair’s *The Jungle*. Alinsky continued organizing community groups around the country through the 1950s, but the 1960s put him back in the center of the action.

Alinsky first recorded his ideas in *Reveille for Radicals* (1946). His second book, *Rules for Radicals* (1971), challenged what he perceived as the naive romanticism of 1960s radicals. Alinsky anticipated the Reagan Democrats’ turn to the right. He noted that the working and lower-middle classes

cannot be dismissed by labeling them blue collar or hard hat. They will not continue to be relatively passive and slightly challenging. If we fail to communicate with them, if we don’t encourage them to form alliances with us, they will move to the right. (Alinsky 1971)

With prescience he observed that not just working-class, but middle-class U.S. citizens lacked control over the institutions that controlled their lives. Today’s FBCOs recruit economically and racially diverse congregations, whose members learn that they often have more in common than not: a need for public-serving programs and a countervailing force that keeps government responsive.

After Alinsky’s death in 1972, senior organizer Ed Chambers became the IAF director. He and organizer Ernesto Cortes developed the “new” IAF faith-based model. The difference was that Chambers advocated community federations of churches, rather than individuals or local clubs and businesses, because churches bring organized people and shared values, which he felt would undergird issue organizing, act as the glue of shared identity and solidarity, and thereby help organizations survive. After the decline of inner-city neighborhoods after urban renewal and white flight, the most stable institutions in these neighborhoods were the churches. Raising sufficient funds through a local “sponsoring committee” before beginning to organize allows FBCOs to pay organizers as career professionals.

Hundreds of organizers have been trained in this method—including President Barack Obama, who described his formative work as a faith-based community organizer in Chicago in *Dreams From My Father* (1995).

The Faith-Based Model in Action

The first IAF organization using the FBCO method was Communities Organized for Public Service (COPS). In San Antonio, Texas, Hispanics were a majority of the population, but the government was run by wealthy Anglos. This lack of political clout resulted in Hispanic neighborhoods' unpaved roads, poor schools, and frequent, deadly floods. In 1973 to 1974, IAF organizer and former seminarian Cortes went to San Antonio and began to recruit organizations. A core group of twenty-five Catholic parishes emerged, along with Catholic and Protestant financial support. As COPS grew, the group won a city bond issue for massive improvements in the barrio. District city council elections that COPS helped win, combined with a Hispanic population of 53 percent (in 1980), helped shift the balance of power in San Antonio. By 2001, COPS had won more than a billion dollars in improvements for poor communities.

As the political mood shifted rightward in the 1970s and 1980s, the IAF framed its work not as “radical” but as a force that improved communities and strengthened the vitality of congregations and empowered members. The IAF also continued the pressure group strategy of “holding politicians accountable” rather than backing or running them for office. Subsequent FBCO networks have continued this practice, partly to allow a working relationship with whichever candidate wins.

Beliefs and Practices

Faith-based community organizing draws from both secular community organizing and religious culture. Both secular and faith-based organizations teach that good first issues are “concrete, specific, and winnable” so that disempowered groups can experience success before taking on greater challenges. “Organizers”—the paid, expert staff—are coaches who recruit and train “leaders”—grassroots members who can draw followers. Many distinctive FBCO practices are not explicitly religious. FBCOs institutionalize the practice of “challenging” one another to make commitments and be “accountable” to fulfill them—even “agitating” members into anger over injustice, and then action. An emphasis on grassroots democracy leads organizers to

identify problems using a labor-intensive bottom-up process. Congregational organizing team members conduct from one hundred to three hundred interviews, or one-to-ones, with their congregants to identify the most widely felt issues. These are goal-directed conversations designed to identify a person's self-interest and values. The one-to-one interview is used at all levels, among organizers and grassroots leaders. It builds the web of social networks that groups mobilize to large actions. These are usually public meetings with officials, the most common strategy of exercising power—mass meetings that seek commitments from authorities, who risk losing electoral support if they do not deliver concessions. Grassroots leaders practice conducting these meetings with formality, discipline, and control.

All FBCOs teach Alinsky's principle that power, often defined neutrally as “the ability to act,” is desirable, and powerlessness is not virtuous. The power of organized people rests in their relationships. One needs power to act on one's self-interest. The FBCO innovation is that it ties self-interest to values, which are what people believe in, act on with regularity, and defend publicly—such as justice, community, and human dignity.

Other National Faith-Based Networks

The IAF inspired other groups to adopt its methods. After the IAF, the three largest networks of local organizations are People Improving Communities Through Organizing (PICO) National Network, the Gamaliel Foundation, and Direct Action Research and Training (DART). Several smaller networks and independent local federations also exist. All the groups are multi-issue organizations that seek to build power through numbers so their members can tackle problems such as lack of jobs; crime-ridden, dilapidated neighborhoods; and poor schools.

People Improving Communities Through Organizing (PICO) National Network

Jesuit priest John Bauman founded the neighborhood-based Oakland (California) Community Organizations (OCO) with another priest in 1972. In 1981 OCO helped pressure Oakland into instituting city council elections by local district, as COPS did in San Antonio (earlier), which opens access to candidates rooted in and accountable to specific neighborhoods. Although originating in California, PICO has affiliates nationwide and is known for its strong emphasis on developing grassroots leaders. PICO's more

than fifty local affiliates have won hundreds of local victories. Together, the 21-federation PICO California project has mobilized thousands in state campaigns on education and health care. In 2006 PICO California and health advocates placed Proposition 86 on the ballot, which taxed cigarettes to fund an estimated \$2.1 billion annual for health care, plus \$405 million to cover uninsured California children. In 2001 the statewide PICO coalition and the California Primary Care Association won \$52 million for health clinic infrastructure and services.

Gamaliel Foundation

The Gamaliel Foundation, started in the 1960s in Chicago's West Side, focused on multi-issue organizing after former priest Gregory Galluzzo became director in 1986. (Gamaliel was a teacher of Paul, in the Book of Acts 5:38–39.) Gamaliel maintains several "strategic partners" including Myron Orfield, Jon Powell, and David Rusk, policy experts on urban sprawl, concentrated black poverty, and a regional approach to solving inner-city problems. The network teaches local members a sophisticated analysis of the link between urban devastation and suburban sprawl. Concentrated in the Midwest but with affiliates throughout the country, Gamaliel's plan for 2000 to 2010 was to build a metropolitan organization in every major population area in the United States, raising the necessary money and recruiting two hundred professional organizers. The Gamaliel Foundation is likely the least well funded and staffed of the major networks, and matching its resources to its vision is its major challenge. However, Gamaliel has notable achievements to its credit, such as registering 47,000 new voters in 2003 to 2004 in nineteen states. It has run national campaigns on immigrants' rights and improved federal funding of transportation infrastructure. Work by its locals on transportation equity (funds for urban mass transit, not just more highways) is coordinated with its national transportation campaign (Swarts 2008).

Direct Action Research and Training (DART)

DART was founded in 1982 by its executive director John Calkins, who got his start in the Peace Corps and welfare rights organizing. In 1980 a three-day race riot broke out in Miami after an all-white jury acquitted four white police officers of killing an African American man. Calkins and others led an organizing drive among African American congregations in Miami to work on such issues as minority hiring, job creation, and accountability for police violence

toward African Americans. The subsequently founded organizations constitute DART, which shares the same FBCO methods and multi-issue focus as the other networks.

Funding

Raising funds is a major challenge for FBCOs. Part of their strategy is to mobilize resources through congregations and national denominations. A single FBCO's income is usually a patchwork of member congregation dues, grassroots fundraising, foundation grants, and sometimes grants from area businesses. Successful FBCOs with notable achievements, especially in affluent regions, may have budgets of \$1 million or more, whereas struggling groups may raise just \$100,000 or less annually. Although a \$1 million or more budget may seem large from a parish perspective, it is small considering that local FBCOs usually battle city administrations, developers, and big business with billion-dollar budgets and political contributions. PICO affiliate San Jose PACT fought for funding for better schools, anti-drug and antigang neighborhood programs, and community reinvestment, policies that competed for funds with a downtown sports arena championed by the mayor and extravagant downtown development projects. Operating with a bare-bones budget throughout the 1990s, PACT had to rely on people power. By 2000, PACT won, conservatively, \$45 million in neighborhood-serving programs (Swarts 2008).

Organizers see congregational dues and internal fundraising as the ideal because they provide maximum self-sufficiency. In reality, member congregations are rarely able or willing to provide most of the budget. However, dues demonstrate the local support necessary to obtain outside grants. Bodies exist whose mission is to fund or advocate funding for community organizing. The Catholic Campaign for Human Development (CCHD), the antipoverty funding arm of the U.S. Conference of Catholic Bishops, seeks to address the "root causes of poverty" rather than ameliorate its effects. Supported by an annual collection in all U.S. parishes, the CCHD has granted almost \$300 million since its founding in 1969, much to community organizing. Other funders include the Charles Stewart Mott Foundation, Ford Foundation, McKnight Foundation, Discount Foundation, and Needmor Fund. The Neighborhood Funders Group and the National Center for Responsible Philanthropy actively promote organizing. Interfaith Funders, a collaboration of religious denominations and grant makers, has sought to broaden support for FBCOs since 1997. From

1998 to 2004, Interfaith Funders raised \$1.8 million for nineteen FBCO groups in five FBCO networks.

Religion and FBCO Organizing

Following the civil rights movement and the 1960s, the political valence of socially active religion moved to the right. Although the religious right's fortunes have waxed and waned, it moved the Republican Party to the right, defeated many local gay rights ordinances, and moved public opinion and many state laws on abortion to the right. There was no similarly coherent "religious left." FBCOs are one attempt on the left to link congregants' faith to political action. Most FBCOs begin meetings with a prayer or "reflection." Biblical references are scattered richly through trainings, meetings, and speeches; for example, Moses and Paul are framed as great organizers. Pastors are adept at using Bible stories to illustrate organizing principles. Churches link their faith to organizational needs (such as prayer breakfast fundraisers) and rituals become part of their repertoire of contention. For example, an FBCO may hold a "prayer walk" in which members tour an area and pray at sites of shootings or drug trafficking. Although this appropriation of religious culture may seem merely strategic, in successful FBCOs the link between religious faith and public action is authentically felt. Many organizers are clergy or religious laypersons. As one organizer explained, "You never finish, because you're disciples."

Strategies

Christian congregations have cultural drawbacks as well as resources. Secular organizing groups sometimes criticize what they see as FBCOs' tactical timidity. Some Christians understand "turning the other cheek" to mean that conflict is destructive. Although FBCOs have occupied decision makers' offices (if they refused to meet) and used other unruly tactics, they more typically use "public meetings" with authorities, a more orderly form of contention. However polite, these meetings flex their muscle by amassing hundreds or thousands of voting citizens to observe a leadership team propose policy reforms to officials and witness their commitments—or refusals, which will certainly lead to escalated organizing.

However, the public meeting is just a tactic. FBCOs' larger strategies are to build deeply rooted local affiliates in the belief that, like politics, all organizing is local, and to keep participants committed, FBCOs must continually identify new local issues. However, they harness these

networks to tackle regional, statewide, and national issues. Since Alinsky's time, the decisions that affect local communities are more often made at the state, national, or international levels. Cities that have lost federal funds and much of their economic base have fewer resources for community groups to bargain for. This has challenged FBCO strategists to educate members about where political decisions are made. Although community organizations traditionally targeted city officials for concessions, today they may collaborate with these officials in pursuing funds at the state and federal levels. The networks differ in their willingness to work with nonreligious groups. The IAF includes labor unions and others in its federations. However, the PICO network does not recruit unions to local federations because staffers find it difficult to integrate religious and labor union cultures. Nevertheless, the IAF, PICO, and the Gamaliel Foundation regularly form alliances with labor and other advocacy groups.

Influence of FBCO on Congregations

Recruiting congregations into faith-based community organizing is challenging because they have limited funds and numerous projects and initiatives. Pastoral leadership is critical to surmounting these barriers. Participating congregations often report corresponding benefits for themselves. A 2004 study of forty-five congregations in thirteen cities by Interfaith Funders and the University of New Mexico investigated possible benefits to congregations from FBCO participation. Almost all reported some benefits, including deepened relationships within congregations and with members of other faiths; stronger leadership skills such as public speaking, identifying issues, and running meetings; greater lay participation in church; public visibility for the congregation; and heightened focus on their faith's call for social justice. Some congregations reported membership growth. Lutheran, Presbyterian, and Unitarian-Universalist assessments also identified alliances across lines of race, class, and ethnicity as a benefit.

Civic and Political Impact

FBCOs have many different positive outcomes: For example, sociologists Mark Warren (2001) and Warren Wood (2002) assessed FBCOs as an engine of social capital, democratic process, and civic engagement for the disempowered. P.W. Speer and J. Hughey (1996) assess FBCOs' impact from a community psychology perspective. Heidi Swarts measured the value of policy outcomes for the PICO Network

and Gamaliel Foundation, in dollars and number of people affected. Swartz, Stephen Hart (2001), and other scholars emphasize FBCOs' in-depth leadership development.

The election of Barack Obama boosted visibility for FBCOs. In December 2008, 2,500 Gamaliel Foundation members met with a senior advisor to the president-elect to present their policy platform. Since 2004, PICO's New Voices campaign brought activists from all over the country to lobby Congress twice a year on children's health insurance. In February 2009, PICO leaders witnessed President Obama sign the State Children's Health Insurance Program (SCHIP) legislation, twice vetoed by President George W. Bush. These FBCOs cannot take sole credit for such victories—they were part of a larger advocacy network. To gain national influence, FBCOs will have to join broader coalitions. However, they are growing and increasingly acting nationally. Their unchallenged achievement is to recruit and empower many thousands of U.S. citizens in the skills of civic engagement, revitalizing democracy and linking it to religious values.

Faith-Based Initiatives

Faith-based initiatives are partnerships between faith-based organizations (that is, religious congregations and faith-related nonprofit agencies such as the Salvation Army) and government agencies to provide social welfare services to a community, especially through the transfer of public funds to faith-based organizations (FBOs). They exist at all levels of government—federal, state, and local—and range from partnerships for the production of affordable housing to the operation of day care and after-school programs to prisoner rehabilitation.

Prominence of Faith-Based Initiatives

The term "faith-based initiatives" gained prominence during and after the 2000 presidential election. Republican George W. Bush and Democrat Al Gore proclaimed support for public-funded social welfare delivery by FBOs. Both candidates promised an expansion of faith-based initiatives. Their agreement on the issue reflected the bipartisan consensus that some FBOs may provide social services better—more efficiently and effectively—than would government and that government should encourage FBOs to provide or expand community outreach (that is, services intended to increase the potential of the needy to live healthy lives, form and maintain families and communities, and achieve self-sufficiency).

After becoming president, Bush created the White House Office of Faith-Based and Community Initiatives (OFBCI) to assist the federal government in expanding funding opportunities for FBOs and strengthening the capacity of FBOs to address social needs in communities across the United States. Although Bush favored new legislation to expand and sustain faith-based initiatives, he did not devote political capital to moving such legislation through Congress. Instead, Bush used Executive Orders to design, promote, and manage faith-based initiatives by federal agencies, opening a range of federal grants and contracts to competition by FBOs. State governments assisted his efforts. They passed legislation and adopted rules and regulations

that created state-level offices and liaisons for faith-based initiatives and provided greater opportunities for FBOs to be awarded contracts and grants.

Supporters like John Ashcroft, the first U.S. attorney general during the Bush administration, saw faith-based initiatives as efficient and effective means by government to reduce the scale of social problems. Proponents of faith-based initiatives rested much of their support on claims that FBOs had interest in tackling large-scale social problems, the capacity to do so, and successful records of doing so. Opponents of faith-based initiatives, such as the liberal Americans United for Separation of Church and State, saw them as affronts to the establishment clause of the U.S. Constitution, especially in their potential to entangle government with religion and possibly to infringe upon the free exercise of religion. Opponents also charged that faith-based initiatives were retrograde efforts to diminish the welfare state and political tools to influence votes and award partisan supporters.

A Catalyst for Faith-Based Initiatives

Like those in Western Europe and other parts of the world, governmental partnerships with FBOs to provide social welfare programs are not new to the United States. Nonetheless, since the mid-1990s, government officials have attempted to increase the number and scale of faith-based initiatives to deliver government-funded social welfare. A catalyst for the expansion of faith-based initiatives was the federal “welfare reform” during the second administration of Bill Clinton. Specifically, the 1996 enactment of the Personal Responsibility and Work Opportunity Reconciliation Act included a set of new federal laws and regulations, dubbed “Charitable Choice,” encouraging FBOs, especially religious congregations, to partner with government to reduce the welfare caseloads among the states through the receipt of direct federal funding for services provided by FBOs. While partnerships between government and faith-related agencies were not new, the encouragement and direct funding of religious congregations was a significant policy change.

Until 1996 government normally required religious congregations, often referred to as “pervasively sectarian institutions,” to create independent nonprofit organizations to receive public funding for social services delivery. Direct funding of congregations was assumed to be unconstitutional. However, due to Charitable Choice and subsequent changes in social policy, along with the creation of

the White House Office of Faith-Based and Community Initiatives and similar offices by the Bush administration, public policy no longer mandated that congregations have separate secular agencies to receive public funding.

Fundamentals of Faith-Based Initiatives

Charitable Choice rests on four fundamental principles. First, faith-based initiatives do not necessarily provide new and increased social welfare funding, nor do they create funds reserved solely for FBOs. Charitable Choice merely provides funding opportunities to organizations that may have been excluded from applying for and receiving federal social welfare funds. In short, FBOs compete against secular organizations for existing funding. Governmental monies are not expressly set aside for FBOs. Second, governmental agencies are allowed—not required—to contract with congregations or other FBOs. Proponents of faith-based initiatives, such as John DiIulio, the first director of the OFBCI, claimed that before the expansion of Charitable Choice FBOs faced an “unlevel playing field,” tilted to favor secular nonprofits and large faith-related agencies like Catholic Charities. After Charitable Choice, when contracting for the delivery of social services, government agencies must consider the proposals and qualifications of FBOs on an equal, nondiscriminatory, and neutral basis. They may neither advantage FBOs nor disadvantage them in relation to secular organizations.

Third, while FBOs cannot use federal funds for religious worship, instruction, or proselytism, faith-based initiatives do not affect other aspects of the religious character of faith-based organizations. Before Charitable Choice, government agencies pushed FBOs to, among other things, conceal crucifixes and to change their names to downplay their religious affiliations. Additionally, the religious character of FBOs participating in faith-based initiatives is protected by exemptions from antidiscrimination laws related to hiring. FBOs, according to most interpretations of statutes and case law, are allowed to maintain faith-based employment preferences even if they receive federal funding. A Jewish faith-related agency such as Jewish Family and Children Services, for example, may hire Jews alone, if they deem it essential to the agency’s religious identity and mission. Fourth, individuals seeking government-funded social welfare are not required to receive it from FBOs. Social welfare consumers have the right to refuse to utilize services provided by a religious congregation or faith-related agency and to request services from secular social welfare agencies. Yet it is unclear

how that right would be exercised in jurisdictions that lack secular alternatives.

Public Opinion on Faith-Based Initiatives

In the early twenty-first century, faith-based initiatives generally accord with public sentiment and opinion. A majority of the public agrees that government should collaborate with FBOs to address social welfare problems and concurs that FBOs can be effective at reducing the scale of such problems. Core supporters tend to be white evangelical Protestants, black Protestants, Hispanic Catholics and Protestants, Muslims, individuals with lower education and income, southerners and midwesterners, and younger adults. Public opinion suggests, however, that the nation believes that faith-based initiatives would be more effective in social welfare areas such as feeding the homeless, counseling prisoners, and mentoring youth than in areas like job training, health care, addiction recovery, and child care. Furthermore, public opinion opposes faith-based initiatives when FBOs exercise religious hiring preferences or proselytize to consumers of social services.

Although public opinion favors governmental funding of FBOs to provide social services, it opposes such funding for FBOs outside the religious mainstream in the United States, such as the Nation of Islam, Hare Krishna, and even the Church of Jesus Christ of Latter-day Saints (Mormons). Despite strong support for the broad idea of faith-based initiatives, surveys suggest that Jews and, not surprisingly, atheists and those who generally favor secular solutions to social welfare problems are chief opponents of faith-based initiatives.

Contentious Issues

Among the knotty issues raised by faith-based initiatives is whether religious congregations or faith-related agencies that expressly incorporate religious doctrines and teaching into their community outreach programs (for example, Teen Challenge) can directly receive public funding. Direct public funding of such FBOs raises constitutional concerns about the establishment of religion and the free exercise of religion. Generally, the U.S. Supreme Court has determined that such funding is constitutional if it fosters a secular purpose, its primary effect does not advance nor inhibit religion, and it does not excessively entangle government with religion (see, for example, *Lemon v. Kurtzman* [1971] and *Mitchell v. Helms* [2000]).

As a means of avoiding the issue altogether, without banning faith-based initiatives, some advocates propose that the government indirectly fund FBOs regardless of how central religion is to the organizations and their programs. Government would provide the needy with vouchers for social services, much like school vouchers or food stamps. Recent Supreme Court rulings such as *Zelman vs. Simmons-Harris* (2002) provide constitutional support for indirect funding when the choices are made by consumers, not government. However, indirect funding through consumer choice may not provide adequate and consistent revenue to sustain service provision by FBOs. Social welfare agencies prefer financial contracts that identify and perhaps guarantee the amount of revenue to be earned by partnering with government agencies.

A related issue, perhaps the most contentious of all, pertains to religious hiring preferences. May FBOs, whether permeated or just associated with religion, use religious preferences in their hiring and receive public funding? Legally, the question is whether FBOs participating in faith-based initiatives have a constitutional right to hire coreligionists. Supporters such as the conservative Center for Public Justice rely on the ministerial exemption to Title VII of the Civil Rights Act of 1964 to claim that government funding does not remove the right of FBOs to determine who will best represent and perform the mission and manifest the values of their organizations. Also, they argue that requiring FBOs that receive public funding to hire nonreligionists creates an excessive entanglement of government with religion and infringes upon the free exercise of religion. Opponents of religious hiring preferences, like Representative Robert “Bobby” Scott (D-VA), claim that organizations supported by public funding must not discriminate. They contend that such discrimination counters long-standing American beliefs about the import of merit in the workplace and is in opposition to public opinion.

As of the dawn of the administration of President Barack Obama, the Supreme Court had yet to rule on a case involving religious hiring preferences by FBOs receiving public funds. Although the Court has generally accepted the argument that government cannot influence the hiring decisions of religious organizations not receiving public money (for example, *Corporation of the Presiding Bishop of the Church of Latter Day Saints v. Amos* [1987]), lower court rulings such as *Dodge v. Salvation Army* (1989) and *Pedreira v. Kentucky Baptist Homes for Children, Inc.* (2001) have been

inconsistent in deciding whether the receipt of public funds by FBOs permits government to influence hiring decisions.

Another thorny issue is the capacity of FBOs to serve civic purposes. Despite the claims and beliefs of many supporters of faith-based initiatives, national and local surveys suggest that congregations and small faith-related agencies have a limited capacity to play lead or central roles in faith-based initiatives. Furthermore, studies from across the states suggest that the general interest of FBOs in partnering with government is less than the levels suggested by proponents of faith-based initiatives. Additionally, there is disagreement over how one would measure the effectiveness of FBOs to serve civic purposes at government expense.

While the award of public funds to FBOs, inclusive of sectarian institutions and faith-related agencies, via faith-based initiatives is aimed to reduce poverty and other social ills, critics charge that faith-based initiatives become nothing more than political favors. Critics such as Rabbi David Saperstein of the Religious Action Center for Reform Judaism and Barry Lynn of Americans United for Separation of Church and State contend that faith-based initiatives have been used to award public funds to political allies and to influence partisan support in elections. Investigative journalism by the *Washington Post* and *Boston Globe* in 2006 suggest that the award of federal grants and contracts to FBOs by the Bush administration, for instance, deliberately coincided with elections, went to districts where political allies were up for election or reelection, and rewarded religious organizations that mobilized voters for political allies.

Furthermore, critics of faith-based initiatives such as Rev. Jesse Jackson Sr. of the Rainbow/PUSH Coalition and Rev. Jeremiah Wright of Trinity United Church of Christ in Chicago charge that faith-based initiatives are intended to reduce the ability of FBOs to speak truth to power. They aver that public funding of FBOs is a means by conservative political coalitions to reduce the political activism and weaken the ability of FBOs to function as social justice advocates. The logic of the argument is that public funding of FBOs will make them reliant on government and that their dependence will make them less likely to challenge public policies for fear of losing their funding. Moreover, some progressive activists such as Marian Wright Edelman of the Children's Defense Fund worry that focusing on faith-based initiatives begets a false belief that the provision of social services is enough to address the problems of the

poor without attending to structural causes of need and impoverishment in the United States.

Conclusion

Faith-based initiatives are a conventional approach to addressing social welfare problems in the United States. Although elements and activities of faith-based initiatives remain controversial in some quarters, the idea of partnerships between government and FBOs to provide social welfare services, even at public expense, is widely accepted by policymakers and the general public. The biggest change from the Bush to Obama administrations may be in FBO hiring practices. While Obama supports faith-based initiatives and has called for expanding their number and scale, he has declared opposition to FBOs that receive public funding hiring only coreligionists. Moreover, he has stressed that government must improve its monitoring of faith-based initiatives to ensure that public money is not used for religious worship or proselytism. Nonetheless, faith-based initiatives are expected to endure in and beyond the Obama administration.

Feminism

Feminism is a social, political, and religious movement that advocates the rights of women. Feminists believe that, in society, women tend to be unequal in status and resources, and the feminist movement seeks to eradicate this inequality.

Although the term *feminism* was not used to refer to the movement until the end of the nineteenth century, various people and events have advanced the rights of women in North America since the founding of the British colonies in the seventeenth century. Three distinct waves of feminism are identifiable in American history, each one advancing a different agenda and dealing with different social circumstances. Consequently, it is appropriate to recognize multiple feminisms rather than to describe feminism as a monolithic category.

The Meaning of “Feminism”

The word *feminism* (from Latin, *femina*, “woman”) dates back to 1851. Originally, it simply referred to being feminine. In 1872 the term *féministe* was coined in France and referred to one who is an advocate for the feminine. The term was imported into the English language in 1894, when feminism became synonymous with the promotion of women’s rights. Since then, feminism has been defined in many ways by many people. Supporters of feminism have defined it positively—as the idea that women are fully human; that women should be equal with men; and that women should be given the right to define themselves on their own terms.

Those who consider themselves to be humanist feminists use the “sameness” approach, arguing that women are the same as men. Because both men and women share a common humanity, humanist feminists believe that both men and women should be entitled to the same rights. Gynocentric feminists, on the other hand, use the “difference” approach, arguing that women are fundamentally different from men. This does not mean that women should have fewer rights than men, but rather that women are entitled to different rights under the law, such as the right to be protected from an abusive husband. Women are unique, gynocentric feminists believe, and have a unique perspective. In order to overcome patriarchal oppression, society must value the uniqueness of women. Feminists who use the “dominance” approach tend to think that the argument between the sameness approach and the difference approach misses the point. Instead of focusing on whether women are the same as or different from men, proponents of the dominance approach maintain that patriarchal oppression is based on the subordination of women. To end such oppression, women must be liberated from this role of subordination. In contradistinction to dominance feminists, Marxist feminists believe that the root cause of the subordination of women

is not men, but rather capitalism. Women must be liberated from the oppressive forces of capitalism, according to Marxist feminism.

But how should women be liberated? Who gets to decide? Are all women really oppressed in the same way? Should all women be liberated in the same way? Such questions tend to be asked by postmodern feminists who have little faith in the epistemology of the sameness, difference, dominance, and Marxist approaches. Postmodern feminism claims that gender and gender roles are not biological facts but rather are social constructions. However, other feminists have criticized postmodern feminists for preferring questions over answers, dilemmas over solutions.

Although most people in the United States today might look favorably on some of the ideas of feminism described above—such as the idea that women should be equal with men—the term *feminism* often carries a negative connotation. Feminists often are portrayed in popular media as men-hating lesbians who attend protests and burn their bras. Because of this negative portrayal, many individuals and social institutions have remained indifferent to feminism or have adopted an antifeminist stance. Those who self-identify as antifeminists tend to think that feminists are too radical and alienate men. Conservative religious institutions, especially in the late twentieth century, began to adopt antifeminist rhetoric to argue that God created men and women differently; therefore, they should have different roles in society. Oddly enough, such rhetoric sounded similar to the arguments made by gynocentric feminists who used the difference approach. Yet conservative religious institutions asserted so loudly that they were antifeminist that the American public began to believe that all religion was antifeminist. Some feminists who believed religion to be inherently patriarchal also helped to spread the misconception that religion and feminism are essentially opposed.

However, since the seventeenth century feminism has had a complicated relationship with religion. Because feminism has taken on many different meanings over the centuries and because religion itself refers to numerous traditions, the relationship between feminism and religion cannot be described in essentialist terms. For instance, it is not accurate to state that religion is essentially opposed to feminism; nor is it accurate to state that religion is essentially supportive of feminism. Feminism is not essentially opposed to religion; nor is feminism essentially supportive of religion. Multiple, diverse feminisms relate differently to multiple, diverse religious traditions. This essay will trace the impact these

feminisms have had on various religious traditions throughout American history, beginning with the colonial era.

The Colonial Period

The Puritans often are characterized as austere, misogynist, doom-and-gloom traditionalists who used their religious ideology to denigrate women. However, in Puritan New England during the seventeenth century, women were valued as important members of the religious community in particular and of society in general. The most fundamental unit of society was the family, and the glue that held the family together was the relationship between husband and wife. This relationship between men and women in the form of marriage was imbued with divine symbolism. Although Puritans did not believe marriage to be a sacrament, it was viewed as a symbol of the relationship between Christ and the church. Men were representatives of Christ in a marriage, and women were representative of the church. Men were supposed to love their wives as Christ loved the church, while women were supposed to submit to their husbands as unto Christ. Although on the surface this religious ideology may seem to be antifeminist, or in opposition to the rights of women, the spiritual elevation of marriage actually led to the elevation of women. Women were the “helpmeets” of their husbands, and filling this role of helpmeet did not necessitate the relegation of women to the domestic sphere. If need be, women could move in and out of the public sector of society as representatives of their husbands.

Furthermore, Puritan women were often seen as more spiritual than men. Because each Puritan was thought to be “married” to Christ, Christ was portrayed as the male in the relationship, while humans—both men and women—were portrayed as the female. The female role was characterized by submissive obedience. Women assumed the “female” role in their relationship with Christ and in their relationship with their husbands. Because women had to learn to be submissive in their relationships with their earthly husbands, Puritans generally believed that women found it easy to extend this submissive attitude to their relationship with their heavenly husband, Christ. Men, on the other hand, were supposed to fulfill the male role in their relationship with their wives and the female role in their relationship with Christ. Consequently, men were thought to be less adept at submissiveness. In order to learn to be more submissive in their relationship with Christ, men could look to women as spiritual exemplars. In a counterintuitive way, the

religious ideology of the Puritans tended to elevate the status of women rather than denigrate women. Thus it could be said that the Puritan tradition had a positive relationship to what we now conceive of as feminism.

Similarly, the first Great Awakening helped to advance the rights of women. The first Great Awakening was a religious movement that took place in England and the American colonies during the 1730s and 1740s. This movement, led by Protestant theologians and clergymen such as Jonathan Edwards (1703–1758), John Wesley (1703–1791), and George Whitefield (1714–1770), emphasized the belief that every person was inherently sinful. To undo the damning effects of this sinful nature, every person had to undergo a spiritual “awakening,” or religious conversion, also known as the new birth. The new birth was the beginning of one’s personal relationship with God. Because new-birth theology mandated that everyone—men and women, clergy and laity—must be born again, traditional church hierarchies were overturned. Born-again women or African American slaves were viewed as more spiritual than white clergymen who were not born again. By gaining this informal authority in the churches, many women were able to secure formal authority also. In the middle colonies and in New England, women began to speak in churches and teach others about the new birth. In the southern colonies, women also became deacons and elders. Thus the first Great Awakening had a countercultural effect that gave women more authority in the churches than in other spheres of life. In this way, the beginnings of evangelical culture, which was birthed in the first Great Awakening, could be viewed as implicitly supportive of feminism.

The first Great Awakening gave American colonists a sense of unity and divine purpose. This unity allowed the colonies to feel secure in fighting Great Britain for independence in the Revolutionary War. During the writing of the new Constitution of the United States of America, Abigail Adams (1744–1818) famously implored her husband, John, the future president, to “remember the ladies,” to take seriously the issue of women’s rights. Despite the implorations of Adams and the hopes of American women, the Constitution did not include any specific mention of the rights of women. From a legal standpoint, women were just as dependent on and as subordinate to their fathers and husbands as they had been before the Revolution. After the Revolution, women, African Americans, and non-landholding white men became disillusioned with the promises of the new republic.

The Nineteenth Century

Such disillusionment made American society ripe for the Second Great Awakening, a series of revivals that took place in the early nineteenth century. Itinerant ministers like Charles Grandison Finney (1792–1875) traveled around the country preaching about the importance of emotionalism, private and public holiness, personal salvation, and the power of the Holy Spirit. Such preaching had the ability to incite emotional outbursts from those assembled at the camp meetings. Oftentimes, those assembled would bark, jerk, laugh, fall down, dance, or do anything they felt the Holy Spirit was leading them to do. Participants in the Second Great Awakening believed that God could make sinful individuals holy in this life, not just in the afterlife. By extension, they believed that God could transform a sinful society into a perfect one.

This perfectionist idealism gave rise to many utopian communities that adopted unconventional religious practices and beliefs. The Oneida Community, which settled in Oneida, New York, taught that Christ had already accomplished his Second Coming and therefore people could experience heaven on earth in the form of sinless perfection. Because the Bible states that people will neither be married nor be given in marriage in heaven, members of the Oneida Community believed that monogamous marriage did not have to be practiced on earth. Instead, the practice of free love was viewed as a better way to prepare oneself for heaven. Sexual intercourse was viewed as holy, and freely giving sex was the path to holiness, although sexual intercourse between two partners had to be preapproved. To a certain extent, free love allowed the members of the community to challenge traditional gender roles. Rather than marrying at a young age, bearing several children, and being relegated to the domestic sphere, Oneida women had multiple partners and only a select few were encouraged to have children. Those who did have children were able to put the children in the nursery so that mothers could work. Some historians have noted that the Oneida Community was not as feminist-oriented as it may have appeared. Often women were not allowed to choose their sexual partners, and they were still viewed as spiritually inferior to men. Although at times the Oneida Community challenged the gender status quo, at other times it reinforced it.

Another utopian community that was nontraditional in its gender expectations was the United Society of Believers in Christ's Second Appearing, which originated in England.

Also known as the Shaking Quakers or Shakers, this group formed many communal societies, mostly in the northern United States. Much like the Oneidas, the Shakers believed that no one in heaven married, that heaven could be experienced on earth, and therefore that marriage was not necessary on earth. Unlike the Oneidas, however, the Shakers believed that sexual intercourse was the root of evil. Therefore no one in the Shaker community was allowed to marry or to have sex. To ward off temptation, men and women lived in separate quarters and worshipped in groups separated by gender. On the one hand, this arrangement gave women power and freedom. Each position in the hierarchy of the Shaker church was occupied by both a man and a woman. Because no one was allowed to have sexual intercourse, women were freed from the responsibility of bearing children. On the other hand, Shaker women were still expected to do “women’s work,” like cooking and cleaning and taking care of the children who had been adopted. Thus both the Shaker and the Oneida communities had ambivalent relationships to the rights and freedoms of women.

The idealism and desire to perfect society that came from the Second Great Awakening not only led to the formation of utopian communities but also to reform movements. Evangelical Protestants believed that God wanted them to reform society. Individuals who experienced perfection and holiness were expected to help society become perfect and holy. This fusion of personal and public godliness, albeit with other mitigating factors, was the reason for the popularity of the temperance movement, which gained strength in the early nineteenth century. Many Protestants in general and evangelicals in particular believed that alcohol could be a detriment to the social order. In the 1870s the Woman’s Christian Temperance Union (WCTU) was founded (and continues to exist today). The WCTU insisted that alcohol was harmful to women. Men who drank too much alcohol tended to beat their wives and children, squander their paychecks, and act immorally. With the protection of women as its founding purpose, it is not surprising that some of the group’s leaders and members considered themselves to be feminists. Besides advocating prohibition, the WCTU also took up other reform issues, such as advocating women’s suffrage, opposing prostitution, and supporting public health.

Another reform movement that gained support after the Second Great Awakening was abolitionism. White male northerners, former African American slaves, and women all took an active role in abolitionism for various political, religious, and social reasons. Many women Christians, including

sisters Sarah Grimké (1792–1873) and Angelina Grimké (1805–1879), used their religious beliefs to condemn the institution of slavery. In her “Appeal to the Christian Women of the South” (1836), Angelina Grimké sought to prove that slavery went against the teachings of Jesus and the Bible. Elizabeth Cady Stanton (1815–1902) and Susan B. Anthony (1820–1906), in addition to supporting temperance, also became deeply involved in the antislavery movement.

First-Wave Feminism

Becoming involved in antebellum reform movements, like temperance and abolitionism, gave vast numbers of women a sense of empowerment and a reason to believe that they could make a difference. Many women were criticized for stepping outside their domestic role as wife and mother into the public world of political activism, and consequently they felt the need to defend their participation in reform movements. Catharine Beecher (1800–1878), sister to Harriet Beecher Stowe (1811–1896), criticized the Grimké sisters for behavior not befitting of women. In response to such criticism, Sarah Grimké wrote “Letters on the Equality of the Sexes” (1837), in which she demonstrated that the Bible taught that men and women were equals. Similar to the way in which they defended the rights of African American slaves, the Grimkés made an appeal to the common humanity that women shared with men, therefore deserving the same rights and respect.

Women were not only criticized for participating in reform movements by those on the outside, but they were also discriminated against by those on the inside. Abolitionist women like Stanton and Anthony were angry that women had to sit separately from men at antislavery conferences and that they were not given sufficient leadership roles in antislavery societies. In 1848 Stanton organized the first women’s rights conference, in Seneca Falls, New York, to highlight the discrimination of women. The Seneca Falls convention, under the guidance of Stanton, produced the Declaration of Sentiments, which was modeled after the Declaration of Independence. In it, Stanton objected to the tyranny of men who wield authority over women, and she demanded that women be allowed to fulfill the equal role which their Creator entitled them to. Later on, in 1895–1898, Stanton and a “revising committee” wrote *The Woman’s Bible* because she maintained that previous versions of the Bible were prejudiced against women.

Although the Declaration of Sentiments was groundbreaking and caused a stir, the demands of the antislavery movement quickly proved to be more pressing. During the Civil War (1861–1865) women’s rights concerns were set aside, as women’s rights activists endeavored to support the cause of the Union and abolition. However, many of these feminists were disappointed and bitter when the Fifteenth Amendment was passed after the war, stating that the right to vote should not be denied on the basis of “race, color, or previous condition of servitude.” Women like Stanton and Anthony demanded to know why the amendment did not give women the right to vote as well. In language that bordered on racist, they insisted that many women were more educated, and therefore would be better voters, than African American men who previously were slaves and had little or no formal education.

Sojourner Truth (1797–1883) was the first African American woman to point out that white women benefited from the privileges of white men in a racist society. Truth was the embodiment of the connections between the Second Great Awakening, antebellum reform movements, and first-wave feminism. Born a slave in New York, she was freed when slavery was outlawed in the state of New York in 1827. After she was freed, she underwent a religious conversion and began attending church and revivalist camp meetings. She joined a small utopian community in New York City, where she worked as a domestic servant. After the utopian community disbanded, Truth became an itinerant preacher. She befriended various abolitionist leaders and eventually used her speaking skills to deliver speeches at antislavery conventions. In 1851 in Akron, Ohio, Truth attended a convention on women’s rights where she gave her famous “Ain’t I a Woman?” speech. In addition to drawing attention to the plight of African American women who did not have the pleasure of occupying the delicate, domestic role of well-off white women, Truth claimed that the teachings of the Bible presumed that women possessed inherent strength and power. If Eve had the power to turn the world upside down with her sin, then surely women had the power to turn the world right side up again. Men did not have the right to stand in the way of women who wanted to do so, Truth contended.

Yet not everyone who shared Truth’s evangelical background also shared her convictions about the rights of women. Early feminists were concerned that some evangelical groups denied the most private and basic rights of women, such as the right to monogamy. The polygamous

practices of the Church of Jesus Christ of Latter-day Saints, also known as Mormons, were abhorred by feminists in particular and by most of the American population in general. The Latter-day Saints instituted plural marriage, a polygynous form of polygamy, in the early 1840s (but officially renounced it in 1890). Although the percentage of the Latter-day Saints who practiced polygamy was relatively small, the popular media placed a huge spotlight on the perceived harm that it inflicted on women and children. Slavery and polygamy were thought to be twins of the same barbaric system. Early on, women's rights activists contended that giving the right to vote to women in Utah, which had a large Mormon population, would help to end polygamy, because surely Mormon women would vote against such barbarism. In 1870 Utah was second only to Wyoming in giving women the right to vote. At this time, many who supported women's suffrage expected that Mormon women would stand up for themselves and vote their way to monogamy. When this did not happen, and Mormon women voted in tandem with Mormon men, women's rights activists worried that Mormon women were being brainwashed into thinking that polygamy was anything but abuse. Proponents of women's rights began to see Mormon women as objects of reform rather than as agents of reform, as women who desperately needed help because they could not help themselves. Both Stanton and Anthony condemned polygamy and what they saw as its inherent misogyny. After a trip to Utah, Stanton came to the conclusion that Mormons, especially Mormon women, were held in slavery by the Mormon church. They were not allowed to think for themselves, and consequently the progress of their society was stifled.

The women's rights movement in the nineteenth century, led by Stanton and Anthony, later came to be known as first-wave feminism. Focusing on de jure (legal) discrimination, first-wave feminism was unified by the goal of giving women the right the vote. Many first-wave feminists argued their case from the sameness approach, insisting that women shared a common humanity with men and therefore should be extended the same rights, especially the right to vote. Other first-wave feminists took the difference approach, insisting that women were different from men in the area of morality. They argued that because women were inherently more virtuous than men allowing women to vote could restore morality and accountability to the corrupt world of politics. As noted previously, religion had an ambivalent relationship to early feminism. Although it could be claimed

that women's rights activism was a product of evangelical Christian reform movements, it could also be shown that many evangelical groups, including Mormons and utopian communities, did not share the same goals as first-wave feminists.

The Twentieth Century

Because first-wave feminists were united by the common goal of women's suffrage, first-wave feminism largely subsided after women were given the right to vote with the ratification of the Nineteenth Amendment in 1920. Yet the search for women's freedom and self-determination did not end. The "Roaring Twenties" was a time when young women known as "flappers" cut their hair, wore short dresses, and defied sexual norms. These women who lived extravagant lifestyles and snubbed traditional gender roles in the 1920s were forced to be dutiful wives and mothers during the hardships of the Great Depression of the 1930s. When the depression lifted during the World War II years (1941–1945), women were expected to enter the workforce in greater numbers to fill in the economic gaps left by the men who went to fight in the war. Women who helped their country by working in factories and producing weapons during the war were then forced to retreat to the domestic sphere when their men returned from war and needed their jobs back. Harking back to the "cult of domesticity" prized by Victorians in the nineteenth century, middle-class women of the 1950s were taught that being a wife and mother was their most important role in society. They were encouraged to be content with making a home and taking care of their families. However, by the 1960s, some women began to wonder if there was more to life than cooking and cleaning and raising babies.

Second-Wave Feminism

During the forty years from 1920 to 1960, only one organization self-identified as "feminist." The National Woman's Party, founded in 1916, was the only group willing to associate itself with feminism because many other groups were fearful that they would be accused of being radicals or communists, or both. This avoidance of the term "feminist" changed drastically with the rise of second-wave feminism in the 1960s and 1970s. It could be said that second-wave feminism was born in 1963, the year that Betty Friedan (1921–2006) published *The Feminine Mystique*. Friedan's book highlighted the disillusionment that many educated, middle-class women felt toward domesticity. While first-wave

feminists focused mainly on de jure discrimination, second-wave feminists, much like the civil rights leaders of the 1950s and 1960s, sought to focus their attention on de facto discrimination. De facto discrimination is discrimination that is not necessarily sanctioned by law but is sanctioned by practice. One of the battle cries of second-wave feminism was, “The personal is political.” This meant that the ordinary things in a woman’s life that were normally deemed private—such as the clothes she wore, the number of children she had, the career she chose—were not private matters at all but were actually power-laden choices determined by a patriarchal society.

Shulamith Firestone (1945–), perhaps one of the most influential of radical feminists, wanted women to have more options than getting married and raising children. Firestone developed what she labeled “revolutionary alternatives” to the oppressive nature of the patriarchal structuring of society. These alternatives included artificial reproduction to take the burden of child bearing off women altogether; economic independence of women and children; the full assimilation of women and children into society at large; and the complete sexual independence of women and children. On this issue of sexuality, many radical feminists believed that sexual intercourse between a man and a woman would always be about male dominance of the female and therefore could always be considered rape. Consequently, many radical feminists converted to lesbianism so that they did not have to participate in the heterosexual domination of women’s bodies. Luce Irigaray (1932–), a Belgian scholar, explicated the phallogentrism of Western society, which privileged the male penis during intercourse and the male perspective in intellectual life. Yet not all second-wave feminists blamed men for the oppression that women faced. Evelyn Reed (1905–1979), a prominent member of the Socialist Workers Party, supported Marxist feminism by arguing that patriarchy was the result of capitalism and by advocating the overthrow of capitalism in the United States.

Mary Daly (1928–), on the other hand, did not believe that capitalism was the reason for Western society’s oppression of women. Instead, she argued that religion—that is, Christianity—was the main tool used by society to oppress women. Daly’s first book criticized the Roman Catholic Church for being misogynist; her second book, *Beyond God the Father* (1973), called for the death of God as a male father figure. Daly’s work was very influential, convincing many second-wave feminists that religion was a major source of oppression. This was especially true for feminists when it

came to the issue of abortion. Second-wave feminism advocated the right of every woman to have access to a legal and safe abortion. Most conservative Christians, including evangelicals and Catholics, loudly opposed abortion, considering it to be the destruction of God-given human life. Feminists retorted that women should be free to choose what happens with their own bodies without the interference of religion or government. This conviction led to the popular statement, “Keep your rosaries off my ovaries.”

Even as some feminists denounced religion for supporting centuries of patriarchy, others wanted to revamp their own religious traditions to make them less patriarchal and more feminist friendly. Some Christian denominations took seriously Daly’s indictment of patriarchal language and began to use the phrase “in the name of God our Creator, Redeemer, and Sanctifier,” rather than “in the name of God the Father, the Son, and the Holy Spirit.” Reform Jews, Conservative Jews, and liberal Christian denominations began to ordain women as rabbis, ministers, and priests.

Although several religious groups accepted the goals of feminism as their own, others waged war on feminism. In America during the 1980s Christianity, Judaism, and Islam experienced a conservative backlash against the liberalizing tendencies of the 1960s and 1970s. Many groups within these religious traditions felt that second-wave feminism was anti-God, antireligion, and antifamily. Conservative Christians argued that God created woman for a specific plan and purpose. A woman’s body was created differently from a man’s body so that she could be the bearer of children. While feminists sought to transcend the perceived biological limitations of women’s bodies, antifeminist Christians saw the biology of women’s bodies as their destiny. A woman’s role in society and in the home was to be different from yet complementary to a man’s role. Reminiscent of Puritan theologians, conservative Christians sought to reappropriate the idea that women should be submissive, especially to their husbands, the clergy, and the authorities that God has placed above them. If women abandoned the role that God has given them—by pursuing the goals of feminism, for example—they would never truly be happy or experience fulfillment. Conservative Christians were also appalled by the feminist movement’s support of abortion and homosexuality, which they felt were unbiblical.

Third-Wave Feminism

Third-wave feminism became a distinct movement in the 1990s. Although third-wave feminists grew up enjoying the

rights and privileges secured by the success of second-wave feminism, they critiqued second-wave feminists for assuming that the concerns of white, middle-class American women were the concerns of all women. Lower-class women, African American women, Native American women, Mexican American women, and immigrant women did not feel that their particular needs and rights were addressed or represented by second-wave feminists. They asserted that there were multiple ways of being a woman and multiple ways of being a feminist. Embracing the postmodernism described at the beginning of this essay, such women became comfortable with, even insisted upon, multiplicity and contradiction. One did not have to burn one's bra or avoid sex with men to be a good feminist. In fact, for third-wave feminists being a good feminist actually meant celebrating the different ways that different women fight injustice and inequality in their everyday lives. It became acceptable for women to be both feminine and a feminist. They could embrace their reproductive bodies without denying their intellect. These women insisted that they could have it all: an education, a career, a husband, a family.

Perhaps because of this profamily atmosphere, more religious denominations began to adopt feminist-friendly attitudes, even if they did not explicitly identify themselves with the feminist movement. Some women in traditionally antifeminist denominations became more receptive to third-wave feminism. Third-wave feminists who were still uncomfortable with organized religion developed their own women-centered spirituality through what became known as ecofeminism. Ecofeminists believed that domination, whether speaking of the domination of women, nature, or people of color, is a structural problem throughout Western society, and especially in Western theological traditions. Focusing on issues of food, sanitation, health, and sustainable population growth, ecofeminists sought to help meet the needs of poor women and children in an environmentally friendly way. Other third-wave feminists criticized ecofeminists for participating in the essentializing of women by presuming that women are innately closer to nature than are men or essentially better at taking care of the earth than are men.

In addition to rethinking feminism's relationship to religion and nature, third-wave feminism began to rethink feminism's relationship to sexuality. Not all heterosexual sex had to involve the domination of women, as feminists from the second wave suggested. Many third-wave feminists thought men should not be the only ones who enjoy sexual

intercourse—women should also derive pleasure from sex. Although some felt that heterosexuality was compatible with their feminism, others saw homosexuality, transsexuality, and even asexuality as more conducive to helping them achieve their feminist goals.

Critical Assessment

While first-wave feminists endeavored to rid the United States of de jure discrimination by seeking to give women the right to vote, second-wave feminists were more concerned with de facto discrimination and the ways in which cultural practices oppressed women. Third-wave feminism, on the other hand, emphasized that different women were oppressed in different ways and therefore needed different feminisms to battle oppression. Thus there is little consensus on the goals, agenda, or definition of feminism. Because of the multiplicity of feminist ideas and movements, feminism has had an ambivalent relationship with religion. Sometimes religion has supported the goals of feminism, while at other times religion and feminism were viewed as diametrically opposed to one another. Yet since the colonial era feminism and religion have been intertwined.

Feminist Studies

Feminist studies arose as an academic field in the late 1960s and early 1970s. Feminism, which is concerned with political, economic, and social equity between women and men, encompasses both the personal and the political; it includes

equity in individual choices and in the institutional structures of society. A feminist consciousness begins with a recognition that inequities exist and are not a result of “natural” differences between women and men.

Historically, feminism is descriptive of social movements for change, identified by feminist historians as “waves.” The central issue of the first wave of American feminism was the suffrage movement, an endeavor that began in a Wesleyan Methodist chapel in Seneca Falls, New York, in 1848 with some three hundred women and a few men; it ended seventy-two years later, in 1920, when women gained the “sacred right to the elective franchise,” with the ratification of the Nineteenth Amendment to the Constitution. The second and third waves refer respectively to the contemporary movement beginning after World War II and the post-1990 generational shifts in strategies and tone for promoting political, legal, and social equality.

Women's Studies: The Beginnings

Feminist studies or women's studies developed out of various streams of change. During and after World War II women's employment and educational opportunities in the United States expanded. When women were able to achieve higher levels of education and wider work experience with added earning potential, the marginalization of women became less acceptable than it had been in previous generations. In order to understand changed expectations regarding women's roles, President John F. Kennedy appointed, in 1961, a Commission on the Study of Women headed by former first lady Eleanor Roosevelt. It became increasingly clear that both legal change and academic study and analysis were needed.

The Feminine Mystique, published in 1963 by New York magazine writer Betty Friedan, addressed the effects of changing roles for women. Friedan identified “the problem that had no name” as the lack of identity that many suburban, recently college educated women (white and middle-class) felt when their lives were shaped only by housework, child care, and husband “care.” The underutilization of women's skills in American society hurt both women and America. Friedan's analysis resonated broadly with women. By 1966 the National Organization for Women (NOW) had formed with a focus on legal equity.

At the same time college-age women were experiencing discrimination as they worked in the civil rights and antiwar movements. These younger women began to discuss social

justice from their experiences as women. They formed discussion groups known as consciousness-raising, or CR, groups. As they tried to make sense of changing roles, they looked to the past and to other fields of study. The first accredited women's studies class was held at Cornell University in 1969. The impetus for this course came from the recently formed Cornell-Ithaca Chapter of NOW. Women's studies courses took hold across the country, from California to Michigan, Ohio, and the eastern seaboard. The first women's studies program was started in 1970 at San Diego State University in California. Today there are more than nine hundred programs in women's studies or gender studies offered at undergraduate and graduate levels in the United States. In 1977 the National Women's Studies Association formed to support the academic enterprise. The NWSA's Web page reports that women's studies programs have the largest enrollments compared to other interdisciplinary fields. Women's Studies Online Resources (<http://userpages.umbc.edu/~korenman/wmst>), affiliated with the University of Maryland, Baltimore County, in 2009 listed over sixty international women's studies offerings; the site is periodically updated to identify additional programs.

Women's Studies and Religion: The 1960s and 1970s

The conversation about women's roles was also present in churches, religious education, and religious life. In the fall of 1969 members of the first feminist or CR group at Yale University, the Yale Women's Alliance, shared their frustrations at the biases of the theology department. One result of their sharing of personal stories and insights was the publication a decade later of *Womanspirit Rising: A Feminist Reader in Religion* (1979), edited by Carol P. Christ and Judith Plaskow.

The increasing attempts by feminist scholars of religion to change how theology was done built on writings from the recent past. In 1958 theologian Krister Stendahl (later dean of Harvard Divinity School, 1968–1979, and bishop of Stockholm) had laid the foundation for the ordination of women as priests in the Church of Sweden in "The Bible and the Role of Women: A Case Study in Hermeneutics." In this essay, Stendahl systematically set the inclusive vision of Galatians 3:28 as the centerpoint of biblical instruction on women's roles. The issue found expression throughout the church. During the reforms of the Second Vatican Council (1962–1965), Pope John XXIII suggested that women can indeed be priests. In his 1963 encyclical *Pacem*

in Terris he wrote: "Human beings have the right to choose freely the state of life which they prefer, and therefore the right to set up a family, with equal rights and duties for man and woman, and also the right to follow a vocation to the priesthood or the religious life."

In 1968 Mary Daly's *Church and the Second Sex* was published. Daly, a Roman Catholic theologian, responded in part to Simone de Beauvoir's 1949 book *Le deuxième sexe* in which de Beauvoir named the Christian church as a source of women's oppression. Daly's extensive critique of the misogyny of the church included analyses of church dogma, the Bible, and the writings of church theologians over the centuries. She revealed a history written by both women and men that at the same time diminished women as second-class and affirmed them as equal to men because both women and men were created in the image of God.

One measure of the broad religious impact of the early secular women's liberation movement is an article that appeared in the *Ladies' Home Journal* in December 1970 by evangelist Billy Graham. In "Jesus and the Liberated Woman," Graham stated that boredom is "the problem that has no name" in reference to the question Friedan had posed in *The Feminine Mystique*. Graham called women's problem a spiritual problem: a failure to accept God's plan for men as husband, father, and protector and for women the role of wife, mother, and homemaker. Graham said that Christ brought women new prestige, but Christ did not free women from the home.

In 1973 Harvard Divinity School founded the Women's Studies in Religion Program to reshape theological education. It was only in 1955 that women had first been admitted to the divinity school, but by the mid-1970s nearly one-third of the student body was female. In another five years more than 50 percent were women. The program quickly evolved into a research format and in 1980 began supporting research associates, who worked on research projects and taught in the divinity school.

In 1974 a small magazine, *Daughters of Sarah*, edited by evangelical feminist women in Chicago, focused on interpreting the Bible and acknowledging historical women who had shaped the Christian tradition. The stories of biblical women such as Deborah, Sarah, Hagar, the unnamed concubine in Judges 19, and Mary and Martha were retold with the women as central figures rather than marginal to the story of men.

The importance of uncovering and collecting texts both against women and by women was an early focus of

feminist theologians. In 1974 theologian and historian Rosemary Radford Ruether edited a collection of essays, *Religion and Sexism: Images of Woman in the Jewish and Christian Traditions*, that brought together theology and psychology, from medieval, Protestant, Jewish, and Catholic viewpoints. A year later, in *New Woman, New Earth: Sexist Ideologies and Human Liberation* (1975), Ruether showed relationships among sexism, economic systems, racism, psychology, and religious beliefs.

The interdisciplinary nature of feminist studies in religion was always important. Scholars were interested in history, biblical interpretation, psychology, sociology, and social issues. Topics of interest ranged from inclusive language to homosexuality and reproductive rights. Diversity of religious traditions was equally part of the conversation. Evangelical women focused on methods of interpretation and found the Bible to be a rich resource in support of the equality of women in conservative Christianity. The most significant book from the evangelical community was *All We're Meant to Be*, published in 1974 by sociologist Letha Scanzoni and church historian Nancy Hardesty. Their argument centered on two texts: Genesis 1:27 and Galatians 3:28.

The Rebuilding of the Canon: The 1980s Onward

As well as recovering missing “herstories,” feminist scholars also began to ask questions about reconstructing and reimagining theology and biblical hermeneutics, or interpretation of texts. Many significant books appeared in the 1980s. In the same year, 1983, Ruether published *Sexism and God-Talk* and New Testament scholar Elisabeth Schüssler Fiorenza published *In Memory of Her: A Feminist Theological Reconstruction of Christian Origins*. The use of gender analysis added new and exciting dimensions to religious studies scholarship. Concepts such as theology and the biblical canon were recast. Ruether reinterpreted traditional theological categories informed by a view of Christian tradition as the “liberating prophetic tradition.” The theological category of “man” was no longer assumed to be a generic human understanding but included the experiences of women. Fiorenza created the “hermeneutic of suspicion,” an approach to biblical interpretation that focused on the limits of an androcentric biblical text. She encouraged readers to read the silences and traced two streams within the biblical text that emerged from Jesus’ discipleship of equals: a patriarchal hierarchical stream and a liberating egalitarian stream.

Religious history, theology, and hermeneutics were vital to the enterprise of feminist studies in religion, but also important was the practice of religion. New subjects emerged for theological and ethical reflection. Katie Cannon, in *Black Womanist Ethics* (1988), brought a new approach to studying ethics by using African American women’s fiction as a resource and context for ethical reflection. Psychologist Marie M. Fortune examined abuses within the church in *Is Nothing Sacred? When Sex Invades the Pastoral Relationship* (1989). Both *The Inclusive Language Lectionary* (1983–1985) and Nancy Hardesty’s *Inclusive Language in the Church* (1987) were helpful resources for ministers and liturgists concerned about the role of language in perpetuating male dominance and privilege. This awareness of the role of language was initially expressed by Mary Daly’s dictum: “When God is male, the male is god.”

Feminist studies in religious history also reshaped established understandings of religious movements. Betty A. DeBerg, in *Ungodly Women: Gender and the First Wave of American Fundamentalism* (1990), described fundamentalism as more than an intellectual theological debate. She agreed with other social historians that fundamentalism was also a reaction to the social changes of the early twentieth century, such as industrialization, urbanization, immigration, and World War I. However, she also noted that one of the most dramatic, pervasive, and intensely personal social changes of the period, the shifts in meanings of femininity and masculinity, had received scant attention. DeBerg examined the plethora of popular literature, namely, sermons, tracts, and periodical literature. In her analysis of these sources, she discovered rhetoric that was dominated by what she described as domestic relations, human sexual identity and behavior, and women’s and men’s spheres of activity. Her work demonstrated how feminist studies can enrich and broaden the insights of religious history.

Despite the wealth of insights from feminist studies in religion over the past four decades, gender analysis in the academy continues to strive to be considered mainstream. In November 2002 historian Ann Braude, director of the Women’s Studies in Religion Program at Harvard Divinity School, convened a conference to document the history of religion’s engagement with feminism. Twenty-five women, activists and academics, told their stories from Catholic, Protestant, Evangelical, Pentecostal, Jewish, Muslim, Mormon, Buddhist, womanist, *mujerista*, and goddess perspectives. These stories have transformed religious education and practice. Indeed, the discipline of feminist studies in

religion is a necessity to fully understand North American religious life.

Film

New media technologies, such as film, have great impact on religious, social, and political life and can be used by communities and authorities for many diverse ends. At the same time, each and every “new medium” throughout history has been an extension and continuation of the media that came before. Clergy, journalists, and filmmakers, as well as judges and lawyers, have long contributed to the general relationships between religion and cinema in the United States.

The responses of two Protestant religious leaders to the cinematic portrayal of the Passion of Christ are instructive for seeing the relationship between religion and film at two points in time:

[I]t is easily the most heart-wrenching, powerful portrayal of Christ's suffering that I have ever seen. . . . I believe it has the potential to dramatically impact Christian viewers and, even more importantly, change the lives of the many unsaved audience members who could potentially be drawn to it.

Intensely realistic they are, and it is this feature which gives them truthfulness and makes them instructive. Painful they are necessarily to sensitive and sympathetic souls, and so are many of the pictures which surmount some of the altars of our churches. . . . I cannot conceive of a more impressive object-lesson for Sunday school scholars.

The first quote is from evangelical leader James C. Dobson, written in 2004 in response to Mel Gibson's *Passion of the Christ* (in “The Greatest Story Ever Told,” www2.focusonthefamily.com/docstudy/newsletters/a000000767.cfm, 2004). The second, in response to Thomas Edison's *Passion Play of Oberammergau*, was written in 1898 by the Reverend R. F. Putnam (originally published in *Home Journal*, February 15, 1898, quoted in Charles Musser, *The Emergence of Cinema: The American Screen to 1907*, 1990, p. 216). Both praise the realism of the respective films, both note the emotional impact that images can have, and both see the films as efficacious for religious life: the saving of souls and/or instruction. Yet the films are separated by more than a century, a century that spans the history of cinema, and the films are radically different from each other.

On one hand are films that make religious claims (and claims on religion), while on the other hand are religiously motivated responses to those films. This essay outlines both the production and the reception of films within the religious cultures of the United States. First, it is important to note that film and religion have been intertwined in the United States since the dawn of cinema. Second, while the subject matter of films is important in a religious studies context, the response to films is equally important. Although not immediately apparent in the sentences quoted above, their larger context reveals that Dobson and Putnam were writing apologies, defending the films against other political and religious leaders who had castigated the films for

theological reasons. The second part of this essay charts some of the commentaries and debates that have ensued in light of evolving filmic technologies.

A Brief History of Religious Films in the United States

“Religious films” here refer to those films with manifest religious subject matter (*The Passion Play*, *The Ten Commandments*, and so forth), though other films with latent religious foci also warrant attention since religion increasingly lies dormant within contemporary, seemingly secular cultural productions. When dealing with over a century’s worth of U.S. film productions, significant social, cultural, and religious changes are evident, and the cinema becomes a fascinating lens through which to view such changes.

Early Film and the Incarnation

While the oft-acknowledged inventors of cinema, the Lumière brothers—Auguste and Louis—were unveiling their cinematic technologies in France, screening short films on the walls of cafés in Paris in the 1890s, Thomas Edison was working to perfect his own motion-picture cameras and projectors in the United States. Edison’s first impulse was to create single-viewer projectors, such as the kinoscope, but eventually he realized the potential for projecting large images for a large audience. Once the early technological issues of recording and projecting were worked out, and once the novelty of cinematic projection began to wear off, a key issue of cinema turned to content: what to show? At first, as with the Lumières’ films in France, American films were motion images of everyday life: workers and performers, celebrations, sporting events, and the like. Soon, however, there was a desire for reproductions of events not always immediately accessible to viewers. By the late 1890s, according to early film historian Charles Musser, two subjects stood out: boxing matches and Passion plays.

Within a decade of the first cinematic projections, several versions of the Passion play were made and screened around the world (some as “motion pictures” but many also as illustrated lectures accompanied by organ music, hymns, and slides). Louis Lumière produced *La vie et la Passion de Jesus Christ* in 1898 in France, while the *Horitz Passion Play* opened in Philadelphia about the same time. But it was Edison’s 1898 production of *The Passion Play of Oberammergau* (dir. Henry C. Vincent) that became immensely popular and for all practical purposes started the quest to represent the life and death of Jesus on film. The Edison-produced film was a motion

picture decidedly still a part of a theatre world with its staged tableaux and stable camera, yet the “realism” affected by the moving images on screen was of great interest to audiences. According to reports, more than thirty thousand people saw the film in its first three weeks of screenings.

Other Passion plays and films on the life of Christ were successful in the decades following, with *From the Manger to the Cross* (dir. Sidney Olcott, 1912) becoming perhaps the first great, successful Jesus film. Olcott’s film was striking for its production costs (between \$20,000 and \$25,000 at the time) and the fact that it was filmed in “original locations” in Egypt and Palestine. Skipping ahead fifteen years, Cecil B. DeMille’s *King of Kings* (1927) becomes the first “truly American Christ,” as religion scholar Stephenson Humphries-Brooks claims, “and neither the church nor Hollywood would be the same after 1927” (*Cinematic Savior: Hollywood’s Making of the American Christ*, 2006, p. 9). Film-makers in future decades continued to create films based on the life and death of Christ, as the divine-human connection changed with the times and technologies.

Beyond the Silent Era

After the advent of sound films, for various reasons, major U.S. film production turned decidedly away from stories of Jesus and away from explicit biblical stories in general. There was no major production of a biblically based film from the 1927 release of *King of Kings* until DeMille’s *Samson and Delilah* in 1949. There were a number of Bible story films created by specific Christian production companies for small, target audiences that began to emerge during this time, but their effect on the general American culture is unclear and is beyond the scope of this essay.

Even if the trend was to turn away from Bible stories per se, religious subjects with a heavy-handed dose of moralizing became prominent through the 1930s and 1940s. *Boys Town* (dir. Norman Taurog, 1938), *The Song of Bernadette* (dir. Henry King, 1943), *Going my Way* and its sequel *The Bells of St. Mary’s* (dir. Leo McCarey, 1944, 1945) were all big hits and multiple Oscar winners that helped to re-create a unique vision of U.S. religiosity. Christianity became embodied in single individuals who struggle against institutional structures (even if that meant the church itself) to bring goodness, truth, and justice to a troubled environment. Such stories, in a secularized form, continue today in such films as *Lean on Me* (dir. John G. Avildsen, 1989), *Mr. Holland’s Opus* (dir. Stephen Herek, 1995), and *Take the Lead* (dir. Liz Friedlander, 2006), films that share

plot structures of the earlier films but are emptied of their religious dimensions to become secularized images of the strong individual in the face of adversity.

After the success of DeMille's *Samson and Delilah* (which reiterated the single individual versus institution theme, now reinterpreted through the biblical tradition), the way was cleared for big-budget "sword and sandal" epics to take prominence. A brief list includes *David and Bathsheba* (dir. Henry King, 1951), *The Ten Commandments* (dir. DeMille, 1956), a new rendition of *King of Kings* (dir. Nicholas Ray, 1961), *The Greatest Story Ever Told* (dir. George Stevens, 1965), and myriad other Christian-biblical themed films. Meanwhile, *Quo Vadis* (dir. Mervyn LeRoy, 1951), *The Robe* (dir. Henry Koster, 1953), and *Ben Hur* (dir. William Wyler, 1959) each did well, with their religious, tangentially biblical themes. All these films utilized biblical stories, which proved their upstanding nature; at the same time they provided grist for the expanding Hollywood titillation mill with their depictions of lies, murder, greed, and lust, subjects that permeate the Bible itself. Many of the films appealed to audiences who identified as Christian and saw them as instructional, and even at times devotional, so much so that many of these pictures actually created the imagery and understanding of theology and the Bible for masses of people.

"Religious films" have almost always been bound up with representations of Christian themes. Other religious traditions are seldom seen, and when they are, they tend to be cast in a negative light. This is especially true of representations of Judaism. Important to note, as some commentators already have, is that many of these midcentury pieces are not simply "biblical" films, but are in particular "Christian oriented" biblical films in which the Bible is understood via "supersessionist" reinterpretations. That is, Christian theology, through the New Testament, completes and fulfills the prophetic roles given in the Hebrew scriptures; thus Christianity is understood to supersede the "old covenant/testament." Furthermore, in these films Jesus is often portrayed not merely as a new and improved Semite of ancient history but as a new and improved European and, increasingly in the contemporary United States, a "superhero."

At the same time, the fact is that even within the specific locale of the United States there are myriad Christian traditions: There are always "Christianities," not simply "Christianity," and the varieties of Christian figures in films cannot be underestimated. Moreover, though in a more limited way, "Jewishness" (most films until the late twentieth century

cannot be said to deal with "Judaism" as such but with a more vague idea of what it is to be "Jewish") emerges at a number of cinematic spots. Starting with *The Jazz Singer* (dir. Alan Crosland, 1927), but especially coming to the fore in post-World War II movies such as *Gentleman's Agreement* (dir. Elia Kazan, 1948), with its theme of "passing" as Jewish, and eventually in *The Last Angry Man* (dir. Daniel Mann, 1959), films in American history dealing with Jewishness and Judaism have touched on issues of identity, assimilation, and anti-Semitism. With the 1971 *Fiddler on the Roof* (dir. Norman Jewison), we also find nostalgia for an earlier way of Jewish life, for all that was in place "before"—before the pogroms, before assimilation, before the Holocaust.

Midcentury Film and Ideologies of Race

Bound up with these overarching representations of Christianity and Christian morals are issues of race and ethnicity. This is true in relation to representations of Jews, as it is to representations of African Americans. D.W. Griffith's *Birth of a Nation* (1915) disturbingly re-creates a creation story of the United States based on purportedly Christian principles that affirm white supremacy and indicate that Christianity and the United States are founded on such. To the contrary, a significant genre of film that is often elided in religious film history are so-called race films, created mainly by black producers and actors for African American audiences. The 1920s and 1930s were decades with a very active black film industry, with Oscar Micheaux (1884–1951) being one of the most significant filmmakers. Black director King Vidor mentioned religious relations when discussing his 1929 *Hallelujah*: "Perhaps films can help us learn about life and living. Does the chance to watch shadows of ourselves in the speaking dark of a movie house explain cinema's great attraction? How else are we to express our human-ness? How else are we to express God?" (Quoted in Judith Weisenfeld, *Hollywood Be Thy Name: African American Religion in American Film, 1929–1949*, 2007, p. 22).

The critically acclaimed *Green Pastures* of 1936 retells biblical stories, but the setting is the contemporary South. The film had an all-black cast, including the actor Rex Ingram who played God himself, yet it was created by a primarily white filmmaking crew, and there was significant controversy over the depictions of African American religious beliefs and practices. The film was influential enough to shape many future filmic depictions of African American religiosity and thus also the image of black religion in the white imagination.

As filmmaking was consolidated into a handful of big commercial companies in the 1930s, black filmmaking began to disappear. Into the twenty-first century there is a smaller African American presence in U.S. cinema than there was eighty years ago, though two contemporary filmmakers, from radically different perspectives, should be noted. Julie Dash confronts African American identity through a retelling of history in *Daughters of the Dust* (1991). The story is of a Gullah family living on the Sea Islands off the coast of South Carolina at the turn of the twentieth century. The film makes extensive use of a complex, African American mythological framework to tell the story and thus preserve the past. And Spike Lee, even if his films are not “religious” by most stretches of the imagination, has nonetheless made some important comments on religion and race relations.

The 1970s Onward: Beyond Christianity

The period since the 1970s has seen its fair share of “Jesus films” in the United States, though by this time there was a need for a new Jesus for a new generation of Americans. These newer films each pushed the orthodox limits of how to depict Christ, including most significantly *Jesus Christ Superstar* (dir. Norman Jewison, 1973), *The Last Temptation of Christ* (dir. Martin Scorsese, 1988), and *The Passion of the Christ* (dir. Mel Gibson, 2004). If the first two were criticized for emphasizing Christ’s humanity, the latter has been seen as emphasizing if not his divinity at least his super-humanity. Both Scorsese and Gibson emerge from strongly Roman Catholic backgrounds, and their films can be seen expressionistically as part and parcel of their own faith backgrounds.

The last thirty years have brought new types of “religious films” that do not fit the traditional Christian model. There have been farcical productions such as *Oh God!* (dir. Carl Reiner, 1977) and *Dogma* (dir. Kevin Smith, 1999), as well as stories that give strong attention to religion yet pull on traditions other than Christianity. Among the latter are *The Legend of Bagger Vance* (dir. Robert Redford, 2000), a retelling of the *Bhagavad Gita*; *Kundun* (dir. Martin Scorsese, 1997), dealing with Buddhism in Tibet; and the comedic yet provocative *Keeping the Faith* (dir. Edward Norton, 2000), in which a rabbi and a priest play the key friendship role. There are also films that work syncretically, piecing together mythic and ritualistic elements from several traditions; prominent among these are two science fiction works: *Star Wars* (dir. George Lucas, 1977) and *The Matrix* (dir. the Wachowski Brothers, 1999).

Further, although many films throughout cinematic history are noted for their religious subject matter, directly borrowing from established religious traditions, a great many more films borrow from the formal structures of religion. Mythological modes of storytelling, ritualistic renditions of space and time, and the use of symbolic imagery have each been refitted for filmic purposes via editing, cinematography, and screenwriting. Myths, rituals, and symbols re-create the world as it is, repackaging it for religious consumption. Similarly, editing refigures the temporal flow of normal time, making it repeat, slow down, or move backward; cinematography sets a rectangular frame of vision onto the world, excluding some elements and including others; and screenwriting can unfold from a small story, or can be expansive and function as grand creation myths.

Experimental films such as *Koyanqsqaatsi* (dir. Godfrey Reggio, 1982) and *Baraka* (dir. Ron Fricke, 1992) make great use of editing to piece together disparate parts of the world and show the world as an interwoven organism, for better or worse. Films by Paul Thomas Anderson (*Magnolia*, 1999, and *There Will Be Blood*, 2007) and Tim Burton (*Big Fish*, 2003, and *Sweeney Todd*, 2007) are striking in their dramatic use of storytelling in ways that mimic mythological methods. And, more specifically, classical narrative elements of hero myths are continually reworked in films. Examples are *The Lion King* (dirs. Roger Allers and Rob Minkoff, 1994), *Braveheart* (dir. Mel Gibson, 1995), *Gladiator* (dir. Ridley Scott, 2000), and *Finding Nemo* (dir. Andrew Stanton, 2003). Classic pilgrimage structures are remade through films such as *The Straight Story* (dir. David Lynch, 1999).

Myths, particularly the stories pertaining to heroes, make for inspiring cinema, drawing viewers into the world of the screen. For younger viewers Simba (in *The Lion King*) and for older viewers Maximus (in *Gladiator*) each recast classic hero-myth structures. Each has the standard “call to adventure,” an acceptance of the challenge, the accompaniment and help by a strange group of others, a facing of trials, and eventually the finding of the source (whether that means dying in the meantime or not is beside the point of the hero’s journey). As in ancient hero stories, modern cinema attempts to inspire its audiences through psychologically relevant narratives.

Documentary and the Avant-Garde

Two genres of filmmaking deserve special notice, if only because they have often been ignored by religious studies scholars: documentary and avant-garde film.

Documentary film with religious significance begins with the dawn of cinema, even if the category “documentary” was not yet in place. One important example was the work of W. K. L. Dickson, who in 1898 received Pope Leo XIII’s cooperation to film a dozen scenarios of the pope’s ins and outs. These were shown at Carnegie Hall, in New York City, on December 14, 1898, generating newspaper comments like this: “His Holiness blessed the instrument which had recorded his movements, and through it . . . those who would see the pictures afterwards” (quoted in Musser, *The Emergence of Cinema*, 1990, p. 220). This is an amazing technophilic claim that suggests much about the perceived power of the media. Later popes, however, treated cinema with more caution.

Over the decades, documentaries increasingly developed a self-awareness of the differences and interminglings of subjective and objective points of view. Meanwhile, contemporary documentaries dealing with religion are prevalent. From anthropologically oriented pieces to more experimental works, documentaries excel at depicting religious life at a local level. Several such works appeared as part of a package put together through Auburn Media called “Faith on Film,” including *Investigation of a Flame* (dir. Lynne Saches, 2003), *The Smith Family* (dir. Tasha Oldham, 2002), and *A Time for Burning* (dir. Bill Jersey, 1966). Since the dawn of the twenty-first century, documentaries such as *Hell House* (dir. George Ratliff, 2001), *Trembling Before G-d* (dir. Sandi Dubowski, 2001), *The Education of Shelby Knox* (dirs. Marion Lipschutz and Rose Rosenblatt), and *Jesus Camp* (dirs. Heidi Ewing and Rachel Grady, 2006) have offered intriguing entries into conservative religious traditions through various channels.

Avant-garde film is seldom seen outside universities and museums, and it has not had a major impact on the viewing public. There is plenty of room to suggest that avant-garde film influences industrialized cinema, and so the indirect connection is important. But, even so, too strong a focus on “popular” film may be equally misguided. Even if, say, *Star Wars* and *The Passion of the Christ* are box-office successes (that is, they made much more money for the producers than they cost to make), it does not mean we can extrapolate from these films to make assumptions about American religious life. Scholars sometimes suggest that “popular” films allow us insight into mass culture, generally forgetting that most people have not seen even the most popular of movies.

Stan Brakhage, Maya Deren, and Hollis Frampton, among others, were outstanding experimental filmmakers in the mid- to late twentieth century, and their contributions have been felt across the filmmaking industry. Their work is deeply engaged with issues of religion, ritual, and mythology. In the early 1960s Brakhage wrote something of a manifesto for the religion and avant-garde relationship, claiming that the new artists “are essentially preoccupied by and deal imagistically with—birth, sex, death, and the search for God” (in “Metaphors on Vision,” *The Avant-Garde Film*, ed. P. Adams Sitney, 1978, p. 120). Meanwhile, commenting on *Wavelength* (1967)—a film that for forty-five minutes does little more than slowly zoom in on a small picture from across a somewhat empty room—filmmaker Michael Snow stated, “I wanted to make a summation of my nervous system, religious inklings and aesthetic ideas” (see Sitney, *Visionary Film: The American Avant-Garde, 1943–2000*, 2002, p. 352). We might query what possible “religious inkling” could be expressed through such an experimental format, yet such comments should be intriguing to those interested in the religion–film connection. Can films really affect our “nervous system” and our “religious inklings”? The experimental film form of Snow and others offers something uniquely different to the film viewer, making the receptive experience of watching film something like a religious experience that appeals to viewers’ bodies and spirits.

Responses to Film and Its Medium: Detractors and Supporters

Inevitably, there have been various responses to the religion–film relationship. First, the medium of film—the formal way it represents space and time, its projected setting, and its existence in a generally “public” milieu—is critical to take into account beyond the explicit subject matter. This was particularly true in the early years of film as the new technology began to reach mass audiences. Second, religious authorities, journalists, and others have responded to the filmic re-presentations of the world and thus have become part of the broader cultural field we call “cinema,” even as some of these responses have reached the U.S. Supreme Court.

Early Responses to Film’s Media and Presentation

The presence of religious subject matter in early cinema in the United States is tied to a number of agents and circumstances that are carried through at least the first half of

the twentieth century, to a greater or lesser extent. Such circumstances include the need for screening venues and the related needs to show film as wholesome (Edison himself quipped in 1907 that the success of motion pictures relies on films “of good moral tone”); the monetary greed of the “showmen” who set up screenings; religious authorities who saw cinema as potential blessing and/or curse; the artistic sentiments of filmmakers who attempted to create new and previously unseen imagery; and masses of people who created their own responses even as they could be swayed by prominent authorities and marketing motives. Musser (in *The Emergence of Cinema*, 1990, p. 221) makes an intriguing suggestion that “in the end amusement entrepreneurs exploited religious subject matter for their own commercial purposes and ultimately absorbed it within their own cultural framework. Religious subjects did not necessarily oppose the flourishing world of popular amusement but rather were often subsumed by it.”

In the United States, as elsewhere, new technologies meet religious acceptance and opposition, often to mixed results: The faithful who are pro-technology end up with messages that easily surpass what authorities thought they were good for, while those resistant to new technologies generally cannot maintain their opposition if they remain anything other than sectarian. So, while the subject matter of films has always been a central issue in the religion-film relationship, there is also the issue of film as a specific audio-visual medium, presented formally in specific environments, and there are responses to that larger package of material. The best of early cinema might have been concerned with subjects of “good moral tone,” but there was a countering negative impulse concerning such crucial material matters as lighting in the theatres, since the morally minded did not like to imagine what was going on in those “dark holes.” Morality in every new medium is as much about content as formal presentation, and both are part of the subject to which people respond.

Responses by Religious Leaders

As religious groups, and the general public, settled in to the presence of cinema as a major player in U.S. cultural life, various individuals and groups worked to respond to and regulate the emerging industry. A great many of these were religiously motivated. Many of the early films on the life of Christ were acceptable to the general religious public because they found visual inspiration from scenarios by the

French artist Gustave Doré, whose illustrations for Bibles in the nineteenth century were popular across the Western world.

Even so, the varied versions of Passion plays produced in the United States in the first two decades of cinema became a notorious issue for public theological debate. One key problem, carried over from theatrical versions of the Passion, was that human (presumably sinful) actors played the part of Jesus, thus problematizing the human-divine synthesis of the orthodox Christian understanding of the Incarnation. Particularly disgraceful was that an actor would be paid as a professional to depict the holy figure. As with the preceding centuries, in which Christian images have been exalted, prayed to, argued against, and destroyed, the next hundred-plus years of filmmaking have taken up similar challenges of representation and Incarnation. Gibson’s *Passion of the Christ* was merely one more contentious link in a chain of images spanning the length of religious cinematic history.

Throughout the first half of the twentieth century, many religious leaders, especially Protestant, published articles and gave sermons on the topic of cinema, some promoting it and others condemning it. An article by Protestant minister Dr. Percy Stickney Grant in 1920 praises film’s potentials for teaching as well as for offering entertainment value after a hard day’s work. The evangelist John Rice, in *What Is Wrong with the Movies* (1938), pleads with his readers, “I warn you that continuing to see the movies may harden your heart until you will be enamored of sin.” Many other leaders could be quoted, and these two merely indicate that there was no coherent religious response to cinema, especially among Protestants.

Yet it was the zealous work of Will H. Hays—a Presbyterian layman, national chair of the Republican Party, and U.S. postmaster general—that really began the work of standardizing and censoring the morality surrounding film subject matter. By the mid-1930s the “Hays Code” (officially, the Motion Picture Production Code) was in place, with the help of the Jesuit priest Daniel Lord. The code severely restricted displays of sexuality and crime that had become rampant in cinema of the 1920s. The code continued to hold sway (often in minute detail) for film production until the 1968 adoption of the rating system by the Motion Picture Association of America.

Meanwhile, Roman Catholics in the United States organized and unified their approach to cinema. U.S. bishops helped create the Legion of Decency in the 1930s, leading

Pope Pius XI to respond with an encyclical, *Vigilanti Cura* (1936). The encyclical attempts to be balanced by noting how motion pictures can promote good and insinuate evil, but it clearly falls on the side of caution, arguing strongly for regulations begun by the Legion of Decency. Through the midcentury, the U.S. Catholic Church became a key force in the censorship of film, and Hays worked alongside the Legion of Decency to shape the way films were produced and what was presented to audiences.

Ambivalence toward film continued through the latter half of the century, though the ire and acclaim became increasingly focused on individual films, not on “cinema” as a whole. Controversies continued over representations of Jesus Christ in Martin Scorsese’s *Last Temptation of Christ* (1988), in which an all too human Jesus is condemned by conservatives, while on the flip side liberals condemned Mel Gibson’s *Passion of the Christ* for excessive violence and an all too superhuman view of Jesus. After the uproar over Gibson’s film, smaller scuffles have broken out more recently in response to *The Chronicles of Narnia* (dir. Andrew Adamson, 2005), with many criticizing its thinly veiled Christian apologetics, and others blasting *The Golden Compass* (dir. Chris Weitz, 2007) because it was based on a book by an atheist writer, Philip Pullman.

Supreme Court Cases

These controversies have generally been set within and bounded by popular media: newspapers and television news and, more recently, Internet outlets like blogs and Web sites. Yet they have also surfaced in the legal system, with a number of cases reaching the U.S. Supreme Court. Two examples are a case in the early 1950s over Roberto Rossellini’s film *The Miracle* and a 2005 case that harkens back to DeMille’s *Ten Commandments*.

The Miracle stands at the heart of *Burstyn v. Wilson*, a case ruled on by the Supreme Court in 1952. In the film a somewhat confused and inebriated shepherdess has sex with a wandering stranger (played by Federico Fellini), envisioning him to be St. Joseph. When she becomes pregnant she imagines the child must be divine as well. The woman is mocked and scorned by her neighbors for her beliefs, and in the end she flees town and gives birth in a church on top of a mountain. The National League of Decency, a private Catholic organization, called the film “a sacrilegious and blasphemous mockery of Christian religious truth,” while in New York, Francis Cardinal Spellman led protests against the screening of the film. Once called the “American pope,” Cardinal

Spellman and the protests were initially successful, causing the New York film board to ban screenings, relying on a state law that allowed censorship boards to deny licenses to commercial films that were deemed “obscene, indecent, immoral, inhuman, sacrilegious.” The Supreme Court ultimately reversed the New York State ruling, asserting the right to free speech set out in the First Amendment and effectively rewriting the laws on censorship and film that had been in place since the dawn of theatres in the United States. Literature had been protected until this point, but not film.

A half-century later, another Supreme Court case displayed the role of film in a U.S. political and legal context. *Van Orden v. Perry* (2005) concerned the display of the Ten Commandments in and around courthouses, one of those being a six-foot-high granite sculpture outside the Austin, Texas, state capitol and adjacent courthouse. The monument was erected in 1961, though little attention was paid to it for the following decades, and it is only one of many Ten Commandment sculptures outside courthouses, capitols, and urban squares in the United States today. A great many of these monuments actually came into being through the publicity stunts of DeMille as he was finishing his second version of *The Ten Commandments* in the mid-1950s. As promotion for the film, DeMille got in touch with the Fraternal Order of Eagles, a nationwide association of civic-minded clubs (founded in 1898, interestingly enough, by a group of theater owners), who had been distributing copies of the Ten Commandments to courtrooms across the country as “guidance” for juvenile delinquents. DeMille and the FOE commissioned hundreds of granite sculptures of Moses’ tablets to be placed outside courthouses across the United States, including Austin, Texas. DeMille died in 1959, but the FOE continued the task of planting the sculptures through the 1960s, and they are now the focal point of Supreme Court decisions that impinge directly on church–state issues in the United States.

Conclusion

Through the twentieth century, cinema became a vital sociopolitical force that has had many repercussions for religious traditions. The connections between religion and film are vast, intersecting with politics, church–state relations, and the justice system; social tensions of race and gender; and the role of technology and media in evolving religious traditions. A thorough understanding of twentieth-century life in the United States cannot afford to ignore the role that cinema has had on religion.

The continued rise of the “new media” provides both new challenges and opportunities for religious traditions in the United States. Cinema’s dominant cultural influence is undoubtedly waning in the wake of videogames and Internet-related innovations. On the other hand, a thorough understanding of the history of film, especially early film, reveals reactions and responses that are uncannily similar to those being developed toward new media today. Gibson’s *Passion of 2004* and other films like *The DaVinci Code* (dir. Ron Howard, 2006) show that film continues to be an important player in symbolic struggles.

Folklore

Artifacts, art, craft, architecture, beliefs, behaviors, private and public customs, habits, foodways, dress, ways of speaking, bodily communication, dance, music, and song—these are among the cultural expressions of religious affiliation or observance that constitute religious folklore and folklife in the American context. The terms *folklore* and *folklife* refer to specific cultural creations, the process of their creation, their conscious and unconscious performance, as well as their transmission between individuals and communities.

The field of folklore and folklife studies the multitude of aesthetic forms that constitute daily living and include a wide range of subjects associated with American religion—from New England Puritan diaries to Italian Catholic St. Joseph Day altars, from African American preaching styles to Pennsylvania Lutheran baptismal certificates, from Mormon missionary narratives to Polish Easter food customs, from Sacred Heart of Jesus tattoos to apocalyptic Internet sites proclaiming the Rapture. All these examples are based on the Christian tradition, but any number of Native American, Jewish, Muslim, Hindu, Buddhist, Wiccan, and Neo-Pagan topics in myriad expressive forms have informed the study of American religious folklore.

Contemporary studies of American religious folklore tend to analyze and compare the cultures of communities

defined by their religious belief systems. Such communities can also be defined through shared geography, age, gender, economy, occupation, leisure, and medical, political, or other beliefs. Religious folklore stresses the significances of aesthetic or artistic creativity and creation; historical process; the varieties of construction of mental, verbal, or material forms; and the enduring relationship and subtle balance between utility and creativity in such forms within cultures. The methodology of religious folklife includes exhaustive historical research using all available historical sources as well as field studies that include ethnographic observation, thick description, and interviewing. This method and subsequent analysis allow people to speak for themselves using their own aesthetic and classificatory systems to explain their religious beliefs and practices.

Developments in the Study of American Religion

Since the 1980s scholars who specialize in American religion have been moving away from concentrating solely on the history, texts, leadership, and theological controversies of religious institutions. What had been known as the study of American “church” history is now more broadly and openly referred to as American “religious” history. Scholars presently have a greater sensitivity to and interest in the realities of religion as it is actually lived, not only among ministers or administrative functionaries of a religious institution, but also among the laity whose beliefs and practices actually sustain those religious institutions. Meanwhile, written or published sources are no longer given primacy over other cultural forms or expressions of religion such as speech, music, and art as sources for telling the multiple and complex stories of American religious communities and individuals. Complementing the desire to study the historical parameters of people’s religion is the greater interest in studying the cultural life of contemporary religion using both qualitative and quantitative methods.

Folklorists are attentive to the documentation and analysis of American religiosity in historical and contemporary settings and in rural, urban, suburban, agricultural, industrial, face-to-face, mass-mediated, and generational contexts. Folklore studies particularly challenge both academics and nonacademics to learn from and analyze the cultural production of all people and communities within a society, not solely the socially elite, academically trained, or politically powerful. Folklorists, therefore, endeavor to focus on all individuals, cultures, and lifeways found within the context of a local region, but also as these are manifested globally.

Folklorists and American Religion

American folklorists were drawn to study the noninstitutional dimensions of American religion, as well as its vibrant cultural expressivity, several decades before their scholarly counterparts in church history and religious studies. In the first half of the twentieth century, before formal academic programs in folklore existed in the United States and Canada, scholars of American folklore were divided between those who identified themselves as anthropological folklorists and used fieldwork to gather data, and those who identified themselves as literary folklorists studying aspects of American religion by, for example, emphasizing historical text as a form of information-laden literature over a concentration on cultural context.

The anthropologist Franz Boas (1858–1942) and his students Ruth Benedict (1887–1948), and Gladys Reichard (1893–1955) were editors of the *Journal of American Folklore* from 1908 to 1940. They wrote and published many studies on Native American religion, mythology, and worldview bringing the anthropological fieldwork-oriented approach to religion into the discipline of folklore. Benedict wrote *Zuni Mythology* in 1935, and Reichard published *Prayer: The Compulsive Word* in 1944, and *Navaho Religion: A Study of Symbolism* in 1950. Boas’s ethnographic approach influenced his student Zora Neale Hurston (1891–1960), whose article “Hoodoo in America” in *JAF* in 1931 and her subsequent writings about African American folklore and beliefs are significant ethnographic accounts. Melville Jean Herskovits (1895–1963), another of Boas’s students, studied survivals of African cultures in the family life and in the material and spiritual life of African Americans. Herskovits’s student, William R. Bascom (1912–1981), who served as president of the American Folklore Society from 1952 to 1954, is known for his studies of Yoruba religion. He conducted early research among the Gullah people of South Carolina and the Georgia Sea Islands in 1939. Bascom’s work in African, Afro-Caribbean, and African American folklore stresses the importance of understanding the social and cultural contexts of religious beliefs and practices.

George Pullen Jackson (1874–1953) was a text-centered early researcher of American folklore. A professor of German at Vanderbilt University, Jackson reserved his greatest scholarly enthusiasm not for German legend or oral epic, but for the study of American religious folksong. He was the first major scholar to describe and classify the sources of religious folk music, which he traced from New England to

the South. Relying on printed texts and the detectable melody and lyrics, especially nineteenth-century American “shape-note” songbooks—a nonstandard method of musical notation employing shaped characters associated with particular pitches—he formulated typologies of folk hymns, revival spirituals, and religious ballads. Jackson discerned the significance of religious folksong in American evangelism, revivalism, the camp meeting and “singing schools” (summer sessions taught by itinerant master singers), but insisted, problematically, that any traceable African influence was minimal.

Other Genre-Oriented Approaches

In the generation of scholars who immediately followed Jackson, folklorist Wayland Hand (1907–1986) specialized in an area of text study that he framed as “popular belief and superstition.” Hand approached American religion from the perspective of the study of oral genres or the “lore” of religious people and was, like Jackson, interested in the diversity and cross-cultural spread of such beliefs. He assembled religious, medical, magical, miraculous, and occult beliefs from the field and from thousands of scholarly and popular print sources to create the UCLA Archive of Popular Beliefs and Superstitions. Hand also worked on the collected “popular beliefs” of North Carolina (assembled from the “Frank C. Brown Collection”), Ohio, and Utah, preserving, classifying geographically, and annotating these narratives as items of belief.

American Religious Folklife: Yoder

The interface of folklore and American religion was developed most prominently by Don Yoder (1921–), one of the most influential and well-known American folklorists. Yoder applied European “folklife” approaches to the American scene. Moving folklore studies away from oral materials and related texts, he prompted the study of new “texts” with a greater sensitivity to the context in which they were found. Beginning in the early 1950s, Yoder took the scholarly methods he had learned as a doctoral student in American church history in the 1940s at the University of Chicago and integrated them with the approaches to regional ethnology, or the study of local cultures, used by scholars in continental Europe. Equipped with knowledge of pre- and post-World War II German-language folklore scholarship, Yoder took the European *religiöse Volkskunde* or “religious folklife” approach from German and Swiss scholars such as

Georg Schreiber, Heinrich Schauerte, Rudolf Kriss, Adolf Spamer, and Richard Weiss and applied it to the American context. These men had chronicled the traditional oral, material, and ritual lifeways of Roman Catholic and Protestant Christians in regions of Central Europe emphasizing, for example, systems of pilgrimage, customs of the church year, holy day foods, and the material expressions of saint devotion.

In applying the lessons learned from *Volkskunde* to the American religious scene, Yoder developed an “American folklife studies” approach. He directed that approach toward the collection and analysis of the cultural output of religious communities, especially in the mid-Atlantic region, that had been transplanted from Europe and successfully adapted to America. These communities included church and sectarian groups such as the Lutherans, Swiss Reformed, Amish, and Delaware Valley members of the Society of Friends, who had come originally to Pennsylvania at the invitation of the English colony’s founder, William Penn, the Quaker exemplar of religious toleration.

Among Yoder’s many scholarly contributions was the journal *Pennsylvania Folklife*, which he cofounded with folklorist and colleague Alfred L. Shoemaker (1913–?), and a series of innovative courses, beginning in 1957, at the University of Pennsylvania. Yoder did not neglect the study of the leading personalities and theological controversies of relevant denominations, but he worked to balance the study of such biographies and texts with the rich oral, material, and performative forms present in the everyday lives of the faithful. He believed these folklore materials should spur American religious historians to rethink the preeminent established discourse, which asserted that the overarching narrative of American religion ostensibly issued forth from the influential roots of New England Puritanism. Yoder suggested that such a narrative was better founded in the equally complex narrative of American religious toleration and plurality that existed in Quaker Pennsylvania. From the intricacies of Moravian women’s clothing and the prevalence of occult narratives among the Pennsylvania Germans to the search for a Quaker material culture and the distinctiveness of religious folk song observed in the “white spiritual” in Pennsylvania, Yoder chronicled and analyzed the origins, variants, vibrancy, meaning, and influence of such expressive culture, which he used as keys to unlock the ideas, fears, joys, emotions, and longings of mid-Atlantic religious cultures. Within the tapestry of American religious life, as Yoder detailed, those could be found in the Pennsylvania

German *fraktur* or illustrated manuscript art, the painted hex signs on the barns of some Pennsylvania Dutch, the hand-drawn and -colored picture Bible of an American Pietist, and the celebratory customs marking Christmas, New Year's, and Easter.

An American "Folk Religion"

Yoder's approach to what he termed "folk religion" in America was as a context-centered, not genre-centered, assemblage of people's religious oral and material lore/culture. He often cast what he saw as the folk practice and folk interpretation of religion into a rubric he called the folk cultural dimension of religion. Again relying on European folklife precedents, he conceptualized religion as a dichotomy between institutional perspectives, or "official religion," and everyday religious belief and practice and interpretation, or "folk religion." He included within this definition the totality of all people's views and practices of religion apart from and alongside the strictly theological and liturgical forms of the official religion.

Other folklorists influenced and inspired by Yoder over the last forty years have applied his conceptualization to the American scene. Their research is illustrative of the variety of communities, contexts, and approaches of the folklorist to American religion. Elaine J. Lawless, for example, studied the oral expression and life history of Pentecostal women in Indiana, Illinois, and Missouri, later using reflexive ethnography to study Missouri Pentecostals. Jeff Todd Titon concentrated on speech, chant, and song in an Appalachian Independent Baptist congregation. Jodie Shapiro Davie analyzed the conversion stories of Presbyterian women in New Jersey. Lydia Fish concentrated on Polish Catholic celebrations and customs in Buffalo, New York. Daniel Wojcik investigated traditionalist Catholic Marian apocalypticism at a Queens, New York, shrine. James S. Griffith explored the architecture and sacred topography of the Southwest. Yvonne J. Milspaw examined Protestant home shrines in Pennsylvania. Yvonne Lange described the influence of Catholic paper ephemera on the folk sculpture of New Mexico. And David J. Hufford probed the boundaries of supernatural beliefs for Americans through attention to the traditions of supernatural assault and their transmission as *memorates* or first-person accounts of the supernatural.

Yoder consistently asserted that in a complex society there are no religious traditions, periods of their existence, or particularities of setting that do not have relevant folklore present to appreciate and research. Each religious context

should be observed to see which folklore genres are present and appropriate for consideration and study, such as folk speech, narrative, ritual and festivity, music, belief, and humor. Daniel W. Patterson, another folklorist and contemporary of Yoder, contributed significantly to the study of a distinctive American religious movement and culture. Patterson worked and published on the musical traditions of the intentional utopian community known as the Shakers.

Toward a Theory of American "Vernacular Religion"

Beginning in the 1960s, the application of what is now called performance theory—an emphasis on mode of presentation in a social context versus mere collection and documentation—to the study of folklife complemented the earlier perception that tradition is a living process exhibiting both conservative/passive and dynamic/changing qualities. Performance theory further prompted folklorists to see religion in its various forms of expression as vibrant, never static, continually transforming as individuals receive and adapt traditional knowledge and practices to specific circumstances. Thus the expressive culture of religion from a performance theory perspective does more than simply reflect the worldview of a religious tradition; it actually assists in the creation of a culture, and, if needed, its reconstruction.

In the 1990s Yoder's student Leonard Norman Primiano, influenced by the theoretical developments of performance theory in folklore, noted the limitations of a dichotomous two-tiered approach to understanding lived religion. In 1995 he introduced the term *vernacular religion* to replace the term *folk religion*. Unhappy with the designation of institutionalized religion as "official" and folk religion as "unofficial," Primiano adopted the term *vernacular religion* to define more clearly religion as human beings encounter, understand, interpret, and practice it. Primiano called on folklorists, and religious studies scholars alike to pay special attention to the complex process of acquisition and formation of beliefs accomplished by means of conscious and unconscious negotiations of and between believers, and to the artistry of their verbal, behavioral, and material expressions of religious belief.

Material Expressions of American Religion

Many contemporary folklorists have found material culture to be an invaluable source of vernacular knowledge, artistry, and practice regarding religion both within formal institutions and of believers themselves. Material culture is the

embodiment in various media of living creatures' impulse and ability for survival, communication, and creativity. For humans it encompasses both mundane and artistic creation and use and reciprocal relationships between objects and individuals. It often reflects and influences societal values, ideas, attitudes, and assumptions. The folklorist defines religious material culture broadly to include artifacts, texts, interior and exterior environments or landscapes, and architecture that are communal and individual expressions of religious belief, affiliation, or faithfulness. Material culture in the historical and contemporary perspective of global religious traditions can be further delineated using sacred, decorative (or aesthetic), and more utilitarian categories. Like any material culture, religious material culture can be observed in paintings, drawings, prints, sculpture, photography, books, foodways, clothing, bodily alterations and adornment, architecture, agriculture, town planning, furniture, furnishings, and even machines and devices.

Material culture research is a relatively new scholarly pursuit among American folklorists. Not until the 1960s did the study of material culture become more fully accepted and included in definitions and explanations of American folklore. It was Don Yoder's marriage of the genres of folklife studies into a comprehensive regional culture approach that prompted an emphasis on the materialization of religion in the United States. Along with Yoder, other notable advocates have been Alfred Shoemaker, Warren Roberts, Michael Owen Jones, and Henry Glassie. The study of the material culture of religious Americans further blossomed with the work of Colleen McDannell, Yvonne Lange, Robert Thomas Teske, Kay Turner, Donald J. Cosentino, Laurie Beth Kalb, Holly J. Everett, Sabina Magliocco, and Joseph Sciorra, among many others. Such scholarship has been shaped by the identities and worldviews of particular religious communities studied as outlets for traditional behavior, performance, and creativity. Folklorists portray the material expression of belief not as something esoteric but as something that people have done and continue to do in their lives.

One early important attempt at synthesizing religious folk art in America was the 1983 exhibition "Reflections of Faith" at the Museum of American Folk Art in New York City. The breadth of the exhibition was emblematic of a fluid conceptualization of American religious material culture as an aesthetic form that could also include objects that had been previously classified as folk, fine, tourist, ethnic, rural, urban, or popular art. Drawing on various perspectives,

the exhibit reflected on Americans' association of spiritual beliefs and personal and community values. A carved winged Tlingit Native American canoe ornament, a twentieth-century New Mexican saint carving known as a *santo*, a detail of a Rhode Island 1793 gravestone, a 1978 *pysanky* or Ukrainian dyed Easter egg—this exhibition looked to how these and other objects were important because of their creation and use in context, and not because they were collectible commodities on the Americana art market. Such objects represented the breadth of material artistry, as well as the complexities of appreciating and preserving such examples of American religiosity as both historical and ethnographic evidence and as collectible art objects.

A multitude of material expressive forms in various shapes, sizes, colors, densities, conditions, and surfaces define American material religion at the traditional, institutional, and personal levels of enactment and use. Contemporary folklorists as ethnographers are students of such use, the relationship of objects to traditional creation and perception by believers and nonbelievers alike, and the dynamic complexities of continuity and change over time in a variety of circumstances. A sensitivity to such materializations of belief engages folklorists seeking to understand the nuances of American religious life. Their explorations include theoretical considerations of the importance of belief in the meaning of religious folk art; contemporary ethnographic readings of vernacular memorials found in American cemeteries; and reflections on memory, imagination, taste, race, and ethnicity in the creation and understanding of the constellation of religious buildings and environments that inhabit urban ethnic landscapes.

Each culture and religious tradition articulates its own beliefs and related practices between the sacred and the material. The plurality of religions in America therefore indicates the national presence of quite different investments in sacred materiality by the populace. Christians, Hindus, and Buddhists, for example, frequently use images of their deities in public and private devotions and intercession. Jews and Muslims forbid sacred iconography depicting their God. Still, each religious tradition has produced forms of material expression related to its religious belief system. Religious iconography in the form of image or text of various sizes and forms exemplifying local, lay, personal, and even national knowledge of interest to folklorists is evident in and on public and private spaces in America. Some American Roman Catholics attach to their refrigerators or keep in their pockets the paper ephemera known as "holy cards"

that are distributed to family and friends at the funerals of loved ones. The cards bear the name, birth and death dates, and an image of Jesus, the Virgin Mary, or a saint. American Mormons wear religious ritual garments after their consecration in Mormon temples. American Greek Orthodox have traditionally worn cloth amulets under their garments for protection from evil. American Jews may wear a gold Star of David or *Chat* sign on a chain around their necks. American evangelical Protestants might keep a wooden cross in their pocket or purse or possess a key chain with a biblical verse on it to remind them of their personal relationship with Jesus. American Muslims may wear the name of God or select a Qur'anic verse as a medallion, or hang the *subha*, Islamic prayer beads, from their car mirror. Like oral folklore, material culture affords folklorists an opportunity to study such human creativity and the variety of ways in which religious Americans interact with the power of institutional religion.

Vernacular Catholicism

Until the 1980s the majority of ethnographic research on religion by American folklorists stressed what could be called “folk Protestantism.” With the exception of Yoder’s work on Pennsylvania, such studies of Protestant Americans tended to center on independent southern congregations. William M. Clements, for example, researched the “folk church” in northeast Arkansas and from that study drew a typology of traditional elements in American “folk Protestantism.” Twentieth-first-century scholarship on Protestant Christian communities—also centered in the South—by scholars trained in folklore such as Glenn Hinson and Richard Cunningham Jr. has no interest in typologizing and makes use of both historical and ethnographic methods focusing analyses on the complexities of the experience and influence of religion in America.

Catholic folkloristics—the study of Catholic folklore and folklife in America—gradually emerged in the 1980s as a part of the study of American ethnic folk traditions. Folklorist Jack Santino keenly observed that ethnic Catholicism, the identification of Catholics with specific ethnic communities in the United States, has been balanced, and in some cases overpowered, by the identification of Catholicism itself as an ethnic group, especially since the reforms of the Second Vatican Council (1962–1965). Both traditional and innovative beliefs and practices can be found among contemporary American Catholics in the nearly half-century since the theological, liturgical, devotional, and administrative reforms

of the Council. Such examples of Catholic folklife continue even in the face of secularization and lower level of participation in organized church life.

Many of the traditional practices still involve the home and the use of objects in it. Secular objects such as food can be given a religious purpose, and religious objects can be used for public display. Examples of the use of food are the Italian American Christmas Eve custom of serving a meal of “seven fishes” and the Polish American blessings of Easter tables filled with holiday foods, including dyed eggs and butter in the form of a lamb symbolizing Jesus. Examples of the use of secular objects are hanging palm crosses on doors, placing Marian holy corners in prominent spaces, or presenting window displays of religious statues or images. The elaborate home altars dedicated to St. Joseph or St. Anthony by Sicilian Americans living in Gloucester, Massachusetts, are a most compelling example of such a living vernacular religious tradition. These feasts for the eyes of color and spirit and creativity are rooted in the religious tradition of making vows to God for granting some blessing or healing. Such cultural performances celebrating the past and present vitality of vernacular Catholicism are complemented by contemporary manifestations of the Catholic tradition created and re-created by faithful believers, from the weekly liturgies and commitment ceremonies of same-sex Catholics to the physical changes in worship spaces required by nuns who wish to hold nonpatriarchal, nonhierarchical, and non-male priest-dominated Communion services.

Primiano defines “vernacular Catholicism” as the uniquely Catholic formulation of the impulse for religious expression. Vernacular Catholicism (and, by extension, vernacular Protestantism, vernacular Judaism, vernacular Islam, and so forth.) must not only take into account traditional customs, foodways, devotional practices, narratives, and such, but also consider the ways in which a Catholic individually expresses his or her understanding of the Catholic tradition—that is, the history, structures, laws, customs, beliefs, and practices of believers. Vernacular Catholicism involves absorbing, learning, accepting, changing, denying, embellishing, and appreciating the spiritual and cultural parameters of Catholicism in one’s life. Expressions of American vernacular Catholicism can be found wherever one finds American Catholics, whether through the prism of religious beliefs and practices of the individual Catholic or through the vernacular religion of the group.

American Jewish Folklore

Study of American Jewish folklore and community traditions is surprisingly underdeveloped, but rich with opportunities for observation and research. The cultural communication of this American ethnic, yet also religious, community grew out of the mass immigrations of eastern Europeans from 1880 to 1920, and later the twentieth-century movements of Jews from lands such as Germany, Russia, and Israel. American Jewish folklore expresses both conservative and dynamic qualities in various contexts and expressions: linguistically in the use of Yiddish, Judeo-Spanish, and Hebrew; musicologically in abundant music and song traditions; materially in distinctive foodways; and customarily in rites of passage such as the *brit milah* or *bris* ceremony of male circumcision, the bar/bat mitzvah ritual for boys/girls at age thirteen, and holiday celebrations such as Passover and the American celebration and elevation of Hanukkah from a minor to a major religious event. A particularly significant theme that attention to folklore brings to the discussion of the lives of American Jews (for example, in the work of Barbara Kirshenblatt-Gimblett, Hannah Kliger, and David Shuldiner) is the challenge for some of maintaining a distinctive ethnic or religious identity while balancing and responding to the influential challenges of both American Christian and secular culture. The transnational quality of the Jewish experience between, for example, the United States and Israel sets a tone for research, but limits concentration on purely American topics.

Mormon Folklore in America

Mormon folklore is one of the richest resources of religious lore in America. Members of the Church of Jesus Christ of Latter-day Saints, or the Mormon Church, recognized early in the twentieth century that their communities growing out of the church's center in Salt Lake City, Utah, represented a religious culture that was shaped and sustained by a unique folklore. Mormons emerged as leaders in the study of the expressive culture found among their own people

Mormon folklore studies reveal the variety and richness of the folklore of a sometimes persecuted religious community. Scholars have examined genres such as jokelore, folk art and craft, vernacular architecture, family folklore, folk medicine, folk song, and narrative traditions—from pioneer and folk hero legendry and missionary testimony to first-person accounts of the supernatural, including near-death

experiences. Cycles of stories both serious and humorous work to reinforce Mormons' claims about the truth of their doctrine and reports of remarkable conversions.

The contemporary Mormon folklorist William A. Wilson, while engaged, like Wayland Hand before him, in a variety of other folklore research, has memorably contributed to the content and methodology of American religious folklife by collecting and analyzing forms of the Mormon narrative, including Mormon humor, missionary tales, and memorates of the miraculous, while reminding his readers that it is not only attention to the memorable in religious folklore, such as dramatic tales of the supernatural, that lies at the heart of the Mormon experience. Rather, he argues that the tales of quiet lives of committed service to each other and others are often overlooked but central expressions of the everyday experience of Mormon life that especially need identification and attention by scholars of religious folklife. Although this scholarship represents an invaluable understanding and appreciation of American Mormonism as a culture, it awaits the next step in a critical consideration of all dimensions of Mormon life.

Resources

Resources for the study of folklore and American religion abound in colleges and universities in the United States and Canada. Material examples of vernacular religious art and craft can be found in local museums and outdoor folk cultural settings, as well as in the larger institutions such as the American Folk Art Museum in New York City, Museum of International Folk Art in Santa Fe, American Visionary Art Museum in Baltimore, and many other significant ethnic, religious, customary, architectural, and costume collections found throughout the country. And not to be overlooked are the federally funded institutions such as the Smithsonian Institution and the American Folklife Center of the Library of Congress. The Smithsonian Center for Folklife Programs and Cultural Studies is especially interested in issues of cultural representation, conservation, and creativity. Smithsonian Folkways has produced and preserved important recordings of American religious folk song and preaching styles. Every summer the Smithsonian's Festival of American Folklife, a research-based cultural exhibition, is held outdoors on the National Mall in Washington, D.C. It brings together local and regional American tradition bearers to demonstrate their traditional skills, and religion has frequently become a central concern.

Various archives also contain considerable resources on American religion, including those of religious organizations, research centers, and public libraries. The American Folklife Center at the Library of Congress has sound, film, and video archives documenting aspects of American religious life from the 1930s to the present, including hymn singing, gospel music, spirituals, church services, sermons, revivals, and interviews recorded in the field.

Conclusion

Folklore and the context of its role in everyday life offer an exciting prospect for students of American religion. As folklore ethnographies have blended oral, musical, and material traditions of religious Americans, they have emerged with rich understandings of neglected communities, forms, and functions. The folkloristic contribution to American religion celebrates the significance of the artfulness of American religion—that is, it appreciates the ways in which religious belief and practice are embedded in American society and continue to thrive among the multiethnic, multiregional American population.

Food and Diet

What, how, and with whom the religious peoples of North America eat or do not eat are significant expressions of their beliefs, community, and values. Food is a, if not the, central ingredient of worship in most traditions that have made a

home on the continent, from the sacred corn of many Native American tribes to Christianity's communion bread and wine or Hinduism's *prasad*.

Foodways, the know-how and folk practices associated with food, are a much-beloved means of enacting and preserving community, from the Methodist potluck to Muslim fast-breaking meals. Some traditional foods eaten on holidays or in community gatherings, such as *vareniki* (filled dumplings) for Canada's Russian Mennonites or pork barbecue for southern evangelicals, are sacred symbols in themselves because they communicate the powerful combination of family, ethnic or regional heritages, and religious tradition. Whether skipping several meals a month and donating their cost to the Mormon Welfare Program or abstaining from eating pork altogether, Mormons keeping the Law of the Fast and Jews keeping kosher embody religious identity and values in their diets.

Although the functions of food and diet in North American religions are hardly unique, food has taken on special significance in two ways in shaping North American religion and culture. The first is the role of food in maintaining identity and continuity with historical religious traditions in new situations. This process takes place primarily (and ironically) through many different forms of adaptation. The second is the striking emphasis relative to that of other cultures on diet and abstinence—*dieting*—in the “land of plenty,” particularly in the dominant tradition, Protestant Christianity.

Food is also a valuable lens for bringing into focus central aspects of religion that are often overlooked in favor of institutional and theological concerns, especially those that take place in daily life and in which laypeople rather than clergy may be the chief actors. Foodways are “faithways” in which people of all walks of life make sense of, negotiate with, and live out religion. They are especially significant for understanding the complex relationships between women's leadership and subordination and other gender dynamics in religious communities and religious expression located primarily in home and family. They provide ample evidence for the overlap of religious and secular ways of understanding reality and for exchange between religious groups in this pluralistic society. Foodways may blur many of the lines by which religion has been defined, but they also clarify the dynamic nature of religion in North America.

Although food in America recently began to attract academic as well popular interest, culinary historians and anthropologists have paid little attention to religion when

examining food in North America, and scholars of religion have only begun to study the connections. Yet in the books and articles that do address the topic, food's centrality to religious life in North America across traditions, time, and geography emerges plainly, especially as exemplified in the themes just outlined.

Continuity and Adaptation in Minority Religious Groups

Foodways have been an important means by which minority peoples in North America have held onto religious identity, especially when they have suffered oppression or the threat of extinction. For Native Americans, the arrival and eventual dominance of Europeans in North America threatened almost every aspect of their cultures, including foodways and religion, which were deeply intertwined. Food rituals can be very resilient through time and dramatic change, however, and they have helped to perpetuate an indigenous religious identity. The Festival of the Green Corn has been celebrated by some tribes in the U.S. Southeast for centuries. The Muskogee, who were among the tribes relocated in the 1830s by the U.S. government from the Southeast to the Oklahoma Territory down the “Trail of Tears,” still observe this annual rite, which celebrates the food most important to their traditional way of life very much as was done when the ritual was first recorded in the nineteenth century and, presumably, far earlier. Beginning with a fast and ending with a feast, this “new year's” ritual not only renews life according to the sacred myths of the Muskogee but also reaffirms the connection of a people in vastly different circumstances with revered ancestors.

For the Oglala Sioux, the last buffalo hunt in 1875 could have marked the end of their religious identity because Oglala myths and rituals of sacrifice and feasting revolved around the symbolic power of the buffalo and its centrality to their diet. Rather than abandoning their religion, the Oglala adapted by doing what might have been unthinkable otherwise; they adopted and ritually hunted cows as “spotted buffalo” and accepted beef, previously considered unpalatable “white man's food,” into their sacred meals and regular diet.

Eating together is a powerful way in which African American churches remember heritage, celebrate hope, and perpetuate community. The foods themselves—soul foods—communicate these connections because they hearken back to the creativity-in-suffering of the slave cooks who brought

food traditions and symbolic associations from Africa. These symbols were adapted to the biblical language of white Christianity. The “gospel bird” of Sunday dinners, for example, may have a distant connection to African bird symbolism. Feasting on soul food realizes the hopes of those oppressed ancestors for “passing over” to eat at the “welcome table.”

African American Protestantism, more than the white churches, has connected feasting with worship. Many congregations still extend their Sunday meetings with meals. One African American movement founded in the early twentieth century did this quite literally. “Father Divine” and his followers in the International Peace Movement did not distinguish between church dinners and Communion. Their Holy Communion banquets were full meals in which, he taught, God’s love became tangible for and in diners, uniting bodies and souls.

For African American Christians, foodways have been important not only in persevering to maintain an oppressed minority tradition but also in transforming the dominant culture. As surely as soul foodways have influenced the American diet, the meaning African American Christians gave them has helped to prompt change in American culture. Christian leaders of the civil rights movement not only strategized over soul food but also made breaking down racial eating taboos a hallmark of integration.

But for those African Americans who lost hope in racial and religious integration, soul food could no longer be redeemed or be redemptive. As they saw it, soul food was the food of slavery and still enslaved black people by harming them psychologically and physically. Wallace Fard Muhammad, founder of Nation of Islam (NOI), believed that by advocating dietary change Islam could significantly benefit black people. He also saw such a change as necessary to severing ties with African American Christianity. Mohammad wrote manuals promoting Islamic dietary rules for healthier eating, but members of the Nation of Islam knew they needed a food symbol of their own, something that said “black” and “Islam.” Its exact origins are disputed, but bean pie, a combination of African American baking and the bean-based cuisines of traditional Islamic cultures, became that symbol of Black Muslim identity. It appeared at NOI gatherings, was sold on street corners for fund-raising, and announced the presence of a new religious movement in African American culture.

Foodways continue to be vehicles for immigrant groups to maintain their identities when they come to North

America. Since 1965 when the U.S. Immigration and Nationality Act reopened the country’s doors to South Asians, Hindu temples have sprung up nationwide. For Hindus food is integral to temple worship, a central means of communicating with deities. Offerings of food are presented to and partaken of by the deities, thereby becoming *prasad*—a divine gift that is then returned to devotees for consumption. But in a new land the emphasis of temple activity is on eating together and treating all foods consumed in the temple complex as *prasad*.

Although Hindus may eat Indian dishes that keep them connected to their homeland and their gods, they may do so in ways that reflect the new context and need to connect to each other across traditional boundaries. Many temples have potlucks, a peculiarly American form of communal religious eating. Although Indian and Hindu food traditions are quite complex, varying by region, caste, or Ayurvedic disposition, the differences that might prevent Hindus from eating with each other in India are often renegotiated in America where they may matter less or threaten the coherence of the community. Some temples adapt by employing a chef who can (by virtue of caste and training) cook for all. And some avoid foods such as onions or garlic that cannot be eaten by some of their members.

New Variations on Old Themes in Protestantism

By the time the Puritans arrived on the shores of New England, European Christianity had already endured more than a century of division over the meaning and practice of its ritual meal. The names by which Puritans called it, “the Lord’s Supper” or “Communion,” were intended to express a pronounced difference with the medieval church’s emphasis on the transformation of the bread and wine into Christ’s body and blood that imparts grace to communicants, the sacrificial action of priests through which those miracles occurred, and the elaborate style of the Mass that paralleled the high theology of sacrament and priesthood. Puritans believed the meal should resemble the one described in the scripture: a simple gathering of the few true disciples doing what their Lord asked, remembering him with a common meal.

Yet stripping away the “magic” of the Mass did not altogether strip away the sense of awe associated with the meal or end the controversy surrounding its meaning and practice for those first Protestants who came to North America or their heirs. The new circumstances that arose in the new culture repeatedly called for resetting the Lord’s table. What

has remained constant through those developments is a concern for protecting the holiness or purity of the meal and a profound sense of danger associated with its violation.

Early New England Puritans were not of one mind about precisely what made the Communion meal efficacious for the faithful. Some sounded not all that far off from their theological archenemies, the Anglicans, asserting that the bread and wine might effect conversion or reveal Christ's presence, while others held firmly that what mattered was the believer's preparation. But if Puritan theology of the Lord's Supper was muddled, the dangers of violating its sacredness appear to have been quite clear. Preparation guides, devotional poetry, and other works from the period emphasize its holiness as well as the importance of proper observance. Only full church members—those who had testified satisfactorily to an experience of conversion as well as received baptism and lived uprightly—could partake in Communion. Such conversions happened less among the New England-born children of the first generation, so that by the end of the seventeenth century only a quarter of New England's churchgoers were partaking in Communion. Although some clergy argued for broader inclusion at the Lord's Supper, laypeople were quite reluctant to partake out of fear of the consequences they might incur by violating the meal's sacred boundaries.

In the mid-nineteenth century the holiness of the Communion meal was at stake again for Protestants. Rather than the purity of those who partook, the purity of what they drank became the main issue as the temperance movement raised fears about the evils of alcohol. How could the Communion table be set with something so physically and spiritually poisonous as an alcoholic beverage? But how could churches abandon the drink that Jesus and his disciples shared?

The "two-wine theory" was first proposed in the 1830s by Andover Theological Seminary Bible scholar Moses Stuart, and it spread widely through the end of the century. This theory advocated nonalcoholic Communion while preserving biblical tradition. Its proponents held that the wine Jesus drank at the Last Supper was really "good" unfermented grape juice, whereas the wine associated with drunkenness elsewhere in the scripture was indeed the "bad" alcoholic variety. In 1869 a Methodist dentist, Thomas Welch, discovered how to pasteurize grape juice in bottles, making "good" wine more feasible for churches. Meanwhile, temperance advocates warned that even one

sip of "bad" wine at the altar rail could start one down the slippery slope of sinful addiction. Fear and innovation were enough to convert most churches to grape juice well into the mid-twentieth century, with more conservative branches of Protestantism still observing the ban on wine.

A few decades later, how communicants drank came under scrutiny, and once again the purity of tradition was at odds with other purity issues arising in the changing society. The traditional use of a common cup ran counter to the new medical research on sanitation and fears of a new wave of immigrants perceived to be "dirty" by many. Individual cups, drunk from at the same moment in worship, became the alternative for some Protestant groups.

Abstinence and Diet in American Protestantism

The connections Protestants have made between purity, morality, and holiness in their sacred meal parallel tendencies in their outlooks on everyday eating and communal meals. Although many churches still enjoy community dinners at which prodigious amounts of food are consumed, a profound ambiguity about eating has also pervaded American Protestantism, as many a recipe in church cookbooks with titles such as "Sin Pie" attests. How Christians should eat, even more than how they should commune, has been a lively topic in American Protestant circles.

The 1621 Plymouth harvest feast that is considered the origin of the American Thanksgiving holiday was just one of many "thanksgivings" held by Puritan communities. Days of thanksgiving could be held whenever a special providential blessing had been bestowed. Most often, they came after fast periods had assuaged God's displeasure with the community.

Seventeenth-century Puritans observed far more fast than thanksgiving days, which involved twenty-four-hour abstinence from food during which prayers and sermons rang out in the churches. These public communal events often centered on working up guilt or pressuring moral conformity among members. Puritan leaders also encouraged private fasts for spiritual discipline and humiliation for personal sins, just as public fasts were a sign of communal humiliation before the Almighty.

Early Methodists and other evangelicals also observed communal and private fasts. Some thought it useful for fomenting revival. By the nineteenth century, however, fasting had fallen out of favor with Protestants. But as it waned, interest in the connection between daily diet and spiritual and physical health came to the forefront in almost every

Protestant group from evangelical social reformers to transcendentalists and the Restorationist and Utopian movements, which saw diet and bodily holiness as integral to purifying the world. Almost all new religious movements had dietary teachings. By the late nineteenth century, morality and diet were virtually inseparable and permeated mainstream culture, secular and religious.

Puritan thinkers had already connected diet and physical health to spiritual and moral well-being. John Wesley, the founder of Methodism, believed excessive eating and drinking made one unfit for Christian service. Many religious reformers in the nineteenth century also believed that certain foods and drinks were prone to lead to sin through overstimulation rather than just overeating. These included not only the obvious stimulants such as coffee and tea but also sugar (and desserts), spices, and meat. Alcohol was at the top of the “bad” list, and there was a strong connection between temperance and dietary reform. A bad meal, however, could be as bad as a drink.

In sermons, manuals, and cookbooks, the most important religious and social leaders of the day warned against an overstimulating diet—it, along with slavery and illiteracy, was a social evil. The women of leading reform-inclined families led the charge. In 1858 Mary Peabody Mann began *Christianity in the Kitchen* with a dire warning directly from scripture: “There’s death in the pot” (2 Kings 4:40). The ingredients she wanted to keep out of the Christian cook pot included those just mentioned, but also “whitened” flour was a particular target. A decade earlier, Catherine Beecher in *Miss Beecher’s Domestic Receipt Book* (1841) had already surmised, “What had been the staff of life for countless ages” had become “a weak crutch.”

The person credited most for this attack on white flour was Presbyterian minister Sylvester Graham. Known today primarily for the “graham” cracker named for him, he was the most influential diet teacher in the early nineteenth century, mesmerizing crowds and spawning numerous followers and offshoot movements. Graham’s theories were broader than advocating whole wheat flour for health; he also included vegetarianism. His overarching premise was that diet should reflect creation. Healthy foods, Graham held, were the foods closest to the way the Creator had made them, not industrial products. Attempts to enhance natural foods with spices, even salt and pepper, he taught, were corruptions and might cause immorality or madness. Even cooking itself could be a “moral abuse” as well as a

“waste of woman’s time,” as Graham’s colleague William Alcott, the first president of the American Vegetarian Society, put it in his *Law of Health* (1853).

Among the sectarian groups identifying most fervently with Graham’s ideas were the Seventh-day Adventists. Founder Ellen Gould Harmon White had a vision in 1864 in which she was told to avoid meat, alcohol, and tobacco. Diet became an expression of holiness and a path to health for the Adventists. Their home base, Battle Creek, Michigan, became a dietary and medical center. The dietary teachings of White’s follower and head of the sanitarium there, John Harvey Kellogg, mirrored those of Graham. Like him, Kellogg is now remembered mostly for a product with mass appeal, developed from his emphasis on reforming the American breakfast with whole-grain “cereals.”

The late twentieth century saw more of a focus on diet in and out of Protestant circles. New vegetarian societies, raw foodists, and others, whether overtly religious or not, shared a worldview that stressed dietary purity as a means of renewing the world and improving the spiritual and physical health of individuals. Today, much reminds of the Protestant literature of the nineteenth century, but latter-day reformers often place more emphasis on the welfare of animals, as in the writings of theologian Stephen Webb (*Good Eating*, 2001), and on the environment.

One trend, however, is both a continuation of previous developments and a departure. In the mid-twentieth century an emphasis on weight loss and slimness—dieting—as a means to holiness emerged in the works of evangelical Protestants such as Charlie Shedd, a popular spiritual writer and Presbyterian minister. The recurrent themes in Shedd’s *Pray Your Weight Away* (1957), in a vast amount of subsequent literature, and in Christian dieting organizations such as the Weigh Down Workshop are the sinfulness of fat and thinness as a sign of closeness to Christ.

Cultural critics today sometimes blame Protestantism for the culture’s paradoxical obsession with health foods and overconsumption. To blame food “puritanism” alone is overly simplistic. Various factors have conspired to create a worried and overly well-fed culture. In the nineteenth century those included industrialization of the food system, medicalization of diet, and fears about impurity prompted by immigration. In the twentieth century agribusiness, globalization, the diet industry, and ever-increasing amounts of confusing medical advice topped the list. Religion does provide a symbolic language for the confusion of concerns about food. The history of diet in American Protestantism

reveals, however, a two-way exchange in which cultural concerns transform religious communities as well.

Foodways as Faithways

Foodways often make religion dynamic and real for people, but they are just as often overlooked when religion is thought of primarily as doctrinal or confined to official worship space. For one thing, foodways can bridge private life and public religion, turning laypeople into the chief agents of a religious community. Whether African American Protestants frying up chicken in their kitchens for the church dinner, Greek Orthodox women gathering to make mountains of stuffed grape leaves to sell at their church's Greek festival, or Zen Buddhists hoeing the community garden before making a communal meal of its bounty, preparing food is a major way in which laypeople live out religious community. Community building, or fellowship, outside of worship is the main way in which foodways contribute to religious life. In part, however, these are such powerful community activities because they parallel sacred ritual in worship. African American church dinners and Greek festivals are festival times—that is, they are ritually charged events that bring the community together and reconnect it to its origins, whether each Sunday or once a year. As in the act of worshipping together, eating together incorporates members into the larger body. For Buddhists who hold that everyday activities can be opportunities for enhancing awareness, gardening, cooking, and doing the dishes together can be acts of communal meditation.

A well-known aspect of American church tradition is the potluck meal. This meal may have its origins in the evangelical camp meetings of the nineteenth century. These were practical meals for those traveling long distances to the meetings. Sharing provisions in a “dinner on the ground” persisted as churches were established. The name even persisted long after the meal moved indoors and around a table. Many churches in the South still celebrate an annual “Homecoming” to which former members living at a distance may return. The center of the event is a dinner on the ground, where regional dishes and the particular specialties of church matriarchs recall childhood, cultural, and religious origins all at once, drawing participants once again into the fold.

Through the taste of a familiar casserole or someone's special pie, those “coming home” are literally reincorporated as they take these meaning-filled foods into their bodies. Flavors, textures, and aromas are experienced in the body and incite memory and meaning. They are powerful aspects

of food as a meaning-making tool. Some Italian American Catholics who grew up in the New York neighborhood around the Church of Our Lady of Mount Carmel have described their primal experiences of religion as hearing the sounds and smelling the aromas of cooking—the sizzling of sausages at the street festival of Our Lady or mothers and aunts stirring the simmering tomato “gravy” that was always part of the meal served after every Sunday Mass.

Such associations literally bring religion home as well, personalizing the broader experience to the level of mother's gravy. Sunday dinner as a sacred routine or memory may be as much a part of religious experience as Sunday Mass. It may even enhance the experience of the Mass as it extends the experience of sacred time into private life.

Foodways can also offer insight into the ways in which laypeople negotiate or reinterpret official religious teachings and values to suit personal situations or preferences. Although the teachings and preachings of Protestant religious reformers in the nineteenth century advocated strict dietary rules, laypeople sometimes balked or met them only halfway. When revivalist Charles Grandison Finney, as president of Oberlin College, instituted dietary restrictions that included abstinence from tobacco, alcohol, coffee, and tea, the campus complied. When he tried to mandate a vegetarian diet, however, students and faculty objected.

Dynamic Foodways in American Judaism

American Judaism is an especially interesting case study of negotiation and personalization in foodways. Judaism is often called a domestic religion because of its ancestral heritage and because much of its worship takes place in home-based rituals, including the annual Passover seder and Friday evening Sabbath meals. *Seder* means “order,” and the ritual itself is highly ordered, with a prescribed series of blessings, table setting, drinks, and foods reflecting the sacred story of the first Passover. Like the foods that ritually appear on the seder plate—bitter herbs, shank bone, *charoset*—foods at a weekly Sabbath meal, perhaps a *cholent* (meat stew) or *kugel* (baked noodle custard), have taken on symbolic meaning as well, tying a particular ethnic heritage or family tradition to religious tradition. A study of one family's seder reveals that individuals give meaning to the ritual in highly personalized ways, involving family dynamics and relationships that charge the event with meaning beyond that of its historical and religious relevance. To eat as a Jew can mean to eat as a Jew in a specific family as well as to be part of a venerable tradition.

Originally, the Jewish dietary laws or *kashrut* were most likely intended to be markers of holiness and purity distinguishing the Hebrew people from others. Today, keeping these laws is a means of being a holy and distinct people and is a link to the ancient past for many Jews, especially in the Orthodox and Conservative branches of Judaism. *Kashrut* and its interpretation have developed over time, however, and “keeping kosher” (an Anglicization of *kashrut*) eventually became as much a distinguishing factor among denominations of Judaism in the United States as a marker of Jewish identity. Indeed, controversy over *kashrut* figured prominently in the division of the traditional and progressive movements into full-fledged religious denominations.

In 1883 the menu for a banquet held in honor of the first graduating class of Hebrew Union College included nonkosher foods such as shellfish and frogs’ legs and also violated *kashrut* by serving milk and meat in the same meal. Observant participants were scandalized, but seminary leaders were unapologetic, insisting that the dietary laws no longer mattered. The incident became known as the “*Trefa* (unfit or nonkosher) Banquet,” and, as a result, some congregations left the Union of American Hebrew Congregations and called for the establishment of a more conservative seminary. Two years later the defining document of Reform Judaism, the “Pittsburgh Platform,” declared that keeping kosher was irrelevant to modern Jewish life.

Foodways—even ones of ancient ancestry that have been at the center of more recent historical divisions—are dynamic, however. By the end of the twentieth century both the Reform and Reconstructionist branches of Judaism were reexamining *kashrut*. Some began to reinterpret the dietary law as an important symbol of identity and guides to a moral lifestyle, especially related to animal, human, and environmental well-being. Reform Judaism’s 1999 “Statement of Principles” reaffirms the value of *kashrut* but leaves its observance to personal choice.

These events at the institutional level reflect the negotiations that individuals, families, and communities have been undertaking all along in American Judaism. Since first arriving in the United States, Jews have interpreted *kashrut* for themselves with a great deal of creativity and variety, in large part by necessity. Until the mid-nineteenth century few rabbis were on hand to offer guidance or enforcement, and so laypeople had to figure out for themselves how to manage their diets. With few *shochtim* (ritual slaughterers) and limited access to kosher foods, Jews had to make do,

following as best they could but often having to compromise the laws. Eventually, vibrant Jewish neighborhoods developed around bakeries specializing in ethnic Jewish delicacies, kosher butcher shops, and grocers who stocked kosher goods. Indeed, Jews often moved to be near a kosher food supply. And yet even today in small towns and rural areas obtaining kosher meat can be difficult, although mail order and the Internet have made it easier if not less expensive.

To ensure against false claims of kosher purity, in the early twentieth century the Union of Orthodox Rabbis began certifying foods as kosher so that wherever Jews shopped for food they could be assured of the purity of foods marked with its symbols. It was a sign of Jewish culture moving into the American mainstream when food corporations began marketing specifically to Jews. Crisco, a shortening developed in 1911 from vegetable oil, is *pareve* or a neutral food that makes keeping kosher easier and was marketed as such.

For those who do not or cannot keep strict observance, there is an infinite range of interpretation. Some keep part of the law. Avoiding pork but eating shellfish has been a popular compromise. Some keep kosher at home but not when eating out. Others who usually do not follow the dietary laws keep kosher in the presence of more scrupulous relatives or friends or during holidays. The term *kosher style* is now applied to some of these methods of negotiation as well as foods prepared according to Jewish ethnic traditions but not necessarily the kosher rules.

Sometimes negotiation with other identities calls for negotiation with the dietary laws. A recent study of southern Jews reveals a range of negotiation for “born and bred” southern Jews with the South’s pork-based cuisine. Some Jews express southernness by eating pork barbecue, ham, and bacon in public while keeping kosher at home. Others acknowledge the irony of being Jewish and southern and fully indulge in porcine dishes. Barbecue, an important symbol of southern culture, has been adopted and adapted by southern Jews. Memphis, the holy city of barbecue, has seen creative variations in its Jewish community. An Orthodox congregation adapts barbecue to the dietary laws with a kosher barbecue contest, substituting other meats for the traditional pork. The Jewish owners of one of Memphis’s most popular barbecue chains, known for its sublime pulled pork, made kosher versions of some products when inaugurating a new cooking facility—before it became defiled with pork.

Gender, Food, and Religion

Nowhere better than through foodways can the complex roles that gender plays in religious communities be examined. Looking at food exposes a world of women's involvement and leadership that is often hidden and inevitably interwoven with women's subordination. While men have dominated church leadership from the worship spaces above, down in the basements of churches and temples women have lead, built, and perpetuated community out of kitchens and dining halls.

When women have been the primary leaders of religious communities, the traditional feminine roles of nurturer and food provider have often been distinctive marks of their leadership and spiritual charisma, and foodways have been important for communal identity. Ellen G. White's charisma was linked to her visions about diet. Her dietary teaching became a centerpiece of the Battle Creek community and a hallmark of the Adventist lifestyle as the tradition developed. Mama Lola, a Haitian vodou (voodoo) practitioner studied by Karen McCarthy Brown, maintains her relationship with the spirits largely through rituals that involve preparing food and drink for them and her community of Haitian immigrants in New York. She also must return to Haiti periodically, in part to prepare elaborate feasts for the poor as well as the spirits. Her charisma is largely related to her knowledge of how to please each spirit with just the right foods and drinks and her hospitality to communities in both her new and old homes.

Even in traditions in which women's public leadership is minimal or nonexistent or in which the symbolic elements of bread and wine are kept in the hands of a male priesthood, women are ritual specialists when it comes to food. They take the lead in rites of passage, in comforting the bereaved with casseroles and coffee cakes and in validating weddings, baptisms, and bar mitzvahs with feasts. Their expertise can parallel priestly functions, reinforcing church rituals with the home rituals over which they preside. A grandson remembering his Polish Catholic grandmother's Easter preparations detailed the specific route on which he accompanied her as she gathered from the ethnic shops in their community the food items needed for the Easter feasts. He recalled watching her prepare a special basket reserved for the Easter foods, and watching her, along with a procession of other women, present them to the parish priest for blessing before returning home to prepare the dishes to be served after Mass on Easter. His remembrance concluded

with his grandmother presiding over the table, serving each family member herself. Unconsciously, he described a kind of sacred ritual in which his grandmother was the religious expert who prepared and presided over the festival table, a role not unlike that of her priest.

Women also have traditionally handled the preparations for church rituals and created the symbolic foods that express religious identity. In Episcopal churches women's altar guilds prepare the bread and wine, polish the silver, and iron the linens for the Eucharistic table. Women in Orthodox Christian congregations make the *prosphora*, the bread at the center of worship, working it into shapes reflective of theological and spiritual principles such as the nature of Christ and devotion to the Virgin Mary. Meanwhile, a pioneering woman member of the Nation of Islam (which one is a matter of some debate) devised the bean pie symbolizing the combination of African American and Muslim cultures.

The most obvious areas of women's leadership involving food, however, are their initiatives in community building. Food is often at the center of fund-raising. From bake sales to festival fund-raising dinners, women's cooking has paid for worship space, internal programs, and mission projects. It has also helped to increase the numbers as well as the girth of church members. Nineteenth-century southern evangelical women, for example, held dinners that included entertainment to draw in the men, who were less likely to come to worship services.

Women have perpetuated communities as well through documenting their food traditions and providing guides for maintaining them in cookbooks. Realizing that their community was attracting new members more familiar with McDonald's than with the foodways of its heritage, the women of St. Nectarios Orthodox Church produced *A Lenten Cookbook for Orthodox Christians* in 1972 for those who "have not grown up in an Orthodox environment where lentil, fish, and other 'fast foods' were essential parts of their diets." While keeping the past alive, the cookbook also charts changes in the community as it integrated into the broader culture from which the new members came. The recipes include seafood jambalaya and peach crisp as well as Greek specialties.

The cookbooks that women have written often present histories of religious life that go untold in official accounts. And they are especially important for recording women's leadership. One Presbyterian cookbook begins with a brief history of the church told primarily as the history of its male

clergy, but the remainder of the book tells the story of women's agency through their recipes, helpful hints, and narratives of fellowship events. Compiling the book in itself was an initiative women took to raise money for building improvements.

The records women have left in community cookbooks can also enlighten the big picture of religious history. The changing attitudes in Reform Judaism toward dietary laws could be traced by means of official documents, but the cookbooks produced by temple sisterhoods over the years document them as well in particularly vivid ways. One rabbi's survey of editions of his congregation's cookbook revealed that the first edition from the 1920s contained recipes using pork while an edition fifty years later omitted those but included shellfish recipes. The most recent edition is kosher.

Foodways have been the vehicles through which women have been moral exemplars and taken initiative in reform and charitable outreach. Feeding the hungry, through cooking for soup kitchens and canning thousands of cans of vegetables for distribution to the poor, has been a major activity for women in some communities (the Mennonites, for example). The prominent roles of women in temperance and diet movements have already been noted. Although reformers in the male clergy such as Horace Mann and Lyman Beecher had pulpits from which to push their reform agendas, their wives' and sisters' housekeeping manuals taught other women how to incorporate those principles into their daily routines and leave a more detailed understanding of the worldview of Protestant reform than treatises and sermons might.

The connection between women, morality, and food has placed a heavy burden on women. Blame as well as praise has been heaped on women's foodways in religious communities, and in some the standards for nurturer and moral exemplar have been impossibly demanding. Although many women eagerly participated in dietary reform movements of the nineteenth century, its leaders, male and female, often placed heavy blame for ill health and moral decline in men and children on what and how wives and mothers fed them. Some even accused women of trying to improve on God's creation, showing off with their spices, cooking methods, and unhealthy cakes to the detriment of their families' health. Nation of Islam founder Wallace Fard Muhammad blamed black women and their soul food cooking for weakening black men.

In the Christian dieting movement that arose in the twentieth century, the focus moved to women's bodies rather than what women did to others. Christian dieting manuals and organizations largely target women, colluding with a social standard that assigns status to female thinness. In these organizations body shape and size are scrutinized as evidence of holiness or disobedience. Women who do not measure up (or, rather, down) are considered inferior Christians.

Foodways as markers of gender are very ancient. The Muskogee celebration of corn begins with men fasting and ends with women preparing a feast. Foodways can reinforce gender assignments that keep women out of the pulpit and in the kitchen regardless of proclivity or calling. Even in the leadership that foodways afford women, there is subordination. Foodways may offer opportunities for creativity, leadership, and female community within religious groups, but these almost always come with a price for women. All that cooking and cleaning at church is a lot of work, often unacknowledged or overscrutinized, and in addition similar to labors at home.

As women have moved into the professional clergy and other religious leadership roles and gender roles have relaxed somewhat in society, foodways in some religious groups are reflecting these changes. Professional church chefs, take-out or catering, and fewer social events because fewer women are willing or capable of taking on the task of cooking for large numbers of people are options religious groups find themselves exploring. Now that cooking is not just "women's work," more men rise to the occasion, joining altar guilds and volunteering to cook, but there are fewer than needed to replace the women whose daughters and granddaughters channel their energies elsewhere.

Some worry that foodways may be slipping away, not only because of the changing roles of women but also because of the proliferation of convenience and fast foods. There is much nostalgia in religious communities as well as society at large for grandmothers' cooking. Indeed, some women are rethinking the value of foodways let go by recent generations. For some, retrieving them may not appeal primarily because of community but rather as a personal way—even the only way—of relating to religious heritage or as a spiritual discipline. A popular example in Jewish circles and out is Elizabeth Ehrlich's story in her best-selling *Miriam's Kitchen* (1997) of how she came to adopt a kosher lifestyle by reflecting on the life of her mother-in-law.

Food And Religious Exchange

Dietary rules often distinguish religious traditions from each other, but foodways can provide means of exchange between religious groups. Even the boundaries themselves sometimes create unexpected opportunities. For example, Middle Eastern groceries that carry ethnic foods common to Jews, Muslims, and Christians can be religious meeting grounds. Especially in areas where obtaining kosher or *halal* foods is difficult, a kosher market can become a place where Jews and Muslims shop together (some Muslims will accept kosher meats as *halal* or “permitted” under Muslim dietary rules). Foodways can be intentional opportunities for cooperation and dialogue, such as dinners sponsored by inter-faith organizations or joint charitable projects to fight hunger. Vast numbers of others, however, are at the same time celebrations of a religion’s distinctiveness and outreach to the larger community. In particular, fairs and festivals held annually by minority religious groups in communities have multiple purposes—fund-raising, preserving tradition, and reaching out to others as good neighbors. In many American towns the annual festival held by the local Orthodox church is a time when everybody “goes Greek,” with Protestants coming after church to have Sunday lunch of spanikopita and souvlaki and to tour the church facility, learning something of its traditions. In the nineteenth century and beyond, Jewish temple fairs, centered around selling ethnic foods, were opportunities for Jews to celebrate their distinctive heritage and to reach out to the community, displaying their good citizenship and sometimes including addresses by civic leaders.

Foodways can also be a form of mission or conversion, intentional or not. The International Society of Krishna Consciousness, founded in North America in 1966, is as well known for its free Sunday Love Feasts as for its ecstatic dancing and Indian-style attire. At a Love Feast, diners observe Krishna devotion and are invited to join, but they are already converted in a sense that they are eating *prasad*. Thus they take in Krishna’s blessing.

A recent study of Mennonite foodways found that many people first learned of this church rooted in the Anabaptist tradition (like its better-known kin, the Amish) through a cookbook authored by Doris Janzen Longacre and published by the Mennonites’ Herald Press. In the seventies *More with Less* (1975) struck a chord with many people who were seeking to simplify their lifestyles and were concerned

about environment. Looking for recipes and dietary advice, they found a tradition that emphasized peacemaking and simple living. Although the numbers of converts attributed to *More with Less* may not be numerous relative to its publication history (forty-seven printings and almost one million copies sold), the book has raised awareness of the Mennonite mission perhaps more than any “religious” work could. The most popular theological work of the tradition, John Howard Yoder’s classic *The Politics of Jesus* (1972), has sold about one-tenth as many copies.

The Mennonites also offer an example of how foodways are part of exchanges that expand a tradition. In 1991 Herald Press published Joetta Handrich Schlabach’s *Extending the Table: A World Community Cookbook*. Commissioned by the Mennonite Central Committee, the church’s relief branch, it contains recipes and stories from places around the world where Mennonites provide aid. The book reveals that the church’s international missions have converted its culture to a global one. Alongside shoo-fly pies and beef and noodle casseroles, curries and stir-fries now appear at Mennonite potlucks from Kansas to Kenya.

Sacred Ideas in Secular Foodways

This discussion has presented evidence of the dynamic interplay of religion and culture in foodways. Cultural concerns such as changing understandings of health and diet, gender roles, and ethnic identity overlap religious issues, eventually becoming part of religious practice or teaching. Other examples, however, illustrate how religion provides a language for making meaning in secular foodways. In contemporary food literature, “Zen” has come to signify a style of cooking and eating that is disciplined, slow, and simple whether Asian or not. Studies of two populations at opposite ends of the food spectrum have shown how behaviors and language in secular phenomena rely on religious symbolism for structure and articulation. Some women who suffer from eating disorders describe their desire for extreme thinness as a quest for redemption from being unworthy in a culture that glorifies the thin female body. The rituals of dieting, starvation, and exercise they undergo are spiritual disciplines through which bodily suffering is understood to lead to holiness. For those immersed in the wine culture, wine tastings are ritual events designed to evoke sensibilities that reflect experiences of holiness and create a special community among imbibers as the religious symbolism of wine carries over into these secular events.

Of course, wine was first brought to North America for use in religious services. That is just one way in which religious traditions have influenced cuisine on the continent. Although such traditions have been gateways for foods from bagels to graham crackers into the culinary vocabulary, religion has also provided a language with which to speak about food's significance as something more than fuel. As America's greatest food writer, M. F. K. Fisher (*The Art of Eating*, 1954), put it, "There is a communion of more than our bodies when bread is broken and wine is drunk."

Freedom, Religious

True religious freedom, or the notion that citizens can hold beliefs and engage in activities related to their faith commitments free of any government restriction, is an ideal that in reality often requires that the needs of the religious adherent

be balanced against the dictates of society and its legal structures. In the United States this balance is grounded in the First Amendment of the U.S. Constitution, and its guarantee is ostensibly protected by the federal judiciary. But as with all legal documents the First Amendment has emerged from a complex cultural, social, and legal history; it has been subject to divergent legal interpretations, and it has been affected by the nation's political processes and cultural sensibilities, meaning that the limits on—and possibilities for—religious freedom have shifted over the course of American history.

Toward a First Disestablishment: The Colonial and Revolutionary Years

During the colonial period the pursuit of religious freedom most often associated with the Pilgrims of New England was less about religious egalitarianism and more about religious dominance for a particular religious community at the expense of others. A modicum of tolerance—rather than freedom—was often the best for which politically and culturally marginal religious communities could hope. Religious “establishments”—that is, the integration of religious and government interests, if not of institutions—were common throughout the colonies, with Congregationalism dominating the New England colonies and the Church of England dominating the mid-Atlantic region. Religious deviance was not tolerated well, corporal punishments and expulsions for doctrinal differences were not unheard of, and political competition between religious traditions (mostly between Protestants and Roman Catholics, but also between the Protestant denominations) was often fierce. The 1620 Charter of New England, for example, stated that since “we [those embarking on the colonization endeavor] would be loath that any person should be permitted to pass that we suspected to affect the superstition of the Church of Rome, we do hereby declare that it is our will and pleasure that none be permitted to pass. . . .”

Several colonies were more expansive in their understanding of religious freedom. In its 1682 Frame of Government, Pennsylvania—often cited as a leader in religious toleration—extended public office to all who “possess faith in Jesus Christ,” meaning that Catholics as well as Protestants could run for office, and he stated that citizens of the colony “who confess and acknowledge the one Almighty and eternal God, to be the Creator, Upholder and Ruler of the world,” and were willing to live in peace with their fellow citizens, “shall, in no ways, be molested or prejudiced for their religious persuasion, or practice, in matters of faith and

worship, nor shall they be compelled, at any time, to frequent or maintain any religious worship, place, or ministry whatever.” The 1663 charter for the Rhode Island and Providence Plantations—founded by Roger Williams, who had been expelled from Massachusetts for expressing religiously unorthodox ideas—supported similar language.

The transformation of Virginia provides one of the best illustrations of emerging notions of religious freedom. Drafts of what would become Article XVI of its Declaration of Rights, written in early 1776 as the colonies prepared for a war of independence from Britain, initially declared that “all men should enjoy the fullest toleration in the exercise of religion. . . .” James Madison argued against the notion of “toleration,” and the article’s final language was altered significantly to reflect his objections: “all men are equally entitled to the free exercise of religion. . . .” Three years later, a bill drafted by Thomas Jefferson to disestablish the Church of England in Virginia was tabled by the legislature. However, in 1785, shortly after Patrick Henry introduced legislation to raise taxes to pay for church schools, Madison organized a petition campaign among the increasingly religiously diverse population in western Virginia. His text accompanying the petitions (“Memorial and Remonstrance Against Religious Assessments”)—and the fact that Henry had been in the interim elevated to serve as governor—turned the tide, and the tax bill was defeated. With Jefferson in France, Madison then reintroduced his colleague’s 1779 bill (“An Act for Establishing Religious Freedom”), which passed in 1786, and Virginia was for the first time without an official state church. The following year, acting under the Articles of Confederation, the United States Congress passed the Northwest Ordinance of 1787, which, in language reminiscent of the charters of Pennsylvania and Rhode Island, stated that “No person, demeaning himself in a peaceable and orderly manner, shall ever be molested on account of his mode of worship or religious sentiment, in the said territory.” The geographical designation was less a limitation than an extension of religious freedom, since many of the states still maintained their own religious establishments and would not have been subject to any federal declaration related to religious freedom articulated by Congress at this time.

By 1789 Congress was taking up the issue of a Bill of Rights to amend the U.S. Constitution. Early drafts of the religion clauses—written by Madison and built around his experiences in Virginia—contained a broad freedom of conscience that was later removed, and the final wording as it now exists (“Congress shall make no law respecting an

establishment of religion, or prohibiting the free exercise thereof; . . .”) passed without significant recorded debate. Reflecting this disestablishmentarian spirit, in 1797 the U.S. Senate ratified a treaty between the United States and Tripoli that stated that “the government of the United States of America is not in any sense founded on the Christian Religion. . . .” By law, this was now true—at least on the federal level; the official separation of religion from federal law, commonly known as the separation of “church and state,” had effected a first national disestablishment. By culture and custom, however, this was not necessarily so, and a second disestablishment—the loosening of the monopoly enjoyed by Christianity in American public institutions on the federal, state, and municipal levels—would require more time.

Toward the Second Disestablishment: The Nineteenth Century and Public Protestantism

For the eighty years following the ratification of the Bill of Rights, religious freedom continued to be politically determined; those who had political power could safeguard their own religious freedom, while those who did not, could not. The limitations of colonial charters and the lack of a significant record surrounding the debate over the language of the First Amendment suggest that it was not as revolutionary a statement as it has come to be seen in the more recent past; what is now identified as the First Amendment actually was the third amendment sent to the states for ratification (the first two addressed representation and congressional salaries). Many historians have argued that, in context, it is more reasonable to interpret the religion clauses not as uniquely enlightened statements of the rights of all citizens, but as a recognition of the political reality of religious competition and political suspicion extant in the early Republic.

One reason for downplaying the initial impact of the First Amendment is that the extension of religious freedom—and the concomitant disestablishment of religion—was neither universal nor instantaneous following the amendment’s ratification. The Virginia Declaration of Rights, itself a model for the First Amendment, stated “that it is the mutual duty of all to practice Christian forbearance, love, and charity towards each other,” immediately after it recognized the religious rights of all of Virginia’s citizens, including the Jewish community of Richmond (established in 1769). Massachusetts—the last state to “disestablish” its religious institutions—did not do so until 1833, and until then it required taxpayers to stipulate to which church—from an official list—they wanted their tax dollars sent for

their children’s education. Because the U.S. Constitution’s prohibition of religious tests (Article VI) applied only to the federal government, many of the constitutions of states that originally had been colonies retained religious test oaths for elected office well into the nineteenth century—the last was removed in the 1890s—requiring belief in the Trinity, for example, or forsaking all foreign authority (religious as well as political). (The Ninth and Tenth Amendments permitted states established after the adoption of these two amendments to grant freedoms that were equal to or greater than—but not less than—those protected in the U.S. Constitution.) Concerned that religious rivalries might threaten the establishment of a truly United States, drafters protected state establishments by prohibiting federal intrusion, while reassuring competing religious authorities by providing no advantage in the emerging federal government. In 1845 the Supreme Court maintained this federalist relationship, ruling that a religious dispute between New Orleans and one of its citizens was a state concern and not worthy of First Amendment protection since Congress was not a party (*Permoli v. First Municipality of New Orleans*). The guarantee of religious freedom was still considered a federal matter well into the 1870s. In 1875, in debates over a proposed constitutional amendment that began “No State shall make any law respecting an establishment of religion, or prohibiting the free exercise thereof,” no mention was made of the seeming overlap with the opening words of the First Amendment, which apparently no one thought applied to actions between citizens and the states.

Another reason for downplaying the initial impact of the First Amendment is that most citizens in the late eighteenth and early nineteenth centuries understood religious freedom differently from the way we do today. By the end of the American Revolution, Roman Catholics represented the largest non-Protestant religious identity in the United States, but by then even the originally Catholic colony of Maryland was predominantly Protestant in both population and political control. At the same time, Jews—who had settled in the colonies as early as 1654, and on the North American continent as early as the 1520s—were few in number, and were found mostly in the largest cities. What religious diversity existed in the new country was mostly within the spectrum of Protestant denominations. This was particularly true of the public institutions responsible for drafting, executing, and judging the kinds of laws that safeguarded religious freedom. Although not a law, the Declaration of Independence had only one signer who was not

Protestant; the Articles of Confederation likewise; and the U.S. Constitution was signed by only two non-Protestants, both Catholic. Studies of the state ratifying conventions suggest a similar pattern.

Not surprisingly, this lack of diversity was reflected in the laws of the Christian majority. Many states maintained laws against blasphemy—understood only as the defaming of the Christian God—and required Bible reading and prayer in schools. State and federal courts also maintained Sunday closing laws (“blue” laws) to protect the Christian Sabbath, in some cases permitting only behavior that did not interrupt Christian worship and in others prohibiting all activities considered improper. But more than simply a matter of the law’s substance, the law’s essence—even as it was initially articulated on the federal level—reflected Protestant theology. “Freedom” did not mean a religious person was free to select if, when, and how she adhered to her chosen religious identity, but rather that government was theologically prohibited from interfering in the relationship between the believer, her conscience, and God. This was based on the Protestant doctrine that understood all believers to have the facility to read the gospel and communicate with the divine, and that privileged faith over good works as the path to salvation. Madison’s amendment to Virginia’s Declaration of Rights, for example, defined religion as “the duty which we owe to our Creator and the manner of discharging it,” but noted nonetheless that it could be “directed by reason and conviction, not by force or violence,” and that “all men are equally entitled to the free exercise of religion” specifically so that they could comply with the “dictates of conscience.” His initial drafts of what became the First Amendment stated that “[t]he civil rights of none shall be abridged on account of religious belief or worship, nor shall any national religion be established, nor shall the full and equal rights of conscience be in any manner, or on any pretence, infringed.” Similarly, Jefferson’s “Act” granted that “Almighty God hath created the mind free” and that “truth is great and will prevail if left to herself” even as it noted that “it is time enough for the rightful purposes of civil government, for its officers to interfere when principles break out into overt acts against peace and good order.” Conscience and beliefs were the domain solely of the divine; behavior was left to the state to monitor.

