Moody's evangelistic campaigns in the United States centered largely on northern urban areas. Those of Sam P. Jones (1847–1906), a native of Alabama, made their mark in major cities both north and south. Once a heavy drinker, Jones gave up alcohol in response to his father's deathbed request. At the time, he was a lawyer, but by 1872 he had received ordination in the Methodist Episcopal Church, South, gaining renown for his down-to-earth but captivating sermons that kept audiences spellbound. After leading a revival in Brooklyn, New York, he gave up working as an agent for a Methodist orphanage in Georgia to become a traveling evangelist. As other revivalists of the day, Jones insisted that religious conversion resulted in changed moral behavior; given his own history, he stridently emphasized total abstinence from alcohol as the key aspect of personal behavior where transformation manifested itself. Popularly called the "Moody of the South," Jones never abandoned his conviction that changed behavior was the only proof of valid personal religious experience. Like Moody, Jones believed that rescuing individuals from the grip of immorality was paramount. Like Moody, too, he summoned the converted in cities where he preached to become cadres of righteousness that would crusade to eliminate tempting social evils, from alcohol to gambling. So, as with many other itinerant evangelists, the fine points of doctrine and creed were of little significance to Jones. Sometimes the cities where he accepted invitations to preach lacked adequate facilities to accommodate the crowds anticipated. For example, Ryman Auditorium in Nashville, later for many years the home of

the Grand Ole Opry, provided the venue for one of Jones's evangelistic campaigns. But Jones did not establish the same sort of network of ancillary organizations that Moody did; there were no training schools or camps that bore his name and imprint. Rather, he looked to local congregations and new converts to carry on his mission after he wrapped up a revival campaign.

Moody and Jones both created a space for revivalism in a nation that was becoming increasingly urban and industrial. In the northern cities where Moody's efforts were concentrated, new immigration swelled the population, bringing large numbers for whom the evangelical Protestant style that informed revivalism was totally alien. Most of the new immigrants entering the nation between Civil War and World War I were Roman Catholic, Jewish, or Eastern Orthodox. Although fewer of them came to the smaller southern urban areas where Jones focused much of his efforts, they represented a challenge to the Protestant hegemony in American religious life. Later nineteenth-century urban revivalism thus had a mission that went beyond revitalizing stagnant Protestant congregations and stirring dormant faith. It often sought to make the evangelical Protestant message plausible to non-Protestants because of an assumption that conversion to evangelical Protestant ways was part of the process of Americanizing immigrants and inculcating in them the moral values that made for good citizens.

Catholic Revivalism

Within American Catholic circles, though, a style of revivalism emerged that was also quite removed from the calls for conversion of camp meeting preachers or evangelists such as Finney, Moody, and Jones. As early as the 1830s, when Irish and German immigration began to swell the ranks of the American Catholic population, church leaders recognized that growth in the numbers of Catholics frequently outpaced the ability of the church to establish and staff parishes. Protestant evangelicals seemed intent on trying to convert Catholics. Recent historians have demonstrated that many Catholic immigrants themselves were not firmly tied to their faith, despite coming from cultures where Catholic presence dominated. Such folk were ready targets for conversion. Particularly in smaller communities where Catholics were a distinct minority, there were fears that Catholic commitment could easily falter. Catholic revivalism, by encouraging nominal Catholics to understand their own faith better, hoped to render them less likely to fall under the sway of Protestant revivalists and other detractors. Hence the primary aim of

Catholic revivalism was to strengthen the commitment of Catholics to their own faith. More so than evangelical Protestant revivalism, it had a catechetical function. That is, those conducting parish revivals tried to instruct those who came in the meaning of Catholic belief and practice.

Even the format of Catholic revivalism, while similar to Protestant campaigns in spanning a week or two in a particular parish, was nevertheless distinctive. It often was more of an extended preaching mission in which visiting priests would speak in local congregations, offering their expositions of Catholicism. Some were in areas where the regular ministrations of priests had to be shared among several parishes; others were in areas where Catholic growth was extraordinarily rapid. Redemptorists and Jesuits supplied many of the preachers for revivals in parishes during the antebellum period; after the Civil War, Paulist fathers and others joined their ranks. Many of the missions had a sacramental character; that is, they tried to instill in those attending an appreciation for the sacramental life at the heart of Catholic practice, perhaps suggesting that baptismal vows should lead to an abiding commitment and that the crucified Christ whose presence was evoked in the Mass remained the model of devotion for men and women of faith. Often doctrines that Protestants attacked became the focus for instruction; confession, for example, was one that many detractors spurned. Mission preachers in turn stressed the psychological and spiritual benefits of confession. Also vital were calls to high standards of morality. Again, part of the rationale was to dispel Protestant criticisms of Catholics. Many immigrants came from European areas where religious celebration and other social activity included dancing and enjoyment of alcoholic beverages. To evangelical Protestants, especially urban revivalists who equated drinking of anything alcoholic with moral degradation, such practices were not only misunderstood but taken as evidence that Catholic Americans would never be good citizens. By urging high standards of moral conduct, despite differences in social custom, those preaching parish missions provided an effective counter to much of the popular criticism.

Historian Jay Dolan demonstrated the appropriateness of using the label “evangelical” to describe Catholic revivalism and parish missions. The word suggests a stimulus to piety and devotion, a call to the faithful to deepen their spirituality. Catholic revivalism clearly sought to bring lay folk within the orbit of Catholic institutions and religious practice. Yet the parish mission revivals did on occasion lead to the same sort of evangelical response that Protestant preachers sought,

namely the conversion of others to this expression of the Christian tradition. Their experiences were not necessarily of the emotional sort associated with Protestant revivalism. Protestant converts responded more to the explication of Catholic doctrine, becoming convinced of the truth of the faith, and they often sought further instruction before actually formally identifying with the Roman church. Even so, the numbers of Protestant converts to Catholicism remained relatively small, but not insignificant. Hence the parish missions represent an evangelical revivalism in several senses of that term.

The Enduring Impact of Revivalism

By the dawn of the twentieth century, revivalism of many sorts flourished in American life. Yet there were signs of change. Increasingly the frontier camp meeting, even when retooled into the summer Bible conference, was undergoing transition. In one sense, the evangelical style had been too successful among Protestants; there were fewer children born to Protestant families who were without any nurture in the faith. More and more, dramatic conversion experiences seemed less likely. So from camp meetings to revivals, the number of reported conversions waned, though records suggest that powerful preaching remained vital. Among Protestants, camp meetings and revivals were becoming mechanisms to strengthen identification with Christianity more than they were tools to bring the notoriously irreligious within the fold. Urban revivals, though, still sought converts among the downtrodden and sinful. Billy Sunday (1862–1935), whose career peaked around the era of World War I, in some ways illustrates that transition. Although condemning sin and calling for conversion, Sunday attracted the vast majority of his audiences from among those who were already self-identified as Christian.

Revivals endured, then, but more in the classic sense of revitalizing faith, although they still provided occasions to share a religious world view with those outside the fold. Some camp meetings still exist, but most are now summer camps or institutions that offer opportunities for study and reflection. Many are modeled after the first Chautauqua Institute that opened in 1874 on a lakeside camp ground in the old “burned-over district” of New York. Inspired by John Heyl Vincent (1832–1920), later a bishop in the Methodist Episcopal Church, Chautauqua set out to train Sunday school teachers and church workers as well as to provide educational programs for lay men and women who were already believers. The nature of the institution presumes that

nurture, not conversion, is paramount. However, when social conditions suggest that vital piety is declining or endangered, calls for revival echo throughout evangelical Protestant circles even in the twenty-first century.

Catholic revivalism also ebbed somewhat as the advent of World War I made other issues top priorities throughout the culture, though parish missions continued at least through the time of the Second Vatican Council (1962–1965). In 1884, Catholic bishops held a plenary council in Baltimore to celebrate the centennial of the naming of the first American bishop. That gathering urged every parish to include a school to provide for the education of children not only in traditional subjects but also in the Catholic faith. Parochial schools would in part supplant parish missions as a means to tie a new generation to the church and its teaching. By 1908, Catholic leaders in Rome ended the mission status of the church in the United States, signaling that Catholic identity was secure.

Nonetheless, the ways revivalism cascaded across Christianity in America in the nineteenth century ensured that it would remain a vital means to rouse the faithful, to heighten commitment, and to share with others what believers regard as truth. Understanding the role of revivalism in the nineteenth century is one key to understanding the ongoing dynamics of American religion.

Revivalism: Twentieth Century to the Present

Revivalism has been a characteristic feature of the American religious landscape from the Great Awakening of the eighteenth century to the present. Its appeal has varied with place and time, but it has been most popular and pervasive at moments of greatest dissonance between traditional values and norms and the experiences of those struggling with the exigencies of social and cultural change. Few countries have witnessed greater transformation in the lives of their people than did the United States in the twentieth century. Industrialization, immigration, urbanization, technological innovation, shifting intellectual paradigms, evolving personal and social relationships, and the assumption of the role of major power in an increasingly insecure world engendered in the American people optimism and pride on the one hand and doubt and anxiety on the other. The ambivalence of the age was conducive both to the growth of grassroots evangelism and to the emergence of a number of extraordinarily talented and highly successful revivalists. Throughout the century, creative and sometimes controversial preachers across the theological spectrum, from Pentecostal to Neo-evangelical, refined the techniques of mass evangelism and espoused an interpretation of the current state of the world and of Christianity's place in it that millions of their contemporaries found meaningful. Their message was usually more personal palliative than social prescription, and the impact of revivalism on the times was less than that of the times on revivalism,

but evangelism and its principal practitioners were integral features of twentieth-century American popular culture.

Evangelical Protestantism was at its zenith in the United States in the mid-nineteenth century. Despite sectarian rivalries, doctrinal differences, and schisms over slavery, its core beliefs provided a measure of cultural cohesion that would soon be undermined by the legacy of civil war, an increasingly diverse population, and the economic and social changes that accompanied the rise of industrial capitalism. Protestant clergy and laity alike wrestled with how best to cope with the change swirling about them, and their responses ranged from tenacious resistance to creative accommodation. Mass evangelism manifested characteristics of both responses.

Revivalism in the twentieth century was fundamentally conservative in substance but often innovative in form. It stressed some variation of Protestant doctrine and practice originating in the Reformation and informed by a three-hundred-year sojourn in North America. Yet, while generally antithetical toward theological and social liberalism, evangelists often proved remarkably pragmatic as they sought the most effective way to spread the gospel. Increasingly, mass evangelism exhibited a tendency toward organization, specialization, and institutionalization. By the early 1900s, the most successful revival preachers, building on the foundations laid by their nineteenth-century predecessors, were already bringing to their tasks not only an increasingly sophisticated understanding of worshipers' psychology but also the organizational, marketing, and financial skills typical of the business ethos of the day.

Billy Sunday's Entrepreneurial Evangelism

William Ashley "Billy" Sunday (1862–1935), the foremost mainstream evangelist in America in the first half of the twentieth century, exemplified both the ideological conservatism and the methodological sophistication of the most successful revivalists of his era. Born in Iowa during the Civil War, Sunday played major league baseball for several years in the 1880s and early 1890s before becoming an evangelist. By the 1910s, he had emerged onto the national scene, preaching to millions in most of the nation's major metropolitan centers.

Sunday's success came at a time when conservative Protestants were mounting a relatively coherent offensive against textual and historical biblical analysis, the Social Gospel, Darwinism, political radicalism, evolving social mores, and a host of other changes that seemed to threaten their view of the world and their place in it. Between 1910 and 1915, a series

of doctrinal publications, known as the "Fundamentals," appeared, which gave to this movement the name fundamentalism. Sunday's theology resonated with the spirit and tenets of fundamentalism, but his message was not doctrinaire. Indeed, he demanded little of converts beyond an acceptance of Jesus as savior and a pledge to live decently, which essentially meant in accord with the religious and social values of the rural and small-town Midwest of his youth. Like all effective revivalists, he understood that the essence of successful evangelism was the reduction of complex ideas to their least common denominator and the presentation of those ideas in a comprehensible and appealing manner. He described his style as putting "the cookies and jam on the lowest shelf." His preaching was simple and animated and his sermons were dramatic. He railed against liquor, modernism, effeminacy, and both domestic and foreign foes of God and country. He enacted stories from the Bible, drew upon sentimental anecdotes, and engaged in feats of masculine acrobatic agility that held worshipers spellbound.

Although Sunday's message resonated with the beliefs and values of an earlier era, he argued that clergy should adopt the most up-to-date methods in their efforts to win souls for Christ, by which he meant the application of modern business principles to evangelization. He believed that in the religious marketplace, he who offered the best product had a competitive edge. However, he also understood that product alone was insufficient for success. Specialization, efficiency, and productivity were essential too. He developed a multifaceted and sophisticated staff that managed every aspect of the campaigns. Sunday appreciated the importance of marketing, and he and his staff worked closely with the press to secure extensive and positive coverage. In an age in which efforts to reduce competition were routine, he took steps to ensure that he could minimize competition from local pastors and other revivalists. He refused to preach in cities in which another major evangelist had recently held a meeting and expected that most local religious activity would be suspended at times when his services were scheduled.

Sunday was proud of the businesslike methods with which his revivalistic campaigns were planned and executed. He boasted that his revivals produced converts at approximately "\$2.00 per soul," which he believed made him the most cost-effective evangelist in the business. Critics attacked Sunday for uncouth methods, transformation of evangelism into a business, shameless self-promotion, and accumulation of a personal fortune. However, he felt justified in doing whatever was necessary to most effectively preach the gospel,

and he considered his financial success and popularity signs of God's favor.

Sunday's revivalism provided worshipers with a familiar social vision and comfortable version of the gospel delivered in a dramatic and sometimes unconventional manner. The businesslike aura of his ministry, along with his ties to the nation's most popular sport, lent to his message an air of modernity that added credibility and relevance to the beliefs and values he espoused. His message and methods mediated between tradition and modernity in a way that facilitated his audiences' transition from rural-agricultural to urban-industrial America. After World War I, as the nation turned the corner toward modernity and the Roaring Twenties, Sunday's message seemed less interesting and relevant and his ministry declined in popularity.

Holiness-Pentecostal Revival

As Sunday was preaching his way out of the Midwest, a revival of another sort was breaking out among a growing number of Americans plagued by a sense of alienation and marginalization. Rooted in American and British evangelicalism, this phenomenon, soon to be known as Pentecostalism, provided a matrix for the emergence of a host of impassioned evangelists whose controversial message and methods eventually transformed a peripheral movement centered largely, though not exclusively, among the nation's rural and urban working classes into a revival of national and international significance.

The immediate progenitor of Pentecostalism was the Holiness movement that steadily gained momentum in the United States throughout the last two thirds of the nineteenth century. This phenomenon originated with John Wesley's doctrine of a lifelong process of purification or sanctification following conversion and was influenced in North America by Oberlin Perfectionist and English Keswick Holiness notions of Holy Spirit empowerment for witness and service as well as by Plymouth Brethren dispensationalist premillennialism. The Holiness revival in the post-Civil War era generated tension within Methodism and other Protestant groups that precipitated schisms along economic, geographic, and doctrinal lines and led to the proliferation of independent congregations and nascent sects. Out of the left wing of this Holiness revival emerged a doctrinal thread stressing, in addition to salvation and sanctification, another work of God's grace, baptism in the Holy Spirit, provided to empower Christians to evangelize the world in preparation for the return of Christ. Some adherents of this

notion believed that "speaking in tongues," as described in the Acts account of Pentecost, was authentication of this additional blessing, an idea that was to become the distinguishing doctrine of Pentecostalism.

The movement had precursors in the Midwest and South, but African American preacher William Joseph Seymour's (1870–1922) Azusa Street revival that began in Los Angeles in April 1906 is generally regarded as the birthplace of the Pentecostal revival that spread throughout the United States and world over the next century. From Azusa Pentecostal, believers carried the message across the country. They frequently tapped the existing network of Holiness congregations and sects for converts. Although many Holiness believers regarded their message as heretical, others, especially among newer Holiness congregations and those on the fringes of the movement, accepted the Pentecostal gospel as yet another manifestation of God's work among the faithful.

Pentecostals, who were often voiceless and powerless, were among those who, at the turn of the century, believed that something was radically wrong with the world in which they lived. They were not passive, but unlike those drawn to populism or progressivism, they were generally apolitical, with little hope that the nation or the world could be saved by other than the return of Christ, which would usher in the millennium. Their dispensationalist premillennial understanding of the Bible convinced them that the troubles of the contemporary world were indicative of the imminent return of their savior, and they felt it their responsibility not to reform society but to win souls for Christ before it was too late. They crafted from their experience and their understanding of the Bible an apocalyptic cosmology that explained the state of the world in terms of a dramatically unfolding divine plan and defined their place in that plan. They sought order in chaos and meaning in order and found both in Pentecostalism.

Aimee Semple McPherson and the Pentecostal Revival

Most of the revivalists of the early years of the Charismatic awakening remained obscure figures, unknown except within the Pentecostal subculture, and their contributions have been largely forgotten today, except by some within that subculture and by a small cadre of scholars. Aimee Semple McPherson (1890–1944) is a notable exception. Within less than twenty years of the Azusa Street revival, McPherson was a well-known, albeit controversial, Charismatic preacher.

The daughter of a farmer and a Salvation Army worker, religion was an integral part of McPherson's daily life, and despite a period of adolescent doubt, she was drawn to religious work by experience and by her marriage in 1907 to Robert Semple, a young Pentecostal revivalist. Like many young Charismatics of their day, the couple felt a call to mission work and soon found themselves in China, where Robert died and their daughter Roberta was born. McPherson and the baby returned to the United States, and after a period of doubt and depression, she married Harold McPherson, but she soon abandoned the traditional life of wife and mother for that of peripatetic evangelist. She crisscrossed the country for several years in the latter 1910s and then settled in Southern California. Soon she focused her ministry on the establishment of Angelus Temple in Los Angeles. Thereafter, although she continued to preach in other parts of the nation, much of her travel was related to fundraising for the temple.

Sister Aimee's success as an evangelist and as pastor of Angelus Temple stemmed from her charisma, subtle air of sexuality, flare for the dramatic, reputation as a healer, and tendency to blur the boundaries between the sacred and profane. She dramatized her sermons in ways unimagined by Sunday, produced a magazine called *The Bridal Call*, operated a powerful radio station to disseminate her message, and was actively engaged with the business and civic leadership of her community. Like Sunday, McPherson preached an essentially conservative fundamentalist gospel that validated the Old Time Religion in a changing world but did so in a way that resonated with many aspects of the business-oriented, media-captivated, sensation-loving consumer society of the 1920s. Her message was conventional, but unlike some fundamentalists of her day, she did not emphasize the torments of hell but the rewards of heaven. As one contemporary journalist put it, "Aimee believed in hell—but not for advertising purposes." She was typically fundamentalist in her attacks on modernism, evolution, communism, and other signs of what she perceived as religious and moral deterioration. Like many Christians before and since, McPherson believed that the United States had a covenant with God and that it risked disaster by failing to keep its commitment to that covenant. In the 1920s and early 1930s, although remaining committed to the tenets of Pentecostalism, she de-emphasized the more exclusive and controversial features of the movement in favor of a somewhat more ecumenical approach in hopes that her essentially conservative message would appeal to those of many denominations who would return to their home

churches with a renewed commitment to the gospel as she understood it.

In a manner atypical of most Pentecostals of her generation, McPherson reached out from Angelus Temple to engage the community and serve its citizens. Although consorting with movie stars and business leaders and relishing celebrity and the success of her temple, which, by the late 1920s and early 1930s was evolving into a fledgling denomination that would become the International Church of the Foursquare Gospel, she did not forget those in need, including unwed mothers, abused women, and the poor of all races. In the depths of the Great Depression, her church commissary provided food, clothing, shelter, and even cash to the down-and-out. She became involved in politics to a degree rare among early Pentecostals, and even many fundamentalists, supporting Herbert Hoover for the presidency in 1928 and Franklin Roosevelt in 1932 and opposing Upton Sinclair for governor of California in 1936. In the later 1930s, she returned more overtly to her Pentecostal roots and espoused traditional Charismatic tenets but continued to market them in a way that would make them as widely appealing as possible.

McPherson was complex and controversial. Her ministry was marred by divorce, allegations of a sham kidnapping and sexual impropriety, bitter and public discord within her family and church, and criticism from both the religious left and right. Flawed though she may have been, she is among the most significant women in the history of American Protestantism. In an age craving entertainment, she entertained. In an age captivated by radio, she made extensive use of the new medium. In an era steeped in the mystique of business, she understood how to market the gospel. Through her itinerant revivalism, establishment of Angelus Temple, and founding of the International Church of the Foursquare Gospel, she helped to publicize Pentecostalism and to interject into it at least a small measure of social and political engagement, largely lacking prior to her ministry.

Billy Graham and Neo-Evangelicalism

McPherson died in 1944, just prior to what has been described as a "bull market for American evangelists." The United States emerged from the second great war of the century as the single most militarily powerful nation on Earth, but the psychological aftermath of war, dawn of the nuclear age, and spread of communism left Americans anxious about the future. This anxiety expressed itself in such phenomena as the Cold War and McCarthyism, but nowhere

was it more apparent than in the wave of religious fervor that swept the nation. Church membership, the popularity of religious publications, and the tempo of revivalistic activity surged in the 1940s and 1950s.

One of the earliest expressions of this religious awakening originated during the war. As early as 1940, clergy and laity, concerned to meet the religious needs of the country's soldiers in particular and of its youth in general, began holding youth rallies in various parts of the nation. In the summer of 1945, leaders of this movement formally organized Youth for Christ International (YFC) and invited a young Illinois pastor, William Franklin "Billy" Graham (1918–), to serve as YFC national field representative. For the next several years, Graham and other YFC evangelists conducted rallies that were a blend of patriotism, entertainment, and worship service. These YFC events not only reached millions of young people in the United States and abroad, but they also provided Graham with experience and name recognition that would set the stage for his own ministry in the second half of the century.

In his midteens, Graham had a life-transforming experience at a revival conducted by fundamentalist evangelist Mordecai Ham that oriented him toward religious work. After attending Bob Jones College, Florida Bible Institute, and Wheaton College, he pastored a small church, worked for YFC, and served as titular president of Northwestern College in Minneapolis, Minnesota. Meanwhile, in the late 1940s, he launched his own evangelistic career, and within a few years, the tall, amiable Carolinian, with the rapid-fire delivery and earnest demeanor, had become a national sensation.

Graham's early evangelism was characterized by sermons filled with denunciations of sin in general and communism in particular that were not radically different in content from those of a myriad of fundamentalists of the day. His success, however, rested not on his espousal of doctrine, which he did not emphasize, but on the earnestness with which he conveyed his simple faith in the redemptive love of God. Over the years his preaching style became more relaxed and the substance of his message reflected maturation, greater appreciation of religious and cultural diversity, and recognition that moderation and adaptation were essential to reach the widest possible audience. Like that of Sunday, Graham's message was essentially a simple call to accept Christ as savior and to live a clean and responsible life. Like McPherson, he emphasized God's love rather than dwelling on the torments of hell. President George W. Bush observed that Graham did not make you feel guilty but made you feel loved.

Graham's drift toward a more moderate expression of conservative Protestantism and his willingness to collaborate with Catholics and liberal Christians and to engage in dialogues with those of other faiths brought down upon him the wrath of doctrinaire fundamentalists who believed that he had betrayed the faith. The simplicity of his message and his caution in dealing with social issues, such as the Vietnam War and segregation, earned him the condemnation of sophisticated Christians like the theologian Reinhold Niebuhr, who scorned Graham's failure to address the complexities and ambiguities of the human condition in the modern world. If his message was simple, the scope and structure of his evangelistic organization was not. The Billy Graham Evangelistic Association elevated evangelism to new levels of sophistication. Graham's organization was responsible not only for large and complex crusades at home and abroad but also for a weekly radio program, periodic television specials, a magazine, a newspaper column, a film production company, and a Web site. Aware of the problems that had beset earlier evangelists, Graham and his evangelistic team in the late 1940s developed a systematic plan to minimize the opportunity for financial mismanagement, sexual misconduct, misinformation about revivals, and hostility from local churches. Consequently, the Graham organization was remarkably free of scandal.

Graham, more than any other religious figure in American history, transcended the role of evangelist and became a nationally and internationally known symbol of Protestant Christianity and American culture. He visited every major nation and preached in most, often meeting with the political leadership of those countries. His friendship with several American presidents and other national political and business leaders lent an aura of credibility and prestige to evangelical religion which it had not previously enjoyed. However, his unofficial role as spiritual advisor to presidents, most notably his cordial relationship with Richard Nixon prior to Watergate, was occasionally a source of controversy and embarrassment.

Graham's appearance on the American religious scene occurred at a fortuitous moment for many Protestants. The battle between conservatives and liberals that had been joined in the late nineteenth century had continued with increased ferocity into the 1920s. Fundamentalists like J. Gresham Machen labeled liberal Christianity not Christianity at all but a new religion, while liberals like Harry Emerson Fosdick considered fundamentalists wedded to an antiquated understanding of the faith that had little to offer

the modern world. The clashes over evolution in the 1920s, as well as resistance to other intellectual and social trends in American society in the decades between the wars, caused the fundamentalists to adopt an increasingly defensive and separatist position in their struggle with the modernists. Fundamentalist Bible colleges and seminaries, such as the Bible Institute of Los Angeles, Northwestern Bible and Missionary School, and Bob Jones College, flourished, and fundamentalist leaders became more strident and disputatious, which further alienated them from the mainstream. As the gap between fundamentalism and liberalism widened, many moderately conservative Christians sought an alternative middle ground.

In the 1940s, some of the moderates began forging a theological and social position that Harold John Ockenga, one of their leaders, dubbed neoevangelicalism. These Christians accepted a number of the basic tenets of fundamentalism. They were, however, less doctrinaire and more ecumenical, and they believed that conservative Christians should not eschew some measure of social responsibility. Graham's emergence as the nation's premier revivalist in the last half of the century provided neoevangelicals with a respected leader and articulate voice around which the movement could coalesce and grow.

Healing Revivalism

Although Graham was, without question, the preeminent figure in American evangelism in the last half of the twentieth century, other revivalists were engaged in work that contributed to shaping the future of American Christianity. Speaking in tongues was the most visible and controversial of the gifts of the spirit espoused by early Pentecostals, but another of those gifts, that of healing, had a significant impact on twentieth-century revivalism. John Alexander Dowie (1847–1907), a Scotch-born Australian immigrant to the United States, drew widespread attention and opprobrium to divine healing just before and after the turn of the twentieth century. Dowie founded the Christian Catholic Apostolic Church based in Zion, Illinois, and conducted Healing revivals in the United States and abroad, including one in Madison Square Garden in 1903. Although his work antedated Pentecostalism, his notion that the atonement provided for healing as well as salvation influenced the theology of some early Charismatic revivalists. In the 1910s and 1920s, a number of Healing evangelists were active on the American scene, including Smith Wigglesworth, Fred Bosworth, John G. Lake, Thomas Wyatt, Maria Beulah "M. B." Woodworth-Etter, and Aimee

McPherson. The work of these early Healing evangelists prepared the way for a more widespread and dramatic Healing revival that swept Pentecostalism and beyond from the late 1940s to the late 1950s.

The Pentecostal movement had grown steadily since the early years of the century and had, by the postwar era, given rise to several relatively stable denominations and begun to slowly emerge from its peripheral socioeconomic and religious status. Although flourishing, it continued to experience schisms and sectarian rivalry. In addition, a certain complacency and lack of fervor had appeared in some quarters. There were many among the faithful who longed for unity and renewal and the Healing revival briefly seemed to provide a catalyst for both.

Initially concentrated primarily in the Pentecostal subculture, the appeal of the Healing phenomenon eventually attracted some from the religious mainstream and the unchurched before its energy waned by the end of the 1950s. Among the best known and most successful of the postwar Healing revivalists were William Branham, William Freeman, Gayle Jackson, Jack Coe, T. L. Osborn, A. A. Allen, and Oral Roberts. The two most important revivalists in this mid-century movement were William Marrion Branham (1909–1965) and Granville Oral Roberts (1918–). Branham's role in the revival was curious since he lacked most of the attributes often associated with evangelistic success. Meek and unassuming, with little business acumen, he was at best a mediocre preacher with some rather heterodox ideas, but there was about him an aura of sincerity and the mystical that captured the imagination of audiences. News of his Healing revivals in parts of the South and West in the winter of 1946 and 1947 swept Pentecostalism, heartening believers in search of a sign of the Holy Spirit's continued work in their midst.

Although Branham's ministry helped to launch the Healing revival, Roberts did more than anyone else to popularize and sustain it into the mid- and late 1950s. In his late teens he felt himself called to preach, and in 1947, after almost a decade of evangelistic and pastoral service to the Pentecostal Holiness Church, he abandoned the parish ministry for full-time Healing evangelism. Attractive, personable, and hard working, he soon enjoyed success as a tent revivalist, radio evangelist, and in the 1950s as a pioneer televangelist who brought his tent revivals to network television, thus introducing millions of Americans to Pentecostal worship for the first time.

By the mid- and late 1950s, the Healing revival had begun to wane. Friction developed between the evangelists and the

Pentecostal sects from which they had emerged. Too many aspiring healers, often with little or no talent, joined the ranks of revivalists. Evidence mounted that many of the alleged healings were undocumented or fraudulent. Consequently, by the end of the decade, the revival had become largely enervated, although Healing ministries did not disappear, as is evident in the work of Charismatics like Kathryn Johanna Kuhlman (1907–1976). Controversial and problematic though it may have been, the Healing revival provided at least some Pentecostals with assurance of the continued work of the Holy Spirit and also served as one of the links between the classical Pentecostalism of the first half of the century and the Neo-Pentecostal or Charismatic revival of the second.

Oral Roberts and the Charismatic Revival

Roberts's ministry transcended the decline of the Healing revivals and helped to bring Charismatic Christianity to the nation's religious mainstream in the 1960s and 1970s. With regularly scheduled television coverage of his revivals on the ABC network in the 1950s, he had become the best known of the Healing evangelists. That visibility had not only earned for him considerable admiration in some quarters but had also brought down upon him widespread criticism for exaggerated claims of successful healings and for encouraging what some believed to be an unorthodox and simplistic interpretation of Christianity. Critics charged that his message conveyed an understanding of the gospel that suggested that divine power could be manipulated by the faithful to produce healing, prosperity, and a generally comfortable existence and that allowed little room for the suffering and disappointment that are part of the human condition. Despite criticism, Roberts's work flourished and the expanding Oral Roberts Evangelistic Association coordinated revivals, administered an extensive radio and television ministry, published a magazine, communicated regularly with "faith partner" and "blessing pact" contributors, and answered the voluminous mail that poured into the Tulsa headquarters each week.

Roberts, who believed himself to have been divinely healed as an adolescent, was committed to healing as an integral part of his ministry, but by the mid-1950s he understood that the Healing evangelism of the late 1940s and early 1950s had become problematic. He also recognized that an ever larger number of those attracted to his revivals were neither Pentecostals nor church members. Furthermore, he became convinced that there were in mainstream churches many who would be receptive to the kind of experiential Christianity characteristic of Pentecostalism. Consequently, the

emphasis and tenor of his ministry began to change. By the early 1960s, Roberts had shortened both his sermons and evangelistic campaigns, placed greater emphasis on God's saving grace, dressed in more fashionable attire, and behaved in a less flamboyant manner, all of which were indicative of his drift toward mainstream evangelicalism. In the 1960s, he stepped up the tempo of his international evangelism, conducting crusades in a number of overseas venues, including some in communist countries. Although his work abroad never rivaled that of Graham in terms of numbers of attendees at crusades, nor did he enjoy the same level of official acceptance, his revivals did help to draw attention to the global spread of Charismatic Christianity. Meanwhile, at home, he took steps to institutionalize his work through the founding of Oral Roberts University, designed to provide a sound undergraduate and graduate education in a Christian environment. By the end of the 1960s, Roberts had largely abandoned traditional evangelism to concentrate his energy on serving as president of Oral Roberts University and on reaching the masses through a new weekly television ministry that was accompanied by occasional primetime specials that combined music, entertainment, celebrity appearances, and short sermons.