Though often considered silent on the matter of religion during this period, between 1815 and 1878 the U.S. Supreme Court ruled a number of times on matters related

to the relationship of religion and government, and in most instances it maintained the relationship as articulated in these early documents. In a handful of “glebe” (church) property cases, for example, the Court supported religious belief and morality as community values separate from institutional claims of ownership. In other cases, the Court maintained state Sunday work prohibitions or declarations of holy days. One of the most prominent voices of the Protestant theological approach was that of Justice Joseph Story, who wrote most of the decisions related to religion during his tenure on the high court (1811–1845). In one such opinion authored by the justice in 1844, the Supreme Court acknowledged Christianity as a part of the common law of Pennsylvania, concluding that a will was not offensive to that law simply because it prohibited clergy from teaching religion (*Vidal v. Girard’s Executors*).

Expressions of a close relationship between Protestantism and government reflected the culture’s larger unease with non-Protestants, who, since the colonial period, were limited in their enjoyment of full religious freedom. Anti-Catholicism in particular belied any notion that the First Amendment effectively guaranteed religious freedom to all. In the debate over emerging notions of public education, for example, American Catholics faced entrenched Protestant practices, and serious conflicts developed over the use of the King James Version of the Christian scriptures as a reading primer. When Catholic school children were punished for objecting, Catholic leadership organized what developed into the Catholic parochial school system, opting to educate their own children rather than have them subjected to Protestant theology in the name of public education.

Native Americans fared no better. Their religious expression was often misunderstood, overlooked as inauthentic, or seen as inferior to the Western religious traditions, particularly Christianity. Throughout the second half of the nineteenth century, Congress (or its delegated territorial authorities) prohibited various Native American religious practices—most infamously the Sun Dance and the Ghost Dance, practices of Southwest and emerging pan-tribal communities—while enacting legislation designed to “civilize” them by limiting nomadic behavior and requiring farming and land ownership. Those living on federal reservations were also not included under the protections of the First Amendment; they wouldn’t be granted full American citizenship until 1924, excluded largely because of the way in which relations between them and the federal government had developed since the colonial period.

By the late 1860s the federal government was funding President Ulysses S. Grant's "peace policy," which provided religious organizations with federal funds for their missionary work among Native Americans, in the hope that—either by conversion or acculturation—the organizations would serve as surrogates of the federal government in pacifying the Native Americans. One unintended consequence was the realization of many mainstream Protestant organizations that, with most of the money going to Quaker and Roman Catholic charities, they were now uncomfortable with the federal government funding religious activities, and a new separationist ethos arose from the uneasiness of their anti-Catholicism.

In many ways, the high point of the close identification of Protestantism with American culture came in an 1878 Supreme Court decision in a case challenging a law making the Mormon practice of plural marriage a federal crime (*Reynolds v. United States*). The Court disagreed with the challenge, citing the history of the fight for religious freedom in Virginia and in the Constitutional Convention, and agreed with Jefferson and Madison that "Congress was deprived of all legislative power over mere opinion, but was left free to reach actions which were in violation of social duties or subversive of good order." Calling the Mormon religious practice "odious"—particularly "among the northern and western nations of Europe" (in other words, the Protestant ones) and "almost exclusively a feature of the life of Asiatic and of African people"—the Court concluded that "Laws are made for the government of actions, and while they cannot interfere with mere religious belief and opinions, they may with practices." Mormons could believe in plural marriage, but to maintain order the state had to regulate actions, particularly "when principles break out into overt acts against peace and good order," as polygamy was presumed to.

This dichotomy between actions and beliefs would rule the federal judiciary's approach to religious freedom for the next sixty-two years. By the end of the nineteenth century, however, the challenge to the Protestant monopoly in public culture was increasing on a variety of fronts. Since the 1840s Roman Catholicism had been the single largest religious denomination in the United States, and by century's end immigration from traditionally Catholic countries beyond Ireland supplied an even greater presence. The numbers of Jewish immigrants accelerated rapidly between the 1880s and 1920s, bringing this community's population from roughly 300,000 to nearly 3.5 million by the end of World

War I. Additionally, the image of a monolithic mainstream Protestantism, enhanced by cooperative efforts throughout the nineteenth century, was shattered in the denominational divisions that were taking place over traditionalist and literalist camps on the one side and modernists on the other. Modern Protestant fundamentalism, evangelicalism, and Pentecostalism took greater shape during this period, providing yet greater diversity within the Protestant world.

These factors provided the impetus for a backlash against traditionally marginalized religious communities in the United States, even as they provided opportunities. Anti-Semitism reached a zenith with the revival of the Ku Klux Klan in the South and the 1915 lynching in Atlanta of Jewish factory manager Leo Frank. Anti-Catholicism also reached a high point in the public opposition to New York governor Al Smith's 1928 presidential campaign, with primarily southern conservative Protestant ministers raising allegations of alcoholism and divided loyalty against the Catholic Democrat. While this period also saw the confirmation of the first Jewish justice to the Supreme Court (Justice Louis Brandeis, who joined the high court in 1916), and an increase in Catholic political organization in several large U.S. cities, well into the twentieth century many were still drawing connections between Protestant Christianity and American citizenship. Justice George Sutherland, writing for the Court in a 1931 decision involving a conscientious objector who was seeking to become a naturalized American citizen, noted that "[w]e are a Christian people, according to one another the equal right of religious freedom, and acknowledging with reverence the duty of obedience to the will of God" (*United States v. Macintosh*).

The Flowering of Religious Freedom: 1940–1990

The dramatic demographic changes in American society would lay the foundation for the possibility of expanded religious freedom, not only through changes in the political and social climate, but also through changes in judicial interpretation and conceptualization. Throughout the preceding century, the courts and legislatures had most often classified rights according to group identity—all Mormons were responsible for the church's position on polygamy; all Native Americans were in need of civilizing and Christianizing; all "peace" church members qualified automatically as conscientious objectors. By the beginning of the twentieth century, however, these stereotypical assignments were being challenged, not particularly in the area of religion but in the political arena of free speech rights.

Initially interpreting the Fourteenth Amendment as protecting the economic rights of those engaged in business, the Court left to the states disputes over actions most often involved in claims of restricted religious freedom. With the onset of World War I, and the passage of legislation like the Sedition Act (1918), the federal government found itself involved in policing these behaviors in the name of national security. In successive decisions starting in 1919, the Supreme Court increasingly expanded the right of free speech to protect those alleging state as well as federal restriction. By 1934 Justice Benjamin Cardozo had argued in a concurring opinion that the Fourteenth Amendment also protected against state restrictions related to the religion clauses (*Hamilton v. Regents of the University of California*), a position that became more firmly established in law when, in 1937, he wrote it into the majority opinion (*Palko v. Connecticut*). In 1940 the Court made explicit the authority of the “free exercise” clause of the First Amendment over state restrictions (*Cantwell v. Connecticut*).

The impact of this transformation was profound. Up until this point, cases involving claims of limitations on an individual’s religious freedom had been controlled as much by the 1846 Court decision (*Permoli v. Municipality No. 1 of the City of New Orleans*) keeping the federal government out of state action as by the 1878 decision (*Reynolds*) separating belief from action, and most of the religious behaviors that ran afoul of the law were considered state concerns: breach of the peace, for example, or violations of laws related to public education. However, with the First Amendment now applicable to state actions by virtue of the Fourteenth Amendment, state limitations of religious freedom could now be scrutinized by the federal judiciary. Writing for the Court in 1943, Justice Robert Jackson noted that “[t]he very purpose of a Bill of Rights was to withdraw certain subjects from the vicissitudes of political controversy, to place them beyond the reach of majorities and officials and to establish them as legal principles to be applied by the courts,” including the freedom of worship and assembly (*West Virginia State Board of Education v. Barnette*).

The proof of how profound this change was can be seen in the sheer number of religious freedom cases argued before the Supreme Court, which grew exponentially after 1940. It can also be seen in the litigation history of the Jehovah’s Witnesses, a religious community often in court between 1938 and 1960 for its religious practices, including door-to-door distribution of religious material and the refusal of Jehovah’s Witness schoolchildren to salute the American flag. In cases

where the organization’s legal counsel relied either entirely or in large part on free speech arguments, the community was overwhelmingly successful. In cases where it relied solely on religious freedom arguments, the organization was singularly unsuccessful.

The series of cases won by the Jehovah’s Witnesses provided a foundation for the expansion for the protection of religious freedom in the United States. In the 1940s the organization won the right to preach without a license (*Cantwell*) and for their school-age children to refuse to salute the American flag (*Barnette*). Other nonmainstream religious organizations were able to capitalize on the expansion of the legal protections. In a 1944 decision from a case involving allegations of mail fraud against the IAM religious community, the Supreme Court ruled that the substance of a believer’s beliefs could not be questioned, only the sincerity with which they were held. “Men may believe what they cannot prove,” wrote Justice William Douglas for the Court (*United States v. Ballard*).

Arguably the most influential decade for the expansion of religious freedom was the 1960s, when law and politics converged with demographics to transform the landscape. In 1961 the U.S. Supreme Court expanded religious freedom to include freedom from religion, striking down a Maryland test oath challenged by an atheist who had been denied public office (*Torcaso v. Watkins*). The following year the Court ruled for a Seventh-day Adventist who had been denied unemployment compensation because she had refused work on Saturday, her Sabbath (*Sherbert v. Verner*), concluding that the distinction articulated in the 1878 *Reynolds* decision between belief and action was a false one. The Court then delineated what came to be known as the “Sherbert test” for determining when citizens could expect to have their religious freedoms protected, and when the state or federal government could reasonably limit those freedoms. If the religious adherent could identify an actual burden on his religious exercise, the government was required to identify a “compelling interest” for the restriction and then prove that the restriction was being administered in the “least restrictive means” possible before a religious practice could be restricted. Three years later the Court extended religious freedom protection to a man who had refused military induction as a conscientious objector even though his objections were not based on specific religious training or practice, noting that his beliefs occupied in his life the position of traditional religious beliefs in the life of a traditionally religious person (*United States v. Seeger*).

By the middle of the 1960s factors other than the interpretation of the First Amendment would also have a significant impact on religious freedom. The election of Sen. John F. Kennedy as the first Catholic to be president of the United States was the pinnacle of Catholic integration into American public society. The Civil Rights Act of 1964 included religion among the list of categories that were protected against discrimination by the federal government, while the Immigration and Naturalization Act of 1965 not only reopened America to a new generation of immigrants but also abolished the old quota system that had favored people from northern and western Europe. In increasingly larger numbers, people from South and Southeast Asia started coming to the United States, bringing with them their religious traditions and patterns, including an explosion in the numbers of “ethnic” Buddhists and Hindus. Passed at the end of the decade, the Indian Civil Rights Act of 1968 extended First Amendment religious freedom protections to Native Americans living on federal reservations.

Although the 1970s saw a number of important cases involving the First Amendment’s free exercise clause, the decade was marked also by the number of “no establishment” clause decisions, as the federal government worked to diminish the Protestant monopoly over public practices, particularly in the public schools. The Court also granted conscientious objector status to a man who denied having a religious ideology (*Welsh v. United States*, 1970), conversely denied conscientious objector status to a man who justified his position based on the traditional Catholic “just war” doctrine (*Gillette v. United States*, 1971), and permitted Amish parents to withdraw their children from public education before they reached the stated mandatory age (*Wisconsin v. Yoder*, 1972). Native American cases involving claims of religious freedom restrictions began appearing before the Supreme Court by the mid-1980s, but they were universally unsuccessful (*Bowen v. Roy*, 1986; *Lyng v. Northwest Indian Cemetery Protective Association*, 1987). The growing corpus of church–state decisions meant that many controversial issues—religious refusal of medical treatment, for example—were litigated in lower federal courts and were not heard by the high court.

Religious Freedom since 1990

The protection of religious freedom was challenged in the Court’s 1990 decision in *Employment Division, Oregon v. Smith*. Smith, a drug counselor, was fired for ingesting peyote—a controlled substance in Oregon—during his free

time at a ritual ceremony of the Native American Church. The Supreme Court obliterated the Sherbert test by ruling that, in violating a generally applicable law, Smith had no right to unemployment compensation and that the state had no burden to prove its legislation was motivated by a “compelling interest” enforced through the “least restrictive means.”

After appealing unsuccessfully to have the case reheard, a coalition of religious organizations worked with members of Congress to pass the Religious Freedom Restoration Act (RFRA, 1993), which directed state and federal courts to use the Sherbert test in cases involving questions of religious freedom. That same year, the Supreme Court clarified its own position in a case involving a municipal ordinance that prohibited religious animal sacrifice but permitted secular animal slaughter (*Church of Lukumi Babalu Aye v. City of Hialeah*). In its ruling the Court noted that, unlike in *Smith*, the law here was not generally applicable and had been written with a specific religious community in mind. In 1994 Congress added amendments to the 1978 American Indian Religious Freedom Act (AIRFA), granting Native Americans federal protection for the ritual use of peyote.

The Court ruled on RFRA’s constitutionality in 1997, when, in a case involving a historic preservation board’s rejection of a Catholic church’s renovation application, it declared that Congress had overstepped its authority by including state as well as federal courts in its directive (*City of Boerne v. Flores*). In response, a number of states passed their own versions of the now-limited RFRA, and Congress passed the Religious Land Use and Institutionalized Persons Act (RLIUPA, 2000), which required any government to apply the Sherbert test before it could impose land-use restrictions on a religious person or congregation, or substantial religious exercise restrictions on those incarcerated or institutionalized. In 2005 the Supreme Court affirmed RLIUPA’s use in protecting the religious exercise rights of Ohio state prisoners (*Cutter v. Wilkinson*), and in 2006 the Court affirmed RFRA’s federal mandate, affirming a small religious community’s right to import hallucinogenic herbs for ritual purposes (*Gonzales v. O Centro Espirita Beneficente União Do Vegetal*).

Possible Future Arenas for Conflict

The coming of age of the baby boom generation—those born between 1946 and 1963—has had a significant impact on all of American culture. Most significantly for religious

freedom, it has introduced a greater acceptability of religious “identity switching,” noninstitutional “spiritual pursuit,” and the downplaying of religious identity entirely. As a result, loyalty to one’s religious identity is no longer necessarily as meaningful as it had been for most of American history, and religious institutions have been playing a less dominant role in the lives of many Americans.

Ironically, one result is that there are greater opportunities for expanded religious freedom, and more visible signs of religious diversity and a spirit of pluralism that accepts that diversity. For example, the Supreme Court—which saw its first non-Protestant member in 1836 (Roger Taney, Catholic) and its first non-Christian member in 1916 (Louis Brandeis, Jewish)—had a non-Protestant majority by 1999 (three Catholics, two Jews), a Catholic majority by 2005, and more Jews (two) than Protestants (one) by 2009. In 2006, despite a rash of post-September 11, 2001, anti-Muslim sentiment, American citizens elected the first Muslim to Congress (Keith Ellison, D-Minn.).

As the culture assimilates this religious diversity, and as the Court builds a body of precedence related to religious freedom, more of the conflicts that might have come before the Supreme Court have been resolved on the lower federal and state court levels. There has also been a shift in the parties litigating in the name of religious freedom; conservative Protestants whose ideological forebears once enjoyed a greater cultural monopoly are more frequently seeking protection of their religious freedom rights, in such venues as the public schools (*Westside Community Schools v. Mergens*, 1990) and institutions of higher learning (*Rosenberger v. University of Virginia*, 1995). Like the Jehovah’s Witnesses who pioneered the issue of religious freedom in the 1940s, the Court in many of these cases has relied on free speech rather than “free exercise” justifications (*Van Orden v. Perry*, 2005; *McCreary County v. ACLU*, 2005; *Pleasant Grove City v. Sumnum*, 2009).

Another result of these changes is the migration of conversations about religious freedom from issues generally identified with the First Amendment’s religion clauses to those more traditionally identified with the Fourteenth Amendment’s individual rights protections. Starting in the last decades of the twentieth century, Justice John Paul Stevens in particular articulated concerns about such issues, including abortion and euthanasia. In *Webster v. Reproductive Health Services* (1989), Justice Stevens noted that a Missouri statute’s preamble, which defined life as beginning at conception, was entirely without secular purpose and therefore

a violation of the no establishment clause of the First Amendment. The following year, in *Cruzan v. Director, Missouri Department of Health* (1990), Stevens, citing his earlier statement in *Webster*, argued that, by keeping a young woman alive artificially, the state of Missouri was “establishing a sectarian definition of life.” More recently, legal scholars have identified state and federal restrictions prohibiting gay men and lesbians from enjoying the full benefits of marriage as a religious freedom issue. This argument is based in part on the argument that, by maintaining the prohibition, the various state governments have embraced a position that many see as justifiable only in religious language, and that they have therefore “established” the religion of conservative social theology.

Although identified as “no establishment” issues, these three areas—and others involving personal liberties—represent possible future arenas of conflict over the meaning of religious freedom. While the framers may have written the two religion clauses of the First Amendment for separate purposes—a possibility that continues to be a source of debate among legal scholars and historians—there is little doubt that today they are seen by many as intimately and inextricably related, a zero-sum game in which the establishment of one person or group’s position is a threat to the religious freedom of another’s. In contemporary America, where conservative Christians are as likely as Jehovah’s Witnesses to challenge laws they feel restrict their religious freedom rights, there are very few truly privileged political positions. The period of the “establishment” representing a particular religious position has transitioned into a period of greater diversity, in which more of the participants are vying to participate equally. As “Publius” (either Madison or Alexander Hamilton) suggested in *The Federalist*, No. 51, securing civil as well as religious rights depends on a “multiplicity of sects” and a “multiplicity of interests.” Religious freedom in the United States has enabled the former; cultural, political, and legal transformations in American have facilitated the latter.

Frontier and Borderlands

The concepts of frontier and borderlands have shaped the way American historians, including religious historians, have thought about the development of the United States and its religious history. Colloquially, *frontier* has generally referred to the western edge of Euro-American society. The term *borderlands* has usually referred to the border between the United States and Mexico and the American Southwest more broadly.

In the 1980s scholars began to reconsider both terms. As a result, they have redefined both terms in an effort to make them more inclusive and generally able to carry more meaning. American religious historians, though usually not taking an active part in the debates over these terms, have implemented the results in their work. The changing concepts of the frontier and borderlands have thus shaped scholarship on American religious history, particularly those works aimed at the American West and Southwest.

Frederick Jackson Turner's Frontier Thesis

In 1890 the U.S. Census Bureau declared the American frontier closed. By this the bureau meant that there was no longer a clear boundary separating land with a population density of less than two people per square mile from areas more densely populated. Three years later, historian Frederick Jackson Turner proposed his famous "frontier thesis" at a meeting of the American Historical Association in Chicago. "The existence of free land," he said, "its continuous recession, and the advance of American settlement westward explain American development." This process, Turner argued, shaped the character of Americans and their institutions, promoting individualism, democracy, innovation, strength, pragmatism, and a host of other virtues. Later elaborated in his book *The Frontier in American History*, Turner's thesis about the centrality of the frontier in the development of the United States shaped generations of American historians. Scholars have wrestled with the implications of the frontier thesis ever since.

Turner's thesis had at least two important implications. First, it rejected the prevailing "germ theory" of civilization that held that American institutions were transplantations from Europe, brought across the Atlantic by colonists, in favor of an environmental determinism that attributed American character, institutions, and ideas to the influence of the physical conditions of the new continent. Second, it introduced a definitive periodization in American history based on the successive openings of new frontiers as the nation pushed westward, with a decisive break in 1890 when the frontier disappeared. The frontier was thus a moving target, proceeding inexorably, if unevenly, westward from the initial European settlements on the eastern seaboard. Perhaps most important, Turner shifted the attention of his field to the frontier, so that even those who did not agree with him were forced to acknowledge the importance of this aspect of American history.

Turner recognized the importance of understanding the role of religion—by which he meant, primarily, Protestant Christianity—in the development of the American frontier. Seeing religion as principally a means of social control, Turner argued that missionary work was one of the main ways that the East attempted to regulate the development of the frontier. However, even though he asserted that religious competition on the frontier “must have had” significant effects on religion in the United States as a whole (an assertion that logically followed from his thesis), he left these effects unenumerated, stating only that this aspect of American history needed study.

William Warren Sweet and American Religious History

Although most American religious historians have not been followers of Turner, by turning historians’ attention to the westward movement of the United States, Turner had a significant impact on the study of American religion. Perhaps most notable in this regard was William Warren Sweet, a Methodist from Kansas who grew up to be the first professor of the history of American Christianity in the United States. Long before he was called to that position at the University of Chicago Divinity School, Sweet developed an influential synthesis of American religious history that depended on the American frontier. For Sweet, the frontier was a “proving ground” where denominational success determined which churches would be successful nationwide and would come to be regarded as “typically American.”

Articulated first in *Our American Churches* (1924) and later elaborated and popularized in his influential textbook *The Story of Religions in America* (first issued in 1930), Sweet’s synthesis emphasized institutional success as a criterion for inclusion in the group of “typically American” churches. The basis for this success, it became evident, was a strong, centralized ecclesiastical organization that could coordinate the denomination’s westward expansion combined with an enthusiastic and skillful use of revivalism as a way of reaching western settlers. For Sweet, the Methodists embodied these characteristics most fully and were, therefore, the prototypical “American” church. Presbyterians, Baptists, and Congregationalists, though not as successful as Methodists on the frontier, also received the stamp of approval. Other denominations, despite their sometimes very large size, did not interest Sweet. He disregarded both Catholicism and Lutheranism, which he considered too “foreign,” as well as minority ethnic and religious groups

such as African Americans and Jews. The success of the Methodists, Baptists, Presbyterians, and Congregationalists on the frontier, Sweet argued, made them the most “American” of churches, and thus justifiably the focus not only of histories of frontier religion, but of histories of American religion in general as well.

Despite the centrality of the “Turner frontier thesis” during his lifetime, Sweet was not himself a “Turnerian.” For Sweet, accepting Turner’s thesis would have meant accepting that the frontier had an indelible influence on the churches that evangelized the western edges of American society. Instead, Sweet focused on how Protestantism shaped frontier settlements. Turning Turner’s frontier thesis on its head, Sweet held not that the frontier made Protestantism American, but, as James L. Ash Jr. asserts, that the Protestants made the frontier American, and thus contributed to the development of American democracy and national character. Nevertheless, Sweet’s argument that denominational success on the frontier determined the fortunes of denominations in the nation as a whole fit nicely with Turner’s suggestion that religious competition on the frontier had important implications for the religious organization of the nation as a whole.

Sweet’s Legacy

Sweet trained an impressive cadre of graduate students, many of whom, after earning their doctorates, proceeded to develop programs in American church history at the institutions where they were hired. Quite a few of Sweet’s students, including Robert T. Handy, Winthrop S. Hudson, and Sidney Mead, went on to become luminaries in the field of American religion and to train even more of graduate students. Later generations of American religious historians found Sweet’s work on frontier religion, including the source materials whose publication he oversaw while at the University of Chicago, a fertile source of ideas and jumping-off points for their own work. Trained by Sweet or his students, or simply swayed by the enormous influence of his synthesis, Handy, Martin E. Marty, Sydney E. Ahlstrom, and Edwin S. Gaustad all recognized the importance of the frontier in their own syntheses of American religious history, though they rarely featured it as prominently as Sweet.

Sweet was, of course, not the only influence on later generations of historians, and other trends in religious studies and history also had their effects on the ways later historians used Turner’s thesis and Sweet’s synthesis in their own work. The general trend was toward greater

inclusivity—a broadening of the subjects of inquiry from Methodists, Baptists, Presbyterians, and Congregationalists to include Catholics, Lutherans, and other denominations as well as nonwhite and non-Christian groups. Still, denominational history remained an important concern throughout the twentieth century. Ferenc Morton Szasz, for example, has emphasized the importance of denominational identity in the American West during the frontier era and well beyond. Sounding somewhat Turnerian, and certainly emphasizing themes dear to Sweet, Szasz has asserted that the American West shaped the national religious landscape in the twenty-first century.

The “New Western History”

As the quincentenary of Columbus’s voyage to the New World and the centenary of Turner’s frontier thesis approached, a loose group known as the New Western Historians began to question the thesis’s validity and usefulness. Patricia Nelson Limerick, Richard White, Donald Worster, and others objected in particular to Turner’s vague and sometimes racist definition of the term *frontier*, the ethnocentrism of Turner’s focus on Euro-Americans, and the tendency of the frontier thesis to obscure continuities in western history, marking instead a sharp break at 1890, with the closing of the frontier. Disparaging the term *frontier* as “the F word,” some among this group looked for alternatives that would be more inclusive, less Euro-centric, and more conducive to conceiving of the West as a region. The focus turned to place (the West) and away from process (the frontier).

Perhaps most notable among the New Western Historians was Patricia Nelson Limerick, whose book *The Legacy of Conquest: The Unbroken Past of the American West* synthesized many of these ideas. Limerick argued that western historians’ preoccupation with the frontier led them away from describing the continuities that shaped western reality. Limerick sought to find a new way of telling western history in which the story was not divided into two acts by the closing of the frontier in 1890. To that end, she focused on continuities, describing western history in *The Legacy of Conquest* as “the study of a place always undergoing conquest and never fully escaping its consequences.”

Though they argued for the treatment of the West as a region with its own “unbroken history,” the New Western Historians never fully abandoned the idea of the frontier. Instead, they sought to redefine the frontier as a “zone of contact” between culturally different groups of people and

thus to remove much of the ethnocentrism in the prevailing conception of the frontier as the furthest edge of Euro-American society. This redefinition allowed historians to attend to both sides of the cultural divide, writing more inclusive, less triumphalist histories of the American West.

The Frontier in Contemporary Scholarship on American Religious History

As historians debated and refined Turner’s frontier thesis, religious historians quietly proceeded to apply the results to the study of American religion, particularly in the West. Michael E. Engh, adopting the notion of the frontier as a zone of contact, explored the religious diversity of early Los Angeles, California, in his *Frontier Faiths: Church, Temple, and Synagogue in Los Angeles, 1846–1888* (1992). Distinguishing between this frontier situation and other frontiers, in other times and places, Engh pointed out that Sweet’s “typically American” churches fared poorly at first, while minority faiths such as Judaism and Chinese religions enjoyed much more approval than they were finding elsewhere in the United States. Engh attributed the high level of tolerance and ecumenism evident in early Los Angeles to the frontier conditions found there: the imperative of depending on one’s neighbors, regardless of their religious convictions, and the common desire for community development.

Absorbing as well a new interest in “lived religion,” religious historians focusing on the frontier turned their attention away from institutional history to examine the effects of religion in ordinary people’s lives. Laurie F. Maffly-Kipp, in her study of Gold Rush California, *Religion and Society in Frontier California* (1994), examined the same four denominations that had occupied Sweet: Methodists, Baptists, Presbyterians, and Congregationalists. However, Maffly-Kipp rejected the notion that missionaries from these denominations could somehow transplant their eastern institutions into the West. Instead, she argued along Turnerian lines that the conditions of frontier California encouraged the modification of eastern forms of religion and, indeed, the creation of new forms of religious practice and belief more compatible with the physical, economic, and social milieu of Gold Rush California.

Mormonism

Mormon history was left out of this development for a long time. In many ways the grand exception to the frontier rule—communal rather than individualistic, hierarchical

rather than democratic (though only in certain ways), institutional rather than interdenominational or extra-ecclesiastical—the history of the Mormons was written in large part by members of the Church of Jesus Christ of Latter-day Saints (LDS). Members of academia who did not belong to the church avoided this history for various reasons. Most prominent was the general discomfort among historians with the subject of religion, exacerbated by a long-standing academic prejudice against Mormonism that made it difficult for even religious studies scholars to take Mormonism seriously.

In one sense, Mormonism had always been a frontier religion: it began in New York's "Burned-Over District" and moved westward with, or ahead of, the tide of American expansion. In general, however, even though the frontier was the setting for the story of Mormonism, few academics considered it a decisive influence in the elaboration or practice of the religion. Other factors, such as the religious genius of founder Joseph Smith, the organizational abilities of the Mormons' second leader, Brigham Young, and the prejudices of the surrounding non-Mormon community, took center stage in explaining the history of the church. Some scholars have recognized the benefits of the frontier isolation that the beleaguered LDS community found in Utah. Nevertheless, although Mormon history has become more integrated into western history as a whole, the concept of the frontier has not proven a powerful analytical tool in this area.

Herbert Eugene Bolton and the Borderlands School

William Warren Sweet's exclusion of Catholicism from consideration among the American frontier faiths created a significant lacuna in the study of American religions on the frontier that has been filled primarily by scholars trained in the "borderlands school" of history. Herbert Eugene Bolton, considered by many to be the "dean of the borderlands," trained generations of scholars in the history of the northern frontier of New Spain. Although he considered himself one of Turner's students, Bolton never applied Turner's frontier thesis to his own area of study—nor did his students. Nevertheless, Bolton's work and that of his students have been enormously important to those scholars of American religious history working on the area known as the borderlands—primarily that region of the American Southwest that once belonged to Mexico and before that to Spain.

In 1848 Mexico ceded about a third of its territory to the United States under the terms of the Treaty of Guadalupe

Hidalgo. These concessions were later expanded, resulting in the ultimate transfer of about half of Mexico's land base to the United States. The acquisition of this territory by the United States brought with it the addition of a primarily Spanish-speaking Catholic population that became the target of Protestant missionaries determined to evangelize and Americanize these new citizens. Long before the Protestants arrived, however, Roman Catholic priests constructed missions throughout the American Southwest in an effort to Christianize and Hispanicize the local indigenous populations. Unlike the Protestant missionaries who would come later, these Catholic priests were often an integral part of Spanish military expeditions, and their missions were officially sponsored by the Spanish crown. As Herbert Eugene Bolton observed in his influential 1917 article "The Mission as a Frontier Institution in the Spanish-American Colonies," these missions did double duty, working for both the Catholic Church and the Spanish empire. Bolton called these multipurpose establishments "frontier institutions," but he did not use the term *frontier* to refer to Turner's process-oriented thesis. Rather, for Bolton *frontier* meant simply the farthest reaches of the Spanish empire. Bolton's focus on the missions was typical of the borderlands school treatment of religion: in general, scholars focused on the institutional church and its efforts to absorb the Indian populations along Spain's northern frontier. Indigenous religions, and the effects of the frontier on Spanish Catholicism, received little consideration.

As was true of American history more generally, borderlands historians gradually expanded their focus beyond Spanish institutional history to consider the multiple sides of the cultural encounters resulting from Spain's northward expansion. Many scholars have explored the religious dimensions of these encounters, taking seriously both the Roman Catholicism of the priests and colonists as well as the traditional religions of the native inhabitants of the areas Spain invaded. For example, Ramón A. Gutiérrez's book *When Jesus Came, the Corn Mothers Went Away: Marriage, Sexuality, and Power in New Mexico, 1500–1846* (1991) explores both Pueblo and Hispanic worldviews, taking both seriously as a way of understanding why historical actors behaved as they did.

Contemporary Scholarship on Borderlands Religion

The nearly exclusive association of the term *borderlands* with the history of Mexicans and Mexican Americans in the

Southwest has meant that for religious historians the term signifies Catholicism and increasingly Mexican American folk religions such as *curanderismo* and *espiritualismo*. More recently, scholars of borderlands religion have begun to think of their subject in explicitly transnational terms, examining the cross-border flows of ideas, practices, and material culture in religious contexts. Luis D. León's *La Llorona's Children: Religion, Life, and Death in the U.S.-Mexican Borderlands* (2004) is a good example. León discusses the literal and symbolic border crossings involved in contemporary devotion to the Virgin of Guadalupe, the practices of *curanderismo* and *espiritualismo*, and the rise of evangelical and Pentecostal Christianity in Mexico and Los Angeles. The transnational focus in León's work and that of other scholars highlights the fluidity of borders and identities and brings into stark relief the dynamics of power—especially state power, but also the economic and cultural power that ultimately controls the flows that shape religious belief and practice on both sides of the border.

More important perhaps has been the political appropriation of the term *borderlands*, turning the word from a geographic designation into a metaphor for the unsettled political, social, and emotional space in which Mexican Americans find themselves. Gloria Anzaldúa's *Borderlands/La Frontera: The New Mestiza*, first published in 1987, defines the borderlands as “a vague and undetermined place created by the emotional residue of an unnatural boundary.” Anzaldúa uses the term to describe a state that religious studies scholars and anthropologists recognized as a form of liminality. According to Anzaldúa, borderlands themselves were constantly in transition, and the people who lived in them were typical liminal figures—that is, those on the margins of mainstream society. For Anzaldúa this was, among other things, a spiritual condition, one dealt with by utilizing and reinterpreting the resources of ancient Nahuatl religion as well as more contemporary Mexican American Catholic religious practices. Although Anzaldúa draws on her own experience as a Mexican American, and specifically *tejana*, lesbian, she clearly intends to describe the condition of Mexican Americans in the United States more generally, whether they lived in the Southwest or elsewhere.

This metaphorical turn has allowed scholars of religious studies to amplify their meanings when discussing the lives and religious practices of Mexicans and Mexican Americans. León, for example, understands the borderlands in a strict sense as the territory on either side of the U.S.-Mexican border, but draws on Anzaldúa and other Mexican

American cultural critics to explore this space as a social, political, economic, psychological, and mythical space as well. The geographic borderlands thus become a space in which to examine the symbolic narratives that shape Mexican American spirituality, a “religious poetics” that subverts what Anzaldúa sees as the “unnatural boundary” that divided the Mexican Americans' homeland of Aztlán between Mexico and the United States.

Nepantla

Scholars have also experimented with other terms. For example, elaborating on a word that Anzaldúa and other Mexican American cultural critics had employed, Rudy V. Busto suggested the Nahuatl term *nepantla*, meaning “middle place.” According to Busto, the term originally referred to both place, because of the word's technical meaning, and process, based on the root word's reference to mutuality or reciprocity. Busto adopted the term as a way of understanding both the religious situation of indigenous Mexicans after the Spanish invasion (the context in which the term was first recorded) and the later populations of Hispanics and Filipino Americans who find themselves between religious systems, partaking of both but at home in neither and sometimes creating a third option using the religious materials at hand. *Nepantla* has been taken up less explicitly by other scholars working on Mexican Americans' religion.

Conclusion

This metaphorical turn has thus brought the discussion full circle: taking terms originally used to refer to geographical space, such as *borderlands*, or more ambiguously to some combination of spatial location, temporal position, and social interaction, such as *nepantla*, scholars have turned them into ways of talking about process.

Although *nepantla* has yet to be fully theorized or widely adopted, the terms *borderlands* and *frontier* continue to be common in the historiography of American religion. Still, both remain problematic, primarily because their referents—the U.S.-Mexican border or the westward-moving edge of Euro-American society—privilege certain, usually white, people and their usually Christian religions at the expense of other, often brown, people and their often non-Christian religions. Some scholars such as Eldon G. Ernst and Maffly-Kipp have tried to remedy this problem by imagining American religious history from the opposite direction, beginning in the West and moving eastward. This exercise, which tends to privilege groups and religions that have been

given short shrift in the traditional narratives of American religious history, has sparked the imaginations of many scholars. However, it has yet to produce a major new synthesis of American religious history. In the meantime, the focus of *frontier* on change spurred by new environments and the use of *borderlands* to discuss transnational aspects of religious belief and practice ensure that these terms will retain their utility for some time to come.

Fundamentalism

Definitions of fundamentalism range from the sociological to the theological. Older assessments portrayed fundamentalism as the reaction of southern rural uneducated folk

against the northeastern urban and academic elites during the early decades of the twentieth century. H. L. Mencken, the era's most prominent journalist, popularized from his perch at the *Baltimore Sun* the idea that fundamentalism was "a holy war upon every decency that civilized men cherish." As he wrote in "The Collapse of Protestantism," for him fundamentalists "constituted, perhaps, the most ignorant class of teachers ever set up to lead a civilized people . . . even more ignorant than the county superintendents of schools."

Mencken's remarks, though provocatively amusing, were not altogether different from H. Richard Niebuhr's analysis in his essay on fundamentalism in the *Encyclopedia of Social Sciences* (1937). Despite being a theologian, Niebuhr tried to interpret fundamentalism sociologically as a movement that developed out of a conflict between America's rural and urban cultures. In its more aggressive forms, according to Niebuhr, fundamentalism was most prevalent in isolated communities where "the traditions of pioneer society had been most effectively preserved" and were "least subject to the influence of modern science and industrial civilization." The image of fundamentalism as a rural, backward, anti-intellectual form of twentieth-century Protestantism persisted in many texts on American history published during the 1940s and 1950s and culminated with Richard Hofstadter's Pulitzer Prize-winning book, *Anti-Intellectualism in American Life* (1962), which cited fundamentalism as one of the best examples of the perennial hostility of American culture to advanced learning and the life of the mind.

One of the first historians to shift from identifying fundamentalism as a social movement and to consider it chiefly in religious and theological terms was Paul A. Carter. In an article published in 1968, Carter noted how important ideas and doctrines were to conservative Protestants who opposed liberalism. He argued against the historical and sociological consensus that fundamentalists possessed their own set of beliefs and ideas and that these systems of thought were complex in their own right, even if foreign to the world of research universities and city newspaper editors. In other words, rather than constituting an anti-intellectual form of belief, fundamentalists were just as interested in ideas and learning as their Protestant foes who were attempting to harmonize Christianity and modern learning.

Carter's work was soon followed by important historical studies that explored in great detail the ideas that made the fundamentalist mind tick. The work of Ernest R. Sandeen located fundamentalism in the intellectual rigor of premillennial teaching about the return of Christ and the

doctrine of biblical inerrancy. It was followed by the benchmark work of George M. Marsden, who added depth by examining a constellation of ideas that included Wesleyan teaching on holy living, convictions about Christian America, and a philosophical disposition with roots in Scottish common sense realism. The definition of fundamentalism that emerged from these revisionist accounts was that fundamentalism was not anti-intellectual or even anti-modern, but that conservative Protestants who opposed liberalism were possibly more intellectualistic than liberals and just as modern as the rest of the Protestant world.

Yet even the recent discovery of fundamentalism's intellectual roots has its limits. If fundamentalism is defined simply as the 1920s conservative opposition to liberal ideas, such as theological appropriations of biblical criticism and Darwinian science, then the timing of fundamentalism remains a mystery. Soon after the Civil War American Protestant churches were beginning to introduce critical theories about the Bible and working out terms of peace between evolution and the first chapters of Genesis. A fundamentalist controversy in the 1890s would have been more understandable than one occurring when many of the new views about evolution, creation, and the human (as opposed to divine) qualities of the Bible were already several decades old. As it happened, the fundamentalist controversy was as much a reaction to the ecumenical movement within the churches, Protestant expectations about America's religious character, and populist developments outside the largest denominations as it was to theological innovation.

The Promise of Protestant Unity and Christian Social Order

As much as new learning emanating from the research universities and their divinity schools could have polarized American Protestants into liberal and conservative factions, denominational cooperation and good will characterized the Protestant existence between 1865 and 1920. This was the era in which the largest Anglo-American denominations such as the Congregationalists, Presbyterians, Methodists, Episcopalians, and Baptists established ties of commonality that forged what became known as "mainline" Protestantism. As William R. Hutchison wrote in the preface to *Between the Times: The Travail of the Protestant Establishment in America, 1900–1960* (1989), these denominations through their cooperative efforts would emerge in the early twentieth century as the Protestant establishment—that is, as those churches that "felt responsible for America: for its moral

structure, for the religious content of national ideals, for the educative and welfare functions that government would not . . . carry out."

Care for social order in the United States was not new for Protestants after the Civil War. In fact, before 1860 the Protestants who took the lead in organizing social life in the new nation were those in the revivalist tradition and who grew numerically and regionally during the Second Great Awakening. The evangelical awakenings of the colonial and antebellum eras taught American Protestants a conception of the relationship between faith and social activism that would be crucial to mainline Protestants. Because genuine conversion naturally led to holy living, born-again Protestants sponsored a host of social reforms that were designed to create a Christian culture in the United States. The task of the array of voluntary societies founded by evangelicals, known as the Benevolent Empire, was to purge America of sinful behavior and establish a righteous society. Many of these organizations were explicitly religious, such as the American Board of Foreign Missions (1810), the American Bible Society (1816), and the American Tract Society (1825). But some were also explicitly social in purpose—such as the American Colonization Society (1817), the American Sunday School Union (1824), and the American Society for the Promotion of Temperance (1827). Other efforts were devoted to women's rights, penal reform, abolition, Sabbath observance, and antismoking.

The greatest example of evangelical activism was that aimed at abolishing slavery. This campaign included social reformers from both religious and secular backgrounds, but the greatest support for ending slavery came from the promoters of revivals, who believed that chattel slavery was sinful and that the United States could not advance the kingdom of God until it rid itself of the evil institution. Evangelicalism also fed the discontentment with efforts to reform slavery gradually. Revivalists insisted that slaves be freed as immediately as individuals decided to follow Christ and as quickly as believers exhibited holy living. But not all evangelicals opposed slavery. In the fifteen years before the Civil War slavery divided Baptists, Methodists, and Presbyterians into northern and southern branches, divisions that set into motion the secession of the South from the Union. Southern evangelicals especially went from ambivalence to outright defense of the institution as necessary to domestic tranquility and social order. But evangelicalism was such an important factor in the conflict that it is possible to speak of the Civil War as the last chapter in the Second Great Awakening.

Support for religious voluntary associations that were not directly connected to the churches and the logic of cooperation in moral and social activism carried over from the antebellum era to the postbellum period, when increasingly the logic of unity appealed not simply to individual Protestants but also to denominational leaders. The appeal of union was especially powerful at a time when the nation's own unity had first been threatened and then restored through a destructive and tragic war. War had taught Protestants on each sectional side of the divide that if they could cooperate during the time of conflict for a common purpose, then the same trust and camaraderie should characterize peacetime church endeavors. The lesson of working together against a common foe made particular sense during the last decades of the nineteenth century, a time marked by the rise of new industries, the arrival of immigrants to work in those businesses, and those immigrants' settlement in urban centers marked by ghettos, criminal activity, and lewd behavior and indecency. Protestants' growing discomfort in their united nation was not helped by the record number of Roman Catholics migrating to the United States. In effect, many Protestants believed that churches needed to cooperate for the negative purpose of combating secularism, materialism, drunkenness, Sabbath-breaking, socialism, and Roman Catholicism. On the positive side, Protestants hoped to maintain a Christian America.

One of the first cooperative endeavors emerging from this constellation of concerns was the Evangelical Alliance, an agency founded in London in 1846 and that in 1867 gained an American branch. The alliance regularly sponsored conferences featuring pastors and university professors who reported on social conditions in the United States and invariably recommended policies or educational or family structures that reflected Anglo-American Protestant religious and cultural conventions. In 1908 Protestant denominational cooperation culminated in formation of the Federal Council of Churches. The federated structure ensured that the denominations would retain their own identity and control of their own resources. However, members of the council took the informal associations from the previous decades and melded them into a single formal institution that would provide an outlet for Protestant activism. In fact, the Federal Council's first piece of business was to adopt the "Social Creed for the Churches," a fourteen-point program. Its recommendations for business owners, government officials, and labor leaders were aimed at putting an end to the unrest between workers and the owners of large-scale

industry. This creed was the embodiment of the Social Gospel, which was a new form of teaching within Protestantism that posited the realities of sinfulness that extended beyond those of the individual, and the need for a social message of salvation as much as an individual gospel. Even so, as much as the Social Gospel was evident within the Federal Council's activity, so too were various evangelists and pastors known for their revivalistic ministries. The Federal Council, even if achieving institutional heft unimaginable by antebellum Protestantism, maintained the earlier balance between revivalism and social reform.

The next stage of Protestant cooperation was reached, just as it had begun, after a war. Thanks to the common efforts of Protestant churches during World War I, as well as to a desire for greater unity, the members of the Federal Council began in 1919 to consider plans for an organic union of Protestant churches—a proposal that would have done away with separate denominational structures and yielded one united Protestant church of the United States. Although this plan failed (unlike in Canada where in 1925 a similar proposal produced the United Church of Canada), it was nevertheless the culmination of American Protestant efforts to rally behind a common effort to preserve a moral and orderly society under the banner of Christian resolve. The social influence of the churches, in other words, went hand in hand with ecumenical aims. As a result, distinct aspects of denominational identity, whether in doctrine, polity, or worship, were less important for many American Protestants than a generic sense of mission that Anglo-American Protestant communions held by virtue of their identification with an American way of life that included Protestantism.

In contrast, then, to the seminary professors who were polarized into conservative and liberal camps thanks to new learning associated with Darwinism and higher criticism, from 1870 to 1920 clergy and church members were experiencing a groundswell of enthusiasm for greater cooperation among the denominations. This desire for church union, combined with its institutional manifestations, was arguably as important a backdrop for the fundamentalist controversy as the alleged scholarly threats to beliefs about the Bible.

The Limits of Cooperation and Unity

Outside the mainline denominations the concerns about a Christian social order and organizational solidarity were less important than the biblical preoccupations and devotional

convictions that would eventually produce dissent from ecumenical Protestantism as well as the building blocks of fundamentalism.

One important nineteenth-century doctrinal development for opposition to ecumenism and also to liberalism was dispensationalism, a particular way of interpreting the Bible—especially the prophetic passages—that also generated a network of teachers, schools, and conferences outside the denominations. Dispensationalism divided salvation history into seven eras or dispensations, each of which was marked by God establishing terms of fellowship with believers, the failure and wickedness of those called to faithfulness, and the divine response of judgment and punishment. This perspective on the Bible located the church, the Christian era, in the last dispensation, and taught that the church, just as believers had in the previous eras, would fail in its spiritual responsibilities. The Second Coming of Christ would end the church age. His return was to save true believers and judge the rest.

Dispensationalism offered a markedly different understanding of history and its unfolding. In contrast to many in the mainline churches who believed in a progressive unfolding of the kingdom of God that could be identified with the advance of the civilized world, dispensationalists believed that the world, including the church, was growing ever more corrupt. This pessimism extended to the United States, which may have once held a special place in the divine plan of redemption for dispensationalists but was going to follow the general example of the rest of humankind.

Dispensational teaching arose first in the United Kingdom through the work and writing of John Nelson Darby (1800–1882) and spawned the Plymouth Brethren association of Christians. After the Civil War Darby traveled to the United States for a series of preaching tours that gave his teaching a wider hearing. Among the important disseminators of Darby's views were William E. Blackstone (1841–1935), James H. Brooks (1837–1890), and James M. Gray (1851–1935). These evangelists were, in turn, responsible for establishing a network of Bible and prophecy conferences that further popularized dispensationalism within a specific sector of American Protestantism. The most influential of these meetings was the Niagara Conference movement, which began in the 1870s. It met in a variety of locations, and from 1883 to 1897 at Niagara-on-the-Lake, in Ontario, Canada. Although the original aim of the Niagara Conferences was to encourage a better understanding of the scripture, over time it developed doctrinal emphases that would

also be common in fundamentalism, especially the inerrancy of the Bible and the “personal and premillennial” return of Christ, also known as “the blessed hope.”

Although the Bible conference movement faded from importance, especially after the death of Brooks, another institution soon took its place in popularizing the teachings of dispensationalism. In the late nineteenth century, Protestants who sensed an urgency to train religious workers, evangelists, and missionaries created the Bible institute or Bible college as a way to address the need for laity who wanted to engage in full-time Christian service. In 1886 the famous revivalist Dwight L. Moody (1837–1899) established one of the first of these schools, the Moody Bible Institute, in Chicago. Earlier, in 1884, A. B. Simpson (1843–1919), a Canadian Presbyterian who would form the denomination known as the Christian and Missionary Alliance, erected the New York Missionary Training College (later Nyack College). The Bible institutes were important for providing Protestants of a revivalist temperament with an alternative to the liberal arts college and the theological seminary. Their instruction in the Bible and in practical techniques of ministry or support services was designed to produce graduates quickly who were prepared to evangelize non-Christians in often difficult circumstances, whether in the slums of the industrial city or non-Western societies.

The sense of urgency that spearheaded the Bible institutes arose directly from dispensationalism and its sense of imminent divine judgment and the return of Christ. If the end of history was near, Christians needed to send out as many evangelists and missionaries as possible to reduce the number of people facing eternal perdition. Dispensationalism, in turn, determined the content of the curriculum at Bible colleges and institutes. C. I. Scofield (1843–1921) was another of the popular speakers in the Bible conference movement, and his book *Rightly Dividing the Word of Truth* (1888) established him as the leading teacher of dispensationalism. He also created a correspondence course that attracted large numbers of lay Protestants and eventually became part of the curriculum at Moody Bible Institute. With their rival interpretation of history and alternative form of disseminating dispensationalist ideas, these Protestants created an alternative identity to the ecumenically and progressive-minded Protestantism of the mainline denominations. At the same time these methods of reading and interpreting the Bible provided a substantial counterweight to the historical-critical methods becoming popular in American seminaries and divinity schools. Increasingly, the

Revivalist Dwight Moody established one of the first Bible institutes, which were designed to produce graduates who would evangelize non-Christians.

world of the largest denominations and that of a more populist strand of Protestantism were operating in two different universes.

One additional source for a Protestant faith that existed on the margins or outside of the largest denominations was Wesleyan teaching on sanctification made popular through the Holiness movement. The idea of Christian perfection or the higher Christian life stemmed from John Wesley's own teaching about the possibility of living a life free from sin. The Wesleyan understanding of sanctification not only was popular among Methodists but also attracted parts of the Congregationalist and Presbyterian world. It informed Charles Finney's lectures on theology and was the doctrinal position of Oberlin College. Phoebe Palmer (1807–1874) and Hannah Whithall Smith (1832–1911) wrote books that were arguably more important than Finney for spreading Holiness views. By the postbellum era the Holiness movement was fueling camp meetings under the auspices of the National Campmeeting Association for the Promotion of Holiness and the Keswick Convention, an English conference for perfectionist teachings that Dwight Moody imported to the United States with his Northfield Conferences in Massachusetts. Holiness teaching also spawned a "come-outer" impulse among Methodists, which, in turn, led the most zealous advocates of Holiness to form new denominations such as the Church of God (1881) and the

Church of the Nazarenes (1907) where Christian perfection could flourish without compromise.

The most novel form of Holiness teaching and practice emerged at the beginning of the twentieth century. In Pentecostalism evidence of entire sanctification was speaking in tongues (glossolalia, a type of activity described in the New Testament as part of the early church's experience). The first denomination to embody this form of Holiness teaching was the Assemblies of God, formed in 1914. Not only did the Holiness movement thrive in settings comparable to those of dispensationalism and outside the mainline churches, but Pentecostalism

also drew upon a sense of the "end times" when trying to justify behavior that some Protestants and even those in the Holiness movement found strange.

Protestant Dissent Organized

If late nineteenth-century grassroots Protestant interest in dispensationalism and holy living revealed the limits of the mainline church's agenda for cooperation, developments within those mainline denominations after World War I threatened the harmony and common resolve that had prevailed among Protestants for almost fifty years. A harbinger of this threat came in the form of a pamphlet series, *The Fundamentals*, published between 1910 and 1915. Although commonly regarded as the beginnings of a fundamentalist movement because of its name, the series involved figures who would in the 1920s avoid identifying with the cause of purging liberal theology and evolution from the churches and schools. Even so, *The Fundamentals* did signal the emergence of an effort to reassert the basic convictions of historic Protestantism over the perceived doctrinal indifference of the mainline churches.

The man who conceived of the series was a wealthy oilman from California, Lyman Stewart, who also funded the series and sent an estimated three million copies to English-speaking religious workers. If the series had a theological viewpoint it was dispensationalism. Amzi C. Dixon

(1854–1925) and Reuben A. Torrey (1856–1928) were among the better-known editors of the twelve volumes; both were also well known in Bible conference and Bible institute networks. Even so, *The Fundamentals* also received contributions from notable Calvinist theologians such as Benjamin Warfield of Princeton Seminary and James Orr of the Free Church College in Edinburgh who had no particular affinity with dispensationalism and who worked within the mainstream denominational structures. Although authors like Warfield and Orr were by no means a natural fit within the dispensationalist and Holiness convictions of most of the contributors to *The Fundamentals*, the doctrine of biblical inerrancy as articulated by Reformed theologians did prove to be a welcome weapon in the emerging fundamentalist arsenal.

The dispensationalist-minded editors of *The Fundamentals* were able to call on nonpremillennial authors in part because of the aim of the series. Instead of functioning as a positive treatment of a distinct biblical outlook, *The Fundamentals* defended traditional Protestant views of the Bible and salvation. Approximately one-third of the articles defended scripture from ideas commonly associated with higher criticism. Other themes were arguments against liberal conceptions of older teaching, such as the person and work of Christ, or criticism of evolutionary theory even while expressing tolerance for theistic evolution. Yet another layer of writings in *The Fundamentals* concerned practical matters in the lives of Christians or anecdotes from the experience of prominent pastors. Essays in this category demonstrated the continuing popularity of Holiness teaching.

In sum, *The Fundamentals* became significant by acting as a rallying point for conservatives. By no means doctrinaire, the series drew together a variety of Protestant views that were arguably theologically and ecclesologically incompatible. And yet by indicating the broad outline of a conservative agenda, *The Fundamentals* foreshadowed the emergence of a conservative opposition to liberal trends within the mainline churches.

The next level of organized conservative dissent emerged in 1919 with the formation of the World's Christian Fundamentals Association (WCFA). Undoubtedly, the term *fundamentals* was important for the new organization and tapped whatever energy had been created by the pamphlet series of that name. Unlike *The Fundamentals*, the WCFA was aggressive in identifying threats to Christianity in America and in assuming an explicitly oppositional posture. The man who

created and ran the association, William Bell Riley (1861–1947), targeted evolution and theological liberalism as the chief errors afflicting the nation's churches and schools.

In many respects the WCFA was less important as an organization than it was as a vehicle for Riley who would emerge as a key figure in the fundamentalist-modernist controversy. In fact, in 1924 when Riley became sick and had to withdraw from association activities for six months, the organization teetered on disbandment. Yet the WCFA was significant in Riley's efforts to marshal conservatives into a united front against liberalism. On the one hand, the association built on the pattern of Bible prophecy conferences that had helped to popularize dispensationalism. On the other hand, under Riley's influence the WCFA adapted dispensationalism from an outlook that motivated evangelism and missions to one that became the basis for opposing liberal ideas about progress and the moral superiority of the United States as a defender of the civilized world in World War I. In fact, for the WCFA dispensationalism led directly to antievolution and antinaturalism because both Darwinism and cultural progressivism removed the miraculous and supernatural from Christian teaching about human origins and the end of human history.

Riley, who hailed from Indiana, became a convert to Christianity at the age of fourteen during an evangelistic meeting. He received his theological training at Southern Baptist Seminary in Louisville and held pastorates at a series of churches in the upper Midwest before arriving at First Baptist Church of Minneapolis where he established a national reputation for combating liberalism. Like many fundamentalists, Riley interpreted the Bible according to the dispensationalist scheme and found it remarkably well suited for diagnosing national and international affairs. He opposed the teaching of evolution in tax-supported schools, not so much on biblical or scientific grounds, but rather because of what he believed evolution did to the morality of children thanks to its obliteration of the distinction between men and monkeys. Without a sense of sin, Riley warned, men and women, boys and girls, would revert to the brute morality of the jungle. By the 1930s he would use biblical prophecy to spot conspiracies within the administration of President Franklin D. Roosevelt as well as the communist empire of the Soviet Union.

Although Riley, like many fundamentalist leaders, operated independently, he was still intimately connected with other conservatives on the two main fronts of the battle between conservatives and liberals: public schools and

churches. In 1925 he recruited William Jennings Bryan to be the chief prosecutor at the Scopes trial in Dayton, Tennessee, and played an important role in the denominational controversies among both southern and northern Baptists.

The Scopes Trial and Anti-Darwinism

Riley's argument connecting Darwinism to moral decline took on added plausibility after World War I when anti-evolutionists tied Germany's perceived aggression to the consequences of scientific ideas that were no longer controlled by scripture. The important factor prompting a backlash against evolution in the 1920s was not the wartime experience as much as it was the expansion of public education in the South. As various states began to require universal education, teachers, parents, students, and school board members encountered textbooks that taught evolutionary biology. In response, the legislatures in many southern states considered laws that would ban the teaching of Darwinian science and several adopted such legislation. Tennessee's law, passed in early 1925, was among the most explicit in condemning evolution. It prohibited teaching "any theory that denies the Story of Divine Creation of man as taught in the Bible, and to teach instead that man has descended from a lower order of animal."

The Tennessee legislature could not have predicted the national attention and local interest its law would generate. The American Civil Liberties Union set out to make a test case of the Tennessee law and sought someone they could use to test the law's constitutionality. The man who stepped forward was John T. Scopes, a science teacher in Dayton. Scopes received encouragement not only from national organizations opposed to the apparent restriction of free speech and scientific inquiry but also from local business groups who calculated that a trial in Dayton would attract the national spotlight and bring journalists and tourists to a town that, for business purposes, needed to be put on the map. Adding to the potential for a national spectacle were figures such as Riley and his World's Christian Fundamentals Association. These fundamentalists wanted to ensure that they would win such a public contest over the Bible and its place in American institutions.

The selection of William Jennings Bryan (1860–1925) to be the chief prosecutor for the state only intensified the spotlight that the nation and its press would shine on the small town of Dayton. A native of Illinois who was trained as a lawyer, Bryan was the most active layman in the religious controversies of the 1920s. He represented Nebraska

in the U.S. Congress before gaining the Democratic nomination for president in 1896, 1900, and 1904, all of which he lost. As a politician, Bryan supported progressive reforms such as woman suffrage, prohibition, and regulation of big business. But he also earned a reputation as a man of the people and an advocate of the economic interests of farmers and rural America. In fact, his most famous speech, "Cross of Gold," argued for a silver standard for the American currency so that cash-starved farmers who were increasingly dependent on and yet alienated from America's banking system might have better access to cheaper money and credit. Although Bryan was portrayed as the champion of lost causes, his political concerns were sufficiently mainstream for him to serve as Woodrow Wilson's secretary of state, a position from which Bryan would resign because of his unwillingness to support the country's entry into World War I.

In retirement from public service, Bryan remained active as a popular speaker and religious teacher. His newspaper columns were read by millions of Americans. When he took up the issue of evolution in the early 1920s, calling Darwinism a "menace," Bryan became the most prominent of national spokesmen who were defending the biblical account of creation. His involvement at the Scopes trial was a natural development of his own legal and religious background. Bryan believed that not only was evolution a threat to traditional Christian morality but its inclusion in the curriculum of public schools represented the imposition of scientific and educational elites upon the ideas and mores of average Americans. In fact, within the arguments before the court the more pressing issue in Dayton was less the truth of Moses or Charles Darwin than it was the power of the majority of local citizens in a democratic community to determine its own affairs, including education.

As plausible as Bryan's political arguments may have been and as popular as he was as a political figure and religious leader, he was no match for the lawyers and journalists who descended upon Dayton for the proceedings during the summer of 1925. Clarence Darrow, one of the era's most famous attorneys, led the defense, and H. L. Mencken led the hundreds of journalists who reported on the spectacle and often wrote disparaging stories on the backwardness of rural Tennessee. Although Darrow at times bested Bryan in arguments—even baiting Bryan to take the stand and defend biblical stories such as the flood and the whale that swallowed Jonah—Bryan actually won the trial by the court's standards. The judge found Scopes guilty of violating

Tennessee's law and fined the teacher \$100. Although the decision would later be overturned on a technicality, the law remained on the books for several more decades. Meanwhile, journalistic coverage of Bryan's victory in court turned his efforts into a cultural defeat for religiously backward Americans who seemed to oppose science, education, and the assertion that progress that came from new discoveries. Only five days after the trial, Bryan died in Tennessee. His death underscored the sense of defeat for fundamentalists before the bar of public opinion.

Fundamentalism in the Denominations

The year of Bryan's death was also important for the major denominations that were experiencing opposition between conservatives and liberals, and the results were not much better for fundamentalists. Some denominations—including Methodists, Episcopalians, Disciples, Southern Presbyterians and Southern Baptists—felt the turbulence of these disputes, but the biggest battles were among Presbyterians and Baptists in the North. These were the only controversies that resulted in the formation of new denominations.

Because of the independent character of the church polity of Baptists, much energy in the Northern Baptist Convention among fundamentalists was local and lacked coordination. As such, in Baptist circles the efforts of individual pastors could be as substantial as institutional efforts. William Bell Riley illustrates this point. His own involvement in his church in Minneapolis, as well as his founding of a Bible college and the WCFA and his lengthy efforts to combat evolution in public education, demonstrate the way in which one Baptist pastor could cast a long shadow among conservative Protestants, both Baptist and those in other denominations.

This was no less true for another important Baptist fundamentalist. John Roach Straton (1875–1929) was a prominent Baptist who acted locally but also participated in denominational associations to oppose modernism. Born in the Midwest and educated at Southern Baptist institutions, Straton gained notoriety in the North when he served as pastor of Calvary Baptist Church in New York City from 1918 until his death in 1929. Unlike the reputation that fundamentalists may have gained at the Scopes trial, Straton showed that they also were engaged in progressive social and urban activism. In fact, like Bryan (not to mention his liberal opponents), Straton believed that the well-being of the United States depended on true religion. Unlike liberal proponents of the Social Gospel, however, Straton refused to

isolate social reform from individual salvation. The social ills could be remedied only through the conversion of individuals. To this end, Straton visited red-light districts to protest prostitution, supported Prohibition, and advocated the minimum wage, mothers' pensions, and profit sharing. Nevertheless, whatever good these policies might accomplish was far from the ultimate good that came through the Christian faith. In fact, Straton's emergence as a fundamentalist stemmed from his own frustrations with liberal Protestants who he believed were abandoning evangelism to pursue reform almost exclusively.

Straton achieved fame among fundamentalists during debates in 1923 and 1924 with Charles Francis Potter, a Unitarian minister in New York. Not only were Straton's debates published in book form, but they also attracted front-page coverage in newspapers and were broadcast on the radio. The topics were biblical inerrancy, evolution, and the deity of Christ. In the end, Straton's arguments were conventional for Victorian Protestants. He asserted that the very foundations of the American Republic stemmed directly from the pages of the Bible, which taught the basics of civilization—the practice of monogamy, the sanctity of marriage, the value of men and women, and the importance of the family. Even though, unlike Riley, Straton was not a leader in Northern Baptist fundamentalist organizations, he did join and support them during the 1920s.

J. C. Masee (1871–1965) was another Baptist fundamentalist to come up through the ranks of Southern Baptists. Born and reared in Georgia, Masee attended Southern Baptist Theological Seminary and held a series of pastorates before arriving in 1922 at Boston's Tremont Temple, where he gained a following locally. Dispensationalism heavily influenced Masee, but instead of using it to call attention to the nation's moral degeneracy he used it in the more typical manner as an incentive for evangelism. But this interest in evangelism did prompt his opposition to signs of liberalism among the ranks of Northern Baptist missionaries and his call for investigation of modernism in the foreign mission fields. Even so, Masee's opposition to liberalism never prompted him to leave the Northern Baptist Convention with other fundamentalists or to engage in the political and cultural battles that occupied Riley and others. Masee was content with the strategy of evangelism.

The fluidity of Baptist denominational structures would draw another Southern Baptist into the controversy in the North. J. Frank Norris (1887–1952) was known by many as the gun-toting Baptist because of the 1926 incident in

which he shot a man who threatened him in his office (Norris was found not guilty of wrongdoing). He labored chiefly among Baptists in Texas. After studying at Southern Baptist Theological Seminary, he ministered in Dallas and then for the rest of his life at First Baptist Church in Fort Worth, a post he would eventually split with ministering at Temple Baptist Church in Detroit. Norris was editor of the magazine *The Fundamentalist*, founded in 1927. He also was a supporter of the Baptist Bible Union, an organization that drew support from Northern Baptist fundamentalists.

Baptist Fundamentalists Organized

Founded in 1923, the Baptist Bible Union became the formal outlet for one form of fundamentalist opposition to modernism in the Northern Baptist Convention. Leaders such as Norris and Canadian T. T. Shields (1873–1955) gave the union a measure of visibility, even if they had their own Baptist identities outside the northern communion. The union had particular appeal among Northern Baptists concerned about the direction of foreign missions in the convention. By the early 1930s the potential for the union's leaders to be distracted from the organization's affairs led to the formation in 1932 of the General Association of Regular Baptists (GARB).

Robert T. Ketcham (1889–1978) was the early leader of GARB. He lacked a formal higher education but still pastored in congregations in Pennsylvania and Ohio and was active in the Baptist Bible Union. By 1928 his opposition to liberalism had led to the founding of the Ohio Association of Independent Baptists. When GARB was formed four years later, it adopted the New Hampshire Confession with a premillennial emphasis. The association has remained careful about associating with other Baptist communions and, to avoid the dangers of denominationalism, has chosen to conduct a variety of its work through other independent institutions.

The Bible Baptist Union was not the only resource for Baptist fundamentalists in the North. Preceding the union by a couple years was the Fundamentalist Baptist Fellowship, which spearheaded conservative opposition to liberal teaching in Baptist colleges and seminaries. Perceived as not as radical as the union, the Fellowship tried to pressure the Northern Baptist Convention to adopt a confession of faith based on older Baptist creeds. But the convention affirmed instead that the Bible summarized its faith and the Fundamentalist Baptist Fellowship never regained its standing. Even so, the Fellowship persisted, and in the 1940s

when questions about foreign missions resurfaced, the Fellowship led the opposition. Eventually members of the Fellowship became frustrated with the Northern Baptist Convention's unresponsiveness and formed the Conservative Baptist Association, a communion that also received Riley's blessing and membership before his death that year. The Fellowship would go on, but the Conservative Baptists achieved greater visibility and influence, especially through their seminaries in Portland and Denver. During the 1970s the seminaries became identified with the evangelical movement associated with Billy Graham and *Christianity Today* magazine.

The Presbyterian Controversy

Compared with Baptist disputes, the conflict within the Northern Presbyterian Church, the Presbyterian Church in the USA (PCUSA), revolved less around personalities and individuals. Even so, Williams Jennings Bryan was arguably the most prominent Presbyterian in the controversies of the 1920s. He was an elder in the Presbyterian Church and participated in some of the important debates within the denomination, always lobbying for the church to condemn the consumption of alcohol and evolution. As a scion of Cumberland Presbyterianism, a branch of American Presbyterianism that rejected the covenantal and Calvinistic teachings of the Westminster Confession, Bryan failed to see the theological fine points that liberalism signified to his Presbyterian colleagues.

Other leading figures in the Presbyterian controversy were John Gresham Machen (1881–1937) and Clarence Macartney, both of whom were associated with Princeton Theological Seminary, which was the center of the organized opposition to the theological discrepancies within the PCUSA. Machen grew up in Baltimore where he attended Johns Hopkins University before studying at Princeton Theological Seminary and Princeton University. He taught New Testament at the seminary until 1929 when he led in the formation of Westminster Theological Seminary to be Old Princeton Seminary in exile. Because of Machen's association to Princeton Theological Seminary, an institution widely known for the doctrine of inerrancy, the tendency has been to interpret conservative Presbyterian objections to liberalism as a function of Princeton's doctrine of scripture. But Machen's most popular book, *Christianity and Liberalism* (1923), demonstrated that liberalism's greatest defect for conservative Presbyterianism lay in the doctrinal realms of sin and grace. Because liberal Protestantism taught a

different view of salvation, Machen argued, it was “an entirely different religion” from Christianity.

Macartney (1879–1957) grew up among the Covenanters (Reformed Presbyterian Church in North America) in western Pennsylvania, but entered mainline Presbyterianism by attending Princeton Theological Seminary on his way to ordination in the PCUSA. He went on to minister at prominent congregations in Philadelphia and Pittsburgh, and he served on the board of trustees of the Princeton and Westminster seminaries. Macartney emerged as a leading conservative in 1922 when in response to Harry Emerson Fosdick’s provocative sermon “Shall the Fundamentalists Win?” Macartney wrote an article critical of Fosdick and spearheaded Presbyterian opposition. Macartney served as moderator of the PCUSA’s 1924 General Assembly, the only fundamentalist to be elected to that post during the controversy. He joined Machen in efforts to promote Westminster Theological Seminary by serving on the new school’s board of trustees. But Machen and Macartney would part in the 1930s over ecclesiastical politics and the best way to defeat liberalism within the Presbyterian Church.

The Presbyterian controversy went through three phases. The first ran roughly from 1922 to 1925 and involved conservatives opposing bold expressions of liberal Protestantism. In 1922 Fosdick preached what turned out to be the opening thrust in the match between conservatives and liberals with “Shall the Fundamentalists Win?” A liberal Baptist who was responsible for regular preaching as a guest minister at New York’s First Presbyterian Church, Fosdick more likely spoke with Baptist controversies in mind than the Presbyterian situation. He accused fundamentalists of intolerance and called their essential doctrines, such as inerrancy and premillennialism, minor matters in the scope of world events. The Presbytery of New York City added to conservative alarm when it ordained two men who would not affirm the virgin birth. Conservatives regarded these events as ample evidence of liberalism and tried to force the Presbyterian officials in New York to comply with denominational guidelines. In several successive General Assemblies, however, the denomination displayed a concerted unwillingness to be intolerant or divisive. The Presbyterian bureaucracy, with tacit support from the laity, chose administrative solutions to ease the tensions and maintain church unity. One of these measures involved the appointment in 1925 of a study committee whose report blamed conservatives for acrimony in the church and called for all sides, especially conservatives, to cease from public polemics.

A similar response to controversy characterized the second phase of the Presbyterian conflict, 1927–1929. Here the general warning to conservatives about public criticism of liberalism was specifically applied to Princeton Theological Seminary. Between 1927 and 1929 the General Assembly appointed another study committee to explore antagonisms that were afflicting the seminary, in this case between conservatives such as Machen, who opposed broadening the Presbyterian Church, and evangelicals such as practical theology professor Charles Erdman, who believed church unity was more important than theological purity, a desire that was theoretically possible but practically impossible. The committee recommended reorganizing Princeton, a solution that gave the president greater authority and reduced the conservative majority in the seminary’s board of directors to a minority. Machen responded in 1929 by resigning from Princeton and founding Westminster Theological Seminary in Philadelphia to be the institution of conservative Presbyterian dissent within the PCUSA.

The third and last phase of the Presbyterian controversy, which began in 1932, was unexpected and again involved an administrative response to doctrinal and practical problems. In 1932 an interdenominational report on foreign missions, *Re-Thinking Missions*, exposed what for conservatives amounted to a serious weakness in the witness of the Presbyterian Board of Foreign Missions, one of the sponsoring agencies of the study. The report argued that the old motive for missions—salvation from sin and eternal death—was backward and that a new rationale was needed, one that involved cooperation with other religions with the goal of advancing civilization. Conservatives responded by trying to show how this Presbyterian agency was failing to maintain denominational standards in doctrine and ministry. After being rebuffed by Presbyterian officials, many of whom such as Robert E. Speer (1867–1947) were not liberal but evangelical, conservatives, led by Machen, founded the Independent Board for Presbyterian Foreign Missions. In 1934 denominational officials ruled that this independent institution was unconstitutional and ordered members of the new missions board to be brought to trial. Machen’s was the most sensational of these proceedings, in part because the ecclesiastical court trying him refused to hear any arguments about the constitutionality of the 1934 mandate. In 1935 the Presbytery of New Brunswick convicted Machen of violating his ordination vows on six counts and suspended him from ministry and membership in the PCUSA. He appealed to the national meeting of

Presbyterians in 1936, but his conviction was upheld. Within a week after his appeal, Machen led other conservative Presbyterians into a new denomination, the Orthodox Presbyterian Church. Small at the beginning (5,000 members), this denomination remains small (approximately 31,000 in 2009) because of the controversies that caused some conservatives to leave, as well as its attention to doctrinal correctness that has often been off putting to evangelical Protestants.

Consequences and Legacy of Fundamentalism

Although it played out in particular settings with distinct sociopolitical, theological, and denominational convictions, the fundamentalist controversy was important from the broad perspective of American Protestantism as a whole. Its chief significance was to divide the largest white Protestant denominations of Anglo descent—the American Protestant mainline—into two camps, one liberal and one conservative. Before the 1920s this expression of Protestantism had combined evangelism and social reform as part of the church's efforts to redeem individuals and transform America. After the 1920s social activism and evangelism would go in different directions. The so-called liberal or mainline churches continued to adopt ministries and programs designed to Christianize the United States and even the world. To be sure, the rise of neo-orthodoxy in the 1930s and 1940s infused mainline Protestantism with a more sober estimate of the relationship between progressive social policy and the advance of God's kingdom. Even so, after 1930 American Protestantism had two clear parties: the mainline churches and fundamentalists, those who dissented from the mainline. What overwhelmingly characterized these dissenters was a commitment to evangelism and foreign missions in a way that insisted that the eternal destinies of people were of far greater consequence than improving temporal social conditions.

By the 1940s, however, some fundamentalists had become frustrated with the otherworldly outlooks of their peers and worked for an alternative form of conservative Protestantism. Led by Harold John Ockenga (1905–1985), Carl F. H. Henry (1913–2003), and Billy Graham (1918–), these neoevangelicals, as they were originally known, attempted to forge a union of the diverse groups and leaders within fundamentalism and to restore a concern for American society and global affairs among those intent on evangelism and missions. The institutions that gave coherence to neoevangelicals initially were the National

Association of Evangelicals (established in 1942), Fuller Theological Seminary (1947), and *Christianity Today* (1956). Although the efforts of neoevangelicals ultimately failed to unify conservative Protestants outside the mainline, these leaders were responsible for carving out *evangelical* as a conservative Protestant identity distinct from *fundamentalist*.

The political and social developments of the 1960s and 1970s that seemingly turned the United States into a post-Protestant society animated both evangelicals and fundamentalists to return to the political activism of an earlier Protestant era. Jerry Falwell's Moral Majority and Pat Robertson's Christian Coalition (in addition to Robertson's bid for the Republican presidential nomination in 1988) were notable institutions for channeling Protestants who were known for being otherworldly back into the realities of electoral politics and international relations. Some have interpreted this fundamentalist and evangelical political activism as a threat to America's tradition of the separation of church and state. But as much as the Religious Right's policies and understanding of the nation may be out of step with the religious and cultural diversity that characterizes twenty-first-century America, the desire for and effort behind Christianizing America has been a hallmark of the largest Protestant denominations in the United States since 1800. The real anomaly for American Protestants may be the fundamentalist era, when conservative Protestants abandoned hopes for realizing the kingdom of God in the United States and looked instead to the crisis of Christ's return to judge the nations as the culmination of salvation history.

Fundamentalism: Contemporary

As the decade of the 1980s opened, friends could rejoice, and opponents could warn, that fundamentalism was now "back with a vengeance," as the historian Martin E. Marty put it. This time, however, the opponent was not theological liberals within the denominations but secularizing forces within the nation.

American Protestant fundamentalism was born in the 1910s, it retrenched from the 1930s to 1950s, and it has resurged since the mid-1970s. At its core the movement has always been theological. Unlike the nineteenth- and twentieth-century moves to modernize Christian theology to accommodate developments in science and biblical scholarship, fundamentalism has built its house on biblical inerrancy—affirming the accuracy of the Christian Bible in every detail, interpreted as literally as possible. It has battled the scientific theory of Darwinian evolution for theological reasons, often insisting that the earth was created less than ten thousand years ago in six literal days (a commitment based on a literal reading of the opening chapters of Genesis). The movement has grown through evangelism, often with the sophisticated support of communications technologies. It has viewed the mission field of the world through the lens of premillennialism—a bleak view of human culture as suffering from a severe and irreversible decline from which believers will be rescued only by the personal intervention of Jesus Christ, the returning King come to establish his thousand-year kingdom on earth. Meanwhile, among a significant minority of fundamentalists the quest for theological purity has entailed strict separation from nonfundamentalists, and indeed even from other conservative Christians who themselves associate with nonfundamentalists.

Although the theological dimensions of fundamentalism have always been primary, the movement has also maintained a strong ethos of cultural concern. Emerging as it did from the nineteenth century when evangelical Protestants could comfortably behave as custodians of a presumptively Christian American culture, fundamentalism reacted strongly whenever it saw this Christendom vision threatened. Higher biblical criticism and Darwinian evolution were not just theological threats but also threats to America's Christian civilization. At first, fundamentalists saw such godless intellectual trends behind the German barbarism of World War I. Then they perceived them in worldwide communism. By the 1970s the forces of godlessness seemed to

have rooted themselves within America itself—attacking American children in their schools, American families in their cohesion and sexual identity, and American institutions in their moral moorings. If there was such a thing as a “fundamentalist resurgence” in the 1970s (and this depends on the definition of *fundamentalism*), then it was growth in a new sort of fundamentalism—one in which the cultural battle now eclipsed the theological battle both as motivator and as an engine of growth. The old theological commitments were still present. Now, however, the crusade was not primarily denominational and theological, but cultural and political; it was not about how to read the Bible or understand the end times, but how to vote and act on abortion, feminism, homosexuality, school prayer, and a host of related issues.

The Fundamentalist Battlefields

The cultural concerns of fundamentalists after the late 1970s arose from the counterculture agitations of the 1960s and 1970s. The civil rights movement of the late 1950s and 1960s became the pattern and impetus for radical feminist and gay rights activism, and the sexual revolution of the 1960s fostered sexual permissiveness. The 1960s and especially the 1970s also saw conservative Christians enter a new era of political involvement as they faced state intervention in matters such as religion in the classroom and abortion. In addressing religion in the classroom, the U.S. Supreme Court declared in *Engel v. Vitale* in 1962 that government-imposed prayer in public schools was a violation of the establishment clause of the Constitution. The following year the Court declared in *Abington Township School District v. Schempp* that school-sponsored Bible reading was unconstitutional as well. In addressing the abortion issue, the Court found in *Roe v. Wade* (1973) that a woman had the right to terminate her pregnancy.

For fundamentalists each of these developments alone was troubling enough, but taken together, they seemed to amount to a full frontal secularizing attack. No longer, as in the era of the flappers, could conservative Christians dictate public behavior from the high ground of moral authority automatically associated with the Protestant establishment. By the 1970s there no longer was a Protestant establishment. Simply shaming transgressors would not work anymore: a group rapidly losing status in the nation it had for decades and centuries thought of as its own preserve now had to discover new modes of public persuasion and political action.

This evolution in cultural approach did not happen automatically or smoothly from within fundamentalist ranks. In fact, the Roman Catholics led the charge. The issue was abortion—not a concern that originated in Protestant circles. Abortion had long been treated as an excommunicable sin in Roman Catholic canon law, but in 1968 Pope Paul VI (1897–1978) explicitly reaffirmed this stance in his encyclical *Humanae Vitae*. Then in 1973 the *Roe v. Wade* decision triggered a wave of Roman Catholic antiabortion activism. Politically active right-to-life organizations were founded without official Roman Catholic ties, but they were staffed by Roman Catholic laypeople. To make headway in the cultural battle, the fundamentalists had to swallow centuries of confessional pride and join with Catholics.

One issue in the new culture war was, however, distinctively Protestant, at least in its origins and its key constituency: the posing of a quasi-scientific theory of “creationism” to counter the Darwinian theory of evolution by natural selection. Since World War I fundamentalists had understood Darwinism to be the biggest threat to Christian civilization in America—matched only, perhaps, by the new winds of higher biblical criticism blowing across the Atlantic from Germany. By the early twenty-first century, although creationism was still solidly a fundamentalist preserve, linked as it was to a literal reading of the Genesis Creation accounts, it had also expanded to include many evangelicals and even some mainline Protestants. This creationist argumentation was pushed into the mainstream with the help of the “intelligent design” movement. Originating in the 1980s from the thought of scientist and historian Charles B. Thaxton, and then carried forward by mathematician and philosopher William Dembski and biochemist Michael Behe, intelligent design argues that some organisms and organs in the natural world are far too complex to have arisen by mere chance.

Today, the Roman Catholic Church, which historically has supported a qualified evolutionary position, is beginning to reconsider that support. Even some nonreligious folks, drawing on postmodern understandings of the subjectivity of scientific knowledge, have begun to waver in their support for evolutionary theory. Activist preachers and their followers have continued to focus on creationism, and creation science institutes, think-tanks, and museums have developed multimillion-dollar budgets and sophisticated literature campaigns. All of these advocates have focused their argumentation on portraying Darwinian evolution as a “theory” that is shaky and unproven.

Creationists have proved to be savvy political lobbyists, drawing support in recent years from highly placed Republicans such as House majority leader Tom DeLay of Texas, Senate majority leader Bill Frist of Tennessee, and President George W. Bush. Across forty-three states, activists have brought their movement to legislatures, school boards, and school districts. As a result, some districts have adopted standards allowing for critiques of evolutionary theory within the science curriculum, and others have either allowed creationism to be taught alongside evolution or have avoided teaching evolution altogether.

But not all the developments have favored the creationists. Evolutionists have fought back in many states and school districts, with battles see-sawing from year to year. For example, in *McLean v. Arkansas Board of Education* (1982) a federal court declared that Arkansas's statute requiring public schools to give "balanced treatment" to "creation-science" and "evolution-science" violated the establishment clause of the U.S. Constitution. Moreover, the court refused to admit creation science as legitimate science. Creationist literature was taken to be religious literature, and thus the Arkansas statute was interpreted as defending a religious position.

During this ongoing legal skirmish, the creationists' coalitions with other conservatives have also waxed and waned as some conservatives have become concerned about being associated in the public's mind with "crackpot theories." But the creationists have never flagged in their belief in the rightness of their cause and the wrongness of evolutionary theory.

Portrait of an Enemy: "Secular Humanism"

In the 1970s one phrase, "secular humanism," came to encapsulate the fundamentalists' sense of cultural malaise and frustration with perceived government-imposed secularization. "Secular humanism" was a concept developed by Francis Schaeffer (1912–1984), an influential conservative Reformed (that is, Calvinist Protestant) writer and speaker.

Schaeffer had studied first under the old-school fundamentalist John Gresham Machen (1881–1937) at Westminster Theological Seminary, and then under the fundamentalist separatist Carl McIntire (1906–2002). When, after World War II, McIntire became increasingly invested in anticommunist and antiecumenist crusades, Schaeffer split from him and established his Swiss think-tank and retreat center, L'Abri. Schaeffer drew from the Reformed tradition that insisted that Christianity should transform culture. His film

series *How Shall We Then Live?* contrasted the Christian synthesis of the first nineteen centuries of the church with modern secular humanism, which had proved empty and destructive in the fragmentation and moral relativism of the twentieth century.

Schaeffer was also instrumental in raising *Roe v. Wade* to a position of preeminence as an example of a secularist takeover of government to promote an anti-Christian and licentious agenda. In 1979, working with C. Everett Koop, a physician who was soon appointed U.S. surgeon general by President Ronald Reagan, Schaeffer came out with a follow-up film series, *Whatever Happened to the Human Race?* It portrayed abortion as murder and the legalization of abortion as the natural result of the secular humanists' emphasis on freedom of choice in the service of self-indulgence.

With the rhetorical help of fundamentalist author and family values activist Tim LaHaye, secular humanism morphed from syndrome to conspiracy—a useful rallying cry to inspire the fundamentalist troops to urgent action. Many fundamentalist parents concluded that the public school systems had already succumbed to the conspiracy. They continued a trend begun in the 1960s to create alternative Christian schools whose explicit aim was to train young men and women to be armed against secular humanism both intellectually and politically.

Thus a remarkable shift occurred during the 1960s and 1970s. Fundamentalists had long contented themselves with blanket condemnations of "the world" as a corrupt realm from which good Christians must protect themselves. Turning their backs on a long heritage of evangelical social reform, they had for decades refused most forms of social action, proclaiming loudly that Jesus would set everything right upon his imminent return. Meanwhile, their sacred task was to save souls from the cultural wreckage. But now, in the face of what seemed to be the rampant secularization of a once-proud Christian nation, fundamentalists were increasingly joining in a cultural crusade active in the schools, the courtrooms, and the halls of political power. Their crusade was selective, but their new cultural engagement led observers and insiders alike to wonder whether "fundamentalism" was still the right word for this movement.

"Christian America" and the Imminent Second Coming

The positive vision that accompanied the negative campaign against the supposed conspiracy of the secular humanists was

a narrative of “Christian America.” From the late 1970s on, as fundamentalist leaders labored for a package of political reforms that would turn the tide against humanism, they portrayed the promised land as a familiar place: the same land of virtue and piety created by the founders and sustained by the Protestant hegemony of the 1800s.

The fundamentalists knew that this vision of America could not be regained by legislation alone, and so they continued to pray and organize for national religious revival and personal conversion. “If my [God’s] people, who are called by my name, will humble themselves and pray and seek my face and turn from their wicked ways,” they insisted, in the words of 2 Chronicles 7:14, “then will I hear from heaven and will forgive their sin and will heal their land.”

In this effort at national conversion, the rhetoric of cultural recovery mixed uneasily with that of end-times prophecy. The fundamentalists’ chosen narrative of dispensational premillennialism had always insisted that the world—including America, presumably—would become increasingly evil and chaotic until Jesus returned, caught up his “saints” in a global extraction movement called the Rapture, and set up his thousand-year reign on earth. This narrative was vividly portrayed in Hal Lindsey’s *The Late Great Planet Earth* (1970), which, by 1990, had sold 28 million copies. The *Left Behind* books by Tim LaHaye and Jerry B. Jenkins would take over where Lindsey’s account left off, selling over 62 million copies by 2004.

Fundamentalists raised on this apocalyptic vision became adept at finding in their nation’s evident moral decline, or in the threat of communist takeover, or in the litany of other cultural concerns, evidence of this declension. But now such views existed in paradoxical conjunction with concerted efforts to institute long-term change in the fabric of American society.

Although fundamentalist premillennialism did not seem to affect most areas of fundamentalist politics, there was one significant exception: U.S. policy on the state of Israel. The founding of that state in 1948 had provided dispensationalists with a shining example of fulfilled prophecy—a seemingly airtight piece of evidence that the events leading to Christ’s return would soon roll into motion. Believers only had to await the invasion of Israel by a Soviet-Arab force, which would trigger the Battle of Armageddon. Yearning to be found on the side of God in this final conflict, fundamentalists continued through the end of the century to insist that the United States do its utmost to protect God’s favored nation.

Jerry Falwell and “True Fundamentalism”

By 1980 a leader had emerged to channel fundamentalism’s newfound cultural concern and social action: Rev. Jerry Falwell (1933–2007). Falwell had begun his ministry in 1956 as the founding pastor of Thomas Road Baptist Church in Lynchburg, Virginia. Through the 1990s his sympathies lay with the independent fundamentalist movement (Thomas Road was affiliated with the fundamentalist Baptist Bible Fellowship International). By the late 1970s, reading the signs of America’s conservative religious landscape, Falwell turned the label “fundamentalist” to his own uses as a rallying cry in his crusade to bring the voice of a silent but powerful “Moral Majority” to bear on American cultural politics. In 1979 Falwell cofounded the organization of that name with *Left Behind* author and Bob Jones University graduate Tim LaHaye and Southern Baptist pastor Charles Stanley. Moral Majority became the bulwark of the new, culture-warring fundamentalism and helped elect Ronald Reagan to the White House in 1980. (A later iteration of the Religious Right’s political machine was the Christian Coalition, cofounded in 1987 by televangelist Pat Robertson and Republican strategist Ralph Reed.)

Falwell laid out the Moral Majority’s agenda in a 1981 book he commissioned, *The Fundamentalist Phenomenon: The Resurgence of Conservative Christianity*. In it, Ed Dobson and Ed Hindson, both professors at Falwell’s Liberty University (then Liberty Baptist College) in Lynchburg, claimed that fundamentalists were on the rise—and would likely eclipse all other groups in growth during the coming decades. Then they staked out a definition of “true fundamentalists” as opposed to the separatist “hyper-fundamentalists” on the right and the effete, elite, and dangerously compromising evangelicals on the left. Their hyper-fundamentalists included figures such as fundamentalist newspaper editor John R. Rice (1895–1980), the three generations of Bob Joneses of Bob Jones University in South Carolina, and Carl McIntire, founder of the separatist American Council of Christian Churches and the Bible Presbyterian Church. Their evangelicals included members of the National Association of Evangelicals (NAE), readers of *Christianity Today*, and constituents of Fuller Seminary in Pasadena, California.

Falwell and his writers also listed the weaknesses of fundamentalists, but they were clearly aiming at the hyper-fundamentalists. They had little capacity for self-criticism, and they overemphasized external spirituality, resisted

change, elevated minor issues, added “hobby horses” to their Bible preaching, depended too much on dynamic leaders, worried too much about labels and associations, saw all issues as black or white, approached matters of discipline in too authoritarian a way, and questioned the salvation of other Christians who did not think like they did.

Falwell concluded the book with an “Agenda for the Eighties.” It was a rallying cry to the solid fundamentalist middle, who, he argued, represented the nation’s “moral majority,” defending America’s Christian moral foundations which had been largely eaten away during the decadent 1960s and 1970s. The war of the 1980s to reclaim America for God was to be founded on Christian understandings, but unlike the doctrinal battles of the original fundamentalists of the first half of the twentieth century, it was not to be fought in the churches. Its battlegrounds would be the schools, courts, and halls of political power. To save Christian civilization in its flagship nation, fundamentalists must organize on every moral front and at every level, from the local to the national.

The targeted enemies of this fundamentalist crusade were many: abortion, euthanasia, creeping “humanism” in the public schools, the threat to godly sexuality posed by pornography and homosexuality, new gender roles in the family, issues in medical ethics, antiwar rhetoric putting national defense preparedness at risk, the continuing communist threat, and the forces arrayed against the state of Israel. As they fought these enemies in the name of Christian morality, Falwell urged fundamentalists not to slacken in their efforts to evangelize, plant churches, and improve Christian education. All fundamentalists must join the moral and spiritual army. Those evangelicals who had not capitulated to elite culture must join as well or get out of the way.

In the decades that followed, Falwell continued to eschew the separatism of the hyper-fundamentalists and began to build a broad conservative political consensus beyond his fundamentalist base. This consensus included not only evangelicals who were willing to stand militantly and faithfully for fundamentalist values, but also conservatives among Roman Catholics (at one point the largest single bloc within Moral Majority), Mormons, Jews, and other groups concerned about a perceived moral deterioration in America. On the outside looking in were the old separatist fundamentalists. George Dollar, author of the insider *History of Fundamentalism* and former dean of Central Baptist Seminary in Minneapolis, spoke for them when he derided

Falwell as a “pseudo-fundamentalist” for his coalition-building connections with nonfundamentalists.

In 1996 Falwell left the ranks of the independent conservative Baptists and brought his Thomas Road Baptist Church into the Southern Baptist Convention. Was he still, at that point, a fundamentalist? The answer to this question may become clearer by looking at the Southern Baptist Convention and the history of conservative Christianity in the South.

A Southern Surge

Fundamentalism itself was a northern phenomenon because from the 1920s through the 1960s southern conservative Protestants did not face nearly the degree of cultural challenge confronting their northern brethren. However, the post-1970s surge of newly politicized fundamentalism is very much a southern story. Illustrative are the statistics from the “Southern Crossroads” states of Arkansas, Louisiana, Missouri, Oklahoma, and Texas—that is, the land of Republican politicians George H. W. Bush, George W. Bush, Mike Huckabee, and John Ashcroft. In this region, Moral Majority and its successor, the Christian Coalition, had a large impact on the Republican Party during the 1980s. Only in the Pacific Northwest did the Christian Right influence state Republican parties as much as in the Southern Crossroads. Next in the rankings were the South, Mountain West, and Midwest, with the Pacific, Mid-Atlantic, and New England regions lagging far behind. What accounts for this southern political clout of the Christian Right? What has made the South the most religiously conservative and politically pugnacious region of the country—the epicenter of the culture wars?

For one thing, the effects of pluralism and secularization were longer in hitting the South. Despite the controversy that the famous Scopes trial of 1925 brought to Tennessee, well into the 1960s southerners still thought of their region as a “Zion,” dedicated to Christian conservative values. But in the 1960s and 1970s the larger national changes began to be felt even in Zion, and by the end of the 1970s southerners were united in feeling that their heartland was in danger of becoming instead a “Babylon,” infected with the secularizing trends of modern culture. Thus when America began to organize against these trends, southerners led the charge. Disturbed from their slumber by the divisive campaign for civil rights, second-wave feminist and gay activism, and signs of secularization, Jerry Falwell, Pat Robertson, and James Robison, among others, became national leaders in the

fundamentalist political reaction. Fundamentalism was born in the North, but it came of age in the South.

Speeding the incipient cultural reaction of the formerly isolated South was the massive northward migration from the 1930s through the 1950s. Complacent southerners, accustomed to maintaining the Christian status quo in their home states, moved into the North and encountered there the alarming signs of imminent cultural collapse. Northern fundamentalists were beginning to respond to the secularizing trends, and so from California to New England transplanted southerners joined these fundamentalist crusades, which were often focused on the public schools. Before long, these crusades migrated back into the South, and by the 1960s few aspects of fundamentalism's cultural crusade lacked a southern phalanx. Falwell's leadership in the emerging Moral Majority carried this trend into the 1970s and 1980s, and southern "Bible-believing" Christianity effectively became hybridized with the old fundamentalism of the North.

Unlike northern fundamentalism, the southern variety did not focus on denominational battles, but there was one major exception: the nation's largest Protestant denomination, the Southern Baptist Convention (SBC). Until the late 1970s, Southern Baptists were controlled by a solid majority of denominational moderates. On the left wing were progressives and on the right wing were conservatives, both seeking to move their denomination to a more active stance in the public arena. But the Southern Baptist Convention, at ease in its comfortable Zion, had not yet sensed the cultural crisis endemic in the North and had never associated with northern evangelical activism.

Southern Baptists did not, in fact, like to apply the label "evangelical" to themselves, even though they shared with northern evangelicals commitments to orthodoxy, conversion through Christ, and evangelism. The SBC aversion to interdenominational affiliation was a remnant of southern sectionalism—southerners still remembered the previous century's rancorous denominational and national splits over slavery—and the SBC especially balked at making common cause with paedobaptistic (infant-baptizing) groups such as the Presbyterians, who were prominent in northern fundamentalism. For such reasons, SBC conservatives of the 1960s and 1970s consistently found themselves on the outside of denominational power looking in. Their proud denomination did not yet see a reason to join with the scattered parachurch and interdenominational coalition of northern evangelicals. After all, all of their

seminaries taken together did not come up to the number of SBC seminarians!

What led, then, to the "fundamentalization" of the Southern Baptist Convention? During the 1960s and 1970s leaders and future leaders of the denomination headed north for college or graduate school, and there they began reading the northern evangelicals. Especially important were Carl F. H. Henry (1913–2003) and Francis Schaeffer, two heralds of cultural crisis who woke up these southern Christians to the dangers of creeping (even galloping) secularization. The messages of these northern evangelical authors resonated with SBC leaders such as Richard Land, and when they returned home to find secularizing trends in their own towns and school systems, they began to draw on northern evangelical ideas to arm their parishioners against the coming cultural storm.

As never before, these conservatives within the denomination began to rally around the fundamentalist standard of biblical inerrancy against all secular cultural rivals. Throughout the 1970s this mission proved sufficiently compelling to enough people in the denomination that they became willing to make common cause with northern fundamentalists and seek wholesale change in the power structures of their own denomination. In the late 1970s Texans Paul Pressler and Paige Patterson built a coalition within the denomination (largely drawn from Southern Crossroads states) aimed at electing an SBC president who stood firmly on scriptural inerrancy and who would appoint an interlocking structure of leaders who shared that conviction. In 1979 their efforts paid off, and an inerrantist president, Adrian Rogers, was elected. At the 1980 convention another inerrantist president was elected, and convention goers passed a resolution that required all SBC seminary faculty members to teach biblical inerrancy. This resolution was accompanied by the passage of many others on abortion, school prayer, and endorsement of Christian political candidates. By 1990 the moderates were in full retreat, and the Southern Baptist Convention had armed itself for the culture wars with a new, fundamentalist identity.

Fundamentalism: A Question of Definitions

A good argument could be made that "fundamentalism" is not the appropriate label for the politicized evangelical movement described here. Many self-described fundamentalists with separatist convictions have vehemently disavowed their culturally engaged brethren of the Falwell ilk. Indeed, those stricter fundamentalists in the tradition of

Carl McIntire and the Bob Joneses seem to be cut out of a different cloth than members of the post-1970s movement. The stricter fundamentalists espouse complete separation from religious liberalism; believe in an extreme version of inerrancy that amounts to a process of divine dictation through authors who add nothing of their own perspective; frequently view the King James (Authorized) Version as the inerrant text of scripture; view other churches, including all major Protestant bodies not committed to their own values, as apostate, and therefore see the ecumenical movement as a dangerous cabal of apostate bodies; observe taboos against a long list of personal “sins,” including smoking, drinking, and dancing; and support the anti-communist crusades of leaders such as Carl McIntire. Above all, these stricter fundamentalists seek separation from a world far gone in sin. They seek to present a distinctive Christian witness to the world, and when this act means division from other, less culture-averse Christians, they are willing to divide. Meaning is to be found exclusively in the “things of God,” and not at all in the inevitably declining (according to their premillennial commitments) world outside their doors.

By contrast, the new breed of “open” fundamentalists (the term coined by Canadian theologian Clark H. Pinnock) have tried to distance themselves from their separatist coreligionists. Despite their continuing commitments to creationism and premillennialism (though often in a form modified from the old dispensationalism), they are now eager to work for change in their nation, and they are willing to engage higher education and the intellectual life, social reform, and even self-criticism in that pursuit. For these kinds of reasons, historians such as Barry Hankins, author of *Uneasy in Babylon* (2003) on the Southern Baptist Convention takeover by conservatives, eschew this use of the term *fundamentalist* altogether when describing nonseparatist groups. Such scholars would reserve the term for the “strict” fundamentalists who are strictly separatist or who self-identify as fundamentalist or who are both. The application of this definition results in a scenario not of *resurgence* of fundamentalism starting in the 1970s, but, if anything, of *contraction*. To take just one example, the premillennial dispensational theology still espoused by many “strict” fundamentalists is now in retreat, even undergoing extensive critique and revision in the school that historically has been its fortress, Dallas Theological Seminary.

But the argument in favor of using “fundamentalism” as a label for this new, post-1970s group is also strong. Cultural engagement is nothing new for fundamentalists. The movement arose from a nineteenth-century evangelicalism that believed itself to be the custodian of American culture—that is, adherents were the keepers of the faith who would guide this “chosen nation” in the path of godliness. Any secularizing influence that has threatened that path has always been actively opposed by conservative evangelicals—in the nineteenth, twentieth, and twenty-first centuries alike. In fact, fundamentalists share with their evangelical forebears a tendency not just to combat modernity’s depredations, but also to thrive positively on that combat.

It is true that the issues absorbing fundamentalist attention have changed. But the dual sense of cultural custodianship and embattlement against cultural trends has continued, and indeed heightened. This prophetic and embattled American-ness has proved to be a potent and invigorating compound for the politically active fundamentalists of the 1970s and beyond.

In short, politically active conservative Christians who affirm traditionally fundamentalist items of faith seem still to be “fundamentalists” whether they prefer to use the label or not. Thus Jerry Falwell (who eschewed the label “fundamentalist” late in his ministry), Christian psychologist and crusader for “family values” James Dobson, Pat Robertson, and other conservative Christian leaders, organizations, and churches that share a belief in biblical inerrancy, a sense of cultural crisis, and an activist commitment to respond to that crisis would be “fundamentalists” in a coherent and defensible sense.

One even broader definition of the term *fundamentalist* has been contested, at least at points, by many scholars of American religion. This broad definition takes the idea of a religious orthodoxy that opposes aspects of the “outside world,” abstracts it from the twentieth-century American religious scene, and applies it across religious boundaries, from Islam to Buddhism to Hinduism and beyond. At heart, this definition focuses on the political activism of these movements, while recognizing that their antagonism with “the world” arises from their religious convictions.

This definition was initially expressed in works such as Bruce Lawrence’s *Defenders of God* (1989) and Norman J. Cohen’s *The Fundamentalist Phenomenon* (1990). It is perfected and elaborated in the five-volume *Fundamentalism*

Project, assembled under the editorial direction of Martin Marty and R. Scott Appleby between 1991 and 1995.

Although some scholars question whether the term *fundamentalist*, rooted as it is in the American 1920s, can accurately be extended as a descriptor to conservative groups within far-flung groups such as the Sikhs, Muslims, and Orthodox Jews, there are certainly fruitful parallels between American Protestant fundamentalism and such world movements. In particular, historian George M. Marsden notes qualities of militancy, concerns about preserving religious identity and patrolling community “borders,” and a desire to provide social modalities that stand against the secular world around them.

Marsden also insists that there is one crucial difference between American fundamentalists and the militant religionists worldwide to whom this label has been applied: fundamentalists have their evangelical roots deep in the American Enlightenment. Their evangelical forefathers consistently affirmed freedom of religious choice, separation of church and state, and populist religious modes. Thus today, although they do seek legislation that supports their values on certain issues, they are more comfortable with persuasion and voluntary action than state coercion. And even though they do hold dear a vision of “Christian America,” for most fundamentalists the heart of that vision is religious freedom.

But this principle of liberty and the lack of literal militancy do not extend to foreign policy. In that department, fundamentalists tend to see their nation uncritically as an agent of God against “the forces of evil.” If the fight against those forces requires the exercise of military might, then many fundamentalists are willing to support such action.

Insider, Fellow Traveler, and Ethnographic Views

Particularly important when examining a group that has drawn such negative public portrayal is the ability to see inside the group from the perspective of participants and sympathetic observers. Such perspectives can never stand on their own, uncriticized, as the final word on a group, but they can enrich the critical understanding.

Insider accounts of fundamentalists see beyond their political involvement and into their theological commitments, spiritual lives, and communal structures. Such accounts reveal a fundamentalism that is not just reactive and militant but also characterized by strong continuity with a larger spiritual tradition—a conversionist tradition of

Protestant revivalism—that goes back to the seventeenth century in America and beyond, to earlier European groups such as the Puritans and pietists. To ignore this spiritual, personal, and transformational dimension is to mischaracterize the movement. It is true that antimodern concerns, rhetoric, and action characterize both the fundamentalism of the 1920s and the more politically active movement since the 1970s. But at the heart of the movement are still such distinctively religious concerns as the “born-again” experience of conversion and the disciplines of a holy life.

At the center of the fundamentalist consciousness is an understanding of Jesus Christ as the exclusive savior of the world. Out of this understanding flows a sense of personal redemption as well as a compulsion to evangelize—not just to gain members but to see people’s lives transformed. Fundamentalists believe such a transformation can happen only when they preach “the blood”—that is, Christ’s death is interpreted as paying the debt of people’s sins—and when they absorb and live by the very words of the Christian Bible.

Richard J. Mouw, president of the evangelical Fuller Seminary, grew up as a fundamentalist. Although he is critical of such fundamentalist theological commitments as dispensational premillennialism, he singles out some “spiritual merits” that have resulted from that commitment: good preaching on the Old Testament, preaching about a savior who loves gentile and Jew alike, and loving action in ministries such as inner-city rescue missions. In short, says Mouw in his book *The Smell of Sawdust* (2000), dispensationalism “embodied a spirituality that produced some of the most Christlike human beings I have ever known.” He also appreciates aspects of dispensationalism’s intellectual legacy, especially its understanding of historical change—a sense that God has intervened time and again in crises, and that he will continue to do so. The proof is in the pudding, and the dispensationalists’ belief that “war and poverty and famine” would continue to blight the globe was vindicated, while twentieth-century liberals’ optimism that those problems would soon be licked has proven hollow.

That such virtues could, despite fundamentalists’ combative public stance, produce a humane and warmly supportive community life is depicted in an ethnography of a fundamentalist church community by James M. Ault Jr. In *Spirit and Flesh: Life in a Fundamentalist Baptist Church*, an expansion of his award-winning documentary film *Born Again*, Ault reports his three-year experience as a participant-observer in a fundamentalist Baptist church in Worcester,

Massachusetts. Ault, a Harvard-educated sociologist with a research interest in feminist and other leftist activism, launched into this study in order to better understand the Religious Right. What he discovered was a warm, close-knit community in which everything revolved around relationships—a stark contrast in this largely working-class church to the autonomous individualism of the professional classes in America.

The portrait that emerges in Ault's study is one of "popular conservatism as an effort to defend family obligations as sacred duties against the tide of individualism and individual rights unleashed in the 1960s and 1970s." The family dimension extended to the congregation. One of Ault's most helpful insights came from observing the on-the-ground implementation of convictions that, to outsiders, seem inflexible to the point of inhumanity. For example, when faced with instances in their midst of teen pregnancy, abortion, and divorce, the congregation proceeded in supportive and flexible ways that belied their absolutist political rhetoric.

In response to the disorienting and anti-God cultural shifts they have perceived, contemporary fundamentalists have taken organized action both to affirm their own deepest values through evangelism and community and to recover those values at a societal level through persuasion and political pressure. Their commitments to an inerrant scripture have led them to affirm beliefs that place them outside the mainstream of American life. These beliefs include scientific creationism, theologically motivated pro-Israel activism, and end-times narratives involving the supposed "Rapture" of believers at Christ's imminent return. Unlike the fundamentalists of earlier decades, however, contemporary adherents have spent more time and energy on the crusades of cultural politics than on the minutiae of

theological debate. This pragmatic approach has publicized moral causes, swayed elections, and worried liberal pundits, resulting in a torrent of public ink and bandwidth.

G

Gender

Gender is a category of analysis that investigates how and why roles assigned to females and males in multiple and diverse religious communities are socially constructed, theologically undergirded, and lived out. It includes homosexuality and heterosexuality, femininities and masculinities, and it acknowledges a growing variety and complexity of sexual identities. Gender analysis investigates (a) how and why relationships between women and men, women and women, and men and men are ordered according to the worldviews of particular communities; (b) how power and authority in religions are gendered and reinforced based on sexual differences perceived as spiritually significant; (c) how binary language structures related to gender and sexuality circumscribe possibilities for responding creatively to differences; (d) how gender issues overlap with other markers of social stratification such as race and class; (e) how gendered structures in religions overlap with those found in political, economic, cultural, and educational institutions; and (f) how insights from other disciplines—philosophy and feminist critical theory, psychology, biology, anthropology, literature—cross-pollinate with gender-related topics in religious studies, theology, and ethics.

Scholars who write books and essays about gender and religion in America often begin by acknowledging that this is a very difficult subject to take on. At one level it appears to require a deceptively simple acknowledgement of the obvious: being female or male, homosexual or heterosexual, in a given religious tradition is a matter of definitive importance when it comes to what one is permitted to do, compelled to do, or forbidden to do. More than forty years of

scholarship about gender has demonstrated beyond dispute that it is not “ability” that determines these prescriptions. They follow from particular communities’ interpretations of the spiritual and social meanings of sexual identities. Ignoring this reality results in failure to comprehend an essential aspect of religion in general and religions in particular. Unless scholars acknowledge gender critique as an essential component of studying religions in particular and in general, they will have seriously inadequate as well as unsophisticated understandings of a major element of the traditions they are studying.

At the same time, there are aspects of studying gender that render it a complex and baffling enterprise. These are related both to the realities of “bodies,” in their physicality and in the religious significance of their sexual identities, and to intensely debated theories about the extent to which language—discourse—and social customs construct and impose experiences of being female or male, homosexual or heterosexual. In addition, the study of gender in American religion and religions requires the consideration of two arenas of inquiry that have their own distinctive complexities—the academy and religious communities—and thus gender studies move back and forth along a spiraling continuum that includes not only highly abstract theories but also the challenges of daily life in religious communities.

Further, gender is not a category of analysis that simply takes its place with others such as ritual, worldview, doctrine, moral codes, and governance. It is, instead, a category that applies to all the others. How, for example, are ritual roles allotted by sexual identity in a particular tradition and for what reasons? Where do religious worldviews place women and men relative to each other? What distinctive qualities

are attributed to women and men, and how are those qualities valued within the tradition? What kinds of sexual relationships are legitimated, and which are forbidden—and for what reasons? What do language analyses of particular traditions and their ways of speaking about the sacred and humankind reveal about assumptions concerning gender? In matters of language, the fact that there are “only two” gender designations—female/male—and the additional binary construction of homosexual/heterosexual have frustrated and sometimes confounded efforts to interpret stories that reflect multiplicities of gender and sexual identities. Efforts to break out of these language binds have, ironically, given rise to other binary constructions—social constructionism and essentialism; insider and outsider; similarity and difference. These have stirred their own debates about theoretical and practical issues that have filled the history of gender critique with contradictions, ironies, and paradoxes. They offer convincing evidence that the subject of “gender” in American religion is not a problem to be resolved but an endlessly unfolding arena of inquiry.

Finally, what has come to be called gender critique in American religion had its beginnings in the middle 1960s, not just as a search for information about male and female roles in American religions but also out of recognition of unjust asymmetries related to gender roles in American religions. It was motivated at first by the secular women’s movement—the second wave of feminism—and took shape as an effort to reveal and then to dismantle the ways that construction of gender roles concealed women’s absence and ignored and undervalued women’s presence in history, in theology, and in the lives of religious communities. That dual enterprise became more complicated and more multifaceted with every succeeding decade.

Where We Were

From the vantage point of the early twenty-first century, it is almost impossible to comprehend that as recently as the 1960s *gender* was perceived as an uncomplicated, either/or designation—male or female. It functioned in the academy, in religious institutions, and in popular culture not as a category of analysis but as a synonym for sexual identity. If it were investigated at all, it was a subject more typically of concern to anthropologists and social scientists studying religions considered unorthodox or exotic in some way. It was not understood as an arena of inquiry that was both significant and essential for the work of religious historians, theologians, and ethicists studying long-established American

religious traditions. Nor was it a subject of widespread debate in religious communities. *Gender* carried with it few if any connotations of manifold and disputed meanings. Most dictionaries—some to this day—defined *gender*, first, as related to linguistic constructions in languages and only second or third as pointing to physical, emotional, and spiritual characteristics traditionally associated with males and females.

There was little recognition of the implications for scholarship and for the life of religious communities of a double reality that seems so obvious in retrospect. First is the fact that religions are thoroughly gendered. There are structurally embedded, theologically grounded, and powerfully imposed differences in the ways that women and men, homosexuals and heterosexuals, participate in their communities precisely because they are embodied in particular ways as sexual beings. Second, what follows inevitably from that mostly undisputed fact is the reality that women and men, homosexuals and heterosexuals, therefore experience their traditions differently and reflect on them and live them out in distinctive ways.

The emphasis here is on the extent to which critical awareness of gender—asking why and when and how about taken-for-granted relationships between gender roles and sexual identities—was absent in the academy and in religious communities. In fact, the study of gender took shape in religious studies and theology later than it did in other disciplines. Even though gender patterns were obvious to anyone with eyes to see, there was not much interest in their origins, almost no awareness of their power in the lives of religious communities, and few laments about the near non-existence of methods for investigating the theological, linguistic, and internal governance structures that upheld them. There was minimal critical consciousness of what it meant, why it mattered, and to what extent it was just or unjust that gendered roles permeated all parts of religious traditions. There was little recognition that gender formation may be as powerful an influence on how people live out their individual and communal lives as are racial, class, economic, and political constructions and not much sense, either, of how deeply traditional gender roles are rooted in religion.

There was minimal analytical awareness—little interest or surprise or concern—that gender patterns in almost all religious communities in American culture accorded the most public and authoritative roles to men and that with very few exceptions, mostly of women considered “dissenters,” the names of women were missing from the histories of their

Religious studies scholar Valerie Saiving's groundbreaking 1960 article *The Human Situation: A Feminine View* presented ideas that many viewed as novel, even eccentric. Saiving speculated that sexual identity—the experience of being a woman or a man—has a bearing on how members of communities experience their traditions.

communities even though they had outnumbered men in their congregations for most of the four centuries since European settlement. It was difficult to find traces of collective memory in academia or in religious communities that issues of gender particular to Jews and Christians, blacks and whites, traditionalists and liberals had been debated at previous moments in American religious history. As to homosexual members of religious communities, they were invisible—hidden, in fact. About sexual orientations alternative to heterosexuality, there was silence apart from the occasionally repeated anathemas against lived-out homosexual relationships and judgments rendered against homosexual identity as unnatural.

Rita Gross, a scholar and practitioner of Buddhism, a founder of the subject of women's studies and feminist studies in religion, and one of the first to take the subject of women in world religions seriously, began early in the 1970s to use the term *androcentric* to indicate the traditional way of studying religion that assumed the male as human norm and the female as "other." When she took her preliminary

examinations at the University of Chicago in 1968, exams that included her interest in women and world religions, she was asked by one committee member why she, as an intelligent person, didn't understand that the "generic male" included women as well. Gross was not the first but certainly among the earliest scholars in American religion to call for the study of gender as essential to the understanding of religion. Together she and Valerie Saiving provided early clues about how issues of gender would unfold in the academy and in religious communities. Debates about relationships between discourse and "bodies" would become the focus of ongoing revelations about the complexities of gender, and these, in turn, would foster intense debate in the study of American religion and religions.

Where We've Been

Since the 1960s there have been three major turning points related to the significance of gender in American religion, and all three continue to have implications in academia and in the lives of religious communities. The first, and the one that has produced the most scholarship thus far, was the discovery of the vital presence of women in religious communities in contrast with their absence from history and from positions of public authority. It includes the work of historians, theologians, and ethicists, most of them women. This first discovery has also led some scholars, although fewer by comparison, to investigate how gender patterns in American religion have affected the roles and lives of men—men in particular rather than "mankind." The second has been a recognition of the immense diversities of human experience that have been subsumed under the binary categories of "women" and "men" and how diversities—of race, economic status, cultural context, sexual orientation, religious beliefs and practices—are related to matters of gender. The third, more recent, has been the emergence of studies about varieties of sexual orientation as key to subverting the binary categories of male and female, heterosexual and homosexual, and thereby further opening up issues of gender.

One way to look at these moves in the study of gender and American religion is to say that they have given rise to each other. Each has revealed aspects of how gender is embedded in religion that the previous insights had not. Yet none has completed the work of the previous. These are overlapping arenas of inquiry. They continue to foster new questions and research, ongoing attempts at social transformation, and further efforts—often contentious—to

articulate the social, political, and personal intricacies by which gender roles are constructed and integrated with sexual identities.

Where Are the Women?

It was not a call from religious communities for justice that motivated the beginnings of gender study in American religion. It was, rather, the influence of the second wave of feminism that stirred in the early 1960s, an as yet barely articulated uneasiness about the unquestioned assumption that traditional gender roles were rooted in nature and therefore immutable. As the asymmetrical power arrangements between women and men emerged more visibly in the secular culture, that same reality became more obvious in religious communities and emerged as a topic of serious interest in the academy. There was increasing skepticism that women and men held appointed places in religion determined by the sexual identities of their bodies and that “as bodies” with correspondingly distinctive natures and roles, they functioned as complementary partners in a divinely ordained plan for human relationships.

In the academy and in religious communities the question “Where are the women?” motivated new kinds of scholarship. Historians documented women’s absences from positions of public power and the reasons for those absences: how they were grounded in expectations and prohibitions for women and for men and reciprocally reinforced by gender role configurations in the secular culture and in the teachings and practices of religious traditions. Increasingly sophisticated efforts took shape to recover the multiple ways in which women have been present but forgotten as creative contributors to their communities: forgotten because they were not considered historically noteworthy, because they were controversial, or because evidence existed in places that had escaped the notice of historians. To what sources would one go, for example, to find information about the lives of clergymen’s wives, who were often as powerful in the lives of congregations as their husbands but whose histories were unrecorded except, perhaps, in an obituary or in a diary that remained in the possession of their families?

Chronicling the history of women in American religion required new questions, new methods, and new sources. Scholars such as Barbara Welter and Nancy Cott found themselves asking how constructing the history of women needed to be different from traditional ways of doing history, in which both women’s presence and absence had escaped notice. What alternative assumptions had to be developed

about historical significance—which persons and what developments mattered enough to be recorded? What nontraditional sources—diaries, journals, congregational membership rolls, minutes of meetings, material objects—needed to be unearthed, consulted, and interpreted? Would they carry as much weight in the interpretation of religious communities as the scholarly writings of clergy written for an educated audience? Might there even, in fact, be scholarly writings and sermons by women that had been lost to history?

This search for women in American religion and for new and more complex narratives about how gender has functioned in American religious history has uncovered multiple examples of women’s leadership, significant contributions, and distinctive religious experiences. Historians have revealed the existence of many more female preachers, black and white, in the eighteenth and nineteenth centuries than had previously been imagined, a great surprise, since women were officially barred from public preaching. Analysis of congregational financial reports has turned up evidence of the heavy financial support of congregations by women’s organizations, even if they influenced its spending only indirectly because they could not serve on congregational councils.

Historians likewise came to discover new kinds of authority in religious communities: women’s offering or withholding approval of clergymen who on the surface appeared to hold all the authority in the congregation; the widespread authority of Roman Catholic sisters who founded hospitals and colleges; the power and influence of African American rural churchwomen in the civil rights movement; the healing authority of Mormon women open to them in the early years of the movement. Studies proliferated about the extent to which women who learned organizational abilities in religious women’s groups went on to use their skills and their confidence in wider political and social arenas. Scholars eventually tuned in to the reality that women in communities considered theologically conservative, Pentecostalism, for example, found ways to circumvent prohibitions against their speaking publicly. As historians uncovered evidence that ran contrary to assumptions about the circumscribed roles of women in American religion, it was increasingly obvious that although women were generally barred from learning, preaching, and teaching publicly, it was not lack of ability that prevented them from doing so. It meant, rather, that such activities were gendered male rather than female. As one nineteenth-century clergyman exclaimed after hearing an eloquent female preacher, it was

not that she was incapable of preaching but that it was not decent that she do so. Discoveries such as these led to the acceptance of an insight that has become commonplace in the study of gender: gender roles and sexual identity are not, indeed, synonyms for each other; rather gender roles are assigned through various cultural means based on anatomical differences between women and men and reinforced through social custom and religious reinforcement. This has not been an undisputed insight, as will become clear, but it was an early intuition about how socially constructed gender roles take precedence over ability. It gave rise to the conviction that gender roles and sexual identities could be separated from each other—even if not neatly or easily.

As historians delved more deeply into the history of women in American religions, broader patterns emerged beyond the gendering of specific roles. Among the earliest, now so famous that it appears on T-shirts and bumper stickers, is colonial historian Laurel Thatcher Ulrich's claim in a 1976 article about colonial women that "well-behaved women seldom make history." Women's theological venturing forth has been tied to fears of social chaos. Examples range across the centuries: from Anne Hutchinson (1591–1643), whose minister suggested that, given her heretical views, she was likely to be unfaithful to her husband, to the "new woman" chastised for her wantonness by fundamentalists of the early twentieth century, to disputes about male and female seating in Reform synagogues, to the accusations against participants in the theologically controversial Re-Imagining Conference in Minneapolis in 1993, most of whom could be accurately described as "church ladies," women's theological venturing forth has been tied to fears of inevitable social and theological chaos. Historically, religious dissent has often been gendered female.

There have been persistent concerns, as well, about whether, in spite of male dominance in positions of public power, religion itself is a "feminine" enterprise and therefore lower in status than other cultural institutions and, on the whole, unappealing to men. Thus, if leadership in American religions has been gendered male, membership has been gendered female.

Discovering Diversity

By the 1980s the diversity of women's experiences was becoming obvious, and it emerged as both a contentious issue and a stimulus to creativity. Women learned to claim the authority of their particular experiences, integrating those of race and class with gender. This wave of

recognition about the diversity of women's experiences gave rise to theological articulations distinctive to particular communities—feminist, womanist (African American), *mujerista*, Jewish, goddess, New Age, Buddhist, Mormon, Asian, lesbian. They gave substance to themes they saw as de-emphasized and undervalued in traditional male theology and elaborated on them. For example, in their own distinctive ways women of many communities explored the theological possibilities of immanence, that is, the indwelling of the divine. They pointed to the sacredness of the earth, of women's bodies, and of ordinary life. The radical interrelatedness of all creation and the power of relationships and communities emerged as another powerful theme in contrast, as women articulated it, as a counter to traditional overemphasis on individualism. It was not that themes like these had never appeared in the writings of male theologians but that they were expanded on and particularly valued in the writings of women. The diversity of approaches to such themes from the perspectives of specific traditions illustrated ever more powerfully that "women's experience" in the singular and, by implication, as a universal category was not a phrase that did justice to the particularities of women's diverse experiences.

By 1990 historians and theologians had accomplished several decades' worth of groundwork for the study of gender in American religion and had exploded any possibility of making general claims about "women's experience" or, for that matter, "men's experience." Womanist (African American) theologians, among them Delores Williams and Cheryl Kirk-Duggan; *mujerista* theologian Ada Maria Isasi-Diaz; and Jewish theologians Judith Plaskow and Carol Ochs illustrated the particularities of experience in many different communities of women.

Along with its insights, diversity brought urgent interpretive issues related to gender and its overlapping with matters of race and class. More than most historians and even first-generation theologians, the second and third generations of women theologians—those born in the 1950s, 1960s, and 1970s—became interested in the intersections between women's theologies and the varieties of feminist theorizing about gender and sexual difference. These were emerging from both American and Continental philosophical and literary studies, whose ideas were articulated by feminists thinkers such as Luce Irigaray and Julia Kristeva. That early insight about gender—that it is not synonymous with sexual identity but rather based on socially constructed roles—while still widely accepted did not hold up very long

as undisputed, because it seemed to assume that “sexed bodies” are the blank canvases on which gender roles are imposed. The growing insistence among feminist theorists—Judith Butler, for example—that there are no universal categories of experience including male and female that are always and everywhere the same stirred further explorations of gender and diversity, even to asking, “Is it possible to say any longer that there are ‘women’ and ‘men’?”

Questions like this one offered linguistic and by implication philosophical ways out of the either-or bind of gender terminology. They functioned heuristically to force new understandings of gendered categories of experience that are taken for granted as givens. Asking questions this radical also prompted fears that, finally, there would be no philosophical or moral basis on which to make claims about justice for those who are diverse in the particular experiences of their lives but who nonetheless undergo common kinds of oppression. Debates ensued over whether there was any “essential” connection between gender roles and embodied sexual identities or whether gender roles were totally socially constructed by “discourse”—language about gender and by implication about how power is distributed. Many American women theologians, among them Rebecca Chopp, Sheila Greeve Davaney, Paula Cooney, and Lisa Sowle Cahill, have agreed that somewhere between the poststructuralist rejection of the binary, fixed opposites of male and female and, on the other side, claims for universal and eternal categories of feminine and masculine lay the territory that women’s theologies could make sense of and seek justice for: the suffering bodies of individuals in all their particularities and the broken body politic.

“Men,” Not Mankind

In spite of continuing emphasis on diversity, an irony of scholarly attention to gender in American religion has been the relative lack of attention to men, at least those who were not prominent leaders. The study of men and religion became an institutionalized and ongoing focus of study of the American Academy of Religion only in 1990. In fact, gender studies for many years was so much associated with women, to the detriment of better-integrated knowledge about both women and men, that women scholars have cautioned that *gender* is not a synonym for *women* and that it is not only women who are “gendered.” Thus at the beginning of the twenty-first century it is accurate to say that historians know more about famous men and not-so-famous women than they do about the religious lives of

ordinary laymen. While this is not true in all cases, there are still anthologies of essays on American religious history, in which entries under sections titled “Gender” cite mostly research about women.

Recently, there has been intriguing research by David Hackett and Mark C. Carnes, among others, about how fraternal lodges function as gathering places, as an alternative to religious communities for white men and as communities of significance for black men that often overlapped with church membership. Response to the feminization theory has inspired research on some of the several ways men argued about whether it was manly to be religious at all, or whether true manliness required the abandonment of religion for the kind of rational life of the mind that was assumed to exclude religion. There were also efforts to reclaim a more manly form of Christianity called “muscular Christianity,” which promoted devotion to a masculine Jesus and urged the development of an athletic physique with the promise that taking religion seriously did not necessarily diminish one’s masculinity. Recent historical studies that emphasize “body” point to such practices as fasting and food deprivation that, as R. Marie Griffith points out, have traditionally been gendered feminine in American religion but were embraced by men as well.

Some early feminist critiques by scholars such as Mary Daly, Rosemary Radford Ruether, and Rita Gross described all traditional theology as so androcentric that it might as well be called male theology, but just as women began to construct theologies with the consciousness that they were speaking “as women,” men have begun to do some of the same kind of work. Men’s theological work, such as that of James B. Nelson, Stephen B. Boyd, W. Merle Longwood, and Mark W. Muesse, construct male spiritualities that respond to the dual pain of “hegemonic masculinity”: an idealization of white, middle-class, educated, professionally successful, publicly powerful males that excludes a very large number of men, maybe the majority, in American culture and religion. The critique of hegemonic masculinity has stimulated research on varieties of “masculinities.” A prominent theme in men’s spiritualities, whether they come out of social justice models, return-to-head-of-the-family movements, or the Iron John model of hyper-but-authentic maleness, has involved the construction of strategies to alleviate the pain that comes from trying to live within the structures of what it means to be a “real man,” even if one is not in a community of men that qualifies for either the benefits of hegemonic masculinity or the stresses that come from trying to

emulate it. Mary Daly, one of the first Christian feminist theologians and now a post-Christian lesbian feminist, identified the deleterious effects for women of exclusively male language for God—“When God is male, the male is God.” There are now forceful interpretations of how male imagery for God has been harmfully restrictive for men as well, even if in different ways. On the whole, though, greater attention to the particularities of men’s experiences in American religion as another imperative for investigating issues of gender is a project awaiting more concentration and new methods.

Varieties of Sexual Identity

The study of gender in American religion has been significantly broadened and complicated by serious attention to homosexuality since at least the 1980s. Homosexuality as an all-encompassing and static category of sexual identity that is “the opposite” of an equally static heterosexuality has given way to the acronym LGBT—lesbian, gay, bisexual, transgender—an analytical category of multiple designations that includes more varieties of publicly proclaimed sexual identity, gender crossing, and gender bending than could have been imagined fifty years ago. A relatively new body of scholarship, “queer studies,” has emerged as a challenge to historically disproportionate emphasis on heterosexuality; as a response to evidence from the biological and social sciences that sexual identities are fluid and multiple rather than binary and fixed; and as an impetus to more research about sexual identities and practices in different religious, historical, and cultural contexts. This research has included theological analysis and reflection by LGBT persons, among them Marvin Ellison, Mary Hunt, and Kathy Rudy, on their own experiences of themselves as spiritual-sexual beings and as members of religious communities.

Among many flourishing debates are those about nomenclature. Assumptions about men-identified-men as feminine and women-identified-women as masculine, such a long-standing cultural and religious cliché about homosexuality, have long since been discredited. There is intense discussion but not widespread agreement about terms such as *third gender*, which points to gender identity other than heterosexuality but does so in the singular rather than with attention to distinctively male and female experiences. There are studies of “berdache,” a concept related to gender variance in Native American communities and used by some religious studies scholars as a way to point to nonbinary kinds of sexual identities, but many contemporary Native American scholars and activists have dispatched with that term in

favor of *two-spirit people*. Evangelical scholar Virginia Ramey Mollenkott has written theological reflections on what she calls “omnigender,” in order to explore the experiences of “trans” people who do not experience themselves as fitting into the categories of male or female, homosexual or heterosexual.

Some of the earliest critiques of theological writings about homosexuality came from lesbians such as Sally Miller Gearhart and Mary Hunt, among the first to object that the voices of gay men were being taken as the authoritative experience on homosexual experience, with little recognition that the lives of lesbian women were very different from those of gay men. This claim included the fact that male homosexuality has been more highly regulated by legal means whereas lesbian relationships are more subject to scrutiny in domestic settings. LGBT, or GLBT, as it is sometimes called, began to call for sexual ethics that are created in realistic ways for members of the LGBT community and not imitative of norms and values for heterosexuals. Deprived for so long of any ethical response other than castigation in their religious communities, LGBT people are creating new definitions of “good sex”: ethics grounded in spiritualities of same-sex relationships that include the sexual-as-pleasurable, the interpersonal, the spiritual, the communal, and the political.

If dynamic, more flexible terminology about LGBT experiences is of ongoing concern in the academy, it is “bodies” and their differences and their sexual identities that remain the primary and often polarizing focus of religious communities. Almost all contemporary religious communities are dealing with same-sex love and the place of LGBT people in those communities. Many mainline Christian denominations welcome LGBT people as members, but they have been embroiled for years in battles about whether gay people, particularly those who are in open, committed relationships, can be ordained. The Presbyterian Church (USA), the Evangelical Lutheran Church in America, the United Methodists, and the Episcopal Church all continue to be in the process, sometimes highly acrimonious and sometimes nearing reconciliation, of making this decision—or deciding not to make it until there is greater clarity and consensus. Gay marriage is another divisive issue on which American religious traditions take different stands. Arguments persist about whether “family” as it has been configured traditionally can be expanded in ways that are responsive to the realities of LGBT persons. Debates rage on about whether homosexuality itself is unnatural and chosen

and can and should be “cured,” or whether it is “inherently disordered” but not sinful if not acted on, or whether it is part of a continuum of sexual identities that should not only be included in religious communities but also affirmed and supported.

In the meantime, LGBT people have created their own forms of spirituality and spiritual communities and even their own denominations, such as the Metropolitan Community Church founded by Troy Perry in California in 1968, with approximately 300 congregations by 2008. There are also specific communities, such as Spirit of the Lakes Church in Minneapolis, Minnesota, affiliated with the United Church of Christ since 1992 as the first congregation of a mainline denomination serving LGBT people. Studies of religious communities’ varied perspectives on homosexuality can be found in recent volumes such as *Homosexuality and Religion: An Encyclopedia*, edited by Jeffrey S. Siker (Greenwood Press, 2002) that catalog themes related to the law, the social and biological sciences, and spirituality, AIDS and “coming out,” and includes essays on major and smaller religious groups in America. These studies demonstrate that diversity of experience is just as significant an ongoing part of gender critique in the LGBT communities as it has been for women’s histories and theologies.

Where We Are

What has changed regarding gender and gender studies over the last half-century in the academy, in religious communities, and in the overall culture? The answer might be this: more than anyone could have imagined in 1960 and less than there was reason to assume as women’s studies and then gender studies demonstrated beyond any possibility of refutation that being male or female, heterosexual or homosexual, in religious communities had tremendous consequences for how members participate. Women’s studies and gender studies have not been creatively incorporated into religious studies, theology, and ethics given the proliferation of scholarship now available. British scholar Ursula King has voiced what is also a common perception among American scholars: that religious studies has been and still is surprisingly gender-blind and that other disciplines—the humanities, social sciences, and natural sciences—are religion-blind in their disinclination to see religion as relevant to their own interests, even when those interests focus on gender. Gender studies is still widely perceived as “women’s work”—by women and for women—without much relevance for broader historical and cultural narratives.

Debates continue about whether those who are perceived as different or other (there are whole bodies of research related to “difference”) should make claims for recognition of their full humanity based on similarity or on difference, or on the paradoxical insistence on both.

And yet . . . there are women’s studies and gender studies programs in colleges, universities, and seminaries all over the country. Research on gender continues to unfold in multiple areas of American religion, and creative discussions persist about how to integrate theory with practice and utilize in practical ways the fruits of gender analysis in the academy and religious communities. More sophisticated questions are emerging about why and how traditional gender roles remain so very intractable in religion despite ongoing insights into the extent to which they are socially constructed and inextricably connected with race, economics, and politics. The work of gender studies, now recognized as both significant and essential in the study of American religion, will, of course, continue, because it deals with some of the most basic, pervasive, and mysterious experiences of human beings and communal life.

Geographical Approaches

Cultural geography seeks to describe how humans function in relation to the space they occupy. Scholars may study the impact of the physical landscape on religion as well as religion's impact on the landscape. They consider the distribution of religions across the land and how and why distribution has changed over time. They examine the religious traits of a people in a defined zone, and how such traits vary or remain constant from one location to another. Some of the most interesting questions about how religion develops, spreads, and affects lives are rooted in geographical factors (what happens where, and how the "where" affects what happens). In its broadest sense geography, like history, is not the examination

of anything in particular, but a particular way of examining anything. It is less a compilation of facts about districts of the earth than a singular way of looking at the world. Focused on religion, it is a way of seeing that takes into account religion's enactment in its environment. Like all people, believers inevitably interpret their environment. When they do, an alchemy occurs: "space" becomes "place." The physical environment itself is often less important than the environment perceived.

Religion in the United States is so diverse, and the country so large, that studying and comparing distinct regions has become increasingly necessary. Indeed, the major culture regions of the United States are poorly understood if one ignores the influence of religion. So important is this approach that the *Encyclopedia* treats "region," as well as particular regions, in independent entries.

While inevitably brushing up against regional concerns, this essay will illustrate other aspects of the geography of American religion. It will examine how the land influenced settlement and the formation and character of religion. It will consider something of religion's spatial distribution across time—a denominational geography—and will glance at possibilities for mapping religion. It will touch on the creation of sacred space. Along the way it will notice advantages and limitations of geographical approaches to understanding and explaining the religious history and culture of the United States.

Geography's Influence on Religion

"Religion among us seems to wear the face of the country; part moderately cultivated, the greater part, wild and savage." So said the Reverend Thomas Bacon, reporting in the mid-eighteenth century from Maryland to his sponsoring mission society in England. Bacon was neither the first nor the last to notice a relation between religion and its natural environment. Remarkably, however, a great many histories have treated countless topics without explicit attention to the terrain that hosted, shaped, and was shaped by human actors.

This omission seems flagrant in the study of religion. The three great Western religions, Judaism, Christianity, and Islam, are, after all, grounded in the tradition of the ancient Abrahamic covenant. And core to this covenant that God was said to make with Abraham was the notion of the promised land. A concern with sacred geographic zones informs both biblical testaments, at many points. The themes of exodus, exile, return, and diaspora; the contested boundaries of Israel itself; preoccupations with specific places such as Mt. Sinai, Jerusalem, Galilee, Nazareth, Bethlehem, Judea,

the Temple, the Holy of Holies—all these attest to an awareness of sacred physical space.

Subsequent Christian history is scarcely comprehensible apart from geographical awareness. The emergence of the papacy at Rome because of the city's cultural and political preeminence over Antioch, Alexandria, and others of its metropolitan rivals is a case in point. So are the deepening political and theological tensions between the eastern and western halves of the empire that, a millennium after Jesus, sundered Christendom into Eastern Orthodoxy and Roman (Western) Catholicism. So too are the Crusades, bloody contests over occupancy of lands construed as sacred. The later Protestant Reformation was not only theological but also geographical, dividing Europe north and south. Consequent intractable wars were at last resolved geographically: whatever the religion of the ruling prince was would be the legal religion of the territory. Geographic concerns today continue to color the lives of religious practitioners throughout the world, as when Muslims face the holy city of Mecca five times each day in prayer, or when Hindus or Buddhists, no less than Christians or Muslims, make pilgrimages to sacred sites.

In religiously more diverse North America, geography entwined with religion from the beginning. Detailed knowledge is scarce concerning the religions of the prehistoric Siberian tribes who made their way across a land bridge into North America, then dispersed southward to people a hemisphere. But modern clues suggest that their practices and beliefs hinged on a tribe's means of subsistence, which in turn depended on geography. Hunters sanctified the game they pursued. An individual hunter, ritually prepared, might depart from his tribal companions at crucial times to seek guidance from the spirits. Refraining from food and drink, he might imbibe a psychotropic drug and travel in a sacred manner on a sacred path to a sacred place to contact a guardian spirit. He sought protection against disease, animals, competitors, or battle. The land on which he hunted for his people was sacred land.

The religions of agricultural peoples were different but not less geographical. These tribes invested the soil, the sun, the water, and what they grew with sacred import. They typically worshiped a fertility spirit associated with the earth, as opposed to the hunters' sky god. Agrarian communal rituals differed from hunters' more individualistic stress on personal guardian spirits. Southward, agriculture flourished more commonly. There the tribes, more stationary than hunters, developed more elaborate rituals and symbols.

Some tribes combined hunting and agriculture, a union reflected in their religions. Geographic relocation inspired religious amendments: a hunting religion grew less compelling if game was scarce and the tribe now planted crops or gathered previously unknown fruits. Geography and the sacred intersected in other ways and across the generations, as when Lakota aligned their tepees with sacred points on the horizon. In short, the religion of the early natives and their heirs connected fundamentally with the environment. In considerable measure religion *was* the environment: the land, and the weather, seasons, directions, harvests, prey, herds, spirits, peoples, and cosmos that interacted with it.

Geography and Religious Settlement

The geographical fact that kept these peoples so long protected from the sixteenth- and seventeenth-century invasions that were to come was, of course, the ocean. And once the Europeans were ashore, the ocean remained the dominating geographical influence throughout colonial history, at least for the eastern terrain that would become the original United States. The ocean functioned as a permeable but daunting membrane separating the peoples of two continents. Voyages across the treacherous waters required from four to twelve weeks, at extravagant cost to purses and often to health and lives. The Atlantic challenged and hampered those religions that treasured close ties to superiors abroad. Communication was slow and erratic. The ocean constricted the numbers who came, the sort who came, the pace with which they came, and whether or not they stayed.

This great watery obstacle impinged dramatically on Anglicanism, which did not manage to complete its ecclesiastical organization until after the American Revolution. Young colonists seeking Anglican ordination had to do so in England, forced to risk crossing the sea a second time and to absorb the costs of both journeys. Many aspirants demurred. By contrast, churches whose polity was less hierarchical—Baptists and Congregationalists, in particular—found the three-thousand-mile barrier to their advantage, once they had safely arrived. They enjoyed the distance from potential ecclesiastical overlords. As religious freedom emerged over time, it owed as much to topography as to legal theory.

The theology of these transplanted Europeans was less directly tied to geography than was the religion of the natives they encountered, but geography nonetheless dictated much. The malarial near-swamp in and around Jamestown, for example, rendered life expectancy in that colony markedly shorter than that in generally healthier

New England. Patterns of settlement followed geographic contours. America's Atlantic seaboard offered to explorers and settlers a more welcoming coast than the Pacific. The Gulf of Saint Lawrence and Chesapeake Bay presented safe havens. Wide, navigable rivers (the Saint Lawrence, Connecticut, Hudson, Delaware, Potomac, and James, among others) would serve for centuries as liquid highways for travel and trade into the interior of the continent.

Against their initial intent to plant small towns and matching, efficient parishes, Anglicans found Virginia's rivers lent themselves to long and narrow plantations. This yielded a crop of hopelessly dispersed parishioners. Like the ocean, the lay of the land and its rivers thus cramped the coherence and efficiency of southern colonial Anglicanism. Another river, named after Henry Hudson, who explored it in 1609, ran north and south; this dictated the direction of the movement of seventeenth-century settlers and their Dutch, German, and English churches in New Netherland, soon to become New York. The early immigrant Puritans found their refuge in Plymouth and Massachusetts bays. By their large numbers and their disproportionately religious intent amid a comparatively compact geography, they formed colonies of religious and cultural consistency unparalleled elsewhere.

Those rejected by these in New England and by others in New York often found their own refuge in a colony formed around another bay: Narragansett, in Rhode Island. Catholics found theirs at yet another—Chesapeake Bay—farther south. Begun long prior to William Penn's securing a charter for his large American colony, the migration of English Quakers received a great boost when Pennsylvania officially opened its port in 1682. Eastern Pennsylvania promptly became Quaker terrain. The Friends' religious and political influence, however, was soon diluted by the colony's policy of religious tolerance, which brought a rapidly growing diversity, one that came to exceed even that of Rhode Island. Africans were made Americans against their will, becoming slaves whose minds, circumstance, and religion shaped and were shaped by a land that grew cotton. In the eighteenth century, this meant concentration in Maryland, Virginia, South Carolina, and Georgia.

Before the American Revolution, geography had conditioned the arrival in the New World of these and many others, including Jews, Huguenots, and Mennonites. Rivers and fall lines directed where they initially settled. In turn, interior mountains discouraged a flow of the population westward. Politics, theology, and social allegiance combined

with physical geography to create a denominational geography in America.

Denominational Geography in the Early Republic

While both demography and religion as it was actually lived were of course complex, large patterns in this denominational geography are clear. By 1790, Baptists were the largest religious group on Long Island and in two Rhode Island counties, thereby interrupting Congregationalist dominance in the rest of New England. The largest church body in what would become North Jersey and in New York was Presbyterian, Dutch Reformed strongholds having retreated northward to the vicinity of Albany. The Middle Atlantic states were especially diverse. Quakers were the largest group in southern New Jersey, southeastern Pennsylvania, and pockets of North Carolina and Georgia. Lutherans held sway in a great swath of eastern Pennsylvania and predominated from much of Pennsylvania Dutch country down into Maryland and Virginia. Pluralism obtained among Germans in Pennsylvania, where Lutherans, the German Reformed, and diverse sects shared their buildings. Frontier settlements of the Scots-Irish made Presbyterians predominate in the backcountry of Pennsylvania, and they shared the honor with Baptists in the backcountry of Virginia and the Carolinas. Vestiges of old Catholic Maryland endured, and the Methodists were the largest group only on the southern half of the Delmarva Peninsula in Maryland and Delaware. Episcopalians remained strong in the old settlements of the Tidewater South but had yielded their dominance in the Piedmont and mountain areas.

In the decades that followed, the young country's populace crossed the Appalachians and swarmed westward; by 1836 three states were already established beyond the Mississippi River. Religion followed, with a vengeance. Congregationalists moved west into New York and the "New Connecticut" of the Ohio Western Reserve, then witnessed many of its churches turn Presbyterian as the 1801 Plan of Union between the two denominations worked its effect. Roman Catholics showed strength along the old French terrain of the Mississippi River valley and by a rising tide of immigration that after midcentury would make it the nation's largest religious group. For many Protestants this constituted the threat articulated in Presbyterian evangelist Lyman Beecher's famous "Plea for the Churches": Papist strength demanded Protestant funds, schools, and evangelizing in a west in which "the religious and political destiny of our nation is to be decided." When Protestant

missionaries arrived as far as New Mexico after the Mexican-American War, they discovered that Franciscans had preceded them by more than two centuries. Protestant success was limited, but by the end of the century several thousand Hispanic Methodists, Presbyterians, and others resided in the area.

As impressive as were the changes wrought by immigration and territorial expansion on America's denominational geography, equally dramatic was the appearance in the early republic of diverse new religious expressions native to the country and, on a far larger scale, the virtual conquest of that republic by the populist theology and methods of farmer-preachers and circuit riders. Mormons had first appeared in New York, inciting commotion in the 1830s and 1840s as they migrated, flourished, and were expelled from Missouri, Ohio, and Illinois. Restorationist Christians were, soon after their birth, the largest religious group in pockets of eastern Kentucky, western Ohio, Illinois, and Indiana. But despite all this and much else of interest and importance, the Age of Jackson was, religiously, the Age of Methodists and Baptists. So explosively successful were their populist methods and message that either one or the other was, by 1830, the largest denomination in three-quarters of all U.S. counties. South of New York City, that predominance included even the eastern seaboard. Anglicans (by now Episcopalians) had everywhere ceded influence before the onslaught. Having dominated the colonial Tidewater South, Episcopalians were by 1830 the largest denomination in fewer than a dozen U.S. counties; only three of them were in Virginia.

Denominational Geography at the End of the Nineteenth Century

By 1890 the frontier was closed, and despite an ongoing flood of immigration, the major patterns that would characterize much of the twentieth century had been established. The West Coast was by then populated, and it remained only for some of the western interior to fill in. The legendary waves of late-nineteenth-century immigrants from southern and eastern Europe brought significant numbers of Jews to eastern cities and rendered Catholicism the largest religious body in almost all of the major urban areas of the North and the West, as well as in most of New England, an influence that extended westward through New York and into the upper Midwest. Catholics were also largest in the French and Spanish areas of Louisiana and southern Texas and, outside of Washington State and the Mormon heartland, in most counties in the West as a whole.

As opposed to Catholic expansion, the Methodist Age was about to approach its twilight. Methodists remained the largest U.S. Protestant body until yielding to Baptist growth in 1925. But in the coming decades Methodist geographical predominance began to constrict from national might to a horizontal belt running east from Nebraska and Kansas to the historic hearth of the Delmarva Peninsula and New Jersey. The constriction would continue throughout the twentieth century, though by century's end Methodists remained the next-largest group after Roman Catholics in New York and scores of counties throughout Pennsylvania and the Midwest, and next-largest also after Baptists throughout the South. Outside a cluster of counties in New Hampshire, the New England predominance of Congregationalists had by 1890 almost everywhere disappeared behind the deluge of Catholic immigration and, in Maine, Baptist growth, though Congregationalist influence in political and social spheres remained disproportionately strong—a reminder of the importance of the historical base beneath the shifting demographics. The number of Presbyterian-dominated counties had shrunk dramatically, though they remained substantial in eastern Pennsylvania and in a three-county area in the Shenandoah Valley in Virginia.

Episcopalians had surrendered numerical superiority in every county along the eastern seaboard, while gaining ascendancy in a few scattered counties in the West, notably in the southern tip of Texas and in South Dakota (where their adherents were not primarily English but Native American). Yet another colonial church, the Dutch Reformed, had disappeared from the map of predominance in the East, though they were the largest body in two counties in Michigan—the start of a small empire—and one in South Dakota. Outside of Maine and a few scattered counties elsewhere, the former mainline Baptist predominance in the North had all but disappeared, balanced by a widening reign of more evangelical Baptists in the South that was soon to eclipse the Methodists altogether. The Lutheran “kingdom” in the upper Midwest, made up of newly arrived Germans and Scandinavians, was by 1890 well formed, marbled with Catholicism, while the colonial Lutheran domain in eastern Pennsylvania remained intact. The Mormon cultural region in the Great Basin had by then spilled over from Utah into southern Idaho, Nevada, Arizona, and Wyoming. The early religious pluralism of the Pacific Northwest was already evident. In no other region of the country would religious predominance be less stable during the subsequent century.

By the early twenty-first century the basic patterns established a century earlier could still be discerned. The largest denomination in each U.S. county created a surprisingly simple picture of regional dominance. With exceptions, Southern Baptists ruled the South, Lutherans much of the upper Midwest, Mormons the Great Basin in the West, Methodists the remnants of their traditional horizontal belt from Nebraska and Kansas to Delaware and Delmarva Maryland, and Catholics everywhere else. Beneath this image, however, was fabulous complexity and change. Alterations in immigration law in the 1920s and 1960s had built on the nation's fundamental religious geography and altered its most recent layers. The consequences altered the country's consciousness. The arrival of significant numbers of Muslims, Hindus, Buddhists, and others in the later decades of the century had a particular impact. So too was the uneven erosion of ethnic, racial, and religious prejudice, an occurrence that among other things induced interfaith marriages, with deep implications for subsequent generations. For a wide variety of reasons, by the early twenty-first century, the fastest-growing religious category was the "Nones": those who reported to surveyors that they held no formal religious attachment. This was true throughout the nation but particularly in the West, except among Mormons, and in the Northeast. The appearance of radio, television, the Internet, and other forms of mass communication, and the development of modern and rapid transportation and a consequent national and global consciousness—all wrought effects on America's religious composition and sensibilities. They have even fostered the illusion among some that regional distinctions have evaporated. These and other developments are considered elsewhere in the *Encyclopedia*.

Physical Geography and Region

What is pertinent here is how geography conditioned evolving and enduring regional differences. California, for example, boasts an appealing climate and oceanic ports of entry. It is far from the East Coast despite the influence of mobile easterners who helped establish the territory. It is farther yet from Europe. Instead, Asia is more proximate, and Mexico more so. Much of the terrain was in fact formerly native and Mexican land. At 26 percent, California claims the highest percentage among all states of citizens who were born outside the country. It receives immigrants from 85 percent of the world's countries. Latinos constitute 20 percent of all Protestants—again the largest proportion in the country.

California's location has historically nurtured cross-cultural borrowing. This mix and the state's geography have over time produced a zone that harbors more than its proportionate share of Buddhists, Hindus, Sikhs, Muslims, Jews, Mormons, New Age adherents, Hispanic Catholics, Hispanic and Asian Protestant groups, Holiness and Pentecostal faiths, and those who identify with no religion. Buddhism in California is perhaps more diverse than in Tibet, Japan, Southeast Asia, or anywhere else on the planet, because all the Buddhisms of the world have been imported there. Strong evangelical and mainline Protestant pockets may be found as well as, of course, a strong and evermore Hispanic Catholicism. But relatively little sense of "Judeo-Christian" cultural influence thrives amid the astonishing diversity. Religious institutions are comparatively weak on the West Coast, but interfaith cooperation on the environment and other civic matters is comparatively strong. More than in other regions, religion there tends toward eclectic, individualized, and innovative spiritualities. Nonconformity is almost normative. It is not difficult to link the state's religious makeup and its geography.

Nor is it difficult elsewhere. The fact that nearly 70 percent of religious citizens in New England are Catholic owes its explanation in large measure to the Italian and Irish immigrants attracted during the nineteenth century to the area's urban-industrial landscape, which had preceded other areas in developing factories, industrial cities, and employment. The scarcity of such urban and industrial cities in the South deflected the waves of new immigrants, including those from southern and eastern Europe who sought a living in the late nineteenth and the early twentieth century. Hence the Baptists and Methodists who assumed religious dominance in antebellum times bequeathed to the region an enduring legacy, enriched by the substance and cadences of black religion. Much of African American religion, in turn, was itself made possible by the earlier importation of Africans to a New World region whose principle crop seemed to demand cheap labor. Black religion derived also from the admixture of Christianity with the tribal religions of the people providing this labor and with sensibilities arising from their experience working the land *as* slaves. Geography was thus a crucial element in developing the Southern evangelical style.

Religion in the intermountain West, to cite another example, is similarly conditioned by physical realities. Religion there is characterized by a triad of subregions having more in common geographically than religiously

and culturally. This three-way partition developed in part because the region's climate, limited water, and rugged topography created, across time, a few urban centers separated by hundreds of miles of scarcely populated space. The region does share a backdrop of Catholicism behind the diversity and a certain cultural libertarianism in which each spiritual community claims its own ground, values, and style. But the Mormon culture region of Utah and adjacent counties in Wyoming, Idaho, Nevada, and Arizona is isolated and sharply distinct from the Hispanic Catholicism dominating New Mexico, the southern-California-like diversity that leavens a predominant Catholicism in Arizona, and the small but potent pockets of contrasting religious centers in Colorado (evangelicalism in Colorado Springs; New Age/Buddhist/Muslim adherents in Boulder).

All this, in turn, is at variance with the many Native American enclaves in the West, a result of nineteenth-century U.S. policies of ghettoization. Emerging from their native geographies, and particularly since the identity-revitalization movements of the 1960s, many reservations have developed distinct cultures, each with its own native practices and symbols. Sometimes these movements of renewal have emerged from contests over land deemed sacred to a tribe but important for tourist or commercial purposes by government or business interests.

Cartography

In some instances and some respects, the relationship of religion and space can be represented visually. A photograph capturing three or even four churches of differing denominations at a single intersection, for example, may tell us something of the history and character of a town and its carved space, and how religion may leave its mark on the landscape, as it does, say, in the districts of Amish farms. More locally yet, a schema of a Puritan chapel, its pulpit front, center, and raised, may disclose something of its historical occupants' theology—the importance of the Word. This may become the more apparent when juxtaposed against a diagram of a Quaker meetinghouse, with no pulpit, its democracy implied by benches surrounding an empty center. Likewise, the contrast between the landscape of a seventeenth-century Congregationalist cemetery in Boston and a nineteenth-century Catholic one in Baton Rouge may jar us into awareness of or curiosity about the sensibilities of their sponsoring cultures.

Another way to explore religion and space is through the making of maps. But cartography, like all scholarship, is a

precarious enterprise. Visual maps, like verbal ones, both reveal and distort. Religion, after all, may be abstract and ethereal or practical and enacted, but maps are flat or round. If deftly accomplished, such representations may illuminate or even beguile, but they do not interpret themselves. Maps deceive to show us otherwise obscure truths. Viewers should view them critically, asking what they disclose and what they mask; attending to what information has been included, what excluded; noting what is portrayed as “central” or “above” and what as peripheral or below; pondering what a map's framework tells us about the framer as well as that which is framed.

A simple and helpful map may convey the location of all Buddhist temples in Chicago or all megachurches in the South. Another may portray the national distribution and density of fundamentalist denominations in 1950 or 2010, or both, suggesting that the change over time is significant. In relation to regional distinctions discussed earlier in this essay, scholars have constructed maps depicting the largest denomination in each U.S. county for every twenty-year period of the nation's history; broad patterns of predominance are thus disclosed.

More customized cartography sometimes plots what may at first seem insignificant but in the end proves revealing. Scholars Paul Boyer and Stephen Nissenbaum, for instance, rendered more explicable the outbreak of witchcraft hysteria in Salem, Massachusetts, in 1692–1693, by linking local geography, politics, and social tensions. They plotted the residence of every known accused witch and their defenders, as well as every accuser and their supporters. The resulting map showed that those accused of witchcraft (and their defenders) resided predominantly in Salem Towne, while the witches' accusers and their supporters lived almost exclusively in adjacent Salem Village. The map makes us ask why this should be so. Additional research revealed that the Village had for years been dominated by Salem Towne in matters of taxation, church jurisdiction, and prestige, and it had long struggled, unsuccessfully and with increasing resentment, to gain corporate independence. The cartography of Salem's resentment helps unravel a historical puzzle.

Cartographic lenses may be placed over a great mass of data to make visually and intuitively obvious religious-geographic relations otherwise obscure. One such lens, for example, demonstrates that in some respects the United States is less possessed of a Bible Belt than a Bible Suspender—a broad vertical pattern of counties twisting from Minnesota and the Dakotas down through Oklahoma

and Texas—that is more dense in its attachment to organized religion than is the horizontal, mythic Bible Belt in the South. Another pair of lenses makes cartographically clear how a generation after the Civil War, Northern and Southern Baptists were still almost completely separated along an extended Mason-Dixon line; in the twentieth century, however, the Southern Baptists succeeded in establishing a national presence, while Northern Baptists failed to penetrate the South. Another lens yet may make apparent the relation between the denominational composition of each state and its inclination to go red or blue during a given presidential election. Another may make clear how American Jews are almost entirely resident in large cities, with Roman Catholics, Episcopalians, and Unitarians predominantly urban as well, while Baptists, Holiness, and other groups are sharply less so. Potential insights and questions to be extracted from such cartographic lenses await only the imagination and diligence of their creators.

Sacred Space

While scholars may scrutinize the relation of people, religion, and space, the people themselves grow conscious to varying degrees of their relation to their environment. Believers may inherit, experience, or create a spiritual geography, a kind of geo-theology, whether formally expressed or merely sensed. This can take many forms.

One trace of this relationship inheres in the religious names assigned to places, sometimes in earnest, sometimes with whimsy. Religious place-names are “storied” places, “place-tales,” locations made sacred because of experiences remembered and stories told about them. How some village came to be called Damascus or Sodom or Faith or Saint George may be particular to each instance. As a whole, however, the place-tales disclose a process of heritage- and identity-making, as people impose their beliefs or yearnings on their surroundings or incorporate their environment into their beliefs.

Perhaps 800 biblical place-names attach to U.S. locations. California and Texas together claim nearly 100 cities named after saints, quite apart from rivers, hills, and other features of the landscape. Native Americans in the Pacific Northwest know Mount Rainier as Tahoma: “the Mountain that was God.” Missionary Ridge in Tennessee and Georgia was named after a David Brainerd mission there. Hardshell and neighboring Soft Shell are eastern Kentucky communities forged by contrasting Baptist sensibilities. Germans of differing sects arriving in the seventeenth and eighteenth centuries

in Pennsylvania and North Carolina bestowed religious names on their communities: Emmaus, Ephrata, Nazareth, Bethlehem. Kansas Mennonites conjured good relations at Liebenthal (“Valley of Love”); Quakers in Indiana championed simplicity in Plainfield; hopeful and communal Rappites christened Harmonie in the same state. Dozens of westward-moving towns attracted the label *Salem* (“peace”; a shortened form of *Jerusalem*). The words that speak America’s religious past do not always form full sentences.

Sometimes the land itself exudes the holy: The extraordinary landscapes of Sedona, Arizona, for example, have long evoked awe in Native American tribes. Non-Native devotees have discovered their own holy place there. Sometimes their attachment has an affinity with their interpretations of Native American spirituality. Thousands are drawn by Sedona’s “enhanced energy vortexes,” said to facilitate prayer, meditation, metaphysical insight, mind/body healing, exploration of the divine, and insight into one’s relationship with the soul. Seekers and dispensers of spiritual wisdom have generated there an eclectic culture of healers, astrologists, shamans, metaphysicians, prophets, and followers.

More pervasively, believers link memory of sacred experience with the space and place of their occurrence. Such memory may be individualistic and of one’s own direct experience, as reflected in the stories and poems of Wendell Berry or in Kathleen Norris’s spiritual meditations in *Dakota*. Or memory of sacred space may ground the understandings of entire religions. Like all Muslims, American Muslims know that Muhammad heard the voice of the reciting angel Gabriel in a lonely cave on Mount Hira, near Mecca. Previously following Jewish tradition by praying toward Jerusalem, the Prophet received a revelation instructing him to turn his back on it and face Mecca. Muslims since then not only follow suit in prayer but also are forbidden from spitting or relieving nature facing that sacred direction. Similarly, biblical memory tells of Moses obediently removing his sandals out of respect for holy ground, before the Burning Bush on Mt. Sinai. Buddha reached enlightenment under the Bo tree near Gaya on the floodplain of the Ganges.