The Charismatic revivals that developed in the Episcopal and Catholic churches in the turbulent 1960s and subsequently spread into other Protestant denominations, confirmed Roberts in his conviction that American Christianity was ready for an outpouring of the Spirit. With that in mind, he spoke more frequently of baptism in the Holy Spirit and of speaking in tongues. He also sponsored several conferences designed to bring Charismatics and other evangelicals together to foster greater understanding among them. Roberts himself stepped into the evangelical mainstream in 1968 when he abandoned the Pentecostal Holiness Church for ordination in the United Methodist Church. This denominational realignment was gratifying to Roberts who interpreted it as an affirmation of his life's work and who believed it indicative of American Christianity's acceptance of a Charismatic dimension to the faith. It was, however, a controversial action that was met with skepticism by some evangelical and liberal Protestants and with disappointment and anger by some classical Pentecostals who felt abandoned and betrayed. Although his ministry suffered financially for a time as the result of the loss of some Pentecostal support, during the 1970s Roberts in particular and Charismatic Christianity in general enjoyed a degree of acceptance that neither had known before.

The success of Roberts's evangelism was the result not only of his own restless, creative, energetic personality but also of post-World War II religious fervor and of the mid-century maturation of American Pentecostalism. The evolution of his career from that of itinerant revivalist to that of popular televangelist and university president with a multi-million-dollar religious organization lent credibility to his unabashed espousal of Charismatic Christianity and of an abundant life for the faithful. Though more complex and controversial than that of Graham, his ministry was to some Charismatic believers what Graham's was to many neoevangelicals, a visible symbol and an articulate voice that gave expression to that which they believed.

Televangelism

Although Graham and Roberts were traditional evangelists whose ministries expanded into additional venues, other twentieth-century apostles capitalized primarily on emerging technologies to preach the gospel. Christians of almost every doctrinal and practical persuasion recognized the potential of radio as soon as it appeared on the American scene. The first religious broadcast was probably on KDKA in Pittsburgh in 1921. Throughout the 1920s, evangelists like Aimee McPherson in Los Angeles and Paul Rader in Chicago pioneered in the use of the new medium to reach a wider audience, but it was Charles Edward Fuller (1887–1968) who developed a truly national radio ministry. From the 1930s until his death, Fuller's "Old Fashion Revival Hour" reached millions weekly by syndication or over the Mutual and later the ABC Radio networks. By midcentury, while radio remained in wide use, television quickly became the medium of choice for religious broadcasters. The electronic expression of Christianity tended to grow more conservative as the nation entered the age of televangelism. Thanks to television, a host of local, regional, and national preachers became famous and sometimes infamous. Among the pioneers were Alpha Rex Emmanuel Humbar (1919–2007), who in the 1950s began weekly broadcasts from his Cathedral of Tomorrow, a media-equipped precursor of today's mega-churches, near Akron, Ohio, and Robert Harold Schuller (1926–), who, in the same era, began preaching his gospel of Christian success in Garden Grove, California, a ministry that eventually became the weekly "Hour of Power" broadcast from the Crystal Cathedral. Late in the same decade, a youthful Jimmy Lee Swaggart (1935–) began evangelistic work in the South as a gospel musician and Assemblies of God revivalist. Within a few years, he had taken his very conservative

brand of Pentecostalism first to radio and then to television, becoming one of the electronic church's most widely viewed Charismatic preachers. Meanwhile, Jerry Lamon Falwell (1933–2007) used the media to espouse an essentially fundamentalist message that provided the basis for the religiously and politically conservative Moral Majority in the 1980s.

Without question the most successful and best-known religious broadcaster of the last third of the twentieth century was Marion Gordon "Pat" Robertson (1930–). Never a televangelist in the same sense as were many of his contemporaries, this Southern Baptist, with a Charismatic bent, launched his career in Christian broadcasting in the early 1960s, and by the 1980s he was an extraordinarily successful entrepreneur. He hosted the popular 700 Club, operated the Christian Broadcasting Network, oversaw the development of Regent University, wrote books, and coordinated charitable and relief efforts. Ultimately, he became politically active as a candidate for the Republican presidential nomination in 1988, founder of the Christian Coalition, and champion of a variety of conservative moral causes. In the 1960s, Robertson's ministry, which was receptive to a range of evangelical and Charismatic perspectives, provided Assemblies of God minister James Orson "Jim" Bakker (1940–) and his wife, Tamara "Tammy" Faye (1942–2007), with an entree into the world of televangelism, an opportunity which, by the 1980s, the couple had parleyed into the PTL Club, PTL Television Network, and Heritage USA theme park, all of which were generating millions annually for their ministry.

Critics charged that televangelism tended to amplify certain problems inherent within evangelism. It made celebrities of preachers and preachers of celebrities. It siphoned much needed support from local congregations and concentrated enormous amounts of money in the hands of relatively few individuals with little accountability for the expenditure of those funds. It provided a leisurely and comfortable individualistic alternative to traditional worship that was good neither for the church nor the believer. It did little to promote biblical and theological literacy. It emphasized issues of personal morality at the expense of the more subtle and complicated social ones. It created a dangerous potential for esteemed and wealthy evangelists to develop inflated egos that could set the stage for serious errors in judgment. All of these charges have been leveled at traditional evangelism at one time or another, but the pervasiveness of satellite and cable Christianity and the scandals that rocked televangelism in the 1980s and 1990s, especially those that swirled about the Bakker and Swaggart ministries, seemed to give the criticisms a new immediacy.

As the twenty-first century dawned, Sunday and McPherson were long dead, Graham and Roberts were octogenarians near the end of their careers, and no one of comparable stature had yet arisen to take their place. As Sunday's ministry declined in the 1920s and 1930s, some savants predicted that mass evangelism like that of Sunday would be replaced with newer, more sophisticated and effective approaches to the spread of the gospel. They were, of course, only partially correct, since post-World War II America witnessed the emergence of Graham, the most successful revivalist in American history. It was true, however, that Graham's ministry was amplified by his effective use of electronic media. Whether the availability of increasingly sophisticated technology that enables religious broadcasters to both target specific markets and also to reach wider audiences now signals the end of evangelism as we have known it remains an open question. However, given the regular recurrence of religious awakenings in our history and the centrality of dynamic personalities in those awakenings, it is unlikely that we have seen the last of either traditional popular evangelism or the preachers around whom revivals coalesce.

Roman Catholicism: African American Catholics

Africans were among the first New World Catholics, but the difference between them and the sixteenth-century Spanish and French Catholics with whom they arrived was the Africans' status as slaves. They helped survey, explore, and settle Spanish and French colonies along the Gulf Coast, in the Southwest, California, and the Great Lakes region. However,

by the time the British came to dominate the American colonies in the seventeenth century, Catholicism was a minority religion with significant communities only in parts of the upper Midwest, the Gulf Coast, Florida, and the Southwest. After the American Revolution many of the regions where Catholics dominated were not yet part of the United States and thus Catholicism became even of more a minority religion. Only when German and Irish immigration picked up toward the end of the eighteenth century and throughout the nineteenth century did Catholicism begin to grow in earnest in the Northeast and Midwest, places with small African American populations. Among the Catholic strongholds in the South, Louisiana, coastal Mississippi, Florida, Alabama, central Kentucky, and Maryland, significant communities of African American Catholics, enslaved like their forebears, endured. Historian Emily Clark's work reveals that before the Louisiana Purchase African American Catholics, free and enslaved, were the foundation of Catholic life and practice in that city and continued to be very significant in the development of Catholicism in the area afterward. Father John Carroll (1725–1815), later the first archbishop of the United States, confirmed this significance in his first report to the Holy See on the status of Catholicism in the United States in 1784. The state with the largest Catholic population, Maryland, had a population of 3,000 enslaved black Catholics in a Catholic population of 15,800. The Catholic population in Pennsylvania, the next largest, included a few African Americans. The total Catholic population in the United States in 1784 was 24,500, nearly 20 percent of whom were enslaved.

The Haitian revolution of 1790 brought a wave of Catholic émigrés to the United States and the French colony of Louisiana, increasing the black Catholic population in America. Free Catholics of African descent, sometimes called people of color, settled in significant numbers in Baltimore, New Orleans, and other cities and locales along the Gulf Coast. These communities combined with the enslaved Catholic population made these three regions the historical and cultural capitals of black Catholicism in the United States. Out of these communities emerged two orders of African American women religious, the Oblate Sisters of Providence, founded in Baltimore in 1828, and the Sisters of the Holy Family, founded in New Orleans in 1842.

Nineteenth Century: Impact of black Women Religious

Historians Diane Batts Morrow and Cyprian Davis have documented how both the Oblate Sisters of Providence,

whose ministry was the education of African American girls, and the Sisters of the Holy Family, whose original ministry was to care for abandoned slaves, were orders of African American sisters who made significant contributions to the creation of an enduring black Catholic community in the nineteenth century. Both orders dealt with racism within the Roman Catholic Church and fought for institutional support for their ministries. Yet despite these challenges, Mother Mary Lange (1782–1882), who founded the Oblate Sisters of Providence, and Mother Henriette Delille (1813–1862), who founded the Sisters of the Holy Family, led their sisters in meeting the educational, religious, health care, and material needs of African Americans when the church and the U.S. government and society failed to provide them. In the twentieth century a third religious sisterhood of black women, the Franciscan Handmaids of the Most Pure Heart of Mary, joined the work of the Oblate Sisters of Providence and the Sisters of the Holy Family in ministering to African Americans.

Throughout the nineteenth century the Oblates and the Holy Family sisters represented Catholicism in both the African American community and the wider U.S. culture. Their unmistakable physical representation of Catholicism, their spirituality, and their service made it clear that indeed there were such things as African American Catholics. Historian Cyprian Davis has noted that the power of their witness as Catholics did much to strengthen the African American laity, which in turn did much to support the missions and ministries of their sisters. The sisters also made favorable impressions on non-Catholic African Americans, who acknowledged the sisters' work and benefited from the care and services they provided.

For most of the nineteenth century, the ministries of the Oblates and the Holy Family sisters were conducted primarily in Baltimore and New Orleans, but the Catholic community grew most quickly in the Northeast and in the Midwest because of Irish and German Catholic immigration. Bishops in these areas focused their attention and resources on providing for the religious, educational, and social needs of European immigrants, often to the detriment of both enslaved and free black Catholics. Unfortunately, African American Catholics in the Northeast and Midwest did not have African American sisters or African American priests. This meant that the African American laity had to take matters into their own hands.

One of the most dramatic cases of the African American laity challenging episcopal neglect occurred in 1853 in New

York City. Writing on behalf of black Catholics in New York City, Harriet Thompson penned a missive to Pope Pius IX asking him to directly provide for the spiritual needs of African American Catholics in America. Not wishing to show disrespect for the clerical leaders of New York City but also very aware of the mistreatment African American Catholics faced, Thompson informed the pope of the extent of this spiritual neglect in hopes that he might intervene.

Thompson identified the Irish heritage of the majority of bishops and priests in the United States as directly related to their neglect of African Americans. She asserted that because there were no blacks in Ireland, New York City's Irish American bishop, Archbishop John Hughes, could not and would not relate to the situation of black Catholics. The African American Catholic community of New York found this to be particularly true for Catholic parochial schools in New York City. Although black Catholics supported the schools, they were not permitted to send their children to them. Black Catholic children therefore had to go to public schools where their faith was in jeopardy because of the dominant Protestant ethos and the consequent anti-Catholicism. Thompson lamented that the effect was that one could find many African American families in America whose parents were Catholics and children were Protestants. This she believed was the direct result of the denial of spiritual care to black Catholics by church leaders. Thompson, representing twenty-six black Catholics, wanted Pope Pius IX to know these things so that he could bypass the American bishops and do something to help save the black Catholic community in the United States. Thompson's protest underscored the dearth of Catholic episcopal efforts to support black Catholics before the Civil War and the tradition of appeal to the Holy See that would mark the African American Catholic experience in the United States.

Late Nineteenth Century: Black Missions after the Civil War

Not long after the Civil War, in 1866, Archbishop Martin J. Spalding (1810–1872) called the Second Plenary Council of Baltimore. Top on the agenda was what the American church needed to do for the newly freed blacks. A former slaveholder himself and apologist for slavery, Spalding was determined that Catholics establish a strong mission to African Americans. Conscious of the work that black and white Protestants were doing to help the freedmen build schools and churches and of the slippage of African American Catholics from the Roman Catholic Church in the wake of

the Civil War, Spalding was anxious to get a plan of evangelization of blacks into place. He proposed separate black parishes, black priests, preaching missions to blacks (the Catholic equivalent of revivals), religious orders dedicated to serving blacks, singing in the vernacular rather than ecclesiastical Latin, and an apostolic prefect (a cleric appointed by the Holy See who would have charge of ministering to blacks throughout the United States). Spalding believed that to keep blacks in the Catholic Church and to stimulate their conversion to Catholicism, it would be especially necessary to ordain African American priests. He was convinced that these strategies would help bring a "golden harvest" of African American souls to the Roman Catholic Church.

With this confidence, Spalding presented this blueprint to the American bishops gathered in 1866. He highlighted the idea of what he called an ecclesial man, the apostolic prefect to be appointed by the Sacred Congregation of Propaganda Fide, the office of the Holy See with charge over missionary endeavors of the Roman Catholic Church, to have national responsibility for organizing and implementing all missions and ministries to African Americans. In other words, Spalding proposed a bishop to have charge over all African Americans regardless of episcopal boundaries. Most of the bishops roundly rejected the idea, seeing it as a threat and an insult to their own episcopal authority. They asserted they would take care of the African Americans in their dioceses in the ways they deemed most prudent, thus putting an abrupt halt to Spalding's plan and to Propaganda Fide's desire for the American Church to put forth a serious evangelical appeal to newly freed slaves. At the close of the plenary council, the bishops published a pastoral letter addressing the emancipation of African Americans and asserting their dedication to do what they could, given their own limited resources.

Although most bishops rejected a national program of evangelization, some expressed interest in engaging religious communities for missionary work among African Americans in their dioceses. Such interest prompted Spalding to negotiate with the Society of St. Joseph, the Mill Hill Fathers of England, to send a group of missionary priests to the United States to work exclusively with African Americans. Favorably impressed with this request, the English order sent a delegation of priests to the United States. The Mill Hill priests, more commonly known as the Josephites, arrived in Baltimore in 1871 and took charge of St. Francis Xavier Church, the oldest African American parish in the country. Eventually the American Josephites would become independent of the English Mill Hill priests, but their mission in the United

States would always remain the African American apostolate. The Josephites established missions and parishes throughout the South and the mid-Atlantic states. In some places they established schools and catechetical institutes, and for a time they led the way in establishing a native clergy among African Americans, ordaining the first black priests in the United States in the 1890s.

In 1891 another religious community dedicated to the African American apostolate emerged. The Sisters of the Blessed Sacrament for Indians and Colored People, founded by Sister Katherine Drexel (1858–1955), established schools, private and parochial, throughout the deep South, Virginia, the Northeast, the Midwest, and the Southwest. In addition to establishing elementary, middle, and secondary schools, the Sisters of the Blessed Sacrament established the first and only Catholic college dedicated to the education of African Americans. The sisters founded Xavier University of Louisiana in 1925 in New Orleans. Initially serving the local Catholic community, Xavier University of Louisiana soon became a national institute of higher learning, attracting black Catholics from around the country and abroad as well as non-Catholic African Americans. It gained a reputation for its exceptional science, pharmacy, and visual arts departments as well as for being an outpost for nascent African American Catholic leadership.

Late Nineteenth to Early Twentieth Century: Lay Leadership

From the end of the nineteenth century through the first third of the twentieth century, African American Catholic leadership was squarely in the hands of the laity. The locus of control and power in the African American community has been its religious bodies and institutions. In these institutions African Americans had the power to assert authority, to practice agency without question, to make decisions, to advance religious, social, and political agendas, and to define what it meant to be black and Christian in a culture that held them in contempt. So too did black Catholics, but they had different channels to accomplish their goals. African American Catholics recognized the boundaries of their tradition and respected the hierarchy, forging new paths to undermine racial boundaries they believed kept them from being full members of the Roman Catholic Church in the United States.

One of the most important African American Catholic lay leaders at the end of the nineteenth century was Daniel Rudd. Rudd, born a slave in Kentucky, was a cradle Catholic.

Following the Civil War he ventured north to Ohio to take advantage of educational opportunities available to African Americans there. By the 1880s he was the creator, owner, and publisher of the first African American Catholic newspaper, *The American Catholic Tribune*. African Americans, Catholic and non-Catholic, were his primary audience. He used his newspaper to give the Catholic Church a hearing in the African American community and to give African American Catholics a voice in the Catholic Church. Convinced that Roman Catholicism was the true church as well as the one institution in the United States, or anywhere, that blacks could expect to be treated as equals, Rudd was intent on evangelizing the African American community.

That is, African American Catholics had to unite to discuss issues in the Catholic Church and the United States that concerned them the most and to plan strategies to effect positive change in both the Catholic Church and American society. Thus he organized the first Colored Catholic Congress in 1889 in Baltimore, Maryland, which brought together for the first time in U.S. history African American Catholic lay leaders from all over the country. Four more times the following decade, they gathered to address the concerns related to evangelization, education, theology, labor unions, employment discrimination, civil rights, and racial prejudice in American society and the Roman Catholic Church in the United States.

The congresses of the late nineteenth century set the stage for continuing African American lay leadership in the twentieth century. Led by Dr. Thomas Wyatt Turner (1877–1978), the Federated Colored Catholics was established in 1924 to address three primary concerns. It wished to initiate a national conversation in the United States Catholic Church on racism in the church, to make American Catholics more conscious of racism in the church, and to change racist policies and practices in the church.

To this end the Federated Colored Catholics established a national organ titled *The Chronicle* and began actively lobbying American bishops to address racism in the American church. One of its greatest accomplishments was to create a Catholic industrial and agricultural high school in southern Maryland in 1924, the Cardinal Gibbons Institute. Administered by an African American Catholic lay couple, Victor and Constance Daniel, the institute realized a dream of African American Catholics to have a national vocational school that would also provide a solid academic education to its youth, Catholic and non-Catholic. The Federated Colored Catholics advanced its agenda until its leader,

Dr. Thomas Wyatt Turner, and two Jesuit priests active in the African American apostolate wrangled for the leadership of the organization. Although Turner supported the involvement of whites in the organization, he staunchly believed that it needed to be led by black Catholics. Father John LaFarge, SJ, and Father William Markoe, SJ, disagreed and charged that Turner was seeking to lead a “race” organization and not a Catholic one.

At the annual meeting in 1932 Markoe challenged Turner for the leadership of the group and won the support of many African American members. Although this did not spell the end of the Federated Colored Catholics, which Turner would continue to lead until the 1950s, it did fracture the group badly and instigated the creation of a new organization, the Catholic Interracial Council, that would become the premier Catholic group working on the question of racial justice in the United States through the 1960s. The makeup of the group, as its name indicates, was interracial, but it was led not by laypeople but by clerics. As the dominant Catholic racial justice body, the Catholic Interracial Council had to take on many of the issues that African American lay Catholics had been working on without much clerical support since the early nineteenth century, such as the failure of the American Catholic Church to honor the religious vocations of African American men.

Struggle and Rise of African American Priests

Father Augustus Tolton (1854–1897) was the first recognized African American priest. He was ordained in Rome and was intended to serve as a missionary priest in Africa because no American bishop would agree to accept him as priest in his diocese. However, following his ordination, a Roman official reversed this decision and determined that Father Tolton would in fact return to the United States to serve in the Diocese of Alton (now the Diocese of Springfield, Illinois). During his short priesthood, the African American Catholic community in the United States embraced Father Tolton and celebrated him as its priest, even though few black Catholics lived where he served. Father Tolton experienced loneliness, isolation, and disdain from his fellow American priests, as well as their envy as black and white Catholics flocked to his church. Essentially forced to leave the Diocese of Alton because of the jealousy of a white priest, Father Tolton struck out for the Archdiocese of Chicago, where he had great plans to build a new parish for African Americans. Unfortunately, poor health from intense stress took his life in 1897.

Not until the twentieth century would there finally be a significant number of African American priests serving in the United States. This was not because of any dearth of African American priestly vocations but because of the refusal of most dioceses and religious orders to even give these men consideration. Among the arguments against the ordination of African American men were claims that they lacked the moral character and intellectual ability needed for the priesthood. Many bishops and religious orders also feared if they accepted black men to the seminaries they would surrender white vocations. These arguments made it difficult for the Josephites to place the few African Americans they ordained in dioceses and for other religious communities such as the Society of the Divine Word and the Congregation of the Holy Ghost who served in the African American apostolate and wanted to accept African American men to move forward in their own work of evangelization.

Mid-Twentieth Century: The “Negro Apostolate” and Black Convert Authors

Despite these difficulties Catholic efforts to evangelize African Americans increased in the 1930s, 1940s, and 1950s. Between 1937 and 1939 the *Interracial Review* reported a fifty-thousand-member increase in the number of African American Catholics to 300,000. It attributed most of this growth to evangelization efforts that fell under an umbrella term, the *Negro Apostolate*, that included all kinds of efforts to introduce and draw African Americans to Catholicism. Spurred on by the Great Migration, the Depression, and concerns about communism taking root in African American communities, Catholics dedicated religious orders and teams of diocesan priests to work in African American neighborhoods and engage in direct efforts to bring African Americans into the Catholic Church. Black Catholic laity were also enlisted in these efforts, which included educational endeavors in elementary through college level, social services like medical clinics, day care centers, and orphanages, and interracial justice activism to show that Catholicism was not in fact “a white man’s religion” but one that welcomed all. Movements like Friendship House, founded by the Baroness Catherine De Hueck in Harlem, and efforts to integrate Catholic institutions of higher education, such as the Manhattanville Resolutions that led to the integration of Manhattanville College in the 1930s, resulted in more African Americans giving Catholicism more consideration. The Harlem Negro Apostolate was one of the most successful convert-makers of the day. The Church of St. Charles

Borromeo in Harlem alone brought in nearly six thousand new African American Catholics in twelve years. It came to be known as the Negro convert center of the United States.

Not only were African Americans converting to Catholicism, they were also writing about their conversions. Elizabeth Adams, Helen Caldwell Day Lewis, and Ellen Tarry published memoirs about their conversions, and other black Catholic converts found Catholic publications such as *The Interracial Reviews*, *Commonweal*, and *America* very interested in publishing their conversion narratives. These books and articles were meant to encourage African Americans to give Catholicism a try and to show white Catholics how African American culture and experience was in tune with the Catholic faith. These efforts were successful. Between 1940 and 1965 the number of African American Catholics more than doubled, from an estimated 300,000 to nearly 723,000. Although some the growth was attributable to natural increase in the population, the greatest source was conversion.

Mid- to Late Twentieth Century: Civil Rights and the Black Catholic Movement

The civil rights movement leadership included no nationally recognized African American Catholics. On the local level, African American Catholics were certainly involved. New Orleans black and white Catholic college students were on the cutting edge of civil rights activism in the 1940s and 1950s, working together to challenge racial segregation in Catholic parishes, schools, colleges, and universities in the city. Catholic lawyer A. P. Tureaud (1899–1972) supported these activists and used his position as one the very few African American lawyers in Louisiana to challenge Jim Crow laws in the South. Young black Catholic priests, brothers, and sisters, with the permission of their religious communities, participated in public demonstrations for civil rights like the March on Washington in 1963 and the Selma campaigns in 1965. Beginning in the 1940s Archbishop Joseph Ritter of St. Louis led the way to desegregating Catholic institutions in his diocese and was followed by others elsewhere, such as Bishop Vincent S. Waters of Raleigh, North Carolina, and Archbishop Joseph Rummel of New Orleans.

The civil rights movement and later the Black Power movement served as consciousness raisers for African American Catholic religious, many of whom were the first or only black members of their religious community or priests in their diocese, about the racial injustices they and other blacks faced in their churches. This effort reached a peak in the spring of

1968, when Dr. Martin Luther King Jr. was assassinated in Memphis, Tennessee, and violence broke out in urban areas, where most African American priests, brothers, and sisters served. Shortly after Dr. King's assassination, African American priests gathered for the first time as a national body to address the violence being perpetrated in cities like Chicago by police against black youth. Gathered for the annual meeting of the Catholic Clergy Conference on the Interracial Apostolate, angry African American priests frankly discussed the racism they personally faced in the church and determined to publish a manifesto asserting that "the Catholic Church in the United States, primarily a white racist institution" was not concerning itself with the problems of African Americans but instead with those of white Americans only.

They called for greater leadership roles for black Catholics in the church, improved formation of white clergy and religious who served in black communities, and more educational opportunities for black Catholic laypersons involved in leadership in the church. At the end of this 1968 meeting, the African American clergy formed the National Black Catholic Clergy Caucus, which included priests, seminarians, religious brothers, and eventually members of the permanent diaconate. Later in the summer a similar gathering of black Catholic women religious convened at Carlow College in Pittsburgh, Pennsylvania. They took up concerns very similar to those of the clergy but focused on how African American women religious could meet the needs of the African American community. They organized themselves into the National Black Catholic Sisters' Conference and pledged to never cease working for the total liberation of black people.

The results of the National Black Catholic Clergy Caucus and the National Black Catholic Sisters' Conference were numerous and tangible, including the establishment of the National Office for Black Catholics to support the creation of offices of African American Catholics throughout the United States; the foundation of the Institute for Black Catholic Studies at Xavier University of Louisiana where lay and religious part of or serving in black Catholic communities could work for master's degrees in theology with a focus on the black Catholic experience and certificates in catechesis, leadership; and youth ministries, and ultimately the revival of the tradition of the Colored Catholic Congresses with the calling of the first National Black Catholic Congress in 1987. A strong belief that African American culture and spirituality was necessary for Catholicism to flourish in the African American community was at the heart of all of these endeavors. Often referred to as the Black Catholic movement, over

the period between 1968 and 1988, black Catholics were intent on witnessing what they meant when they claimed to be “authentically black and truly Catholic.” The Second Vatican Council’s encouragement for the inculturation of the liturgy, meaning the inclusion of cultural traditions, symbols, and practices in worship, and the recognition that the future of the Roman Catholic Church was unfolding in Africa, Asia, South America, and North America all galvanized the successful efforts of the black Catholic movement.

At the turn of the twenty-first century, nearly 25 percent of the one billion Roman Catholics in the world are of African descent and three million of them live in the United States. African immigrants to the United States are growing the black Catholic community in much the same way that African American Catholic converts did in the middle of the twentieth century. African immigrants, laity, clerics, and religious brothers and sisters are filling pews and leadership roles across the United States in parishes originally created for native-born African Americans. Today native-born African American Catholics and African Catholics are working together to blend their cultures, traditions, and histories with those of other Catholics in creating parishes, schools, and other Catholic institutions that may best be understood as multicultural. The African American Catholic experience continues as a work in progress.

Roman Catholicism: Catholics in the Atlantic Colonies

Catholics made up only a tiny part of the population in most of Britain’s Atlantic colonies. Few settled in British North America for the simple reason that Britain itself, the origin of most immigrants, was overwhelmingly Protestant. Nor did the colonies welcome those Catholics who did attempt to emigrate. In almost every colony the colonial period was difficult for Catholics. Protestant European settlers brought anti-Catholicism to the New World as part of their cultural heritage. Over time politics added other anti-Catholic strains. Wars with France and Spain in the 1690s intensified anti-Catholic sentiment. South Carolinians engaged in brutal warfare against the Spanish and their Indian allies in Florida for much of the early eighteenth century, and New Englanders battled the French and their allies along the Canadian frontier. These conflicts produced numerous atrocities and stoked the flames of religious antipathy. Although loyalty to Britain and religious sentiments could reinforce each other, anti-Catholicism also heightened support for independence. Many saw the Québec Act of 1774, by which Britain extended tolerance to Catholics in Québec and incorporated French settlers in Ohio, as an unforgivable betrayal.

Anti-Catholicism in Law and Practice

Anti-Catholic sentiments permeated colonial laws. By 1700 only Rhode Island offered Catholics full civil and religious rights. Most colonies established one or another Protestant church, usually Congregationalist or Anglican, and over the course of the eighteenth century proscriptions against Catholics tightened almost everywhere. Many colonies required those seeking public office to swear test oaths that specifically excluded Catholics by including clauses about the truth of Protestantism. Other colonies required anyone wishing to preach to obtain a license.

Anti-Catholicism spilled over the boundaries of law books. Each year colonists celebrated Pope Day, devised by the Puritans as the equivalent of Guy Fawkes Day—the celebration of a failed attempt by a small group of English Catholics to blow up the houses of parliament. Crowds paraded effigies of the pope and the devil through the streets. Initially confined to New England, Pope Day spread throughout the colonies in the wake of the Québec Act. Such hatred could easily encourage spontaneous violence. In several instances mobs attacked Catholics, anticipating the far more organized and extensive violence of later decades.

Especially in the South, Protestant distrust of Catholics often focused on the Catholic Church's perceived eagerness to conspire with blacks. In Maryland, rumors that priests plotted with slaves and Indians to overthrow the government dated back to 1689. South Carolinians and Georgians were no doubt aware that Spanish authorities in Florida offered freedom to slaves who escaped from the English colonies, provided they converted to Catholicism. This policy ended with Spain's cession of Florida to Britain in 1763, but distrust lingered. Throughout the colonial period, rumors that Catholics were inciting slave revolts swept British America. In 1775 a mob attacked two Irish Catholics in Charleston on the grounds that they had conspired with slaves.

Catholic Settlement

Despite such animosity, some Catholics did settle in the colonies. The Catholic population of Maryland steadily grew and soon spilled over into Pennsylvania. Another large group, exiles from Acadia, settled for several years in South Carolina. Doubtlessly many others quietly entered the colonies, either keeping their faith a secret or gradually drifting into Protestant churches. A few Catholics even rose to prominence. The Carrolls of Maryland produced several important leaders, including Charles Carroll of Carrollton, the only Catholic to sign the Declaration of Independence. In New York two Catholics, Anthony Brockholles and Thomas Dongan, served as governors of the colony. The growth of the Catholic population and the possibility of Catholics attaining positions of importance demonstrated that penal laws against them were not always enforced. As a result, though they still faced various hurdles, Catholics enjoyed more liberty in the colonies than in any other Protestant-dominated society of the time.

Maryland

In 1632 King Charles I bestowed a charter for a colony on Cecil Calvert, the son of George Calvert, who had been the first Lord Baltimore and a favorite of the king despite his conversion to Catholicism. Maryland's settlement began in 1634 with the arrival of two ships, the *Ark* and the *Dove*. The gentlemen who arrived were primarily Catholic and the laborers primarily Protestant. The wealthy Catholic ruling class soon established a plantation system as well as a system of churches, chapels, and missions run by Jesuits. The first and most prominent of these early Jesuits was their superior, Father Andrew White, who arrived in Maryland with the first settlers in 1634. White had studied and received

ordination on the continent but had repeatedly returned to England for mission work, flouting laws that made it treasonous for priests to enter the country. His daring nature encouraged the Calverts to entrust him with spiritual guardianship of their new Maryland colony.

The Jesuits ministered to the Catholic population and sought to convert Protestants, Indians, and slaves. They were among the first large-scale Catholic slaveholders in America. Like later clerical slave owners, the Jesuits received slaves as gifts from lay patrons. By 1765 they owned 192 slaves. The Jesuits used slave ownership to stake their claim to full civil rights as English subjects and used slave labor to recreate the self-sufficient English manors. Like most Catholic clergy, the Jesuits insisted on their slaves' right to worship as Catholics and to receive the sacraments, and stressed a responsibility to take care of the slaves, often at great expense. As in other mission fields, the Jesuits' successes in Maryland caused resentment and anxiety, both among the Protestant majority and on the part of Calvert, who resisted Jesuit demands for tax exemption and other privileges.

Toleration Act

Although Maryland's charter said nothing about religious liberty, the second Lord Baltimore instructed the colony's governors to allow all Christians to practice as they pleased. Calvert's Maryland Design introduced a form of toleration that both ensured the rights of Catholics and conceded that Protestants would always compose the majority of the population. The Maryland Assembly enshrined Calvert's intentions in law in 1639 and ten years later in the Act Concerning Religion, or Toleration Act, one of the earliest official expressions of religious liberty in America. The act, passed by the Maryland Assembly on April 21, 1649, was less an innovation than a codification of the attitudes and policies of Maryland's rulers. The act emerged from a turbulent context. In the mid-1640s Maryland had endured a series of attacks by Virginia Protestants as political turmoil in England threatened the Calverts' authority. In the late 1640s, with some degree of order restored, the proprietor appointed a Protestant by the name of William Stone as governor. As part of his instructions to Stone, Calvert ordered him not to bother any Christians, especially Catholics. The Toleration Act of 1649 codified these instructions.

Catholics composed a minority of the population in 1649 as they had throughout Maryland's history. Despite their demographic disadvantage, they exercised considerable power in the colonial assembly. This power, coupled with

pressure from the proprietor, ensured the act's passage. But the act was not purely the work of Catholics. In all likelihood, many moderate Protestants also supported it, recognizing the importance of peace and stability in the colony. Pragmatism on the issue of religious diversity had long contributed to Maryland's relative tolerance and played at least as large a role in the passage of the Toleration Act as any ideal of religious liberty. The act asserted that intolerance had proven dangerous to commonwealths, and it required that no one "professing to believe in Jesus Christ, shall from henceforth bee any waies troubled . . . in respect of his or her religion nor in the free exercise thereof . . . nor in any way compelled to the beliefe of exercise of any other Religion." It also prohibited reproachful language about the Virgin Mary, the apostles, or evangelists, forbade derogatory names for religious groups, and mandated respect for the Sabbath.

Although a bold statement for its time, the act protected only those "professing to believe in Jesus Christ," and stipulated the death penalty for deniers of the Trinity. Hard-line Puritans insisted on this clause, pointing to a precedent in English statutes. Neither these limitations nor the fact that the act remained in force for only five years should diminish its significance. The act went further than any other law of its time and represented an important step in the direction of religious liberty. For American Catholics, it remained a source of pride and a way to rebuke later Protestant criticism that Catholicism was antithetical to religious liberty.

Conflict in Maryland

Despite an auspicious beginning, Maryland enjoyed little peace. From the granting of the charter, Catholic control of the colony depended on royal support, and the turbulence of English politics led to instability. The spread of Puritanism in the colony and a decline in royal authority in England helped pave the way for a series of attacks in the mid-1640s by Richard Ingle, the captain of a Chesapeake tobacco ship, and a gang of Virginia Protestants. In 1654, with Puritans in control of Parliament in England, Maryland Protestants repudiated the proprietor and the Toleration Act. Joining with Protestant forces from Virginia, they defeated Governor Stone in battle, outlawed Catholicism, plundered Catholics' property, and killed or exiled the colony's priests. Lord Baltimore regained his privileges in 1657, but only under the condition that he name a different governor.

Even following the restoration of royal authority in England in 1660, Catholics in Maryland had a precarious status. Four revolts, reflecting both economic and religious tensions,

disrupted the colony in the seventeenth century, and after the Glorious Revolution in England in 1689 Protestants took control of the colony. In 1691 William III made Maryland a royal province but allowed the Calverts to keep their property. The following year Maryland's fragile history of religious liberty came to an end with the establishment of the Church of England. Over time, anti-Catholic legislation grew so onerous that Catholics dispatched Charles Carroll to French Louisiana in an unsuccessful search for a refuge.

By the early 1700s Maryland resembled every other southern colony but continued to serve as a symbol for Catholics. Baltimore was the see of the first American Catholic bishop, making the city the Catholic Church's ecclesiastical center. The Catholic families of Maryland continued to provide the Catholic Church with leaders, and even decades later, when dioceses had cropped up across the country and the Catholic planter families had either died out or moved to other states, Maryland symbolized for American Catholics the first fulfillment of the promise of religious liberty.

American Revolution

The Revolution marked a transition for Catholics in America. Although antipathy toward them lingered, patriot leaders recognized the importance of unity in attempting to throw off the British yoke. George Washington forbade his soldiers to celebrate Pope Day and soon the practice disappeared. With the French alliance in 1778, patriot sentiment shifted in favor of Catholics, and revolutionary rhetoric made talk about the dangers of popery seem paranoid.

Catholics helped shape public opinion. Most of them sided with the cause of independence and many fought in the revolutionary army. The few prominent Catholic leaders were outspoken patriots. Charles Carroll signed the Declaration of Independence as a delegate for Maryland and two years later traveled with the priest John Carroll, Benjamin Franklin, and others to Canada to win support for the war. Two Catholic laymen, Daniel Carroll and Thomas Fitzsimons, served on the Constitutional Convention. Their selection demonstrated respect for Catholics, and their service further promoted Protestant acceptance.

Roman Catholicism: Catholics in the New Nation and the Early Republic

After the Constitution was adopted in 1788, Catholics in the early republic found themselves in a new and potentially positive situation. They, as it turned out, were between a long era of discrimination and anti-Catholicism that marked the colonial period and a marked revival of such sentiments in the 1830s, in a different form, as Catholic immigration from Europe began to increase noticeably. Before the Revolution the Catholic Church was prohibited by law from establishing itself in many of the colonies, including New York and Massachusetts. The inheritance of the intense religious rivalry with Protestantism that carried over to the colonization of America, and the presence of the largely Catholic and French-speaking colony to the North, made Catholics in British North America decidedly unwelcome in the midst of otherwise diverse but overwhelmingly Protestant societies. Individual Catholics in colonial America faced a range of civil and political disabilities that kept them from enjoying the freedoms that many other Christians of European birth and ancestry took as their birthright. The logic of the American Revolution, however, resulted in the shattering of the primacy of loyalty to the Protestant monarch in London, which had made Catholics suspect. In places that had an identifiable Catholic population before 1775, namely Maryland and Pennsylvania, Catholics had joined the patriot cause in significant numbers. Catholic politicians, most notably Charles Carroll of Maryland and Thomas Fitzsimons of Pennsylvania, supported the Revolution, as did Father John Carroll of Maryland, who was part of an American diplomatic mission to Canada in the early years of the conflict.

For Catholics, the writing and ratification of the Constitution in 1787 and 1788 were important. The Constitution

included no religious test for office, which was a reason that anti-Federalists opposed it. Prominent Catholics, however, including Carroll and Fitzsimons, supported and indeed signed it. The evidence indicates that those Catholics who were politically active favored ratification as well. The end of the old colonial system promised a new day for Catholics after a long season of outright discrimination and hostility. After the Revolution, even in New England, a traditional site of anti-Catholicism in the colonies, the states of Massachusetts, Connecticut, New Hampshire, and Rhode Island all granted religious toleration to the Catholic Church, as did New York. This allowed Catholics to establish the first Catholic churches in those states, including St. Peter's in Manhattan, founded in 1786. In Boston Catholics worshiped publicly for the first time beginning in 1788, as Mass was said in a former Huguenot chapel remade into the Church of the Holy Cross.

By no means, however, did suspicion of Catholics disappear everywhere and all at once. As residents of rural Massachusetts made clear, toleration was not the same thing as equality. In voting on the Massachusetts constitution in 1780, records indicate that people in remote parts of New England were more likely to favor retaining laws that discriminated against Catholics, whereas people in the eastern parts of New England, in Boston and Rhode Island, for example, who had been exposed to Catholic soldiers from France, were more likely to favor some degree of toleration. In general, the period immediately after the Revolution was marked by higher tolerance, and relations between Catholics and Protestants improved. Cases were recorded of Protestants giving financial aid in New York, Boston, and Philadelphia to build Catholic churches, and Protestants on occasion would even send their children to Catholic schools. Catholics, for their part, would seek to tone down the aspects of their religion that might make it seem excessively foreign or European; Catholic priests in the early republic, for example, were often called Mister by their parishioners, and new Catholic churches were often built in a style that was unobtrusive to American Protestants.

Despite these mutual efforts at understanding, the new republic was not entirely free of overt acts of discrimination aimed at Catholics. In the early years of the nineteenth century, Catholics in New York City held Midnight Mass on Christmas Eve but eschewed the traditional outdoors process so as not to draw the attention of the wider community. Members of a local gang, however, banged on the doors of St. Peter's Church during Mass, demanding to be admitted to

see what was transpiring inside. At that same time, Elizabeth Ann Seton, a New York convert to Catholicism, had founded a new religious order, the Sisters of Charity of St. Joseph, the first to be established in the United States. She and her sisters left New York to find a religious climate more hospitable to Catholicism, and did so in Maryland. In general, the impact of the Revolution tended to be positive for Catholics. And though it has rarely been noted in revolutionary studies, an argument can be made that in terms of achieving religious freedom and at least the potential for political equality Catholics benefited as much as any religious group in American society from the break with Great Britain.

Building a Church

Catholics in the 1780s turned to the work of creating a sound administrative structure of the church as it broke free from the prohibitions of the colonial period. In 1784 Father John Carroll of Baltimore (1735–1815) was named the superior of the American mission, with the understanding that this appointment might serve as a prelude to his being named the bishop of a new diocese centered in the United States. Carroll was a member of a wealthy Maryland Catholic family with roots well back into the seventeenth century. Educated in Europe, he later joined the Jesuits. When that order was suppressed in 1773, he returned to Maryland. After the war and his diplomatic venture to Canada, Carroll and others set out to construct an administrative structure that might govern the Catholic Church in the new nation. Carroll was supported in his ascendancy within the Catholic community by Benjamin Franklin, who knew and respected Carroll from their work together on the Canada mission during the Revolution. Now effectively the head of the Catholic Church in the United States, Carroll deliberately set out to develop a brand of Catholicism that was suitable for the emerging republican society of which it hoped to become a part.

A product of broad education and travels, Carroll had been influenced by Enlightenment principles as well as something of the ecumenical spirit of the Revolution. His understanding was that the church in the United States would certainly recognize the papacy as the center of Christian unity and the pope as the spiritual head of the church, but that American Catholics would be in practice largely free of direct administrative control from Rome. As things were in the 1780s, however, the Catholic Church in the United States, as a mission without its own bishop, were under the purview of the vicar apostolic in London, and also under the

part of the Vatican that administered fledgling churches. Carroll and other priests concluded that it was in the best interests of the new U.S. church to have its own bishop, one who would administer his diocese largely independent of Rome. That is what eventually happened, and the first diocese in the United States was created in 1789, with its cathedral and episcopal seat situated in Baltimore, Maryland. Father Carroll had been elevated to this place of primacy by his fellow American priests, with the permission of Rome. Carroll was ordained a bishop the following year, at a ceremony in London. The Catholic Church in the United States was termed a mission church, a status it would not lose until the early twentieth century.

Despite the major accomplishment of securing a bishop, and an American at that, the new church faced many challenges. Because the institutional church had been so weak in the colonial period, given various anti-Catholic laws in the colonies, there were far too few priests to serve the faithful in the sprawling new diocese of Baltimore. Many parishes were forced to recruit priests from Europe, sometimes acting without the knowledge or approval of Bishop Carroll, an ad hoc arrangement that met with mixed success. Some of the immigrant clergy were Jesuits, and this caused a problem because the Society of Jesus had been suppressed by the Pope in 1773. And despite the efforts of Bishop Carroll and others to reconcile the Catholic Church and American republicanism, one important area of controversy and discord did emerge in the early republic that illustrated the distinct differences between Catholic tradition and culture, at least those since medieval times, and the democratic ethos of the American Revolution and new republic.

Lay Trustee Boards

Under the laws of most of the new states, each religious body was required to elect a lay board of trustees, in whom legal ownership of the institution would reside. For Protestant churches this was for the most part a fairly easy transition. In the Catholic Church, with its tradition of hierarchy, this proved to be a major area of tension between the clergy and the laity. Connected to this question of legal ownership was a battle over who had the proper authority to appoint priests and pastors, the parish congregations or the bishops. The Catholic community in the United States had a very small cadre of priests and little in the way of institutions such as seminaries to meet the needs of the laity.

As early as the 1780s Catholics in New York City and Philadelphia and on the western frontier of the new nation

began to organize themselves as religious communities before securing the services of a regular parish priest. The idea of lay control of Catholic congregations did have some precedence in European history, but it was not the norm and by no means was it desirable in the eyes of the clergy. Before the Revolution lay Catholics had to take responsibility for their own affairs in many cases, especially in provinces such as New York, where priests under pain of death were barred. Bishop John Carroll, although open to innovations such as priests using English instead of the traditional liturgical Latin during Mass, recoiled at the idea of the laity wielding the power to appoint priests.

In 1791, at a church synod meeting of priests in the United States, the new bishop expressed concern that his sprawling new diocese was “badly regulated.” Lay Catholics in several parts of the country however, including Philadelphia, Boston, Norfolk, Virginia, and New York City, moved to control the affairs of their parishes in accordance with the laws of their states. Sharp divisions arose in Catholic parishes in the early years of the early republic, often between laity who wanted to continue to control the property and others who generally were less educated and preferred influence to not lie with their social betters among the laity, but rather with the clergy. Bishop Carroll, although adamant that it was his decision to appoint priests, one that some congregations openly sparred with him on, did in fact support the lay trustee system as a practical compromise with American republicanism.

Churches in Norfolk, Virginia, Buffalo, New York, and Charleston, South Carolina, remained bitterly divided on this point for decades. In 1829 the bishops meeting at the first provincial council in Baltimore moved to resolve the dispute, declaring that they possessed the true authority to hold property on behalf of the church and to appoint and dismiss priests within their own dioceses. It was this aspect of Catholicism in the United States that the French political philosopher Alexis de Tocqueville in his travels in the nation in 1831 and 1832 found so interesting. For Tocqueville, American Catholics, that is, the laity, unlike their Protestant counterparts, were all equal before the power of the clergy; the irony was, in his view, that within the churches of republican America, it was the Catholic parishes that had the most genuinely democratic ethos.

The number of Catholics grew in the first decades of the new republic, in part because of a steady stream of immigrants to the United States, particularly from Ireland. This growth and expansions was recognized officially in 1808,

when Pope Pius VII approved the formation of four new dioceses in the United States. They were established in New York City, Boston, Philadelphia, and Bardstown, Kentucky, where a sizeable group of Maryland Catholics had emigrated after the Revolution and established an important western frontier outpost of Catholicism. Rome approved Bishop Carroll’s suggestions for bishops for the new dioceses in most cases, though over Carroll’s objections the pope named an Irish clergyman, Richard Concanen, who was wholly unfamiliar with the United States, as bishop of New York. Concanen died before he could assume his duties, however, and the New York diocese was without a bishop for several years.

Struggle for Political Equality

In addition to securing their religious liberties, American Catholics were also determined to be on equal civil and political grounds with citizens of other faiths. The early republic was an intensely political period, and citizens and groups struggled to define the meaning of what they had created in the 1770s and 1780s.

At the start of American politics in the 1790s, prominent Americans such as Thomas Fitzsimons of Pennsylvania and the Carrolls of Maryland, namely Charles and his cousin the bishop John Carroll, supported the new government and the party associated most closely with it, the Federalists. The leaders of that party, President George Washington and Secretary of the Treasury Alexander Hamilton, had in their own ways expressed support for the political aspirations of Catholics to civic and political equality. In 1787, as a member of the New York legislature, Hamilton had taken the lead in blocking legislation championed by anti-Federalist politicians that would have effectively disenfranchised Catholic voters in the state by forcing them to renounce “all foreign and ecclesiastical authority.” Hamilton openly denounced this measure as a none-too-subtle attempt to keep Catholics in New York from political participation, as they had been since the late seventeenth century, arguing that the United States as a new nation had to transform the old religious rivalries of Europe and make national loyalty a purely civic matter. The following year, however, the New York legislature did enact a law requiring all elected officials in New York to take just such an oath on taking office.

Washington responded to an entreaty by American Catholics, both clergy and laity, who asked him as president to do what he could to ensure political equality for Catholics. Washington acknowledged that Catholics had indeed

supported the Revolution and expressed regret that in a number of states religious barriers to office were in effect against Catholics. He offered the hope that as the nation matured politically such barriers would be removed. In any event, Federalists clearly would have had the first allegiances of Catholics as Americans began the republican experiment in the 1790s. A central event with the real potential to tie Catholics to Federalists was the intense reactions of both the Federalists and their emerging political opposition, the Republicans, to the French Revolution. Virtually all Americans, including Catholics, supported the French uprising in its earliest phases because the monarchy was being replaced by a republic that would presumably be constructed along American lines.

However, as the upheaval took an increasingly radical and secular turn, embarking on a de-Christianization campaign aimed primarily at the Catholic Church, American Catholics, especially the clergy, began to have grave doubts. In addition, Federalists were uneasy with immigrants from Europe, some of whom were Catholic, and Republican political organizers, such as those in New York state, began to organize urban immigrants against Federalist policies such as the Jay Treaty, which they claimed had a pro-British bias.

Republicans led by Thomas Jefferson, whose own religious views were not always easily defined, began to appeal to Catholics based not so much on a shared religiosity but on what would eventually become a politics of cultural tolerance and plurality, as well as on a platform of equal political rights for all white men. With the exception of a few African Americans, the vast majority of Catholic men in the United States were European by birth or ancestry, and Catholics began to gravitate toward the Republicans. That party also portrayed itself as the party of ordinary workers in the nation's cities, where many immigrant Catholics lived. In 1806 it was the Republicans who led the effort to change the oath of office for state officials, allowing the first Catholic to serve in the New York State legislature. Federalists opposed this measure, ostensibly on legal and constitutional grounds, but it was also true that they had become uneasy with the increasing democratic tendencies of national politics.

In part because of the growing number of white men of all religious backgrounds who owned no property, states in the 1820s began to liberalize their voting requirements. As a result virtually all white men could vote even if they did not own property. Early Jacksonian Democrats were especially interested in garnering the votes of Catholic men. By 1830

the last of the old colonial laws aimed at disenfranchising Catholics had effectively been removed.

Expansion and Growth of the Catholic Community

The Catholic Church expanded as the nation's geographic reach grew. After the Louisiana Purchase of 1803, New Orleans, a city with a rich Catholic history and a strong French flavor, became part of the nation. When Louisiana entered the Union as a state in 1812, it became the fifth diocese of the United States. In January 1815 Catholic Ursuline nuns prayed for an American victory before the Battle of New Orleans, a smashing victory by the United States in the final conflict of the War of 1812. In addition to claiming their new identity as citizens of the United States, the Ursulines, whose order had been founded in France, played a key role in the development of Catholicism in the lower Mississippi Valley. Although they did own slaves, they also educated young women, both black and white, in integrated schools in New Orleans. African Americans, both free and enslaved, were a critical part of the Catholic community in the new state of Louisiana. Most members of the Cathedral parish of St. Louis, for example, were African Americans and were able to establish a sacramental community outside the bounds of the otherwise predominantly white and Protestant South. Despite making some progress on the difficult matter of race, the diocese was troubled, as were many others, by a shortage of priests, ethnic feuding, and great distances between parishes. The sprawling New Orleans diocese was divided twice before 1830; in 1826 the diocese of St. Louis was created in the new state of Missouri, and three years later, in 1829, the Diocese of Mobile, Alabama, was established.

As the church grew with its new dioceses, Bishop John Carroll remained in effect the leader of Catholics in the United States until his death in 1815. One figure who championed the cause of establishing good relations with Protestants that Carroll espoused was John England, a native of Ireland and the bishop of the Diocese of Charleston, South Carolina. England's sprawling diocese included the whole of three states, North and South Carolina and Georgia. In 1826 he became the first member of the Catholic clergy to address the U.S. House of Representatives. England supervised the Sisters of Our Lady of Mercy in Charleston, founding the first society in the United States for Catholic workingmen, and even establishing a society for African American Catholics later in his ministry, a project that white leaders of Charleston forced him to abandon as southern whites began

to defend slavery and white supremacy in the face of mounting criticism of slavery.

Beginnings of a New Nativism

Despite the efforts of bishops Carroll and England to establish relations with the Protestant majority based on mutual respect and cordiality, a renewed hostility toward Catholics began to emerge, especially among some evangelical Christians as the revivals of the Second Great Awakening began in the 1830s. These revivals made the United States more overtly Christian and Protestant than it had been. Evangelicals grew concerned about what they saw as a popish threat to the republican character of the nation they were trying to reform along Protestant lines. Catholics, for their part, did not experience these religious revivals. Instead, they in some important sense became a target of them. In the eyes of many evangelical Christians, the Catholic Church was a threat to true religion and Christianity. Catholics had also begun to arrive in the United States in ever increasing numbers, especially after 1815. Most of these immigrants arrived from Ireland and Germany and settled in the cities along the eastern seaboard, especially the Irish; some of the Germans headed west, especially to cities such as Cincinnati and to the farmlands of the Ohio and Mississippi valleys. They helped fill a huge need for unskilled labor. Irish workers helped dig and build the Erie Canal in New York from 1817 to 1825 and worked in textile mills in New England. The growing Catholic presence produced a backlash, especially as the clergy began to supplant lay influence. The Catholic Church began to resemble something foreign and European once again, as priests and bishops who answered to Rome now controlled decision making.

The growth of the Catholic Church in the early nineteenth century in the United States was impressive; in 1807 there were seventy priests, eighty churches, and about seventy thousand members; by 1830 in New England alone there were about fourteen thousand Catholics and sixteen churches. By 1830 there were also ten dioceses in the country, six seminaries, nine colleges, thirty-three monasteries, and countless schools and hospitals. Catholics, however, did not always help their cause in terms of establishing cordial relations with their fellow citizens. A meeting of all the American bishops in 1829, the First Provincial Council, held in Baltimore, called on Catholics to avoid “corrupt” translations of the Bible, urged them to build parish schools to save their children from “perversion,” and encouraged them to baptize children who were not Catholics if there were any

chance at all of their being baptized Catholics. Evangelical Protestants reacted strongly against this, as they fanned out across the country to try to convert Catholics on the basis of giving them direct access to the Bible. This resurgence of anti-Catholicism was marked by a flurry of salacious and provocative literature published, purportedly by those who had escaped the clutches of Catholic convents and monasteries and had tale of horror and sexual deviance and debauchery to report. “Ten Days in a Nunnery” by Maria Monk was one such tale; another was “Six Months in a Convent” or “pornography for the puritan,” as one scholar once called it. This turned out to be a fraudulent story, but that it was did not keep many Americans from believing in it, confirming their worst fears about Catholicism as marked by an unnatural denial of human sexuality. Publications such as this were a clear and unmistakable sign that the general period of toleration and acceptance that Catholics had largely enjoyed since the 1780s was now coming to an end. What followed was a period in the mid-nineteenth century of even more dramatic growth in the American Catholic population, one that was to be accompanied by a new period of prejudice and nativism.

Roman Catholicism: The Impact of Immigration in the Nineteenth Century

Roman Catholics made up a relatively small percentage of the U.S. population throughout the early national period. In 1820 the approximately 195,000 Catholics in the United States not only were outnumbered by Methodists and Baptists but also had fewer churches (124) than any other denomination. Catholics were concentrated in the middle to upper classes, predominately of French or English ancestry, and clustered in the middle Atlantic region. The “Century of Immigration” that opened in 1820 substantially altered the size and ethnic composition of the U.S. Roman Catholic population. Above all, it was the arrival of thousands of Irish and German Catholic immigrants that caused Catholicism to become the largest denomination in the country by 1850, with a total population of 1.6 million. This figure would almost double in the next decade. By 1860, the nation’s 3.1 million Catholics worshipped in 2,385 churches and were served by 2,235 clergy, up from a mere 150 forty years earlier.

Irish and German immigration also transformed worship styles and religious practices within the American Catholic community. Throughout the colonial period Catholics operated in what amounted to a “priestless church.” Dependent on the travel schedules of itinerant clergy, lay Catholics often went months without access to Mass or the sacraments. Consequently religious practices were centered in private homes, where multiple Catholic families would gather for worship or prayer. In the nineteenth century, Catholic religious life would become progressively more parish oriented. In part this was due to the efforts of church leaders such as John Carroll, first bishop of the United States and head of the diocese of Baltimore from 1789 to 1815, to expand Catholicism’s institutional base. But it was primarily the arrival of the Irish and the Germans that prompted American Catholic life to revolve so decisively around the parish. Immigration also changed the typical organizational structure of the American parish. Throughout the early national period most parishes had been organized territorially, meaning that all people within a designated geographical area belonged to the same parish, regardless of ethnic distinctions. But the onset of massive European migration led to the establishment of more “national parishes” organized on the basis of ethnicity or, more specifically, language. In these parishes immigrant

Catholics were able to hear sermons preached in their native tongue, preserve the religious customs of the Old World, and educate their children according to ethnic customs and traditions.

Irish Immigrants and Their Parishes

The Irish were by far the largest immigrant group and would place a distinctive stamp on Catholicism in the United States. Irish immigrants had been present in American society since the colonial period, though their numbers were fairly small when compared with their counterparts in the nineteenth century. Moreover, of the 400,000 people of Irish birth or descent in the United States at the time of the census of 1790, the vast majority were Protestants from Ulster. It was not until the nineteenth century that Catholics would come to dominate Irish migration to the United States. Although the potato famine in Ireland (1845–1850) is rightly regarded as a major push factor in Irish Catholic migration, significant numbers of Irish (260,000) had immigrated to the United States in the two decades that preceded it. Another 1 million Irish arrived in the United States during the famine years. Largely unskilled, famine immigrants settled for the most part in urban areas. By 1860 one out of every four residents of New York City had been born in Ireland. Factoring in the second generation, the city’s Irish population approached 50 percent of the total. Other cities on the eastern seaboard, such as Philadelphia and Boston, had only slightly lower proportions of Irish Americans.

Irish migration continued at a rapid pace even after the end of the famine. Between 1851 and 1921 over 3.7 million Irish would arrive in the United States, bringing with them a brand of Catholicism that had been decisively shaped by events in their homeland. Ireland’s ongoing struggle with Protestant England for political and religious freedom in the nineteenth century, as well as the passing away of Gaelic language and culture in the late eighteenth century, had given rise to an intensified Catholicism and accelerated the fusion of religion and patriotism. From Catholic emancipation in 1829 throughout the postfamine period, Catholicism in Ireland underwent what historian Emmet Larkin has described as a “devotional revolution.” Distinctive features of this included a rise in the number of Catholic churches, a dramatic increase in the numbers of priests and women religious, considerable institutional growth, and a strengthening of the bonds between religion and ethnicity. The devotional revolution also tightened Ireland’s ties to Rome. Paul Cullen, Ireland’s first cardinal and a key figure behind the devotional

revolution, helped move the country more decisively into the ultramontanist camp. Significantly, it was Cullen who drafted the statement on papal infallibility, which would be adopted at the Vatican Council in 1870. Irish Catholics thus arrived in the United States with a strong loyalty to clergy and hierarchy, a firm commitment to parish life, a desire to build educational and charitable institutions, and in sympathy with the consolidating trends of the national and universal church.

In addition to Mass and the sacraments, the principal acts of worship among Catholics, Irish Catholics in Ireland participated in a wide range of special devotions. Irish parishes were tailored to the rich devotional life of their members, sponsoring a variety of rituals attached to liturgical seasons, confraternities that honored Mary or one of the saints, and other organizations designed to foster piety among the people. Although the ratio of priests to people was relatively high compared with what it would later become (in New York City between 1850 and 1865 there was approximately one priest for every 4,500 Catholics), it was clear that among the Irish the priest not only was the key spiritual leader but also wielded a great deal of authority over all parish operations.

The Irish brand of Catholicism was so distinctive that the Irish parish became a recognizable institution in the United States by the middle of the nineteenth century. It is significant that while an Irish parish in antebellum New York City might easily be confused with an Irish parish in Dublin, the distinctions between an Irish American parish and a German American one were readily apparent. As historian Jay P. Dolan observed, these two institutions were as dissimilar as those in Dublin and Munich.

German Immigrants and Their Parishes

Approximately 1.7 million German Catholics migrated to the United States between 1820 and 1920 (representing about one-third of the total German immigration during this period). From 1820 until the 1880s, Germans were outnumbered only by the Irish among Catholic immigrant groups. While the vast majority of the Irish were impoverished, German Catholic migrants tended to come from more prosperous backgrounds and were more likely to engage in skilled labor. Although they also would become a significant presence in the urban North, German immigrants were far more likely than the Irish to gravitate toward the fertile and inexpensive farmland in the Midwest. The region between St. Louis, Milwaukee, and Cincinnati is known as the "German triangle" because of the large number of Germans present there.

The first German parish in the United States was founded in Philadelphia in 1787; a century later there were 2,250 German-speaking parishes in the country. Three-fourths of these were located in the five midwestern dioceses of Cincinnati, St. Louis, Milwaukee, St. Paul, and Chicago, but German parishes also appeared in New York and Philadelphia (where there were, respectively, 37 and 11 German parishes). As mandated by Catholic theology, Masses celebrated in Irish and German parishes were identical in format and structure. But the worship styles differed dramatically, as German parishes invariably featured more elaborate liturgies, incorporated more music, and overall displayed more pomp and ceremony. Devotional life also bore a distinctive German stamp. The key difference between Irish and German parishes, however, was language. Unlike the Irish, the Germans spoke a foreign language, and believing that "language saves faith," they were far more committed to establishing parishes in which they could hear sermons and practice devotions in their native tongues.

The impetus for founding German parishes often came from the laity. A group of leaders in the immigrant community would purchase land, raise funds, and petition the bishop for a priest. Once established, German parishes were characterized by significant lay involvement. Irish immigrants generally collaborated more closely with clergy in establishing and governing parishes. One study of three hundred Catholic parishes in the mid-nineteenth century showed that 62 percent of German parishes operated according to a lay trustee system, in which elected members of the laity shared nonsacramental responsibilities with a clergy member. Irish parishes, whose members characteristically exhibited more deference to clergy, were far less likely to have lay trustees.

Several factors explain German Catholics' relatively weaker attachment to clergy. First of all there was the religious experience imported from Germany, where there was a strong tradition of lay involvement in parish affairs. But conditions in the new country also had an impact. Compared with the English-speaking Irish, they had far fewer German-speaking priests available to them. Moreover, Catholicism was not the dominant religion in the German American community in the way it was for Irish American Catholics; German American Catholics, therefore, had to contend with anticlericalism and anti-Catholicism within the secular and Protestant German-speaking ethnic community. As a result the German parish was more self-contained than its Irish counterpart and played a more comprehensive role in sustaining ethnic identity among new arrivals and

their descendants. This greater group consciousness among German Catholic immigrants ensured that German parishes played a definitive role in the social as well as religious life of the people, and compared with their Irish counterparts, German parishes featured a much more elaborate organizational network. In addition to devotional societies, the typical German parish sponsored life insurance organizations, music societies, military groups, and a host of other organizations. Among the most popular parish associations, or *Vereine*, was the *Unterstützungsverein*, which had as its main purpose the raising of money for the relief of the poor, the sick, and families of deceased members.