Millions of individuals and groups live according to such mythic geographies—spaces that scholar Mircea Eliade called *real*, as distinct from “objective, abstract, non-essential” space that people do not really live in. Holy terrain can inform the nation’s civil religion, as is apparent in the vibrant reverence that fills the air surrounding the Vietnam Veterans Memorial in Washington, D.C. And sacred space may inform the consciousness of the adherents of specific religions. This is the

case with the Mormons at the Hill Cumorah and the “sacred grove” in upstate New York, site of Joseph Smith’s earliest visions; at Nauvoo, Illinois, where a majestic reconstructed temple informs tourists and reminds Latter-day Saint pilgrims of a sacred, tragic past where their kingdom once flourished and where their founding prophet was martyred; and in Casper, Wyoming, where each summer hundreds flock to ritually reenact the pulling and pushing of handcarts that their ancestors transported across the plains in exodus and exile from their former country and toward their latest promised land. In these and many other ways, geography may become not just an approach for scholarly scrutiny but the very stuff of religion.

Historian Sidney Mead has suggested that, in contradistinction to Europe, the relative importance of space and time was inverted when the United States came into being. That is, in the nation’s early years, space overshadowed time in the formation of the ideals of the American mind and spirit. At the epicenter of those ideals was freedom. And religious freedom in the sparsely inhabited New World entailed the freedom to move on, to escape the constrictions of class, custom, and law by going, when necessary, to another place. Even before the nation formed, Rhode Island served as a colonial example, assuming a role played two centuries later by the entire American West: as a repository for malcontents and social outcasts. In these and other ways we have considered, and against many who assume otherwise in an age of mass communication, hypermobility, and globalization, human relationships to the land may be shown to be important. Indeed, further study might sustain the thesis that a modern sense of rootlessness has a correlation with a selective decline in religious faith. In any case, a scholar hoping to understand American religion while ignoring geography proceeds at severe peril.

Glossolalia

The term *glossolalia*, often called speaking in tongues, has been used since 1879 to refer to the phenomenon of speaking in a language that the speaker has not learned. It comes from two Greek words, *glossa* (“tongue” or “language”) and *lalein* (“to talk”). Glossolalia usually occurs in a religious setting and consists of unintelligible language-like sounds that are unknown to the speaker. A famous example is the oracle at the temple dedicated to the Greek god Apollo in Delphi in the fifth century BCE. Glossolalic utterances by the Delphic oracle were followed by personal prophecies delivered by the oracle in a state of trance. Other examples are found in the Hindu vedas and Buddhist sutras in India, in the Tibetan tantras, and in the expressions of some Sufi mystics. Although accounts of tongues speech have been reported in many cultures throughout history, it is best known in the Western Hemisphere as a phenomenon occurring among Christians, from the beginning of the church until the present day.

Forms of Glossolalia

Three distinct types of tongues speech have been reported. *Heteroglossa* is a language that is unknown to the speaker but understood by the hearers. This seems to be the type of tongues described in the Bible, in Acts 2, on the day of Pentecost. *Glossolalia* is the utterance of a tongue that is

unknown to the speaker and also to the hearers; it requires a gift of interpretation to be understood. This type is described in I Corinthians 12 in relation to the manifestation of the *charismata*, or gifts of the Holy Spirit. The third type, *zenoglossa*, occurs when the speaker speaks in his or her own language, but those listening understand the tongues as being in their language. St. Francis Xavier (1506–1552), for example, is reported to have preached in his native Portuguese in Goa, on the western coast of India, while the people listening to him understood him as speaking in their language.

In modern times, glossolalia has been the object of extensive historic, scientific, and psychological research. Early studies made the assumption that tongues speech was a pathological phenomenon that occurred among the mentally ill and the economically deprived, often in times of great stress or persecution. Charges of mental instability among tongues speakers were often made during the early part of the twentieth century. Later studies done after World War II have largely discounted the earlier pathological theories and have seen tongues speakers as within the range of normalcy, and in some studies to be better adjusted than the control groups with which they were compared. Scholars are investigating the role of ecstasy as one mode of religious experience that for Pentecostals would include tongues, prophecy, and divine healing.

Glossolalia in the Christian Tradition

Although there were hints of glossolalia in the Old Testament, no clear cases were recorded. Speaking in tongues was a New Testament phenomenon and related to the very beginning of the Christian church. As recounted in Acts 2, about the year 30 CE Jesus and his followers were in Jerusalem for the Jewish festival of Pentecost. As they were gathered for the feast day, the Holy Spirit descended on them. A flood of glossolalic utterances from the twelve disciples resulted in the conversion of three thousand Jewish listeners who were confounded by hearing Jewish followers of Jesus speaking in their own native languages. (Some have called this the “Jewish Pentecost.”) Soon afterward glossolalia appeared among Roman gentiles in Caesarea, in Judaea, under the preaching of Simon Peter (Acts 10). Peter was astonished that non-Jewish people had also received this manifestation. (This is sometimes called the “Roman Pentecost.”) Sometime after this, the apostle Paul visited Ephesus, a Greek city in Asia Minor (Acts 19), and tongues appeared again in a very different cultural setting. (This has been called the “Greek Pentecost.”) On two other occasions, people received the Holy Spirit without tongues being

specifically mentioned. The first was among half-Jews in Samaria (Acts 8), where Simon Magus attempted to buy the Holy Spirit from Simon Peter. In Acts 9 when Saul (also known as Paul) received the Holy Spirit, tongues was not reported, but Paul’s later statement, “I thank my God that I speak in tongues more than you all,” leads many scholars to conclude that he first spoke in tongues at that time.

There are some references to tongues during the post-apostolic era, but these are few and tend to decrease in number as time goes by. Tongues were reported among the followers of Montanus (156–172), by Ireneus (175), and Novatian (230). In the nonbiblical Jewish Testament of Job (chapters 48–50), a young girl is said to have spoken “in the dialect of the cherubim.”

By the fourth century, tongues seems to have declined to the point that St. Augustine (354–430) announced a theory that the miraculous gifts had been sent to authenticate the beginnings of the church, but they had ceased with the death of the last apostles. This was the beginning of the “cessation theory,” which has persisted to this day in the West, though it was never adopted by the Eastern Orthodox churches. Some scholars, such as Eddie Ensley, see a continuation of glossolalia in the “wordless songs of praise” known as the Jubilate. In time, this form of singing developed into the Gregorian chant, becoming the first use of musical notation. More recent Roman Catholic scholars, such as Kilian McDonnell and George Montague, have found that the ritual of laying on of hands to receive the Holy Spirit with the accompanying charismata persisted in most parts of the ancient church for at least eight centuries.

During the Middle Ages, a time of abundant miraculous claims, glossolalia was notable by its rarity. Most reported claims of glossolalia were contained in the hagiographies of the saints. Often, speaking in tongues was cited as one of the miracles required for canonization. However, research indicates that many of these claims lacked contemporary evidence and that these hagiographies became in essence art forms rather than historical documents.

Glossolalia in Modern Times

There is no evidence that the leading Protestant reformers of the sixteenth century such as Martin Luther and John Calvin approved of the practice of glossolalia. In general, they accepted the cessation theories of the Western church and opposed the prophecies and other spiritual manifestations of the radical reformers such as the Anabaptists. In the seventeenth century, claims of glossolalia and other motor

phenomena abounded among the prophets of the Cevennes region in southern France. These French Protestants, also known as Camisards, later attracted the attention of John Wesley, the founder of the Methodists in England, who cited them as proof of continuing and authentic glossolalia.

Glossolalia reappeared in the nineteenth century among British restorationist groups, such as the Shakers and the Irvingites, and also among followers of the Church of Latter-day Saints, or Mormons, in the United States. In the 1830s Edward Irving and his British friends organized the Catholic Apostolic Church, which claimed to restore not only the gifts of the Spirit but the apostolic office as well. As a pre-Pentecostal theologian, Irving permitted tongues in his London Presbyterian congregation; he announced that they were the “standing sign of the baptism in the Holy Spirit” and the “root and stem” out of which all the other gifts flowed. Among Mormons, Joseph Smith spoke in tongues, and Brigham Young preached entire sermons in tongues accompanied by interpretation. Mother Ann Lee, founder of the Shakers, spoke in tongues and composed songs in tongues to accompany the spiritual dances that were the main feature of Shaker worship.

Glossolalia in Early Pentecostalism

The surge of glossolalia in the twentieth century came with the rise of Pentecostalism at the beginning of the century. Under the teaching of the Holiness evangelist Charles Fox Parham, Agnes Ozman spoke in tongues in January 1901, in Topeka, Kansas, thus beginning the modern Pentecostal movement. Most of the earliest Pentecostals were former Methodists, who had left the church because of debates over whether a second distinct experience (a “second blessing”) of sanctification or holiness followed on conversion or justification (the “first blessing”). Parham began to teach that the baptism in the Holy Spirit was now a third blessing certified by the “Bible evidence” of speaking in tongues.

Parham’s new Pentecostal movement grew slowly until one of his students, William Joseph Seymour, opened the Azusa Street Revival in Los Angeles, in April 1906. Seymour, an African American, drew thousands of people of all races and classes to his mission. To promote the revival, Seymour published a paper, the *Apostolic Faith*, which was sent free to fifty thousand subscribers. Miraculous healings and tongues speaking drew multitudes to Azusa Street. Services were held three times a day, seven days a week for more than three years. Azusa Street “pilgrims” soon carried the Pentecostal movement to all parts of America and around the world.

The American South was the most fertile early ground for the spread of glossolalia. The first Pentecostal denominations had southern roots; among them were the Pentecostal Holiness Church, the Church of God (Cleveland, Tennessee), the Church of God in Christ, and the Assemblies of God. In their statements of faith, all of these denominations eventually adopted the “initial evidence” doctrine (that is, an experience of speaking in tongues; speaking in tongues was the “initial evidence” that one had received the Holy Spirit). With few exceptions, this doctrine became the position of the Pentecostal churches that eventually became known as “classical Pentecostals.” After 1916, with the appearance of the “Oneness,” non-trinitarian Pentecostals, glossolalia among them was elevated to the point of being necessary to salvation. The major churches of this tradition were the Pentecostal Assemblies of the World and the United Pentecostal Church.

The teaching of initial evidence deeply divided the Holiness and fundamentalist movements after 1910, with some critics charging that tongues were demon inspired. This was the claim of Alma White in her 1910 book, *Demons and Tongues*. The ultimate cessationist work attacking glossolalia and other miracles was that of a Princeton fundamentalist scholar, Benjamin Warfield, who, in his 1918 book, *Counterfeit Miracles*, claimed that there had been no authentic miracles, including tongues, since the death of the last apostle. Despite such attacks, as well as theological ostracism, the Pentecostal churches continued to grow in the United States, and after World War II they made dramatic advances throughout the world.

In 1960 glossolalia entered the mainline Protestant churches in what came to be known as the charismatic movement. This movement was sparked by Dennis Bennett, an Episcopal priest in Van Nuys, California, who believed he had received a personal baptism with the Holy Spirit. By 1967 glossolalia also began to appear dramatically in the American Roman Catholic Church. From North America, speaking in tongues soon spread to all parts of the global church, including Protestants, Catholics, and Orthodox Christians.

The mainline charismatics did not adopt the Pentecostal claim of “initial evidence,” but they saw glossolalia as a valid and desired manifestation of the Spirit, though not the only evidence of the Spirit-filled life. By the 1970s Pentecostal preachers such as Oral Roberts were popularizing the teaching that tongues was a “prayer language” for use in worship, in addition to being evidence of the baptism in the Holy Spirit. Among charismatics, “singing in the Spirit” became the favorite way of using tongues as a language of worship.

In the 1960s and afterward the movement drew new impetus through the television ministries of such evangelists as Oral Roberts, Pat Robertson, Jimmy Swaggart, and Jim and Tammy Faye Bakker. In the 1980s tongue speakers from all traditions became part of the “religious right,” backing political candidates who opposed abortion on demand and supported prayer in public schools. They were active in the elections of Ronald Reagan as president and the two George Bushes.

After the turn of the century in 2000, the Pentecostal/Charismatic movement was the fastest growing Christian movement in the world, becoming the second largest Christian denomination after the Roman Catholic Church. By 2007 studies showed that glossolalists had grown to be significant percentages of the populations in many African, Asian, and Latin American nations. In two countries, Guatemala and Kenya, studies showed that they composed an absolute majority of the population. It would be safe to say that there are more people practicing glossolalia around the world now than at any other time in history. The Pentecostal movement is by far the largest religious movement to originate in the United States.

Great Awakening(s)

Great awakenings are times of religious revival and revitalization that respond to perceived social and cultural upheavals and restore stability. These awakenings involve a restoration of religious piety among practitioners, a return to traditional

religious and cultural practices, and often conversions of nonreligious persons to a religious tradition. Historians of religion in America have focused on the macrosocial phenomena of great awakenings in the eighteenth and nineteenth centuries.

The so-called first Great Awakening involved a series of revivals in New England and the Middle Atlantic colonies in the 1730s and 1740s. The Second Great Awakening, which lasted from the 1790s until the 1840s, was a time of pervasive revival fervor in New England, western New York, Tennessee, and Kentucky. The Second Great Awakening initiated a long-standing tradition of revivalism in America, leading many historians to claim that the history of Great Awakenings is a history of revivalism. Revivalism has been an important component of America's Great Awakenings. At the end of the nineteenth century an event that some historians call the Third Great Awakening included the religious revitalization of celebrity revivalists. Some historians also look at the resurgence in religious adherence and the rise of new revivalists after World War II as a Fourth Great Awakening. These four Great Awakenings privilege a Protestant narrative of American religious history. Restoration movements of Native Americans, Roman Catholics, and Jews also help to illustrate that Great Awakenings are more than Protestant revivalism. They are also social and cultural phenomena that radically reorient the population.

Native American Awakenings

From the time of their early contacts with Europeans and Americans of European descent, Native Americans had religious awakenings that were in part a response to those contacts and in part were influenced by religious hybridity. Indian prophets such as Neolin (Delaware) in the 1760s, Tenskatawa (Shawnee) in the early nineteenth century, Kenekuk (Kickapoo) in the 1820s and 1830s, Wabokieshiek (Winnebago) in the 1830s, Abishabis (Cree) in the 1840s, and Skolaskin (Yakama) in the 1870s led their respective tribes in revitalization movements to return to traditional native religion. Some, like Neolin, and Tenskatawa, advocated turning away from the religion of the white settlers. Others, like Abishabis and Skolaskin, used a hybrid form of native religion and Christianity to revitalize their tribes. Abishabis called himself Jesus and used lines from a Methodist hymnal as inspiration for his “track to heaven” message. Skolaskin eschewed native practices of dancing and healing and preferred organized Sunday meetings.

Many prophets claimed to have experienced severe illness or temporary death, a metaphor representing the condition of Indian life since the coming of Europeans. In the early nineteenth century the Seneca prophet Handsome Lake claimed that three messengers had visited him during an illness and told him to preach against alcohol, witchcraft, abortion, and love potions. He viewed these social ills as evidence of the waywardness of the Seneca from their traditional religion and culture and toward assimilation of Euro-American culture. In his early career Handsome Lake promoted these reforms, stressing the revitalization of Seneca traditions. He later added a message of peace with white settlers and an emphasis on morality in domestic life. Modern-day Native American religious practices called the longhouse religion or Handsome Lake religion follow the moral code set by the prophet.

The Ghost Dance was an awakening that occurred among the tribes in the American West. The Ghost Dance began in 1869, when the Paiute prophet Wodziwob claimed to have received messages from the dead while he was in a trance induced by dancing. He preached to the Paiutes at the Walker River Reservation in Nevada, proclaiming that the dead would return and bring terror followed by a restoration of precontact native life. Like Handsome Lake before him, Wodziwob viewed contact with white people as harmful to traditional Indian ways. Two of Wodziwob's disciples traveled to other reservations to promote this pan-Indian revival of traditional religion. Frank Spencer (also known as Weneyuga) preached to the Paiutes as well as to the Washoe in Nevada. Tavibo was another itinerant preacher who served on Wodziwob's behalf. The first Ghost Dance revival lasted a few years.

Tavibo's son, Wovoka (also called Jack Wilson), became the leader of a second Ghost Dance revival in the 1890s. Wovoka experienced a trance during a solar eclipse on January 1, 1889, and claimed that the Creator and the dead had visited him, giving him the ability to prophesy, invulnerability to weapons, and songs that would control the weather. Wovoka taught natives a "dance in a circle" to be performed for five days, wherein they would experience communication with the dead. He preached peaceful coexistence with white people. This revival spread from Nevada onto the Great Plains, especially among the Lakota. As it spread, subtle variations occurred among different tribes. Christian missionaries and U.S. government representatives worried that the native revival would provoke violent resistance to federal laws and white settlers. The Battle of Wounded Knee, in

1890, was a result of military action to curtail the native revival. The significance of Native American awakenings lies in how they illustrate that revitalization and restoration are important components of great awakenings.

Colonial America and the First Great Awakening

European colonists in North America also held rituals of religious revitalization. Puritans in New England held covenant renewals in which they rejuvenated their individual and corporate covenants with God. These covenant renewals were intended to stem the perceived tide of impiety among the parishioners. The sermon on election days, often called the jeremiad, emphasized the need for annual covenant renewal. These renewals were common in and around Boston. In the Connecticut River Valley, Solomon Stoddard (1643–1729) reported six "harvests of souls" in Northampton, Massachusetts, during his tenure as pastor. Along with "Pope" Stoddard, William Williams and Timothy Edwards participated in local revivals. These men were elder relatives of Jonathan Edwards, whose Northampton revival in 1734–1735 is credited with being the catalyst for the first Great Awakening.

The first Great Awakening was a religious response to the social and cultural upheaval of the early eighteenth century. The feudal agricultural system of medieval and early modern Europe had given way to a mercantile and capitalist economy. The feudal system, with its lords and servants, had instilled in the public an idea of their relationship with God as a lord who oversaw his servants. The mercantile economy elevated the idea of the self-sufficiency of the individual. The eighteenth-century Enlightenment elevated the rational individual. Ministers feared that these developments were a threat to the piety of their congregations. The age of orthodoxy in the seventeenth century also emphasized doctrine more than piety. A movement in Europe known as Pietism reasserted the importance of heartfelt piety over doctrine as the necessity for faith and salvation.

Pietists inspired Theodorus Frelinghuysen (1691–1747), a Dutch Reformed pastor who came to New Brunswick, New Jersey, from Germany in 1719. Believing that religious devotion was a matter of the heart, not the head, he was frustrated by his congregation's lethargy. He aggressively preached heartfelt conversions rather than doctrinal knowledge. Gilbert Tennent (1703–1764), a Presbyterian minister in New Brunswick who also disapproved of his parishioners' lethargy, supported and cooperated with Frelinghuysen. Both pastors withheld Communion from any persons not

A staunch Calvinist, Jonathan Edwards believed that individual conversion, local revival, and great awakening were products of God's predestination of when, how, and who experienced religious revitalization. His Northampton, Massachusetts, revival in 1734–1735 is credited with being the catalyst for the first Great Awakening.

showing evidence of a conversion. Although they endured controversy regarding their careers, both saw an increase in the number of conversions.

Jonathan Edwards (1703–1758) was a contemporary of Frelinghuysen and Tennent who advocated an elevated view of God's majesty over heartfelt piety. Edwards inherited Solomon Stoddard's—his grandfather's—congregation in Northampton in 1729. Stoddard and Timothy Edwards, Jonathan's father, taught Jonathan about revival. A staunch Calvinist, Edwards believed that individual conversion, local revival, and great awakening were products of God's predestination of when, how, and who experienced religious revitalization. He was prepared to see revival come to Northampton when it did in 1734. By his estimate, three hundred persons converted during the revival in 1734–1735. From Northampton, the awakening spread throughout the Connecticut River Valley. Edwards recorded the events at Northampton in his *Faithful Narrative of the Surprising Work of God* (1737). The *Faithful Narrative* granted

Edwards international fame and encouraged pro-revival “New Lights” in New England, dissenters in England, as well as Methodist founder John Wesley. The New Lights were ministers who upheld the Puritan tradition of Calvinist doctrine while also advocating revival as a means to ensure religious conversions. The *Faithful Narrative* told of the conditions leading to revival, described the process of conversion using examples from Edwards's congregation, and inspired future accounts published in Scotland and England, and in the magazine *Christian History* (1743–1744) in America. In later decades, Edwards instructed New England clergy called the New Divinity, who claimed to follow Edwards's spirit of revivalism.

George Whitefield (1714–1770) and John Wesley (1703–1791) were proponents of the “new birth,” a term to explain the change in one's heart when converted. Both Whitefield and Wesley were Anglican priests and members of the Methodist movement at Oxford. Wesley went to Georgia to preach the new birth and start Methodist societies in Anglican parishes. In 1738 he invited Whitefield, who was a celebrity preacher. Whitefield developed outdoor preaching as the method by which to reach large audiences for mass conversions. He made nine preaching tours throughout America and England, winning him the title “Grand Itinerant.” Whitefield's ministry illustrates two important aspects of the first Great Awakening: itinerancy and the Atlantic world. Itinerant ministry was vital for the promotion of revivals. Pro-revival ministers traveled from church to church or town to town and preached the new birth. Second, this great awakening was taking place in continental Europe, Scotland, England, Wales, the American colonies, and the Caribbean. Revivalists crossed the Atlantic, and so did information about revivals in the form of printed accounts. Moravian missions in the Caribbean inspired revivals among African slaves.

The first Great Awakening inspired controversies, particularly in the Middle Colonies and New England. Whitefield provoked ire from Anglican priests by his criticism of their unwillingness to accept the new birth. Tennent received persecution for his accusations in a famous sermon, “The Danger of an Unconverted Ministry” (1739). In New England the battle raged most fiercely. After Whitefield's visit in 1740, revivals continued in nearly one-third of Boston's churches. James Davenport followed Whitefield to hold follow-up revivals. He drew the criticism of Old Light Bostonians who banned him from pulpits. Pro-revival Benjamin Colman and Gilbert Tennent also spoke out

against Davenport. Charles Chauncy issued his *Enthusiasm Described and Cautioned Against* (1742) as a treatise against the excessive emotional displays of revivals. Jonathan Edwards publicly debated Chauncy. By 1743 the more radical supporters of revival and of Davenport had separated from Congregational and Baptist churches in New England.

Some historians date the end of the first Great Awakening at 1742, when Whitefield was not welcome during his second visit at Harvard. By the mid 1740s the controversy over revivalism in general and Davenport in particular shifted the society away from having revivals to an evaluation of the appropriateness of revivals. In the 1750s revivalism waned in New England, with a short burst between 1762 and 1765. To say that the first Great Awakening ended in 1742 neglects to take into account the geographic scope of the awakening. The South experienced the first Great Awakening as early as Wesley's and Whitefield's work in Georgia in the 1730s. Missionaries came to the South from New England and the Middle Colonies in the 1740s. Samuel Davies came to Virginia from Pennsylvania in 1748. James Davenport itinerated in Virginia in 1750. Separate Baptists, who dissented from the Regular Baptists, found success in the South, especially under the labors of Shubal Stearns and Daniel Marshall. Baptist itinerants spread throughout the South and were often jailed for fomenting public unrest. Methodists also found success. Anglican Devereux Jarratt welcomed Methodist itinerants into his Virginia parish, and he promoted revival among parishioners. In the 1760s–1780s revivalist Presbyterians and Baptists moved into the backcountry of the Deep South, penetrating into western Virginia and the Carolinas, as well as into northern Georgia.

The awakening promoted a revitalization of Christian piety in a time that Jonathan Edwards called a period of “extreme dullness in religion.” Americans also experienced upheaval during the awakening. The controversy over the awakening hinged on an important component of the social and cultural reorientation of the first Great Awakening. The awakening reaffirmed the individual in new ways by stressing individual conversion and piety. Social groups such as the Congregationalists were no longer monolithic wholes but associations of individuals. For union to be maintained, individuals within the social group had to agree. Debate caused fissures within the Congregationalists. The reorientation of social units as associations of individuals allowed Americans to think of themselves as being part of an intercolonial association. The awakening fomented the antiauthoritarian ethos of some dissenting clergy and parishioners. In the South

dissenting revivalist Presbyterians, Baptists, and Methodists challenged the authority of the Anglican Church. With the formation of associative communities and opposition to authority, the first Great Awakening had given Americans the cultural tools with which to build an idea of an independent nation.

The Second Great Awakening

Some historians have difficulty identifying the seam between the First and Second Great Awakenings. The persistence of revivalism in the South and the efforts of the New Divinity in New England indicate that revival fervor never died in the latter decades of the eighteenth century. Another period of social upheaval and lull in religion preceded the revivalism of the 1790s–1830s. During these decades Americans experienced new calls to restoring “true” Christianity as well as another cultural reorientation.

With the onset of the Revolutionary War in 1775 and the early years of crafting a republic, Americans seemed less concerned with religion than they had been previously. The Enlightenment advocated rationality and “natural religion,” a form of religion that was rational and universal and not revealed through divine intervention. Deism, the belief in God's transcendence that invalidates his intervention in human and natural affairs, was popular. Books like Ethan Allen's *Reason, the Only Oracle of Man* (1785) and Thomas Paine's *Age of Reason* (1794, 1795) illustrated an intellectual shift from piety and revelation to reason. Statistics reveal the opposite. Church admissions in Connecticut between 1740 and 1749 were 13.0 percent of males ages 30–34 and 6.7 percent of females ages 30–34. Between 1750 and 1798 church admissions of the same age group rose to 21.3 percent of males and 19.1 percent of females. Nevertheless, ministers in the North and the South feared the outcomes of the Enlightenment, particularly irreligion and lapsed morals. Both parties pointed to Sabbath breaking, swearing, gambling, and alcohol abuse as signs of moral decay in the absence of piety. As the United States acquired more land westward across the Appalachian Mountains, ministers feared that avarice for land left unchecked would cause social strife and violence. As citizens relocated, they experienced social and commercial dislocation in ways that brought insecurity. The Second Great Awakening not only revitalized Protestant evangelical religion in pervasive ways, but it also assuaged the anxieties that Americans experienced.

Southern clergy moved with migrants across the Appalachian Mountains. They brought an expressive religion that

created some of the most significant forms of revival. Scottish and Scots-Irish Presbyterians brought with them a spring-time Communion ceremony that collected parishioners outdoors. These events were perennial revivals that renewed the religious life of the individual and of the community. Near the end of the eighteenth century, a series of these revivals began to take place in Kentucky. Presbyterian itinerant James McGready (1763–1817) reported revivals at his parishes in 1798 and 1799. The sacramental meeting at Red River, Kentucky, in June 1800 brought together McGready's three parishes, with more than four hundred in attendance during this outdoor ceremony. In July 1800 Presbyterians, Baptists, and Methodists met at Gasper River for a sacramental meeting. Persons came from disparate areas and camped at this location for the weeklong gathering. Historians point to this event as the first camp meeting. The most famous camp meeting is Cane Ridge, which took place in August 1801. Barton W. Stone (1772–1844) organized the outdoor revival and promoted it for a month. Between twenty thousand and thirty thousand people attended Cane Ridge.

Camp meetings remained a fixture of revivalism in the western states. In later years New England revivalists held camp meetings. These were controversial events in which some eastern clergy were outraged by the ecstatic “exercises” of those participating in camp meeting revival. Camp meetings also influenced the local congregation and urban revivalism promoted by Charles Grandison Finney (1792–1875). Although Presbyterians began camp meetings, Methodists continued the activity in the latter half of the nineteenth century and instituted camp meetings as official revivals in late summer.

New Divinity Congregationalist clergy were preaching revival and doctrine in New England, causing Connecticut to become alive with local revivals in the 1790s. Preaching by Yale's president Timothy Dwight led to a campus revival in 1801–1802, winning Dwight the recognition of initiating the Second Great Awakening. In New England, New Divinity men led the Second Great Awakening. True to their Calvinist doctrines, they believed that God had ordained a season of revival when the elect professed their faith.

As New England Yankees moved into western New York, revival spread with them into the “burned-over district,” so named because of the number of revivals that ignited in the region. In this district, Charles G. Finney emerged as the new celebrity of the Second Great Awakening. Finney was a lawyer by training, but he joined the ministry after a sudden conversion experience. He taught

that any person could be converted as long as the individual followed the steps of conviction, faith, and repentance. He also taught that revivals happened according to the “new measures” that ministers used to promote revival. Those measures included plain speech during sermons directed at the audience and the “protracted meeting.” The protracted meeting was a modification of the camp meeting. Finney's revivals often took place over a week or more in one town. He held services every evening for businessmen to attend. At times these revivals took place in local churches, but public buildings were also used to accommodate large audiences. The protracted meeting extended the time of the religious service to ensure the likely conversion of as many people as possible. Finney mobilized women in voluntary roles to promote and prepare for his revivals. Women distributed announcements of upcoming revivals and walked streets praying for individuals and families who might attend a revival meeting. Finney produced results as a traveling revivalist and as a local pastor.

The influence of New Divinity and Finneyite revivalism was manifested in nineteenth-century reform movements, such as temperance and antislavery. Urban revivals promoted reforms of personal morals and advocated social reforms. Benevolent societies such as temperance societies, antislavery societies, and aid for the poor emerged. Aggressive societies of interdenominational evangelicalism, such as the American Sunday School Union, American Bible Society, American Tract Society, and American Home Mission Society, spread the evangelical message of conversion and repentance to people near and far.

The Second Great Awakening gave American history four legacies. First, during the presidency of Andrew Jackson, it harnessed the power of individualism in what came to be called Jacksonian democracy (1820s–1830s). The awakening's revivalism led to controversial demagogues and self-proclaimed prophets who claimed autonomous authority in an age that appreciated individual success. Second, the awakening gathered people into social units and gave them a sense of community, just at a time when they began to sense social dissolution as a result of mobility, industry, and commerce. People joined churches and new religious movements such as the Oneida community in Vermont and later in New York; the Adventist tradition following the prophetic preaching of Baptist farmer William Miller; and the Church of Christ founded by Joseph Smith (later called the Church of Jesus Christ of Latter-day Saints). In the early decades of the nineteenth century, when Americans were

searching for national cohesion, religious awakening provided a cultural phenomenon for them to rally social cohesion. Ironically, one of the outcomes of the awakening was the diversification and fragmentation of American religious culture, just as the same phenomenon was taking place among political parties prior to the Civil War.

Third, the awakening helped Americans to grasp a sense of national purpose, as expressed in the term Manifest Destiny. Westward expansion in the trans-Appalachian and trans-Mississippi frontiers took on a religious significance. Americans experiencing a restoration of evangelical religion looked at the newly acquired geography as a field of experimentation where they would see fulfilled their goals of redeeming the world and being dutiful to God's providential plan. Theirs was a destiny of building, refining, and extending a righteous empire across the continent.

Fourth, the awakening made revivalism a mainstay throughout the nineteenth and twentieth centuries. Prayer meeting revivals such as the "Businessmen's Revival" of 1857–1858 in northern cities were frequent occurrences. Prayer meetings also initiated the Holiness Movement within the Methodist tradition. Sarah Worrall Lankford began her Tuesday Meeting for the Promotion of Holiness at her New York City home in 1835. Her sister, Phoebe Palmer, soon joined the meeting, which advocated the Wesleyan teaching on Christian perfection among Methodists. Methodists also institutionalized the camp meeting as a forum for promoting holiness. Revivalism was primarily a northern phenomenon. The South was all but immune to the 1858 revival in which businessmen in industrial northern cities gathered to pray. Holiness also spread slowly in the South. Southerners distrusted Holiness preaching. Members of the Methodist Episcopal Church South separated from the northern church over issues regarding slavery, and they viewed Holiness preaching at places such as Oberlin, Ohio, to be the culprit of abolitionism. Later, after the post-Civil War Reconstruction period in the South, Holiness revivalism spread in the lower areas of the region.

The persistence of revivalism as a cultural phenomenon in America makes difficult the determination that the Second Great Awakening ended in the 1830s or 1840s. Historians state that the Second Great Awakening was over by the 1840s, when political issues regarding slavery were escalating toward Civil War. By the 1840s, debates over abolitionism and the ensuing violence of the 1850s indicated that the righteous empire caused social strife through sectional bitterness. As a phenomenon that oriented Americans toward

collectivity and mission, the Second Great Awakening ended when collectivity dissolved in the conflict of competing missions.

The Third Great Awakening

The Third Great Awakening is a contested historical phenomenon. Some historians debate whether the awakening took place. Others who do accept its existence debate its time frame. The renewal of mass evangelism by Dwight L. Moody in the 1870s and the escalation of the fundamentalist-modernist controversy in the 1920s provide bookends for the Third Great Awakening. This awakening also involved the Social Gospel, a movement in Protestant liberalism that emphasized social reform over piety and conversion. The irony of the Third Great Awakening is that it began with the restorationist impulse of Moody and Billy Sunday, who promoted "old-time religion" in the form of mass revivalism, but ended with a cultural shift toward modernized liberalism that drove a divisive wedge in American society.

The social situation in the wake of the Civil War was bleak. The South was laid to waste during the North's campaign to break the Confederacy. The North reeled from the atrocities of property destruction and loss of population. As they were at the end of the Revolution, Americans were more immediately concerned with taking care of their temporal necessities than worrying about their souls. Skepticism, like that evinced by the agnostic orator and political leader Robert Ingersoll, spread throughout the country. Jewish and Catholic emigrants from Europe to the United States altered the religious composition of a population once dominated by Protestants. With mass immigration also came new ideas about religion and science. Higher criticism, an import from German universities, questioned the inerrancy of the Bible by pointing out textual and historical inconsistencies. Darwinian science and social Darwinist ideas colored people's understanding of the world and led them to question its origin. In this age of uncertainty and flux, Americans also had to answer the question of how to mend a divided nation. The Third Great Awakening offered multiple answers that ultimately brought new divisions.

Moody (1837–1899) was a product of the revivals in the 1850s. Converted in 1856, just before the "Businessmen's Revival," Moody became an advocate for Sunday schools and the YMCA. The height of his revivalism was 1873–1877, when successful revivals in England and in the American urban North won him fame as an effective evangelist. With the help of his songster, Ira D. Sankey (1840–1908),

Moody held the most successful revivals of the 1870s, challenging the influence of the national camp meetings. Moody and Sankey also perpetuated the urban setting of evangelical revivalism. Near the close of the nineteenth century, the cities were ablaze with revivals as evangelists sought to correct the moral corruption of industrial America. Moody's revivals are famous for promoting "old-fashioned religion with modern improvements," using modern mass media to promote himself and his revival message.

Another proponent of old-time religion who rose to celebrity status was Billy Sunday (1862–1935). Sunday began working for the YMCA in Chicago in the 1890s after a professional baseball career. In 1896 he held his first successful revival at Garner, Iowa. Throughout the first years of his ministry, Sunday preached to small and medium-sized towns in the Midwest. He employed musicians, much as Moody did. His first musician, Fred Fischer, learned contemporary arrangements for hymns and gospel songs from the style at Moody Bible Institute. By 1907 Sunday was a celebrity in the national press. In the 1910s he went on successful preaching tours to the major northern cities, with his ten-week revival in New York City in 1917 the zenith of his career and influence. After World War I ended in 1918, Sunday, much like religion in general, went into decline.

The legacy of Moody and Sunday was two-fold. On one hand they advocated a restoration of older forms of revival rooted in the evangelical tradition of the Second Great Awakening. Their theological simplicity and reliance on a literal interpretation of the Bible was integral to the burgeoning fundamentalist movement. Sunday would later criticize liberals for straying from the evangelical tradition. On the other hand, Moody and Sunday introduced modern adaptations to "old-time religion." Both made use of mass media in promotional ways. Moody used modern business practices to organize his revivals. Sunday updated revival by incorporating Progressive Era reforms as well as altering the gendered aspect of Protestant spirituality. He advocated a muscular, masculine form of religion against the feminized religion that had predominated during most of the nineteenth century. Despite their attempts to restore evangelicalism to its traditional message and potency, Moody and Sunday were part of the modernization impulse of the Third Great Awakening.

Another mix of restoration and modernization was the Social Gospel, which placed social reform at the core of the Christian message. Social Gospel proponents claimed to be revitalizing traditional Christianity in its original biblical

teachings on ethics. They also perpetuated the postmillennialism of nineteenth-century evangelicalism, claiming that reform would prepare society for Christ's return. Social Gospelers were also part of the Progressive Era. They made use of modern sociological and economic theories to explain social conditions.

In both the revivalism of Moody and Sunday and the Social Gospel, the Third Great Awakening was a reorientation toward a progressive restoration of the ideal society. Late in his career, Moody advocated more social reforms to aid Chicago's poor. Sunday advocated temperance to solve social ills. The driving ethos of the Third Great Awakening was to stabilize a society in flux. Division soon developed. Followers of the revivalist tradition of Moody and Sankey preferred biblical literalism and theological conservatism. They perceived modernization as dangerous—particularly higher criticism and liberal theology. The result was a rift between conservatives and liberals that historians call the fundamentalist–modernist controversy. Moderates who were in the middle of the theological spectrum soon fell into the liberal camp, dismayed by the intolerant rhetoric of conservatives. The Scopes Trial in Dayton, Tennessee, in 1925—which revolved around the teaching of Darwin's biological evolution—polarized the nation, separating conservatives from moderates and liberals. With this schism, the so-called Third Great Awakening and its propulsion toward a stabilized, cohesive society had come to an end.

The Fourth Great Awakening

The seeds of division caused social unrest, but some liberals remained optimistic. The stabilizing spirit of the Third Great Awakening was not dead. In the 1930s major church leaders devised efforts to bring Protestant denominations together in a great ecumenical movement. Economic depression in that decade gave way to the morass of war following Japan's attack on Pearl Harbor in December 1941. Four years of warfare during World War II left Americans with a deep sense of anxiety. In the wake of victories over Germany and Japan, Americans regained their confidence and turned to religion as a way of regaining stability. After World War II a new awakening occurred that has involved conservative and liberal Protestants, Roman Catholics, and Jews. Whereas 49 percent of the American population claimed church affiliation in 1940, that number had risen to 62 percent by 1956, and in 1960 it rose to its highest point, at 69 percent. People attended church in greater numbers than they ever had in American history. A pervasive piety in American society led

to the inclusion of the phrase “under God” in the Pledge of Allegiance in 1954 and the acceptance of “In God We Trust” as the national motto.

In the postwar years American revivalists rose to prominence once more. Oral Roberts (1918–2009), an evangelist and faith healer, saw a boost to his career during the 1940s and 1950s, thanks to his use of mass media. Billy Graham (1918–), who, like successful revivalists before him, utilized mass media, also ascended in popularity. Graham had a successful radio ministry based in Chicago and affiliated with the Moody Bible Institute. His 1949 revival in Los Angeles won him national acclaim. Over a period of more than sixty years, Graham led major revivals in the United States and abroad. Although his fame as an evangelist is well established, his greatest success may have come during the postwar awakening.

Protestant evangelicals were not the only ones to participate in the awakening of the late twentieth century. Roman Catholics participated in an awakening of parish renewal. After the Second Vatican Council (1962–1965), reforms of the liturgy allowed for some Catholics to find new vigor in participating in the Mass. The late 1960s also saw the start of a charismatic, or Pentecostal, awakening in Catholicism. Two lay faculty members at Duquesne University in Pittsburgh, Pennsylvania, committed themselves to prayer and recitation of the hymn from the Mass of Pentecost. The prayer group grew in the next year, and twenty people testified to experiencing glossolalia, or speaking in tongues. The charismatic renewal movement spread to the University of Notre Dame and the student parish at Michigan State University in 1967. By 1970 there were 203 charismatic prayer groups in the United States.

Jewish Americans also experienced a renewal after World War II. When the state of Israel was established in 1948, Zionist zeal breathed new life into some Jews. As Jews moved upward socially and outward from the cities, many increased participation in synagogue activity. The number of Conservative synagogues doubled between 1937 and 1956, and the number of member families rose from 75,000 to 200,000 in the same time period. Reform temples grew from 290 with 50,000 families in 1937 to 520 temples with 255,000 families in 1956. Relocation to the suburbs allowed Jews to redefine their Jewishness in terms of religious earnestness. Observance of Jewish holy days paralleled that of the Christian holidays. Postwar observance of Hanukkah increased as Jewish families celebrated their religion in the Christmas season. Jewish education rose in midcentury as

parents provided their children with instruction in their religion and heritage.

The Fourth Great Awakening has no clear ending, just as no great awakening does. President Dwight D. Eisenhower best expressed the ethos of this awakening when he stated that America’s best trait is its firm religious conviction, whatever that religion is. The interreligious quality of this awakening has given some hope for a religious multiculturalism in the present and near future.

Historical Debate

Historians disagree about much with respect to great awakenings. Some question whether these events have ever occurred. Jon Butler claims that there was no first Great Awakening because the religious revival was too limited by geography, religious tradition, and social groups. Others have suggested that the Second Great Awakening had similar limitations. Regional studies on the South and on the larger Atlantic context demonstrate that the first two great awakenings were far more widespread than localized religious revival and indeed effected broad social and cultural transformation. Recent studies by Frank Lambert and Kathryn Long have shown how people participating in religious revival interpreted and conveyed a sense of awakening. The Third and Fourth Great Awakenings are highly questionable for some historians who do not see a general religious awakening during those times.

Nor can historians agree on how to delimit time periods to identify a great awakening. The dates 1739–1742 for the first Great Awakening are tied to the success of George Whitefield but neglect earlier revivals in the 1720s–1730s under the likes of Frelinghuysen, Tennent, and Edwards, and later revivals in the South in the 1740s–1770s. The Second Great Awakening is equally problematic. Revival fervor persisted in the South and moved across the Appalachian Mountains, and New Divinity clergy in the North promoted revival as a means of gaining converts. But historians claim the 1790s as the start of that awakening. The end of the Second Great Awakening is vague because revivalism became an American institution after the influence of Finney.

Perhaps the most important debate involves the substance of an awakening. The nomenclature of “Great Awakening” is contested. The phrase did not appear until 1842, when Joseph Tracy, a Congregational minister in New England, published *The Great Awakening*. Tracy’s history explains evangelical revivalism as a great awakening. Some historians

maintain that revivalism is the substance of an awakening, and they look at church records on conversions and admissions as evidence of an increase in religiosity. Others say that great awakenings are deeper social and cultural transformations. The historian William McLoughlin proposed that great awakenings are revitalization movements. Inspired by anthropologist Andrew Wallace's thesis on revitalization movements, McLoughlin argued that great awakenings provided social cohesion in times of anxiety by promoting an idealized traditional religion. Donald Matthews advanced a similar idea with respect to the Second Great Awakening. McLoughlin claimed that five distinct awakenings occurred in American history and argued that each provided Americans with a sense of social reorientation and cohesion.

Conclusion

The irony of great awakenings is that they develop out of social fragmentation and anxiety in order to promote stability and cohesion, only to produce new sets of factionalism. New England clergy debated the viability of revivalism during the first Great Awakening. The Second Great Awakening, with its ideals of Manifest Destiny, caused regional competition that eventually erupted into the Civil War. The Third Great Awakening polarized theological conservatives and liberals, causing restructurings during the Fourth Great Awakening that maintained that division. Theologians and politicians have predicted a coming great awakening in the global age when media connect people at greater speed and with greater ease. Whether this awakening will be an event for a particular religious tradition or an egalitarian interfaith renewal is yet to be seen, if such an awakening will occur at all.

Great Lakes Region

The five Great Lakes states—Ohio, Indiana, Illinois, Michigan, and Wisconsin—have their origins in the western lands ceded by Great Britain to the United States at the conclusion of the Revolutionary War. Anticipating rapid, large-scale migration into what became known as the Northwest Territories (and later, the Old Northwest), the U.S. Congress enacted a series of ordinances to control settlement. These included the Ordinance of 1785, which called for the surveying of the entire territory into a grid of rectangular townships, followed by the Ordinance of 1787, which put into place a system of governmental stages by which the territory would be divided and new states created. Significantly, appended to the Ordinance of 1787 was a set of articles that functioned as an early bill of rights—four years before an equivalent set of rights were added to the federal Constitution. Two of the Northwest Ordinance's articles bore directly on the subsequent religious history of the region. Article I guaranteed religious freedom ("No person demeaning himself in a peaceable and orderly manner shall ever be molested on account of his mode of worship or religious sentiments in said territory"), and Article III enjoined (in addition to fair treatment of Native Americans) the promotion of religion through education ("Religion, Morality and knowledge being necessary to good government and the happiness of mankind, Schools and the means of education shall forever be encouraged"). It is not exactly

clear what the framers' intent was in terms of the relation of religion and education in Article III. Scholars and other interested parties still debate the meaning of this seeming endorsement of state sponsorship of religion. The mandate of Article I, however, was clear, making the Great Lakes states a unique early testing ground for U.S. values of pluralism and voluntarism.

Anglo-American Protestants in the Old Northwest

Settlers began to pour into the fertile lands of the Old Northwest once Indian resistance had been broken after the War of 1812. Drawn predominantly from three of the four culture hearths of the Atlantic seaboard—the Upland South, the Midland, and the Yankee Northeast—migrants from each quickly established churches of all the major denominations: Methodist, Baptist, Presbyterian, Congregational, Episcopal, Quaker, and Campbellite (Disciples of Christ). The three migration streams, though, did not spread evenly over the land. As a result, clearly identifiable ethnic subregions emerged in the Old Northwest, indicated partly by the preponderance of specific denominations in each subregion. Upland southerners were the first to arrive, settling the southern portions of Ohio, Indiana, and Illinois; here Baptists were represented in numbers greater than in the rest of the region. Proceeding directly west from Pennsylvania, a broad Midland band, partially mixed with the southern, established itself in the midsections of these states. Scots-Irish Presbyterians predominated here. Latest were the Yankees who mostly stayed north, colonizing the Western Reserve of Ohio, parts of northern Indiana, and much of northern Illinois, southern Michigan, and southern Wisconsin. The presence of Congregationalism testified to the Yankee influence in the northern parts of the Old Northwest. To this day, clear cultural differences are perceptible as one travels north to south in the region, and the denominational markers remain.

Despite ethnic and denominational rivalries, there were several unifying factors among the Anglo-American Protestants in the Old Northwest. The most prominent was the pervasiveness of a specific religious style: Wesleyan evangelicalism. The republican principle of religious freedom encouraged a fierce competition for church members on the frontier, and those denominations best able to satisfy the reigning needs of the majority were destined to dominate in this religious “free market.” In the Old Northwest, as in the most of the Midwest, the Methodists outperformed them all, chiefly through the heroic efforts of such circuit

riders as Illinois' Peter Cartwright and Michigan's Elijah Pilcher. Methodism quickly became the largest and the most influential Protestant denomination in the region. Wesleyan evangelicalism, with its emphasis on Arminianism, perfectionism, and revivalism, spread far beyond the Methodists: Episcopalians, Presbyterians, and Congregationalists all adopted Wesleyan elements to varying degrees, as did—perhaps most unexpectedly—the Quakers. Starting in the 1830s, the Indiana Yearly Meeting of Friends came under the influence of the evangelical Quaker Joseph John Gurney and later Methodist revivalists; from then on, the so-called Quaker Trace of eastern Indiana became the dominant seat of evangelical or “Guerneyite” Quakerism in the United States. Given its influence, it is no wonder the region still exhibits an “enduring Methodist tinge” (Noll in Barlow and Silk, 2004).

The early evangelical culture of the Old Northwest was also notable for its urgent concern for social reform. Outstanding in this regard was the Reverend Lyman Beecher, a Connecticut Congregationalist who moved to Cincinnati in 1832 to assume the presidency of Lane Theological Seminary. (The Plan of Union of 1801 permitted Congregationalist-Presbyterian cooperation in this region.) Beecher argued in *A Plea for the West* (1835) that the destiny of the United States lay in the Mississippi Valley, and that without strong moral guidance the region risked developing into a corrupt society lost to debauchery, vice, or worse—Roman Catholicism. Beecher was tireless in establishing voluntary societies for the promotion of temperance, Sabbatarianism, Sunday Schools, and a whole host of humanitarian reforms. Beecher also preached a strong antislavery message from his pulpit, and his daughter Harriet conceived the idea for *Uncle Tom's Cabin* (1852) in Cincinnati. Another Presbyterian clergyman of reformist sentiments was the Yankee-Yorker Charles Grandison Finney. First as a faculty member and then as president, Finney transformed Ohio's Oberlin College into a preeminent center of perfectionist-inspired social reform, including radical abolitionism. Of all the social reform issues, antislavery dominated the Northwest (or what is now the Midwest) and not simply among Yankees. The Northwest Ordinance permanently barred the holding of slaves, so the region was a magnet for antislavery southerners who sought free soil in the West. For example, the North Carolina Quaker Levi Coffin worked tirelessly to protect runaway slaves and free blacks in Indiana and Ohio, and was known nationally as the “President of the Underground Railroad.” And it was the Virginia-born Methodist James B. Finley, long-time Ohio

circuit rider, whose agitation against slave-owning bishops led directly to the denomination's North-South split.

Finally, education formed an abiding concern among many of the migrants to the Old Northwest, with evangelical Anglo-Protestant clergy in the vanguard. This was the heyday of the founding of the region's denominational colleges, a surprisingly high proportion of which continue in operation (for Ohio alone, one can cite Congregationalist Marietta [1797], Presbyterian Miami [1809], Episcopalian Kenyon [1824], Baptist Denison [1831], Methodist Ohio Wesleyan [1841], and Disciples of Christ Hiram [1850]—not to mention those founded by German evangelicals). Despite their denominational identities, many of these colleges tended to encourage the admission of students and the hiring of faculty regardless of affiliation, again contributing to the region's undercurrent of nonsectarian evangelicalism. As for elementary and secondary education, denominationally sponsored academies for both sexes were plentiful, and many a minister supplemented his income by running a subscription school on the side. Moreover, evangelicals supported the creation of public school systems, perhaps because they interpreted Article III of the Northwest Ordinance as requiring religious instruction and thus saw public schools as an opportunity to bring evangelical Christianity to a larger audience. Readings from the King James Bible and hymn singing were commonplace, as was the use of the highly moralizing Eclectic Readers compiled by William Holmes McGuffey, a Presbyterian minister and professor at Ohio's Miami University. Such educational practices lasted for decades in the Old Northwest. Only in 1872 did the Ohio Supreme Court strike down reading from the King James Bible in the public schools in response to a suit brought by an unlikely alliance of Catholics, Jews, and free-thinkers from Cincinnati.

Germans in the Old Northwest

Concomitant with Anglo-American migration into the Old Northwest came large numbers of northern European immigrants, greatly complicating the religious scene. Some of this immigration was heavily localized, resulting in, for example, concentrations of Swedish and Norwegian Lutherans in northern Illinois and Wisconsin, and a pocket of Dutch Reformed in southwest Michigan. Germans, however, made up the largest, most pervasive immigrant stream during this period. By 1850, for example, 57 percent of the foreign-born in Milwaukee, the majority of the town's population, were from Germany. Cultural geographers still refer to the area

bounded by Cincinnati, St. Louis, and Milwaukee as the "German Triangle." Despite their numbers and common language, German influence was mitigated by their division into Catholics and Protestants, by the numerous sectarian separations within German Protestantism, and by intramural conflicts over modernization and Americanization that became acute with their movement west. The reasons for the intensification of these conflicts at this time and place are complex: Partly they stemmed from clashes of fresh immigrants from the Old Country with second and third generation Germans, whose ancestors had come to the American colonies the previous century; the conflicts also resulted from the extremes of cultural conservatism and liberalism that frontier life seemed to engender.

Whatever the reasons, within the full spectrum of German Protestantism—Lutherans, Reformed, Anabaptists, and Pietists—none managed to avoid schisms over the issues of modernization and Americanization in the Old Northwest. German Lutherans divided into bodies that were either relatively liberal (the Ohio Synod [1818], for example) or deeply conservative (the Wisconsin Synod [1850]), and the Mennonites, who are now found in force in northeast Ohio and northern Indiana, divided and subdivided, such that today there are at least sixteen separate Mennonite groups. Even the Amish, for whom antimodernism is a way of life, did not escape division as they gathered in the Old Northwest. Less complicated, but just as enduring, were the splits within the Pennsylvania-born Church of the Brethren that resulted in progressives (the Brethren Church) headquartered in Indiana, conservatives (Old Order Dunkers) in Ohio, and moderates (Church of the Brethren) in Illinois. German Protestants were capable of uniting in the face of external threats such as the rise of nativism in the 1850s and 1880s, but in general, like their Anglo-American cousins, German Protestants took full advantage of the region's freedoms to work out the various permutations of their faith.

About half of all German immigrants to the Great Lakes states at this time were Catholics. According to Jay P. Dolan, "It is the German presence that sets Midwest Catholicism apart" (Dolan in Barlow and Silk 2004, 111). In recognition of the large German population, John Martin Henni was appointed bishop of Milwaukee in 1844. Henni, like many of his compatriots, was convinced that the loss of German language in the United States would lead to an erosion of German culture and, ultimately, to a rejection of the Catholic faith. Among other actions, Bishop Henni appointed only German-speaking priests to his German parishes and

insisted that school instruction in these parishes be in the German language. This greatly concerned many Irish in the hierarchy who feared that this would lead to a rejection of the church by the predominantly Protestant United States. Bishop John Ireland, perhaps one of the most extreme “Americanists,” demanded that English should be the sole language of the American church, and he even went so far as to say that Catholics should send their children to public schools to ensure a degree of assimilation. The conflict between German and Irish Catholics smoldered for decades until finally, in 1899, the Vatican condemned the extreme “Americanizing” position seemingly held by some Catholic liberals such as Ireland. Although the intent of this condemnation was more to preserve the integrity of the American church and not ethnicity *per se*, the impact of the regional conflict between Germans and Irish was to ensure the survival and expansion of language parishes throughout the United States well into the twentieth century.

The German migration to the Great Lakes states brought with it a small but vibrant population of Jews. By 1850, noticeable Jewish populations could be found in Cincinnati, Cleveland, and St. Louis; in the following decades Chicago, Milwaukee, Detroit, and Columbus also emerged as important centers of Jewish life. Before the Civil War, Jewish immigrants came unaccompanied by rabbis or other religious specialists, and thus were thrown to their own devices to preserve their faith. In the predominantly Protestant environment, changes to synagogue practice were made, such as English services, sermons, choir singing, and family seating. Such Americanizing accommodations facilitated the rise of Reform Judaism in the region. Reform Judaism, which had begun in Germany in the 18th century, championed the notion that Judaism was adaptable to the times, and to this end, its leaders suggested major changes in ritual and Jewish law (*halakah*), as well as outright rejection of such things as messianism, dietary restrictions, and the inviolability of the Sabbath. In 1853, Isaac Mayer Wise, who became the great leader of Reform Judaism in the United States, became the rabbi of Congregation Bene Yeshurun in Cincinnati. He immediately led the congregation away from traditional practices, and in 1857, published the book of Reform service, the *Minhag America* (*American Ritual*) to codify these radical changes. Of even more lasting importance perhaps were the series of national Reform organizations spearheaded by Wise. At a conference of Reform congregations held in Cincinnati in 1873, the Union of American Hebrew Congregations was formed. At

its first meeting in Cleveland the following year, the union voted unanimously to establish the Hebrew Union College, which opened in Cincinnati in 1875 with Rabbi Wise as its president. Finally, Wise was also instrumental in the creation of the Central Conference of American Rabbis (CCAR) in Detroit in 1889. Although based in the Great Lakes states, each of these organizations helped strengthen the cause of Reform throughout the country.

Urban Protestantism in the Industrial Heartland

With the concurrence of abundant natural resources, available capital, growing transportation links by water and rail, and the catalytic action of the Civil War, the Great Lakes states entered a period of massive industrialization beginning in the 1860s. By the beginning of the twentieth century—and with the rise of the automobile industry—the Great Lakes states were the heart of the nation’s industrial economy. Industrialization necessarily led to greater urbanization, and across the region, previously insignificant towns burgeoned into ungainly metropolises. Chicago, ranked eighth among U.S. cities in 1860, was number two in 1890 when its population reached more than a million. Many cities in the region also saw explosive growth during this period, either through new foreign immigration or in-migration. Such immigration shifted the ethnic balance of the region yet again: Although Germans and Irish remained the largest foreign-born groups in most cities, they were now joined by large numbers of Scandinavians, Slavs, and Italians. And once foreign immigration was effectively stopped after World War I, the region’s industries attracted new mass migrations, this time of blacks and whites from the South.

Anglo-American Protestants, despite stereotypes associating them with rural and small town environments, adapted quite well to the growing urbanism of the Great Lakes states. As one historian put it, Protestants during this period were very much “at home in the city” (Lewis 1992). Congregationalists, Presbyterians, Methodists, Episcopalians, and Baptists all typically maintained large congregations and expensive physical plants downtown as symbols of their civic influence. Beyond simply status, many Anglo-American Protestants also saw city ministries as a golden opportunity for mass evangelism. Dwight L. Moody, a Congregationalist layman who settled in Chicago in 1856, saw most clearly the possibilities for urban missions. First working to evangelize the city’s poor and then as president of the Chicago Young Men’s Christian Association (YMCA), Moody discovered his gifts as a popular revivalist

and cultivated a powerful non-denominational message. After an extended revival tour through the great cities of Britain, during which he and his music director, Ira Sankey, perfected the use of popular hymnody, Moody returned to the United States to conduct a series of extremely successful urban revivals in major U.S. cities. His model of urban revivals was widely copied with varying degrees of success, setting off an extended period of revivalism that was particularly strong in the cities and towns of the Midwest. Later generations of urban evangelists such as Billy Sunday and Billy Graham owed a debt to Moody's pioneering work. Widely acknowledged as the most effective revivalist of the Gilded Age, Moody capped his work in 1886 with the founding of a practical training school for urban evangelists, the Chicago (later Moody) Bible Institute.

Although they saw opportunities in the city, Anglo-American Protestants were not blind to the immense social problems created by urbanization, especially civic corruption and the plight of the working classes. Many a pastor of a downtown church worked tirelessly, if quietly, "to clean up the city" and rid city government of graft and tolerance of vice. Many advocated the creation of the so-called institutional church, which offered recreational and educational opportunities that, it was hoped, would make it more attractive than the saloon or pool hall. Moreover, this was the era of the urban rescue mission, such as Chicago's Pacific Garden Mission, that, in addition to religious services, offered food, temporary lodging, and employment help. Several Protestant church members, however, influenced by various currents of modernist theology, political progressivism, and academic sociology, felt that more needed to be done than saving souls—that society itself must be redeemed by reforming its economic structure. This line of thinking became known as the Social Gospel and flourished in a loosely articulated movement from about 1870 to the 1920s. The rapidly urbanizing industrial heartland produced several key leaders of the movement, including the Congregationalist clergyman Washington Gladden. From his pulpit in Columbus, Ohio, Gladden preached a powerful critique of laissez-faire capitalism, which he expanded into books with titles such as *Working People and Their Employers* (1876), *Applied Christianity* (1887), and *Social Salvation* (1902). In a few instances, Social Gospel ideas penetrated to the level of practical politics and informed policy, as in the case of Samuel M. ("Golden Rule") Jones, elected mayor of Toledo in 1897. Living up to his nickname, Jones based his public policy on a Christian-inspired egalitarianism, once

saying that he "consider[ed] the rights of the weakest child in the city as being equally important with those of the greatest and wisest man" (Teaford 1993, 115).

Urban Catholicism in the Industrial Heartland

After the Civil War, the Catholic Church in the Great Lakes states was largely an urban church, with most new foreign immigrants attracted to the industrial jobs in the cities. In light of this, Roman Catholics, too, addressed themselves to the larger social problems engendered by urbanization and industrialization. At first still outsiders, most Catholic clergy shied away from overt criticism of the economic system of the United States and devoted themselves mainly to charity work. The Catholic hierarchy maintained cool attitudes toward labor, and they were especially suspicious of labor organizations because at this time they functioned much like secret societies. Nevertheless, in 1891, Pope Leo XIII issued the encyclical *Rerum Novarum*, which, while condemning socialism, recognized the rights of labor to fight for social justice. The bishop of Peoria, John Lancaster Spalding, interpreted this to mean that now the church should focus on the saving of society as well as souls. An entire generation of Catholic clergy were similarly inspired and became actively involved in issues of labor and in the creation of a specifically Catholic Social Gospel. Accordingly, in 1893, the Columbian Catholic Congress met in Chicago to discuss the rights of labor, and in subsequent years, Catholic bishops including Spalding were instrumental in the successful mediation of protracted strikes. Well into the twentieth century, the region's Catholic Church would be noted for being the most reform minded in the nation, with the archdiocese of Chicago leading the way by generating several effective organizations dedicated to labor issues and social justice generally.

In addition to the problems of urbanization and industrialization, the church also faced a massive influx of Catholics from Eastern Europe (primarily Poles, Czechs, and Slovaks) and Southern Europe (primarily Italians). Of these "new" immigrants, the Slavs—especially the majority Poles—were the most visible and voluble; indeed, the Polish Catholic presence in Cleveland, Detroit, Chicago, and Milwaukee long set these cities apart from the still strongly Teutonic Catholicism of Cincinnati and St. Louis. Chicago's first Polish parish, St. Stanislaus Kostka, was erected in 1867, and by 1899 it was reputed to be the largest in the world, counting some 50,000 parishioners. By 1910 some 400,000 Poles made Chicago their home, whereas Milwaukee and Detroit

played host to 100,000 each. This stunning growth was not without its challenges. In a time when most of the hierarchy was de-emphasizing ethnic separatism within the American church, Polish Catholics were even more fiercely committed to national parishes than were the Germans before them. Confronted with the threat of schism over this issue, the hierarchy eventually appointed Polish bishops, and the Polish language continued to be taught in some parochial schools until the 1970s. Polish Catholicism remains a distinctive presence in the cities of the Great Lakes, especially in places such as Chicago that received renewed Polish immigration in the last decades of the twentieth century.

The Great Migrations

Beginning with the industrialization of the upper Midwest in the late nineteenth century, large numbers of southerners, both black and white, were attracted to the relatively high paying jobs industry offered, thus setting off the greatest internal migration the nation has yet known. Southern migrants came in three waves: the period from the beginning of the twentieth century to the outbreak of World War I; the period after World War I, which saw severe restrictions of foreign immigration accelerating southern migration; and the period starting with World War II and the boom in defense work, which lasted until the late 1970s. By this time, the Great Lakes and Plains states hosted some 1,485,658 southern blacks and 3,167,995 southern whites. Both “great migrations,” black and white, profoundly affected religion in the Great Lakes states.

Once in the northern cities, African Americans had a range of choices to fulfill their religious needs. Many joined white denominations, which created segregated congregations to accommodate them. For example, after 1900, new all-black congregations of Catholics, Congregationalists, Presbyterians, and Northern Baptists arose in Detroit. Others joined the all-black denominations (Baptist, African Methodist Episcopal [AME], or AME Zion), swelling these churches’ membership rolls and often leading to the creation of several new satellite congregations. In Chicago, the prestigious Olivet Baptist Church grew from 4,000 in 1915 to almost 9,000 five years later, becoming the largest Protestant congregation in the United States. In turn, it spun off five new congregations by 1919, and many of these became prominent churches in their own right. Although many older members of these established black churches feared the social effects of absorbing so many rural migrants, most sought to ease their transition. Chicago’s Olivet Baptist

Church began a relief program for unemployed blacks in 1908, and Bethel AME of Detroit created separate social services, housing, and labor departments to reach out to the new migrants. Perhaps the most ambitious of such efforts was that spearheaded by the Reverend Reverdy C. Ransom, whose Institutional Church and Social Settlement of Chicago, founded in 1900, applied the methods of the Social Gospel to the problems of the black urban poor. Despite attempts at outreach, not all migrants found the established churches welcoming: Many were too large and too impersonal, were too concerned with social issues and less with salvation, had worship that was too formal, and provided few opportunities to participate in the leadership. Many migrants therefore opted for the small house or “storefront” churches, mainly of the sanctified (Holiness and Pentecostal) variety. Others abandoned Christianity altogether, joining new sects such as the Nation of Islam, which had its roots in 1930s Detroit.

As with southern blacks, southern white migrants were also highly religious and tended to regard as important locating an amenable congregation near their new homes. Since there were no racial barriers, many joined existing white congregations, although northern religious styles tended to be unfamiliar and at times intimidating. Northern white churches, it must be said, did much less than their black counterparts to attract southern migrants. White southern migrants in this situation did what their black counterparts did: They built their own churches—churches often with a marked southern fundamentalist flavor. Although some were Holiness and Pentecostal churches (Rex Humbard, for example, established the seat of his televangelist empire near Akron, Ohio, in 1958), most were Baptist. The Southern Baptist Convention (SBC) had agreed with the Northern Baptist Convention not to found churches in the North (the 1894 Fortress Monroe agreement), so the new Baptist churches founded by southerners were either independent or members of small, ultra-conservative Baptist associations. After World War II, however, the SBC changed its policy, citing the fact that many of the Baptists in the North were un-churched southerners. A veritable explosion of SBC church building outside the South ensued. In the Midwest, in addition to the Illinois association founded in 1907, Southern Baptist state associations were founded in Ohio (1954), Michigan (1957), and Indiana (1958). In the 1970s, Southern Baptist growth in the region slowed, as southerners began to migrate to the Sun Belt, either to retire or because the industrial jobs on which

they depended were, ironically enough, shipped to the less expensive South.

Rust-Belt Religion

After World War II, there were massive changes in the economy and social geography in Great Lakes states. Beginning well before the war, but accelerating greatly after, the central cities of the region began to lose their upper- and middle-class populations to the ever-expanding suburbs. The percentage of owner-occupied houses (a good indication of suburbanization) increased exponentially, and by 1950 the nation's top twelve metropolitan areas in terms of this percentage were found in Michigan (the highest), Indiana, and Ohio. Following this largely white exodus to the suburbs were retailers and other downtown employers, leaving the now largely black inner cities to decay as "reservations for the impoverished" (Teaford 1993, 211). The simultaneous decline of heavy industry and manufacturing throughout the Great Lakes states exacerbated the situation, turning the region into what journalists by the late 1960s were derisively calling the "Rust Belt." Moreover, except for the Chicago metropolitan area, the large-scale foreign immigration and domestic in-migration that had so characterized the region throughout most of its history had ceased by the 1970s and 1980s. To a large extent, each of these changes is reflected in the postwar religious history of the Great Lakes states, presenting several interesting case studies of the behavior of religious people and institutions in times of wrenching socioeconomic change.

In the late 1940s and early 1950s, new suburban developments in places such as Livonia east of Detroit and Parma south of Cleveland attracted many young middle-class couples that, after wartime delays, were looking to own their own homes and start families. Like their pioneer forebears, these people accepted the lack of established community and cultural institutions of new suburban developments as a necessary sacrifice for cheap homesteads. But, also like their forebears, these pioneer suburbanites just as quickly set about creating these community institutions, especially the schools and churches so necessary for the socialization of their children. A large part of the celebrated religious revival of the 1950s was actually the result of the success of mainline denominations in catering to this demographic through massive church and synagogue-building campaigns and financial support to newly organized suburban congregations. Ecclesiastical architects soon discovered that the same prefab construction techniques that made suburban

developments so profitable could also be applied to make church construction cheap and cost effective (hence the proliferation of cinderblock sanctuaries and "abstract" stained glass windows). What these churches lacked in elegance and solidity, they made up for in sheer numbers, and their modernist architecture became a proud symbol of the new suburban lifestyle. In addition, the young clergy who staffed these new churches tended to be sociologically trained, organizationally minded, and more liberal than their elders, lending a certain progressive tone to suburban religion.

Not all were happy with the success of suburban churches. Beginning in the mid 1950s and continuing into the 1960s, a series of sophisticated jeremiads appeared decrying the shallowness of much suburban religion. One the more famous of these came from the pen of Gibson Winter, an Episcopal priest based at the Parishfield Community Center outside of Detroit. In his widely cited article, and later book, *The Suburban Captivity of the Churches* (1961), Winter contended that suburban religion was a bland, conformist faith that was ultimately doomed to extinction. Although much of the bitterness of such critiques probably reflected the clergy's frustration that suburbanites did not take the opportunity of new beginnings to totally dedicate their lives to religion, the charge of shallowness was undoubtedly correct. As the newness of the suburban churches wore off and their modernist architecture became dated and dowdy, memberships began to drop, especially as the Great Lakes states' economies began to sag. Many first-generation postwar suburbanites retired to the Sunbelt, while their baby boomer children gradually replaced churchgoing with a variety of leisure activities.

When later generations of suburbanites did return to church—mainly in search of a community in which to socialize their children—they increasingly eschewed the neighborhood church and sought out large megachurches, such as the now-famous Willow Creek Community Church outside of Chicago. One observer has argued that the popularity of such megachurches in the Midwest reflects the region's lingering "Methodist tinge" and the legacy of camp meetings (Noll in Barlow and Silk 2004). This may be true, but probably more important is that megachurches are far more shaped by suburban values than Winter would have ever believed possible. Most megachurches are denominationally independent and led by charismatic preachers who theatrically purvey a highly simplified, homogenized, and sentimental evangelical spirituality, thus appealing to a suburban clientele little interested in theological issues but

intensely interested in success, celebrity, and spectacle. Moreover, suburbanites value convenience, and megachurches function like shopping malls by offering several services under one roof—from worship services to softball teams to Starbucks (unlike the Social Gospel–inspired “institutional” churches of the inner city, megachurches are wholly consumer-driven phenomena). Finally, the massive congregations of megachurches help preserve the anonymity with which most suburbanites are comfortable, thereby allowing them maximum flexibility in the depth of their commitment. Anonymity makes megachurches a little less restricted than neighborhood churches in class (members commute to these churches and are rarely next-door neighbors), but even more susceptible to rapid membership turnover. Despite this, megachurches have become increasingly common in suburban communities, and as suburban values have become U.S. values over time, the church has found its way into the rural countryside and the city.

Throughout the Great Lakes states, from Cleveland to Detroit to Milwaukee, postwar suburbanization coupled with the loss of heavy industry contributed to the precipitous decline of most of the region’s central cities. The result has been the death of many of the white middle- and upper-class mainline congregations once proudly located downtown. Many of the grand architectural monuments built by these congregations during a city’s heyday have either been demolished or sold, primarily to black congregations. Indeed, what religious vibrancy there is in the region’s central cities is now found almost exclusively in African American churches. Long barred from the suburbs, the black middle class has continued to support downtown churches so that many older congregations such as New Bethel Baptist of Detroit and Cleveland’s St. John’s AME still thrive despite urban decay and growing poverty. And, as inner-city politics have increasingly become controlled by African Americans, the pastors of “establishment” black churches have come to play a prominent political role equal to that played by ministers of the white downtown churches before World War II.

Of all the cities in the Great Lakes region, only one has managed to overcome the malaise of industrial decline and white flight: Chicago is the only city in the region to emerge as a global city—that is, a hub in the global service economy. As such, the city attracts both the very wealthy and a huge population of service workers, mainly newly arrived immigrants from around the world. What this means for religion is the strong presence of vibrant and increasingly diverse Christian churches spread fairly evenly throughout the

metropolitan area, including its core. Unlike most of the old industrial towns of the Great Lakes region, Chicago’s old downtown churches such as Fourth United Methodist Chicago Temple, Old St. Patrick Catholic Church, and Fourth Presbyterian continue to serve active and growing congregations, mainly by reaching out and welcoming more and more heterogeneous populations—a strategy adopted by many of Chicago’s more successful churches. This increasing openness to cultural diversity (a necessity in a global city) has also encouraged the survival and modest growth of Chicago’s Jewish community, and it has paved the way for the appearance of relatively large and self-sustaining congregations of Muslims, Hindus, Sikhs, Jains, and Buddhists, thus making Chicago the most religiously diverse city in the Midwest.

Many factors went into the evolution of the religious life of the Great Lakes states, factors ranging from a foundational commitment to religious freedom and pluralism, to a changing constellation of ethnic and racial diversity, to the relatively peaceful coexistence of Protestant and Catholic cultures for more than a century and a half. And yet, if one were to point to one overarching force that has shaped the region’s religious history, one would have to point to the impact of large-scale economic shifts on the region, especially their impact on the changing loci of religious vitality within the region. In the frontier period, a vibrant and creative religious life spread almost evenly across the landscape, only to be concentrated in the major cities upon industrialization and the suburbs upon de-industrialization. Such economic shifts and such relocations of religious vitality have occurred in other regions, but the rapidity and thoroughness of the process at each stage is perhaps unique to the Great Lakes states. Moreover, unlike any other U.S. region, with the advent of globalization, the religious vitality of the Great Lakes states has become concentrated in Chicago, a single massive metropolis whose cultural domination over the region is destined to grow even stronger with time. What impact this centralization of religious energy and creativity in a single global city will have on the subsequent religious development of the region will be the key question for observers of religion in the Great Lakes states in the decades to come.

Great Plains Region

To understand the religions of a region, it is helpful to examine its environmental characteristics and its history of human occupation because interpretations and forms of worship often reflect the environment with which believers cope. Although characteristics of the natural environment are intricately incorporated into most ancient religions, this relationship may be less obvious in religions with creeds and sets of beliefs enunciated by historic figures. The focus here is on how the religious history of the Great Plains distinguishes it from other parts of America.

Defining the Great Plains Region

Comments about the distinctiveness of the Great Plains are dependent on its definitional boundaries, which involve regionalization: the division of the earth's surface into areas that simplify the tremendous variations in one or more phenomena. Regions are defined in the same way as classes, namely, in a manner that minimizes the variations within each one and maximizes the differences among them.

The task of regionalization is often complicated because some boundaries realistically are transitional zones, where the characteristics of one area shade gradually into an adjoining one. In the case of the Great Plains, for example,

the eastern edge merges almost imperceptibly into what is considered the Midwest.

According to common understanding, the Great Plains is regarded as distinct on the basis of two factors: location and climate. The location refers to its position in the interior of the United States. In contrast to most other regions, no part of the Great Plains has a coastal border. This interior position affects at least two major factors.

One factor is the region's general dryness. Being a long ways from the maritime sources of moisture, much of the Great Plains receives limited precipitation and is defined as semiarid. This climatic condition, in turn, has affected the population density of the region. Although much of the land was filled by Euro-American farmers living in small towns in the latter part of the nineteenth century, within half a century depopulation began. Farmers realized that under a system of commercial agriculture, the number of crops that could be grown profitably in a dry climate was limited. Even though irrigation could compensate for the lack of moisture, it required a large investment, which led to consolidation of farm ownership. This trend continued as most rural counties in the Great Plains lost population when farm families, along with the persons providing small town services, left and moved to urban areas.

Combined with the physical limitations of a dry climate is the isolation of the region from major markets. The distance to markets, both domestic metropolises and port cities with foreign connections, greatly limits the economic viability of the region. This isolation is exacerbated because even regional markets tend to be located on the periphery of the Great Plains. This factor of inaccessibility tends to complicate efforts to overcome the limitations of climate. The net effect is a region that has experienced, and continues to experience, rural depopulation, along with attitudes and perspectives associated with declining communities.

The low population density, especially in nonmetropolitan areas, affects the cultural milieu in innumerable ways. It is related to the frequency with which individuals interact, the diversity in personal interactions, the availability of social and commercial services, the kind and size of public events, the time spent in traveling to work and school, and the laws enacted for low-density situations. Apprehension about population decline permeates the cultural climate and religious perspective of the region.

The factor of location has contributed also to the history of the Great Plains, with settlement by Euro-Americans occurring later than in most other parts of the country.

During the earliest years of intrusion into Native Americans' land, the expansion was justified in terms of Manifest Destiny. The land was primarily traversed from the settled East to the new lands of the West. Later, following the Civil War, settlement of the land occurred rapidly over the next few decades. This region, therefore, is distinctive because it lacks both the long history and the prospects for economic growth that are more common elsewhere in America.

These criteria of dryness and isolation apply equally to parts of Canada, but here the focus is on the United States, which means the northern extent of the Great Plains is defined by the international boundary. On the west, the region is delineated by mountains and the resultant climatic divide. The southern boundary, which is partly defined by the international border with Mexico, corresponds to the Bolcones Escarpment, which excludes the area identified as the Texas Gulf Coast.

The delineation of the eastern edge of the Great Plains, however, differs greatly because of variations in the criteria utilized. In an attempt to discover a consensus, Rossum and Lavin examined fifty published versions of the regional boundaries. They discovered all the versions of the eastern boundary generally lie along two paths. The more restrictive path approximates the 98th meridian, which means the eastern portion of the Dakotas, Nebraska, Kansas, Oklahoma, and Texas are not regarded as part of the Great Plains. The other path places the eastern boundary at the Mississippi River but excludes Louisiana and often Arkansas and Missouri. For the *Encyclopedia of the Great Plains*, the editor compromised these two sets of lines by utilizing the state boundaries of the Dakotas, Nebraska, and Kansas for the eastern boundary. According to this definition, the region encompasses approximately six hundred counties in ten states. This is the definition generally accepted here, but it is expanded to include the transitional states of Minnesota and Iowa.

Further refinement in the description of this region is achieved by noting internal differences. A major locational factor that must be acknowledged when generalizing about the Great Plains is the contrast between rural and urban areas. This differentiation is important in part because the population is declining in most of the region, while it is increasing in the urban areas. Since most of the major cities situated within the boundaries defined for this region are on its periphery, one could logically argue that they are not truly a part of "the Great Plains."

Another factor contributing to internal variations within the Great Plains is implied by the fact that some geographers

consider the 98th meridian as differentiating the physical landscape between west and east. Differences are reflected also by the socioeconomic association with livestock ranchers in the west and crop farmers in the east.

In spite of these internal differences, the question arises: Can a region be defined in such a way as to be applicable in understanding religious variations? Are there characteristics of religion that are distinctive in this part of the United States?

Distinctive Characteristics of Religion

Differentiating religious behavior in the Great Plains from other regions of the United States can be approached by examining the areal distribution of various components of religion. Even though studying maps of religious characteristics provides an effective way of detecting regional differences, this technique possesses limitations.

One problem concerns what constitutes a particular religious group (which here is called a *denomination*, irrespective of its spiritual perspective and organizational characteristics). The task is straightforward for many denominations because they exist as established religious bodies; consequently data on their memberships have been collected and can facilitate discerning patterns. However, for several groups, especially those following a New Age belief or a recent variant of an Asian religion, questions about their religiousness and "membership" complicate the collection of data. Furthermore, even for the more mainstream denominations, comparisons among them are complicated by different definitions of what constitutes membership.

Closely related to this problem is the task of grouping the multitude of denominations into meaningful categories, which is necessary for forming generalizations. Here broad terms for the four leading denominations of Lutheran, Catholic, Baptist, and Methodist are examined, but with the recognition that within each of these major groupings are smaller denominations (except for the Catholics). Although the subgroups within each general denomination may retain similar names and/or institutional structures, their beliefs and practices often vary considerably.

Another problem encountered when analyzing spatial data concerns the size of the areal unit from which statistics are collected. The generalizations stated here arise primarily from analyzing religious data for counties, which constitutes a good compromise between data for entire states and individual towns or census districts. Of course this decision affects, for instance, the observed degree of religious

diversity because larger areal units normally enclose a greater number of denominations.

One characteristic having relevance is religious adherence, which is measured by the percentage of church members in a given population. Even though mere membership in a church does not necessarily indicate congregants' theological positions, attitudes about social issues, or degrees of involvement, the number of persons belonging to various denominations in each county generates an indicator of religious differences. In spite of these limitations, this statistic provides a practical index to the concept of religiousness.

The mapping of church adherence for U.S. counties by geographer and social scientist Lisa Jordan reveals a high level of adherence within the boundaries of the Great Plains. In the central part of the United States, a major north-south swath of counties has adherence of 55 percent or above. With exceptions of the "Mormon region" in the west and some scattered counties in the east, the area of high adherence coincides well with the region defined as the Great Plains. Evidence that the counties with high adherence do form a distinctive regionalism is further supported by an analysis of spatial clustering—that is, the degree to which adjacent counties are similar. Jordan found this index of clustering to be moderately strong in this part of the United States. In summary, counties in which church adherence is relatively high form a region that does, indeed, coincide with the area defined as the Great Plains.

Even though the distribution of high religious adherence in the United States exposes the distinctiveness of the Great Plains, internal variations do exist. In addition to the western counties having lower percentages than the eastern ones, Jordan's mapping reveals that there is a north-south divergence, with the central portion having lower levels than the north and south. Differences also reflect the degree of urbanization, with urban counties generally displaying lower adherence than rural ones.

Another pattern of religion can be produced by determining the denominational diversity within each county. Measuring the degree to which residents in a county differ in their religious beliefs and practices is difficult because of the many internal variations within most denominations, which are accentuated when grouped into broad categories. In addition, the lack of data for some religious groups complicates a precise measurement of diversity.

The spatial distribution of religious diversity in the United States does not match adherence and, therefore, does not depict a pattern that corresponds closely to the Great

Plains. To illustrate, many contiguous counties in Texas and Oklahoma show little diversity, but this homogeneity does not extend to other broad areas of the Great Plains. Also complicating a spatial generalization is the observation that the eastern edge of this subregion is indistinct. Even though more diversity generally occurs in the northern portions of the Great Plains, counties with the highest diversity tend to be scattered. This characteristic undoubtedly reflects the fact that adjacent rural counties with smaller and more homogeneous populations contain fewer different denominations, while urbanized counties normally have higher population densities that support a greater variety of churches.

The locations of members of the four leading denominations generally cluster into subregions. Baptists are concentrated in Oklahoma and most of Texas; and Lutherans are the dominant denomination in Minnesota, most of North Dakota, eastern South Dakota, and northern Iowa. Catholic counties include most of Montana, Wyoming, Colorado, New Mexico, and southern Texas. The Catholic region also extends into western South Dakota; and Catholicism is common (it ranks second) in the "Lutheran" region. Except for a relatively small area in western Wyoming where the Church of Jesus Christ of Latter-day Saints is the plurality denomination, the remaining part of the Great Plains might be identified either as Methodist or "mixed." In this subregion, which covers Nebraska, Kansas, and southern Iowa, the pattern of counties showing a particular denominational strength is scattered. Although Methodism is the plurality denomination in many counties, they are not contiguous.

A Historical Perspective

Understanding these patterns of religion is enhanced by reviewing a few historical components of the region and the denominations. The non-Native American population migrated into this region predominately from the 1860s until the 1920s. Settlement replicated the normal flows of migration as newcomers clustered into ethnic and religious communities. In some cases, these aggregations were initiated by European religious leaders who brought many congregants to this newly "opened" land. This selectivity in destinations resulted in subregional variations in the population. In the northeastern portion of the Great Plains the settlement was dominated by Scandinavians and Germans; in the central portion by Germans, Irish, and English; and in the south by Germans, Irish, English, African Americans, and Mexican Americans.

In the early years of settlement, the cultural outlook was a mixture of both independence and dependence. Immigrants,

by their willingness to leave the security of family and community in their original homes, became deeply involved with solving their physical needs and establishing a functional society in this “new” land. Independence in thought and practice was characteristic of the people who had left traditional cultures and were facing new and difficult challenges. Simultaneously, the population of the Great Plains was highly dependent on outside economic forces. Policies regarding land ownership were made by the government in Washington, D.C.; markets for agricultural products, which were critical for economic survival, were located outside the region; and the transportation of goods was highly dependent on railroads owned by outsiders.

The characteristics of the Great Plains underwent numerous changes in the first half of the twentieth century. Although the “Dust Bowl” and “Great Depression” were dramatic, these events represented conditions that extended over a longer period. The initial euphoria generated by advertisements luring prospective settlers, by several years of sufficient rainfall, and by periods of good prices for agricultural goods was soon replaced by more realistic awareness of the limitations of the region. Farmers eventually realized that the fluctuating cycles of wetter and drier weather could result in phases when precipitation in the Great Plains would be insufficient for arable crops. When these adverse weather conditions coincided with economic recessions, many families abandoned their homes and moved to other regions of the United States. The rural depopulation that was publicized widely in the 1930s actually commenced with the turn of the century and has continued since then.

These climatic and economic conditions apply particularly to the “core” of the Great Plains. At the eastern edge of the region, where physical characteristics merge into the Midwest, the effects of drier years are lessened and the accessibility of markets is increased. On the western edge, where the aridity was always accepted as a given, the land is utilized for ranching. This does not mean generalizations about the Great Plains do not apply to the entire region, but they tend to be especially typical of the central north-south swath.

In more recent decades, the climatic problem of aridity has been partly solved for crop farmers by investing in irrigation, but recent controversy over access to ground and surface water has become a restraint. The economic dependence on outside markets persists. In rural counties, depopulation continues as commercial farming operates with larger landholdings and many small farmers abandon the land and seek employment elsewhere, usually in urban centers, either

within the Great Plains or in other regions. These changes result in rural areas continuing to reflect traditional cultural characteristics, while urban centers resemble the mixtures of American population in general.

Associated with these changes in the economic and cultural history of the region are religious characteristics. When early immigrants established a new society in a strange land, church membership was often important. When a community was dominantly one ethnic group, the church was a vital component of community life. Where towns were less ethnically homogeneous, several denominations often built churches and competed for new members. As rural communities declined with depopulation, many open-country and small town churches disappeared. The remaining ones, however, frequently increased their importance because they continued to serve the societal need of belonging to a community.

In contrast, religion in urban areas became more denominationally diversified, as arrivals came from numerous formerly homogeneous communities within the region and from a variety of foreign areas. With the tremendous variety of organizations and social opportunities, the role of urban churches has varied. Survival for some has meant expanding their mission to include an assortment of activities, while others maintain their strength through strong ethnic identity and sense of community.

Differences among Four Denominations

Additional understanding of religion in the Great Plains can be gained by noting some of the differences among denominational histories and current significance. Main attention is given here to the major Christian groups of today and to the dominant religion prior to the mid-nineteenth century, but a few non-Christian religious organizations are also discussed briefly.

Christian religions were introduced into the Great Plains first by Catholic priests, who accompanied Spanish explorers into what is now New Mexico and Texas. Not only was this nonindigenous religion located in just a small portion of the region, but the number of adherents was relatively small. This denomination grew in importance when Catholic Euro-Americans migrated into the area and became part of the resident population. Nearly a third of the Germans, who constituted approximately a fourth of European immigrants in the last half of the nineteenth century, were Catholic. The Irish, who were a significant segment of the immigrant population into the Great Plains, also increased

the Catholic population. A century later, Catholics from Latin America and Southeast Asia became a significant part of the immigrant population.

In spite of the nineteenth-century prevalence of hostility to Catholics by many evangelicals who regarded Protestantism as the “national” religion, growth of the Catholic population also occurred through conversions. By the end of the twentieth century, the distributional pattern of Catholics in the Great Plains revealed their importance throughout the region. Although the Catholic subregion suggests a concentration in the western portion of the Great Plains, Catholics are numerically important in many counties elsewhere, especially in the areas settled by Germans, such as the Lutheran subregion.

The pattern produced by counties with high percentages of Catholics does not necessarily reveal their numerical importance in urban areas, where the proportion of all Catholics is considerably greater than for the other three denominations examined here. Because of the diversity of denominations, the percentage of Catholics in urban centers is diluted, which affects the mapping of denominational strength by counties; nevertheless, their sizeable total makes them a major religious group in the Great Plains.

Lutheranism became a significant part of the religious landscape in the Great Plains, with the immigration of Scandinavians and Germans in the second half of the nineteenth century. This religious affiliation persisted, so the area where they settled now forms a Lutheran region today. Although this areal concentration suggests a religious homogeneity, diversity of beliefs occurs within this denominational grouping because a multitude of synods, based on ethnic heritage and geographic origins, merged and recombined through time. Diversity within the subregion also results because several counties having Catholic communities, with similar geographic roots, are intermixed with the Lutheran ones.

Later generations of Lutherans have moved to urban areas, so the original rural communities are no longer the overwhelming residential setting, but the remaining ones retain the strengths of religious affiliation. In small towns that have experienced depopulation, the Lutheran church has become increasingly important as the center of community life and an important influence in the social and political behavior of the residents.

The Baptist subregion is located primarily in Oklahoma and most of Texas. The development of this denominational concentration contrasts with those of the Catholics and Lutherans because it resulted more from family migrations from other parts of United States and from individual

conversions than from the settlement of ethnic communities. Furthermore, the earliest establishment of Baptists in these two states differs because of their unique histories. In Texas, evangelical Christianity commenced when the prohibition against all denominations other than Catholicism ended in 1834. Within a few years, Baptist missionaries from other parts of the United States held camp meetings and organized congregations. By 1850, 70 Baptist churches (compared to 173 Methodist and 47 Presbyterian churches) had been established. Generally these were located in the eastern portion of the state, where the agricultural economy mirrored that of the South. As the denomination grew, numerous splits—some caused by views about slavery—and mergers led to a variety of theological and social differences; nevertheless, the Baptist family of churches continued to grow faster than other denominations. By 1906, Baptists were the largest denomination in the state. Even in counties having a Catholic majority, Baptists now are often the second-ranked denomination in percentage of adherents.

In Oklahoma, some of the first Baptists were members of one or more of five Native American tribes who were deported to Indian Territory, even though for a while, Creeks persecuted those who became Christians. The growth of the Baptist churches developed as a result of missionary efforts in the Indian Territory and later expanded when the territory was opened for settlement. The message of Baptist preachers and the structure of their organization appealed to the lives of the settlers on the frontier. Eventually the Baptist family of churches became dominant in Oklahoma, and currently this denomination has more than half of all religious membership in the state. Baptist growth in the Great Plains has nearly doubled in the past four decades, accentuating the homogeneity of this subregion.

The essence of the remaining subregion is its mixture of religions. Seldom do more than half the adherents in each county belong to any one denomination, but Methodists, Catholics, and Lutherans are usually the largest religious populations. In most counties, Presbyterian, Disciples of Christ, and Mennonite churches, as well as numerous other smaller groups, contribute to the variety of denominations. In addition to this multiplicity within counties, the spatial distribution of counties by denominational strengths does not form contiguous areal groupings.

This subregion can be identified with Methodism because of its ubiquity, with churches in nearly all counties. This extensiveness resulted from its rapid growth during the settlement period. Methodist, as well as Baptist

and Presbyterian, preachers spoke to the spiritual needs of struggling families on the frontier. In contrast to the established churches of the East with formal sermonizing, the message of Methodism was compatible with pioneer conditions. Camp meetings and circuit riders were especially effective in contacting a population scattered across a land with limited infrastructure. Its localized church organization was conducive to the formation of small congregations in this region of sparse population.

Although rural depopulation in the Great Plains has meant a decline in the size of congregations outside of the large cities, Methodist churches are still common in most small towns and hamlets. In many surviving hamlets, the Methodist church is one of the few institutions remaining, long after schools, retail shops, and other services disappear. Generally Methodism has a larger number of adherents in rural areas than other denominations. Nevertheless, the community cohesion fostered by a Methodist church in small towns is seldom as strong as in those dominated by Lutherans.

Non-Christian Groups

In addition to these four main denominations, as well as numerous other Protestant churches, a variety of non-Christian groups are present in the Great Plains. The dominant religions prior to the nineteenth century were those of Native Americans. The expression of religion in stories and rituals varied among the several tribes, with those in the east relating more to agriculture while those in the west connected with the role of bison. Nevertheless, here they are grouped together for the purpose of generalization.

Most beliefs and rituals seek cosmic harmony and the renewal of spiritual powers. Associated meaning and values are expressed often by the geometry of constructed features. In addition, central to the Native American religions is a reverence for the natural environment, which includes a belief attributed to special places. Crucial for believers is worship at specific sacred sites.

As Native Americans were dispossessed of their lands, forcefully moved to other areas, and subjected to attempts at cultural conversion, numerous religious changes took place. The attachment to a particular place was severed as many tribes were assigned to reservations elsewhere, and the massacre of Wounded Knee in 1890 convinced many individuals of the futility of continuing their previous ways of living. Many rituals, especially certain dances, were outlawed. Worshipping at sacred sites was prohibited. Conversion to Christianity was encouraged.

Today indigenous religions are practiced by only a small minority of citizens in the Great Plains. Even though the proportional size of the Native American population in this region is larger than in most others in the United States, few residents follow the religion of their ancestors. Many have joined one of the major Christian denominations. Others are members of the Native American Church, which combines elements of traditional religions with tenets of Christianity. All-night worship sessions, participation in the Sun Dance, and the ritualistic use of peyote attest to the merger of traditional religious beliefs and practices with mainline Christianity.

Although some of the previously hostile restraints have been relaxed in recent decades, contemporary Native Americans still encounter difficulties in practicing their faith. This is most obvious when worshippers make a pilgrimage to a sacred site such as to Bear Butte, Bear's Lodge, or a Sacred Hoop.

Mato Paha (Lakota for "Bear Butte"), located near the Paha Sapa (Black Hills), is the place where many tribes come to pray, especially in May, June, and July. The enduring importance of this particular place is evidenced by artifacts that date to ten thousand years ago. Current worship, however, is sometimes disrupted by the actions of nonworshippers who engage in drag racing, other recreational activities, and commercial enterprises.

Mato Tipila (Lakota for "Devil's Tower") is another spectacular Great Plains landmark that engenders conflicting views about the use of space. Lakota worshippers who journey to this site, especially in June, seek solitude for their pipe ceremonies and vision quests. The majority of common tourists voluntarily respect this religious period, but a small group of mountaineers have insisted their members have the right to climb this geologic tower at any time.

The Sacred Hoop ("Medicine Wheel"), located on a mountaintop in the Big Horn Range, presents a third illustration of conflicting views about religious practices in the Great Plains. Although many sacred hoops have been constructed across North America and are not always distinctive landscape features, this one is uniquely sited at one of the ten nuclei of continents. It is revered by religious pilgrims as a place having inner spiritual energy and healing. The kind of conflict over the use of place is not as intense here as, for example, at Bear's Lodge/Devil's Tower, but crowds of tourists are not compatible with the ambiance desired for worship.

In contrast with the Native American adherents, who live in both rural tribal lands and urban centers, most other

non-Christian groups are almost entirely residents of metropolises. Some Jewish groups first settled originally in rural areas, but soon most moved to cities. Today the small Jewish population in the Great Plains is almost entirely urban. Likewise, members of the Bahá'í faith are 'primarily in cities, where larger and more diversified populations offer the setting for alternative religions.

The diversity of religions in the cities increased rapidly after the 1960s because the Immigration and Naturalization Act of 1965 changed the composition of immigrants and because societal changes in the United States involved the rise of numerous New Age sects.

Most immigrants since the late twentieth century have moved as individuals or single families and have settled in urban areas, where employment opportunities are the greatest. Immigrants who came as a group, such as the Muslim community in Cedar Rapids, Iowa, which built a mosque before 1930, are the exception. However, refugees from particular countries often form new communities in only a few cities. Although those from Latin America and Eastern Europe expanded membership in Catholic churches in the Great Plains, immigrants from Asia usually brought non-Christian religions. These include, among others, Islam, Hinduism, Sikhism, Jainism, and Buddhism. Some migrants, both first- and second-generation, have adhered closely to the traditions of their home areas, but others have adapted their rituals and forms of worship to the social environment of their new homes. Because some religious communities are small and unable to build and maintain temples, pilgrimages and festivals are important, especially for members of South Asian religions.

The other main sources of non-Christian religions arose from the rapid conversion to an established faith (especially Islam), from the revival of early religions (for example, paganism), and from the development and adoption of new spiritual groups. Illustrative of the latter are Transcendental Meditation, the Unification Church of Reverend Moon, the International Society for Krishna Consciousness, and various modifications to traditional Buddhism and Hinduism. Adherents tend to be persons seeking a fundamental change in American values and behavior. Acceptance is highest among individuals in cities. Those supporters who live in more remote areas may interact with other believers electronically.

Conclusion

As is true for all of America, considerable diversity in religion exists in the Great Plains. In several respects, however,

the expression of religion is distinctive in this region. Adherence to religion, as measured through membership and participation in various denominations, contrasts with other parts of America. This distinctiveness is related to the low density of the rural population, which reflects the climatic conditions and geographic location within the United States. This relationship demonstrates clearly the interactive effects between environment and religion.

Harmonialism and Metaphysical Religion

Harmonial or metaphysical religion, emerging as mental science and mind cure in the last half of the nineteenth century, and maturing into New Thought by the turn of the twentieth century, is a distinctly American set of theologies supported by loosely affiliated religious groups. New Thought is based in a wide variety of philosophical and religious systems, from Platonism (ideas over matter) and Hegelianism (idea of spiritual progress); Swedenborgianism (emphasis on spiritual interpretation of Scripture); transcendentalism (divinity pervades nature, including mankind); and Eastern religion, particularly Vedanta Hinduism (monism: God is all substance).

The best known New Thought groups are Divine Science, Unity, and Religious Science, though there are numerous smaller organizations and independent congregations. All emphasize the mystical experience and power of individuals to practice the presence of God in their own lives. This is accomplished through realizing their divine essence and connection to the power of God, unleashed through positive thinking, affirmations, concentration, and silent meditation, in order to demonstrate health, spirituality, and prosperity. Harmonial religions, as defined by church historian Sydney E. Ahlstrom in *A Religious History of the American People*, are “those forms of piety and belief in which

spiritual composure, physical health, and even economic well-being are understood to flow from a person’s rapport with the cosmos” (p. 1019).

By 1900 there were one hundred publications devoted to New Thought ideas. These told their readers about mental methods consisting of spiritual affirmations that would ensure individual spiritual evolution, health, social progress, and individual success and prosperity; and many believed that through these methods New Thought would liberate humanity from its bondage to materialism. New Thought also introduced meditation to some Americans and clearly produced the groundwork for numerous contemporary self-help and therapeutic systems, such as those taught by Deepak Chopra, Louise L. Hay, and Eckhart Tolle, and popularized by Oprah Winfrey.

Without a centralized organization or ritual practice, by the 1890s, Chicago, Denver, Kansas City, St. Louis, San Francisco, and Los Angeles had significant New Thought centers; and local clubs began to be formed in hundreds of cities, and towns into the early twentieth century. While there were many names of these new groups and just as many teachers and publications, they all agreed on the noninstitutional nature of the truths that they all taught.

These early groups practiced metaphysical idealism, the belief that all reality is mental and/or spiritual. While much of early New Thought was influenced by Protestant Christianity, its believers emphasized mystical, monist, and panentheistic ideas (God is greater than the universe but includes and interpenetrates it). The metaphysical tradition that ensued was formed through the influences of many different writers, both religious and secular/scientific, including Ralph Waldo Emerson, Emanuel Swedenborg, Franz Anton

Mesmer, Phineas Parkhurst Quimby, and Swedenborg and Quimby follower Warren Felt Evans.

At the turn of the twentieth century, Harvard philosopher William James recognized that New Thought was one of the most important speculative and practical contributions to religious thought in America in its systematic cultivation of optimism and healthy-mindedness. James stated that the influences in New Thought were the Gospels, Emerson, idealism, “spiritism” (with its emphasis on underlying laws of progress), popular science evolution, and Hinduism.

Early Contexts of New Thought

Ralph Waldo Emerson (1803–1882) of Concord, Massachusetts, was leader and seer of American transcendentalism. His philosophy, with its emphasis on individual self-reliance and pragmatism, and also on the validity of inner mystical experience, was instrumental in introducing the idea that the life of man was the essence and even substance of the divine mind, another name for God. Inspired by Swedenborg and Eastern religion, particularly the Vedas, Emerson recognized a power of life that emanated throughout a beautiful and unified nature. As man recognized this power, he aligned himself with the good, the unity of all things, and awakened his spiritual senses. His was a mystical and moral idealism that suggested that man’s higher spiritual self was part of a divine oversoul, a unity that bound each individual together. Emerson inspired a religious liberalism that valued silence and meditation, recognized the individual’s cravings after things spiritual, sought insights in sacred texts beyond the Bible, and emphasized the immanence of the transcendent in nature and individuals—all elements that informed metaphysical religion or New Thought.

Tantamount to New Thought’s success was the idea that these spiritual truths could be demonstrated in physical healing and improved lifestyle. In the late nineteenth century, Americans were faced with a remarkable medical marketplace of patent medicines, water cure, Graham’s pure food system, mesmerism, magnetism, electricity, homeopathy, and naturopathy, while advocacy for symptomatic medicine was rising with the formation of the American Medical Association (founded in 1847). Earlier concepts of mind, spirit, and body were increasingly compartmentalized in the emerging medical science. The relationship between matter and spirit was crucial: where Christian Science founder Mary Baker Eddy’s idealism was absolutely clear on the ultimate unreality of matter and the sole reality of the divine mind and its spiritual ideas, in New Thought the human

mind was a conduit between spirit and matter. Matter was part of God’s creation even if spirit could dominate it and thought could materialize it.

Early mental science was also informed by an interest in mesmerism, Austrian physician Franz Anton Mesmer’s (1734–1815) developing methods of hypnosis and suggestion, based on his studies of “animal magnetism.” These studies resulted in the idea that thoughts could transfer influence and energy between persons and heal nervous and physical ailments. His follower Charles Poyen brought mesmerism to America.

In the area of spirituality, another eighteenth-century Swedish scientist, Emanuel Swedenborg (1688–1772), was advancing his mystical and spiritual interpretations of the Bible, revealed through his visions and angelic visitations, in a series of books and glossaries beginning in 1748. These contained a neoplatonic theology of correspondences between the world of the spiritual and material reality. In 1817 this theology was organized into the Church of the New Jerusalem, or the New Church, in the United States. Swedenborg’s penchant for spiritually interpreting scriptural objects, names, and situations became a method also used by metaphysical teachers from Eddy, whose *Key to the Scriptures* was added to her textbook *Science and Health* in 1883; to Ernest Holme, who wrote *Science of Mind* (1926); to Charles Fillmore, author of the *Metaphysical Bible Dictionary* (1932).

Phineas P. Quimby and His Followers

Phineas P. Quimby (1802–1866), the practical spiritual pioneer and forefather of New Thought, started as a Maine clockmaker before he became a mesmeric hypnotist/healer, with an early practice inspired by Charles Poyen’s demonstrations of mesmerism that Quimby saw through a Dr. Collyer in 1838. Quimby became a circuit clairvoyant performer with partner Lucius Burkmar before he embarked on a healing practice that included reading and manipulating the invisible magnetic fluid of the life force.

Quimby finally gave up mesmerism and found that he needed to simply convince his patients that their illnesses were mental in nature and could be healed by the power of the mind. He used placebo effects like rubbing and hypnosis, but at the base of his practice was the idea that patients could heal themselves.

Quimby was an amateur theologian and healer who denounced the negativity of much religion and medicine. He came to believe simply that matter was a “fine interpenetrating substance” susceptible to change and influence by

the mind. Mind was an independent reality. He believed that errors of the mind, coming from the beliefs in sickness and mortality, could condense into material diseases. God was wisdom that could be accessed as a source of good mental impressions and health.

Christian Science founder Mary Baker Eddy came to Quimby for healing in the early 1860s and subsequently tried to fit his mind/body ideas into a Christian framework. Quimby helped many of New Thought's first leaders, from Warren Felt Evans to Julius Dresser.

Where Quimby left only unfinished manuscripts, Warren Felt Evans (1817–1889) emphasized spirituality as important to health, as he melded Swedenborg with Quimby into a more systematic form. As a minister of the New Church, he was an articulate preacher and author, who in many ways clarified Quimby's ideas in his emphasis on the divinity within each individual. Evans's mental healing practice began in Boston in 1867, and his books, mixing idealism and transcendental mysticism, including *The Mental Cure* (1869), created an esoteric/mystical and philosophical lineage for New Thought from idealism, through German romanticism, into what he called Christian Pantheism.

Julius A. Dresser (1838–1893), a one-time Baptist minister, and Annetta Seabury Dresser, who were patients and students of Quimby in the early 1860s, began a mental healing practice inspired by his teachings in Boston in 1882, after the rise of Eddy's Christian Science movement, and began teaching students using Quimby's manuscripts. The publication of Julius Dresser's *The True Story of Mental Science* in 1887 stirred up controversies about Eddy's relationship to Quimby.

The first efforts at adding intellectual vigor to emerging mental science ideas were undertaken by the Metaphysical Club, founded in Boston in 1895. Henry Wood (1834–1908), a businessman and member of the Metaphysical Club in Boston, gave a more rational and systematic method. In his *Ideal Suggestion through Mental Photography* (1899), he recommended that patients use disciplined meditations on short visual mantras or suggestions and provided examples to be written on placards, such as "Healing is Biblical," "Mental Healing is Scientific," "Health is Natural," and "I Rule the Body," all supplemented with visualization techniques and short treatments.

Also important was the rise of Horatio Dresser, son of Julius and Annetta Dresser, whose *The Power of Silence* (1895) emphasized the internal meditation that many New Thinkers would subsequently develop as a method for

reaching inner peace and accessing spiritual power. The Boston Metaphysical Club promoted an interest in positive affirmative spiritual philosophies of life, taught that right thinking could bring one's loftiest ideas into perfect realization, and advanced study in the systematic treatment of disease by mental methods. By the mid-1890s a periodical was in place, the *Journal of Practical Metaphysics*, with Horatio Dresser as editor. A Church of the Higher Life gave the club a more religious outlet.

Horatio Dresser began practicing Quimby's method in 1886 and soon launched a campaign to undermine Eddy's authority. He studied with William James at Harvard and finished his PhD in 1907, making him the most trained leader in the New Thought movement. In 1919 he published the first full-length history of New Thought, *History of the New Thought Movement*; and in 1921 he published *The Quimby Manuscripts*, taken from copious notes by Quimby. Subsequent historical research reveals that Eddy's monistic thinking departed from Quimby's mind/body dualism. Her Christian orientation was basically foreign to Quimby's original ideas, which clearly had been supplemented by his early followers with more Christian overtones.

Christian Science: Mary Baker Eddy and Emma Curtis Hopkins

Mental science or mind cure began with Quimby, Evans, and the Dressers in New England, where Boston became the center of Eddy's far-flung and highly successful Christian Science movement. Eddy's genius for organizing started with her founding the Massachusetts Metaphysical College, whose four thousand students by 1910 spread Christian Science rapidly across the United States, and particularly in the Middle West.

Eddy had sought out Quimby's help in 1862 and had been helped by him during an extended stay in Portland. She was excited by the prospects of healing, praised Quimby in the press, and became concerned to articulate Quimby's method. But she could not accept his ideas fully, as he was often hostile to the Christian faith she held sacred. After Quimby died in 1866, Eddy's fall on the ice became the falling apple of the emergence of her Christian Science. For the next decade she studied the scriptures, publishing her ideas in *Science and Health* (1875). In 1879 she and her students founded the Church of Christ, Scientist to commemorate Jesus' teaching and to heal according to his method. As she survived the challenges from the Quimbyites, she still had significant defections.

While most of Eddy's students remained loyal to her leadership, several, such as Ursula Gestefeld (1845–1921), who had taken a class with Eddy in Chicago in 1884, broke with her Christian roots in favor of the prosperity gospel and the attraction of eclectic Eastern ideas, and many of her once-loyal students started their own versions of her teaching. Like Christian Science, New Thought found Chicago and the West to be the most fertile ground for its publishing and therapeutic activities.

The "teacher of teachers," a feminist and an important founder of New Thought, was also originally a student of Eddy. Emma Curtis Hopkins (1849–1925) was first attracted to Christian Science in 1881. Hopkins took a primary class with Eddy in late 1883, lived at the Massachusetts Metaphysical College, and was listed as a Christian Science practitioner in 1884. She became editor in September 1884 of the *Christian Science Journal*. She edited issues nine through fourteen before being dismissed in October 1885. Hopkins was a loyal student of Eddy, not Quimby, but she was also a spiritual eclectic interested in Eastern religion and mysticism.

In 1886 she founded the Emma Curtis Hopkins College of Christian Science. She taught mainly women and formed a student's association similar to Eddy's. In 1887, her colleague Mary Plunkett founded the magazine *Truth, a Magazine of Christian Science* to serve the school and student association. Hopkins continued to teach in Chicago and also in San Francisco, Milwaukee, and New York, leaving in place a number of affiliated teaching institutions. Hopkins produced Bible lessons, published in the *Chicago Inter-Ocean* from 1890 to 1898, began a new periodical with Ida Nichols called *Christian Science*, and renamed her school the Christian Science Theological Seminary. It functioned under that name until 1895.

Hopkins's charismatic teaching was legendary, and her pamphlets and books such as *Class Lessons* (1888), *Scientific Christian Mental Practice* (1888), and later *High Mysticism* (1920) were important in consolidating her influence. Hopkins educated more than one hundred ministers, nearly 90 percent women, whom she ordained to take their version of her mystical Christian Science, then becoming New Thought, across the United States, particularly in the Midwest and West.

Hopkins's emphasis on the feminine nature of the Holy Spirit and women's importance to the complete revelation of God in history aligned her with Gnostic (esoteric knowledge) and early medieval mystical interpretations of the Bible, particularly concerning the Trinity, where God the

Father was associated with the Old Testament, the Son with the New Testament, and the Holy Spirit, or Mother Principle, with the present period.

Hopkins Students Spread New Thought Ideas, and Organizations Prosper

Hopkins was the teacher of Annie Militz, founder of the Homes of Truth; Malinda Cramer, cofounder of Divine Science; Clara Stocker, teacher of Albert Grier, founder of the Church of Truth; popular poet Ella Wheeler Wilcox; Charles and Myrtle Fillmore, founders of Unity Church; Harriet Emilie Cady, an important author of the Unity textbook *Lessons in Truth* (1896); Frances Lord, who took New Thought ideas to Britain; and Ernest Holmes, founder of Religious Science.

Annie Rix Militz (1856–1924) was taught by Hopkins in 1887 and ordained by her in 1891. She and her sister Harriet Rix started a metaphysical bookstore in San Francisco in the early 1890s, calling it first the Pacific Coast Metaphysical Bureau and later the Home of Truth, with a permanent house built in 1905 for the group in Alameda, California. Enamored of Swami Vivekananda's Hindu teaching, introduced at the World's Parliament of Religion at Chicago's Columbian Exposition in 1893, Militz began integrating Eastern ideas into her teaching and hoped that the Home of Truth would be an interfaith organization with emphasis on both Christianity and Hinduism. She also continued to work with the Fillmores in their new Unity movement, published the *Master Mind* magazine between 1911 until her death in 1924, and supported the opening of several Home of Truth centers along the West Coast and in Boston, Chicago, and other cities where New Thought made inroads.

The World's Parliament of Religions was the watershed moment in the introduction of new Eastern religions to America. After the Chicago Fair, New Thought began to develop into regional clubs that joined together to form the International New Thought Alliance (INTA) in 1914. Also after the Fair, there was growing interest in world spirituality focused in the summer retreat movement. Sarah Farmer, inspired by the Parliament of Religions, created a center for the study of world religions in 1894. She created a summer community, similar to Chautauqua, called Greenacre, in Eliot, Maine, that entertained ideas from Vedanta (a branch of Hinduism) to Bahá'ism. In its early years, New Thought and mental science were often topics.

Ralph Waldo Trine, an esoteric mystic and social reformer, had gone to Greenacre to write what became the best-selling

In Tune with the Infinite: Fullness of Peace, Power and Plenty (1897). Trine thought of God as the spirit of infinite life, a transcendent font of power that would flow into the lives of those prepared to receive it. Thoughts were forces: good thoughts worked in mankind's favor, while bad thoughts became manifested in the body as worry and disease—fundamental New Thought ideas that were to have a decisive influence on Ernest Holmes. By 1895, texts by Trine and Dresser were attracting millions of readers in the United States.

Chicago continued to be an important center for both Christian Science and emerging New Thought theologies, attracting a number of significant writers in New Thought, inspired both by spirituality and ideas of success. The Psychic Club and the Atkinson School of Mental Science were founded in Chicago by William Walker Atkinson, who became an important New Thought proponent, publishing several magazines between 1900 and 1916. He and partner/publisher Sydney Flower became interested in Hinduism and taught yoga and Hindu-oriented New Thought. His 1906 *Thought Vibration of the Law of Attraction in the Thought World* inspired Rhonda Byrne's 2006 movie *The Secret*.

A less Christian, more scientific/secular view of New Thought emerged after the turn of the twentieth century, using psychological concepts through writers such as Judge Thomas Troward, whose writings on mental science, tinged with Eastern philosophy, particularly his *Edinburgh Lecture on Mental Science* (1909), later inspired Ernest Holme's Science of Mind (SOM).

The first conventions of New Thought groups were held between 1894 and 1899 under the auspices of the International Divine Science Association; between 1899 and 1908 under the International Metaphysical League; between 1908 and 1914 under the National New Thought Alliance; and, beginning in 1914, under the International New Thought Alliance (INTA), the major attempt at unifying the various strands of New Thought. A lessening of the Christian focus is evident in the platform adopted in 1916: "To teach the Infinitude of the Supreme One; the divinity of Man and his infinite possibilities through the creative power of constructive thinking and obedience to the voice of the indwelling presence, which is our source of inspiration, Power, Health, and Prosperity." At the International Alliance's Sixth Annual Congress in Cincinnati, in 1919, a new plank concerning "Christ Standards" was voted into the Declaration of Principles, upon which plank the Unity Movement and the Divine Science College of Denver entered the alliance. A revised statement was produced in 1957.

Divine Science

Malinda Elliott Cramer of San Francisco, founder of Divine Science, was healed through spiritual means in 1885. After taking an 1887 class with Hopkins in San Francisco, she started a magazine, *Harmony* (1888–1906), and opened the Home College of Divine Science in 1888. Cramer published *Lessons in the Science of Infinite Spirit* in 1890. Divine Science came together as a movement that same year, when Cramer and Nona Brooks of Pueblo, Colorado, who had taken a class with one of Hopkins's students, decided to share the name Divine Science after they realized the similarities in their theologies. In 1898, after being ordained by Cramer, Brooks and her sisters started a church and formed the Colorado College of Divine Science in Denver to spread their teachings, with Cramer's *Divine Science and Healing* (1904) and Nona's sister Fannie James's *Truth and Health* as major textbooks. Several periodicals were published between 1902 and the 1960s. Nona led the church and became the first female pastor in Denver, attracting a number of followers, mostly women, to the ranks of Divine Science. In 1922 the organization built a handsome classical edifice in Denver and officially joined the INTA. Troward-inspired Emmet Fox (1886–1951) was ordained by Nona Brooks and in 1931 took over the pulpit of New York's Church of the Healing Christ, founded in 1906 by once-Christian Scientist William John Murray. Fox's lectures attracted thousands, and his *Sermon on the Mount* (1934) became one of the most widely read popular religious books of New Thought. Fox also inspired Bill W., founder of Alcoholics Anonymous, who had his followers read Fox's books. In 1957 the Divine Science Federation International was organized as a union of Divine Science organizations, with less than twenty congregations today.

Unity

Charles Fillmore (1854–1948), a real estate agent, and Myrtle Fillmore (1845–1931) experienced spiritual healing through the Illinois Metaphysical College, and both became students of Hopkins, who ordained them in 1891. They started the work of Unity in 1889, with the launching of their magazine *Modern Thought*, renamed *Unity* in 1894. Unity's first textbook, *Lessons in Truth* by Hopkins's student H. Emilie Cady, was also published in 1894. Myrtle was instrumental in forming the Society of Silent Help, a prayer ministry now known as Silent Unity, in 1890. Myrtle also founded a children's magazine, *Wee Wisdom* (1893–1991). By

1903 the Unity Society of Practical Christianity was formed as the first Unity church, located in Kansas City. Publishing and prayer activities increased, and in 1914 the Fillmores founded the Unity School of Christianity for publishing and education work. In 1919 the Unity Farm (later Unity Village) was formed, and the group moved to Lee's Summit, Missouri. Unity was a member of the INTA until 1922. In 1966 an association of Unity churches was established, and today more than nine hundred ministries are listed in the United States that provide worship services, healing meetings, prayer groups, counseling, study classes, and youth development, including Sunday schools.

The Fillmores, not unlike Christian Science founder Mary Baker Eddy, believed that their "practical Christianity" was based on the words and works of Jesus and was actually the primitive Christianity taught by Jesus. Admitting that other spiritual paths would lead to spiritual unfoldment, including a belief in vegetarianism and reincarnation, the Fillmores nonetheless emphasized the authority of Jesus' teachings as the foundation of their ministry. Jesus is the Wayshower, who expressed perfection and became the Christ, leading us to an understanding of God as divine mind, absolute good. We are spiritual ideas in mind and manifest the Christ in an individualized way. Prayer is conscious communion with God, made practical through affirmations and denials that strengthen our relationship with God, and therefore prayer creates a path for goodness, healing, and prosperity to enter our lives.

Religious Science and Science of Mind (SOM)

Ernest Holmes (1887–1960) was a minister of Divine Science until he founded the Institute of Religious Science and Philosophy in 1927 (later emerging into two groups: the United Church of Religious Science in 1953 and Religious Science International), as a practical metaphysical teaching institute correlated from philosophical, religious, and scientific insights. His teaching is basically a great synthesis of insights from Christian Science and New Thought writers, together with psychology and physics. His 1926 Christian-centered text, *The Science of Mind*, was inspired by Emerson, Troward, and Trine and informed by his classes with Emma Curtis Hopkins. SOM teaches how to experience a spiritual sense of things through affirmative prayer, suggesting that everyone can realize the Christ consciousness that dwells uniquely within each of us. It deals with the human mind as an instrument through which the divine mind particularizes itself. God is all, and

the objective universe is the body of God. To see the spiritual sense of things in back of the physical is to use the mind that Jesus used. Today there are more than 350 ministries associated with Religious Science.

Ernest Holmes mentored Norman Vincent Peale, who was the pastor of the Marble Collegiate Church in New York from 1932 to 1984, a congregation of the Reformed Church in America, founder of Foundation for Christian Living in 1945, and later a religio-psychiatric clinic. He wrote his blockbuster *Power of Positive Thinking* in 1952 and used the radio as a medium for his sermons. He and his wife, Ruth Peale, founded *Guideposts* magazine in 1945. Peale influenced Robert H. Schuller, who used Peale's positive ideas in his own theology and preaching at the Crystal Cathedral, while pastor there from 1955 to 2005.

Other Groups and Megachurches

After World War II and up to the present day, many New Thought ideas have become part of the New Age. Joel S. Goldsmith, a Christian Science practitioner turned revelator, wrote *The Infinite Way* (1947), which asked seekers to look for God in the silence and stillness of the inner kingdom of mind, inspiring some of popular self-help lecturer Wayne Dyer's teachings. Goldsmith was also author of *The Art of Meditation* (1956). Another important teaching similar to Goldsmith's is Dr. Helen Schucman and Dr. William Thetford's *A Course in Miracles* (ACIM), published in 1976.

There are several other sizable and influential New Thought congregations in the United States, including the Living Enrichment Center in Oregon, now New Thought Ministries of Oregon; Dr. Johnnie Coleman's twenty-thousand-member Christ Universal Temple, founded in Chicago in 1956 after she took courses at the Unity School of Practical Christianity; the Agape International Spiritual Center in Culver City; Dr. Barbara L. King's Hillside International Truth Center in Atlanta; Della Reese's Understanding Principles of Better Living Church in Los Angeles; and Renaissance Unity Interfaith Spiritual Fellowship in Warren, Michigan, whose one-time minister was Marianne Williamson, a popular ACIM teacher and author of *Return to Love* (1992).

Hasidism

Hasidim (Hebrew for "pious ones") are Orthodox Jews who follow both Jewish law and the teachings of a male charismatic leader called a *rebbe*. Hasidism, which emphasizes forms of spirituality, began in eighteenth-century Ukraine; was severely threatened by the Shoah; but by the twenty-first century had communities in the United States, Israel, Canada, and many other countries. Over time Hasidism slowly developed from a reactionary, populist movement to a strict, often separatist movement, but throughout has continued its emphasis on spiritual connection with God. Hasidim are also called "haredim," "traditional-orthodox," or "ultra-orthodox," especially when they are grouped with other very traditionally observant Jews.

European Origins

The Jewish spiritual movement of Hasidism emerged from the teachings of Ukrainian Rabbi Israel ben Eliezar

(1698–1760). As ben Eliezar became known for his piety, healing, and miracles, he earned the name Ba'al Shem Tov (literally, "master of the good name") for his closeness to God. The Ba'al Shem Tov became a revered figure, and followers told so many stories about him that it is difficult to discern which are historically accurate. However, he lived a simple life, and although he was very learned in Jewish sources, he advocated a more heart-centered, rather than text-centered, approach to the human relationship with God. He would use simple and ordinary stories as teaching tools to illustrate religious morals or values. Following certain aspects of Kabbalah, he saw God in every piece of the world. The human task, then, was to celebrate and live a joyful rather than an ascetic life. *Devekut*, or attachment to God, was accessible through storytelling, melodies, and dancing, just as much as through the intense study of Rabbinic Judaism. According to the Ba'al Shem Tov, joy and humility were the best way to serve an omnipresent God.

The Ba'al Shem Tov's spiritual approach to Judaism and his openness to all people attracted many disciples and admirers during his lifetime. Jews in need of healing and spiritual guidance came great distances, and many peasants were drawn to an accessible Judaism. After his death in 1760, the movement continued to grow both numerically and geographically under the auspices of his successor, Rabbi Dov Ber of Mezritch. Dov Ber, also known as the Maggid or "preacher," was a renowned Talmudic scholar; he took up the mantle of the Ba'al Shem Tov, writing and organizing Hasidic thought into a comprehensive movement.

Early Hasidism proved to be a popular movement: because its philosophy emphasized prayer as a valuable primary path to God, it validated the religious experience of men and women who did not have the education to approach God through the traditional path of textual study. In addition to the many peasants who found a spiritual home in this new pietistic Judaism, those who had felt their spiritual needs unmet through study of the Talmud or traditional Kabbalah also flocked to Hasidism. The movement and its followers sought to unseat scholarship as the sole or best way to be Jewish, and elevate bodily practices like prayerful praise to its religious level. It also democratized this access to God. For instance, whereas in other Orthodox Jewish communities, a man called the *hazan* was the sole prayer leader and singer, all Hasidim would sing and chant prayers.

Hasidic practices in Eastern Europe became a major source of, first, discomfort and then disagreement with

non-Hasidic, traditional rabbinic Jews. The visible and audible characteristics of Hasidic ritual made these differences clear: Hasidim would dance wildly, sing, and shout during prayer. They also separated themselves by less sensual ritual boundaries such as writing a separate prayerbook. As the movement grew, Hasidim began to live in separate communities where they could live and pray according to their own religious standards. Followers organized themselves around different charismatic leaders in different cities, with each community (or court) named after its city. The group based in Ger would call themselves the Gerer Hasidim, while those in Bobov would be the Bobover Hasidim.

The orthodox opponents of Hasidism—or *mitnagdim*—argued that these innovations detracted from proper Judaism by disparaging traditional Torah study and elevating rebbes to the level of the divine, which they saw as idolatrous. Despite their decrees against Hasidism, which included a writ of excommunication in 1772, the *mitnagdim* had difficulty stemming the group's growth or encouraging its followers back into the non-Hasidic community. Over time, however, the two groups began to reconcile because of similarities and the emergence of a common enemy. In the early years of the nineteenth century, many Hasidic leaders began to reemphasize textual study, and some even sided with the *mitnagdim* and criticized the fulsomeness of their own rituals, but the most significant factor of the rapprochement was shared opposition to the Jewish enlightenment. Both Hasidim and *mitnagdim* agreed that dismissal of ritual, critical study of text, and privileging of reason above other religious ideals were destroying the essence of Judaism. In many places in Eastern Europe, the two once-opposed groups began to do business, intermarry, and even worship together again.

Persecution and Violence

In the late nineteenth and early twentieth centuries, pogroms (organized violence against Jews), threatened the lives and livelihoods of many Jewish families in Russia and Eastern Europe. The far-reaching violence and resultant political reorganization of the First World War uprooted many Hasidic communities. Forced to relocate after the destruction of their homes or villages, these Hasidim often split up or fled to cities far from their rebbes. A few would immigrate to the United States along with large numbers of other Eastern European Jews, but most stayed and continued their way of life. But neither the secularism of the Jewish

enlightenment nor the violence in the first decades of the twentieth century would match the terrible toll taken by the Shoah during the Second World War.

Historians estimate that the Nazis and their allies killed about 80 percent of Hasidim, a much greater proportion than non-Hasidic Jews. Because of their distinctive ways of dress, especially for the men, they were easy to identify. As observant Jews who “looked” Jewish with women's wigs or men's beards and hats, they also made symbolic targets for the anti-Semitic Nazi regime. Unlike other less observant and secular Jews who could speak without accents and dress and act according to secular customs, Hasidic men and women were generally unable or unwilling to assimilate and thereby pass as non-Jewish.

In addition to being targeted for their obvious espousal of Judaism, Hasidim also held to their way of life even when it might imperil them. Early in World War II, most rebbes counseled their followers to stay in Europe. According to these leaders, the bodies of the Hasidim might be endangered in the Old World, but the New World would endanger their souls. The rebbe, as the spiritual center of the community, acted like a magnet for his followers: where the rebbe stayed, his people stayed.

When they were taken to camps, many Hasidic prisoners drew strength from the Hasidic traditions of teaching and storytelling, but for others the mass murders shook their faith in God and their rebbes. While some wondered how God could desert them in such a time of need, others prayed nightly or steadfastly refused to eat any possibly non-kosher food. Survivor Ester Gold, for example, would take her prayerbook each night and stand under the lone lightbulb before going to sleep. When the other women derided her for her naïveté, she explained that the prayers were the only thing sustaining her.

Few Hasidim escaped the persecutions alive, and most survivors were left with nothing. In some cases, the Nazis had murdered the inhabitants of entire Hasidic villages, but even survivors faced an enormous challenge if they wanted to rebuild a Hasidic lifestyle. Not only had they lost their belongings but also their homes, villages, and families. Left with little choice, they moved away from Europe, mostly to the United States and Palestine. Among the survivors were a handful of Hasidic leaders, including the rebbes of Klausenberg, Skver, Satmar, and Bobov. After the war some Hasidim felt betrayed by their leaders, who had insisted upon the piety of remaining in Europe but then used connections to gain rescue for themselves. But the remaining rebbes and

many of the survivors were committed to restoring Hasidism even after its nearly complete destruction.

Hasidism Comes to the United States

Although the largest number of practicing Hasidic immigrants arrived in the United States in the wake of the devastation of World War II, they were not the first Hasidim to live on American soil. Rabbi Joshua Segal, who arrived in 1875, became the chief rabbi of a conglomerate of small Hasidic congregations. Immigrant Rabbi Pinchos Dovid Horowitz founded the first American Hasidic court in Boston in 1916. In the years after World War I, a number of Hasidim from different communities came to live and study in New York without the benefit of their rebbes. For instance, although the Lubavitcher Hasidim officially organized in 1924, the community was unable to ensure unity without the presence of a rebbe, and by 1931 a small group called the M'lochim (angels) had broken away. A few rebbes, such as the Chernobler and Skverer, came in the twenties and thirties with small followings. Perhaps the exemplar of the pre-World War II period, because of its slow struggle with acculturation rather than dramatic division, was a community originally from Boyan in Russia. Despite warnings about America as the "unclean land," in the mid-1920s the Boyaner Rebbe and his family left the unstable political climate of Russia and joined a small group of his followers in the United States. Like other immigrants, they struggled financially but felt that freedom could offer them opportunities. The rebbe's children, for instance, all attended college. But this freedom also brought consequences for Jewish observance: young men like the rebbe's sons did not want to grow beards and sidelocks, and they were embarrassed to be seen wearing yarmulkes. Many children of Hasidim decided to leave the observant lifestyle, and the community trickled away from its Lower East Side neighborhoods to Brooklyn, the Bronx, and Queens.

The Shoah changed the Hasidic landscape in America completely. As the war ended, large numbers of Hasidim arrived along with a few high-profile leaders, such as the Lubavitcher Rebbe in 1940, the Satmarer Rebbe in 1946, the Bobover Rebbe in 1946, and the Klausenburger Rebbe in 1947. Once in the United States, these Hasidim faced the question of creating a viable Orthodox life in a new, metropolitan area. Unlike the former villages in Europe, the Brooklyn neighborhoods of Williamsburg, Borough Park (often spelled "Boro Park"), and Crown Heights were densely populated and urban, which would require different

social structures. No longer would thousands of followers travel long distances to see their rebbe; now they would see him weekly or even more frequently. Courts and rebbes that had been separated by language and many hundreds of miles were suddenly living on adjacent streets.

While difference from Europe was forced upon these Hasidim, they actively sought to retain difference from America. Unlike most earlier Jewish immigrants, these Hasidim did not seek to learn American culture; rather, they sought to build Hasidic communities set apart by both language and culture. They retained the names of their villages to mark their separation. To demonstrate the difference physically, Hasidim from many communities instituted strict norms of appearance long ignored by Jews in the United States: married women wore wigs or complete hair coverings and men wore full beards and sidelocks. If they could not re-create their communities from before the war, at least they could honor God and those who had died by building new pious lives.

Hasidic Life in the United States

The postwar groups of Hasidic immigrants created complete Hasidic lifestyles more successfully than their earlier counterparts. Because of their large numbers and because of their strong commitment to the memory of the departed, these newly arrived Hasidim built vibrant, observant Jewish societies. Estimates of Hasidic population in the United States in the first decade of the twenty-first century range from 150,000 to 300,000, but all agree that large family sizes are feeding continued rapid growth. Satmar and Lubavitch are the two largest courts, each estimated at upwards of 50,000 members. More than twenty smaller courts, such as Belz, Bobov, Boston, Breslov, Ger, Klausenberg, Skver, and Stolin, remain active.

After settling, Hasidic groups who previously organized mainly by geography suddenly needed to decide how to organize their societies. In the United States, as in Europe, the central organizing feature of the community is the rebbe. Individuals and families identify themselves by court, but their allegiance is to a rebbe rather than a city. The Bobover Hasidim, then, identify primarily with the Bobover Rebbe's community rather than with the city of Bobov. Therefore, many courts can live in close proximity to one another in Brooklyn, for example, and retain their differences by the instructions and example of their rebbes. After the death of a rebbe, a son or son-in-law will slowly assume the mantle, thereby ensuring continuity within the community.

The rebbe is a charismatic and learned character; he is enormously respected by all of his followers. They solicit his advice on everything from appropriate marriage choices to employment, and they often emulate his dress or mannerisms. He functions as a religious leader who conducts prayers, teachings, and songs but also as a religious exemplar who is holy and closer to God at all times. The rebbe's followers look up to him as one might a grandparent, but the men who gather around him will push aggressively to be nearer (most courts do to permit women to touch male nonrelatives, especially the rebbe). In addition to his religious charisma, each rebbe also makes practical decisions, although often in conjunction with advisors, about how his community should run. These might be decisions about schools, housing, building projects, or industry.

In addition to their interactions with the rebbe, Hasidim weave religious practice into all parts of their lives. Hasidic women, noted for high levels of modesty, express their religiosity primarily through the home and family. Raising children, cleaning, and cooking, along with more overtly religious activities such as lighting Sabbath candles, define most Hasidic women's lives. They may also attend religious gatherings with the rebbe and other men but must sit quietly in the balcony. Men, on the other hand, often pray enthusiastically, rocking back and forth while humming, singing, or shouting. Men focus their religious lives on the study of holy texts, often in community with others.

Physical appearance sets Hasidim apart from most others in American society and to lesser degrees separates the courts from one another. Hasidic women wear modest clothing that covers the collarbone, elbows, and legs. Most married women also shave their heads and wear wigs or kerchiefs for the religious reason that a woman's hair may be alluring to men who are not her husband. Some courts, including Satmar and Belz, require hats on top of the wigs, while others like Lubavitch allow women to cut their hair short rather than shave it. Hasidic men dress more uniformly but also maintain differences in detail according to court. They wear long beards and sidelocks, which boys begin to wear at age three during a religious haircutting ceremony. Like their forebears in Eastern Europe, men tend to wear white collared shirts and dark pants, shoes, coats, and hats each day. On holy days and the Sabbath, a man wears a long silk overcoat and a special fur-trimmed hat called a *shtreimel*. Hasidic men generally do not wear neckties, and their coats button right to left in contrast to common menswear. The number of buttons and cut of the coats, sock color, and hat

style most notably distinguish men of one court from another. For instance, Gerer *shtreimels* are taller than others, and Bobover Hasidim typically wear white knee socks over their dark pants as opposed to under the pants.

Family, Education, and Work

While Hasidic marriages are not strictly arranged, most take place with the help of a matchmaker. Grown children most often marry another member of the community and remain within the court. A typical young woman might meet with one or two young men recommended by the matchmaker before agreeing to a match in consultation with her family. Both the young woman's and young man's families will look for integrity, piety, and financial stability in a match. Marriage comes before love. Divorce is not unheard of, but the man must initiate the proceedings. Hasidic culture values women primarily in their duties as wives and mothers, and any domestic or child-rearing work done by men is generally seen as a favor to the women. Most Hasidim understand the biblical injunction "be fruitful and multiply" to mean that they should have as many children as God will give them. The median number of children in Hasidic families is between six and nine, and twelve is not uncommon.

Not surprisingly, then, girls' education revolves around the home, while boys' schools emphasize religious learning. Hasidic communities have established their own network of schools, from nursery to high school, structurally modeled on American public school. Although they comply with secular minimum state standards, the courts choose the teachers and methods with the explicit goal of safeguarding the cultural identity of the community. Books are heavily censored, although to different degrees in different courts. Satmar schools, for instance, often block out pictures of gentle children because of their clothes or activities.

In all Hasidic communities, work is not important as personal fulfillment, but simply as providing sustenance. Many young married women work while their husbands continue to study religious texts for several years after the wedding. Women do not drive, but they are often bused to and from their jobs if they are in other parts of the city. Many women, despite their large families, continue to work while their children grow. Although many young men desire religious study as a community-supported vocation, monetary restrictions allow only a few men to do so. Most work in small business settings such as electronics and diamond sales as either owners or employees. Because of limited secular education, few Hasidim are doctors, lawyers, or the like. Indeed, in part

because of the decreased cultural significance of secular education and careers, as many as 20 percent of Hasidim in the United States live below the poverty line.

Hasidic Relationships with Other Groups

Different courts have different attitudes toward the secular world, but all consider some aspects dangerous. Most shun television programs, although they may permit televisions for closed-circuit programming from within the community. Prohibitions and strictures are particularly apparent in education, but they extend to adults. Public libraries and secular newspapers are off-limits in most communities. Unlike some other insulated religious communities, Hasidim do not shun all technology but only the culture that it can bring. For instance, they will use music players to listen to Hasidic recordings but not other music. Many own computers for business and educational use, but they see the Internet as potentially dangerous. Ger has gone so far as to suggest that individuals remove their computers because of this peril. Some communities, such as Lubavitch, tend to be more permissive when it comes to interactions with the secular world, while others, such as Satmar, are stricter. To help ensure a continued separation from secular culture, most Hasidim speak Yiddish at home and in their communities.

At times the insularity and cultural difference of Hasidim has caused friction and conflict with their non-Hasidic neighbors. Often the clash occurs over scarce housing resources, or growing Hasidic communities expanding into areas formerly inhabited by other groups. In Crown Heights, Brooklyn, a 1991 incident inflamed otherwise tense relations between African Americans and Hasidim. A motorcade with the Lubavitcher Rebbe accidentally hit and killed a black child. Witnesses accused the Hasidic ambulance personnel of ignoring the child and helping the Hasidic driver; others said the second (non-Hasidic) ambulance had already arrived and was tending to the child. Riots followed, and a young black man stabbed an uninvolved Hasidic student who was visiting from Australia. Tensions between the communities continued for many years.

Despite their overwhelming similarities in dress and lifestyle from the perspective of outsiders, Hasidic courts often perceive their differences from other courts as significant. Lubavitch and Satmar have often come into conflict because of the former's recruiting efforts and tolerance of some American culture and the latter's strict defense of its often isolationist and anti-Zionist policies.

Zionism and the state of Israel remain issues of contestation among Hasidic communities. Some see Zionism as an important commitment to Jewish survival and flourishing after the Shoah. After almost all of his followers perished during the Shoah, the Gerer Rebbe escaped to Jerusalem in 1940, and there he began to build anew a pious community. In an ideological break from some of his followers and most other Hasidim, he proclaimed support of Zionism to be a commandment. Other Hasidic groups would soon warm to the idea of Zionism and support of the state of Israel when it came into existence in 1948. The Lubavitcher court supports and influences Israel, while others such as the Belzer Hasidim recognize that involvement in Israeli politics can benefit Hasidic groups. Satmar and several smaller Hungarian courts, on the other hand, remain absolutely anti-Zionist. They believe that only the coming of the Messiah will bring the true return to the Holy Land, and therefore any human attempt to establish a Jewish state in Palestine is blasphemy.

Hasidim also differ in their positions vis-à-vis other Jews. Most Hasidic courts agree that strict Orthodoxy is the one true Judaism, and therefore they do not recognize Reform, Conservative, or Modern Orthodox Jews. Many will derisively refer to a less observant Jew as "goy" or "non-Jew." A few communities like Lubavitcher and Bostoner Hasidim promote proselytization of non-Hasidic Jews and are therefore more tolerant of other Jews in the hopes of winning them over to a Hasidic lifestyle. These newly observant or "returning" Jews are called *ba'alei teshuva*, and while the community generally welcomes them, they tend to marry and socialize primarily with other *ba'alei teshuva*. Most courts, however, would prefer to employ and interact with non-Jews, whom they see as neutral outsiders, rather than less observant Jews, whom they see as poor role models for their children.

Because of their rich history and stories, Hasidim have also inspired literary works. Jewish authors such as Isaac Bashevis Singer, Chaim Potok, Bernard Malamud, and Michael Chabon have portrayed Hasidim in their novels and short stories, while scholars such as Martin Buber have collected stories told by Hasidim themselves. The Hasidic man most familiar to many Americans comes from Singer's "Tevye" stories and has entered the popular imagination through the musical "Fiddler on the Roof." While the jokes of the play may not be fully representative of Hasidic life, the characters' reverence for God and family orientation are common features.

Hasidim have a rich set of religious traditions and vibrant communities. Their growing numerical and cultural presence in the United States suggests that the communities will have an increasing influence in American life, even as they continue to see themselves as existing apart from secular values. In this sense, then, these pious Jewish communities have created new life and strength since their near-destruction during the Shoah.

Healing

Seeking healing from suffering is a central task of religious traditions. Yet experiences of suffering, and therefore of healing, are shaped and continually reshaped by changing social conditions, cultural forces, and theological frameworks. In North America, practitioners of religion in every historical era have debated definitions of sickness and health, as well as meanings and methods of healing. Questions about the nature and causes of disease, the proper modes of coping with affliction and means of pursuing well-being, and the relationship between divine and human agency in the therapeutic process have exercised religious communities from the precolonial period to the present. Numerous factors have prompted and influenced these deliberations, including episodes of encounter and competition among religious groups; shifting intellectual currents associated with Enlightenment liberalism and

postmodern pluralism; the development and proliferation of new technologies for alleviating pain and curing illness; and transformations in the economic and social spheres resulting from modernization, immigration, and globalization. The history of healing in North America reveals how various religious traditions have adapted their interpretation of suffering and pursuit of health amidst a host of changing circumstances.

Healing in Colonial North America: Contact, Encounter, and Cultural Transformation

When European colonists arrived in North America, they encountered indigenous communities for whom healing was a fundamental feature of religious life and practice. Diverse tribes practiced distinctive religions in different regions of the continent, yet common to all Native American traditions was an emphasis on maintaining harmony among humans, the natural world, and sacred beings. Sickness and suffering resulted from disruptions in cosmic balance; healing involved restoring right relations through ritual ceremonies.

Native American Healing: Post-Contact

Because healing was central to their own religious traditions, Native Americans sometimes viewed the Europeans with whom they initially came into contact as conduits of sacred healing power. Jesuit priests in New France during the early seventeenth century, for example, asserted that Huron and Iroquois Indians regarded them as healers who had the power to protect and cure people from sickness through rituals of prayer, anointing, and especially baptism. Capitalizing on perceived resonances between Catholic and native traditions, Jesuit missionaries presented themselves as ritual healing specialists whose practices were superior to those of tribal shamans.

As epidemics of smallpox and other diseases decimated indigenous populations over the course of the seventeenth century, Native Americans became increasingly distrustful of Europeans and doubtful about the efficacy of their religious healing rituals. In New France, many Indians came to believe that Christian baptism was the cause of rather than the cure for cosmic disturbance, communal disintegration, bodily illness, and death. In the English and Dutch colonies, Native Americans were even more likely to view Europeans as agents of harm rather than healing. As the primarily Protestant settlers in these regions encroached upon Indian lands, indigenous peoples began to reconfigure rituals of

religious healing to address the radical disruptions resulting from European imperialism.

Protestant European Colonists' Attitudes towards Healing: Post-Contact

Although they rarely recognized resemblances between their own religious traditions and those of Native Americans, Protestant European settlers also conceived of healing in ways that linked individual, community, and cosmos. As participants in the Reformed tradition that sought to purify Christianity from “superstitious” practices, Dutch colonists in New Amsterdam and Puritans in New England rejected Catholic means of seeking individual bodily healing, such as praying to the saints, making pilgrimages to sacred shrines, or venerating holy relics. According to the influential Protestant theologian John Calvin, Jesus had performed miracles of healing to demonstrate his divinity, but once the Christian church had been established, miraculous signs were no longer necessary. The age of miracles had ceased with the apostles, he argued; therefore, appeals to the healing power of saints or material objects such as relics undermined true faith in Christ and violated biblical prescriptions against idolatry.

Given this theological perspective, it is not surprising that Protestants looked askance at Native American healing ceremonies that employed sacred objects and involved ritual specialists who served as mediators of divine power. Often likening Native American modes of healing to “corrupt” Catholic rites, colonists in New England and elsewhere condemned Native American traditions as idolatrous. Unlike the Jesuit priests who sought to win native converts by demonstrating their superior power to defend against and cure disease, missionaries such as Puritan minister John Eliot emphasized the urgent need for spiritual salvation rather than what they saw as the lesser hope of relief from physical affliction. According to Reformed theology, suffering was a blessing sent or allowed by God to lead the sinner to repentance and sanctification.

Within their own communities, Protestant colonists stressed the redemptive role of suffering, urging Christian believers to welcome afflictions as God-given opportunities for pursuing personal Holiness. Although they did often pray for the restoration of bodily health, Puritans endeavored to endure suffering with patience and equanimity for the sake of their souls. True healing only took place in heaven, when the “weary pilgrim,” as Puritan poet Anne Bradstreet put it, would finally be free of sickness, cleansed of sin, and reconciled to God.

For colonial Protestants, and especially for New England Puritans, healing also had communal connotations. Even prior to their arrival in Massachusetts Bay, Puritans such as John Winthrop (1588–1649) worried that they would fail to fulfill the “special commission” they had received from God to establish an exemplary Christian community in the New World. When the colonists did face threats to the social fabric of their community in various forms—theological dissent, interpersonal discord, outbreaks of disease, cases of “possession” or “witchcraft”—they assumed these adversities were manifestations of God’s judgment upon sinful behavior. Rituals of repentance, including fast days and public confession, were means of renewing the community’s covenant with God and thereby restoring health to the body social. Healing in Puritan New England sometimes involved more stringent forms of public purification, in which “infected” members of the group who remained unrepentant were purged from the community through excommunication, exile, or execution.

Eighteenth-Century Shifts in Attitudes to Religious Healing

In the aftermath of the Salem witch trials (1692–1693), colonial Protestants began to reconsider these corporate rituals of healing. During the eighteenth century, the increasing influence of Enlightenment ideas put pressure on traditional Protestant assumptions about the nature of suffering—both individual and social. Growing belief in a benevolent deity who desired harmony among and happiness for all human beings challenged traditional Protestant conceptions of God’s “afflictive providence” and wrath. Confidence that scientific inquiry was uncovering “laws of nature” that reflected a divinely ordered universe inspired hope that sickness might be overcome through more sophisticated therapeutic methods (such as inoculation). Faith in reason resulted in rising optimism about human nature, encouraging Protestants to propose alternative explanations for disease and to question the notion that patient endurance was the proper Christian response to physical suffering.

Developments in the political and economic arenas over the course of the eighteenth century also helped reshape traditional Protestant approaches to healing. The democratic fervor accompanying the American Revolution and the founding of the United States fueled a growing emphasis on self-determination as the hallmark of a healthy society. Within this context, many people began to question the authority of medical experts in favor of healing systems that

stressed the importance of individual agency in maintaining or restoring physical well-being. With the expansion of markets and the rise of entrepreneurial capitalism, competition among medical practitioners increased and commercial remedies proliferated. Sick persons seeking health soon had access to an abundance of physicians, patent medicines, and inventive new therapies.

Healing in the Early National Period: Revitalization and Reform

By the turn of the nineteenth century, transformations in the social and cultural landscape had set the stage for the emergence of a variety of health reform and new religious healing movements. The establishment and territorial expansion of the United States also had profound consequences for American Indians in these years. Throughout the 1800s, a variety of Native American leaders would instigate movements of religious revitalization through which they sought to address increasingly cataclysmic forms of bodily and social suffering.

Revitalization of Native American Healing: Among American Indians and Anglo-Americans

In 1799, the Seneca prophet Handsome Lake (ca. 1735–1815) began experiencing visions that prompted him to initiate a new religious movement among the Iroquois. After the American Revolution, the once-prosperous Iroquois confederacy had lost half its population and most of its land, and its people suffered from starvation and sickness. In these circumstances, Handsome Lake received a series of apocalyptic communications from messengers of the Great Spirit, who prescribed moral and communal practices such as sobriety, marital faithfulness, the use of medicinal tobacco, and land preservation to relieve the suffering of the Iroquois people and restore them to prosperity and health.

During the early national period, a number of American Indian leaders also inaugurated movements of resistance and renewal that sought individual and communal healing through “sacred revolts” against territorial imperialism. In the “Red Stick Revolt” of 1813–1814, for example, Muscogee warriors inspired by prophetic visions of world renewal rebelled against the United States in an effort to resist colonial invasion and restore harmony to the cosmos. As the century progressed, healing remained a central theme in Native American religions, as various tribal groups struggled to sustain distinctive lifeways on increasingly diminishing tracts of land in the West, to cope with the harsh realities

of reservation existence, and, ultimately, to heal the wounds of colonialism by restoring cosmic balance.

Ironically, during the same period when the U.S. government was developing and enforcing policies of “Indian removal,” Anglo-Americans were becoming increasingly enamored of native practices of healing. Early-nineteenth-century medical manuals began to promote the use of Native American herbal remedies as an indigenous form of medicine, and some European American healers posed as “Indian doctors” endowed with the ability to draw upon the restorative powers of nature in pursuit of health. The allure of Native American modes of healing reflected a broader restlessness with the “heroic” forms of therapy that dominated mainstream medical practice in these decades. Although physicians continued to prescribe blistering, bleeding, purging, and toxic drugs such as opium and calomel throughout the nineteenth century, health reformers had begun to question the efficacy of these treatments by the 1830s.

Alternative Medicine: Christian Physiology and Spiritualism

In their critique of “orthodox” medical approaches, a host of “alternative” practitioners asserted that bodily purity was a key factor in the prevention and cure of disease. “Christian physiologists” such as Sylvester Graham (1795–1851), a Presbyterian minister associated with revivalist evangelicalism, promoted a vegetarian diet, abstinence from alcohol, and sexual restraint as means to health and healing. William Andrus Alcott (1798–1859), who had family connections to the transcendentalist movement, urged both dietary reform and “physical education” as methods for pursuing purity. Proponents of hydropathy extolled the cleansing properties of water, and homeopathic physicians argued that avoiding large quantities of noxious drugs was essential for preserving well-being. All of these movements shared the conviction that “regular” or “allopathic” physicians contradicted the healing powers of nature by recommending deleterious therapies and polluting the body with poisons. The best way to maintain or restore health, in this view, was to keep oneself uncontaminated by debilitating substances and to live in accordance with the God-given laws of nature.

Implicit in this understanding of how to avoid illness and achieve health was a crucial assumption about human nature that set homeopaths and health reformers apart from Protestants, who taught that disease was an affliction of divine providence to which one must remain patiently resigned. If pain and illness were the products of human error, and

purity and health were the results of human effort, then sick persons were both responsible for their own infirmity and capable of overcoming it. This “physical Arminianism,” as the historian James Whorton first called it, resonated with the more optimistic anthropology that characterized both liberal theology and the evangelical revivalism of the Second Great Awakening. Undermining the traditional Calvinist assumption that human beings were powerless to affect their spiritual destinies, let alone their physical health, “Christian physiologists” argued that human beings could and should work actively toward both spiritual regeneration and physiological renewal.

The widespread appeal of health reform among antebellum Protestants of all sorts suggests that many individuals were eager to cast off Calvinist interpretations of suffering and to adopt strategies of healing that assumed the primacy of God’s goodness, mercy, and love. A growing tendency to emphasize God’s munificent character also inspired a large cohort of Protestants to participate in spiritualism, a movement that assailed Calvinist assumptions about the relationship between spiritual health and bodily distress. As with their contemporaries in various health reform movements, spiritualists argued that well-being was the natural condition of human beings and consequently refused to see disease either as a deserved punishment or as a God-given blessing sent for the sick person’s sanctification.

The Return of Miracles

Challenges to the Reformed tradition also prompted many American Protestants to reject Calvin’s conviction that God had ceased to work miracles of healing after the apostolic age. Drawing upon the “biblical primitivism” that characterized so much of nineteenth-century Protestantism, religious movements of the antebellum era such as Mormonism and Adventism claimed miraculous healings as an essential feature of true Christianity. According to Joseph Smith (1805–1844), founder of the Church of Jesus Christ of Latter-day Saints, the recovery of the lost legacy of divine healing among Mormons represented a return to a purer and more powerful form of Christian faith.

Mormons were not the only antebellum Protestants to reclaim the reality of miraculous healing in the “modern” world. In his 1858 treatise *Nature and the Supernatural*, Congregationalist pastor Horace Bushnell (1802–1876), whom many later identified as the father of American theological liberalism, argued that God performs miracles in every era, including the present age. Although Bushnell, like his

Mormon contemporaries, did not reject the use of “natural agencies” and “secondary causes” such as medicines and physicians as methods of pursuing health, he also insisted that sick persons should remain open to the possibility of direct, supernatural intervention. Miraculous cures, in Bushnell’s view, offered evidence of God’s vital, personal, and ongoing presence in the face of what Bushnell saw as the growing skepticism, materialism, and naturalism of modern culture.

Healing in America from the 1860s to the 1950s

Following the Civil War, many religious believers in America echoed Bushnell’s concerns about the debilitating effects of modernity on individual and communal health. During this period, several movements devoted to “divine” healing sought to counter the “swelling unbelief” of late-nineteenth-century culture through their theories of sickness and (re) definitions of health.

Protestant and Metaphysical Healing from the Late Nineteenth to Mid-Twentieth Centuries

Christian Science, New Thought, and evangelical divine healing all emerged and spread rapidly across North America and beyond in the latter decades of the nineteenth century. Bemoaning the materialism of contemporary life to varying degrees, each of these religious movements argued for the legitimacy of spiritual interpretations of illness and healing in the face of mounting hostility from medical professionals aggressively working to consolidate their authority over the process of diagnosing and treating sickness.

Beginning in the late 1870s, Mary Baker Eddy (1821–1910) contended that the “metaphysical method of cure” she called Christian Science enabled participants to obtain freedom from the illusions of bodily illness, sin, and death by aligning their minds with the eternal divine spirit. During this same period, proponents of New Thought, a diffuse and diverse movement inspired by nineteenth-century healing systems such as animal magnetism and mesmerism, also began to promote a version of “mind cure” that emphasized the power of thought to shape physical reality. Drawing upon the teaching of earlier mesmeric healers such as Phineas Parkhurst Quimby (1802–1866), New Thought leaders such as Ralph Waldo Trine (1866–1958) encouraged participants to obtain “peace, power and plenty” by opening their minds to an inflow of divine healing energy. Trine’s best-selling inspirational text, *In Tune with the Infinite* (1897), remained popular throughout the twentieth century,

inspiring later proponents of metaphysical healing such as Protestant minister Norman Vincent Peale, Catholic Bishop Fulton Sheen, and Rabbi Joshua Liebman, all of whom, in the post–World War II era, attributed material and spiritual well-being to the power of positive thinking.

At the same time that Eddy and Trine were advocating mind cure, proponents of evangelical divine healing were insisting that sickness and health were spiritual conditions requiring religious remedies. Participants in “faith cure,” a movement that emerged in the 1870s, argued that miracles of healing provided a powerful antidote to the “materialism and infidelity” of the modern era. Drawing on the work of Bushnell and others who defended God’s ability and willingness to perform supernatural acts in the present, these believers contended that Christ, the great physician, provided both forgiveness of sins and triumph over sickness for the person who claimed these gifts through faithful prayer. All proponents of divine healing prescribed scriptural practices such as prayer, laying on of hands, and anointing with oil as means of pursuing health. Some also discouraged medical treatment. Although outright prohibitions against physicians were relatively rare among earlier participants in divine healing, the emergence of Pentecostalism in the early twentieth century led to increasing tensions with medical professionals. By the mid-twentieth century, Pentecostal faith healers were more inclined to disparage doctors and drugs as agents of demonic oppression. Although some Pentecostals, most notably evangelist Oral Roberts (1918–2009), sought a rapprochement with modern medicine following World War II, emphasis on the supernatural dimensions of illness, health, and healing remained prominent.

Negative attitudes toward scientific materialism brought practitioners of both mind cure and divine healing into conflict with the medical profession throughout the first half of the twentieth century. But not all religious believers were as skeptical as these groups about the benefits of the biomedical model. Some Protestants at the turn of the twentieth century attempted to reconcile spiritual and scientific approaches to healing. Drawing on the burgeoning field of psychology, Episcopal clergymen Elwood Worcester (1862–1940) and Samuel McComb (1864–1938) established a counseling center at the Emmanuel Church in Boston, in 1906. Envisioned as a cooperative endeavor involving trained neurologists, physicians, and ministers, the Emmanuel movement combined insights from medicine and theology to promote physical and psychic wholeness.

Protestants such as Worcester and McComb sought a rapprochement between religion and medicine as a means of

promoting individual well-being, but they were also concerned with healing the body social. During the late nineteenth and early twentieth centuries, both evangelical and liberal Protestants worried about the effects of urbanization, industrialization, and laissez-faire capitalism on personal and public health. Evangelistic organizations such as the Salvation Army sought to assuage social ills, including poverty and crime, by providing food, shelter, medical care, and education to the indigent. Proponents of the social gospel suggested that reforming oppressive social structures that caused sickness and privation was a, if not *the*, central task of Christianity.

Catholic and Jewish Healing from the Late-Nineteenth to Mid-Twentieth Centuries

American Catholics also attempted to bring the resources of Christian healing traditions to bear on sickly economic and social conditions. For centuries, Catholics sought individual and communal health through devotion to the saints and participation in sacramental practices, such as penance and the Eucharist. Unlike their Protestant critics, who rejected the idea that material objects and ritual actions could serve as conduits of supernatural healing power, Catholics insisted that venerating sacred images, partaking of consecrated bread and wine, and being anointed with holy water were legitimate means of seeking spiritual and physical well-being. By the late nineteenth century, Catholics in both Europe and North America were experiencing a devotional revival marked in part by the increasing popularity of healing shrines at the sites of Marian apparitions such as Lourdes in France and the Basilica of Our Lady of Guadalupe in Mexico. Cures that occurred at these pilgrimage sites were assiduously investigated by the Catholic hierarchy, and only those confirmed by the church’s medical bureau were deemed miraculous. Just as Protestants promoted divine healing as a riposte to modern materialism, so too did Catholics assert that miracle cures proved the reality of the supernatural in an era of scientific skepticism.

While Catholics always insisted on the reality of miraculous healing, they never denied the association between sanctity and suffering that became suspect among some nineteenth-century Protestants. Like their medieval predecessors, most American Catholics embraced the idea that God sent sickness and physical pain for spiritual purposes. Even as they idealized suffering saints, however, American Catholics also worked tirelessly to relieve bodily afflictions and heal social maladies. During the nineteenth century, Catholic orders such as the Sisters of Charity founded

hundreds of hospitals and charitable organizations in North America. In response to the plight of millions of impoverished immigrants, Catholic theologians and reformers of the Progressive Era developed critiques of exploitative economic systems and lobbied for structural improvements such as national health insurance.

Both Catholics and Protestants struggled, in a variety of ways, to resist the wholesale medicalization of healing during the early decades of the twentieth century. A small contingent of American Jews also promoted a form of spiritual healing in these years. In his 1916 book, *Jewish Science: Divine Healing in Judaism*, Reform rabbi Alfred Geiger Moses (1878–1956) combined elements of the New Thought tradition, emerging discourses of psychology, and Jewish spirituality in an effort to encourage Jews to consider the religious dimensions of illness and health. Although some responded to Geiger's appeal, most Jews in mid-twentieth-century America discounted divine healing and traditional Jewish curative practices in favor of biomedicine. In American Jewish culture, as in the culture at large, healing involved patronizing preeminent physicians and helping to build the medical profession.

Healing since the Late Twentieth Century

A series of cultural and social shifts in the 1960s helped reshape theories and practices of healing during the late twentieth and early twenty-first centuries. The Immigration Act of 1965 led to heightened religious and cultural diversity in the United States. Although traditions such as Buddhism, Hinduism, and Confucianism had long been a part of the North American religious landscape, cross-cultural encounters resulting from increased immigration fueled an explosion of interest in non-Western healing systems and practices such as Chinese acupuncture, Japanese Reiki therapy, and Indian Ayurvedic medicine. The embrace of these and other “alternative” modes of healing also prompted renewed consideration of Native American healing resources, particularly among practitioners of New Age spirituality—a diverse and decentralized movement with roots in the American metaphysical tradition. Espousing an ethic of cultural pluralism, New Age healers draw upon multiple religious traditions in their quest to access the curative powers of “subtle energies.”

The pluralist ethos and religious diversity of the late twentieth century also influenced how American Catholics sought healing. Immigrants from Mexico, the Caribbean, and Latin America brought with them devotions to unfamiliar

holy figures (such as El Santo Niño de Atocha in Los Angeles), whose shrines have become popular pilgrimage sites for American Catholics seeking health and well-being. Practitioners of Cuban Santería, many of whom also identify as Roman Catholic, have pursued healing in ways that both draws from and challenges traditional Catholic theology and ritual. Healing also featured prominently in the charismatic revival that swept through numerous Catholic communities in the late 1960s, prompting many churches to start special services devoted to prayer for healing through the power of the Holy Spirit. Theological and liturgical changes introduced by Vatican II (1962–1965), such as the reconfiguration of the sacrament of extreme unction as “Anointing of the Sick,” contributed to the growing presence of healing services in mainstream Catholic churches. Liberation theology, which emerged in part out of Vatican II's expressed concern for the oppressed, inspired both lay and clerical Catholics to conceive of healing in communal terms by seeking to reform social structures that perpetuate poverty, violence, racial discrimination, and gender bias.

Social revolutions of the 1960s and 1970s, including the civil rights movement, second wave feminism, and environmentalism also sparked new ways of defining healing among American religious communities. Protestants, Jews, Native Americans, Wiccans, and New Age metaphysicians have all paid increasing attention to systemic ills such as racism, sexism, colonialism, and degradation of the natural world. Some have created new religious rituals of repentance or reconciliation designed to restore broken relationships and correct harmful patterns of behavior.

While the social dimensions of healing have garnered the attention of an increasing number of American religious communities since the 1960s, the pursuit of personal well-being and wholeness has remained a central preoccupation for believers of all persuasions. During the last two decades of the twentieth century, a religious healing movement emerged among American Jews. The National Center of Jewish Healing, established in 1994, works to reclaim the resources of the Jewish tradition as means for coping with illness. Mainline and evangelical Protestant churches influenced by the charismatic renewal promote divine healing through services of prayer, anointing, and laying on of hands. Pentecostal healers such as Creflo Dollar, Benny Hinn, and Joyce Meyer encourage petitioners to claim the blessings of health and prosperity through positive affirmations of faith. As they broadcast their revival meetings around the world, the message of these word of faith preachers resonates with

the experiences of expanding Pentecostal and charismatic communities in Africa, Latin America, and Asia, for whom promises of wealth and well-being are central components of the Christian gospel. At the beginning of the twenty-first century, globalization continues to heighten concern about sickness and health, pushing religious communities in North America and elsewhere to adapt their interpretations of illness and pursuit of health to changing economic, social, and cultural conditions. Within this context, healing remains central to religious life.

Health, Disease, and Medicine

Physical health and well-being are areas of enduring concern to most religions. In the Christian tradition, for instance, Jesus of Nazareth healed the sick, and Christian institutions played a central role in establishing medical facilities over the course of many centuries. In the American context, religion and medicine have brought varying perspectives to the challenges associated with health and disease, producing a relationship that has shifted considerably over time. From the substantial overlap of religion and medicine among Native Americans and in the early period of European settlement to the considerable distance and tension

between the two fields that marked most of the twentieth century, the intersection of religion and medicine has been especially fluid and complex. Still, the general course of development has followed the pattern of modernization in advanced societies by moving toward greater distance and clarification between areas of human experience that previously overlapped more fully. Since the 1970s, however, there has been a remarkable resurgence of interest in the connections between religion and medicine and a huge array of resulting therapies. The twenty-first-century popularity of alternative therapies and religiously informed medicine makes this an especially timely topic.

Religion and medicine are united by a common focus on health, whether spiritual or physical health. As social and cultural enterprises, religion and medicine seek to enhance human flourishing and keep at bay disorder and disease, spiritually understood as sin or a malady of the spirit and physically understood as bodily impairment. Both arenas ultimately address human mortality. For religion and medicine, death is the common enemy, the ultimate impediment and mystery. Medicine seeks to stave it off, to fight back its emissaries and manage its ultimate arrival; religion seeks to make it meaningful and sufferable. In the face of death, both religion and medicine offer visions of human well-being and urge people to live as fully and faithfully as possible in the limited time they have, whether by exercising and avoiding smoking and fatty foods or by believing, repenting, and praying.

Given the commonalities of religion and medicine, a persistent issue in American history has been the relationship between these fields. How have these fields intersected, and what convictions and standards should govern their interactions? From a historical perspective, we can discern five eras that have marked the relationship between religion and medicine and affected religious understanding of and approaches to health and disease. First, before and soon after colonial settlements, there was substantial overlap between religion and medicine, sometimes to the point that there was little to distinguish them. Second, through the influence of the Enlightenment and commercial development on eighteenth-century colonists, a stronger demarcation between the realms of religion and medicine developed, coinciding with clearer lines of professional authority among ministers and physicians. Third, shaped by the ideological and social consequences of the American Revolution, the nineteenth century witnessed a democratization of the professions and religious and medical innovations that destabilized the

relationship between religion and medicine, creating an amorphous period marked by the search for authority. Fourth, scientific advances and increasing societal modernization prompted medical professionalization under the banner of science beginning in the mid-nineteenth century and increasing in intensity after the turn of the century, resulting in strictly demarcated religious and medical territories. Fifth, in recent decades, alternative therapies and scientific research at the intersection between religion and medicine have complicated the relationship by raising fresh questions about the body, health, and well-being.

These five periods cannot be precisely delimited chronologically. Instead, they identify significant historical shifts that have occurred over decades. They suggest in broad outlines a pattern of alternation between increasing differentiation of the religious and medical arenas, on the one hand, and significant interpenetration, on the other. Modernization has entailed institutional and cultural fragmentation, but it has also prompted sustained efforts to understand and care for human beings in holistic ways. The periods examined here suggest large-scale changes over time, but it is vital to recognize the thoroughgoing diversity that has characterized the American context. Pluralism in matters religious and medical has marked the American setting from the beginning, so countervailing examples to the identifiable patterns of development could readily be identified.

Overlap of Religion and Medicine among Native Americans and Early Colonists

Native American Healing

Among the Native American tribes who populated North America for centuries prior to sustained European settlements, there existed only limited differentiation between religious and medical activity. Many Indian tribes had no word that translated as “religion.” Spiritual activity and belief was so fully integrated into the daily course of life that it made no sense to identify a distinct sphere as religious, to abstract out of the whole that segment of existence. Additionally, Native American tribes held to a monistic understanding of the world. No basic distinction existed between nature and supernature, since all of life was inspired and the gods and spirits were fully immanent and natural rather than transcendent and supernatural. Just as it made no sense to designate an area of human experience as religion, it was nonsensical to think of the body primarily in materialistic terms. The physical and spiritual worlds were

united and interdependent, so one could not segregate the religious from the medical, the spiritual from the physical. In various tribes, shamans, medicine men, or priests bridged religion and medicine.

Shamans functioned as a primary form of medical care for many Indian tribes. For the Mi'kmaq, a northeastern woodland tribe, shamans entered a trance state and invoked their *manitou* or spirit helper to enable them to supplicate offended spirits and powers. Diseases arose from the violation of taboos, such as those associated with hunting, or from the failure to enact proper rituals, leading angry spirits to visit sickness upon guilty parties. Shamans would diagnose disease and its causation, then function as spiritual intermediaries. Physical ailments had spiritual causation, necessitating an expert who could travel to the spirit realm and parley with the attacking spirits. Through trance voyages, sometimes induced by rigid asceticism or hallucinogenic substances, shamans of various tribes would propitiate the spirits that caused sickness, thus healing the individual and restoring order and harmony to the tribe by renewing its ecological and spiritual equilibrium.

Among Pueblo Indians of the Southwest, such as the Acoma, medicine men blessed newborns with the essential gifts needed to start a healthy and prosperous life as a member of the tribe, thereby enmeshing them in a kinship network shaped by gift exchanges and indebtedness. In their sacred *kivas*, where ritual interactions with the gods created a cosmos by keeping away evil and chaos, medicine men prayed to animal fetishes for power, utilized bear claws and feather plumes to whip away diseases, sucked foreign objects often symbolized by a feather out of diseased bodies, or fought as shamans with witches to reclaim a patient's heart. For the Catawbas of the Carolinas, priests or conjurers utilized herbal medicines and their sacred ritual authority in manipulating spiritual forces to counteract sickness. Disease arose when evil spirits or the shades of the dead entered the body, and priests engaged in rituals to propitiate the spirits and thus produce healing. Priests would draw upon the resources of their natural environments, utilizing river water, fish teeth, local herbs, and feathers. These examples illustrate a common etiology among Native Americans: disease arose from the infiltration of the alien into the body, which produced disharmony; whether physical or spiritual, this alien object or spirit needed to be overcome and removed. Health then entailed a return to harmonious existence, where the previously sick person was restored to right relations within

the human and spiritual community and the natural environment, and the tribe renewed its cosmos.

Early Puritan Medicine

Early European settlers to North America faced stark trials, including famine, warfare, and a new disease environment. The diseases colonists brought with them proved to be the single greatest factor in decimating native populations, but Europeans also had to adapt to major medical challenges. The well-known stories of death and destruction at Jamestown and Plymouth reinforce the enormity of establishing new settlements at such great distance from home and civilization as the colonists knew it, a task that often proved hazardous to life and health.

European settlers brought to America a conception of two distinguishable realms of human endeavor, religion and medicine, each with its designated specialists. As products of Christian culture, Europeans adhered to a worldview in which the natural and supernatural were distinct, even if intersecting at points. Still, in practice there was substantial overlap between the realms of religion and medicine among seventeenth-century colonists, since the sovereign God of creation was the lord of both heaven and earth. Under God's providential care, human health and disease were areas of divine concern and theological reflection. Christians have always prayed to God for relief from disease and suffering and for strength and faith to endure illness and make it meaningful, with varying expectations as to how God might answer such prayers. Like most of the children of the Protestant Reformation, the Puritans held to the doctrine of cessationism, believing that miracles ceased with the end of the apostolic age, since their purpose had been to authenticate Christ and help establish the church. This doctrine served as a bulwark against Catholic superstition and attempts to manipulate divine power. The Puritans believed God's continual agency infused and sustained the material world and that he could act in the world in whatever fashion he chose, but typically he worked in the material realm through secondary causation. If God willed it, he could provide direct healing in an act of "special providence," but the normative pattern was for God to bless human efforts to steward natural resources for improved health and well-being.

Simultaneously, New England Puritans balanced a focus on the natural causation of disease with a tendency to attribute specific diseases to individual or collective sin. Like hurricanes and other natural disasters that Puritans termed "remarkable providences," epidemics or plagues betokened

God's displeasure at human sinfulness, especially the failure of God's people to maintain faithfully their covenant with him. But God's rebuke also brought his invitation to repentance and faith. Increase Mather (1639–1723) recorded stories of such *Remarkable Providences* (1684) to serve as a warning to the spiritually lazy and to detail the extraordinary divine deliverances they entailed. While Puritans recognized two distinct realms of religion and medicine, in belief and practice they overlapped, with the extent depending upon the circumstances. Certainly there was no hard and fast distinction between sickness of the body and sickness of the soul. For instance, "religious melancholy" was an enervating, destabilizing illness that involved wrestling with sin, confessing to God, and seeking his mercy. Today, we would recur to psychological or psychiatric diagnoses and treatments, but Puritan culture had few such resources at hand. More important, while the body served as the temple of the Holy Spirit, it was also the temporary abode for the soul, which had an eternal destiny. Spiritual understanding shaped medical insight and often treatment.

Given this understanding of nature and supernature, physicians functioned in an accepted role in Puritan culture, as was true more broadly in colonial America, but they remained ultimately subordinate to religious understanding and practice. Doctors obtained medical training through apprenticeships, with wide variations in quality. Given the exigencies and limitations of colonial life, physicians were relatively scarce. It therefore fell to ministers, almost always the best-educated members of their communities, to provide some measure of medical care through the distribution of medicines as well as prayers for healing. For instance, Michael Wigglesworth (1631–1705), minister at Malden, Massachusetts, studied medicine and cared for his parishioners' bodies as well as their souls. The work of religious historians David Hall and Jon Butler has revealed the wide popular use in colonial New England of charms, potions, amulets, and other religious items to ward off disease and the demons that caused it. Many early New England settlers believed the material realm could be infused with spiritual portent, and clerical censure of these magical and pagan practices did not prevent common folk from protecting themselves in whatever way seemed efficacious.

A notable episode that demonstrates the overlap between religion and medicine in the early eighteenth century involved Cotton Mather (1663–1728) and Zabdiel Boylston (1679–1766). The leading minister in Massachusetts and the prodigious author of hundreds of books, Mather engaged in

scientific experiments in his spare time. The physician Boylston was a pioneer in the realm of surgery, performing the first known removal of gall bladder stones in America and first excision of a breast tumor. In 1721, Boston faced a smallpox epidemic, and Mather and Boylston promoted inoculation against the disease. Mather had first learned of inoculation fifteen years earlier from his Sudanese slave Onesimus, who had been inoculated as a child in Africa, but his efforts to promote the practice among physicians had failed. As smallpox raged, however, Mather persuaded Boylston to try inoculating patients. Boylston's son and two slaves received inoculations and recovered within a week. In the face of extraordinary public opposition stoked by fears of the alleged poisoning effects of inoculation, Boylston went on to inoculate dozens of patients to good effect, published the results, and was elected a fellow of the Royal Society. Mather and Boylston's experimental efforts suggest the influence of Enlightenment empiricism, the intellectual impact of which increased over the course of the eighteenth century.

Growing Differentiation in the Enlightened Eighteenth Century

Historians have located the early development of American commercial society in the eighteenth-century colonies. Advances in communications and transportation enhanced commercial activity, resulting in significant increases in material goods and a growing segmentation of the social world. Intellectual and cultural developments also promoted this movement toward the differentiation of life into distinct spheres, including those of religion and medicine. Enlightenment thought encouraged rationalism, empiricism, an emphasis on personal experience, and a deep distrust of received authority. Two religious movements with broad influence in the eighteenth century that drew upon these currents were the transatlantic evangelical awakenings, particularly the Great Awakening of the 1730s and 1740s, and the growth of rationalistic religiosity among cultural elites, particularly Unitarianism and deism.

Great Awakening and Methodism

Beginning in the 1730s, the Anglo-American religious world experienced substantial Christian revivals. In England, brothers John (1703–1791) and Charles (1707–1788) Wesley sought to renew Anglicanism through their evangelical preaching. They urged conversion and the second blessing of sanctification through the power of the indwelling Holy

Spirit. Knowing in the depths of their being the reality of Christ, believers were to live with heartfelt devotion and faith. The Wesleys and their many followers in what became known as the Methodist movement preached personal knowledge and appropriation rather than lifeless forms rooted in settled authority. Experiencing the power of God affected the body as well as the soul. John Wesley's personal journal is replete with instances of miraculous healings and answered prayers for improvements in health. Notably, Wesley also distributed medicines and medical advice to those in need and urged his fellow Methodist ministers to do likewise. Wesley went so far as to write a popular textbook on *Primitive Physick* (1747), which contained home remedies for all sorts of ailments. Many colonial American ministers in frontier or sparsely populated regions or those working among the poor followed Wesley's example by trying to alleviate physical suffering and providing limited medical care. Often, as with Wesley, this was accompanied by a stinging critique of overpriced, deficient physicians, who took the money of patients but provided dubious results.

The colonial Great Awakening arose through the efforts of ministers such as Jonathan Edwards (1703–1758) and George Whitefield (1714–1770). The brilliant theologian and pastor of Northampton, Massachusetts, Edwards used the Enlightenment thought of John Locke and Isaac Newton to promote evangelical awakening. He preached that sinners received a "new sense of the heart" through God's grace in conversion, which enabled them to know God's love, beauty, and goodness. Whitefield's preaching tours of the colonies created a sensation, as thousands amassed to listen to the famous English evangelist. Critics like Charles Chauncy (1705–1787) cited the Awakening's tendency to take Christianity from the authoritative space of the church into the marketplace and open fields, thereby inviting indecorous and highly emotional behavior. Historians have suggested that this decentralization of Christianity and the accompanying democratization of authority that led to revival preaching from laity, women, and even slaves enabled many Christians to adapt to the increasingly fragmented world of commercial society. Among radical evangelicals, God's present power in the Awakening not only included fainting, trances, and other bodily exercises but also healing miracles. The well-publicized healing of Mercy Wheeler of Plainfield, Connecticut, in 1743, for example, was one of many that encouraged heightened expectations among radical evangelicals and brought rebuke from more moderate evangelicals and ridicule from critics.

Deism and Unitarianism

Even as the Great Awakening prompted some Christians to unite religion and physical health in expectation of miraculous healings, a more culturally influential trend in the eighteenth century moved in another direction. Shaped by Enlightenment rationalism and distrust of orthodox Christianity, figures such as Chauncy and Jonathan Mayhew (1720–1766) turned away from the Trinitarian tradition of their Congregational Church and toward Unitarianism. Additionally, deism grew as a live religious option in the latter half of the eighteenth century, with many of the leading figures of the American founding associated with it. For the fledgling Unitarian movement and for deists, the creator God removed himself from active intervention in the natural world. God ordained nature and its laws, but then withdrew, allowing his finely tuned instrument to carry on according to its own dictates. This effectively removed the divine from the physical realm, including medicine and the body.

Simultaneously, the Enlightenment stress on science and empiricism encouraged scientific study of the human body. The polymath Benjamin Franklin (1706–1790) not only invented bifocals and the urinary catheter, he also conducted medical experiments. With moderate to limited success, Franklin tried to assess the effect of electricity on paralysis, epilepsy, hysteria, and melancholia. During his residency in France, he played a key role in refuting the declarations of Franz Mesmer (1734–1815), whose mesmerism utilized magnets to control “animal magnetism” within the body, thereby reestablishing bodily harmony and curing diseases. In 1784, Franklin served with the chemist Antoine Lavoisier and others on a royal commission that investigated Mesmer and found his colossal claims wanting, effectively putting an end to his public career. For Franklin and others like him, human reason, empirical study, and experimental knowledge guided medicine, not dubious metaphysical claims about the agency of unknowable powers.

Another representative figure of the age was Benjamin Rush (1745–1813), signatory of the Declaration of Independence and a prominent physician in Philadelphia. After attending the College of New Jersey (now Princeton University) and studying medicine as an apprentice in Philadelphia, Rush received a medical degree from the University of Edinburgh, since formal medical education was still in its embryonic phase in the American colonies. Rush proceeded to become a professor of chemistry and then professor of the theory and practice of medicine at the College of Philadelphia (now the University of Pennsylvania). Rush practiced

the “heroic” medicine common to his day, which relied upon purging, bloodletting, and other evacuations based on Galen’s ancient humoral understanding of the body. Rush pioneered inquiry into mental illness, publishing the first American textbook in the field, which classified different forms of mental illness and speculated as to their origins. In addition to his scientific prowess, medical achievements, and many humanitarian ventures, Rush was a Presbyterian and founder of the Philadelphia Bible Society, who gradually moved away from his hereditary Calvinism towards a universalist understanding of salvation and an ambiguous relationship with institutional religion. Like Thomas Jefferson (1743–1826) in matters of church and state, Rush and Franklin adhered to a separation of religion and medicine into spheres that may have united ultimately in theory but remained distinct in practice. Yet as revolutionary stalwarts and founding fathers, they helped unleash social forces that muddied their clear Enlightenment waters.

Democratization and the Search for Authority in the Nineteenth Century

In the wake of the Revolutionary era, common men and women came to believe in their capacities in new ways. Regular people imbibed the message of the Revolution and declared their independence from social hierarchy and vested authorities. The decades after the founding witnessed a remarkable growth of the twin forces of democratization and individualism, which helped fuel the westward expansion of the country by giving rise to a restless hunger for progress and the individual’s belief in the pursuit of happiness. Education, social standing, family heritage, professional standards—none stood against the driving conviction of common folk that they could be and do what they wanted. Social elasticity and the desire to escape the standards and institutions of settled society encouraged a spirit of innovation in religion and medicine, with dozens of new groups and movements that thrived in the early republic. Consequently, the relationship between religion and medicine became more ambiguous in this period, as the colonial push toward standards, rigor, and a differentiated medical sphere that we see in Benjamin Rush became derailed, and new claims for authority arose.

Second Great Awakening

The Second Great Awakening, usually dated from roughly 1790 to 1830, altered the open religious marketplace of the early republic, where success in religion would be

determined by the capacity to persuade and move people, not by social and political power. Revivalists preached a Christian gospel premised on free will and human agency, while vibrant newer denominations like the Baptists and Methodists promoted their evangelical faith. The Methodists especially represented and benefited from the currents of the age. Arriving in the colonies in the 1760s from England, Methodism grew at an astounding rate, becoming the largest denomination in the country by 1830. Through a system of circuit riders, small group gatherings, lay leadership, and strong moral discipline well suited to the challenges of an expanding frontier, Methodism found a receptive audience. Leaders like Francis Asbury (1745–1816) and Peter Cartwright (1785–1872) traveled thousands of miles on horseback organizing expanding churches in far-flung locales. Like their forebear John Wesley, these itinerant ministers often distributed medicines or medical advice to those who did not have access to physicians because of distance or poverty. Perfectly suited to a democratic age, Methodist ministers required no formal training or social stature. No longer would figures like Cotton Mather be seen as authorities by virtue of their advanced learning, wealth, or standing. Instead, the early nineteenth century produced leaders like Lorenzo Dow (1777–1834), whose lack of education was matched only by his lack of decorum. Known as “Crazy” Lorenzo Dow, he preached to crowds of thousands at camp meetings and other revival gatherings, utilizing a full range of emotions and persuasive techniques to draw sinners into God’s kingdom.

Like hundreds of other self-trained preachers, including many women and African Americans, Lorenzo Dow functioned as a physician for some of his followers. Since the medical field also faced the democratic onslaught against hierarchy and professionalism, reform movements abounded in the nineteenth century. Dow, Elias Smith (1769–1846), John Leland (1754–1841), and other revivalist preachers critiqued “orthodox” medicine and favored sectarian alternatives. Religious dissent from the older established churches tended to go hand-in-hand with medical dissent. The universalist Elias Smith worked alongside Samuel Thomson (1769–1843) to promote the latter’s botanical remedies. Natural medicine, they believed, would liberate the people from the tyranny of regular physicians, with their torturous practices of induced bleeding, purging, sweating, and blistering. Rather than relying on calomel and mercury, Thomson turned to the lobelia as a natural emetic, a practice that went back to the Penobscot Indians. Thomson’s system thrived

The nineteenth-century evangelist “Crazy” Lorenzo Dow served in the role of physician for some of his followers. Dow and other revivalist preachers critiqued “orthodox” medicine and favored sectarian alternatives.

primarily through its democratic and individualistic rhetoric; just as in religion and politics, the people should decide for themselves what best served their medical needs. Other advocates for Thomson’s botanical remedies included Mormons, whose founder Joseph Smith (1805–1844) and his successor Brigham Young (1801–1877) urged the use of sectarian medicine in their movement.

Sectarian Medical Innovations

The faith in progress, outsized expectations for human potentialities, and optimistic revolt against received wisdom that fed religious innovations in the early republic also shaped medical reforms. Based on the teachings of the German physician Samuel Hahnemann (1755–1843), homeopathy taught the use of infinitesimally small doses of preparations—achieved through repeated dilutions—that produced

symptoms similar to the patient's in a healthy person. After its introduction in the United States in the late 1820s, homeopathy grew in influence throughout the nineteenth century, producing thousands of practitioners and more than twenty homeopathic colleges by the end of the century. Along with vegetarianism and temperance, dietary reformer Sylvester Graham (1794–1851) promoted foods rich in whole grains and free of chemical additives in the decades before 1850, and his thought eventually had a significant influence on the Seventh-day Adventist movement. Hydropathy, or the “water cure,” flourished in the mid-nineteenth century and following, promising the afflicted healing from all manner of disease through cold water baths, natural springs, wet compresses, and the copious drinking of clean water.

Arrival of Catholicism

American religious and medical pluralism grew through immigration, voluntary or involuntary, as well as through innovation. Catholics began to arrive in the United States in large numbers in the 1820s and 1830s, bringing with them a sacramental theology that stressed the capacity of material objects to be infused with restorative grace. Like other Americans of the nineteenth century, Catholics relied upon orthodox and sectarian medicine to varying degrees. They also drew upon a long tradition of miraculous healing focused on relics, shrines, or apparitions. The “miraculous medal” ensued from a Marian apparition in Paris in 1830; it promised special grace for those who wore it and became associated with unusual healings. Mary appeared again in France, this time in 1858 in the town of Lourdes. A peasant girl named Bernadette Soubirous followed Mary's instructions to dig in the earth, thereby uncovering a spring whose waters have become a source of healing to thousands of pilgrims. Within years of its authentication by the Catholic Church, the healing efficacy of Lourdes water spread throughout the United States by means of the distribution system enacted by the Church of Our Lady of the Sacred Heart at Notre Dame University, which also built a replica grotto for those who could not travel to northern Indiana but not southern France.

African American Healing Practices

African Americans also brought their traditions to America, though their capacity to retain and transmit them was limited by the brutal realities of slavery. On southern plantations, blacks relied upon herbal medicines, often drawing upon the wisdom of the elders to concoct remedies from available

plants. Slaves utilized conjuration—also called “rootwork” or “hoodoo”—to harness spiritual forces for healing and protection or for harming enemies. Relying on monistic African religious traditions, blacks made use of the spiritual and magical forces inherent in animal bones, herbs, roots, and other natural objects. The escaped slave Henry Bibb (1815–1854), for example, described his extensive—and for him ultimately unsuccessful—use of conjure to curse his master and win the heart of his beloved. With their access to regular or even common alternative medicines severely limited, slaves relied upon conjure to assert control over their bodies and their environment and to bring order to life experiences that continually threatened chaos and destruction. The illness experience became more manageable and hopeful with spiritual powers working on the person's behalf.

Professionalization, Modern Biomedicine, and Religious Dissenters

The nineteenth-century proliferation of religious and medical pluralism continued into the latter half of the century and provoked a strong reaction from orthodox physicians, who worked to define their theory and practices as medically legitimate and deny legitimacy to alternative approaches. Scientific advances such as the development of germ theory and associated medical applications in the 1860s and 1870s revolutionized the understanding and treatment of disease, laying the groundwork for vast improvements in public health and hygiene, as well as the development of antibiotics in the twentieth century. Building upon such scientific developments, orthodox physicians sought to professionalize under the banner of science. They increasingly presented themselves as scientists applying the fruits of the laboratory to the human body, whereas alternative practitioners engaged in quackery rooted in greed or ignorance. Success in this endeavor pushed clinical treatment toward scientific standards of depersonalized objectivity. The body came to be an independent organism subject to disease and disorder, remediable through scientifically verified drugs and techniques, rather than an integral part of a complex, whole person.

Modernizing Medicine

Key markers in this transition to modern scientific medicine included the founding of the American Medical Association (AMA) in 1847, the passage of the Food and Drug Act of 1906, and the Flexner Report of 1910. As competition grew from alternative practitioners, orthodox physicians banded together in the AMA to further their interests, define and

protect their turf, and establish professional standards. Although weak at first, the AMA gave physicians an increasingly important institutional presence and voice to promote their agenda and delegitimize alternatives. The Food and Drug Act enacted regulations for the medical marketplace, which had existed for decades as a pharmacological Wild West. A trip to the local chemist shop or apothecary could secure for a sufferer opiates like laudanum or morphine, while an exceptionally wide range of home brews, tonics, and patent medicines contained mercury, cocaine, and other addictive or harmful substances. Finally, Abraham Flexner's lengthy study for the Carnegie Foundation on medical education in North America exposed a dismal state of affairs, in which many doctors received training at third-rate proprietary schools with little scientific grounding. Using Johns Hopkins Medical School as his model, Flexner proposed numerous reforms that helped standardize medical education and move it into the modern era.

Further medical and social developments helped define medicine as a sphere essentially distinct from religion and family. By the late nineteenth century, physicians increasingly relied upon dedicated physical spaces to conduct their professional activity. For centuries the home had been the primary site of illness and healing, but by the turn of the twentieth century doctors' offices with clinical apparatus and hospitals were becoming normal and eventually standard. This had the effect of physically segregating professional medicine from the rest of life, including prayer and religious devotions that occurred in the home. It also limited access to patients from clergy, family, and friends. Illness became less something that was endured at home in the normal course of life than something cordoned off to a delimited realm. This physical segregation of illness reinforced the notion that healing required specialized medical training. Similarly, the rise of the funeral home industry around the turn of the century isolated death and the dead. Whereas families traditionally cared for their suffering loved ones unto death in the home, then washed, dressed, and cared for their deceased bodies while awaiting the funeral, modernization entailed dying in the hospital and embalming at the mortuary. Arguably, these changes further distanced and distinguished health, illness, and medicine from religion. Broader patterns of modernization, as seen in the social, economic, and cultural changes of urbanization and industrialization, contributed to and reinforced this process of fragmentation.

By the 1920s there was a clear cultural differentiation between religion and medicine and a common conviction

that these two realms should remain distinct, even if they overlapped at limited points. Certainly, religious people went on praying for God or the divine to bring healing to their relatives, but they knew to leave the primary care to the doctors and nurses. Even as the great majority of Protestants, Catholics, Jews, and other religious adherents adapted to and supported this changing medical world, a variety of religious innovators dissented from the division of medicine and religion, especially during the major decades (1870–1930) in which this transformation occurred.

Religious Dissenters

Mary Baker Eddy (1821–1910) spent years as a suffering invalid before discovering the key to health in the metaphysical teachings of Phineas Quimby (1802–1866) and in a radical understanding of the nature and teachings of Christ. Through her book *Science and Health* (1875) and her Christian Science movement, Eddy taught that all reality is spiritual and matter is illusory. This thoroughgoing idealism stressed the oneness of all in God, understood as an impersonal force of love and goodness. Sin, evil, disease, and suffering all proved to be unreal, false notions rooted in wrong thinking. Healing, then, entailed changing one's thinking to reject the illusion of a body in pain and embracing instead the goodness of being.

Such "mental healing" or "mind cure" was also central to the New Thought movement, which in its varied incarnations stressed the unity, goodness, and spiritual nature of all being. New Thought metaphysics taught positive thinking, the law of attraction, the divinity of the self, and a conception of the life force into which practitioners needed to tap. As in Christian Science, healing in New Thought groups such as the Unity School of Christianity and the Church of Divine Science occurred through mental acceptance of metaphysical reality and rejection of false ideas. In the early twentieth century, rabbis Alfred Moses (1878–1956) and Morris Lichtenstein (1888–1938) promoted a Jewish version of New Thought known as Jewish Science, which stressed affirmative prayer and healing through right thinking. Aspects of New Thought have proven extremely influential in American religious life, including in the revival of positive thinking in the 1950s via the teachings of Joshua Loth Liebman (1907–1948) and especially Norman Vincent Peale (1898–1993), whose best seller, *The Power of Positive Thinking* (1952), urged millions to associate positivity and good thoughts with health, happiness, and success.

Among radical evangelical Christians, growing numbers of believers relied upon faith healing after 1870 in the context of the Holiness and Pentecostal movements. Arising out of Methodism, the Holiness movement sought freedom from inbred sin through John Wesley's experience of sanctification. Extending the logic of perfection from the soul to the body, some Holiness believers began expecting God to heal them directly in response to the prayer of faith. Faith healing advocates like A. B. Simpson (1843–1919), founder of the Christian and Missionary Alliance, insisted that what they called “divine healing” was rooted in Christ's atonement. Just as Jesus paid the price for our sins on the cross and we can be forgiven through faith in him, so he paid for our diseases since sickness arises from sin, whether personal or general. Thus, if believers have faith in Christ for it, they assuredly will be healed. Pentecostals from the African American pastor William J. Seymour (1870–1922) to the flamboyant healing evangelist Aimee Semple McPherson (1890–1944) taught healing in atonement, urging believers to accept in faith Christ's gift of a restored body. Radical proponents such as John Alexander Dowie (1847–1907), who established a Christian utopian community in Zion City, Illinois, stressed the necessity of rejecting doctors and medicine as agents of the devil seeking to draw believers away from trust in God. As with Christian Science and New Thought, failure to achieve healing arose from the inability of the sick person to change his or her thought or put faith in Jesus, claims that no doubt added to the suffering of many.

Other Communities

Other religious communities fused spirituality and health. Catholics continued to look for supernatural help in times of distress. Among many other options, St. Jude, viewed as the saint of hopeless causes, drew the prayers of thousands after the introduction of his devotion in Chicago in 1929. Letters to his shrine suggest that St. Jude produced miracles of healing for the sick, lame, and depressed. Among Episcopalians, the Emmanuel movement brought together psychotherapy and religious healing in the early twentieth century. Episcopal priests Elwood Worcester (1862–1940) and Samuel McComb (1864–1938) established a clinic at the Emmanuel Church in Boston, which relied upon physicians for medical services as well as New Thought principles of suggestion and positive thinking. Metaphysical thought also helped give rise to chiropractic medicine in the late nineteenth century. Founder D. D. Palmer (1845–1913) based his teachings on vitalism, the idea that a vital spark,

or energy undergirds living organisms. Specifically, Palmer focused on “innate intelligence,” or the inborn vitalistic power that structured, maintained, and healed the human body, which could operate freely when spinal adjustments aligned the spine.

These religious and medical dissenters drew millions of followers, but from the latter part of the nineteenth century through the middle of the twentieth century the demarcation between religion and medicine grew apace. As medicine became more grounded in science it prided itself on being disinterested, data-driven, and specialized. This had the effect of segmenting patient care into ever more tightly defined disciplines. Medical advances such as penicillin demonstrated the undoubted power and success of this modern biomedical approach, but by the last few decades of the twentieth century a growing chorus of critics suggested the costs had been high as well. Advocates of alternatives suggested that in its drive for scientific grounding, biomedicine had sacrificed the art of medicine, thereby losing enormous insights into human health and illness and providing a diminished quality of care.

Renewed Challenges in Recent Decades

Since the 1970s, the dominant biomedical model has faced renewed challenges from alternative medical therapies, which have often been motivated by religious convictions and fueled by increased immigration. Today numerous treatment modalities exist alongside the main biomedical model. As advocates have publicized their critiques of biomedicine and advanced alternatives to the dominant approach, there has been a huge growth in what has come to be called “complementary and alternative medicine,” including therapies that draw upon religion in diverse ways.

Criticisms of Conventional Medicine

Building upon the cultural and social revolution of the 1960s and 1970s, critics of biomedicine have focused on several shortcomings. While recognizing in the main the success of modern medicine in treating certain kinds of diseases through pharmacological advances and improved surgical procedures, proponents of alternative medicine have argued that biomedicine treats patients as detached physical organisms rather than whole persons. It thereby neglects the emotional, psychological, and spiritual dimensions of human experience. Since the illness experience entails a search for meaning and order in the midst of the insult and threat introduced by serious disease, these broader dimensions of

lived experience can and should be involved in meaningful ways in the healing process. By overlooking them, biomedical practitioners neglect the art of medicine and diminish the quality of patient care. Many patients need to be heard as they narrate their illnesses in the context of family tensions, stress at work, grief over the death of a friend, or any number of other experiences that affect health and well-being. Instead of attending to the full lives of patients through empathy and personal engagement, thus assessing their illnesses in a more complete framework, physicians too readily see themselves as scientists attacking a localized physical problem. This criticism of biomedicine has fueled holistic approaches to disease, health, and medicine that seek to understand the body in the full context of personhood, in all its complex and mysterious dimensions, rather than simply as a physical organism driven by biochemistry subject to medical manipulation.

New Religious Healing Movements

The revolution of the 1960s and 1970s stressed liberation from inherited norms, including sexual and health norms that governed the body. New forms of birth control, the legalization of abortion, and a sexualized youth culture promoted sexuality far beyond the marital bond, while the widespread use of illegal drugs promoted a vision of the body as an existential tableau, a realm of experimentation and imagination. Fresh religious organizations flourished, including communes built on new understandings of the body and personhood. For example, the Children of God (today the Family International), organized by David Berg (1919–1994) in California in the late 1960s and early 1970s, practiced unfettered sexuality, including with children. Such new religious movements provoked outcries and significant controversy, but they captured in sometimes extreme forms the ethos of the age. The attack on received authority led many away from the Christianity or Judaism of their upbringing and toward pagan, pantheistic, or other forms of religiosity. Many groups established on these foundations came to be classified as new age or neopagan, and their desire to live in holistic fashion and in harmony with the natural world led them to promote herbal remedies, crystal therapies, and much more. For instance, contemporary Wiccans have located in witchcraft a spiritual home for feminism and holistic living, which includes the use of magic and herbal medicines in matters of health. Since the 1970s, an invigorated vegetarian movement has drawn upon environmentalism and neopagan religiosity to express a

deep concern for the natural world and desire for harmony with nature.

Neopagan and especially new age groups have relied extensively on Eastern religiosity, albeit often in haphazard ways. The Immigration and Naturalization Act of 1965 opened American borders to a massive influx of immigrants from around the world, resulting in significant changes in the religious and medical spheres. Immigrants have brought with them to American shores religiously infused medical therapies, such as the Chinese tradition of acupuncture or Indian treatments based on the concept of chakras. Popularizers such as Deepak Chopra (1946–) have reached millions through best sellers touting the “mind-body medicine” of Asian religious traditions. Among immigrant communities, a wide array of religiously based health practices exist, such as the Mexican Catholic veneration of El Santo Niño de Atocha as a source of healing in Los Angeles or Hmong shamanism in Minneapolis and St. Paul. Along with a growing number of foreign-born neighbors and colleagues at home, spiritual seekers could rely upon huge advances in communications and transportation to access the accumulated wisdom of other cultures.

Herbal Remedies and Fitness

New religious conceptions have contributed to a seemingly endless array of new herbal remedies and therapeutic programs. The unregulated arena of herbal medicines has proven to be a boon for marketers and the bane of many biomedical physicians. St. John’s wort for depression, echinacea to prevent colds, aloe vera for burns and wounds—these and much more are available at the local drugstore. Aromatherapy is based in herbal medicine, using plant compounds and essential oils to produce olfactory healing and mood enhancement. Today’s medical marketplace bears some resemblance to that of the late nineteenth century, with numerous innovations and grand and dubious claims to efficacy. Still, while many physicians initially tried to marginalize alternative medicine, it has grown into a multi-billion-dollar industry and has gained widespread recognition. Its more common designation today, “complementary and alternative medicine” (CAM), suggests that it has achieved acceptance, if not in all of its forms. But a surprisingly wide range of therapies that extend beyond the biomedical model have received marks of legitimacy. Signs of this include the establishment of a National Center for Complementary and Alternative Medicine under the aegis of the National Institutes of Health and, consequently, the extensive research on CAM that is being done at reputable research universities.

The health and fitness craze has also produced closer connections between religion and medicine. Along with jogging, weightlifting, and aerobics, Americans have turned to karate, tai chi, and other martial arts that often have underlying metaphysical claims. The exercises involved in yoga, for example, entail mental discipline and meditation rooted in Hinduism. Like modern chiropractic, these practices frequently are shorn of their religious implications as they are packaged for popular consumption as exercise programs with health benefits. Still, many practitioners of yoga embrace its metaphysical dimensions. Even as contemporary Americans struggle with obesity, heart disease, and other symptoms of poor health management, they have invested physical health and bodily fitness with quasi-sacred qualities. Iconic images of youthful, muscular bodies, vigorous and beautiful, fill the popular imagination with ideals that remain otherworldly for most Americans. Magazines such as *Spirituality & Health* combine holistic sensibilities with the promotion of health and fitness, while secular publications such as *Self* and *Women's Health* often broach spirituality as they preach physical strength. For those who fail to keep up their athletic and culinary discipline, a massive dieting industry awaits, including Gwen Shamblin's Weigh Down, touted as a biblically based weight loss program.

Faith Healing, Mainline Rites, and Spirituality in Biomedicine

New forms of faith healing also abound, most notably the Word-Faith (or Word of Faith) movement. Such popular television preachers as T.D. Jakes (1957–), Joel Osteen (1963–), and Joyce Meyer (1943–) preach prosperity and health to their followers. Combining aspects of Christianity with New Thought metaphysics, these megachurch leaders and televangelists teach that the power of faith and the words to express it shape reality, including the reality of healed bodies. Just as they believe God spoke reality into existence, as little gods we can do likewise, if we truly believe. Not incidentally, such belief is often signified by sending in a generous donation, since God multiplies our blessings in response to acts of faith. Whether a new car or a healed joint, trusting and proclaiming will lead to possessing. Benny Hinn (1952–) in particular has focused on healing in his Word-Faith ministry, not without a great deal of controversy.

Another substantial development that has reflected the closer connections between religion and medicine is the growth of health-related rites in mainline Protestant,

Catholic, and Jewish communities. With the Second Vatican Council (1962–1965), the Catholic Church renamed as the “anointing of the sick” the sacrament long known as “extreme unction” and given as part of the last rites to a dying member. This reflected a concern that the church minister to the seriously ill who may yet recover and the belief that the sacrament conveys grace to the suffering. Episcopal, Lutheran, Methodist, and other mainline denominations have also demonstrated a renewed interest in the health and well-being of their members, reflecting the influence of both the charismatic movement of the 1960s and 1970s and a reinvigoration of their own traditions of ritual concern for the body. For instance, St. George's Episcopal Church in Maplewood, New Jersey, holds weekly healing services in the belief that anointing with oil and the laying on of hands during prayer can channel healing power to sufferers. In addition to the esoteric healing practices of mystical Kabbalah, mainstream Judaism is also rediscovering the healing resources in its traditions and thus offering opportunities for adherents to combine divine and medical resources in fighting sickness.

While biomedical practitioners do not give credence to the more outlandish faith healing claims, and they regard many herbal medicines with suspicion or cynicism, increasing numbers of them recognize a role for religion in medicine. The connections between religion and medicine in promoting health have been the subject of a great deal of scientific study since the 1980s. Pioneers such as Harold Koenig at Duke Medical School and Herbert Benson at Harvard Medical School have discovered substantial health effects for a wide variety of religious practices. Koenig and many others have identified health benefits associated with prayer and spiritual disciplines, regular attendance at religious services, and more. Though not without controversy from medical and religious detractors, hundreds of studies have affirmed in general that religion has a positive effect on health and medical outcomes if it contains a positive conception of the divine; a communal dimension such as provided by a vibrant synagogue, mosque, or church; and strong elements of faith and hope in the power of the divine. Far from being on the medical fringe, the authors of these studies have founded centers for the study of spirituality and medicine at Duke, George Washington, the University of Minnesota, and other first-rate research institutions. Their work has had a profound impact on medical education, leading to the establishment of a curriculum in spirituality and medicine in the great majority of medical schools.

Conclusion

Developments since the 1970s have complicated what had been a fairly straightforward picture of biomedical ascendancy and strict separation between religion and medicine. Americans in large numbers have embraced holism in the realm of health, and they see religion as potentially beneficial in addressing illness. Befitting American pluralism, even in times of religious or medical dominance there have been dissenters from the reigning paradigms. In other eras, like the first half of the nineteenth century and since the 1970s, new innovations and claims rise to such levels that settled assumptions become unsettled and religion and medicine negotiate new relations in an ambiguous, ongoing process. In their various ways, both religion and medicine speak to the deepest questions and largest challenges of human existence, and their relationship will continue to spark interest and controversy.

Hindu Tradition and Heritage

Hinduism is considered one of the world's oldest religions, practiced in 2009 by 81 percent of the populations of both Indian and Nepal and a sizeable, worldwide diaspora. Its precise historical origins are indeterminable, given that it has no founder and the very concept is a late-eighteenth-century invention to describe an array of religious texts and devotional styles. Significant sectarian and regional diversity is found throughout the South Asian subcontinent, and various caste groups often also practice quite distinct forms of Hinduism. Scholars have expressed divergent opinions, therefore, about whether it is appropriate to characterize it as a single religion at all, but those arguing for the legitimacy of the concept "Hinduism" point to its fairly bounded geographical identity; Hindus' near universal acceptance of the sacredness of the ancient Vedic texts; and their embrace of a worldview shaped by the concepts *dharma*, *karma*, *samsara*, and *moksha*.

Early Religious Culture in South Asia

Although the specific claims are often controversial, archaeological evidence from the first urban society in India, the Indus Valley or Harappan Civilization (ca. 2500–1500 BCE), suggests the existence of some religious ideas that persist into the early twentieth-first century. A body of literature spanning approximately 1500 to 500 BCE—and collectively referred to as the Vedas—is acknowledged by nearly all Hindus as their sacred and foundational texts. They occupy a distinct class of Hindu literature called *shruti* or "heard," to distinguish them from *smriti* or "remembered," texts. As *shruti*, the four Vedas (the *Rig Veda*, the *Sama Veda*, the *Yajur Veda*, and the *Atharva Veda*) are regarded as eternal and primordial sound, prior even to the creation of the cosmos, and encountered or heard by the ancient sages called *rishis* rather than composed by them. Each of the Vedas consists of the *samhitas* (hymns) and the commentary, ritual guidelines and explanatory apparatus attached to them. The *Rig Veda* is the most revered and oldest of the four Vedas, although it is

clear that its 1,028 hymns were written over several centuries, likely from 1500 to 1000 BCE. The major theme of the Vedas is the proper conduct of sacrificial rituals that function in a set of reciprocal exchanges between divine beings and humans, who employ Agni, the god of sacrificial fire, as their intermediary. Agni transforms and transmits the substances offered to the gods, who are thereby fortified to maintain natural and social order.

Written in an early form of Sanskrit, the sacred language of Hinduism, the Vedas consist chiefly of hymns to a pantheon of gods, most of whom were incorporated under other names into later Hinduism or came to assume fairly minor roles. The religious culture described in the texts is often referred to as Vedism or Brahmanism to distinguish it from Hinduism proper, which emerged as a synthesis of Vedic and popular practice around the turn of the first millennium CE. Nevertheless, the religious culture of the people who composed the Vedas and called themselves Arya (“the noble”) survives in various guises in contemporary Hinduism. While only the trained religious elite can now understand or recite them, the Vedas are treated with unsurpassed regard by Hindus. Chanted at various daily and life-cycle rites by Brahmin priests, they constitute the backdrop to everyday Hindu practice. The Vedas describe a religious worldview oriented toward an elaborate sacrificial complex requiring the offices of various priestly ritual specialists. *Rig Veda* 10.90 describes an early version of the Indian caste system that protected the purity of these Brahmin priests, the highest *varna* (caste), by a division of labor that apportioned other tasks to Kshatriyas (warriors and royal rulers), Vaishyas (merchants and agriculturalists), and Shudras (servants to the upper three varnas).

Other texts are also included in the Vedic corpus of shruti literature, although all are associated with one of the four major Vedas and considered derivative from them. The Brahmanas and Aranyakas are sets of ritual manuals. A more influential set of Vedic texts for later Hinduism, the eleven principal Upanishads, contains philosophical reflections on the major themes of the Vedas and generally offers monistic interpretations of those themes. The oldest and most important are the *Brihadavanyaka* and *Chāndogya Upanishads*. Composed between roughly 600 and 100 BCE (contemporary with the rise of Buddhism and Jainism), some Upanishads assert that individual meditation on the divine principle within oneself will reveal the identity of the impersonal, universal animating force and principle, *brahman*, with the individual soul, or *atman*. The texts’ focus on individual acquisition of insight is complemented by their description

of a teacher-disciple method of instruction, transmission, and succession. In multiple ways, then, the Upanishads mark a significant and newly philosophical orientation in the emergent Hindu tradition.

While the older Vedic hymns highlighted the complex ritualism of the sacrifice and the ritual status of the priest, the Upanishads underscored the essential identity of all being, and, in de-emphasizing or even challenging the caste system, they suggested the necessity of individual pursuit under the guidance of an initiated teacher or guru. Rather than shifting Hindu thought and practice in a new direction, however, the Upanishads represent an early instance of a well-established pattern in Hindu history: distinct layers of ideas and orientations are successively laid down, each of which contributes to commonly articulated notions and supplies the rationale for various sects and institutions.

The Emergence of Hinduism

As the centuries unfolded, political and textual developments converged that contributed to the emergence of classical Hindu forms and ideas. The appearance of the Mauryan (321–184 BCE) and Gupta (280–550 CE) dynasties forged a political unity in the subcontinent that allowed an emerging cultural cohesion. These and other lineages also contributed to the rise of the institution of the king, who became patron and protector of temples and Brahmans. Codification of Hindu social and moral codes followed, and Hindu legal texts called the Dharmasastras were composed. Chief among them was the *Manusmriti*, or *Laws of Manu* (ca. 200 BCE–200 CE). These texts detailed such matters as the roles, obligations, and status of distinct caste groups; gendered codes of conduct; the performance of life-cycle rites; and purity and pollution regulations.

The two major Sanskrit epics of the Indian subcontinent were also composed and disseminated in these periods. The epics articulate and enshrine values that informed Hindu culture for centuries. Continuously retold and reinterpreted in vernacular texts as well as folk and classical performances, and undiminished in popularity to the present day, the *Ramayana* and the *Mahabharata* have long been cultural reference points for all Hindus.

In just under fifty thousand lines of verse, the Sanskrit *Ramayana* tells the story of the righteous king Rama whose wife, Sita, is abducted while Rama is serving a self-imposed fourteen-year exile in the forest. Her captor, the ten-headed demon king Ravana, had fallen in love with her and held her at his palace on the island of Lanka

(modern Sri Lanka), hoping to win her affection there; but while captive, Sita remains steadfastly faithful to her husband until he rescues her with the aid of the Hindu monkey god, Hanuman. The themes of kingship and the duty of the king to protect his subjects and preserve virtue in his kingdom are woven throughout the tale. Also understood to be an incarnation of the god Vishnu, Rama represents the ideal king and model husband, while Sita embodies the paradigmatic virtuous, chaste, and beautiful wife. Hanuman, with his fierce and selfless dedication to the couple, suggests the attitude of an ideal devotee.

The *Mahabharata* presents a set of more morally complex and ambiguous characters than the *Ramayana*. At nearly one hundred thousand verses, its main narrative is supplemented by multiple storylines and subplots, and its cast of characters is immense. The primary narrative depicts the rivalry and eventual war between two sets of paternal cousins, the five Pandava brothers and the one hundred sons of their uncle, King Dhritarashtra. As sons of the deceased former king Pandu, the Pandavas are rightful heirs to half of the kingdom of Bharata, but in a fixed dice match, the eldest, Yudhishthira, gambles away their right to ascend the throne to their cousins, the Kauravas; and they are forced into exile, along with their common wife Draupadi, for thirteen years. When they return after fulfilling the complex terms of the agreement, Duryodhana, the eldest of the Kauravas and the Pandavas' chief antagonist, balks, sparking a horrendous eighteen-day war. Treachery and rage that defy the code of warrior conduct are displayed by both sides, and the eventual result is a Pandava victory at tremendous human cost. Save the Pandavas themselves, nearly every combatant and all the children of Draupadi are killed.

At the center of the *Mahabharata* is one of the world's most famous sacred texts and among the most influential works in Hindu literature, the *Bhagavad Gita*, or Song of God. It takes the form of a dialogue between Arjuna, the third Pandava, who is leading his brothers and their armies into battle, and Krishna, an avatar of the god Vishnu, who acts as Arjuna's charioteer. When Krishna drives Arjuna onto the battlefield to survey the troops arrayed on either side and Arjuna sees kinsmen and his gurus among the enemy, he experiences a moral crisis and failure of resolve. In a series of exchanges that outline fundamental concepts of the Hindu worldview and moral imagination, Krishna convinces Arjuna that it is not only his caste duty to fight this war to the just conclusion that will install the rightful kings to the throne but also that

only by doing so will he perform his duty to protect order in society and, by extension, the cosmos.

The period of epics also saw the first textual codification of the philosophy and practice of yoga, the *Yoga Sutras*. Seeking spiritual liberation from thoughts bound to the instabilities of experience and memory through the discipline of the mind surely dates back at least to the early Upanishads, with some evidence locating such practices as early as the *Rig Veda* or Indus Valley Civilization. Buddhism and Jainism share closely related ideas and practices. The *Yoga Sutras*, attributed to the Sanskrit grammarian Patanjali, form the basis for numerous later commentaries, sectarian schools, and guru lineages that cultivate meditative practices.

Particularly as a result of the social stability and political unity established in South Asia by the Gupta Empire, the pantheon of classical and contemporary Hinduism was developed alongside the mythology that depicted the offices, personalities, and narratives of the deities. The Puranas are compendia of myths, royal genealogies, and cosmologies that shaped the beliefs and practices of theistic, devotional Hinduism and helped spawn the culture of temple worship of major deities in the regional kingdoms of the medieval period that succeeded the breakup of the Gupta Empire. The Puranas celebrate the powers of the major deities of the Hindu tradition, Brahma, Vishnu, and Shiva, while also sketching a complex cosmos populated with *devas* and *asuras* (gods and demons) and the qualities and tales of some goddesses such as Lakshmi and Parvati, consorts of Vishnu and Shiva, respectively. By extolling the glory and power of sacred sites such as Allahabad, where the Ganges and Yamuna Rivers converge, and Kashi (also known as Benaras and Varanasi), the holiest and most ancient Hindu site on the Ganges River, the Puranas promote a concept of the sacred geography of India and the practice of pilgrimage to its various sites of divine manifestation. There are eighteen major and eighteen minor Puranas, each articulating a sectarian loyalty to Shiva or Vishnu and the other deities associated with them. The rise of regional kingdoms and their courtly patronage of pilgrimage sites, temples, and religious institutions further promoted *bhakti*, or devotion to a particular chosen deity, in line with the Puranic concept of multiple divine personalities and manifestations.

Modern Hinduism

Due to social and political forces introduced by European colonialism, the nineteenth century was a period of significant developments in Hinduism. The preaching of

Christian missionaries, the spread of English education, and the Hindu encounter with Enlightenment rationalism contributed to the emergence of uniquely modern forms of Hindu expression. Explicitly monotheistic Hindu sects appeared, claiming their roots in the true teachings of the Vedas. Raja Rammohan Roy (1774–1833) formed a society that came to be known as the Brahmo Samaj in 1828 to promote the nonidolatrous and congregational worship of a single universal God.

Dayananda Saraswati (1824–1883) based his Arya Samaj (“Noble Society,” founded 1875) on a radical reforming program that rejected the personal deities and myths of the Puranas, as well as the devotional practices such as pilgrimage, in favor of his vision of a pure Vedic religious reverence for an impersonal, all-powerful God. Dayananda aimed to forge a reformed and monotheistic Hinduism as a force to counter aggressive Christianity and Islam. Both the Arya Samaj and the Brahmo Samaj advocated social reforms alongside religious reforms, advancing such causes as female education, the abolition of *sati* (the immolation of Hindu widows on the funeral pyres of their husbands), and the rejection of the caste system.

Later nineteenth-century movements such as the Ramakrishna Mission, whose founder, Swami Vivekananda, captivated the Chicago Parliament of World Religions in 1893, showed another face of modern Hinduism: a global and universal religious outlook that preached the unity of all religions and the relevance of a Hindu worldview to all modern peoples. Each of these organizations illustrates how colonialism inspired the “Semiticization” of Hinduism, whereby literate and elite Hindus, as a result of contact with Western as well as Islamic religious ideas and institutions, began to articulate a set of rationalized and coherent principles as the basis of a global Hinduism that might compete on similar terms with the great monotheistic traditions. The twentieth-century fruits of these movements included exclusionary forms of Hindu nationalism that oppose Muslim and Christian influences and inclusionary global outreach to non-Indians in forms such as the International Society of Krishna Consciousness (ISKCON) and the Transcendental Meditation (TM) movement, which introduced many westerners to Hindu practices beginning in the 1960s and 1970s.

Central Hindu Concepts

A particular set of concepts provides a common reference point for most Hindu worldviews, although Hindu

interpretations of these ideas vary widely and there are points of sharp disagreement. *Dharma*, or religious duty; *karma*, the cosmic law of moral cause and effect; *samsara*, the cycle of rebirth according to one’s karma; and *moksha* or *mukti*, the eventual liberation of the soul from repeated rebirth, together constitute a general framework for understanding Hindu religious traditions.

Dharma encompasses the wide-ranging obligations each Hindu has toward the gods, the Hindu tradition, family, and society. The scope of dharma is wide: for Hindus, religious duty stretches to every element of one’s life and relationships. Dharma is specific to individual circumstances and often, as in Arjuna’s dilemma in the *Bhagavad Gita*, difficult to discern. Traditionally it is said to consist of the duties incumbent on one’s caste identity and station in life (student, householder, retiring forest dweller, renunciant approaching death). Gender is also a major component, as the traditional dharma of women is to support and nurture the dharma of their husbands.

Karma is the notion that all deeds include their own consequences, generally experienced in a future birth. It is less a doctrine of reward and punishment than a principle that no act is without ramifications, positive and negative, or “fruits,” which one cannot avoid experiencing. Inscrutable because unseen directly, the precise workings of karma have been the subject of much historical debate. One common conception is that the eventual blossoming of all karma will exhaust it; another is that total accumulation of merit and demerit determines the specific birth of an individual soul, from the basest animal form to the highest caste and even beyond in heavenly realms.

Samsara refers to the cycle of rebirth according to one’s karma through which every soul must pass, and moksa is the eventual release from this cycle, experienced by every soul once the karma that binds it to rebirth is expended. Many Hindus believe souls may reside for times in heavens or hells between births, and many imagine moksa as a sort of heavenly state. Among the more philosophically inclined, however, moksa is a blissful absorption into the universal spirit in which individual experience and identity dissolve.

A common Hindu claim is that “all paths lead to God,” meaning that any religious discipline adopted sincerely and pursued rigorously is conducive to spiritual advance. This idea is the source of what many Hindus and non-Hindus alike describe as the “tolerance” that is a central value of the tradition. Practically and historically, it has often meant that Hindus have accepted the legitimacy of all other religions

and have not adopted conversionary practices, although some modern groups have more recently developed conversion and reconversion rites. Hinduism itself names four paths that one might pursue within the tradition itself, each appropriate to those with particular inclinations and dispositions. The path of knowledge, *jnana yoga*, appropriate for the intellectually inclined, consists of the study of texts and meditation upon their meaning; the path of devotion, *bhakti yoga*, involves theistic devotion to particular gods and goddesses; according to *karma yoga*, the path of action, one performs one's dharma without attachment to the outcome or consequences of that action; in *raja yoga*, one pursues meditative practices to achieve moksa.

Like the pantheon of contemporary Hinduism, Hindu concepts of time emerged in the Puranas, which depict repeated, endless cycles of creation, preservation, and destruction of the universe with no teleological purpose or culmination. Each cycle of the universe proceeds from a golden age, the *Krita Yuga*, in which humans enjoy long life spans and in which piety and pursuit of dharmic duty are the norms, through a decline to the fourth era, the *Kali Yuga*, corresponding to our current age, in which corruption and impiety are rife. Each of the four ages is successively shorter, as decay accelerates, until the entire cycle—conceived as a single day in the life of Brahma—is brought to an end in order that a new cycle may begin.

The caste system is often believed to be a central component of Hinduism, and historically, Hindu practice has been closely correlated with caste, although the religious elements of caste have been eroding since India gained independence from Great Britain (1947), and caste has become more a marker of social and political identity. The classical caste system first described in the *Rig Veda* outlines the nature of four *varnas*. Although the ancient varna system remains the reference point for what caste means, and most Indian communities associate themselves with one of the varnas, when Hindus refer to their caste, they most often refer to a more narrowly defined birth group called *jati*. There are estimated to be three thousand *jatis* in India, but the number is uncountable, as names vary from region to region, there may be disagreement about what distinguishes one *jati* from another, and there is no institution that attempts to catalogue them. *Jatis* are endogamous birth groups associated with a traditional occupation such as potter, merchant of particular materials, or specific lineage of priest.

Few Hindus at the beginning of the twentieth-first century practice their traditional caste occupation. *Jatis* are

ranked hierarchically according to relative ritual purity, although there may be strong disagreement about the rank of any with respect to another in a given area. Theoretically each *jati* belongs to one of the Vedic varnas or is designated a *Dalit* or Scheduled Caste, those once known as *untouchables* and called by Mohandas Gandhi *harijan* (children of God). In orthodox and traditional Hinduism, performing one's caste occupation and accepting its hierarchical rank and privileges, its rights, responsibilities, or limitations, was an important dharmic duty. Adopted in 1950, the constitution of independent India outlawed both discrimination on the basis of caste and the practice of untouchability, but caste remains a social and political force in much of India, and in some rural places, it still rigidly segregates communities. Lower-caste Hindus including Dalits may act as religious specialists and administrators, but often for deities considered inferior to the major gods of the Hindu pantheon, whose temple priesthood remains the province of Brahmins and who are worshipped by Hindus of all castes.

Hindu Concept of the Divine

Hinduism envelops six schools of philosophical thought and a great number of popular sects and traditions, each with its own particular understanding of the nature of the divine and its relationship to humans. A general characterization of the most common understanding would emphasize the unity of all being, divine and otherwise, and the worship of that divine unity in the multiple forms that the various gods of Hinduism represent. The pantheon of popular Hinduism is vast. An oft-cited passage of the *Brihadaranyaka Upanishad* begins to suggest the complicated nature of the question, "How many gods do Hindus worship?" placing the number as high as 330 million or as low as one (3.9.1).

The pantheon within twenty-first-century Hinduism, while rooted in the Vedas and taking shape during the Puranic period, continues to evolve. For example, the goddess Santoshi Ma, originally a creation of the 1975 feature film *Jai Santoshi Ma!* and the post-Independence Indian nation itself, has her own temples and images. One tradition teaches a "trinity" of main Hindu deities. It names Brahma as the creator god who initiates each cycle of universal creation, Vishnu as the god who preserves the universe through its evolution and decline, and Shiva as the god of destruction and transformation who brings the world to an end and aids its dissolution into its primordial form in anticipation of a new cycle of creation. Most Hindus worship the major deities as well as local and regional gods at appropriate times

and places while maintaining a principal ritual and personal relationship to one.

The god Shiva is renowned for his ascetic practices and the power that he continuously acquires and displays as a result of those practices. He is generally pictured clad in a single cloth with matted locks of hair, with the begging bowl and staff favored by wandering ascetics and some representation of the Ganges River goddess, whose descent to earth Shiva softened by absorbing its force with his head, in his hair. He is generally worshipped, however, in the abstract cylindrical form called the *linga*, which represents the raw creative power he possesses. Vishnu is depicted in more regal clothing, often with the multiple arms of some Hindu iconography. The mythology of Vishnu describes ten “avatars,” or earthly incarnations that Vishnu has taken to confront specific threats to dharmic order on earth or in the heavens. He is frequently worshipped in these specific forms. A particularly popular avatar is Krishna, a figure who first emerged among pastoralists in north-central India. His mythology features well-known stories of his mischievous childhood and amorous youth among the *gopis* (cow-herding women) who adored him. A second popular avatar of Vishnu is Rama, hero of the *Ramayana*, generally depicted with a bow and often with his wife Sita.

Most Hindus acknowledge some form of the Hindu goddess Devi, each of which embodies the divine feminine energy called “*shakti*.” Devi is worshiped both as the mother of the world—a source of life and bounty—and in innumerable specific manifestations. Some of these specific goddess figures are local deities, often village protectoresses or locally malevolent forms requiring pacification. Others are pan-Hindu deities. Well-known forms who show the fierce demon-destroying capacity of unbridled female energy are Kali, often pictured with lolling tongue and necklace of human skulls, and Durga, who defeated a buffalo demon and is depicted riding a lion and armed for battle. Other goddess figures embody *śakti* in its tamed and harnessed state and are paired with male deities as their wives or consorts: Parvati with Shiva; Saraswati, the goddess of learning, with Brahma; and Laksmi, goddess of wealth and prosperity, with Vishnu.

Two other Hindu gods are among the most commonly worshipped today. Ganesa is the beloved elephant-headed god who is son of Shiva and Parvati and the “Lord of Obstacles,” the deity who can remove obstructions to the completion of social, professional, or ritual goals. Ganesa is, therefore, often worshipped first in major rituals and at the outset of any major undertaking. Hanuman, the monkey god first seen in the *Ramayana* and renowned as the model

devotee for his unflinching loyalty and service to Rama and Sita, displays his strength and martial discipline that also makes him patron of wrestlers, athletes, and, today, those advocating a more confrontational, “muscular” Hinduism.

Temple, Home, and Pilgrimage

As Hinduism accommodates a wide spectrum of belief, participation in Hindu ritual is typically a more important indicator of piety than belief in specific doctrines. Much Hindu ritual takes place in the home and centers around the family, and most Hindu homes have a room or area set aside for ritual. These typically host many gods of the Hindu pantheon, and families may also have a particular family or lineage deity to whom devotion is offered. Daily worship, called *puja*, is conducted early in the morning and perhaps at other times of the day to images of the gods. These *murtis* are believed to house the spirit of the deity, making him or her, in effect, a guest in the home. Foodstuffs are offered to the murti and incense and lamps are waved before it, accompanied by the chanting or singing of verses and prayers. The daily devotions of Hindu women are often performed for the welfare of other family members as an element of their dharma. Puja is also performed in small and large temples by priests of the Brahman caste. Temples are dedicated to a single god or goddess, but usually with shrines to other deities in addition to the central shrine. Deities in temples are awakened in the early morning, bathed, fed, and entertained at specific times throughout the day. Devotees may come to a temple on days of the week or during festivals specifically sacred to that deity, who may also oversee a particular area of life in which a devotee seeks assistance.

Hindu sacred geography depicts the Indian subcontinent itself as a giant site of divine manifestation. The strong ties that many Indians living abroad (Non-Resident Indians, or NRIs) continue to feel can be partly attributed to the sacred character of the land. Hinduism does not require pilgrimage as Islam does, but major temples, mythological sites, and features of the natural landscape are common sites of Hindu pilgrimage throughout India. Tirupati in south India is one of India’s most visited and wealthiest temples, hosting tens of thousands of visitors a day who offer their hair in fulfillment of vows. Managing these visitors, their needs, and the hair they offer requires a vast infrastructure and administration. Pilgrimage sites in the Himalayan Mountains, including the glacial sources of the Ganges and Yamuna rivers, also see hundreds of thousands of pilgrims a year from all over India.

The Ganges River, called Ganga by Indians, is the single most sacred feature of all Hindu geography and a goddess in its own right. Emerging out of a glacier high in the Himalayas, it descends through the mountains to enter the plains at the important pilgrimage city Hardwar. Flowing through and irrigating much of the north Indian plains, its most famous site is the ancient city of Benaras, also called Kashi and Varanasi, where many Hindus aspire to die to achieve rapid liberation. Hindus believe bathing in the Ganga cleanses one of all past sin. Its intrinsic divine nature is associated with the goddess's descent from the heavens.

All Hindus undergo a series of important life-cycle rites called *samskaras*. These extend from conception to death and beyond, as the living continue to nurture the souls of departed ancestors. Samskaras not only mark transitions in the course of an individual life but aim, through ritual, to affect the development of the person by obstructing malign forces while channeling auspicious ones and impressing the soul with particular marks and characteristics. The most important and widely practiced samskaras include a child's first haircut, the male child's initiation and donning of the sacred thread that marks the entrance of the upper three castes into religious adulthood, marriage around a Vedic fire pit, and the funeral ceremony, in which the body is cremated and the soul sent on the first stage of its journey to the next life.

Hindu Nationalism

As the British Raj entered its final decades, Indian nationalist sentiment was inspired principally by two personalities. Mohandas Gandhi (1869–1948), the architect of nonviolent resistance he called *satyagraha* (“clinging to the truth”), gave the emergent nation a spiritual leader who urged India to embrace its religiously diverse heritage. Jawaharlal Nehru sketched the secularist and socialist vision that would shape the Indian state and later became India's first prime minister. The Indian constitution came to institutionalize their ideals by declaring a secular principle for handling religious diversity. Called “Mahatma,” or “Great Soul,” Gandhi preached a set of norms that many have since associated with modern Hinduism: a nonviolent stance toward other life, including that of one's enemies; a tolerance of all religions; and a rejection of the practice of untouchability.

Although less well known at the time, Hindu religious nationalism had its birth at the same moment in resistance to Gandhian and Nehruvian ideals of secularism and tolerance. Naturam Godse, Gandhi's assassin, was associated with several Hindu nationalist groups. In the outcry following the

assassination, the movement retreated underground and slowly grew from a radical grassroots movement to a strong political force by the 1990s. Espousing an ideology distilled into the movement's watchword, *Hindutva*, or “Hinduness,” Hindu nationalism identifies the Indian nation not with secular democracy but with the purported Hindu character of the history, culture, and land of India. Historically and ideologically related to early-twentieth-century fascisms, radical Hindu nationalism claims that Indian culture is fundamentally Hindu in character and that members of nonindigenous religious such as Christians and Muslims are foreigners with correspondingly reduced social standing and political rights. Hindutva politics aims to confront and diminish non-Hindu influences in government and society on the basis of the charge leveled by Vinayak Damodar Savarkar, one of Hindu nationalism's founding thinkers, that non-Hindus, whose holy lands were in the Middle East, would never feel absolute loyalty to India.

The Rashtriya Swayam Sevak Sangh (RSS), founded in 1925, emerged as the grandfather of allied Hindu nationalist organizations, which are grouped together under the name Sangh Parivar, or “Family of Associations.” The RSS is active abroad under the name Hindu Swayam Sevak Sangh (HSS). The other Hindu nationalist organization prominent outside India is the Vishva Hindu Parishad (VHP), whose primary goals are the strengthening of Hindu society and the cultivation of Hindu identity among Hindus living outside of India. The political party representing Hindu nationalist ideals in electoral politics in India is the Bharatiya Janata Party (BJP), which rose to prominence in the 1989 Lok Sabha (lower house) elections. It has formed the government three separate times in India, most significantly in 1999 to 2004, when it lasted its full five-year term. Together, the BJP and VHP agitated for the destruction of the sixteenth-century Babri Mosque in Ayodhya, claiming it had been constructed on the site of the Hindu god Rama's birthplace. The destruction of the mosque in December 1992 led to rioting and Hindu–Muslim violence throughout India but further underwrote the Hindu right's fortunes. Disputes over the fate of the Ayodhya site, often led by Hindu nationalist organizations, have spurred Hindu–Muslim violence at several points since then, most notably in 2002, when a train car carrying Hindu activists back to their homes from the site was burned at a station in the west Indian city of Godhra, killing fifty-eight Hindus. Violence responsible for the deaths of over one thousand more, the great majority Muslims, quickly spread through the state of Gujarat.

Hinduism in the Diaspora

Hinduism has spread outside South Asia due to a series of historical developments stemming initially from Western colonialism. During the period of British rule, indentured Hindu laborers emigrated to such other parts of the British empire as the Caribbean, South Africa, and East Africa. In these places, Hinduism has now long existed and thrives, largely independently of ongoing contacts with India. Immigration to other parts of the world, especially the English-speaking countries of Europe and North America, occurred after World War II and Indian Independence (1947) and consisted largely of educated and professional workers. A significant number of Hindus also emigrated to Persian Gulf states to work in the oil industry beginning in the 1970s.

Hinduism in the diaspora shows important continuities with Indian tradition but also many innovations and transformations. The historical adaptability of Hinduism to changing cultural and social circumstances continues to contribute to the development of fully indigenized forms of Hinduism in more recent host countries. In Trinidad, Canada, and the United States, for example, temple architecture has evolved to cultivate congregational worship and Sunday school-like education more reminiscent of Christian and Jewish religious practice than Hindu practice in Indian temples, which emphasize individual worship. In its newer homes, Hinduism has tended to shed deities, practices, or ideas specific to regional or caste groups and to emphasize the broader, pan-Hindu features that immigrants from different castes and regions might have in common. In such places, the November festival of Divali has developed into the major holiday of the Hindu calendar, a time at which temples hold large religious and cultural programs that also serve as cultural outreach and education, with many temples advertising the programs to the general public. In areas such as Toronto and Atlanta, where much larger numbers of Hindus now live, temples and religious centers that cater to more regional or sectarian Hindu groups are increasingly common.

Among late-twentieth and early-twenty-first-century waves of professional classes of Hindu immigrants, nostalgia for their Indian homeland, the desire to transmit the Hindu tradition to the next generation, and the proud display of Indian religious traditions in their adopted homes have also produced significant effects in India itself. One of the founding aims of the VHP had been to nurture Hinduism

abroad; and in diaspora temples, many of which it founded itself, the VHP has been active in programming and fundraising as well. These transnational contacts have provided a reliable source of funding and organizational support for Hindu nationalist causes in India.

Hinduism in North America

Hinduism, the largest religion in India, includes a wide range of texts, philosophical positions, deities, and practices. Philosophical components of Hinduism generally develop from interpretations of texts such as the Upanishads, a collection of writings attributed to ancient spiritual teachers, and address issues such as the relation of humanity to the rest of the cosmos. For centuries, spiritual teachers, known as gurus, have presented their philosophical interpretations and taught meditation and other practices that foster the spiritual understanding that the philosophies highlight. Since 1893, when the first guru visited the United States for Chicago's World's Parliament of Religion, gurus have added to America's religious landscape. Beyond philosophy, devotional practices focus on various gods and goddesses, which some texts describe as different manifestations of one universal spirit. Although some early gurus in the United States emphasized devotional practices, the increasing immigration of Hindus from India after changes in immigration law in the Hart-Celler Act in 1965 increased the prominence of devotional practices in American Hinduism. These diverse elements add significantly to the religious complexity of American communities, sometimes fostering positive relations and sometimes facing opposition.

Early Influence of Hinduism in America

The influence of Hindu texts and philosophical approaches first entered the culture of the United States in a prominent way through American transcendentalism, which arose in New England in the first half of the nineteenth century. Transcendentalists drew inspiration for their critique of contemporary American society and Christianity from translations of Hindu texts that emphasized the monistic principles of Hinduism and the conception that human perception of reality is an illusion. Most notably, Ralph Waldo Emerson (1803–1882) and Henry David Thoreau (1817–1862) both refer to the Vedas, considered the oldest texts in Hinduism, and the philosophy of the *Bhagavad Gita*, a central Hindu devotional and philosophical text. Emerson incorporated aspects of Hindu thought into his own writings, including reincarnation and the unity of being in Brahman, the universal spirit. Thoreau also related his withdrawal from society to the austerity and contemplation that he derived from English translations of Hindu texts and the practices of Hindu ascetics.

The 1893 World's Parliament of Religions in Chicago brought teachers of various Asian religions to the United States. Most famously, Swami Vivekananda (1863–1902) presented the concepts of Advaita Vedanta, a Hindu school of philosophy that emphasizes the unity of all in one universal spirit, and received an enthusiastic response. Desiring to spread Vedanta, Vivekananda toured the country for two years immediately after the Chicago Parliament and then again in 1899 and 1900, gaining many followers. He established the first Vedanta Society in New York City in 1894 and also taught in other cities across the United States. Although Vivekananda died in 1902 in India, Vedanta Societies continued to develop, as other teachers arrived from India, including Swami Paramananda (1884–1940), who established Vedanta Societies in Boston and Los Angeles. Vedanta Societies in California also built the first Hindu temples in the United States, in San Francisco in 1906, in Hollywood in 1938, and in Santa Barbara in 1956. Their emphasis on philosophical interpretations of Hindu texts differs from the centrality of devotional practices in later Hindu temples in the United States.

Other gurus came to teach their conceptions of Hinduism in this period. Soon after the turn of the twentieth century, Baba Premanand Bharati (d. 1914) spent five years lecturing about devotion to the Hindu god Krishna and establishing societies focused on Krishna in New York City and Los Angeles, though these communities did not survive his death. In 1920, Swami Paramahansa Yogananda (1893–1952) participated in an international conference on religions in Boston, Massachusetts. He then remained in America to spread his methods for attaining spiritual understanding through the Self-Realization Fellowship, which continued to propagate his ideas after his death.

Hindu Influence in the Mid-1900s

Continuing in the model of Vivekananda, in the 1950s, Chinmayananda (1916–1993) began the Chinmaya Mission Worldwide to spread the conceptions of Vedanta beyond India. Spending considerable time in the United States, he developed an *ashram* in California in 1979, known as the Shri Chinmoy Center. Branches of the Chinmaya Mission continue to meet across the United States. Maharishi Mahesh Yogi (1917–2008) similarly brought his spiritual practices, known as transcendental meditation, to Hawaii in 1959, which he then carried to the mainland United States.

Although these gurus spread their specific interpretations among their followers, other Hindu ideas influenced American history more broadly, most notably through the civil rights movement. Martin Luther King Jr. (1929–1968) adapted the philosophy of Mahatma Mohandas K. Gandhi (1869–1948) and the Indian independence movement that had opposed the British rule of India. Gandhi's concept of nonviolent noncooperation, which King adapted to the American struggle, drew largely on Gandhi's interpretation of Hindu teachings about nonviolence and nonattachment to the results of actions, which primarily comes from the *Bhagavad Gita*, along with ideas Gandhi adapted from Christianity and other religions.

Expansion of Hinduism in America since 1965

As an outgrowth of the civil rights movement, the United States Congress passed the Hart-Celler Act in 1965, which removed the European bias from immigration policies and allowed more people of Asian heritage to immigrate to the United States. Over time, this change altered the ethnic, cultural, and religious composition of the United States.

Immigration law favored immigrants from India and elsewhere who were either highly educated or entrepreneurs with capital to invest in new businesses. Such restrictions, combined with the aspirations and hard work of those who came from India, has resulted in Indian Americans' earning one of the highest per capita incomes among ethnic groups in the United States.

Along with their economic success, many Indian American families, who are predominately Hindu, have established religious practices in their homes, often using a shelf, a kitchen cabinet, or a corner of a room to create a home shrine that contains statues and pictures of various gods and goddesses. One or more family member may conduct rituals at the shrine daily to honor the deities, request blessings, and express gratitude. The rituals include offerings of flowers, water, a lighted oil lamp, and food while chanting and singing devotional hymns.

The home often becomes the center point for special rituals celebrating life events and festivals. Specific rituals for life events often involve the services of a priest. Although some immigrants have learned particular rituals and perform them for other families on a volunteer basis, formally trained priests from India have also immigrated to serve as temple priests and to perform home rituals. In areas without a local priest, families sometimes hire a priest from another city to perform rituals. Many festivals in India and the

United States involve family members reciting particular texts and performing special rituals, along with a family meal, all within the home. In the context of migration, festivals also have become important opportunities to gather with other families with the same heritage, celebrating together with rituals, food, music, and dancing.

Hindu Temples in America

Although Hindu home rituals and festivals in America reflect practices in India, many Indian Americans have expressed a need for religious institutions that instill in their children knowledge and pride about their heritage. Temples also match the symbolic place of a church for American Christians, making their commitment as Hindus more recognizable to other Americans. In many cities, informal home gatherings to socialize and express religious sentiments became the foundation for the formation of a temple. Hindu immigrants in Pittsburgh, Pennsylvania, were among the first immigrants to create a temple in America. They met occasionally in homes to sing devotional songs before deciding to form a temple. In the mid-1970s, the community purchased a church building and established a cultural and religious center where Hindus, Jains, and Sikhs performed their own rituals. Conflicts arose, however, as some Hindus wanted a formal temple with full-time priests. They formed a second temple, which they dedicated to Lord Venkateswara, a manifestation of Vishnu, with statues ritually installed in 1976. This split followed regional differences, as the second temple adopted South Indian architectural and ritual forms, including bringing artisans from South India to complete sculptures on the temple, and attracted many South Indian Hindus, although many immigrants from North India focused on the original religious center. With its traditional architecture, the Venkateswara temple in Pittsburgh became one of the first temples in the United States to resemble large temples in India. Major temple building projects began in the next few years in other urban centers with significant immigrant populations, including Flushing, New York (1977); Houston, Texas (1979); Malibu, California (1981); and Chicago, Illinois (1983).

Observers often organize Hindu temples in America into multiple categories. Pan-Indian temples incorporate Hindu traditions from across India; regional temples emphasize the language, architecture, and ritual forms of a specific region; and sectarian temples promote the teachings of a guru or branch of Hinduism. Many cities, like Pittsburgh, have multiple temples that often develop out of an initial pan-Indian

temple. However, the dynamics within Hindu communities are unique to each context. The Raleigh, North Carolina area, for example, has a significant population of successful Hindus who began meeting in homes in the 1970s. They purchased a Jehovah's Witness church to create a temple in 1980 and constructed a temple and community center, known as the Hindu Bhavan, in 1986, to meet the needs of the growing community. In contrast to the Venkateswara temple in Pittsburgh, the Hindu Bhavan's exterior does not resemble North or South Indian temples. The Hindu Bhavan also includes a range of gods and goddesses, selected by community members, to create a pan-Indian temple with an open shrine that allows members to approach the images without the assistance of a priest. Although the split in Pittsburgh occurred when the original temple was still in a formative stage, the Hindu Bhavan remained largely united for almost fifteen years. However, as the community continued to grow, regional and sectarian commitments gained strength. Some South Indians, dissatisfied with the informality at the Hindu Bhavan, established a Venkateswara temple in 1999 that followed the example of the Venkateswara temple in Pittsburgh in its architectural plans and ritual commitments. Interestingly, some of the leaders of the Venkateswara temple maintained amicable relations with the Hindu Bhavan, which they identified as a cultural center. A sectarian temple that focused on the Swaminarayan guru movement from the Gujarati region of India also developed in the area.

Hindu temples in the United States are not limited to major urban areas. Because of economic and employment opportunities, some immigrants, especially medical doctors and hotel owners, live in medium-sized cities and small towns. Although the lack of an Indian American community in an area posed an initial challenge, continued immigration to even many small cities has created a critical mass of Hindus who can conduct Hindu rituals and Indian American social activities on a periodic basis. As with the example of Pittsburgh, the desire to establish a Hindu temple increases as the size of an area's Hindu community grows. After meeting in homes for years and traveling to other cities to visit a temple, Hindus in

The Sri Venkateswara Swami Temple in Malibu, California.

Tuscaloosa, Alabama, converted a house into a temple in 2007. New temples continually develop in the United States, both in major cities with existing temples and in smaller cities without any temple.

Practices outside Temples and Homes

Even with the formation of temples in an area, a range of Hindu events continue outside of the temples. Beyond the family rituals in homes, many guru movements hold weekly or monthly gatherings in homes to sing devotional songs, recite passages from significant texts, and listen to a recorded

discourse by their guru. Although earlier guru movements primarily attracted non-Indians, many movements now attract exclusively Indian Americans or a mixture of followers. Many Indian American participants in these movements immigrated to the United States without much exposure to the particular guru movement and began attending because the regular gatherings were in their area. Individual Hindu immigrants, therefore, do not simply re-create activities from their experiences in India but discover new personally meaningful elements within the diversity of Hinduism in America.

Indian festivals also provide an important expression of Hinduism outside of temples. Although many temples conduct special activities for festivals, regional associations organize the majority of the festival commemorations, following their particular region's traditions. Regional associations sometimes use a temple's facilities but often create a temporary Hindu site in hotel banquet rooms or community centers. Activities generally include special rituals associated with the festival, musical and dance performances, and food. With various regional associations in larger cities, many American cities have multiple celebrations of popular Indian festivals. Indian American communities also celebrate Indian political holidays, such as Indian Independence Day on August 15. As many communities use these occasions to showcase Indian culture to non-Indians, expressions of Hinduism are often important elements in these festivals as well.

Guru Movements since 1965

A number of gurus among the immigrants since 1965 have followed the model of Vivekananda, bringing their interpretations of Hinduism and universal spirituality to non-Indians. However, the relation of many guru movements to Hinduism remains ambiguous, as some gurus reject that label and incorporate ideas from other traditions into their teachings. In 1971, the leader of the Divine Light Mission, Prem Rawat (1957–), came to the United States to expand his father's movement. After internal difficulties with members of his family, he made the movement more universal and eliminated much of the obvious Indian influence on his practices, while still emphasizing meditation and inner peace. In 1983, he changed the movement's name to Elan Vital, which he continues to lead. Migrating to the United States in 1981, Bhagwan Shree Rajneesh (1931–1990) brought his ideas, along with many non-Indian followers who had joined him in Pune, India. Rajneesh emphasized a universal spirituality and revised traditional Hindu practices, such as asceticism, by incorporating concepts from a range

of Asian and Western religions. With his migration, some of his followers established Rajneeshpuram, an intentional community in Oregon. The extreme dedication of his followers, who lavished gifts on him, and radical elements in his philosophy brought media scrutiny and an antagonistic relationship with the broader society. When Rajneesh revealed the criminal activities of his appointed emissaries, who were taking control of his movement, the Oregon community dissolved, and Rajneesh was soon after deported on charges of immigration violations.

Perhaps the best-known Hindu guru movement in the United States is the International Society of Krishna Consciousness (ISKCON), commonly known as the Hare Krishnas. In 1965, A. C. Bhaktivedanta Prabhupada (1896–1977) came to the United States at the behest of his guru to teach non-Indians about ecstatic devotion to Krishna. Although commonly viewed as the founder of a new religious movement, Prabhupada was initiated into a lineage of gurus who emphasized devotion to Krishna as the way to deepen spiritual consciousness and escape rebirth in the world. Arriving in New York City, Prabhupada attracted young people who were disaffected from American society. He established his first center in New York City in 1966, from which the movement expanded over the next decade. ISKCON has temples in numerous cities and agricultural communes in some rural areas. The movement, however, has experienced opposition on several fronts. Persistent efforts of some followers to solicit money and to spread Krishna consciousness in airports led to local restrictions, which the Supreme Court upheld in 1992. Also, family members of some converts opposed ISKCON, expressing concern about the changing lifestyle of devotees who became ascetics, leaving family and careers or school. Despite being targeted by anticult efforts, ISKCON continues to have a significant presence in the United States and has incorporated Hindu immigrants in some ISKCON temples.

Tensions in Ethnically Diverse Movements

Indian American Hindus and non-Indian converts converge in some guru movements, often creating complex dynamics in their local centers. The Indianapolis Sai Baba Center follows a Hindu guru who has claimed to be a manifestation of God and who considers his teachings beyond Hinduism. Founded in the mid-1980s, the center originally attracted European Americans who met together in homes. In the 1990s, the center began to grow, attracting more Indian Americans, who eventually dominated the membership. The

increasing prominence of specifically Indian practices coincided with a decline in non-Indian members, possibly because Indian practices made the center less appealing to non-Indians. A similar tension is visible in many ISKCON temples. Prabhupada founded a temple in Atlanta in the early 1970s with a significant number of African Americans and European Americans. By the mid-1990s, the temple attracted similar numbers of Indian Americans and people of non-Indian heritage. As many of the non-Indian converts, with their countercultural views, valorized the act of renunciation and lived on the temple premises to devote themselves to Krishna, many professionals within the Indian American community expressed frustration over the financial burden that the renunciants created. Ironically, the non-Indian converts had adopted a traditional Indian valorization of asceticism, although many Hindu immigrants reflected contemporary American attitudes towards the material world that many converts had specifically rejected when they joined the movement. Such tensions relate to the contrast between Hindu immigrants, who often participate in temples to promote cultural heritage generally, and non-Indians, who commit to the teachings of a specific guru, especially as both Sai Baba and Prabhupada considered their movements beyond Hinduism.

Americanization of Hinduism

The influence of American culture on Hinduism extends well beyond such tensions in particular movements. Since many Hindu temples in India depended on major historical donors, not contemporary visitors, most Hindu immigrants were not accustomed to supporting temples financially. Most temples have established membership dues to provide basic funding for operations, along with fees for specific rituals. Although temples generally emphasize individual and family worship in temples, as in India, and therefore have a priest available at regular hours, some communities have created more congregational forms. The Vedic Center in Greenville, South Carolina, for example, depends on volunteers to open the temple every evening and perform the ritual with whom-ever can join them at the specified time. Hindus from the Caribbean also continue their distinctive traditions by gathering on Sunday mornings to sing devotional songs and conduct the community-wide rituals. Most temples also adjust their schedules to coordinate with the American calendar. Festivals are often conducted on the nearest weekend to the traditional date, and times for important rituals, such as the laying of a foundation stone or the consecration of a

new statue, are set according to both the traditional astrology of India and the American work calendar.

Many Hindu immigrants specifically link the development of temples to the need to provide a positive religious and cultural identity for their children. Hindus in America have also developed programs to educate their children, who grow up separated from both a majority Hindu society and extended family members who traditionally provide informal religious education in India. Many temples, guru movements, and other Indian American organizations provide religious, cultural, and language classes for children, loosely on the model of Christian Sunday schools. Despite the communal gatherings, membership lists, and weekend classes, most temples do not constitute a congregation in the Christian sense of expecting an exclusive commitment. Some Hindus remain members of multiple temples, and many participate in a wide range of activities, including visiting different temples.

Relations between Hindus and Non-Hindus in America

Various controversies have occasionally created problems for Hindus in America. In addition to disagreements over conflicting understandings of Hinduism, some Hindus oppose the efforts of guru movements to convert non-Indians, asserting that conversion to Hinduism contradicts a Hindu concept that all religions lead to the same supreme being. Some Hindus also fear that efforts to convert non-Hindus heighten tensions with the broader American society. Several guru movements with non-Indian followers, in addition to ISKCON, have faced opposition from Christian anticult movements, which both reject the conversion of young people from Christianity and fear subsequent lifestyle changes and complete submission to the guru. Accusations of criminal activity and misconduct have also arisen within specific movements, heightening the controversies. In addition to Rajneesh's arrest, misconduct by the non-Indian successors to Prabhupada in ISKCON, including charges of murder, and accusations of sexual misconduct against several gurus have fed negative stereotypes of gurus among both Hindus and non-Hindus.

Such tensions and controversies are not the only type of encounter between Hinduism and non-Hindus in America. Many temples have maintained amicable relations with the larger community. The common Hindu assertion that conversion to Hinduism is unnecessary can reduce opposition to the presence of Hinduism in America, and the

professional relationships between Hindus and non-Hindus also foster positive interaction. One neighbor of the Hindu Bhavan in Raleigh, North Carolina, who maintained his Christian and American identity by displaying flags in his yard, actively assisted the temple, largely because a Hindu cardiologist had saved his life.

Concerns about the attitudes of Hindu children towards Hinduism have also spawned efforts to challenge representations of Hinduism in the United States. The Hindu American Foundation and the Vishwa Hindu Parishad (VHP; World Hindu Federation), among other organizations, have fought what they identify as biased anti-Hindu presentations by scholars of Hinduism and educational institutions. In California, some Hindus challenged the State Board of Education over a sixth-grade textbook's representation of Hinduism. Their efforts received support from many educators over the removal of some demeaning representations of Hinduism. Disagreements, however, remained, as some Hindus attempted to alter discussions of more controversial elements of Hinduism and the history of India generally to create a more sanitized image, although others, Hindu and non-Hindu, found the requested changes distorting.

The VHP of America, a component of a global organization that promotes a contemporary understanding of Hinduism, is perhaps the most famous organization promoting the political power and positive image of Hinduism. In its effort to display the unity and political power of Hindus throughout the world, the VHP emphasizes a narrow version of Hinduism that some Hindus reject. Because of its prominence and political activism, some fear that the VHP's version of Hinduism will become the standard view among future generations of Hindus in America.

The VHP and similar organizations also work to secure symbolic recognition of the Hindu presence in America. On September 14, 2000, and July 12, 2007, Hindu religious leaders led the opening prayer for a session of the U.S. Congress and Senate, respectively. When some expressed disdain for the inclusion of non-Christian religions, the VHP and other organizations praised the inclusion, emphasizing the concept of religious liberty. The VHP of America has also pressured the U.S. Postal Service to issue a stamp commemorating the Hindu festival of Divali.

Some have also opposed yoga, a practice commonly associated with Hinduism that has become a common form of contemplation and exercise in the United States. According to Hindu traditions, yoga should combine physical exercises with meditative disciplines and moral control to

gain spiritual understanding. In the United States, some of the spiritual and moral components are often neglected in favor of the physical and mental elements of the yogic postures. Nevertheless, some non-Hindus object to the use of yoga within schools and other contexts because they associate it with Hinduism. Among immigrant Hindus, other forms of yoga, involving more philosophical elements also influence their practice of Hinduism.

Despite the challenges of establishing Hinduism in the United States, Hindus and Hinduism have become a significant component of the multireligious landscape of the United States. Over the course of the twentieth century, Hinduism has moved from a curiosity to a physical and human presence in cities of many sizes. Its cultural influence on the United States is even broader, ranging from American transcendentalism and Martin Luther King's nonviolent philosophy to common practices and understandings at the beginning of the twenty-first century.

Hispanic Influence

The dominant character of religious cultures in the United States has always been shaped, in large measure, by the religious traditions of immigrants and displaced migrants. While early immigration to the nation was largely of European origin, this changed dramatically during the course of the

twentieth century. In 1965, the signing of the Hart-Celler Immigration Act phased out the national origins quota system that favored European immigration. With a pen stroke, a new era of mass immigration began where the most common point of origin for newly arriving peoples became Latin America and the Pacific Rim. And as these groups have introduced their forms of faith, the religious landscape of the United States has been radically and permanently changed.

In 1980, the U.S. Census Bureau counted slightly more than fourteen million Latinos in the United States. By 2000, the Latino/a population stood at thirty-five million, and it is estimated that by July 2005 it had grown to forty-two million. While these figures are remarkable, they are likely conservative due to the difficulty of tracking populations with circular patterns of migration across the most frequently crossed border in the world. As of 2009, 64 percent of the nation's Latino/a population were of Mexican ancestry; another 10 percent were of Puerto Rican background; and about 3 percent each were of Cuban, Salvadoran, and Dominican origins. The remaining 17 percent were of other Central American or South American origins. This population is greater than the entire population of Canada or that of the most populous U.S. state, California. And although investment in the idea of a North/Latin divide between the Americas is still common, the United States is close to becoming the third-largest Spanish-speaking nation in the world. Today the impact of Latin American culture on American religious life is profound and undeniable.

On many levels, Latino/a individuals, families, and communities have been the loci of extraordinary cultural blending and transformation. They have been the agents through whom hybrid religions and religious practices such as *Santería* and *Curanderismo* have come to flourish in the United States. And once arrived, they have also altered religious traditions and impacted institutions in the United States in innovative ways, in order to meet new challenges and circumstances. Though majority Catholic, they have also adopted Protestant Christianity and Mormonism in large numbers, with sometimes subtle and sometimes radical transformative effects on those faiths. Furthermore, the religious life of Latinos often also exists beyond traditional institutional forms and includes a host of devotional practices, personal beliefs, and social conventions that challenge easy categorization. The contribution of Latinos to the broader religious life of the United States is long-running and multifaceted; it is shaped by experiences of migration, discrimination, economic hardship, war, and other powerful social forces.

War and Migration

Following Mexico's independence from Spain (1821), opportunities for travel and commerce opened along the nation's northern frontier, resulting in some of the first significant religious encounters to occur between the religious cultures of the United States and those of Latin America. Initially migration ran principally from the United States towards Mexico, as considerable numbers of American farmers and merchants settled in Mexican Texas and California. These individuals were required by Mexican law to convert to Catholicism as they and their families became American-Mexicans. The establishment of the Santa Fe Trail provided another early point of contact. In combination with the Chihuahua Trail, it became a bustling international conduit for commercial and cultural interchange running nearly three thousand miles from Mexico City to Franklin, Missouri. But shortly after its creation, this same trail provided a route for the American invasion, conquest, and occupation of Mexico's northern territories during the Mexican American War (1846–1848). And this transformation of Mexico's North into the United States's Southwest initiated a number of long-running clashes around issues of religious and cultural difference.

Clergy-Laity Tension and Circular Migration

Some of the earliest and most significant of these conflicts came about as a result of the uneasy relationship between American Catholic clergy and Hispano laity in New Mexico. Historically, clergy had been sparse in the region, and, as a result, the piety of the region's ethnic Mexican population was characterized by the prominent role played by laymen and laywomen in the creation and perpetuation of religious traditions. However, following the war, Jean Baptiste Lamy (1814–1888), the first American Catholic bishop of New Mexico, implemented a host of reforms aimed squarely at curbing lay influence, centralizing religious authority, and Americanizing religious practice. Lamy's reforms were resisted by powerful Hispano penitential confraternities as well as the few remaining ethnic Mexican clergy, most notably Father Antonio José Martínez of Taos, who was excommunicated by the bishop for his opposition to the imposition of a tithe and a number of other disagreements. Lamy was ultimately successful in limiting the power of the local-born clergy by recruiting French priests and nuns from across the Atlantic, whenever possible, to staff his growing New Mexican Church. This

bias became so ingrained that Catholic clergy of the state were overwhelmingly of French origin until the early 1970s, effectively keeping Latino/as from positions of higher authority within the American Catholic Church for more than a century.

However, this form of exclusion encouraged the continuation of devotional practices outside of institutional structures that are typical of Latino/a religious life and have come to be celebrated as folkways central to the region's identity. Chief among these is the centuries-old Santero tradition of manufacturing and reproducing religious art with a long-established vocabulary of stylistic forms. These religious *bultos* (statues) and painted *retablos* typically depict images of holy persons such as Jesus (as the infant Santo Niño de Atocha or as the Man of Sorrows), the Virgin of Guadalupe, and a host of saints. This form of ethnic religious art-making flourished in the United States during the twentieth century as a result of the piety and autonomy of the laity, and also in part because of the efforts of the Works Progress Administration (WPA) Artists' Project during the Great Depression to document and portray this spiritual aesthetic as a regional American tradition.

Similarly, eighteenth-century colonial Spanish and Mexican mission church architecture had a profound influence on the creation of the signature architectural styles of the American Southwest in the twentieth century. And these same churches, predating annexation by the United States, came to serve as historical landmarks and markers of regional identity in American civic culture.

Though native-born ethnic Mexican populations in the Southwest formed a foundational Latino/a presence in the United States, migration from Latin America to the United States escalated around the turn of the twentieth century as a consequence of the Spanish American War (1898) and the Mexican Revolution (1910–1920). Following the war with Spain, continuing American political intervention in Puerto Rico and Cuba provided the impetus for the formation of the first sizable émigré communities from the islands in the United States. And Mexican immigration to the United States increased dramatically during the 1910s and intensified even further with the explosive growth of agribusiness in the American West in the 1920s. Census data show that between the years 1900 and 1930, the Mexican-born population of the United States grew from 103,000 to 1,400,000, with the largest waves of immigration occurring in the 1920s and dramatically marking the first large-scale arrival of Latin American culture to the United States.

Although a great number of Mexico's Catholic clergy went into political exile in the Southwest during the 1910s and 1920s, Mexican participation in American Catholic services remained low, but domestic piety in the form of home altars and prayer groups remained as common expressions of faith, much as it had for earlier Catholic immigrant groups. The proximity of the Mexican border and the speed of rail travel further limited incentives to actively assimilate or convert. These factors, combined with racism and segregation, resulted in fairly insular Mexican and Mexican American communities in the early twentieth century. Even though by 1928 Los Angeles had the largest Mexican-born population of any city outside of Mexico, from 1910 to 1930 only one in ten Mexican nationals in the United States applied for permanent residency or citizenship.

In the 1930s, global economic depression fanned the flames of anti-immigrant sentiment in the United States and spurred the creation of a repatriation program designed to rid the United States of foreign-born Mexicans. But beginning in 1942, just five years after the end of these campaigns and as a result of the advent of World War II, the U.S. government initiated a bilateral labor agreement with the Mexican government to recruit desperately needed workers. This agreement, known as the *Bracero* program, brought more than five million Mexicans, mostly men, to the United States. Although most *Braceros* would eventually return to Mexico, their presence greatly increased the size of the nation's Mexican American communities. More importantly, the *Bracero* program firmly established a circular pattern for Mexican immigration to the United States that would last through the rest of the twentieth century: during times of plenty, Mexican laborers would cross the border; and during lean times, they would return to Mexico—resulting in prolonged exchanges between Mexican and American religious cultures and a renewal of lay traditions.

Cursillo Movement

In the midst of this expansive growth of Mexican cultures within the United States, the American Catholic Church launched its first concerted outreach programs among Latino/as. Easily the most influential Catholic campaign of the mid-twentieth century was the *Cursillo* movement. Originating in Majorca, Spain, in 1947 and arriving in the United States a decade later, the *Cursillo* has had a great impact on Latino/a religious life. Participants in the *Cursillo* would undertake three-day “retreats” for religious renewal and dedication. And although the clergy would often

participate in organizing the retreats, the aim of the *Cursillo* was to stress greater responsibility among laypersons in the maintenance of the church and their own spiritual lives. This reinforced the extant pattern of Latino/a religious practice taking place in the home, but it also inculcated a broader commitment to social justice. Thus, the *Cursillo* movement also had a significant impact on the larger American culture because it fostered social activism among Mexican Catholics. The movement can be credited with influencing Catholic civil rights leadership; César Chávez of the United Farm Workers (UFW), for example, became a *Cursillista*.

With the advent of the civil rights movement in the 1950s, Mexican Americans witnessed African Americans' successes through demonstrations, picketing, and direct confrontations with racism. By decade's end, they began to emulate these tactics in both the political and religious spheres. In 1965 César Chávez headed the first attempts by Mexican agricultural workers in California to unionize under the banner of the UFW. During Lent in 1966, members of the new union undertook a three-hundred-mile march of "Pilgrimage, Penitence and Revolution," from Delano to Sacramento, under the banner of the Virgin of Guadalupe and both Mexican and American flags. The use of this most Mexican image of Mary by the UFW was an expression of ethnic identity and also a strategic use of symbolism to counter accusations of communist agitation. Criticism of the union helped to foster communication and dialogue between field workers and American Catholic clergy as both sides reached out to each other—union leaders seeking protection from cold war nativism and a new generation of activist clergy seeking to participate in the moral project of the civil rights movement.

Urban Transformations

While many cities in the southwestern United States have had significant Latino/a populations since 1848, migration from Latin American in the twentieth century has had a transformative effect on the religious life of nearly all of the nation's major urban centers. Puerto Rican and Dominican immigration began a sharp rise in the 1950s, with most of these migrants settling in the Northeast and the greatest populations arriving in New York. It is significant that as a result of Puerto Rico's status as an autonomous commonwealth of the United States, Puerto Ricans are born American citizens. Therefore all Puerto Ricans, unlike other Latino/a immigrants, arrive already naturalized. By the late 1990s, they were largest Latino/a group in New York City

and among its fastest-growing immigrant populations. Slightly over a decade later, the Bronx had a majority Latino/a population, and the borough's Catholic, Pentecostal, and Mainline Protestant churches all commonly offered Spanish-language services. In areas of particular Latino/a density, many churches, especially small storefront churches, still conduct worship exclusively in Spanish. As is typical of most Latin American ethnic groups, Marian devotion often serves as an ethnic marker, with veneration of the *Virgen Santa de la Providencia* common among Puerto Ricans and of the *Virgen de la Alta Gracia* among Dominicans.

In 1959, just prior to the Cuban Revolution, the number of ethnic Cubans in the United States was estimated to be 124,000, about 30,000 of whom resided in Florida. For the next three decades, hundreds of thousands of Cubans left Cuba and began a new life in the United States, with the majority settling in and transforming Miami. There have been four distinct waves of Cuban immigration to the United States since the revolution in 1959. The first was an initial wave of post-Castro exiles; the second was the airlifts of 1965 to 1970; the third was the Mariel boatlift in 1980; and the fourth, from the mid-1990s to the present, has seen more than 40,000 arrive by water vessel. While earlier migrants were typically fleeing Cuba for political reasons, more recent migrations have been fueled by declining economic conditions as well.

In 2009 there were more than a million persons of Cuban descent in the United States, and almost 80 percent of those born in Cuba and 64 percent of those born in the United States identify as Catholic. Fourteen percent of Cuban migrants and 10 percent of U.S.-born Cubans follow some form of Protestantism. Most Protestant Cubans belong to mainline Protestant denominations; however, there are increasing numbers of Cuban American Pentecostals, Jehovah's Witnesses, and Seventh-day Adventists. This growth mirrors the growth of these churches throughout Latin America. The Jewish Cuban community, while small, is also a visible part of Miami's religious landscape.

Santería and Court Cases

The most recent waves of migrants from Cuba have renewed and expanded the presence of Afro-Latin religion in the United States, principally through the popularization of *Santería* (also known as *Lukumí*). This tradition is a centuries-old hybrid of Yoruba (West African) and Spanish Catholic religious beliefs, symbols, and rites. Adherents of *Santería* seek the protection and guidance of the *orishas*,

powerful spirits and ancestors, who manifest themselves in healing rituals and possessions and are sometimes offered animal sacrifice. This aspect of Santería practice has caused considerable controversy in the United States, most famously when leaders of a Santería congregation challenged a municipal law prohibiting animal sacrifice.

In the late 1980s, the city council of Hialeah, Florida, was faced with public concern that the Church of Lukumi Babalu Aye had leased land and was planning to establish a church, school, and cultural center within city limits. In an effort to forestall the practice of animal sacrifice, the city passed an ordinance that forbade the “unnecessary killing of an animal in a public or private ritual or ceremony not for the primary purpose of food consumption.” The church argued that this violated their First Amendment rights to freely exercise their religion. After a series of legal challenges, the case of *The Church of Lukumi Babalu Aye v. City of Hialeah* was heard in 1993 by the U.S. Supreme Court, which ultimately ruled that the law against ritual animal sacrifice was in fact unconstitutional. Moreover, this case had the effect of making Santería a more broadly recognized faith in the United States.

The unique experiences of all generations of exilic Cubans make the interconnections between religion and the politics of migration more explicit than for most other Latino/a groups. In November 1999, five-year-old Elián Gonzales, his mother, and twelve others left Cuba on a small boat intending to make the ninety-mile trip to seek asylum in the United States. Elián’s mother and ten others died in the crossing, but he and two others survived at sea, floating on inner tubes until they were rescued and turned over to the U.S. Coast Guard. The ensuing political battle between the exilic Cuban American community in Miami and the Cuban government transformed the young boy into a powerful political and religious symbol. Among adherents of Santería, Elián’s miraculous journey came to be viewed as proof alternately that he was the personification of the orisha Elegua, the patron spirit of travelers, or a child of Ochun, the patron of the sea. Cuban Christians often allegorically referred to his crossing as being like that of Moses in the Red Sea, from bondage into freedom, and there were a number of sightings of the Virgin Mary above the Miami house he stayed in with his extended family. Ultimately, Elián was returned to his father in Cuba, sparking large protests among Cuban Americans and a political backlash by these crucial swing voters against Al Gore in the 2000 presidential race.

On the West Coast, migration from Latin American has similarly had a considerable impact on American religious culture. Activism on the part of Latino/as would help to foster a series of reforms within the Catholic Church, such as the elevation of the first Latino bishop, Patricio Flores (in 1970) and the spread of the Spanish-language mass. However, lay practice has continued to be the vibrant heart of Latino/a religious life; and transformations in religious culture that would touch the daily lives of ethnic Mexicans also occurred outside of the church, principally through innovations in the expression of religious visual culture through the spread of the Chicano/a mural movement beginning in the early 1970s.

Muralism

The production of public murals offered a medium through which ethnic Mexicans could visually articulate their own religious and cultural iconography beyond institutional settings and, in so doing, employ these sacred icons to distinguish the urban spaces they inhabited and claim them as their own. Among the first ethnic murals in Southern California were those painted in the early 1970s at the Estrada Courts and Ramona Gardens housing projects in East Los Angeles. Resident youths, often talented gang graffiti taggers, were recruited by social activists to work collaboratively with artists to create art that set up a political and religious dialogue with the surrounding city. Murals began to proliferate very quickly, becoming a commonplace element in barrio streetscapes that had previously been demarcated principally with stylized gang graffiti. By the end of the 1970s, many of the city’s housing projects would be home to hundreds of murals depicting religious images, such as the Virgin Mary, the Crucifixion, and the Sacred Heart of Jesus, side by side with portraits of Aztec and Maya warriors, Mexican revolutionary leaders, and contemporary civil rights leaders (such as César Chávez, Luis Valdéz, Reies Tijerina, Martin Luther King Jr., and John F. Kennedy), as well as banners spelling out messages of social uplift.

The combination of religious and political imagery made murals a locus for the expression of the experiences and conditions endured by the community. All at once, murals functioned as communal markers and, through their presentation of religious imagery, as responses to suffering. As such, they regularly became devotional and commemorative sites. While depictions of Jesus, particularly as the man of sorrows, were common, no image better conjoined the assertion of

Mexican ethnic presence and religious practice than that of the Virgin of Guadalupe.

The ubiquity of this Marian image, as well as the multiplicity of forms in which it is reproduced, speaks to the power of the symbolic link to Mexico that Guadalupe provides ethnic Mexicans in their creation of homes in the United States. As a result, the public places where Guadalupe is displayed, particularly though the public medium of muralism, can become sites that represent the spiritual hearts of their respective communities.

The continued longevity of these devotional mural sites, as well as that of many others like them, speaks to the success of early muralism as a nexus of Latino/a religious and political praxis. As the mural movement evolved in metropolitan areas with large Latino/a populations such as Los Angeles, San Diego, Chicago, El Paso, and San Antonio, Chicano/a art became a regular feature of American city streetscapes. Throughout the late seventies, murals became popular in civic renovation or so-called Barrio Beautiful campaigns that attracted support from municipal budgets, the National Endowment for the Arts, and the Federal Comprehensive Employment Training Act. However, with the election of President Ronald Reagan in 1980, federal funding for these projects was abruptly terminated. And though this decline in financial support marked the end of many community mural programs, the remarkable productivity of the movement had succeeded in firmly establishing a tradition of ethnic vernacular art with a strongly religious cast.

The clergy's recognition and embrace of religious murals created by lay practitioners speaks to the dramatic change in the relationship of the church to Latino/a parishioners, perhaps most explicitly in Latino/a majority cities such as Los Angeles. According to the 2000 Census, nearly half of the population of Los Angeles is Latino/a, and one in three Angelinos is an ethnic Mexican. And these figures do not include the bulk of the city's undocumented population. As a result, in the past forty years, Catholicism in Los Angeles has been transformed. Currently, more than 60 percent of the four million lay members of the Archdiocese are Latino/as, all seminarians are required to learn conversational Spanish, and Spanish-language masses are offered in 187 of its 287 churches. The lived religious consequences of these institutional changes are made clear in the nearly universal presence of Guadalupan shrines in Catholic churches throughout Southern California. At the very center of the city, in the plaza of the original pueblo, the Our Lady Queen of the Angels Church, or "*La Placita*," is home to a large-scale

outdoor tile mural depicting Guadalupe that spans the entire side of the church. Prayer vigils and public devotion in the form of flowers and candles are a constant. And every December 12th, the mural serves as the backdrop for the largest celebration of Guadalupe's feast day in the city, with thousands in attendance. Similar large-scale celebrations are now occurring across the nation, from processions in New York City to candlelit vigils in North Carolina.

Continuing Contributions

Many reforms instituted in the late 1960s by Vatican II, such as the vernacular mass, provided powerful new methods for outreach in ethnic parishes. In the early 1970s, Spanish-language services became increasingly popular and took inventive new forms, such as the "mariachi mass" that featured Latino/a musicians in the performance of the liturgy. And immigrant traditions have been revitalized and in some cases re-imagined with the church's blessing. For instance, Chicano/as have popularized the Mexican tradition of *El Dia de los Muertos*, which like the Feast of All Saints honors the ancestral dead, and it has been incorporated into the liturgical calendar of many parishes and has become a centrally important holiday in most ethnic Mexican communities in the United States.

Theological Developments and "New Immigration"

Among Catholics, the post-Vatican II improvement in church-lay Latino/a relations also resulted in a number of theological developments. Liberation theology made its way to the United States from, South and Central America. Mujerista theologians have shown the central role of women in the perpetuation and creation of Latino/a religious traditions and provided critical tools in the struggle for social justice and women's rights. And *Mestisaje* or racial and ethnic blending has also been proposed as the basis for a new theology that makes sense of the cultural experiences of Latino/as.

In the 1980s and 1990s, large-scale immigration from Latin America became one of the most significant elements of what scholars of immigration to the United States have come to term "the new immigration." This immigration is characterized by a large-scale flow of legal and undocumented immigrants that intensified rapidly after 1980. In the 1990s there were more legal immigrants to the United States from Mexico alone than from all of the countries of Europe combined.

Many of these "new" immigrants in the United States are transnational citizens rather than simple transplants. These

recent arrivals are emerging as important actors in American society and civic life, while still participating in their home countries' religious, economic, political, and cultural spheres. This situation is not lost on Latin American politicians—former Mexican president Vicente Fox toured the border region in December 2000 to personally welcome back a few of the estimated one million Mexicans traveling south for Christmas. The popularity of Fox's dual nationality initiative, whereby Mexican immigrants becoming U.S. citizens retain a host of political rights in Mexico, suggests an emerging transnational framework for the identities of these "new" immigrants.

Increased openness on the part of the Catholic Church to Latino/a concerns about social justice for immigrants led to the involvement of clergy in political issues surrounding American foreign policy in Latin America. In 1980, a decade-long civil war erupted in El Salvador as a result of a coup by anticommunists that was ultimately backed by the United States. The resulting violence displaced more than a million refugees, roughly half of whom headed north to Mexico and the United States. A similar and contemporaneous civil war broke out in Guatemala, displacing a large portion of that country's population as well. Once in the United States, this large and mostly undocumented population faced execution and/or torture if deported back to their homelands; however, they were not typically granted political asylum. Beginning at the La Placita Church in Los Angeles in 1982, Catholic clergy and Latino/a parishioners initiated a coordinated response in what became known as the Sanctuary Movement.

The movement came to consist of hundreds of individual churches across the country, principally Catholic but also of several other denominations, that declared themselves as safe havens from deportation for Central American immigrants. Beyond providing much-needed humanitarian aid, the movement was also a powerful critique of U.S. foreign and military policy in Central America. While the movement was spearheaded by clergy and a few individual bishops, the American Catholic Church itself did not endorse it and was not officially critical of U.S. policy in Central America until a series of bishops' conferences held in 1988.

Future Prospects

While contemporary immigrants have found the American Catholic Church more sympathetic than did earlier generations Protestant denominations (especially charismatic churches) have had significant success in their conversion efforts. Many of these churches make use of transnational

networks to establish satellite congregations in Latin American hometowns, thereby creating important support networks for their members and religious cultures that are American and Latin American all at once. And rather than converting in the United States, many Protestant Latin American émigrés bring their expression of their denominations to the United States. As of the year 2000, Protestants made up 25 percent of Guatemala's population and 22 percent of El Salvador's; and in Mexico, more than one hundred Pentecostal denominations have over four million members.

The role Latino/as play in American politics and public affairs is greatly influenced by distinctions in their religious faith. Most Latino/as see religion as a guide in their own political choices, and most Latino/as view the pulpit as an appropriate place to address social and political issues. Evangelical Protestant Latino/as are twice as likely as Catholic Latino/as to identify with the Republican Party. And while often socially conservative, Latino/a Catholics are much more likely to identify with the Democratic Party, with this latter trend increasing in the 2008 election. Given its rapid growth, the Latino/a population will have an increasingly dramatic impact on the intersection of American religion and politics.

The Latino/a population of the United States is growing faster in the South than anywhere else. From Georgia to North Carolina to Alabama, substantial Latino/a populations have arrived in communities where Latino/as were a negligible presence just a decade or two ago. In cultural and religious terms, these southern communities differ greatly from areas of the country where Latino/as have traditionally settled. Most of these new arrivals are foreign-born, and as a result the growth of the Latino/a population in the South will have a distinctive and as yet unforeseen impact on religious life and public policy. But as in other gateway regions, churches and religious organizations in the South will be challenged to assemble and offer the tools to facilitate settlement and mediate cultural differences between Latino/a immigrants and their host communities.

Historical Approaches

The earliest historical accounts of religious experience among English-speaking colonists in the New World were chronicles that sought to justify a particular denomination's presence there. To be sure, there were early Spanish and French writings as well. A Franciscan named Alonso de Benavides (c. 1580–1316) wrote an overview of missionary efforts in New Mexico, but his work was merely self-serving propaganda to aid his chances of being appointed bishop of the province. French Jesuits made annual reports, termed *Relations*, about their efforts to convert Native Americans. As their superiors in Canada collected these over the years, they constituted something of an historical survey, but single reports were little more than truncated annals.

Significant Historical Accounts in the Colonies and Early Republic

The first historical account of substantial content was produced by a pious layman, William Bradford (1590–1657), one of the original colonists aboard the *Mayflower* in 1620. He recorded material drawn from firsthand observations, and his treatise entitled *Of Plimouth Plantation* depicted the tenor of Pilgrim life from the founding of Plymouth until 1647. The manuscript was misplaced and not published until the mid-nineteenth century, but it is now recognized as one of the most valuable sources on religious beginnings in America. Another observer of Puritan efforts in the New World was Nathaniel Morton (1613–1685), who grew up in the family

of William Bradford and was responsible for much of the routine government activities at Plymouth. In 1669 he published *New England's Memorial*, which is filled with details about early colonial laws and the Puritan minority who sought to make their establishment a holy commonwealth and beacon for all Calvinist transatlantic immigrants.

The most outstanding historical treatise of early years, in both depth and scope, was written by Cotton Mather (1663–1728), a second-generation Puritan born in the Massachusetts Bay Colony town of Boston. His magisterial work, *Magnalia Christi Americana* (Great Works of Christ in America), was published in 1702, and it purported to describe all the major events in the ecclesiastical history of New England from its first planting to Mather's contemporary times. He portrayed succeeding generations of Puritans as earnest participants in a lifestyle dedicated to creating in Boston a "City set upon a Hill," a model of godliness and disciplined obedience to God's instructions. He sought to inspire younger Puritans, who he hoped would continue to fashion lives according to scriptural teachings and Massachusetts law. Though many townspeople regarded him as meddling and domineering, Mather was nevertheless industrious in writing about the place of religion in daily life. He authored the staggering total of 450 books, many of which aimed at maintaining excellence within American Puritanism and safeguarding its perpetuation.

Few writings of the eighteenth century can be termed historical. The tendency of Enlightenment thinking was to seek the ideal in government and social relations in a golden age in the distant past. Rationalists had little interest in historical development and ignored the years between their ancient ideals and present circumstances. They transferred prior examples of virtue to their own day, spurning what they believed to be the corrupting influences that had accumulated during intervening centuries of superstition and decay. Moreover, revival experiences in the Great Awakening and political arguments over independence from England took precedence over inquiries into the past. Save for chronicles and denominational defenses, there were no writings of historical import in the 1700s.

Writers in the nineteenth century gave much more attention to the processes of historical development and the impact of previous actions and precedent. The first to put this perspective into print was Samuel Miller (1769–1850), whose two-volume work, *A Brief Retrospect of the Eighteenth Century* (1803), highlighted the importance of religion in the cumulative experience of American events. Miller had

an encyclopedic mind, and he began his work with the creation of the world and tracked important occurrences through Jewish history, the early church, medieval encrustations, Reformation emendations, and the culmination of refinements in the Presbyterianism of his own day. He also touched upon other subjects such as ethics, politics, natural science, theology, mechanical and fine arts, and the cause of human rights, especially the wrongs of slavery. All his writings and lectures adhered to the view that vital Protestant doctrines were derived from the Word of God and that a proper understanding of the past provided examples of both warning and pious emulation, models for preserving orthodox beliefs and strict religious propriety.

The next and far more well-known of this generation of church historians was Robert Baird (1798–1863), a Presbyterian whose career had a wider perspective. After ordination, Baird served as a schoolteacher, then as a Bible distributor for a state missionary society, and next as traveling emissary for the American Sunday School Union. In 1834 he accepted a position as a Protestant evangelist in France and spent much of the rest of his life explaining the essentials of American Protestantism to predominately Catholic audiences in Europe. His most well-known work, *Religion in America* (1843 in Scotland and 1844 in New York), depicted the dynamics of church life in the United States to a transatlantic population.

Baird strenuously defended such characteristics as separation of church and state, voluntary support for church programs, and revivals as the best means of producing conversions and increased membership. In another work, *The Progress and Prospects of Christianity in the United States* (1851), he held that freedom of religion among Protestant evangelical groups was the key to growth for the mainstream American denominations. In contrast to these genuine representatives of American religious genius, Baird commented negatively on all contravening forms of religion in the new republic, including Judaism, Roman Catholicism, and Unitarianism. In his view, the traits of these groups were not consistent with the American way of life and would not survive in the free atmosphere of republican culture.

Philip Schaff and the American Society of Church History

The historical approach to understanding American religion had many native observers and seminal authors, but the most influential individual on American scholarship in the nineteenth century was Philip Schaff (1819–1893).

Self-described as Swiss by birth, German by education, and American by choice, his overarching interest was the historical development of experiences in Christianity, the organic connections between past and present. Using biblical terminology to describe his model of progress, he foresaw the Petrine and Pauline versions of Christianity eventually blending into a Johannine fusion of the best of the earlier movements. In his earlier books, *Principle of Protestantism* (1845) and *What Is Church History?* (1846), Schaff introduced Americans to a theoretical basis for sound methods in historical scholarship, discussing religious developments in America against the backdrop of ancient, medieval, and Reformation occurrences.

Schaff produced historical works of remarkable breadth and scope. His six-volume *History of the Christian Church* (1882–1892) alone places him as a leading historian of religion of his day, but he did much more, especially concentrating on distinctive ecclesial characteristics that had emerged in the United States. Schaff wrote a series of lectures, *America: A Sketch of the Political, Social, and Religious Character of the United States of North America* (1855), in an attempt to explain features of American church life to European audiences. He wrote articles and speeches on American religion, one outstanding effort being *Church and State in the United States* (1888), published under the auspices of the American Historical Association. As with earlier observers, he endorsed the principles of religious freedom, competition between and among evangelical groups, and the authority of scripture as the ultimate rule for ethics and liturgy. Unlike others, however, Schaff also perceived promise in Roman Catholicism, hoping to see the day when Protestant and Catholic would reunite.

This irenic vision, dedication to accuracy in documentary evidence, and emphasis on providential direction of events, gave inspiration and motivating energy to historians who followed Schaff's precedent. More than eighty publications bear his name and helped create a more profound appreciation of critical historical studies in the United States. In 1888, he was instrumental in founding the American Society of Church History, which has ever since been the flagship of scholarly excellence in ecclesiastical history.

The subsequent American Church History Series (1893–1897), a thirteen-volume set of denominational histories, put the study of religions in America on an altogether higher, more inclusive, and ecumenical level. At that time it was the most ambitious undertaking of a historical overview of American religious phenomena, touching on no less than

twenty different denominations. Schaff chose authors for each segment and urged them to emphasize elements compatible with other churches, the better to highlight shared goals for future cooperation and growth. One such tome, *The Religious Forces of the United States* (1893), drew heavily on the government census of 1890 and employed statistics as a means of demonstrating the importance of Christianity to American culture. The final volume, *A History of American Christianity* (1897), written by Leonard W. Bacon (1830–1907), provided a masterful summary of denominational activities up to that point. His blending of various denominational endeavors helped integrate ecclesiastical work into larger cultural categories.

Contemporary with Schaff was John Dawson Gilmary Shea (1824–1892). After withdrawing from Jesuit formation, Shea supported himself as a journalist and editor of ladies' magazines, dedicating his spare time to writing the history of Catholic beginnings in the New World. A staunch defender of the Roman church, which he treated as the exclusive possessor of religious truth, Shea amassed a formidable array of documentary evidence and produced a four-volume magnum opus entitled *A History of the Catholic Church within the Limits of the United States from the First Attempted Colonization to the Present Time* (1886). In a history of early Catholic missions to Native Americans and in many articles published in the *American Catholic Quarterly Review*, he wrote indefatigably to defend his church against frequent Protestant criticisms. Shea marshaled evidence to argue that Catholics were genuinely qualified to be American citizens, that they had sustained republican values for generations, and that they had repeatedly proved their loyalty to the federal government by defending it during wartime.

Another contemporary of Schaff and Shea was Methodist minister Daniel Dorchester (1827–1907), who diametrically opposed any favorable view of Catholicism. Dorchester's writing reflected dominant attitudes in popular culture at the time, and he never referred to Catholic activities or influence without making disparaging remarks. Dorchester was noted for his use of statistical tables and charts. He compiled these cumulative figures to emphasize developmental progress, a palpable improvement over earlier beginnings. Instead of venerating the past and legitimizing current forms by linking them with colonial precedent, Dorchester exalted modern conditions as the best forms of religious expression made heretofore. His *Christianity in the United States from the First Settlement down to the Present Time* (1888) compiled massive documentation to prove that American

Protestant churches were improving moral and social conditions as never before in national life. His idea of religious growth epitomized the zenith of pan-Protestant dominance in American culture, just at the time when new influences from such immigration would make his arrogant conceptions obsolete.

Early-Twentieth-Century Church History and the "Frontier Thesis"

By the beginning of the twentieth century, the historical approach to understanding American religious expressions had reached a higher level. Of course some writers continued to focus narrowly on single denominations in isolated, apologetic defenses. Others branched out to interdenominational surveys that stayed safely within mainstream Protestantism, ranging from Baptists to Episcopalians and Lutherans to Disciples of Christ. But in a new century of historiographical rigor, these historians began increasingly to conform to rules regarding documentary evidence used in modern universities. Secular interpretive themes came to dominate the study of religious history, relying on the same standards that held sway among students of social and political topics. One bellwether publication was *History of Religion in the United States* (1924) by Henry K. Rowe (1869–1941). Rowe's survey resembled the views of other progressivist historians who celebrated the triumph of free church ideals over ecclesiastical establishment, the predominance of evangelical enthusiasm over formalized worship. Rowe's account of religious change emphasized an upward progression of acquired freedoms and a core of democratic characteristics that distinguished American religion from other countries.

A scholar who flourished during the same decades as Rowe was Peter K. Guilday (1884–1947), a farsighted and influential academic who deserves to be regarded as the father of modern Catholic historiography in the United States. He succeeded Shea as the foremost historian of Roman developments in American life, and his interest in placing ecclesiastical growth within the context of more general cultural progress added a dimension that gave his works a wider appeal. Guilday also espoused critical historical methods, which gave his studies an authenticity with an increasingly professionalized constituency. He produced lengthy biographies of bishops John Carroll (1922) and John England (1927), as well as a history of *conciliar dicta* issued from the archdiocese of Baltimore (1932). Guilday was instrumental in establishing *The Catholic Historical Review* in 1915, where he served as editor until 1941. He was also the

leading figure behind founding the American Catholic Historical Society in 1919, serving as secretary until general retirement in 1941. All of his activities used a progressivist perspective to vindicate Catholic activities in a country where nativist antagonists had unfairly discounted Catholic contributions to liberty.

A major interpretive theme in the first half of the twentieth century was known as “the frontier thesis.” Popularized in an 1893 essay by Frederick Jackson Turner (1861–1932), the thesis suggested that immigrants had developed a new society because of open land that lay west of the Atlantic seaboard. Americans acquired new characteristics because the frontier environment helped nurture such innovations. The first religious historian who capitalized on this hypothesis was Peter G. Mode, whose book *The Frontier Spirit in American Christianity* (1923) stood in the forefront of scores of others that used American experiences on the frontier to explain religious developments. Prior to that seminal work, Mode also charted the way in this school of thought by issuing a *Source Book and Bibliographical Guide for American Church History* in 1921. In an all too brief career at the University of Chicago, Mode set a historiographical precedent that remained vigorous for the next half century.

Following closely on the heels of Mode at the University of Chicago was William W. Sweet (1881–1959), who emphasized the frontier elements in American religion so much that the frontier perspective became a dominant theme in the scholarship of his day. Sweet was the first to occupy a chair of American church history, and as an advocate of training in secular historical methods, he inaugurated a program of graduate studies that concentrated on American subject matter, a field he considered woefully neglected. Sweet also began collecting documentary sources and made Chicago the richest depository of primary source materials in the country. Adhering loyally to the frontier thesis, he held that life on the American continent had shaped new features and emphases in religion. These innovative forms of institutional and intellectual life became the interpretive framework for his classic narrative, *The Story of Religions in America* (1930), which quickly became the standard textbook. Between 1931 and 1946, Sweet also compiled selections from his storehouse of documents to exhibit distinctive characteristics of the most vigorous denominations active on the expanding frontier: Baptists, Presbyterians, Congregationalists, and Methodists. He held that these churches exhibited individualism, hard work, recklessness, upward social mobility, and an occasional ability to cooperate with others.

While many twentieth-century historians followed this emphasis on frontier influences, some concentrated instead on colonial precedents, especially on the intellectual giants who flourished in those early generations. By the 1930s, Puritan studies had become obscure or ignored, but Perry G.E. Miller (1905–1963), a professor of English and American Literature at Harvard, inspired a remarkable resurgence of interest in the genre. He portrayed the full sweep of Puritan influences in New England and produced acute biographies of two major figures: Jonathan Edwards in 1949 and Roger Williams in 1953.

Additional studies of orthodox thought in Massachusetts and of the controlling ideas behind colonialism in general culminated in Miller’s two massive syntheses of Puritan life: *The New England Mind: The Seventeenth Century* (1939) and *The New England Mind: From Colony to Province* (1953). Detailing every major aspect of religious thought, sometimes offering quite controversial interpretations, Miller traced the continental and British roots of Puritanism and helped clarify the extensive framework of its scope. His analysis laid bare the tensions and strengths of religious influences that had an impact on burgeoning social developments and were affected by them. Intellectual historians since Miller have stressed either the inherent cogency of religious ideas or their practical consequences, but both approaches have enhanced the scope and content of religion studies.

Mid-Twentieth-Century History and “the American Character”

An additional major element in historiographical approaches to understanding religion in America also emerged by mid-century: the search for a consensus regarding values that epitomized “the American character.”

After the trauma of World War II, historians pursued American identity to find reassuring continuities with past generations. Consensus historians no longer emphasized progress through challenges but rather sought to portray a homogeneous culture where shared ideals had permeated minor cultural variations and had fashioned a normative American culture. Winthrop S. Hudson (1911–2001), in *The Great Tradition in American Churches* (1953), identified the core values of national life as having stemmed from Puritan times through revivals and free church traditions. His *American Protestantism* (1961) also made splendid use of specialized studies for purposes of a useful overview of basic traits.

Another outstanding author of this genre was Sidney E. Mead (1904–1999), who published little but whose short

pieces were very influential. At least two generations of historians have reckoned with his suggestive interpretations that were disseminated primarily through articles, reviews, and lectures. Nine such essays were put together in a seminal volume entitled *The Lively Experiment: The Shaping of Christianity in America* (1963). There Mead incorporated masses of evidence to exhibit the tradition of religious freedom as the driving force that shaped American cultural patterns. Unlike Hudson, who traced the roots of freedom to Puritan precedents, Mead found the genius of liberty and toleration to lie in the Enlightenment. He argued that since rationalists placed social tranquility over orthodox beliefs, they made certain that federal laws would not support an established church nor prevent the free exercise of various creeds and liturgies. Mead regarded the sometimes oppressive resurgence of evangelical fervor as a challenge to the more detached and neutral attitudes in Enlightenment thinking. His charge to other scholars was to untangle the threads of pietism and rationalism in order to appropriate the strengths of both traditions for effective cooperation. These strands could then, he hoped, shape democratic forms and ideas for the good of American society in general.

An additional influential writer who helped inspire and embody this renaissance of historical approaches to American religion was Sydney E. Ahlstrom (1919–1984). Rather than follow Mead's theory of Enlightenment ideas as the most influential force behind religious freedom in America, Ahlstrom found more persuasive elements to lie in Puritanism, intellectual and cultural emphases that flourished in the seventeenth and eighteenth centuries. He labored for decades to encapsulate this perspective in the fullest, most complete overview of diversified spiritual life in this country, and his *A Religious History of the American People* (1972) was the magisterial result. This massive volume contains three discernible but not separable themes. On one level, Ahlstrom portrayed religious life as exhibited in institutional structures. He noted that most people at most times have believed and behaved within organized religious groups, and he analyzed their historical existence by reference to sociologically defined categories. Secondly, he also recognized that many religious activities flourished outside traditionally organized patterns, and he included discussions of many religious sensibilities that flourished outside mainstream channels. Finally, Ahlstrom focused on the reciprocal interaction between religions in America and the larger spheres of social and political life. He continued a historiographical tradition that went back to Robert Baird

by interpreting America as a nation with the soul of a church, a New World phenomenon where evangelical Protestantism had informed popular national ideals during much of its history.

Another high-ranking scholar in this golden age of historical studies was Robert T. Handy (1918–2009). Adept at producing popular lectures and essays, he also wrote a 1971 study of Protestant dominance in nineteenth-century America, where he suggested that attempts to Christianize national culture produced the ironic result of Americanizing basic Christian values. He also pursued an ambitious project entitled *A History of the Churches in the United States and Canada* (1977), which for the first time included in a single volume an account of religious activities in both countries. This integrative concept has since challenged many others to pursue additional investigations along the same lines. Together with H. Shelton Smith (1893–1987) and Lefferts A. Loetscher (1904–1981), Handy also edited and wrote explanatory notes for *American Christianity: An Historical Interpretation with Representative Documents* (1960, 1963), one of the most valuable anthologies of primary source documents.

A fifth luminary of the most seminal period of historical studies was Edwin S. Gaustad (1923–). Like others in this age of synthesis, he contributed a survey of the pluralistic expressions of spirituality in *A Religious History of America* (1966), a success in the textbook market. Gaustad had already begun working in a much more original fashion with his *Historical Atlas of Religion in America* (1962). There and in several revised and expanded editions he demonstrated how maps, statistical tables, charts, and denominational surveys could be both isolated and integrated to enhance a better understanding of churches in and of themselves, as well as factors in shaping national virtues. In addition to constituting a geographical history of American religions, the *Atlas* ranks as one of the best generic overviews ever correlated. And in yet another vein, Gaustad improved on the primary source anthologies by issuing two volumes that include the finest judgments about religious expressions in this country. *A Documentary History of Religion in America* (1982–1983) presents a collection of reprinted materials from the variegated features of both mainline traditions and sectarian innovations. Ranging from staid bureaucratic memoranda to the heartfelt exhortations of impassioned souls, his pages comprise the finest compendium of diverse materials on the subject yet to be printed.

Martin Marty and John Tracy Ellis

One of the longest-lived and most prolific authors in this constellation of scholars is Martin E. Marty (1928–). His publications span a period of almost fifty years and number well over one hundred separate items. The titles are numerous and varied; topics range from the role of religious action in political revolutions and social change to studies of liturgies and doctrine in traditional churches and creative experimentations found in evangelical revivals. Biographical sketches related to “infidels” as well as profound believers, including a subtle and nuanced new look at Martin Luther, plus ecumenical overtures have also attracted his attention. Like many others, he produced sweeping overviews: in 1984 alone, he wrote a survey of Christianity in the New World from 1500 to 1800 and then a five-hundred-year interpretation of American Christians, whom he termed pilgrims in their own land. Over the years, however, Marty has indicated a preference for comprehending religious changes in recent centuries. Just two titles that attest to his recurrent interest in such themes are *The New Shape of American Religion* (1959) and *Modern American Religion* (1986).

But perhaps Marty’s single most influential historical perspective was broached in his 1970 publication *Righteous Empire: The Protestant Experience in America*. His discussion of the idea of a “two-party system,” the culmination of several notions he had developed in previous writings, had a lasting impact on other thinkers. Marty advanced the idea that the differences between denominations in modern America were less important than differences between members of the same denomination. People gravitated toward various clusters of opinions about various issues, and it was important to recognize that liberals and conservatives within churches of the same name had less to do with each other than they did with their ideological counterparts who belonged to churches with different names. The old organizational, institutional labels were obsolete and did not accurately portray the complex membership patterns of any contemporary denomination. A better analytical tool was to identify an issue such as confessional orthodoxy, civil rights, ecology, or abortion, and then study the ways people from all sorts of churches used religious expressions and activities to address the issue. Denominational histories will continue to appear in isolated studies, but Marty provided a bold, incisive, and creative alternative to the old parochialism.

Finally, the sixth great historian of the twentieth century was John Tracy Ellis (1905–1992), the most prolific and widely read historian of American Catholicism in the twentieth century. Ellis was originally trained as a historian of European ecclesiastical affairs and was requested rather late in his academic career to assume responsibility for American topics, of which he quickly became master. Some of his less extensive writings touched on seminary education; early years of the Catholic University of America; the balance between religious faith and secular learning; and the lamentable relationship between Catholics and serious, critical intellectual pursuits. He provided aid to generations of students and scholars by compiling *Documents of American Catholic History* (1956), which, together with other guides and bibliographies, went through several reprints in the subsequent three decades. In those works Ellis displayed unerring judgment in choosing pertinent materials and an impressive capacity for explaining their significance in succinct introductory remarks.

Biographical studies were another of his interests, as indicated by publications on Cardinal E. Consalvi (1942) and John L. Spalding (1961). The most impressive item in this genre was a two-volume work, *The Life of James Cardinal Gibbons, Archbishop of Baltimore, 1835–1921* (1952). In that painstakingly thorough opus, he captured the spirit of a church and its leadership, whose wise policies and pastoral care made it the largest single denomination in American history. In an attempt to give students a concise interpretative discussion of Catholic experience from its beginnings, Ellis issued *American Catholicism* in 1956, and this lucid overview still finds appreciative readers in present times. A further comprehensive survey that is also still useful is *Catholics in Colonial America* (1965), where Ellis compares and contrasts the Spanish, French, and English forms of Catholicism that were practiced in the Western Hemisphere.

The Late Twentieth Century: A Wide Range of Topics

Counterbalancing the predominantly mainstream topics emphasized by such authors as Ahlstrom and Marty, some historians have chosen to highlight less well-known expressions in American religious life. Multiple editions of *Popular Religion in America* (1980), by Peter W. Williams (1944–), have been and continue to be a useful guide to denominational minorities. Featuring a variety of uncommon enthusiasms is the survey by Catherine L. Albanese (1940–), entitled *American*

Religions and Religion (1981 and subsequent editions), in which she investigates such impulses as naturalistic holism and metaphysical mental healing. Another publication that celebrates the complexity of American religious expressions is *American Religion: A Cultural Perspective* (1984), by Mary F. Bednarowski. All these books hold the implicit thesis that the culture of the United States has accumulated a great number of different perspectives and these are now so diverse that no single overview of all of them is possible. The only practical alternative for future historical studies is to investigate a select range of topics within limited chronological and geographical contexts.

Another form of Christianity that has remained a somewhat discrete entity, and has been regarded so by most historians of religion, is the large group known as Latter-day Saints, or, more colloquially, Mormons. A wide range of Mormon scholars work within the rubrics of today's critical historical methods, and they avoid such questions as whether Joseph Smith Jr. really was a divinely inspired prophet or whether miracles have actually happened. Substantial publications were issued in 1958 by Leonard J. Arrington (1917–1999) on the economic history of the Great Basin; in 1965 by Robert B. Flanders (1930–) on Mormon experience in Illinois; and in 1979 by Mark P. Leone (1940–) on the roots of Mormon faith as it has developed today. More recent studies of note include *Mormonism in Transition: The Latter Day Saints and their Church, 1890–1930* (1984), by Thomas G. Alexander (1935–), and *Mormonism: The Story of a New Religious Tradition* (1985), by Jan Shipps (1929–). A useful sourcebook is *Mormonism in American Culture* (1972), edited by Marvin S. Hill (1928–) and James B. Allen (1927–).

An additional religious tradition in America that traces its ancient roots is Judaism. After rather meager beginnings in colonial times, immigration swelled the number of American Jews by the end of the nineteenth century. Sophisticated studies of these and subsequent events have emerged to take a rightful place among other scholarly historical approaches. To provide a compilation of documentary evidence, Jacob R. Marcus (1896–1995) edited a three-volume set entitled *Memoirs of American Jews, 1775–1865* (1955–1956) and then *American Jewry: Documents* (1959). Meticulous gathering of primary sources plus industrious research allowed Nathan Glazer (1923–) to produce *American Judaism* (1957), a compact, useful overview. A more comprehensive survey is that by Joseph L. Blau (1909–1986), entitled *Judaism in America: From Curiosity to Third Faith* (1976). The most recent and

interesting of such historians is Jonathan D. Sarna (1955–). His works include a wide variety of subjects, such as the effects of evangelical revivalism on Judaism and the Americanization of Jewish culture in the twentieth century. The publication that crowns the list of Sarna's achievements is *American Judaism: A History* (2004), a stimulating interpretation and analysis that is already being recognized as a classic in its field.

During the past two decades no significant theme has emerged to attract the attention, or occupy the time, of historians interested in American religion. Of course several important areas of study existed in the twentieth century and still do today, but many contemporary authors seek to distance themselves from previous historiography and choose topics for no apparent reason other than novelty.

Serious topics, however, continue to attract responsible historical students. One of the most widespread and important of these has to do with the general phenomenon of immigration.

American history is largely the record of those who have immigrated here. Therefore, historical studies of religions have recently concentrated on groups heretofore slighted, including Native Americans, African Americans, and Hispanics in all their different cultural identifications. Then, too, that women have contributed to the panoply of America's religions is a focal point of tremendous significance in today's historical analyses. It has become apparent that there are a myriad of valid themes featuring important contributions made by women to theology, preaching, institutional leadership, and social policy. Biographies, histories of religious orders, and narratives of sectarian creativity are other promising areas of research regarding the varied activities pursued by women in the United States.

After the frontier thesis lost its fascination for historians, it became increasingly apparent that urban America held a large number of important topics as well. When late-nineteenth-century immigrant populations ceased moving into rural areas and settled predominantly in cities, the shift gave urban conditions even more significance in modern religious expressions. Liberal theology burgeoned, as did fundamentalist reactions; human misery in slums evoked various social gospels; and individualistic evangelism continued along with sensationalist revivals. Urban settings have provided the context for studies ranging from an increased denominational sophistication to charismatic leaders in city ghettos who exhibited various emphases in store-front

provenances. Finally, charismatic/Pentecostal emphases have grown to impressive proportions. No longer considered peripheral expressions of Christianity, Pentecostal churches are now regarded as part of mainstream Protestantism, and they invite comparative analysis with their traditional counterparts in the historical approach to understanding religions in America.

Several new approaches have emerged in recent decades to enrich our historical understanding of religions in America. Immigration from Asia and the Near East has introduced religious traditions that are relatively new in North America, especially the United States. Now, after centuries when Protestant themes first predominated, then combined with Catholic and Jewish ones, such new religions as Islam, Buddhism, and Hinduism have begun to appear. This enrichment of the American kaleidoscope has also introduced new analytical and interpretive perspectives for a better understanding of religions in general.

This genuinely pluralistic framework has allowed students to utilize more universally applicable tools that derive from the social sciences. Many contemporary surveys of American religious thought and action, or any localized segment thereof, have broken new ground by not assuming that a Christian, or Western European, standard should serve as a measure of religious practices. These new perspectives draw on a wider, more inclusive "history of religions" point of view that uses tools derived from sociology, anthropology, linguistics, and psychology. Students have learned from the social sciences to define a particular religious topic as an integral part of a specific cultural context. Using methods familiar to cultural and intellectual historians, they have expanded our ways of understanding the function of religious belief and behavior within a variety of cultural situations.

As more sophisticated methodological perspectives have developed at the turn of the millennium, prospects of a deeper and broader understanding of American religions have become increasingly bright. Historians are no longer obliged to defend theological affirmations or denominational authenticity. They are now free to consider how church members, or those of even looser affiliation, are affected by institutional proclamations and how, in turn, religious expressions are influenced by their social surroundings. The emergence of new topics and methods has benefited contemporary scholarship by providing a variety of innovative ways to view a wide range of topics, both centuries old and recently considered. Variegated subject matter has allowed for helpful comparisons between and among chosen topics,

pointing out common denominators as well as highlighting distinctive characteristics. We can anticipate further developments in the dynamic historical approaches to what Philip Schaff called the "motley sampler" of religions in America.

History of Religions, Approaches

The history of religions, also commonly called comparative religion in the United States, is a methodological approach to the study of religion that examines diverse religious traditions both historically and systematically. It has encompassed the major “world religions,” such as Hinduism, Buddhism, Judaism, Islam, and Christianity, as well as what previous generations of scholars have referred to as “primitive” or “archaic” religions, those of premodern or smaller societies. Historians of religion examine the history of different religious traditions and of the idea of “religion” itself to compare various myths, rituals, or symbols manifested within religious conceptions of the sacred. This approach flourished in the United States in the decades following World War II, especially under the influence of Mircea Eliade, its chief scholar and doyen based at the University of Chicago.

Establishing a Science of Religion

While interest in the study of religion has existed in the West for centuries, scholarly attention to the comparative study of religion dates back to the late nineteenth century, when German scholars in particular initiated what they termed *Religionswissenschaft*, loosely translated as the science of religion, though often rendered in the United States as the history of religions. The creation of the academic study of religion ought to be understood within the historical context of the modern West at this time. Protestant Christianity played a dominant role in scholarly understandings of what religion ought to look like, even as orthodox Christian faith was also under attack and sometimes radically reformed at this time, as it came under pressure from the rise of scientific authority and Darwinian evolution. The nineteenth century was also a period of expansive European colonization across the globe, and interest in religious comparison often developed out of broader colonial interests that pitted a modern West against what people took as an exotic and frequently a less developed “other.” The Christian and colonial biases of this scholarship has been notably challenged by historians of religion since the 1960s. But it was within that context that the German-born Friedrich Max Müller became a leading figure in the development of the modern scientific study of religion, when he delivered a series of lectures at London’s Royal Institution in 1870, later published as *Introduction to the Science of Religion* (1873).

Trained as a student of comparative philology, Müller, who spent most of his career in England, located the origins of religion in man’s perception of the infinite, on the one hand, and in language or, more precisely, a “disease of language,” on the other. According to Müller, religion arose when ancient peoples mistook the powerful and inexplicable events they witnessed in nature to be manifestations of various gods. Words once used to name the sun, for example, became personified and elevated, as in the example of Apollo, the god of the sun, among ancient Greeks. In his terms, *nomina* became *numina*—names became gods—and premodern people sewed together elaborate myths to describe these gods. Müller organized his science of religion around the philological study of myths, the religious stories people told themselves. Moving away from speaking of religions as “true” or “false,” “revealed” or “natural,” he set a path for classification and comparison among many religions, for as he famously noted, “He who knows one [religion], knows none.”

The anthropological study of religion in the late nineteenth century provided an alternative account of the origins of religion. Heavily influenced by Darwinian theories of evolution, it focused more on the historical and social development of religion than on language. Edward Burnett Tylor held the first academic post in the field of anthropology, appointed at Oxford University in 1884. In *Primitive Culture*, first published in 1871, he developed a theory of animism and the concept of “survivals.” Both have significantly influenced the study of comparative religion. Animism locates the origins of religion in the idea that primitive or ancient humans understood all phenomena, natural and human, to have spirits or souls and imbued them with aspects of human personality. The theory of survivals claims that these prehistoric manifestations of religion have survived into the present, even as humans have progressed through evolutionary phases, from savagery to civilization. Eventually, Tylor claimed, animism itself evolved among some societies into belief in a single supreme deity. Reflecting his own cultural bias, Judaism and Christianity provided his leading examples of the final stage of evolution. Tylor’s theory of survivals allowed for the comparison between people living in small-scale societies, the subject of anthropological research at this time, and the modern, civilized West.

British anthropologist James George Frazer further developed Tylor’s theories in his foundational work, *The Golden Bough*. Frazer argued that “primitive” thinking could be divided into two types, magic and religion. Magic

arose when people connected two different phenomena on the basis of similarity or attachment—things that are physically associated with one another become mentally associated as well. As primitive thinking evolved, Frazier thought, people would see the mistakenness of magical thinking, and religion would eventually replace it. With religion, people believed that supernatural beings, not magical laws, controlled the workings of nature. Finally, Frazier contended, humans would advance to scientific thinking, in which time the coexistence of magic and religion would be attributed to the “survivals” that Tylor discussed. This early anthropological and ethnological tradition, along with Müller’s approach based in the methods of comparative philology, provided two significant bases for the development of the comparative study of religion in the early twentieth century, both in Europe and in the United States.

Comparative Religion in North America

By the late nineteenth century, the academic and theological study of comparative religions was already taking hold in the United States. James Freeman Clarke joined the Harvard Divinity School in 1867; Boston University appointed William Fairfield Warren in 1873; and Frank Field Ellinwood held the post of professor of comparative religion at New York University, serving as a central organizer for the American Society of Comparative Religion in 1890. Harvard University and the University of Chicago established two more significant milestones in the history of the comparative study of religion in the United States when George Foote Moore became the first chair of the history of religions at Harvard, and Chicago established its Department of Comparative Religion, calling George Stephen Goodspeed to teach in the areas of comparative religion and ancient history. By the end of the century, Chicago had established two influential lectureships in comparative religion, and the American Oriental Society founded a section for the historical study of religion.

Perhaps the most significant event to spur the comparative study of religions in the United States occurred with the opening to the 1893 World’s Parliament of Religions in Chicago. More popular than academic, the general committee for the World’s Parliament included men of diverse religious backgrounds, including various stripes of Protestant, as well as Unitarian, Catholic, and Jewish members. Echoing the cultural ethos of religious pluralism common to liberal Protestants at the time, the committee called for religious representatives from a number of traditions,

including not only Christians and Jews but also Hindus, Muslims, and Buddhists, to exhibit the highest tenets of their faith. The tenor of religious liberalism envisioned continuity among the diverse world religions, now on stage for all to see.

The popularity of comparative theology and religious studies lasted through the 1920s. During the period between the World Wars, however, the study of comparative religion began to take new form under Albert Eustace Haydon, who replaced Goodspeed as the chair of comparative religions at Chicago in 1919. Haydon proposed a shift from comparative religion to the history of religion. The shift in name marked his criticism of comparative religion and its relationship to theology, which he argued erroneously assumed a fundamental law of religious development that ran from primitive to modern, leading inevitably to the natural superiority of Protestant Christian faith. The humanistic study of religion, as opposed to theological interest in comparative faith, was not firmly established in American universities until after the Second World War, with the appointment of Haydon’s successor, Joachim Wach, in 1945. Under Wach, a systematic approach to the history of religions became fully developed.

Wach emphasized the differences between theological study and the general science of religion, the latter of which includes various methodological fields such as phenomenology, historical study, psychology, and sociology. Even more, according to Wach’s 1967 introduction to *The History of Religion, Religionswissenschaft* claimed a different field of study than did theology: not our own religion (presumably Christianity) but rather “foreign” religions, as Wach called them. The central question was not “what must I believe?” but instead “what is there that is believed?” (p. 2). Focusing on the beliefs of various religious traditions, Wach adhered to a hermeneutical, or interpretive, approach to the study of religion borrowed from German philosophers Rudolph Otto, Edmund Husserl, and Wilhelm Dilthey and the Dutch scholar Gerardus van der Leeuw, a leading figure in the development of the phenomenology of religion. Wach called for scholars of religion to be trained to interpret their material with sympathetic understanding. The hermeneutical approach to comparative religion would be further developed at the University of Chicago by two of his students, Joseph Kitagawa and Charles Long. But the central figure in this scholarly tradition has been Hungarian historian of religions Mircea Eliade, who replaced Wach in the 1950s and cemented the

University of Chicago's central place in establishing the history of religions in the United States.

Along with Kitagawa and Long, Eliade founded the journal *History of Religions* in 1961, which quickly rivaled in prestige existing European journals for the study of comparative religion, including *Numen*. The journal hosted articles on the descriptive history of specific religions but also set forward a program for systematic study across religions. In the inaugural issue, Eliade bemoaned that historians of religion increasingly specialized in a single tradition. He called for more attention to the development of a hermeneutical program that would allow for comparison among religions and restore the science of religion to its highest cultural function, a "new humanism" that would seek a deeper knowledge of humankind. Though not alone in this endeavor, from his post at Chicago Eliade would popularize an approach centered on the history and phenomenology of religious experience, training students and encouraging a school of thought that still resonates in the academic study of religion today.

Mircea Eliade and the History of Religions

Eliade's significance in the development of religious studies in North America would be difficult to overstate. Even today, most undergraduate courses designed to introduce students to religion include works by Eliade, especially *The Sacred and the Profane*, published in 1959, which lays out most succinctly his theory of religion. Eliade's scholarly work ranged from specific studies of yoga and shamanism, to broader concerns with conceptions of the sacred and the profane, and with time and history. Eliade divided mankind into "archaic" and "modern"—categories meant to denote states of mentality more than a historical evolution. Modern man lives in historical time, within the ongoing processes and evolution of history, and is represented in Eliade's writing by Judeo-Christians. Archaic man includes both prehistoric peoples and contemporary people living in small-scale societies. Archaic man lives in cyclical time, in which he constantly attempts to return to the beginning of time through rituals meant to re-create the mythic origins of the world, a theory Eliade called the myth of the eternal return. Through these rituals, which symbolically destroy linear, historical time, archaic man escapes what Eliade calls "the terror of history," the march of time devoid of sacred content that consequently contributes to modern man's feelings of anxiety and nihilism.

Central to Eliade's account of religion are the categories of the sacred and the profane. He drew from the French

sociologist Emile Durkheim, for whom the division of the world into sacred and profane was a foundational aspect of religion, one of its elemental forms. For Durkheim, writing at the beginning of the twentieth century, the division of sacred and profane and the development of religion allowed society to express its needs to itself. In this sense, religion served a social function. Eliade too saw the division of sacred and profane as central to the development of religion, but he strongly objected to Durkheim's explanation, as well as other definitions that reduced religion to merely human functions. Famously, Eliade claimed, religion could only be understood on its own terms, ontologically distinct from other aspects of human life. "To try to grasp the essence of such a phenomenon by means of physiology, psychology, sociology, economics, linguistics, art or any other study is false," Eliade declaimed in *Patterns in Comparative Religion*. "It misses the one unique and irreducible element in it—the element of the sacred" (p. xvii). Following Otto and van der Leeuw, who described religion as the experience of the holy or the divine power, Eliade held the sacred to be *sui generis*, a trans-historical phenomenon revealed through religious experience. For Eliade and his students, the phenomenological study of religious experience was essential to the efforts of the historian of religions, as it provided historical study with a common point for systematic analysis across religious traditions. By utilizing the phenomenological method, Eliade and other historians of religions signaled that religion was to be understood from the standpoint of the believer, on its own terms, rather than from that of the sociologist, historian, or psychologist.

From his perch at the University of Chicago, Eliade trained numerous scholars in the history of religions and significantly shaped the development of the academic study of religion in the United States. Since the 1970s, however, the study of comparative religion has drawn severe criticism. The development of postmodernism and postcolonial theory, especially as represented by Michel Foucault and Edward Said, targeted the modern Western biases often found in scholars' grand, universalizing claims. This trend called for greater attention to the methods of new historicism that focused on local contexts rather than comparison, and it has emphasized the central role of Western imperialism and colonialism in the construction of modern thought. Scholars of religion began to reflect on the often Orientalist and colonialist assumptions undergirding previous definitions of religion, including the presumed historical progression of humans from "savagery" to "civilization," or from

animism to monotheism, which suspiciously specified Protestant Christianity and the modern West as the highest stage of advancement. Other scholars have criticized the enterprise of comparison itself, which too often stripped religious phenomena from the historical and cultural contexts necessary to comprehend fully their meaning, in order to make generalizations across vast geographic distance and time. Indeed, the ability to compare an essential, universal entity called “religion” across various cultures soon seemed troubling in itself.

Revised Versions of Comparative Religion

Wilfred Cantwell Smith, a Canadian scholar of comparative religion and director of the Center for the Study of World Religions at Harvard, anticipated many criticisms of the category of “religion” in his 1962 classic *The Meaning and End of Religion*. Cantwell Smith provided perhaps the first argument against the essentialist definitions of religion put forth by previous scholars, including Eliade. Strictly speaking, according to Cantwell Smith, there is nothing in the world that the noun *religion* properly refers to; it refers, rather, to an abstraction that scholars then reify (or define as something real). Cantwell Smith instead preferred the adjective *religious*, which he argues escapes this threat of reification. He further proposed that scholars employ the category of “faith” to mark the internal and personal dimension of religious experience, and “cumulative tradition” to account for the outward, social dimensions of religious history. Cantwell Smith’s categories, too, have been criticized more recently. The idea of a personal faith as transcendent, internal, and universal has particularly Protestant roots, and, as anthropologist of religion Talal Asad has pointed out, these concepts further elide the significant role of practice and discipline in the creation of religious lives, including the inwardly focused dimension of faith.