Another common society in the German parish was the *Jägercompagnie*, which was initially organized as a parish militia to protect church property from anti-Catholic antagonists. For if the massive influx of immigrants in the first half of the nineteenth century transformed the demographics and worship styles of the Roman Catholics in the United States, it also changed how they were perceived by their non-Catholic fellow citizens. The rapid growth of the Catholic population, its association with lower economic classes, and its “foreign” religious practices were a major contributing factor to the rise of anti-Catholicism in the 1830s and 1840s.

Immigration and the Rise of Anti-Catholicism

In the early national period the Catholic community was too small and too ethnically indistinct from the Protestant majority to make anti-Catholicism a major force in American culture. After 1830, though, the rapid increase in the pace of Catholic migration to the United States, combined with the persistence of ethnic traditions among Catholic immigrants, raised new doubts about whether Catholics could be completely loyal to the United States when their spiritual leader was also a temporal prince in Italy. In 1835 inventor Samuel Morse published “The Imminent Dangers to the Free Institutions of the United States through Foreign Immigration,” in which he argued that Jesuits were in control of the transatlantic movement of Catholics and were directing the newcomers to strategic points in the nation in preparation for an attempt to overthrow the government. Rev. Lyman Beecher, one of the most popular preachers of the antebellum era, was another American leader who perceived the sharp increase in the Catholic population as a threat to the republic. In his “Plea for the West,” also published in 1835, Beecher observed that “no government is more complex and difficult of preservation than a Republic . . . a tenth part of the suffrage of the

nation, thus condensed and wielded by the Catholic powers of Europe, might decide our elections, perplex our policy, inflame and divide our nation, break the bond of our union, and throw down our free institutions.”

Beecher’s sermons contributed to one of the most violent anti-Catholic episodes in American history, the burning of the Charleston convent in 1834. Also contributing to that incident was a lurid fascination with the inner lives of priests and nuns. As women who lived and worked in all-female environments, who ran institutions in the public domain, who wore mysterious clothes, and who took vows of chastity, nuns’ “secret” lives figured prominently in Protestant fantasies. By far the best-selling version of this was Maria Monk’s *Aufful Disclosures of the Hotel Dieu Nunnery in Montreal*, first published in 1836. Monk described how she had been kidnapped, taken to a convent, and impregnated by a priest. Her sordid tale went on to recount how the nuns baptized her baby before killing it and burying the body under a convent. The fact that Monk’s story was quickly proved a sham did not diminish its popularity. *Aufful Disclosures* sold 300,000 copies between 1836 and 1860 and was outsold in antebellum America only by Harriet Beecher Stowe’s *Uncle Tom’s Cabin*.

Another decisive factor contributing to the rise of anti-Catholicism was the fact that the beginning of massive Catholic immigration to the United States coincided precisely with the period in which Americans were attempting to provide a universal education to its citizens. The “common schools” incorporated in the antebellum period claimed to be nonsectarian, but in reality their leaders and curriculum often replicated the anti-Catholic bias of the dominant culture. In particular, church leaders and Catholic parents routinely objected to the use of textbooks that disparaged the Church of Rome and to the compulsory reading of the King James Bible. Until the early 1840s, though, most bishops and Catholic leaders would have settled for a public school system that was truly nonsectarian rather than devote already scarce resources to building and funding parish schools. But a series of events in major Catholic centers of New York and Philadelphia would change their minds. John Hughes, the Irish-born bishop of New York between 1833 and 1863, played a pivotal role in this development.

Immigration and the Development of a Catholic Parochial School System

In 1840 John Hughes (1797–1864) confronted New York’s Public School Society, an organization of leading Protestants

who dictated the curriculum of the city's schools. Over the course of a two-year battle, Hughes grew convinced that Catholic children would never get an unbiased education in public schools. Unsuccessful in his bid to secure public funds for private schools, Hughes exhorted U.S. Catholics and new arrivals to establish and finance separate schools; his dictum, "Build the school house first, and the church after," suggests the high level of priority he assigned to this task. Hughes's crusade for Catholic schools received added impetus in 1844, when Catholics in Philadelphia petitioned the local school board to permit their children to read the Douay (English language) translation of the Bible. Protestant outcry resulted in a series of "Save the Bible" rallies throughout the city. When violence erupted at one of these rallies, a two-week period of rioting ensued that led to the burning of two Catholic churches and thirty Catholic homes and ended only with the declaration of martial law. In the aftermath of the conflicts in New York and Philadelphia, the American hierarchy would become progressively more attached to the idea that Catholic children belonged in church-sponsored schools.

But if church leaders had created parish schools primarily in response to anti-Catholic sentiment, they committed to them—and organized them into a comprehensive, diocesan-based system—for an assortment of other reasons. Foremost among these was the increasing secularization of the public school system throughout the nineteenth century. By the early 1880s, it was evident that Catholics' objection to public schools rested less on those schools' antipathy toward Catholics and more on their apathy with regard to religion. In 1883 the editors of Philadelphia's *Catholic Standard* ranted against "godless" public schools, declaring that "Catholics should avoid the terrible danger of entrusting our children's salvation to teachers . . . who have no religion of any kind." Catholic criticism of public schools would increase in direct proportion to their secularization.

Continuing immigration also explains Catholics' escalating commitment to a separate, church-sponsored school system. German immigrants in the 1840s had been the first Catholic ethnic group to become emphatic supporters of parochial education; given their fervent belief that "language saves faith," it made sense that they would insist that their children be instructed in the language of the homeland. Tellingly, two-thirds of midwestern German parishes established schools within two years of their founding, compared with only one-fourth of Irish parishes. Immigrant groups who arrived later in the nineteenth century, most notably Polish Catholics, would buttress the ethnic argument for Catholic schools. The

Catholic Church's institutional commitment to a parallel school system was solidified by 1884, when, at the Third Plenary Council in Baltimore, American bishops decreed that every Catholic parish in the nation have a school attached within two years. This unreasonable goal was never reached, but the American parochial school system nevertheless grew into the largest nonpublic system in the world.

Catholics, of course, were not the only American religious group who objected to the secularization of the public school system. Neither were they the only denomination for whom ethnicity provided a rationale for separate schools. But no other group had the resources or the population to build such a large school system. This reality points to a third reason why Catholic hierarchy and clergy were able to muster such strong support for separate schools: the exponential growth of women's religious communities, both in size and number, provided a viable population of teachers willing to staff them. In 1840, when there were fewer than 200 Catholic schools in the United States, there were approximately 900 sisters in the country, disbursed among fifteen orders. Sixty years later, with the commitment complete, the American population of nuns had multiplied to 46,583 sisters among 170 congregations. Of these, the vast majority were teaching.

Immigration and Religious Life

Immigration was a major contributing factor to the rapid growth of Catholic women's religious life in America. Of the sixteen women's religious communities that were established in the United States between 1830 and 1850, eleven were European congregations who sent missionaries to the United States, usually at the behest of bishops or priests. In 1843 Rev. Edward Sorin, C.S.C., the founder of the University of Notre Dame, summoned four Sisters of the Holy Cross from LeMans, France. Within a few years these women opened the institution that would eventually become Saint Mary's College. Also in 1843, Rev. Michael O'Connor, the newly appointed bishop of Pittsburgh, asked the superior of the Sisters of Mercy in Ireland to send several nuns to assist him. Having seen the work of Catherine McAuley's "walking nuns" in Dublin, O'Connor knew how well they would serve Pittsburgh's population. Within days of their arrival, Mother Frances Warde and seven companions began visiting the poor and sick, and before long they established permanent educational, health care, and social service institutions. As they spread to other American cities and small towns, the Sisters of Mercy developed a variety of creative responses to

the needs of the local church, founding and staffing schools, hospitals, homes for working women, homes for the aged, orphanages, employment agencies, and home health care organizations.

Ethnicity was often a consideration when the bishops requested American foundations of European communities. In 1847 a group of School Sisters of Notre Dame, based in Munich, arrived in St. Mary's, Pennsylvania, to undertake the education of children in the local German Catholic community. By 1892, the congregation had over two thousand members who were educating seventy thousand Catholic children across twenty dioceses in seventeen states. Like their Irish counterparts, German immigrant nuns engaged in other ministries besides teaching. The Poor Handmaids of Jesus Christ, a congregation from Dernbach, Germany, arrived in Fort Wayne, Indiana, in 1868, and by the end of the century members from the American foundation staffed orphan asylums, hospitals, and infirmaries throughout the Midwest.

Over time the Sisters of Mercy, Poor Handmaids, and other European congregations began to attract new members from among native-born Catholics in the ethnic communities in which they ministered. Irish immigrant daughters, in particular, joined convents in large numbers. The "greening" of American religious life is evident in the Sisters of St. Joseph of Philadelphia, a community derived from a French congregation of nuns who had established an American foothold at Carondolet, Missouri, in 1836. From there four sisters traveled to Philadelphia in 1847 to establish an orphanage. Ten years later, the Philadelphia community totaled fifty-four members. Thirty-five of these had been born in Ireland, three hailed from Germany, and the remaining sixteen were native-born with Irish surnames.

Men's religious life followed a similar pattern. The Redemptorists, an order originally established in Italy that had established a significant presence in German-speaking countries, sent their first missionaries to the United States to minister to German-born clergy in 1832 and would spread to other major American cities by the end of the Civil War. Priests and brothers who staffed Most Holy Redeemer Church in New York, the city's most prominent German parish in the mid-nineteenth century, were all Redemptorists who had been born in German states. The congregation opened an American seminary in 1851 to prepare more priests to minister at German American parishes. Benedictines from Bavaria and Switzerland also contributed a significant number of German-speaking clergy,

opening monasteries in western Pennsylvania, Indiana, Minnesota, and Missouri.

Missionary priests contributed to the importation and spread of European devotions, many of which fostered ethnic identity. Among the Germans, the Redemptorists encouraged new arrivals to replicate devotional practices of the fatherland, including Marian devotions focused on the Assumption and Immaculate Conception. Redemptorists also encouraged the spread of societies such as the Archconfraternity of the Holy Family, as well as devotions to particular saints. St. Joseph was among those especially beloved among German Americans; the Joseph Verein, founded in New York in 1843, was the oldest relief society in Most Holy Redeemer parish in New York City.

Other Marian devotions were embraced by Catholics of different ethnic groups. By far the most popular expression of Marian piety involved Our Lady of Lourdes, a devotion that grew out of an apparition of the Blessed Virgin to a French peasant girl in 1858. The aforementioned Edward Sorin (1814–1893) of the French Congregation of the Holy Cross played a central role in popularizing American devotion to Lourdes by making Notre Dame the epicenter of Catholic devotion to Lourdes. In 1865 he founded the journal *Ave Maria*, which quickly became one of the most widely read Catholic publications in America. In 1877 a replica of the grotto at Lourdes was constructed on Notre Dame's campus. European promotion of Lourdes and other devotions was one manifestation of the "Romanization" of Catholicism, the effort to unify a diverse church under and consolidate power in the Vatican. As mentioned previously, Irish Catholics in Ireland and the United States were in full support of this trend.

Despite the presence of missionaries from other European countries, it was Irish Americans who would dominate the ranks of both the American clergy and hierarchy. By 1900 two-thirds of all Catholic bishops in the United States were of Irish descent, and in regions such as New England this ratio approached three-fourths. The presence of so many Irish in positions of authority ensured that the Irish tradition of lay deference to clergy and hierarchy would become the prevailing model in the American church. This is not to say that Irish hegemony went uncontested. On the contrary, non-Irish Catholic immigrant groups repeatedly clamored for more non-English-speaking priests and bishops, for the right to worship in their native languages, and for the retention of ethnic customs and traditions in parish and devotional life.

Ethnic Conflict in the American Catholic Church

Throughout the nineteenth century conflict erupted on the parish and diocesan level between different Catholic ethnic groups. In territorial parishes with a mixed ethnic population, parishioners argued about a host of issues, ranging from the proper pastoral response to new arrivals to the kind of hymns sung at Mass. In dioceses, battles raged between parishioners of German-speaking parishes and members of the Irish-dominated episcopacy over the appointment of pastors, finances, and governance. Animosity between German and Irish Catholics reached a fever pitch in the late nineteenth century, when Peter Paul Cahensly, a German politician, visited the United States on behalf of the St. Rafael Society for the protection of German immigrants. Cahensly claimed that Catholic immigrant communities in the United States had suffered a loss of “ten million souls” as a result of the Irish American hierarchy’s insensitivity to the ethnic traditions of non-Irish Catholics and the dearth of non-English-speaking bishops. In his Lucerne Memorial, a document he presented to Pope Leo XIII in 1891, Cahensly called for more Roman involvement in establishing and funding national parishes and schools in the United States and greater immigrant representation among the American hierarchy. “Cahenslyism” inspired outrage among key church leaders. James Cardinal Gibbons of Baltimore, the most influential member among the American hierarchy, argued that it would confirm anti-Catholics’ worst fears about Vatican intervention in American affairs. Also decrying Cahenslyism was Archbishop John Ireland of St. Paul, Minnesota, whose “Americanist” agenda included rapid assimilation of immigrants and cooperation between public and parochial schools. In part because of the vehement reaction it evoked in the United States, Cahensly’s proposal was tabled by the Vatican, though German Americans were partially vindicated, in 1899, when an apostolic letter curbed the Americanizing impulses of Ireland and his supporters.

Although Irish clergy and laity would continue to exert a powerful influence over the U.S. Catholic Church well into the twentieth century, increasing numbers of immigrants from southern and eastern Europe, as well as migrants from the Western Hemisphere, would again transform the ethnic composition and religious practices of the Roman Catholic Church in the United States.

Roman Catholic Immigration after 1880

Whereas German and Irish arrivals dominated Catholic migration to the United States before the Civil War, in the

postbellum period it would be far more diverse. In 1820 the Catholic Church in America included no more than three foreign-language groups; a century later it was a cosmopolitan church whose members spoke at least twenty-eight different languages. Irish and Germans remained the two largest groups, followed by Italians, Poles, French Canadians, and Mexicans. According to the religious census of 1916, these six ethnic groups accounted for at least three-quarters of the Catholic population.

Italian American Catholics

The first permanent Italian American parish, St. Mary Magdalen de’ Pazzi, was established in Philadelphia in 1857. Major Italian immigration to the United States, however, did not begin until 1880. By 1900 close to one million Italians arrived in the United States, almost all of whom were Catholics, and twenty years later the Italian American population had risen to over four million. Less fervently invested in either the priesthood or the parish than their Irish and German counterparts, Italian immigrants practiced a style of Catholicism that was oriented toward family devotion and firmly rooted in the religious traditions of the peasant villages of their native lands. Unlike in Ireland, where Catholicism was the religion of the beleaguered minority, the church in Italy was associated with the landowning upper class and the status quo. Many immigrants from southern Italy thus exhibited a pronounced anticlericalism and a disassociation from the institutional church. Whereas Irish Catholicism revolved around attending Mass and receiving the sacraments, Italian practices centered on devotions in the home and in communal religious celebrations. Beginning in the 1880s, for example, Italian Catholic immigrants in East Harlem devoted an entire week each July to a celebration in honor of Our Lady of Mount Carmel. The devotion, like the statue of Our Lady itself, had traveled to Harlem from Salerno. The highlight of the annual *fiesta* involved a procession, in which thousands of devotees marched behind *la Madonna* through the streets of Harlem, carrying their intentions with them to lay at her feet. Robert Orsi’s study of this celebration demonstrates the intimate connection between Italian American homes and the devotion to Our Lady of Mount Carmel. The shrines to Our Lady of Mount Carmel that were set up in the bedrooms of Italian Harlem underscored the sacredness of the home and family.

Italian Americans’ relative detachment from parish life sparked criticism from an Irish-dominated clergy and hierarchy. In turn, Italian immigrants felt like second-class citizens

in the institutional church; those who settled in territorial parishes were often relegated to attending separate masses in church basements. The chronic shortage of Italian-speaking priests, and the lack of sympathy it evoked from the Irish, also rankled. It was in partial response to this problem that Giovanni Battista Scalabrini, the bishop of Piacenza, Italy, established the Missionaries of St. Charles Borromeo in 1887, charging them with the ministry of Italian immigrants in the United States. The “Scalabrini Fathers,” as they were known, joined Italian-speaking members of other male religious congregations such as the Servites and the Augustinians in serving Italian immigrants throughout the country, both in parochial and nonparochial institutions. Among the latter was the St. Rafael Society for the Protection of Italian Emigrants, an organization modeled on a German organization of the same name (St. Rafael was the patron saint of travel). Women religious also devoted themselves to the pastoral care of Italian immigrants in America. In 1889 Mother Frances Cabrini, the Italian-born founder of the Missionaries of the Sacred Heart, arrived in the United States and along with other members of her congregation established hospitals, orphanages, and schools to serve Italian immigrants across the United States. Native-born Italians Blandina and Justina Segale, biological sisters as well as members of the same religious community, founded and operated the Santa Maria Institute in Cincinnati, a settlement house that served the city’s Italian Catholics.

Polish American Catholics

Like Italians, Polish Catholics brought their own religious traditions to the American Catholic Church. The period of greatest migration of Poles occurred between 1870 and 1914, when over two million arrived in the United States. Throughout this period Poland did not exist as a country, its territory having been divided among Germany, Russia, and Austria in 1795. For ethnic Poles religious devotion was interwoven with devotion to their dismembered homeland. Devotion to Our Lady of Czestochowa, who had been proclaimed queen of Poland in 1656, was infused with political as well as religious significance.

The Polish tradition of lay involvement in establishing and governing parishes also affected the church in the United States. Most of the early Polish parishes were founded through the initiative of laypeople rather than clerical authorities. Relying on Old World precedent, Polish American Catholics sought and received control over parish finances, assigned a great deal of authority to parish councils,

and petitioned local ordinaries for Polish-speaking pastors. Polish attachment to ethnic religious customs produced the first major split in the American Catholic Church in 1896, when schismatic parishes in cities with large Polish populations, especially Chicago, Buffalo, and Scranton, Pennsylvania, united under the Polish National Catholic Church, the only American ethnic church to survive a breakaway from the Roman Catholic Church. The vast majority of Polish American Catholics retained allegiance to Rome, though their distinctive styles of Catholicism created other clashes with an Irish-dominated hierarchy. One source of perpetual conflict was the lack of Polish representation in the episcopacy. The first Polish American bishop was not appointed until 1908, and it was not until 1961 that a Polish American was elevated to the head of a major Roman Catholic diocese in America (Archbishop—later Cardinal—John Krol in Philadelphia).

Unlike Italians, Polish American Catholics actively participated in the creation of national parishes. In Chicago, site of the largest Polish population outside of the homeland, Poles established thirty-five national parishes by 1918. Given this strong commitment to the parish and the fusion of religion, language, and nationality, it is not surprising that Polish Catholics rivaled German Catholics in their deep commitment to ethnic parochial schools. Viewing public schools and non-Polish parish schools with equal suspicion, Polish Americans contributed their meager financial resources to send their children to schools where classes were taught in Polish, English was considered a foreign language, and the curriculum emphasized Polish history as well as religion. Here again, it would be women religious from the homeland who would establish and sustain these institutions. One of the largest Polish congregations was the Felician Sisters, originally founded in Warsaw and officially known as the Congregation of the Sisters of St. Felix of Cantalice. The Felicians established an American foundation in rural Wisconsin in 1874 and by 1900 were teaching Polish immigrant children at forty-one parish schools in eleven states. These and other Polish Catholic schools helped preserve both religious values and Polish heritage.

The primary caretakers of religion and ethnic identity, however, were mothers in Polish American homes, where women created and maintained family shrines to Our Lady of Czestochowa. On the feast of the Assumption, which was known in Poland as the Feast of Our Lady of the Herbs, Polish women took bouquets of flowers and herbs to church, had them blessed, and placed them with other holy objects in the home. On Epiphany priests visited the home and

inscribed the initials of the magi in chalk above all of the doors. During these and other religious holidays mothers prepared and served elaborate meals that reinforced ethnic traditions.

French Canadians

French Canadians constituted another sizable Catholic immigrant group in the late nineteenth century. Attracted to the small mill towns of New England by the expansion of the American textile industry, French Canadian settlers were vitally committed to language preservation and ethnic parishes. According to the religious census of 1916, over one million Catholics worshipped in French-speaking parishes. Although French Canadians brought with them a strong tradition of lay involvement and autonomous local churches, they encountered strong resistance to this model among the Irish-dominated hierarchy of New England. While they never approached the scale of those that gripped the Polish American community, skirmishes between French Canadian laity and Irish American hierarchy were not uncommon. In 1886, French Canadians in Fall River, Massachusetts, refused to contribute money to the church and eventually stopped attending Mass when the local bishop did not appoint a French Canadian priest. Facing a similar situation in North Brookfield, Massachusetts, in 1900, French Canadians went so far as to establish a new parish with their own pastor, a situation that eventually led the bishop to excommunicate all those involved.

Mexican Americans

Mexican Americans, another group of Catholic immigrants from the Western Hemisphere, round out the list of the six largest Catholic immigrant groups in the nineteenth century. The approximately eighty thousand Mexicans who became U.S. citizens as a result of the Treaty of Guadalupe-Hidalgo (1848) practiced Catholicism amid a severe shortage of clergy; when the first bishop of Santa Fe was appointed in 1851, there were only twelve priests assigned to serve Catholics scattered across a geographical area as large as France. Consequently, the parish was not the most important religious organization for Mexican Americans. Mixing Catholic devotions and folk traditions, Mexican Americans practiced their religion through festivals in honor of patron saints, religious confraternities, and family-centered rituals. Like Poles and Italians, Mexican Americans blended family and devotional life in elaborate domestic shrines. A typical shrine would honor Our Lady of Guadalupe, patron saint of

Mexico, and would include several candles to symbolize continual devotion, rosaries, novena cards, and special medals.

Compared with what it would become in the twentieth century, Mexican migration to the United States proceeded at a relatively slow pace throughout the nineteenth. An estimated 216,500 Mexicans migrated across the Mexican-American border during the first two decades of the twentieth century. The flow of Mexican migration to the United States would increase dramatically after 1920, and later in the twentieth century Mexican Americans would join other Spanish-speaking Catholic immigrants in effecting yet another demographic transformation in the Roman Catholic Church in the United States.

Conclusion

In the 1920s it seemed that the era of the immigrant church was coming to a close. Anti-German sentiment and “100 percent Americanism” during the Great War had undermined Catholics’ support for ethnic parishes and schools. Immigration restriction laws in 1921 and 1924 ensured that an ever-larger percentage of U.S. Catholics would be members of the middle classes and the second and third generations. On the whole this group was far less supportive of national parishes, and before long the territorial parish replaced the national parish as the default model. The burgeoning Latino/a Catholic population, as well as increased migration from Asia and Africa, would by the late twentieth century make the Catholic Church in the United States “a communion of immigrants” and prompt it to shift its pastoral response. Until then, however, it would primarily be native-born Catholics who would determine the institutional agenda and popular religious practices of the Roman Catholic Church in the United States.

Roman Catholicism: The Age of the Catholic Ghetto

At the beginning of the twentieth century, a rapid increase in the American Catholic population, along with a fear of Protestant proselytizing, resulted in the development of an organizational and institutional structure within the Roman Catholic Church that can best be described as self-contained. Although designed to insulate Catholics from what church leaders believed was a secular and anti-Catholic American culture, this system also offered a variety of programs and opportunities that would provide numerous ways for Catholics to interact with each other and American society.

The Catholic population in 1910 was about 16,363,000; by 1920 it had grown to 19,828,000. This increase is reflected in the number of new dioceses created during the early twentieth century. Between 1903 and 1914 thirteen new dioceses were erected throughout the country, and in 1913 a separate jurisdiction for Byzantine-Slavic Catholics was established in Philadelphia. The number of lay Catholics demonstrated the need for the number of dioceses being created. Pius X acknowledged this dramatic growth in *Sapienter Consilio* (1908), a papal document that noted that the American church was no longer considered a missionary church dependent on the Propaganda Fide, the Vatican Congregation responsible for organizing missionary activity. The pontiff's decision, of course, did not give the American church

the right to act independently of Rome, but simply recognized that the situation had changed; the United States had in fact been sending missionaries to other countries for some time.

In addition to being removed from the list of missionary churches, twentieth-century American Catholicism would be strongly influenced by the papacy of Pius X (1903–1914) in other ways. The pope did not believe that the church should attempt to reconcile either its teachings or its practices with the progressive, industrial era and in 1907 issued the decree *Lamentabili sane exitu* (“Condemning the Errors of the Modernists”) and the encyclical *Pascendi Dominici Gregis* (“On the Doctrines of the Modernists”). These two documents not only condemned doctrinal errors believed to be supported by so-called modernists but also instituted ecclesiastical procedures designed to purge any theological thought believed to deviate from Catholic teaching. The papacy's concern with modern thought (in any form) had a tremendous impact on the intellectual life of American Catholicism; theologians and other academics would produce little if any creative scholarship during the first half on the twentieth century.

Local Catholic Life

The primary manifestation of twentieth-century Catholic institutional life was the local parish. Parishes were primarily territorial, meeting the needs of those living within a particular geographic community. Others, however, were designated as national parishes and ministered to a specific ethnic group. National parishes were staffed by priests able to communicate with an immigrant group in its native language (hearing confessions, preaching, and counseling) in an attempt to prevent them from leaving their ancestral church. The number of national parishes contained within a diocese was dependent upon the ethnic diversity of the area. Thirty-two national parishes involving twenty-two languages, for example, were founded in the Archdiocese of Detroit between 1918 and 1922. In many cities, however, most national parishes were established to provide for the spiritual and sacramental needs of Italian immigrants. By 1941 at least forty-one Italian parishes had been established throughout the Archdiocese of New York.

Many urban parishes, especially in the north, boasted impressive physical plants. It was not unusual for a parish to include a church, school, rectory, and convent, and sometimes even an auditorium or gymnasium. Urban areas with large numbers of Catholics also supported institutions that transcended the boundaries of individual parishes, such as

Catholic high schools, academies, and hospitals. Although Catholics were discouraged from participating in activities sponsored by secular or non-Catholic associations, they did move beyond the confines of the local parish by attending and becoming involved in these institutions.

Critics often charged the early twentieth-century Catholic Church with demonstrating a lack of concern for city dwellers who were poor and oppressed. Church leaders vehemently denied this accusation and pointed to Catholic social settlements, day nurseries, kindergartens, and camps as a manifestation of their concern for the poor. The first Catholic settlement house, the Santa Maria Institute, opened in Cincinnati in 1897 under the leadership of two Sisters of Charity, Blandina and Justina Segale (who were also biological sisters). In 1898 St. Rose's Settlement opened on New York City's East Side with laywoman Marion Gurney as head resident. By 1915 social settlements and other Catholic social service institutions, such as day nurseries, were operating in most major American cities.

Catholic charitable and philanthropic institutions differed from those established by secular reformers and social workers because they were concerned about the spiritual lives of those among whom they lived and worked. Catholic social settlements of the early twentieth century, for instance, usually offered classes in Christian doctrine and sacramental preparation in addition to the traditional educational and social activities found in settlements throughout the country. Catholic reformers, who had been influenced by the Progressive movement, believed the establishment of institutions dedicated to Catholic social service could help Catholics become loyal American citizens, allow them to participate in wholesome social activities, and still remain dedicated to the teachings and practices of Catholicism.

Rural Catholics, who did not enjoy the same access to the complex parish physical plants and supporting institutions as their urban counterparts, required a different response from church leaders. The Catholic Church Extension Society was founded in 1905 by Father (later Bishop) Francis Clement Kelly (1870–1948) to work with Catholics living in rural areas and small towns. Between 1907 and 1930 the society used railroad cars, known as chapels on wheels, to bring priests and temporary chapels to Catholics living in remote areas. By 1908 the American Catholic Missionary Union, which had been founded by Paulist Walter Elliott in the 1890s, was sponsoring approximately thirty mission bands of diocesan priests, who were assigned to work in parishes without access to a resident priest.

Catholics living in rural areas were also able to take advantage of the agencies and programs sponsored by the National Catholic Rural Life Conference (NCRLC), founded in 1923 by Father (later Bishop) Edwin V. O'Hara (1881–1956) of Oregon. During the 1920s the NCRLC was primarily concerned with providing religious education for rural Catholics and evangelizing non-Catholics living in rural areas of the United States. Over the years the conference expanded its work to advocate for agricultural policies, federal aid for farmers, and programs attempting to eradicate world hunger.

Hierarchy

Bishops appointed to American dioceses and archdioceses during this era would contribute to the shaping of the twentieth-century church in the United States. The appointment of William H. O'Connell as bishop of Portland, Maine, in May of 1901 marked the beginning of what has been called the Romanization of the American hierarchy. O'Connell, who was serving as rector of the North American College in Rome at the time, did not appear on the lists of candidates endorsed by either the priests of the diocese or the bishops of the Boston province, but was selected by the Vatican to fill the vacant see. The following year, two major American sees, New York and Chicago, became vacant, following the deaths of Michael Corrigan and Patrick Feehan. Their successors, John Farley in New York and James Quigley in Chicago, were appointed because they were well known to Italian Cardinal Francesco Satolli, first apostolic delegate (1893–1896) to the United States.

Throughout most of the first half of the twentieth century, the appointment of bishops continued to be based on Roman connections and international politics as much as on the rankings provided by priests and bishops. Following the death of Chicago's James Quigley in 1915, George Mundelein (1872–1924) was appointed his successor. Mundelein was originally slated to be named bishop of Buffalo, but the Vatican, acting on a request from the British Foreign Office that a bishop of German descent not be assigned to any American diocese bordering Canada, named him to the Chicago archdiocese. Mundelein's friendship with Apostolic Delegate Giovanni Bonzano ensured that he would soon be the most influential bishop in the American hierarchy. Following the death of Bishop Edmond Prendergast of Philadelphia in 1918, Dennis Dougherty (1865–1951), who had studied and been ordained in Rome, was appointed archbishop. On March 7, 1921, he was named a cardinal.

This generation of American bishops actively discouraged Catholics from participating in Protestant and secular culture. In Philadelphia, Dennis Cardinal Dougherty prohibited the 825,000 Catholics living within the boundaries of his archdiocese from attending any motion picture under pain of serious sin. Hollywood films, the prelate believed, demonstrated an opposition to Christian civilization, including the sacrament of marriage, pure and virtuous women, the sanctity of the home, and lawful authority. Philadelphia Catholics complied with the cardinal's request, as did a number of Protestant congregations whose ministers supported Dougherty's objections to the industry, and the area's movie attendance decreased by about 40 percent.

When the United States entered World War I in 1917, church leaders continued their attempts to discourage Catholics from participating in activities deemed inappropriate from the perspective of church teaching; at the same time, however, they began to play a role in the formation of public policy. In an effort to replicate the work of the Federal Council of Churches, Paulist Father John J. Burke invited representatives from all dioceses and Catholic organizations to a meeting at the Catholic University of America in 1917. Those attending agreed to form the National Catholic War Council, an organization charged with coordinating all Catholic activities related to the war effort, including funding programs conducted by the Knights of Columbus, ensuring that there were enough Catholic chaplains to offer spirituality and solace to troops, and reminding those serving in the military of their responsibility to adhere to Catholic moral teachings. Other Catholic associations composed primarily of laypeople also began to represent their church in the public square. The Knights of Columbus, a fraternal organization, was a strong Catholic presence in military camps throughout the country, and other groups, such as women graduates of the National Catholic School of Social Service, also visibly contributed to the American war effort.