One of the most significant figures in the revision of comparative religion and the development of histories of the study of religion has been Jonathan Z. Smith. An historian of religion and successor of Eliade at Chicago, Smith famously stated in *Imagining Religion*, “There is no data for religion. Religion is solely the creation of the scholar’s study” (p. xi). For Smith, religion serves as an academic category imposed by scholars to support “imaginative acts of comparison and generalization.” Smith redirected the study of religion to important issues of theory and method, including historical investigation into the concept of religion itself, a category that arose not only from a legacy of Enlightenment

and Romantic thought but also from the West’s contact and colonial relations with North America, Asia, and Africa. Since the 1980s, scholars aligned with Smith’s project such as Bruce Lincoln, Ivan Strenski, Russell McCutcheon, and Tomoko Masuzawa have significantly challenged and revised many of the categories essential to the history of religions, such as myth, sacrifice, ritual, the sacred and the profane, and the concept of world religions, among others. They have argued for the importance of theorizing about religion in reference to the colonialist and often Christian origins of the term and alongside understandings of practice, power, and ideology that have shaped its analytic potential, both in the scholar’s craft and among the materials under survey. Largely as a result of these criticisms and the push for academic specialization, scholars have narrowed their focus to various area studies, such as Hinduism and Indian religion or Japanese religion. This shift has brought the history of religions closer to fields in the humanities and social sciences that focus on the historical, anthropological, and sociological analysis of a single religious tradition.

The strong turn against the comparative study of religion has all but eliminated serious comparative work from graduate training in the history of religions, but more recently scholars have attempted to set out new terms by which comparative methods may still be relevant to the study of religion. The edited volume *A Magic Still Dwells* (2000) represents the most useful recent assessment of comparative religion. In the postmodern period, the contributors collectively contend, attention must be paid to religious differences and similarities when making comparisons, and more reflection must be paid to the scholar’s own cultural positioning in the process of any comparative enterprise. The volume features a single essay by a scholar of American religion, Winnifred Fallers Sullivan, who contends, as the title of her essay asserts, that “American Religion Is Naturally Comparative.” This essay provides a useful point for considering the influence of the history of religions approach for the study of North American religion.

History of Religions and American Religious History

According to Sullivan, the study of comparative religion was less influential in the study of American religion for two reasons: comparativists for the most part shied away from studying Christianity, whereas Americanists until quite recently have been preoccupied with Christianity; and most comparativists lamented the turn to area studies, which

Americanists exemplified. A quick foray into the history of the study of American religion clarifies this observation. The study of American religion has at least four genealogical streams: the study of American church history, American literature, the sociology of religion, and religious studies.

American church history has focused largely on the history of Christianity, and Protestant Christianity and theology more specifically. And it has often been situated within the broader study of the history of Christianity, which developed alongside the history of religions. But these two fields rarely found common ground in their methodological approaches or subject matter. Indeed, the history of religions was often premised on the study of “other” religions, “foreign” religions as Wach called them, which frequently meant religions other than Christianity and, to a lesser extent, Judaism. The resurgence of Puritan studies in the American academy under the literary scholar Perry Miller at Harvard University in the 1930s also influenced the study of North American religion, reframing narratives of American religious history around a mythical Puritan heritage in the New World. These two fields occupied the central concerns of historians of American religion through the 1960s and 1970s, evidenced in studies by Martin Marty, Sydney Ahlstrom, Edwin Gaustad, Edmund Wilson, John Wilson, and the early work of David Hall. While this generation of historians sometimes pushed against the legacy of theological and church history, they focused mostly on the Protestant history of America and drew their analytic categories more from American history and literary scholarship than from historians and phenomenologists of religion. Reflecting in part the enormous influence of Eliade on the study of religion in the American academy, the generation of scholars trained since the 1970s, often by the aforementioned historians, has been far more influenced by the field of religious studies and the sociology of religion, as well as by broader trends in the development of cultural history, feminist and critical theory, and social anthropology.

To claim that the history of religions has had a direct and significant impact on the study of religion in North America would probably be an overstatement. The legacy of church history and American literary studies has had a more significant influence, and historians of religion tended to focus on religions outside of the West. But scholars of American religion have been in dialogue with historians of religions for decades. Even in the heyday of the history of religions at the University of Chicago, scholars of American religion were present. Charles Long, for instance,

published several essays on African American religion and called for historians of religion to pay more attention to the context of colonialism and their focus on the “other” within the field. Additionally, he thought more sustained attention ought to be paid to the religious situation of contact between the West and other cultures, including Americans and Europeans and Europeans and Africans. The theme of contact itself, he argued, could be interpreted as a religious mode. Finally, Long’s distinction between ordinary and extraordinary religion—the social aspects of religion versus the central importance of the experience with the supernatural—has been taken up by the historian of American religion Catherine Albanese in her 1981 textbook, *America: Religion and Religions*.

The study of American religion, as opposed to American church history narrowly understood, “burst wide open,” according to Sullivan, with the publication of Albanese’s textbook. Trained at the University of Chicago, Albanese moved away from strictly chronological narratives of American religion that detailed Christianity from the Puritans to the present day. Instead, she employed analytic categories of symbol and myth, ritual and violence, and sacred and profane space and time. And she explored numerous religions, attending to Native American religions, nature religion and spirituality, and the influence of Spanish and French colonization in the New World, along with Catholics and Jews in America and the religious lives of African Americans. Albanese produced in the end a textbook that represented a veritable “religious studies” approach to the history of American religion.

Long and Albanese represent two early alternatives for the study of American religion, and other scholars in the field have picked up their cue. Since the 1980s, scholars of American religion have increasingly shown interest in combining the theoretical reserves and approaches of religious studies with the study of American religion. Three recent trends illustrate the possible directions in which this shift has been taken: the study of world religions in North America; the use of categories borrowed from religious studies, such as the sacred and the profane; and the examination of the history of the category of religion, particularly as it has been developed within the United States.

History of Religion and the Study of Religion in North America

From its beginnings, American religious life has been diverse. Protestants and Catholics came into contact with

Native American, Jewish, Muslim, and indigenous African religious practices from the earliest days of American colonialism, often forming novel religious traditions in the process, such as Santería and voodoo. And this diversity has only been on the rise since the earliest days of European contact, especially since the Immigration and Naturalization Act of 1965 eliminated national immigration quotas, allowing larger numbers of Asians, Africans, and Middle Easterners to settle in the United States. New denominations of Protestants have sprouted and prospered, and more Jews now call the United States home than any other nation. Numbering about six million, Muslims have become the second largest religious group in the United States, second only to Christians, and Hindus and Buddhists have flourished in American cities and suburbs from New York to Los Angeles. Indeed, the United States itself has become the most religiously diverse country in the world.

Given this context, scholars have begun to study the presence of various religions in America. Historian of Judaism Jacob Neusner's *World Religions in America* (1994) includes essays from leading scholars covering a significant range of religious diversity, including Native American and African American religious traditions; the history of Catholics, Mormons, and Jews in America; as well as the history of Buddhists, Hindus, and Muslims. But perhaps no one has done more to document American religious diversity and to move away from the inaccurate model of a "Christian America" than Diana Eck, professor of comparative religion and Indian studies at Harvard. Eck has forged the way for the study of religious pluralism in the United States through the creation of the Pluralism Project at Harvard University and popular publications such as *New Religious America: How a "Christian Country" Has Become the World's Most Religiously Diverse Nation* (2001). Eck's research not only catalogues religious diversity but also urges interfaith dialogue that moves beyond mere toleration to a more thorough acceptance of religious pluralism. Indeed, the optimistic liberal spirit of late-nineteenth- and early-twentieth-century scholars and theologians reverberates in Eck's work. To the extent that research on world religions in America places more emphasis on non-Western religious traditions, it risks obscuring the diversity found within American Christianity and Judaism and reproducing a problematic East/West binary, one found in the very separation of the history of religions from the history of Christianity in many American graduate schools. The presence of religious innovation, such as that among Korean evangelicals or Latino Pentecostals,

two quickly growing communities in North America, reminds scholars that religious innovation occurs in numerous ways and across various ethnic, cultural, racial, and geographic lines. Research on religion and immigration in North America, such as *Gatherings in Diaspora: Religious Communities and New Immigration* (1998), has usefully documented some of these developments.

Scholars of North American religion have also employed categories borrowed from the history of religions approach to interpret American religious phenomena in new ways. Studies of popular religion have usefully employed the categories such as sacred and profane, ritual and pilgrimage, that have provided an analytic language to comment upon cultural events not usually understood as "religious." Toward this end, scholars of American religion have directed us to the sacred spaces of shopping malls and sporting events, to spiritual pilgrimages to Ground Zero or even Graceland, and to the gospel of Oprah Winfrey. Echoing scholars of American civil religion, such as sociologist Robert Bellah, historians have also illustrated how Americans have sacralized various national spaces, such as Plymouth Rock, the National Memorial, or Mount Rushmore, which have become sites of both individual and national significance. This attention to popular religions has not only borrowed from but has also reframed categories such as sacred and profane. As historian of material religion Colleen McDannell has argued, separations between sacred and profane in American Christianity often prove more muddled than we commonly assume, as when religion mixes with cultural forms often considered not only secular, but indeed profane, such as radio and television or business and consumer culture. Moving the site of religion from the church to the television screen, or selling religious books for profit, for instance, present new interpretative opportunities that scholars of American religion have taken up.

Exploring sacred space in America, religious studies scholars David Chidester and Ed Linenthal have argued for a correction to Eliade's theory of sacred and profane. Following Jonathan Z. Smith, they offer two definitions of the sacred, as substantial or situational. In the first definition, the sacred is a given, uncanny phenomena, or what we could call a presence. Understanding the sacred as situation, in contrast, means that nothing is inherently sacred. Rather, a place or object can become sacred through the labor of consecration and ritual. Rather than a presence, we could call this a representation. The intermingling of the mundane and the sacred in examples listed above, then, exposes how

sacred sites and objects are not simply present, waiting to be discovered, but rather actively created by people through religious practices. Shifting from sacred space to visual culture, art historian David Morgan has shown for instance how kitsch art, such as the famous image of Jesus painted by Warner Sallman in the first half of the twentieth century, can take on religious meaning to become a sacred image, even as it is reprinted on mundane objects, from T-shirts to key chains. This interpretative move in the study of American religion has enriched the analytical language scholars have used to describe religious phenomena, but it has also, and perhaps more importantly, allowed scholars to redefine what gets to count as religion or religious and, indeed, to reflect on how they have used categories of religion in their scholarship.

Using the analytic tools of religious studies to comment on mainline and often white American Protestantism, for example, has allowed scholars to reverse what historian of American Catholicism Robert Orsi has called the modernist paradigm, the assumption that religious traditions mature through a phase focused on bodies and material objects to a rational faith, or from superstition and ritual to morality and belief. The application of categories drawn from comparative religions shows American Protestantism in a new light, as more similar to the “other” religious traditions—which have included at various moments Catholicism and Judaism, Christian evangelicalism and African American religious traditions, as well as non-Western religious forms—against which historians of American church history have too often premised their scholarship. Following this line, scholars have recently become interested in the reflective study of the history of the category of religion, along with the history of the study of religion, and they have begun to suggest new ways to think about these broader histories in reference to North America.

Historians such as Leigh Schmidt, Ann Taves, and Robert Orsi have suggested that existing histories of the study of religion have focused too heavily on its development in Europe and on the role of intellectual elites. Tomoko Masuzawa, for example, offers a trenchant criticism of the paradigm of “world religions” as it developed in the nineteenth-century European academy from a background of Christian theology and Western preoccupations with universalism. Yet she and others understate, Orsi has argued, how the study of religion emerged not out of a simple binary of Christian and “other,” in which Christian theologians and scholars co-opted the latter, but through more

complicated relationships between the West and other parts of the world, and even within the West itself. The focus on European intellectuals has also clouded the participation of American theologians and scholars of religion in the creation of the study of religion. American psychologist William James, for example, authored one of the most important studies in the United States, *The Varieties of Religious Experience*. First published in 1902, this study played an important role in the study of religion by redefining religion in a particularly liberal Protestant mode as individual experience, a lead later picked up by Eliade as well as other professional and amateur scholars of religion in Europe and the United States. Likewise, more attention ought to be given to amateur scholars of religion. Too often, scholars have argued, amateur historians and comparative scholars, often women, have been excised from histories of the formation of the discipline in favor of professionalized, male scholars writing from the platforms of elite institutions. Telling this alternative history also leads to new stories about how people have employed or contested the category of religion.

In his cultural history of hearing and religion in the American enlightenment, Schmidt describes how hearing the divine, once a common medium for religious experience, was deemed increasingly unreliable over the course of the eighteenth and nineteenth centuries. Divine sound was largely muffled, replaced by an absence constructed by new aural technologies, from the art of ventriloquism to the invention of the stethoscope. Hearing, once quite central to religious experience, thus increasingly fell under the purview of science and reason, further afield from the world of enchantment. Historian Tisa Wenger offers a cultural history of the deployment of the category of religion among a group of Pueblo Indians. When the federal Bureau of Indian Affairs attempted to suppress ceremonial dancing in the 1920s, Pueblo leaders strategically defended their traditions by redefining them as religion to legitimize them. They adopted the Western category of religion to make a case for religious freedom within the American legal system. Taking on the Western category of religion, Wenger shows, provided the Pueblos with a unique strategy of resistance. By showing how ordinary people employed and contested categories of religion in everyday life, these historians have pushed the history of the study of religion in new directions. Taken together, researches into the presence of world religions in North America, the translation of categories such as the sacred and the profane to American materials, and investigation into the cultural history of religion in the New

World suggest the potential reach of the history of religions approach in the study of North America, even as the approach itself has come under revision.

Conclusion

To be sure, scholars of American religion consistently deploy modes of comparison. To paraphrase Jonathan Z. Smith, comparison is how we think. But the topics of comparative study in American religion have less often been those of the history of religions. American religious historians have tended to show less interest in concepts of myth, sacrifice, and even the sacred and profane than their cousins in the history of religions. But they have had their own concepts of comparison all along, including notions of contact and exchange, colonization and acculturation, and elite and popular religion. More recently, investigations into agency and resistance, gender and sexuality, dietary practices and the body, health and well-being, hearing and vision, and various other aspects of religious practice have come to the fore. What historians of American religion have lacked, perhaps, are systematic understandings of the comparative enterprise itself. Indeed, they would do well to reap the benefits of recent writing from historians of religion to avoid their shortcomings and to further the investigation of religious life in North America in all its diversity, conflict, and abundance.

In recent years, the field of American religion has been heavily influenced by the development of “lived religion.” This approach builds on the theoretical work of sociologist Pierre Bourdieu and historian Michel de Certeau, among others, to highlight religious practice. One of the leading figures of this field, historian Robert Orsi, has called scholars of American religion back to the idea of sacred presence. Too often in modern life, he has noted, given the fads of secularism, the focus has shifted to sacred absence. But how, he asks, do contemporary scholars of religion, working within modern disciplines, talk about the realness of sacred presence alongside social and psychological explanations, particularly as this presence is represented by the people whose lives they study and share? The question does not quite return us to Eliade, but neither does his absence solve the dilemma.

Holidays

Holidays are “Holy Days”: days set aside and marked as sacred through myth, symbols, and ritual acts. Holidays structure the seasonal calendar through meaningful changes to daily routines. They are socially recognized events but are not always legal holidays. While the word *holiday* may connote a happy, festive celebration, the occasions evoke a spectrum of moods and motivations, including penitence and voluntary self-deprivation. Across religious traditions, different days direct participants to similar purposes, such as atonement, thanksgiving, commemoration, and celebration. Abundant feasts with special foods are integral to some days, while others promote solemn reflection. Holidays vary in degree of importance. The American cycle includes both distinctly religious commemorations as well as civil and cultural celebrations with religious dimensions. In the United States holidays refract a spectrum of themes and social tensions. Often, groups negotiate questions of identity through unique observances or refusing to participate in the celebrations of dominant society. Holidays can also be integrative and reinforce national myths and cultural patterns.

The American Holiday Mosaic

Holiday beliefs and behaviors are among the best testimonies of a longstanding pluralism in American religion and culture. The American holiday calendar is a composite of celebrations universal and specific to particular groups.

Because Christianity has been the dominant religious tradition in America, the Christian calendar has been the major structure for American holiday life, and it often intrudes on the particular observances of religious minorities. Yet religion actually cuts across American holiday life on several axes. Some holidays, such as the Fourth of July, tie into the national myth of “civil religion.” Others, such as Palm Sunday and Ramadan, are specifically religious occasions. For a third category, including St. Patrick’s Day and Valentine’s Day, the original religious dimensions have given way to a spirit of cultural celebration.

Holidays give religious communities a sense of continuity with the past, of keeping traditions alive and thereby participating in something greater than ourselves. Yet the rituals, beliefs, sentiments, and aesthetics associated with an event change over time, with elements added and others dropped. For this reason the idea of a “traditional” style of observance is in some ways an illusion; rather, holidays are better seen as cultural amalgamations that reflect changing historical contexts.

As the scholar Amitai Etzioni has observed, holidays tend to be of two types—those that reinforce the values of the community and those that release social tensions through revelry and limited periods of tolerated disorder. Holidays have distinct centers, such as the home, street, and church, which often can be competitive arenas of social expression.

Celebration in the Colonial Period

The treatment of holiday celebrations in the colonial period reflects two conflicting impulses that the colonists inherited from Europe. The Reformation introduced a preference for simplicity in religious life, which affected holiday observances. By pruning the calendar of religious holidays and prohibiting public festivities, the Puritans and other Protestants limited both the occasions for and expressions of merrymaking. At the same time, Protestant austerity competed with the carnivalesque folk culture that also was a part of the colonists’ European heritage.

Having earned their name from their hope to purge all pagan elements from Protestantism, the Puritans did away with most of the European festive calendar. In New England, religious and civil authorities banned festivities on Christmas, New Year’s, Easter, and “Whitsuntide” (Pentecost), and imposed sanctions on violators of the ordinances against celebrations. Some colonists attempted to restore traditional festivities—for example, Thomas Morton, who led a group of “madd Bacchinalians” in a dance around a Maypole in 1627. More somber members of the Mount Wollaston, Massachusetts, community attacked him, and Morton later was deported.

The Puritans’ life was not devoid of ritual commemoration, but their “holidays” did not look anything like today’s celebrations. They were deeply Sabbatarian, honoring God’s commandment to rest on Sundays with limitations on work and leisure. Towns and colonies regularly scheduled days of thanksgiving, repentance, and humiliation. Most of these occasions were intended to bring communities closer to God and were observed with church attendance and fasting.

The Puritans did, however, hold a Harvest Home festival similar to those celebrated across Europe. It is likely the community feast at Plymouth Plantation in the fall of 1621 was such an event, with a far different character than the prototypical “Thanksgiving” holiday to which it was linked in the nineteenth century.

In New England the resistance to jollification was surprisingly long-lived. There, stores were open on Christmas Day into the early nineteenth century, and through the eighteenth century, Methodists, Congregationalists, Presbyterians, and the Society of Friends refused to celebrate either Easter or what Quakers called “the Day called Christmas.” Yet not even in New England was the attempt to banish traditional behavior successful, and in other regions many colonials saw holidays as reasons for rowdy behavior that upended all Protestant expectations of decorum. Carnivalesque fetes often included the upending of social roles and ritual challenging of boundaries of gender, race, and class. In the mid-Atlantic and southern colonies Christmas, New Year’s and other occasions were celebrated as in Europe, with feasts, drinking, and games.

By the eighteenth century a rowdy men’s culture had developed that resembled that of western Europe. Shrove Tuesday and Easter Monday were traditional days for both drinking and “gander pulling,” the sport of attempting to grasp a greased goose suspended by a rope from a tree. “Masking” or “mumming” was another revelry of European origin, which has contributed to the celebratory style of modern-day New Year’s, Mardi Gras, and Halloween. In colonial America the Christmas season was a masculine time, when “masquerades” of young men reveled in the streets.

The American Revolution forged some of the earliest symbols for American civil religion. From the time of the Early Republic, commemorations of the birthday of George Washington and the signing of the Declaration of Independence animated community life and promoted national unity. At first, however, civil holidays were oriented to men’s political culture. “Election Days” and the Fourth of July were celebrated by all-male dinners for political factions or members of the local militia.

The nationalism of civil religion was balanced by regional and local solidarity rituals. In New England, “Forefathers Day” was observed starting in 1769. Held a few days before Christmas, the day commemorated the arrival of the Pilgrims in 1620, not the harvest feast held in autumn 1621. Late December was not the optimal time for public

celebrations, though, and in the 1820s the Pilgrim Society proposed “Embarkation Day,” marking the Pilgrims’ departure from the Netherlands in August 1620, as an alternative. These events were important antecedents to the modern Thanksgiving. Nor was regional identity the only social denominator reinforced through holiday observances. Small groups often have celebrations special to their tradition, and even in the colonial period, religious minorities maintained distinct practices. By the late 1730s, Moravians in Georgia had begun holding “love feasts”—rituals modeled after the agape services of the early Christians. After Mother Ann Lee died in 1784, it became the custom for Shakers to honor on March 1 the February 29 birthday of their founder by baking a “Mother Ann cake” flavored with peach and sometimes rosewater.

Victorian Holiday Domestications

Traditional carnivalesque celebrations persisted through the nineteenth century. Across many cities groups of young men dressed in rags, blackface, or women’s clothing took control of the streets on both religious and civil holidays. That their merrymaking could take a violent turn, with bands of white Protestants harassing and even attacking Catholic immigrants and African Americans, illustrates how holidays could be times when social tensions erupted. Changing public attitudes brought this kind of celebration largely to a close by 1900, by which time the masqueraders were commonly regarded as a public nuisance. That the masqueraders’ behavior was increasingly seen as deviant reflects a major shift in Americans’ understandings of festive behavior. In the nineteenth century several cultural trends converged to reorient many holidays, away from the rowdy world of the streets and toward the home and family.

Victorian sensibilities fostered the development of a new holiday style, which celebrated decorum, sentimentality, domesticity, and evangelical Protestant piety. Arminian theology, which stressed the role of free choice in obtaining salvation, contributed to a new understanding of child development. In the mindset of “Christian nurture,” the moral state of children depended on neither election nor dramatic conversion but rather on their long-term spiritual “cultivation” by loving parents and teachers. As American culture became more child centered, women gained a special place in family life. Period gender assumptions, communicated through the “cult of true womanhood,” elevated woman’s roles as guardian of the home and nurturer of the family. Holidays gave women the opportunity, and also the

responsibility, to express these values through increasingly elaborate preparations. By the 1850s, when men still went door-to-door shooting off guns and firecrackers, women's role of holiday shopper was firmly established.

The market revolution changed holidays more profoundly than any other social development. All the forces of commerce—production, distribution, advertising, and sales—were engaged to expand holiday celebrations. Fears that religious holidays could be corrupted or even profaned by commercialization and excessive carousing were periodically aired. Valentine's Day, although nominally based on the feast day of a Christian martyr, was attractive because it was free of overt religious content and thus avoided controversies about religious propriety. The formation of Valentine's Day as the first "greeting-card" holiday involved several stages, as outlined by Leigh Schmidt. As sentimentality came to define the aesthetics of the period, it became fashionable to give Valentine's Day cards to friends and loved ones. The cards affirmed social bonds and kinship networks, as well as relations between lovers. In the 1830s and 1840s the cards were largely homemade, though the givers were helped in their task by store-bought "valentine writers," booklets of suggested valentine verses. In this time Valentine's Day also provided an outlet for ritual social transgression very much in the spirit of street celebrations, as Americans antagonized one another with the sending of Valentine's Day parodies to those whom they disliked. By the 1850s, however, store-bought lithographed valentines were common, and the practice of sending "anti-valentines" had fallen off.

In the nineteenth century many of the elements of the "traditional" American Christmas were introduced, but this happened over several decades. In the early 1800s many Protestants were reluctant to celebrate "Catholic" holidays. In fact, the practice of attending church on Christmas was a relatively late addition. Into the mid-nineteenth century people attended Christmas services if the holiday happened to fall on Sunday but otherwise stayed home. Many Americans celebrated a festive New Year's but avoided merrymaking on Christmas, especially in New England.

In the eighteenth century Americans seldom exchanged presents, though it was customary to "tip" apprentices and servants. After 1780, Americans began to give "holiday presents," first on New Year's and only later on Christmas. These often were trinkets given to friends, though gifts of religious books and such toys as Noah's Ark sets became common presents for children, too. Over time the focus of gift giving shifted away from acquaintances and toward family members,

and the presents grew more expensive. The explosion of print media made "Christmas books" a popular gift item. In the 1840s, Charles Dickens's story *A Christmas Carol* out-sold the Bible in the American market. By then Americans were also buying tastefully bound editions of popular science and history books as well as collections of short stories for children. These "respectable" early gift exchanges paved the way for the custom of giving presents to develop in the Victorian period.

The American representation of Santa Claus was formed in the first half of the nineteenth century. The figure was based on the character of St. Nicholas the Wonderworker, the third-century bishop of Anatolia, who in European renditions was alternately depicted as black or white, thin or fat. His arrival was celebrated on different days in several countries: December 5, Christmas Eve or Day, and New Year's. Two poems published in the 1820s helped to introduce the American public to Santa Claus as a portly, red-suited driver of a sleigh pulled by reindeer. "The Children's Friend," was published in 1821 with an unnamed author. Two years later an anonymous poem entitled "A Visit from Saint Nicholas" appeared in the *Sentinel* newspaper in Troy, New York. Clement Clarke Moore, a Bible professor from the Episcopal General Theological Seminary, later admitted he had written the poem, more commonly known as "'Twas the Night before Christmas," although his authorship has been disputed. Stephen Nissenbaum argues that Moore divorced Saint Nicholas from his Christian symbolism of divine reward and punishment and reduced him to a friendly, magical gift giver—the jolly Santa Claus as he is known today.

The "American Christmas" is the product of customs and folklore from many European countries, especially England, Germany, and Scandinavia. Christmas trees originated in Germany. In the United States the Amish had trees by the 1820s. A Harvard College German professor and Unitarian named Charles Follen introduced the custom to mainstream Protestant America in 1832. By 1900, 20 percent of American families had Christmas trees.

A shared language gave the British Isles disproportionate influence on American holiday music, which actually encompassed two different musical traditions that both dated to the Middle Ages. As seen in the song "We Wish You a Merry Christmas," the practice of "caroling" door-to-door has close ties to English masking revelries. Christmas hymns also were a longstanding part of the English Christmas tradition, but liturgical songs were suppressed briefly during the Commonwealth period. The Restoration expanded the

tradition of High Church music, and English hymnody blossomed in the eighteenth century with the songs of Isaac Watts, who wrote more than 750 songs, including “Joy to the World.” Despite the high representation of English contributions, in the nineteenth century translations of French and German hymns and carols entered the American holiday repertoire, including popular songs such as “Oh, Christmas Tree” (“*O Tannenbaum*”) and “Angels We Have Heard on High” (“*Les Anges dans nos Campagnes*”). Best known of these international additions is “Silent Night” (“*Stille Nacht, Heilige Nacht*”), an Austrian hymn that James Freeman Young, an Episcopal bishop, translated and published in 1859.

Unbeknownst to many Americans, our emotional expectations of family gatherings continue to reflect Victorian sensibilities. In the nineteenth century sentimentality became the dominant affective style for many major holidays, which were seen as days to extol family, piety, and “tradition.” Among the best examples of how holidays reflected Victorian expectations can be found in the creation of Thanksgiving. Thanksgiving has its origins in the New England “Forefathers’ Day” commemorations, which were based on the English Harvest Home festival. In the 1840s, Sarah Josepha Hale, a popular writer and editor of *Godey’s Lady’s Book*, first proposed a national observance celebrating the Pilgrims as the “founders” of America. In 1863 she wrote a letter to Abraham Lincoln, who issued a proclamation that fall. Thanksgiving was envisioned as a day for families to come together in the affirming of national unity at a time when many families were separated by the war. Thanksgiving was sentimentally associated with travel to the homes of loved ones through the popularization of Lydia Maria Child’s 1844 poem “A Boy’s Thanksgiving Day,” which began with the famous line “Over the river and through the woods.” The regional dimensions of the holiday were promoted through the “traditional” Thanksgiving menu of foods believed to have been eaten at Plymouth in 1621, including roast turkey, cranberry sauce, and pumpkin pie.

In the years immediately following the Civil War, observance of Thanksgiving was not uniform. Catholics were wary of the implicit Protestantism in the ritual commemoration of the Massachusetts Pilgrims. Immigrants, especially Jews, did not identify with American culture enough to invest in a holiday they saw as reserved for the native born, and other ethnic communities, as well as Southerners, resisted embracing the holiday for some time.

That the holiday focused on a communal feast highlighting the domestic skills of women illuminates the longstanding association of Thanksgiving with football, which offered a

masculine counterweight to feminine domesticity. By the 1890s the Ivy League championship game, held on Thanksgiving, had become a very popular event. In the twentieth century, high school, college, and professional teams drew in millions of Americans as participants and spectators of holiday games.

The Making of American Holidays, 1860–1930

Until the Civil War, holidays were seldom recognized by the United States government. Rather, their observance and dissemination were the result of efforts by other social forces—business, religious bodies, and prevailing cultural attitudes. Lincoln’s proclamation of Thanksgiving ushered in a new government interest in the creation of national holidays. Between 1870 and 1930 many major holidays were added to the American calendar, along with others that withered on the vine. In the Progressive Era holidays were a “nationalizing process”—first to unify the country after the Civil War, which quickly was followed by the even larger project of creating a common cultural identity amid mass immigration from Europe.

With the rise of the Victorian holiday paradigm, civil holidays such as the Fourth of July that originally were men’s social occasions became family-centered events. This was evident in early observances of Memorial Day, which began as “Decoration Day” in 1868. Decoration Day processions were solemn affairs that often ended at cemeteries, but it soon became customary for families to follow the parade with a picnic. During Reconstruction, white Southerners who still were resentful of the Union honored their war dead on different days, but by the 1870s the North and South shared a single commemorative holiday.

The late nineteenth century saw other holiday additions to “civil religion.” Americans began to celebrate the birthday of George Washington while the first president still was in office, but in 1880 Congress declared February 22 a holiday for government workers in the District of Columbia. Washington’s Birthday became a full federal holiday five years later. The first public commemoration of Lincoln’s birthday was in 1874. The birthday of Abraham Lincoln on February 12 has never been nationally commemorated, though today it is recognized by many states.

In the Progressive Era, public schools took on the role of teaching civil religion and promoting a unified “American” culture. Thanksgiving was one of several holidays promoted through the public school system. The theme of peace between Pilgrims and American Indians became a model for assimilating immigrants into a mainstream “American” culture

that still regarded white Protestant identity as the ideal. By the 1920s Thanksgiving was celebrated in most public schools and thereby communicated to the entire nation.

Pressured to adopt “American” holiday observances, immigrants’ responses were a mixture of rejection, embracement, and adaptation. In the late nineteenth century Italian and Irish members encouraged the Knights of Columbus to press for the public observance of Columbus Day. By presenting Christopher Columbus as the first “immigrant,” American Catholics sought to create a countermyth to the Pilgrims that would also be ratified in holiday behavior.

Christmas was first declared a federal holiday in 1870. Over the next sixty years American consumer culture grew even more elaborate. This changed many holidays and helped in the making of entirely new ones. American business interests saw opportunities in bringing national versions of holidays to the public, and consumption became a potent force for cultural cohesion. Even the Fourth of July was commercialized, as fireworks intended “for home use” came on the market.

Americans harnessed new technologies to enhance the holidays. On December 31, 1907, a glass-and-wood sphere, illuminated with one hundred 25-watt lightbulbs, descended from a flagpole on the One Times Square building in downtown New York City. A century later as many as one million people gather in Times Square to watch the “Ball Drop” on New Year’s Eve. Above all other celebrations, Christmas became a spectacle of parades and displays, lights and sights. The first public Christmas tree was in Madison Square Park in New York in 1912. Eight years later Gimbel’s department store in Philadelphia, which was owned by a Jewish family, began its holiday parade, and Santa Claus enjoyed a prominent role. The proximity of the New York City Gimbel’s and Macy’s department stores, both located in Herald Square, was likely an impetus for Macy’s to start its Thanksgiving Day Parade in 1924.

In the Progressive Era representations of Santa Claus took on a standard appearance, deriving from Thomas Nast’s depictions in *Harper’s Weekly* and reinforcing the image of a red-suited man bearing mountains of presents. Santa’s status as an embodiment of the American Christmas season was sealed in 1897, when *New York Sun* editor Francis Pharellus Church responded in print to eight-year-old Virginia O’Hanlon’s question with the affirmative, “Yes, Virginia, there is a Santa Claus.”

Mother’s Day was a new addition that derived from older evangelical religious values. In 1907 Anna Jarvis started the

holiday, by handing out white carnations to all the mothers in the congregation of her own deceased mother’s Methodist church in Grafton, West Virginia. The increasing commercialism of Mother’s Day led Jarvis to publicly denounce its style of observance in 1920, to little effect. Jarvis inspired another woman, however, to circulate a petition in 1910 calling for the establishment of a day honoring fathers. Sonora Smart Dodd of Spokane, Washington, found support from proponents of “muscular Christianity,” including participants in the Men and Religion Forward Movement. Into the 1930s, though, Fathers’ Day was primarily a local event in Spokane, after which interest spread to other American cities and towns. Richard Nixon made the holiday official in 1972.

The development of the “American” Easter reflects the homogenizing power of the market, as well as the increasing cultural diversity of America in the Progressive Era. The “American” Easter borrowed symbols and customs from many countries. The Easter lily was imported from Japan in 1882, and it quickly became the holiday emblem. German immigrants brought the custom of dyeing eggs to the United States in the mid-1800s, but the practice was not popularized until after the Civil War. The “Easter Bunny” also had roots in German culture, where the hare was an old symbol for springtime. By 1890 German American chocolate makers were selling candy rabbits. In 1878 Rutherford B. Hayes presided over the first White House “Easter Egg Roll,” giving official recognition to a practice that had been performed informally.

Much more than Christmas, which often has been celebrated by Americans who are not Christian, Easter continues to be understood as a major religious occasion. Yet in addition to commemorating the resurrection of Jesus Christ, Easter is a holiday of springtime and fertility. In Europe and the United States, Easter is associated with symbols of regeneration such as flowers and baby animals—some mark the start of the season with new clothing as well. In the 1870s the Easter Parade started in New York, giving stylish participants the chance to show off their festive spring outfits. Commercialization blurred the boundary between religion and consumption. In the 1890s, taking their inspiration from the seasonal church decorations of Catholics and Episcopalians, store owners began creating festive window displays that often featured acutely religious symbols such as crosses.

With Easter, no less than the rest of the American holiday cycle, immigrants to America sometimes found it challenging to preserve older customs. While in some eastern

European cultures, Easter is primary, the holiday is less important in the United States. As a result some ethnicities, such as the Poles and Russians, downgraded their own celebrations to fit in with national expectations. Yet the holiday also offered the chance for eastern Europeans to assert ethnic pride. In Europe, Easter Monday was one of several religious days given over to carousing. Boisterous celebrations were mostly phased out in the early twentieth century but are still celebrated in some communities.

Holidays and the American Way of Life

The consumption that had long been part of American holiday practice was curtailed by the Great Depression. The economic crisis provoked responses from many dimensions of American society. Widespread unemployment forced many families to cut back dramatically on holiday observances. At Christmastime families relied on homemade gifts and decorations, and when necessary they refurbished old toys and gave them to children as “new” presents. Religious groups and charities invoked Americans’ fondness for the “spirit of Christmas” and expanded their December fundraising. The Salvation Army had begun collecting donations with a red kettle in the 1890s, but the Depression gave new prominence to the bell ringers, who became a symbol of the season. In 1939 Franklin Delano Roosevelt moved Thanksgiving up one full week in order to plump the economy by extending the holiday shopping season.

The economic austerity of the Depression years did not check Americans’ desire for consumer holiday fantasies. New entertainment media worked a kind of alchemy on the spirits of hard-pressed Americans, who turned out for the film industry’s musicals and comedies with holiday themes. Department stores conceived of new gimmicks to draw people in. Store Santas lifted the spirits of Depression-minded shoppers, and in 1939 copywriter Robert May wrote the song “Rudolph the Red-Nosed Reindeer” as an advertisement for Montgomery Ward. Via the rapidly expanding technology of radio, May’s song soon entered other public spaces, including rival places of business. Radio thus affected the locations where Christmas music was heard. Radio also directed its content away from religious themes toward a more general festive sentiment, aptly captured in Burl Ives’s song “Holly, Jolly Christmas.” Partaking of this holiday spirit did not require a commitment to Christianity; some of the most famous Christmas songs of the twentieth century, such as “Happy Holiday” and “White Christmas,” were written by Jewish composer Irving Berlin.

The attack on Pearl Harbor shattered the 1941 Christmas season. Throughout the war years Americans were ambivalent about lavish celebrations. With millions of GIs serving overseas, it felt inappropriate to be festive. With most men going to the military, Santa left few bicycles for children. Families saved their butter and sugar rations weeks before the winter holidays to make such requisite desserts as fruitcake and pies. Many Americans found solace in popular culture’s sentimental promotions of family togetherness. Singer Bing Crosby gave expression to their sense of longing in “I’ll Be Home for Christmas” and promised the continuity of tradition in “White Christmas”—both hit songs.

“Peace on Earth” has long been a theme associated with Christmas. Just as Andrew Johnson’s 1868 “Christmas Pardon” of members of the Confederacy signaled an official end to the Civil War, President Harry Truman signed a proclamation of “selective amnesty” for all religious conscientious objectors on Christmas Eve in 1947. That same year the film *Miracle on 34th Street* was released, delivering a message of the triumph of the “true Christmas spirit” over cynical consumerism. It was a timely message for Americans seeking to restore a sense of normalcy. The challenge ahead would be finding authenticity in an era of unprecedented prosperity.

The 1950s saw continuities with historical assumptions about gender. Women bore primary responsibility for shopping and cooking for holidays, but the way these roles were performed changed. As mass food production and advertising introduced brand names, Libby’s pumpkin, Butterball turkey, and Ocean Spray cranberries became holiday staples.

By their nature holidays provide an escape from everyday life, but they are not immune to current events. Real-life events intruded on holiday observances in the 1950s and following decades. Anxieties over “Godless Communism” led President Harry Truman and the U.S. Congress to issue a joint resolution establishing the National Day of Prayer in 1952. Ronald Reagan’s 1988 proclamation gave the day a permanent place on the American calendar, setting aside the first Thursday in May. Veterans Day had been known as Armistice Day since it was established by Woodrow Wilson in 1919. Dwight Eisenhower called for the name to change in 1954, in order to acknowledge the additional wars the United States had fought. That same year the White House Easter Egg Roll was open to black children for the first time, at the insistence of First Lady Mamie Eisenhower.

In the second half of the twentieth century, television wielded great power in shaping ritual life. Televised coverage

expanded the audiences for parades on Easter, football games on New Year's, and both such events on Thanksgiving. Beginning in 1956, millions of Americans tuned their sets to CBS to watch the Times Square New Year's Eve coverage. Fifty years later the event was watched by 100 million Americans and as many as 1 billion people around the world. Years after they ran in theaters, films such as *It's a Wonderful Life* were rebroadcast on television. In 1964 a "stop motion" story about Rudolph the Red-Nosed Reindeer aired for the first time on NBC, featuring the singer Burl Ives. *Rudolph* was followed by dozens more holiday "specials," including *How the Grinch Stole Christmas*, *Frosty the Snowman*, and *Mr. Magoo's A Christmas Carol*. The cast of Charles Schultz's *Peanuts* comic strip was featured in programs airing for Christmas, Thanksgiving, Easter, Valentine's Day, and Halloween. In all these instances television programs took on the iconic status as holiday "traditions."

Television advertising fed the increasing consumerism of the second half of the twentieth century. In 1968 Congress passed the Uniform Holidays Bill, placing four federal holidays on "permanent Mondays": George Washington's Birthday, Memorial Day, Columbus Day, and Veterans Day; Veterans Day was later restored to its former date of November 11. This rationalization of the holiday cycle had unintended commercial consequences. Americans took their cue from advertisers, who promoted "Presidents' Day" as a joint holiday honoring both George Washington and Abraham Lincoln. This is the name by which the commemoration now is known to most Americans, for some of whom the February weekend represents good "deals" on cars, mattresses, and durable goods.

By the 1990s Christmas had grown to a \$150 billion event, the biggest holiday of the year in the United States. Americans expressed cynicism about consumption but seemed powerless to stop its relentless growth. In 1992 Protestant and Catholic clergy came together to condemn the commercialization of Christmas in an open letter entitled "Celebrate Christmas, not Commercialism." The letter was largely a symbolic gesture, made at a time when shopping had become the focal point of the holiday for many Americans. Christmas had come to be seen by many as an ecumenical winter holiday. Not surprisingly, over the twentieth century American Christmas music shifted in emphasis, away from a celebration of the nativity and toward seasonal festivities. As Christmas music became "secularized," popular singers took to recording original or traditional holiday songs. While Elvis Presley's release of several Christmas

albums arguably made him "King" of the seasonal genre, everyone from Bruce Springsteen to Madonna seemed to get into the act. Such recordings came to dominate the airwaves, making Christmas music ubiquitous and inevitably raising church-state issues. In 1980 the U.S. Supreme Court reaffirmed the "secular" nature of Christmas music. In *Florey v. Sioux Falls School District*, the Supreme Court sided with the lower district, which found that the music, art, and literature of traditional American holidays has "acquired a significance which is no longer confined to the religious sphere of life. It has become integrated into our national culture and heritage." Christmas had become synonymous with "the American Way of Life."

In the late twentieth century increasing ethnic and religious diversity expanded and changed the American holiday calendar, and anxieties over the meaning of cultural pluralism caused some Christian activists to call for recognition of what they believed were the religious origins of the nation through public support of Christian holidays. Tensions seemed to abate in the aftermath of the September 11, 2001, al-Qaida attacks, which provoked calls for both national unity and religious tolerance in the immediate aftermath. The interfaith memorial services held in many locales deliberately include imams and other Muslim representatives, in acknowledgment of the "Judeo-Christian-Islamic" heritage of the United States. In 2002, September 11 seemed ready to become the latest addition to America's Civil Religion, when commemorations were held across the country. Since 2002, though, observances of September 11 have fallen off.

At the moment, it appears that the latest addition to the holiday calendar with the greatest prospects for longevity is Earth Day, which celebrates ecological and environmental concerns. Earth Day first was observed in 1970, with two different commemorations of the same name. Today, a non-profit organization, Earth Day Network, coordinates events in more than 170 countries. The internationalization of Earth Day makes it the first American contribution to a global ritual calendar, a holiday that rapidly has transitioned from countercultural to "mainstream."

Religious Pluralism and Holiday Practice

American holiday observances have been enriched by contributions from many religious and ethnic subcultures. At the same time, many groups have maintained distinct holiday customs, and some groups commemorate events of special importance to them. For example, Latter-day Saints

honor the July 24, 1847, arrival of the first group to the Salt Lake Valley on “Pioneer Day,” by staging walks on the Mormon Trail. The impact of these culturally specific occasions varies widely, however. Few Americans commemorate the birthday of L. Ron Hubbard, founder of the Church of Scientology, or observe “Parents Day” in honor of Sun Myung Moon and his wife, Hak Ja Han, the leaders of the Family Federation for World Peace and Unification (the Unification Church). Even so, some religious and ethnic minorities have voiced their presence in American culture through holiday behavior to a degree that warrants their separate consideration.

Catholic and Russian Orthodox Observance

The American Catholic experience, and to a lesser extent the Eastern Orthodox one, carry the conflicting attitudes of identification with “mainstream” American culture and resistance to its homogenizing pressure. From the nineteenth century on Catholics celebrated both religious and ethnic solidarity through pageants, parades, and festivals. St Patrick’s Day was celebrated as early as the 1840s in New York. Originally an Irish fertility festival that was relatively nonsectarian, the holiday became more Catholic in the context of Protestant nativism. Because in the mid-nineteenth century the Fourth of July was an occasion for nativist demonstrations, Catholic organizations such as the Ancient Order of Hibernians organized their own parades in protest, as they did in New York in 1852.

The aesthetics of church and home decoration, ritual behavior, and special foods all helped immigrants identify with the “old country.” From the Progressive Era into the twentieth century, ethnicity defined the religious life of these communities, so that shared religious doctrines were given diverse expression. Thus, because Christmas Eve was a “meatless” fast day for all Roman Catholics until its elimination from Canon Law in 1983, Italian Americans traditionally served a dinner of “Seven Fishes,” while cheese and potato dumplings (pierogi) were favored by eastern Europeans.

Both Roman Catholics and Eastern Orthodox Christians hold feast days in honor of different saints; these vary country by country and often are specific to particular communities or regions. Hungarian Americans celebrate St. Stephen of Hungary on August 16; Mexican Americans honor the Virgin of Guadalupe on December 12. Since 1926, Italian Americans have held the San Gennaro festival in Manhattan in honor of the patron saint of Naples. Each

September, participants pin money to a statue of the saint as it is paraded through the streets of Little Italy, with the proceeds going to the local Catholic church. The Feast of St. Basil is important to many Orthodox Christians, and especially to Greek Americans.

Orthodox and Roman Catholic traditions operate on different calendars, but each one has a liturgical calendar that honors key events in the life of Jesus and the development of the church. The weeks leading up to Christmas and Easter are more important in Roman Catholicism and Eastern Orthodoxy than in many Protestant traditions, where the liturgical seasons are less emphasized.

Advent is a time of spiritual preparation in advance of the commemoration of Christ’s birth. For Roman Catholics and High Church Protestants, the progress of the four weeks leading up to Christmas is announced with special liturgical readings as well as the lighting of candles on an Advent wreath, with one additional candle lit on each Sunday as Christmas approaches.

During Lent many Christians commemorate Jesus’ time in the desert, imitating Christ through fasting, prayer, abstinence from bodily pleasures, and acts of penance. It is common for Catholics, along with large numbers of Protestants, to “give up” something enjoyable—for instance, alcohol or smoking. Millions of children forgo ice cream, candy, and even television. Despite the end of meatless Fridays with Vatican II, many Catholics continue to abstain from meat on Fridays during Lent, although the asceticism of the season has lessened for Catholics when compared with earlier periods. Lenten fasts may be broken on Sundays because they are traditional feast days, but many Catholics do not avail themselves of this possibility, especially those who have chosen to give up such a vice as drinking. Lent begins with Ash Wednesday, when worshipers receive blessings of smudged ashes from the burnt palm crosses from the past year. Ahead of this day it has been customary for centuries for Catholics to begin the period of self-denial with a festival of partying. In some countries the Carnival season starts with the Feast of the Epiphany in January, as is the custom with Mardi Gras in New Orleans. In other instances the revelry is confined to Shrove Tuesday, on which day thousands of American Catholic churches continue to hold pancake suppers. For Catholics, Lent culminates in “Holy Week”—Maundy Thursday, Good Friday, Holy Saturday, and Easter Sunday. In 1970, Vatican II ended the practice of veiling all statues in Catholic churches during the last two weeks of Lent, which were known until then as *Passiontide*.

There are some differences between Eastern Orthodox and Roman Catholic observance. Many national Eastern Orthodox churches use the Julian calendar, celebrating Christmas, Easter, and other religious holidays thirteen days later than the Western Gregorian calendar dates. Eastern Christians also place greater emphasis on asceticism: during both the Great Lent and the Nativity Fast, Eastern Christians abstain from meat, dairy, eggs, wine, and oil on most days. Regardless of the subtle distinctions in Lenten practices, however, Roman Catholics and Eastern Orthodox together have helped spread interest in Lent beyond the Episcopalians who also traditionally celebrate it, to an increasing number of mainline Protestants, and some evangelicals.

Jewish Holidays

Even more than American Catholics, the American Jewish experience entails anxieties about proximity to Christianity. This has affected holiday observances. Traditional Judaism maintains an elaborate lunar calendar inherited from the time of Temple Judaism, but many holidays are no longer celebrated by most American Jews. The modern Jewish calendar also commemorates more recent events, such as the Holocaust, which has been commemorated on Yom HaShoah since 1951. Holocaust Memorial Day falls in July or August. The month of Tishrei, falling in September or October, is the holiest season in Judaism. The High Holy Days begin with Rosh Hashanah, the Jewish New Year. It is customary to welcome the new year by wearing new clothes. The sweetness of the new year is symbolized in the eating of honey cake and apples dipped in honey. American Jews crowd synagogues to hear the blowing of the ram's horn, the *shofar*. On the afternoon of the first day of Rosh Hashanah, observant Jews gather at lakes and streams, for *tashlikh*, where they recite prayers and throw bread into the water, symbolically casting away sins. Rosh Hashanah ushers in a ten-day period of spiritual reflection leading up to Yom Kippur, the Day of Atonement, on which Jews repent of their sins through fasting, prayer, and attending religious services. Believed to be to the holiest day of the year, Yom Kippur commemorates the day when the high priest entered the Holy of Holies, the inner chamber of the Temple in Jerusalem that housed the Ark of the Covenant and the original Ten Commandments. Sukkot (Sukkos, and other alternative spellings) starts barely a week after Yom Kippur. During the weeklong "Feast of Booths," an observant family may build a temporary hut known as a *sukkah*, in which they eat meals and spend much of their time, in

commemoration of the historic pilgrimage of Jews to the Temple in Jerusalem. Tishrei ends with Simchat Torah, which marks the end of the annual cycle of Torah readings. Fewer American Jews celebrate Sukkot and Simchat Torah than Rosh Hashanah and Yom Kippur, for which one commonly needs a "ticket" to attend synagogue services.

Passover, or Pesach, is the most observed Jewish holiday in America. On the first two nights of this eight-day festival, Jews hold seders, meals of traditional foods that represent the events described in the book of Exodus. For the entire holiday observant Jews abstain from wheat and other grains and eat matzo, which is unleavened bread whose contact with water during preparation is limited. According to the 2000–2001 National Jewish Population Survey, nearly 90 percent of American Jews attended a seder meal, though the percentage who cleaned their houses of all leavened products or ate matzo for eight days was far lower. The popularity of Passover among American Jews has made the holiday an outlet for their many understandings of their tradition. Since the 1970s Jewish feminists began placing an orange on the Passover seder plate as a symbol of support for the ordination of women as rabbis. Like the fruit on the plate, they argued, women's ordination transformed the ritual but did not violate Jewish law. Many progressive Jews have adopted this practice. American book publishers have taken advantage of the variety of Passover interpretations by offering an abundance of Haggadoth, religious texts used as guides for the Passover meal. Not only are dozens of interactive and "child-friendly" versions now available, including at least one comic book, but Jewish feminists, secular humanists, and vegetarians can all find Haggadoth ratifying their views, as can Jewish converts to Christianity and Buddhism who wish to observe the holiday from an interfaith perspective. This current range of options stands in contrast with much of the twentieth century, when many Jews used the Haggadah printed by the Maxwell House coffee company.

Hanukkah is the Jewish holiday best known to non-Jews. The "Festival of Lights" commemorates the story of the Maccabean Revolt from the Apocrypha. Jews celebrate the rededication of the Temple in Jerusalem by lighting a menorah, a nine-branched candelabrum, and eating foods cooked in oil, especially potato pancakes and jelly doughnuts. Hanukkah bears the marks of American Jews' experience as a religious minority in a dominantly Christian nation. In Judaism, the importance of a holiday is reflected in whether the day is considered a "working day" or a "day of rest," when the thirty-nine *melakhot* restrict many categories of

activity. Many Jewish holidays include prohibitions on the work that can be done, which includes many activities not regulated in most other religious traditions. Originally, Hanukkah was a minor Jewish festival not even marked with days of rest. Before the Civil War few American Jews celebrated Hanukkah, and many Jews did in fact celebrate Christmas. This prompted Jewish Sunday schools to introduce Hanukkah in the 1870s. Through much of the twentieth century, Hanukkah was promoted by Jewish leaders as an alternative to Christmas. Not only did the practice of gift giving grow more extravagant, but also Jewish families, religious leaders, and marketers devised an array of strategies to make the Jewish holiday an effective counterweight to the Christian one. By the 1950s this endeavor had given rise to the Hanukkah “stockings” and “bushes” that traditionalists scorned and comedians spoofed. In the 1960s younger Jews who identified with the counterculture and participants in the Jewish renewal movement (Havurah) advocated a return to simplicity that eventually was taken up by much of the Jewish American population. Today Hanukkah celebrations and the associated gift giving can be lavish or simple, depending on personal interpretation and local custom.

Until the 1970s, Jews’ reactions to Christmas were directed primarily to other Jews. Some activists protested the explicitly Christian songs in children’s holiday programs, which led many public schools to include a Jewish holiday song to balance a program of Christmas carols. Very often, the featured Jewish song was “Dreidl, Dreidl, Dreidl,” about the children’s top that is used in a Hannukah game. Reduction of the Jewish holiday down to this one piece of music inspired resentment among some Jews, who came to regard it as “the infamous Hannukah carol.” More often, though, American Jews did not bring their concerns about Christmas beyond the Jewish community. This changed in 1974, when the Chabad-Lubavitch branch of the Hasidim began holding “Menorah Parades” in several American cities, at the encouragement of their grand rebbe, Menachem M. Schneerson. Chabad expanded their outreach in 1986, when Schneerson called for the placing of menorahs in public holiday displays.

In contrast to Hanukkah, Purim is the Jewish holiday that traditionally most closely resembled Christmas. Purim is a time of merrymaking; it is a positive commandment to overindulge in alcohol. Children dress in costume, and in some communities they receive presents. Though not celebrated by most Jews through much of the twentieth century, Purim is enjoying a resurgence more recently. This change

reflects the return to traditional religious observance seen across the spectrum of American Jewish subcultures.

African American and Native American Commemorations and Celebrations

African Americans have maintained a distinct holiday calendar and practices for centuries. In New Orleans, Carnival celebrants dress in many sorts of costumes, but one of the longest-standing Mardi Gras traditions is the “Indian tribes.” Since the 1890s bands of African American men costumed as Plains Indians have formed street parades and gone house-to-house in a manner reminiscent of eighteenth-century masqueraders. Their historical disenfranchisement and exclusion from much public life led many African Americans to find a release of social tensions through revelry. Pinkster was held from the seventeenth century, when the slaves of Dutch colonists in New York enjoyed time off from work while their owners observed the religious holiday of Pentecost, from which the name of the holiday derived. The June festival celebrated fertility and a libertine spirit, which led to its being banned in the Hudson Valley in about 1811. After the Civil War African Americans marked the end of slavery with “Emancipation Days,” held on different dates in various locales. Over time, the nineteenth of June grew to be the day most commonly chosen, which was the date of the announcement of the Emancipation Proclamation in Galveston, Texas, in 1865. “Juneteenth” observances vary in different communities. In some places the day continues to be associated with celebration, but it also is a day of commemoration of African American history.

Themes of history and memory reverberate in two African American holidays that have become established additions to the American calendar since the 1960s. Martin Luther King Jr. Day, to honor the leader’s birth date in January, has a special meaning for African American people. The day was made a federal holiday in 1986 but not without controversy. Some states, including Arizona, Montana, and New Hampshire, refused to recognize the day as a state holiday, demanding that state employees be present at work. In 1998 an Indiana chapter of the Ku Klux Klan held a rally in Memphis, Tennessee, to protest the holiday. A riot broke out when twelve thousand people showed up to protest the demonstration. As Americans have increasingly accepted the new January holiday, it has become a day for interfaith religious services and volunteer work.

Ron Maulana Karenga, a professor at UCLA, created Kwanzaa in 1966 as a response to the Watts riots in Los

Angeles. Kwanzaa modeled the celebration on African harvest festivals; its name derives from a Swahili phrase meaning “first fruits.” Kwanzaa celebrates the *Nguzo Saba*, or seven principles that have sustained African people in the diaspora. On each of the seven days of Kwanzaa, a different value is honored with the lighting of a candle in a special holder known as a *kinara*. This has invited comparisons to the Jewish Hanukkah and has made some people question what they see as the syncretic nature of the holiday. Over time, though, Kwanzaa’s success has assuaged much of the skepticism among both blacks and whites about its authenticity. In 2000 as many as five million African Americans celebrated Kwanzaa, and *Ebony* magazine estimated sales of Kwanzaa-related goods and services totaled \$700 million that year. In its commercialization Kwanzaa reflects broad patterns in the American holiday experience, but this “commodification” causes special concern, given Kwanzaa’s roots in countercultural black nationalism and a rejection of the capitalist ethos.

Until the late twentieth century, American Indian culture was systematically oppressed in an effort to assimilate Native people into non-Indian society. Traditional festivities such as the Plains Indian Sundance or the Potlatch ceremony of the Pacific Northwest were banned on reservations. Native Americans preserved their cultures by linking tribal celebrations to mainstream holidays—holding the Sun Dance on the Fourth of July, and continuing the Potlatch under the guise of giving Christmas presents. After 1970, American Indian cultures underwent a resurgence, and since then tribes have felt freer to celebrate Native holidays in their own right. Most Native American festivals are specific to tribes or cultural regions. The Lakota and the Cheyenne and Arapaho tribes mark their 1876 victory over George Armstrong Custer and the U.S. 7th Cavalry on “Little Big Horn Day,” on June 25. In contrast, the Cherokee hold their own national holiday on Labor Day weekend.

Buddhist, Hindu, Sikh, and Muslim Traditions

Buddhism, Islam, Hinduism, and Sikhism have become more visible parts of American religious life since 1965, when changes to federal immigration law opened the door to arrivals from Asia, Africa, and the Middle East. Muslims, Hindus, Sikhs, and Buddhists observe their own holidays, and each of these traditions uses a solar or lunar calendar that does not coincide with Gregorian tabulation.

Many religions honor their founders with specific commemorations. The *Báha’í* mark important moments in the life of the Bab, including his birth and martyrdom.

Buddhists celebrate the birthday of the Buddha on Vesak in May, as well as the Buddha’s enlightenment on the December holiday of Bodhi. Sikhs commemorate the birthdays and martyrdom of the Gurus with festivals called *gurpurbs*, where the Sri Guru Granth Sahib is read and free vegetarian meals are offered to the general public.

Some holidays transcend religious boundaries and are shared across ethnic populations practicing different religions. Divali (Diwali or Deepavali) is a major festival in Hinduism, but Sikhs, Jains, and some Buddhists also observe versions of it, pointing to its status as a major festival on the Indian subcontinent. In Hinduism Divali encompasses several myths, including Rama’s victory over the demon Ravana, Krishna’s defeat of the thunder god Indra, and the birth of Lakshmi, goddess of wealth and good fortune. Jains commemorate Lord Mahavira’s attainment of nirvana, and Sikhs celebrate Divali as the return of the sixth guru, Har Gobind Ji, to the town of Amritsar following his imprisonment. Across these diverse theological justifications, Indian Americans observe the five-day autumn holiday in similar ways: by lighting small oil lamps called “divas” and congregating in temples, *gurdwaras*, and rented social halls for communal banquets.

As America’s Muslim, Hindu, and Buddhist populations have grown, their holiday cycles have become more visible parts of the American holiday landscape. For many years residents of New York, San Francisco, and Washington, D.C., have jammed the streets on Chinese New Year to cheer processions of “Lion Dancers”—long dragon-shaped puppets that take several men to animate. Recently the winter festival has become the focus for community celebrations in smaller American cities, and even in some public schools.

The growth of America’s non-Christian population also has inspired greater calls for public accommodations to other faith traditions. The month of Ramadan, which is the most important period in the Islamic calendar, was officially recognized in 2007. Some Muslim Americans have lobbied for the study of Islamic holidays to be part of school curricula and have petitioned city and state governments to recognize the two major holidays of Eid al-Fitr and Eid al-Adha as official school holidays. In New York City, parking regulations are now suspended on Jewish, Christian, and Muslim holidays.

Conclusion—Contested Meanings in Holiday Practices

Public commemorations often have generated conflicting patterns of meaning. In the current context of cultural pluralism, holidays frequently highlight and also call into

question social boundaries. Among the best illustrations of such social dynamics are Christmas and Halloween, which also reign as the two largest consumer events today.

Like Valentine's Day, Halloween has distant religious origins but has become almost entirely secularized. Scots-Irish immigrants first brought Halloween practices to America. The eve of All Saints' Day was traditionally viewed as a night of magic and witches, and a time when children indulged in pranks and mischief. In about 1912 the Boy Scouts, public schools, and civic organizations began promoting alternatives to the petty vandalism that "Devil's Night" inspired. Encouraging children to beg for candy was a domestication of the holiday. In the early twentieth century many children, especially Catholics, dressed in rags and went door-to-door collecting pennies on Thanksgiving. The practice of "Trick or Treating" thus transposed the Thanksgiving activity onto All Hallows' Eve; by the 1930s, "Trick or Treating" was commonplace. In the 1990s, Halloween overtook Valentine's Day as the second-largest consumer event after Christmas. A conservative estimate valued the economic activity of Halloween at more than \$400 million by 2000. This increase in spending has coincided with a rise in adult interest in the holiday. In a return of the carnivalesque, Halloween is now celebrated through house parties, on college campuses, and in parades in several American cities.

Many Americans find little religious content in Halloween, but among some subcultures the holiday provokes a spectrum of responses. Some observant Jews and conservative Protestants opposed to Halloween for its sorcerous connotations still recognize its attractiveness, and therefore offer religiously appropriate alternatives. In the case of Judaism, the late-winter holiday of Purim is promoted as an alternative day for wearing costumes—including, ironically, those of witches. Some evangelical Christians hold "harvest parties" and encourage children to dress as the fruit and vegetable characters from the video series *VeggieTales*. Others appeal more directly to the "scary" aspects of Halloween. Since the 1970s, conservative Christian churches have offered "Hell House" tours using live actors to depict gruesome scenes of sinful life and the penalties of eternal damnation. Other Protestants, especially Missouri Synod Lutherans, celebrate October 31 as Reformation Day, thus assigning a new meaning to the day.

While Halloween prompts a centrifugal reaction among some religious subcultures, other groups align their distinct traditions with mainstream practices. Mexican Americans increasingly blend Halloween symbols and customs into the

two-day celebration of Día de Todos los Santos and Día de los Muertos (All Saints' Day and All Souls' Day), celebrated on November 1 and 2. Wiccans and pagans celebrate November 1 as Samhain (pronounced "Sah-win"), the day marking the death of the earth.

The dissonant voices of Halloween seem quiet in comparison with the din of Christmas, which as the biggest holiday of the year bears on Americans of all faiths. At mid-century, the Jehovah's Witnesses who rejected Christmas were sometimes perceived as deviant, but a few decades later several religious bodies voiced dissent against the holiday.

The "Christmas Wars" convolute reactions to two different challenges: the consumerism that has shaped American life for so long and responses to the pluralism that characterizes American religion and culture. The month of December harbors holidays important to many religions and ethnicities and highlights the challenges of creating civility in a diverse society. While the greeting "Happy Holidays" has been common since the Progressive Era, it grew more popular as an ecumenical acknowledgment of the season in the late twentieth century. This led some conservative commentators to decry its use, arguing that the phrase was anti-Christian hate speech. Radio and television pundits urged audiences to insist on "Merry Christmas" and to boycott stores that posted general "holiday" greetings. Rejection of the phrase, and use of "Merry Christmas" instead, was framed as a "reminder" of the religious dimensions of the holiday. It also was an attempt to reestablish the dominance of Christianity. Conservative Christian activists have sought a more public recognition of Christmas as a religious holiday by the government. In response civil libertarians, secularists, and freethinkers argue against the government promotion of any religion.

A major front in this culture war is the debate over religious symbols in public displays that has wended through the American legal system over recent decades, starting with the case *Lynch v. Donnelly* (1984). When the city of Pawtucket, Rhode Island, included a nativity scene in a display of holiday decorations, alongside Santa Claus and a Christmas tree, some town residents argued that the crèche was unconstitutional, but the U.S. Supreme Court ruled that the display did not violate the First Amendment. Noting a long precedent of government acknowledging religion in American life, the court found that religious symbols need not be excluded from government-sponsored displays. Rather, when placed alongside other decorations—and here a Christmas tree was taken to be a secular symbol—a nativity

scene could function as a relevant seasonal symbol without being an endorsement of Christianity. This has become known as the “plastic reindeer rule.” It was tested five years later when the Supreme Court took up another case, *County of Allegheny v. Greater Pittsburgh ACLU*, that evaluated two different displays in Philadelphia, Pennsylvania. A Roman Catholic group had placed a nativity scene in the county courthouse, while the Chabad-Lubavitch organization had erected a menorah outside a government office building. Both Christian activists and the American Civil Liberties Union challenged the placing of menorahs on public property; the ACLU objected to the crèche as well. In a split decision with Justices Blackmun and O’Connor as pivotal votes, different majorities found that because the crèche stood alone, it was an overtly religious symbol, unlike the 18-foot menorah, which stood beside a Christmas tree.

This mixed decision has left lower courts with few clear guidelines as to the constitutionality of religious displays, and the issue continues to be decided on a case-by-case basis. Some localities have chosen to cancel holiday displays. Another possibility is to honor the requests, including menorahs or nativity scenes when groups have asked for them. Some communities have expanded on this second option, by opening up public space to a range of groups for temporary displays.

The goal of tolerance, however, may have practical limits in some instances. What those limits actually may be is unclear, but holidays are certain to remain vibrant prisms for the expression of American religious life.

Holiness Denominational Family

Various denominations and groups emerged from the Holiness movement such that, at the turn of the twenty-first century, these encompassed millions of Christians worldwide (an estimated ten to twelve million). These are organized into congregations, associations, denominations, partnerships, and informal fellowships, as the products of an influential branch of North American Protestant Christianity, together with their missions to every inhabited continent. Representative aims of the Holiness denominational family include holy living (“being in but not of the world”) and evangelism and social service aimed at the poor and oppressed. While eighteenth-century British Methodism was the source and model for the American movement, the latter was diverse and pragmatic, shaping and being shaped by the currents of nineteenth-century American culture. In fact, the earliest Holiness body, Primitive Methodists, migrated from Britain to America as a result of the preaching of American revivalist Lorenzo Dow at the turn of the nineteenth century.

Important questions for understanding the Holiness movement relate to the denominational family as well: have

they maintained their historical charter as articulated by the founder of Methodism, John Wesley, or have they transformed it and, if so, how? The analysis offered here presumes that a degree of doctrinal drift is inevitable but also that each new context requires an authentic application. Three overlapping but roughly chronological developments are examined here: (1) Holiness revival and reform movements, (2) Holiness associations and camp meetings, and (3) Holiness mergers and missions. First, millennialism—the widespread anticipation of an era of peace and prosperity associated with the Second Coming of Christ—shaped early-nineteenth-century American culture, and the Christian version of that doctrine shaped early Holiness denominations as corporate reform movements. Second, complex patterns of Holiness association emerged amidst the later-nineteenth-century cultural dynamics of urbanization, feminization, and the growth of the middle class, thus proliferating Holiness networks and organizations and sharpening individual Holiness expressions. Third, the fading prominence of Holiness—the demise of its relevance or doubts about the character of its corporate expressions—enabled, by the turn of the twentieth century, the merger of formerly distinctive groups, especially under the banner of evangelistic world missions. The line between Holiness bodies and more broadly evangelical groups thereby blurred.

Holiness Revival and Reform Movements

Schisms that arose in the Methodist Episcopal Church (the MEC, formerly the largest American Methodist body), especially in the later nineteenth century, played a fundamental role in the development of the Holiness denominational family. The backdrop for Holiness-related church schisms, however, is found in the antebellum Methodist reform movements that opposed slavery and drunkenness and in the increase of wealth, education, and social engagement among Methodists.

The Wesleyan Methodist Connection (WMC)

The WMC was organized in 1843 in Utica, New York, by radically reform-minded clergy and laity from the MEC, but with the participation of others. Their stated purpose was to form a church free from slavery and the oversight of bishops and with the “disciplinary regulations as are necessary to preserve and promote experimental and practical godliness.” This quotation is from the *True Wesleyan*, published by MEC minister Orange Scott (1800–1847), to communicate the founders’ reforming agenda. The name “Wesleyan”

expressed their desire to reassert the ethics of the founder of Methodism, John Wesley, who opposed slavery and advocated the spread of scriptural holiness. “Connection” meant that the church existed as independent, local bodies, which, though associated with one other, were not under denominational rule like the MEC and similar *connectional* churches. The fact that Reformed Methodists, as well as Baptist, Episcopal, and Christian Church representatives, were among the founding participants underscored both the demand for a congregational-form church government and the hope for a renewed emphasis on the doctrine of sanctification (Holy Spirit-enabled growth in holiness). Lay participants at the organizing conference outnumbered clergy more than three to one and were rewarded with an equal voice in decision making of the sort denied them in their home denominations. They considered their actions necessary for the restoration of primitive Methodism.

WMC founders Orange Scott and Luther Lee (1800–1889) embodied the early movement’s radical egalitarianism. Poor and self-educated MEC revivalists joined the abolitionist movement in the 1830s and realized a call to take a stand against the institutional church’s (MEC’s) silence on slavery. Scott followed closely William Lloyd Garrison’s abolitionist newspaper, the *Liberator*, purchasing subscriptions for one hundred of his fellow MEC ministers. Lee preached the ordination of Antoinette Brown, the first female minister in America, in 1853. Scott and Lee were censured by MEC bishops on account of their “antislavery agitating,” withdrawing in 1842. That their views were representative of rank-and-file MEC ministers and laypersons is seen in the existence of local churches called “Wesleyan Methodist” prior to the WMC founding conference and in the conference’s enrollment of two hundred ministers and six thousand members in their first year (1843), with an additional fifteen thousand over the next two years.

The Utica convention had amended the MEC *Discipline* by abandoning the traditional threefold order of ministry—bishop, elder, and deacon—in favor of a “parity of the ministry”—that is, ordaining deacons (“servants”) alone and granting the laity equal representation at conference. The business of the local church had been thoroughly democratized, with classes electing their own leaders and church members convening business meetings. In its articles of religion, the WMC *Discipline* affirmed Wesley’s original wording in prohibiting slave holding or its approval and added a new article based on the command (of Jesus) to love God and one’s neighbor, thereby undergirding the corporate

social action of the churches in abolitionism and other reforms. A revised article on the use of alcohol went beyond Wesley's wording that forbade drunkenness and the use of liquor "unless in cases of necessity" by prohibiting the manufacture, sale, or use of hard liquor, with few exceptions. Articles on the resurrection of the dead and end-time judgment were added to check the spread of contemporary heretical teachings (Millerism) prophesying that Christ's return would occur in 1843 (the same year, coincidentally, of the WMC's founding).

Wesleyans, no less than Millerites, embraced the millennial vision—the belief in Christ's thousand-year reign on earth during an era of peace and righteousness—though they denied that anyone could predict the date of its advent. The redemptive impact of various revivals on corrupt society was evidence that the Holy Spirit was at work in anticipation of the Second Coming; to participate in the reforms was to hasten his coming. Like Methodists in general, Wesleyans attacked the institution of slavery as the "sum of all villainies" (Wesley's words) since it tore families apart, forced adulterous relationships upon innocents, and condemned an entire race to suffering. Wesleyans became active supporters of the Underground Railroad, openly flaunting their disregard for the Fugitive Slave Law of 1850. A stream of antislavery literature issued from Wesleyan authors, who admonished their fellow Wesleyans to cast their votes in favor of freedom (abolitionist) candidates. Wesleyan reformers worked with equal fervor to secure freedom for those "enslaved" to alcohol by joining the assault on the tavern and by "voting dry." This, in turn, inspired additional reforms such as support for women's suffrage. Identical reform emphases were of course seen outside of Wesleyanism and the broader church, but this did not erase the fundamental distinction between gospel-inspired good works and other reforming efforts. Another Wesleyan founder, L. C. Matlack (1816–1883), defended in the pages of the *American Wesleyan* his plan to conduct a series of camp meetings in the Middle West as "an opportunity to vindicate the identity of radical reform with living piety." His statement tied reform to the revival and pointed to individually sanctified lives ("living piety") as the building blocks of true reform.

The division of the MEC along anti/pro-slavery lines in 1844 brought to an end the ban on debate—the northern bishops' insistence upon church neutrality in the matter of slavery—prompting a return of some Wesleyans to the MEC. After the war, to the dismay of remaining Wesleyans, founders Lee and Matlack also defected. The Union

Movement, as it was known, coincided with a series of failed merger attempts between the WMC and various denominations. These failures presaged the elusive nature of unity among Holiness bodies and revealed the institutional weaknesses of the Connection when compared with denominations—weaknesses that resulted in the loss of the WMC stake in Adrian and Wheaton Colleges. Through the leadership of Adam Crooks in the postwar period, the WMC found its identity in the nationwide Holiness revival where, as the first Holiness "church" to have included sanctification in its articles of religion, it once more had a leading role to play.

The Free Methodist Church

The Free Methodist Church was born in 1860 of a schism of MEC (North) laity under the leadership of dissident clergymen Benjamin Titus Roberts (1823–1893) in the East and John Wesley Redfield (1810–1863), who conducted widespread revivals in the (Middle) West. Both were Holiness advocates and students of Phoebe Palmer's "shorter way" (to entire sanctification, the belief that sin could be entirely eradicated in believers), who charged the MEC bishops with worldliness and the resultant neglect of Methodism's central doctrine of sanctification.

Roberts founded Methodist laymen's conventions in the "burned-over" region (so-called for its pervasive revivalism in the 1820s and 1830s) of western New York, beginning in 1858. These fueled the already pervasive abolition sentiment and made lay participation in church government a sore point at a time when MEC bishops sought to placate Methodists in the border conferences to prevent their defection (and, thus, their states' defection) from the Union. Consequently, the MEC General Conference of 1860 voted to soften its antislavery rhetoric and to deny lay delegations as inexpedient, thus embittering Roberts and his followers. Redfield conducted highly successful revivals in MEC churches in Wisconsin, Missouri, and Illinois, and subsequently inspired a dissident Methodist lay movement that sought reforms similar to those advocated by Roberts. Both men abhorred the increasing worldliness in the institutional church, which they identified with formality in worship, participation in secret societies, ornate church buildings, and pew rentals (an approach to church fund-raising that Roberts derided as "charging admission"). Surreptitiously, Roberts established a parallel itinerancy for dissident (Free Church) congregations to be supplied by expelled (for slavery agitation) MEC ministers. His publication of remarks

critical of the bishops (in violation of the *Discipline*) prompted charges of insubordination. The MEC displayed support for Holiness but not for schismatic activity by setting Bishop Matthew Simpson over Robert's Genesee Conference trial and by inviting evangelist William Taylor to preach the conference's opening sermon; both proclaimed Holiness and were friends of Phoebe Palmer. The Free Methodist schism made Holiness rhetoric a weapon in the struggle for lay representation at the conference. Roberts and his followers became known as "Nazaries," emphasizing their separatist bent. Some said that Redfield's Holiness preaching planted the seeds of fanaticism, and many influential Free Methodists—including lay evangelist Harriet Damon ("Auntie") Coon—were converted under his preaching. Like the WMC before them, Free Methodist leaders revised Wesley's articles of religion by adding articles on entire sanctification and on future rewards and punishments.

Holiness Camp Meetings and Associations

The national revival of 1857–1858 kindled hopes for an era of interdenominational unity among Christians and heightened opposition to schismatic behavior among Holiness advocates. Nevertheless, conflict over Holiness continued, though more on the basis of organizational preference than theology: Holiness advocates preferred testimony meetings—informal gatherings where believers shared spiritual experiences—as the locus for defining the church's mission and for determining ministry assignments, over the business-like committee meeting that increasingly characterized MEC administration. Daily union prayer meetings, weekday home meetings, and annual camp meetings were increasingly utilized in the wake of the revival—each contributing to a social network of independent Holiness agencies critical of the MEC and preparing the way (if unintentionally) for the emergence of independent denominations.

Weekday meetings in urban homes were modeled after the Tuesday Meeting for the Promotion of Holiness conducted by Phoebe Worrall Palmer (1807–1874) and her husband Walter (1804–1883), a physician, in their New York City home from the late 1830s until Phoebe's death in 1874. These influential meetings, which continued to the turn of the century, hosted MEC bishops sympathetic to the Holiness movement; founders of the annual Holiness camp meetings; religious journalists (including opponents); and admirers of Palmer's writings, for example, *The Way to Holiness* (1843). MEC minister and revivalist John Inskip (1816–1884) and his wife Martha were guests of the Palmers and,

under her influence, began similar meetings in their own home. Thereafter, Inskip helped to lead the first National Camp Meeting for the Promotion of Holiness (hereafter, "the National") in 1867 in Vineland, New Jersey, with the assistance of other MEC ministers including Bishop Matthew Simpson, who preached the meeting's opening sermon. Inskip became president of the National, which, beginning in 1870, sponsored three annual national meetings to which Phoebe Palmer was invited to present her views on Holiness. The annual national camp meetings spawned scores of similar regional meetings, establishing outposts for Holiness teachings throughout the rural hinterland. Both the weekday meetings and conventions provided extrachurch leadership opportunities for Methodist laity and a venue for public speaking for women. Here, the doctrine and experience of entire sanctification—a controversial subject in many churches—could be freely promoted.

Key nineteenth-century social dynamics ensured the influence of Palmer's Tuesday Meetings, including the rise of an evangelical print culture that nurtured a Holiness community not bounded by geographical restrictions. Best-selling books by Timothy Merritt (*The Christian's Manual*, 1824), Asa Mahan (*The Scriptural Doctrine of Christian Perfection*, 1839), William Boardman (*The Higher Christian Life*, 1858), Phoebe Palmer (*The Promise of the Father*, 1859), and Elizabeth Prentiss (*Stepping Heavenward*, 1869), shaped this culture, along with Holiness-themed journals such as Merritt's *Guide to Holiness*, which promoted the Palmer's "shorter way" and encouraged readers to publish their own experiences.

Another dynamic, related to the refinement of American Methodism, helped Methodists and others pursue "moral earnestness" (Christian authenticity) while avoiding worldliness and superficiality. For those in attendance at the Tuesday Meetings, Phoebe Palmer modeled a balance of middle-class respectability and fervent commitment to Holiness. The cultivation of decorum, good taste, and manners was seen as serving a higher purpose than social advancement. Likewise, material possessions were viewed as God's blessing so long as they were lightly esteemed, freely shared, and met the criterion of usefulness (to "kingdom work"). Returning to a former example, the Inskips had moved from a rural "western" parish, where John was censured by his Ohio Conference for liberalism and pandering to wealthy parishioners. Welcomed into the Palmer home, John Inskip found his former opposition to sanctification (as evidenced in his *Methodism Explained and Defended*, 1851) giving way to his

embrace of the experience and the dedication of his ministry to its propagation. In contrast to dissident Free Methodists Roberts and Redfield, Palmer and Inskip profoundly influenced the MEC bishops from their privileged positions as insiders.

Finally, on the heels of the financial panic of 1857, daily union prayer meetings (open to all denominations) awakened in many urban businessmen an unction to see scriptural principles applied to the marketplace. Wealthy “businessmen’s revival” participants funded many urban and international mission projects, as urban laity assumed leadership roles in Holiness associations. The interface of business and revival concerns, previously seen in the Great Awakening under George Whitefield, had encouraged the “marketing” of the revival in newspapers. The Second Great Awakening saw the development of permanent Holiness resorts—the original being the Ocean Grove (New Jersey) Camp Meeting—hosting perennial Holiness conventions. Here, prosperous Christians could receive Holiness instruction in a restful, temperance-oriented vacation setting.

In responding to the nineteenth-century dynamics of urbanization, feminization, and the rise of a middle class, Methodism thus effectively transformed its primary tools of frontier class meetings and revivals into weekday home meetings and Holiness retreats. Consequently, Methodism itself was being transformed to reflect the values of modern American culture. The National Camp Meeting Association mobilized to accommodate the phenomenal growth in popularity of the early national camp meetings, from 10,000 in attendance at the first meeting in 1867 to 250,000 at the third in 1869. This growth prompted many among the MEC laity to request reduced local church responsibilities as they busied themselves with conference organization and promotion. The bishops responded by affirming the sincerity of those who zealously maintained Holiness ministries but also by deploring the tendency to act as an autonomous arm of the church. The proliferation of independent Holiness camps and associations therefore exacerbated tensions within the MEC, frequently necessitating that the National play the role of mediator.

Thus, throughout the latter half of the nineteenth century, the rise in the popularity and national visibility of Holiness revivals and camp meetings helped to move the doctrine of entire sanctification to center stage in American Protestantism, where, as “Holiness,” it became both a banner—the hope for the revitalization of the church—and a shibboleth for an increasing number of evangelicals. Toward

the end of the period described here, the geographical center of the Holiness movement shifted from New England to Chicago.

In 1872 the Western Holiness Association was established in Illinois, complementing the work of the National Camp Meeting Association back east. Many regional camp meetings and associations were spawned in its wake, including the Texas Holiness Association (1878), the Iowa Holiness Association (1879), and the Southwest Holiness Associations (Kansas and Missouri, 1879). These associations advocated denominational support, yet permitted the establishment of independent Holiness small groups in places where MEC (North) officials were antagonistic toward “Holiness agitation.” These “Holiness bands” soon gave birth to independent Holiness congregations and denominations. Responding to the movement’s growing divisiveness, the MEC (North) censured “Holiness agitation” just as, previously, it censured “slavery agitation.” The bishops reacted to the criticisms originating from Holiness circles by appointing pro-Holiness ministers to anti-Holiness congregations and anti-Holiness preachers to pro-Holiness churches.

In avoiding the MEC tactic of mismatching pro-Holiness ministers and congregations, the Southern California and Arizona Holiness Association was perhaps first to permit the formation of small Holiness bands, leading to the founding in 1880 of a connection of independent congregations known as the “Holiness Church.” The Southwest Holiness Association (SHA), following this trend, allowed Holiness bands to appoint their own pastors. The resulting association of independent congregations grew in power and influence until it managed to take over the SHA. Former MEC minister John Brooks became the theorist and spokesman for this and other “come-outer” movements with the publication of *The Divine Church* (1891), which opposed connectionalism (MEC polity) as contrary to “true holiness.” Brooks had experienced entire sanctification in a rural Illinois revival in 1869 and had subsequently edited the Western Holiness Association’s journal, the *Banner of Holiness*, read widely throughout the Holiness movement.

The Church of God (Anderson)

A third Holiness attempt at restoring the primitive church was led by Daniel S. Warner (1842–1895), eventually becoming the Church of God (Anderson, Indiana) (the location is added to distinguish this group from other denominations called the Church of God). This was at first called the “Church of God movement” by Warner and his

converts, in contrast to the *Churches of God* organized by John Winebrenner earlier in the century, from which Warner had been expelled for testifying of his experience of entire sanctification. At first, Warner followed others in the Northern Indiana Eldership of the *Churches*—a schism based on the *Churches'* failure to denounce worldly associations such as membership in secret societies. However, Warner came to oppose ministerial licensing and other formal church practices of the eldership as a false basis of fellowship and withdrew from this group as well. The fellowship of local churches subsequently established by Warner kept no membership records, believing that the Church of God included all Christians who had experienced the second work of grace, or entire sanctification.

The restoration movement among Holiness churches was thus inspired by what proved to be an elusive ideal of unity that sought grounding in the New Testament. When no consensus emerged, leaders of the independent movements were left with a functional view of unity based on the experience of sanctification. The result was a strict separatism, spurred on by the offense of what was perceived as the institutional church's compromise with the world—the materialism and superficiality that marked the fin de siècle. Lacking a centralized form of church government, which they opposed, the restoration movements were often characterized by internal strife and discord. The separatism that marked the Church of God movement also reflected the economically poor and socially marginalized character of its participants. In that social setting, women were encouraged to preach and to pastor churches, and there was an emphasis on outreach both to immigrants and to African Americans, with Jane Williams starting the movement's first African American congregation in Charleston, South Carolina, in 1886. The Church of God (Anderson) has ever since remained one of the few racially integrated denominations, with African Americans comprising approximately 20 percent of its membership at the turn of the twenty-first century.

The Church of the Nazarene

According to Timothy L. Smith, the Holiness movement's most prominent historian, immersion in social work tended to alienate the urban Holiness leaders from the MEC. Church of the Nazarene founder Phineas Bresee (1838–1915) served as Smith's example, since Bresee's ministry to the poor in Los Angeles through the Peniel Mission brought his long career as an MEC minister to a close.

Bresee brought abolitionism with him from his western New York home and helped elect abolitionist Gilbert Haven an MEC bishop. During the national revival of 1857–1858, Bresee ministered in rural Iowa, where he encountered sanctification and began a series of revivals that gained him notoriety both as an evangelist and as a fund-raiser able to bring prosperity to so-called “hardscrabble circuits.” He later described his grasp on Holiness at this period as tentative—an assessment that seems borne out by his involvement in a failed venture capitalist scheme.

Bresee left Iowa penniless but arrived in Los Angeles in the late summer of 1883, where invitations to preach at prominent MEC churches were immediately extended to him. In Los Angeles, Bresee excelled at Methodist Conference work and befriended Holiness advocates among the laity, becoming the champion of several prominent businessmen seeking to advance the Holiness revival in Southern California. With their backing he augmented the Southern California and Arizona Holiness Association through a series of revivals and comprehensive social initiatives. Bresee's Iowa-tested revival methods sparked opposition from the cosmopolitan Los Angeles ministers. Although he viewed his own presentation of entire sanctification as cautious and diplomatic, Bresee's strategy of inviting nationally known Holiness evangelists to California to speak fanned the flames of “Holiness agitation” in the conference, earning him, by 1894, an assignment to a heavily indebted church whose members were hardly enthusiastic about Holiness. At this point in his career Bresee was unable or unwilling to do for the “grand tabernacle” of Los Angeles (Simpson MEC) what he had done for many others, and when his request for reassignment to inner-city mission work was denied, Bresee withdrew from the MEC. Based on his belief that the conference ministers had mobilized against Holiness only lately, and then only at the prompting of anti-Holiness bishops, Bresee lamented his initial caution in advancing Holiness in the conference when most doors were wide open to him.

The congregation first called the Church of the Nazarene gathered about Bresee at Peniel Mission where he developed the Nazarene creed, together with its polity as a democratized form of Methodism. The local, mission-focused body attracted like-minded congregations throughout California and the Midwest. The official founding of the denomination resulted from the 1908 merger with other churches similar to those already described in this article: earlier schisms over Holiness teaching from various MEC churches in New England and New York yielded

independent Holiness congregations and were subsequently gathered up into the Pentecostal Church of the Nazarene and the Association of Pentecostal Church of America (for whom “Pentecostal” signified the baptism or fullness of the Holy Spirit, resulting in Holiness). In the Southeast, remnants of a restorationist body—the New Testament Church of Christ—joined with independent Holiness congregations in Texas to form the Holiness Church of Christ. These groups were connected through the efforts of C.W. Ruth, an Indianapolis-based Holiness evangelist who became a traveling secretary for the Church of the Nazarene.

Holiness Mergers and Missions

Evangelistic missions were characteristic of the Holiness movement from its earliest years as a reform enterprise. The story of William Taylor (1821–1902) is representative of the widening horizons of Holiness missions. A gifted preacher, Taylor was recruited from his rural Virginia circuit for evangelistic ministry in Baltimore before being sent to California as a missionary during the Gold Rush. The national bank failure of 1857 brought an end to Taylor’s Seaman’s Bethel ministry, and he returned to New York to publish a book of his experiences to pay his debts. There he met Phoebe Palmer and became involved in the national revival of 1857–1858, preaching Holiness in New York, Canada, and throughout the Midwest. Billed as “California Taylor,” his independent missionary bravado endeared him to his growing Holiness constituency. His subsequent missions throughout the world were self-funded through the sale of his books and guided entirely by the “leading of the Holy Spirit,” apart from the knowledge or approval of the Methodist Board of Missions. By 1896, when he was forced to retire, Taylor had established independent churches, missions, and schools in Australia, India, Latin America, and Africa, most of which reflected a Holiness perspective. Taylor’s autonomous mission strategies—described in his *Pauline Missionary Methods*, published in 1879 by the National Camp Meeting Association—taxed the patience of politically minded mission board members. His surprising election as missionary bishop to Africa in 1884 was seen as a vindication of his methods by his Holiness supporters. Many Holiness associations and denominations subsequently commissioned their own missionaries who, like Taylor, paid little attention to formal comity arrangements.

The Salvation Army (SA)

The Salvation Army is a Holiness denomination that combined reforming zeal with centralized authority. Though

British in origin, the SA established a beachhead in Philadelphia in 1879 and spread rapidly throughout the United States. The SA’s mission was to reach souls trapped in poverty and related miseries in the inner city, and this ensured its influence in every major urban center; its officer training appealed to recruits, for whom it served as a Protestant religious order; and its military discipline naturally complemented a life of Holiness. Through the publication of its paper, the *War Cry*, and best-selling works of officers such as Samuel Logan Brengle (1860–1936), the SA influenced Holiness theology by tempering the “shorter way” theology of Phoebe Palmer. The SA’s strong organization and centralized authority provided an enviable model for those who lamented the challenge of reaching consensus with the partners of independent Holiness associations. Its pervasive work has made the SA the best-known corporate representative of the Holiness life and the most widely supported charity in America.

Later Developments of the Holiness Denominations

Late in the nineteenth century the WMC became the “Wesleyan Methodist Connection (or Church) of America”—the addition of *or church* signaling a new tolerance, if not appreciation, for the need for central ecclesiastical authority. That same year, 1891, a general secretary was installed to coordinate the necessary churchwide support for world missions. While repeated attempts to merge with the Free Methodist Church failed, the WMC became the “Wesleyan Methodist Church” through its union in 1968 with the Pilgrim Holiness Church, having already received several Holiness associations into its membership. By way of these and later mergers, the WMC became responsible for missionary work throughout the world, growing to a constituency of four hundred thousand, in four thousand churches, in eighty countries by the end of the first decade of the twenty-first century.

The Free Methodist Church, traditionally a rural body, sponsored urban missions as early as the 1860s (the decade of its founding), with Jane Dunning ministering among African Americans in New York City. By the 1880s the Free Methodist Church began sending missionaries to the Far East and Africa, and its subsequent missionary endeavors have established general conferences throughout the world. By 2010, the denomination’s U.S. constituency was only about 10 percent (fewer than sixty-five thousand), with the balance of its seven hundred thousand total membership in

India (18 percent) and Africa (53 percent) and the remainder in Vietnam and elsewhere in Asia.

Like other Holiness bodies, the Church of God (Anderson) was shaped in the twentieth century by the rising social class of its leadership and the influence of corporate models of organization. With a U.S. constituency of about 250,000 (as of 2010), the Church of God (Anderson) remains one of the few racially integrated denominations, of which about 20 percent is African American. True to founder D. S. Warner's convictions, the church remains without formal membership.

The Church of the Nazarene—a merger of existing Holiness congregations and associations—gained missionaries in India and Japan at the time of its founding in 1908. Additional mergers after 1915 added missions in Latin America, Africa, and Asia. Later on it received into its membership a number of indigenous Holiness congregations in Australia, Canada, Great Britain, and Nigeria. In contrast to the Free Methodist denomination, which is composed of the independent Free Methodist conferences, Nazarene congregations throughout the world are directed by the American church.

Interdenominational Holiness Associations

The same concerns that gave rise to Holiness denominations are seen in the development of later, interdenominational Holiness associations—especially a perceived laxity in behavioral standards and the centralization of decision-making authority. Like their predecessors, these Holiness advocates are averse to launching new churches and take care to avoid being perceived as “come-outers.” Participants gather to pray for the revival of their respective denominations and to hear teaching on the doctrine of sanctification. Some of these associations serve practical, pastoral ministry concerns, while others are academically oriented.

The prototype of interdenominational Holiness associations was the (already mentioned) National Camp Meeting Association for the Promotion of Holiness, which sponsored annual national meetings from 1870 to 1942. Thereafter the National served as a resource and clearinghouse for annual local and regional camp meetings, some of which still meet. In 1910 the National founded its own missionary society (now the World Gospel Mission). In 1971 the National became the Christian Holiness Association and in 1998 the Christian Holiness Partnership, both with a view toward offering informational seminars to participating Holiness denominations and institutions. Several years after the 1998

name change, the Partnership became, and as of 2010 it remains, inactive.

Still active is the Inter-Church Holiness Convention, which began in 1951 under the leadership of Holiness publisher H. E. Schmul (1921–1998). Its participants meet annually in Dayton, Ohio, to worship, to pray for revival in the various Holiness denominations represented, and to encourage teaching on the doctrine of entire sanctification.

Active scholarly associations in the Wesleyan Holiness tradition include the Wesleyan Theological Society, an offshoot of the National founded in 1966 to encourage research and fellowship among Wesleyan scholars, and more recently the Aldersgate Forum, sponsored by God's Bible School in Cincinnati, Ohio, to promote dialogue and scholarship on the conservative Holiness movement.

Scores of Bible and Christian liberal arts colleges and seminaries were established during the late-nineteenth-century consolidation of various Holiness associations. Many of these, such as God's Bible School in Cincinnati, founded in 1900, were training schools for missionaries and urban Christian workers. Asbury College in Wilmore, Kentucky, was founded as the Kentucky Holiness College by MEC evangelist John Wesley Hughes (1852–1932), graduating world-renowned evangelist E. Stanley Jones in 1907. Some Holiness schools were newly founded (such as Asbury in 1890), and others took over older institutions. Taylor University was purchased by the National Association of Local Preachers in 1890, which renamed the “old Methodist College” of Fort Wayne, Indiana (est. 1846), for their champion, William Taylor, whose name was synonymous with Holiness evangelism and independent lay missions.

Conclusion

This threefold survey of the Holiness denominational family may be summarized in terms of the initial quest for a corporate identity (a “true Wesleyan” reform), followed by the diversification of the movement with its many individual expressions and associations, and a subsequent merging of Holiness constituencies into denominations and national or international partnerships or conventions. These later mergers produced Holiness missions, which, in turn, have revitalized Holiness life abroad through indigenous congregations worldwide.

In what ways did the Holiness denominational family succeed or fail? The answer, of course, is intertwined with the Holiness movement itself. Certainly, the constituent organizations failed in their quest for unity, which some

advocates considered the *sine qua non* of any Holiness worthiness of the name. Indeed, unity appears to have been most lacking in seasons when Holiness essentials were most clearly articulated. Moreover, in reminding the church of its responsibility to uphold a key tenet of Christian orthodoxy, to what extent did Holiness leaders faithfully represent their concerns? For example, were B.T. Roberts's criticisms of the MEC bishops motivated by his desire to advance the role of laity in decision making? What role did the gentility of Phoebe Palmer's Tuesday Meetings play in transforming John Inskip, formerly an opponent, into a leader of the national camps meetings? No "clear and definite" testimony to entire sanctification materialized for Phineas Bresee until he left his rural Iowa circuit for a circle of wealthy lay supporters in Los Angeles, where his conflicts with the MEC began. Bresee's limited grasp of Holiness, however, cannot have been entirely determinative for the course of the Church of the Nazarene he helped to found. The same would be true for the other founders described here: their religious heirs may revere and strive for their ideals without romanticizing their lives. The larger Holiness denominations surveyed here, like their smaller counterparts, continue trying to represent a living legacy of outreach through testimony and faithful living that strives to obey the command, quoted in 1 Peter 1:16, "Be holy, for I am holy."

Holiness Movement

The Holiness movement includes persons who embraced Oberlin, Wesleyan/Holiness, or Keswick theology beginning in the nineteenth century. It expresses the impulse to achieve perfection that has persisted throughout church history. While some individuals in the movement used the word *perfection* to describe their quest, others substituted *sanctification*, *holiness*, *higher life*, *victorious living*, or other synonyms to describe their growth process toward maturity as Christians. By the end of the nineteenth century, millions professed holiness.

John Wesley and Holiness

John Wesley's (1703–1791) understanding of perfection became the basis for the modern Holiness movement. Wesley was a priest in the Church of England during the eighteenth century. When he spoke of the state of holiness, he most frequently used the term *perfection*. Most Christians believed that sanctification occurred simultaneously at conversion or

justification (the beginning of a new life in Christ), a term preferred by Wesley. Wesley, however, maintained that sanctification was a distinct experience following justification. Wesley believed that a period of growth followed justification. Then, God's act of entire sanctification took place in an instant when the consecrated Christian exhibited faith in God's promise of perfection. Wesley affirmed the doctrine of original sin and maintained that entire sanctification cleansed Christians from inbred sin, resulting in a pure heart or holiness. Another consequence of the experience was the renewal of the person in God's image. At this point in the Christian life, Wesley claimed, an individual was perfect. Controversy arose over his definition of "perfection" as it related to sin. Wesley did not help matters, since he appeared to claim both that sanctified Christians did not sin and that the most perfect person could commit transgressions. Confusion over this aspect of perfection continues to this day, causing some to avoid the term altogether.

Unfortunately, Wesley did not author a systematic statement of his view of perfection. He compiled *A Plain Account of Christian Perfection* (1777), but the content does not live up to the title. His discussion of perfection and sin illustrates this shortcoming. Rather than a well-organized rendering of his views, the book consists of portions of his sermons, letters, and magazine articles, as well as hymn lyrics written by his brother Charles.

The theme of love was central to Wesley's theology. He defined perfection as perfect love for God and neighbor. Perfect love would increase as Christians matured. Growth in love would continue throughout one's life. Perfection was not a static condition.

Wesley's emphasis on perfection was not unique. He read widely and consulted diverse theologians, including the Eastern Fathers of the Church. Pietists, after the teachings of Lutheran pastor Philipp Spener (1635–1705), were particularly influential in Wesley's acceptance of experience as a source of theology. The Pietists' emphasis on love and holy living as well as the conviction that growth in these areas must characterize Christians likewise helped shape Wesley's theology.

Wesley supervised priests and lay preachers who followed his practice of traveling throughout the British Isles. They preached justification and perfection in churches or outdoors and established local Methodist societies. Wesley's message spread to the North American colonies when he commissioned preachers to serve as itinerants there. One, Francis Asbury (1745–1816), noted in his diary that he

sought to preach sanctification or Christian perfection in every sermon. Wesley's followers in the United States founded the Methodist Episcopal Church (now the United Methodist Church) in 1784 with Asbury as one of the first bishops. While the doctrine is no longer emphasized throughout the denomination, candidates for ordination still are asked if they are going on to perfection and expect to be made perfect in this life.

Oberlin Perfectionism

This branch of the Holiness movement takes its name from Oberlin College in Ohio and made inroads in Reformed circles. Prodded by a student's question about sanctification, President Asa Mahan (1799–1889) and Professor Charles Finney (1792–1875) researched the topic. For both men, the outcome of this research was a personal experience of perfection during the winter of 1836–1837. Finney is best known as the prominent revivalist of the Second Great Awakening during the nineteenth century. Although Finney was ordained a Presbyterian, his opponents accused him of abandoning the Reformed doctrine of predestination and embracing Arminianism or the belief in free will. This perception is not surprising in light of his revival messages that promised conversion instantaneously when individuals freely repented of their sins and sought God's forgiveness. Christians also exercised free will when pursuing perfection. The revival ethos eroded the belief in predestination and made it possible for those with a Reformed heritage to actively pursue perfection. Mahan formalized his theological shift by leaving behind his Reformed background in the Congregational church and joining the Wesleyan Methodist Connection, a Wesleyan/Holiness group that affirmed Arminianism. Finney's link to Methodism, while not as strong as Mahan's, included reading Wesley's *A Plain Account of Christian Perfection*. It is not surprising that Oberlin theology manifested a strong Wesleyan influence.

Mahan was the primary theologian of Oberlin perfectionism and, for the most part, he followed Wesley's views. One distinction was that Oberlin perfectionists placed more emphasis on the human will. Entire sanctification occurred when the Holy Spirit overwhelmed the will. This difference did not prevent cooperation between advocates of Oberlin theology and Wesleyan/Holiness believers.

Controversy surrounds the origin of equating the baptism of the Holy Ghost with perfection. Some claim Wesley was the source of Pentecostal language to describe

perfection, but he seldom used it. Others trace the association of Pentecost and Holiness to John Fletcher (1729–1785), a close colleague of Wesley. Mahan frequently used the phrase “baptism of the Holy Ghost” and authored a book with that as the title. Mahan found these words in Acts 1:4–5, when Jesus assured his followers to wait in Jerusalem where they would be baptized with the Holy Ghost. Jesus’ words were fulfilled on the day of Pentecost (Acts 2:4). Mahan identified Pentecost as the moment of perfection for those who had stayed in Jerusalem.

Phoebe Palmer and Wesleyan/Holiness Theology

Phoebe Palmer (1807–1874) developed the theology that became the basis for the Wesleyan/Holiness movement. She believed Holiness involved three vital components, the first of which is *consecration*. She borrowed biblical language not used by Wesley but instead relied on Hester Ann Rogers (1756–1794), one of his close friends, who wrote that consecration involved “laying all on the altar,” which she identified as Christ (“the altar sanctifies the gift” Matthew. 23:19 KJV). By this, she meant that everything and everyone in the seeker’s life needed to be symbolically placed on the altar before Holiness could occur. Despite Palmer’s dependence on Rogers, the use of altar language to describe the process of consecration generally is attributed to Palmer. The second component of Holiness is *faith*, which Palmer defined as trusting God. God has promised Holiness, and the person pursuing Holiness must claim that promise. The presence of faith assured Holiness. When these requirements were met, God cleansed the heart and Holiness resulted. The third requirement was *testimony*, which was required to maintain the experience. All three steps required action on the individual’s part, but a divine act was necessary to bring about sanctification and make the person holy. Palmer’s view of Holiness clearly relied on Wesley’s theology.

Palmer’s explanation of Holiness reflected the revival atmosphere of her time. Following the revival pattern, Christians often claimed Holiness quickly rather than after an extended quest. Phoebe Palmer’s language reflected this difference. She described a “shorter way” that did not involve an emotional confirmation. Her own experience had been prolonged because she initially believed that an emotional response was necessary. Following the shorter way, she experienced Holiness in 1837.

Some have accused Palmer of departing significantly from Wesley’s theology. She did disregard the period of growth between justification and Holiness. But contrary to

her detractors, she emphasized growth following Holiness as continually keeping one’s all on the altar. While Wesley did not use “altar” language, the focus on growth was identical. She simplified Wesley’s theology but, for the most part, differences were due to emphasis.

Phoebe Palmer popularized her views by writing numerous articles and authoring several books. *The Way of Holiness* (1843), her personal testimony, appeared in more than fifty editions. *Entire Devotion to God and Faith and Its Effects* were other major books devoted to Holiness. She began editing the magazine *Guide to Holiness* in 1864 but had contributed articles since its inception in 1839.

The Wesleyan/Holiness Movement

Phoebe Palmer deserves the title “Mother of the Wesleyan/Holiness Movement” in the United States. Besides establishing its theology, she played a prominent role in disseminating it. In 1840, Palmer became responsible for the Tuesday Meeting for the Promotion of Holiness, begun in 1836 by her sister Sarah Lankford, for Methodist women from two churches in New York City. In 1839, the meetings were opened to men, including clergy and bishops. Members of other denominations attended the informal gatherings, which sometimes swelled to three hundred people. These meetings played an important role in promoting Holiness and served as the model for more than two hundred similar meetings around the country. Palmer expanded her influence by preaching to more than a million people at more than three hundred revivals and camp meetings. Contemporaries claimed 25,000 conversions and thousands of people sanctified under her ministry. Besides her extensive ministry in the United States and Canada, she spent four years preaching in the British Isles.

In the early nineteenth century, camp meetings had become a popular form of revivalism. In 1867, a camp meeting in Vineland, New Jersey, resulted in the organization of the National Camp Meeting Association for the Promotion of Holiness. Preachers promoted Palmer’s version of Holiness doctrine. Even though Methodist clergy initially dominated the leadership of the group, the association welcomed members of other denominations to the camp meetings. Soon, state associations emerged and camp meetings took place throughout the country. Leadership gradually shifted to Wesleyan/Holiness leaders who had left Methodism because they believed Holiness doctrine was being neglected. Renamed the Christian Holiness Association and, most recently, Christian Holiness Partnership, the group included

Wesleyan/Holiness denominations, camp meetings, independent mission agencies, schools, and individuals who remained loyal to Palmer's theology.

The denominations comprising the Wesleyan/Holiness movement embraced the doctrine of Holiness as preached by Wesley and Palmer. Some small established groups added Holiness to their confessional statements, while others organized explicitly to emphasize Holiness. The denominations are all Arminian. While they agree on orthodox Christian beliefs, there is a wide range of difference, particularly in terms of polity and eschatology. The three largest Wesleyan/Holiness denominations are the Church of the Nazarene, the Salvation Army, and the Church of God (Anderson, Indiana).

Another distinction of Wesleyan/Holiness denominations is their affirmation of women preachers. One factor supporting this practice relates to camp meetings and revivals that recognized prophetic authority in which the Holy Spirit "is no respecter of persons" and chooses who will be gifted to preach. All groups recognized prophetic authority and most ordained women at their inception. The theology of Holiness supported women in the pulpit. Palmer played a prominent role not only by her example but by authoring *Promise of the Father* (1859), a defense of women preachers. The title is a quotation by Jesus in anticipation of the events of Pentecost when his followers, men and women, received power from the Holy Spirit to share the gospel (Luke 24:49; Acts 2). Palmer equated Holiness and power. Hundreds of Wesleyan/Holiness women preachers justified their ministry by quoting Palmer's words. They claimed the power of the Holy Spirit enabled them to challenge restrictive gender roles. Other advocates in the Wesleyan/Holiness movement wrote book-length defenses of women in ministry during the nineteenth and early twentieth centuries. This was highly unusual, since very few women were ordained in other denominations during this time. Authors furnished examples from the Bible, including Paul's favorable mention of women coworkers. Experience was also a key source, in that churches acknowledged a woman's personal call to ministry.

The percentage of women clergy, however, has declined dramatically in most Wesleyan/Holiness churches. One denomination reported 32 percent women pastors in 1925 at a time when most mainline Protestant churches refused to ordain women. That percentage sank to single digits in some groups by the end of the twentieth century. Several denominations are addressing this issue and implementing programs that are resulting in an increase in the number of

women clergy. They also support Wesleyan/Holiness Women Clergy, International, founded in 1991. This group promotes Palmer's legacy by encouraging and promoting women in professional ministry and women preparing for ministry.

Most Wesleyan/Holiness denominations developed along racial lines. The exception is the Church of God, which proclaimed a message of Holiness and unity. Holy living defined as unity resulted in racial unity, which the church practiced from its inception in 1880 until 1917. Then, blacks began forming separate parallel structures within the church as a result of heightened tension between the races. They continued to participate in programs sponsored by the church headquartered in Anderson, Indiana, even though they were marginalized. Reflecting the Black Power movement, the Black Caucus formed within the church in 1970 and demanded leadership in all national church agencies. The church met their demands, and African Americans have held top leadership positions in the church since then. Currently, African Americans comprise approximately 20 percent of the Church of God.

The Wesleyan/Holiness movement has been particularly influential in the area of Christian music. Song writers in the movement have contributed songs such as "The Old Rugged Cross," "Leaning on the Everlasting Arms," and "Blessed Assurance" to the broader Christian world. Popular singers such as Bill and Gloria Gaither and Sandi Patty (also spelled Sandi Patti) are part of the movement as well.

Keswick Movement

Americans Hannah Whitall Smith (1832–1911), her husband Robert Pearsall Smith (1827–1899), Asa Mahan, and William Boardman all played key roles in Holiness meetings that were instrumental in establishing the Keswick (ke'-zik) movement. The Smiths, who were Quakers, encountered Holiness through a member of the Wesleyan/Holiness movement. Hannah Whitall Smith is best known for her book on Holiness, *The Christian's Secret of a Happy Life* (1875), which is still in print. The book's popularity bridged the Holiness groups. Boardman, a Presbyterian pastor, was influenced by Oberlin perfectionism but also attended Palmer's Tuesday meetings. Mahan was active in all three Holiness groups.

Begun in 1873, the meetings moved permanently to Keswick, England, in 1875, and the theology adopted the name of the town. Keswick theology found its way to the United States, most notably through the Northfield Conferences sponsored by revivalist Dwight L. Moody. Even

though Moody clearly belongs in the Keswick camp, his experience of sanctification resulted from the urgings of Sarah Cook and Sister Hawxhurst, two Wesleyan/Holiness urban workers in Chicago.

Popular synonyms for Holiness among Keswick believers were *higher life* or *victorious life*. Adherents refrained from any discussion of perfection and avoided the word. Even though the synonyms differed, Keswick believers, for the most part, belonged to the Reformed tradition, as did adherents of Oberlin perfectionism. Also, corresponding to the Oberlin position, Keswick theology was indebted to Wesley and Palmer.

There are more similarities than differences between the Wesleyan/Holiness and Keswick doctrines. Both emphasize consecration and faith as requirements for Holiness. They also agree that the experience occurs in a moment that is followed by a lifelong process of growth. Some have sought to distinguish the two by attributing a focus on power for evangelism and missions to Keswick theology, but this is not an accurate distinction since the Wesleyan/Holiness movement also stressed power. The contrast between the two theologies relates to original sin. Believers in the “higher life” rejected the view that sin can be eradicated and instead held that the sinful nature remained following sanctification but with continual surrender, the power of the Holy Spirit provided victory over any known sin. Sin was counteracted by victorious living, reflecting the Reformed doctrine that one should “let go and let God.”

Adherents of Keswick theology maintained their denominational allegiances. Moody Bible Institute, Dallas Theological Seminary, and Wheaton College were among the schools that taught Keswick theology. Interdenominational gatherings were another means of promoting the doctrine.

One denomination defies classification in any of the Holiness groups but perhaps fits best in the Keswick category. Its founder, A. B. Simpson (1843–1919), a Presbyterian minister, experienced Holiness in 1874. He became aware of Holiness by reading a book written by Boardman. He founded two ecumenical groups in 1887, one to support missions and the other to promote sanctification and divine healing. They merged in 1897, forming the Christian and Missionary Alliance (C&MA). Simpson’s Reformed heritage and the fact that the C&MA does not believe in the eradication of original sin distinguish it from the Wesleyan/Holiness movement theologically. However, during the late nineteenth and early twentieth

centuries, many people from both groups worked together in urban slums to alleviate problems caused by poverty.

Social Christianity

It is not coincidental that the area of upper New York “burned over” by revival fires of the Second Great Awakening was also the center of social reform. It is impossible to separate revivalism and Oberlin perfectionism in terms of their role in promoting Christian efforts to create a perfect society. Finney preached conversion to sinners and perfection to Christians. Finney, his converts, and Oberlin graduates sought the perfection of society as well. Finney’s commitment to the antislavery cause is a primary example. One of Finney’s “new measures” also affirmed women preachers at revivals. This practice extended to promoting equality for women in the political arena.

Several issues, including abolitionism, led the Wesleyan Methodist Connection of America (now the Wesleyan Church) to split from the Methodist Episcopal Church in 1843. Members participated in the Liberty Party, which was committed to ending slavery and securing the rights of women through the political process. A Wesleyan Methodist congregation hosted the first woman’s rights convention in Seneca Falls, New York, in 1848. Like Finney, these church members refused to limit perfection to individuals and worked to create a perfect society.

Some refer to Wesleyan/Holiness involvement in social Christianity as “sanctified compassion” or “social Holiness” to distinguish it from the Social Gospel. Wesley provided a solid foundation for social Holiness by consistently stressing the need to love God and love neighbor. He refused to separate inward and outward Holiness and practiced social Holiness by meeting physical needs of the poor.

Palmer professed the Christian’s duty to be useful and set the example for Wesleyan/Holiness believers. Among other activities, she ministered in the notorious Five Points neighborhood of New York City. The mission she helped establish there included a chapel, housing for families, and a school.

Particularly following the Civil War and through the turn of the twentieth century, many Wesleyan/Holiness women and men worked with the poor in urban slums providing job training for former prostitutes, dealing with the ravages of alcohol, or offering shelter and food. Wesleyan/Holiness workers spoke of love of neighbor as the motivation for their actions. The Salvation Army is the best-known Wesleyan/Holiness group that exemplifies social Holiness.

Relationship to Fundamentalism and Evangelicalism

The Holiness movement's affinity with fundamentalism depends on which group is being considered. Sometimes, the Wesleyan/Holiness branch is identified with fundamentalism, but that is generally because of the mistaken assumption that Wesleyan/Holiness maintains the Bible is inerrant. While fundamentalism affirms inerrancy, most Wesleyan/Holiness denominations focus instead on the purpose of the Bible, stressing its value in terms of explaining salvation rather than claiming it has no scientific or historical errors. The Wesleyan/Holiness movement holds a high view of scripture, believing that everything that relates to faith and practice is true. Also, dispensational premillennialism is often associated with fundamentalism, but it did not make inroads in Wesleyan/Holiness denominations.

The majority of the Wesleyan/Holiness movement did not identify with fundamentalism, when fundamentalism originated in the early twentieth century as a militant response to modernism. It is more accurate to speak of the Wesleyan/Holiness group as being among the many "innocent bystanders" that did not take sides in the modernist/fundamentalist controversy. Over time, the small minority of Wesleyan/Holiness adherents who initially embraced inerrancy has been joined by others. Contemporary fundamentalists who rejected the movement toward neoevangelicalism do not include these Wesleyan/Holiness believers in their camp, notwithstanding their affirmation of inerrancy. Fundamentalists reject their theology of Holiness.

On the other hand, Keswick theology found itself in harmony with fundamentalism rather than fostering new denominations. This is evident in Scofield's Reference Bible, published by C. I. Scofield (1843–1921) in 1909, which continues to be popular among many fundamentalists. His annotations promoted dispensational premillennialism and also traced the relationship between Keswick doctrine and dispensationalism. The "higher life" is still preached from fundamentalist pulpits, although there is no way of determining the extent of its influence today.

There is no agreement on the definition of *evangelicalism*. Scholars have suggested from three to fourteen classifications. Narrow and broad definitions abound, although the word has numerous meanings depending on the time and place. This makes it difficult to assess the term as a possible label to describe groups in the Holiness movement.

Using an historical approach, a group of fundamentalists began calling themselves "neoevangelicals" during the late

1940s. Billy Graham (1918–) was the most well-known member of the group. Neoevangelicals retained fundamentalist doctrines but sought to be more engaged in cultural and intellectual arenas. *Neo-* eventually was dropped and *evangelical* now describes this position. Evangelicals are heirs of fundamentalism; the Wesleyan/Holiness movement does not belong in the evangelical category because it traces its roots to Wesley rather than to fundamentalism.

Others favor a broad sweeping definition of "evangelical" that includes Wesleyan/Holiness believers and many other "innocent bystanders." In this case, *evangelical* refers generically to conservative Christians who preach the gospel of Jesus Christ. This definition assumes that Christians are either conservative or liberal when, in fact, they fall along a wide spectrum and do not neatly fit into these two categories. While many Wesleyan/Holiness adherents and several denominations today accept "evangelical" as a self-designation, others reject it because of its historical ties to fundamentalism. They fear that identifying with evangelicalism will result in the further loss of Wesleyan/Holiness distinction.

Holiness and Pentecostalism

The Wesleyan/Holiness movement is sometimes confused with the Pentecostal movement because of its identification with Pentecost and the use of Pentecostal language. By 1900, this language was commonplace, and the Holy Spirit played a primary role in Holiness theology. Both movements looked to Pentecost as the precedent for their theology. Several Wesleyan/Holiness groups initially incorporated "Pentecost" in their names. To distance themselves from the Pentecostal movement, they later dropped the word. Some minimized Pentecostal language and also the relationship between power and Holiness that stemmed from an emphasis on Pentecost. Equating speaking in tongues (*glossolalia*) with the baptism of the Holy Spirit led to further problems with differentiation, since the latter term also had been used as a synonym for sanctification by Wesleyan/Holiness advocates.

However, it is clear that Pentecostalism was an outgrowth of the Wesleyan/Holiness movement. Agnes N. Ozman (1870–1937) spoke in tongues, the primary distinction of Pentecostalism, in 1901. She was a member of a Bible study begun by Charles Parham, a Wesleyan/Holiness preacher. But it was the Azusa Street revival beginning in 1906 that catapulted the experience into a worldwide phenomenon. The revival originated under William Seymour (1870–1922), a Wesleyan/Holiness preacher. Numerous Wesleyan/Holiness believers attended and began speaking in tongues. They

defined glossolalia as a third work of grace, following conversion and sanctification. Several Wesleyan/Holiness denominations such as the Church of God (Cleveland, Tennessee) and the Church of God in Christ embraced glossolalia.

Many C&MA members found speaking in tongues compatible with their faith. While the denomination did not adopt the practice, A. B. Simpson's emphasis on the fourfold gospel of Jesus as Savior, Healer, Sanctifier, and Coming King contributed to Pentecostal theology.

The Holiness Movement Today

Oberlin perfectionists aligned with the Keswick movement. A shared Reformed heritage was one factor in making this transition. There is no separate group of Oberlin adherents today. Officially organized in the United States in 1913, Keswick conferences have met at Keswick Grove, New Jersey, since 1923.

The Wesleyan/Holiness movement provides a classic example of sect/church typology. Originally, denominations were sectarian because Holiness included outward purity, which meant separating oneself from "worldly" activities such as card playing, dancing, attending movies, and fancy dress. These distinctions gradually have been abandoned. The sect/church cycle has recurred as small groups have split from established Wesleyan/Holiness denominations to maintain the earlier sectarian understanding of outward Holiness. They have joined together with like-minded individuals and independent congregations as members of the Interdenominational Holiness Convention, which organized in 1947.

Holiness doctrine has lost its emphasis in many churches that claim a Wesleyan/Holiness heritage. To counter this trend, several denominations have explicitly focused on describing Holiness so that it is relevant. In 2006, ten denominations issued a Holiness Manifesto that restated Holiness theology for a contemporary audience. These activities indicate a heightened interest in reclaiming the defining doctrine of the movement.

Holocaust

The subject of the Holocaust (in Hebrew, *Shoah*), the near-total destruction of the Jews and other groups in Europe during World War II, is of great moral significance in the history of Western civilization. Genocide, the obliteration of all members of a national group, is one of the most horrible of crimes and one of the most difficult to deal with in the field of social studies; it reveals the human race at its worst. Researchers in the shadow of the Holocaust testify to the stubborn persistence of the Shoah to "the past that weighs like a nightmare on the brain of the living," as Jean-Paul Sartre once described history.

The "deadly weight" of the Shoah—the horrific tradition of state-sponsored victimization and murder and the uncountable human, spiritual, and material loss that followed—has aroused many Christians and Jews to speak out against revisionist history of the Holocaust—that is, distortion of the Holocaust facts. For example, on May 5, 1985, President Ronald Reagan and Chancellor Helmut Kohl of West Germany visited Bitburg's Kolmeschohe military cemetery, where soldiers from the Second SS Panzer Division are also buried, to honor soldiers killed during World War II. The occasion was to commemorate in good faith the fortieth anniversary of the end of World War II. However, many veterans' groups, members of Congress, and Christian and Jewish groups protested this event as revisionist history, because it appeared to discount that soldiers from one of Hitler's brutal SS units were also buried there, and in

so doing seemed to dishonor the millions of victims of the Holocaust.

Encountering the Shoah

Advances in understanding of the Shoah (causes, effects, responses) have been dramatic and widely chronicled in the second half of the twentieth century. Holocaust studies have occurred in successive waves. The first recounted the horrors of the Nazi treatment of Europe's Jews, 1933 to 1945, in the historical context of deep-rooted religious anti-Judaism, secular anti-Semitism, and renewed nationalism. Though many Catholic and Protestant churches and laypeople accepted and endorsed the virulent anti-Semitism of the Nazi state, fed in part by scriptural and church teachings (for example, charges of deicide and misanthropy), they pursued a policy of compromise and accommodation with the Nazi regime because of concerns about possible anti-Christian repercussions emanating from its fascist ideology. Some church leaders courageously opposed the Nazi treatment of Jews, and a network of resistance and rescue movements helped Jews flee from the Nazi regime. Also, statements and resolutions from the provisional World Council of Churches (Geneva, November 16, 1938), General Assembly of the Presbyterian Church USA (May 1939), and Federal Council of Churches, United States (December 11, 1942) spoke out against racial persecution and anti-Semitic propaganda and for full justice for Jews in Western civilization.

The second wave of Holocaust studies indicted the German and Austrian nations, the Roman Catholic Church leadership, the French, English, and Soviet governments, and the free world for their lack of intent and will to combat morally the threat of and from Nazism. Christian complicity in the Nazi war against the Jews was roundly criticized in "Ten Points of Seelisberg" (Switzerland 1947), and the founding meeting of the World Council of Churches condemned anti-Semitism as irreconcilable with Christian belief and practice (Amsterdam 1948). Also, in this second wave arose questions of theology and theodicy—that is, issues regarding the interrelationship between human and divine responsibility—following the horrors of Auschwitz, the Nazi extermination camp in Poland.

In a third wave, during the last decades of the twentieth century, a number of Jewish and Christian scholars exposed and debunked disingenuous Holocaust denial and revisionism among historians and others. They argued against the denial and the minimization of the event and emphasized that moral bankruptcy among those who deny the historicity of the Shoah is an early warning sign of genocidal tendencies

now and in the future. Finally, the rise of Jewish-Christian discussion groups, symposia, and conferences interfacing on post-Holocaust morality and theology is notable in the last decades of the twentieth century and at the start of the twenty-first century.

Perhaps because of the tendency to focus on the Shoah itself, one aspect of Holocaust studies has been less carefully considered: the impact of the Shoah on America and, more specifically, on Jewish life and Christian belief in America. There are a number of questions in this area of Holocaust studies. When and what did Jews in America know about the European Judeocide? How effective or ineffective was the American Jewish response to the murder of European Jewry? How do Shoah survivors who came to America deal with shattered memories, and why do many (but not all) feel the need to educate others? How do survivors in America relate to scholars whose research endeavors to objectify their years of agony, pain, and torment? After decades of silence by many American Jews, why has the Holocaust become a black hole around which their Jewish identity is spiraling? How—in American terms—are we to deal with Jewish theology after the Shoah? How successful is academic Christian-Jewish dialogue in helping the American Christian in the pew to distinguish between Christian verities and teaching of triumphalism (the triumph of Christianity over other religions), which contributed to Nazi *Geistigkeit* (enthusiasm) in the bosom of Christendom? How does one "sensitize" an American Christian culture to not sanitize or Christianize proper memory and respect for the Shoah?

Jewish-Christian Dialogue

In some Christian theology on the Shoah, the measures appear to be the church and its sacred texts and traditions. However, for the dialogically minded Christian and Jew, this sort of theology, while valuable, will not suffice in a post-Auschwitz age. They acknowledged that a comprehensive sense of understanding holocaustal events by way of interfaith dialogue is critically important.

The modus operandi of the scholars involved in dialogue is straightforward and transforming: as practicing Jews or Christians, they examine the impact of the Shoah on their religious commitment by demonstrating how a dialogical encounter with selected biblical texts and postbiblical religious texts of both traditions can foster mutual understanding and respect, as well as personal change among its participants. Moreover, because they believe study of the Shoah requires that they transcend the objectivity and data-driven detachment of standard academic

approaches, those involved in dialogue encourage students to enter into a confrontation with the reality of the Shoah, its aftermath, and the directions that they can take in a post-Auschwitz world.

The development of an interfaith approach, as presented by Shoah scholars who are also committed to a variety of religious faiths and confessions, offers a model for dialogue, as well as an interdisciplinary approach to learning. Focus on texts is only one version of a model for many other research topics, and only one approach among many possible options. The twenty-first century presents a turning point among researchers. This generation of scholars is the generation of dialogue. They are not only modeling a way of doing Shoah research but are also modeling a style of being in the world that is ultimately the only way to say “Never again.” This may be the basic intent of such research and teaching: that is, the aim is not merely to expose the evil of the past or even just to sustain the memory for the sake of the survivors but to build a world for the new generations. This world is a world of dialogue.

For instance, the mandate of the first American Scholars Conference (Wayne State University, 1970), as well as its immediate successors, has been clear and precise: to root out the anti-Jewish bias (or *contra Judaeos*) found in some Christian preaching and teaching; to stress the importance of the study of Judaism on its own terms so that Christians are able to assess the positive value of rabbinic cult, rite, and law on the early church and on the later history of Christianity; to confront the “teaching of contempt”—traced back to certain New Testament passages and the comments of the early church fathers—that Christians have projected onto the Jews for the past two millennia across denominational barriers; to take seriously the concept of the Jews as God’s covenantal people, whom Christians in their understanding of God’s Word in scriptures and tradition are morally bound to support and protect; to rediscover the deep Jewish roots of the *corpus Christi* (Body of Christ) and live the *imitatio Christi* (way of Christ) without anti-Semitism; and finally, to avoid Christian-centered agendas (manifest, for example, in the argument that Christians suffered equally as did the Jews in the Shoah), as well as Jewish-centered agendas (for example, the argument that Jews are best suited to teach about the Shoah to Christians, whose primary role should be to listen passively) by learning intellectually and honestly the lessons of the Shoah in a setting that is interreligious, international, and interdisciplinary. Overall the aim of this first American Scholars Conference and successive conferences

was to lay a solid dialogical groundwork for a believable and workable interfaith response to the Shoah.

In sum, no single philosophy can be superimposed on the Shoah agenda. Suggestions come easily when they deal with facts and figures, but Shoah education reflects the vitality of live concepts. Thus, interfaith discussion mirrors causes of existence and conditions of being and responds to the imperative “Remember and do not forget” in ways different from exclusively piloted agendas (for example, those found in strictly ecclesiastical or survivors’ conclaves). Also, Shoah thinking cannot function under ideological imperialism. Its stream of consciousness is like the natural world: only diversity and adaptation will energize it.

Jewish Religious and Theological Responses

Elie Wiesel, Shoah survivor and Nobel Peace Prize laureate (1986), has stated that the Holocaust transcends history and that the living are neither capable nor worthy of recovering its mystery. Nonetheless, American Jews grapple with the historicity of the Shoah, as they present a wide range of literary, pedagogical, religious, and theological concerns and approaches that attempt to pinpoint ways in which it is possible to remain human and seek meaning in an age of technologically administered mass death.

Responses by survivors reflect their excruciating experience so that others can learn. Many relate witness stories promoting Jewish survival as an unshakable dogma after Auschwitz. Exceptional are the words of Wiesel in his memoir *Night* (1958), which are read at many Yom HaShoah commemorative events at schools and in communities:

Never shall I forget that night, the first night in camp which has turned my life into one long night. . . . Never shall I forget the little faces of the children, whose bodies I saw turn into wreaths of smoke beneath a silent blue sky. Never shall I forget those flames which consumed my faith forever. Never shall I forget that nocturnal silence which deprived me, for all eternity, of the desire to live. Never shall I forget those moments which murdered my God and my soul and turned my dreams to dust. Never shall I forget to live as long as God Himself. Never. (p. 32)

Wiesel’s memoir does not diminish the paradox of the Shoah (that is, end of childhood innocence, question of simple faith) but serves to make the issue more troubling and therefore also more full of hope. Survivors strongly advocate that the specific lessons of the Shoah should never

be forgotten. Their eyewitness approach to the event, which is rooted in the redemptive quality of memory, carries the message that one can survive with morality, a message that appeals to all who have suffered and will suffer.

To explain the worst calamity in Jewish history, the ultra-Orthodox view the Nazi atrocity as a punishment for Jewish sins (for example, assimilation and secular Zionism) or a wake-up call against a far worse collective tragedy. Religious humanists argue that the Holocaust suggests the absence of the biblical-rabbinical God in contemporary culture and the demise of a core doctrine, the Chosen People of Israel. Others opine about post-Shoah Jewish existence. The survival of the Jews is learned from the everyday acts of prisoners in the death camps nurtured and sanctified by the way of Torah. Thus, the standard for millions of Jews trapped in Adolf Hitler's inferno was neither nihilism nor despair nor suicide but the practice of Judaism to the extent possible under such horrendous conditions. This behavior of *tikkun 'atsmi* ("repairing of self") points the way to healing the rupture of the Jewish people after the Shoah. That is to say, Jews must survive as Jews—ethically, morally, and ritually—and under no circumstances must a posthumous victory be granted to Hitler.

How may Jewish theology explain the effects of the worst catastrophe in Jewish history on the faith of Israel? Traditionally, the basics of Judaism are derived from an encounter between God and Israel begun at Sinai and renewed during the centuries of prophetic leadership and later rabbinic thought. The Lord is a creator God and the world of his creation is purposely designed as less than perfect, for if it were perfect there would be no need for history or of the finite realm. God is not the elusive "absolute" of philosophers, but, as expressed in the biblical-rabbinic imagery, he is involved in history and cares for his creation. He shows his loving concern through ethical-religious channels.

Humankind, made in the image of God, properly lives that image by performing Godlike actions of justice, mercy, and righteousness. God purposely hides his face (*hester panim*) so that humanity can exercise freedom of ethical choice, thereby becoming a partner—albeit subordinate—with him in bringing about a universal era of wholeness—that is, peace and redemption. Nonetheless, Shoah is a dramatization of faith shattered when humanity fails and *hester panim* prevails. Thus Judaism's encounter with covenantal theology treats all who died in the European hell, believers and nonbelievers alike, as *kedoshim* (saints, martyrs).

From this recognition comes the breakthrough of faith after the Shoah in American Judaism.

But is it Judaism as usual? In view of what the Shoah presents, the murder of millions coupled with a horrifically hidden God, the role of Israel's covenant and the mythos of Israel's election must be revised, reevaluated, and renegotiated. Indeed the very word *Holocaust* invokes images of fire and burnt offerings. It is associated with the *akedah*, the binding of Isaac in the biblical story in which Abraham is tested and Isaac is victimized (Genesis 22). The use of that word consequently empowers the Jew to question the intentions of God. On the other hand, the term *Shoah* (devastation, destruction) focuses on the human propensity to dislike the unlike and ultimately eliminate land, nature, and humankind.

An element of post-Shoah theology argues that the imposed covenant at Sinai is no longer essential after Auschwitz. It cannot be otherwise; it has failed. Centuries of persecution have chipped away at its words, and the flames of the Shoah have obliterated its authoritative words that "descended on it in fire" (Exodus 19:18; NIV). In lieu of the shattered obligatory covenant, a new covenant has arisen by virtue of the actions of survivors and other Jews who choose not to assimilate, die, or forget but to survive as a people. Jewish survival by any means necessary, including secular activity, is the central tenet of the new voluntary covenant. Shifting from obligatory to voluntary does not compromise the unity of Judaism any more than the unity of God. It is responding to the faithless Jew, existing in the shadows darkened by the inferno smoke of the Nazi crematoria, who lives Judaism either by being, or by being in the process of becoming, but not necessarily by following the Torah of Sinai. Covenant living in the image of God, not logic or straight belief, is a new process in American Judaism in shaping Jewish values after the Shoah.

Christian Responses: Remembrance and Repairing

Shortly after his election as *Reichkanzler* (head of government) in 1933, Hitler spoke to a group of Methodist women meeting in Obersalzberg about his admiration for Frederick the Great, Otto von Bismarck, and Martin Luther. When asked, "Where do you get the courage to undertake the great changes in the whole Reich?" Hitler responded, with Luther's New Testament commentary in hand, "From God's word." while Hitler's mandate for the *drittes Reich* (politically, "Third Empire" but theologically, "Third Kingdom") is not rooted in German trinitarian pietism, it cannot be denied

that centuries of church teachings of alienation from and contempt for the Jewish people contributed to Hitler's policy of lethal anti-Semitism. Questions of why, how, and who in the Christian support of the Nazi demonizing of the Jews and what we can learn about Christian (Catholic, Evangelical, Lutheran, Orthodox) culpability in the near-total destruction of European Jewry, are the *raison d'être* for reflection, remembrance, and researching the Shoah in Christian America. The ecclesiastical, pedagogical, and pragmatic objectives are to evaluate and identify the contributing factors in scriptural Christianity and historical Christendom that impeded the ability of European Christian clergy and laity in 1920s to 1940s to proclaim and to condemn National Socialism as evil.

Certainly, Nazism was not a Christian phenomenon, but theological anti-Semitism was linked to modern racial anti-Semitism within Europe's Catholic and Protestant churches, which strongly nullifies the position that anti-Semitism and anti-Christianity in Nazi ideology are the same. The detrimental impact of Hitlerian Judeocide on the "Body of Christ" is realized by contemporary mainstream denominational church bodies, and transformational steps are taken by post-Shoah Catholic and Protestant authorities to reconsider traditional negative teachings (for example, deicide, misanthropy, conversion) about the Jews and Judaism in Christian salvation history in order to reconcile with the Jewish people. This involves treading and shredding scriptural and theological traditions and language bias that have polarized acceptance and recognition between two monotheistic Abrahamic faiths, sometimes despite the best intentions of bearing witness and reconciliation.

One example involves the Christian response, "Love your neighbor," to rectify *extra Ecclesiam salus non est* ("No salvation outside the Church"). Jesus came "in spirit and in truth" (John 4:23; NIV) and proclaimed that "salvation is from the Jews" (John 4:22; NIV). However, this blessing is forever stained by the portrayal of some Jewish authorities, especially the temple priests, as accomplices in the Crucifixion of Jesus as it is scripturally attested: "His blood be upon us and on our children" (Matthew 27:25; NIV); "The Jews [that is, only the Jews who] who killed the Lord Jesus. . . . They displease God and are hostile to all men" (I Thessalonians 2:14–15), and elsewhere. Still Christ loved his own, and this has empowered the campaign to convert the Jews to believe in the death and resurrection of Jesus to ensure their salvation. To teach otherwise is to deny the Jews eternal salvation, and this is unacceptable.

However, for Jews, this standard call of the church in history, and especially after Auschwitz, to be fulfilled in Christ Jesus is unconscionable. It is not a proclamation of conscious malice, but a misguided spiritual voice in the valley of the fallen ashes on the crooked road from Calvary to Auschwitz and beyond.

In the late twentieth and early twenty-first centuries, there has been a dramatic and positive shift in Christian perspectives on the Jews, nurtured by ecclesiastical declarations seeking common religious ground between the church and the synagogue. Following the Vatican II declaration *Nostra Aetate* (1965; "In Our Times," the statement on the relationship of the Roman Catholic Church to non-Christian religions) and subsequent Roman Catholic pronouncements of the Holy See on the Jewish people, declarations from 1974 to the early twenty-first century, especially those of Pope John Paul II, address the relationship between Catholics and Jews. The U.S. Conference of Catholic Bishops (USCCB) have reflected upon and enlarged these documents in statements and guidelines issued in the United States.

Likewise, mainstream Protestant denominations (the World Lutheran Federation, for example) have taken a strong position against the "teaching of contempt" that some Christians projected in their depictions of the Jews. They have rejected the teachings of this nature over the past two millennia as based on errant scriptural reading (for example, by emphasizing Jewish guilt in the Passion narrative, the New Testament account of Christ's persecution and death), misguided and fallacious theology, and ignorance of the influence and impact of postbiblical Judaism on both the early church and the later history of Christianity. Christians have been challenged to rediscover the deep Jewish roots of their faith and to live the life of Christ without theological anti-Semitism. When relevant in Christian preaching and catechesis, the Jewish understanding of God, Torah, and Israel are to be presented without polemics, politics, or paternalism. Post-Shoah official statements from the World Council of Christian Churches, including North American member churches, represent a corrective theological change for the better in portraying the acute core of Jewish religious and ethnic identity (biblical, theological, ethical, ritual, historical, and political).

In comparison, Jewish reciprocal correctives about Christianity have been less forthcoming. This may be attributable to lingering Jewish hostility toward past Christian policies against the Jews in word and deed. Moreover, many Jews

have perceived that they are in a “no gain” situation in respect to Christian attitudes on basic theological matters. They have questioned, for example, whether believers in the new covenant and its messiah, “this perfect gift from above” (as John Paul II called it), could ever accept Israel—God’s special people, “a kingdom of priests and a holy nation” (Exodus 19:6; NIV)—as religiously coequal. They have wondered whether viable common theological ground could be achieved when, unlike Christians, Jews cannot see trinitarianism (the doctrine holding that God exists as three, the Father, the Son, and the Holy Spirit) in the plain meaning of Hebrew scriptures. In addition, there have been differences of opinion within the Jewish religious organizations that impede a responsible collective response to the varied Catholic and Protestant statements about the Jews. This may explain the dearth of a communal reply to the Vatican documents that suggest the establishment of the State of Israel is not “in itself religious” and reports the “sad fact” that most Jews did/ do not accept the salvific role of Jesus in history, while, in contrast, this is a basic tenet of classical Christianity.

However, this attitude among Jews would change in 2000, when a cross-denominational Jewish statement (although not supported in the main by Orthodox Jews), *Dabru Emet* (“Speak Truth”), and its accompanying book, *Christianity in Jewish Terms*, categorically delineated how contemporary Jews are encouraged to view Christianity, and, by extension, what is thought to be proper and not proper in the Christian view of Judaism. The hope is that the call to “speak truthfully” about two thousand years of the relationship of Judaism and Christianity is now being heeded.

To conclude, there is no question about the significant contribution of philo-Semitism (a favorable attitude toward Judaism) to Shoah remembrance and commemoration. Post-Vatican Council II interfaith dialogue among Catholic, Orthodox, Protestant, and Jewish ecclesiastical bodies successfully addresses Jewish-Christian relations (scriptures, liturgy, Jewish evangelism, anti-Semitism, the State of Israel, and so on) and manage to convert age-old disputation into respectful dialogue. Honest discussion helped diffuse the controversy surrounding the 2008 Good Friday reestablishment of the Tridentine Rite (conversion of the Jews) and the 2009 Vatican approach to pre-Vatican II Catholic Holocaust revisionist clergy. Pondering Shoah and its aftermath are centripetal forces in the spiraling spiritual reconciliation of Jews and Christians on contemporary North American shores.

House Church Movement

House church or *home church* is a generic term for a small informal assembly of Christians, usually Protestant evangelicals, who intentionally gather in a home or similar convenient location other than a church building. Participants in house churches typically worship, pray, learn, and care for one another on a personal level. House churches place emphasis on participation by everyone in the group and on sharing life together in a sense of community and mission that extends beyond meeting times. Within the United States, the house church movement is a late twentieth- and early twenty-first-century phenomenon.

House churches tend to be small in size, both because of the physical limitations of their locations and a bias toward functioning as smaller relational groups. House churches adopt different labels, some chosen to avoid the word *house* or *home* in order to put less emphasis on location and more weight on the type of meeting that takes place. Common alternate titles are *simple church*, *open church*, *organic church*, *relational church*, *primitive church*, *body life church*, *micro church*,

koinos church (from the Greek word meaning “all things in common”) and *biblical church*.

House churches are not the same as small groups or cell groups associated with a conventional church. House churches may network with other house churches, but each views itself as a complete church, not a subunit of a larger church. Some see themselves as deliberate alternatives to traditional or established churches.

Origins and History

Christians who meet together in homes or locations other than a church building usually do so in order to follow what they see as the apostolic model found in the New Testament. Many believe that small extended family-sized churches were the pattern intended by Jesus Christ and followed by Christians in the first century.

After Jesus’ death, the Apostles gathered not in the temple but in an upper room. The New Testament repeatedly provides examples of house churches, such as 1 Corinthians 16:19 (NIV), “Aquila and Priscilla greet you warmly in the Lord, and so does the church that meets in their house.” Such statements lead some to conclude that the New Testament church was primarily a house church movement.

For the first three centuries of Christianity, followers of Jesus commonly met in homes. Early church fathers like Clement of Alexandria wrote of worshiping in a house. A private house in Dura-Europos (near Baghdad), excavated in the 1930s, was used as a Christian meeting place in CE 232, with one small room serving as a baptistry. During the Middle Ages, Brethren of the Common Life gathered to worship in homes across Europe. Some scholars say these house churches helped lay the foundation for both the Renaissance and the Protestant Reformation.

House churches have been found worldwide, especially in countries where Christian groups have been persecuted or banned. In some countries such as China during the latter half of the twentieth century, when all missionaries were expelled and many established churches closed, the Christian faith expanded dramatically, largely through a context of house churches.

Impact on North American Religious Life

The origins of the house church movement in North America are varied. Many traditions that downplayed the role of clergy easily embraced house church ideals. These ranged from the Restorationist movement, which began in the nineteenth century and emphasized a return to New Testament standards,

to the Plymouth Brethren, a mid-nineteenth-century group whose best-known teacher was John Nelson Darby. The charismatic renewal movement begun in the 1960s has formed many Bible study groups, most of which remain part of their respective churches, but some of which have branched off as house churches. The Jesus movement of the 1970s inspired many informal groups, some of which associated with a denomination and others which became house churches.

A general cultural bias against institutional religion has also fueled the idea of house churches. So has what sociologist Wade Clark Roof calls a “salad bar approach” to religion, where people pick and choose those elements of religious practice that appeal to them, many opting for increased spirituality without becoming associated with an established local church.

Since the 1990s the house church movement has been encouraged by the publishing initiative of house church advocates such as seminary professors Robert Banks and Wolfgang Simson, and pastors Del Birkey, Neil Cole, Tony and Felicity Dale, Robert Fitts, and Larry Kreider. These writers represent a variety of Protestant backgrounds. The Internet also has contributed to the phenomenon’s growth during the early twenty-first century, enabling many previously unconnected individuals to discover and network with each other. Some of the more widely used Web sites are www.simplechurch.com, www.house2house.com, www.housechurchresource.org, and www.hccentral.com, many of which promote annual national conferences, social networks, and discussion lists for house church leaders. Local networks of house churches have also begun to form, with gatherings of house churches in an area getting together periodically for fellowship or joint worship celebrations.

During the 1990s and early 2000s, most media attention went to megachurches as the ascendant mode of conservative American faith. However, in 2005, George Barna, evangelicalism’s best-known pollster, indicated a dramatic growth in the number of believers who had stopped going to a standard church and instead were part of a house church. In 2006 Barna released a book titled *Revolution*, suggesting that the house church movement might well result in a third great awakening in American spiritual life. Mainline media responded as the *New York Times*, *Time* magazine, NBC News, CNN, and others wrote about the house church, heightening its level of exposure and acceptance.

Not everyone agrees with Barna’s numbers, which claimed that as many as 9 percent of adults—or 20 million people—have attended a house church during a typical

week, and as many as 70 million adults have at least experimented with house church participation. Even fewer agree with his predictions of how many people will adopt the house church as their primary faith community. The Southern Baptist Convention, for example, which is the largest Protestant denomination in the United States, responded to Barna by conducting their own study of house church participation in 2007, finding a growing interest in house churches, but at a level of 4 million at most—far less than Barna’s report but still not a small number.

Leadership, Meeting Format, and Finances

In a house church, everyone is expected to participate and look for ways to use their talents, abilities, and gifts. A commonly held belief in the American house church movement is that the Protestant Reformation did not go far enough to demonstrate the New Testament idea concerning the priesthood of all believers under the leadership of Jesus Christ as head of his church.

Most house churches are not held together by written principles and do not have detailed standards of conduct. They generally do not ask new members to sign a covenant or pledge. Rather, people typically become members of house churches relationally when a friend or family member invites them to attend.

Within that framework, some house church assemblies have almost no leadership structure, while others develop elders and deacons who serve their members. Some house churches also accept ministry from church planters and itinerant workers they consider to be apostles.

According to a 2006 survey by George Barna, 80 percent of house churches meet every week. The most common meeting days are Wednesday (27 percent) and Sunday (20 percent). Most house churches are family oriented; the average size of a house church is twenty people, including seven children under the age of eighteen. The typical house church gathering lasts for about two hours, with practices characterized as follows:

- 93 percent have spoken prayer during their meetings;
- 90 percent read from the Bible;
- 89 percent devote time to sharing personal needs or experiences;
- 85 percent spend time eating and talking before or after the meeting;
- 83 percent discuss the teaching provided;
- 76 percent have a formal teaching time;
- 70 percent incorporate music or singing.

The rapid growth in house church activity is evident in the fact that 54 percent of the people who are currently engaged in an independent home fellowship have been participating for less than three months. In total, 75 percent of house church participants have been active in their current gathering for one year or less. One out of every five adults has been in their house church for three years or more.

Some house churches legally incorporate and others do not. House churches emphasize financial generosity, such as giving a tithe (10 percent) of one’s income to spiritual purposes. It is not unusual for 80 to 90 percent of the offerings received in a house church to go to benevolence and missions both local and foreign. By contrast, typically 50 percent of a traditional church’s budget goes to staff costs and another 25 or 30 percent to facility costs, leaving little for good works beyond the church’s walls.

Critical Assessment

While the house church movement is growing in size in the United States, it is not without challenges. Sociologist Max Weber (1864–1920) identified a number of social forces that contribute to “the routinization of charisma” in which a charismatic authority, such as Moses or Jesus, is succeeded by a bureaucracy vested with authority, such as the priesthood, laws, and rules. These institutionalize the charismatic leader’s thoughts and direction and thereby perpetuate the founder’s ideals. Recent house church impetus has come largely through a series of writers, Internet resources, and conferences. There is no cohesive structure for long-term continuity, and indeed house churches are resistant to such, just as they are to other potential stabilizing factors such as owning property, utilizing legal charters, developing membership rolls, or establishing institutions for training future house church leaders or members. As a result, house churches are typically very fluid organizations. They may meet for awhile and then dissolve. Or they may change directions in doctrine. Critics worry that small pastorless groups can become doctrinally or even socially unmoored.

Some theologians raise concerns about the ecclesiology—doctrine of the church—found in house churches. They ask whether a house church, over time, is able to fulfill all the biblical requirements of being a church, including conducting ceremonial events such as weddings, funerals, and baptisms, but also having a sufficient knowledge base for nurturing new generations in the faith.

House church replication, essential for the overall growth of a movement, is likewise an issue that few house churches have successfully addressed. For those churches who have

multiplied from one house church to several, how should the leaders or groups reconnect, especially as the replication process continues? These issues are common to all first-generation organizations and must be addressed if the movement is to grow.

House church leader and trainer Neil Cole has said that the task of the house church (which he calls the “organic church”) is to lower the bar of how to have church while raising the bar of what it means to be a disciple of Jesus Christ. Theologian Wolfgang Simson has said the goal of the house church is to shift from organized religion to original Christianity, thereby giving the church back to ordinary people. History is still undecided as to whether the house church movement can successfully accomplish these ideals.

Idealist Philosophy

While idealist philosophy is perhaps more accurately described as a metaphysical orientation or framework—that is, an orientation or framework for conceptualizing the universe—rather than a specific doctrine or set of beliefs about the universe, idealist philosophies appear generally to share the view that humans and human experience are fragmentary yet genuine expressions of the real nature of the world. Idealist philosophies also often hold that mind or spirit constitutes fundamental reality.

Idealist philosophy, or idealism, has taken a variety of forms over a wide expanse of time, with its origin most typically traced, in Western thought, to the ancient Greek philosopher, Plato, and his theory of the Forms or Ideas. Also regarded as a primary figure in the history of idealist philosophy is George Berkeley, an Irish philosopher of the eighteenth century, perhaps best known for his own brand of idealism, emblemized in the epithet, “To be is to be perceived or to perceive.” Georg Wilhelm Friedrich Hegel, a German philosopher of the nineteenth century, is famous for his idealist conception of Spirit as the self-knowing and self-actualizing synthesis of Idea and Nature.

This trend of variegated articulations of idealist philosophy continues in the hands of American idealists. Although eighteenth-century figures such as first president of New York’s King’s College (Columbia University), and Jonathan Edwards, the renowned Awakening preacher and theologian are typically classified as early American idealists, the nineteenth century marks the true emergence of idealist philosophy as a palpable and sustained force in American thought. While idealist philosophy was influential in American

thought in the early and middle twentieth century, it is generally agreed that idealist philosophy fell out of favor in American thought with the rise in popularity of analytic philosophy—a metaphysical orientation and framework rooted in new developments in logic and language analysis—in the mid-twentieth century.

St. Louis Hegelians

The St. Louis Hegelians is the name commonly given to a group of nonprofessional philosophers, based in St. Louis in the 1850s to 1880s, who were immersed in the idealist philosophy of Hegel and related thinkers. To say that the St. Louis Hegelians were nonprofessional is not to suggest a lack of intellectual rigor but to note that they were not formally affiliated with any university or educational institution. The St. Louis Hegelians were trenchant translators and incisive interpreters of philosophical texts, most in the German language and tradition. Founded and led by Henry Conrad Brokmeyer (1818–1906) and William Torrey Harris (1835–1909), the group started the *Journal of Speculative Philosophy*, in which they published their own translations and ruminations, as well as those of several professional philosophers of significance in the development of the philosophical landscape in America in the late nineteenth and early twentieth centuries. Among those whose thought was published in the pages of the journal were Transcendentalists such as Ralph Waldo Emerson, Frederic Henry Hedge, Amos Bronson Alcott, James Elliot Cabot, and Pragmatists such as Charles Sanders Peirce, William James, Josiah Royce, and John Dewey. Although steeped in transcendentalism, Brokmeyer and Harris were drawn to Hegelian idealism for what they saw as its potential to enable social reform.

Holding that aspects of Hegelian thought as seemingly disparate as his logic and social philosophy were of a piece, since all types of philosophy were to be tested against lived experience, they melded their Transcendentalist roots and idealist philosophy with a Pragmatist ethos.

That this ferment should develop in St. Louis was not accidental. A gateway to those seeking fortune in the West during the California Gold Rush of the 1840s–1860s, and a route of return for those whose search for fortune had failed, St. Louis was a frontier town. At the same time, it was a cosmopolitan city with a population diverse in ethnicities, occupations, and passions, a culturally rich center with aspirations of becoming the nation's capital. All the while, it was also a locus of disruption, surrounded on nearly all sides by slaveholders and Confederate sympathizers, although it was itself a city that was strongly antislavery. In short, the city was the site of straining tensions, the alleviation of which Brokmeyer and Harris thought might be achieved in the promotion and adoption of idealist philosophy. Their concern was not provincial, however, as they believed that idealism held melioristic promise for all who might embrace it. While versions of American idealism are undoubtedly as variegated as those that preceded them, it may be argued that common to all American idealist thought is the belief that despite the fragmentary nature of human existence, the world stands malleable to human touch; humans have the ability to effect positive change in the world and their experience within it. This notion was fundamental to the social, political, moral, educational, and religious thought of the St. Louis Hegelians and served as backbone to the idealisms that followed.

St. Louis Hegelians and Religion

Although Brokmeyer was a founder and leader of the group, he wrote little, with much of his influence exerted through speech. The most prolific writers of the St. Louis Hegelians were Harris and Denton J. Snider (1841–1925). Although certainly not their only area of focus, Harris and Snider both placed a strong emphasis on religion. Because of this emphasis, their views are treated as furnishing a fair representation of the religious thought of the St. Louis Hegelians. Still, the religious thought of Harris and Snider does not exhaust that of the St. Louis Hegelians. Rather, Harris and Snider stand out as the most prominent among the St. Louis Hegelians in formulating and articulating a religious philosophy.

Harris believed that religion is the foundation of social life insofar as that social life belongs to the history of civilization. Religion is a great social process of intellect, will,

and heart, with its ideas not those of individual scholars in ivory towers but of the aggregate results of a social activity of intellect. Humans develop and progress via communion with fellow humans and the formation of institutions of civilization such as the family, civil society, the state, and the church. While historical institutions are finite and thus may perish, their archetype, the invisible church, is infinite and thus enduring. The spirit of the invisible church is the Holy Spirit. Harris conceives of the Holy Spirit as the Third Person contained in a triune conception of God. The First Person is God as absolute self-activity, who begets the Second Person, a self-knowing being equal to the First. The Third Person, or Holy Spirit, proceeds from the free union of individuals assuming the form of the Second Person.

The institution of the church proves vital to Snider's religious thought as well, for religion exceeds the subjective realm of personal belief and is objectified when grounded in a communal institution. Whereas secular institutions such as the family, civil society, and the state affirm the finite will concerned with finite ends, the religious institution of the church affirms the infinite will of God, which is the ideal end of the universe. While Snider saw the Christian church as the highest development of the religious institution at his time, he envisioned a universal religious institution that would integrate the various religious institutions of the world. For Snider, such a vision was plausible on account of what seemed to already be a great deal of agreement among major religions of the world concerning concepts of humanity, charity, and love.

While both Harris and Snider believed it was of primary importance to place religion in an institutional context, they differ insofar as Harris sees the Trinity embodied in the church as archetypal of all institutions, while Snider sees the archetypal religious institution arriving in the future. That the religious thought of each is cast within the framework of the historical evolution of religion and religious institutions is indicative of their Hegelian influence.

Personal Idealism: Borden Parker Bowne

Personal idealism, more commonly referred to as "personalism," is a type of idealism that places an emphasis on the individual self or person. Personalists seek to avoid the negation or trivialization of the person, a perceived danger of emphasizing Spirit or the Absolute, as in Hegel's idealism. American personalists of the later nineteenth and early twentieth centuries included Ralph Tyler Flewelling,

Albert Cornelius Knudson, Edgar Sheffield Brightman, W.H. Werkmeister, and Peter A. Bertocci. The most influential of the American personalists, however, were Borden Parker Bowne (1847–1910) and George Holmes Howison (1834–1916).

Bowne was influential as a teacher and lecturer, especially during his professorship at Boston University from 1876 to 1910. Bowne is most known, however, for defending and promoting personal idealism in writing, with what is perhaps the definitive statement of the philosophy presented in his *Personalism* of 1908. “Personality” is the central concept in Bowne’s thought, with his using the term to refer to selfhood, self-consciousness, self-control, and the power to know. Bowne believes that any being, finite or infinite, that has self-consciousness, self-control, and knowledge is “personal,” but finite persons, because they are, by nature, unable to attain full self-consciousness, self-control, and knowledge, cannot achieve full personhood.

According to Bowne, there exists one infinite and absolute being. The relationship between this being and finite beings is illuminated upon considering a potential problem in holding both that ultimate reality is personal and that all humans satisfying the requirements for personality are persons—these presuppositions may lead to a system in which each individual person reigns supreme, and community is rendered impossible. Bowne responds that persons continually depend upon one infinite and absolute being such that the uniting force of this Being is that which makes the interacting plurality possible in the first place. In short, Bowne solves the problem of unmitigated independence by eliminating independence. Finite persons, as created manifestations of the infinite person, interact and thus mutually determine each other, on account of the presence of the same Infinite Being in them all.

Bowne is remembered for saying that because philosophy can never be allowed to commit suicide, it is bound to accept those views consistent with its own existence, and for this reason, philosophy must always be theistic. To propose a theory denying an infinite, controlling mind in the universe would be to undermine the confidence of the finite mind in itself, presumably a manifestation of the infinite mind. Such a proposal is self-contradictory, however, for the finite mind would be trusted in order to establish the untrustworthiness of the finite mind on account of the supposed absence of an infinite, controlling mind. Bowne offered an equally pithy argument for the personal nature of the infinite being. The fact that finite minds can comprehend the

universe by thought indicates that the universe was founded in thought; otherwise, there could be no connection between minds and things. Because thought is a distinctively personal phenomenon, the founder of the universe must be a person, and because the infinite being is the founder of the universe, the infinite being is a person.

Personal Idealism: George Holmes Howison

Like Bowne, George Holmes Howison was influential as a teacher and lecturer, especially during Howison’s professorship at the University of California at Berkeley from 1884 to 1909. Unlike Bowne, Howison published little defending and promoting personal idealism, although the short volume *The Limits of Evolution and Other Essays Illustrating the Metaphysical Theory of Personal Idealism*, published in 1901, stands as an exception. Howison believes that all existence is either that of minds or the items and order of the experience of minds. These many minds form what he dubs the “Eternal Republic.” All members of the Eternal Republic share the aim of fulfilling the same rational ideal, with God the impersonated ideal of every mind. Thus, similar to Bowne’s conception, God reigns as the fulfilled type of every mind and the living bond of their union. Unlike Bowne’s conception, however, at the same time that God reigns, he does not fulfill the function of “Prime Mover.” The world, or “World of Spirits,” is an unmoved mover that moves all things including God, when united through recognition of God. Because this process involves the purposive movement of all things changeable toward a common ideal, Howison described it as “Evolution.” This label should not be interpreted as implying determinism, however, for the Eternal Republic is composed of free and self-subsistent, though not self-contained, citizens in mutually free relation with each other and the common ideal, a personal God. This personal God is also free and self-subsistent and exists not as an all-encompassing Absolute, but as a First among equals.

Absolute Idealism: Josiah Royce and the Absolute

Josiah Royce (1855–1916) is undoubtedly the most prominent of American idealists. His brand of idealism is that of absolute idealism. The term *absolute* is derived from the systems of Hegel and other German idealists, but Royce was influenced at least as much by American pragmatism, especially the thought of Charles S. Peirce and William James, with whom he was a contemporary and colleague at Harvard University. The son of parents who had migrated to

California in the midst of the California Gold Rush, Royce was a lecturer at the University of California at Berkeley from 1878 to 1882 and a professor at Harvard from 1882 until his death in 1916. Royce's unique contributions to philosophy, in general, and religious thought, in particular, are many and varied.

Royce formulated several arguments for the existence of the Absolute in his career. One of his most known is from his first book, *The Religious Aspect of Philosophy*, published in 1885. Therein, Royce argues that finite error implies absolute truth. Royce proceeds by observing that an idea cannot be deemed true or false in and of itself; it must be judged so against some other idea or ideas. Likewise, these ideas must be judged against some other idea or ideas, ad infinitum. Therefore, if any thought is in error, it can only be so if all reality is present to an inclusive infinite judge, or Infinite Thought. Royce calls this conclusion a "religious insight," and dubs this judge, the Absolute, the "religious aspect of philosophy."