The council was so successful that Burke decided not to disband it after the armistice, but to transform the National Catholic Welfare Council (NCWC) into an organization that would lobby for legislation of special interest to Catholics, and offer advice to bishops about issues being debated in their state legislatures. Dennis Dougherty of Philadelphia and Boston's William Cardinal O'Connell disagreed with Burke's plan and joined forces to prevent the continuance of the NCWC by lobbying both in Rome and among their American colleagues. After a great deal of correspondence and American visits to the Vatican, those in favor of the NCWC

prevailed, and Benedict XV formally approved the National Catholic Welfare Council on April 10, 1919 (the name changed to the National Catholic Welfare Conference in 1922).

The NCWC immediately began to examine problems facing the American economy and social order in the postwar years. In 1918 the bishops asked Father John A. Ryan (1869–1945), a professor of economics at the Catholic University of America, to draft a document addressing the problems of postwar reconstruction. The plan, initially and best known as "The Bishops' Program for Social Reconstruction" but published under the simpler title "Social Reconstruction," recommended that the government continue several agencies that had been created during the war, including the U.S. Employment Service and the National War Labor Board, which supported collective bargaining and the rights of labor to organize, issues important to the immigrant and working-class Catholic population. Ryan's plan also called for vocational training schools, minimum wage laws, and a variety of social insurance programs to be established. Many of his suggestions would be realized in the legislative initiatives of President Franklin Delano Roosevelt's New Deal.

The Bishops' Program generated a good deal of controversy because some prelates, such as Bismarck's Vincent Wehrle, believed Ryan's proposals were nothing more than socialism; others simply found his ideas more radical and daring than they were willing to support. Included in this group was Boston's William O'Connell, who refused to support the growing reform movement to prohibit child labor on the grounds that parents, not the government, knew what was best for children. The social action program drafted by Ryan, however, would allow the church to ally itself with the New Deal legislation of the 1930s. In return, Roosevelt would seek a closer alliance with American Catholics, who were coming to be perceived—partially as a result of the work of the NCWC—as an influential voting bloc.

Education

American bishops during this era encouraged and supported the development of a Catholic educational, cultural, and intellectual life. One immediate response of the hierarchy to the increased numbers of American Catholics was to establish a nationwide parochial school system. At the Third Plenary Council of Baltimore (November 1884), the bishops issued several decrees related to the development of a network of parochial elementary and secondary schools. The majority of prelates agreed that every parish was to house a

school, and parents were to provide their children with a Catholic education rather than enrolling them in public schools. The 1917 Code of Canon Law reinforced the bishops' mandate by prohibiting Catholic children from attending schools that enrolled non-Catholics, including American public schools. In the years following World War I, the growing number of Catholics moving into the middle classes allowed American church leaders to undertake an extensive expansion of the parochial school system. In 1900, for instance, about 37 percent of American parishes sponsored schools; by 1930 that figure had increased to 40.5 percent.

As the number of parochial schools increased, some non-Catholic and anti-Catholic groups were uncomfortable with such a visible manifestation of a Catholic presence in the United States. In the early 1920s the Ku Klux Klan in Oregon campaigned for a referendum requiring parents to send their children to public schools; the bill's passage would have effectively outlawed parochial schools. When voters approved the Oregon School Law in 1922, the church fought back, challenging the law in the United States Supreme Court. *Pierce v. The Society of the Sisters of the Holy Names of Jesus and Mary* declared the state law unconstitutional and granted parents the right to send children to the school of their choice. This decision allowed the American church to continue its efforts to establish a parochial school in every Catholic parish.

In addition to embarking on an ambitious program to increase the number of parochial schools, the bishops supported several proposals intended to improve the quality of these schools, including competency exams for teachers and the establishment of normal schools to provide teacher training. Although Pius XI's (1922–1939) encyclical *Divini Illius Magistri* ("On the Christian Education of Youth," 1929) noted the importance of good teaching, the hierarchy was also influenced by the attempts of state governments to improve public education in the years following World War I. By 1926 many states had implemented programs designed to ensure the proper certification of teachers. These requirements would have a great effect on the women religious primarily responsible for staffing parochial schools, many of whom were often immigrants themselves and lacked the credentials required of public school teachers. In the mid-1920s, for instance, a study in Chicago found that many Polish teaching sisters could communicate only in broken English. For immigrant parents and clerics, who were often adamant that children learn English in addition to academic subjects, the inability of teaching sisters to speak good

English was a major concern. The establishment of a teachers' college at the Catholic University of America (1911) and Americanization programs advocating the exclusive use of English in schools (1920s) would help resolve these issues. Although religious communities supported professionalization, the Great Depression, combined with the need for teacher-sisters, often prevented women religious from receiving the necessary educational training.

By 1900 sixty-three Catholic colleges and universities for men had been established throughout the United States. The largest and most well known was the University of Notre Dame (South Bend, Indiana), staffed by the Congregation of Holy Cross. Most of these colleges were administered by religious orders, including Jesuits, Benedictines, Christian Brothers, Franciscans, and Vincentians. The Catholic University of America was under the direction of the entire American hierarchy; seven other colleges came under the jurisdiction of local dioceses.

Although men's colleges and universities were an important part of the American Catholic educational enterprise, the development of a Catholic culture in the United States mandated comparable institutions for Catholic women. The College of Notre Dame (Baltimore, Maryland), the first Catholic women's college, was established by the School Sisters of Notre Dame in 1896. Four years later, Trinity College (Sisters of Notre Dame de Namur) in Washington, D.C., opened, and New Jersey's St. Elizabeth's Academy (Sisters of Charity) was chartered as a college. By 1930 seventy Catholic women's colleges, all sponsored by communities of women religious, had been established across the United States.

Associations and Publications

Catholic schools and colleges—and their faculty members—operated from the premise that American society was essentially hostile to religion. During the twentieth century Catholic scholars working in higher education began to form Catholic societies that paralleled many secular learned and professional organizations. It was hoped these societies would offer Catholic academics more support than they might receive from a secular association. Catholic historians, scholarly and nonprofessional, were given the opportunity to join the American Catholic Historical Association, founded by Peter Guilday in 1919; the society later adopted the *Catholic Historical Review*, which had begun publishing articles on Catholic history in 1915. The American Catholic Philosophical Association was founded in 1926 to encourage the Catholic

philosophical heritage; one year later the *American Catholic Philosophical Quarterly* began publication. In 1938 the American Catholic Sociological Society was established to validate the importance of what scholars believed was a distinctive Catholic sociology rooted in the church's social teachings. Still later, in 1948, the American Catholic Psychological Association was founded to incorporate Catholic teachings into the field, as well as to promote the burgeoning discipline of psychology in Catholic higher education.

Other organizations were intended to encourage Catholics interested in the arts and literature. The Catholic Art Association was founded in 1938. Originally established to bring together art teachers in Catholic schools (primarily teaching sisters), its mission was broadened under the leadership of layman Graham Carey. Francis X. Talbot, S.J., who served as editor of *America Magazine* from 1936 to 1944, organized the Catholic Book Club in 1928 to increase interest in Catholic writers such as Francois Mauriac. Talbot also founded the Catholic Poetry Society (1931), and helped to organize the Catholic Theater Conference in the 1930s. In 1924 Michael Williams founded *The Commonweal* (later changed to *Commonweal*) to offer interested lay Catholics news of literature, politics, and art.

Although the liturgical movement, which was dedicated to reforming worship within the Catholic Church, was not limited to Catholic members of academia, it must be included in any discussion of Catholic intellectual culture in the middle decades of the twentieth century. The founder and primary leader of the movement was Virgil Michel (1890–1938), a Benedictine priest from St. John's Abbey, Minnesota, who hoped, along with a number of theologians and liturgists, to promote a liturgical revival within American Catholicism. The movement's central goal was to increase the laity's understanding of the Mass by encouraging more active participation. Congregational singing was emphasized, and the laity were urged to follow the order of the Mass by using an English-language missal. By the 1950s, anticipating the decrees of the Second Vatican Council (1962–1965), some of the movement's proponents were voicing their belief that Mass should be celebrated in English. Although the liturgical movement never involved more than a small number of American Catholics, by the 1940s it was generating enough interest to hold annual national conferences.

The publication of a comprehensive Catholic encyclopedia, however, was probably the greatest scholarly effort sponsored by the Catholic Church during the first half of the twentieth century. The project developed as a response to a

1902 article titled "Poisoning the Wells" by Jesuit John Wynne, in which he deplored the ways in which Catholicism was being either ignored or misrepresented in other reference works. A total of sixteen volumes containing entries composed by almost fifteen hundred contributors (clergy and laity) was published by the Robert Appleton Company (New York) between 1907 and 1914. Believing it was important to remind readers that Catholics had contributed to all aspects of knowledge, the editors did not limit the almost 350,000 entries exclusively to Catholicism. Although it embraced a variety of perspectives, liberal and conservative, the encyclopedia received generally good reviews from both the Catholic and secular press.

Lay Organizations

American bishops did not agree on the place of lay organizations in the American Catholic world of the first half of the twentieth century. In 1901 the American Federation of Catholic Societies was founded to bring together the many existing groups devoted to education and social and charitable work. By 1912 the federation boasted approximately three million members; but the great majority of bishops preferred to encourage the development of lay organizations that would be supervised by the hierarchy. After World War I two such organizations dedicated to the lay apostolate were placed within the organizational structure of the NCWC. Founded in 1920, the National Council of Catholic Men (NCCM) was an association of Catholic men's groups that served as a clearinghouse for activities related to the laity. The NCCM staffed a radio and television office in New York City and in 1930 began to sponsor the weekly radio show the "Catholic Hour," hosted by Monsignor (later Bishop) Fulton Sheen (1895–1979). In the same year the National Council of Catholic Women (NCCW) was established to serve as a federation of Catholic women's societies. The NCCW was active in the movement to provide social workers with a professional education and supported the National Catholic School of Service for women in Washington, D.C. In 1947 the school merged with the Catholic University of America's School of Social Work (for men).

Other organizations were based in the local parish. Men were encouraged to join either the Holy Name Society or the St. Vincent de Paul Society. By the 1920s the Holy Name Society, dedicated to eradicating cursing and blasphemy from its members' speech, was the most popular parish organization for lay men. Meetings were held on Sunday mornings

after Mass, and usually included breakfast and a short talk on a subject related to Catholic teaching or values. St. Vincent de Paul societies were devoted to helping the needy of a particular area, not necessarily Catholics. Members were directed to search out those who were struggling, and the society would then attempt to alleviate their distress. Because most church leaders believed wives and mothers were responsible for handing down the faith, devotional societies and sodalities, combining prayer and socialization, were formed to attract the women of a parish.

Members of the laity also found a role in the area of religious education. In 1935 the Confraternity of Christian Doctrine was incorporated into the work of the NCWC by Bishop Edwin V. O'Hara, who believed the laity had an important role to play in passing down the faith. Laypeople involved in the CCD often found themselves assuming leadership positions on either a parish or national level.

Even though the NCWC did not work directly with Catholic youth, children were encouraged to participate in Catholic organizations, rather than becoming involved in activities sponsored by non-Catholic or secular groups. Boys were encouraged to be altar servers, and parishes often organized a junior sodality or altar society for girls. The largest group for Catholic boys and girls, however, was the Catholic Youth Organization (CYO), founded in Chicago in 1930 under the leadership of Bishop Bernard J. Sheil (1888–1969). Athletics, Sheil believed, could protect young Catholic men and women from the dangers of secular American culture. The boxing tournaments, camps, and athletic competitions sponsored by the CYO offered a Catholic alternative to programs offered by the YMCA and YWCA. The CYO later sponsored dances and public-speaking contests as alternative activities for those not interested in athletics.

Priesthood

Priestly ministry took several forms during the first half of the twentieth century. Before the Second Vatican Council, American Catholics viewed priests as men set apart from the laity, made holy by ordination. Seminary education followed a curricular structure that supported this view. Candidates for the priesthood often spent four years in a minor (college) seminary before entering a major seminary, where they received four years of theological education. During their years in the seminary, men studying for the priesthood were isolated from the larger culture because they were expected to fit a certain mold; they were to be obedient to their superiors, maintain a strict adherence to various appropriate

devotions, and enthusiastically and vocally uphold church doctrine.

The specific ministry of American priests differed from one part of the country to another. Priests in rural areas and parts of the South, for instance, often served as religious education teachers and parish administrators in addition to celebrating Mass and administering the sacraments. Sometimes serving two or three parishes at once, many rural priests found it necessary to delegate work and power to the laity before the decrees of Vatican II endorsed collaboration between clergy and laypeople. In urban areas and the Northeast, however, priests were plentiful, and in some areas, such as Boston, there were sometimes more priests than needed to provide an adequate ministry to the area's Catholic population.

John Ryan's work in the Social Action Department of the NCWC, along with his writings on various aspects of Catholic social teaching, inspired a number of American priests to enter the field of social justice during the 1930s. John O'Grady directed the National Conference of Catholic Charities from 1920 to 1961 and supported Social Security and the building of federally funded low-income housing. Luigi G. Ligutti worked with farmers who found themselves ruined by the Great Depression and in 1941 became the head of the National Catholic Rural Life Conference. Chicagoan George Higgins began working in the Social Action Department of the NCWC in 1944, becoming the director ten years later. These priests, and others who joined them in this work, found themselves involved in a very different ministry than their counterparts involved in parish ministry.

Other priests found themselves traveling a very different path. Charles Coughlin (1891–1979), known as the radio priest, was the pastor of the Shrine of the Little Flower in Royal Oak, Michigan. By 1931 Coughlin, who began his radio career on a children's program at a Detroit radio station, was reaching millions of Americans every week. A staunch supporter of Roosevelt in 1932, Coughlin's radio ministry raised questions about whether the church was endorsing a presidential candidate. The American hierarchy adamantly denied they were supporting either Roosevelt or Hoover, but Coughlin continued to vehemently express his opinions about politics and economics during Roosevelt's first term. By the election of 1936 Coughlin had turned on Roosevelt and endorsed William Lemke, the Union Party's candidate. As his broadcasts became increasingly anti-Semitic and anti-democratic, the American hierarchy's concern about Coughlin continued to increase. A number of bishops believed he should be silenced, but such a decision could only be made

by the radio priest's immediate superior, the archbishop of Detroit. In 1942, when Edward Mooney succeeded Michael Gallagher as the leader of Detroit's Catholics, Coughlin was ordered to cease any involvement in politics and limit his work to that of a parish priest.

Catholics and Political Issues

Twentieth-century American Catholics, like their ecclesiastical leaders, sometimes found themselves involved in politics. In 1928 Catholics became embroiled in a heated presidential campaign, when Catholic New York governor Alfred E. Smith ran for president against Iowan Herbert Hoover. Despite the many scholarly debates that have taken place since Hoover defeated the first Catholic candidate for president, it is still not clear how much of a role religion played in the campaign. Several commentators have argued that the fact that Smith was from New York City and anti-Prohibition were at least as important as his faith in the minds of voters; others have noted that Smith's Catholicism, even though it hurt him in the South, may actually have helped his campaign in the North.

Whatever the reasons behind Smith's defeat, it is clear that American Catholics did not expect the intense manifestations of anti-Catholicism that erupted in the months following his nomination. Rumors that Protestants would lose their American citizenship or the pope would reside in the White House, along with cross-burnings engineered by anti-Catholic groups such as the Ku Klux Klan, were not as disturbing, however, as questions concerning the loyalties of American Catholics. A number of Americans were asking the question Catholics had been asked since the eighteenth century: can one be a loyal Catholic and a good American at the same time? Episcopal layman Charles C. Marshall echoed the thoughts of many when he asserted that the dogma and hierarchical structure of the Catholic Church were in opposition to American constitutional ideas. Responding to Marshall, Smith asserted his belief in religious liberty and the separation of church and state, but was unable to persuade the American public that he could be both a faithful Catholic and a loyal American.

During the 1930s Catholics became more involved with national and international political and social issues. The rise and growth of communism in Russia, the battle between communism and fascism in Spain, the persecution of the church in Mexico, and the growth of national socialism in Germany concerned American Catholics, who worried about the effects of these forces upon their country and their

church as well as the fate of co-religionists living in these nations. The greatest single international issue of concern to Catholics was communism because of its totalitarian and atheistic philosophies. Catholic senator Joseph McCarthy (a Democrat from Wisconsin) spearheaded the effort to eradicate communism from American government and culture. Catholics outnumbered Protestants among the senator's supporters, but most commentators agree McCarthy's campaign was focused on the American political tradition, rather than Catholic thought.

End of an Era

The American Catholic population continued to increase during the years following World War II. In 1945 twenty-five million Catholics were worshiping in fifteen thousand American parishes. More Catholics lived in the urban Northeast and Midwest than other parts of the country, however; in 1952, for instance, only one Catholic church served the entire city of Atlanta. Catholics began to move into the middle and upper classes in increasing numbers between 1945 and 1960. Although Catholics of the 1940s and 1950s were much more likely to have non-Catholic neighbors than earlier generations, some of the issues separating Catholics from other Americans remained in place, including controversies over state aid for parochial schools, legalization of birth control, and the appointment of an American ambassador to the Vatican.

During the post-World War II years, the hierarchy became more "Americanized." Rather than depending on Roman sources for recommending potential bishops, Pius XII (1939-1958) turned to several American prelates, including New York's Francis Cardinal Spellman and Cleveland's Edward F. Hoban, when an American see became vacant. Spellman's enthusiasm for his auxiliaries, for instance, led to the naming of James F. McIntyre and John F. O'Hara, C.S.C., as archbishops of Los Angeles (1948) and Philadelphia (1951).

In 1947 two-thirds of American Catholics were defined as lower class, and on average all continued to have fewer years of postsecondary education than their non-Catholic counterparts. By 1966 Catholics were not only earning more than the average American, they had completed more years of education. This meant a greater demand for both parochial schools and teaching sisters to staff them. During the late 1940s and 1950s, the building of parochial schools continued as Catholic veterans and their families joined other Americans in their trek to the suburbs. By 1959 more than four million students were attending parish elementary schools,

and during the 1950s 2,400 new elementary schools were built throughout the United States.

Many communities of women religious grew dramatically during the years following World War II. Their number of American sisters increased by more than 21,000 during the 1950s to 164,922 by 1960. Although this number showed a growth of 15 percent, the student population of Catholic schools increased by 200 percent in the same period. In addition to staffing schools, women religious were a major force in the administration of the many Catholic institutions built during the twentieth century. Despite ministries requiring them to live an active lifestyle, the lives of women religious during this time were both regulated and restricted. Sisters were rarely allowed to return to their homes for a visit, for example, and they were paid a very low salary (an elementary school teacher usually received only about \$300 per year) that was transmitted directly to the community rather than the individual.

This rapid growth of the American Catholic education system took place at a time when state and local governments were requiring more education for teachers. This posed a special dilemma for American nuns, who in the past often entered the classroom before completing a college degree. The National Catholic Education Association (founded in 1904) was the only organization open to women religious and their needs. In 1953 the NCEA agreed to form a Sister-Education and Professional Standards Commission (SPES) to address this problem. The commission's name was changed to Sister Formation Conference (SFC) the following year; its goal was to promote the entire education (including religious and spiritual formation) of women religious.

By the mid-1950s American Catholics began to move away from the world of the Catholic ghetto. The seminal intellectual call for them to enter the larger intellectual culture came from Monsignor John Tracy Ellis (1905–1992), a professor at the Catholic University of America. In a 1955 essay titled “American Catholics and the Intellectual Life,” Ellis decried the lack of serious scholarship among American Catholics. He was particularly concerned about Catholic seminaries, colleges, and universities, claiming they were not as academically challenging as they could or should be because they were afraid to step out of their “self-imposed ghetto mentality.” Some Catholics were profoundly offended by Ellis's charge, but he is credited with beginning a movement that would lead to the promotion of rigorous scholarship in Catholic intellectual life, as well as higher standards in Catholic institutions of higher education.

The elections of Pope John XXIII (1958–1963) in 1958 and President John Fitzgerald Kennedy in 1960 signified the end of an era in American Catholic history. Although some Americans chose not to vote for a Catholic candidate for president, Kennedy's victory in the West Virginia primary demonstrated that the number of voters questioning a Catholic's ability to be a loyal citizen had decreased. In a major speech to the General Houston Ministerial Association, Kennedy clearly stated his firm belief in the separation of church and state and assured those attending that if he were ever forced to choose between performing his duty as president and his conscience, he would resign. Although Catholics voted overwhelmingly for Kennedy, it is equally obvious that Kennedy needed many Protestant votes to claim the presidency. If John Kennedy moved Catholics into the mainstream of American politics and culture, John XXIII would begin the process of moving the church into the modern world through the work and decrees of the Second Vatican Council. As a result of John XXIII's papacy and John Kennedy's election to the presidency, the world of American Catholics would change dramatically, and they began to experience both their church and their culture in a new way.

Roman Catholicism: The Cold War and Vatican II

In the middle of the twentieth century Catholics began to emerge from their social and political isolation, often called the Catholic ghetto, to engage American culture and politics as an increasingly important force. The decades of the 1950s and 1960s included growing tensions with communism; greater access to higher education, owing in large part to the post-World War II GI Bill; social revolution; and political unrest. Many Catholics were no longer immigrants but first- and second-generation Americans who more easily appropriated the habits of American society and culture. John F. Kennedy, a Boston Catholic, was elected president; Vatican II opened the church to the world; and Catholics entered the professional ranks in unprecedented numbers. It was a period of rapid change that wedded Catholics more deeply to American culture and saw them form a type of Catholicism that was distinctively American.

From 1940 to 1960, aided by the postwar baby boom, the Catholic population doubled. The 1950s saw the largest expansion of schools and churches since the Council of Baltimore a century earlier. As the population moved to the suburbs, bishops and pastors expanded their land holdings, physical plants, and programs, delving into the pockets of Catholics to pay for them.

At the same time that Catholic culture was so embedded, its foundations were stirring. Catholics were assimilating into American society, becoming wealthier, better educated, and geographically diversified. The majority were no longer immigrants. Opportunities in business, government, entertainment, education, and industry became available to Catholics in increasing numbers. They did not hold sway on the top echelons of the professions, but doors were opening that would change the economic, professional, and social status of the rising generation. Along with Georgetown, Notre Dame, Boston College, and Fordham, Catholics matriculated at Harvard, Princeton, and Yale.

For all of the changes, the Catholic subculture continued to flourish. For decades Catholics had the run of their neighborhoods. Feast days were celebrated publicly, with streets blocked off to accommodate long processions of priests, religious, and parishioners. May processions filled with hundreds of girls in white dresses and boys in school uniforms were annual events that bestowed an identity on the neighborhood. For Corpus Christi processions (parades through the streets on the feast of the body and blood of Christ celebrated in the spring), police and fire departments

cooperated in cordoning off sections of the neighborhood and in setting up temporary wooden structures that served as altars. Parishioners scrubbed porches, steps, curbs, and streets in preparation for the benediction service that would take place. Flowers, ribbons, and banners festooned the area, and people talked about the event all summer. These celebrations made up a part of the rhythm of the neighborhood. The parish school was *the* school. Sports teams, socials, dances, novenas, funerals, missions, weddings, lent, and advent set the calendar and created a place in which people found a common identity. People walked to church. Children walked to the parish school, came home for lunch, went to Mass as a group on First Fridays, and wore uniforms, as had their brothers and sisters before them in the school. There was continuity and cohesion.

There was also xenophobia. Catholics were told from the pulpit and in the classroom that they must not enter a Protestant church or a Jewish synagogue. The church was often unwelcoming to African Americans and only beginning to reach out to Hispanic Catholics. American society continued to be dominated by Protestants, but Catholics were making inroads.

Reactions to Communism

In 1917 in Fátima, Portugal, Mary, the mother of Jesus is said to have appeared to three shepherd children delivering messages about the future of the world. One of those messages from Our Lady of Fátima is reported to have said, "In the end, My Immaculate Heart will triumph. The Holy Father will consecrate Russia to me, and she will be converted, and a period of peace will be granted to the world." Vladimir Lenin (1870–1924) had just led a revolution in Russia that overthrew the czar and created the Communist Party of the Soviet Union and a socialist state that suppressed the public expression of religion. The Roman Catholic Church reacted to these events by opposing communism at every turn.

Pope Leo XIII (pontificate 1878–1903) composed a prayer to Saint Michael the Archangel that read:

Saint Michael the Archangel, defend us in battle; be our protection against the wickedness and snares of the devil. May God rebuke him, we humbly pray: and do thou, O Prince of the heavenly host, by the power of God, thrust into hell Satan and all evil spirits who prowl about the world seeking the ruin of souls. Amen.

Popes Pius XI (1922–1939) and Pius XII (1939–1958) instituted the use of this prayer as part of a set of prayers led by a priest at the foot of the altar after Mass in what was commonly called the “Prayers for the Conversion of Russia.” These prayers were used regularly until after Vatican II.

The church reinforced the state in its resistance to, and fight against, communism. In 1937, Pius XI issued an encyclical (a papal letter) titled *Divini Redemptoris* (“Divine Redeemer”) that condemned the Soviets and communism. He described the threat: “This all too imminent danger . . . is bolshevistic and atheistic communism, which aims at upsetting the social order and at undermining the very foundations of Christian civilization. In the face of such a threat, the Catholic Church could not and does not remain silent.”

Soviet communism was more than a threat to the nation; it was a threat to the faith. American Catholics thus had patriotic and religious motivation to fight communism. The country and the church engaged in a battle for the hearts and *souls* of American citizens.

In a speech to the Houston Baptist Association during his campaign for the presidency John F. Kennedy, the only Catholic president in U.S. history, privatized his faith by drawing a clear line between his Catholicism and his obligation to follow the Constitution. Nevertheless, Americans did not forget or ignore his religious identification, and Kennedy continued to practice his faith, which meant exposure to the church’s position against communism.

The 1963 encyclical of Pope John XXIII (1958–1963), *Pacem in Terris* (“Peace on Earth”), written two years after the erection of the Berlin Wall and shortly after the Cuban missile crisis, challenged the idea of just war, because the nuclear age had changed the ground rules for war. A forceful call for diplomacy over swords, it anticipated the negotiations over nuclear weapons that would engage Soviet Russia and the United States. This document addresses human rights and moral duties, the relationship between individuals and the state, the equality of nations, and the relationships between nations. For the first time in the history of papal encyclicals it is addressed not only to Catholics but also to all persons of good will, meaning the entire world.

On October 4, 1965, Pope Paul VI (1963–1978) addressed the United Nations diplomatic corps, the first pope to do so. He made an impassioned plea for peace between nations, saying, “No more war, never again war!”

Vatican II and the Cold War

The Second Vatican Council (1962–1965) convened in the midst of this political standoff between communism and

democracy, atheism and faith. The council concerned itself largely with internal matters of the church, seeking to reform its practices and update its theology; however, an institution as old and as influential as the Catholic Church cannot operate in social and political isolation. Whatever the church decided, the consequences would be felt by individuals, communities, governments, and nations. Part of the focus of the council was on freedom of religion. Communism had suppressed religion and expunged Christianity or driven it underground in Russia. The church could not stand by passively while religious freedom was trampled. The council took a stand on December 7, 1965, in one of the last of its documents to be promulgated, “Declaration on Religious Freedom” (*Dignitatis Humanae*), when it stated, “All the more is it a violation of the will of God and of the sacred rights of the person and the family of nations when force is brought to bear in any way in order to destroy or repress religion, either in the whole of mankind or in a particular country or in a specific community.” The reference to communism could not be mistaken. The church went on record in opposition to the repression of religion wrought by communism.

John Courtney Murray (1904–1967), an American Jesuit priest, proved to be one of the key theologians who guided the church’s hand in the creation of the Declaration on Religious Freedom. Murray was not a likely candidate for this role, given his struggles with the church in the decade preceding Vatican II and his late entrance into the council chambers. His theological work focused on religious freedom, the question of who might be saved beyond Catholics, and church–state relations. Sensing that he favored equality among Christian denominations and a separation of church and state, the Vatican disapproved of the direction and content of his work and in 1954 forbade him from publishing on the topic of religious freedom. After all, in much of Europe the church enjoyed the favor of governments and benefited financially and otherwise from the relationships. The American notion of separation of church and state included in the U.S. Constitution was little understood by Rome and even less desirable as a model.

Despite Murray’s troubles with the Vatican, his appeal to Americans did not wane, as demonstrated by the fact that his picture appeared on the cover of *Time* magazine in December 1960. Murray also had formidable critics among theologians, such as prominent Protestant thinkers Reinhold Niebuhr, who upheld Christian realism, and his brother Richard Niebuhr, an ethicist on the faculty of Yale. Murray’s ideas were shaped by his experiences as a citizen of the United States, a country in which religious persons of all persuasions

lived side by side and enjoyed the protection of the government. Because of Murray's influence, the Declaration on Religious Freedom is seen by some observers as the "American" document of Vatican II. The document argues that religious freedom is a right granted by God and grounded in the dignity of the human person, in natural law, and in divine revelation. The first line states "that men should act on their own judgment, enjoying and making use of a responsible freedom, not driven by coercion." The document extensively treats the theme of freedom from coercion in society.

The consequences of this thinking can be traced in part by the turn to democracy in heavily Catholic countries such as Chile, Poland, and the Philippines in the decades after Vatican II. The church aligned itself with democracy movements and abandoned its unflinching support for dictators and authoritarian governments. The respect for democracy, however, led to concern on the church's part that all forms of democratic ideas should not be treated as equal, with none able to make a claim to truth. John Paul II (1978–2005) expressed this concern in his 1991 encyclical *Centesimus Annus* ("The Hundredth Year," commemorating the encyclical *Rerum Novarum* ["Of New Things"]) when he wrote, "Those who are convinced that they know the truth and firmly adhere to it are considered unreliable from a democratic point of view."

Some Effects of Vatican II

The Second Vatican Council coincided with a social revolution in American society that included the women's liberation movement, protests against the Vietnam War, and the loosening, if not unraveling, of many social norms. The council fathers sought to update the church and bring its practices into line with the contemporary world. This was revolutionary for a church that had consciously separated itself from the world for so long, often condemning modernity. The council changed the language of the church's worship, the liturgy, from Latin into the vernacular. It welcomed contemporary forms and instruments of music, with the guitar displacing the pipe organ in many parishes. Many priests and sisters adopted garb that did not distinguish them from those whom they served. The changes initiated by the council, coupled with the tumult in American society, led to an exodus by tens of thousands from the priesthood, sisterhood, and brotherhood. The laity were empowered to take greater responsibility for their parishes and their baptismal commitment to be Christian. A shift from classical culture to modernity occurred, accompanied by a greater appreciation

for the immanence of God instead of the transcendence that pre-Vatican II theology had emphasized.

City neighborhoods, so long the preserve of white Catholic immigrants from Europe, were integrated, usually after much resistance, by increasingly mobile African Americans. Theologians objected openly to Vatican pronouncements on issues such as artificial birth control and sexual ethics. Many who remained in active ministry did so with the expectation of greater change still, such as the abolition of mandatory celibacy.

Accompanying the transition to the vernacular was a dizzying flurry of liturgical changes that altered significantly the face of Catholicism. Prior to Vatican II, the main altar in churches faced the front wall of the church in the sanctuary. Priests "said Mass" by facing the altar with their backs to the congregation. They followed complex rubrics that included bowing and genuflecting at different times during the Mass. The laity either sat or knelt for most of the Mass. After Vatican II, altars were turned around (or new ones were installed in front of the existing altars) so that the priest faced the people. Liturgical colors were adjusted, as, for example, in the case of funerals, for which the priest now wore white (as a sign of the hope of the resurrection of the dead) instead of black vestments. Latin hymns were translated into English, traditionally Protestant hymns were adopted, and a whole new cottage industry grew up around the creation of liturgical music, much of it accompanied by the guitar rather than the traditional church instrument, the organ.

Shortly after Vatican II, Catholics who had been required to fast from solid food from midnight the night before receiving Communion were required to fast only three hours; eventually that was further reduced to one hour. Pre-Vatican II Catholics received the host directly on their tongues and distributed only by priests. Vatican II introduced the practice of receiving the Eucharist (often in the form of ordinary bread instead of the thin wafer) in the palms of their hands from the priests and laity who distributed it. They also drank from the cup of consecrated wine. Many pre-Vatican II Catholics would privately and silently recite the rosary during the Mass. The new rubrics required them to respond to communal prayers offered during the liturgy, greet one another with a handshake of peace, read the scriptures, lead the congregational singing, offer prayers for the needs of the church and world, and stand for much of the celebration.

The American bishops were both inspired by Vatican II and aware of the tensions created by the Cold War, which produced a growing stockpile of nuclear weapons. They did

not hesitate to address a number of sensitive public policy issues, including the nuclear arms race. In doing so, they appealed to the ecclesiastical community and the civil community, using arguments constructed from the scriptures and from natural law. By grounding their documents in the Bible, they appealed to revelation that underpins all Christian theology. By employing a natural law argument, they were being consistent with Catholic theology that has relied on natural law reasoning since at least the time of Thomas Aquinas. Using natural law they attempted to influence public opinion and government policy by explicitly using a philosophical argument that did not require the public (and public officials) to share the faith disposition of the bishops. The 1983 pastoral letter that resulted, "The Challenge of Peace," was not only bold in content but also the product of an extraordinarily consultative process, something new for American bishops and for American Catholics. These pastorals addressed all Americans, not simply Catholics.

The impetus for the pastoral came from Vatican II and particularly from the Pastoral Constitution on the "Church in the Modern World" (*Gaudium et Spes*), which encouraged the bishops to read the "signs of the times" and to respond to them in ways consistent with the gospel. In the area of war and peace, the bishops' reading of the times indicated the need for a quest for peace, emphasized the unique destructive powers of nuclear weapons, and underlined the need to curb the escalating arms race. The peace pastoral attempted to analyze the moral issues involved in nuclear warfare and to suggest ways to peace. The church has traditionally defended a just war theory that allows for warfare under certain conditions. Nuclear war, an ever-present threat in the Cold War period, the pastoral argued, no longer fit under this rubric, since nuclear weaponry cannot compare to conventional weapons. Nuclear weapons are capable of destroying entire countries in a matter of minutes, and they readily violate all principles of proportionality. It is virtually impossible to contain their destructive effect to exclusively military targets. Thus "a limited nuclear war" seems an oxymoron. War, in any form, is no longer morally viable in the modern world, according to the bishops. Citing one of Pope John Paul II's homilies, the document asserts: "Today, the scale and the horror of modern warfare—whether nuclear or not—makes it totally unacceptable as a means of settling differences between nations. War should belong to the tragic past, to history; it should find no place on humanity's agenda for the future."

To some laypeople this sounded like a utopian dream. To others it was the only stance possible in an unstable world in

which the weaker nations were likely to suffer at the hands of the powerful. The document was careful to distinguish those who are Christian (and Catholic) from those who "do not share the same vision of faith," although it is ultimately intended for everyone regardless of religious commitment. For Catholics it was an internal authoritative voice; for other Christians it was a plea for peace based on Christian scripture; for non-Christian America it was an appeal to rationality and sanity in a time when all sense of reason could evaporate in the heat of nuclear conflict brought on by Cold War enemies.

The road to passage was not always a smooth one, however. Some Catholics who were more hawkish disagreed vehemently with the document's position that first-strike nuclear war cannot be justified under any conditions. In general, conservatives inside and outside the church disagreed with the bishops. For example, William F. Buckley Jr., the conservative commentator and founder of *National Review*, decried the pastoral's message, fearing, in part, that it meant abandoning the fight against communism. Those with a more liberal bent agreed with the document, and those within the church were heartened by the support for the document in circles outside the church. Both sides were surprised and encouraged by the consultative process by which the document was conceived.

Despite the widespread consultation in the creation of the pastoral, and the accompanying publicity it received, many Catholics either ignored it or were unwilling to invest themselves in a quest for peace, partly because Catholics invested less authority in their bishops and partly because political realities in a tense Cold War climate trumped the church's teaching.

Thus, Vatican II provided the impetus for Rome to confront the Cold War and for the American bishops to respond as they saw fit. Neither the Vatican nor the American hierarchy thought that any good could come from the political and military tensions between communism and democracy. Each confronted the geopolitical realities in its own ways. But each drew inspiration from the groundbreaking documents produced by Vatican II.

Conclusion

Historians and political scientists do not hold that the activities of the church alone led to the end of the Cold War; however, they do acknowledge that the church played a vital role in the fight against communism. For the church's part the documents of Vatican II undergird much of the reasoning

behind the dispositions and activities of the church during the Cold War. On one front the church fought communism with the power of the pen and the pulpit. On another front the church pursued an agenda of religious freedom around the world that affected how the church itself functioned in various countries and permitted it to press for freedom of conscience and choice of religious affiliation for all peoples. To what degree the Cold War inspired the documents of Vatican II is a matter of judgment, but it is unquestionable that the documents influenced the church's theology, ethics, and political strategy in the fight to end the tensions between nations that threatened the entire world.

Independent of the Cold War, the Catholic Church changed dramatically from 1940s to the 1960s, in part because of what was happening in the world but more due to its own intention to open up to the world. American Catholics felt the effects of those changes in every dimension of their religious lives. Their church was now thoroughly American without sacrificing its ties to Rome. However, many American Catholics distanced themselves from the official teachings of the church, in particular after Pope Paul VI upheld the church's prohibition of birth control in a 1968 encyclical titled *Humanae Vitae* ("Of Human Life"). A commission established by the pope himself advised that birth control should be permitted and not considered sinful, but Paul VI ignored the commission's conclusion and upheld the ban. Many American Catholics disagreed and practiced birth control. While they disobeyed the Vatican, they found sympathetic clergy who downplayed the Vatican's position and tacitly supported the decision of Catholic couples to practice birth control. Thus, American Catholics began to shape their Catholicism according to their personal experience and often weighed that against the official teachings, sometimes siding with the church and sometimes creating their own brand of Catholicism. To many trained eyes this was the end of Catholicism shaped by the Council of Trent (1545–1563) and the beginning of a new era of Catholicism that is still defining its identity today.

Roman Catholicism: The Later Twentieth Century

In the four decades since the Second Vatican Council of 1962–1965, the Roman Catholic Church in the United States underwent significant changes in leadership, liturgy, and cultural cohesion. The resulting situation, characterized by a heightened polarization between traditionalist and progressive factions, reflects internal challenges about governance, trust between clergy and laity, and the church's relationship to the world, as well as the effects of external social, economic, and political forces. Two events have primarily framed the American Catholic Church in this era: the papal condemnation of artificial birth control in 1968 and in 2002 the revelations of sexual abuse of children and adolescents by priests, followed by disclosure of orchestrated cover-ups of those abuses by the hierarchy. Each moment led a wave of American Catholics to leave the church and to lose confidence in its leadership. Additionally, the failure to fully implement Vatican II reforms, declining vocations among male and female religious orders, demographic shifts of an urban core of

Catholic to the suburbs, and new waves of immigrants from developing nations have reshaped institutional life in a different fashion from the European immigrant base of the past.

A New Catholic Establishment?

In contrast to their nineteenth-century social location, Catholics are no longer the “Other” to a Protestant establishment. Whether one regards the Second World War, the GI Bill’s funding of education for veterans, or the election of John F. Kennedy as president in 1960 as the events that smoothed the path of Catholic integration, Catholic Americans are no longer outsiders. In many instances, they have fully assimilated into every sector of American society, from finance to law to multinational corporations to politics. In the political sphere upward and downward mobility of Catholics has fragmented the solidly Catholic voting bloc within the Democratic Party.

Since the nineteenth century, the Democratic Party had welcomed Catholic immigrants (mostly Irish and German), who later formed the nation’s industrial working class, soon joined by Poles, Lithuanians, Slavs, and Italians. The association of Catholics with the Democrats went largely unchallenged until the election of Ronald Reagan in 1980 and 1984, marking a shift to the right, as the Republican Party played to white ethnic resentments of the lower middle class in dying industrial economies and to the free market sensibilities of newly affluent Catholics in order to secure votes that were crucial to Reagan’s victory.

The presence of Catholics in the United States Congress has increased in the late twentieth century. In 1947, for example, 78 Catholics held seats in Congress, compared with the 111th Congress of 2009–2011, which includes 162 Catholics. During the 1970s Robert Drinan, a Jesuit priest, served as the U.S. representative from Massachusetts until Pope John Paul II demanded the departure of priests from electoral politics in 1980.

The Catholic Church’s expressed unease about explicit involvement in politics by clergy and hierarchy seemed at odds with the American bishops’ subsequent attempts to intervene in the presidential election campaigns of 2004 and 2008 by threatening to deny the Eucharist to (and even to excommunicate) candidates who did not profess opposition to legal abortion. Some Catholics objected to using this one issue as a benchmark for Catholic identity, citing economic inequality and militarism fostered by Republican policies as more deserving of Catholic condemnation; others applauded the stand as a defense of a “culture of life” adumbrated in the

“seamless garment” ethic articulated by Joseph Cardinal Bernardin of Chicago in 1983.

Legacy of Catholic Action

Catholic Action, which provided the model for laypeople to interact with and shape their world, was defined by Pius XI in 1927 as “the participation of the laity in the apostolate of the hierarchy.” The 1930s initiatives that followed encouraged laypeople to take responsibility for church and society, allowing many Catholic citizens of the United States to recognize and act on the similarities they discovered between a lay apostolate and the nation’s participatory democracy. Through Catholic Action they could become both loyal Catholics and Americans. Despite the limits imposed on lay leadership, Catholic Action’s three-part formula of “see-judge-act” inspired many Catholics of the 1940s and 1950s in Europe and the Americas. Vatican II further affirmed the “modern world” toward which these actions were directed as something to embrace, not fear.

Recently, strategies of action relying on combined efforts of the hierarchy and laity have been revived as attempts to end the polarization within the Catholic community. In 1983 Cardinal Bernardin proposed a “seamless garment” ethic to guide Catholic social action. By this he meant that Catholics should oppose abortion but also fight for the economic support of women and their children, as well as condemning militarism, poverty, racism, and sexism. The phrase became popular shorthand for many forms of Catholic activism that followed. Some pro-life Catholics believed that it diluted their single-issue focus; others praised its translation of moral issues into a broader public agenda.

In 1996, in a further effort to reduce division within the Catholic camp, Bernardin handpicked the initial participants for the Catholic Common Ground Initiative. Despite its best efforts, Common Ground has not succeeded in restoring civility to the public conversation among American Catholics. In part, it has faltered owing to the death of Bernardin from cancer a few months later, the lack of a strongly felt Catholic identity by younger Catholics, and the lack of desire for genuine discussion with the opposition. When the sex abuse crisis broke only a few years after Common Ground began, it only increased acrimony against an untrustworthy hierarchy.

Catholic Social Teaching

The basis for Catholic social action derived from the previous century’s tradition of Catholic social teaching, a resource

little known to Catholics themselves. These ecclesial documents defined an alternate, progressive ethical teaching within Catholicism that addresses the relationship between the individual, the Catholic Church, and society while transcending the hostile reaction to “modernity” expressed by Pope Pius IX in the decree *Lamentabili Sane Exitu* (“Syllabus of Errors”). *Rerum Novarum* (“Of New Things”), the first so-called social encyclical, was issued by Pope Leo XIII in 1891, establishing the lineage for two significant pastoral letters produced by the American bishops in the 1980s. A first letter questioned the morality of nuclear deterrence (“The Challenge of Peace: God’s Promise and Our Response,” 1983), and the next rejected the unchallenged primacy of laissez-faire capitalism (“Economic Justice for All,” 1986) in America. Prompted by the dramatic widening of the income gap between rich and poor during the Reagan administration, the bishops attacked the excesses of capitalism and the lack of concern for those at the lower levels of the economy, especially women, immigrants, children, and working people. Using scripture, Catholic social teaching, and the language of human rights, the bishops condemned the abuses of “trickle-down” economics. Their prophetic repudiations of the unquestioned values held by many Americans, including Catholics, met with cheers from some and resistance from others. Conservative commentators attacked the bishops for condemning these sacred cows and went so far as to defend militarism and capitalism as morally justified by their Catholic faith. Similar controversy followed Pope John Paul II’s 1991 *Centesimus Annus*, on the one-hundredth anniversary of *Rerum Novarum*, in which Catholics debated whether it condemned or recommended American-style market capitalism.

The Vatican had addressed economic issues in *Populorum Progressio* (1967; “On the Development of Peoples”), the first papal encyclical devoted specifically to international economic development in the context of the Vietnam War and African anticolonial wars. In that spirit “This Land Is Home to Me” was issued in 1975 by twenty-five Appalachian bishops who connected regional and global poverty in a unique poetic form. Historian David O’Brien called it “certainly the most remarkable document of the postconciliar American Church.” The bishops named economic questions as “the first and most basic questions for all people,” calling attention to the presence of multinational corporations in Appalachia as a local and global issue. In its sentiments “This Land” rehearsed themes that John Paul II would address in his 1987 *Sollicitudo Rei Socialis* (“On Social Concerns”), which singled

out the widening gap between wealth concentrated in the Northern Hemisphere and the impoverished South.

Liberation Theology

In the bipolar world of the Cold War, relations between North and South in the Western Hemisphere took center stage in American foreign policy and in Catholic theological thought and action during the decades of the 1970s and 1980s as communism appeared to make inroads into Latin America. Liberation theology was a progressive movement that emerged in response to social conditions but was forced to retrench by the end of the century under Vatican pressure. Theologian Harvey Cox once spoke confidently of the “de-Northification of the Gospel” as Christianity’s center shifted to the South. Liberation theology claimed that it was the mission of the church to work on behalf of the poor, not in support of the wealthy elites who had governed the Americas since 1492. The interpretation of the gospel as the continuing work of Jesus as liberator of the oppressed, however, was never distinguished by the Vatican from advocacy of Marxist principles in Central and South America, where the theology flourished. Was liberation theology a Marxist “invasion” of the church? It was never clear if that was the case, although the charge was certainly made by the Vatican of numerous liberation theologians, sisters, and priests active in the region’s “ecclesial base communities.” For many Catholics of the developing world, Marxism clearly offered a powerful tool to analyze the historical structures of exploitation of the Indians, the slaves, and the Catholic masses.

The Vatican, far from encouraging the Latin American bishops’ quest to side with the oppressed, instead targeted several leading theologians and priests, notably Leonardo Boff of Brazil, who was silenced in 1984 and 1989 and deprived of his teaching position. In a similar crackdown on public dissent by clergy, the pope removed the Reverend Charles E. Curran from his tenured theology position at Catholic University in Washington, D.C., for his expressed views on sexual morality. In 1984 John Paul II countered liberation theology with a program he called the “New Evangelization,” whose goal was to restore Christianity throughout the world by the year 2000. The candidacy of El Salvador’s assassinated bishop Oscar Romero, a proponent of liberationist views, has not progressed beyond local levels, whereas the pope further made clear his preference for traditionalists by canonizing in 1992 José Maria Escrivà, the founder of the archconservative movement Opus Dei. Because the character of Catholic higher education was at

the heart of many of these debates on politics and evangelization, John Paul II issued an apostolic constitution, *Ex Corde Ecclesiae* ("From the Heart of the Church"), in 1990, as a warning to Catholic institutions to maintain and profess their "Catholic" identity. Some Americans perceived the statement as increasing the authority of bishops over colleges and universities by requiring theological faculties to gain an episcopal approval, or a "mandate"; others applauded the pope's bold rebuke to dissenters.

Birth Control and Conscience

When Pope Paul VI issued *Humanae Vitae* ("Of Human Life") in 1968, many Catholics were angered by his renewal of the church's blanket condemnation of artificial contraception that had been articulated in *Casti Connubii* of 1930. Although Pope Paul had expanded an existing commission studying birth control to include three married couples, he overrode its advice in issuing the encyclical, which sixty-five of seventy-two members had opposed. The opposition included the leaders of the Catholic Family Movement in the United States. The couples pointed out their dislike of the "rhythm method," the only method of regulating pregnancy accepted by the church. They reported that the method frustrated the normal cycles of sexual desire, since it mandated abstinence during a woman's fertile period, and did not take into account the realities of lay life, including work, family, illness, separation during travel, and so on. They asked why marriage, the only licit place for sexual intercourse in Catholic teaching, must now rely on periodic abstinence. John Paul II's devotion to the Virgin Mary, which led him to speak favorably of the value of virginity even within marriage, did not improve the mood for spouses and families.

Humanae Vitae led thousands of priests and laypersons to dissent publicly, and many left the church in protest. Among the clergy, obliged to defend the pope's position, the burden often fell on itinerant mission preachers, as pastors feared alienating their parishioners. The pope had seriously misjudged his flock, and his interpretation of "natural law" as the rationale for *Humanae Vitae* hinted at what was to come: the loss of conviction that this medieval ethic provided templates for contemporary moral questions. Vatican opposition to the distribution and use of condoms to prevent the spread of AIDS (acquired immunodeficiency syndrome) was one such failed application. Once Catholics began to invoke American individualist norms of "freedom of conscience," as they did in rejecting *Humanae Vitae*, would any leader or doctrine survive the challenge to authority? If nothing else, *Humanae*

Vitae ushered in an era of popular protest against this and subsequent church teachings that no longer seemed sacrosanct, such as an all-male priesthood, priestly celibacy, and condemnations of homosexuality.

The Call to Action initiative was designed to coincide with the nation's bicentennial in 1976. This conference was a first attempt after Vatican II to coordinate national lay activities to achieve a more democratic church. It was not an overwhelming success. Bishops never acceded to the proposal for a "Catholic Bill of Rights" to be appended to the Code of Canon Law, and generally quashed lay desires for a greater role in the church. Nevertheless, three spinoff groups emerging from Call to Action have endured: the Women's Ordination Conference; Catholics for Free Choice, established in 1970 in support of the legalization of abortion; and Dignity, an organization for gay and lesbian Catholics. Not until Voice of the Faithful appeared in 2002 did laypersons again organize in such a bold fashion to address a crisis and voice their preparedness to redress the church's structural failings.

A countertrend toward traditionalism has matched these demands for greater institutional transparency, financial accountability, and lay leadership. Critics of Popes John Paul II and Benedict XVI have noted a creeping conservatism and an intentional undoing of Vatican II in their pronouncements and policies. There is wider permission for use of the Tridentine liturgy and suggestions that Catholics should kneel to receive communion on the tongue rather than in the hand. Further, since 1989, when the Catholic right wing lost its favorite topic, communism, Restorationists have focused their efforts on the return to pre-Vatican II liturgical practices and antihomosexuality and antiabortion politics.

The opening of a visible split between conservative and progressive Catholics fits the contours of American religion generally since 1945, as charted by several sociologists, notably Robert Wuthnow (in *The Restructuring of American Religion*, 1988). Instead of the American church battling Rome, American Catholics were fighting each other. Traditionalists could only sense moral decay in more permissive attitudes toward sex and sexual expression evinced since the 1960s, and they began to focus militancy around efforts to overturn the Supreme Court's 1973 decision in *Roe v. Wade*, which protected a woman's right to an abortion. In a strange dissolution of ancient hatreds, antiabortion Catholics joined with conservative Protestants in Operation Rescue, a militant antiabortion group founded in 1986 by Randall Terry, a Pentecostal from Binghamton, New York. This group regards abortion as murder and targets abortion clinics with

well-publicized “direct action” protests that blockaded entrances and harassed patients by obliging them to pass a gauntlet of protesters bearing posters with the bloody images of maimed fetuses. Although not linked directly to the murders of several physicians who performed abortions in Florida, Kansas, and Massachusetts, Terry’s radical message contributed to the support of such events. The shooting deaths of several abortion doctors at the hands of activists led other antiabortion groups to disavow Operation Rescue, which renamed itself Operation Save America in 1999. More typical of Catholic participation in the antiabortion movement is the annual March for Life in Washington, D.C., on the anniversary of *Roe v. Wade*. The event often draws thousands of marchers, and other cities have begun similar events.

Clergy Sexual Abuse Scandals

Traditionalist and progressive Catholics alike were horrified by the exposure of predatory priests and the American hierarchy’s cover-up of clergy sexual abuse of children and adolescents that has occurred since the 1960s. Beginning in January of 2002, reports about the archdiocese of Boston were heralds of a national and even international problem. Hundreds of priests have been barred from public ministry, and thousands of claims came forward from adults claiming to have been abused. Pastoral and institutional responses have been disunited, however, with no overseer at the national level. As with Call to Action, one lay-inspired institution appeared: Voice of the Faithful was founded out of a national meeting hosted in Boston in 2002. The organization drafted its three goals as support for the victims, support for priests who were wrongly accused, and support for structural change in the Catholic Church, the latter being the hardest to accomplish. Consequences of what may be the greatest scandal in the history of the church were still unfolding at the end of the century’s first decade. The settlements in lawsuits against individual priests have created deficits for numerous dioceses, and by 2009 seven dioceses had filed for bankruptcy protection. By 2010 the American Catholic Church had paid some \$2 billion to abuse victims and the pope himself had become implicated in the scandal as reports of abuses in the German church during his tenure as archbishop of Munich surfaced. The disillusionment of the laity will shape the future of the American church.

Saints, Devotions, Parish Life

As the liturgy of the Mass changed in accordance with Vatican II, devotional practices of the previous decades

declined. It was a painful shift for Catholics who did not want to abandon their devotion to the rosary, Blessed Sacrament, Stations of the Cross, and the many saints. John Paul II energized this segment by canonizing a record number of Catholics, creating 480 saints, totals exceeding those generated by his predecessors for five hundred years. While a significant amount of the total represents group canonizations of martyrs of China, Korea, and Vietnam, some of his choices have stirred controversy, especially the canonization of two of the Fátima visionaries, Juan Diego (the purported visionary of Guadalupe), José Maria Escrivà, Maximilian Kolbe, Padre Pio, and Edith Stein. (Kolbe, for example, has been accused of anti-Semitic writing, while the very existence of Juan Diego has been questioned.)

Vatican II had generated hopes for a more democratic and inclusive parish life after the Council. Many lay ministers took advantage of the newly created position of permanent deacon (open only to men), while others participated at the parish and diocesan levels as lectors and Eucharistic ministers, and via liturgy committees focused on sacred art, music, and dance. Some pastors welcomed lay participation and willingly shared power; others held tight to the preconiliar model of the pastor as autocrat. The continued lack of participation by laity in the choice of pastor, and even of his financial accountability to parishioners, suggests the uneven influence of Vatican II in forming a transparent and more democratic church.

One of the sources of change within the postconciliar church has been the presence of a more educated and diverse laity. Where theology had formerly been the sole province of priests, now women, persons of color, and students from the developing nations have become producers and shapers of theology. Many of these lay professionals serve the church as theologians, liturgists, family counselors, and professors of canon law, while others serve some of the functions of priests in the nation’s many understaffed parishes. At the professional level the Catholic Theological Society of America provides a case in point. In 1946, at the time of its founding, all 104 members were priests. In early 2010, about 33 percent of the 1,418 members were women, who have brought different emphases and issues to the foreground, including dialogue with non-Catholic faiths and the ordination of women.

These added voices in theology, however, have not substantially improved the position of women in the church. While the Vatican’s attempts to address women seem limited to the regulation of sexuality, women have initiated trends that demonstrate their concerns at the global level. Among

Catholic sisterhoods, for example, “green” lifestyles have been adopted, providing sisters with a new vocational focus that links renewal of the planet to renewal in Christ.

Hispanic Catholics have contributed new perspectives as well, although it is too early to discern a definitive pattern. The growing presence of Latino/a theologians and the expanding area of *mujerista* theology point to innovation. One sign of recognition for Hispanic voices in the American church was the appointment of Miguel Díaz, a Cuban-born American theologian, as ambassador to the Vatican by President Barack Obama in May 2009. Survey data on grassroots Latino/a Catholics indicate, however, that many continue to join “spirit-filled” churches, especially Pentecostal, citing greater sociability in parish life and the appeal of emotive, unmediated worship services.

The presence of the young in the church of the future has been a focus of the last two pontificates. John Paul II inaugurated World Youth Day in 1986 and attended its first international gathering in North America in Denver in 1993.

A Priestless Church?

The American Catholic Church faces daunting challenges at the opening of the twenty-first century. The diminishing membership in religious orders of men and women represents an obvious concern. At the local level thousands of parishes lack a residential pastor. These needs are being met by combinations of women religious, permanent deacons, and a few laypersons. Ordaining married men, the ordination of women, and lay-led parishes are all proposed solutions. Given the current pope’s views, it is more likely that married clergy, as converts from other Christian traditions, will be placed in Catholic parishes before the prospect of women priests is seriously considered. Financial security is necessary for any religious institution to survive, yet for the first time in American history, the Catholic Church is facing a declining infrastructure matched by a contraction in giving. Since 1990, weekly tithing by Catholics stands at a paltry 1.1 percent.

Some suggest that the end of American triumphalism parallels the end of Catholic triumphalism: propositions and strategies that once seemed obvious and unassailable now seem obsolete and indefensible. In order to survive, the church will need to become a less dogmatic, more flexible institution. Some have described the pragmatic choices already made by the laity as a kind of “cafeteria Catholicism,” where individuals select among dogmas and teachings to reflect their own consciences. It remains unclear if the tendency toward reform or retrenchment will prevail.

Roman Catholicism: Early Twenty-First-Century Issues

In the decade that marked the fortieth anniversary of Vatican Council II (October 11, 1962–December 8, 1965), American Catholic laypeople expanded their independence and American Catholic bishops vigorously reasserted their hierarchical authority, continuing a thirty-year pattern of disconnection. The bishops defined the boundaries of Catholic belief and practice more narrowly, and Catholic people across the ideological spectrum insisted on being Catholic on their own terms. That insistence reflected the degree to which the American Catholic people have absorbed voluntary religious sensibilities.

Contests over authority, celibacy, gender roles, homosexuality, sexual ethics, liturgy and politics, and reactions to the clergy sexual abuse scandals, exemplified the competing understandings of Catholicity alive within the American Catholic community. Larger social and cultural forces—among them increasing levels of education and economic affluence among Catholics, shifting attitudes and behaviors of age cohorts, ongoing immigration, declining fiscal support for the church, and a priest shortage—also informed the conflicts. Roman Catholicism remains the largest single faith community in the United States, claiming nearly one-quarter of the population, but it is a community under strain.

Clergy Shortage

A set of interlocking challenges altered the institutional shape of Catholicism in the United States in the early twenty-first century. The worsening clergy shortage that began in the 1960s may be the most significant because of the centrality of ordained priesthood to Catholic sacramental life. The number of new priests is not enough to replace retiring clergy or keep pace with the growth in Catholic population. Foreign priests, 25 percent of clergy serving American Catholic parishes in 2009, cannot fill the gap. Priests in the United States are becoming pastors at younger ages, and their shortened periods of mentoring leave them less prepared to negotiate parish leadership.

The priest shortage and demographic shifts have led to the closing and consolidation of parishes in many dioceses. Consolidations disrupt local communities and have sparked anger and activism on the part of affected laity. Some laity adapt, but others leave.

In 2009 more than 50 percent of U.S. Catholic parishes had pastors with responsibility for more than one parish. Deacons, women religious, professional lay ministers, and volunteers assisted these priests in a situation that requires unprecedented levels of collaboration between clergy and laity to maintain pastoral and liturgical life.

Clergy Sexual Abuse

The National Conference of Catholic Bishops began dealing formally with clergy sexual abuse in the early 1980s, but extensive coverage of the 2002 trial and conviction of former Archdiocese of Boston priest John Geoghan for the sexual abuse of a ten-year-old boy permanently altered how clergy sexual abuse was viewed and would be handled in the American Catholic community. The cases of Geoghan and others exposed what had been a widespread practice among

most bishops—moving abusive priests from one ministry setting to another.

The clergy abuse scandal has cost the Catholic Church monetarily and in the credibility of the bishops. Several dioceses have entered bankruptcy over sexual abuse claims. Estimates of the final cost of such claims go as high as \$4 billion.

In June 2002 the United States Conference of Catholic Bishops (USCCB) adopted the Charter for the Protection of Children and Young People. The move was a first step to restore credibility by clearly exercising pastoral care of children, a responsibility in which many laity, such as those who founded Voice of the Faithful, which claimed thirty thousand members in 2008, believed the bishops had failed.

Gender Roles and Sexuality

Advocacy for the ordination of women and married persons continued in the early twenty-first century, and 2005 marked the thirtieth anniversary of the Women's Ordination Conference. Despite the Vatican's insistence that prohibition of the ordination of women is a matter of faith and not disciplinary practice, the majority of U.S. Catholics favor it. Bishops not in good standing with the Vatican have ordained American Catholic women, with one highly publicized ordination taking place in Pittsburgh in 2006. Polls show Catholics also are open to married clergy. Corpus, an organization of now married Roman Catholic priests, has advocated for married clergy for thirty-five years.

In the wake of the clergy sexual abuse scandal, the Vatican and U.S. bishops have raised the question of whether gay men should be ordained. This had not been a major question previously because Catholic clergy are celibate. Despite research showing that homosexual men are no more likely to be pedophiles than heterosexual men, seminaries are attending more closely to the sexual orientation of candidates for ordination.

Understandings of appropriate gender roles informed the Vatican's investigation of U.S. women's religious communities that began in 2009. The investigation targeted the Leadership Conference of Women Religious, which represents the majority of U.S. women's religious communities, because of LCWR's failure to promote the Church's teachings on male-only priesthood, homosexuality, and the primacy of the Roman Catholic Church as the means to salvation. Although traditionalist communities welcomed the investigation, most saw it as an attempt to curb their independence, curtail their ministries, and constrain their forms of community life.

Catholic sexual minorities found community in local Catholic parishes and support in organizations such as Dignity during the early twenty-first century. They also more vocally rejected official church teaching on homosexuality—that it is a disordered, though not sinful, state but that homosexual acts are sinful. Convinced that all forms of sexual love are manifestations of God's love, members of the Rainbow Sash Movement staged public actions in which gays and lesbians, wearing rainbow colored sashes, made their presence known during Eucharistic celebrations.

Catholic lay women and lay men align along the entire spectrum of positions on gender and religion, from a view shared with evangelicals that women should submit to the male head of household as submission to God, to a feminist understanding of the full equality of all genders in Christ. In Catholicism gender issues are intimately related to questions of ordination and teaching authority.

Authority: Magisterium and Conscience

In a voluntary religious setting, the authority of religious leaders rests on their credibility, the intelligibility and persuasiveness of their teaching, and the plausibility structures that ground a faith community. U.S. Catholic bishops vigorously reasserted their teaching authority based on office, but were frustrated in their attempt to bring laity into line. Catholics increasingly relied on the authority of their experience and their consciences, reading of Scripture, and sense of faith to guide them. Traditionalist and progressive Catholics operate this way. Traditionalists spearheaded a vigorous pro-life movement and embraced the return of the Latin Mass, but also openly challenged bishops whose positions they deemed unorthodox. Progressive laity, sensitive to the historical character of all church teaching, drew on Catholic social teaching to promote causes and criticized bishops for not being faithful to that teaching.