Royce offered a related argument in *The Conception of God*, published in 1895, referring now to "Absolute Experience." Royce begins with the observation that every intelligent interpretation of an experience involves the appeal from a particular experienced fragment to some more organized whole of experience. The fragment of experience has a unity or organic place in the more organized whole, thus to speak of any reality which this fragmentary experience indicates, is to speak of part of the content of the more organized experience. Therefore, there is an Absolute Experience that is the organic whole to which our own experiences are related as fragments. In short, finite experience implies Absolute Experience. Royce refers to Absolute Experience as Omniscient Being or God.

Royce offered another related argument in *The World and the Individual*, published in 1901, again tweaking his terms. Royce begins by supposing that ideas have internal meanings and external meanings. The internal meaning of an idea is its embodiment of a single conscious purpose, while the external meaning of an idea is its correspondence to facts that are themselves not part of the idea. Truth is the correspondence of internal and external meanings of an idea. Because humans are finite, they can never know the complete internal meaning of any particular idea; to do so would be to know the entire set of all possible finite ideas. In order for a complete internal meaning to exist, however, some knower must know it in one inclusive act. This knower is the Absolute Idea or Self-Conscious Knower.

Absolute Idealism: Josiah Royce and the Problem of Evil

The problem of evil is classically described as such: How can evil coexist with an all-knowing, all-powerful, and all-good God? Royce recognizes the problem as such, but addresses the problem in the context of the situation of Job, in *Studies of Good and Evil*, published in 1898. A popular solution to the problem is to hold that God uses evil for the ultimate benefit of humans, in the way that a physician may prescribe bitter medicine to an ill patient or a parent may punish a child for wrongdoing. Royce believes that such a solution fails because God is directly responsible for the world and for the evil in it, in a way that the physician is not responsible for the illness and the parent is not responsible for the wrongdoing. Another popular solution to the problem has it that it was best for God to create humans with free will, and that evil initially arises because humans exercise their free will in evil ways. God then responds to these evils with attendant evils, in the interest of divine justice. Royce rejects this solution, too, for God often declines to protect the innocent, who consequently suffer undeserved evil.

For Royce, a suitable response to Job must show that evil is a logical necessity, something the nonexistence of which would contradict the very essence or perfection of God's nature and power. Royce's conception of the Absolute qua God leads him to the position that since human experience is fragmentary to the more organized whole of God's experience, human sufferings are God's sufferings, not God's external work. Thus, God both suffers along with humans and hopes along with humans for the overcoming of this suffering. Royce goes on to argue that it is not those innocent of evil who are fullest of the life of God, but those servants of the good who have faced evil and suffering and triumphed over them. At the same time, the ultimate triumph over evil is God's, but with human experience part of Absolute Experience, humans may see God's eventual triumph over evil as their own.

Absolute Idealism: Josiah Royce and Loyalty and Community

The concept of the struggling servant of the good articulated in Royce's consideration of the problem of Job was central to Royce's ethical and social thought, with another figure from Christianity, Paul, also serving as an important model.

In *The Philosophy of Loyalty*, published in 1908, Royce defined loyalty as the willing and practical and thoroughgoing devotion of a person to a cause. With “practical,” Royce meant that loyalty is never mere emotion; the loyal person serves his or her cause in action. Perhaps with Job in mind, Royce asserted that in a world of wandering, of private disasters, and unsettlement, the loyal are always at home, for however they may wander or lose, they view their cause as fixed and worthy. According to Royce, justice, charity, industry, wisdom, and spirituality are all definable in terms of enlightened loyalty. With “enlightened” loyalty, Royce has in mind his notion of loyalty to loyalty. Loyalty to loyalty consists in humans serving their individual causes so as to promote the greatest increase of loyalty among humanity.

In *The Problem of Christianity*, published in 1913, Royce contends that Christianity is, in its essence, the most highly developed religion of loyalty, and that loyalty itself is a perfectly concrete form and interest of the spiritual life. Royce believes that Paul learned the meaning and value of universal loyalty from the social and religious life of the early Christian communities and enriched and transformed the meaning and value of universal loyalty through his own work as missionary and teacher. Royce advocates what he views as Paul’s understanding of the genuinely and loyally united community and resonates with personalist idealism in the process. Such a community lives a coherent life and is thus in a perfectly literal sense, a person. Royce interprets Paul as believing the church of Christ to be such a person. For Royce, whatever may come of Christian institutions or traditions, the religion of loyalty must survive and direct the future of religion and of humanity, if humanity is ever to achieve salvation.

Absolutistic Personalism: Mary Whiton Calkins

Mary Whiton Calkins (1863–1930), who studied with Royce at Harvard and, except for a stint to return to graduate work, was a professor at Wellesley College from 1891 to 1927, shares affinities with Royce’s absolute idealism but also explicitly incorporates personalist idealism in her thought. Calkins gives a name to her variety of idealist philosophy in the title of “The Philosophical Credo of an Absolutistic Personalist,” published in 1930. The influences of personalist idealism and absolute idealism are seen upon considering the tenets of her credo. First, the universe contains distinctively mental realities; it may or may not also contain nonmental entities, but in any case irreducibly

mental entities exist. Second, the directly observed mental phenomena are not percepts, thoughts, emotions, and volitions in unending succession, but rather perceiving, thinking, feeling, and willing self or selves. Third, the universe is through and through mental in character; all that is real is ultimately mental, and accordingly personal, in nature. Fourth, the universe literally is one all-inclusive, and accordingly, complete, self of which all the lesser selves are genuine and identical parts, or members. Calkins’s religious thought is perhaps best seen through the lenses of “The Nature of Prayer,” published in 1911, in which she argues that prayer is the intercourse of the human spirit with a reality, or being, realized as greater than human and either conceived or treated as personal. That prayer is conceived in terms of intercourse is key, for the event is a genuinely mutual transaction between persons finite and infinite. Echoing Royce’s emphasis on loyalty, Calkins describes prayer as a reciprocal relation between human person and God, in which humans fuse the passion of desire with loyal adoption of God’s purpose and full submission to his will, while God’s response to prayer is that of recognition of humans’ love and trust and expression of God’s love of humans.

Absolutistic Personalism: William Ernest Hocking

Also a student of Royce’s, as well as a professor at Harvard from 1914 to 1943, William Ernest Hocking (1873–1966) adopts an absolutistic personalism similar to that of Calkins but applies his metaphysical theory to the practical more overtly than Calkins, as evidenced in texts such as *The Spirit of World Politics*, published in 1932. Hocking’s religious thought is most extensively articulated in *The Meaning of God in Human Experience*, published in 1912. According to Hocking, religion is the present attainment in a single experience of those objects that in the course of nature are reached only at the end of infinite progression. This attainment is best understood as an interrelation of feeling and thought, or nonrationality and rationality. Religion is a great emotional response to the felt perils and glories of the situation of the finite human, yet all emotions are underwritten by guiding ideas. The value of religion for humans is found in the ideas that they have formed of reality and God. Hocking’s ideas include the notion that if there is a God at all, God is a fixity in the universe whom humans must accept and not undertake to change; although humans can shape some parts of reality, it is beyond the ability of humans to shape the divine. At the same time, because the world would be consistent with or without God, humans must

postulate God. Humans find themselves with this postulation already constituted and possessed, Hocking contends, when in suffering, they demand justice of their creator. Also echoing Royce's emphasis on loyalty, Hocking describes faith as the loyal determination and resolve that sees the world as it is capable of becoming and commits its fortunes to the effort to make real what it thus sees. Thus, Hocking's absolutistic personalist idealism leads to a melioristic religious philosophy, akin to that formulated by the St. Louis Hegelians nearly a century before him.

Immigration: From the Colonial Era to the Mid-Nineteenth Century

Spanish Roman Catholic explorers initiated settlements in what would become the territory of the United States as early as 1513, when Juan Ponce de León (1460–1521) arrived on the coast of what would be named the Florida

peninsula. By the early 1520s, Spanish priests arrived in order to start settlements and establish missions among the Native Americans.

Sixteenth Century: Spanish Exploration and Colonization

The natives, initially, were very successful in driving the Spanish away; however, following half a dozen failures the Spanish succeeded in establishing the first permanent colony in the future United States. The settlement of Saint Augustine in Florida was founded in 1565 by Pedro Menéndez de Avilés (1519–1574) along with eight hundred men. When Avilés set sail from Spain, he came to Florida in an attempt to destroy all French settlements, which culminated in the massacre of the French Huguenots who had settled at the mouth of the Saint Johns River in 1562.

In the 1540s, Spanish colonization efforts within the border of the future United States had focused on the territory north of Mexico. In attempting to claim the Seven Cities of Cibola for Spain, Francisco Vásquez de Coronado (1510–1554) was sent north for a major expedition in search of treasure. He located the Grand Canyon, the future territories of Kansas, Oklahoma, and the Texas panhandle, all of which contained an immense mission field of native tribes; however, he failed to find silver or gold. This mission field would be neglected until 1598, when Don Juan de Oñate (1550s–1630) claimed these lands for Spain and founded the first settlement in the future territory of New Mexico. Oñate named the settlement San Juan de Caballeros; he established it with one hundred soldiers, four hundred settlers, and seven Franciscans.

Seventeenth Century: Spanish Missions

By 1630, immigration had brought at least fifty Spanish priests into the territory, and they had established some twenty-five thriving missions; however, the 1630s brought a steady decline in immigration and missions. The 1680s brought a widespread Native American revolt that resulted in a massacre, pushing the Spanish back to the Mexican border settlement of El Paso. Around 1694, Don Diego de Vargas (1644–1704) reconquered the territory for Spain, allowing for the return of Spanish missions. This conquest led to increased Spanish immigration, and by 1744 the non-Native American population numbered more than 10,000. Spanish missions were also successful during this time, and by 1750 the territory boasted more than twenty-two missions, with some 17,500 Native American converts. In 1848,

when the United States gained control of the land area of the New Mexican province, which included the territories of New Mexico as well as much of Texas, Colorado, Utah, Nevada, and Arizona, the Spanish population had increased to around 30,000 settlers.

The Catholic priest Eusebio Francisco Kino (1645–1711), who was born in Italy, came to Mexico in 1681 and six years later traveled north to the Arizonian territory. In 1700, he founded the mission San Xavier del Bac near present-day Tucson. During his twenty-four years of missionary service, he traveled thousands of miles exploring and mapping the area while establishing missions. He claimed to have personally baptized 30,000 Indians. In spite of his personal efforts, missions and immigration in the New Mexican province never thrived, and by 1821 little remained of the missions he founded.

Immigration to the territories of Texas and California was never enthusiastically embraced by the Spanish. By 1810, fewer than 3,000 Spanish had settled in Texas and had established only half a dozen missions in which they converted very few Native Americans. Immigration to California was equally weak; however, like Kino in New Mexico, Franciscan Father Junípero Serra (1713–1784) established Spanish missions in California. He built the mission in San Diego in 1769 and established a series of missions along the California coast, the most successful of which were the missions of Santa Barbara, San Jose, and Los Angeles. By the end of his work he had founded twenty-one missions and converted some 21,000 Native Americans. Even with the success of Serra's missions in California, by 1800 only around eighteen hundred Spanish had settled within that territory. By 1854 all the territory of New Spain that was to become part of the continental United States had been lost by Spain because of revolution, annexation, conquest, or purchase.

Sixteenth to Eighteenth Centuries: French Colonization

While Catholic Spain began its exploration of the Americas in the Caribbean during the fifteenth century, Catholic France would initiate its interest in the Americas through shipping vessels exploring the Newfoundland coast and fleets of fishing vessels making frequent visits to the Grand Banks. Jacques Cartier (1491–1557), a French explorer, was the first European to chart the Gulf of Saint Lawrence and the banks of the Saint Lawrence River. In 1534, Francis I (1494–1547) commissioned him to explore the northern

waters west of Newfoundland in order to find a passage to the valuable markets of Asia. By 1541 any thought of finding a passage to Asia was gone; however, Cartier returned to the Saint Lawrence with five ships in order to establish a permanent settlement.

In 1608, Samuel Champlain (1567–1635), the royal French geographer, developed a colonial interest; he founded Quebec during the third of his eleven voyages. During the first winter, only eight men survived; however, by the year of Champlain's death the settlement was secure enough that he believed he had founded a permanent colony. In spite of this success, by the mid-seventeenth century the Canadian population was rather insignificant; immigration to Canada had only produced a population of some 2,500 traders, officials, and priests. In addition, these immigrants were primarily focused on trapping and missions and in general had neglected to build defensive fortifications.

In an attempt to change this lack of financial success and to motivate increased French immigration to New France, France in 1663 made Canada a royal domain; the new minister of finance, Jean Baptiste Colbert (1619–1683), established a policy whereby the mother country would maintain a trade monopoly over its colonial empire. A few years following this French policy, René Robert Cavalier, Sieur de La Salle (1643–1687), traveled to New France. In 1669, he initiated his first exploration in search of a route to China, during which his canoe party were most likely the first Europeans to traverse the Ohio River. All of his explorations during the 1670s led to his most famous expedition in 1682, when he, still in search of a route to Asia, canoed down the Mississippi River. La Salle named the Mississippi River basin Louisiana in honor of King Louis XIV (1638–1715), and while canoeing down the Mississippi River he built Fort Prud'homme near present-day Memphis, Tennessee. When he reached the mouth of the Mississippi River, he erected a cross and an inscription claiming the territory for France. He conceived of the idea and convinced the royal court that the French should control the land mass extending from Quebec to the mouth of the Mississippi River and from the Ohio River to the Rocky Mountain springs of Missouri.

Jesuits immigrated to New France in greater numbers after 1625, primarily to establish missions to the Huron and Iroquois Indians. The Jesuits had some success in persuading their fellow French citizens to journey to New France. In 1641, Jesuits gained the support of Jean Jacques Olier (1608–1657) and his Sulpician community of diocesan priests. They had obtained a land grant on the Island of Montreal, where

they established a permanent settlement. During the first year of Montreal's settlement, Jeanne Mance (1606–1673) established a Catholic hospital named in honor of Saint Joseph. In 1653, Sister Marguerite Bourgeoys (1620–1700) immigrated to Montreal with additional Sulpician priests, and she set to work to founding the Church of Notre Dame, which was to become well known for its school for girls.

French immigration never became large enough to significantly affect the North American region that would become the United States. While the immigration effort of explorers, trappers, and Jesuits was at times impressive, they could not overcome the French inclination to stay in France, especially during the ongoing wars that occurred during the seventy-two-year reign (1643–1715) of Louis XIV. In addition, French influence in the region was diminished when Louisiana was ceded to Spain in 1762 and when French Canada was surrendered to Britain in 1763.

Sixteenth to Seventeenth Century: Early English Colonization

Although exploration by the English began shortly after the successful voyage of Christopher Columbus, immigration and colonization would have to wait until the early seventeenth century. John Cabot (1450–1499) was commissioned by King Henry VII (1485–1509) in 1497 to explore the coast of the Americas above the Spanish settlements in the Caribbean. During his two voyages Cabot charted the American coast from as far north as Newfoundland to as far south as the Chesapeake Bay. His voyages established England's rights to the northern coastal lands of America.

In 1607, three merchant ships funded by the Virginia Company set sail for America. The ships would arrive in May at the mouth of the James River, and the voyagers would found Jamestown, which would be the first permanent English settlement in America. These first immigrants were motivated by the prospects of monetary gain, especially since the plan for colonization originated with the merchants of London and Plymouth in an attempt to compete with the colonization of Spain and France. In addition, England was motivated by competition with the Roman Catholic influence that Spain and France produced within their colonies. England was determined to establish a Protestant influence within the North American coastal territories. The Virginia colony failed as a capitalist adventure. In 1624, the Virginia Company went bankrupt after losing some £200,000, and the viability of the settlement as a lasting colony was often in jeopardy. In 1616, only 350 settlers

were still alive, and by 1623 only 1,200 settlers remained in Jamestown in spite of immigration to the settlement by more than 4,000 English. After the financial failure of the Virginia Company, King James I (1566–1625) made Jamestown a royal colony and established Anglicanism as the official church of the colony.

The next English settlement on the North Atlantic coast was established by immigration of the Pilgrim Puritans to New England in 1620. The Pilgrims' original destination was just north of Jamestown, as their charter had been granted as an extension of the Virginia Company; however, they ended up settling far to the north in the territory charter of the Council for New England. The next decade brought very limited immigration from England, and by 1630 the colony grew to only around three hundred settlers.

In March 1629, King Charles I (1600–1648) extended a large portion of the New England charter to a newly formed group of wealthy Puritans who had established the Massachusetts Bay Company. In 1630, under the direction of John Winthrop (1588–1649), nearly 1,000 Puritans set sail from Southampton. Landing at Massachusetts Bay, they quickly established several villages and created a self-sufficient colony. Restrictions on Puritans in England motivated more than 20,000 English to immigrate to the Bay colony by 1641. With the initial success of this colony, several settlements sprang up along neighboring territories. In the mid-1630s, the Reverend Thomas Hooker, along with his entire congregation, immigrated to the Connecticut territory. By 1662 the Connecticut colony had at least fifteen settlements.

In 1636, Massachusetts Bay exiled Roger Williams (1603–1683), mainly for his heretical belief in the separation of civil government from church establishment. His irreconcilable difference with Puritan doctrine and Governor John Winthrop's enforcement of church policy led Williams to settle the colony of Providence, which would provide a safe haven for many outcast who would not conform to Puritan civil regulations. In 1644, Williams received an English charter to establish his own government. A government was created in 1647 in order to safeguard individual freedoms, including the freedom of religion, which made it a very attractive destination of immigrating Baptists and Quakers. By 1740 there were about eleven Baptist congregations in Rhode Island, and Quaker immigration increased following the 1672 visit of George Fox (1624–1691).

English colonial aspirations were put on hold for the next two decades of civil war and the rule of Oliver Cromwell

(1599–1658). In 1660, a few years following the restoration of the monarchy under Charles II (1630–1685), a charter was granted to settle the tract of land south of Virginia. The Carolina colony was granted to men who had grand visions of a prosperous feudal society. After several failed attempts, in 1670 a settlement was founded at Charles Town. Soon thereafter English immigration established several small villages to the north of Charles Town. South of Carolina, the English set up the colony of Georgia in large part to protect the Atlantic coastline from incursion by Spanish or French settlements. In 1723, Thomas Bray (1656–1730) envisioned the colony as a safe haven for the poor and destitute in England as well as a home base for his plan to “evangelize the negro.” Ten years later, a group of twenty-one wealthy trustees was granted a charter, and in that same year five hundred of England’s poorest citizens established a settlement at Savannah. Over the next twenty years, more than 1,000 poor immigrants from Europe found a home in Georgia.

Seventeenth Century: Immigration of Minority Groups

Dutch

Immigration during the 1620s and 1630s brought settlements to the mid-Atlantic and southern coastal colonies. In 1609 Sir Henry Hudson (1565–1611) was chosen by the Dutch West India Trading Company to discover a water passage to the East. Thus, he explored the Hudson and Delaware rivers in 1609, and in 1620 the Dutch West India Company sent a small party to establish a settlement on an upstream island on the Delaware River. In 1624 Dutch settlers established New Amsterdam as a permanent colony on the Hudson River basin. However, Dutch immigration to these two settlements would fail to produce a thriving outpost. In 1638 there was a joint venture with Sweden to build a fortified colony on the territory along the Delaware River, and that pact resulted in the establishment of Fort Christina. But the colony still lacked sufficient immigration up through 1664, when the British would take over the territory even though the colony had drawn immigrants from two European nations.

Dutch immigration was hampered by Spain’s refusal to recognize their long-held right of independence until 1648. Another factor that hindered immigration was the Dutch West India Trading Company’s sole interest in profit from trade. The company simply failed to establish any agricultural communities that could support a growing population.

Thus in 1664, when England took over the colony, it was still sparsely populated. When James, the Duke of York (1633–1701), was granted possession of the colony by Charles II, he renamed it New York and established a colony that was much more supportive of increased immigration, that could support a growing population, and that sought religious toleration. By 1695, immigration to New York City had brought nearly nine hundred families, the vast majority of whom were Dutch.

Jews

In 1654, some Jewish families immigrated to New Amsterdam after being forced out of Brazil following the Portuguese reclaiming of the territory from the Dutch. Merchant Jews from Holland had begun living in Brazil as early as the 1630s, when Jews participated in Holland’s colonial efforts in South America. Jewish families had originally fled to Holland during the late fifteenth century, when Spain and Portugal established Roman Catholic monarchies requiring Jews to convert or to relocate. During the exiting of Jews from Brazil, the Dutch West India Company encouraged them to settle in New Amsterdam in spite of the objections from the governor. By 1664, when the British took over the city, many Jewish immigrants had become successful property owners and merchants.

These earliest Jewish immigrants to America were Sephardic Jews whose religious tradition was influenced by a deep desire not to forget the beliefs and practices of the Babylonian exile. This tradition was renewed during the sixth century CE and strove to create religious rituals designed to provide a constant remembrance of the legacy of separation from their homeland. The Jewish communities in America remained small throughout the seventeenth and eighteenth centuries; however, by 1692 they had established the first synagogue in North America, in New York City, and by 1763 another community of Jewish immigrants in Newport, Rhode Island, constructed a synagogue. Further Jewish immigration, by the beginning of the eighteenth century, had established small Jewish communities along the Atlantic coastal cities from New England to South Carolina in places like Savannah, Philadelphia, and Charleston. In the early nineteenth century, an increase in German immigration to America brought an increase in the number of German Reformed Jews. By the middle of the nineteenth century, Reform Judaism was the fastest-growing Jewish tradition in America. In 1846, when Isaac Wise (1819–1900) immigrated to America, he became the most influential

leader of the more liberal Jewish religious movement. In 1850 Wise moved from Albany, New York, to Cincinnati, Ohio, where he led the movement in embracing both modernity and a patriotism that would not have been acceptable to the European Jewish sensibility. A large increase in European Jewish immigration would not unfold until a few decades after the Civil War.

Catholics

North of Virginia was the English settlement of Maryland. This colony was chartered by James I (1566–1625) and granted to the Roman Catholic George Calvert (1580–1632), who was the former Lord Baltimore. The charter was received by Calvert's son Cecil (1605–1675), who never actually traveled to Maryland. The colony was a refuge for harassed English Catholics since it was founded on religious toleration. In 1634 Cecil's brother Leonard arrived in Maryland as the colony's first governor, and five years later religious freedom was guaranteed by legal decree. Throughout the colony's history, Catholics remained a minority in Maryland, although by 1770 some 10,000 Catholics—by far the most of any colony—lived in Maryland. The religious toleration in Pennsylvania made it the second most attractive colony for immigrating Catholics, but by 1770 its Catholic population had grown to only around 3,000.

Quakers

In 1681, William Penn (1644–1718), who was a Quaker and the son of the highly successful Admiral Penn (1630–1684), received a charter for a large tract of land south of the New England colonies and west of New York and Delaware. By 1682, when Penn arrived there, his future colony was already home to some 4,000 European immigrants. The large immigration from several European nations (primarily English, Scotch, and German) and various religious traditions demonstrated that various groups could live and prosper within a single commonwealth. Although immigrants came from all over Europe, the vast majority of seventeenth-century immigrants to Pennsylvania were English Quakers, and by 1700 there were more than forty Quaker meeting houses, many of them large and growing. German immigration to Pennsylvania was also significant. Prior to the Revolutionary War, more than 80,000 Germans immigrated through the port of Philadelphia. While the Quakers of Pennsylvania were active in fighting against the Atlantic slave trade, most European nations profited from

the practice that resulted in one of the largest forced migrations in world history.

Germans (Mennonites, Amish, Dunkers, and Moravians)

William Penn's decision to make Pennsylvania a colony of religious toleration brought to that colony the largest concentration of German immigrants. The Anabaptist Reformation traditions had been subjected to some of the most bitter persecution of all the more radical Protestant traditions. This motivated their acceptance of Penn's generous offer of land for settlements. Anabaptists were a group of deeply dedicated Protestant traditions that refused infant baptism and sought to live in complete conformity to the commands of Christ, which led them to, among other things, reject military service, civil service, and the taking of oaths. An early group took their name from Menno Simmons (1492–1559), and they began to immigrate to America in 1683, possibly traveling with some Dutch Quakers settling in Germantown, Pennsylvania. By 1708, with increasing Swiss immigration, the Mennonites began to migrate west, settling in the rich farming lands of rural Lancaster County.

Around 1727, a more conservative Anabaptist group, the Amish, began to arrive in Pennsylvania. They were founded by a Swiss Mennonite preacher, Jacob Amman (1644–1730), who in 1693 separated from the Mennonite community and espoused a more strict disciplinary practice and a simpler lifestyle. The Amish began to arrive in Pennsylvania in more significant numbers in the 1740s, settling around Berks and Lancaster counties and continuing in their more conservative ways. The Amish in America dressed simply, refused the use of church buildings, and enforced the shunning of excommunicated members. As more and more Mennonites and Amish immigrated into the rich farmlands of southeastern Pennsylvania, some groups migrated west to Ohio and south to Virginia. Swiss Mennonites immigrated to Ohio and Indiana in large numbers between 1810 and 1830, forming many communities not associated with the Pennsylvania Mennonites.

The Dunkers were the earliest of the pietistic groups to immigrate to America. They gained their name from their practice of baptism by threefold immersion in the name of the Father, Son, and Holy Spirit. The movement had its origin in 1708 in Schwarzenau, Germany, when Alexander Mack formed his German Reformed Bible study into a new congregation. Pietism focused on individual experience and

feelings of the heart, pointing people back to a relationship with God. Church historians quite often refer to Philip Jacob Spencer (1635–1705) as the father of pietism. The first Dunker community in America was established in Germantown, Pennsylvania, in 1719. Immigration by the German Dunker community was disorganized and lacked funding; by the American Revolution there were barely more than 1,000 Dunkers forming around twenty communities in southeastern Pennsylvania and northern New Jersey.

Moravians first came to America in 1735, settling in Georgia under the command of Augustus Spangenberg (1704–1792) in an attempt to evangelize the Creek and Cherokee Indians. The Moravians originated in the fifteenth century as a pietistic movement that developed out of the preaching of John Hus of Prague. While in Georgia, Spangenberg met George Whitefield and followed him to Philadelphia to construct a school for “Negro” children. By 1740 the Moravians had already rejected Whitefield’s Calvinistic theology, and Whitefield’s finances had run out. The Moravians established their own community, which they named Nazareth, north of Philadelphia and purchased the land from Whitefield. In December 1741, when Count Nicholas Ludwig Zinzendorf (1700–1760) immigrated to Pennsylvania, he helped the Moravians establish another community they named Bethlehem. They were a small movement even by the beginning of the Civil War; they numbered slightly more than 8,000 and were scattered across the East Coast but concentrated in Pennsylvania.

Scotch-Irish

Father Francis Makemie (1658–1708) was a Scotch-Irish Presbyterian minister ordained in 1681 in Northern Ireland as a missionary to America. In 1706, he organized the first American presbytery by calling together all the Presbyterian ministers to a gathering in Philadelphia. The majority of Presbyterian churches were located in the southeastern Pennsylvania, Delaware, and New Jersey colonies. Scotch-Irish immigration to the mid-Atlantic colonies would continue at an impressive annual rate of around 3,000 to 6,000 through the middle of the eighteenth century. By 1729 the Presbyterian Church in America was large enough to hold its first general synod, and this group officially accepted the Westminster Confession for the American Presbyterian Church. Following 1801, the majority of Presbyterian church growth can be attributed to frontier missions rather than to foreign immigration, but the numbers are impressive, nonetheless, since membership

rocketed from 18,000 in 1790 to more than 220,000 by 1840, a mere fifty years later.

Africans (Slave Trade)

A Dutch ship carried twenty slaves into the harbor of Jamestown in 1619 to be sold as laborers in the tobacco fields of the Virginia colony. Over the next three decades, the forced migration of Africans was slow, and records indicate that around three hundred slaves were imported by 1649. By 1660, however, slaves began pouring into the colonies of both Virginia and Maryland. In the Massachusetts Bay Colony to the north, slave ships began arriving around 1638. Thus, the English settlers, both Anglican and Puritan, participated in the slave trade and enjoyed the financial benefits of slavery. This began the colonial policy that would bring approximately half a million African slaves to the coast of what would become the United States.

By the early nineteenth century the slave trade into the United States had slowed. Much of the decrease stemmed from the outlawing of the trade in 1808, which meant slave ships entering U.S. ports had to be smuggled. Despite this decrease in forced importation of slaves, by the beginning of the nineteenth century there were approximately one million slaves, which equaled about 20 percent of the total population. By the end of the Civil War the freed slave population had grown to around four million. Most of these forced immigrants attempted to maintain their West African religious traditions, and many African slaves were influenced by the growing presence of Islam in West Africa.

The vast majority of slaves traveled from West Africa, where their religious traditions varied greatly from the European religious sensibilities. There was much diversity within the various groups within each West African tribal area; each possessed its own sacred stories, gods, types of healers, and ritual practices. However, within this diversity was a similar sacred worldview in which all aspects of life were interconnected. Each individual had a deep-rooted connection to his or her community. For West Africans, ancestors were protectors of the community and clan who could mediate between humans and deities.

West Africans had elaborate rituals designed to keep the memory of ancestors alive so that time would reinforce their memory and their relationship to the community. Ancestors could be transformed into gods, and there was no radical distinction between the sacred and the profane within the West African religious worldview. Spiritual power was present in all of life, and power could be possessed and used by

the one who was sensitive to the gods and ancestors. West Africans classified the gods by their power. The high god was the creator god, who created everything but who was not active in history. The secondary gods were named after animals or natural forces; these gods could disrupt history and empower humans. The music of drums and dance rituals were used to summon the gods into the presence of the people. Often during these West African communal rituals, the gods would possess a person and the person would go into a trancelike state.

Nineteenth Century: Catholic German and Irish Immigrants

While the sixteenth- and seventeenth-century immigration to America brought much regional, civil, religious, and racial diversity, it also produced a dominant, homogenized Protestant culture that was ill prepared to adjust to the increasing numbers of non-Protestant immigrants who would begin to pour into the United States in the 1820s.

According to twentieth-century scholar William R. Hutchison, English-speaking Calvinist Protestants, who had spent two hundred years developing their own cultural prerogatives, made up 85 percent of colonial America's population. Numbers of established religious communities reveal the limitation of immigration of non-Protestants to America. In 1780, America could boast of some 3,200 religious congregations, out of which only 56 were Catholic and only 5 were Jewish. Thus, what was perceived as diversity was largely an increasing variety of Protestant denominations. In addition, the vast majority of Protestants were Episcopalians, Presbyterians, and Congregationalists.

From the mid-1840s to the mid-1850s, some three million immigrants came to the United States at a time when the nation's population was only around twenty million people. This 15 percent increase in population represented the largest ten-year increase in the nation's history. The fact that most of the immigrants were not English Protestants brought a whole new level of cultural, religious, and linguistic diversity to American shores. While the vast majority of these three million immigrants came from Europe, there were increasing numbers of non-Europeans who left their homelands in search of better lives. An example of this increasing non-European immigration to the United States occurred from around 1848 to 1858, when approximately 50,000 Chinese left China to find work and new lives in America, many of them coming, like the Spanish conquistadors, in search of gold.

By far the two largest groups of immigrants traveling to America in the early nineteenth century were Germans and Irish. While German immigration included some Roman Catholics, the two greatest changes brought by German immigration from 1790 to 1860 was an increase in Lutheranism, which reduced the proportional dominance of Calvinistic Protestantism and spurred an increase in German-speaking communities. In 1820 there were fewer than eight hundred Lutheran churches in America; however, by 1860 there were more than 2,000. In addition, these German immigrants also established more than 1,000 non-English-speaking congregations.

Roman Catholicism had the greatest increase in immigration to America of any religious group during the time period of 1790 to 1850. Within those six decades, the Catholic population in America grew from an insignificant minority to become one of the largest religious minorities. During these decades, well over one million Catholics immigrated to the United States. In 1790, out of a population of nearly four million people, fewer than 35,000 were Catholic. By 1860, the U.S. population had grown to about twenty million people, out of which more than three million were Catholics. During this time period, Roman Catholics accounted for more than one-third of all German immigrants and for the vast majority of Irish immigrants. This in-flood of Roman Catholic immigration, especially from the 1820s to 1860, reduced the Protestant majority within America's population from 90 percent to around 75 percent. Nearly 70 percent of immigrants coming to America during those four decades were either German or Irish.

The immigration from Ireland steadily increased from 1790 until the 1820s, when immigration rates shot up. Following the end of the Napoleonic Era in 1815, economic conditions worsened in Ireland, while American industrialization was rapidly developing, creating a need for more and more labor. In the 1830s, more than 200,000 Irish immigrants entered American cities. In the mid-1840s a prolonged period of cold and damp weather produced a fungus that destroyed the potato crop, a staple that impoverished farmers had grown ever more dependent upon since 1815. In Ireland from 1845 to 1855 approximately 1.5 million people starved. Following the potato famine there was a desperate Irish migration to America in an attempt to stave off starvation. In the year 1850 more Irish entered the United States than in the entire decade of the 1830s, pushing the population of Irish Catholics in America to almost

one million. By 1860 the Irish Catholic population in America had grown to more than 1.6 million people.

The tremendous increase in immigration of impoverished Irish fleeing a famine was not without financial consequences in America. It produced an influx of poor immigrants who lived in slumlike surroundings. The deteriorating conditions within America's eastern cities were exacerbated by the new arrivals, who were too poor to relocate elsewhere, and resulted in urban slums; too much available labor resulted in ever-lower wages for back-breaking work. Often labor-intensive public projects tore apart families as men were forced to find low-paying jobs such as canal, railroad, and dam construction and women often flocked to any available industrial job regardless of the working conditions. The Catholic Church hierarchy struggled to keep up with the demands of an ever-growing Catholic population within the urban centers of America.

The first generation of Irish Catholics remained faithful to the Catholic Church in America; the church helped them maintain their ethnic identity and survive politically and economically in a capitalistic society. Irish Catholics, when compared to Catholics of other nationality, were more focused on personal morality and spirituality as they sought a religious practice with stricter adherence to church law. Irish Catholics were very enthusiastic participants in church life, and parents strongly encouraged their children to enter into Christian service as priests and nuns. Since the Irish Catholics were willing to enter Christian service, they soon began to take over the majority of leadership positions in the American Roman Catholic Church. This included the founding and staffing of many Catholic schools.

By 1850, German immigrants were the second-largest ethnic group of Europeans in America, with a population of approximately half a million. Many of these German, especially those who arrived after 1820, were Roman Catholic. These Catholic immigrants not only were well educated, but they were financially equipped to travel out of the eastern port cities and acquire farm land in the upper Midwest region around Ohio, Wisconsin, and Missouri. These German Catholics held on deeply to their ethnic identity and founded their own churches and schools in which they could maintain their German language and larger cultural identity.

Conclusion

Immigration to the future U.S. territory began in the early sixteenth century by Roman Catholic explorers on the

Florida peninsula. In the sixteenth and seventeenth centuries, Catholic Spain was motivated by building empire and missions. Catholic France during the sixteenth through the eighteenth centuries sent immigrant priests and traders to try to evangelize natives and to tap the wealth of the new continent. English colonization prepared the way for the seventeenth- and eighteenth-century immigration of oppressed European religious groups, primarily English, and for the forced importation of African slaves. As the English Protestants established Virginia, New England, and Rhode Island, Dutch Protestants were attempting to plant settlements on both the Hudson and Delaware rivers. Jews, in 1654, began immigrating to New Amsterdam. The colonial charter to the Roman Catholic George Calvert began another wave of Roman Catholic immigration to Maryland. Thus, colonial diversity began to expand and shape the future of what would be a growing acceptance of religious tolerance in American colonies like Pennsylvania. The Quaker William Penn, who founded Pennsylvania in 1681, made the colony a safe haven for all persecuted sects in Europe, so while English Quakers still dominated immigration to Penn's colony, many persecuted German religious sects traveled there as well. In the seventeenth and eighteenth centuries, the slave trade uprooted hundreds of thousands of West Africans and transplanted them into the eastern coastal port cities to be sold to southern colonies and states. Africans who survived the slave ship journey struggled to maintain their cultural and religious traditions in America. In the early eighteenth century, large numbers of Scotch-Irish Presbyterians immigrated to New Jersey, Delaware, and southeastern Pennsylvania. Immigration of large numbers of German-speaking Lutherans from the 1790s through the 1850s brought a cultural change to the Calvinistic English-speaking majority in America. The last large wave of Roman Catholic immigration that occurred during this time period occurred from the 1840s through the 1850s, when the Irish attempted to find food and jobs in America during a time when there was famine in their homeland.

Immigration: From the Mid-Nineteenth Century to World War I

The period of mass immigration to the United States from 1840 to 1920 was one of the largest human migrations in recorded history. The immigration of more than 33 million people from Europe and Asia to the United States profoundly changed not only the United States but also the immigrants themselves. Because religion was deeply important to the identities of both the settled American community and the immigrants, the resulting diversity of religions made for complex changes in American religious life through the end of the nineteenth century and into the twentieth.

Prior to 1840, American religious life had been narrowly defined by elements of Reformed Protestantism, primarily from Great Britain, and by indigenous offshoots of this tradition. By the beginning of the twentieth century, this tradition had been transformed by the mass immigration of non-English Protestants from Germany and Scandinavia; Roman Catholics from Ireland, Italy, and central and eastern Europe; Orthodox Christians and Jews from Russia and eastern Europe; and Buddhists and members of other Asian religious traditions from Japan and China. Obviously this dramatic religious transformation occasioned periods of conflict and struggle, but the American religious tradition managed, on the whole, to adjust to this influx of new religions without major disruptions. The older, settled American religious traditions eventually came to an accommodation with the new immigrant religions, while the immigrants adapted their own religious traditions to the free and pluralistic world of American religion.

First Period of Immigration, 1840–1890

From 1840 to 1860, the largest share of immigrants to the United States came from northwest Europe: 1.7 million people came from Ireland, 1.4 million from Germany, and 700,000 from Great Britain. This antebellum immigration resulted in the sudden inclusion of a sizable Roman Catholic community in the United States. Prior to 1840, the American religious community had been overwhelmingly Protestant, and despite denominational fragmentation most were united in a common revivalist and reform-oriented religious tradition. Protestants were also united in a common heritage of anti-Roman Catholicism, tracing back to the English Reformation, which colored Protestants' view of many of the new immigrants and caused a major backlash especially against the Irish. The pace of European immigration to the United States continued and accelerated from 1840 to 1860, as the American need for labor and the social and economic pressures in Europe combined to push immigrants toward the New World. Immigration was temporarily depressed by American economic troubles in the 1850s and the Civil War (1861–1865) but resumed and accelerated after 1865. The immigration from 1861 to 1890 was predominantly from Great Britain, Germany, and Scandinavia; of the 8.6 million Europeans who immigrated to the United States, 5.9 million were from these countries. Irish immigration added another 1.6 million from 1861 to 1890, but the pace and proportion of this immigration clearly slowed. Immigration from southern and eastern Europe picked up dramatically during this period, from only 25,000 in 1861–1870, to 165,000 in 1871–1880, and 775,000 in 1881–1890. (See Table 1.)

As noted, the pace of immigration from Ireland slowed dramatically after 1860, while immigration from Britain, Germany, and Scandinavia rose sharply. Since most of those from Britain and Scandinavia, as well as a substantial number of the Germans, were at least

Table 1. Immigration by European Region, 1861–1890

	1861–1870	1871–1880	1881–1890
Total immigration (net)	2.1 million	2.6 million	4.9 million
Britain/Germany/Scandinavia	1.5 million	1.5 million	2.9 million
Ireland	437,000	436,000	655,000
Eastern/Southern Europe	25,000	165,000	774,000

nominally Protestant, the majority of immigrants during this period were added to the Protestant membership rolls. The still large number of Roman Catholic immigrants, however, continued to attract public notice and controversy, with public concern about the increasing immigration numbers from southern and eastern Europe replacing that directed toward the Irish.

Immigration from 1861 to 1890 coincided with the opening of the trans-Mississippi frontier and the settling of the western United States. Many immigrants were attracted by the promise of homestead lands in the West and, encouraged by railroad land companies, rushed west to stake their claims. Immigrant communities in the Midwest were replenished by newer immigrants from Europe, but because of the destruction of the Civil War and postwar isolation, relatively few immigrants settled in the American South. By 1890, the “foreign stock” of the American population (foreign born and their children) made up 33 percent of the American population, while white “native stock” constituted 55 percent of the whole. Immigrants tended to settle in the urban areas of the North and Midwest, where they constituted 53 percent of the urban population by 1890.

Second Period of Immigration, 1890–1920

The second period of immigration saw a dramatic change in the nationality of the immigrants, who increasingly came from eastern and southern Europe. Immigration from Britain, Ireland, and Germany dropped dramatically after 1890, while Scandinavian immigration held its own. But the increase of immigrants from Italy, Austria-Hungary, Russia, and eastern Europe was huge; at the peak of immigration, from 1901 to 1910, some 5.8 million immigrants from these countries entered the United States. (See Table 2.) That these immigrants were overwhelmingly Roman Catholic, Orthodox, and Jewish fanned the fears of American Protestants that “their” country was slipping away from their

U.S. inspectors examine the eyes of immigrants at Ellis Island, New York. The new immigrants created their own religious institutions and challenged the Protestant majority for control, at least numerically, in the urban areas and in certain rural enclaves.

control. The new immigrants created their own religious institutions and challenged the Protestant majority for control, at least numerically, in the urban areas and in certain rural enclaves. By 1890 the Roman Catholic Church in the United States was the single largest unified religious organization in the country, though there were still more Protestants than Roman Catholics in number.

The nature of this second immigration differed from the first, and not just by religion and country of origin. By 1890 the American agricultural frontier was essentially closed, and the vast majority of the second wave of immigrants settled in urban areas, with some others populating mining and forestry areas. The growth of American industry was made possible by this inexpensive immigrant labor.

The characteristics of these immigrants changed as well. As the second period of immigration continued, the composition of the immigration changed, with more single young men and women coming to the United States to

Table 2. Immigration by European Region, 1891–1920

	1891–1900	1901–1910	1911–1920
Total immigration (net)	3.7 million	6.3 million	2.5 million
Britain/Germany/ Scandinavia	1.1 million	1.4 million	688,000
Ireland	388,000	340,000	146,000
Eastern/Southern Europe	1.7 million	5.8 million	2.9 million

Note: Figures may exceed the total due to substantial remigration back to Europe.

look for employment. These young people were not constrained by family ties, were much more mobile, and were much more likely to be in the United States for a limited number of years before returning to their home countries. Advances in transportation allowed some immigrants to make multiple trips to the United States and home again, earning in America a sizeable amount of money to bring back to their native countries.

Immigration from Outside Europe

Though the majority of immigrants during the period from 1891 to 1920 came from Europe, there were other areas that contributed immigrants to this vast movement of people. More than 200,000 Chinese came to the West Coast and Hawaii during the second half of the nineteenth century, and although nativist (anti-immigrant) legislation, beginning with the Asian Exclusion Act of 1882, drastically limited immigration from these areas, a number of immigrants arrived from Japan. These Asian immigrants brought Buddhist practices that took root on the West Coast, although immigration restrictions that severely limited the number of women immigrants and the transient nature of Asian contract labor hampered the formation of a tradition. Japanese Jodo Shinsu Buddhists formed the Buddhist Mission of North America, the forerunner to the Buddhist Churches of America, in San Francisco in 1899. Chinese Buddhists formed a number of local Buddhist temples on the West Coast.

Immigration from other countries in the Western Hemisphere added to the diversity of religion in the United States. During the first two decades of the twentieth century came a total of 920,000 immigrants from Canada, one-third of whom were French-speaking Roman Catholics from Quebec who formed their own Roman Catholic parishes in the northeastern United States. During the same time

270,000 immigrants came from Mexico and 230,000 from the West Indies, mainly to the southern and southwestern United States; they brought with them their own forms of Roman Catholicism. Though none of these immigrations could match the size of the earlier European immigration, they added their own distinct traditions of worship and piety, increasing the diversity of American religious life.

The Effects of Religion on Immigration, 1860–1920

In social and religious aspects, the mass immigration of 1860–1920 caused a revolution in what had been a rather homogeneous American culture prior to the Civil War. Though American Protestants were often sharply divided among themselves along denominational lines, their overall forms and assumptions of religious life were generally uniform. Growing out of the Second Great Awakening (after 1790), American Protestants reached a general consensus on a form of Reformed Protestantism modified by the new revivalism that was optimistic about building the kingdom of God on earth through the efforts of voluntary reform and mission societies. Though this consensus was shaken by the controversy over slavery and the initial flood of Irish Catholic immigrants during the 1840s, it held dominant sway in the United States through the Civil War.

Because of the changes brought by mass immigration after 1865, and also because of internal divisions within the American Protestant consensus in the late nineteenth century, the dominance of American Protestantism was shaken. Native-born American Protestants began to divide along liberal and conservative lines over how to respond to secularism and scientific modernity. Numerically, native-born Protestants were losing ground to foreign-born Protestants, Roman Catholics, Orthodox Christians, and Jews. Among the Protestants, non-English-speaking groups grew rapidly, and by 1900 the largest of these groups, the Lutherans, had become the fourth largest Protestant denomination in the country, and other groups, mainly German and Dutch Reformed, were also growing. The number of American Roman Catholics increased dramatically, from 50,000 in 1800 to 12 million in 1900. The immigration from eastern Europe and Russia after 1900 would bring some 3.5 million Jews to the United States, and although they were not all regularly practicing or observant, they had a large affect on Christian America. Similarly, the small numbers of immigrants practicing Asian religions had impact beyond their numbers, simply because of their differences with the

dominant culture, among both Americans who feared the new religions as well as those who were attracted to them.

Native-born American Protestants responded to these new immigrant religions in a number of different ways. One approach was to build alliances and relations with like-minded immigrant religious groups, such as German, Scandinavian, and Dutch Protestants. Although differences in language and confessional issues kept these immigrant groups separate from other American Protestants (and from each other), native-born Protestants attempted to reach out to these new groups. The Congregationalist American Home Missionary Society subsidized a number of immigrant home missionaries, and the Methodists formed several different foreign-language districts to take in the immigrants. Almost every settled American Protestant denomination had some form of outreach to these new Protestants, though their efforts were sporadic and not often successful. Some sought to move the foreign-language Protestants into their own folds; others simply tried to build strategic relationships with them.

Roman Catholics, Jews, and Buddhists were often targets for organized Protestant proselytization, and Protestants formed numerous mission societies focused on outreach to these newcomers. Many of these efforts were focused on the burgeoning urban immigrant populations who were crowded into unhealthy slums and subject to economic and social stresses. Many of these missions focused on providing for the basic economic needs of the new immigrants, with additional assistance in education and adjustment to this new country. Behind much of this work, however, was a religious fear of the new immigrants and the worry that Protestant America was under siege from these new, non-Protestant groups. Although these missions were often very helpful to the immigrants themselves, they were not very effective in converting the immigrants to Protestantism.

Growth of the Immigrant Religious Traditions

Just as the American Protestants who attempted religious outreach to the new immigrants were less than successful, those who worked to keep these immigrants faithful to their Old World religious traditions also faced difficult challenges. Especially with the new immigrants who came into the United States at the end of the nineteenth century, immigrant religious leaders struggled, often with very few resources, to build ethnic religious denominations and institutions in the United States. The immigrants themselves were not always very interested in the religious message of

these leaders, or they wished to be free to make their own religious choices, including no religion at all. Adaptation of the Old World religious institutions and traditions to the chaotic religious and cultural world of the United States was often difficult, and generational differences often split first-generation immigrants from their American-born children.

Some religious leaders in Europe were skeptical and hostile toward immigration to the United States and worked actively to discourage it. Leaders of the Scandinavian state churches were very active in the anti-immigration societies in their respective countries, and European Roman Catholic bishops worked with political officials to restrict immigration to the United States. Certainly they were worried about the loss of members in their own parishes, but more than this, they were not sure that it would be feasible to establish their religious traditions in the United States. Most of the European churches were state supported, not only by governmental funding but also through laws that restricted dissenting religious groups. Many religious leaders saw America as a “godless, anarchistic society” with few social and religious institutions. They could not imagine a pluralistic America, dedicated to freedom of religion, and a free, non-state-supported denominational structure. European Roman Catholics, especially, worried that the establishment of a Roman Catholic Church in the United States would be impossible in such an intensely Protestant nation, and that their immigrants would be lost once they reached the New World. Jewish leaders in eastern Europe, threatened by severe persecution and restrictions, were equally threatened by American culture and urged their people not to leave for America.

The fears of these religious leaders were not unfounded. Many immigrants had been attracted to the new religious groups and ideas that were being spread in Europe and were seeking to push beyond the restrictive state-church religiosity of their homelands. The strong tradition of European anticlericalism evident in many countries had already indicated that many immigrants were disaffected from their local religious leaders and were willing to consider religious or nonreligious alternatives. With the added considerations of American Protestant proselytization efforts and the lack of state support for religion, the transplantation and survival of the European and Asian religious traditions to the United States seemed almost impossible.

Immigrant Religious Institutions

The task of reestablishing and reformulating these Old World religious traditions in the United States fell mainly

on adventurous clergy and their lay supporters who saw opportunity in the New World. These immigrant religious leaders saw the free American situation as an opportunity to establish, and often to purify, their native religious traditions in order to serve the immigrant community. Sometimes their most difficult battles would be with Old World religious superiors who sought to limit their power to establish and innovate, fearing a loss of control of the “core” of the religious tradition.

The immigrant religious denominations and institutions formed by these leaders and their ethnic immigrant populations were by far the largest and most effective ethnic institutions in the immigrant communities—no other immigrant institutions even came close to the reach of these religious groups. There were, of course, a multitude of immigrant cultural, social, and educational societies and nonreligious groups, such as the socialists and the labor federations, that attempted to build institutions parallel to those of organized religion. But these efforts fell far short of those of the religious groups, who were the main institutions for continuing the ethnic and linguistic traditions of the immigrant community.

This is not to say, however, that all the immigrants joined these ethnic denominations, nor did they always support them. Figures are inexact, but it is clear that at best, fewer than half the immigrants and their children joined their American ethnic denominations, and in the case of many nationalities, rates of membership were in the single digits. Though the traditions of anticlericalism and American religious freedom (including freedom from religion) were in part the cause of this, there were many more pragmatic reasons for the low level of participation in organized immigrant religion. There were very few clergy who could speak the immigrants’ languages, and even less funding available to support them. Many groups of immigrants were spread over wide geographical areas and were continually on the move to find new and better opportunities. The American tradition of voluntarily supported religion allowed for a much greater freedom, of course, but the converse was that organized religion cost money, which had to come directly out of the pockets of the immigrants. Also, the American voluntary system was predicated on a Protestant understanding of “membership”: that a person would actively choose to become a committed member of a certain religious group, usually after some sort of conversion experience. In the Old World, there was no category of “membership”; your nationality and ethnicity

determined your religious identity, without any volitional choice. The idea that one might have to “join” a church and support it financially was foreign to almost every immigrant. Many did not bother to formally join an immigrant congregation but utilized the services of the group just as they might in the Old World, for special holidays, rites of passage, educational and cultural gatherings, and to socialize with others of the same ethnicity. This dynamic has led some scholars to speculate that immigrant religious denominations had a “sphere of influence” that was probably two to three times larger than their formal membership might indicate.

Some other immigrants bypassed the immigrant religious organizations altogether. Influenced by the Old World heritage of anticlericalism, by American concepts of freedom of religion, and by new antireligious ideologies such as socialism, some of the immigrants completely abandoned religion as a part of their lives. Other immigrants had neither the time nor resources for a “luxury” good like religion; they would employ their time and resources in more efficient ways. This was especially true for the young single laborers who had come to America to make money but not necessarily to put down permanent roots. The likelihood that an immigrant would become a member of an ethnic religious organization was much greater if he or she were part of a larger family or kin group, or if he or she decided to settle permanently in a particular location.

Some immigrants saw the value in religion but did not want to join a foreign-language, ethnic religious group. They had come to the United States to learn English and become Americans, so the idea of joining a “foreign” religious group did not appeal to them. Also, there were often economic and social advantages to joining an “English” church; such churches often provided social prestige and contacts into the wider society that immigrant denominations could hardly afford on their own. Immigrants of a higher educational and social class often looked down on the immigrant churches, full of laborers and servants, as being beneath their station in life; immigrants who became economically successful in the United States often came to share the same attitude. Finally, American-born children of the immigrants often struggled against the conservatism of their parents’ congregations, which tended to be especially slow in adapting to the new American surroundings, especially in the use of the English language. Intermarriage was another factor. It is hard to tell how many of those who did not join an immigrant religious group joined an

“American” denomination instead, but it is likely that this number was substantial.

The Internal Development of Immigrant Religion

The ethnic denominations and religious groups formed in the United States by nineteenth-century immigrants were hardly clones of their Old World counterparts; they could not be so, even if the immigrants wanted this, which in many cases they did not. Rather the ethnic religious groups were carefully crafted compromises, attempting to blend the Old World traditions of religiosity with the realities of a pluralistic and free religious America. Immigrants did initially form linguistic ghettos and enclaves in which many of the traditions of the old country were maintained. But even these separate societies were porous; the immigrants lived in two worlds, and much of American culture invaded the immigrant enclaves, whether they liked it or not. The immigrant religious institutions could not shield their members from the outside world; rather, they were carefully constructed attempts to mediate the new world of America into the immigrant community and to manage the rate of change, preserving the core of the immigrant religion in the new situation of America. The nature and rate of that change were a source of continual struggle within these religious groups.

The most pressing need for these immigrant religious organizations was leadership, especially leadership that could function within the American situation. For these immigrant religious groups, there were never enough pastors, priests, rabbis, monks, and nuns to meet their needs. The initial leadership came from those who traveled with the immigrants, but most Old World religious leaders were not likely to leave the settled areas of Europe and Asia to travel to the United States. Protestant pastors and Jewish rabbis accompanied parties of immigrants, while missionary priests and nuns were sent by their superiors to the New World, as were Buddhist priests on the West Coast. But these leaders, important as they were, could hardly begin to meet the needs of millions of new immigrants. The solution was to train immigrant religious leaders in the United States, and the initial priority of most immigrant religious groups was to establish educational institutions—colleges, seminaries, and other such schools—to accomplish this. Eventually these institutions were expanded beyond their original intentions to provide a broader education for immigrant youth.

Since there was no mechanism for government financing of religion in the United States, the immigrant religious leaders had to found their institutions along the lines of American

voluntary religion. This meant that churches, parishes, synagogues, and temples had to be self-financing and self-governing, and lay members of the community would have to take over many of these roles. This was a new and often daunting experience for immigrants, many of whom had limited education and experience in these areas. Nevertheless, the new local religious institutions flourished, becoming “training schools” for immigrants to practice the skills of democracy and capitalism. This also led to clashes with immigrant clergy, who were used to more autocratic control over religion. Roman Catholic and Orthodox Christian communities often had the most trouble in this area; Protestant and Jewish groups had more of a tradition of self-management. The American system empowered the lay religious members, who could leave and join (and financially support) another religious institution if they did not like where they were; immigrant clergy had to take this dynamic seriously.

Immigrant religion was also often divided internally along confessional and ethnic lines, with coreligionists not able to bridge the linguistic and theological gaps with each other. Older immigrant groups, who had settled into America and acculturated to its religious patterns, were many times unable to connect to newer immigrants or even felt threatened by them. English-speaking Roman Catholics, Lutherans, and Reform Jews were overwhelmed by the tide of their new immigrant counterparts and often more than a bit resentful of them. For the Jews and the Lutherans, the newcomers generally bypassed their congregations to form separate ones; among Roman Catholics, the new Irish, German, Italian, and Polish immigrants founded separate ethnic parishes and religious orders.

There were also tensions within the immigrant communities themselves. Some had to do with theological or confessional issues, brought from the old country but made worse in the United States. Protestants readily divided up into smaller denominations; by 1900 there were, for example, more than twenty different Lutheran denominations in the United States. Similarly, American Jews divided into Reform, Conservative, and Orthodox organizations. One major issue was how much to accommodate to a Protestant American religious culture; groups like Reform Judaism and the Japanese Buddhist Churches of America who accommodated readily to American culture were often strongly opposed by more conservative groups who sought little or no change in their Old World traditions.

Most often, however, the divisions within the immigrant religious world were ethnic; language was the key identifier,

and groups often developed separately along linguistic lines. For immigrant Protestants, Orthodox, and Buddhists, this meant separate ethnic denominations; although the Russian-dominated Orthodox Church of America attempted to be *the* church for Orthodox immigrants, the newer Greek and eastern European immigrants instead founded their own ethnic church organizations. For American Roman Catholics this was not readily possible, although a Polish National Roman Catholic Church was formed out of ethnic rivalries (not recognized by the Vatican, however). Rather, American Roman Catholicism became a patchwork of different ethnic parishes, each of which represented a different linguistic and devotional heritage, led by ethnic clergy. The development of Catholic religious orders of monks and nuns was also along ethnic lines, and this leadership often was at odds with the hierarchy of the American Roman Catholic Church, especially if the bishop of a diocese was seen as favoring his own ethnic group at the expense of others. The dominance of the American Roman Catholic hierarchy by Irish Americans caused a great deal of unrest in the Midwest, for example, where German, Polish, and Italian Roman Catholics chafed under the control of Irish American bishops.

Nativism and Reactions against Immigrants

Prior to the beginning of the mass immigration to the United States in the 1840s, America was in many ways a very homogeneous country. Although there were social conflicts (especially over slavery), sectional disputes, and differences among political parties and religious groups, the United States demonstrated a large measure of uniformity. This uniformity was based on a common set of constitutional values, a religious consensus on a form of Protestantism, and a general ethnic heritage derived from Great Britain. It is hardly surprising, then, that the massing of new non-English-speaking immigrants from Europe and Asia would lead to social and religious conflicts between the native-born Americans and the new arrivals. American Protestants were raised on anti-Roman Catholic literature and were conditioned by missionary groups to see Buddhists, Jews, and others of different religions as targets for conversion. As immigration increased through the nineteenth century and into the twentieth, many native-born Americans worried that the hordes of new immigrants would not be acculturated into the United States and would overwhelm their society. These fears led to conflict.

The initial target of anti-immigrant sentiment, or nativism, was the mass immigration of the Irish from 1840 to

1860. Though reports of actions against the Irish have been overstated, it is clear that there was a strong bias against the Irish in many areas of American society, especially because of strong adherence to Roman Catholicism among the Irish and their reputation for excessive consumption of alcohol. German Roman Catholic immigrants came under similar suspicions, but the massing of Irish immigrants in the new American cities made them a target for nativist groups such as the Know-Nothing Party. The antidraft, antiwar sentiments of some urban immigrants during the Civil War, seen in the draft riots in northern cities, also made the new immigrants unpopular.

The resumption of mass immigration after the Civil War led to a renewal of nativist sentiments. Because the first period of immigration (1840–1890) was dominated by Protestant immigrants from northern and western Europe, the fears were muted. But with the late-century shift toward Roman Catholic, Orthodox, and Jewish immigration from southern and eastern Europe, nativist sentiment increased dramatically. Fears of Asian immigration were similarly present on the West Coast of the United States. Though there were many other aspects of this nativist sentiment, such as political and economic rivalry, racial ideals, and social discomfort, religion played a primary role. Since the “others” were not “good Protestant Americans,” and not likely to become so, their arrival seemed to threaten American society.

One of the major areas of dispute between native-born Americans and the new immigrants were the separate institutions developed by the newcomers to maintain their language and ethnicity. Foreign language institutions and separate schools, especially the parochial schools developed by Roman Catholics and others, were seen as an attempt to evade the acculturating (and Protestantizing) nature of an American icon, the public school. Native-born Americans feared the political power of the new immigrants, seen especially in the Irish domination of urban politics, and worried that Roman Catholic voters would blindly follow the dictates of their bishops and the Vatican to the demise of American democracy. Close contact with formerly distant religious groups, such as Jews and Buddhists, led to further nativist fears and backlash.

One approach to this issue by native-born Protestants was to try to convert and acculturate these new immigrants into the older American Protestant consensus. All sorts of outreach and evangelism, some less obvious than others, did not result in the conversion of many immigrants. Though

the immigrants were very open to experiencing American economic and political culture, many of them preferred to maintain their distinct social and religious traditions, at least as these traditions were slowly being modified to meet American norms.

The political and legal movements against immigration were more successful. Beginning with the Asian Exclusion Act of 1882, the U.S. Congress passed a series of measures restricting (or in cases eliminating) immigration to America. In 1891 the American government took over permanent control over immigration and began to screen immigrants for “undesirable” traits, such as disease, poverty, and unpopular political ideas. Eventually these policies would lead to an almost complete cessation of immigration during the 1920s. Native-born American religious leaders were often strongly supportive of these measures; immigrant religious leaders were generally opposed, though it depended on whether their groups were affected or not.

Conclusion

The massive immigration to the United States from 1840 to 1920 dramatically changed America, and in few areas was this transformation greater than in religion. Millions of immigrants brought their new and often different religious traditions with them and attempted to establish them in the United States, much to the dismay of native-born American Protestants. Religion was a key factor that identified the new immigrants, and their religious institutions became centers of their ethnicity and survival. But as the new immigrant religions transformed America, America transformed the immigrant religious institutions. The new immigrants adapted their Old World traditions to meet the needs of a pluralistic and religiously free America. These transformations were not without conflict, both between native-born and immigrants and within the immigrant communities themselves. Nativism and interethnic tensions threatened the religious freedom of the country. But both native-born and immigrant religious communities learned to cope with the new pluralistic situation of American religion, and many of them thrived in the new competitive situation. American religious culture proved to be much more adaptive and resilient than many Americans had thought.

Immigration: From World War I to the 1965 Immigration Act

This period of American immigration history, situated between the high-water mark of European immigration and the extremely diverse new immigrants of the late twentieth century, is often thought of as a “low-water” mark—a time when nothing happened. In fact, this era is shot through with complex immigration and entrance legislation, the ongoing assimilation of European immigrants, and the struggles of new immigrant communities—particularly communities of color—to find their place. These forty years laid the groundwork for the religious and cultural explosion of the 1960s that was triggered by the Immigration and Nationality Act of 1965.

European Immigration and Assimilation

This period begins with the Reed-Johnson Act of 1924, also known as the National Origins Act. The intent of the act was to restrict immigration to the United States almost completely to northern and western Europeans, leaving out or minimizing immigration from southern and eastern Europe, and the legislation succeeded in accomplishing this. However, because of the Great Depression in the United States, World War II in Europe, and the economic success of the Marshall Plan (1947–1948) in northwestern Europe, there were fewer European immigrants during this period than in the period before 1924. Quite simply, the people of northwestern Europe, with the exception of Germany, were not very interested in immigration. Others, who were interested, found it more difficult to enter; and the restrictive laws against immigration became tragically entangled with the need to provide refuge to those fleeing the Holocaust during World War II.

In religious and cultural life, this was the era of “Protestant, Catholic, Jew”: the time when the children of immigrants of the pre-World War I era, largely European in origin, continued the process of assimilation to American life. Religious institutions played a major role in this assimilation. Ethnic Protestant churches, Catholic national parishes, and Jewish synagogues established prior to World War I continued to consolidate and grow institutionally through the early period. Continuing immigration from Europe was funneled into existing institutions: German Lutherans could find German Lutheran churches, while Scandinavian Lutherans could find their favorite variety of Lutheran churches as well;

Italian Catholic immigrants had national parishes already established, and Polish Catholics could come to Chicago and find their local Polish National church, complete with Polish priests and Polish religious art, eager to embrace them and help them find their way around the new culture.

As the children of earlier immigrants learned the English language and American culture, they became less attached to their language and culture-specific ethnic institutions and began to look for English-language churches in which they could feel more “American” and less “immigrant.” By the third generation, according to scholarly understanding based on the experiences of these immigrants, a German American was functionally indistinguishable from a Scandinavian American but was still distinguishable from an Irish American or Italian American, because the former groups would be almost certainly Protestant and the latter groups almost certainly Catholic.

The three great divisions of religious life—Protestants, Catholics, and Jews—became the divisions of cultural life. Protestants remained hegemonic, the most influential and powerful of the religious-cultural groups through this period, but Catholics began to catch up, especially after the election of President John F. Kennedy. Jews, the third of the great culturally recognized religious divisions, continued to struggle in many ways for acceptance in the larger culture until well after World War II. During World War II, the continued presence of anti-Semitism in American life meant that the American government did not act in any substantial way to help or support Jewish refugees from the Holocaust. Even refugees sponsored by prestigious American Jewish institutions and universities were often turned back to die in concentration camps. Internationally famous Jewish refugees, such as Albert Einstein, might be welcomed, but thousands more were refused or even, as in the case of a boatload of a thousand Jewish refugees who tried to land in Miami, turned back from American shores to face almost certain death in wartorn Europe. The utter failure of American immigration authorities to act quickly and responsibly in this refugee situation influenced later efforts to create a more accommodating system for emergency acceptance of those fleeing persecution and death, but the system remained piecemeal and often inadequate to need until the wholesale overhaul of immigration law in 1965.

Non-European Immigration

By 1924, Asian immigration was already largely restricted. Since 1882, the Chinese had been forbidden to immigrate

but were permitted to bring over their children, which led to a flourishing trade in “paper sons,” young males who were sons only as a legal fiction. The Japanese had been forbidden to immigrate since 1907, but they were permitted to bring over wives—the “picture brides,” women selected as mates at long distance, known to their prospective husbands only through photographs—until 1924. East Indian immigrants had been barred in 1917. For these communities, the period after 1924 told stories of attempting to survive in a continually hostile and racist environment.

The Reed-Johnson Act of 1924 did not apply to the Western Hemisphere, which meant that Mexican and other Latin American immigrations were not affected by its quotas; Asian immigrants continued to trickle in because of various exceptions and the exigencies of America’s conquests or relationships in Asia. Immigration from Asia, Mexico, and Puerto Rico during this time added to America’s religious and racial diversity, generally to the intense dismay of those who had intended Reed-Johnson to safeguard “white America” (a goal that was hardly kept secret during the racially charged debates about immigration law in the 1920s and earlier).

The immigration restriction legislation reflected the intense focus on Americanization or assimilation of immigrants during this time period. European immigrants from the earlier periods of immigration did, in fact, largely Americanize and assimilate—and their churches and synagogues were deeply involved in this process. The churches understood their role with immigrants to be one of supporting Americanization and assimilation. The goal of the church was to Americanize the immigrant. Immigrants who did not belong to established “American” churches, however—non-Christians and those who had not immigrated in large numbers during the pre-1924 period—found themselves in a very different religious situation.

Chinese and Japanese Immigrants and Religions

Not much has been written about the religion of the Chinese in this period. Though Chinese had been entering the United States since 1850, after 1882 they suffered from intense immigration restrictions and were largely unable to bring Chinese women over as wives. This loss of family and descendants must have been particularly terrible, in a religious as well as emotional sense, for Chinese men, since traditional Chinese religion places strong emphasis on respect and relationship with ancestors and emphasizes the importance of male children to honor an individual’s spirit

after death. After 1943, Chinese immigrants received a tiny immigration quota as recognition of the Chinese role as an ally in World War II; this sliver of an opening led to a growing Chinese community in America. The Chinese Protestant churches also grew. Chinese converts became more common in Chinatowns, and the few second-generation Chinese joined Young Men’s Christian Association (YMCA) and Young Women’s Christian Association (YWCA) organizations. The “joss houses” (*joss* is a corruption of the Portuguese word for God) of an older generation—temples where ancestor and other worship was practiced—largely died out; it was not until the new immigration of 1965 that Chinese temples began to become active again. The children of the immigrant Chinese often wished to assimilate to American society and American churches, but American antagonism to their race made this impossible.

Japanese immigrants had a shorter time period (roughly 1870 to 1924) to enter the United States before they, too, were excluded, but between 1907 and 1924 they had an opportunity to bring Japanese women to the United States. During the 1924–1965 period, therefore, the Japanese community was raising its first American-born, American citizen generation—the *Nisei*. The Japanese were overwhelmingly Buddhist, but Christian Japanese were growing in numbers and tended to be vocal in their relations with the dominant society.

Both religious groups—Buddhist and Christian—were eager to show that Japanese citizens were part of American society, but the Buddhists were viewed with much greater suspicion as an “alien” creed. Like many immigrant religious organizations since, Buddhist missionaries and priests caring for the Japanese communities struggled to make their religion more American, with churchlike buildings, meetings on Sundays, and Young Men’s and Young Women’s Buddhist Associations. These groups provided some of the most important arenas in which the *Nisei* could feel completely at home, work together as leaders, and support their own cultural and religious values.

The Japanese Christian groups also had access to the YWCA and YMCA, but since these groups were overwhelmingly white, the Christian *Nisei* did not have the same experience of complete welcome within them and often were made to feel unwelcome because of their race. The YPCC—Young People’s Christian Conference—was different, an organization specifically for Japanese Christians, and Christian *Nisei* found the YPCC to be an important center for their lives. Japanese ministers organized Japanese

American churches for their communities and created Japanese groups within and between denominations.

During World War II, Japanese immigrants and Japanese American children—almost all of whom were American citizens—were forcibly taken from their homes to internment camps, an immensely traumatizing experience. In these camps, the Buddhist and Christian Japanese associations worked hard to support their people and to prove that the Japanese were “American.” The camps saw some of the first interfaith work in America, as Japanese Buddhist and Japanese Christian organizations cooperated in worship and social action to care for the internees. The organizations continued to focus on social service, even within these constrained circumstances. And when the war ended, both religions continued to serve the communities as they struggled to rebuild.

Catholicism and Latino and Filipino Immigrants

Before entering a detailed discussion of the religious life of the mostly Catholic immigrants from Mexico, Puerto Rico, Cuba, and the Philippines, it is worth making note of some important similarities and differences among them, and between these immigrants and the “old” Catholic immigrants from Europe. The Spanish Conquest had led to a strong folk Catholicism in its colonies in the Americas and the Philippines. Sometimes this Catholicism is called “syncretistic,” melded with native traditions and customs or with those of Africans brought as slaves. The folk Catholicism of these groups differed from nation to nation and between classes and regions within countries, but in general it focused on relationship rather than doctrines or institutions. The individual was in relationship with God, with Mary, with Jesus, and with the saints as well as with the living and dead members of their own communities. Baptism was important because it brought children fully into this community; beyond this, there was relatively little concern for the sacraments or for the priests.

Cuba, the Philippines, and Puerto Rico were affected religiously by the transfer of sovereignty from Spain to the United States after the Spanish–American War (1898) in that very large portions of their clergy, who had come from Spain, requested to be repatriated rather than remaining in the former colonies. The Puerto Ricans in particular had almost no native clergy. The situation for the Filipino Catholics was similar, complicated by much greater syncretism with the strong indigenous tradition in the Philippines and, at the beginning of the twentieth century, the defection of

a significant proportion of the native Filipino Catholic clergy to the Aglipayan or Filipino Independent Church. There simply were no Filipino Catholic clergy on offer for many years after Filipino immigration began. The Cubans, like the Filipinos, had a strong syncretistic tradition but had at least a moderate number of Cuban Catholic clergy despite the fact that the Catholic Church in Cuba was institutionally fairly weak. Almost all of these clergy accompanied the first wave of Cuban immigration after the Castro revolution in 1959, making Cuban immigrant religion unique in American life.

These Catholic communities differed significantly from the earlier European Catholic immigrants in their relations to the church. The American Catholic churches were strongly influenced by Irish Catholicism. Irish Catholicism emphasized loyalty to the institutional church, accurate understanding of doctrine, regular acceptance of the sacraments, regular attendance at church, and obedience to the authority of the priest. This was almost a perfect recipe for trouble when Irish Catholicism was confronted with the folk Catholicism of the Puerto Ricans, Mexicans, Cubans, and Filipinos, which was indifferent toward the church as an institution, had relatively little role for priests, and was focused on home devotion and the saints rather than church devotion or sacraments. In addition, the Mexican, Puerto Rican, Cuban, and Filipino Catholic immigrants did not have national parishes on the old model, and the Catholic assimilation experienced by European Catholics in the second and third generations did not occur for these communities. All of these communities in America began a renegotiation of their relationship with the Catholic Church upon entering the United States.

Filipino Immigrants and Religion

Filipino immigration to the United States began in the early twentieth century, after the islands became American territory in 1898, and lasted until the islands achieved independence in 1934, when the Filipinos were reclassified as aliens. During this time Filipinos lived in a legal limbo in the United States.

Like the other Spanish Conquest communities, Filipinos were numerically almost entirely Catholic, but they also had access to a native indigenous tradition. This native tradition, as well as the Filipino Independent Church (Aglipayan) and Protestant missionary work, was well represented among the immigrants. An Aglipayan priest and a Filipino Methodist minister served the immigrants in Hawaii quite early on.

Filipino Protestant churches were established in Los Angeles and Stockton, California, and became strongholds of the community, and the Protestant missions developed Filipino churches in Hawaii. The Filipino immigrant community also joined semi-religious fraternal orders such as Dimas San Alang, and at least one Filipino religious group had its start in the United States—a *colorum*, or a fraternal-religious organization dedicated to Filipino independence and based in mystical practices in the tradition of Mount Banahaw, a site in the Philippines known for shrines built around its many springs. Filipino Catholics, however, had little or no access to Filipino priests or institutions, and if they went to church, they joined English-speaking parishes.

Mexican Immigrants and Religion

The Mexican community in the United States was older than the United States as a whole. After the Treaty of Guadalupe Hidalgo in 1848, thousands of Mexicans suddenly found themselves to be American. The result was less than good for most of the Mexicans who remained in the newly American territories, and the rights, status, and economic well-being of the community deteriorated with the influx of Anglo-Americans into the Southwest. In addition, the Catholic churches of the Mexican Americans now were under the authority of American, not Mexican, bishops.

Mexican immigration was not subject to the quotas of the Reed-Johnson Act, and during this period Mexican immigration increased both in absolute numbers and as a proportion of total immigration. In addition, in an effort to fill the gap in agricultural labor left empty by the restriction of Asian immigration, beginning in 1942 the United States and Mexico developed the Bracero Program, a guest worker agricultural program. In a sense, there were two Mexican American communities during this period—the settled dwellers, both new immigrant and old American, and the *braceros* or migrant workers. Both groups had their own religious lives.

Mexican Catholics rarely had churches of their own in the sense of a national church. A few national churches were established, but most Mexican churches became majority Mexican by default rather than intention. The Mexican Catholic churches were served by Spanish-speaking, but not Mexican, priests and religious, who often were uncomfortable with the practices of Mexican Catholics. The bishops and priests of the American Catholic Church largely believed that their role was to Americanize the Mexicans—and by making them good, American-style Catholics, they

intended to do so. Priests and religious struggled to reach out to the *braceros* and migrant workers as well. Rural and migrant Mexicans could go years without seeing a priest, but their religious life continued nonetheless. A priest visiting the migrant camps noted that every camp, no matter how poor, had an image of the Virgin of Guadalupe, the holy patroness of Mexico.

Struggling to maintain their community life despite little support from the Catholic hierarchy, settled Mexicans joined church-based sodalities such as the *Hijas de María Sociedad Guadalupeana*, and the *Vasallos de Cristo Rey*. Sodalities provided social functions as well as religious ones and gave Mexican immigrants and Mexican Americans the ability to exercise their leadership and creative skills in ways the larger society would not permit. In this way, the sodalities performed the work that national parishes had done for the older Catholic immigrant communities.

The folk Catholicism of Mexicans was focused on the home, with home altars and home devotions such as the rosary. Mexicans would sometimes engage the saints with vows to accomplish something in return for a favor—*la promesa*. These vows to the saints, which might involve pilgrimage, were taken very seriously. Mexican communities also celebrated their faith in the streets, with prayer in the shape of processions of sodalities with their saints. December 12, the Feast of the Virgin of Guadalupe, was a special occasion for these public prayers and celebrations. The enthusiasm of Mexicans for their saints was sometimes very troubling to American bishops and priests—in particular, the practice of dancing before the image of the Virgin on special occasions, which was considered un-American.

There were Protestant Mexicans as well. The main Protestant denominations all had works and missions among the Mexican communities from the late nineteenth century; in addition, the Pentecostal movement, which began with a multiracial revival in California in 1907, made great inroads in the Mexican community. Faith healers and charismatic preachers were very popular among the Mexicans, as they fit in well with the folk Catholic category of the *curandera/o*, or healer. The Mexican Protestant churches, unlike the Catholic Church, had Mexican ministers. However, there was a certain amount of antagonism toward converts to Protestantism among Mexican Catholics. Many Mexicans had a strong sense that, regardless of how well or badly the institutional church served them, their culture was essentially *muy catolico*. Protestant churches often rejected Mexican religious culture even more strongly than did the Catholic Church.

Puerto Rican Immigrants and Religion

Puerto Ricans began arriving in the United States in large numbers in the 1940s and 1950s, from an island with a strong tradition of folk Catholicism and a weak attachment to the institutional church. An overwhelming proportion of the Puerto Ricans settled in New York City, but they also frequently visited their home island, since they enjoyed the privileges of American citizenship from 1917 on. Puerto Rican Catholic priests and bishops were nearly all imported to Puerto Rico from the United States and were dedicated to Americanizing the Puerto Ricans in their church and society. By the time Puerto Ricans began to immigrate, they had lived with “Americanization” schemes that were supported by the institutional Catholic Church for almost half a century. While happy to be citizens and thinking well of America in general, Puerto Ricans were strongly and definitively *puerto-riquenos*—not *Americanos*—and defined themselves by their culture, their folk Catholicism, and their Spanish language.

Puerto Rican Catholicism, however, was unfamiliar to the Catholic hierarchy in America. Puerto Ricans had relatively little relationship to the institutional church or to the regular sacraments, including marriage—consensual relationship, rather than church or civil marriage, was quite typical in many parts of Puerto Rico—and had few priests. They also came to the United States at a time when the New York hierarchy, particularly Cardinal Spellman, was determined to resist efforts to create new national parishes. The Puerto Ricans were therefore assigned to territorial parishes, with the expectation that a Spanish-speaking priest would be provided for their care.

The Puerto Ricans in New York did not have strong attachments to these territorial parishes, which they felt, accurately, were not “theirs.” There were not enough Spanish-speaking priests to serve the community, nor were the Puerto Rican forms of Catholic worship and society understood. Two priests in the New York hierarchy, Father Joseph Fitzpatrick and Father Ivan Illich, set themselves in different ways to amend this problem. Since they could not create national parishes, they influenced Cardinal Spellman to create a priestly resource that could better serve the people. All seminarians were required to learn Spanish and to study at the Center for Intercultural Studies created by Illich in Puerto Rico. Eventually, this provided the two hundred priests necessary for the numbers of Puerto Ricans in New York, although Puerto Ricans continued to feel alienated from the church because of the lack of their own culturally appropriate parishes.

More successful was Fitzpatrick’s creation of the Fiesta for St. John the Baptist, the patron saint of Puerto Rico. The first celebration of a pontifical Mass for San Juan Batista in 1954 drew 5,000 people to St. Patrick’s Cathedral. A few years later, the fiesta was day-long, the premier Puerto Rican event in New York City, drawing more than 30,000 people to worship, celebrate, and picnic together. The celebration became less popular as the church refused to become involved in all–Puerto Rican issues, focusing only on Catholic Puerto Ricans; gradually the Puerto Rican community created purely civic festivals to replace it.

Pentecostal and other Protestant churches were making inroads into the Puerto Rican community as well, partly as a result of the lack of leadership possibilities for Puerto Rican laypeople in the Catholic Church. The introduction of the Catholic *curso* (a three-day retreat) into the American Puerto Rican community began to change this situation in the late 1950s.

Cuban Immigrants and Religion

Cuban immigration to the United States began in the nineteenth century and continued into the early twentieth with the establishment of a cigar-making factory town, Ybor City, in Florida. Religion in Ybor City seems to have been minimal. Most Cubans were not very religious, and the Cubans working in the cigar factories were part of the radical Cuban “proletariat” who were suspicious of religious institutions.

The massive Cuban immigration that began in 1959 with the fall of the Batista regime and the beginning of Fidel Castro’s rule was very different. The first wave of the immigrant refugees included many island elites. Among this class, although the men tended to be skeptical of religion, women tended to be quite religious and attached to the Catholic Church. Their sons and husbands had attended elite Catholic schools, run by the Jesuits, and were part of influential alumni associations and networks. These new exiles were the Cubans who were most likely to be attached to the institutional church if they were religious at all. They were accompanied by almost all the Catholic clergy in Cuba, including the Jesuits, who relocated their entire school and alumni network.

This community was welcomed by the Catholic hierarchy in Miami. The diocese provided huge amounts of material aid to the exile refugees, who were perceived as having taken a stand for their faith against godless communism. In this situation, it is not surprising that the exiles themselves

began to interpret their exile as a religious one, and their destiny of returning to Cuba as a religious destiny. This divinization of exile continued through the next decade. It was not until later in the 1960s that lower-class Cubans, who practiced Santería (an Afro-Cuban religion), began to migrate, and Cuba's religious diversity was better represented in the United States.

Immigration: Since the 1965 Immigration Act

Today's American immigration policy has its roots in the Immigration and Nationality Act of 1965 (often called the Hart-Cellar Act). The act struck down the national origins quota system that had defined U.S. immigration policy for over forty years and had limited the possibility of immigration from entire areas of the world. In its place, the 1965 immigration reform created a system that rewarded family reunification and granted no favored status to specific countries or regions. Its passage marked the reopening of large-scale legal immigration to the United States.

The act was signed into law by President Lyndon B. Johnson on October 3, 1965, in front of the Statue of Liberty. This venue was chosen not because supporters of the Immigration Act believed the act would alter the demographic and religious composition of the country (it did), but to provide propaganda value in a refugee dispute with Cuba. Indeed, a significant portion of Johnson's signing statement dealt with Cuba, not the Immigration Act.

The 1965 Immigration Act and its subsequent revisions, most notably those enacted in 1990, are not the only immigration policies that have contributed to reshaping the demographic and religious landscape of the United States. Refugee policy, especially the Refugee Act of 1980, allowed millions of persecuted persons, many for religious reasons such as Tibetan Buddhists, Russian Jews, Iraqi Chaldeans, and Bosnia Muslims, to emigrate to the United States. Policies governing temporary immigration have allowed hundreds of millions of foreign nationals to visit, work, study and worship in the United States, some of whom have become legal immigrants.

Globalization

Increasing globalization at the end of the twentieth century accelerated people's opportunities, and more often than not their need, to seek work and settlement outside of their country of origin. Economic changes fostered by the processes of globalization—the free movement of capital and the reduction of trade barriers—transformed labor markets, creating new employment opportunities for some while taking the jobs of others. Improvements in communications technology have facilitated the quick dissemination of migration opportunities, while advancements in and expansion of transportation systems have reduced the time and cost of travel.

The International Organization for Migration estimates that in 2008 about 200 million persons were living outside their country of origin. Migration theorists are quick to point out that the expansion of trade and the opening of once protected markets have increased the supply of immigrants, especially from developing countries. It is not surprising, then, that most immigrants to the United States come from developing countries. Indeed, since the 1980s only a handful of developed countries can be found in the list of the top sending countries of immigrants to the United States. The constant and long-term demand for labor has made the United States the leading migration magnet globally.

Size of Early Twenty-First-Century Immigration

Since passage of the 1965 Immigration Act, the United States has experienced a steady increase in the number of immigrants arriving at its borders. Not since the great European migration at the turn of the twentieth century have so many newcomers settled in the United States. Between 1967—the year the changes took effect—and 2007 the country received more than 29.8 million legal immigrants. Average annual legal immigration was 450,000 in the 1970s, 734,000 in the 1980s, 910,000 in the 1990s, and 1,020,000 in the 2000s.

The continuing flow of undocumented immigrants is adding to the demographic change. Precise estimates of the total number and yearly flow of undocumented immigrants are difficult to derive. Nevertheless, most research suggests that the total number of undocumented immigrants in the United States is between 7.0 and 11.9 million.

The result of this post-1965 immigration is that in the United States the proportion of the foreign-born population has steadily increased over the last three decades. In 1970 foreign-born constituted 4.7 percent of the population; in 1980, 6.2 percent; in 1990, 7.9 percent; and in 2000, 10.4 percent. Although these numbers are high, they have not yet approached the historic benchmarks of the late nineteenth and early twentieth centuries, which ranged from 13.3 percent to 14.8 percent.

Diversity of Early Twenty-First-Century Immigration

The racial and ethnic heterogeneity of American immigration is unprecedented. Before 1965 the majority of all immigrants came to the United States from Europe. Over the last thirty years, however, Latin America and Asia have consistently accounted for nearly 76 percent of all immigrants; Europe is the origin of only 14 percent and Africa 4 percent. Country-level data yield even more detail on diversity. Throughout this first decade of the new millennium the United States received legal immigrants from some two hundred countries and territories. More significant, immigrants from twenty countries represented about 70 percent of all immigrants to the United States. Over the last three decades Mexico has been the single largest sender of immigrants—in 2006 slightly less than one in eight legal immigrants. The four other top sending countries—India, China, Colombia, and the Philippines—account for an additional 20 percent of all immigrants.

Of the immigrant streams associated with the post-1965 immigration reforms, African immigration has shown the largest percentage increase over the last three decades. From 1970 to 2000 the percentage growth in African immigration was 525 percent, compared with 30 percent from Europe, 61 percent from Asia, and 59 percent from the Western Hemisphere. In the 1970s some 7,100 African immigrants came to the United States a year compared with 64,000 a year in the 2000s. If the growth rate of African immigration remains unchanged, it may well exceed European immigration to the United States by the end of the second decade of the twenty-first century. Another way to put the numbers in context is to note that at the beginning of the twenty-first century more Africans are immigrating to the United States on a yearly basis than at any point during the transatlantic slave trade.

About 70 percent of all immigrants live in only a few states: California, Texas, Florida, New York, Illinois, and New Jersey. California alone is home to some 30 percent of the nation's foreign-born population—that is, slightly more than one in four Californians is foreign-born. Nevertheless, data from the 2000 census and other sources indicate that increasing numbers of immigrants are taking up residence in other states. Southern states such as Virginia, North Carolina, Georgia, Maryland, and Arkansas have witnessed large-scale growth in their foreign-born populations, as have western states such as Arizona, Nevada, and Colorado. At the county level, nine of the ten counties with the largest percentage increase in foreign-born population between 2000 and 2006 were located outside traditional immigrant receiving states.

Immigrants from particular countries tend to settle in specific states and regions. For example, most Cubans can be found in South Florida, and most Nigerians reside in the New York region. Portland, Maine, has a large concentration of Somalis; Atlanta, Georgia, has growing numbers of Mexicans. Networks based on ethnicity, family, and friendship serve to draw immigrants to certain areas. Other factors that influence the settlement patterns of immigrants include religious institutions, ethnic networks, businesses and enclaves, and employment opportunities.

Quantitative Estimates of Impact on American Religious Life

Estimating with any precision the quantitative effects of post-1965 immigration on the shape and composition of American religious life is difficult. The decennial census is

the most thorough accounting of the country's sociodemographic structure. However, it is legally prohibited from asking questions about religious affiliation or identity, thereby making it impossible to link the questions it does ask, such as ancestry or foreign-born status, to religion. The same is true of immigration data collected by the Departments of State and Homeland Security. Although immigration data do document country of origin, making inferences from the data about religious affiliation can result in inaccurate numbers. Iraq is a case in point. Even though Muslims make up an overwhelming proportion of the country's population, a significant number of Iraqis admitted to the United States are Chaldean Christians. Likewise, knowing the distribution of Hindu, Muslim, Sikh, and Jain adherents in India, one of the primary immigrant sending countries over several decades, has little predictive value for estimating the size of each in the United States because one cannot assume that each group emigrates proportionally.

The most thorough accounting of immigrants and religious affiliation is found in the 2007 U.S. Religious Landscape Survey by the Pew Forum on Religion and Public Life. The large sample size of the study allows the generation of reasonably reliable estimates. According to the Pew data, 78 percent of the total population of the United States identifies as Christians. Of all immigrants, slightly less than three-quarters identify as Christians, and of those the majority are Catholic. Catholic immigrants arriving since 1990 outnumber Protestant immigrants by over a two-to-one margin and represent nearly half of all immigrants. Catholic immigration is largely—though not entirely—fueled by the widespread Hispanic immigration. Buddhist, Muslim, and Hindu adherents represent a little less than 2 percent of the country's population. Slightly over one-quarter of Buddhists are foreign-born, compared with about two-thirds of Muslims and five in six Hindus. For U.S.-born Hindus and Muslims it is likely that a significant number are second generation. Because Buddhism was established in America well before the new immigration began, it is reasonable to assume that the majority of native-born Buddhists are beyond second generation.

Americans' Changing Attitudes toward Immigrants

Americans' attitudes toward the assimilation of immigrants shape the environment to which newcomers adapt, and these attitudes have changed considerably over the last century. In the early decades of the twentieth century,

immigrants were strongly pushed to shed their ethnic identities and adopt American ones. The Americanization movement best exemplifies the role of public policy and public education in hastening the assimilation process. The movement called for immigrants to speak English, forget their native tongue and culture, and behave like "Americans." Although some Americans saw assimilation in less stark and absolute terms, it was regarded nevertheless as inevitable as well as highly valued. The "melting pot" metaphor captured the notion of the transformation of immigrants' cultural identities into new ones based on American ideals and values—preferably the Anglo-Protestant ethic and culture.

By the beginning of the post-1965 immigration scholars of assimilation had already begun to examine the empirical evidence supporting the notions of the melting pot and straight-line assimilation—the assumption that the longer immigrants lived in the United States the more they adopted mainstream or American culture. Scholars found that the ethnicity of immigrants had not "melted" away. Instead, the children and grandchildren of immigrants maintained distinct cultural patterns and continued, for the most part, to practice the faiths of their parents. The empirical reality that immigrants retained much of their native culture—called "cultural pluralism"—became the basis for questioning the paradigm of straight-line assimilation as something to be valued. The metaphor of the "melting pot" was replaced with that of a "salad bowl" in which individual parts still made up something whole but nevertheless remained distinct. Cultural pluralists argued that immigrants did not have to give up their cultural norms, values, and traditions to be American. Or as Andrew Greeley wryly observed in 2006 in "Why Can't They Be More Like Us?" the new immigrants "don't have to be like us. They are entitled to be 'strange.' Just as the rest of us are." Such a statement would have been almost inconceivable a century earlier.

Cultural pluralism emerged just as Catholicism and Judaism were being recognized as mainstream American religions just as legitimate as Protestantism. Including the faiths of immigrants not representing the biblical tradition in the cultural or religious pluralism framework required only extending its domain, not its underlying assumptions. A country in which cultural pluralism, not "Americanization," is the norm creates a profoundly different environment in which new immigrants can practice their religion. This is not to say that the religious practices and holidays of Jews, Sikhs, Muslims, and Buddhists receive the same recognition and

accommodation as those of Christians, nor is it to argue that there is no bias or hostility toward non-Christian religious practices. However, non-Christians face far less pressure to conform to a Protestant American ideal than was true in the past. On many American college campuses it is common to see female Muslim students wearing *hijabs* and even an occasional *burka*, just as it is to see male Jewish students with skull caps. These statements of religious identity in publicly funded institutions of education are not banned, nor are they discouraged as they have been in other countries.

Transnational Context of Immigrant Religion

Communications and transportation technology has strengthened transnationalism, making it easier for immigrants to remain connected to family, friends, and religious institutions in their home countries and complicating the process of assimilation into American society. Immigrants' religions are now tied more than ever to their home countries: culture and religion transcend borders. Modern communications technology allows religious services to be broadcast from the home country to the United States and the United States to the home country. Modern transportation makes it possible for monks, imams, priests, and ministers to visit their countrymen and -women in the United States. Indeed, a growing phenomenon is the establishment of religious franchises in which churches or temples, from say Brazil or Thailand, are re-created in the United States and overseen by the same religious leader. U.S. immigration policy makes it possible for religious franchises to flourish by granting special immigration visas to religious leaders.

Language

Because language is the expression of culture and thus is often connected to religion, one cannot look at the religious practices of immigrants without also examining language issues. English is not the native language or mother tongue of most post-1965 immigrants. Indeed, only a handful of immigrant-sending countries use English as their primary language. Immigrants must, then, navigate social institutions that are mostly English only. For many post-1965 immigrants, especially those who are skilled and educated, the dominance of English presents few if any challenges because they have acquired English-language proficiency in their country of origin through school or work and have only to refine it further once in the United States. By contrast, immigrants with low levels of skill and education often arrive in the United States with little English-language proficiency

and confront very real language barriers. The numbers here are not small. The 2000 U.S. Census estimates that several million immigrant families are linguistically isolated, meaning family members speak English less than well.

Tensions over English-language barriers, on the one hand, and retention of native languages, on the other, are played out in immigrant families and communities and the religious institutions they attend. For example, Hispanic Catholic immigrants who retain their native language often choose to worship in Spanish. Unlike for earlier waves of European Catholic immigrants such as Italians and Poles, insufficient numbers of Catholic clergy from Latin American countries have immigrated to attend to the spiritual needs of Hispanic immigrants. Depending on their time of arrival and where they have settled, Hispanic immigrants have found themselves attending English-language masses that offer rituals, routines, and saints that are foreign to them. Over the years urban Catholic parishes have accommodated Spanish-speaking parishioners by assigning to them native-born, Spanish-speaking priests who are familiar with cultural traditions of Hispanic immigrants such as the *quinceañeras* (coming-of-age celebrations) and the veneration of religious figures such as Our Lady of Guadalupe. Nevertheless, accommodating the language needs of Hispanic immigrants remains very much a work in progress for the Catholic Church, largely because Hispanic immigrants are now settling in new areas of the country such as the South and West where parishes have little or no history of offering services in any language but English. Parishes in Virginia and North Carolina are now struggling with the same language accommodation issues that confronted parishes in California or Texas a generation or two ago.

But it is not just a matter of accommodating one non-English-proficient immigrant group in parishes and churches. The multiethnic communities served by urban churches are often multilingual. A Catholic Church in a multiethnic neighborhood may offer masses in English, Spanish, and Vietnamese. However, because of the language divide parishioners may have little in common other than that they attend the same church. They may not find that church membership provides a common platform to address interests and concerns.

The retention of languages central to the practice of some religions poses challenges to immigrant adherents, especially for members of the second and third generations who are caught in the gravitational pull of the English language. Data on the English-language acquisition of children

of immigrants consistently show that the children become overwhelmingly proficient in English by adulthood. Second- and third-generation children largely lose the ability to communicate in their parents' native language unless it is spoken in the home or is reinforced by social institutions such as schools or religious study classes. When religious texts are in Arabic or worship services are conducted in Hindu, unilingual English-speaking adherents cannot fully participate in the religion of their ancestors. Just as earlier generations of Jewish immigrants dealt with this issue by having their children attend Hebrew school, immigrant groups such as Hindus and Muslims are developing language schools to maintain their religious traditions. Language retention and religion may be further reinforced by the transnational nature of immigration. Modern travel makes it relatively easy for second- and third-generation immigrant children to become immersed in the language and religious practices of their family's homeland by visiting it for short or extended periods.

The Changing Landscape of American Religion

This description of the demographic change produced by the post-1965 immigration has pointed to the obvious fact that most immigrants have come from countries and regions where Protestantism is a minor religion. Asia is the region of the world most responsible for altering America's tripartite religious pluralism (Protestantism, Catholicism, and Judaism). The faiths such as Islam, Buddhism, and Hinduism brought by Asian immigrants are not necessarily new to the United States in that practitioners of those faiths had already gained a toehold in the country by means of the small numbers of immigrants who arrived prior to the 1960s. Nevertheless, the post-1965 immigration greatly increased the numbers of Buddhists, Muslims, and Hindus. As adherents of those religions then branched out in their settlement they introduced their faiths into new areas of the country.

As indicated earlier, Hispanic immigrants have been responsible for adding to the ranks of Catholic adherents. Nevertheless, evangelical and Pentecostal movements in Latin America have made inroads into the hegemony of the Catholic Church, with the result that increasing numbers of Hispanic immigrants are coming to the United States as Protestants. Moreover, the abundance of Pentecostal storefront churches in Hispanic neighborhoods indicates that many Catholic immigrants convert to Protestantism once they arrive.

African Immigration

Even though immigration from Africa is increasing in number and scope, it has largely occurred under the radar of scholars of immigration and American religion. For example, in her influential and widely read book *A New Religious America*, Diana Eck does not include African immigrants and their religious institutions. In other instances, scholars have, for analytic convenience, classified East African immigrants with those from the Middle East. Writing about African immigrant churches in 2007, scholar of African Christianity Akintunde Akinade notes, "This religious movement remains, by and large, terra incognita to many well-informed people in the West." African immigration is bringing new adherents to religious denominations long established in the United States such as the Congregationalists and Catholics as well as to more recently arrived religious traditions such as Islam.

Immigrants from Africa (as is true of many Hispanic immigrants) hold conservative positions on the social issues of the day such as abortion and gay rights. Indeed, many African Christians have denounced the West's support of gay rights, and Anglicans have spoken of separating from the mother church over the issue. What little research that exists on African immigrants indicates a reverse missionary phenomenon whereby African clergy have come to the United States to steer the faithful back to a more conservative interpretation of Christian doctrine. It remains to be seen whether African clergy will be able to expand their sphere of influence beyond their African compatriots or whether the acculturation process will alter their positions.

Independent Bible and Community Churches

According to the American Religious Identification Survey and the Barna Research Group, in 2008 nondenominational churches served 2.489 million adults in the United States (www.adherents.com/re1_USA.html). Independent, nondenominational Bible and community churches represent a segment of this larger independent church family.

Primarily an urban phenomenon that began in the early to mid-twentieth century, these churches not only are unaffiliated with denominations but also are unaffiliated with

organized fellowships of churches such as the Independent Fundamental Churches of America, National Association of Evangelicals, Berean Church Fellowship, Sovereign Grace Ministries, and Open Bible Churches. Like many of the churches represented by such fellowships, these independent Bible and community churches originally emerged from the revivalist empire of evangelist Dwight L. Moody (1837–1899) and the millenarian movement in the United States, which is rooted in the teachings of Brethren Bible teacher John Nelson Darby (1800–1882) and centered institutionally in the Moody Bible Institute and Dallas Theological Seminary.

Roots

The nineteenth-century millenarian movement inspired by Darby's theology contributed to the emergence of these independent churches and, along with traditional American revivalism, significantly shaped their identity. Darby, a deacon in the Anglican Church serving in Ireland, formulated dispensationalism, an innovative form of premillennialist theology. He drew a distinction between the nation of Israel, which he believed held an "earthly citizenship" shaped by ties to political and social structures related to an earthly existence, and the Christian Church, which he saw as being "in Christ" seated in heaven and possessing a "heavenly citizenship" shaped by spiritual realities not yet shared by Israel. Darby interpreted the scripture and fashioned his theological beliefs through the lens of this dualism.

Darby's dualistic hermeneutic produced the corollary beliefs that helped to fashion the core theological identity of the independent Bible and community churches. His innovative interpretation of scriptural prophecy was particularly important in forming a central feature of these churches' identity. They subscribed to Darby's teaching that biblical prophecy concerned earthly things related to Israel. As a distinctively Pauline revelation, the Christian church is absent from biblical prophecy. The prophetic timetable for earthly Israel, according to Darby, was suspended at the Crucifixion and will be resumed after the dispensation (or parenthesis) of the church, which ends with the Rapture of the church to its heavenly home prior to the Tribulation, a seven-year period of judgment upon the earth. This understanding of the church's uniqueness shaped these independent churches' views of Christian living. As God's heavenly people, Christians were not subject to Israel's law, a code concerned with priests and an earthly, legal

righteousness that served as a rule for man's life on earth. The gospel operated not through law but through grace, by means of which the church acquired justifying righteousness, union with Christ, and a heavenly rule of life.

Thus the theological concepts that formed the distinguishing theological features of these independent Bible and community churches is a distinction between Israel and the church; a spiritual life shaped by an emphasis on grace instead of the Mosaic Law and legalism; and the novel belief in a pretribulational Rapture that precedes an apocalyptic judgment upon the earth. These churches' discerning of the "signs of the times" and consequent stress on the nearness of God's judgment produced a cottage industry of weekend prophetic conferences in local churches; revivals; the publication of tracts, magazines, and books (and later the production of movies) to promote Christian living; and strenuous evangelistic efforts to convert as many as possible in the time remaining.

Reception and Dissemination of Dispensationalism in America

American evangelicals began absorbing these features of Darby's theology between 1862 and 1877, the period during which Darby traveled seven times to Canada and the United States. His beliefs spread through several institutions that subsequently proved crucial to the later emergence of the independent Bible and community churches in the United States. His dispensational views were initially circulated through the interdenominational Bible and Prophetic Conference movement, where they were particularly well received by evangelicals within the Reformed wing of American Protestantism. The Niagara Bible Conference (1876–1897), one of the earliest and most influential of these conferences, was led by Presbyterian minister and dispensationalist James Hall Brookes (1830–1897). Dwight Moody's Northfield Conferences, extremely popular in the 1880s and 1890s, were equally influential in broadening dispensationalism's appeal in America and in inspiring people to establish similar conference centers elsewhere. The publication of the *Scofield Reference Bible* in 1909 by Cyrus Ingerson Scofield (1843–1921), one of the most popular conference speakers of the era, cemented dispensationalism's place within American evangelicalism and was chiefly responsible for its enormous popularity among laymen and laywomen.

Beyond the dissemination of dispensational beliefs through their meetings and associated periodicals such as Brookes' *Truth* and Adoniram Judson Gordon's *Watchword*,

the Bible and Prophetic Conferences also placed a strong emphasis on Bible teaching that became for much of their history a much advertised trademark of the later independent Bible and community churches. The pastor, typically identified as the "pastor-teacher," preached systematically through books of the Bible, carefully expounding the author's central theme and tracing it paragraph by paragraph and verse by verse through the book before making the appropriate applications for his audience. Pastors occasionally offered topical series, but they remained deeply grounded in scriptural texts tied to their contexts. Indeed, teaching books of the Bible and stressing context and original languages remained the emphasis in these Bible and community churches in stark contrast to the traditional preaching style and anecdotal content observed in most denominational churches. Unlike denominational congregations influenced by the rise and spread of dispensationalism within America, these independent churches owe their emergence, growth, and distinguishing characteristics to Darby's theological influence, particularly as it was mediated through key evangelical educational institutions.

Educational Support Structure

Beyond the major conference centers, Darby's beliefs reached millions of Americans through the influence of educational institutions, principally the Dallas Theological Seminary (DTS) in Texas and the Moody Bible Institute (MBI) in Chicago. These two schools and other institutions derived from or shaped by their teaching and graduates were critical catalysts for the rise of independent Bible and community churches in the United States. Leaders at both schools, but particularly at MBI, spoke each year at hundreds of Bible conferences sponsored by local churches, where people were eager for teaching on Bible prophecy and on holiness themes. DTS and MBI, along with a variety of parachurch organizations that arose out of this same milieu, provided an institutional framework that sustained independent churches and enabled them to prosper.

Dallas Theological Seminary has long been recognized by historians of American religion as the academic focal point of dispensationalism in America. DTS was founded in 1924 by moderate Presbyterian fundamentalist Lewis Sperry Chafer (1871–1952). Chafer was Scofield's key disciple and a second-generation leader of the Bible and Prophetic Conference movement. His writings, particularly *Systematic Theology* published in 1948, provided a systematic and slightly modified version of Darby's dispensational beliefs.

Chafer founded DTS initially as a means of preserving and extending the work of the Bible conference movement. In the context of the growing peril from European theological liberalism, Chafer saw Bible conferences, especially those promoting dispensationalism, as an important bulwark for orthodoxy within American Christianity. By the 1920s he believed the influence of the Bible and Prophetic Conference movement was threatened by the declining strength and death of its first-generation leaders and the rise of militant fundamentalists, whose rancorous preaching would surely damage the movement's status within American Protestantism. Chafer founded DTS to train expositors and ensure the survival of the movement's Bible teaching ministry. Most of Chafer's students, to the disappointment of the more strident fundamentalists, followed his moderate style and sought to roll back the incoming tide of liberalism by promoting truth, as they saw it, rather than belligerently attacking the perceived enemies of the gospel. Chafer's moderate fundamentalism formed part of the ethos of the independent Bible and community churches, because most of them were founded by DTS graduates or by people influenced directly or indirectly by the seminary.

Much of DTS's influence on the Bible and community churches was channeled through independent Bible schools. Although Moody Bible Institute was organized in 1889 to provide biblically trained home and foreign missionaries, its structure and ethos, like those of the few independent Bible schools that existed at the time, were altered by the fundamentalist/modernist controversy of the 1920s. MBI and other Bible schools in the decades following the establishment of DTS were increasingly shaped by the seminary's theological agenda as more and more of Chafer's graduates filled faculty positions in the burgeoning independent Bible school movement. Enjoying the prestige of association with Dwight Moody and blessed with innovative leadership, MBI served as a model for other Bible schools that emulated its curriculum and teaching style. Bible school faculty and alumni disseminated dispensational theology and founded independent churches throughout the United States. Bible schools helped sustain these churches by supplying theological leadership, conference speakers, pulpit supply when pastors were absent, and ministerial staff when it was not obtained directly from DTS.

Most Bible school leaders were also important in forming a moderate fundamentalist ethos within the independent churches. They typically steered a middle course in disputes between moderate and separatist fundamentalists,

especially in disagreements over withdrawing from mainline Protestant churches. They emphasized the nonsectarian nature of genuine Bible study and evangelism and encouraged stability rather than controversy within their constituencies. Because of these schools' close association with the independent Bible and community churches, they largely were not and are not products of the separatist beliefs of sectarian fundamentalism that Chafer rejected.

Emergence of Independent Churches

Most of the first independent churches were established in the decade or so prior to 1945, typically by people from Presbyterian, Congregational, Baptist, and, to a lesser extent, Methodist backgrounds. These churches were founded either as by-products of the denominational battles over dispensational premillennialism within American Presbyterianism or as the fulfillment of people simply desiring a local church where they would have continual access to the kind of Bible teaching associated with the Bible conference movement. The latter sentiment is a constant refrain among the founders of these early churches.

When denominational wrangling over dispensational theology was an issue, the founding of independent churches occasionally involved a church split, such as the one that occurred within the affluent First Presbyterian Church of Memphis, Tennessee. Pastor Albert C. Dudley, a firm proponent of dispensational theology and Bible conferences, began a Bible conference ministry upon his arrival at First Presbyterian in 1928. Chafer's close friend Harry Ironside, pastor of Moody Memorial Church in Chicago and associated with MBI's extensive Bible conference ministry, as well as an adjunct instructor at DTS, spoke at the first conference. Chafer followed Ironside as speaker for the church's second Bible conference and established a close and enduring friendship with Dudley. By 1933 denominational traditionalists within First Presbyterian, alarmed by the church's growing association with the dispensationalist Bible conference movement and its financial support of Chafer's independent seminary in Dallas, took steps to eliminate Chafer's influence. Unable to overcome this opposition and not wanting to lose their association with the Bible conference ministry, sixty-five members of the congregation, many of them prominent leaders within the congregation, left First Presbyterian and founded the nondenominational Evangelical Community Church, where they were quickly joined by some sixty evangelicals from other mainline Memphis congregations who had attended Bible conferences at First Presbyterian.

This split was not a result desired by Chafer, but he served, nevertheless, as a trusted guide for the separation and for establishing the new congregation. The new church entered a close, mutually beneficial relationship with DTS and began supporting independent mission organizations. Similar splits of local churches have been interpreted as by-products of separatist fundamentalism and its concerns about theological purity. Although the founders of these Bible and community churches were religiously conservative, maintaining theological purity, particularly in the South, was not often among the motives for forming an independent church. Even when it was a motive, it was frequently combined with other reasons that more generally influenced those who decided to leave denominational churches and pursue an independent ministry.

Independent Church Ministry

Although these independent churches lost access to denominational support systems, they were not isolated and left to their own devices. Typically they were involved in symbiotic relationships with DTS and one or more of the independent Bible schools. Through these institutions, independent church leaders were able to quickly associate their churches with a variety of other independent, nondenominational evangelical organizations. They fulfilled their missionary responsibilities through cooperation with independent mission organizations such as China Inland Missions, African Inland Missions, and South Africa General Missions. Their Sunday school materials, if not generated by Sunday school teachers trained at one of the Bible schools, was obtained through nondenominational publishers such as David C. Cook or from MBI's Bible Institute Colportage Association, renamed Moody Press in 1941. Adult classes often used the flood of popular books being published by faculty at DTS or one of the Bible schools. Chafer's *Major Bible Themes*, a popular survey of Bible doctrine published by DTS in 1926, was used in churches to teach Christian doctrine survey classes.

Some aspects of their approach to ministry set independent Bible and community churches apart from America's revivalist milieu in which evangelical church services were focused primarily on converting the lost. In these independent churches, a pastor's primary responsibility typically reflected the pattern presented in Chafer's *True Evangelism*, a controversial book published in 1911 that assailed the traditional evangelistic ethos of evangelical church services. Unlike the evangelist whose work was to reach the

unevangelized, a pastor-teacher's work was to instruct and train Christians. Thus sermons in Bible and community churches tended to be didactic, aimed at producing biblical literacy and Christian maturity. In harmony with the preaching style just described, if the text was not evangelistic or moralistic neither was the sermon. After the sermon a brief presentation of the gospel was made for the benefit of any unbelievers in the audience, who were then given the opportunity to respond in the privacy of their own thoughts; no altar call was given. People who wished to inquire further were invited to speak with the pastor-teacher or an elder after the service.

In accord with their principal concerns, most of these churches replaced the traditional annual revival services held in America's evangelical churches with an annual Bible conference. Although the use of large Bible conference sites did not die out completely, Bible conferences increasingly came to be held in local churches and often in association with an independent Bible school.

Because of their dispensational beliefs, independent church leaders rejected tithing, which they considered a legal requirement limited to Israel, and so many Bible and community churches did not take up an offering as part of their services. Instead, they typically provided an offering box in the church vestibule and taught their congregations the nonlegalistic form of giving for the church age—that is, to give cheerfully according to how much the Lord had prospered them. In most churches, unless the pastor's text was specifically about money or supporting God's work, nothing was said from the pulpit about the subject. Such practices set this independent church community apart from mainline Protestant churches in America, particularly in the South. Indeed, until recently independent church leaders there often placed literature in their vestibules explaining the distinguishing characteristics of a Bible church to allay the suspicions and criticism of traditional-minded denominationalists.

Spread of Independent Churches

In addition to the continuing pull of the characteristics shared within the early community of parachurch institutions and independent churches, nondispensational mainline Presbyterians opened the floodgates to independency in the mid-1940s by purging the dispensational influence from their denominations. In the 1930s, widespread disaffection with and resistance to dispensational premillennialism stiffened within the mainline Presbyterian denominations in the

United States. Chafer and the Dallas Theological Seminary were identified by traditionalists in these denominations as the principal purveyors of dispensationalism within their ranks. This opposition forced Chafer into a defensive posture and produced growing conflict within Presbyteries over the ordination of DTS graduates. By the mid-1940s both Presbyterian denominations (northern and southern) had officially identified dispensational premillennialism as incompatible with the Presbyterian doctrines enunciated in the Westminster Standards, effectively eliminating the chance that DTS graduates would fill Presbyterian pulpits and destroying Chafer's vision of rescuing these denominations from the growing influence of liberals in their midst.

After the Presbyterian purge DTS realigned itself to serve the small but growing independent church community. DTS's influence declined after 1945 within the mainline Presbyterian denominations, but its alumni began to found independent Bible and community churches. DTS also became a key resource for staff in the fast-growing parachurch movement, which included, in addition to Bible schools, organizations such as independent mission agencies, Child Evangelism Fellowship, Young Life Campaign, and InterVarsity Christian Fellowship. Chafer's graduates, who were spread throughout in these institutions, were responsible for founding some of them. Along with DTS and the Bible schools, these institutions formed part of the institutional network contributing to life within the independent church community.

Independent Bible and community churches emerged in a variety of ways after 1945. Reflecting their roots in the Bible and Prophetic Conference movement, they were largely an urban phenomenon. Most of the new churches founded after the purge began with home Bible studies initiated by faculty members, students, or alumni from DTS and the Bible schools. Believers Bible Church in Lufkin, Texas, began in 1958 as a women's Bible study that eventually included couples and was taught for years by DTS students, one of whom became the first pastor when the church was founded in 1970. Cornerstone Bible Church in Lilburn, Georgia, emerged in 1971 from two home Bible studies taught by two DTS alumni who came to Atlanta to plant a church, a practice that continues to the present. In addition to alumni planting churches in this fashion, DTS and the Bible schools often received requests for help in starting independent churches from groups generally consisting of ten to twenty committed persons around whom to build the church.

The planting of sister churches by established congregations has been another major source of new churches within this community. For example, Fellowship Bible Church in Dallas, Texas, founded by DTS professor Gene A. Getz in 1972, is responsible for a growing number of Fellowship Bible Churches around the country. In addition to the traditional influences, these churches have been shaped by principles of church renewal developed by Getz in response to DTS student comments about the anti-institutional culture in America in the 1960s. Getz published these principles in his influential *Sharpening the Focus of the Church* in 1974. Getz's views are also disseminated through his Center for Church Renewal and Center for Church Based Training in Richardson, Texas. His work has influenced other churches within and outside the independent Bible and community church family.

Social Profile

Bible and community churches are largely an urban phenomenon and typically involve well-educated, middle-class evangelicals. In the early stages of the movement's history, these churches were largely established by comfortable to affluent white evangelicals from established mainline denominational churches. Although these congregations grew in numbers through conversions and internal growth, much of their growth historically has stemmed from transfers from denominational churches or from other independent churches within the movement. The social profile of Shades Mountain Bible Church in Birmingham, Alabama, produced in the early 1990s provides a general picture of the social characteristics of these churches.

Shades Mountain emerged from a home Bible study rooted in the influence of professors at Southeastern Bible College (SBC), an independent, interdenominational school with close ties to Dallas Theological Seminary. After SBC's founding in the early 1930s its leaders avoided involvement in establishing independent churches because SBC was originally launched to serve the needs of denominational churches. But during the 1950s and early 1960s the SBC leadership gradually developed an interest in establishing independent Bible churches in Alabama and neighboring states. With encouragement from SBC's president and at least two of its faculty members, Shades Mountain Bible Church was formally established in the fall of 1963 by three Birmingham businessmen, their families, and a student at SBC who served as the congregation's first pastor. As a special-purpose church that offered a strong program of

Bible study and discipleship, Shades Mountain was not solely dependent on the local community but also drew members from residents of the suburbs and cities adjacent to Birmingham. By 1982 the church had 225 members. Its offerings for that year amounted to \$264,455, out of which \$59,585 was used to support faith mission organizations.

By 1991, the year of the congregational self-study upon which this social profile is based, Shades Mountain had 310 official members, although some 150–200 more persons attended regularly. Its offerings for that year amounted to \$812,657, out of which \$148,852 was committed to supporting mission efforts. The following data reflect the responses of a balanced mix of official members and regular attendees to a profile questionnaire. Sixteen percent of respondents had attended college for one to three years, 37 percent had attended for four or more years, and 17 percent had earned graduate degrees. Twenty-seven percent of respondents held managerial or professional occupations; 14 percent held technical, sales, or administrative support positions; 3 percent worked in production industries; 4 percent were retired; 23 percent were students; and 21 percent were housewives. Among the employed respondents, 10 percent earned less than \$20,000 a year; 11 percent \$20,000–35,000 a year; 28 percent \$35,000–50,000 a year; and 35 percent more than \$50,000 a year, a wage equivalent in 2007 dollars to almost twice that amount, or \$96,632 (<http://measuring-worth.com>).

Independent Bible and community churches continue to emerge and to serve primarily middle- to upper-middle-class constituencies. The true number of churches and people represented by this wing of the nation's nondenominational churches is unknown because of the limited historical and sociological research targeting these congregations. However, some data may be suggestive. By 2007 DTS alumni were serving as staff in 1,144 independent Bible and community churches. A nationwide sample of some 250 of these churches revealed a collective average attendance on Sunday mornings of 308,016, of which 209,842 were attending the fifty-one megachurches (attendance of 2,000 or more) represented in the sample. There were sixty-four large churches (over 500), sixty-one medium churches (200–500), and eighty-one small churches (fewer than 200). Based on research on megachurches by the Hartford Institute for Religion Research (www.hartfordinstitute.org/mega-church), it is safe to assume that the sample accounts for most of the megachurches within this wing of the independent church community. The average attendance of the

non-megachurches is 479. If the average attendance of the 1,093 non-megachurches is conservatively estimated at 350, then this portion of the independent Bible and community churches, including the megachurches, serves a minimum of 592,392 people. Studies are needed to establish the overall size and influence of this wing of the nation's independent churches and to explain the growing number of ethnic churches, particularly African American congregations, within this community.

Internet

The Internet is a global network of linked computers that allows users to access information uploaded (that is, placed online) by one computer from a remote terminal, whether a workstation in a university library, a desktop computer in one's home office, or a laptop in a coffee shop. Thus, a member of a Hindu temple in Mumbai can view, download, and respond to material posted online by a religious studies professor in Miami. A congregant on vacation in Venice can watch sermons from her home church in Vancouver, and a Muslim in Surrey can follow his son's *hajj* via e-mail and uploaded photos or video. Despite industry hyperbole and enthusiast rhetoric that the world is now "globally connected," however, in 2008 just under 22 percent of the

world's population had Internet access, with the technologized nations of the West leading in overall social penetration (that is, the percentage of a given population with access to the Internet and the economic means to use it), whereas Asia and Africa lead in Internet usage growth, though there is tremendous variation of Internet access between and freedom of usage within countries in these two continents.

Although the Internet existed many years before its popular emergence in the mid-1990s, the invention of the World Wide Web and the introduction of user-friendly graphical interfaces—Web browsers such as Netscape Mosaic (later Navigator) and Internet Explorer—brought what had been the almost exclusive domain of the technological *cognoscenti* into the realm of popular use and culture. Now, less than two decades later, in many countries of the world Internet technology has become almost transparent: We are no longer surprised to see laptop computers in university classrooms or on pastors' desks; e-mail and Web addresses are as common as telephone numbers and need no special explanation; users are as likely to check the Internet for news, weather, and sports as they are to check television or the radio. In many ways, computers have become part of the furniture. Although many users have gone online for some purpose related to religion, the most popular use of the Internet, especially in its most recognizable form as the World Wide Web, is the sending and receiving of e-mail; the advent, however, of Weblogs (blogs), social networking sites (such as Facebook, MySpace, and Twitter), and open participation platforms such as YouTube are changing the shape of electronic communication and increasing the ability of users to participate in online communities, where they might engage in conversation, and, not infrequently, conflict.

In many ways, religion has been a part of the Internet from the beginning, just as it has been in every major revolution in communications technology: from the invention of writing to moveable type and the printing press; from radio and television to online sermons, prayer groups, and ritual practice; from 1200-baud modems that took several minutes to download a single page of text to broadband, wireless Internet, and powerful handheld computers such as the BlackBerry and the Apple iPhone. Before the advent of graphical browsers, religiously inclined users posted messages on text-only bulletin boards (BBSs) hosted on early online services such as Delphi and participated in complex and often hotly contested discussions on a wide range of Usenet newsgroups such as alt.religion.scientology, alt.religion.buddhism, and alt.religion.zoroastrianism. Many

exchanged prayer requests and shared with co-religionists their stories of lived religion, commiserating and celebrating in turn. A few attempted online rituals—prayer circles or invocations to the gods and goddesses—all of which were text-based and many only marginally successful. What these initial attempts did, though, is excite users about the possibilities presented by this new technology.

Although some early researchers argued that the lack of real world contact meant that any claims to an Internet community were illusory at best, others were quickly convinced that online interaction did herald a new form of religious community, a new “place” where people who might never meet in real life could interact, come to know one another, and share meaningfully in each other's lives. The introduction of graphical interface browsing greatly increased both the number of users who could (or would) access the Internet and the ability of those users to participate in online activity. Indeed, no communications technology in history has so rapidly and deeply penetrated society, and now in many countries online activity of all sorts is as common as a telephone conversation and often takes place more frequently.

From Religion Online to Online Religion

The most basic conceptual distinction is between “religion online” and “online religion,” that is, between use of the Internet to provide a variety of information services related to religious belief and practice and the use of the Internet as a site for religious ritual and devotion. Although researchers initially framed these as discrete categories—either religion online or online religion—it became clear relatively quickly that they are more usefully understood as endpoints on a continuum and that many Web sites and patterns of Internet usage include aspects of both. Indeed, as Internet technology becomes more sophisticated and its social penetration more pronounced, the strict division between religion online and online religion becomes less and less distinct, though no less important. For example, Hindu users may access certain Web sites to perform *puja* (rituals) online, and students in introductory religious studies class can navigate to the same site to learn about *puja*, to become familiar with its various ritual elements, or to understand how Hindus are using Internet technology for ritual purposes.

Fundamentalist Christian groups can point to online *puja* sites as putative evidence for what they regard as the problematic nature of Hinduism and the ongoing need for evangelism. Thus, for two very different faith groups, the site provides examples of online religion, and for another

group, religion online. Despite the rhetoric that so often accompanies Internet advertising—that there is something qualitatively different, qualitatively better, about online activity—these examples indicate activities that are no different from the relationship between religious practice and the observation of or opposition to that practice off line. Indeed, what occurs online is little more than a reflection or a refraction of off-line activity. The nature of the interface may make the experience seem different—and, as will be discussed later, the Internet does shape religious belief and practice in identifiable ways—but there is little if anything that occurs in the online world that cannot be found off line. Bearing in mind these caveats, consider some of the ways the oldest of human social behaviors has become a part of the newest of human communication technologies.

Religion Online

Put simply, *religion online* is the provision of goods, information, or services related to particular religious traditions through the Internet. Roman Catholics who want to purchase rosaries, votive candles, or holy cards, for example, can navigate to any number of online supply stores—many of which only exist on the World Wide Web and, like Amazon.com, have no off-line retail location—make their purchases, and have them delivered to their doors in a few days. Buddhists can go to Web sites maintained by their favorite magazine and order back issues, books, or other items related to their practice, and modern pagans can purchase Tarot cards, religious statuary, and ritual clothing online. Although the convenience here is obvious, this is little more than catalogue shopping; it is simply mediated through a different communication technology—e-mail rather than “snail mail.” Similarly, the Web has given believers access to a wide range of religious news heretofore either unavailable or difficult to locate. Users can bookmark their browsers or set Really Simple Syndication (RSS) feeds to download news or podcasts from favorite Web sites automatically. Although this, too, has the advantage of convenience, in many ways it contributes to a self-limiting organization of online religious behavior. Once again, however, this is little different from off-line activity.

In more technologically developed nations—particularly those of the Group of Eight (G8) industrial democracies—it is rare now to find a religious congregation that does not have even the most rudimentary Web presence. Even those that do not maintain their own sites are now listed in a variety of community listings, often with basic contact

information and a link to an online locator service such as MapQuest or Google Maps. Congregational Web sites range from simple home pages detailing only the group’s address, contact information, and perhaps service times, to elaborate, professionally developed Web sites that rival the most sophisticated available anywhere. Here, congregants can use the Web for a wide variety of purposes: online prayer notices and prayer chains both keep members informed about the needs of the congregation and allow shut-ins to feel connected in meaningful ways; religious leaders can use e-mail or social networking sites to communicate with their congregations, methods that are far more efficient (though some might argue impersonal) than letters, personal calls, or the venerable telephone tree; religious services can be recorded and uploaded both for the benefit of congregation members and to attract potential new members; dedicated Facebook or MySpace sites can be created and tailored to the needs of special congregational groups—religious classes, membership courses and catechisms, age- or gender-specific fellowships, or congregational trips, pilgrimages, and special events.

Religion Online and Online Religion

Much of the activity on more elaborate congregational Web sites includes aspects of both religion online and online religion, and often the precise line between them is difficult to discern. Learning about the prayer needs of others, for example, then responding to a Web-based prayer chain invokes both facets. Arguably, however, one of the most important confluences of religion online and online religion is use of the Internet for religious education, particularly when it takes the form of initiatory preparation, membership classes, or catechises. Many religious traditions require extensive instruction before someone is accepted into a congregation, yet offering classes leading to membership can be time-consuming and difficult to schedule. Online classes allow students to participate when and as they can, progressing through a series of structured lessons leading to initiation or formal membership. As with most aspects of online activity, though, this, too, is a compromise. As a social phenomenon, and though there are rare exceptions, religion is predicated on community activity, on the real world interaction of members one with another, and with the various elements of their faith. This kind of interaction is distinctly limited online, and can often assume the character of distance education, so many congregations use Web activity as an adjunct to more formal off-line classes rather than as a replacement for the off-line classes.

Some traditions, especially those that occupy more marginal positions in society, have used the Internet as a means to establish and legitimize their presence on the religious landscape, both online and off-line. Often lacking the ability to form local ritual and social groups, for example, many modern pagans (that is, modern witches, Wiccans, druids, and goddess-worshippers) have created Internet-based communities of like-minded people—online covens, circles, and groves (the variety of modern pagan ritual working groups)—and brought into contact those who might otherwise never meet. Using threaded discussion forums such as MSN and Yahoo! groups, Wiccans, witches, druids, and nature worshippers of all type share news, resources, encouragement, and problems. Here, too, though, online behavior reflects off-line activity. The reality for many religious communities is that a relatively small percentage of members account for the bulk of group activity. Online this appears no different. Many modern pagan discussion groups have hundreds of members—because “membership” is a function of pressing a button and often requires no more commitment than that—but only a tiny fraction post to the group, and many groups average less than one message per month per member. This highlights the disjunction between the often bombastic claims for the value of Internet communication and the reality of Internet use. These groups, however, can serve as valuable tools for personal and cultural religious legitimation. In 2001, for example, news that census data appeared to indicate that modern paganism was one of the fastest growing new religions in the West was quickly replicated on hundreds of discussion boards, e-mail lists, and Web sites around the world, became for many pagans almost an article of faith, and seemed to reinforce their sense of legitimacy as a religion in proportion to the number of times the claim was repeated.

Online Religion

From Wiccan Web sites that offer practitioners an online coven, complete with degree initiations, ritual opportunities, and community interaction, to a variety of Hindu *puja*, in which worshippers click-and-drag onscreen icons representing bells, flowers, incense, and *aarti* lamps before a representation of one or more gods and goddesses, from online adoration of the Blessed Sacrament, a service provided by monastics dedicated to that particular devotional practice, to the creation of a virtual diocese by a Catholic bishop suddenly out of favor with Rome, the search for a “pure” online religion—one that exists only and entirely through the

Internet—continues. Though some scholars are convinced that online religion of this type is inevitable, and a few contend that it already exists, others are less sanguine about the possibility, arguing instead that our ineluctably embodied nature prevents us from living life online to the exclusion of off-line activity, interaction, or reference. That is, we can be off line without being online, but short of “uploading” (a hope shared by some transhumanists—that is, those who believe in the scientific and technological enhancement of human abilities and capacities—that the entirety of a human consciousness will someday be transferred to a computer), the reverse is not the case. Indeed, some religious groups that initially organized online—for example, the Egyptian-oriented House of Netjer—quickly realized the value and desirability of off-line contact and interaction. What began on the Internet has established itself in the real world, as members began meeting away from their computers to socialize and celebrate rituals together.

For the moment, at least, and for four principal reasons, anything approaching the ideal type of an online religion remains elusive. First, it must be entirely online in its liturgical, ritual, and social interaction. The online presence of an off-line group, movement, or tradition is not the same. Second, it must be identifiable as a religion, not simply an amalgam of icons, buttons, and Web paraphernalia that someone uploads with the invitation to “Click here to join my religion!” Some scholars have pointed to online parodies of religion, claiming that these are examples of online religion, yet that begs the question of whether something should be considered a legitimate religion in the virtual world if it would not be so in the real world. Third, because religion is a social phenomenon, there must be the facility for co-religionists to interact in meaningful ways. Simply “clicking to join,” but with no further requirement or opportunity for interaction, is rather like signing up for a university course but never attending any of the classes. This would result in a failing grade, and questions whether such a person could legitimately be called a student. The same obtains with putative online religions: What does membership mean and when does online membership rise to the level of legitimate community? Fourth, an online religion must have some way to ensure its durability. Once again, if a new religion begins off line but does not last longer than a few weeks or months, it is a curiosity on the religious landscape but little more. If someone “starts” what he or she considers an online religion, then loses interest and does not update the Web site regularly or allows the domain license

to be purchased by someone else, then it seems unreasonable to consider it a viable religion. Though the speed with which computer design is advancing cannot rule out the possibility that more and more opportunities for online religion will emerge, a religious tradition that exists exclusively on the Internet seems out of reach at the present time.

Religious Response to the Internet

Like many other technological advances, the Internet has proven both boon and bane for religious communities. Some have embraced it in an attempt to attract new members, but others only use it as long as it serves their particular needs. In caveats similar to those made about radio and television, some have cautioned their followers that Internet activity cannot substitute for real world participation in ritual and devotion, and still others have pointed ominously to the Web as an integral component of apocalyptic prophecy.

On paper, the United Church of Canada is that country's largest mainline Protestant denomination, claiming more than three million members. In reality, like so many denominations of its kind, the United Church has been in decline for decades and, by the early twenty-first century, only a small fraction (about 7 percent) of those who claim membership attended worship on a regular basis. To address this decline, in late 2006 the church launched its "Emerging Spirit Campaign," a set of advertising initiatives designed to attract the attention of non-church-going people between the ages of thirty and forty-five. In addition to more traditional print media, the campaign relies on Web technologies such as "viral video" (a video clip that is transmitted and replicated through e-mail, instant messaging services, RSS feeds, and Web sites) and the mainstay of the program, a dedicated discussion site called WonderCafe. Intended to tap into a social and cultural demographic that has had Internet access for a significant portion of its lives and has the economic means and technological comfort to access Emerging Spirit on a regular basis—that is, for whom the technology has become largely transparent—WonderCafe resembles hundreds of similar sites, both religious and not. It offers a variety of threaded discussion groups, dedicated blog space, the ability for users to customize their versions of WonderCafe, and e-mail accounts that are accessed from the site. Only two years old at the time of this writing, and supported by a multimillion dollar bequest to the church, it is too early to determine what if any effect the online campaign has had, but it does point to two particular realities of

the religious response to the Internet. First, the World Wide Web cannot be ignored. With the Internet's depth and breadth of social penetration, avoiding use of the Web would be like deciding to remove one's answering machine or telephone from the church office. Second, though this is by no means certain, embracing an online presence can open one's religious presence to a market share unavailable through more traditional advertising.

For many years, the Church of Scientology has similarly embraced the advertising potential of the Internet, maintaining a sophisticated set of interconnected Web sites designed to communicate basic information about the group and its teachings, to allow members to purchase Scientological materials and remain current on news of the church, and, through its online Oxford Capacity Analysis test, to encourage potential members to investigate its teachings. Since the mid-1990s, however, the often-controversial movement has also vigorously contested the right of different countermovement groups to repost online what it considers sensitive material related to the upper, or OT ("Operating Thetan"), levels of teaching and practice. Originally placed in the public domain as part of a defense to a libel suit, these Scientological esoterica were quickly uploaded to the Internet and have survived all attempts by the church to have them removed. In their attempts to forestall online replication of private teachings, Scientologists were urged to flood Usenet groups such as alt.religion.scientology with spam (multiple posts designed to overload a particular server's bandwidth, or carrying capacity) and employ "cancelbot" programs that automatically deleted Usenet group messages that contained objectionable material. In some cases, lawsuits were brought against Internet service providers that refused to remove the OT material. None of these had the desired effect, and many commentators have argued that they did the Church of Scientology more harm than good. Perhaps more than any other single example, this highlights the prime directive of Internet communications: Data must flow.

For the Roman Catholic Church, the world's largest Christian denomination, the Internet presents a different range of potential and a different set of problems. On the one hand, like the United Church, parish and diocesan personnel can use the Web to communicate with congregants, update Catholic news items gathered from a variety of sources, and inform members of special events. The Vatican's official Web site contains a wealth of information related to church teachings, papal encyclicals, and research material.

That is, the Internet functions in its capacity of religion online. On the other hand, some Catholics have begun to use the World Wide Web for what they regard as sacramental or quasi-sacramental purposes—online religion. As noted earlier, for example, sites exist on which regularly updated Web camera photos of the Blessed Sacrament are loaded and that Catholics who do not have off-line access to the devotional practice of adoration are encouraged to visit. Although some Catholics regard this as tantamount to idolatry, others consider it a valuable part of their faith lives and even report instances of visions or miracles associated with online viewing of the Blessed Host. In a number of statements addressing the issue of the Internet, though, the Vatican has made it clear that there is no such thing as an online sacrament. Millions of Catholics around the world may go online for any number of reasons, but online activity can never substitute for one's lived Catholicism off line.

Finally, there are those who view computers and their virtual progeny, the Internet, as one more indicator that the apocalypse is imminent. In the late 1990s, news of the so-called Y2K bug—the alleged inability of computers to adjust for the rollover from “1999” to “2000” in their internal clocks and the supposed devastation that would occur in its wake—was interpreted by many fundamentalist Protestants as a sign that end-times were beginning. Some, such as well-known televangelists Jack van Impe and Pat Robertson, predicted that Y2K heralded the beginning of the tribulation and that the return of Christ could not be far off. Many dispensationalist Christians believe that the rise of the Antichrist will unite the world under one government and into one religion, and some consider the World Wide Web as the ideal technological tool for achieving this.

Internet Issues

Although a variety of issues face both religious believers who use the Internet either as consumers or contributors and religious traditions that either embrace the online world or regard it with a jaundiced eye, two particular concerns obtain for all: the problem of open source information and online accuracy, and the question of the Internet as a venue for religious proselytization.

In the early years of the Internet—the late 1980s—most users were restricted to simple, text-based communication: principally, the reading and posting of online messages. Relatively few had sufficiently mastered the arcana of HTML and, later, Java, two of the major building blocks of Web pages, to add significantly to the emerging online

world. By the early 1990s, however, the advent of graphical browsing, increased Internet infrastructure, and the introduction of WYSIWYG (“What you see is what you get”) Web page editors—Microsoft FrontPage and Macromedia Dreamweaver, for example—suddenly meant that millions of believers could become contributors to the World Wide Web, not merely spectators or consumers of it. First on rudimentary home pages, but now through Web sites, blogs, social networking sites, podcasting, and graphics sharing services such as Flickr and YouTube, hundreds of millions of people to whom publication in any kind of commercial venue would be denied have a creative outlet. Although not restricted to religion on the Internet, three important and interrelated aspects of this development have been noted by researchers: (1) the abundance of style over substance, (2) the replication of online material under the guise of original writing, and (3) the Wikipedia effect and the problem of open source information.

First, although many Web sites have a very pleasing aesthetic and appear to represent the work of professional organizations, closer inspection often reveals that they are the product of individuals who may or may not have particular expertise in that area. Members of the evangelical Christian apologetic movement, for example, conservative Protestants who believe that all religions other than theirs—and often any understanding of Christianity that differs from their own—are both theologically erroneous and spiritually dangerous, have established a number of very sophisticated Web sites to advance their religious agenda. Over time, as these sites have been visited and hyperlinked more frequently and as their creators found new ways to promote them, these sites began to appear more frequently in search engine results. The sites, and by implication their creators, took on the appearance of authority. Yet, in many cases, though these creators often present themselves online as experts in Christian apologetics (that is, those who make theological arguments both for their own faith and against the faiths of others), their biographical information indicates little or no formal training in Christian theology, religious history, or religious studies. Users who are looking for basic information on a particular religious group, then, but who may not know enough to recognize biased or faulty information, are easily persuaded that the views and opinions offered on these sites are accurate and trustworthy representations of the groups in question. In many cases, they are not.

Second, the issue of online authority is especially problematic when a number of Web sites replicate similar

material, a circumstance that plays into our cognitive bias toward repeated information. Anyone who has spent significant time exploring religious information on the World Wide Web is aware of the tremendous amount of repetition. Rather than offer extended original material, for example, many religiously oriented blogs are simply filled with a hodgepodge of items cut-and-pasted from different sources and threaded together with a few sentences from the blog owner. Other blogs pick these up, sometimes with attribution, often without, and the process of online replication assumes something of a viral quality. Other Web sites, however, rely all but entirely on “shovelware”—large tracts of basic information about a religious tradition that are taken from online or off-line sources and reposted to the Internet. Again, this material is often used without any acknowledgment. In the early days of the World Wide Web, many users regarded the online world as an unrestricted data space, a new world of information in which the off-line constraints of copyright and proper attribution did not apply. Though they are working within a family of religious traditions that highly values originality and creativity, for example, many modern pagan Web sites—some of which claim to function as online covens or ritual working groups—cut, paste, and repost pagan material readily available on any number of other sites. This may not pose much of an issue for religious traditions that maintain an established doctrinal framework against which online material may be checked, but many modern paganisms are predicated on freedom from convention and an expectation that individual pagans will forge their own spiritual paths, establish their own relationships with patron deities, and develop their own ritual and devotional practices. Thus, the viral replication of similar modern pagan material online can contribute to an incipient orthodoxy that is at odds with the basic tenets of paganism off line.

Third, and integrally related to these first two issues, there is what one might call the Wikipedia effect, named for the online free encyclopedia: the overall lack of authentication for information placed online and the ability of users to change, adapt, modify, or simply invent material at their pleasure. Many readers will be familiar with Wikipedia, a network of online encyclopedia projects, the principal characteristic of which is its open source architecture: Anyone can log on and change an entry, whether the change is accurate or not. Neither vetting nor source standardization is required. The problem this presents for religion on the Internet, especially when users are seeking initial information about a particular person, group, or practice, is that the users

may not know enough to know that they don't know anything. That is, they are not in a position to evaluate the accuracy and worth of the information provided on a blog, discussion forum, or Web site, and may give it more credence than is reasonable. In the online world, as in the off-line world, unfamiliarity can breed vulnerability. This process is exacerbated by three well-known social psychological principles: confirmation bias, the process by which we tend to value more highly information with which we agree; the memory effect, our predisposition to remember more easily information with which we agree; and source dissociation, our inability over time to recall the source of information with which we agree. Because information placed online is often not subject to the processes of vetting and authorization that obtain off line, and contrary to the hopes of many that increased information will result in increased tolerance for different religious beliefs, these principles often result in a foreshortened perspective, a self-limiting construction of reality that reduces the user's ability to differentiate between accurate and inaccurate information.

If the issue of online authenticity has proven itself a very real problem, another early fear about the Internet has not. One of the major concerns about the World Wide Web and its ability to influence users emerged in the immediate wake of the Heaven's Gate suicides in 1997. The Heaven's Gate group members used the Internet both to support themselves (through a moderately successful Web design company) and to promote their religious vision (through a Web site dedicated to their beliefs and participation in various discussion forums). In the media frenzy following the suicides, the connection between the Internet and the group was made explicitly by both secular anticult and evangelical countercult activists who claimed that the World Wide Web could serve as an effective recruiting tool for dangerous new religions. The equation was simple: because Heaven's Gate members owned computers and used them both to finance their group and to promote their agenda, the Web was guilty by association in the suicides. Drawing on studies of new religious conversion and an emerging sociology of the Internet, however, further research revealed how simplistic this answer is. First, the processes of new religious affiliation and disaffiliation are sufficiently complex that no one mechanism can influence them to the extent claimed by countermovement activists. Second, even groups that have intensive and prolonged personal contact with potential adherents have extremely poor recruitment and retention rates. Third, despite its increasing social penetration, the Internet is an

ephemeral and voluntarist technology. That is, any number of things, from hardware failure to server collapse to thunderstorms, can interrupt online activity, preventing the kind of prolonged persuasive contact critics feared, and leaving the Internet as easy as turning away from the screen or pressing the off button. That people will use the Internet as a recruitment tool is not the issue—of course, they will—but the very depth of its social penetration—its increasing transparency—means that it will not have anything close to the recruiting power suggested by these countermovement activists.

The Future of Religion and the Internet

What is the future of the Internet and its relationship to religion? Short of global and catastrophic network failure, the Internet will continue to develop and its social penetration will increase, though perhaps at something less than the astonishing pace set over the past two decades. Similarly, there is no reason to believe that religion will not continue to play an important role in online activity, a prospect researchers have viewed through lenses both utopian and dystopian.

On the one hand, some commentators have suggested that the virtual world will eventually supplant the real world and that most of our religious activity will be carried out online, that somehow the communications advances precipitated by the Internet will facilitate our quest for transcendence in a qualitatively different, qualitatively better way than ever before. This seems unlikely. First, there is the issue of embodiment and religious history. No matter how precise the image, watching a video of Kumbh Mela, the largest religious gathering on Earth during which tens of millions of Hindus make a pilgrimage to one of four sacred sites, on one's thirteen-inch MacBook screen can hardly compare with the experience itself. Likewise, although getting an e-mail of support from a friend is a welcome event, being held in prayer by that friend at a time of great loss has a qualitatively different affect. Second, some traditions will embrace online religious behavior, but others will continue to insist that it can serve as an adjunct to off-line ritual and devotion, but nothing more than that. Modern pagans will continue to explore the possibility of entirely online covens, and the Roman Catholic Church will continue to insist that physical copresence is a requisite condition for sacramental participation.

On the other hand, as Internet technology advances, different uses for that technology will develop—uses that may not be immediately apparent. Although millions of people now consider social networking through Facebook and

MySpace an integral part of their day, for example, what may appear less obvious to them is the surveillance aspect of Web technology that this behavior effects. That is, millions of people are voluntarily reporting their activities on an ongoing basis and often providing evidence of those activities in the form of pictures and videos. Videos posted to open participation platforms such as YouTube—and which replicate virally from there—have already demonstrated the capacity to affect events in significant ways. Cell phone video recorded at religious services or meetings can be uploaded to the Internet within seconds, replicating virally within minutes or hours. In some cases, these videos can return to haunt religious leaders who might want to step back from more extreme pronouncements; in other cases, these videos can be used repeatedly by critics to demonstrate the danger they believe these pronouncements represent.

Neither the Internet as a major communications technology nor religion as a principal human activity seem in danger of disappearing anytime soon, so understanding the relationship between them remains important. This is especially so as the technology becomes increasingly transparent and researchers are apt to consider it no more remarkable than the telephone or the television—both of which had tremendous impact on the way religious communities constitute themselves. Religion will continue to shape Internet use and continue to be shaped by it.

Invisible Institution

From the Africans' first encounter with the absurdity that was chattel slavery in the New World, they and their descendants had to struggle with issues of identity and their sense of self. Torn from their homes and their families, not allowed to speak their own language or to find solace in their customs and cultural expressions, these enslaved people became "stalkers after meaning" and "seekers after hope." Over time they took elements of the world they had known, as well as aspects of the one they encountered in North America, and developed a unique, vibrant religious tradition. The crucible in which this transformation took place was what scholars have come to refer to as the "invisible institution."

African Traditions and Christian Revival

The first Africans in the English North American colonies were the twenty persons acquired from Dutch slavers. They were purchased as indentured workers for the English settlement of Jamestown in 1619. By the mid-nineteenth century the number of enslaved Africans in the United States would approach four million.

The vast majority of Africans who experienced the religious atmosphere of the early 1800s were born in North America and had little if any access to the specifics of their ancestral religious practices and beliefs. Because the slavers mixed Africans from different ethnic, cultural, and social groups and enforced the various prohibitions on the use or expression of African languages and rituals, much of the comprehensive religious systems held by those who had experienced the Middle Passage firsthand had faded in the collective memory. Yet not all had been lost. There were significant commonalities among the Africans brought to America, such as the notion of a supreme deity, or high god, as well as a spiritual dimension of reality that was immanent, active, and connected one with another as well as with the

past, that would be retained. Indeed, these religious Africanisms would have a profound impact on Christianity associated with the invisible institution.

Despite contemporary efforts to assert that the United States was founded as a Christian nation, the reality is that it was not until after a series of revival movements—the Great Awakenings, the first from 1730 to the 1750s and the second from 1790 to 1840—that a significant segment of the American population was exposed to Christianity in an intentional fashion. Indeed, this was the case for both Africans and European Americans.

Clandestine Religious Lives of Slaves

Unfortunately, a great deal remains unknown about the religious lives of enslaved Africans. What is known derives primarily from cultural products such as slave narratives, autobiographies, folktales, and musical forms such as spirituals. Perhaps the most significant source of information about the invisible institution is George P. Rawick's *The American Slave: A Composite Autobiography*. Known as the Slave Narrative Collection, these volumes grew out of a 1936–1938 study by the Folklore Division of the Federal Writers' Project, established during the presidency of Franklin D. Roosevelt as a means of white-collar employment during the Great Depression.

The narratives provide glimpses into the religious lives of enslaved Africans. The first discovery is that the invisible institution was a clandestine endeavor, existing beyond, or at least on the periphery of, the dominant society. Often in the middle of the night in locations variously described as hush, bush, or brush arbors, Africans came together, creating a space of their own in which to encounter the sacred. The arbors were makeshift structures that could be erected from found and standing timber and then covered with bushes or other foliage in order to enclose those gathered while providing a modicum of visual and acoustic protection. In other instances, Africans availed themselves of empty or abandoned dwellings or barns. Some were so daring as to hold gatherings within their own quarters.

These meetings were marked with prayer, singing, preaching, and general fellowship. Consistent with an African aesthetic, worship involved the whole body in praise and the shout. There was an emphasis as well on orality and aurality, consistent with African vocalities and ironically well suited for a society that made it illegal to teach Africans to read, although some acquired the skill at great personal risk.

As noted by the historian John B. Boles, some Christian slaveholders believed themselves responsible for their chattels' bodies and souls, and thus provided some form of religious instruction. Enslaved Africans not part of the plantation system occasionally attended services with their owners, creating "bi-racial" religious communities. In the rarest instances, predominantly African congregations were founded, such as the First African Baptist Church near Savannah, Georgia, whose immediate antecedent predated the Revolutionary War by three years.

The narratives, however, reveal a consistent preference among the Africans for the secret meetings over the public gatherings. According to numerous narratives, only in the secret meetings could one worship as the spirit led. Yet in an atmosphere in which even the most docile and timid slave was viewed as potential flight risk or perhaps an agent of rebellion, any unauthorized and unsupervised assembly exposed those attending to the harshest penalties, up to and including death. Indeed, great care was taken to monitor the movement of Africans at all times. Slaveholders routinely sent out evening patrols through the slave quarters as well as the woods. In response, the Africans stationed look-outs and set traps to prevent their detection or capture. Songs such as "Steal Away to Jesus" not only spoke to longings for the next world but also might indicate when all was clear. Other strategies for avoiding detection included, in addition to building hush arbors, digging holes in fields so that worshippers could lie down to pray. Others would seek out hollows in which to sing and shout. Finally, a common practice at meetings was to turn a pot or kettle upside down to absorb sound.

Dominant Themes of Worship

A significant consequence of Africans creating spaces of their own was its profound impact on their appropriation of a Christian or biblical worldview. Africans developed their own interpretations and understandings, which often ran counter to those of their masters. For example, as opposed to the messages might instruct them to be obedient to their earthly masters as unto God, Africans emphasized a God of justice who supported the poor and the oppressed.

Perhaps the most dominant theme associated with the religious tradition of Africans within the invisible institution was their embrace of the Exodus narrative. The biblical images of Egypt, Exodus, Israel, and the promised land were very prominent. According to the scholar Hans A. Baer, Africans identified with Israel, seeing America as another

Egypt and their masters as Pharaoh. Central to such faith was the belief that if God acted to free the Hebrew slaves, God would do the same for them. Thus many Africans prayed expectantly for their future day of deliverance.

Other Africans adopted a more proactive posture toward securing their emancipation. For example, some took on the mantle of Moses, acting as God's instrument in the divine plan of liberation, to lead their people to a "promised land," whether it was the American North or Canada. One such "Moses" who became a celebrated conductor on the Underground Railroad was Harriet Tubman. The clandestine religious gatherings were frequently the staging grounds for such undertakings.

Still other Africans were inspired by other elements of the biblical tradition—the prophetic and apocalyptic narratives—to take even bolder actions. Texts that spoke to the destruction of Israel's enemies resonated with the desires of enslaved Africans to see their masters suffer punishment for the evil of slavery. Indeed, Gabriel Prosser, Denmark Vesey, and Nat Turner, who directed the most well-known slave insurrections during the nineteenth century, were perceived by other Africans as uniquely gifted emissaries of the divine.

Numerous scholars have noted that Africans embraced an image of Jesus as one actively engaged in combating evil rather than the images of Jesus as the "Prince of Peace" or the "Lamb of God" favored by those within the dominant Christian culture. The Jesus to whom they bore witness in their preaching and teaching was a warrior king "seated on a milk white horse" with a sword and shield in his hands. He was a conquering hero who did not know defeat. The historian Lawrence Levine attributes this imagery to Africans' emphasis on themes within the biblical tradition that might sustain their hope for not only salvation for their souls, but also release from their physical oppression. Meanwhile, the Old Testament patriarchs, along with Jesus and the New Testament saints, were part of the religious lives of the slaves as well. In keeping with the African tradition of the ancestors, the biblical characters were immanently present and active in behalf of their descendants.

Religious diversity persisted throughout the invisible institution. There was no orthodoxy, no universal creeds, or dogmas. Although at times explicitly and intentionally Christian, "congregants" and their leaders embraced and evinced varying degrees of hybridity and syncretism in their convictions, rituals, and everyday life. Many pastors, preachers, and elders were also conjurers, root workers, hoodoos, and gopher doctors. In such capacities they would invoke

spiritual power for various purposes, such as healing, protection, and self-defense. Indeed, the African American religionist Theophus Smith has noted that for many the Bible in its objective presence was frequently a powerful magical formulary, used along with roots, herbs, and incantations to heal, to harm, and to transform one's circumstances. Such spiritual practices may have allowed Africans to procure some additional measure of control over their lives.

Legacy

Ultimately, however, the invisible institution dissolved into the visible black church. In the wake of the Civil War, African Americans in the South attempted to establish stable families, communities, and institutions, with the black church often occupying a pivotal role. African Americans who had been active in biracial churches left en masse to join the burgeoning African American congregations. Furthermore, independent African American churches in the North mobilized mission efforts for freedmen throughout the South. However, the religious legacy of the invisible institution remains a component of African American religion in all its variations.

Islam in North America

Though populations of Muslims living in North America remained rather small until the late nineteenth century, they have had a sustained presence and influence on the continent since the colonial period. Muslim North American history encompasses the narratives of two separate but often overlapping lineages: Muslims of African descent brought to America as slaves and Muslims who immigrated.

In 2009 Islam was the fastest-growing religion in North America, with estimates of up to 6 million Muslims in the United States, 500,000 in the Caribbean, and 1 million in Canada. Throughout North America the Muslim community is highly diverse, with large populations of South Asian, Southeast Asian, European, Arab, and African American believers. These Muslims have adapted their religious beliefs to new social and national contexts, often contending with significant resistance, violence, and prejudice from individuals and groups with negative views of Islam and its people.

Colonial History

Historically well known for expertise in navigation and exploration, Muslims may have visited the Americas as early as the fourteenth century. In fact, Christopher Columbus's voyage to the Americas was led by Muslim navigator Pedro Alonso Niño and staffed with Muslim crew members forced to affirm Christianity. Muslims were living in North America by the early sixteenth century, because some of the African slaves brought to New Spain practiced Islam. Transported from regions of Africa with large Muslim populations such as Senegambia, the Gold Coast, Sierra Leone, and the Bight of Benin, Muslims made up 10–20 percent of the total number of slaves in the New World.

Muslim populations were not evenly distributed throughout North America during the colonial period. Instead, Muslims tended to be concentrated in certain locations because of the size of slave populations, the strictness of white oversight, and the trade relationships that slave traders had with Muslim-dominated regions of West Africa. In the North where slave populations were small and residential, scholars find little evidence of a Muslim presence. However, in parts of the American South and the Caribbean where slaves from Muslim regions were often preferred and slave communities were large with little white oversight, there is overwhelming documentation of a Muslim presence. States and countries with large Muslim populations—South Carolina, Georgia, Jamaica, Trinidad, and San Domingue

(Haiti)—have produced accounts of Muslim slaves who could read and write in Arabic, who organized religious communities, and who performed prayers throughout the day. Scholars have also recovered artifacts, including amulets, copies of the Qur'an and Qur'anic verses, and prayer beads. In the Caribbean the memory of Islamic and Moorish roots has even been retained in elements of language, naming, and cultural practice.

Throughout the American South and the Anglophone Caribbean, Muslim slaves were generally highly valued and treated differently from other Africans. Slaveholders tended to see Muslims as intelligent, qualified for skilled labor, capable of taking on supervisory positions, and less rebellious than other slaves. Documents praising the loyalty and intelligence of Muslim slaves are often the only sources that draw attention to individuals. For example, the lives of Muslim leaders Muhammad Kaba and Abu Bakr come to light only when Irish special magistrate R. R. Madden praised the men for not being involved in the subversive slave activities that occurred around 1820. Indeed, distinctions between Muslims and non-Muslims were made by African Muslims themselves who generally believed they were superior to non-Muslim Africans, whom they criticized as lazy, immoral, drunk, and unthriftful. For example, Muhammad Bath, the leader of a Muslim community in Trinidad, formed an Islamic society that sought to free its members from slavery by purchasing non-Muslim slaves that could be exchanged for the freedom of a Muslim. Although African Muslims did not desire to be enslaved themselves, they often did not oppose slavery as an institution and sometimes became slaveholders themselves after gaining their freedom.

Perhaps the most famous African Muslim living in North America, Omar Ibn Said, wrote fourteen Arabic manuscripts, including an autobiography, during his enslavement in North Carolina. Born in Futa Tooro, a region in Western Africa and formally trained as a Muslim scholar, Said was captured in 1807 during a military conflict and taken to the United States as a slave. After escaping, Said was recaptured and sold to James Owens in Cape Fear, North Carolina. The Owens family, intrigued by Said's intelligence and facility with Arabic, gave him ample time to study an Arabic translation of the Bible that Said's owner had procured from Francis Scott Key, the composer of "The Star Spangled Banner." Though scholars have argued over whether Said eventually converted to Christianity, Said asserts his dedication to Islam in his 1831 autobiography and annotated his Arabic Bible with praise to Allah. Evidence suggests that Said

African Muslim Omar Ibn Said wrote fourteen Arabic manuscripts, including an autobiography, during his enslavement in North Carolina.

retained much of his Muslim identity, as did many other first-generation slaves whose names are lost to history.

Until the early nineteenth century, demographic facts, combined with findings about the behavior and lifestyles of some slaves, indicate that during their enslavement Muslims, to the best of their abilities, continued to practice their religion. Indeed, significant historical events such as the Haitian Revolution have been linked to Muslim organizing and religious thought. However, by the nineteenth century the end of the international slave trade and the persistence of evangelical Christians had resulted in a dramatic, if not nearly complete, disappearance of Islam among slaves. Although the twentieth century would witness a resurgence in adherence to Islam among people of African descent, the history of Muslims in nineteenth-century North America lies primarily with the thousands of Arab and European Muslims who came to the continent seeking political refuge, economic opportunities, and new beginnings.

Immigration, 1875–1960

Held to advertise America's economic and technological prowess, the Philadelphia Centennial Exposition of 1876 attracted an international complement of merchants and

vendors, including, for the first time, Arab Muslim entrepreneurs interested in selling their goods in the United States. Fueled by increased attention to American economic opportunities and success stories from other Arabs, the first wave of Muslim immigration began at the close of the decade.

From 1875 until World War I Arab Muslims and Christians from Syria and Lebanon immigrated to the United States to escape the economic and political deterioration brought on by the collapse of the Ottoman Empire. Almost entirely young, male, and uneducated, these Arab laborers came to the United States to find economic advancement. A few dozen settled in Manhattan and Brooklyn, while most gradually moved westward, settling throughout the Midwest. Conditions in the United States were generally harsh for new immigrants and worse for the Arabs, who were often the victims of racism and other forms of prejudice or misunderstanding. Discouraged, many Muslim immigrants chose to return home. Those who remained in the United States endured a long spell of cultural and religious isolation.

Indeed, the historical and demographic realities of nineteenth- and early twentieth-century America affected immigrants' abilities to practice and retain Islam as they had known it in their homelands. Practically speaking, worship led by a religious expert in a mosque was nearly impossible for most Muslims until well into the twentieth century. Those who continued to practice and maintain their faith worshipped in their homes and often looked to correspondences with friends and family as sources of religious inspiration and advice. Moreover, the cultural norms and dictates of American life were not well suited for the maintenance of many Muslim religious practices, especially the five daily prayers. Inevitably, the formation of new communities, minority status, and the contact with Christianity changed and challenged Muslims' religious worldviews. Faced with a new landscape, immigrant Muslims quickly began to forge new communities and create a distinct American Muslim subculture. Often the creation of a community was necessary to help immigrants survive mentally and physically in their new homes. In fact, it was not uncommon to find individuals with a highly diverse range of religious orthodoxies and backgrounds sharing a community.