Church authority in public life received considerable attention during the national elections of 2004 and 2008. One issue of contention between the bishops and politicians was whether a Catholic candidate could personally oppose abortion while supporting its legality in a religiously pluralistic nation. Bishops' opposition to this position hampered John Kerry's 2004 presidential campaign. In 2008 Catholics opted for Barack Obama (54 percent to 45 percent overall, 50 percent to 49 percent for weekly Mass attenders), a choice defensible within the terms of the bishops' own document to guide the consciences of Catholics on voting, *Faithful Citizenship*. Tension between Catholic politicians and the bishops

heightened at a moment when Catholics became more powerful politically at state and national levels than ever before.

Role of Laity

For more than three decades the ranks of professional lay ministers have grown, replacing declining populations of clergy and vowed religious in leadership roles in parishes, educational institutions, and social service organizations. At the turn to the twenty-first century, bishops were hiring fewer lay professionals trained in freestanding theological schools or university-based ministry institutes and using more volunteers trained in bishops' diocesan-defined education and formation programs.

Laypeople considering themselves actively Catholic were oriented primarily to their local parish. Catholics of both traditionalist and progressive bent who are active in parishes are more interested in learning about Catholic theology and participating in faith-sharing groups than Catholics who are not. Catholics active in parishes were more likely to take official Catholic teaching seriously and more likely than their inactive counterparts to engage in organizations advocating for and dissenting from positions of the hierarchy on a wide range of topics.

Survey data revealed that the salience of institutional religious membership and participation declined during the early twenty-first century, especially for Catholics under thirty. Young Catholics tended to locate their identity in relation to Catholic social teaching and to church-sponsored volunteer activity in which they had engaged.

Some Catholic laity were oriented primarily to particular organizations or causes, such as Opus Dei, Focolari, the pro-life movement, the women's ordination movement, the Grail, the Catholic Worker, Call to Action, or Voice of the Faithful. Still others, though estranged from the institutional church, connected to their heritage by seeking guidance at spiritual direction and retreat centers run by Roman Catholic religious communities. These last, especially some run by women's communities, were centers for the development of an emerging Catholic ecological theology.

During the early twenty-first century economic and cultural gaps widened between longer established, more affluent and educated Euro-American Catholics and more recent arrivals, primarily Hispanic, but also African and Asian. Cultural conflict within parishes fed dissatisfaction and created pastoral and theological challenges. At the same time, in some parishes the presence of multiple cultures inspired self-conscious reflection on being a global church.

As the bishops sharpened boundaries of belief, behavior, and belonging, more Catholics found such considerations irrelevant to their lives. Ten percent of American adults in 2007 were former Roman Catholics. More than one-half of marriages by Catholics were to people of different Christian denominations, other faiths, or no faith. Catholic laity, like all religiously interested Americans, drew on web-based sources, published resources, independent networks, and voluntary organizations in composing their religious views and communities. Active Catholics valued their parishes, sacramental ritual, and Catholic teaching of care for the poor. They combined Catholic sacramental and communal sensibilities with robust Congregationalist sensibilities in terms of polity. If the early twenty-first century is any indication, the near future of U.S. Catholicism will be marked by more intracommunal pluralism and conflict.

Roman Catholicism: Cultural Impact

American culture is different because of the presence of Roman Catholicism, and Roman Catholicism is different because it was brought to America. These differences are apparent in the artistic and intellectual achievements of Catholic Americans (one possible definition of the term *culture*); they are also apparent in the interactions between the entire way of life and the frameworks of meanings of Catholics and those of other Americans (another useful definition). The United States was affected by what we refer to as Catholic culture, and Roman Catholicism was affected by what we refer to as American culture.

Colonial Era and Early Republic

The first sustained European presence on the North American continent was Catholic. Christopher Columbus (1451–1506) undertook his voyages to claim whatever wealth and glory he encountered for a Catholic crown. In his later years, he understood his accomplishments increasingly as signs of God's providence—focused especially on ultimate victory of Christianity over Islam—in history. The Franciscan Bartolomé de las Casas (1474–1566) documented the destruction of indigenous culture, and argued for the humanity of Native Americans and against their enslavement. French explorers and settlers farther north gave way to missionaries such as Jesuits Jean de Brébeuf (1593–1649) and Isaac Jogues (1607–1646), and Ursuline sister Marie de l'Incarnation (1599–1672).

Collectively the lives of these individuals tell a story quite different from the founding myth of the United States. In that myth—meaning not a false story but a means by which a group or a people understands itself—early European settlers to the New World came seeking religious freedom,

defended the growing colonies against unjust strictures placed upon them by England, and eventually established an Enlightenment republic to stand as a beacon of democracy and freedom to the world. The stories told by and about the early Catholic missionaries were very different, involving sacrifice of one's life, whether in exile from home during long and difficult years in the wilderness, or through physical torture and martyrdom at the hands of the people they were trying to convert. Political and economic success was not what mattered—only the eternal.

The point of a myth is not whether it is true, and many people, historians and nonhistorians, would debate the adequacy of either of these accounts of the nation's founding. Nonetheless, to a significant extent, the United States defined itself against the story Catholics told about their presence on the continent. Although the Founders were committed to religious freedom, their vision of how the United States should function explicitly rejected the unified political and religious authority that continued to characterize the Catholic countries of Europe for at least another century. At an even deeper level, they accepted the idea of human personhood developed by philosopher John Locke, in which human beings are born autonomous and unclaimed, and enter into society as free parties to a contract. This idea contrasted dramatically with the medieval Catholic notion of the Great Chain of Being, in which humans have a place given to them in an order created by God, and thus history and community have an inescapable claim on the individual. The ideas of democracy, and separation of church and state, and the primacy of individual autonomy, had a traceable English and Protestant pedigree that influenced the culture of the early republic and stood in significant contrast to the ideas and culture of many Catholic Americans.

Four figures can represent the variety of ways in which Catholics in the early republic found ways to bridge this potential divide, even to reject the notion that there was any conflict between the two cultures. John Carroll (1735–1815) of Maryland was a member of one of the oldest families in the colonies. As the first bishop of Baltimore, the first see (bishop's seat) in America, he helped explain his U.S. compatriots and his Roman superiors to each other. For example, he persuaded Rome to allow priests in the United States to have some say in who their bishops would be, to avoid the impression of complete hierarchical control. This sometimes complicated negotiation between church and culture also characterized the lives of other Catholics in the antebellum period. Mathew Carey (1760–1839), the most important

printer in the early republic, was responsible for printing the first Catholic Bible (known as the Douai version) in the United States. Elizabeth Ann Seton (1774–1821), a convert from Episcopalianism and the first native-born American saint (Italian-born Frances Cabrini was the first U.S. citizen to be canonized), struggled with anti-Catholic prejudice in the United States and with Vatican rules for orders of religious women to establish the Sisters of Charity. Orestes Brownson (1803–1876) went from being a member of the prominent circle of intellectuals who made up the transcendentalist movement to being largely estranged from its members after his conversion to Catholicism in 1844.

Over the course of two or three decades, large-scale Catholic immigration challenged some of the most basic presuppositions about American culture. As immigrants from Germany and Ireland began arriving by the hundreds of thousands in the 1830s, increasing every year throughout the 1840s, presuppositions about U.S. religious identity that had been largely unspoken became explicit, vehement, and sometimes violent. Writers in the press began making public arguments that Catholics, because of their loyalty to a foreign power and their blind obedience to their priests, were not good material for citizenship in a democratic republic that required a freethinking, independent citizenry.

Anti-Catholic stereotypes became ever more a staple of American popular culture, in fiction and nonfiction, and in visual sources as well. One popular genre was the convent narrative, in which an unsuspecting young girl was lured into the dark secrets of the cloister. Two of the most famous of these narratives were *Six Months in a Convent, or, The Narrative of Rebecca Theresa Reed* (1835), and Maria Monk's *Awful Disclosures of the Hôtel-Dieu* (1836). These narratives stoked fears about the supposed control the church exercised over the wills and bodies of its members. Reed's autobiographical story, even before it was published, probably helped contribute to the climate of violence that led to the burning of the Ursuline Convent at Charlestown, Massachusetts, in 1834, the single worst outbreak of nativist violence in the nineteenth century. The lecherous priest and the vulnerable young woman would continue to be a trope in popular culture, including *A Long Fatal Love Chase*, a novel by *Little Women* author Louisa May Alcott, unpublished until well after her death. In a blending of ethnic and religious stereotype, Catholic clergy and Irish and German lay Catholics featured prominently in political cartoons by the most prominent artists in the most prominent periodicals. The most famous example is Thomas Nast's "The American

River Ganges” (1871) in which corrupt New York City politicians of the famous Democratic Party political machine at Tammany Hall drop innocent American children off a cliff into a river full of alligators who, on inspection, turn out to be bishops, whose miters form the alligators’ jaws.

At the same time that anti-Catholicism received such pervasive expression, numerous prominent non-Catholic American authors were drawn to Roman Catholicism, especially to its European past, in an ambiguous mix of attraction and repulsion. Quintessentially American and Protestant writers wrote entire works exploring dimensions of the European Catholic past, such as Henry Wadsworth Longfellow’s *Evangeline*, Harriet Beecher Stowe’s *Agnes of Sorrento*, Mark Twain’s *Personal Recollections of Joan of Arc*, and Henry Adams’s *Mont Saint Michel and Chartres*.

U.S. Catholics were not just depicted, favorably or unfavorably, in the outpouring of popular culture in the nineteenth century—they also contributed to it. Magazines such as *Ave Maria* and *Catholic World* were founded to provide Catholic versions of periodicals such as *Harper’s* and the *Atlantic Monthly*, aimed at the growing and increasingly self-conscious American middle class. Catholics also produced their own versions of what was called the domestic or sentimental novel, the staple of popular fiction for the majority of readers for much of the century. Domestic fiction, most often written by women but read by both women and men, told stories of women’s lives in which they struggled against circumstances but usually in the end found a way to embrace the roles society prescribed for them. Catholic versions of these stories focused also on the need to protect the faith of immigrants from the temptations of U.S. Protestantism, for example, by featuring a Catholic heroine tempted by what appears to be a true love, but who insists on her conversion or refuses to have his children raised Catholic. The outcome might be heartbreak and renunciation, or tragic death, or the ultimate conversion of the hero by the example of the heroine’s steadfastness, but the moral remained the same: the faith could and must be preserved against the American tide.

These efforts were clearly Catholic, that is, they were undertaken by self-identified Catholics for an explicitly religious purpose. But Catholics participated in American popular culture in many ways, not with clear religious goals in mind, but in such numbers and over such a long time that their presence and influence are worth examining. Because these phenomena were not “officially” Catholic, Catholic participation in them raises interesting questions for historians about whether the Catholicism of those involved was

incidental, or whether it influenced the phenomena in implicit but discernible ways.

The most important nineteenth-century example of this unofficially Catholic culture was minstrelsy. Almost no one is proud today of the role played by the minstrel show in the history of American entertainment, but it was so popular, widespread, and long lasting that leaving it out of historical accounts is not an option. Minstrelsy was a genre of performance in which white performers in blackface (and, later in the century, also blacks in blackface) sang and danced and told stories and jokes in exaggerated imitation of African Americans, especially those who lived enslaved on the plantations of the antebellum South. It had a highly formalized structure and stock character types that drove some of the most corrosively racist stereotypes of African Americans deep into American popular culture until well into the twentieth century. At the same time, it represented a complicated stance almost like envy of the power of the African-inflected musical traditions preserved by blacks in the antebellum South. The music and the performance traditions that characterized minstrelsy gave vitality and distinctiveness to U.S. popular culture for over a century. Minstrelsy was in no sense Catholic, but many of its earliest and most famous performers were in fact native and immigrant Irish Catholics, and it would likely not have emerged in its eventual form without their influence. It would be exaggerating to see something ritualistic, if not liturgical, about the stylized and formulaic performances that characterized the minstrel show tradition. At the least, though, it reflected the contentious relationship between Irish and African Americans, in which these two most-despised groups were often left to compete for the bottom rung of the ladder of American prosperity.

Turn into the Twentieth Century

The great wave of immigration between the end of the Civil War and the onset of World War I changed U.S. Catholicism—and in turn U.S. culture—once again. After about 1880 the sources of European immigration to the United States shifted dramatically, away from the countries of northern and western Europe to the southern and eastern regions. One result was the influx of much larger numbers and percentages of Catholics and Jews, and a renewed concern on the part of so-called native Americans—the term at the end of the nineteenth century referred to white Protestant Americans, especially those whose ancestors predated the American Revolution—that the American-ness of American culture was under threat.

Much of this concern focused on the cities, in which the presence of new immigrants, and their concentration in ethnic enclaves, was most apparent. The cities, not coincidentally, were also where an uproarious, kaleidoscopic popular culture was flourishing. Although minstrelsy did not entirely disappear, it evolved into and ceded popularity to vaudeville, which also involved a dizzying variety of performers and genres, but which drew more widely on ethnic music and humor, and on the high culture of recitation and musical performance that grew along with the U.S. middle class and reflected its desire for respectability and cultural uplift. Catholic and other immigrants supplied large percentages of both the performers and the audiences for vaudeville and the other forms of art and entertainment that proliferated at the turn of the twentieth century.

One underappreciated area in which Catholic images profoundly shaped American culture is Renaissance art. Because of the rapid growth of industrial capitalism, a large number of unprecedentedly wealthy Americans sought to establish cultural institutions in cities across the United States in the first decades of the twentieth century. At the same time, the art of the Italian Renaissance was becoming desirable but time was still within financial reach of many collectors. As a result, art that had been created to assist worship and devotion, most often in an explicitly Roman Catholic context, was dismantled, exported, and reassembled as “culture” in the museums of the United States.

Although the turbulence and exuberance of early twentieth-century popular culture raised anxieties among some of the Progressive reformers seeking to bring middle-class order and reserve to the immigrant enclaves of the cities, it is probably not coincidental that Catholics took to it so immediately and thrived within it so thoroughly. Catholicism was itself theatrical, in ways that gave it more apparent affinity with the theatre or the public pageant than with some of the sparer, more word-centered worship of many of its Protestant compatriots. The Roman Catholic liturgy, the Mass, presented itself as a dramatic reenactment of the death and resurrection of Jesus, and appealed to all the senses through word and music, dramatic use of color and light, fabric, incense, water, bells, and meaningful physical postures on the part of both priest and people. Medieval peasant Catholicism, well represented among the immigrants to the United States at the turn into the twentieth century, was even more so of all of these things, celebrating many festivals and devotions in addition to the official ones, spilling out into and thereby claiming the public streets through parades and processions

that brought their dramatic form of religious presence to the attention of their non-Catholic compatriots.

One of the most spectacular forms of Catholic public presence was the Eucharistic Congress. These large gatherings had originated in Europe in 1881 and became a regular feature of late-nineteenth-century Catholic devotion. They involved processions, liturgies, and talks on the Eucharist to the various groups of clergy and laity in attendance. The Twenty-Eighth International Eucharistic Congress was the first held in the United States, in Chicago in 1926. It included the largest-ever children’s choir, sixty thousand singing the Mass of the Angels for a liturgy at Soldier Field, and attendance by at least a million at the closing Mass in Mundelein, Illinois. The 1937 Congress in Cleveland was the seventh held in the United States, its outstanding feature the Living Monstrance. A monstrance is the cross-shaped vessel used to hold the Host and make it available to public view during the devotion known as the Benediction of the Blessed Sacrament. Some twenty thousand people arrayed by rank (archbishops first, then bishops, priests, religious, and laity) and profession (nurses, police, firemen, and schoolchildren in uniform) processed through the streets of Cleveland and filed into the monstrance outlined by flowers on the field of the stadium usually used by the Cleveland Indians. At the monstrance’s center, where the Host would be, was the altar where the pope’s representative to the Congress, Patrick Cardinal Hayes from New York, celebrated the Benediction.

Catholics and the Movies

Such dramatic, large-scale events both claimed a public presence for Catholics on the landscape of American culture and emphasized Catholic difference from their compatriots. To some, this difference was a mark of pride, but it also evoked anxiety—on the part of U.S. Catholics who saw it as an obstacle to assimilation and success as Americans, and on the part of other Americans, especially when it was accompanied by a clear intent to influence American culture in a direction more compatible with Roman Catholicism. Nowhere is the interplay of prominence and anxiety more evident than in the history of Roman Catholic involvement with the motion picture industry.

Catholics probably had more influence over the history of the movies than any other group, with the possible exception of the immigrant Jews who made up such a high proportion of the studio heads in the movies’ early years. But for sheer scale, scope, and duration, Catholic influence was remarkable. By the early 1930s the industry had been struggling for some

During the 1930s, Catholic bishops in several large cities threatened boycotts if the movie studios did not go to further lengths to ensure that their productions were suitable for all audiences. Chicago's Cardinal Mundelein commissioned a Motion Picture Production Code, which evolved into the Production Code Administration, led for two decades by Catholic layman Joseph I. Breen. Here, Breen inspects the harem costumes of actresses on the set of the 1942 film "Arabian Nights."

years with the question of how to control the content of the movies, which were pushing the boundaries of sex and violence further every year. Movies had no First Amendment protection, pursuant to the 1915 Supreme Court decision in the case of *Mutual v. Ohio*. Studio heads were intent on avoiding federal censorship, and so had agreed to various schemes for self-regulation, none of which had been enforced. In the early 1930s the industry was in a precarious financial situation, having invested heavily in the equipment necessary to take advantage of the new sound technology that had made the pictures into the talkies right before the dramatic decline in moviegoing in the first years of the Great Depression. When Catholic bishops in several large cities threatened boycotts if the movies did not make a greater effort to ensure that they were suitable for all audiences, the producers were more receptive than they had ever been to an enforceable regulatory scheme.

Cardinal Mundelein of Chicago initiated and coordinated the decisive action. He commissioned Daniel A. Lord, a Jesuit with experience in the movie industry (he had served as an

advisor on the set of Cecil B. DeMille's 1927 movie about the life of Christ, "The King of Kings") to write a code for movie content by which studio heads would agree to abide. To avoid the impression that the Catholic hierarchy were engineering a takeover, this Motion Picture Production Code (MPPC) was taken to Hollywood and presented to the assembled producers by Martin Quigley, a Catholic layman whose family just happened to be owners of the *Motion Picture Herald*, one of the most influential Hollywood trade papers. The system for enforcing the code that resulted from the negotiations between Quigley and the studio heads, the Production Code Administration (PCA), was headed for more than two decades by another Catholic layman, Joseph I. Breen. The PCA reviewed movies from preproduction to their finished form, and awarded its seal of approval to those it deemed appropriate for all audiences in conformity with the code; without this seal a movie could not be shown

in the chains of movie theaters owned by the movie studios. The PCA relied informally on movie ratings produced by the Legion of Decency, an organization established by the U.S. bishops in 1934, by which Catholics pledged not to attend unsuitable movies. To determine suitability the legion in turn relied on the services of the International Federation of Catholic Alumnae, a Catholic women's group that had been publishing reviews of movies as a service to families long before the MPPC was written.

This system remained largely in place until the early 1960s. Although many Catholics over a certain age remember the Legion of Decency, and many U.S. moviegoers are aware that there used to be something called the Production Code, and that the content of movies used to be more restricted, very few know the extent to which the system was designed and sustained by Roman Catholics. Whether, on the whole, it was a good thing or a bad thing is a complicated question. On the one hand, censorship, and especially censorship by a religious minority, is on the face of it incompatible with the First Amendment. But those who designed,

implemented and accepted the existence of this system believed it to be an alternative to censorship, which they defined as control imposed by the federal government. In addition, few would deny that some of the greatest Hollywood movies were produced during this era, often called the Golden Years. On the other hand, the system also stifled artistic creativity and, by attempting to make sure that all movies were suitable for all audiences, had the unintended side effect of treating adults like children. For better and worse, it reflects two key characteristics of the culture of Roman Catholicism: the role of hierarchical authority and the belief that all of life's activities had theological significance and a communal dimension. These characteristics led to the creation of distinctive structures that required the collaboration of both hierarchy and laity in a way distinctive to mid-twentieth-century U.S. Catholicism.

Catholics and Other Forms of Art and Popular Culture

Daniel A. Lord, S.J., (1888–1955) deserves some additional mention in his own right. He probably put more of a mark on Catholic print culture than any other single individual in the twentieth century, yet his name is almost unknown, even among Catholics. His influence over movies through the MPPC was matched by his prolific writing and publication on almost every topic of interest or concern to mid-twentieth-century U.S. Catholics. The Queen's Work Press, which he helped found and run for decades in St. Louis, Missouri, published hundreds of pamphlets on topics ranging from dating for Catholic teens to the sacraments to race relations. In addition, Lord preached popular retreats, wrote a weekly column, wrote and produced several large-scale historical pageants, wrote sheet music, broadcast on the radio, and wrote several musicals based on papal encyclicals. He was, from one angle, one of a kind, but in other ways he exemplified an energy and an entrepreneurial spirit that characterized a generation of Catholics trying to take an ancient message to a crowded and noisy modern world. Catholics often had a deep suspicion of the use to which new technologies could be put, but wherever they could they embraced innovative possibilities for increasing human connection and spreading the gospel.

Catholics also put their mark on radio in transformative ways. Most notorious is Father Charles Coughlin (1891–1979), whose popular weekly radio show in the 1930s began by advocating for Roman Catholic social teaching and descended into anti-Semitic appeals to fascism as the only

cure for the ills of the contemporary world, especially the threat of communism. Also ardent in his anticommunism but more measured and reasoned was Bishop Fulton J. Sheen (1895–1979) who had a well-known if less popular weekly radio show in the 1930s, and then an extremely popular (it held its own against Milton Berle) television show in the 1950s. Sheen continued the American Catholic tradition of presenting a distinctively Catholic face to the world (he broadcast his weekly show, "Life Is Worth Living," dressed in full bishop's regalia) but projecting a steady confidence that his message was for all people, not just Catholics.

Many of the twentieth century's most important American writers were Catholics by some definition—lapsed, angry, indifferent, nominal. Theodore Dreiser (1871–1945) wrote *Sister Carrie* and other novels about the bleak cruelty of American life under industrial capitalism after escaping a dreary childhood as the son of German Catholic immigrants. Eugene O'Neill (1888–1953), despite a tenuous relationship with the church throughout his life, nonetheless sought clerical guidance concerning the end of his 1933 play *Days Without End*, as well as in his plays capturing critical if painful aspects of Irish American family life. F. Scott Fitzgerald (1896–1940) rejected during his undergraduate years at Princeton the Minnesota Catholicism in which he had been raised, but throughout his life and after his death Catholic critics claimed him as one of their own. Ernest Hemingway (1899–1961) converted to Catholicism in order to marry in 1927, found his relationship to the church tested during the Spanish Civil War (when U.S. intellectuals and artists sided overwhelmingly with the Republican government, and most U.S. Catholics supported the Fascists under Francisco Franco because of their support of the Catholic Church), but retained ties to the church throughout his life and was buried as a Catholic. Whether and how any of this biographical detail is relevant to these artists' work was a subject of debate for much of the twentieth century, more among Catholic critics than among others. The debate over what a Catholic author and a Catholic novel were reveal a great deal about the relationships Catholics saw between art and religion, even in a century in which most commentators saw these categories as necessarily and properly separate.

Many of the twentieth century's important American Catholic writers were converts, and a number of important Catholic works were written by non-Catholics—to the point of provoking a crisis of confidence on the part of those known as cradle Catholics. If their tradition had produced such great art in the past, they reasoned, and was provided

such freedom to be fully itself in the context of American religious liberty, as they believed, and was of such great importance to the urgent needs of the present, as they argued, why had it not yet produced great American art? Writers who illustrate this apparent paradox included Catholic Worker founder Dorothy Day, whose autobiography *The Long Loneliness* (1952) described her journey from radical atheist to radical Catholic, and southern physician Walker Percy, whose novels—the first and most famous of which was *The Moviegoer* (1961)—tried to express the oddness of religious belief in the modern world. Especially puzzling to an earlier generation was non-Catholic Willa Cather, whose novels *Death Comes for the Archbishop* (1927) and *Shadows on the Rock* (1931) gave evocative expression to pieces of the Catholic past in ways no U.S. Catholic writer had yet achieved. African American Catholic converts also gave expression to the relationship between Catholicism and art. Though his conversion predated his death by only three years, the poetry Harlem Renaissance author Claude McKay (1889–1948) wrote after his conversion gave him an honored place among Catholics of his era. Jazz pianist Mary Lou Williams (1910–1981), also a convert, wrote hymns and jazz masses in the 1950s and 1960s.

Three cradle Catholic writers could not in some ways be more different, but exemplify the vitality of the interaction between postwar Catholicism and American culture: J. F. Powers (1917–1999), Jack Kerouac (1922–1969), and Flannery O'Connor (1925–1964). Kerouac's jazz-inflected explorations of the seediness and exaltation of what came to be called beat novels such as *On the Road* (1959) seem far removed from O'Connor's stories of backwoods Georgia fundamentalist prophets. Both are miles apart from Powers's simple and powerful stories of midwestern priests and parishes. But all of them exhibit an intensity that derives in part from their formation in distinctively regional Catholic subcultures (Powers in the Midwest of Illinois and Minnesota and extended stays in Ireland as an adult, O'Connor in Georgia, Kerouac in French-Canadian New England) outside the Catholic mainstream of urban ethnic neighborhoods in the cities of the Northeast and the Midwest.

Catholic critics were as interested in the question of the Catholic novel when the subject was popular literature, as well. One of the most successful novelists of the century was a Catholic, though seldom overtly so in her fiction. Kathleen Thompson Norris (1880–1966) was probably the most successful woman writer in the United States in the first half of the twentieth century. Her first full-length work, a

story-memoir titled *Mother*, was published first as a 1911 magazine article and was so well received that it was issued separately and remained in print until the 1940s. Her success has largely been forgotten, however, because novels such as *The Rich Mrs. Burgoyne* (1912), *Little Ships* (1925), or *The Venables* (1941)—usually stories of the lives of women, often working their way up from the working class to middle-class respectability—were dismissed early on as sentimental and ephemeral. The cultural historian knows, though, that ephemera are particularly valuable as cultural evidence, because ideas and attitudes that change dramatically over time are preserved there for the historian to learn from.

Thus the sustained presence of Catholic themes and stereotypes, some derogatory, some adulatory, in American popular culture is a rich source for understanding the role of Roman Catholicism in American culture. Depictions of Catholics and Catholicism were increasingly prominent in American popular culture during and after World War II. Positive depictions of Roman Catholicism became something close to a prescription for market success in the postwar period. In addition, writers and moviemakers were making a clear play for the Catholic audience (and all those Legion of Decency members) by publishing and producing a string of biblical epics. Popular novels often became motion pictures, a symbiosis in U.S. popular culture that dates back at least as far as the 1915 “Birth of a Nation,” based on the 1905 novel *The Clansman*. An incomplete list would include “Going My Way” (1944) and its sequel, “The Bells of St. Mary’s” (1945); “Song of Bernadette” (1945), based on Franz Werfel’s 1942 novel; Thomas Merton’s best-selling autobiography, *The Seven Storey Mountain* (1948); “The Miracle of the Bells” (1948), based on Russell Janney’s 1946 novel; *The Foundling* (1951), by Francis Cardinal Spellman; “Quo Vadis?” (1951), based on Henryk Sienkiewicz’s 1896 novel; “The Miracle of Our Lady of Fatima” (1952); “The Robe” (1953), based on Lloyd C. Douglas’s 1942 novel; “The Silver Chalice” (1954), based on Thomas B. Costain’s 1952 novel; “The Ten Commandments” (1956); “Ben-Hur” (1959), based on Lew Wallace’s 1880 novel; “The Nun’s Story” (1959), based on Kathryn Hulme’s 1956 memoir; “Lilies of the Field” (1963), based on William E. Barrett’s 1962 novel; “The Cardinal” (1963), based on Henry Morton Robinson’s 1950 novel; “The Trouble with Angels” (1966) and its sequel “Where Angels Go, Trouble Follows” (1969); and “The Shoes of the Fisherman” (1968), based on Morris West’s 1963 novel.

Roman Catholics were also prominent—nearly ubiquitous—in other forms of popular art, though less overt in

their religious identity. In one of those circumstances that may be incidental but may also have a deeper cultural significance, although convert Catholics tended to become the most prominent writers, in television and popular music cradle Catholics thrived, including Bing Crosby, Perry Como, Frank Sinatra, Ed Sullivan, Loretta Young, and, of course, Fulton J. Sheen.

In the postwar era, images of Catholics and Catholicism in popular media were often of something foreign, monarchical, and somewhat feminized. But at the same time these images were for the most part clearly intended to be positive. *Life* magazine, for example, did a cover story in 1958 to commemorate the centenary of the Marian apparitions at Lourdes in France, with photographs by its most famous photographer, Alfred Eisenstadt. These and other similar features struck the same note: Catholics are a little exotic, but they are still Americans. In this way, images of Catholicism in popular culture helped to cement postwar nationalism into a compound that could stand up to the perceived threat of Soviet communism.

The 1960s and After

The Second Vatican Council (1962–1965), which changed so much about Roman Catholicism, or at least gave formal expression to changes that had been long under way, also altered the relationship between Catholicism and American culture. Many distinctive Catholic institutions, including the Legion of Decency, disappeared as both clergy and laity came to agree that even if they had once been needed they were no longer. Deep and difficult divisions among U.S. Catholics emerged, stemming only in part from the changes brought about by Vatican II—in some ways more difficult and more lasting were the conflicts over the Vatican's 1968 prohibition of artificial birth control in the encyclical *Humanae Vitae*, and the deep political and religious divisions made overt by the 1973 Supreme Court decision in *Roe v. Wade*. The long-term consequences of these divides are still playing themselves out, as are those of the grave and more recent controversy of sexual abuse by Roman Catholic clergy.

The relationship between Catholicism and popular culture has remained lively but has acquired new dimensions of contentiousness. Clearly, the interdependence of novel and film, though its heyday may have been the late 1940s and 1950s, continues, as we can see in the popularity of Colleen McCullough's 1977 novel *The Thorn Birds* (eight-hour TV miniseries, 1983); Umberto Eco's 1983 novel *The Name of the Rose* (movie version, 1986) and Dan Brown's 2003 *The Da*

Vinci Code (movie version, 2006) and 2000 *Angels and Demons* (movie version, 2009). Add to these virtually the entire genre of movies depicting the mafia and the occult, centering on Mario Puzo's 1969 *The Godfather* and William Peter Blatty's 1971 *The Exorcist*, but also extending as widely in time and tone as the goofy 1984 *Ghostbusters*, the gory 1999 *Stigmata*, and HBO's sprawling, violent mob series *The Sopranos* (1999–2007). All these depicted a more flawed, even sinister Catholic Church than the sunnier movies of the 1950s, and elicited criticism from a new generation of Catholic cultural commentators—most prominently William Donahue of the Catholic League for Religious and Civil Rights—with sensitive antennae for the emergence of what they considered to be new and destructive forms of anti-Catholicism. Other commentators saw in the postconciliar depictions of Catholics and Catholicism a new freedom and maturity that reflected the fuller assimilation of Catholics as Americans.

Despite these and other persistent differences, despite the disappearance of the dense ethnic subcultures that gave mid-twentieth-century U.S. Catholicism much of its identity and distinctiveness, Catholics remain active, identifiable, and influential in many areas of U.S. cultural life. Authors such as Mary Gordon, Andrew Greeley, Ron Hansen, Jon Hassler, Alice McDermott, Anna Quindlen, and Richard Rodriguez make art of the conflicts and heartache, and help explain contemporary Roman Catholics to their compatriots—and to each other. Just as they took up the printing press and industrialized printing and movies and radio and television and made them all media for expression of Catholic life and culture, Catholics are also a notable presence in cable television, most prominently in Mother Angelica's extensive and visible Eternal Word Television Network (EWTN), and also on the Internet. One of the most interesting efforts of the Catholic netroots in the past decade has been the transfer to the Internet by volunteer transcribers of the entire text of the 1907 to 1913 *Catholic Encyclopedia*, a massive and comprehensive attempt to give a Catholic account of knowledge in every field of human endeavor. That this reference work, initiated and funded by Catholic scholars and lay business people a century ago, should have such a prominent presence in the signature medium of the early twenty-first century says a great deal about what changes and what endures in the relationship between Roman Catholicism and American culture.