Whether motivated by religious or secular concerns, the development of small Islamic communities throughout the Midwest by these first-wave settlers established important early networks for welcoming and supporting future immigrants. For example, in 1895 Syrian brothers Musa, Ali, and Abbas Habhab arrived in Cedar Rapids, Iowa, and established

what is now the oldest continuously existing Muslim community in the United States. By 1920 nearly sixty Muslims were living in Cedar Rapids, and on June 16, 1934, the community dedicated the first Islamic house of worship in North America, known today as "America's Mother Mosque." Syrian-Lebanese immigrants, both Christian and Muslim, established communities in Ross, North Dakota; Michigan City, Indiana; Dearborn and Detroit, Michigan; and Pittsburgh, Pennsylvania. These communities were populated by Arabs and Muslims from Central Asia, Iraq, Northern Africa, and the Middle East during the first two decades of the twentieth century. Like those who came before them, these newcomers were from the working class—poor farmers and unskilled workers who adopted new skills and labored as merchants, entrepreneurs, and factory workers.

But not all Muslims who came to America during the first wave of Muslim immigration were from Arab nations. Muslims were always within the throes of newcomers who hailed from Europe, where Islam has been practiced since the seventh century. Immigrants from Poland, home to a small Muslim community, and from Albania, whose citizens were mostly Muslim, settled in communities in Maine, Connecticut, and New York. By 1926 European Muslims in all three states had built mosques to serve their neighborhoods. In the American and Canadian West, thousands of Muslims from the Punjab region of India relocated to southwestern Canada, California, Oregon, and Washington to work on the railroads and in mining, logging, and farming.

There was no significant break in the presence of Muslims in the Caribbean during the nineteenth century as occurred in the United States. Although the communities of African Muslims in Jamaica, San Domingue, and Trinidad shrank dramatically after the slave trade ended, the system of indentured servitude that replaced slavery in the nineteenth century brought new groups of Muslims to the countries. Hundreds of thousands of East Indian Muslims flooded into Guyana, Trinidad, and Suriname, and smaller groups worked throughout the other countries. Not surprisingly, Indo-Pakistani varieties of Islam, especially the Ahmadiyya movement, flourished in the Caribbean. After the passage of the U.S. Immigration Act of 1924 prohibited Arab immigration and established a strict 2 percent quota system, the influx of Muslims into North America attenuated. However, between 1930 and 1938 when the Great Depression drove immigration, Arab immigration, and subsequently Muslim immigration, spiked when Middle Easterners came to the United States to work as laborers. This brief influx, however, was halted by World War II.

Scholars estimate that prior to World War II several thousand Muslims were living in America. The country experienced a second wave of Muslim immigration in the 1950s in response to the ongoing political and social upheavals in Muslim countries. Most notably, the 1948 Arab-Israeli War displaced 80 percent of Palestinian Muslims. Hundreds of thousands relocated to the United States, Canada, and the Caribbean. Also among these immigrants were Europeans, Syrians, Egyptians, and Iraqis fleeing governments hostile to their interests as political upheavals rocked Central and Eastern Europe and the Middle East. Immigration laws throughout North America continued to strictly limit the number of individuals admitted, and laws favored families, political refugees, and merit-based immigration. Muslim professionals—primarily physicians—settled in the country for educational and professional opportunities. As a result of increased immigration and an explosion of conversions among African Americans, by 1960 a quarter-million Muslims were living in the United States.

Converts

Until the late nineteenth century, conversion to Islam was a largely unknown phenomenon in the United States. Although Muslim Africans converted a small number of their fellow slaves to Islam, nearly all Muslims living in America before the twentieth century brought their religion across the Atlantic. In the last fifty years, there has been an extraordinary increase in the numbers of Muslims in North America. In the United States almost one-third of Muslims are converts, and one-third of those converts are African American. Indeed, the history of Islam in North America cannot be told without paying significant attention to the innovative creativity of the African Americans who were responsible for the spread of Islam throughout Canada, the United States, and the Caribbean.

The first known American convert to Islam was Mohammed Alexander Russell Webb (1846–1916), a white U.S. consul to the Philippines. Raised Presbyterian, Webb experimented with a variety of religions before reading the Qur'an and converting to Islam in 1888. At the time of his conversion Webb had never met a Muslim or participated in any Islamic community. Nevertheless, Webb quickly threw himself into the study of Islam and embarked on a tour of India to meet important Muslim leaders. After his return to America, Webb dedicated himself to spreading Islam and founded the first American mosque in Manhattan in New York City. Although the mosque closed shortly after its

founding, Webb did successfully establish study circles in dozens of cities to support the small communities of the new, mostly white converts who followed in his wake. Through publications and speeches, most notably at the 1893 World's Parliament of Religions in Chicago, Webb was an active proponent of Islam until his death in 1916.

Like Webb, the first major African American proponent of Islam, Noble Drew Ali (1886–1929), had little contact with Muslims or Islam before he proclaimed himself the prophet-leader of the first black Muslim organization in America, the Moorish Science Temple. Noble Drew Ali, born Timothy Drew, founded the Moorish Science Temple in the belief that Islam was the true religion of American blacks. His new sacred text, the Holy Koran of the Moorish Science Temple of America (also called the Seven Circle Koran), taught that American "Africans" were actually Moors—people of Moroccan descent—who had been tricked into believing they were Africans by the whites who enslaved them. Drew himself claimed both Cherokee and Moorish heritage and encouraged members to signify their Moorish ancestry by wearing fezzes, displaying the Moorish flag, and affixing "El" or "Bey" to their surnames. In 1913 Noble Drew Ali founded the Canaanite Temple in Newark, New Jersey. After a schism among his followers, Drew Ali moved to Chicago in 1925 and established temple #9 of the Moorish Science Temple of America. With the founding of temple #9, Moorish Science grew rapidly, attracting about 15,000 members at its peak. Despite their embrace of Islam, the teachings laid out in the Moorish Science Temple diverged significantly from classical Islam. For example, Moorish Science Temple believers did not adopt the Qur'an as their primary sacred text and maintained that Drew, rather than Muhammad, was the final prophet. Members of the temple concerned themselves with practical improvements in their social and economic lives and with the reeducation of Moorish Americans. Like other African American forms of Islam founded in industrial midwestern cities in the 1920s and 1930s, Drew's Moorish Science Temple was a response to the era's racism. Drew urged his followers to reject the derogatory labels such as black, colored, and Negro and taught that Chicago would become a second Mecca. By the 1940s the Moorish Science Temple had been eclipsed by the popularity of a new form of Islam. Today the Moorish Science Temple maintains a presence in several dozen northern cities.

The Nation of Islam, inspired by Noble Drew Ali's Moorish Science Temple, was a black nationalist organization that

was critically important to the civil rights movement and commanded significant social and cultural power through the middle of the twentieth century. Founded in Detroit by Wallace Fard Muhammad in 1930, the Nation of Islam sought to resurrect the black community by uplifting the race to its fullest religious and social potential. The Nation emphasized strict gender roles, reform of criminals in prison, and black separatism. All of this was held together by what the Nation termed *Islam*, which was somewhat different from what Muslims elsewhere in the world practiced. The Nation taught that Fard Muhammad was the messianic fulfillment of Islamic and Christian prophecy. Although the group maintained that the Qur'an was a central sacred scripture, it adopted an idiosyncratic creation and apocalypse story that Elijah Muhammad, Fard's first disciple, claimed to have learned from Fard in the 1920s. The elements of Fard's apocalyptic vision reflected the Nation's emergence at the height of American's eugenics hysteria and offered a kind of alternative religious explanation for the place of eugenics scientists—Muhammad's story credited a "mad scientist" with creating the white race, who would go on to oppress blacks for hundreds of years. Although the Nation was an important part of the civil rights movement in the 1960s and 1970s, the group's influence quickly declined when Elijah Muhammad died in 1975. By the 1990s the Nation had a very small membership of less than 50,000 adherents and found itself increasingly under attack from Jews, who claimed the Nation's leaders made anti-Semitic remarks, and from more orthodox Muslims, who claimed the Nation was a departure from Islam.

Less powerful and pervasive than the Nation of Islam and the Moorish Science Temple, the Indian Ahmadiyya Muslim movement met with success in converting African Americans. Founded in Punjab, India, in 1889 by Mirza Ghulam Ahmad, Ahmadiyya Islam was brought to America by Indian missionaries who aimed to convert ethnic Muslims. In 1920 the first Ahmadiyya Muslim missionary to arrive in America, Mufti Muhammad Sadiq, quickly discovered that whites and ethnic Muslims had little interest in the Ahmadiyya message and so was largely unsuccessful in his efforts to establish Ahmadi communities. Ten years later, Sufi Mutiur Rahman was able to convert blacks to Islam by preaching a message of tolerance and diversity. Ahmadiyya Islam therefore became an Indian-led movement with a mostly African American following. Under Rahman's leadership, in 1950 the community constructed the first mosque in Washington, D.C. By 2009 hundreds of Ahmadiyya mosques were

scattered throughout Canada, the United States, and the Caribbean. The largest mosque in Canada, the Baitun Nur Mosque in Calgary, serves the Ahmadi community established there in 1963.

People of African descent were the first significant populations in North America to convert to Islam. Islam spread quickly through the prison system, and conversions were fueled by the new and often unsatisfactory urban condition of blacks resettling in the north as part of the Great Migration. Disenchanted and poor, African Americans from the urban north converted for a variety of reasons, but for some the poverty and racism they encountered in those cities rendered the Nation of Islam's message about white devils and black superiority plausible. Presented as the "natural" religion of Africans, Islam was empowering. Embracing Islam meant rejecting Christianity as a religion of oppression and enslavement. Moreover, Islam reaffirmed gender roles and personal dignity for black men and women who believed that slavery had undermined the black family and relationships between the sexes. Indeed, the broad alignment of Islam with black nationalism and civil rights causes meant that for a time in the 1950s through the 1970s black Islam was a powerful political and religious voice.

The sometimes significant departures from classical Islam embraced by many black Muslims were not generally well received, however, in the larger Muslim world. In particular, immigrant Muslims were often appalled by the differences they observed in groups like the Nation of Islam, the Ahmadiyya, and the Moorish Science Temple. Faced with contradictory accounts of Islam, many African Americans repositioned themselves as part of the Islamic mainstream and adopted Sunni Islam in a transition that began in the 1970s.

After 1965

In the hundreds of years that Muslims had lived in America they had established a small but enduring community infrastructure. They founded national political and social action organizations such as the Muslim Student Association, Islamic Society of North America, and Federation of Islamic Associations of the United States and Canada, built mosques, and settled in communities. This groundwork would accommodate and support the population surge that occurred when North American immigration laws were liberalized in the 1960s. As more Muslims came to the continent to work and attend school, early settlement patterns were reinforced because newcomers elected to live in areas with Muslim

communities and institutions. Northern California, for example, remains a center of Indo-Pakistani immigration. Farming undertaken by Indian immigrants in the nineteenth century continues to be carried on today by second- and third-generation family members and new settlers. Dearborn, Michigan, settled in the nineteenth century, maintains its status as an Arab American nerve center. With an Arab American population of 30,000 (30 percent of the city's total population, according to the 2000 census), Dearborn is home to the Arab American National Museum and the largest mosque in North America, the Islamic Center of America. New centers of Muslim life also emerged. In Canada, French-speaking Muslims from North and West Africa and Syria resettled in French-speaking parts of Canada. In Quebec, Islam is the third largest religious denomination, and in some parts of Alberta Arab Muslims are so prominent that Arabic is taught in public schools. In the Caribbean the largest Muslim populations are in Guyana, Trinidad and Tobago, and Suriname, where the religion is slowly losing its exclusively Indian character because Islam has made a comeback among people of African descent.

Demographically, most Muslims who immigrated after 1965 were educated, fluent in English, and Westernized. In large part the decision to immigrate was driven by dissatisfaction with political or social conditions in people's home countries. The continuing Palestinian diaspora, the Iranian Revolution, the Lebanese civil war, and the pro-Soviet coup in Afghanistan all contributed to increased emigration from those regions. After passage of the 1965 Hart-Cellar Act, immigrants generally left their home countries with no intentions to return, significantly reshaping the demographics of the U.S. Muslim community. For the first time in history a significant number of Muslim women and children lived in North America. Women and men interested in gender equality and feminism then organized groups such as the Association of Muslim Women in America, which seeks to create community for women, advance equality, and educate. The more open immigration situation also led to a significantly more diverse American Muslim population. Because immigrants from all over the world could now more easily enter the United States, American Islam began to reflect the international diversity of the religion. Practitioners of nearly all varieties of Islam, from convert to ethnic and from Arab to Asian, and members of all the three major branches of Islam (Sunni, Shi'ite, and Sufi) have significant communities in North America. Although Shi'a Muslims make up only 10 percent of the

total Muslim population worldwide, in the United States about 20 percent of Muslims are Shi'a, most from the Middle East. Shi'a Muslims constitute a majority of Muslims in Iran, Iraq, and Bahrain and sizable minorities in Pakistan and Afghanistan. Even smaller groups such as the Ismailis, a sect of Shi'a Muslims, have a presence in the United States and Canada. Nearly all of the 40,000 Ismailis in the United States are immigrants who were seeking refuge from politically unsettled regions of central Asia and Africa. In the United States, the Ismaili community is centered in Houston, Texas, where the Ismaili population numbers about 13,000, according to a 2003 Harvard University Pluralism Project report.

The many Muslim groups that have settled in North America have often found that their religious and cultural practices are unable to translate directly in the American context. In most areas the Muslim population is not dense enough to support significant ethnic and religious factionalism. Indeed, often differences that would be important in people's countries of origin cannot be successfully enforced, such as the factionalism between Sunni and Shi'a Muslims. Although differences are not always ignored, American Muslims tend to downplay them in exchange for participation in a broad community, and 90 percent of the 12,000 mosques in America have members who are a mix of Asians, Arabs, whites, African Americans, and Latinos. In fact, the very character of the mosque itself has changed. Mosques traditionally served only as religious structures, but in America today they often include some secular features such as schools, day care centers, banquet halls, and athletic facilities. The resulting complex is often called an Islamic Center. The Islamic Center, then, serves not only as a mosque that provides religious services, but also as a community center that creates a space for Muslims to come together in contexts outside of worship. It is not uncommon for secular members of Muslim families or cultures to participate actively in the Islamic Center as a way to have access to an ethnic or cultural community.

Other changes in the ways in which Islam is generally practiced in North America reflect the specific living conditions in North American countries. For example, because of the structure of society in most parts of North America Muslims find it difficult to observe daily prayer. Moreover, many Muslims now carry out their religious services on Sundays rather than on Fridays. Similarly, demographic diversity has led groups traditionally disinclined toward conversion to Islam to become increasingly integrated,

including whites, Latinos, and Native Americans. In the United States, particularly in the West and California, certain expressions of Islam have become very attractive to some people, primarily whites, participating in the New Age movement. Sufism, a small branch of Islam that emphasizes the mystical and emotional elements of the religion, has been embraced in some circles as an ancient and expedient route to greater religious awareness. Women, especially, seem to find the music, dance, and ritual in Sufi worship attractive. Many New Age American Muslims believe that Sufism emphasizes the democratic elements of Islam, and is therefore especially well suited to the American context.

Controversies

Throughout North America Muslims face unique circumstances within their communities and the nation. They not only navigate participation in local religious communities that bring together believers with dramatically different backgrounds and interpretations of Islam, but also simultaneously deal with issues related to the reception of Muslims broadly. These issues include religious misunderstanding, prejudice, racism, and minority status, and Muslims have long faced misunderstanding of and discrimination for their religious beliefs. In North America, and especially in the United States, concerns about Islam have generally centered around two major issues: gender and violence.

Gender and Sexual Orientation

Religious teachings on gender relate to both the role of women in Islam and the validity of gay, lesbian, bisexual, and transgender (LGBT) identities. Both subjects have long been a topic of conversation in Islam, and they have been receiving even more attention in recent years as the American media frequently depict Muslim women as subjects of oppression and as LGBT Muslims come out of the closet. As in the other Abrahamic religious traditions, the sacred scripture of Islam, the Qur'an, can be interpreted to condemn homosexuality, delimit valid sexual practice, give men authority over women, and advocate for strict gender roles. However, other understandings are available and practiced, because Muslims do not participate in a monolithic religion or culture. Among the various ethnic and convert varieties of Islam is a diversity of views on gender and sexuality that ranges from the very conservative to the very progressive.

For many Americans one of the most visible symbols of Islam is a woman wearing a head covering or *hijab*. The veiled Muslim woman has come to be a symbol of the

backwardness, oppression, and danger of Islamic militancy. Despite the fact that many Muslim women do not wear the veil and do practice many different versions of Islam and vary in their orthodoxy, the notion that Islam is inherently oppressive to women has become one of the most politically and culturally powerful notions among Americans today. Muslim women have been placed in defensive positions on veiling and—whether they advocate veiling or not—have had to engage the prevalent assumptions that veiling is always a coercive and oppressive religious practice.

The controversy over veiling and the rights of women in Islam is at least twofold. On the one hand, Muslims, especially American Muslims, are concerned about the negative effects of using images of veiled women as evidence that oppressive practices or teachings characterize all Muslims or Islam. On the other hand, Muslims disagree over whether female veiling is required by Islam and whether veiling is an inherently oppressive practice. Muslim feminists often point out that although some women have been coerced into veiling, others have chosen to take up the veil out of a political or personal commitment to Islam, or as an expression of their identity. Indeed, it is highly likely that in any American mosque one could find individuals willing to aggressively critique or support veiling.

The issues surrounding the acceptance of LGBT men and women in Islam bring up an entirely different set of concerns, at least in part because the overwhelming tendency of Islamic communities to view homosexuality as sinful and deviant is accepted by many Americans, especially conservative Christians, who are often the most vocal in deriding Islam on other issues. For this reason Islamic opposition to LGBT identity or civil rights is not frequently used to attack the religion—with the exception of some human rights advocates or LGBT rights activists concerned about violence against and intolerance of gay Muslims. Nevertheless, within the Muslim community as a whole a growing contingent of LGBT Muslims and their allies—mostly from North America and Europe—are attempting to challenge long-standing positions. Indeed, the vast majority of American LGBT Muslims describe extreme marginalization from their religious communities, which largely teach that homosexuality is wrong and stress the nonfluidity of male and female gender roles. Muslims living in America and overseas often see homosexuality and gender nonconformity as a result of contact with a licentious Western culture. Therefore, the cultural and ethnic

resistance to adopting Western ideas of sexuality and gender are often just as strong as the religious reasons given for rejecting homosexuality. This feeling of oppression and misunderstanding is only compounded by the stereotyping of Muslims in the broader culture that identifies Islam with terrorism, and is generally suspicious of all people of color—especially Arabs.

Violence and Terrorism

After the attacks on New York City and Washington, D.C., by Saudi Arabian Muslims on September 11, 2001, American Muslims found themselves in an especially precarious position. President George W. Bush exacerbated their difficulties by calling the retaliatory war in Afghanistan a “crusade,” but he also quickly moved to affirm that Islam was “a religion of peace.” Meanwhile, American Muslims were left to deal with the social and political fallout from the 2001 attacks. Socially, people who appeared to be of Arab descent, including South Asians and Persians, were targeted by xenophobic Americans who associated Arab ethnicity with terrorism against the United States. Since the events of September 11 the tendency to conflate Islam with Arab descent has continued, a misstep that not only ignores the vast ethnic and racial backgrounds of Muslims but also overlooks the fact that a large number of Arabs are Christians. During the months following September 11, 2001, several mosques and Islamic centers were vandalized with anti-Arab and anti-Muslim sentiments.

Although President Bush and most other government officials officially affirmed the belief that Islam was a religion of peace and that Muslims were law-abiding American citizens, programs put in place in 2001 seemed to contradict those beliefs. Prominent Muslims found that a variety of law enforcement agencies, from the local police to the Federal Bureau of Investigation (FBI), suspected them of plotting terrorist attacks because they were Muslim. In California, FBI agents were directed to collect demographic information about terrorists by conducting research on the heavily Arab and Muslim neighborhoods and communities, and were further told to count the mosques in a given area in order to determine which areas needed the closest monitoring. The USA PATRIOT Act (Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism) passed six weeks after the September 11 attacks abridged many constitutional protections that all Americans had previously enjoyed, but prosecutions based on its provisions tended to be focused only on

men of Arab ethnicity and Muslim religion. Muslims also found themselves targeted by an increasingly vigilant Immigration and Nationalization Service (INS). In the aftermath of the 2001 attacks the INS took dimmer view of immigration violations, but focused especially on implementing a “zero tolerance” policy for immigrants from the Middle East and other Muslim countries. Finally, a provision of the Patriot Act called for enhanced scrutiny of charitable giving, and once again this scrutiny fell primarily on Muslim and Arab-affiliated charities. In the five years following 2001, some prominent Muslim charities had their assets frozen under Patriot Act rules, which required no reporting or warning and a minimal appeal process. With their assets frozen, these charities often found themselves unable to mount a legal defense, and several folded under the weight of unknown accusations. Some Muslims asked the U.S. government to provide a list of approved Muslim charities, a request that was denied, making it impossible for Muslims to escape suspicion by being accidentally associated with a charity accused of supporting terrorism.

Since the events of September 11, Muslims have increasingly become subjected to Christian missionary efforts. Operating under the assumption that adherence to Islam inclined people toward terrorism, some conservative Christians initiated or increased long-term efforts to expose Islam as an illegitimate religion and convert Muslims all over the world to Christianity. Leading evangelical leaders, most notably former presidential candidate Pat Robertson, led a media crusade to “prove” that Islam was innately violent, backward, and deceptive. In doing so, he frequently brought former Muslims who had converted to Christianity onto his show to expose the brutal truth of Islam. Discussions of Islam and its relationship to terrorism provoked a national conversation about “true Islam.” Each side attempted to prove that the innate essential character of the religion was peaceful or violent in order to determine whether the terrorists who carried out the September 11 attacks were really Muslim.

This new legal and cultural environment mobilized American Muslims in unprecedented and unexpected ways. For one thing they engaged in an extensive public relations campaign in which the Council on American-Islamic Relations, for example, famously issued a post-September 11 *fatwa* against terrorism. Political change was also under way as Muslims became increasingly concerned about U.S. foreign policy. Throughout the 1980s and until 2000 most Muslims voted for Republican candidates for public office.

In the 2000 presidential campaign candidate George W. Bush promised to revoke a 1995 ruling allowing the use of secret evidence in certain courts, thereby prompting Muslims to support his candidacy. But after passage of the Patriot Act in 2001, as well as the onset of two protracted wars against Muslim-majority countries, Muslims supported Democrat John Kerry by a nearly 20 percentage point margin in the 2004 presidential election. Perhaps more significant, American Muslims began to see the critical need to voice their opinions in political matters, leading to the creation of new grassroots organizing efforts that turned record numbers of Muslim voters out to the elections in 2004, 2006, and 2008. As a result, in November 2006 in a major political achievement, Minnesota Democrat Keith Ellison became the first Muslim to be elected to Congress. The historic significance of this election was sullied only by the controversy that ensued when Ellison indicated that he would be bringing Thomas Jefferson's copy of the Qur'an to his swearing-in ceremony.

In the twenty-first century crimes against American Muslims have fallen substantially, and American Muslim organizations have found themselves able to give voice effectively to the concerns and problems that Muslims and Arabs in America experienced after the September 11, 2001, attacks. As a result, the political and social climate in the United States has dramatically improved. Nevertheless, polls of Americans continue to register negative opinions about the loyalty of Muslim and Arab citizens as well as suspicion about Islam as a religion. The persistence of negative valuations of Islam came to light again during the 2008 presidential campaign when Republicans questioned Democratic candidate Barack Obama's presumed Muslim background and middle name, Hussein. Obama, who is a Christian, was forthcoming in defending his religious identity, and although he stated that he had never been a Muslim, he challenged the idea that it would have been a problem if he had been a Muslim. Given this climate, Muslims in America continue to advocate for their interests through political action groups, increased visibility, and education.

Islam Tradition and Heritage

For the historian of religion, Islam begins in Arabia with the birth of Muhammad in 570 CE. Judaism and Christianity were both known in Arabia, and Islam is seen alongside these earlier traditions as another ethical monotheism. For the believing Muslim, however, Islam is not a religion created by Muhammad, but the religion of God, given to Adam, the first created human being. Muslims believe that Muhammad was the last in a long line of prophets (beginning with Adam), refer to him as the prophet Muhammad, and add a formula of praise and blessing after his name ("May God bless him and give him peace," or "Peace be upon him").

Historical Beginnings

Muslims consider the year 622 CE to be Year One of their calendar. This was the year the prophet Muhammad and his

followers left their native city of Mecca to migrate to the neighboring city of Medina. For thirteen years preceding this emigration [*hijrah* in Arabic] from Mecca, the prophet Muhammad had been receiving revelations that commanded him to warn the people of his city against polytheism and social injustice. Mecca had long been the spiritual center for the peoples of the Arabian Peninsula with many individuals annually journeying to the city to visit the idols housed in an ancient Meccan sanctuary, the *Ka'ba*. The leaders of Mecca became increasingly indignant about Muhammad's revelations because they threatened the status quo in religion and politics. His attacks on idolatry involved attacks on the business of the city in welcoming pilgrims to the idols. Finally, after an unsuccessful attempt on his life, Muhammad and his followers left. For later Muslims, this model of leaving home for another place became a symbol of the notion that faith is not linked to living in any one place.

When the Muslims arrived in Medina, they built the first place of prayer known as a *masjid* (literally, "the place of prostration," referring to the bowing down that occurs in Muslim prayer) or mosque, and set up a way of life based on the series of revelations that had come to Muhammad. Three times their enemies from Mecca attacked them trying to destroy the new Muslim community, but each time the attack failed. The successful defense of the community bolstered the faith of all the members, and the community expanded rapidly as new people converted. In 630, not long before the Prophet's death, the expanded Muslim community launched a campaign to capture the sanctuary in Mecca. The result was the destruction of all idols housed in the sanctuary, the rededication of the *Ka'ba* as the temple originally built by Abraham and Ishmael to honor God, and the conversion of all other peoples of Mecca and the Arabian Peninsula to monotheism.

Throughout the period when the Prophet had been receiving revelations, he had recited what he received to his followers. Many of the new believers often memorized the verses, and sometimes the verses were used for prayer. This is comparable to the way in which Jews and Christians use words of the Bible in worship. After the death of the Prophet, the leaders of the community undertook to compile the verses into a collection known as the Qur'an. Their sources were the memorized verses, as well as words copied down on palm-leaves, stones, or other writing materials that had been available to the community of followers. The accepted final version of the Qur'an was established during the caliphate of Uthman (644–656 CE). Although the

written version of the Qur'an was recognized as the word of God, for the ritual life of the community, hearing the recitation of the Qur'an remained the basic way for Muslims to enter into a feeling of closeness to God. From the origins of the Islamic religion until the present, the recitation of, and listening to, the Qur'an has been understood to be a significant form of religious practice.

Although the Qur'an has been translated into other languages, Muslims recognize the Arabic version as the true word of God. Any translation is by definition a change from what Muslims consider to be the divine word. As such, Muslims are required to conduct their prayers in Arabic, and children are encouraged to memorize the Qur'an in Arabic regardless of mother tongue.

After the Prophet's death, the community became responsible for selecting the caliph, the leader. The main differences between Sunni and Shi'i Muslims center on this question of who the appropriate successor should be. The majority, the Sunni, selected one of the senior members of the community to be leader. Revelation was no longer received and prophecy had ended, but in other respects, the caliph was the leader. The Shi'i maintained that Ali, the son-in-law of the Prophet, and his heirs should have been the leaders of the community. Today, the Shi'i still claim that leadership of the community should rest with a direct descendant of Muhammad. Most Shi'i claim that there were twelve of these descendants who exercised authority; they are known as the twelver Shi'i. The Ismaili are a minority within the Shi'i; they claim to recognize seven of the descendants. Many of them acknowledge the Aga Khan as their present-day spiritual guide.

For centuries, most Muslims considered the Sunni caliph to be the central political authority of the Muslim world. Finally, after more than a thousand years, the last Sunni caliph was exiled from Turkey in 1924. The abolition of the caliphate coincided with the onset of the Turkish revolution that heralded the disintegration of the last remains of the Ottoman Empire. Since that time, Muslim countries have been developing new modes of government, usually based on constitutions and legislative assemblies. Following the end of World War II, several Muslim countries have been successful in implementing these changes. However, many Muslims have emigrated to Europe and North America, often because of political unrest in their countries of origin. As a result, Islam is now the second largest tradition in Canada, France, Germany, Great Britain, and perhaps the United States as well.

Muslim Practices: The Hadith of Gabriel

A famous saying in the Muslim tradition, known as the “hadith of Gabriel,” begins the section on faith in one of the standard collections of hadith (the sayings of Muhammad).

The story takes place in Medina, where a number of people are gathered around the prophet Muhammad. Into their midst comes a mysterious stranger, who bears no mark of the traveling required to reach that oasis town. The stranger calls Muhammad by his given name instead of his title, the Messenger of God, and places his hands on Muhammad, indicating a close personal relationship between them. The stranger asks Muhammad to tell him about Islam. Muhammad responds that Islam means that you bear witness that there is no God but God and that Muhammad is the messenger of God, perform prayer, give to charity, fast during the month of Ramadan, and make the pilgrimage to Mecca if you have the financial means to do so. When Muhammad finishes, the man tells Muhammad that he is correct. The companions of Muhammad are puzzled at this, a stranger asking the Messenger of God about Islam, and then telling Muhammad that his answers were correct. However, Muhammad is nonplussed about the situation. The man then asks Muhammad to tell him about faith. Muhammad replies that faith means that you have faith in God, in God’s angels, in God’s books, in God’s messengers, in the Day of Judgment, and in the measuring out of God’s justice. Again, the man tells Muhammad that he is correct. Then the man asks Muhammad to tell him about doing what is beautiful. Muhammad replies that doing what is beautiful means that you worship God as if you see God—for even if you do not see God, God sees you. The man then asks Muhammad to tell him about the Hour of Judgment. Muhammad refuses to answer this question, saying that he knows no more about it than the man does. The man persists, and asks Muhammad to tell him some of the signs that mark the Hour of Judgment. Muhammad responds that you will see slave girls giving birth to their masters, and barefoot, destitute shepherds competing with one another in building magnificent buildings. After this, the mysterious stranger turns around and leaves. Muhammad waits for a while, then tells the people that the stranger was not a man, but the Angel Gabriel who came to teach them their religion.

For Muslims, this story speaks to them about the truth of their religion. Muhammad is visited by the Angel Gabriel to confirm the teachings that he has brought. Of course, once Muhammad’s companions realized that it was Gabriel and not an ordinary human person who was asking the questions,

it all made sense. Gabriel, being an angel, was able to travel and arrive in Medina unannounced, bearing no marks from what otherwise would be a long journey from any direction. Being Gabriel, he could also be quite familiar with Muhammad, calling him by name and being in his personal space. Also being Gabriel, he knew the answers to the questions that he asked. Interestingly enough, he asks what might be considered a trick question about the final judgment of God. Muhammad neatly sidesteps the problem, telling Gabriel that neither of them knows the answer to that question—it is a matter known only to God. What Muhammad does talk about is an inverting of the social order that defies conventional logic, slaves giving birth to their masters and poor shepherds creating fantastic buildings. We will discuss each of the four questions that Muhammad answers as a way of describing what it means to be Muslim.

Islam (Surrender): The Five Pillars of Islam

The first question that Muhammad is asked is about Islam. Literally, the term *Islam* translates as surrender or submission to God. However, this is not a passive submission, but more of an engaged surrender to God. In his answer to this question, Muhammad identifies five activities, which are often known as the Five Pillars of Islam. Just as a pillar is a support for a building, so these five activities are the support for the religion of Islam. Islam, like Judaism, is often described as a religion of orthopraxy, “right conduct,” compared with Christianity, which is usually described as being more concerned with orthodoxy, or “right belief.” This is not to say that Christians do not believe in doing the right thing, but that for many Christians, doing all of the good works in the world will not save you, only belief in Jesus as the Christ will save you. Muslims and Jews, to be sure, also have an understanding of what is right belief, but they are more concerned with the performance of actions. The first point to be made about the Five Pillars is that they are all activities. Some are activities that you may never do or do only once, such as the pilgrimage to Mecca, but others such as prayer are repeated throughout the day.

The second point to be made about the Five Pillars is that they place an emphasis on community. Muslims refer to their community as an *ummah*, in a usage parallel to that of the church for Christians. The church is the body of believers, and only secondarily is it the physical building in which that community may worship. Similarly, the *ummah* is the community of Muslim believers. The prophet Muhammad said that anyone who performs the prayers and eats the ritually

acceptable food is a Muslim, indicating the importance of community. Some of the Five Pillars can be done in private, but they are all encouraged to be done in community. Muslims value the idea of corporate worship, just as Jews and Christians do. So, it is perfectly acceptable to pray at home alone, but better to pray with others; perfectly acceptable to break one's fast alone, but better to do it in community. The pilgrimage and the giving to charity can only be done, by definition, in community. A discussion of each of the Five Pillars follows.

Witness (Shahadah), or Faith Statement

The first pillar is the statement of faith. This is literally one sentence in two parts: I bear witness that there is no God but God, and I bear witness that Muhammad is the Messenger of God. The only thing that is necessary to convert to Islam is to say the faith statement, with sincerity, in the presence of Muslim witnesses. The first part of the faith statement indicates the monotheism of Islam. There is no one worthy of worship other than the one true God. For Muslims, this is believed to be the same God worshipped by Jews, Christians, and other monotheists. A saying of the prophet Muhammad is that all children are born with this true faith, but their parents turn them into Jews, Christians, Zoroastrians, or Muslims.

The second part of the faith statement indicates the importance of Muhammad. A number of times in the Qur'an, Muslims are commanded to obey God and Muhammad, for example: "Obey God and the Messenger that you might find mercy" (3:132). For Muslims, Muhammad is the exemplar; one is to observe the pillars in the way in which Muhammad performed them. Observant Muslims will recite the faith statement numerous times throughout the day in their daily prayers.

Prayer (Salat)

Salat is the second pillar. For Muslims, the daily prayers are of primary importance, a reminder throughout the day for all things created by God to praise and surrender to their creator. Anyone who has seen Muslims pray will know that the prayers are embodied, meaning that one does not remain in a stationary position such as sitting in a pew in church. The prayers consist of standing, bowing, and prostrating one's self, symbolizing their prostration before God. The place of prostration, literally, in Arabic is *masjid*, which as described earlier is the name given to a Muslim house of

prayer. Sometimes, this is also known as a mosque. Prayers are to take place at five times during the day: in the morning, at noon, in the afternoon, in the evening, and at night.

Before the prayers begin, one is to be in a state of ritual purity. This is accomplished through ablution, washing the hands, face (including mouth and nostrils), arms, and feet. A full bath ablution is required after activities such as sexual intercourse, which leave a person in a state of ritual impurity. Women are required to have their heads covered for prayer, but this head covering is optional for men. Both men and women are required to dress modestly. One can pray in any clean place, and individual prayer is permissible but congregational prayer is preferred. If two or more people are praying, then one person stands slightly in front, and leads the prayer. This person is known as an imam, or prayer leader. A woman can lead a group of women in prayer, but a man traditionally leads a group of men or a mixed-gender group. In 2005, however, there were a few cases known where women led mixed-gender prayers in the United States and Canada. For congregational prayer, men and women line up in rows behind the imam. The prayer is segregated by gender, meaning separate rows of men and women. Sometimes, there are separate prayer areas for women. Canadian Muslim filmmaker Zarqa Nawaz has directed a documentary about her experiences with gender segregation in mosques, entitled *Me and the Mosque* (2005). Wherever Muslims are when they pray, they line up facing the Ka'ba in Mecca, believed to be the first place of monotheistic prayer.

Observant Muslims are required to pray five times a day. The Muslim religious calendar, discussed later, is a lunar calendar, much like the Jewish religious calendar. Months go from new moon to new moon. However, the prayer times depend on the movement of the sun. In this way, both the lunar and the solar cycle are incorporated into Muslim life. The morning prayer takes place between dawn and sunrise. The noon prayer takes place after the sun has reached its peak in the sky, but before afternoon. The afternoon prayer takes place between the noon prayer and sunset. The evening prayer takes place after sunset. Finally, the night prayer takes place between the evening prayer and dawn. Each of the prayers consists of a fixed number of cycles of prayer, involving standing, bowing, and kneeling. The morning prayer consists of two cycles, the noon prayer of four cycles, the afternoon prayer of four cycles, the evening prayer of three cycles, and the night prayer of four cycles.

The prayer begins with a call to prayer (*adhan* in Arabic). Traditionally, this was broadcast outside the mosque, to let

people in the community know that it was time for prayer. However, with noise restrictions in many places in North America, Muslims often have to make the call inside the mosque, to those who are already assembled for the prayer. The call is translated as follows from the Arabic:

God is Greater (repeated four times)
 I bear witness that there is no God but God
 (repeated twice)
 I bear witness that Muhammad is the Messenger of
 God (repeated twice)
 Come alive to the prayer (repeated twice)
 Come alive to the good (repeated twice)
 God is Greater (repeated twice)
 There is no god but God.

For the morning prayer, with the understanding that some people may have a difficult time getting out of bed, the line “Prayer is better than sleep” is added to the call after “Come alive to the good.” The prayers are then recited in Arabic. They consist of the first chapter of the Qur’an, along with other short verses or chapters of the Qur’an as chosen by the person leading the prayer. After the formal prayer, one can make one’s own personal prayer to God, in whatever language one chooses.

All other prayers may be prayed alone, but the Friday noon prayer is offered in congregation. For men, this prayer is obligatory, but for women it is optional. Unlike the other noon prayers, which consist of four cycles of prayer, the Friday congregational prayer consists of two cycles, with two short sermons taking the place of the other cycles. The person who leads the prayer usually gives these sermons.

Charity (Zakat)

Numerous times the Qur’an links prayer with charitable giving, which is the third pillar. For Muslims, wealth is not seen as a bad thing in and of itself, but as a blessing from God. That said, those who have are expected to care for those who do not have. In Christianity, we might refer to this charitable giving as a tithe. In Islam, it is referred to as *zakat*, which has a meaning of “purification” or “increase” in Arabic. This obligatory charity is incumbent on all adults who have more than the minimum amount of certain assets. This obligatory charity is fixed at 2.5 percent of one’s wealth above that minimum amount. The wealth includes gold and silver, savings (bank accounts, stocks, bonds), livestock or agricultural produce, goods for sale, and rental income. One is to calculate one’s

wealth each year and give 2.5 percent of that for charitable purposes. Traditionally, those eligible for this charity have been understood to include the poor and needy, those who administer the charity, those who have recently converted or might convert and may need financial support, slaves who need money to buy their freedom, those in debt, needy travelers, and in the cause of God. The traditional understanding is that this money must be owned by those who receive it, so it cannot be used to build facilities such as a hospital or a mosque. The money also cannot be given to one’s immediate family. Some Muslim scholars think that part of this money can be given to non-Muslims, under the category of “those whose hearts are to be reconciled.” In addition to *zakat* is the voluntary charity, described in the Qur’an as a “loan to God” (2:245). Giving more than the obligatory 2.5 percent is considered voluntary charity, as is doing a number of other things such as feeding the hungry or contributing to a hospital or even smiling at your neighbor.

Fasting (Sawm) in the Month of Ramadan

The Muslim calendar, like the Jewish calendar, is a lunar calendar. This means that it has 12 months, but each month goes from new moon to new moon, a period of 29 or 30 days. On average, this means that the lunar calendar year has about 354 days, and is some 11 days shorter than the solar calendar. In the Jewish tradition, a “leap month” is added every few years to keep the lunar calendar synchronized with the solar calendar. The Qur’an specifically forbids this type of intercalation. Also, in the Jewish tradition, one can use astronomical tables to determine the beginning of a month. In the Muslim tradition, the new moon must be physically observed to begin a new month. What this means is that the Muslim lunar calendar cycles through the solar calendar.

The ninth month of the Muslim calendar is the month of Ramadan. In 2009, this month was started in North America on August 21. In 2010, it should start near August 12, and will move back through the solar calendar about eleven days each year. The fourth pillar, Ramadan is the month of fasting, where all adults who are able to are required to fast during daylight hours. The fast includes no eating, drinking (not even water), smoking, or sexual activity from dawn to sunset. When Ramadan falls during winter months in the Northern hemisphere, the dawn to sunset period is not long. However, when Ramadan falls during summer months, the time of the fast is longer because the days are longer.

There is no set age at which one begins the fast. Children as young as 8 or 9 may begin by fasting a day or two during the month, with the number of days increasing every year as the child gets older. By adolescence, many Muslims are fasting for the entire month. The fast is not meant to be harmful, so anyone who could be hurt by fasting is exempt. This includes small children, pregnant or nursing women, diabetics, people who are ill, travelers, people who are not mentally responsible for their own actions, and the elderly. Women who are menstruating are exempt from fasting, but they must later make up the days missed.

During the month, one wakes up before dawn and eats a small meal. One then declares his or her intention to fast for the entire day. Some people try to limit their physical activity during the month of fasting, but they are expected to carry out their normal work duties. At sunset, one breaks the fast and prays the evening prayer. One is encouraged to break the fast in community, and many people sponsor *iftars* (what these ceremonial meals are called) for their family or community.

For Muslims, Ramadan is a spiritual month. The equivalent is the Sabbath in the Jewish tradition. There, you are expected to work for six days, and then rest on the seventh day. The Sabbath is a day for rest, time with family, and spiritual reflection. For Muslims, the month of fasting is like a month of Sabbath. For eleven months out of the year, one makes one's way in the world. During the month of fasting, individuals reflect more on their religious lives. They are encouraged to break the fast at home with their families. During this month, Muslims are encouraged to spend time reading the Qur'an and to pray extra prayers in the mosque at night. On certain nights at the end of Ramadan, devout Muslims may spend the entire night in the mosque, praying to God.

Ramadan is seen as a spiritual exercise, a way to practice one's surrender to God. Voluntarily, one is giving up things that are perfectly normal to do, such as eat and drink. Having done this, perhaps it increases one's willpower to avoid doing things that one should not do. During the fasting, one is to prevent oneself from getting angry, from lying, and from gossiping about others. This is the interior dimension of the fast, to become more aware of God, and to behave as if one were in God's presence, which one always is. Also, this is to make one thankful for the simple pleasures of food and water that God provides. Muslims, like Jews and Christians, are expected to give thanks to God before each meal. However, some forget to do this. Ramadan is a reminder of dependence on the providence of God.

For many Muslims, the fasting is a connection to those who are hungry all the time. One chooses not to eat during the day, but many people have no other choice. The message is clear: Those who have felt what it means to be hungry and thirsty will be more inclined to work toward a world where no one is hungry and thirsty. Those who miss a day of fasting are obligated to feed a needy person for a day. This stresses the idea of community responsibility. However, the fasting is also a private affair, something between the individual and God. One could pretend to fast in public, but secretly break the fast in private, but God would still know.

The end of the month of fasting is a large festival called Eid al-Fitr (literally, the celebration of the breaking of the fast). This is a day of congregational prayer and celebration, with family members exchanging gifts and new clothes and giving money to charity. Before the beginning of this celebration, the head of each household must give a donation to charity.

Pilgrimage (Hajj) to Mecca

The last of the five pillars is that all Muslims who have the financial resources must make a pilgrimage to Mecca (*hajj* in Arabic). This occurs during the Month of Pilgrimage, the twelfth month of the Islamic lunar calendar.

Traditionally, as with pilgrimage in any religion, the journey to Mecca was as important as the arrival. It could take several months or more to complete the journey, and one might have to save for it for one's entire life. Also, because one might die on the journey, one must make sure that all of one's debts were paid before starting out. Since the 1980s, however, most pilgrims have arrived by commercial aircraft at the airport that was opened in Jeddah, the closest airport to Mecca. This airport, King Abdulaziz International Airport, has a Hajj terminal that is used only during the pilgrimage. The convenience of modern air travel and facilities means that the pilgrimage involves some two million people every year. Although this is a small fraction of the world's estimated one billion Muslims, it requires tremendous skill to manage.

Historically, all of Mecca has been considered a sacred area, and forbidden to non-Muslims. This has been a problem for some people in the modern, ecumenical age. However, the rites of the pilgrims are not a secret and are broadcast around the world by Saudi television each year and webcast on numerous Muslim Web sites. Instead, the idea is that only Muslims can enter the sacred area. This is no different than the historic Jewish temple in Jerusalem

that only Jews could enter, or in the modern world where only devout Mormons can enter a Mormon temple (as distinct from a Mormon church, which is open to everyone), or although are all welcome to attend, only Catholics can take Communion in a Catholic church. Some religious rituals are meant only for the members of that religion.

For Jews and Christians, the story in the Book of Genesis is that Abraham offers his son Isaac for sacrifice on Mt. Moriah in Jerusalem. God does not want the child sacrificed, so a ram is slaughtered in Isaac's place. For Muslims, Abraham offers Ishmael (although interestingly enough, the Qur'an never explicitly names him as the son who is offered) for sacrifice, and this sacrifice takes place in Mecca. Ishmael is sent to Mecca with his mother, Hagar, when they are expelled by Sarah. In Mecca, God reveals the well of Zamzam to provide water for Hagar and Ishmael, which later is used to provide water for pilgrims. Abraham and his son Ishmael build the first place of monotheistic prayer, the Ka'ba, also known as the House of God (Qur'an, 2: 124–129) in Mecca.

The rituals for the pilgrimage are outlined in the Qur'an (22:26–29). Once the pilgrims arrive in Mecca, they wear simple white cloth outfits that signify their pilgrim status and lessen the distinctions between people, with everyone wearing the same thing regardless of financial status or country of origin. All are equal before God. In Mecca, they circle counterclockwise around the Ka'ba, and run between two hills, remembering the frantic search by Hagar in search of water for her son, Ishmael.

The formal pilgrimage begins on the eighth day of the Month of Pilgrimage, when the pilgrims migrate some 20 kilometers east to the plain of Arafat. On the way, some of the pilgrims stop for the night at Mina. Once they reach Arafat, the pilgrims enact the central ritual of the pilgrimage, the standing at Arafat. Here, they stand from noon to sunset, praying and asking for the mercy of God. It is considered a sort of practice for the standing on the Day of Judgment, when all of humanity will be resurrected and stand in this way before God. On the plain of Arafat Muhammad gave his farewell sermon and the last verse of the Qur'an was revealed to him shortly before his death: "This day have I [God] perfected your religion for you, completed my favor upon you, and chosen for you Islam as a religion" (5:3).

From Arafat, the pilgrims go back to Mecca, stopping at Muzdalifah. There, they pick up pebbles for a ritual to take place at Mina. The Muslim tradition tells that it was at Mina

that Abraham was commanded to sacrifice his son, and Satan tempted Abraham to disobey God's command. Abraham resisted this temptation and in response threw stones at Satan to cast him away. In emulation of Abraham's actions, the pilgrims throw stones at pillars that have been erected to represent Satan. Following this ceremonial stoning, the pilgrims offer an animal sacrifice, representing the sacrifice of Abraham. This occurs on the tenth day of the Month of Pilgrimage and is known as Eid al-Adha, the celebration of the sacrifice. The pilgrims then have their hair cut, circumambulate the Ka'ba, and finish the pilgrimage.

Shi'a Variations

The five pillars have been described in the way that Sunni Muslims understand them. Shi'a Muslims perform all of these activities with slight differences. The faith statement is identical for both Sunnis and Shi'as. With respect to prayer, there are differences in the call to prayer. Shi'as add the line "Come alive to the best of works" after the line "Come alive to the good," and they do not add the "prayer is better than sleep" line to the call for the morning prayer. In addition, Shi'as may add the lines "I bear witness that Ali is the friend of God" and "I bear witness that Ali is the proof of God" after the line "I bear witness that Muhammad is the Messenger of God." In the Shi'a tradition, the noon and afternoon prayers, and the evening and night prayers may be combined, resulting in what looks like three prayers per day. There are also slight differences in the position of one's hands during the prayer. In the Shi'a tradition, one's head comes to rest on a baked piece of earth from Karbala, rather than on a prayer mat. This is connected to the martyrdom of Imam Hussain described later with the holiday of Ashura.

When it comes to the giving of charity, Shi'as give the same 2.5 percent of their wealth, which may be given to the religious leader that they follow for distribution to the poor and needy. In addition, the Shi'a give an extra amount to charity, equivalent to 20 percent of their net income.

For the month of fasting, Shi'as fast a bit longer than Sunnis, waiting until the sun has completely set before breaking the fast. Finally, the pilgrimage is the same for both, but Shi'as may visit the tombs of some of the imams after they complete the Hajj.

Iman (Faith): The Six Articles of Faith

The second question that Gabriel asks Muhammad is, "Tell me, Muhammad, about faith." Muhammad responds by telling Gabriel the six things that Muslims are to have faith in.

For Muslims, faith (*iman* in Arabic) is self-commitment or understanding. It is an acceptance of the truth of what God commands. As such, it is at a deeper level than the actions described previously, for one may do the right things for the wrong reasons. The Qur'an makes a distinction between actions and understanding: A group of Bedouin came to the prophet Muhammad and told him that they have faith. Muhammad was commanded to tell them, "Say, 'We do not have faith.' Instead, say 'We have submitted,' for faith has not yet entered your hearts. If you obey God and God's messenger, God will not diminish anything from your actions" (Qur'an 49:14). The heart is the organ of faith. The Prophet said, "Faith is a knowledge in the heart, a voicing with the tongue, and an activity with the limbs."

For Muslims, the proper way to be is in a state of thankfulness to God. This is known as *shukr* in Arabic, and is contrasted with *kufir* or "refusal," the act of being ungrateful. The term for someone who does not have faith is a *kaffir*. Literally, it means someone who says no to God. Tragically, it became a term of racial abuse in South Africa during the days of apartheid when the English, Dutch, and Afrikaans folk used *kaffir* as a denigrating term for all black people.

God—Oneness of God

For Muslims, the cardinal principle of faith is the oneness of God. This is known as *tauheed* or "unity" in Arabic. Like Judaism and Christianity, Islam is a monotheism, and Muslims worship the one true God. This is the same God worshipped by Jews and Christians. Jews, Catholics, Orthodox Christians, and Muslims all agree that they worship the same one God. There are differences in their understanding of God, but it is the same God. Some conservative Protestant and evangelical Christians take a different view, saying that they worship a different God than Muslims. The usual reason given is that Muslims do not believe that Jesus was God. Of course, Jews don't believe this either, and because Jesus was Jewish and Christianity emerged from Judaism, it causes no small amount of theological difficulty to say that Jews and Christians worship different gods. For Muslims, the greatest sin is to associate others with God.

Angels

In the contemporary world, angels have made something of a comeback. One sees guardian angel pins and cards, and pictures of angels everywhere these days. In the Muslim tradition, they never left. Belief in God's angels is the second of the articles of faith. Muslims believe that angels surround us

at all times, recording our deeds. When Muslims greet one another, the greeting is "*al-salaamu alaikum*" ("Peace be upon you"). The response is "*wa alaikum al-salaam*" ("and upon you, peace"). What is interesting here is that the "you" in the Arabic is the plural form. This makes sense when groups of Muslims greet other groups of Muslims, but the same greeting is used when a single Muslim greets another single Muslim. The reason for this is that when one greets another person, the person is greeting the other person and the angels that accompany the person. This is also true in prayer, which ends with the same greeting of peace whether or not one is praying in congregation. If praying alone, one says this to greet the angels on either side of the person praying.

The Angel Gabriel, the angel of revelation, is not the only angel mentioned in the Qur'an. The Qur'an names the Archangel Michael, as well as Harut and Marut who taught in Babylon. In addition, the Muslim tradition identifies Seraphiel as the angel who will blow the trumpet to signal the end of the world, and Azrael as the angel of death. The angels perform other functions as well, such as supporting the throne of God and bringing down God's blessings to the world.

The Revealed Books

The third article of faith is that Muslims believe that God sent previous revelations before the Qur'an. These were a text given to Abraham that is now believed to be lost, the Torah given to Moses, the Psalms to David, and the Gospel to Jesus. For Muslims, all of these texts were later altered, and so the Qur'an was sent down as the final revelation. As such, Muslims use only the text of the Qur'an for liturgical and religious purposes.

Messengers and Prophets

For Muslims, the fourth article of faith is that Muhammad is the last in a long line of prophets. The Qur'an names a number of prophets but also says that numerous other prophets have also been sent, each speaking the language of the people to whom they were sent. Muslim tradition puts the number of prophets at 124,000. Messengers are a smaller group of prophets who are given a specific message, and the Muslim tradition identifies more than 300 of these.

The Last Day

The fifth article of faith is the Last Day. Another of the questions posed dealt with the Hour of Judgment. Muhammad had very little to say about this. Muslims have a very similar notion of eschatology as Jews and Christians do. Just as there

was a first day of creation, so there will be a last day. Sunni Muslims believe Jesus will return to lead the final battle between good and evil, but Shi'a Muslims believe the Hidden Imam will return as the Mahdi or divinely guided one. Everyone will be resurrected and stand before God.

The Measuring Out of the Justice of God

On the Last Day, the Day of Resurrection, people will get what they deserve, according to the sixth article of faith. Those who deserve punishment and hell for their wrongdoing will earn it, and those who deserve paradise as their reward will receive it. For Muslims, as for Jews and Christians, there are similar questions about the afterlife. Who will God assign to heaven, and who to hell? Will God who is merciful really punish people eternally with hell? Will everyone eventually get to heaven? According to Muslims, the answers to all of these questions are known only to God.

Ihsan (Doing What Is Beautiful)

The third question that Gabriel asks Muhammad is about doing what is beautiful. Muhammad responds that doing what is beautiful means that one worships God as if one sees God. This is the realm of intentionality. For Muslims, the intent behind an act is more important than the performance of the act with bad or no intent. A person may intend to go to the evening prayer in the mosque, but his or her car won't start and so the person prays at home. This person is better than is someone who makes it to the mosque but is only there to impress someone. At the beginning of each day's fast during the month of Ramadan, for example, one begins with a statement of intent, saying "I intend to fast this day during the month of Ramadan." Without declaring your intent, the fast is not valid.

The Qur'an describes a quality that separates people from each other. In Arabic, this is known as *taqwa* and translates best as awareness of God or God-wariness. In the Qur'an, God says, "Oh humankind! Truly We [God] created you from a single male and female, and made you into tribes and nations that you might know each other. Truly the most honored of you in the sight of God is the one with the most God-wariness [*taqwa*]. Truly God is All-Knowing, Aware" (49:13).

This awareness of God is at the core of Muslim life, to do things that are always pleasing to God. This resonates deeply with Jewish and Christian religious life as well. Jews are called to be a holy people because God is holy. This awareness is done in everyday acts of worship, as well as in the creation of extraordinary art.

Sometimes the God-wariness is expressed through the language of poetry. This is common among the mystics of Islam. Other times, it is expressed in song. Often, God-wariness is expressed through works of art. Many people are familiar with architecture, the most visible of the arts of Islam. There are beautiful Muslim buildings, from mosques to mausoleums, throughout the world. Perhaps the most beautiful building in the world is the Taj Mahal, a mausoleum built by an Indian Muslim ruler in Agra. Muslim art is also expressed through textiles and ceramics, as well as works on paper such as calligraphy. One of the finest calligraphers in the Muslim world is Mohamed Zakariya, who lives and works in Arlington, Virginia.

Islamic Festivals

All Muslims celebrate two major holidays. They both are called Eid, from the Arabic word meaning celebration. The greetings on these holidays are "Eid Mubarak," literally, "the blessings of the celebration." The first Eid is Eid al-Fitr, which marks the end of the month of Ramadan. It begins on the first day of the following month. The second is Eid al-Adha, which marks Abraham offering up his son for sacrifice. This is celebrated by the pilgrims on the Hajj on the tenth day of the Month of Pilgrimage. Traditionally, the head of every household slaughtered an animal, and the meat was eaten and distributed to the poor. These days, when many Muslims live in cities and have no access to animals—nor the knowledge required about how to slaughter an animal—they rely on commercial butchers to do the slaughtering for them. Both of these holidays are great celebrations with congregational prayer, feasting, and giving to charity.

Many Muslims celebrate the birthday of the prophet Muhammad, known as the Mawlid, on either the twelfth or the seventeenth day of Rabi'a al-Awwal (the third month of the Islamic calendar). This is often done with the singing of devotional songs about the Prophet. Some Muslims frown on this practice, believing that it puts too much emphasis on Muhammad and takes away from the glory of God. They fear that it may become a holiday like Christmas, which has become commercialized.

Shi'a Muslims have their own important celebration of Ashura. This occurs on the tenth day of the Month of Muharram in the Islamic calendar. It commemorates the death of Hussain, the third imam for Shi'a Muslims. Hussain was martyred in Karbala, Iraq, by a political rival. This is not a holiday of celebration but rather one of sorrow and

remembrance. In this respect, it is a somber holiday such as Good Friday for Christians. As with the Passion play at Easter, Shi'a Muslims tell the story of the martyrdom of Hussain through a play, where a white horse without a rider symbolizes the fallen Hussain. As mentioned earlier, when Shi'a Muslims pray, they use a disc of pressed clay from Karbala, where the very blood of Hussain was spilled. So the death of Hussain is remembered each time one's forehead touches the earth in prayer.

J

Jainism

Most Americans know of Mahatma Gandhi, but far fewer can identify Jainism, the religious tradition whose tenets of *ahimsa* (nonviolence), *aparigraha* (nonattachment), and *anekantvad* (the recognition of the relative validity of different points of view) deeply influenced Gandhi's teachings. One of India's many religious traditions, Jainism has a comparatively small number of adherents—an estimated 2 percent of India's population is Jain—and is relatively unknown outside of India. But from the early 1960s, with the arrival of students and professionals, to the present, the United States and Canada have seen the development of a vibrant North American Jain community with transnational links.

Origins and Teachings

The Jain religion can be traced back to the Indian subcontinent, where in the sixth century BCE visionaries and philosophers explored religious truths. One was the Buddha, whose followers formed the earliest Buddhist community. Another was Mahavira, who came from a long line of enlightened beings exemplifying a religious path leading to liberation. Collectively they are known as Tirthankaras, "Ford-makers," those who perceived the way, or Jinas, "Conquerors," from whom the word *Jain*, a follower of the self-realized Jinas, is derived. Of this lineage, Mahavira is the twenty-fourth; Parshva, another historic figure, is the twenty-third. All Tirthankaras are revered, with Mahavira especially venerated.

The teachings they promulgated understood the cosmos to be sentient, with life existing in earth, water, air and fire. Plants, animals, even clods of earth are possessed of souls

(*jivas*), with the difference between higher life forms and lower ones the complexity of their interactive capacity. Humans and other higher life forms have the full range of sensory abilities, while the lowest forms might only be able to react to touch. According to Jain teachings, not only is the world made up of sentient beings, but it is also interactive. Any act of harm, such as kicking a stone, even if done unintentionally, is seen to have an effect on the object of the action—the stone, which experienced the violence of the kick—and on the agent of the action—here the human doing the kicking. That effect causes karma to accrue to the soul of the person committing the action. As in other Asian religions such as Hinduism and Buddhism, karma in Jainism concerns actions and their consequences, but Jains view karma as a subtle form of matter that actually attaches itself to the soul.

Jain teachings accept the idea of reincarnation, the soul's ongoing existence from one life form to another, believing that the accumulation of too much karma weighs the soul down to such an extent that its next existence will be in a lower life form. Addressing this possibility, the teachings also prescribe various means of purifying the soul, ridding it of karma, through fasting and other acts of penance. The accumulation of some karma is nearly impossible to avoid for most people because humans eat, drink and move in the world, but the key is to minimize the karmic residue resulting from careless or harmful actions. Hence, the cultivation of awareness of the impact of one's actions is crucial, leading to practices that will reduce the possibility of harming other life forms. The aphorism *Ahimsa paramo dharma* (nonviolence is the highest teaching of all) summarizes this outlook.

Monastic and Lay Life

Early Jainism saw the development of a community of monks and nuns whose lives were characterized by strict asceticism; from its inception onward the restraint and vigilance of Jain ascetics have embodied the ideal expression of the tradition. The tradition would have died out very early, however, had there been no lay community to support the ascetics and to carry on their teachings. As Jains, laypeople have had the responsibility to cultivate the fullest possible expression of *ahimsa* within the realities of ordinary life. A vegetarian diet—one that even excludes root vegetables, thought to contain complex life forms—matched with practices such as fasting, not eating at night, and filtering drinking water to avoid harming microscopic life; avoiding occupations such as farming, which could harm other living beings; maintaining ethical practices in business; abstaining from sexual excesses; upholding generosity in giving; and a range of other activities exemplify the ideal householder's life. All Jains, monastic and lay, cultivate attentiveness to their actions' impact on the multitude of life around them.

Over the centuries differences in regional practices have led to the emergence of subtraditions. The main division, dating to the first century CE, stemmed from differences over the rigor of ascetic practices, with the issue of whether the monks should clad themselves or not a pivotal question. Contemporary identification as either a Shvetambara or Digambara Jain traces back to this sectarian history. Shvetambaras ("white clad") not only wear white garments but also carry alms bowls. They affirm that all humans, women included, can attain the highest spiritual states. Digambaras ("sky clad") renounce clothing, use only their hands to receive food, and hesitate on the question of women's attainment. Apart from their monastic codes, certain other differences in ritual practices, and some disputes over the control of holy places such as Mount Girnar in Gujarat (the westernmost state in India), there are no other major doctrinal divergences between the two traditions.

Settlement patterns have contributed to the development of distinctive communities. Up through the medieval period, South India had the larger concentration of Digambaras. Hindu resurgence from the ninth century onward absorbed, violently in some cases, much of the Jain population in the South, leaving a few small pockets of Digambaras in the states of Tamilnadu and Karnataka. Gujarat and other parts of western India have continued to see a concentration of Shvetambara communities. Further subtraditions,

of which there are many, relate to affiliations with ascetic lineages and caste background. Contemporary communities among the Shvetambaras include the Osvals and Srimals, known for their business skills.

Jain Practices

Jains from all communities participate in a rich ritual tradition. Remembering and revering the lineage of Jinas, particularly Mahavira, through devotional practices is especially important. Shvetambara and Digambara Jains have a long history of building temples and prayer halls for community gatherings. Temple rituals involve honoring the Tirthankaras through praise and offerings in rites that resemble Hindu *puja* (worship). Jains, however, are not worshipping a God but instead are honoring their enlightened teachers and expressing the hope of following their path. At temples Jains will take care to be in a physically pure state, to calm their thoughts, and to follow other ritual protocols such as circumambulation of the shrine in a clockwise fashion to ensure the sanctity of their actions. Many families maintain shrines in their homes where they undertake daily worship and meditation before icons of Mahavira and other Tirthankaras. Some sectarian movements, notably the Sthanakvasis and the Terapanthis, reject the use of images in their religious practice. Their prayer halls are devoid of icons.

In accordance with the view that lay behavior should mirror that of ascetics, the cultivation equanimity through meditation (*samayika*) is done by many Jains. In prayer halls, in temples, or at home, laypeople may sit in meditative posture with fixed consciousness in front of the Tirthankara icons or in front of a monk for a certain duration. To aid focus and to serve as a reminder of Jain teachings, prayers, and meditations, religious and social gatherings begin with the *Namaskara mantra*, salutations that start with ritually greeting the twenty-four Tirthankaras or Jinas and then other emancipated souls, heads of monastic orders, great teachers, and the orders of monks and nuns. *Namo Jinaman* ("I bow to the Jina") is the salutation used when entering a temple.

Fasting, a spiritual discipline drawing on Mahavira's example, is a further lay practice modeled after ascetic restraint. Depending on their lives' circumstances, the traditions they follow, and their degree of religiosity, both men and women may undertake fasts; even children are encouraged to learn to discipline their appetites. Women, however, are particular exemplars of vows (*vrats*) and often do so to generate a positive force to benefit their families.

The fasts involve the restriction of food intake and can include complete abstention from food and water, the elimination of favorite foods or certain foods such as milk or fruits, the reduction of the number of meals, taking foods only at certain times, and many other expressions of purification and self-control. Individuals will fast on Jain holy days according to the lunar calendar, with particularly rigorous fasting done in a community hall accompanied by other activities such as worship, listening to religious discourses, and ritual confession (*pratikrama*), where one publicly expresses remorse for any harm caused, wrongdoings, or duties left undone. Among Digambaras, the ten-day period known as Dashalakshana Parva is a traditional time of fasting; for Shvetambaras, the annual time is Paryushana Parva, an eight-day period that traditionally coincides with the end of the rainy season in India.

Vows in conjunction with food restrictions may also be taken to minimize harm to other living beings, such as the practice of not eating green leafy vegetables at certain times to avoid the accidental ingestion of tiny insects or vows not to consume milk products in light of how animals are treated in the commercial dairy industry. Further lay expressions of religiosity include offering material support for community rituals by sponsoring meals or making other generous donations; by donating one's time to activities that support the community, such as offering instruction to children; and by otherwise practicing the virtues of nonviolence and nonacquisitiveness.

Settlement outside of the Indian Subcontinent

Throughout history, mercantile and other interests prompted Jains to travel and settle outside the Indian subcontinent. Textual sources mention Jain merchants doing trade with Persia, the Arabian gulf, East Africa, and central and Southeast Asia. With the export of indentured labor from the subcontinent under the British Empire, a sizable Indian community developed in East Africa in the nineteenth century. Arriving as merchants and clerks, Jains from Gujarat settled there and with their increasing prosperity built temples and prayer halls. In the twentieth century, however, political changes resulting from decolonization led to the expulsion of Jains, first from Kenya and Tanzania in 1967–1968 and then from Uganda in 1971. This expulsion accelerated Jain migration to Britain and to North America. Population estimates suggest that up to half the Jains who have settled in North America came by way of East Africa and England.

Knowledge of Jainism in the West

Outside of the Indian subcontinent and other regions where Jains have settled, Jainism was relatively unknown until recently. Up to the latter part of the nineteenth century, Western scholars considered Jains to be Buddhists or from a Hindu subgroup. It was only after Hermann Jacobi, a German scholar renowned for his study of India, cited textual evidence identifying discrete practices and doctrinal positions held by Jain ascetics in an 1879 study that Jainism was recognized as a tradition in its own right. Shortly thereafter, North America received its first introduction to Jain teachings in Chicago at the 1893 World's Parliament of Religions. Among the delegates was Virchand Raghavji Gandhi from Gujarat, who explained the philosophical basis of the Jain way of life. Interest in what he said enabled him to attract some converts during his subsequent lecture tours in England and America.

By the beginning of the twentieth century, works introducing Jain practices and teachings became available to Western audiences. In addition to *Jainism in Western Garb* by Herbert Warren, one of V. R. Gandhi's converts, the Jaina Literature Society of London published a series of works covering topics such as Jain culture, psychology, logic, penance, and law by the English-trained barrister turned philosopher-scholar Champat Rai. He also addressed the World Fellowship of Faiths held in Chicago in 1933. These efforts along with the later outreach of the World Jain Mission, founded by Kamata Prasad Jain in India, garnered interest in Jainism in North America

Establishment of Jain Communities in North America

Restrictive immigration policies in both the United States and Canada prevented any significant settlement of Jain families in North America until the late 1960s. In 1965 the United States changed its immigration laws to allow the entry of qualified professionals, regardless of their country of origin. Two years later Canada shifted from a quota system restricting immigration from certain countries to a point system allowing eligible individuals the right of entry. These changes in immigration policy served to open North America to immigrants of non-European background.

From the mid-1960s onward, several phases of immigration history characterize the formation of the Jain community. Initial immigrants were professionals and students. Subsequent provisions for family reunification allowed for

family settlement. The late 1960s and early 1970s saw an increase in the numbers of Jains arriving, many of whom were political refugees from East Africa. They arrived either directly from Africa or via the United Kingdom. By the mid-1970s Jains had become a recognizable group among other South Asian immigrant groups. This period saw the establishment of Jain centers and organizations in the United States and Canada. Most families who came in the 1970s and subsequent decades have stayed, and now Jains are well established throughout North America. The organizations established earlier to serve the spiritual and cultural concerns of immigrant families now turn their attention to the needs of the second and even third generations.

In their early years of settlement in North America, Jains turned to their own resources for their spiritual needs. To assuage feelings of isolation, Jains celebrated religious events by gathering in their own homes. As numbers grew and people became more established, the community aspired to have its own religious centers. By 1966 Jains in New York founded the first North American center, followed by centers in Chicago, Boston, Toronto, and Los Angeles. From the late 1980s to early 2010, the number of Jain centers and temples saw a significant increase, from thirty-four, in 1987, to well over sixty.

Fulfilling social and educational as well as religious purposes, these centers enabled Jains to gather for community rituals. Often, the early centers were former churches transformed by consecration ceremonies into Jain sacred space. In these instances the centers retain church features, with changes to the façades and interior remodeling to allow for the installation of Jain icons. They have proved vital in fostering community identity through deeper understandings of what it means to be Jain. The resulting social capital enabled various Jain communities to take on the more demanding and more expensive project of building a temple from the ground up. The 1980s saw many centers sponsoring temple-building projects. Now, some twenty years later, these same communities are replacing their smaller temples with exquisite complexes modeled after renowned temples in India

Hindu-Jain Temples

Another phenomenon of the early years of settlement in North America was the pooling of resources with Hindu immigrant families to create Hindu-Jain temples. These shared facilities reflect both Jain and Hindu patterns of inclusivity and the willingness of members of different South

Asian religious traditions to support each other's religious needs where their numbers are small and finances limited or where there are strong linguistic and ethnic connections. At such temples, icons of Hindu deities and of Mahavira and other important Jain Tirthankaras are installed within the same temple. Religious specialists of the respective traditions will typically conduct the specific rites required of each tradition, allowing for the expression of the nuanced differences between the two religions.

One finds Hindu-Jain temples from California to South Carolina. Not all Jains, however, are entirely supportive of this practice. Observing that the tenets of Jain beliefs are not the same as Hindu beliefs, some Jains express concern that shared facilities may lead to a blurring of the differences of Jain practices. North American Jains wish to preserve the vitality of their religion and to pass that on to their children.

A Challenge

A challenge faced not only by North American Jains but by all overseas Jains is how to preserve their traditional relationship with the ascetic community. As exemplars of Jain values, monks and nuns serve both as teachers and models for the lay community. Their rigorous vows of nonviolence, however, restrict the mobility of mendicants to the mindful steps they take with their unshod feet. All other forms of movement cause more harm to living beings. For that reason monks use no mechanical means of transportation, making travel outside of India impossible. Initially bereft of their ties with ascetics, the overseas community filled the resulting lacuna with visiting scholars and other teachers.

In 1970 Muni Chitrabhanu, a Shvetambara monk, broke with tradition by traveling to Geneva to attend a spiritual summit, a decision that unsettled many traditionalists. One year later he renounced his monastic life and came to America, where he lectured widely. His work led to the founding of Jain Meditation International, headquartered in New York City, with other centers worldwide. Serving as spiritual adviser to many Jain centers, he remains an important teacher in North America.

Four years after Chitrabhanu arrived, Acarya Sushil Kumar likewise decided to take his religious work to America. A Sthanakvasi Shvetambara monk and religious activist who up to his death, in 1994, promoted interfaith understanding and global peace, he worked tirelessly with the diasporic community to prompt their self-awareness as Jains. His involvement was instrumental in launching programs of Jain studies at Columbia University and the University

of Toronto in the 1990s. He also founded Siddhachalam, a Jain retreat community in Blairstown, New Jersey.

Numbers

Estimates of the number of North American Jains in the early twenty-first century vary, ranging from 25,000 to 100,000; the higher estimates come from extrapolations of attendance figures at large Jain gatherings. Securing more precise figures is challenging because U.S. census returns do not report religious affiliations. Canadian census reports do, however, and in 2001, 2,455 people in Canada self-identified as Jain, 97 percent of whom were of South Asian background. Most of that population resides in the Toronto area in Ontario.

Faced with questions of the extent of their community, North American Jains have compiled their own demographic data. In the 1970s the Jain Center of Greater Boston launched a project resulting in the 1979 *Jain Directory of North America*. Its purpose was to foster a shared identity by creating an open database of the Jain population in North America. Recognizing that a critical mass of Jain families was essential to sustain the religion, members of the Boston center envisioned the *Directory* as laying down the infrastructure for community networking by enabling scattered individuals and families to be in contact with one another.

The *Directory* was undertaken when none of the electronic search engines and social networking sites taken for granted today was available, and its compilation demanded considerable time and effort. Volunteers scoured telephone books for people whose names—Jain, Shah, Mehta, Parikh—indicated probable Jain identity. Other volunteers followed up with contact, while state-of-the-art software allowed data entry from multiple off-site locations.

In the end the *Directory*, completed in 1979, included listings of names, addresses, and professional and background information, including place of origin. One thousand copies were distributed free of charge to Jains in the United States and Canada, and subsequent editions followed. Through its listings the *Directory* promoted more than just a sense of community; in some instances the awareness of co-religionists in the same area helped people mobilize to create local Jain centers.

JAINA

Within two years of the release of the *Directory*, a Jain convention was held in Los Angeles that attracted participation from Jains throughout North America. One of the

outcomes of that 1981 gathering was the creation of an umbrella organization, the Federation of Jain Associations in North America (JAINA), to facilitate communication among the regional centers and to further their shared purposes. JAINA is headquartered in a suburb of Buffalo, New York, and its wide-reaching activities shed light on the concerns of North America Jains. In addition to organizing a biannual convention, JAINA organizes pilgrimages to sites of historical and religious significance in India. Other efforts include community development and outreach through educational activities. The organization's Web site provides guidelines on the development of regional centers, with advice on everything from needs assessment to zoning permits to considerations of accommodating sectarian differences. Its library of publicly accessible online publications introduces readers to the intellectual heritage of the tradition while also addressing ethical and practical concerns specific to the diasporic community.

Much of this work is focused on making Jains more aware of their own tradition, particularly the second generation, whose outlook and orientation is North American, rather than Indian, but the outreach is also addressed to non-Jains. By working to promote better understanding among different faith communities, JAINA's activities demonstrate the doctrine of *anekantvad* while garnering notice of Jain contributions to the religious landscape of North America. In much the same vein, JAINA's endorsement of humanitarian work and its advocacy of vegetarianism and nonviolence offer evidence of the lived expression of Jain teachings. Publications promoted by JAINA point out how the Jain principles of *aparigraha* and *ahimsa* support social cohesion and ecological sensitivity. Reflecting contemporary environmental concerns, the theme of JAINA's 2009 convention was ecology and how Jainism teachings promote the active awareness of the interconnectedness of all living things, human and nonhuman.

Similarly, its youth wing, the Young Jains of America, emphasizes the contemporary relevance of Jain thought by reminding the second generation that Jainism entails much more than prayer or worship. At the 2006 convention the former Jain monk and social activist Gurudev Chitrabhanu took up the theme "Jain Evolution: Making Our Life Our Message" to reflect on how core Jain teachings such as *ahimsa*, the active cultivation of not harming others, can enable one to live a socially responsible life. In this context Jain evolution referred to the capacity of Jain thought to continue to evolve in response to the demands

of contemporary North American life—but, according to Chitrabhanu and other community activists, without any sacrifice of its original genius.

The maintenance of a Jain religious identity and its transmission to successive generations in North America are central to JAINA's mandate. Its winter 2009 newsletter draws attention to the importance of the development of a standardized curriculum for the *pathshala*, programs of religious education offered at regional centers. Another concern is marriage. As members of a minority tradition not only in North America but also in the Indian subcontinent, many Jains of the first generation want their sons and daughters to marry within their religious tradition. However, with their relatively smaller numbers especially in the earlier years of settlement in North America, the challenge was finding suitable marriage partners. The early Jain directories helped address this question by serving as a source of matrimonial data with their inclusion of information about home regions in India and other details related to education and professional status. With the advent of database search engines, JAINA now maintains a subscriber-based Jain Networking Forum, housing personal profiles of individuals from North America, Europe, Asia, and elsewhere. Discussion groups and seminars also offer advice on how to negotiate the sometimes competing expectations of family and ambient North American culture.

Such challenges notwithstanding, the Jains who have settled in North America and the successive generations who have been born here have demonstrated their ability to draw on their abundant religious and social resources to forge a community that maintains its distinct identity while actively contributing to life there. With its roots in India and its followers worldwide, Jainism is a transnational religion that has adherents who call North America home.

Jehovah's Witnesses

In 1872, a Pittsburgh draper named Charles Taze Russell (1852–1916) founded what later became known as the Watch Tower Bible and Tract Society—the official name for the organization of Jehovah's Witnesses. Russell had a fascination for biblical eschatology (that is, beliefs in the end of the world based on biblical prophecy)—a fascination that played a huge part in the expansion of what is now one of the world's fastest-growing religious movements. Devotees are Christian puritans, heterodox puritans of Judeo-Christian orientation who make an exclusive claim to religious truth and to monopolize truth; hence, they refuse ecumenical relations with all other religious organizations. Their worldwide membership increased from a mere 44,080 in 1928 to an extraordinary 6,741,444 in 2006—a total net growth of 5 percent per year. Even the most conservative estimates indicate that by the year 2020, there will be about 12.5 million members.

The movement has had a checkered evolution. From the moment of their foundation, the Witnesses have remained steadfast in their millenarian beliefs—that is, that the end of the world is imminent and that a New Kingdom is about to be inaugurated. The years of 1874, 1914, 1918, 1925, and 1975 were all earmarked, to a greater or lesser extent, as times for the messianic age, yet all brought disappointment. Despite these well-documented prophecies and their lack of fulfillment, the movement continues to expand.

Origin and Evolution

Millenarian tenets are, by their very nature, disruptive because they challenge conventional beliefs and behavior. Historically, millenarian movements both in Europe and in the United States were formed by dissidents who rejected mainstream religious authority and who were often regarded as opponents

of widely accepted religious truths. The Witnesses' eschatology is based on the texts of the New Testament, and almost all their literature refers to the end of wickedness at Armageddon. Their theological mission is to proselytize to as many prospective converts as possible before this event occurs.

During his initial years as a draper, Russell abandoned Presbyterian Christianity in favor of more liberal Congregational beliefs, but even these eventually gave way to a firm conviction that an omnipotent, omnipresent, and omniscient God was incompatible with conventional doctrines of suffering and hell. At this point, Russell became an avowed skeptic and discarded the Bible altogether, but in 1870 he attended a meeting held by some Seventh-day Adventists in a basement near his store. This meeting appears to have been a significant influence in the restoration of Russell's faith, for although he failed to join the Adventists, they did at least persuade him of an alternative creed to Christendom. He gathered some like-minded friends and acquaintances, and together they formed a Bible study group in Pittsburgh where they met on a regular basis. Witnesses today believe that this was the point at which Russell founded the one true religious faith.

Undoubtedly influenced by the Seventh-day Adventists, Russell espoused doctrines such as the annihilation of the wicked, the denial of hell, the extinction of the soul at death, and a new code for salvation. By 1880, some thirty congregations had sprung up in several U.S. states. Although few sources link Russell's way of thinking to the social, cultural, and political climate of the late nineteenth-century United States, his disillusionment with modern society in general and with orthodox Christianity in particular likely led him to establish this alternative Christian theology.

Throughout the twentieth century, the movement continued to expand, albeit at a checkered rate. By 1971, the Witnesses were active in Brazil, the British Isles, Canada, Mexico, Nigeria, the Philippines, West Germany, and Zambia. Other countries in which the Witnesses claim to have had more than 5,000 active members in 1971 include Argentina, Australia, France, Italy, Jamaica, and South Africa. Millions of copies of the society's two magazines, *The Watchtower* and *Awake!*, are sold throughout the world every year, and Witnessing takes place in more than two hundred countries. The February 1, 2007, issue of *The Watchtower* recorded more than one million Witnesses in the United States alone in 2006 and almost 100,000 congregations worldwide. All these countries have seen substantial increases in membership during the last three and a half decades, although the movement has remained static in Australia, Belgium, Britain, Germany,

Scandinavia, and Spain in recent years. By 2008, the Witnesses were gaining most of their recruits in Eastern Europe, Southeast Asia, Latin America, and many parts of Africa.

Doctrines

The Witnesses' one imperative belief is that the Bible, from beginning to end, is the inspired word of God. Watch Tower beliefs are scripturally supported, and most of the Bible is interpreted literally. The exceptions are the recorded visions in the Books of Daniel and Revelation. The rest is regarded as historically accurate, including the Book of Genesis. Scriptural texts are used by the Witnesses as a constant frame of reference. World catastrophes such as war, famine, environmental pollution, genocide, and international terrorism all help validate the movement's beliefs. When ministering on the doorstep, it is not unusual for Witness evangelists to use biblical texts to explain recent world events. These events are presented as evidence of signs of the last days.

The movement's governing body teaches its members that God has a personal name—Jehovah (Exodus 9:16). The Witnesses' God is the God of the Old Testament (though they have their own version of the Bible known as *The New World Translation*) and they reject trinitarian doctrine, declaring it unscriptural. The Witnesses maintain that since the deception in the Garden of Eden, Satan has misled the world, and the most important reason for the existence of humankind is the vindication of Jehovah over Satan. Instead of destroying Satan, Jehovah decided to test the loyalty of the rest of humankind, after which, say the Witnesses, the righteous will enjoy eternal bliss.

The Witnesses believe that since Pentecost, Jehovah has been preparing a "Bride of Christ," a "Little Flock," a body of 144,000 faithful people (the figure cited in Revelation 14:3) to share heavenly life and leadership. Thus, an anointed class of 144,000 Jehovah's Witnesses will win heavenly reward immediately after Armageddon, and the remainder (that is, Witnesses currently asleep in their tombs) will spend eternity in a different paradise here on earth.

Like their founders, Witnesses today continue to renounce the conventional Christian doctrine of hellfire on the basis that it is unscriptural and contrary to Jehovah's loving nature. They claim that hell is nothing more than an insensible state of complete annihilation that Jesus will execute upon Satan and his demons at Armageddon. The Witnesses believe that the righteous will be saved at this catastrophic event, so the doctrine of salvation plays an important role in Watch Tower ministry.

The society forbids its members to participate in annual celebrations such as Christmas, Easter, birthdays, and national festivals. It teaches that Jehovah does not acknowledge these events because, wherever they are cited in the scriptures, they are always characterized by sin or apostasy. The Witnesses also refuse blood transfusions on the grounds that blood is a sacred life source that should not be consumed by humans (Genesis 9:4; Leviticus 17:11–12; Acts 15:28–29).

Despite their belief that Satan controls the present world, the Witnesses do not generally go as far as members of religious organizations such as the Plymouth Brethren in isolating themselves completely from nonmembers. Nonetheless, their persistent refusal to partake in political activities such as voting in elections or joining pressure groups demonstrates their wariness of secular society. The Witnesses continue to object to both jury and military service on the grounds that both practices endorse legitimate governmental authority. Though some devotees join social and leisure clubs and progress to post-compulsory education, the movement encourages Kingdom interests and frowns on activities that detract from its teachings. Witnesses everywhere are expected to adhere to this strict social, moral, and ascetic code.

“Studying”

The Witnesses have no ordained clergy, and they use the term *studying* to refer to the process both of becoming a member and of retaining one's membership. Becoming a faithful Witness involves reading large amounts of textual information (mainly the movement's own literature and specific version of the Bible) in preparation for a never-ending series of meetings, so *studying* is a more appropriate term for describing their weekly activities than is *worship*. Speaking in tongues, creed recitation, even periods of silent meditation are so far removed from the Witnesses' activities that someone claiming to have had an experience of a transcendental nature would be unlikely to find solace in a Kingdom Hall (the official name for the Witnesses' place of worship). In a modern age in which social movements articulate expressive and aesthetic identities, the Witnesses' style of worship stands out as rational, didactic, and authoritarian.

The notion of *studying* is conducive to a community that eschews the kind of mystical and charismatic experiences found in Roman Catholicism and evangelical Christianity. Watch Tower literature repeatedly warns of the dangers of apostasy, for example, by showing pictures of Catholics invoking images of saints for intercession—practices that the Witnesses regard as irrational—and elders impart the view

that venerating anything or anybody other than God constitutes false worship. Though they are religious in the sense that they believe in the supernatural and offer their allegiance to an omnipotent deity, the Witnesses' theology draws on the forces of modern reason.

The Witnesses' rational orientation is manifest in the layout of Kingdom Halls and what they contain. Unlike the Roman Catholic tradition, for example, in which relics, crucifixes, statues, and tabernacles are part of the religious ethos, the Witnesses' place of worship is sparse and disenchanting. Kingdom Halls are essentially functional meeting places.

Witnesses are expected to attend three weekly meetings, two of which are held at Kingdom Halls. The third meeting—the *Book Study*—is held in a member's home. The two Kingdom Hall meetings include sermons, ministry, and discussions of theological issues from various publications. *Book Study* meetings consist of subgroups of about twenty people. Copies of *The Watchtower* and the movement's own study books are used at these meetings in almost every country in the world. So uniform is the movement's theology and content of meetings that, in principle, every Jehovah's Witness in the world will read the same literature and follow the same weekly program. These centralized procedures create an atmosphere of uniformity that the Witnesses regard as a tangible source of truth.

The Witnesses' determination to bring forth the millenarian age is epitomized in the industry with which they approach their evangelistic mission. Photographs of devotees from all ethnic backgrounds happily evangelizing to prospective converts all over the world appear in most of the movement's publications. Although these images of international expansion confirm the fulfillment of biblical prophecy, they also remind the Witnesses that this work must be complete before the arrival of Armageddon and that no one can be allowed to join the organization without becoming actively involved in ministry.

Certainty in an Uncertain World

Paradoxical as it may seem, the Witnesses are flourishing because of the so-called freedom of the modern world. Liberty and freedom produce questioning and uncertainty, and from this perspective, the Witnesses' version of truth is the answer to modern doubt. The belief that the inerrant word of God has been correctly translated from original Greek and Hebrew manuscripts has earned Witness theologians a deference not unlike that of papal infallibility. The movement's biblical literalism signifies a *revealed* truth that

guards against moral and epistemological relativism and that holds good for the whole of humanity. The certainty offered by scriptural texts is the proverbial stick with which to beat modern societies in which all manner of life options, religious as well as secular, are available.

Millenarian doctrines such as those of the Watch Tower Society are as significant in the twenty-first-century United States as any other time in history. Although the anticipation of an imminent paradise ostensibly offers the Witnesses hope, it is also a means by which they are able to consign their opponents to a future holocaust.

As they patiently await Jehovah's intervention, the Witnesses' relationship with the modern world remains paradoxical. They are modern rationalists in the sense that their belief system lacks the mystical content often found in other versions of Christianity, but conversely, they are antimodern in their resistance to many of the freedoms that characterize U.S. citizenship.

Journalism

Coverage of religion has been a staple of U.S. journalism since newspapers first came into existence during the colonial period. From the beginning, U.S. journalists have tended to portray religion as a good thing—provided that it was the right kind of religion. In the Massachusetts Bay Colony of the late 1600s, that meant both supporting the clerical establishment and reminding readers that God's providence was at work in their world. However, critical

appraisals of religious institutions and individuals, though less common, date back almost as far. In the early 1720s, Boston's clerical establishment found itself under assault by the *New England Courant*, an independent and iconoclastic paper published by James Franklin with the help of his younger brother Benjamin.

The Making of Religion Coverage

Although no comprehensive history of religion coverage in the U.S. news media has yet been written, religion has been treated as most newsworthy in direct proportion to its importance in public life generally, and in politics especially. During the early 1800s, for example, Baptists in Connecticut mounted a campaign to change the state's standing religious order, which mandated tax payments to support religious institutions so as to favor the Congregational churches. This fight, which concluded with disestablishment of these churches in 1818, elicited more attention to religion in the *Connecticut Courant* and other state papers than in the decades before or after.

The rise of the penny press in the 1830s transformed coverage of religion just as it transformed coverage of other subjects. Across the board, no one was more responsible than James Gordon Bennett, the founding editor of the *New York Herald*, which became the largest circulation daily in the country. Bennett, a Scotsman by birth and a liberal Roman Catholic by faith, pioneered sensationalist reporting and believed that religion could be just as entertaining a subject to write about as crime and politics. He was the first editor of a secular newspaper to devote space to the yearly meetings held in New York by denominational bodies and faith-based groups devoted to women's rights, temperance, and the abolition of slavery—and he wrote about them in a way that brought them to life. He sent reporters out to report what the city's preachers were saying. Most notoriously, he happily assailed any religious activity or pronouncement that did not meet his standards for what religion ought to be—from the Episcopalians' lavish Christmas decorations to the antiliberal pronouncements of Pope Pius IX to the histrionics of itinerant evangelists.

Not many editors were prepared to go as far as Bennett, especially when it came to criticizing pillars of the religious community. But they did follow many of his pioneering approaches to religion coverage. Urban revivals, notable public spectacles that promised widespread moral and social reform, became a staple of nineteenth-century religion reporting. No self-respecting daily was without its weekly

sermon reports, and it became common to publish writing by leading clergy, some of whom produced regular columns that were widely syndicated. The Sunday newspaper, though initially criticized by some pastors as a desecration of the Lord's Day, became a home for edifying religious prose—sometimes with purposely contrasting theological points of view. In the early 1900s, for example, the *Atlanta Journal* featured facing Sunday columns by the Methodist bishop of Georgia and the pastor of Atlanta's First Baptist Church. On the eve of the 1925 Scopes "Monkey" trial, the former wrote in support of Darwinian evolution, the latter against.

The Church Page Era

As early as the 1870s, some newspapers were publishing full pages devoted to religion, complete with columns of church announcements and syndicated features such as the "International Sunday School Lesson," which offered a mainline Protestant perspective on the history and meaning of the Bible. Meanwhile, major metropolitan dailies grew increasingly sensitive to the religious diversity of their increasingly diverse readership, and increasingly reluctant to involve themselves in religious controversy. Free listing of religious services gave way to paid advertising, resulting in the creation of the "church page," which typically included listings of church activities and friendly articles on ecclesiastical affairs. In most newspapers it appeared on Saturday to be fresh in the minds of any readers seeking a place to worship the following day. According to a 1952 survey of religion editors, most of the copy used on their pages came directly from church press releases. Like other special sections sustained by advertising, the page was not where scandals and other controversial matters involving religion would appear, if they appeared at all. Major stories with significant religious dimensions—the civil rights struggle, for example—typically fell outside the religion beat.

That is not to say that the twentieth century was void of good religion coverage. Beginning in the 1920s, a number of leading newspapers employed serious and committed reporters to cover religion full time. On occasion, they were barred from covering church meetings and conferences by denominational officials concerned that the resulting stories would be insufficiently protective. In 1949, a group of these reporters formed the Religion Newswriters Association and, through the presentation of awards as well as discreet lobbying within the newspaper industry, began a process of enlarging and upgrading the beat. Their struggle bore some fruit during the so-called Eisenhower revival of the 1950s,

when religion rose in prominence and prestige through growth in membership and as a supposed source of ideological commitment to the U.S. way of life during the Cold War. The era was not without its interfaith skirmishes, largely over Roman Catholic efforts to secure public education funds and a U.S. ambassador to the Vatican. But the skirmishing came to an end with the election of John F. Kennedy as the first Catholic president and the opening of the Catholic Church via the Second Vatican Council—stories that represented a high-water mark of important religion stories that were also "positive" manifestations of religion in public life.

Over the next couple of decades, however, the religion beat did not keep pace with an increasingly sophisticated and professional journalistic community. Although a cadre of high-quality religion writers kept the faith, the beat once again became something of a backwater—a place where, for the most part, pious or over-the-hill reporters took care of the Saturday page and wrote little to give religious leaders or their flocks anything to complain about. The subject was covered as a service for readers but was hardly a priority for editors.

The Golden Age

The golden age of religion reporting, brief but extraordinary, dawned in the early 1990s, thanks to a confluence of commercial, cultural, and political forces. The recession of the late 1980s jolted the U.S. newspaper industry into an intense preoccupation with the long-term decline in market penetration—the proportion of the population buying papers. Among the various efforts undertaken to reverse or slow the decline was to beef up religion coverage in hopes of attracting new readers. At the time it was commonly noted that more U.S. citizens attended worship services on Sunday than sporting events. Increased attention to religion was also driven by the culture wars, in which conservative commentators made a practice of portraying "the media" as an institution hostile to the traditional values of ordinary U.S. citizens. Concerned that there was something to this, some editors strengthened their religion coverage as a way to reassure readers that their newspapers were tuned in to their deepest concerns—that it, so to speak, "felt their faith."

But above all, journalists came to recognize the growing public role of religion in the United States and around the world. After the Iranian Revolution of 1979, political Islam was recognized as a major force in world politics. Likewise,

in the wake of the collapse of the Soviet Union and the end of the Cold War, religion became a new source of ideological conflict worldwide. Domestically, the rise of the religious right at the end of the 1970s ushered in an era of religious politics in the United States that showed little sign of abating. National organizations such as the Moral Majority and the Christian Coalition had, in alliance with the Republican Party, made issues such as abortion and gay rights into central arenas of partisan combat. Increasingly, political reporters needed to acquaint themselves with what was going on in U.S. religion and to fill their rolodexes with the names of religious leaders and academic experts who would talk to them about the politics of religion. Religion, in short, was a multifaceted story the news media could not afford to ignore.

Led by the *Dallas Morning News*, dozens of newspapers expanded their church and religion pages into freestanding “faith and values” sections. Membership in the Religion Newswriters Association doubled. The weekly news magazines also devoted increased attention to religion and found that a religion cover story sold more copies off the newsstand than any other kind. ABC News became the first network news operation to hire a full-time religion reporter, and public television began broadcasting a weekly religion news show, *Religion and Ethics Newsweekly*, which aired on more than two hundred channels around the country. By the end of the twentieth century, religion coverage was enjoying unprecedented popularity in the U.S. news media and was sustained by a level of apparent economic prosperity that kept newspaper profits at historic highs.

The Catholic Crisis

The culmination of the golden age, journalistically speaking, was the Catholic child abuse cover-up scandal of 2001 to 2003. Coverage of child abuse by Catholic priests was not a new story. Beginning in the late 1980s, a succession of local scandals—notably in Louisiana, New York City, and Dallas—highlighted cases of predatory sexual behavior by Catholic priests, directed for the most part at adolescent boys. But when the *Boston Globe* began publishing the results of its investigative series on the Boston archdiocese’s handling of abusive priests, it took the story to an entirely new level. Making painstaking use of court documents and church records, the paper was able to show how the diocesan hierarchy in Massachusetts, with the help of law enforcement and the psychotherapeutic community, covered up case after case of abuse, transferring known abusers from parish to

parish, and in some cases sending them off to other dioceses with clean bills of moral health.

Within weeks, newspapers all over the country were following the *Globe*’s lead, looking to see whether their own bishops had acted similarly—and very often discovering that they had. At a national level, the U.S. Conference of Catholic Bishops had to address what soon became the biggest crisis ever faced by the Catholic Church in the United States, establishing an independent commission to report on the handling of abuse cases. In due course, Boston’s Cardinal Bernard Law was forced to resign, and court settlements pushed a number of dioceses into bankruptcy. Meanwhile, similar cases began to be reported around the world. At once local, national, and international, this turned into the biggest religion story in the history of U.S. journalism. It is hard to imagine a time in the future when a comparable amount of journalistic effort could again be deployed to undertake such coverage according to the traditional norms of the craft.

Other Media

Outside of newspapers, the most important purveyors of religion news in the secular media were the news magazines. *Time*, the first of the newsweeklies, led the way for decades, thanks to its founder, Henry Luce. Brought up in China as the son of Presbyterian missionaries, Luce maintained an intense interest in religion in the United States and did not hesitate to put religious leaders, including theologians, on the cover of his magazine. “Is God Dead?” *Time*’s 1966 cover story on the so-called Death of God theologians, represents an important moment in postwar religious history. In the last decades of the twentieth century, *Time* was joined by *Newsweek* and *U.S. News and World Report* as important sources of religion news.

By contrast, the broadcast media offered much less in the way of religion coverage. The television networks always covered major events such as the election of a new pope, and from time to time turned their attention to other religious phenomena. In 1994, ABC News retained a reporter to cover religion as a regular beat, but let her go during a round of budget cuts in 2001—about the same time CNN began its own experiment with a religion beat reporter. Perhaps the most important religion reporting job in broadcasting was on National Public Radio, which inaugurated a religion beat in 1993. Such positions have, however, been rare, largely because broadcast journalism has never had large enough staff to afford the array of specialty beats common to even the smaller newspapers.

The Big Chill

The implosion of the newspaper industry in the first decade of the twenty-first century dealt a severe blow to religion coverage. Faith and values sections were taken down; the extra staff assigned to put them out, redeployed. As with other specialty beats, some papers concluded they could no longer afford a full-time religion reporter. Increasingly, those interested in news of religion turned to other sources: Web sites and blogs dedicated to one or another specialized religious arena. Anyone interested in following the Catholic Church could not afford to overlook *Whispers in the Loggia*, a one-man tip sheet run by a young graduate of the University of Pennsylvania. When denominational controversies such as the schism in the Episcopal Church or the financial scandal in the Orthodox Church in the United States broke out, the best places to view the action were the blogs and Web sites of the various combatants.

If only by sheer volume of words, the blogosphere began to take over conventional religion reporting. At the *Washington Post*, for example, an online religion section called “On Faith,” featuring daily commentary by a wide array of guest contributors, tended to outweigh the stories produced by the paper’s own reporters. At many news outlets, the reporters themselves were encouraged to start their own blogs, which they filled with an array of notes, comments, and press release information. A host of new “information providers”—pastors, professors, and employees of para-church lobbies and think tanks—suddenly became part of the daily mix of news and opinion. Although the impact of this new quasi-journalistic world is difficult to calculate, it seems likely to weaken the conventions of coverage that had defined the religion beat since the days of the penny press.

Norms of Coverage

To understand the conventions of religion coverage, it is useful to think in terms of certain moral attitudes that govern how religion stories are formulated. These attitudes, called *topoi*, embody basic ideas about the nature of religion that derive from the Western religious tradition, resulting in religion stories that “make sense” in U.S. culture generally. The following list of *topoi* is not meant to be exhaustive, but does mark the basic territory within which much traditional religion coverage takes place. Each *topos* should be understood as pointing, explicitly or implicitly, to one or another anti-*topos*, moral opposites also capable of generating news stories.

Good Works

Doing good is a basic characteristic of religion as it is understood in Western religion. Religion coverage has always been replete with stories of religious people and institutions helping the poor, ministering to the sick, offering relief to those who have suffered natural disasters. Although important U.S. Christian traditions—notably within evangelical Protestantism—have emphasized saving souls over good works, the news media have tended to embrace an attitude more associated with the Social Gospel. Anti-*topoi* of good works may be religiously inspired evil-doing, hypocrisy (see later), false prophecy (see later), or simply doing nothing for the least among us. Public policies, such as the “faith-based initiative” of President George W. Bush’s administration, generally receive favorable media treatment, at least initially, because of this *topos*.

Tolerance

Legal and political issues involving the First Amendment’s ban on religious establishments and protection of religious free exercise are too varied and complex to be handled journalistically simply within the context of “separation of church and state.” Instead, church-state issues have been easier to deal with in terms of the *topoi* of tolerance and intolerance. Tolerance is always good and intolerance bad; opposition to political candidates because of their religious faith is always frowned upon. The debate is likely to be about who is truly tolerant or intolerant. Conservative Christian activists may be portrayed as religiously intolerant, yet they seek to have themselves portrayed as the objects of secularist intolerance.

Hypocrisy

The U.S. news media have long reflected the special antagonism shown by the Western prophetic tradition toward those who fail to practice what they preach. The televangelist scandals of the late 1980s and cases of pedophilia by Catholic priests both prompted an extraordinary amount of news coverage. In the pedophile cases, the violations of law were generally serious, the activities of Jim and Tammy Faye Bakker and Jimmy Swaggart less so. Although hypocrisy is not in itself a crime, but considered a moral defect, the news media often expose such stories as a matter of cultural tradition.

False Prophecy

If the hypocrisy *topos* points to those who fail to adhere to the moral standards they themselves profess, the *topos* of

false prophecy concerns those who may or may not be hypocrites, but whose teachings are themselves considered wrong. News coverage of the Mormons in the nineteenth century was preoccupied with the issue of polygamy and the importance of showing its evils. Similarly, much coverage of new religious movements, or cults, in the latter part of the twentieth century has gone forth under the topos of false prophecy. True prophecy, the anti-topos, governs coverage of exemplary religious leaders like the evangelist Billy Graham, the Catholic nun Mother Teresa, the Anglican archbishop Desmond Tutu of South Africa, and the Dalai Lama.

Inclusion

Inclusion is a topos related to tolerance but specifically concerned with the recognition of unfamiliar or previously disfavored religious groups. The Mormons, first subjected to “false prophecy” treatment, in due course were deemed to merit coverage as a worthy religious group meriting full acceptance in U.S. society. Inclusion is primarily a topos to be applied to domestic religious groups, so complications may arise when the religious group in question includes significant numbers of co-religionists abroad. For example, because “inclusion” does not govern coverage of Islam outside the United States, Muslims in the United States have taken offense at how their religion is characterized in reporting of Muslims abroad. In response, the U.S. news media have taken special pains to provide “positive” (in other words, inclusive) coverage of Muslim communities in the United States when there are “negative” (exclusionary) stories of violence perpetrated by Muslims abroad.

Supernatural Belief

It is often asserted that the news media have a difficult time with religion because journalism is about proving facts and religion is about faith that is beyond proof. This is especially likely to be the case when the religious subject matter at hand has to do with the miraculous or supernatural. Yet religious traditions are far from uninterested in empirical demonstration—witness the Roman Catholic Church’s insistence on proof of miracles to canonize a saint. And journalism often seeks not demonstrable evidence but sources prepared to assert that something happened. For this reason, the topos that governs coverage of supernatural events is the faith of the believers; belief is the story, whether it has to do with a miraculous healing or an apparition of the Virgin Mary. The contrary topos is disproof—showing

the alleged miracle to be a fraud or a delusion. The latter, however, generally requires a good deal of careful investigative journalism, and so is far rarer.

Declension

The decline of religion has been a theme in Western religion since Moses came down from Mount Sinai to discover the golden calf, and in the United States almost since the arrival of the Puritans in New England. New (or allegedly new) religious phenomena—whether cults, megachurches, New Age practices, or religion “shopping”—are commonly seen as evidence of spiritual decline from an earlier age of traditional (“old time”) faith and practice. To be sure, the opposite topos of religious revival periodically comes to the fore—for example, after the attacks of September 11, 2001, when signs of increased religious attendance were detected. Soon enough, however, the attendance settled down to previous levels, which led to a host of “no revival,” that is, declension, stories. That is the prevailing cultural inclination.

Conclusion

As the secular news media merge into the world of new media, there is every reason to expect religion to remain a central area of interest and concern. The profusion and intensity of online responses to religion news and commentary indicate that the beliefs, practices, and institutional goings-on of faith communities matter greatly to many U.S. citizens. One way or another, they will make it their business to find out what they need to know about their religious passions and imaginations.

The diversity of sources and interests is, however, likely to weaken the common values that the news media have tended to strengthen by means of the topoi discussed earlier. These have portrayed “good religion” as tolerant, inclusive, and community building, while picturing intensive and eccentric religious expressions as bad. The new media environment enables U.S. residents to resist this value system more easily.

Judaism: Conservative

Conservative Judaism is a religious movement dedicated to conserving traditional Judaism and adapting it to the changed conditions of modernity. On the one hand, Conservative Jews consider themselves bound by *halakhah*, Jewish law. On the other hand, committed to change within that framework, Conservative Judaism has responded to the challenges of modernity by developing responses to traditional legal strictures that it deemed antithetical to modern sensibilities.

Late Nineteenth Century: Positive-Historical Judaism and the Influence of Reform Judaism

The intellectual forerunner of Conservative Judaism, Positive-Historical Judaism, developed in central Europe in the mid-nineteenth century in response to the challenges of the Enlightenment and Jewish emancipation. Its founder, Rabbi Zecharias Frankel (1801–1875), believed that Jewish law has always adapted over time in response to changing conditions. Opposed to what he considered to be the radical approach of Reform Judaism, Frankel broke from German Reformers in 1845 over the issue of whether it was desirable for Jews to recite traditional prayers in Hebrew. He believed that change ought to evolve organically and be rooted in Jewish history and communal practice. He also advocated the application of modern methods and sensibilities of critical, historical inquiry to the study of Jewish religious texts. In 1854, he assumed the presidency of the Jewish Theological Seminary of Breslau, which trained rabbinical students using this approach.

In the United States, Conservative Judaism adopted a similarly moderate approach to change. It developed in the

mid-1880s, also in response to what it believed to be the Reform movement's radical approach to change. In 1883, the Reform movement's Hebrew Union College served non-kosher shellfish at its first ordination dinner, what later became known as the "*trayfe* banquet." Two years later, the Reform movement issued the Pittsburgh Platform, which accepted "as binding only the moral laws, and maintain only such ceremonies as elevate and sanctify our lives" and rejected the Jewish religious-political organizations' designation as a nation in favor of seeing itself solely as "a religious community" that did not anticipate a return to Palestine. Several congregations resigned from the Union of American Hebrew Congregations and began to plan for a more traditionalist organization. The recently arrived Hungarian rabbi and rabbinic scholar Alexander Kohut (1842–1894) championed this "conservative" approach to modern Judaism, coining the term "the Judaism of the Golden Mean" to describe it.

In 1886, this moderate group founded the Jewish Theological Seminary (JTS) of America, appointing Rabbi Sabato Morais (1823–1897) as its first president. As articulated in the preamble to its constitution, its mission was to preserve the knowledge and practice of historical Judaism. In 1887, JTS held its first class, with ten students, and began preparing them to realize this goal as rabbis. This institution has for more than one hundred years served as the intellectual center of Conservative Judaism.

Solomon Schechter and the Growth of Conservative Judaism

The Conservative movement began to take shape in the United States under Solomon Schechter (1847–1915); he developed the institutional structure through which Conservative Judaism could be disseminated and nurtured. A scholar of rabbinics from Cambridge University, renowned for his discovery of the Cairo Genizah, a treasure trove of ancient Jewish texts and documents, Schechter served as president of the reorganized Jewish Theological Seminary from 1902 to 1915. He transformed JTS into a center of Jewish scholarship and leader of Conservative Judaism by force of his personality, his commitment to scholarship and Jewish life, and his administrative achievements. He recruited a faculty of outstanding scholars, including Louis Ginzberg (1873–1953), Israel Davidson (1870–1939), Israel Friedlaender (1876–1920), and Alexander Marx (1878–1953). Marx amassed a world-renowned library of Judaica books and manuscripts, including some that Schechter had discovered in the Genizah. Schechter also transformed the

rabbinical school into a graduate-level institution that would train English-speaking rabbis for American Jews; in 1909, he established the Teachers Institute under the leadership of Mordecai M. Kaplan (1881–1983) as a vehicle for preparing men and women for careers in Jewish education. In 1906, Schechter issued “Zionism: A Statement,” in which he unequivocally embraced the Zionist cause as the “great bulwark against assimilation.” Though Schechter was careful to explain that his endorsement was personal and not institutional, his support reflected the views of most of the faculty and placed Conservative Judaism squarely in the Zionist camp from the earliest days of the movement.

In 1913, Schechter established the United Synagogue of America as the national organization of Conservative synagogues. Founded with twenty-two synagogues, United Synagogue was dedicated to maintaining Jewish tradition and loyalty to Torah in its historical expositions and preserving hope for Israel’s restoration.

Schechter’s wife, Mathilde, brought the spirit of Conservative Jewish living to JTS through prayer, holiday celebrations, and home hospitality. Convinced that women played a key role in strengthening Jewish life, Mathilde founded Women’s League of the United Synagogue with one hundred women in 1918. Its mission was the perpetuation of traditional Judaism in the home, synagogue, and community.

During the fifty years after World War I, Conservative Judaism became the fastest-growing American Jewish religious movement. Conservative Judaism appealed to children of eastern European Jews who felt comfortable with Jewish tradition and devoted to the Jewish people but who also wanted to integrate into American life. These Jews were also drawn to Conservative Judaism because it resonated with their ethnic sensibilities without judging them for lapses in observance. By 1929, United Synagogue boasted a membership of 229 affiliates, and the rate of growth accelerated still further after World War II. More than one thousand synagogues were built or restored, mostly in suburbia, between 1945 and 1965, with each congregation forming a hub for Jews to meet for social, educational, philanthropic, and religious purposes, and each rabbi serving as the *marā d’atra*, religious authority, of his congregation.

During the period of rapid growth of the institutions of the Conservative Movement in the interwar and post–World War II period, rabbis and their wives played an instrumental role in bringing Conservative Jewish living and learning to new, fast-growing congregations throughout the United States. As rabbis provided pastoral, religious, intellectual, and

spiritual leadership to their congregations, their wives often enhanced their effectiveness by teaching classes, hosting meetings, and modeling Jewish living. Congregational Sisterhoods—local chapters of Mathilde Schechter’s Women’s League—also formed the backbone of the educational mission of the Conservative synagogue. Sisterhood women successfully took on many projects—such as organizing classes, raising funds for charity, maintaining the synagogue gift shop and religious school, and decorating and refurbishing the synagogues—that greatly enhanced Conservative Jewish life in their synagogues. Women’s League also played a crucial role in the national Conservative scene through its fund-raising capabilities. Responsible for collecting sufficient funds to open the Mathilde Schechter Residence Hall at JTS, Women’s League also raised needed scholarship funds for JTS students.

The Influence of Mordecai Kaplan and the Development of Conservative Halakhah

During this period, Conservative Judaism was heavily influenced by Mordecai M. Kaplan, the founder and leader of Reconstructionist Judaism. Kaplan, a Lithuanian-born Jew and a son of a traditional rabbi, was ordained at the Jewish Theological Seminary in 1902 and acquired traditional ordination in 1908 in Europe. In addition to serving as dean of the Teachers Institute, Kaplan was professor of homiletics and philosophy of religion, teaching rabbinical students for more than five decades and influencing several generations of Conservative rabbis. In 1922, Kaplan founded the Society for the Advancement of Judaism (SAJ), which, within a few years, considered itself the prototypical Reconstructionist congregation. In *Judaism as a Civilization: Toward a Reconstruction of American-Jewish Life* (1934), Kaplan described Judaism as culture, language, Zionism, music, art, social activities, sports—as a civilization rather than a halakhically based religion. For Kaplan, Jewish law should have “a vote not a veto,” and he rejected the notion of a supernatural God who punished individuals who transgressed the commandments. For Kaplan, God was the force that makes for salvation in the world. Similarly, Kaplan rejected the chosen people concept, preferring a more democratic view of humanity that promised all humans equal access to Godliness. He believed that people should and would observe rituals that were intrinsically satisfying and that would strengthen Jewish civilization. This vision of Judaism proved popular with eastern European ethnic Jews who felt closely tied to Jews around the world, drawn to the Zionist

vision of establishing a Jewish homeland, and connected to Jewish traditions. Kaplan's view of Judaism also dovetailed with the emerging view of the synagogue as a center that provided diverse opportunities for Jews to spend time with one another through social, educational, recreational, and religious programming and facilities.

In 1947, this expansive view found expression in the establishment of the University of Judaism in Los Angeles as the West Coast branch of the Jewish Theological Seminary. It helped galvanize and enrich the Los Angeles Jewish community, as it began to offer classes and other programming that fostered learning, identity, and meaning.

Kaplan's views challenged Conservative Jews to articulate the distinctiveness of their vision of Judaism, one that retained a commitment to Jewish law while demonstrating how it ought to adjust in accordance with the needs and realities of the people. Over the years, the Rabbinical Assembly's Committee on Jewish Law and Standards has issued several rulings that addressed this challenge. In 1950, analyzing the halakhic restrictions that might prohibit the use of a motor vehicle on the Sabbath and acknowledging that "in our time regular attendance at the synagogue has become a sine qua non for the maintenance of Judaism," the majority of members decided to permit driving to the synagogue on the Sabbath.

In 1953, the committee also adopted what came to be known as the "Lieberman clause," which made the Jewish marriage contract into a civilly binding agreement that committed both husband and wife to abide by the recommendations of a Jewish court of law if their marriage ended. The "Lieberman clause" served to greatly reduce the incidence of *agunot*, literally "chained women," that is, women whose husbands have left them without issuing a Jewish bill of divorce and who are unable to remarry as a result. Though widely used throughout by Conservative Jews, it did not fully resolve the *agunah* problem, and in recent years, the Joint Bet Din [Jewish Court of Law] of the Conservative movement has become more aggressive in dealing with this problem, both by certifying Conservative rabbis qualified to write *gittin* (bills of divorce) and by using *hafka'at kiddushin* (annulment of the marriage) as a tool against recalcitrant husbands.

The Sabbath and Festival Prayer Book and the Leadership Training Fellowship

In 1946, the Conservative movement issued the *Sabbath and Festival Prayer Book*. This prayer book (*siddur*) included

minimal ideological emendations in liturgy, an introduction about the uniqueness of the Conservative ideology, many supplementary English readings, and a modern translation of the Hebrew text. Omitting nonessential prayers and difficult or obscure liturgical poems or *piyyutim*, the editors also included nonliteral translations for passages—such as accounts of temple sacrifice—that no longer resonated for a mid-twentieth-century congregation. By 1949, more than 80 percent of United Synagogue congregations had adopted the *siddur*, forging a sense of unity among Conservative congregations. According to the sociologist Marshall Sklare, by 1955 the overwhelming majority of Conservative synagogues also adopted mixed seating during worship, a practice that most clearly differentiated Orthodox from Conservative synagogues.

In 1955, the Committee on Jewish Law and Standards responded to the changing role of women in the synagogue—the first bat mitzvah ceremony was performed for Mordecai Kaplan's daughter, Judith, in 1922 and had since gained in popularity—by deciding to permit women to be called up for *aliyot* (Torah honors). After reviewing the halakhic literature on the topic and noting that the prohibition was based more on long-standing custom than on law, the author of the *responsum* (rabbinic written response to a halakhic question) Aaron H. Blumenthal, concluded that "the time has come for someone to reverse the direction in which the halakha has been moving for centuries."

During the postwar period, the Conservative movement also recognized the importance of Jewish education. The three-day-a-week supplementary congregational school for boys and girls became the norm, with the goal of teaching Hebrew, prayer, and Jewish culture in preparation for bar and bat mitzvah. But movement leaders also wanted to cultivate a new generation of leaders. To that end, several new organizations were established, including the Leadership Training Fellowship (LTF) in 1945, which worked with rabbis to identify promising youth within Conservative synagogues and motivate them to engage in Jewish study and fellowship. In the summer of 1947, Camp Ramah opened in Conover, Wisconsin, with a goal of providing an intensive Jewish learning environment grounded in Conservative Jewish teaching and living. During the past sixty years, Ramah grew into a network of camps. In summer 2008, more than five thousand campers participated in overnight camps along with another twelve hundred campers in Ramah day camps. In 1951, the United Synagogue founded its youth group division (USY). While LTF catered to elite

Conservative youth, USY aimed to involve all young Conservative Jews in religious, educational, and social activities. Camp Ramah, LTF (disbanded in 1978), and USY modeled Conservative Jewish living and values and inspired thousands of young people to live more intensively Jewish lives. Also in 1951, day school education under Conservative auspices began in Rockaway Park, New York. Over the years, this option grew in popularity for Conservative Jews, and the umbrella organization of Conservative day schools, the Solomon Schechter Day School Association, was founded in the mid-1960s. In 2007–2008, 16,692 students attended the fifty elementary schools, three combined elementary and upper (K–12) schools, and one high school. All of these institutions have been successful sources of recruitment for future rabbis, educators, cantors, and lay leaders for the movement.

Louis Finkelstein and Abraham Joshua Heschel

During Louis Finkelstein's tenure as chancellor of the seminary (1940–1971), JTS positioned itself not only as the preeminent American institution for higher Jewish learning but also as the voice of American Jewry for both Jews and gentiles. Dr. Finkelstein appeared on the October 15, 1951, cover of *Time* magazine and later gave the invocation at the inauguration of President Dwight D. Eisenhower. He began producing the *Eternal Light* radio program, the first major use of broadcasting by an American Jewish religious movement, in 1944. This half-hour radio series, produced in conjunction with NBC, debuted on television in 1952 and lasted through the 1980s on both media. Aired on a rotating basis with Protestant and Catholic programs, the *Eternal Light* emphasized the common ground among the nation's mainstream religions.

During the 1960s, Abraham Joshua Heschel, professor of Jewish ethics and mysticism at JTS from 1945 until his death in 1972, emerged as a prophetic voice and public activist in civil rights, interfaith dialogue, and opposition to the Vietnam War. Placing theological emphasis on awe, transcendence, and dialectical interaction between God and humans, Heschel influenced a generation of students to act on the moral and ethical lessons gleaned from Jewish sacred texts. In 1965, Heschel joined Martin Luther King Jr. on the famed civil rights march from Selma to Montgomery, Alabama. Working with the American Jewish Committee, Heschel met with Germany's Augustin Cardinal Bea to discuss the Vatican's reformulation of the church's relationship with the Jewish people that resulted in the Vatican's 1965

document *Nostra Aetate*. Though the final version watered down the wording of the original drafts and did not renounce the charge of deicide, Heschel still saw it as a step forward in interfaith dialogue.

1960s: Movement toward Women's Equality

In the 1960s, Jewish life faced challenges from the counter-culture movement and second-wave feminism. Many young people who had grown up in the Conservative movement found synagogue life to be impersonal and uninspiring, and they founded *havurot*—small, informal, and nonhierarchical worship and study communities—that emphasized a more intimate engagement with God and community. In 1972, *Ezrat Nashim*, a group of young, well-educated women, most of whom were products of the camps and schools of movement institutions, presented to the Rabbinical Assembly a call for the public affirmation of women's equality in all aspects of Jewish life. They demanded that women be granted membership in synagogues, be counted in a *minyan* (the quorum of ten that is necessary for public prayer), be allowed full participation in religious observances, be recognized as witnesses in Jewish law, be allowed to initiate divorce, be permitted and encouraged to attend rabbinical and cantorial school and perform as rabbis and cantors in synagogues, be encouraged to assume positions of leadership in the community, and be considered bound to fulfill all the *mitzvot* (commandments) equally with men. They stopped just short of demanding rabbinical ordination and investiture as *hazzanim* [cantors] for women. This call evoked a sympathetic response from many Conservative rabbis; as expected, Women's League also became an early and vocal advocate for *Ezrat Nashim's* views.

Women's equality in synagogue ritual precipitated widespread and often heated and divisive debate within the various arms of the Conservative movement over the next decade as it struggled to articulate the implications of Conservative Judaism's commitment to evolutionary change within the boundaries of Jewish law. In 1973, the Committee on Jewish Law and Standards passed a *takkanah* (enactment) allowing women to count equally with men in the *minyan*. The committee also adopted resolutions that further equalized men and women in areas of ritual, including service as prayer leaders. In 1973, the United Synagogue of America resolved to allow women to participate in synagogue rituals and to promote equal opportunity for women in positions of leadership, authority, and responsibility in congregational life. From 1972 to 1976, the number of

Conservative congregations giving *aliyot* to women increased from 7 percent to 50 percent. In 1996, 83 percent of congregations in the United States and Canada counted women in the *minyan*, and today egalitarianism is a nearly universal in Conservative synagogues.

In September 1977, the seminary's chancellor, Gerson D. Cohen, appointed a Committee for the Study of the Ordination of Women as Rabbis that recommended in 1979, eleven to three, that women be ordained. At that time, the Rabbinical Assembly voted to take no action on the question prior to the decision of the JTS, but the faculty did not vote on the issue that year. In 1983, the Rabbinical Assembly decided to consider for membership Beverly Magidson, a graduate of Hebrew Union College. Though widely supported, her admission fell short of receiving the necessary three-quarters vote of rabbis present at that time. However, this spurred the seminary to reconsider the issue, and on October 24, 1983, the seminary faculty voted 34 to 8 to admit women to the seminary's rabbinical school. In 1985, Amy Eilberg became the first woman to be ordained by JTS. The Jewish legal basis for women's admission acceptance was the *Teshuvah (responsum)* of JTS Talmud professor Joel Roth that held that individual women could become rabbis (and prayer leaders) if they chose to assume the same degree of religious obligation as men. Individuals opposed to the decision to admit women formed the Union for Traditional Conservative Judaism, which became a separate group in 1990, changing its name to the Union for Traditional Judaism. In 2009, there were 261 women in the 1,600-member Rabbinical Assembly.

Women have entered the rabbinate in increasing numbers. In 2008, women made up 40 percent of the student body at both the JTS and the Ziegler rabbinical schools. The latter school opened in Los Angeles in 1996 at the University of Judaism (now American Jewish University).

The struggle for acceptance of women as cantors took a different course, since women had been eligible to study in the Cantors Institute since its inception in 1952 as candidates for the degrees of Bachelor, Master, and Doctorate of Sacred Music. In 1987, Seminary chancellor Ismar Schorsch announced that JTS would confer the diploma of *Hazzan* to two women, Marla Barugel and Erica Lippitz. By 2008, approximately fifty women had graduated from JTS's H. L. Miller Cantorial School. In 2010 women make up nearly 70 percent of its student body. In 1990, the Cantors Assembly voted to admit women to its group, and in 2010, 68 of the 540 current members are women.

The vast majority of Conservative synagogues now accord women partial or full equality in religious services, although the official position of the movement is to endorse both egalitarian and nonegalitarian services based on majority and minority opinions issued by the Committee on Jewish Law and Standards. Ceremonies for the naming of baby Jewish girls, performed in an ad hoc, experimental way by individuals for a generation, have entered the mainstream with the publication of Women's League's *Simhat-Bat: Ceremonies to Welcome a Baby Girl* (1994). It is no longer unusual to see women reading Torah or donning historically male Jewish religious garb for prayer. During the past twenty-five years, small numbers of Conservative women have begun to wear *tallith* (prayer shawl), *tefillin* (phylacteries), and *kipot* (skullcaps). This commitment to egalitarianism came to define and invigorate Conservative Judaism at this time.

1980s to Early Twenty-First Century: Emet Ve-Emunah and Creative Tension

In 1987, the Conservative movement issued its first statement of principles, *Emet Ve-Emunah*. Developed by a commission of rabbis, academics, and lay leaders, this forty-page statement reaffirmed the movement's commitment to Zionism, study, prayer, and Jewish peoplehood. It articulated a view of *halakha* as the community's understanding of God's will and therefore subject to change or reaffirmation in every generation. Characteristically Conservative, *Emet Ve-Emunah* does not present a monolithic view but rather includes constructs like "Some of us believe X, others Y." It also describes Conservative Judaism as a dynamic, evolving form of engagement, characterizing the "Ideal Conservative Jew" as a willing, thinking, and striving Jew.

Around the turn of the twenty-first century, Conservative Judaism further expanded its reach. The movement grew in Israel through its Israeli counterpart, the Masorti movement, and through institutions such as the Conservative Yeshiva, which was founded in Jerusalem in 1995 to meet the need for serious study of traditional Jewish texts in a coeducational and open-minded environment. The Schechter Institutes ordain Masorti rabbis and grant graduate degrees in Jewish studies to prepare teachers to serve in Israeli schools. In 1996, JTS established the William Davidson Graduate School of Jewish Education, bringing the number of schools at JTS to five, including rabbinical, cantorial and graduate schools and the undergraduate Albert A. List College of Jewish Studies. Through its schools and programs, JTS continues to train lay and professional leaders for

the American Jewish community and provides an intellectually compelling and spiritually meaningful voice on contemporary issues. Under the leadership of Chancellor Arnold Eisen, the JTS faculty voted to admit gay and lesbian students to the rabbinical school in March 2007, based on Committee on Jewish Law and Standards responsa that opened the door to gay and lesbian clergy. A world-renowned scholar of American Judaism, Eisen is committed to the revitalization of the Conservative movement through passionate study of Torah and spirited practice of tradition.

The Conservative movement has always suffered from a gap between the ideology and decisions of its rabbis and leaders and the practice of the large majority of its members. In every generation, its leaders struggled to adapt Jewish law to the exigencies of the times, while its members held to a pattern of ethnic togetherness that included some observance of tradition. This gap has declined somewhat thanks to the success of movement organizations such as Ramah. Conservative worship is noteworthy for incorporating camp tunes, and for the involvement of lay members in reading Torah and delivering *divrei* Torah (brief talks about portions of the Torah). Younger Conservative Jews have surpassed their parents in ritual observance and level of Jewish education obtained. Yet challenges remain as the movement strives to find a meaningful message for a new generation of American Jews bound less by ethnicity than by personal meaning. As of 2001, 46 percent of Conservative adults were age fifty-five or older. Membership in Conservative synagogues has shrunk accordingly. In 1995, 760 congregations affiliated with the movement; today that number has declined to 700. Some Conservative Jews feel drawn to contemporary Reform with its more relaxed approach to tradition, emphasis on personal autonomy, and openness to intermarried families. As a result, as of the 2000–2001 National Jewish Population Survey, more than one-quarter of American Jews born into Conservative families now identify with the Reform movement (by way of comparison, just 6 percent of current Conservative Jews were born into Reform families). Some of the most observant Conservative Jews joined Orthodox communities, finding there a critical mass of individuals committed to Jewish law. Still others shun denominational labels; like the founders of the *havurah* movement (small fellowship groups) in the 1960s, they are establishing independent egalitarian prayer and study groups.

The creative tension that lies at the heart of Conservative Judaism—a movement that considers itself bound by

halakhah and yet committed to change—is both its strength and its weakness. In many ways, this nuanced approach has caused the movement to struggle most deeply and agonizingly over the challenges of modernity, including feminism, intermarriage, and gay rights, and this has often divided the movement and inhibited its growth. Some leaders believe this dialectic to be essential to its essence, and they feel confident that such struggles will ultimately provide compelling answers for yet another generation of American Jews. Others feel the movement must retool its message to flourish in this postmodern era. Always committed to evolutionary change, Conservative Judaism will itself continue to undergo its own evolution as it prepares to meet the needs of future generations.

Judaism: Jewish Culture

The challenge of defining an American Jewish culture is reflective of the extraordinary variety of ethnic and national traditions that make up the contemporary American Jewish community. At the beginning of the twenty-first century, Jewish culture has evolved to a state at which it is both more openly ethnic and more integrated into American life than ever before. This reflects the increased acceptance of Jews in American society and of ethnic characteristics and particularism—that is, maintaining a distinctive identity—in general, as well as the remarkable success of Jews in contributing to the American cultural landscape. The number of nations and traditions represented in the contemporary American Jewish community makes it virtually impossible to identify one distinct “Jewish culture.” However, the Jewish cultures that coexist and flourish in America are united in some of their challenges and allegiances.

Jews have lived in America for more than three and a half centuries, but it was the immense waves of immigration in the late nineteenth and early twentieth centuries that

brought most identifiable Jewish culture to the United States. Each new wave of immigrants has introduced elements that continue to redefine American and Jewish culture. The most significant of these, both in numeric terms and with regard to its lasting effect on American Jewry's image of itself in popular culture, is the massive immigration from eastern and southern Europe that brought nearly two million Jews to America's shores. This wave lasted principally from the 1880s to the 1920s, when restrictive laws passed in 1921 and 1924 effectively ended open immigration to America.

Likewise, in a powerful reciprocal relationship, the Jewish community in the twentieth century and beyond has played a significant role in shaping much of contemporary American entertainment and literary production; Jewish and American popular cultures have become closely identified and in some respects almost synonymous. Some of these areas of overlap include the film, comedy, comic book, and musical theater industries, in which Jews have played prominent and sometimes formative roles for decades.

Early Jewish Presence in America

At the beginning of the nineteenth century, the population of Jews in the American colonies and the young United States numbered fewer than three thousand. Most of the original Jewish settlers, in the latter part of the seventeenth and beginning of the eighteenth centuries, came from England, Holland, Brazil, and Poland. Early Jewish communities in the Americas were composed of a majority of Sephardic Jews. Sephardim trace their ancestry from a combination of sources, including Jews who had been in the Middle East and Africa since the Roman Empire and Jews who had lived in Spain and Portugal until their expulsion in the late fifteenth century. Those who came to America in the seventeenth and eighteenth centuries had roots primarily in the Iberian Peninsula. Their language, cuisine, synagogue architecture, and religious customs reflected their origins; many of the immigrants spoke Portuguese or Ladino, a fusion language composed mostly of Hebrew and Spanish that had become the lingua franca of Sephardic Jewry.

Sephardic Jews swiftly learned and primarily used English and adopted styles of dress that prevailed among the colonial merchant class, with their appearance dependent more on their economic status than on their religion. Even the work of the leading Jewish craftsman of that period, silversmith Myer Myers (1723–1795), reflected genteel taste even as it beautified Jewish ritual objects. In the

realm of food, recipes incorporating Sephardic customs include green beans, almonds, pilafs, artichokes, and herbs. *Kashrut*, or Jewish dietary law, seems to have been followed by some early settlers, but the majority of the community seems to have relaxed its observance. By the 1800s, most of this group had assimilated into the general American population, thus reducing the effect of Sephardic culture on American Jewry, although aspects of it continued to dominate synagogue life well into the nineteenth century.

German Jewish Immigrants

In the mid-nineteenth century, roughly spanning the years 1820 to 1880, approximately 250,000 Jews from central Europe—Germany, Austria, and parts of Poland—arrived in the United States. Many of these Jews remained deeply immersed in the language and culture of their native lands for decades after their arrival. The custom of teaching German to children ultimately waned, but German Jewish immigrants and their descendants continued to publish German-language periodicals with Jewish content, from the weekly *Die Deborah* published by Rabbi Isaac Mayer Wise (1819–1900) in mid-nineteenth century Cincinnati to the *Aufbau* newspaper founded in New York in 1934. The Jewish press would continue to be one of the most effective ways for the community to reinforce its cultural identity while providing a conduit to American society. In this sense, the German Jews established a model that has lasted into the present day. To the extent that a unique Jewish culinary culture existed at the time, these immigrants increased its repertoire, transmitting recipes for schnitzel, sauerkraut, kugel, gefilte fish, and strudel that would identify families with their central European roots long after they had fully integrated into American life.

The impressive record of this group in laying the foundations of American Jewish institutional life was largely due to their pride in having common antecedents and their persistence in creating networks that advanced their interests in business, culture, and religion. By the late nineteenth and early twentieth centuries, Jews of central European extraction would create several bodies to safeguard and promote Jewish culture, from the Jewish Publication Society founded in 1888 to the twelve-volume *Jewish Encyclopedia* published between 1901 and 1906. These accomplishments evidence their creators' growing realization of the imperative to preserve their history and culture even as their community became more vulnerable to changes wrought by America's relatively open society.

Yiddish Culture in America

Jews had come to America from the eastern European Tsarist and Austro-Hungarian empires at least since the eighteenth century, but it was in the late nineteenth and early twentieth centuries that a confluence of political and economic factors led to the largest Jewish migration in history. By far, the country that received the largest number of Jewish immigrants during this period was the United States. Between 1881 and 1924, nearly two million Jews—approximately 20 percent of the world's Jewish population in 1900—arrived in America, mostly from lands that were part of the Russian and Austro-Hungarian empires of pre-World War I Europe. The impact of this mass migration on American Jewish life and on American culture in general was immense. From the array of institutions reliant on the Yiddish language to the development of music, food, and humor in America, the influence of this group of Ashkenazim—Jews with roots in central and eastern Europe—continues to be felt long after their collective experience of Jewish life in that region has become a memory.

Much of Ashkenazi Jewry's identity and cultural legacy is bound up with the language spoken by most Jews in eastern Europe before World War II, Yiddish. A Germanic fusion language written in Hebrew characters, Yiddish was created in approximately the tenth century by merging medieval High German with Hebrew and adding vocabulary from the predominant languages of the countries where Jews resided, especially Russia and Poland. The vast majority of Jewish immigrants to America at the turn of the twentieth century were Yiddish speakers, and in their early years they established a number of significant cultural institutions that relied on and propagated their native tongue. Among these were schools, societies, and a host of periodicals, estimated at 150 published between 1880 and 1914. This included six Yiddish daily papers, four of which were published in New York City alone. The world's best-known and most widely read Yiddish newspaper, the *Forward* (in Yiddish, *Forverts*), was founded in New York by Abraham Cahan (1860–1951) in 1897.

Probably the most legendary American Jewish cultural institution in the first half of the twentieth century, however, was the Yiddish theater. Attendance at Yiddish theatrical productions became one of the most beloved and popular pastimes enjoyed by the new immigrant community. In New York City alone, it was not unusual for a dozen Yiddish theater companies to be performing at one time. Several of them had their own lavish theater buildings that boasted

such stars of the Yiddish stage as Jacob Adler, Boris Thomshefsky, and Maurice Schwartz. The locus for most of this activity was Second Avenue in downtown New York. Modes of entertainment connected to the Yiddish stage were realized in the post–World War II era in the areas of comedy and English-language theater, some of the most widely appealing and successful industries that prominently feature American Jews.

Another example of Ashkenazi Jewish culture that has made its way into the fabric of American life is music, particularly the instrumental aspects that endure long after the Yiddish lyrics have become inaccessible to most listeners. The genre of music known as *klezmer* (from the Hebrew for “instrument of song”), usually played with easily portable instruments like violin and clarinet, comes from a long tradition of folk music that reflects the peripatetic lives of its musicians. Its characteristic blend of exuberant tunes and long, wailing notes combines elements from eastern European Jewry’s Slavic surroundings and from traditional cantorial melodies.

A wide array of foods accompanied eastern European Jews: stuffed cabbage, blintzes, challah bread, knishes, *kishke* (stuffed beef intestines), *kreplach* (meat-filled dumplings), matzah ball soup, and many other dishes.

Sephardic Jewish Communities in America

The international upheavals at the turn of the twentieth century brought thousands of Sephardic Jews to the shores of the United States from North Africa, Greece, the Ottoman Empire, and areas of the Balkans. (Sephardic Jews from North Africa and the Arabian Peninsula are more properly referred to as *Mizrahi* Jews, from the Hebrew word for “East.”) Numeric estimates for these immigrants range from 50,000 to 70,000 by the beginning of World War II, with more than 25,000 arriving in the first two decades of the century. Syrian, Greek, and Turkish Jews settled mostly in New York at first and brought cuisine featuring ingredients from North Africa, the Middle East, Persia, and Spain. Rice dishes with meats, legumes, and vegetables using spices such as cumin, coriander, and turmeric were complemented by sweets flavored with honey and rosewater.

Sephardic Jews in this wave of immigration brought musical and linguistic traditions with them as well, with Ladino (Judeo-Spanish) songs and Turkish coffeehouses permeating the atmosphere of their neighborhoods. The Sephardic community in early twentieth-century New York

had one major Judeo-Spanish newspaper, *La America* (published from 1910 to 1925). Like most ethnic periodicals, the paper served as both information source and community clearinghouse through which immigrants could find work and, often, each other. The near-total eradication of many Ladino-speaking communities, such as the Jews of Salonika, Greece, and former Yugoslavia, during the Holocaust meant that these pre–World War I immigrants would be the largest group ever to transport Judeo-Spanish language and culture to the United States.

The Ladino tongue is now mostly spoken by a dwindling population of elderly immigrants and new initiates. This group organizes performances and holds fund-raisers and educational events to display the richness of their heritage. Bolstering the efforts of these groups is a scholarly community that aims to correct a lack of information about the Sephardic experience through the publication of academic articles and books and the creation of forums devoted to the formal study of Sephardic history and culture.

Smaller Jewish Groups in America

Other groups who came to the United States in the mid- to late twentieth century have had their own extremely varied impact on Jewish cultural life in America. Prominent among these are the various Hasidic subcommunities, Jews from the former Soviet Union, Jewish communities from Central Asia, Iran, and Iraq, and expatriate Israelis. A longer list might include the roughly 100,000 refugees who fled central (and, to a lesser extent, eastern) Europe immediately prior to World War II, the 250,000 Holocaust survivors who arrived between 1945 and 1960 (this includes most of the Hasidim), the thousands of Egyptian, Lebanese, and Syrian Jews who fled their native countries in response to a hostile political climate following wars between Israel and its Arab neighbors, the Hungarian and Czech Jews who left their homelands in 1956 and 1968, respectively, after the failed anti-Communist revolutions there, and the Cuban Jewish community that fled to Puerto Rico, Miami, and New York after the Castro-led revolution in the early 1960s. All of these groups brought their own culinary, linguistic, and religious (or affirmatively nonreligious) traditions and their political and educational perspectives to bear on the internal dynamics of the American Jewish community and on its relationship with the larger American society.

The Hasidim provide perhaps the most unique case of a powerful, insular culture and identity that has made waves in

the political-legal and sociocultural American landscape. Groups like the Persian Jews (the preferred name for Jews from Iran), Syrian Jews, and Bukharian Jews retain their distinctiveness through linguistic, culinary, ritual, and other customs that not only set them apart from the majority Ashkenazi culture of American Jewry but also from most Sephardim. Most Persian Jews fled after the 1979 Iranian Revolution and settled in affluent parts of New York (especially in Great Neck, Long Island) and Los Angeles, as well as the Chicago suburbs and other similar regions. The community is proud of its ancient culture, exemplified by the still-flourishing use of Iran's historic language, Farsi, and the existence of many specifically Iranian synagogues. It is common for Persian Jews to marry within their community and unusual to marry Ashkenazim—though the longer Persian Jews stay in America, the more common it is to marry outside the group.

At the beginning of the twentieth century, thousands of Syrian Jews immigrated to the United States, mostly from the large Jewish communities in Aleppo and Damascus, and settled in Sephardic neighborhoods on the Lower East Side of New York. In the early 1970s, due in part to the political fallout surrounding the 1973 Arab-Israeli War, the majority of the Syrian Jewish community emigrated from their homeland, with a large percentage moving to parts of Brooklyn, New York, and the New Jersey shore. Like the Persian Jews, Syrian Jews have musical and culinary traditions that have more in common with the lands of their birth than with most American Jews. Syrian Jewish food features grilled food on skewers (kebabs), pomegranate, bulgar, and sweets made with sesame, anise, and fruits. Religiously, Syrian Jews have maintained a strong attachment to their customs and remain opposed to intermarriage. In a period when the rate of American Jews marrying outside the faith hovers around 50 percent, the Syrian Jewish average in America remains at 2 or 3 percent.

With the breakup of the Soviet Union in the late 1980s, several thousand Central Asian Jews, mostly from Uzbekistan and Tajikistan, came to the United States. These so-called Bukharian Jews have settled mostly in Queens, New York, with groups also in California, Arizona, and Florida. They speak either Russian or a dialect of Persian, and their Hebrew language literacy is high compared to other Jews in America. They have maintained a strong cultural presence by establishing Bukharian newspapers and through the many eating establishments that reproduce foods of their native land, such as *manti* and *pelmeni* (dumplings), *plof* (rice with lamb and pineapple), and *lagman* (vegetable and noodle

stew) served in a Persian-Russian-influenced style that includes such flavors as pomegranate and poppy seed. Ties between the two largest Bukharian Jewish communities in the world, in Queens, New York, and Israel, are very close and are now reinforced by use of the Internet. A Hebrew-language Web site that originates in Israel but is popular among Bukharis in the United States includes such features as “B-Date”—a Bukhari Internet dating site that helps ensure that young people will marry within their community. In addition to strong family ties, this group maintains a strong Zionist identity even outside Israel.

Because of their distinctiveness, group loyalty, linguistic and food culture, and self-awareness of their history, the Persian, Syrian, and Bukharian Jews in the United States are rare examples of Jewish communities that have successfully acclimated to America without losing their historic cultural identities.

Cultural Interpretations of the Jewish Experience

Some of the most popular aspects of Jewish culture at the beginning of the twenty-first century, designed especially for American Jews who have diminished ties with their history, are programs and institutions that reinterpret Judaism and the Jewish experience for a modern, often secular public. Thus, sites of nostalgia like Ellis Island and the Lower East Side of New York have seen glossy renovations, often supported by members of the Jewish community. Purveyors of Jewish foods and religious items are flourishing. Walking tours of former Jewish neighborhoods teach new generations about traditional Jewish foods and customs and elevate once-humble buildings to the status of historic icons, perhaps most successfully in the Tenement Museum, housed in a once-condemned building on Orchard Street. The century-old Eldridge Street synagogue, once a towering edifice and then a crumbling ruin, is being painstakingly restored. New York is far from the only locale for such energy; for instance, the historic “Sixth and I” synagogue in Washington, D.C., was purchased in the 1990s by three Jewish real estate developers. It received a multimillion-dollar renovation that recalled it to its former glory as a Moorish-style synagogue and was established as a major cultural center that hosts folk and rock musicians, speakers, book groups, singles and children's events, political discussions, and of course religious services—but, significantly, it is not affiliated with any of the major Jewish religious movements.

Jewish museums have proliferated around the country, displaying mandates ranging from general Judaic knowledge

Holocaust survivors Elie Wiesel (left) and Miles Lerman mix soil from the Nazi concentration camps Auschwitz and Dachau into the foundation of the U.S. Holocaust Memorial Museum in Washington, D.C., during groundbreaking ceremonies held October 16, 1985. The museum opened in 1993.

to Holocaust education to fine arts. Perhaps the most symbolically significant event was the 1993 opening of the United States Holocaust Memorial Museum next to the National Mall in Washington, D.C.

This deeper interest in Jewish history and culture has found expression in academia as well; more than a hundred university departments and programs devoted to the Jewish experience have grown in scope and enrollment, and there are postgraduate programs that relate specifically to American Jewish culture, offering degrees in Jewish material culture and Jewish art. Many activities celebrate Jewish life in America, including the events and exhibitions in 2004 to

commemorate the 350th anniversary of American Jewish life. In the twenty-first century, American Jews are reimagining their experiences to mesh with a larger American narrative that celebrates ethnic flavor while seeking commonalities between groups.

Jews and Contemporary American Culture

The partnership between Jews and American culture in the twentieth and early twenty-first centuries has been a fruitful one. Jews have introduced aspects of their own cultural legacy in such arenas as humor, literature, and the performing arts. This high degree of involvement in and influence on American society has been evidenced through such creative outlets as Tin Pan Alley and vaudeville, the birth and development of the American film industry, the fine arts and comics industries, television, Broadway musicals, photography, the folk revival and other popular music, and comedy.

A small sampling of Jews associated with culture in America, who often serve or served as bridges between their identities as members of their ethnic group and their country includes Sophie Tucker, Leonard Bernstein, Stephen Sondheim, Woody Allen, Art Spiegelman, Gertrude Berg, Lenny Bruce, Adam Sandler, Barbra Streisand, Jerry Seinfeld, Steven Spielberg, and Mattisyahu. Prominent writers who have identified equally with their Jewish backgrounds and American present include Saul Bellow, Bernard Malamud, Philip Roth, Henry Roth, Cynthia Ozick, Norman Mailer, Muriel Rukeyser, Adrienne Rich, Michael Chabon, and Allegra Goodman.

Aspects of specifically Jewish culture—often nonreligious in nature and reliant on Yiddish words, outsider humor, and images of food and overweening parents—have become intertwined with American life. In particular, the absorption of Yiddish terms such as *schlep*, *klutz*, *schlemiel*, and *chutzpah* into American English illustrates the extent to which Yiddish and the Jewish experience are often used for humor and ethnic flavor. This phenomenon has reached into American law, where Jewish and gentile lawyers alike have drawn on Yiddish expressions to add color and emphasis to arguments

in legal briefs; a *Yale Law Journal* (1993) argues that Yiddish is “supplanting Latin as the spice in American legal argot.” Beginning in the late twentieth century, klezmer music (inspired by music of the villages and ghettos of eastern Europe) has become one of the most visible trends in the ever-growing fascination with Jewish ethnicity in America.

The glorification of Jewish food, language, and other parts of group identity can serve as a model for other ethnic groups who have enjoyed success on the American scene. This is slightly ironic given the countervailing impulse of many Jews to fit in with mainstream America, yet it is reflective of—and probably also a cause of—the rising acceptance of ethnic characteristics in the nation’s populace. In many respects, then, the degree of visibility of Jewish culture in America has always been and continues to be a bellwether for the acceptance of other cultures as well as a testing ground for the endurance of Jewish traditions in an increasingly open and modern society.

Judaism: Jewish Identity

The nature of Jewish identity is the great theme of U.S. Jewish history. Key to any discussion of Jewish identity is the meaning of the word *Jewish*. Before the nineteenth century, *Jewish* referred to members of a religion. During the nineteenth and twentieth centuries, however, its meaning expanded to encompass an ethnic group, a nationality, and a population with similar cultural, social, and political values and a common history. There were multiple causes for this. The eighteenth-century Enlightenment led Jews to reject much of traditional Judaism and to develop new religious forms more in keeping with modern thinking. In Europe during the nineteenth century the growth of nationalism, Jewish economic and social mobility, the acculturation of European Jews, an increase in anti-Semitism, and the emergence of new political ideologies such as communism, socialism, and anarchism resulted in the appearance of Zionism and other Jewish ideologies professing new definitions of Jewish identity. U.S. social and political conditions accelerated this process.

Jewish-American Self-Reinvention

The U.S. stress on individualism has, in the words of the sociologist Paul Hollander, encouraged individuals “to reinvent themselves in order to achieve a sense of self that will be most gratifying.” Religious and ethnic groups were urged to reshape themselves in this “*novus ordo seclorum*.” It was inevitable in this land of the self-made person that definitions of Jewish identity would be variegated and that Jews would cast aside old forms of Jewish identity and invent new ones. Here the traditional division between “Jews by birth” and “Jews by choice” has been a distinction without a difference, and Jews have gone from being a chosen people to a choosing people. U.S. freedom and the absence of ghetto walls meant that Jews had to choose whether to remain Jews

and to select the content of their Jewish identity. In the late twentieth century a U.S. senator named Cohen chose not to identify as a Jew, but a black intellectual named Julius Lester did. Although Sabbath and kosher observance declined among Jews, Hanukkah, previously a minor holiday, became a major event on the Jewish calendar, undoubtedly because of its proximity to Christmas. This willingness to reinvent their Jewishness, this combining of “the immediate and the transcendent, the quirky and the hallowed,” the historian Jenna Weissman Joselit wrote, “was virtually without parallel in modern Jewish history.”

For most U.S. Jews, Judaism is merely one aspect, and often a minor aspect, of a broader Jewish identity involving culture, politics, and memories. And because Jews relate differently to these matters, unanimity regarding what constitutes Jewish identity is impossible. The *sui generis* character of Jewish identity, this mixing of religion, history, and ethnicity, has provided U.S. Jews with a unique perspective for viewing U.S. ethnic identity. “No group in twentieth century America,” the historian Moses Rischin wrote, “has been so consistently and clinically concerned with the problems of human identity, in relation to group morale, psychology, personal fulfillment, inter-group relations, and inevitably to group survival as have America’s Jews. . . . Jews have seen their own dilemmas as part of the common plight. They have sought to identify, to define, and to conceptualize perceptions heightened by their own personal and collective autobiographies in universal terms.”

In his “American scholar” address of 1837, Ralph Waldo Emerson urged his fellow U.S. citizens to free themselves from “the sere remains of foreign harvests,” to cease listening “to the courtly muses of Europe,” and to “walk on our own feet” and “speak our own minds.” The Jew especially took to heart Emerson’s advice to leave behind “ancient prejudices and manners” and to receive “new ones from the new mode of life he has embraced, the new government he obeys, and the new ranks he holds.” In this nation where citizenship for Jews was a matter of right and not sufferance and there was no officially sanctioned anti-Semitism, U.S. Jews were particularly attuned to this U.S. newness and eager to become part of it. They were never more American than when pondering the nature of U.S. nationality and asking what it meant to be an U.S. Jew.

The three most important paradigms of U.S. ethnic identity were written by Jews, and each had the U.S. Jewish condition in mind. The first of these was Emma Lazarus’s 1883 sonnet “The New Colossus,” which was engraved on

a plaque placed on the pedestal of the Statue of Liberty. The poem depicted the statue as a symbol of hope to the Jews and other immigrants then pouring into New York City. “Give me your tired, your poor, Your huddled masses yearning to breathe free.” But in the next line Lazarus described the immigrants as “The wretched refuse of your teeming shore.” Historians have puzzled over this seemingly derogatory description of the immigrants as “wretched refuse.” The historian John Higham noted that in the 1880s “wretched” was a synonym for “distressed,” and “refuse” was used to denote objects considered valueless as well as worthless. Perhaps Lazarus had these non-pejorative meanings in mind. In any case, “The New Colossus” became part of the canon of Anglo-conformity, the belief that the immigrants were acceptable only to the extent that they purged themselves of their undesirable traits and rapidly Americanized.

The British writer Israel Zangwill had a different view of U.S. and U.S. Jewish identity. His widely popular 1908 play *The Melting Pot*, the most important response to the ideology of Anglo-conformity, envisaged a process whereby immigrants and Native Americans alike were thrown into the melting pot and out emerged a new nationality, combining the best that each group had to offer. The American, he wrote, was not already formed but was in the process of being created by “God’s crucible . . . God is making the American.” *The Melting Pot* recounts the New York City romance between David, a Russian Jew, and Vera, a Russian Christian, whose father had been responsible for the pogrom in which David’s parents perished. When David discovers this, he is tempted to break off the romance. But in a melodramatic finale, love triumphs over European memories, and David reaffirms his vision of a U.S. identity then being forged. “Yes, East and West, and North and South, and palm and the pine, the pole and the equator, the crescent and the cross—how the great Alchemist melts and fuses them with his purging flame! Here shall they all unite to build the Republic of Man and the Kingdom of God.”

Zangwill’s message of “E Pluribus Unum” was directed at all U.S. citizens, but especially at Jews. He believed they only had two options. Either they could maintain their Jewish identity and help build a Jewish society in Palestine, or they could throw themselves into the U.S. melting pot and contribute to a new U.S. identity combining Hebraism, Christianity, and Hellenism. Seven years after Zangwill’s *The Melting Pot* appeared on Broadway, a Jew published the most important attack on the melting pot concept.

Horace Kallen, the son of eastern European Jewish immigrants, had been influenced while an undergraduate at Harvard by William James, the philosopher of pluralism, and Barrett Wendell, who believed the Hebraic spirit had greatly influenced U.S. literature and culture. Kallen concluded that being a good Jew and being a good American were complementary, and that Jews need not throw themselves into any melting pot or conform to Anglo ways. Kallen published his thoughts on U.S. identity, and by implication on U.S. Jewish identity, in his 1915 essay "Democracy Versus the Melting Pot." His metaphor for the United States was an orchestra. Just as the beauty of an orchestra stemmed from the different sounds produced by dozens of instruments harmonizing with one another, so the richness of U.S. culture came from the contributions of dozens of different ethnic groups. The national spirit, Kallen wrote, "is constituted by this union of the different. It is sustained, not by mutual exclusions, nor by the rule of one over others, but by their equality and by the free trade between these different equals in every good thing the community's life and culture produce." Kallen was impressed by the persistence of ethnicity. It was, he said, the most important social trait of a person, "the efficacious natural milieu or habitat of his temperament . . . the center at which he stands, the point of his most intimate social relations, therefore of his intensest emotional life." Kallen noted that a person could change many things, but he could never change his grandparents. But neither could grandparents predict how their grandchildren would turn out, particularly whom they would marry.

Ethnicity and Religion

Lazarus, Zangwill, and Kallen saw U.S. Jews more as an ethnic than a religious group. Judaism is the religion of the Jewish people, but in their daily lives, peoplehood has generally trumped religion. Jewish ritual practices and beliefs have played a major role in the daily lives of only a minority of Jews. The strongest ties among Jews are not religious practices but ethnic memories, social and political ties with other Jews, fear of anti-Semitism, and membership in a myriad of institutions and organizations. Jews have been one of the most secular elements within the U.S. population.

Most Jewish immigrants brought with them to the United States a skepticism regarding traditional Judaism, and this skepticism deepened on arrival. The restrictions on diet, attire, sexual behavior, and employment on the Sabbath and religious holidays were viewed as incompatible with national ideals of individualism and self-actualization and as obstacles

to acculturation and social and economic advancement. For most Jews, Orthodox Judaism was an anachronism and even an embarrassment, although this attitude, as seen for example in Abraham Cahan's great novel of immigrant adaptation, *The Rise of David Levinsky*, could coexist with a nostalgia for the old religious ways. European-trained rabbis were horrified by the ease with which Jews in the United States gave up the trappings of traditional Judaism. The United States, in their eyes, was a "trefa" (impure) land, where Jews did not observe the Sabbath, religious holidays, dietary restrictions, and other religious commandments.

The often peripheral role of Judaism in U.S. Jewish identity is indicated by the many Jews who have been ideologically hostile to religion in general and Judaism in particular but who still have considered themselves part of the Jewish community and have been considered as such by other Jews. A Roman Catholic atheist or a Protestant atheist is an oxymoron, but the Jewish atheist (or agnostic) is a common phenomenon. Jews take pride in nonbelievers such as Baruch Spinoza. Yeshiva University, an Orthodox institution, even named its medical school after Albert Einstein, a religious skeptic. As a result of this intermixing of ethnicity and religion, even members of messianic groups such as Jews for Jesus claim that they have not ceased being Jewish simply because they have converted to Christianity. They argue that becoming a Christian logically flows from their ethnic identity as Jews. (They ignored Heinrich Heine's witticism that Jews did not make good Christians because no Jew could believe in the divinity of another Jew.)

One of the most important of the versions of Jewish identity that the eastern European immigrants brought with them was Yiddishism. In the late nineteenth and early twentieth centuries, European Yiddish intellectuals asserted that the core of Jewish identity in eastern Europe was not religion, which most of them disdained, but the Yiddish language and Yiddish culture. At this time the Yiddish theater, Yiddish newspapers, Yiddish schools, and Yiddish literature in Europe were flourishing, and Yiddish-speaking immigrants hoped to recreate in the United States the cultural world they had left behind. For a time they were successful, particularly in New York City where there were a variety of Yiddish newspapers, stage productions, and book stores. But the heyday of Yiddish culture in the United States was fleeting. By the end of World War II, just three decades after the peak of Jewish immigration, Yiddish cultural institutions were in a state of free fall. Yiddish culture had little appeal to the children of the immigrants who had been educated in the public

schools, had served in the military where their horizons broadened, and no longer lived in neighborhoods populated by Yiddish-speaking immigrants.

This was no surprise to Cahan, for half a century the publisher of the New York *Forward*, the most widely read of the daily Yiddish newspapers. Cahan had no illusions that a Yiddish newspaper could attract nonimmigrant readers, nor did he see any particular intrinsic value in the perpetuation of Yiddish language or Yiddish culture in the United States. For him the Jewish ways brought from Europe were obsolete and destined to disappear with the passing of the immigrant generation. In the meantime the *Forward's* role was to propagate socialism among the immigrants and to facilitate their adaptation to their new land.

One way the *Forward* fostered acculturation was through the answers it provided to readers who had written for advice on how to behave in the United States. The anonymous writer of the letters-to-the-editor column became a wisdom figure to these readers, who were befuddled by their new surroundings and convinced that the traditional authority figures familiar to them in Europe were out-of-touch with U.S. realities. Introduced in 1906, the column became the most popular section of the paper, and soon other Yiddish papers established advice columns of their own. One typical letter to the *Forward's* "Dear Editor" asked whether the writer should allow his son to play baseball, a "wild and silly game." He did not want his son to become "a wild American runner. But he cries his head off." The editor answered that there was nothing wrong with playing the U.S. national pastime as long as this did not interfere with his son's education. U.S. Jewish children must not grow up as "foreigners in their own birthplace."

The Yiddish writer and future Nobel Prize winner Isaac Bashevis Singer shared Cahan's doubts regarding the future of Yiddish in the United States. Singer moved from Warsaw to New York City in 1935, and eight years later published his essay "Problems of Yiddish Prose in America." "Life here is so rich and varied," Singer wrote, "that English words and phrases inevitably have crept into Yiddish while, at the same time, hallowed Yiddish terms and expressions have disappeared." "The stubborn few who insist in speaking 'pure Yiddish,'" he continued, have become "objects of ridicule and the butt of jokes," and the U.S. Yiddishist was forced to dine on leftovers. "Only food prepared in the old world can nourish him in the new." In the United States, Singer concluded, "the dream of a secular Jewish culture . . . has played itself out."

Yiddish is still spoken in the United States, but not by those for whom secular Yiddish culture is the basis of their Jewish identity. The last redoubts of Yiddish as a vernacular language are neighborhoods in Brooklyn and elsewhere populated by Orthodox sectarians. For the Orthodox, Yiddish is not valued because it liberates Jews from religious obscurantism and enables them to join the world of literary modernism and high culture. Rather, Yiddish embodies the heritage of Eastern European Orthodoxy and helps isolate them in their own encapsulated world. For other Jews, Yiddish is a post-vernacular language of interest mainly to historians and literary scholars at major universities and at the YIVO Institute for Jewish Research in New York City. Many of the books used by researchers at these institutions had been rescued from oblivion by Aaron Lansky's National Yiddish Book Center in western Massachusetts. The funds supporting the National Yiddish Book Center came mainly from U.S. Jews who were not fluent in Yiddish, but who nevertheless wanted to perpetuate in an admittedly attenuated form the secular Jewish culture of eastern European Jewry that had been destroyed during World War II.

Brandeisian Zionism

Zionism was another form of Jewish identity that was recast in the United States. Zionism emerged in Europe in the late nineteenth and early twentieth centuries as an answer to what was called the "Jewish question." Europe was becoming increasingly hostile to Jews, and Zionists argued that Jews for their own safety and self-respect needed a nation of their own, whether in the Middle East or in East Africa. The traditional messianic longings for a third Jewish commonwealth were transformed by the Zionists into a modern secular movement. But a Jewish identity revolving around secular nationalism had little appeal to Jews living in the United States. In the United States there was no Jewish question for which Zionism was the answer.

U.S. Jews viewed Jewish nationalism with wariness because it raised doubts about their ultimate loyalty to the United States and their identity as U.S. Jews. For U.S. Jews, the United States was their promised land and Washington their Jerusalem. For every European Jew who settled in Palestine in the late nineteenth and early twentieth centuries, more than forty settled in the United States, and they did not come as mere sojourners. They immigrated as families at a higher rate than did other immigrant groups, and once here they had a lower repatriation rate. They also became citizens more quickly. U.S. Jews were thus unsuitable

prospects for a Zionism preaching the abnormality of Jewish life in the diaspora. Zionism would have to be recast if it was to appeal to U.S. Jews.

This task fell to Louis D. Brandeis. There was nothing in the background of Brandeis, the first Jewish Supreme Court justice, that could have predicted his becoming the major spokesman for Zionism in the United States in the early twentieth century, and why he did so has not yet been fully explained. He was an assimilated Jew and a notable Progressive Era reformer. Brandeis professed to see similarities between the efforts of Progressive reformers to create a more democratic and just society in the United States and the attempts of the Zionist pioneers to create a secular democratic homeland for Jews in Palestine. For him, Zionism involved progressive reform, not Jewish nationalism, and he encouraged U.S. Jews to support the struggling Zionism movement, not by settling in Zion, but through lobbying and philanthropy. Being U.S. citizens, he told U.S. Jews, required that they be good Zionists, and being Zionists demanded that they be good U.S. citizens. U.S. and Jewish identities were not contradictory but symbiotic.

Brandeis believed that the Jewish nationalism and immigration to Palestine basic to European Zionism were irrelevant for U.S. Jews. They already lived in a country in which they felt at home, and they did not want their patriotism to be questioned. U.S. Jews could be good Zionists without ever personally participating in the building of a new Jewish society in the Middle East or even learning to speak Hebrew. The European Zionists accused Brandeis and his followers of lacking an emotional attachment to the Zionist dream of a Jewish homeland for all Jews, of divesting Zionism of its nationalistic *raison d'être*, and of transforming it into a charity emphasizing refugee relief. Brandeisian Zionism was the butt of the witticism that Zionism was a movement in which one person raised money from another person to send a third person to Palestine. Brandeis's approach to U.S. Zionism continued to be the operative model for U.S. Zionists. Relatively few U.S. Jews have settled in Israel, and most of these have eventually returned to the United States.

By the 1960s, what one scholar called "Israelism" had become the lowest common denominator of U.S. Jews and the operative religion of many, if not most, U.S. Jews. Jonathan S. Woocher titled his examination of the ideology of the pro-Israel leadership of Jewish federations *Sacred Survival: The Civil Religion of American Jews*. This civil religion had its own educational system (leadership development programs), annual rites (the fund-raising campaign), pilgrimages

(missions to Israel), communal activities (fund-raising dinners and telethons), weekend retreats, and norms of behavior (acceptable financial commitments). Jews were not ostracized from the Jewish community for rejecting Judaism, but they were denied communal honors and were fiercely criticized for questioning Israel's policies.

The fervent support for Israel initially stemmed from memories of the state's establishment in 1948 and its subsequent wars. Israel's image, as seen for example in Leon Uris's blockbuster novel *Exodus* (1958), was of a plucky, outnumbered, and brave nation threatened by its bloodthirsty, teeming, and wealthy Arab neighbors. That Israel was an obstacle for communist penetration into the Middle East also endeared the country to U.S. Jews and gentiles alike. By the twenty-first century, however, the generation that had lived through the early and tumultuous period of Israel's founding was fading from the scene, and Israel was now projecting a different image. It had the most powerful army in the Middle East, and its economy on a per capita basis was equivalent to that of many advanced European countries. In place of the romantic image of Israel was the picture of an economically advanced, technologically proficient, and militarily powerful nation. Public opinion polls among Jews revealed a direct correlation between Israelism and the age of respondents, with younger Jews less committed to Israel than were their elders. Observers concluded that Israelism was no longer able to bolster U.S. Jewish identity as it had once done. U.S. Jewish identity required something more than a vicarious identification with Israel.

Holocaust remembrance was another form of Jewish identity popular in the United States in the late twentieth century. The Holocaust should be central to the defining of Jewish identity, some argued, because all Jews bore its scars. Jews, and particularly survivors, funded dozens of Holocaust museums and memorials throughout the United States, subsidized scholarship on the Jewish catastrophe; encouraged the study of the Holocaust in schools so that the lessons of the Holocaust, however these were interpreted, could be disseminated; made Yom HaShoah (Holocaust Remembrance Day) part of the Jewish calendar; helped the writer Elie Wiesel, a Holocaust survivor, become an iconic figure; and made Auschwitz, the largest of the Nazi murder camps, a place for quasi-religious pilgrimages. "Within the American Jewish community," wrote Michael Berenbaum, project director of the U.S. Holocaust Memorial Museum, "the Holocaust has entered the domain of shared sacrality." Holocaust remembrance and Israelism had a symbiotic

relationship. The Holocaust had made the state of Israel necessary, and Israel made a second Holocaust unlikely.

Critics of Holocaust remembrance questioned whether what they cynically referred to as the “Holocaust industry” or “Shoah business” was a viable basis for U.S. Jewish identity. Martyrs command respect, Rabbi Daniel J. Silver of Cleveland said in 1986, but Jews required a sense of purpose consisting of something “more substantial than tears.” Few Jews, these critics feared, would be attracted to an historical narrative featuring victimization and powerlessness, particularly when it encouraged inaccurate and dangerous analogies. Among these was the equating of the situation of modern Israel with that of European Jewry during the 1930s. Some U.S. Jewish philosophers and theologians also noted that Holocaust remembrance, by emphasizing that God had been silent during the Jewish catastrophe, raised doubts about the covenantal relationship of Jews with God and even about God’s existence. Holocaust remembrance thus had the potential of moving Jews in a profoundly non-Jewish or even anti-Jewish direction. Furthermore, its sanctifying of death was inappropriate for a people and religion that had always highly valued life. Finally, it was troubling that, according to public opinion surveys, the Holocaust was more important to the Jewishness of most U.S. Jews than were the exodus from Egypt and the giving of the Torah on Mount Sinai.

Other forms of Jewish identity popular in the United States involved food, philanthropy, and liberal politics. For secular Jews, who comprised most U.S. Jews, eating became the most pleasant and easiest way to reaffirm one’s Jewishness, and delicatessens and restaurants became rivals to the synagogue. Jews eager to profess their Jewish identity but unwilling to give up religiously prohibited foods did not have to observe the kosher dietary restrictions but could instead eat “kosher-style.” Other Jews preferred to observe the dietary laws at home but not outside, as if the purpose of these laws was to make houses and apartments, but not Jews, holy. Such preferences indicated how an essentially secular population could maintain its Jewish identity while preserving its freedom to choose. For such Jews, a home-grown U.S. Jewishness revolving around food and life-cycle events supplemented and even replaced the normative Judaism of the rabbis and the seminaries.

Philanthropy was another form of Jewish identity. U.S. Jews have supported an impressive number of religious and secular institutions—schools, hospitals, shelters, summer camps, museums, social welfare agencies, synagogues—even

though they never constituted more than 4 percent of the general population. These institutions have competed for a limited number of dollars, and much of organized Jewish life has revolved around fund-raising. By the early twenty-first century, U.S. Jews were giving several billion dollars a year to domestic and overseas Jewish causes. The most tangible manifestation of Jewish identity for many Jews was the checks they wrote, and status was largely determined within the official Jewish world by the size of these contributions. Skeptics believed this “check-book Judaism,” “I am because I give,” will be unable to sustain a strong Jewish identity because future generations will have different charitable priorities, and skeptics pointed out that a growing percentage of the dollars donated by U.S. Jews are going to non-Jewish institutions and causes. A major contribution to the Metropolitan Museum of Art or to Harvard University has more cachet within the general society than one to Yeshiva University or to the Jewish Theological Seminary. In the face of widespread acculturation, it is unlikely that Jewish institutions and causes will continue to attract the same level of support, just as it is unlikely that Jews will continue to gravitate to Jewish foods and restaurants offering traditionally ethnic cuisine.

Liberal politics was yet another source of Jewish identity. For some Jews the essence of U.S. Jewish identity was a political liberalism derived from “Jewish values.” The belief that liberalism was the essence of U.S. Jewish identity was the theme of Leonard Fein’s 1988 book, *Where Are we? The Inner Life of America’s Jews*. Only a concern for economic and social justice, Fein wrote, “can serve as our preeminent motive, the path through which our past is vindicated, our present warranted, and our future affirmed.” This emphasis on the centrality of liberalism to Jewish identity left unexplained why the most Jewish of U.S. Jews, those living in Orthodox enclaves in New York, New Jersey, Florida, and elsewhere were not sympathetic to the liberal political agenda that supposedly flowed inevitably from Jewish values. If liberalism was the essence of Jewish identity, then those who ate only Jewish foods, wore only Jewish clothing, had only Jewish spouses, and read only Jewish books should have been ardent supporters of modern liberalism, but this was hardly the case.

Judaism and U.S. Jewish Identity

The question of identity shaped the history of Judaism in the United States. The fluidity of U.S. life and its openness to religious diversity encouraged the emergence of new

Jewish religious forms that were more compatible with middle-class U.S. norms than was European-style Orthodoxy. From the beginning of Jewish settlement in the United States, Jews sought to demonstrate that they were 100 percent U.S. citizens and that Judaism was fully compatible with U.S. values. At the dedication of the Beth Elohim synagogue in Charleston, South Carolina, in 1841, Rabbi Gustav Poznanski declared, "This synagogue is our temple, this city our Jerusalem, this happy land our Palestine." This reconciling of Jewish and U.S. identities became the life work of Isaac Mayer Wise, the greatest figure in U.S. Judaism during the nineteenth century, if not in all of U.S. Jewish history.

Wise preferred to use the term *American Judaism* rather than *Reform Judaism* when referring to the Judaism he hoped to see spread throughout the land. He even believed that a suitably Americanized Judaism might eventually become the majority U.S. religion. He titled his 1857 prayer book *Minhag America (American Custom)*, he named his organization of synagogues the Union of *American Hebrew Congregations*, and he called his organization of rabbis the Central Conference of *American Rabbis*.

In 1885 a group of rabbis affiliated with the Reform movement continued the Americanization of Judaism when they enunciated the Pittsburgh Platform. This statement of principles stressed the full compatibility of Judaism with U.S. values and rejected those elements of Judaism that distinguished Jews from other U.S. citizens. These included the dietary laws and the wearing of skullcaps in synagogue. (Reformers, it was quipped, were willing to give up traditional Judaism at the drop of a hat.) "We consider ourselves," the rabbis said, "no longer a nation, but a religious community, and therefore expect neither a return to Palestine, nor a sacrificial worship under the sons of Aaron, nor the restoration of any of the states concerning the Jewish state." One of the rabbis involved declared that the platform had freed U.S. Jews from "the yoke of Mosaic-Talmudical Judaism."

This redefining of Jewish religious identity continued in the United States during the twentieth century. A new form of Orthodoxy called Modern Orthodoxy or Centrist Orthodoxy appeared in the early twentieth century. Its advocates were convinced that European-style Orthodoxy had no future in the United States. Only an Americanized Orthodoxy, purged of irrelevant and embarrassing religious beliefs and practices and attuned to middle-class U.S. religious norms, such as English sermons and decorous behavior within the sanctuary, could attract the native-born and upwardly mobile. Within the Conservative movement,

Mordecai Kaplan, a professor at the Jewish Theological Seminary, developed a new approach to Jewish identity that came to be called Reconstructionism. Kaplan's 1934 book, *Judaism as a Civilization*, perhaps the most important book written by a U.S. Jewish theologian, argued that intellectual modernity was incompatible with a Judaism revolving around the worship of a personal God. He proposed rather to ground U.S. Judaism on a Jewishness that transcended religion. Jews were Jewish because they were part of a civilization, Kaplan argued, and he recommended that the synagogue should immerse its congregants in this civilization by sponsoring educational, cultural, and artistic activities. Although the Conservative movement rejected Kaplan's theology, many Conservative synagogues accepted his program. It became popular for Conservative synagogues to call themselves "centers," to have gymnasiums, game rooms, and catering halls, to employ youth directors, and to sponsor a full range of activities for adults and children, including game nights, trips to resorts, and Boy Scout chapters.

One of the more curious aspects of this metamorphosis of U.S. Judaism occurred in 1963 when Sherwin Wine, an atheist, founded the Society of Humanistic Judaism. By the early twenty-first century, the society had grown to include about thirty congregations. Nonbelievers have been a prominent part of Jewish history for centuries, but only in the United States did they feel compelled to manifest their ties to Jewishness within a quasi-religious setting of rabbis, congregations, statements of faith, canonical texts, and celebrations. The context for the society's founding was the rapid decline in the secular components of Jewish identity, the post-World War II religious revival, and the migration of Jews to suburbia where Jewishness was increasingly seen in religious terms. One manifestation of this was Will Herberg's *Protestant-Catholic-Jew* (1955), the most popular and controversial book published on U.S. religious sociology during the 1950s. Herberg, a left-wing intellectual turned conservative theologian, argued that with the coming to the fore of the grandchildren of the immigrants of the late nineteenth and early twentieth centuries, U.S. citizens, Jews included, were now likely to answer the question "who am I" in religious terms. There were either Protestants, Catholics, or Jews.

Pessimists and Optimists

By the twenty-first century, "identity" had replaced "anti-Semitism" as the great buzzword of U.S. Jewish discourse. This reflected a new concern with Jewish continuity and

even survival. The fundamental premise of U.S. Jewish life—that the Jewish and U.S. identities of U.S. Jews were mutually reinforcing—was no longer simply assumed but was now being seriously reexamined and even questioned. In June 1952, *Look* magazine published Rabbi Morris Kertzer's article titled "What Is a Jew?" Kertzer's answer was that a Jew was like everyone else but only more so. Jews and Christians, he wrote, "share the same rich heritage of the Old Testament. They both believe in the fatherhood of one God, in the sanctity of the Ten Commandments, the wisdom of the prophets and the brotherhood of man." Kertzer's piece was published at a time when the image of the United States as a Judeo-Christian country was being popularized. Left unstated was the obvious question: If Jews were like everyone else, and if being Jewish did not place distinctive demands on Jews, then why should Jews continue to identify as Jews?

This question became increasingly relevant in view of widespread acculturation, assimilation, and intermarriage. The sociologist Samuel Heilman ended his somber 1995 volume, *Portrait of American Jews: The Last Half of the 20th Century*, speculating on whether Judaism and Jewishness could survive in the United States. "If I am to be certain that my children and their children will continue to be actively Jewish," he wrote, "then the boat that brought my family here to the United States in 1950 may still have another trip to make." This hypothetical trip would be to the Jewish state of Israel. The political scientist Charles Liebman was also skeptical that Jewish and U.S. identities could be easily reconciled. In his 1973 book *The Ambivalent American Jew*, he argued that U.S. Jews were "torn between two sets of values—those of integration and acceptance into U.S. society and those of Jewish group survival." Liebman himself had affirmed the latter of these by migrating to Israel.

The pessimism of Heilman and Liebman regarding the status of U.S. Jewish identity was challenged by a group of sociologists who believed that, when other criteria were used to evaluate U.S. Jewry, the U.S. Jewish future was rather hopeful. These criteria included whether Jews had Jewish friends, whether the organizations they belonged to were Jewish ones, and whether they preferred to live among Jews. The survey research cited indicating that U.S. Jews still valued being Jewish, however, was unable to make any judgments regarding the quality of the Jewish identity of those polled. How important was it from a Jewish perspective if Jews interacted with one another on the golf course or in livingrooms while watching football games? Was there anything Jewish in the lives of such Jews worth surviving?

The major challenge to U.S. Jews has always been to establish that balance that could satisfy the demands of being both Jewish and American. At the end of the American Revolution, Mordecai Sheftall of Georgia wrote a letter to his son predicting that in this new U.S. society nothing will be beyond the aspirations of Jews. "An entire new scene will open itself," he prophesied, "and we have the world to begin again." Sheftall's descendants, as he had predicted, prospered in this new scene, but by the twenty-first century hardly any of them identified as Jews. And yet the experience of the Sheftall family is not the whole story. Jews, the historian Simon Rawidowicz pointed out, have been "an ever-dying people," and this remains true today in the United States when many question whether Jewish identity can survive the challenges of U.S. freedom, individualism, and opportunity. On May 5, 1964, *Look* magazine published an article titled "The Vanishing American Jew." *Look* soon vanished, but not the U.S. Jew. Whether *Look's* editors will have the last laugh, however, remains to be seen. Prophecy, as the Bible teaches, is the province of fools.

Judaism: Jewish Science

Jewish Science is a philosophy of Judaism that seeks to find health and happiness within a specifically Jewish context. First coined by Rabbi Alfred Geiger Moses (1878–1956) of Mobile, Alabama, in a slim volume entitled *Jewish Science: Divine Healing in Judaism* (1916), the term *Jewish Science* later became identified with small religious groups aimed at spreading its teachings. The most successful and long lasting of these was the Society of Jewish Science, founded by Rabbi Morris Lichtenstein (1888–1938) in New York City in 1922.

The explicit intent of Moses, Lichtenstein, and other leaders of Jewish Science was to stem the tide of U.S. Jewish attraction to Christian Science, a movement founded by Mary Baker Eddy in Boston in 1879. Although it is not clear how many Jews formally became affiliated with Christian Science, Reform Rabbi Stephen Wise guessed that by the 1920s, the years of Christian Science's greatest growth, there

were probably few Christian Science churches in the United States without Jews among their members. In 1928, Rabbi Louis Gross estimated that in Greater New York 100,000 Jews had become Christian Scientists, and Rabbi Samuel Felix Mendelsohn, writing in 1936, asserted that 70,000 Jews in New York City alone had become members. This figure is not inconsistent with an earlier figure from a column in the London *Jewish Chronicle* in 1924 that estimated that 60,000 Jews in New York City had joined Christian Science. Actually, the number may be as little as 4,000 and is probably no larger than 40,000. Still, throughout the 1920s and 1930s, a significant number of rabbis spoke out from the pulpit against this growing “defection.” The allure of Christian Science included its emphasis on spiritual healing, prayer, and the immanent power of God.

Alfred Geiger Moses and the Early Formulation of Jewish Science

Rabbi Moses envisioned the teachings of Jewish Science as creating a spiritual renaissance within the U.S. Jewish community. Asserting that the body was real, just as sickness was real to the sufferer, Moses maintained that the teachings of Christian Science, which denied the reality of the body's organs and functions, needed to be rejected as contrary to reason. In the revised 1920 edition of his book, he labeled *Jewish Science* an applied psychology of Judaism, equating divine healing with the power of autosuggestion. Throughout the 1920s, Moses traveled and lectured extensively, sharing his religious ideas in synagogues and auditoriums throughout the United States. He participated in conferences that focused on spiritual healing and lectures to groups associated with the Protestant-based alliance New Thought. Although most New Thought adherents did not deny the reality of physical illness or death, they focused their attention on those functional diseases from which modern middle-class men and women were prone to suffer, such as nervous tension, sleeplessness, excessive worry, and depression. It was their belief, as it became the belief of Jewish Science, that such illnesses could be cured through right thinking and moderate living. Beginning with the presupposition that happiness is normal and that we possess the power within us to retain or achieve this normal state, leaders of New Thought, like secular psychotherapists, emphasized the power of suggestion in conquering disease and attaining health. Although some, such as those later affiliated with Jewish Science, may have advocated the use of modern medicine in helping to fight such diseases, they believed, as

did Christian and Jewish Scientists, that ultimately the mind governs the body.

Without explicitly acknowledging his indebtedness to New Thought, Moses was clearly influenced by its ideas. One can see this influence in his description of silence as a mental technique and spiritual state, ideas taken from Ralph Waldo Emerson and other transcendentalists (who greatly influenced New Thought teachings) and Ernest Shurtleff Holmes, founder of what eventually became known as the (New Thought) Church of Religious Science. Yet equally important was the influence of classical Reform Judaism. The son of Rabbi Adolph Moses, one of the leaders of nineteenth-century Reform, Alfred Moses viewed the recognition of the God-consciousness within not as a realization of one's own internal power, as it was for members of New Thought, but rather as an awareness of God's presence, or, echoing Reform's concept of mission, a bearing witness to the reality of God. The identification of the divine with one's conscience, the prophetic "still, small voice" within, was a belief Alfred Moses shared with many Reform rabbis of his day. Moreover, his insistence that communion with the divine led one to seek righteousness and truth because God is not just the source but the law of morality, reflected Moses' concept of Judaism as ethical monotheism, the heart and soul of classical Reform Judaism.

Between 1917 and 1922, Moses received letters from traditional and Reform rabbis who praised his work and from Jews already attracted to the ideas of New Thought. Some began to conceive of ways in which groups might be formed to study and live by Jewish Science teachings, and at least one group in New York City, which identified itself as both the First Society of Jewish New Thought and the Jewish New Thought Center, was formed as a result of Moses' writings. The group's founders and leaders were Lucia Nola Levy and Bertha Strauss, two Jewish women who sought to spread throughout the U.S. Jewish community the message of health and happiness, as articulated by Moses and New Thought preachers. Although their initial hope was that Moses himself would move to New York to lead the group, there is no indication that Moses ever approached his congregation in Mobile with these plans. Indeed, the minute books of Sha'arai Shomayim's Board of Trustees reveal Moses' apparent satisfaction with his work and his hope for remaining the congregation's spiritual leader. Moses did, however, accept Levy and Strauss' invitation to lend his name as honorary president of their organization, which was formally established in the fall of 1920 as the First Society of Jewish New Thought.

In February 1921, Levy and Strauss considered applying for membership in the International New Thought Alliance (INTA). Approaching James Edgerton, president of INTA, about her intentions, Lucia Nola Levy made it clear that although dedicated to the principles of New Thought, their center did not equate the divine with an inner Christ-consciousness. She thus needed to know whether in joining the alliance they would be presumed to be assenting to specific theological propositions that ran counter to Jewish beliefs. Edgerton assured her that as long as they believed in the power of the mind they were welcome to join, but his address to INTA members, in which he remarked that the only way to salvation was through "Jesus, the Christ," convinced Levy that INTA was indeed a Christian organization and that Jews, as Jews, were not welcome.

The Development of Jewish Science as a Movement

By late 1921, Levy decided to step down as the society's leader, and Strauss began the search to replace her. In December, the *New York Times* proclaimed, "Society of Applied Judaism (formerly known as Jewish New Thought) announces lectures and classes to start in January [with] Rabbi Morris Lichtenstein [as] lecturer and teacher." By the end of January 1922, Lichtenstein (1888–1938) had become far more than Lucia Levy's replacement. He began to reevaluate and redefine the teachings of the society, hoping to create a movement that was less indebted to the teachings of Alfred Geiger Moses than to his own. There is no evidence to suggest that Moses or Lichtenstein were ever in direct contact with one another. Moses retained a great interest in Jewish Science, and at least hundreds of Jews continued to read and were inspired by his earlier writings, but he focused on his daily responsibilities as a congregational rabbi while fighting what by the 1940s had become a losing battle against his own slowly deteriorating mental health. Ironically, despite his belief that mental illness was an illusion, Moses spent the last years of his life in the state mental institution.

Without denying the significance of modern psychology, both Morris Lichtenstein and his wife Tehilla Hirschensohn Lichtenstein (1893–1973), who succeeded him, emphasized the theological insights of Jewish Science. Viewing God as a non-supernatural power or divine mind within every human being, they insisted that each individual has the capability to tap this inner power through such methods as visualization and affirmative prayer to overcome worry and fear and achieve happiness, health, calm, and other states of

personal well-being. Drawing on Jewish literary and liturgical sources in their sermons and published writings, they made the Jewish context of Jewish Science clear. This context was further illuminated through religious school classes, writings by the Lichtensteins that appeared in the monthly *Jewish Science Interpreter*, and weekly Sabbath and holiday services held in Manhattan and, from 1956 to 1977, at the society's synagogue in Old Bethpage, Long Island.

Reform Rabbi Clifton Harby Levy (1867–1962), who helped establish and led the Manhattan-based Center of Jewish Science from 1924 until his death in 1962, emphasized the efficacy of both affirmative and petitionary prayer. Although he also focused on God as healer, he drew on more traditional images of divinity, describing prayer as a feeling of closeness to God rather than a feeling of one's own internal power. A member of the Central Conference of American [Reform] Rabbis (CCAR) until his death, as were Morris Lichtenstein and Alfred Geiger Moses, Levy helped popularize Jewish Science ideas within the Reform movement. He created educational programs on Jewish Science for use by Reform congregations, delivered a major address on spiritual healing at the annual CCAR conference in 1927, and kept alive within the CCAR issues concerning medical and religious cooperation. In 1937, thanks to the efforts of Levy and others, Hebrew Union College in Cincinnati offered as part of the rabbinical school curriculum its first elective course in pastoral psychology. A course in pastoral counseling has long since become a requirement in the rabbinic program of its Cincinnati, New York, and Los Angeles campuses, and similar courses are now offered at other rabbinic institutions.

Jewish Science Today

The Society of Jewish Science, the largest of the Jewish Science groups, reached a membership peak of one thousand during Morris Lichtenstein's tenure as leader (1922–1938). By 2008, under the governance of an executive director and a board of directors, with religious services and study classes led by Rabbi Joyce Reinitz, a graduate of the trans-denominational seminary, the Academy of Jewish Religion, the society's membership was less than 150. In 1995, the society purchased a brownstone in New York City that houses its administrative offices, a Judaica library, and a sanctuary. Based in New York, the society, which also identifies itself as the Center of Applied Judaism, has a number of volunteer-led chapters on the West Coast as well. In numbers, Jewish Science never grew significantly as a movement.

Still, the teachings of Alfred Geiger Moses, Morris and Tehilla Lichtenstein, and Clifton Harby Levy have directly affected thousands of U.S. Jews. Thanks to the Society of Jewish Science, the works of the Lichtensteins are particularly accessible. Predating the current Jewish interest in spiritual healing by more than seventy years, Jewish Science's emphasis on the connection between the mind and the body; its belief that illness cannot be overcome by medicine alone; the use of visualization, affirmation, and meditation to discover and draw on one's inner divine powers; and its overriding message that to *do* well one must *be* well, remain Jewish Science's greatest legacies.

Judaism: Orthodox

Orthodox Judaism teaches that Jews are obliged to follow the *halacha* (Jewish law), which it believes was first dictated by God in the Torah, through the theophany on Mt. Sinai, and as applied authoritatively by the rabbis in the Talmud and in the later codes of Jewish law. The freedom and

opportunities the United States granted to its Jews have posed daunting challenges to the perpetuation of Orthodox Jewish life. The openness of U.S. society and culture and the desire of this minority group to advance and to live harmoniously with those around them have caused most Jews to either ignore or to oppose traditional regulations that might retard their integration or mobility. Given the legal separation of church and state and the religious voluntarism that have contributed to the U.S. way of life, Orthodox religious leaders and institutions have had few weapons available to prevent masses of Jews from disconnecting from the faith and its practices. Moreover, since the mid-nineteenth century, U.S. Jews who wished to maintain a religious identity but did not care for Orthodoxy's strictures have had the option of affiliating with other Jewish religious expressions, most notably Reform or Conservatism. These modern movements have either—in the case of Reform—rejected the bindingness of the Jewish legal system or have offered—as in the case of Conservatism—a more nuanced understanding of the halachic system.

In response, Orthodox officials and their institutions have manifested two basic modalities of behavior. *Resisting* rabbis and lay leaders have attempted to avoid changing the teachings and practices of the faith despite the pressures of the host culture. They have often rejected even making sociological modifications in Orthodoxy's ways—such as Americanizing or anglicizing religious services—at the expense of losing potential adherents. These preservers of past policies and procedures have generally been intolerant toward co-religionists who made very different types of religious decisions.

Accommodationist Orthodox leaders—sometimes even more than their Reform and Conservative counterparts—have been the object of the resisters' ire and critique. By definition, the accommodationists have believed that sociological modifications can be made in Orthodoxy's outlook in encountering U.S. culture. For example, they had few problems using English in worship services. Otherwise, this most traditional Jewish religious expression would have little chance of maintaining the allegiance of most acculturated Jews. Accommodationists have been far less perturbed than resisters about the ideas and activities of more modern Jewish expressions. Occasionally, these Orthodox rabbis and lay spokespeople have found common cause with Conservatives and Reformers in fighting against assimilation.

Variant approaches among rabbis often had much to do with where and how they were trained. U.S.-educated

Orthodox rabbis usually were more lenient than were their European-ordained counterparts. Strictness also had much to do with where the rabbi was located in the United States. In most cases, rabbis who worked within large eastern urban centers were more dogmatic than were colleagues who served smaller Jewish communities. The various approaches that Orthodox lay leaders harbored have been even more variegated.

“Orthodox” Life in Early U.S. Jewish History

From the beginnings of Jewish settlement in the United States in the seventeenth century, until the mid-1820s, when Jews attended a synagogue, they prayed and socialized in an “Orthodox” synagogue. (That nomenclature only entered the Jewish lexicon in the nineteenth century when religiously liberal critics used that term to denigrate their traditional opponents as fossilized and unresponsive to modernity.) There were eight synagogues in the United States, the oldest of which was the Shearith Israel in New York, and most of them adhered to the Sephardic (descendent of Spanish Judaism) rite. Outside the precincts of congregations, however, most Jews did not adhere to halachic strictures. In many times and places, the unavailability of the basics for maintaining religious life—such as kosher meats or wines, Passover matzos, or sacred books and objects—made observance difficult. The U.S. Jews' desires to advance in this country also caused them to work on Saturday at the expense of Sabbath (Shabbat) observance. In addition, the miniscule population pool made finding a Jewish spouse problematic. Moreover, there was a general absence of trained religious functionaries to help those who were interested in maintaining ancestral traditions. The first ordained rabbi, Abraham Rice (1800–1862) from Gochsheim, Germany, did not arrive in this country until 1840. Before then, itinerant—and in larger towns, permanent—Jewish all-purpose functionaries served their communities as cantors, ritual slaughterers, and performers of circumcisions and officiated at weddings and so forth.

In response to religious nonconformity, lay leaders who controlled U.S. Jewish congregational life vacillated between inclusionary and exclusionary policies. Hard-line protocols prescribed fines and denial of synagogue rights and honors to those publicly known to be less observant than the rule setters. Accommodationists, on the other hand, overlooked the activities of religious miscreants. Synagogues frequently oscillated over time between the two positions. Accommodationists made few efforts to change the way the Orthodox

service was conducted to make worship more attractive to potential members. A noteworthy adjustment began in the mid-eighteenth century with the creation of open galleries for women worshippers who chafed at their inability to see activities at the altar. This architectural departure also satisfied the Jews' need to conduct themselves, and to build their religious edifices, in a U.S. way to garner the approbation of their non-Jewish neighbors.

Mid-Nineteenth-Century Denominational Challengers

Beginning in the 1830s, in addition to dealing with the ongoing dilemmas of nonobservance, Orthodox Jewish leaders faced the challenges that liberal Judaism posed. Incipient Reform and Conservative congregations were established; most stemmed from immigrant Orthodox roots. These religious opponents proffered attractive forms of religious life. Keeping up with their desire to conform to U.S. styles of public prayer, many who affiliated with these modern congregations liked their new synagogue's family pew seating. They also were attuned to the shorter, English-based service that often included the playing of instrumental music and a mixed-voice choir. Moreover, these liberal expressions of the faith were popular because they countenanced personal Jewish religious lifestyles that deviated from traditional practice.

Some prescient Orthodox groups fought to prevent transformation of their synagogues—before they lost out in membership plebiscites—through social adjustments in their services. For example, to project themselves too as U.S. congregations, accommodationist elements added English prayers and discourses to the traditional devotions, emphasized the need for decorum during the prayers, and curtailed or abolished the unsightly sale of synagogue honors. More combative Orthodox forces rested their hopes for institutional survival upon strict exclusionary control of synagogue governance—such as restricting who could vote on ritual policies. The most resistant cohorts placed their faith on even stricter exclusionary policies, such as denying membership to Jews known to be Sabbath violators. When Orthodox efforts failed within congregational ranks, there was also the option of seeking civil court relief. There, the disenfranchised argued that reforms violated publicly filed articles of incorporation that specified that services be run along Orthodox lines. However, few of these synagogues remained Orthodox through the end of the 1870s. Some were drawn into the Reform or Conservative orbits. Others

became comfortable with a hybrid ceremonial. They called themselves “Orthodox,” but despite halachic constraints, they permitted men and women to sit together during prayers even as they disdained other liturgical changes. Indeed, when the Union of Orthodox Jewish Congregations of America (OU)—that movement's first national Orthodox organization—was created in 1898, a number of its constituent synagogues had family pews.

The leading accommodationist cantor—communal leader of the time, Isaac Leeser (1806–1868)—he was not an ordained rabbi—attempted to do more than to just hold sway within his congregation. He tried to both battle back against the tide of assimilation that undermined all religious efforts and to oppose the most radical of ideological expressions that deviated strongly from traditional religious teachings. So, for example, in 1855 Leeser joined with the then-compromising Reform rabbi Isaac Mayer Wise (1819–1900) and others in developing national religious unity schemes. The resultant Cleveland Conference dealt programmatically with the idea of a universally acceptable U.S. ritual but also directly addressed the radicalism that the inflexible Reform rabbi David Einhorn (1808–1879) advanced.

Thirty-one years later, in 1886, Rabbi Sabato Morais (1823–1897) brought together a more important coalition. To combat the antinationalistic and antitraditional ritual postures that the Reform movement adopted in its 1885 Pittsburgh Platform, Morais led rabbis Henry W. Schneeburger (1848–1916), Henry P. Mendes (1852–1937), Bernard Drachman (1861–1945), and other Orthodox spokesmen into an alliance with Conservative leaders. Together they formed an institutional bulwark against the growth of Reform in the United States through the Jewish Theological Seminary (JTS), a school that at its inception—and long thereafter—trained rabbis who occupied both Americanized Orthodox and Conservative pulpits.

Varieties of Orthodoxy among Immigrant Eastern European Jews

With the arrival of eastern European immigrants en masse starting in the early 1880s, Jewish denominational strength in the United States changed dramatically. Soon—certainly by 1890—the hundreds of immigrant Orthodox synagogues that served the spiritual and social needs of tens of thousands of newcomers outnumbered the existing Americanized congregations. But even as transplanted Orthodox piety was on large-scale display daily and on the Sabbath within the sacred precincts of downtown neighborhoods, most

immigrants were not committed to Orthodox regulations. In other words, when Jews in the first settlement quarters attended services, they had to be at an Orthodox shul of the eastern European variety. However, as they strove to advance in this country, they attended their *shtetls* (storefront synagogues) with ever decreasing frequency. Many new Americans did not have time for long Sabbath services, if they worked on the Sabbath day.

The world of transplanted Orthodoxy held little attraction to the children of immigrants. They could not relate to the Old World social mores and languages that resounded through their parents' synagogues. As second-generation U.S. citizens, anxious to succeed, they had even less patience than did their elders for Orthodox religious obligations that would retard their progress.

Organized in 1887, the Association of Orthodox Hebrew Congregations, representing fifteen of the largest congregations on New York's Lower East Side, promoted a fundamentally resistant approach toward addressing religious problems. The plan focused on a chief rabbi who would inspire a religious revival among the immigrants and their children. That same year, they recruited Rabbi Jacob Joseph (1848–1902) from Vilna and assigned him the difficult mission of engendering mass commitment to Old World religious values. Specifically, he was to motivate adults and young people to observe the Sabbath more scrupulously. He was to convince parents to send their sons to the Yeshiva Etz Chaim, the small *heder* (Jewish school) established a year earlier in the neighborhood. In this highly parochial Jewish educational environment, youngsters would be spared the assimilatory pressures of U.S. public education. And Rabbi Joseph was told to bring order to the always unmonitored and often corrupt kosher meat industry.

Despite all of his best efforts, this country's culture proved too powerful to overcome. Even downtown rabbinical families acted just like the immigrant masses. Caught up in the lures of the promises of public education, they also refused to remove their children from those schools. The chief rabbi also could not control the lay leaders who tampered with his efforts. The rabbi wanted to supervise kosher meat markets without passing the costs on to consumers. The association's leaders demanded a surcharge on such produce—a move that infuriated many downtowners and weakened further Rabbi Joseph's hold upon potential followers.

In the days immediately following Rabbi Joseph's death in 1902, a more enduring effort was hatched to inculcate an Old World religious way of life within the United States.

The Agudath ha-Rabbanim (Union of Orthodox Rabbis of the United States and Canada [UOR]), made up initially of fifty-nine eastern European-trained rabbis, recognized that it would take a continent-wide organization and many pooled resources and energies to counteract Americanization. In one of their first acts, these committed resisters designated the Yeshiva Rabbi Isaac Elchanan—also known as the Rabbi Isaac Elchanan Theological Seminary (RIETS)—as its favored U.S.-based institution. Founded in 1897, this extension of Yeshiva Etz Chaim, and the forerunner of the rabbinical school of Yeshiva University, trained rabbis as they were then being educated in the great Lithuanian yeshivas. It offered Torah and Talmudic studies exclusively, with no regard for modern professional, ministerial grounding.

However, for all its difficulties with the New World around them, the UOR, over time, compromised with the realities of Jewish life in this country. For example, the association maintained its support for the Yeshiva while that school, between the beginning of the twentieth century and 1915, moved slowly toward introducing the practical sides of modern rabbinical training into its curriculum. In acquiescing to the changes that the Yeshiva's first permanent president, Dr. Bernard Revel (1885–1940), brought to the school, the UOR tacitly acknowledged that for young Orthodox ordainees to be competitive, both against assimilation and the graduates of the Conservative Seminary, the Yeshiva could Americanize its operation.

If the Agudath ha-Rabbanim grudgingly recognized that some U.S. realities had to be served, the Union of Orthodox Jewish Congregations of America openly admitted that to survive, Orthodoxy had to work within this country's culture. This accommodationist organization developed new congregational, political, and educational initiatives to suit the lifestyles of Americanized second-generation constituents. As early as 1900, its youth wing began organizing modern Orthodox services under the auspices of the Jewish Endeavor Society (JES). Conducting its devotions on Shabbat afternoons—after the U.S. work week was completed—it opened its doors to young folks who were laboring while Saturday morning prayers droned on in half-filled immigrant synagogues.

The Endeavorers demonstrated fidelity to Orthodoxy through their gender-separation during prayers, use of the traditional prayer book, and maintenance of unabridged services, complete with the Saturday p.m. Torah reading. Their modernity was evidenced through the weekly English language sermons, the recitation of some prayers in that

vernacular, and ancillary congregational activities such as synagogue suppers and Saturday night dances. A more enduring Young Israel movement beginning in 1913 continued JES work within, and beyond, immigrant Jewish neighborhoods for several additional generations.

While the JES opened its doors wide to those who had to work on the Jewish holy day, the OU's political wing lobbied hard for the removal from the onerous blue laws that legally undercut observance of the Sabbath. On the educational front, the OU accepted that immigrant Jews of their time believed that their children had to receive a public school education. The OU endeavored to capture youngsters back toward Jewish life by developing modern Talmud Torahs. Operating during the available after (public) school hours, these institutions offered boys and girls educational, social, and recreational activities designed to make them feel comfortable with a new U.S. Jewish identity, rooted in traditional teachings.

Interwar Crises and Compromises

The years between the two world wars witnessed new challenges for American Orthodoxy's resisting and accommodating groups. The Old World-looking contingent faced the reality that many of its transplanted rabbis and much of its base of lay followers died between 1920 and 1940. And the strict immigration quotas that Congress passed in 1924 limited the number of first-generation Jews whom the Agudath ha-Rabbanim's members might seek to influence. If these resisters harbored any optimism, their faith rested with an idiosyncratic group of second-generation Jews that resided primarily in interwar Brooklyn, New York. These youngsters came from families that did not succumb to most of the lures of Americanization that transformed other Jews and supported the establishment of yeshivas such as Williamsburg's Mesifita Torah Vodaath—or its distaff counterpart Bais Yaakov—ensconced in that same neighborhood or Yeshiva Chaim Berlin of Brownsville. A few like-minded schools could be found elsewhere in New York and in Baltimore and New Haven. These institutions tried to renew the effort—that had once fired up the old Etz Chaim-RIETS crowd—to reconstitute the past religious civilization on foreign U.S. soil. These resisters did not approve of Bernard Revel's compromised efforts to raise well-integrated U.S. Orthodox rabbis and lay people. Only several thousand families were then part of this effort, but these communities formed a home base for even greater separatism among post-World War II resisters.

Concomitantly, accommodating rabbis continued their struggle to intrigue the majority of generally disinterested U.S. Jews. Often these Orthodox leaders did what their Conservative counterparts did outside the sanctuary. Within their own synagogue centers, they promoted a broad range of ancillary activities, from dances to sports to theater productions, all predicated on the notion that those who came to play might be convinced to stay to pray. Some of these rabbis went even further in approximating what Conservatives did and adjusted synagogue practice to conform to congregants' lifestyles. Many OU affiliates sat men and women together during services, particularly during the high holidays, when many Jews appeared for their yearly visit and wanted to sit with their entire family around them. These, and other, self-defined Orthodox synagogues often conducted late Friday night services to attract those who would not leave work at early sun-down during winter-time. By the early 1940s, accommodations that violated halachic strictures were commonplace enough that the lines of demarcation between U.S. Orthodoxy and Conservatism were effectively blurred. This lack of distinctiveness was particularly true among midwestern and southern Jewish communities. But commonalities of practice could also be found within Orthodoxy's New York epicenter, though not in the heart of the Brooklyn resistant neighborhoods.

Postwar Transformations

After World War II, accommodationist Orthodoxy followed U.S. Jewry to suburban locales and there began to battle against Conservatives, and to a lesser extent Reformers, for the allegiance of the next generation. A robust competition among these Jewish movements took place during an era of religious revival when it was an important national value to affiliate with the religion of your choice. In projecting their version of the faith, members of the Rabbinical Council of America (RCA)—founded in 1937 and made up primarily of RIETS graduates—were highly inclusive of all Jews who might approach their synagogue's portals, regardless of personal levels of observance. In keeping with their traditions, from interwar days, these rabbis continued to approximate what liberal Judaism's leaders did outside of sacred spaces. Where postwar modern Orthodox rabbis differed from their immediate predecessors was in their lack of tolerance for congregations and their religious leaders that called themselves Orthodox but deviated from the halacha in their synagogue practices.

Much of the confidence that this new breed of RIETS rabbi effused can be attributed to the presence in their midst of Rabbi Joseph Soloveitchik (1903–1993). As the most distinguished *Rosh Yeshiva* (Talmudic sage) at RIETS, he set, for hundreds of disciples, authoritative parameters for what constituted acceptable forms of approximation of what the Conservative movement was doing. Although accommodationist Orthodox rabbis and their lay supporters won only a minority of the campaigns for Jewish allegiances on the suburban frontiers, they were secure in their minority status.

The early postwar years also saw a new beginning for strident resistant Orthodoxy. Some of the refugees from and survivors of the Holocaust added members and vitality to old-line forces. These newcomers were the people who had implicitly harkened to the advice of those eastern European sages who admonished believers against settling in the *treif* (also *trefa* or *traif*, meaning unkosher) United States. Now in this county because their world had been destroyed, these so-called Yeshiva World groups or Hasidic sects went about recreating European Jewish conditions on U.S. soil with emphatic zeal. The Yeshiva World constituencies retained their allegiance to the tradition of rarefied Jewish learning that was the hallmark of the seats of Lithuanian Torah centers of the prior centuries. The Hasidic cohorts were deeply loyal to the pietistic values and the charismatic leadership of their “Rebbs” who personified and upheld religious traditions that stemmed from seventeenth-century Polish, Romanian, and Hungarian Jewish roots.

Spokesmen for this group—whether they identified organizationally with the Agudath Israel (the U.S. branch of this European-based organization founded in 1913 that rose to prominence in the United States subsequent to World War II), with the long-standing UOR that the Agudath effectively took over after 1945, or with independent Hasidic entities—had little good to say about accommodationist Orthodoxy. And they were dogmatically opposed to cooperation with, and even recognition of, more liberal forms of Judaism. One early sign of these resisters’ presence on the U.S. scene was the demand of the UOR’s Council of Torah Sages, in 1956, that the OU and RCA cease their work with the interdenominational Synagogue Council of America. That some RIETS faculty members and some RCA members acceded to that demand evidenced the beginning of the resisters’ impact on accommodationist values.

In the most recent period (since the 1970s), accommodating rabbis have ministered to a different type of Americanized

constituency. A winnowing of Orthodoxy took place during these decades as the number of Jews who identified with that movement declined. Many of its less-observant types who had affiliated out of filial piety or nostalgia became more comfortable in Conservative and Reform settings. But those who remained in most modern Orthodox synagogues—particularly in this country’s largest Jewish urban centers—tended to be punctilious in their observances, notwithstanding their high degree of acculturation to U.S. society. However, in smaller U.S. towns and cities, many less devoted types still could be found in Orthodox precincts.

The modern followers of halacha were, more often than not, products of the burgeoning Orthodox Jewish day school movement, an institution that had been born in the 1920s and 1930s but that expanded exponentially in the postwar period. There, youngsters were educated in the ways of living harmoniously with both Jewish religious and U.S. secular cultures. And although not all of its products remained within the fold, many of its alumni, Orthodox “baby boomers,” rose to community-leadership positions. Meanwhile, as the twenty-first century began, the growing camp of resisters—its birth rate was much higher than that of any other cohort of twenty-first-century Jews—was becoming ever more resolute in its mission. Indeed, its social values and way of life, from its dress and speech, to its strict rules on gender separation, even to its undervaluing the importance of secular education, permeated deeply into the behavior and consciousness of observant, modern Orthodox Jews.

Contemporary Resisters versus Accommodators

By the end of the first decade of the twenty-first century, Orthodox resisters and accommodators are far from agreeing on all social policy and religious issues. One major measure of demarcation both between and within factions is their attitude toward female roles in their communities’ congregational and social life. Generally, resisters have not countenanced the active participation of women within their synagogues. Indeed, these men and women have loudly opposed what they perceived as the deleterious impact feminism has had on U.S. Jewish life. They have censured liberal Jewish leaders for their broad redefinitions of women’s roles and have criticized those Orthodox accommodators who have stretched the halacha to allow women greater public ritual and religious leadership.

At the same time, those who have altered the architecture of synagogues to make women more comfortable in

Orthodox precincts, who have elected women as presidents of their synagogue boards, or who, beginning in the 1970s, have supported the creation of women's *tefilla* (Orthodox prayer) groups have acted in accord with their long-standing belief that for traditional Judaism to survive here, it had to, and could, adjust to the U.S. environment. These accommodationists have not always agreed about the degree of female participation permissible in religious life. Although the most progressive have even appointed women to quasi-clerical positions in their synagogues and have predicted that eventually women will be ordained and recognized as Orthodox rabbis, others have focused their efforts on providing women with ever-increasing Jewish educational opportunities comparable with those available to men. In 2000, a new Orthodox rabbinical seminary, Yeshiva Chovevei Torah, was established in New York to train "Open Orthodox" rabbis committed to strong accommodationist religious policies. Nonetheless, as the new century has begun to unfold, the sympathies of most committed Orthodox Jews in the United States have increasingly gravitated toward resistance of many contemporary U.S. mores, albeit in a variety of nuanced degrees.

Judaism: Reconstructionist

Reconstructionist Judaism emerged as a school of thought in the United States in the mid 1930s but did not become a separate denomination in U.S. Jewish life until the founding of the Reconstructionist Rabbinical College in 1968. Reconstructionist Judaism is based on the philosophy of Mordecai M. Kaplan (1881–1983), who denied the divine origin of Jewish text, ritual practice, and culture, and sought to provide an alternative rationale for maintaining Jewish life. Completely rejecting Jewish chosenness, Kaplan forwarded a thoroughly non-supernatural view of God. Reconstructionism continues to adhere to these core principles, but its ideology has evolved in response to contemporary spiritual sensibilities and concerns.

Reconstructionism's Ideological Founder: Mordecai Kaplan

Like his father, Kaplan was an ordained Orthodox rabbi. Mordecai's early exposure to biblical criticism, coupled with his later studies in sociology, led him to view religion as the product of group creativity emerging gradually from shared experience. In his eyes, a thriving Jewish community became a prerequisite for continued Jewish vitality. At his first pulpit in New York, the Orthodox synagogue Kehillat Jeshurun, Kaplan concluded that the younger generation no longer believed in the divine origin of the tradition and had no alternative rationale for living as Jews. He began searching for a Jewish theology based on "some tenable faith which would not be refuted by established facts," a theology that would revitalize the new generation's commitment to Judaism.

Kaplan left Kehillat Jeshurun in 1909 to teach at the Jewish Theological Seminary. In 1922, he founded the Society for the Advancement of Judaism (SAJ), a synagogue in which to put into practice his emerging vision. His work in these two contexts was crucial to the development of Reconstructionist thought. Both Kaplan's innovative *Passover Haggadah* (1941) and *Sabbath Prayer Book* (1945) were originally developed for use at the SAJ. The first U.S. bat mitzvah—that of Kaplan's eldest daughter, Judith—took place soon after the SAJ was inaugurated.

Core Principles

Kaplan argued that Judaism is a religious civilization or culture. Like other cultures, Judaism has a special relationship to a particular territory (Israel), its own language (Hebrew), shared practices (rituals), stories, beliefs, and ideals

that justify these practices, communal structures, and forms of artistic expression. These have evolved naturally over time and have been reinterpreted, occasionally changed, and frequently supplemented in response to new needs and modes of thinking. As a culture, Judaism's value lies not in its supernatural origins—which he denied—but in its making positive contributions to the lives of its members. For Kaplan, the performance of Jewish rituals and the study of Jewish texts help form and maintain group consciousness, cultivate appreciation for life, enrich daily living, encourage moral behavior, and sensitize Jews to God's presence. All the elements of Judaism are essential to maintaining it as a separate, vibrant, and relevant civilization.

Kaplan criticized the Reform movement of his day for diminishing Jewish ritual usage and dismissing essential elements of Jewish civilization, including Hebrew and the land of Israel. He also believed a more radical approach to Jewish life, rather than a Conservative Judaism approach, was needed—one that would deal with laws and rituals inconsistent with contemporary belief and modern morality. Such laws and rituals turned Jews away from their tradition, could not be performed or followed wholeheartedly, and undermined Judaism's ethical stance. Kaplan maintained that changes that help preserve Jewish civilization are self-justifying and do not need to be sanctioned by Jewish law. He believed that Jews should gather in their communities and democratically formulate standards for Jewish ritual and institutional life in a process where “the past has a vote, but not a veto.”

Kaplan did not believe in a personal, supernatural God who controls nature, performs miracles, reveals his will in discrete words, or punishes evil and rewards good. For Kaplan, the biblical view of God is undermined by human experience and by scientific discoveries. Kaplan did believe, however, in a creative force that “brings all nature under the operation of dependable law” and is manifest “in all creativity and in all forms of sovereignty that make for the enhancement of human life.” This godly force guarantees that over time, all of humanity's attempts to improve society will succeed. Its essential role in the promotion of universal good allows continuity with traditional concepts, such as the view of God as Creator and Redeemer, and the idea of living a life that reflects God's will, albeit God's will as understood by people. The unconscious nature of the godly force Kaplan proposes negates other traditional concepts, however, such as chosenness (for an unconscious natural force affects everyone equally), and prayer as dialogue. Prayer becomes, instead, a

vehicle for expressing hopes, reconnecting with ideals that should inform our lives, and developing mindfulness.

Kaplan's approach to the reconstruction of Judaism is well reflected in the many liturgies that he edited between 1941 and 1963. These rid the texts of formulations that he considered either theologically untenable or morally unacceptable. To streamline the text, repetitions were eliminated and prayers of lesser standing in Jewish law and historical memory were shortened. These were replaced by a large selection of new readings—given in both English and Hebrew—that voiced the prayer book's themes in a modern idiom and addressed issues that Kaplan felt were missing from the inherited text. The radicalism of these changes is counterbalanced by maintaining the structure of traditional prayer, most of its central texts, and the prevalence of Hebrew. The goal is to make Jewish prayer more edifying while preserving its historical character. Change is not intended to make the tradition easier to follow but rather more worthy of being followed.

Reconstructionist Institutional History

The publication of Kaplan's *Judaism as a Civilization* in 1934 was a turning point for the dissemination of Reconstructionist thought, the first complete exposition of its author's views. To capitalize on the interest generated by the book, Ira Eisenstein, Kaplan's son-in-law and assistant rabbi at the SAJ, suggested founding a journal devoted to Reconstructionist ideology. The SAJ board of trustees agreed to sponsor the undertaking, and Kaplan and Eisenstein assembled an editorial board chaired by Kaplan and consisting of past supporters, including Eisenstein, Eugene Kohn, and Milton Steinberg. The first issue of *The Reconstructionist* appeared on January 11, 1935, and it remains a major vehicle for the exposition and examination of Reconstructionist thought.

In his book, Kaplan critiqued the existing Jewish religious movements in the United States. Many of his supporters now expected him to sever ties with the Jewish Theological Seminary (JTS)—which by the 1920s had become the rabbinical seminary of Conservative Judaism—and declare Reconstructionism an alternative denomination. Kaplan refused, believing that the proliferation of separate movements undermined the Jews' sense of interconnection and that consciousness of kind was essential to group vitality. In his view, if the philosophy was properly explained and understood, it could be adopted within the existing denominations. In particular, Kaplan hoped that Conservative Judaism would formally recognize Reconstructionism as its left wing. Personal factors,

such as a lack of nerve and an emotional attachment to JTS, may also have played a role in Kaplan's reluctance to turn Reconstructionism into a full-fledged denomination.

In 1940, the Jewish Reconstructionist Foundation was created to help fund lectures and written work about the ideology. By the 1950s, Kaplan and his disciples had distributed thousands of pamphlets, written numerous articles and books, lectured across the United States, and created an independent publishing house (the Reconstructionist Press). Kaplan's philosophy had an impact on Reform Judaism's approach to Zionism and Jewish ritual, and many individual Reform and Conservative rabbis were influenced by Kaplan's writings. In contrast, his ideology had little impact on the formal institutions of Conservative Judaism. There were no signs that either denomination would support the general Reconstructionist platform, and most of Kaplan's ideas remained untried.

Although Kaplan's intransigence tied the hands of the leadership of the foundation, it did not prevent individual supporters from creating institutions devoted to the application of Reconstructionist principles. In 1955, four congregations formed the Reconstructionist Fellowship of Congregations. Meeting in Buffalo in 1963, members of this group convinced Kaplan that his philosophy would never truly influence the lives and thought of contemporary Jews without a rabbinical school to train those who would spread Reconstructionism. Kaplan resigned from JTS that year, and in 1968 the Reconstructionist Rabbinical College (RRC) opened its doors under the leadership of Ira Eisenstein and Arthur Gilbert. The RRC graduated its 300th rabbi in 2008. The Reconstructionist Rabbinical Association was founded in 1974.

As hoped, the creation of the college has led to the expansion of the Reconstructionist movement. The Jewish Reconstructionist Federation, which had 19 congregational affiliates in 1969, had grown to approximately 110 affiliates by 2008. The movement remains numerically small, as many of these congregations have fewer than 150 member-households. According to the National Jewish Population Survey of 2000 to 2001, 2 percent of U.S. Jews (82,000) consider themselves Reconstructionists. The movement enjoys more influence than these statistics indicate because most of RRC's graduates serve non-Reconstructionist institutions and apply Reconstructionist principles in their work. The movement's current prayer book series, *Kol Haneshamah*, has influenced other contemporary Jewish liberal liturgies, including the Reform movement's *Mishkan T'filah*.

Reconstructionism Today

From the start, graduates of RRC asserted their right to differ from Kaplan. In practice, however, very few of his core positions have been abandoned. Reconstructionism today is still understood as a religious civilization recognizing no a priori obligation to Jewish law, no supernatural God, and no traditional concept of Jewish chosenness. The movement is open to Jewish mystic practices and religious vocabulary that were foreign to Kaplan's universe. Whereas a few of the formulations that Kaplan removed from his liturgies for theological reasons have been returned in *Kol Haneshamah*, the prayer book's commentary indicates that they are not understood as literally true. Movement members still maintain higher levels of ritual observance than do Reform Jews but fall short of the standards that Kaplan set.

Reconstructionists today have expanded the democratic sensitivity inherent in Kaplan's approach to religion. Congregations feature a high degree of lay-rabbinic partnership. Lay leaders and rabbis jointly formulate position papers published by the movement. Kaplan's campaign to give women equal rights and responsibilities has been extended to make religious vocabulary and ritual more responsive to women's experience. The RRC was the first U.S. rabbinical school to accept women. It voted to ordain openly homosexual rabbis more than a decade before Reform and Conservative Judaism did and has been a leader in the creation of Jewish religious rituals to sanction the unions of gays and lesbians. Reflecting trends evident in U.S. religion, worship is less formal than it was in Kaplan's time, and guitars are sometimes used to accompany the prayers. Members play a leading role in the running of religious services, especially in congregations that are too small to support a full-time rabbi.

Assessment

Reconstructionism is founded on a comprehensive religious philosophy. Its influence on U.S. Jewish life continues to exceed its institutional strength. This has been a mixed blessing: As Reconstructionist ideas become more mainstream, the uniqueness of Reconstructionist synagogues is less evident. Reconstructionism is likely to remain small in the coming years. Most U.S. synagogues have long-standing affiliations that they are unlikely to abandon. Few new synagogues are being founded, and a weakening interest in denominations makes it less common for new institutions to affiliate. In this sense, Kaplan's reluctance to institutionalize

Reconstructionism in the 1930s has greatly curtailed its prospects for growth.

Judaism: Reform

The Reform movement in Judaism was the first of the modern interpretations of Judaism to emerge in response to the changed political, cultural, and intellectual conditions brought about by the emancipation of the Jews in Europe. The increasing political centralization of the late eighteenth and early nineteenth centuries undermined the societal structure that perpetuated traditional Jewish life. At the same time, Enlightenment ideas began to influence not only a small group of intellectuals but also wider circles. The resulting political, economic, and social changes were profound and led to the founding of the Reform movement.

History

European Roots

The first Reformers—usually identified as “German” Jews but actually from various central European countries—were seeking a middle course between traditional Judaism, which they wanted to break away from, and conversion to Christianity, which they wanted to avoid. Looking for a way to remain Jewish while adapting to the prevailing social customs, they hoped that by introducing modern aesthetics, including greater decorum, they could make worship services

more attractive to the many central European Jews who were drifting away from traditional Judaism but had not become Christians.

Most of the early reforms focused on minor cosmetic changes: They abbreviated the liturgy and added a sermon in the vernacular, added a mixed male and female choir accompanied by an organ, and read prayers in German (as well as Hebrew). From the point of view of Jewish law, reading additional prayers in German was a relatively minor deviation from traditional practice. But for the congregants eager to create a synagogue service that would look respectable to their neighbors and at the same time feel authentic to themselves, such a change carried great import.

By the early 1840s, a trained Reform rabbinic leadership had emerged in central Europe. Abraham Geiger (1810–1874), called to the Breslau Jewish community in 1839, developed into the most distinguished intellectual defender of Reform Judaism in nineteenth-century Europe. Reform rabbinical conferences in Brunswick in 1844, Frankfurt in 1845, and Breslau in 1846 gave rabbis an opportunity to clarify their beliefs and the practices that could follow from them. A debate about the use of Hebrew in the services led Zacharias Frankel to walk out of the 1845 conference, a moment many see as the beginning of the historical school, which advocated positive-historical Judaism. Frankel accepted the evolutionary character of the Jewish religion but insisted that the “positive” dimensions of Jewish tradition needed to be preserved. This perspective later evolved into Conservative Judaism. Although most of the rabbis at these conferences were much less traditional than Frankel, they taught in the established Jewish community, the *Einheitsgemeinde*, and therefore had to remain sensitive to and conversant with traditional rituals and observances.

Nineteenth Century: Reform Comes to the United States

The history of Reform Judaism in the United States differs profoundly from that in Europe. Whereas in Europe the movement developed under the shadow of anti-Semitism and the threat of conversion to Christianity, in the United States a much freer and more pluralistic, more heterodox atmosphere prevailed. There was no established religious community and no support from the state.

The first attempt at reform occurred in Charleston, South Carolina, in 1824, when forty-seven members of Congregation Beth Elohim signed a petition requesting that their congregational leadership institute certain ritual

reforms, including the introduction of prayers in English. The congregational board rejected the request, and a small group of intellectuals decided to form a new congregation, to be based on enlightened liberal values.

Beginning in the 1830s, large numbers of central European Jews, later mistakenly referred to as “German” Jews, began arriving. These immigrants established congregations that gradually moved toward Reform. Particularly notable was the Har Sinai Verein, a small religious group that met to discuss Reform theology and conduct services, established in Baltimore in 1842. In 1845 a similar group founded Emanu-El in New York City, which developed into the largest and most prestigious Reform congregation in the country.

As more congregations developed in the antebellum period, the need for strong rabbinic leadership grew. Not all congregations felt this need; many treasured their independence and many local lay leaders enjoyed dominating communal affairs. Despite the difficulties, rabbis carved out a leadership niche for themselves. Numerous immigrant teachers and ritual functionaries were interested in serving in the rabbinate and, in some cases, in assuming leadership roles on a regional or national level. One of the best known was Isaac Leeser of Philadelphia. A traditionalist minister who published an influential newspaper, *The Occident*, Leeser also promoted many other intellectual, social, and educational projects. However, Isaac Mayer Wise had the charisma and determination to develop into a national Jewish religious leader and to actively work to build U.S. Jewish institutions and organizations.

Isaac Mayer Wise and Major Reform Institutions

Wise arrived from Bohemia in 1846, and although he was advised to become a peddler, Rabbi Max Lilienthal encouraged him to consider the pulpit rabbinate and sent Wise in his stead to dedicate a number of synagogues. This led to an opportunity for Wise to begin serving as rabbi in Albany, New York, where there was a famous confrontation between Wise and the congregation’s president, the first of many clashes between rabbis and lay leaders.

When he was offered a life contract in 1854 to become the rabbi of Congregation B’ne Jeshurun in Cincinnati, Wise accepted, and the pulpit became his base for building the U.S. Reform movement. Wise established a newspaper, *The Israelite*—later *The American Israelite*—and edited a prayer book called *Minhag Amerika: Tefillot Beney Yeshurun/Daily Prayers*. Credited with establishing or being the driving force behind the founding of all three major institutions of the

Reform movement, he founded the Hebrew Union College (HUC) and the Central Conference of American Rabbis (CCAR) and he inspired one of his lay leaders to establish the Union of American Hebrew Congregations (UAHC, later Union for Reform Judaism [URJ]).

Although Wise had hoped to build a U.S. Judaism that included all U.S. Jews rather than just the more liberal elements, a moderate form of Judaism that combined some ritual reforms with traditional elements, this vision proved unworkable especially after the incident of the Treif Banquet in 1883, often cited as one of the events leading to the creation of the Conservative movement. After the ceremony marking the first ordination of Hebrew Union College, numerous forbidden foods were served at a festive dinner, shocking and scandalizing some of the more traditional guests.

The Reform movement was the first Jewish religious movement in the United States to organize itself on a denominational basis. Reform Judaism includes three types of organizations, each with its own territorial parameters: the congregational organization, today represented nationally by the UAHC; the four campuses of the Hebrew Union College–Jewish Institute of Religion (HUC–JIR) in Cincinnati, New York, Los Angeles, and Jerusalem; and the rabbinate, represented by the CCAR. The movement pioneered this “tripartite polity”—a congregational body, a rabbinic organization, and a seminary—which was subsequently adopted by the other major denominations of U.S. Judaism.

In the early 1870s, Wise, who had been trying for many years to create a national association of U.S. congregations, encouraged Moritz Loth, the president of Wise’s Congregation B’ne Jeshurun, to issue a call to congregations to meet in Cincinnati for the purpose of establishing a Hebrew theological college. In July 1873, representatives from 34 congregations from 28 cities, mostly in the Midwest and the South, came together to found the organization. The following year, 21 additional temples joined. By the end of the decade, 118 congregations belonged to the UAHC, more than half of all identified synagogues in the United States.

Characteristics of Classical Reform Judaism

Classical Reform was the type of Reform Judaism that developed in the late nineteenth century. U.S. Jews, most of whom were of central European background, saw the tremendous influence that liberal religion had on their Protestant neighbors and wanted to develop a form of Judaism equivalent to Episcopalianism, Presbyterianism, and

especially Unitarianism. As presented in the 1885 Declaration of Principles, known as the 1885 Pittsburgh Platform, Classical Reform Judaism minimized Judaic ritual and emphasized ethics rather than ethnic particularism, stressing universalism while reaffirming the Reform movement's commitment to Jewish particularism through the expression of the religious idea of the mission of Israel. The document defined Reform Judaism as a rational and modern form of religion in contrast with traditional Judaism on one hand and universalist ethics on the other.

The platform also repudiated Zionism, then a relatively new and extremely controversial political movement that sought to build a Jewish national home in Palestine. Most Reform Jews saw Zionism as potentially undermining their claims to be loyal to the countries of their birth. Indeed, one of the founding principles of Reform Judaism was to reinterpret all of the religious principles that suggested a return to Zion, transforming them into universal aspirations or removing them entirely. This anti-Zionism was never universally accepted by all Reform Jews—there were always a handful of pro-Zionist Reform rabbis, as well as an unknown number of congregants, sympathetic to the goals of the Zionist movement. The entire Reform movement gradually embraced a moderate form of Jewish nationalism in response to political events in the first three decades of the twentieth century.

Reform Judaism has historically emphasized what it interpreted as the central message of the prophets: the need to fight for social justice. The Reformers believed deeply in working with their Christian neighbors to help make the world a place of justice and peace, and this belief was a central part of the religious worldview. The platform emphasized the prophetic mandate to work tirelessly for the rights of the downtrodden, and the term *prophetic Judaism* described the Reform vision of following the dictates of the prophets to create a just society on earth. Coupled with the emphasis on its interpretation of prophetic Judaism, the early Reformers in particular spoke frequently about the mission of Israel, which presented the idea that the prophets of the Bible served as advocates of ethical monotheism. Ethical monotheism combined the Jewish belief in one God with rational thought and modern innovations in scientific knowledge.

They believed that the prophets stressed universalism rather than particularism, and therefore the Reformers felt justified in likewise stressing the universal over the particular. At the same time, the concept of the mission of Israel justified the continued existence of the Jewish people—their

ongoing survival as a religious group was essential if the Jews were to bring their universalistic message of ethical monotheism to the world. David Einhorn used a version of this argument to oppose intermarriage with non-Jews because “the small Jewish race” (a term acceptable at that time) needed to preserve itself as a separate entity to fulfill its religious mission on earth. Taken to its extreme, the mission of Israel concept helped Reform leaders present Judaism as the ultimate expression of ethical monotheism.

As the purest form of monotheistic religion, Judaism was therefore the strongest theological argument for ethical behavior. As such, it deserved to be taken seriously as a way of thought and a way of life by all individuals committed to finding a true understanding of God and God's place in the world. This allowed Reform leaders such as Wise to declare that Judaism was destined to become the faith of all humankind, or at least of all U.S. citizens who held liberal religious beliefs. Reform leaders believed that as time passed, humankind would be better able to understand the will of God, and thus society was certain to become a better place. This belief became most pronounced in Classical Reform.

Twentieth-Century Changes in Reform Judaism

The Reform movement changed its direction as a consequence of the increasingly brutal nature of the twentieth century. World War I jump-started the process of reexamining the liberal sense that had propelled Reform religious thought until that time. The movement's optimistic view of human progress in collaboration with God underwent further change after the rise of the Nazi movement in Germany and the subsequent murder of six million Jews. In the aftermath of that tragedy, the Reform movement veered away from its universalistic triumphalism toward a more ethnically based cultural identity.

But the breakdown of this optimism did not mean the end of either Reform Judaism or the Reform movement. Congregations continued to attract new adherents as sociological patterns shifted. Many Jews found that the Reform temple met their need for a nominal religious identification, while allowing them to join the stew in the U.S. melting pot. From 1881 until 1920, the Reform movement grew slowly relative to the increase in the U.S. Jewish population, with 99 congregations consisting of 9,800 members in 1900 and 200 congregations with 23,000 members in 1920 while the U.S. Jewish population increased fourteenfold. The Reform movement went from being the single most important voice of the Jewish U.S. community to being a small

minority. Although the elite nature of many Reform Jews meant they retained a high profile, they were swamped by the eastern European organizations and ideologies.

Even though the 1885 *Declaration of Principles* had argued that Jews should remain together solely as a religious group to fulfill their mission of bringing ethical monotheism to the world, the terrible rise in anti-Semitism in the 1930s threatened Jewish physical survival, a concern that far outweighed theological considerations. The CCAR adopted the Columbus Platform in 1937, officially named *The Guiding Principles of Reform Judaism*. This new platform embraced Jewish peoplehood and leaned toward support of political Zionism. Evidence of a revolutionary shift in the ideology of the U.S. Reform movement, the new platform encouraged a diversity of opinion and a multiplicity of approaches. It marked the end of a single Reform theological approach, creating the religious pluralism that marks contemporary Reform.

By 1945 the Reform movement was well on its way to accepting Zionism and the soon-to-be-created State of Israel. The interwar period saw the rise of two strongly Zionist Reform rabbis, Stephen S. Wise and Abba Hillel Silver. Wise (no relation to Isaac Mayer Wise) began his rabbinic career in Portland, Oregon, then moved to New York, where he established his own congregation after Temple Emanuel refused to promise him freedom of the pulpit. In 1922, he established the Jewish Institute of Religion (JIR) in New York City to provide a Zionist alternative to Hebrew Union College. Wise believed in both the importance of social justice and the centrality of Jewish peoplehood. Like him, Abba Hillel Silver was a prominent leader in U.S. and world Jewish affairs as well as a congregational rabbi. After serving as a rabbi in Wheeling, West Virginia, he became rabbi of the temple in Cleveland, Ohio. From this pulpit he worked tirelessly to build up the U.S. Zionist movement in the hope of establishing a Jewish state. With Wise, Silver formed the American Zionist Emergency Council, which lobbied the U.S. Congress on behalf of the Zionist movement. Silver was the leader who announced to the United Nations that Israel had declared itself an independent state. Both men were Classical Reformers devoted to Jewish nationalism, a synthesis that would have been nearly unthinkable just a few decades earlier.

The aftermath of World War II brought a massive suburban construction boom that benefited the Conservative branch within U.S. Judaism most. Conservative Judaism appealed to the now Americanized eastern European immigrants and

their children because it appeared substantially more traditional than Reform but allowed far greater flexibility than Orthodoxy. Nevertheless, Reform Judaism benefited from this suburbanization trend as well. The 265 congregations in 1940, with 59,000 members in the UAHC, grew by 1955 to 520 congregations and 255,000 members.

Many suburban Jews who joined Reform congregations saw the temple mainly as an extracurricular activity for their children. Congregations that moved most rapidly to meet the needs of these new suburbanites thrived. The temple became a social center that substituted to some degree for the loss of the old Jewish neighborhoods, such as those once clustered on the Lower East Side or Brownsville in New York and its equivalents in other major urban settings. The Reform leadership faced the challenge of conveying a religious message to congregants who had not joined their synagogues primarily to share a religious vision. Yet the leaders needed to captivate and motivate them to care and to feel that the congregation was helping them fulfill themselves as ethically concerned people.

Authority in Reform Judaism and a "Return to Tradition"

Although Reform Judaism stood for the autonomy of the individual and against the belief that *halakhah* (Jewish law) was binding in its entirety, in the post-World War II period Reformers took a variety of positions on religious authority and how it can be reconciled with individual autonomy. Some argued against all boundaries, but others tried to develop a post-halachic justification for some form of Jewish legal authority. Reform thinkers understood that the freedom of action they advocated could result in unintended consequences. If individuals could make their own decisions about what to observe, then what would stop those individuals from observing nothing at all? Some even used the Reform movement to justify apathy and even apostasy.

No obvious solution presented itself. In 1965, W. Gunther Plaut recommended to the CCAR that a Sabbath (Shabbat) manual be written as a beginning toward a comprehensive guide for the Reform Jew. Plaut edited the result, *A Shabbat Manual*, published by the CCAR Press in 1972. The manual went much further than any previous CCAR publication in urging Reform Jews to perform certain mitzvot—to light Shabbat candles, to recite or chant the kiddush, and to avoid working or performing housework on the Sabbath. This watershed publication led to additional efforts to “return to tradition.”

Yet a return to tradition should not be misunderstood as an acceptance of halakhah as a binding system. Most Reform Jews believe that religion in general, and Judaism specifically, is very much a human institution. They believe that it is impossible to know with absolute certitude what God wants from us. Certainly, behaving ethically is necessary for people of all faiths. But we cannot know what ritual behavior God expects from us. The traditional belief that the mitzvot are binding because they are God-given is reinterpreted to acknowledge God's indirect inspiration in what is essentially a process of human spiritual expression.

By the late 1960s, many felt that *The Union Prayer Book*, used in Reform congregations since the 1890s, had become outdated; new prayers would better express how people felt in response to the volatility of that era. Joseph Glaser, executive vice president of the CCAR, initiated a campaign in 1971 to write and publish new forms of liturgy. A thick blue prayer book, *The Gates of Prayer*, replaced *The Union Prayer Book* in 1975 to a mixed response—great excitement at the numerous options, but horror at the drastic changes. It was joined in 1978 by a completely reworked High Holy Day prayer book, *The Gates of Repentance*. Both new prayer books included more Hebrew and more traditionalist elements than their predecessors had. Ten different Friday night services were offered, most of which presented a specific theological approach, as well as services that catered specifically to children or those preparing for bar mitzvah.

The Schindler Years: Social Justice, Proselytization, Patrilineal Descent

Alexander M. Schindler, who became president of the UAHC in 1973, gained renown for his assertive support of the social action agenda of the Reform movement of the 1970s and 1980s, including civil rights, world peace, nuclear disarmament, a “Marshall Plan” for the poor, feminism, and gay rights, as well as his opposition to the death penalty. Schindler is perhaps best remembered for two issues: his outreach to intermarried couples and his advocacy of patrilineal descent. Intermarriage had long been a taboo in the Jewish community, and many parents ostracized children who “married out.” Schindler felt strongly that this taboo was counterproductive as well as inappropriate. At a meeting of the UAHC's board of trustees in Houston in December 1978, he issued a public call to the Reform movement to reach out to the non-Jewish spouses in interfaith marriages.

Even more surprising, he urged making the Jewish religion available to unchurched gentiles. This controversial call

to proselytize those with no connections of blood or marriage to the Jewish community seemed like a dramatic departure from two thousand years of Jewish religious policy against proselytization. His critics argued that such a move would encourage certain Christian groups to launch campaigns against the Jewish community, using Schindler's call as an excuse for proselytizing unaffiliated Jews. Despite the attention that this suggestion created, little proselytizing of unchurched gentiles has occurred in the succeeding years, whereas many outreach programs to interfaith couples have been developed.

During the Schindler years the Reform movement adopted the patrilineal descent resolution, which stated that the child of one Jewish partner is “under the presumption of Jewish descent.” Although the document's vague wording led to some difficulties, the patrilineal descent policy ensured that if one's father was Jewish and one's mother was not, one would still be regarded as Jewish, provided that one was raised as a Jew. This requirement of raising a child as a Jew was more stringent than halakhah. This supplemented rather than replaced the traditional matrilineal descent policy, which established that the children of a Jewish mother would be Jewish regardless of their father's faith or even how they were raised.

Feminist Trends from the 1970s to the Twenty-First Century

Also during Schindler's presidency, the Reform movement allowed women to assume a more central role in the synagogue, a direct consequence of the feminist movement that influenced every aspect of U.S. life. As U.S. women in the 1960s and 1970s took on a far greater role in religious life than had those of previous generations, the Reform movement responded quickly and actively to the changing gender role expectations. Increasing numbers of congregations allowed women to assume responsibility for all aspects of religious and communal life, even the rabbinate. In 1972, Sally J. Priesand became the first woman ordained a Reform rabbi at HUC-JIR, a revolutionary breakthrough. Since 1972, hundreds of women have enrolled in HUC.

Many modern U.S. women found the language of the traditional prayer book restrictive and even sexist. Based on biblical models that portrayed God solely in masculine terms, the prayers assume that public worship is an obligation primarily for men. For example, the prayer that began “Praised be our God, God of our Fathers, God of Abraham, God of Isaac and God of Jacob” now seemed exclusionary.

Where were the matriarchs? In 1972, a task force on equality, arguing that such language misleads worshipers about the true nature of both human beings and God, recommended altering masculine references in prayer. In the resulting effort to rewrite the prayers to reflect the growing egalitarian nature of U.S. Jewish thinking, the names of the matriarchs were added in a series of gender-sensitive prayer books published in the early 1990s. The same prayer now reads, "Praised be our God, the God of our Fathers and our Mothers: God of Abraham, God of Isaac and God of Jacob; God of Sarah, God of Rebekah, God of Leah, and God of Rachel."

Dealing with the names of God framed in the masculine form was more difficult. In English, Reform prayer books had referred to God as "He" and "Him" and called God "the Lord." These references could be changed, but the practical problem of replacing prayer books in use for only a short time was daunting. Some congregations developed a list of gender-sensitive words that could be substituted for masculine references to God. Thus, the word "God" might be used to replace "the Lord" each time that phrase appeared in the prayer book. But this could confuse congregants, who had to be exceptionally alert to make all the correct substitutions in the right places and at the right times. In the mid-1990s a series of soft-cover experimental gender-sensitive prayer books, then a hard-cover gender-sensitive version intended to be semi-permanent, gradually supplanted the original Sabbath prayer book *Gates of Prayer*. A new prayer book with full gender sensitivity was finally published in 2007.

The Reform movement has embraced religious equality for gays and lesbians. The CCAR first dealt with the issue of homosexuality in the mid-1970s and soon after was supporting human rights as well as civil liberties for gays and lesbians. Most Reform rabbis took liberal positions across the board and so were quick to embrace what many saw as another liberal social cause. HUC-JIR later admitted a transgender student without controversy. Most congregants accepted gay and lesbian clergy without too much prejudice, although there were issues, especially in the first few years.

Eric H. Yoffie and Early Twenty-First Century Trends

Reform practice today, especially in the synagogue itself, is characterized by the partial restoration of a number of formerly abrogated rites and rituals. Ritual items eliminated by the Classical Reformers, such as the yarmulke, tallit, and

even tefillin, have been brought back. But because of the concept of religious autonomy, individual congregations cannot and do not require congregants to wear any of these traditional prayer items. Rather, they are offered to those who find them religiously meaningful or who prefer to wear them as an expression of traditionalist nostalgia.

In a remarkably smooth transition of leadership, Eric H. Yoffie, the president of the UAHC since 1996, inherited a movement that had grown substantially in numbers yet was perceived as having fundamental problems. Yoffie moved quickly and boldly to address these challenges, taking advantage of the new enthusiasm for spirituality and launching a systematic campaign to rebuild the entire Reform movement.

Yoffie outlined a plan to reform Reform: "I propose, therefore, that at this biennial assembly we proclaim a new Reform revolution. Like the original Reform revolution, it will be rooted in the conviction that Judaism is a tradition of rebellion, revival, and redefinition; and like the original too, this new initiative will make synagogue worship our Movement's foremost concern." Yoffie urged that this "worship revolution" be built on a partnership among rabbis, cantors, and lay people. The URJ leadership has prepared a series of initiatives that taken together constitute "a Reform revolution."

Yoffie has only begun the process of reorienting the movement to meet the sociological challenges that Reform Judaism faces in the contemporary United States. At the same time, the rabbinic leadership has proposed a number of controversial initiatives, most notably a new Pittsburgh Platform. This restating of Reform religious beliefs generated a firestorm of controversy in 1998 and 1999. Although the CCAR at its annual conference in Pittsburgh in May 1999 eventually passed a revised version called A Statement of Principles for Reform Judaism, supporters found it severely watered down, whereas Classical Reformers viewed it as a betrayal of the Reform legacy in the United States. Despite a year and a half of conflict over this issue, the values that inspired people to join the Reform movement have kept them from splitting off or leaving altogether. Although the recent economic downturn has forced the URJ and HUC to cut their staff and programming, large segments of the Reform movement remain vibrant and enthusiastic. Primarily situated in the United States, Reform Judaism will thrive if liberal forms of religion succeed in attracting increasing numbers of followers and will decline if liberal religion stagnates.

Judaism: Sectarian Movements

In recent decades, U.S. Judaism has broadened itself to include many new manifestations of the Jewish spiritual experience. Whereas in the immediate post–World War II period Judaism was seen as being represented by the three major denominations, U.S. Judaism now includes a much wider and more diverse grouping of movements, streams, and factions.

The primary impetus for this dramatic structural change was the increasing interest in the spiritual quest as a journey that emphasized the dynamic aspect of the process. Rather than stressing the community obligations of the individual Jew to the Jewish people, the new spirituality emphasized meaning, which differed based on an individual's particular journey. God is experientially accessible through the cultivation of one's inner life. Thus the quest for spiritual fulfillment could lead to God and the search for God could lead to spiritual fulfillment. In any case, the dominant ethos emphasized experiential spirituality rather than institutional spirituality.

Denominational Judaism developed in the United States in the latter half of the nineteenth century. Each of the three major denominations—Reform, Conservative, and Orthodox—developed its own institutional structure. They each founded rabbinical seminaries that were supported by their congregational unions. Religious thinkers began writing theological and historical works that emphasized the particular denominational perspective. Observers of the U.S. Jewish scene in the 1950s, 1960s, and 1970s saw a U.S. religious group that was clearly divided into three institutionally distinct streams. Although this structure appeared to be solid, it began to change dramatically and broaden in response to the new interest in post-denominational and trans-denominational spirituality.

Nondenominationalism, Post-Denominationalism, and Trans-Denominationalism

Whereas many U.S. Jews had never identified themselves as Reform, Conservative, or Orthodox, the popular perception was that most of the Jewish community did identify with a denomination. By the 1980s, however, it was becoming increasingly clear that many Jews were not denominationally affiliated. Various terms have been used to describe these individuals: nondenominational, post-denominational, trans-denominational, cross-denominational, and even anti-denominational. These terms are not necessarily interchangeable, and it is important to define what each means.

Nondenominational Jews are those who identify themselves in telephone surveys as “just Jewish.” Although it's hard to know exactly what they mean by this, they clearly do not identify with any of the denominational choices offered them by the telephone interviewer. They are not Reform, Conservative, Orthodox, or Reconstructionist (a fourth denomination that developed after the other three). In practice, this usually means that they are not involved in Judaism as a religion, but that they have a Jewish ethnic background and are willing to acknowledge that fact. There is a great deal of controversy regarding who is included in this group and how the organized Jewish community should respond to them.

Post-denominationalism refers to those individuals or congregations that do not affiliate with any of the national synagogue movements. Some of the most creative initiatives in U.S. Jewish religious activities in recent decades have been post-denominational, although as time goes on, these post-denominational Jews may evolve into a denomination (or several denominations) in their own right. About two

hundred congregations are not members of any of the established denominations. Some believe that the trend is a practical response to the high cost of such affiliation, but others see post-denominationalism as an ideological movement. Some post-denominational Jews believe that their approach allows them the best of both worlds; they can remain independent while drawing on the best features of each of the religious streams.

Related to post-denominationalism, anti-denominationalism is the active opposition to the concept of denominations. Anti-denominationalists deliberately avoid denominational involvement, believing that the focus on denominational Judaism has tended to stifle, rather than stimulate, spirituality. They see the synagogue movements as the creation of East and West Coast elites who have manufactured distinctions to justify their honorary positions in redundant denominational organizations. They blame the movements for perpetuating the stereotype of Judaism as dull and boring and believe that without the constricting labels of Reform, Conservative, or Orthodox, U.S. Judaism would have thrived. This type of criticism is frequently expressed by young rebels who situate themselves at the edge of or even entirely outside of the Jewish community.

Orthodox outreach organizations have been quick to use the anti-denominationalism so prevalent among younger U.S. Jews. Full-color magazine inserts were put into the various local Jewish newspapers describing the “Ashkefardi-Ultrarefconservadox Generation” and how Judaism had a great deal of spiritual meaning that could be found if one were able to get past all of these divisive labels. Those who responded to the ad were sent on to Orthodox outreach organizations, which could legitimately claim that they indeed rejected the denominational divisions; they believed that there was only one true Judaism. If others chose to refer to them as Orthodox, then so be it. They were following Judaism the way it was supposed to be followed. All the others were simply misguided. Orthodox triumphalists believe that the trend toward anti-denominationalism will, in the end, lead back to Orthodoxy. Others believe that it is more likely to lead to radical assimilation.

Trans-denominational refers to an approach that brings Jews of different religious outlooks together. Many if not most of the recent successful communal initiatives share a trans-denominational goal. Also referred to as cross-denominational, this orientation stresses what U.S. Jews have in common or what they can learn from each other. Much of the trans-denominational bridge building began after the

1990 National Jewish Population Study (NJPS) found that there had been significant erosion in Jewish communal cohesion. Many believed that trans-denominational programs have been quite successful at helping Jews see what they actually have in common, rather than what they thought they had in common.

The Havurah Movement and Jewish Renewal

By the late 1960s and early 1970s, increasing numbers of young Jews were seeking to re-spiritualize Judaism. They were not sufficiently compelled by the “civil Judaism” that stressed loyalty to the Jewish people rather than spiritual meaning. Many were inspired by Rabbi Abraham Joshua Heschel, the charismatic Polish neo-Hasidic philosopher who taught at the Jewish Theological Seminary (JTS) in New York. Small but influential numbers of U.S. Jews began insisting on more emotional content in their Judaic ritual. They wanted more intimate and spiritually satisfying worship rather than what they saw as the staid and hollow services that were offered at most establishment synagogues. In contrast to shallow suburban religious practices, Jewish Renewal and other neo-Hasidic religious approaches sought authenticity and depth of spiritual experience.

The beginnings of Jewish Renewal can be traced to the development of the Havurah movement, which was named for the fellowships that Jewish pietists had organized in the early rabbinic period. A *Havurah* literally means “fellowship.” The concept of a Havurah is used in the Talmud (Tractate *Pesachim*) to refer to the group of people registered for a single Passover sacrifice, as well as those who held a seder together. The Passover seder is perhaps the prototypical group ritual (traditionally) held outside a synagogue involving the sharing of communal experiences, Jewish learning, and prayer. The Havurah (Havurot, plural) was an experimental fellowship set up by young political and social activists who wanted a place where they could engage in heartfelt prayer and study. Many of the early Havurah members had seen how groups of hippies had formed communes, and they wanted to create a Jewish religious alternative.

They placed the emphasis on kavannah, the intention to concentrate. In addition to the regular Hebrew prayers, they sang niggunim, wordless Hasidic melodies, with great fervor to help themselves focus. They hoped that communal prayer could bind them together, but they differed on what type of community it should be. Some had the idea of creating rural communities, others hoped to create residential urban centers, and still others were inspired by the monastic life of the

ancient Dead Sea Scroll sect. They wanted to create an “authentic Jewish community” that took tradition seriously but was willing to make the types of changes that they thought were necessary. This included gender equality and also an array of other political and social causes important to the New Left, such as peace activism, social justice, and for some, vegetarianism.

The Havurat Shalom Community Seminary was the first such commune, established in Somerville, Massachusetts, just outside of Cambridge in 1967, with funding from the Danforth Foundation of St. Louis. Arthur Green, a recent graduate of the rabbinical school at the JTS, envisioned the creation of a counterculture seminary for serious Jewish textual study that would transcend denominational divisions. He planned to include the then almost unheard of subject of mysticism, as well as specific topics of contemporary importance such as the Jewish roots of pacifism and antiwar activism. The Havurah members eliminated the goal of creating a seminary from their mission statement at the end of their first year. They instead decided that their Havurah would become a nonresidential religious community devoted to prayer and study. (Decades later, Green opened a nondenominational rabbinical school at the Hebrew College in Boston.)

Other Havurot were soon created in most other large cities. They each had their own focus, but they all shared a number of things. In particular, they were resolutely nondenominational. Even though many or most of their members had come from Conservative backgrounds, the Havurah members were determined to create a new type of Judaism that was neither Reform, Conservative, nor Orthodox. Most of all, they wanted a Judaism that was vibrant, and they criticized the existing denominations for making synagogue members passive “consumers” of a commodity, rather than active participants who would create and build.

The Havurot initially attracted little attention. But in 1973, Michael and Sharon Strassfeld and Richard Siegel published *The Jewish Catalog*. Subtitled “A Do-It-Yourself Kit,” it was modeled on the recently published counterculture *Whole Earth Catalog*, which was first published in 1969. *The Jewish Catalog* stressed that readers could actually do Judaism rather than just watching rabbis and synagogue elders do it. The catalog also suggested that readers could incorporate Judaic ideas and rituals into their own lives, transforming both Judaism and themselves in the process.

The early Havurot referred to their desire for “religious renewal,” and they are seen as the precursors to what

became known as the Jewish Renewal movement. The exact relationship between the Havurah movement and Jewish Renewal is difficult to describe. Many of the same people were involved in both groups, and much of their basic thinking is complementary, if not identical. The Havurah movement focused primarily on the Havurot, whereas Jewish Renewal is a broader term encompassing all aspects of alternative Judaism. Rabbi Zalman Schachter-Shalomi is acknowledged as the spiritual leader of the Jewish Renewal movement, and Rabbi Arthur Waskow is one of the movement’s main organizers and popularizers.

The Ba’al Teshuvah Movement

Other young U.S. Jews took an entirely different turn. They also felt uninspired by the synagogue experience of their youth, but they were not interested in going the hippie route. Rather, they wanted a completely traditional form of Judaism, a Judaism that actually demanded the full observance of the mitzvot (commandments), just as described in the Shulchan Aruch (the Code of Jewish Law, literally “set table” referring to the practical focus of the code) and based on the Torah and the Talmud. These Jews wanted to study in Talmudic academies called yeshivot (singular is yeshiva) that would explain the actual beliefs of traditional Judaism, without reinterpreting everything to allow for maximum flexibility.

These young people began observing more of the commandments, something that was very difficult to do in the suburban environment. It was difficult to walk to synagogue because most houses were many miles away from the nearest house of worship. Few families kept kosher, and unless they were lucky enough to live in or near an Orthodox suburb, there were not likely to be any kosher restaurants nearby. Their parents were probably well-meaning, but completely uncomprehending. Most eventually left home for what became known as ba’al teshuvah yeshivas, religious seminaries that specialized in teaching adult beginners.

The word *ba’al teshuvah* is a Hebrew term that literally means “a person who has repented.” The term historically referred to a Jew who had been raised in a traditional home, but had then chosen to willingly transgress the halacha, Jewish law, only to later repent and return. The term can also be used in a general sense to refer to anyone who has done a bad thing and then repented. Since the 1970s, the term has been popularly used to refer to a non-Orthodox Jew, frequently coming from a secular background, who decided to embrace Orthodoxy. These individuals may become

modern Orthodox or Haredi (meaning “god-fearers,” the group formerly referred to as “ultra-Orthodox,” a term that is now viewed as derisive by many)—the term may refer to either of these possibilities. Ba’alei teshuvah (the plural form) saw themselves as returning to the faith of their ancestors, recreating themselves as well as reconnecting with the Judaism that they had lost touch with. The ba’al teshuvah refashions their identity, creating a new persona, as well as a new lifestyle.

Much of the enthusiasm was a result of the startling victory of the State of Israel in the Six Days’ War, fought in June 1967. In the weeks leading up to the outbreak of hostilities, many assimilated U.S. Jews who had never previously felt a visceral connection with the Jewish state suddenly felt that their own lives were at risk. Orthodox believers saw Israel’s victory as the beginning of the messianic redemption from galut, exile. They believed that one of the necessary prerequisites for the coming of the messiah was strict ritual observance, and they were determined to help those nonobservant Jews who expressed an interest in learning more about traditional Judaism.

Jewish Renewal and the ba’al teshuvah movement thus differed enormously in the type of individual who was attracted to them, as well as in the beliefs and practices of those who identified with each of these groups. What they shared was that both saw the suburban Judaism of their youth as superficial and lacking in spirituality. They wanted something more intense that would bring them a sense of fulfillment and that would seem more “religious.”

In recent years a widespread consensus emerged that the Jewish establishment had not been aggressive enough in innovating and that the ba’al teshuvah and Jewish Renewal movements had developed cutting-edge responses to both the substance and marketing of Judaism. Along with a number of other Jewish religious sectarian movements such as Chabad-Lubavitch, a form of Hasidic Judaism that stresses outreach to nonobservant Jews, these new spiritual approaches to contemporary Judaism have revolutionized U.S. Jewish perceptions and practices of religion. This is all the more remarkable because these groups are not large, even within the relatively small Jewish world—the ba’al teshuvah movement is a minority within Orthodoxy, which may number about 10 percent of U.S. Jewry, and Jewish Renewal is smaller than even the smallest of the four major established denominations, Reconstructionism, which may be 2 percent of U.S. Jewry at most. The mainstream Jewish world is now in the process of catching up, using new

techniques to recapture the essential spiritual qualities of Judaism that many felt had been lost.

Judaism: Secular

Judaism, though historically and mainly considered a religion—indeed, often credited as the first of the great monotheistic civilizations—has also spawned a variety of secular forms. *Secular Judaism* would appear to be an oxymoron, if one assumes that *Judaism* is fully analogous with other religious ideologies such as Buddhism, Hinduism, or Roman Catholicism. Yet Judaism differs in type from certain other religious “isms.” It is somewhat more commodious and embraces other aspects of personal and group identity, such as ethnic kinship, nationhood, and culture, all of which afford potentially viable and enriching ways of being Jewish; these alternatives are especially important to those who eschew a worldview based on belief in a personal God or cannot accept the behavioral discipline of a religious code. Judaism is notoriously nonrigid when it comes to defining its outer boundaries.

The Persistence of Jewish Identity

Like many members of other modern faith communities, Jews are motivated in varying degrees to identify themselves nominally with their family heritage, and some do

so even in the absence of positive religious conviction or commitment. Freedom of conscience in modern democracies permits the individual maximum latitude in self-definition. Freedom *from* religion, in the sense of release from normative doctrines, coercive authority, or onerous and intrusive duties, is a basic aspect of freedom *of* religion. The secularization of modern society, which means that most civic and social functions are no longer conducted solely or even largely within religious rubrics, is what engenders phenomena such as “secular Judaism.”

Religious institutions tend toward a narrower definition of their ideology and often prescribe some nominal ideal of observance or practice, but they do not often seek to exclude or to restrict potential members, if at all, on behavioral or doctrinal grounds. Among Jews, especially in the United States, such exclusion, either formal or informal, verges on being next to unknown and is certainly impracticable. Whereas, for example, it was expected in the past for a Jew to disassociate himself or herself from the orbit of Judaism on marriage to a gentile—because it was expected of those around them to socially reinforce that dissociation—that is no longer the case, especially for most U.S. Jews (some 90 percent) who are non-Orthodox. With out-marriage having risen from just 13 percent in the 1960s to 47 percent in the last decade of the twentieth century, it is not unlikely for a U.S. Jew to be married to a non-converted, non-Jewish spouse, but it is highly unlikely for such a Jew to be barred from any synagogue.

There is virtually no religious test that sharply divides the practicing from the nonpracticing or secularized Jew; the only consensual exception is that self-professed “messianic Jews,” who assert their belief in Jesus as their own spiritual savior, are by and large considered to have ceased practicing Judaism by anyone else’s standard. All other nonnormative or relativistic positions, ranging from agnosticism to humanism to atheism, regularly fail to be excluded in principle.

Indeed, many agnostics or atheists have a particular tradition in mind when disclaiming any transcendental beliefs. A Jewish atheist is one who professes disbelief in the Jewish God, but by the same token would not consider the possibility of choosing another God. In taking up the position of a religious “rebel” or skeptic, or even a position of indifference, rather than that of a potential apostate, a secular Jew very often retains rather strong ties to other Jews, not just at the level of family kinship and extended-family commitments, but also in the sense that, like other Jews, the Jewish atheist finds all other faiths to be foreign and personally

unacceptable. From 1990 to 2001, as reported in authoritative Jewish identity surveys, self-defining “Jews with no religion” (that is, who have not chosen to affiliate with any other faith community but do not consider themselves Jews “by religion”) increased from 15 percent to 21 percent of a sample of U.S. adults with at least one Jewish parent. That is, about one of every five Jews in the United States (or an estimated 1 million people) is secular by self-definition; those who define themselves in this way indicate that they carry out few or no Jewish rituals, hardly ever attend prayers at a synagogue, do not observe Jewish dietary codes, rarely if ever mark Jewish holy days, are indifferent to religious principles, or disagree philosophically with religion as a truth-system—all this, yet without relinquishing their claim to be Jews.

Participation in Jewish Rites

De facto, then, large populations continue to find social, ethnic, or cultural meaning in their own self-definition as members in good standing, or lapsed members, of various faith communities, and Jews are no exception. Estimates vary from country to country, but like many of their fellow Jews in Israel, Europe, and Latin America, many thousands of Jews in the United States today prefer to define their Judaism as “cultural” or familial, rather than strictly as “religious,” and consider secular identity a way of being Jewish.

Perhaps ironically, but not surprisingly, secularized Jews are apt to avail themselves of certain religious rites of passage or to participate in marking others’ life-cycle rituals: religiously sanctioned birth, marriage, and burial ceremonies often retain their popular appeal even among the otherwise nonobservant. Although some faith communities demand the performance of a reentry ritual (such as baptism or confession), as a “prerequisite” for participation in a rite of the sanctioned religious community, such is not the case among Jews. The more stringent culture of Orthodox Judaism would draw the line at refusing an avowedly lapsed or non-observing Jew the right to act in the capacity of congregational leader or to perform other public, obligatory functions in the name of the congregation. Nonetheless, the same Jews would normally be permitted such essential religious rites as the circumcision of their male newborn children, marriage (and divorce) by Jewish clergy, participation in the prayers of the congregation, and burial.

Thus, it is routine for anyone “of the Jewish faith”—including all those born or converted into a Jewish family, regardless of their lack of actual Jewish practice year-round and over many years—to be wed or buried according to

religious rite and to pray with the congregation on an equal basis should the occasion arise. Such occasions would include, for example, participating in a festive meal, either in a family or institutional setting, where blessings are recited over food and wine, participating in the prayer service attended by family and relatives to mark the occasion of a child's coming of age (bar or bat mitzvah), and attending certain annual holiday observances (such as the two so-called High Holidays of the Jewish calendar—Rosh Hashanah and Yom Kippur), when family obligation or custom sometimes outweigh the lack of inner religious conviction.

Indeed, in life-cycle rituals as well as in the occasional passive or active participation in a religious ceremony, tacit or explicit consideration for one's parents', one's children's, or one's spouse's religious sensibilities can often subjectively legitimate religious activity by the nonreligious, in purely cultural or humanistic terms, and no religious bar exists to prevent such activity. Many Jews often go through life in this fashion, without attempting to "consummate" their quasi-religious performances at an ideational level as part of a system of sacred belief. This is a particularly prevalent form of secular Judaism today.

Another factor that tends to blur the boundaries between secular conviction and occasional "lapses" into religious performance is that secular Jews very often live in societies, such as the United States or Israel, where religion is widely perceived as a universal or national common denominator, with a core of ethical or moral legitimacy at the societal level, regardless of individual faith commitments. Comfortable in their nonobservance, secular Jews are not necessarily "antireligious," though they tend to be vigilant about what may appear to them as the trespass of religious doctrine into the civic sphere.

Some secular Jews find much to admire in the aesthetic culture of their neighbors, such as Christmas trees, or in spiritual traditions even further afield, such as meditation practices borrowed from Eastern religions. They may imagine that their own Jewish humanism is enhanced by freely borrowing customs or practices, originally embedded in other religious traditions, but whose quasi-sacred status in another faith system is culturally or personally nonintimidating or even irrelevant. At the same time, such Jews are likely to take offense at attempts to proselytize them on behalf of a non-Jewish religious community and do not understand that missionaries might mistake them for "unchurched" people. Jewish secularism is culturally broad-minded but also typically ethnocentric.

Organized "Ethical" or "Humanistic" Judaism

In 1876, Felix Adler (1851–1933), the son of a Reform rabbi, and himself having trained to take up the pulpit, founded the New York Society for Ethical Culture. Based socially for the most part on other "enlightened" Jews, Ethical Culture sought to remove the obstacle of separate rites and dogmas from the common quest of all right-thinking people for a rational system of ethics. It aimed to educate people of different religious heritages toward a common set of humanistic values and to overcome bigotry and ignorance.

Nearly a century later, in 1967, Sherwin T. Wine (1928–2007), ordained as a Reform rabbi, founded the Association of Humanistic Rabbis, which was followed by the 1969 founding of the Society for Secular Humanistic Judaism (SHJ). Like Ethical Culture in some ways, SHJ strives to emphasize the rational, the humanistic, and the universal elements in Judaism's classical tradition and to position the Jewish ethical tradition within a larger world culture. Unlike Adler, however, who created nondenominational "societies" of Ethical Culturalists (not "ethical Jews"), Wine wanted to develop his humanistic Jewish alternative without breaking his followers' ties with the ethno-cultural Jewish sphere in which they had been raised. Indeed, he referred to his groups of followers as "congregations," retained the use of his own rabbinical title (as his colleagues continue to do), and at one point tried, unsuccessfully, to bring his movement within the Union of American Hebrew Congregations—the national association of Reform Jewish synagogues. Claiming some two dozen "congregations and communities" across the United States, SHJ has created a hybrid form of "secular synagogue," but it cannot claim to represent the largely amorphous secular wing of U.S. Jewry, as described earlier.

The Growth and Decline of Immigrant Communities

The historical and social basis for today's secular Judaism is ultimately rooted in the experiences of the masses of Jewish immigrants to the United States, most of whom came from countries in eastern Europe before and after the beginning of the twentieth century. Those immigrants, and their children after them when they had grown up, lived in largely urban, densely concentrated neighborhoods along with thousands of other Jewish families. This preponderant experience of environmental, social, and cultural homogeneity gave rise to an "effortless" Jewish socialization pattern,

without regard for its institutionalization in religious associations or synagogues. When sociologist Nathan Glazer (1924–) wrote his now-classic work on *American Judaism* (1957), he referred to the interwar experience of urban U.S. Jews as marking a shift from “Judaism” (the ancestral religion) to “Jewishness”—a contemporary social fabric woven of friendship patterns, typical occupational and residential networks, a group-based leisure culture in favored vacation spots, common tastes in food (not drink) or books, a widely disseminated vernacular culture, and ethnocentric family bonding, all of which resisted a doctrinal or theological definition.

Not all immigrant Jews or their U.S.-born children were secular by conviction, by any means. Among those who were, however, many also tended to be staunch proponents of an alternative political faith: socialists, anarchists, feminists, or Jewish nationalists in the Zionist vein—advocates of national self-determination for Jews in Palestine and of Jewish people’s solidarity abroad. Many of these ideological secularists, properly speaking, referred to themselves in Yiddish, the ethnic Jewish language of Ashkenazi (eastern and central European) Jewry, as “*fraye*” (pronounced FRY-eh)—freethinkers. Some of their spokesmen referred to secularism as “worldliness”—*veltlikhkayt*—and to secular Jews as worldly Jews: *veltlikhe yidn*. Secularists of this stripe founded a variety of Jewish ethnic institutions in U.S. cities, from daily newspapers and literary monthlies to political societies, charitable organizations, social clubs, benevolent societies, feminist circles, labor unions, theatrical companies, housing cooperatives, teachers’ colleges, musical ensembles, schools and summer camps for children, and old-age homes. They constituted a lively counterculture within the Jewish world of their day.

The institutionalized web of a secular Jewish life in the immigrant and second-generation community that arose in the urban United States was closely related to sibling communities abroad—Paris, Buenos Aires, Tel-Aviv, Montreal, and Melbourne—all of which grew out of the rebellion of immigrant sons and daughters, all bent on distancing themselves from what they remembered as the stultifying effects of their parents’ strict, if unlettered and superstitious, folk religion. In all these cases, they advocated “free thinking” and “worldliness” as a positive Jewish response to modernity, as free and unfettered citizens of the world and members-at-large of the culture of progress. This foundational experience remains the historical yardstick by which avowedly secular endeavors in the Jewish realm have come to be

compared and measured, and to which they look when seeking to claim a cultural heritage worthy of emulation.

Yet, by the 1960s, the myriad of secular, mainly Yiddish-based cultural and social institutions had been vastly reduced, almost to the point of extinction. More important, perhaps, the cultural optimism of “progressive” and similar political ideologies that prevailed before the Holocaust and the Cold War, an optimism that critically buoyed the credo of Jewish secularism, gave way increasingly to psychoanalytical and postmodernist critiques of modernity and its veneer of human self-improvement.

Secular Judaism in the late twentieth to early twenty-first century has typically lacked the wide-ranging, multipurpose communal infrastructure that characterized its early twentieth-century prototype. Secular Judaism rests, instead, on the noninstitutionalized, nonideological fraternization that Glazer had referred to as “Jewishness,” and its hallmark is less a rebellion against the piety of illiterate grandparents than an expression of discomfort with denominationalism, “organized religion,” and hollow pieties.

Continuities in Secular Jewish Experience

There are two continuities, however, that represent a seam in the history of secular Judaism in the United States. One such continuity revolves around a bedrock egalitarian outlook: This outlook rejects hierarchy in Jewish life—there are to be no “better” Jews and “worse” Jews, only Jews. The outlook also resists traditional gender role differentiation, which historically had ordained separate “male” and “female” spheres, comportment, and functions. Finally, this outlook typically adopts a positive attitude toward social causes, often dubbing such proactive activity in the public realm on behalf of others as *tikkun olam* (pronounced tee-KOON oh-LOM). The latter Hebrew phrase, meaning restoring or repairing the world, was in its premodern classical setting a kabbalistic (mystical) doctrine, prescribing the restoration of ontological, divine, cosmic meaning, but since the 1960s, *tikkun olam* has become secularized and known in Jewish circles as a synonym for social justice and social action. This outlook functions, for the most part, to provide secular, humanistic activity with a particularistically Jewish rationale, and thus imparts to Jewish secularism a political spin that is reminiscent of older forms of Jewish “worldliness.”

The second continuity revolves around Jewish peoplehood. The particular form this orientation may take is open-ended, and may exhibit itself as an enthusiasm for Yiddish folk culture, empathy with oppressed Jewish communities

abroad or with Jewish victimhood in the past (such as during the Holocaust), or simply an expressed desire to take “pride” in being Jewish. Crucially, the advent of Jewish political sovereignty in the State of Israel, since 1948, and Israel’s role since then in “gathering” Jews from the historic lands of oppression, have reinforced one of the important pillars of modern secular Judaism. As with the case of *tikkun olam*, solidarity with Israel creates avenues for political activity in the public arena, even as it generates powerful emotional satisfaction that can be plausibly related to Jewish sensibilities.

It is relevant here, as well, that the State of Israel has fostered its own version of a Jewish civil religion, based on the revived Hebrew language, the symbolism of ancestral space, national civic holidays and remembrance days, a posture of armed vigilance, and a social aesthetic of simplicity and directness in interpersonal relations. Some elements of this “worldly” Jewish-Israeli culture of a fused physicality and sentimentality have been refracted within U.S. Jewry, where they function alongside other ethno-cultural elements as points of identification.

Along the same vein, Israel’s constitutional laws include the Law of Return, which requires the state to grant automatic citizenship to any Jew who immigrates, as well as to non-Jewish close relatives of a Jew (such as a non-Jewish child, grandchild, or spouse). The Jewish state thus recognizes criteria for “Jewish” affinities on the basis of kinship alone—not faith—that go well beyond the traditional (halachic) rabbinical definition of Jewish lineage, and these wider criteria, backed up by the force of law, undergird the national civil religion. Although the Israeli system of government has reinforced Orthodox Judaism by granting the regnant Orthodox rabbinate sole legal custodianship over official Jewish religious functions (marriage and divorce in particular), it has undeniably also reinforced some secularizing tendencies in modern Jewish life.

Secularization of Jewish Learning

One of the manifestations of secular Judaism in the United States has been the remarkable development of English-language Jewish studies at universities. Whereas classical Judaic culture, particularly related to biblical text study, Hebrew, and Aramaic, was well represented in the academic curriculum of some of the earliest and most prestigious U.S. institutions of higher learning, this was often a supplement to New Testament studies aimed at Christian divinity school students and scholars. Jewish learning in the traditional

mode, in contrast, continued for many years to be maintained largely at sectarian Jewish institutions, informal study circles, rabbinical seminaries, and yeshivas (Talmudic academies). The synagogue itself had historically functioned as a study house: the Yiddish word for “synagogue”—shul—is identical to the word for “school.” Jewish learning in this sense was a liturgical and theosophical endeavor, rather than something abstract and purely intellectual, and it is referred to in Judaic culture as *Torah*.

Formal academic scholarship in Jewish history, literature, philosophy, and linguistic studies aimed at uncoupling “wisdom” from “belief,” and separating “learning” from “Torah,” began in earnest in central and western Europe during the nineteenth century and was transferred to the United States beginning in the first half of the twentieth century. By the post-World War II era, and especially since the 1960s, the number, variety, and academic standing of programs in Jewish studies in U.S. universities began to reach unprecedented levels. The growth spurt and the demand evidenced by growing course registrations coincided with several intersecting trends: the parallel development of ethnic, African American, and women’s studies programs, as U.S. intellectual culture began to embrace diversity; the heightened awareness of Israel and of modern Hebrew—as opposed to classical biblical or rabbinic Hebrew—as a part of Middle East area studies programs; and not least the ability of universities to tap funding sources among Jewish alumni and elsewhere within the Jewish community, who were willing to aid in this sort of development.

As an academic endeavor, Jewish studies programs constitute a secularized venue for the mastering of Jewish texts and languages, for debating issues of approach and agenda that are of scholarly concern to the entire university community, and for fostering the integration of a non-Christian civilization into the core curriculum of Western academia. Jewish studies have focused on integrating contemporary humanistic or social-scientific methodology into a gamut of courses and degree programs whose field is the Jewish experience writ large.

Appealing in particular to faculty trained in various academic disciplines but specializing in Jewish research and aimed largely at Jewish-raised students who may or may not be active religiously, this form of Jewish learning is nonsectarian in character and content. Unlike classical Torah, it aims for critical intellectual achievement rather than for spiritual refinement and transcendental enlightenment. It sees Jewish culture in the context of world civilization,

rather than as a working out of divine commandment. The field has spawned a large number of scholarly journals, dozens of books published annually, and a minor industry of conferences, lectures, literary and scholarship awards, and a whole new generation of eminent authorities.

The option of studying Jewish history, languages, literatures, and philosophy in a secular, academic setting may be especially attractive within the U.S. Jewish population, given the relatively high proportion of young Jewish men and women who go to college. Jewish studies on campus provide such students with adult experiences of study, reading, and research, often at a time in their lives when most are probably unaffiliated with any Jewish religious or communal institution or synagogue. It may also be particularly appealing to encounter the Jewish heritage within a campus culture that promotes an open marketplace of ideas, rather than within a prescriptive framework.

Judaism: Tradition and Heritage

Judaism is the religion that is portrayed in the Torah (the Instruction), which is God's revelation to Moses at Mt. Sinai, and particularly in the Five Books of Moses. Judaism is one of three monotheistic religions. The other two monotheistic religions, Islam and Christianity, affirm that same theology of the unity and uniqueness of God. Distinguished from polytheist religions, with multiple gods, all three monotheisms maintain that God is one and transcendent, not subject to the rules of nature but wholly other. But these three religions differ. Judaism differs from Christianity in recognizing as God's revelation only the Hebrew scriptures, or

Old Testament, but not the New Testament. Judaism differs from Islam in holding Moses to be unique among prophets and in recognizing no prophecy beyond the scriptural record.

The Diversity of Judaisms

Differentiating Judaism from its close affines, Christianity and Islam, is easier than is defining Judaism. The world today knows a number of Judaisms, and times past witnessed diversity as well. That is for two reasons.

First, Judaism encompasses a variety of closely related religions, past and present. These share a number of traits—for example, they all revere the Torah revealed by God to Moses at Mt. Sinai. But they also differ among themselves in important ways. So to define Judaism as a single, unitary, and uniform religion, unfolding in a continuous history from beginning to present, is simply not possible.

Second, Judaism is the union in modern times of the ethnic and the religious. Today some Jews are secular and do not practice Judaism in any form. People generally assume that "Judaism is the religion of the Jewish people," so they identify the attitude and social traits of the ethnic group, the Jews, with the religion, Judaism. That yields confusion.

Defining Judaism as a Religious System

A religious system comprises three components:

1. Worldview, the explanation of the world as perceived by the group; in general, what a system of Judaism defines as "the Torah" will contain the worldview of that system.
2. A way of life, in concrete deeds expressing that worldview and linking the life of the individual to the polity; what a system of Judaism sets forth as the things someone must do describes that holy way of life.
3. An account of a particular social group, explaining who the adherents of the religious system are, where they come from, and what they must do. All Judaic religious systems invoke the scripture's narrative of "Israel" to tell the story of their particular group.

A Judaic religious system answers an urgent question with a self-evidently valid answer. It says the same thing about a great many things. That is how these components of a religious system of the social order come together.

A conception of a single, unitary, and continuous history forms a principal part of the worldview of any Judaic religious system. Each one ordinarily situates itself in a single historical line—hence, as part of a linear history—from the

past. Commonly, each system sees itself as the outcome of an increment of time and change. When we can identify the principal symbol to which a given system on its own appeals, we have a wholly distinct and distinctive Judaic system of the social order, a Judaism.

Judaism as a Way of life: The Festivals and the Calendar of Nature

Common to most Judaic religious systems is the outline of a way of life. The calendar of Judaism celebrates the lunar months, each new moon occasioning a holiday. The months of the Jewish calendar then are signified by the phases of the moon, from the new moon, the first day of the lunar month, to the full moon, the fifteenth day of that same lunar month, and on to the end of the same lunar month and repetition of the cycle. But besides the lunar months into which the year is divided, Israel's years are signified by the solar calendar, which governs the seasons here on Earth. The solar equinoxes, spring and fall, signal critical changes in the ecology of the Land of Israel, marking the end of the winter rains and the advent of the season of dew and the initial barley harvest, in March and April, and the final harvest and the beginning of the winter rains to replenish the life-giving water of the land, in September and October. So the two noteworthy occasions in the solar calendar are the full moons following the vernal and the autumnal equinoxes.

Passover/Pesach: "You Shall Tell Your Child: 'It Is Because of What the Lord Did for Me When I Went Free from Egypt'"

With the advent of spring and renewal after the fructifying winter rains in the Land of Israel comes the holiday of Passover. Passover's celebration of the Exodus from Egypt, matching nature's beginnings at spring tide, sets the stage for all the other parts of the story. The master-narrative of Judaism begins with the story of the origins of Israel: the descent of Israel into Egypt, four centuries of slavery there, then God's sending Moses to the Egyptian pharaoh to liberate the Israelite slaves and lead them to the promised land.

Weeks/Shavuot: The Season of the Giving of the Torah

Seven weeks after Passover, the holiday of Shavuot (Shabuoth) ("Weeks") marks Israel's emergence as the community of those who accept God's dominion as laid out in the Torah. And in the narrative of Judaism, just as everyone, the living and those destined to live, was saved from Egyptian bondage,

so now, on Shavuot, every Israelite through all time is regarded as standing at Mt. Sinai and receiving the Torah. What is at stake? Israel at Mt. Sinai forms an ethnic group, an extended family propagated by birth, and especially, a religious community defined by a common commitment to God and his instruction. Continuous with Passover, Shavuot celebrates God's freely giving, and Israel's willingly receiving, the Torah at Mt. Sinai.

The Ten Days of Awe: The New Year/Rosh Hashanah (the Day of Remembrance and Judgment) and the Day of Atonement/Yom Kippur (the Day of Mercy and Forgiveness)

In the autumn, the first ten days of the lunar month of Tishré (Tishri), the New Year (Rosh Hashanah), and the Day of Atonement (Yom Kippur) together are called "the Ten Days of Awe" and mark days of solemn penitence. The fifteenth day of that same month, the first full moon after the autumnal equinox, marks the advent of Huts/Sukkot.

The story realized in the holy season of the Ten Days of Awe concerns the individual Israelite in the setting of all of humanity. The story tells that the New Year commemorates the creation of the world, and on the New Year, every creature comes before God to be judged in accord with deeds done in the past year. Then, ten days later, the decree is sealed on the Day of Atonement, which, on its own, has the power to atone for sin, so the judgment of the New Year is mitigated or even set aside by the atonement of the Day of Atonement, an occasion for forgiveness from sin. The scripture is clear that the advent of the day on its own brings forgiveness.

Huts/Sukkot: The Season of Our Rejoicing

Called simply "The Festival," the festival of Huts (in Hebrew, Sukkot [Sukkoth], which is frequently translated as "Tabernacles" and sometimes called "Booths") forms the climax of the autumnal holy day season, the counterpart to the sequence of Passover and Shavuot after the vernal equinox. Just as the vernal season begins at Passover and concludes fifty days later at Shavuot, so a span of time is covered in the fall as well. Sukkot does not concern itself with freedom and the giving of the Torah but, rather, with sin, forgiveness, and rejoicing.

Restoring Eden: The Sabbath

Israel (the Jewish people) on the Sabbath, the seventh day of creation, restores the conditions that prevailed when God and Adam were last together, that perfect Sabbath when

God, having perfected creation, blessed and sanctified the Sabbath day in celebration of the perfection of creation, and entered upon repose. As God rested on the seventh day of creation, so Israel rests on the seventh day, from sunset on Friday through sunset on Saturday.

Minor Holidays: Hanukkah

Beginning on the 25th of the lunar month of Kislev, corresponding to December, Hanukkah, the festival of lights, commemorates the rededication of the Temple of Jerusalem after it was desecrated by idolaters in the second century BCE. It does not form “the Jewish Christmas” in any way.

The Life Cycle of Judaism: Birth, Puberty, Marriage

Birth

The rite of passage of circumcision in Judaism requires cutting off the foreskin of the penis on the eighth day after birth. Called *berit milah*, the covenant of, or effected through, the rite of circumcision, *berit milah* seals with the blood of the infant son the contract between Israel (the Jewish people), beginning with its birth in Abraham and Sarah, and God.

Entering the Age of Responsibility

The advent of puberty is marked by the bar mitzvah rite for a young man and a bat mitzvah rite for a young woman. At these rites, a young person becomes obligated to keep the commandments; *bar* means son and *bat* means daughter, with the sense that “one is subject to,” and *mitzvah* means a divine commandment. The rite is unadorned: The young person is called to pronounce the benediction over a portion of the Torah lection in the synagogue and is given the honor of reading the prophetic passage as well.

Marriage: Adam and Eve in Eden

The marriage rite invokes the great themes of the restoration of the Jewish people to the Land of Israel, and of Adam and Eve to Eden. Under the huppah (chuppah), the marriage canopy, the singular couple stands for the Israelites restored to their ancestral land, and Adam and Eve in Eden. The rite unfolds in stages, beginning before the couple reaches the marriage canopy and ending long afterward. Seen in sequence, the rite follows this pattern: (1) the ketubah (marriage contract) is witnessed, (2) the bride’s veil is put in place by the groom, (3) under the huppah betrothal,

erusin, occurs, and (4) under the huppah completion of the wedding, or *nissuin*, occurs.

Everyday Life: Eating, Praying, Studying the Torah

Eating

Sustaining life, which is a gift from God, involves two matters: first, what Israelites are to eat or refrain from eating, and second, how they are to eat. The scripture, (for example, Leviticus 11), as interpreted by the rabbinic sages, specifies a variety of foods that may or may not be eaten. All fruits and vegetables are permitted, so too fish that have fins and scales, but not scavengers or bottom-feeders. For meat, only animals that have cloven hoofs and chew the cud may be consumed by Israelites. Animals slaughtered for meat for Israelites (“kosher” or suitable meat) are slaughtered with a perfectly sharp knife, swiftly to prevent suffering, with the recitation of a blessing; the blood is drained, and the meat inspected for blemishes and indications of disease. “You shall not seethe a kid in its mother’s milk” (Exodus 23:19 [American KJV]) is understood by the sages to mean not consuming dairy products for a span of time after eating meat (from two to six hours, depending on the custom), and different sets of dishes, one for meat, the other for dairy products, are required.

In general, the food regulations form an exercise in sanctification, a perpetual discipline of divine service, and obedience to God’s will in the humblest transactions of everyday life. Among contemporary practitioners of Judaism practice varies, with Reform Judaism not requiring the observance of dietary rules and Orthodox Judaism strictly keeping those rules. It is not uncommon for Conservative Jews to keep the dietary laws at home but to ignore them when eating outside the home. Most public institutions of the Jewish community of the diaspora and Israeli government facilities follow the dietary rules.

The meal, in Judaism, presents itself as an occasion of thanksgiving, which encompasses the entirety of the story Judaism tells. To put matters simply: Every time the faithful Israelite eats a meal, he or she rehearses the whole Judaic narrative, Land, Exile, and Redemption. Blessings before eating food and an elaborate grace after meals transform the act of nourishment to a direct encounter with God, who has provided the food that is eaten, and a reprise of Israel’s condition in time and eternity. The secular facts of hunger and satisfaction now, in an exact sense, *embody* exile and return, sin and remission of sin, and this world and the world to

come. The blessing before eating food and the grace afterward complete the metaphor.

Praying

Prayer in Judaism is obligatory. The community and its members pray upon rising, at dusk, and after dark. Public prayers encompass three important matters: to whom the prayer is addressed, the petition that is presented, and the identification of the community by whom the petition is set forth. These take shape in (1) the recitation of the creed, twice daily, morning and night, called “the Shema,” which means, “Hear . . .,” from the first word, “Hear O Israel . . .”; (2) petition, at the three specified times, for the needs and welfare of the community and the individual, called The Prayer, or Eighteen Benedictions, and (3) the situation or identification of the community in its larger setting, called “Alenu.” These latter two prayers are said morning, dusk, and night.

The Shema. Evening and morning, Israel (the Jewish people) individually and communally proclaims the unity and uniqueness of God: “Hear O Israel, The Lord is our God, the Lord is one” (Deuteronomy 6:4 [New International Version]). The proclamation is preceded and followed by blessings. The whole constitutes the credo, “what the Jews believe.” The three elements of the creed cover creation, revelation, and redemption—that is to say, God as creator of the world, God as revealer of the Torah, and God as redeemer of Israel. The recital of the Shema is introduced by a celebration of God as creator of the world. Morning and evening, Israel responds to the natural order of the world with thanks and praise of God who created the world and who actively guides the daily events of nature. Whatever happens in nature gives testimony to the sovereignty of the creator. And that testimony takes shape in the ordinary events: sunrise and sunset.

The Prayer. The Shema is followed by the second of the three required components of obligatory public worship. The Prayer comprises prayers of petition on weekdays. What the community asks for, always in the plural, concerns the public welfare and covers matters today would be assigned to the category of public policy as much as personal need. In the morning, noon, and evening, these weekday prayers of petition are called “the Eighteen Benedictions” (in Hebrew, *Shemoneh Esre*), which are requests concluding with a blessing. Some of these, particularly those at the beginning and the end, recur in Sabbath and festival prayers.

Alenu. Every synagogue service concludes with a prayer before going forth, called *Alenu*, from its first word in Hebrew, meaning “it is incumbent upon us [to praise . . .].” The third of the three components of the communal worship, *Alenu* draws the community outward into the world.

Studying the Torah

Judaism maintains that humanity finds God in books through the act of learning. Torah study (in Hebrew, *Talmud Torah*) recapitulates the encounter at Mt. Sinai. This means that when Israel assembles for the study of the Torah, God is present. Learning itself constitutes an act of worship.

The Ethics of Judaism

The main point of the Torah, stated simply, is this: The Torah, written and oral, aims at transforming Adam, who represents all humanity, into Israel, and transforming Israel into God’s image, after God’s likeness, which was God’s original plan. But God created all humanity “in our image, after our likeness,” and the qualities that in humanity replicate God’s traits cannot, therefore, be set forth in language particular to Israel. Ethical imperatives are addressed in the Torah by God to Israel, but they pertain to all humanity, defining what it means to be a human being. What that means is defined in a variety of ways, but common to all of them is a stress on ethics and virtue, which pertain to everyone, a common heritage of humanity at large. The Talmud phrases what is at stake in simple sayings, such as, “The All-Merciful wants the heart,” “The commandments were given only to purify humanity,” and the like. The scripture itself is explicit: “You shall not hate your brother in your heart, but reasoning, you shall reason with your neighbor, lest you bear sin because of him. You shall not take vengeance or bear any grudge against the sons of your own people, but you shall love your neighbor as yourself: I am the Lord” (Leviticus 19:17–18), which some authorities identify as the most important law of the Torah.

Right takes priority over rite, as the prophets make clear, and saving a life trumps all other religious obligations and commandments. These sayings, with their insistence on right attitude, one in which the heart of the human being willingly accedes to the will of God, stand no great distance from the story of Adam and Eve in Eden and Israel at Mt. Sinai, rebelling against God while Moses was yet on the mountain.

Then, so far as the weight of Judaic counsel, from the scripture onward, what matters most is ethical conduct

toward one's fellow human being. That is at the heart of Judaism's story of the good life.

The golden rule of Leviticus 19:18 maintains that the main point of the Torah is for people to refrain from doing to others what they do not want done to themselves. More often than not, the highest virtue is good will, which encompasses every other social virtue of generosity, foresight, neighborliness, and the rest. The worst vice is not envy, bad neighborliness, or defaulting on a loan, but ill will, which generates all other vices.

Yohanan, a noted rabbinical scholar of the first century CE, finds the source of all specific virtues in the attitude of good will because in his view, attitude and intention in the end define the human being: We are what we want to be, the world is what we want to make of it. The entire message of the Torah for the virtuous man and woman is summed up in that conviction, which, furthermore, is embodied in the law of Judaism governing the social order.

Gender in Judaism

In telling its tale, Judaism in its classical documents joins traits explicitly marked as male to those explicitly classified as female and insists on both in the formation of models of virtue. Judaism therefore may be classified as androgynous, exhibiting the traits of both sexes as the religion itself defines those gender qualities. In this world, holy Israel (the Jewish people) is to emulate women's virtue, the condition of the coming of the Messiah. And women's capacity for devotion, selfless faith, and loyalty defines the model of what is required of Israel for its virtue.

The sages of the normative writings, Mishnah, Talmud, Midrash, thought in terms of the holy community, rather than isolated individuals. Gender roles formed part of the larger statement that sages proposed to craft concerning the coherent life of the community overall. Sages' doctrine of feminine virtue, therefore, makes sense only within its larger systemic context. The dual Torah, beginning to end, taught that the Israelite was to exhibit the moral virtues of subervience, patience, endurance, and hope. These would translate into the commendable traits of humility and forbearance. And Israelites would yield to social virtues of passivity and conciliation. The hero was one who overcame impulses, and the truly virtuous person was the one who reconciled others by giving way before the opinions of others. All of these acts of self-abnegation and self-denial, accommodation rather than rebellion, were required to begin with the right attitudes, sentiments, emotions, and impulses, and the single

most dominant motif of the rabbinic writings is its stress on the right attitude's leading to the right action, the correct intentionality's producing the desired decision, and above all, accommodating in one's heart to what could not be changed by one's action. And that meant the world as it was. Sages prepared Israel for the long centuries of subordination and alienation by inculcating attitudes that best suited people who could govern little more than how they felt about things. As we shall now see, sages themselves classified the desired virtues as feminine, and they proposed to feminize Israel, the holy people.

When we speak of virtues as feminine and masculine, it is not to perpetuate contemporary stereotypes, but to pay close attention to sages' own judgment of matters. How do we know how the framers of the dual Torah, who bear the title "our sages of blessed memory," classify virtues, whether as masculine or as feminine? In the classical writings, several systematic exegeses focus on women and therefore permit us to characterize sages' conception of women's virtues and, it follows, the virtues the sages classify as feminine. Sages' reading of the scriptural books of Ruth and Esther and their treatment of Miriam the prophetess and other scriptural prophetesses allow access to their thinking on what characterizes the virtuous woman.

Among the expositions pertinent to that matter, however, none more reliably records sages' conception of the feminine and of the feminine in relationship to the masculine than does their reading of the Song of Songs in the exegetical compilation, *Song of Songs Rabbah*, a writing contemporary with the Talmud of Babylonia, ca. 600. There, in reading the Song of Songs as a statement of the relationship of God and Israel, Israel is identified as the female-beloved, God as the male-lover. We need not speculate, therefore, on correct traits for women; in the document at hand, they are those explicitly assigned to feminine Israel.

The History of Judaism: An Overview

The history of Judaism begins with the formation of the Pentateuch, what Jews call the Torah, the Five Books of Moses: Genesis, Exodus, Leviticus, Numbers, and Deuteronomy. Rabbinic tradition holds that God revealed the Torah to Moses on Mt. Sinai, and this remains a core belief of Orthodox Judaism. Modern scholarship holds that the Torah took shape after two axial events. First came the destruction of the First Temple of Jerusalem in 586 BCE along with the exile of the Israelites to Babylonia. Then

Jews from around the globe make pilgrimages to the Western Wall, a supporting section of the Temple Mount, all that remains of the Second Jerusalem Temple from the year 70. The wall, a powerful symbol of Judaism, is the closest access to the site of the original Holy of Holies, the sacred area of the temple, where Jews believe that the divine presence abides. Worshippers gather at the wall to pray and hold ceremonies. Many write messages and petitions to God on small pieces of paper and insert them in the wall's crevices.

came the restoration of Israel to the Land a generation later, ca. 538 BCE. Judaism answered the question, What is the meaning of the exile of the Israelites from the Land of Israel and their restoration to the Land? From that starting point, the history of Judaism is divided into four periods:

1. The age of diversity, in which many Judaic systems flourished, from the period of the formation of the Hebrew scriptures, ca 586 BCE, and the return to Zion in 538 BCE, to the destruction of the Second Temple, in 70 CE. Among the Judaic systems of the age of diversity were Pharisaic, Essene, and Sadducean Judaisms, and the Christianity of Paul and the Gospels competed as a Judaism too.

2. The formative age, from 70 CE to closure of the Talmud of Babylonia, ca. 600 CE. In that period, Rabbinic Judaism shaped the biblical canon, deciding which books would be included in the Bible and which not. The rabbis also declared that, at Mt. Sinai, God revealed the Torah to

Moses in two media, writing and memory, and that the rabbis possessed the memorized or oral Torah.

3. The classical age, from late antiquity to the nineteenth century, in which the rabbinic definition of Judaism dominated the lives of the Jewish people nearly everywhere they lived.

4. The modern age, from the nineteenth century to our own day, when an essentially religious understanding of what it means to be part of the Jewish people, or Israel, came to compete among Jews with other, secular views and symbolic expressions of those views.

The Age of Diversity (586 BCE–70 CE)

The Formation of Judaism: The Pentateuch

The Pentateuch is important because it forms a critical component of the holy writings of every Judaic religious system ever known before the present day.

The Pentateuch's narrative of the destruction of the Temple in 586 BCE followed by the return to Zion emphasizes two points:

1. The formation of Israel and its covenant with God, time and again insisting on the holiness of Israel and its separateness from the other peoples
2. The conditional possession of the land as the mark of the covenant

The people have the land not as a given but as a gift. As long as the people obey the covenant, the land will be theirs and they will prosper in it. If the people violate the Torah, the conditions of the covenant, they will lose the land. The key chapters are Leviticus 26 and Deuteronomy 32.

Exile and Return as the Enduring Structure of the First and the Subsequent Judaisms

The scripture said that Israel suffered through exile, then atoned, attained reconciliation, and renewed the covenant with God as signified by the return to Zion and the rebuilding of the temple. Although only a minority of Jews both went into exile and came back to Zion, the Judaic system of the Torah made normative that experience of alienation and reconciliation. Judaism transformed the experience of a handful of the community into a paradigm, a recurrent pattern of experience.

1. The conclusions generated by the paradigm derived not from reflection on things that happened but from the logic of the paradigm.
2. That same paradigm would create expectations that could not be met, so would renew the resentment captured by the myth of exile, while setting the conditions for remission of resentment, thus resolving the crisis of exile with the promise of return.

This self-generating paradigm formed the self-fulfilling prophecy of exile and return that Judaic religious systems have offered since the beginning as a source of generative tension and critical symbolic structure.

First came the system, its worldview and way of life, then came the selection, by the system, of consequential events and their patterning into systemic propositions. And finally, at a third stage came the formation and composition of the canon of writings that would express the logic of the system and state those events that the system

would select or invent for its own expression. The system created the paradigm of the society that had gone into exile and come back home.

Why did the system of exile and restoration persist as the pattern of Judaism? With the continuing authority of the Torah in Israel, the experience to which it originally responded was recapitulated through the reading and authoritative exegesis of the original scripture that preserved and portrayed the paradigm: "Your descendants will be aliens living in a land that is not theirs . . . but I will punish that nation whose slaves they are, and after that they shall come out with great possessions" (Genesis 15:13–14). The long-term reason for the persistence of the priests' Judaism as the self-evidently valid explanation of Israel's life derives from two facts.

First, the scriptures themselves that told the story retained their authority and were celebrated in regular gatherings of the community.

Second, as long as the people perceived the world in such a way as to make urgent the question that the scripture framed and answered, the paradigm would endure. Jews continued to envision the world through that original perspective created in the aftermath of destruction and restoration. They went on to see the world as a gift instead of a given and themselves as chosen for a life of special suffering but also special reward.

Therefore, the urgent question answered by the Torah retained its original character. The scripture kept reminding people to see the world through the experience of exile and return.

The Formative Age of Rabbinic Judaism (70–640)

Continuing the paradigm of exile and return in a distinctive way, the particular Judaism that predominated from ancient times to our own day, Rabbinic Judaism, appealed to the myth of divine revelation to Moses at Mt. Sinai of the Torah in two media, oral and written. The Judaism of the so-called dual Torah came to full expression in the writings of the sages of the Land of Israel (that is, "the Holy Land," "Palestine") of the later fourth and fifth centuries. These sages maintained that God revealed both a written and an oral Torah at Mt. Sinai. The written Torah is the Hebrew Bible (which the Christian world calls "the Old Testament.") The oral Torah, transmitted orally and memorized by great prophets, then sages, down to the time of the rabbinic sages themselves, is preserved in the Talmud.

The Classical Period of Judaism (640–1787, 1789)

A measure of the remarkable success of the Judaism of the dual Torah is readily at hand. Shortly after the closure of the Talmud of Babylonia, in 640, Islam swept across the Middle East and North Africa, conquering territories that by that point had been Christian for half a millennium. Vast once-Christian populations accepted Islam. Christianity that had triumphed by the sword of Constantine fell before the sword of Muhammad. Judaism held its own. It served as the system of a vanquished people because it explained the situation of the defeated nation. And the same Judaic system flourished into the late nineteenth century in eastern Europe, and down to the middle of the twentieth century for the Judaic communities in Muslim countries. Rabbinic Judaism remained the self-evident answer to the urgent question confronting the Jews and answered in this Judaism. Rabbinic Judaism explained why the gentiles flourished while Israel languished. In the long intervening age, 640 to 1789, whatever important ideas or issues developed were worked out within the categories of the Judaism of the dual Torah.

For example, a variety of mystical ideas and practices entered the world of Judaism and attained naturalization within the Torah. Furthermore, a philosophical tradition restated the truths of the Torah in terms of Greek modes of thought represented by Aristotle and Plato as the Muslim philosophical schools transmitted those modes of thought to the West. In the mystical tradition, the great work was the Zohar, written toward the end of the thirteenth century in Spain, and, in the philosophical tradition, the most important figure was Moses Maimonides (1135–1204), who restated the whole of Judaic law and theology in a systematic way using the categories of philosophy.

Both of these encompassing modes of thought, the mystical and the philosophical, transformed “the one whole Torah of Moses, our rabbi” from a mythic-narrative doctrine into an intellectual experience of God. This involved, on the one side, an intensely felt and profound doctrine of the true nature of God’s being, and, on the other side, an intellectually rich and rational statement of the Torah as truth.

The Modern and Contemporary Scene (1787–)

The year 1787 refers to the U.S. Constitution, which inaugurated the new political setting in which the Jews would find their way. For Europe, 1789, the start of the French Revolution, gives the same signal. The Jews began to attain

civil rights, but on that account had to confront a new urgent question: how to be Israelites and citizens of the countries in which they lived. The issues of a vanquished nation dwelling alone and living its life subordinated by “the nations” now confronted new realities. Jews had to figure out how to be both Israel and something else—French or German or U.S. citizens as well.

Throughout the nineteenth century, a number of other Judaic systems—worldviews, ways of life, addressed to an “Israel”—developed to respond to this new and urgent question. The first and most important of these was Reform Judaism. Reform took seriously the political changes that accorded to Jews the rights of citizens and demanded that they conform, in important ways, to the common culture of their countries of citizenship. Reform took shape in the first quarter of the nineteenth century.

Some decades later, in the middle of the century, an integrationist Orthodoxy stated the position that one may observe the law and enter into the civilization of the West. Affirming the divine origin of the Torah, integrationist Orthodoxy effected a selective piety—for example, affirming secular education in addition to study of the Torah.

Historical Judaism, known in the United States as Conservative Judaism, occupied the center between these two and maintained that change could become reform, but only in accord with the principles by which legitimate change may be separated from illegitimate change. Conservative Judaism discovered those principles through historical study. In an age in which historical facts were taken to represent theological truths, the historicism of Conservative Judaism bore compelling weight.

Each of these Judaic systems exhibited three characteristic traits. First, each asked how one could be both Jewish and something else, that is, also a citizen of a nation. Second, each defined *Judaism* (that is, its system) as a religion, thus leaving ample space for that something else—namely, nationality—to speak to and for the nation’s Jewish citizens among others. Third, each appealed to history to prove the continuity between its system and the received Judaism of the dual Torah.

The importance of history in the theological thought of the nineteenth-century Judaisms derives from the intellectual heritage of the age, with its stress on the nation-state as the definitive unit of society and on history as the mode of defining the culture and character of the nation-state. History as an instrument of reform, further, had served the

Protestant Reformation, with its appeal to the scripture as against (mere) tradition and its claim that it would restore Christianity to its (historical) purity. The one thing the Jewish thinkers wanted to accomplish was to show the rationalism, the reason—the normality—of the Judaism they constructed. Appealing to (mere) facts of history, as against the unbelievable claims of a scripture, placed on a positive and this-worldly foundation that religious view of the world that, in the received system of the dual Torah, rested on a completely supernatural view of reality.

A self-segregationist Orthodoxy prevailed in parts of eastern Europe, which continued the received system without change.

Modern and Contemporary Judaisms in the Context of Rabbinic Judaism

Rabbinic Judaism had encompassed the whole of the existence of the Jews. In the way of life of that system, a Jew was *always* a Jew, and he or she was *only* a Jew. But in modern times, Jews would also be more than only Jewish: Jews and Americans, Jews and workers, Jews and Israelis, and so forth. Contemporary Jews are never Jews alone, in the sense of God's people Israel, as portrayed by the scripture.

Instead, a process called “emancipation”—part of a larger movement of the freeing of serfs, women, slaves, Catholics in Protestant countries, and others—encompassed the Jews as well. The historian Benzion Dinur defines this process of emancipation as follows:

Jewish emancipation denotes the abolition of disabilities and inequities applied specially to Jews, the recognition of Jews as equal to other citizens, and the formal granting of the rights and duties of citizenship. Essentially the legal act of emancipation should have been simply the expression of the diminution of social hostility and psychological aversion toward Jews in the host nation . . . but the antipathy was not obliterated and constantly hampered the realization of equality even after it had been proclaimed by the state and included in the law. (Benzion Dinur, “Emancipation,” *Encyclopaedia Judaica* 6:696–718. Quotation: col. 696)

The political changes that characterize the process of Jews' emancipation began in the eighteenth century, disrupting the long-term stability that had characterized Jews' social and political life from Constantine onward. These political changes raised questions not previously found

urgent and precipitated reflection on problems formerly neglected.

Many scholars trace three periods in the history of the Jews' emancipation. The first (1740–1789) marks the point at which the emancipation of the Jews first came under discussion, the second (1789–1878) is the period in which western and central European states accorded to the Jews the rights of citizens, and the third (1878–1933) brought to the fore a period of new racism that in the end annihilated the Jews of Europe. Nazism ended the political emancipation of the Jews of Germany. Meanwhile in Russia the Communist regime, which began in 1917, closed the schools that transmitted Judaism among the vast Jewish populations subject to its rule and substituted communism for Judaism as a matter of state policy. The Nazis were defeated in World War II in 1945, and the Communists lost control of Russia and the Russian empire in 1989. Nevertheless, the twentieth century witnessed a shift in the central question that all forms of Judaism were called on to address. In the wake of emancipation, the question was how the Jews could be both Israel and something else, but now the question was, how can the Jews continue to *be* at all.

The Twentieth Century and Its Mythic Ideologies

Three Judaisms were born in the twentieth century—two in 1897, one in 1967. The first was Jewish socialism and Yiddishism; the second, Zionism; and the third, three generations later, the U.S. Judaic system of Holocaust and redemption. Jewish socialism took shape in the bund, a Jewish union organized in Poland in 1897. Zionism was founded in the World Zionist Organization, created in Basel, Switzerland, in 1897. U.S. Judaism—“the Judaism of Holocaust and Redemption,” explaining in ethnic and political terms why and where one should be Jewish in the formulation under discussion—came to powerful expression in the aftermath of the 1967 war in the Middle East.

All three Judaic systems answered profoundly political questions. Their agenda attended to the status of the Jews as a group (Zionism, U.S. Judaism), the definition of the Jews in the context of larger political and social change (Jewish socialism, Zionism). It follows that the urgent questions addressed by the twentieth-century Judaisms differed in kind from those found acute in the nineteenth century. In the twentieth century, powerful forces for social and economic change took political form, in movements meant to shape government to the interests of particular classes or groups—the working

classes or racial or ethnic entities, for instance. The Judaic systems of the century responded in kind.

Jewish socialism presented a Jewish-ethnic system congruent to the political task of economic reform through state action. The Jews would form unions and engage in mass activity of an economic and ultimately, therefore, of a political character. Cultural unity would find expression in the Yiddish language.

In that same century the definition of citizenship, encompassing ethnic and genealogical traits, presented the Jews with the problem of how they were to find a place in a nation-state that understood itself in an exclusionary and exclusive, racist way—whether Nazi Germany or nationalist Poland or Hungary or Rumania or France. Zionism declared the Jews “a people, one people,” and proposed as its purpose the creation of the Jewish State. The Hebrew language, renewed from biblical times, would serve as medium for the nationalism of the Jewish people.

Later on shifting currents in U.S. politics, a renewed ethnicism and emphasis on intrinsic traits of birth, rather than on extrinsic ones of ability, questioned Jews’ identification with the democratic system of the United States as that system defined permissible difference. A Jewish ethnicism, counterpart to the search for roots among diverse ethnic groups, responded with a tale of Jewish “uniqueness”—unique suffering—and unique Jewish ethnic salvation and redemption in the Jewish State—far away, to be sure. The ethnic language was U.S. English.

So three powerful and attractive movements—Jewish socialism, Zionism, and U.S. Judaism—presented answers to critical issues confronting groups of Jews. All of these movements addressed political questions and responded with essentially political and secular programs. Zionism wanted to create a Jewish state, U.S. Judaism wanted the Jews to form an active political community on their own, and Jewish socialism in its day framed the Jews into political, as much as economic, organizations, seeing the two as one, a single and inseparable mode of defining economic activity and public policy.

Why Distinguish Secular Jewishness from Religious Judaism?

When people confuse an ethnic group with a religious community, they take random, individual opinion as a representative and definitive fact for the beliefs of the faith. Then they see Judaism as the sum total of the opinions held by individual Jews—a mass of confusion and contradiction.

The confusion emerges when we consider statements such as, “But I’m Jewish and I don’t believe that” or “I’m Jewish and I’m not religious at all.” Both statements speak for perfectly commonplace ethnic Jews, but they tell us nothing whatsoever about Judaism, either as represented in its official writings and teachings, or as practiced by those who claim to meet God in those writings and teachings.

The ethnic group and the religion shape the life of one another, but the fate of Judaism as a religion is not the same as the fate of the Jews as a group. If the Jews as a group grow few in numbers, the life of the religion, Judaism, may yet flourish among those that practice it. The self-segregationist Orthodox Judaisms certainly take that view. And if the Jews as a group grow numerous and influential, but do not practice the religion, Judaism (or any other religion), or practice a religion other than Judaism, then the religion, Judaism, will lose its voice, even while the Jews as a group flourish.

The upshot is simple. A book (that is, a set of religious ideas, divorced from a social entity) is not a Judaism, but the opinions on any given subject of every individual Jew in the aggregate also do not add up to a Judaism. Many of the great debates among Judaisms focus on the definition of the word “Israel,” meaning not the nation-state, the State of Israel of our own day, but the people Israel of which the scripture speaks. That is not a question of the here and now but an issue of what it means to form the people descended from the saints and prophets of that “kingdom of priests and holy people” that God calls into being at Mt. Sinai, that defines itself within the Torah. This matter of “What is ‘Israel,’” and “Who is a ‘Jew,’ meaning, who belongs to ‘Israel,’” has occupied our attention, much as it is a center of ongoing, contemporary debate among Judaisms and among Jews. We cannot define Judaism if we identify the history of the Jews with the history of Judaism, just as we cannot define Judaism if we regard the faith as a set of ideas quite divorced from the life of the people who claim to hold those ideas. The upshot may be simply stated: all Judaists—those who practice the religion, Judaism—are Jews, but not all Jews are Judaists. Those who are can attest to the definition of the religion, Judaism.

K

Krishna Consciousness

Krishna Consciousness is the ultimate goal proposed by the International Society for Krishna Consciousness (ISKCON). ISKCON is a Hindu movement that traces its history to fifteenth-century India, and ultimately to the Hindu God Krishna, but which has been active in North America since 1966. This movement teaches that living entities were originally spiritual, realizing themselves as part and parcel of the Supreme God Krishna. However, living entities are now, within the influence of their material existence, under the illusion that they are in control of their lives and in control of their worlds. They no longer acknowledge that Krishna is the Supreme Personality of Godhead. This ignorance accounts for their personal suffering as well as for the ills of society. People have taken the partial freedom given by Krishna and have misused it in seeking to fulfill their own desires and passions. Only by going “Back to Godhead,” the title of the organization’s magazine, can living entities have hope for peace and fulfillment.

Religious Beliefs

Since living entities are submerged in ignorance and passion as the result of their material existence, it is only by the grace of Krishna that deliverance is possible. Human entities are encouraged to do all they can to remove obstacles to Krishna’s grace so they can return to Krishna Consciousness and the ultimate awareness that they are part and parcel of Krishna himself. Complete surrender to Krishna usually takes many lifetimes. But if one surrenders to Krishna at the beginning, Krishna’s grace will lift the devotee to the

transcendental level, and that entity will dwell with Krishna in Krishna’s heaven. This will be a spiritual existence and the entity will have a spiritual body, which is what was intended from the beginning.

As with other Hindu systems of thought, one’s rebirths are governed by *karma*, the results of one’s thoughts, words, and deeds. One’s desires are determinative of one’s rebirths in the world. Whatever one desires will be granted by Krishna. If one desires wealth, or sexual indulgence, or gluttony, one can have it. Krishna, the administer of *karma*, will grant one’s desires. But such material desires lead one deeper and deeper into the morass of material life. Only by surrender to Krishna is one raised above the affects of *karma* and lifted to the reality of Krishna Consciousness. In the state of Krishna Consciousness, in Krishna’s abode, one does not lose one’s individuality, as is the case with some other Hindu systems of thought. Just as in the material world there is variety, so it is in the spiritual world. Moreover, the material world may be the context in which living entities are covered with ignorance, but it is not inherently evil, since it is the body of Krishna. The entire universe has many worlds, but they are part of Krishna and not separate from him. The world, then, is not a creation *ex nihilo* as in the Judeo-Christian tradition, but rather it is formed from the very body of Krishna.

Religious Life

Some of the practices that help to remove obstacles to Krishna Consciousness are chanting the name of Krishna (Hare Krishna, Hare Krishna, Krishna Krishna, Hare Hare; Hare Rama, Hare Rama, Rama Rama, Hare Hare). Just as

chanting is seen to be effective in other Hindu or Buddhist traditions, so here it has a spiritual and mystical power to transform consciousness. Devotees have a string of 108 beads to help them count the sixteen rounds of chanting they are encouraged to do daily.

A devotee will remove obstacles to Krishna's grace by introducing others to Krishna Consciousness. This is done by inviting people to the temples that are in most major American cities, by encouraging the reading of founder's Swami Bhaktivedanta's books, by eating vegetarian food first offered to Krishna, and by selling the books of their founder.

Devotees are not permitted to engage in any form of illicit sex, are forbidden to eat meat, fish, eggs, or onions, are not permitted to take any kind of stimulants, including drugs, tobacco, alcohol, coffee, and tea. No form of gambling is permitted.

Hindu Context

Although ISKCON is often classified as a "new religion" in America, it is anything but new. Although it was introduced first in New York in the 1960s, its founder was initiated into the Vaishnava movement, which traces its heritage to Chaitanya (a Hindu saint, b. 1486), and ultimately to the Supreme God of the universe, Krishna himself. It claims, as do most Hindu sects, to be based on the *Vedas* (ancient Hindu texts). But this movement sees the *Vedas* as meaning divine knowledge and holds that therefore all *Vedas* point to and teach of Krishna. The texts that are most important for ISKCON are the writings of Chaitanya, the four *Vedas*, the *puranas*, and the *Mahabharata*, which contains the celebrated *Bhagavadgita*. One comes to understand the teachings of the founder, Swami Bhaktivedanta, by reading his commentaries on these important texts.

In addition to its dependence on these ancient Hindu scriptures, ISKCON emphasizes the importance of submission to a bona fide guru who is in disciplic succession. Krishna is the source of scripture, and the reliability of the message is guaranteed through disciplic succession. It is not enough to study ISKCON's scriptures on one's own or with the help of reputable scholars who are often seen as "mental speculators." The essential quality of a disciple is not an inquiring mind but submission to a spiritual master. Being in disciplic succession preserves the authenticity of the message but not the perfection of the messenger. When Mahadeva, one of the eleven individuals chosen to succeed Swami Bhaktivedanta as an initiating guru, was accused of resorting to hallucinogenic drugs to increase the intensity of

his devotional experience and rejoining his wife after he had taken *sannyasa* (celibacy), it was noted that although the guru might not be perfect, the message is. Thus is the teaching preserved in its purity through guru succession, regardless of the moral shortcomings of an individual guru.

American Context

ISKCON was founded by A. C. Bhaktivedanta Swami Prabhupada (1896–1977) who arrived in New York City's Lower East Side in 1965. He was urged by his own spiritual master, Bhakti Siddanta, to carry the teachings of Krishna Consciousness to the West. He was born Abhay Charan De in Calcutta in 1896 and graduated from the University of Calcutta with majors in English, economics, and philosophy. He worked off and on as a chemist until he retired in 1954 to devote himself to the spreading of Krishna Consciousness. He arrived in New York at the age of sixty-nine and worked from storefronts and in parks, chanting and preaching Krishna Consciousness. In 1966 he founded the International Society for Krishna Consciousness. Although he preached strict rules of behavior, he was remarkably successful in drawing to himself a group of devotees from among the hippie generation.

Although Bhaktivedanta arrived in America without resources, within ten years he had established a worldwide movement with several thousand committed members and more than seventy-five ISKCON communities around the world. By the time of his death in 1977 he had initiated more than five thousand disciples. The movement spread from New York to California; young members settled in the Haight-Ashbury district of San Francisco. Los Angeles was home to one of the most influential early ISKCON temples and also to the Bhaktivedanta Book Trust.

In the early years of the movement, disciples were required to renounce their previous lives, live in the temple with other devotees, and have little or no contact with former friends and family. This isolationism, coupled with the oddness of disciples' garb (loose, full-length robes) and their aggressiveness in proselytizing in airports and other public places, led to public hostility. Parents of devotees sometimes hired "deprogrammers" who would kidnap the devotee and keep him or her in isolation while they aggressively sought to convince the devotee to give up his or her new faith and return to "normal" society. ISKCON was considered to be a cult that engaged in mind control. This public perception was partly the result of people's not understanding this strange new religion on American soil and partly the result of ISKCON's aggressive recruitment tactics.

Struggle for Legitimacy

In the succeeding years, ISKCON sought to move from perception as a cult to acceptance as a denomination. Methods of recruitment were modified. The movement went from aggressive selling techniques, not always revealing the identity of the seller, to more ameliorating approaches to outsiders.

ISKCON sought freedom of religion through the courts. Often the claim of government was that since it was a cult and not a religion, ISKCON was not able to avail itself of the First Amendment right of freedom of religion. In one celebrated case from the 1970s, the New York temple requested a grand jury hearing on the alleged kidnapping of Merylee Kreshower (age twenty-four) and Ed Shapiro (age twenty-two), who had been living in the temple. Shapiro had requested \$20,000 from a fund set up for him by his father. His father had him committed for psychiatric examination, but Shapiro was found to have no mental disorder. Instead of pursuing the charges of kidnapping, the grand jury inquiry focused on the teachings and practices of ISKCON, resulting in the arrest of two temple officials on the charge of unlawful detainment and mind control. In 1977, however, the New York Supreme Court affirmed that “the Hari Krishna movement is a *bona fide* religion with roots in India that go back thousands of years.” The court ordered that the defendants be free to practice their religion. There were also a number of cases that granted ISKCON freedom to profess their faith in the context of state fairs, at welcome areas on national turnpikes, and freedom to proselytize on the streets of American cities. Overall, a large number of cases pursued from 1975 through 1979 were successful in granting members of ISKCON protection under the First Amendment as a legitimate religion.

ISKCON also appealed to scholars of Asian religions for legitimacy. At the 1976 annual meeting of the American Academy of Religion in St. Louis, ISKCON members circulated a petition asking scholars to declare that ISKCON was a *bona fide* religion. In 1980–1983, the six-volume *Sriila Prabhupada-lilamrita* was published by the Bhaktivedanta Book Trust. Each volume of this authorized biography of Bhaktivedanta contains a preface by a recognized scholar. A volume titled *Hare Krishna, Hare Krishna: Five Distinguished Scholars on the Krishna Movement in the West* was published in 1983. A refrain running through the essays was that not only is ISKCON not a “cult,” but it is not really a “new” religion. In 1985 the movement inaugurated a new journal intended for an academic audience: *ISKCON Review: Academic*

Perspectives on the Hare Krishna Movement. Finally, the negative assessment of other religions proposed by founder Swami Bhaktivedanta himself has been significantly tempered. ISKCON leaders called for dialogue with the Catholic Church and engaged in conversations with a variety of Christians in the book *Christ and Krishna: The Path of Pure Devotion* (1985).

Crisis of Authority

ISKCON faced a crisis of authority on the passing of Bhaktivedanta in 1977. In 1970, he had appointed a board intended to govern the movement after he died. This GBC (Governing Body Commission) preserved some continuity, but its authority was challenged by the eleven gurus Bhaktivedanta had initiated. Given the importance of disciplic succession and unswerving submission to one’s initiating guru, it was natural that there would be questions raised as to whether the GBC had authority over these new gurus or whether the new gurus had independent authority. Conflict arose over authority when certain of the gurus behaved in a manner that seemed incongruous with the teachings and example of the founder. Some members objected to one of the gurus desiring a larger seat placed in the Bombay temple for the spiritual master and demanded that his disciples do *guru puja* or worship of him as was done to Bhaktivedanta. They saw his moves as an attempt to equate himself with the founder.

In 1980, the Berkeley police uncovered an arsenal of weapons at the sect’s ranch. The guru who resided in the Berkeley community was considered responsible, and considerable debate occurred as to what to do about this guru. Eventually his guruship was revoked for one year by the GBC.

Conflict also occurred over how best to preach and raise money for the support of the movement. Fund-raising had begun to decline prior to Swami Bhaktivedanta’s death. Initially, funds were raised by selling Swami Bhaktivedanta’s books, which was considered a form of preaching. In time, other kinds of objects were sold. Some held that this would free up devotees to preach, while others considered it an inappropriate change in mission. These conflicts led some disciples to leave the movement; some formed their own movements, and others simply became less committed.

In the early years, disciples renounced their former lives and lived in the temples, giving full-time service to Krishna. There are those who continue that tradition, but others have families, often live in the vicinity of a temple, hold down full-time jobs, giving their spare time to the movement.

ISKCON seems to have successfully moved to the status of a denomination. Its members are less aggressive in proselytizing, and the large number of books written by Swami Bhaktivedanta assures a doctrinal base and a continuing presence, however small, for ISKCON.