Roman Catholicism: French Influence

The influence of Frenchmen and -women on the development of Roman Catholicism in North America began in sixteenth-century New France and continued through the

nineteenth century in the United States. Over these four hundred years, French priests, women religious, and laypeople introduced Catholic beliefs and practices to Native Americans, European Americans, and African Americans throughout the St. Lawrence River Valley, Great Lakes Region, and Mississippi River Valley, as well as across pockets of French settlement in different regions of the United States. The missionary orientation of French Catholicism proved decisive in the colonial and early national periods of American history, especially because French missionaries often served as the leading edge of the Catholic Church during times of territorial expansion. It also contributed to the diversification of Catholicism in the United States, because so many people from an array of ethnic backgrounds first encountered Catholicism in the persons of Frenchmen and -women.

Early Exploration and Evangelization in New France

Jacques Cartier (1491–1557), the French explorer and “discoverer” of Canada, entered the Gulf of St. Lawrence in 1534, met a contingency of Algonkians, proceeded to raise a cross in the name of his patron King François I (1494–1547), and promptly returned to France with two Indian captives and his crew. He returned to Canada the following year and took more than a hundred Frenchmen up the St. Lawrence River to what would later be called Montreal. It was there that Cartier began the improvised process of introducing Catholic beliefs and practices to native peoples, at one point presenting a crucifix to an Iroquois headman and insisting that he kiss the object and wear it around his neck. Another chief, being paralyzed, asked Cartier to rub his legs to heal them, which then led to a host of other invalids requesting similar treatment. Cartier obliged by reciting traditional Catholic prayers, making the sign of the cross before them, and reading the story of the passion of the Christ, in effect mimicking the rituals that would have otherwise been performed by a priest. Later that winter, with the help of interpreters, Cartier attempted to convince a group of Iroquois to reject what he called their false gods and accept the Christian god or else perish in the fires of hell. In contrast, during a particularly bad outbreak of scurvy, Cartier led what remained of his French crew in a procession in honor of the Virgin Mary for her intercession. Finally, before his departure, Cartier raised a cross thirty-five feet high and adorned with the French king's coat of arms before a crowd of Iroquois onlookers, after which he captured five adults and

five children and forcibly removed them to France. When he returned to Canada in 1541, six years later, Cartier assured the kin of those he captured that they were safely and comfortably living in France, though, in reality, nine of the ten had died.

Although Cartier's third expedition included a royal commission with explicit instructions to convert *les sauvages*, the fact remained that he and his associates were more interested in successfully settling formerly imprisoned Frenchmen and -women. The colony soon failed, followed by a number of other botched ventures during the remainder of the sixteenth century. It was not until Samuel de Champlain (1567–1635) founded Québec in 1608 that French missionaries started to develop a sturdy ecclesiastical infrastructure able to sustain a large European population and an organized program of evangelization meant to convert an even larger native population. A French trading monopoly funded the settlement of Recollets in Québec, a small group of Franciscan missionary priests who dreamed of creating a Christian utopia of aboriginal peoples. Conflict soon arose between the evangelistic interests of Recollets and the economic interests of merchants and traders. Before being replaced by French Jesuits, Recollets effectively alienated a generation of Innu children from their families and systematically transformed their religious and cultural identities to suit Recollet visions of Christian civilization.

Jesuits, Ursulines, and Native Americans in New France

French Jesuits, seeing themselves as the front line in the Catholic counterreformation of the seventeenth century, conceived of the New World as a place full of potential for establishing a pure form of Christianity, a church untainted by the theological errors of Protestants and the uncooperative indifference of Catholics in Europe. Approximately 150 French Jesuits became missionaries during the first hundred years in Canada, establishing about thirty mission stations from Nova Scotia and Maine to the Great Lakes region and Mississippi River Valley. Jean de Brébeuf (1593–1649), Charles Lalemant (1587–1674), Isaac Jogues (1607–1646), and Jacques Marquette (1636–1675), among other Jesuits, concentrated their attention on the evangelization of Native Americans throughout New France. Moreover, Paul Le Jeune (1591–1664) led the construction of a Jesuit-supported Indian village called Sillery on the outskirts of Québec, where he and his ordained associates attempted to Christianize and “civilize” aboriginal residents. Whether based at a settlement

like Sillery or an Indian village far from Québec, the Jesuit missionary program was largely twofold: to teach indigenous peoples the doctrines and rituals of Christianity and discredit native religious beliefs and practices. Sacramentals, devotional objects, and artistic renderings of the afterlife were just some of the materials Jesuit missionaries used to bridge some of the cultural divisions between French Europeans and Native Americans. Jesuits also tried to learn aboriginal languages to begin the conversion process, but many Christian concepts were simply lost in translation. Jesuits made some accommodations to Indian modes of living, such as recognizing the authority of shamans, sorcerers, and healers and then trying to posture themselves as legitimate and powerful alternative sources of religious authority.

Ursuline and Hospitalier nuns arrived in Québec in the late 1630s, quickly incorporating many of the Jesuit methods of familiarizing native peoples with European and Christian ways of living. Marie de l'Incarnation (1599–1672) was one such Ursuline nun who did what she could to introduce aboriginal girls to the “civilized” occupations of playing musical instruments, fixing hair, wearing European-style clothes, and restraining sexual appetite. Many of the girls were the daughters of converts or the orphans of parents who died during epidemics and warfare. It was the intention of both the Ursulines and the Jesuits to turn Native Americans away from nomadic hunting societies to a more settled existence. In the process, French missionaries sometimes resorted to acts of cruelty, in some instances chaining wives who were not subservient to husbands, imprisoning young girls for exhibiting lust for boys, and publicly flogging those who failed to attend Mass. Moreover, not all Indian nations acquiesced to the religious authority of French missionaries and the economic authority of French traders, such as the Iroquois, who systematically destroyed Huron villages, murdered baptized and unbaptized Huron, and made martyrs out of Jean de Brébeuf and Gabriel Lalemant in 1649. Afterwards only a handful of Huron remained under the evangelistic authority of French missionaries, and most incorporated into Ottawa communities and Christian reductions in the vicinity of Québec.

During the second half of the seventeenth century, French Jesuits focused much of their evangelization effort on the Iroquois, a people described by the Jesuits in the *Relations* as brutal pagans. It was also during this period that the Jesuit Jacques Marquette joined the French-Canadian explorer Louis Joliet (1645–1700) in mapping much of the Mississippi Valley. Before his own death at the hands of the Iroquois,

Lalemant recounted how the Iroquois slowly mutilated and killed Jogues in 1646. The publication of the “Manuscript of 1652” also served as a hagiography of deceased Jesuits that codified what it meant to be a martyr in the New World. Moreover, as Jesuits saw some success in the conversion of Iroquoian people in what would become New York, a young aboriginal girl named Kateri Tekakwitha (1656–1680) started to exhibit a uniquely austere level of Christian piety as she lived in a missionary village near Montreal. She joined several other female inhabitants in organizing an ascetic, virginal sodality they called Slavery of the Blessed Virgin. After four years of self-mortification, Kateri Tekakwitha died during the Holy Week of 1680. Jesuits encouraged other Iroquois to emulate the holiness of Kateri Tekakwitha and venerate her portrait and bones. A Jesuit also wrote a hagiographical memoir of her life in the early eighteenth century as a source of spiritual edification for potential and newly converted Native Americans in New France.

Colonial and Ecclesiastical Politics in Canada

Whereas French Jesuits concentrated much of their attention on evangelizing Native Americans during the seventeenth and eighteenth centuries, dozens of other religious and secular clergy focused on developing a diocesan infrastructure that retained ties to the Gallican Church. Jean-Jacques Olier (1608–1657), the French founder of the Order of St. Sulpice, sent several Sulpicians to Montreal during the late 1650s. At the same time, King Louis XIV (1638–1715) appointed François de Laval (1623–1708) the first vicar apostolic of Québec in 1657, later consecrated bishop in 1674. Laval was followed by five other bishops before the Treaty of Paris ended the Seven Years’ War in 1763. According to a 1666 census, roughly 3,000 French *habitants* lived in New France, more than two-thirds of them men. In 1720 the number was almost 25,000, and by the 1770s more than 70,000. The clergy struggled to reconcile the economic and political interests of the colonial government and French crown with their claims of spiritual authority. Moreover, tension continued between, on the one hand, the Gallican tradition of episcopal autonomy from the pope and the divine right of French kings and on the other, the Holy See’s jurisdiction over foreign missions. It was also during the French régime of the eighteenth century that the majority of priests and women religious came to live in frontier towns, and the majority of Canadian and French populations in rural locales throughout Canada and what was then known as Illinois Country and Lower Louisiana.

The British conquest of New France marked a turning point in the history of French Catholicism in North America. The 1763 Treaty of Paris allowed Catholics of Canada to continue practicing their religion and Jean-Olivier Briand (1715–1794) to be appointed bishop of Québec. The Québec Act of 1774 made permanent these arrangements between Britain and Canada. Under the auspices of the Sacred Congregation de Propaganda Fide, the Holy See endorsed the accommodations of the French clergy to British colonial rule, as well as those who fell under the temporal and spiritual authority of the Spanish in Lower Louisiana. Briand’s allegiance to the British crown was tested during the American War of Independence during the 1770s and 1780s, though he insisted that all Catholic Canadians remain loyal to the British regime that had permitted them to practice their religion freely. The 1783 Treaty of Paris, marking the end of the American Revolution, also convinced the Holy See to appoint an American bishop to guide the Catholic Church in the United States and understand the implications for religious freedom as prescribed in the First Amendment of the Bill of Rights.

Early American Church

In 1789 the selection of John Carroll (1735–1815) as the first bishop of the Diocese of Baltimore coincided with the religious tumult of the French Revolution. With the entire United States falling under the new bishop’s jurisdiction and approximately thirty priests serving in the nascent American church, Carroll looked to revolutionary France for new ecclesiastical recruits. Jacques-André Emery (1608–1657), the superior of the Order of St. Sulpice in France, permitted more than twenty Sulpician émigrés to make the United States their home. This core group established two seminaries in Maryland and provided for the education of hundreds of American and Irish priests. Sulpicians introduced aspiring priests to an austere form of spirituality that closely associated the priestly vocation with the perfection of Jesus Christ, effectively guiding generations of ordained churchmen throughout much of the nineteenth century.

Several prominent Frenchmen proved highly influential in the institutional growth of Catholicism in the early American republic. Bishop Benoît Joseph Flaget (1763–1850) of the Diocese of Bardstown and Bishop Louis Guillaume DuBourg (1766–1833) of the Diocese of Louisiana and the Floridas laid the foundation for the expansion of the Catholic Church in the southern and western United States. Bishop Jean-Louis Lefebvre de Cheverus (1768–1836) of the

Diocese of Boston played an essential role in developing positive Protestant–Catholic relations in New England. Archbishop Ambrose Maréchal oversaw the growth of the early American church as a successor to Carroll in the premier see of Baltimore. The Holy See would approve the erection of dozens of new dioceses out of the original Kentucky, Louisiana, Massachusetts, and Maryland sees during the nineteenth century, stretching from Detroit and St. Louis in the north to Mobile and Galveston in the south and from St. Augustine and Charleston in the east to Santa Fe and the Oregon Territory in the west. All of the dioceses of the United States fell under the authority of the Sacred Congregation de Propaganda Fide—the Vatican organization responsible for the administration of foreign missions—which in turn meant that the French clergy in the United States demonstrated less orientation toward the Gallican principle of episcopal autonomy and more allegiance to the Holy See than many of their confreres remaining in France.

French Catholic communities dotted the map of the United States, especially in frontier areas previously under French colonial rule during the eighteenth century. The overall Catholic population grew exponentially during the nineteenth century as millions of Irish, German, Polish, and Italian immigrants joined French and other ethnic Catholics already living in the United States. Many French Catholics did not attend Mass or receive the sacraments on a regular basis, in large part because few priests lived in the southern and western dioceses. Priests often described lay Frenchmen and -women as indifferent if not antagonistic detractors from their more rigorous understanding of Tridentine orthodoxy and orthopraxy. French Canadians made up a noticeable portion of Catholic populations in New England and along the Canadian–U.S. border. The trade of African slaves also brought French Catholics in contact with indigenous African religions, which in turn created new forms of Catholicism in places like Saint-Domingue (Haiti) and Lower Louisiana. On a larger scale, the popularity of devotions to the Sacred Heart and the Immaculate Conception in France, not to mention the international attraction to the cult of Our Lady of Lourdes, greatly influenced the practice of Catholicism for people of all ethnic backgrounds in the United States.

Nineteenth-Century Expansion

French priests continued to become missionaries in the United States throughout the nineteenth century, in large part because of a missionary revival affecting much of the

Catholic Church worldwide. French bishops remained important players in the episcopal politics of the period even as Irish clerics consolidated their power in the American ecclesiastical hierarchy. The French also remained the leading edge in the expansion of Catholicism to the western United States, in effect perpetuating the evangelization of Native Americans and Protestants of European descent. Pierre-Jean de Smet (1801–1873), a Jesuit missionary from Belgium, and François Norbert Blanchet (1795–1883), a French-Canadian missionary, extended the reach of the Catholic Church to the Rocky Mountains and Pacific Coast during the mid-nineteenth century, focusing much of their effort on ministering to American Indians and erecting Catholic institutions among the growing number of American and European migrants in the West. Jean-Baptiste Lamy (1814–1888) and Joseph Projectus Machebeuf (1812–1889), both missionaries from the Auvergne region of France, led a new wave of church representatives into New Mexico and Arizona following the Treaty of Guadalupe Hidalgo in 1848, a region of the United States populated mostly by Catholic Mexicans and American migrants. Antoine Blanc (1792–1860) and Jean-Marie Odin (1800–1870) oversaw the administration of the Archdiocese of New Orleans from the 1840s to the 1860s, in the process demonstrating the willingness of some French missionaries to support the institution of slavery and Confederate secession. There was also a tradition of French women religious serving in Louisiana, two of the most influential being the Ursuline Order, made up of women of European descent, and the Sisters of the Holy Family, composed of women of African descent.

Frenchmen and -women remained important figures in the development of the Catholic Church in the expanding United States for the remainder of the nineteenth century. By the twentieth century, however, five factors contributed to a decline in the direct influence of French Catholicism in the United States: the nearly complete end to the migration of new French missionaries to North America, the legal separation of church and state in France in 1905 known as laicization, the removal of the United States from the jurisdiction of the Propaganda Fide in 1908, the stabilization of French-Canadian migration to America, and the dominance of Irish clergy in the American church. That said, it was also the case that the institutional presence of the Catholic Church in many parts of the United States and among many ethnic communities simply would not have been possible were it not for the actions of French priests, women

religious, and laypeople during the colonial and early national periods of American history.

Roman Catholicism: Tradition and Heritage

To understand Roman Catholicism in North America, one must first understand the origins and heritage of this identification. As its name indicates, Roman Catholicism is tied to a place as well as being the religious identity of a worldwide community that at the turn of the twenty-first century numbers more than one billion adherents, 17 percent of the world's population. More than 180 million Roman Catholics live in North America (64 million in the United States, 12 million in Canada, and 106 million in Mexico). Whether in Canada, Mexico, or the United States, all Roman Catholics are part of a worldwide church that has its headquarters and its leader in the Vatican City in Rome. The pope is the head of the Roman Catholic Church globally and one of the most powerful religious leaders in the world. Catholics trace the lineage of the papacy back to the beginning of Christianity. They believe that Jesus appointed the apostle Peter to head the church after his resurrection. The Gospel of Matthew

recounts Jesus saying to Peter, "You are Peter, and on this rock I will build my Church, and the gates of hell will not prevail against it" (Matthew 16:18). Catholics believe that the lineage of the papacy remains unbroken from the time of Peter until the present, despite the few times that more than one man claimed to be pope. Benedict XVI, the 265th pope in the succession, was elected in 2005.

History

More important, Catholics, like other Christians, trace their heritage to Jesus of Nazareth, a first-century Jew who lived in ancient Palestine, preached a message of salvation, and attracted followers who carried on his message after the Romans crucified him around the year 30 CE. Thus Catholics are first and foremost Christians. In the early centuries of the church's existence, Christianity was not divided between East and West or Protestant and Roman Catholic. In 1054 the West split from the East in a complex division over theological, liturgical, and administrative issues. In the sixteenth century reformers such as Martin Luther and John Calvin, reacting to what they perceived to be abuses of power and deviance from the gospel by the church, introduced Protestantism. Since that time Christianity has witnessed many more divisions with subgroups forming regularly over time and across the world.

Despite many changes in Christian identity since the time of the first disciples of Jesus, Roman Catholicism has remained remarkably consistent while adjusting to new challenges and periods. It has always sought a balance between maintaining tradition and accommodating the times and has struck that balance as well as any religion. A Catholic in the Middle Ages would likely recognize the marks of the church in the twenty-first century despite the significant changes over the intervening centuries. The church has never allowed itself to change beyond recognition. It has maintained a recognizably consistent doctrine, structure, and practice. As a result, it has spawned a rich culture that includes music, literature, social service, and art as well as a religion.

In its earliest form in the first century, the church operated largely as a Jewish sect. Its members formed house churches where they worshipped and passed on the faith. Some visited Jewish temples as well as practicing nascent Christianity. The apostles played important roles in the spread of Jesus' message. The evangelist Luke who wrote one of the four canonical (officially approved) gospels also wrote an account of the early church contained in the New Testament called the Acts of the Apostles. Saint Paul, who converted from Judaism to

become a follower of Jesus, carried out missionary work in the first century after the death of Jesus. During the middle of the first century, Paul wrote thirteen letters (epistles) to various early Christian communities that are recorded in the New Testament.

Part of the reason for the consistency and longevity of the church has been its hierarchical structure, which began to develop as early as the middle of the first century. By the beginning of the second century, bishops had distinct roles and responsibilities as leaders. The role of bishop was conferred on a candidate when a current bishop ordained him for the role in a ritual that involved laying hands on his head, a ritual that continues to the present. Despite persecution by Rome, which believed Christianity detrimental to the state because Christians refused to worship the emperor, the church perdured and grew. In 325 the Emperor Constantine unified the empire under the banner of Christianity when he convened the Council of Nicea, at which bishops developed the Nicene Creed. The creed defined Christian teachings and refuted heresies, in particular the view of Arius (c. 250–336 CE), a Christian priest who held that Jesus was not the Son of God from the beginning with God the Father, a view determined to be in error by the Council that held that Jesus and God the Father always existed as divine beings. The Nicene Creed, then, defines the fundamentals of Catholic teachings. To this day Catholics around the world recite this creed during the Sunday liturgy (Mass), affirming their unified beliefs. In concise theological language, the creed affirms foundational beliefs about God, Jesus Christ, and the church. The trinitarian formula, Father, Son, and Holy Spirit, affirms the church's belief in one God who is three persons. Each of these persons of the Trinity is equally God. Further, it affirms belief in the church and the origin and destiny of humanity. This creed sums up the central beliefs of Christians. The Catholic Church has many additional teachings that bind its adherents, but those articulated in the creed are the fundamental teachings. Similar in content to the Nicene Creed is the Apostles' Creed, which was used at baptism in the early church. It includes most of the claims of the Nicene version with a few additions, such as "he descended into hell," indicating that Jesus' liberation from death applies also to those faithful to God who came before him.

Many councils followed that of Nicea. As important as these were to fight heresy and define orthodoxy, it was the popes who also shaped the church. As the number of Christians increased, so did papal influence. Since the time of the Council of Nicea and the sanctioning of the church by the

state, popes, regardless of their personal piety or lack of it, have played important roles in the social, cultural, and political order. In the Middle Ages and the Renaissance, they crowned kings. This power underscored both the divine right of kings and the church's authority. Popes also had the power to influence culture. In 1508, for example, Julius II commissioned Michelangelo to repaint the ceiling of the Sistine Chapel in the Vatican. The artist painted figures from biblical stories that continue to inspire visitors to this day. Despite the fact that Julius mistreated this distinguished artist, enduring art resulted. Popes owned principalities, advised monarchies, established moral codes, governed educational institutions, served as patrons of music and art, and fought wars—all in the name of the church. Their decisions and the directions they took influenced the religious, social, cultural, and political landscape.

Teachings

The church has a set of teachings and regulations that range from the definition and importance of sacraments to laws governing membership, marriage, and the authority of the hierarchy. Its central teachings include belief in revelation and salvation, a defined set of sacraments, a special reverence for Mary the mother of Jesus, the recognition of saints, an importance to symbols and icons, the infallibility of the pope, and ethics. The church's official teaching authority exercised by the bishops in union with the pope is called the *magisterium*.

The church holds that God has been revealed both in the natural order and in particular revelations through persons, events, and texts. Thus the prophets of the Old Testament were privileged by God to receive a message they had the responsibility to spread. They did so by preaching, prophesying, and teaching. Their words and actions were compiled in texts that guide the church to this day. The twenty-seven books of the New Testament testify to the ministry, mission, and divinity of Jesus. The Catholic Church recognizes twelve books (called Apocrypha) in the Old Testament that are not accepted as biblical by Jews and by Protestants. Selections from both testaments continue to be read today daily in the liturgy (worship) of the church. These texts are accounts of God's revelation and God's interaction with humanity. In response to this revelation, Catholics are invited to believe in God and to follow the biblical teachings. During the course of centuries, and in particular in the nineteenth century, the literal interpretation of these texts gave way to a sophisticated reading that discriminated between various literary genres, recognizing some texts as historically accurate, others as

poetry, prayer, and practical advice for the time in which they were written.

Thus, although all of the biblical texts are believed to be meaningful, the ways in which that meaning is conveyed differ. One of the best examples of this is the creation account found in the first book of the Bible, Genesis. A story familiar to Christians and non-Christians alike in North America, Adam and Eve in the Garden of Eden disobey God and are punished for their sin. For most of the church's existence, these texts were interpreted literally. In other words, Catholics believed that God created the earth in seven days and that Adam and Eve were the first human beings. With the advent of higher biblical criticism developed in the nineteenth century, largely from Germany and France, the texts began to be read as conveying meaning through metaphor and narrative rather than as a straightforward historical account. So, for example, the Genesis story conveys a truth or a meaning about God's relationship to creation. The point of the story holds that God created the earth and all that is on it, that human beings are the pinnacle of that creation and essentially different from the rest of creation, and that God and humans have a special and abiding relationship. However, the creation event lasted for longer than the seven days described in the Genesis account.

Nineteenth-century Protestant scholars were largely responsible for the developments in biblical criticism. After initially resisting such criticism, in the twentieth century Catholic scholars followed suit and began to contribute. In 1943 Pope Pius XII issued an encyclical (papal letter), *Divino Afflante Spiritu* ("Inspired by the Holy Spirit"), that encouraged Catholic biblical scholars to use the available critical tools, in particular the historical-critical methods long been used by Protestant scholars. Today, the Catholic Church continues to teach that the Bible is God's word, but understands it to be conveyed in the words of human authors who used the available literary genres to convey the message. So, although the message is God's, the messengers were human with all the attendant foibles that pertain to human accounts of events.

This means that Catholics are not literalists in their reading of the Bible. Thus, for example, the Roman Catholic Church does not believe in creationism, its theory that the world is only five thousand years old. Catholic biblical scholarship and theology do not see a conflict between scientific data and religious belief because science informs one dimension of our knowledge and the Bible another dimension. The Bible was not intended to teach science but to disclose that God exists, is personal, and wishes to be in relationship with

the humanity that God created, even if that creation was an evolutionary one.

Some of the roots of the church's teaching originate in Judaism, Christianity's predecessor and—some say—parent religion. The early Jewish biblical texts are not dualistic, separating body and soul. Around the time of Jesus, some Jewish groups had taken over the notion of a soul and related it to the possibility of personal resurrection and continued life of the individual. Christianity's idea of the soul, its identity and durability, was deeply influenced by the hellenization of Christianity and the thought patterns of Greek philosophy. In his work *Phaedo*, Plato argued for a dualism of body and soul and contended that the soul constituted the identity of the person. Catholicism today maintains a distinction between body and soul but holds for a unity of body and soul in the sense that the person is an embodied spirit. Although it is true that Christians believe that they will be raised in a resurrection from the dead, made possible by Jesus' resurrection, the belief in resurrection was present among the first-century CE. Pharisees, a Jewish sect at the time of Jesus. However, this belief was not universal, for it was rejected by the Sadducees, a Jewish religio-political party from the last two centuries BCE and the first century CE.

The New Testament writer Paul was a Pharisee before his conversion to Christianity. The expectation of the earliest, postresurrection Christians was that Jesus would return in glory soon, certainly during their lifetime. As the Christian community grew and time passed, the hope for an imminent return of Jesus faded. With the delay of the Second Coming more evident and more widely accepted among Christians, the idea of a universal judgment on the last day began to fade. Instead of expecting an immediate return of the Messiah, or having the dead await a final day of judgment for all, the idea that each person was judged immediately after death became increasingly accepted. The thought that the soul was held in some state of abeyance began with the Jewish belief in Sheol, the netherworld, the shadowy realm of the dead, and carried over, because of the influence of the Greeks, into early Christianity. The idea of the immortal soul's awaiting the definitive judgment of the Last Day was officially abandoned when the church claimed that the dead are judged immediately after death. Whether the judgment of the dead is immediate or delayed, and whether or not individual theologians hold for an inseparable unity of body and soul or for body and soul dualism, Christianity maintains that the soul has a beginning when God creates it, but no end.

Although individual Catholics often hold diverse beliefs or are unaware of what the church teaches in a specific area, the church's official teachings are carefully laid out in various pronouncements. A doctrine is an official teaching of the church. Doctrines are promulgated by various forms of church authority such as the pope, a synod of bishops, or an ecumenical council, to name a few. The New Testament is the original source for many church teachings. Doctrines articulate the explicit and implicit teachings of the New Testament in language of the period in which they are formulated. Over time, therefore, as insights accumulate and language changes, doctrines are subject to development and can be reformulated without sacrificing their consistent meaning. The cumulative tradition of church teachings and practices informs Catholicism and ensures consistency in its pronouncements. The Catholic Church believes that it is guided by the Holy Spirit, which protects it from error in its doctrine. Thus it looks to tradition to shape it in any era.

Dogmas are doctrines that are promulgated by the pope, usually in conjunction with an ecumenical council. The teachings of the creed—for example, the Trinity—are dogmas. All are considered definitive. It is a heresy to deny church dogmas; historically, however, theologians have sometimes questioned their origin, formulation, and implementation without incurring condemnation.

Encyclicals are formal pastoral letters from the pope addressed to the universal church and, since Pope John XXIII (1958–1963), to all persons of good will. The subjects of these letters vary widely, from social justice to the church's relation with other religions to pastoral practices. Intended to guide and instruct, these are not infallible though their teachings are supposed to be followed by the faithful. Most Catholics are aware that there are such pronouncements, but would be hard pressed to name any (including recent ones) and even less likely to be intimately acquainted with their content.

Most of the fundamental doctrines that the church articulates come from councils, which are gatherings of church leaders. The most important of these are ecumenical councils, in which the pope convenes the bishops of the church to discuss and proclaim church teaching. The Second Vatican Council (1962–1965) was the last such gathering. National councils of bishops are also convened, such as the councils of Baltimore (1852, 1866, and 1884) in the United States in the nineteenth century.

Hierarchical Structure

The Catholic Church operates within a hierarchical system centered at the Vatican in Rome. The pope is elected by the

members of the College of Cardinals who are under the age of eighty. The pope exercises authority over the entire church, speaks in the name of the church, and protects the integrity of the church's doctrine. In practice, this means that new bishops are appointed by the pope who does so by consulting current bishops in a national church and his emissary to the country. For example, the Nuncio, who represents the Vatican to the United States and lives in Washington, D.C., enjoys ambassadorial status in his relations with the government. Thus he represents the pope to the government and to the American church. He is consulted on the appointment of bishops and represents the pope at all high-level functions and important liturgical celebrations such as the installation of a bishop in a diocese.

Papal authority has been exercised in different ways by different popes, and has been challenged by internal forces as well as by princes, kings, and warlords. At times the pope was a prisoner in his own castle, and at other times, a ruler with considerable land. The modern Vatican City State is a shrunken version of the papal states that once included parts of what are now Italy and France. Today it is an enclave of about one hundred acres in Rome and was established as an independent political entity in an agreement with Italy in 1929. Although the pope no longer controls significant territory, he remains the head of the Roman Catholic Church, an empire judged less by its land holdings than by its hold over the reins of orthodoxy in the church.

In recent times the College of Cardinals has had a membership of about 120, with all regions of the globe represented. An archbishop oversees a large diocese (called an archdiocese) and, technically, several bishops in surrounding dioceses. In archdioceses and large dioceses, bishops have auxiliary bishops to assist them. In the diocesan structure, bishops oversee the work of priests, deacons, religious sisters, brothers, and laity. Religious orders of men and women have their own internal structures of authority, traditionally with a father or sister general, provincials or superiors, and in more recent nomenclature with presidents and vice presidents. In this hierarchical order, the laity is below all these ranks.

One of the most misunderstood doctrines of the church—by Catholics and non-Catholics alike—is the doctrine of infallibility. Infallibility pertains to particular statements concerning faith and morals. It is a charism of the Holy Spirit that is given to the church and exercised through the bishops and the pope. The extraordinary teaching authority of the church is exercised on occasion

to clarify, define, and preserve a central truth of the faith, often given particular expression to counter heretical ideas. This teaching authority is exercised by the church in the form of a general council that is representative of the entire church in union with the pope. Papal pronouncements are intended to be taken very seriously by the Catholic community but not, as a matter of course, to be considered infallible. Infallible teachings must be stated explicitly to be so, as indicated in canon law: “Nothing is to be understood as dogmatically declared or defined unless this is clearly manifested.”

Infallibility, which was not a formal doctrine until the First Vatican Council in 1869–1870, means that certain statements of the church pronounced by the pope when he speaks *ex cathedra*, from the chair [of Peter], are immune from error. The occasions for this are rare and the topics are related solely to church teachings.

Saints

The church reveres saints, persons who are identified for their holiness and model Christian lives. Saints have a very important role in the spirituality of Catholics. The church celebrates their feast days, commemorates their lives in the liturgical calendar; Catholics pray to them to intercede with God on their behalf; miracles are attributed to their intercession and required by the church during the canonization process; the stories of saints’ lives are known to many Catholics; statues and paintings of them abound in churches, schools, convents, and rectories.

A handful of saints have been North Americans and thus have attained special prominence for Catholics in the region. One of these was the Canadian Isaac Jogues (1607–1646), a Jesuit missionary priest born in Orleans, France, who migrated to Québec and ministered to the Native Americans in the regions in the northeastern United States bordering Canada. He was martyred by the Iroquois, who thought that he was a sorcerer who had cast a spell on them. In 1930 Pope Pius XI canonized him as part of a group known as the North American Martyrs.

Elizabeth Ann Seton (nee Bayley), another North American saint, was born in New York in 1774, married, was widowed in 1803, raised five children, converted to Catholicism at age twenty-nine. Four years later she founded a religious community and opened a school for poor children near Emmitsburg, Maryland. The Sisters of Charity, which she and some companions founded, became the first indigenous religious society in America. She died in 1821 and was

canonized by Pope Paul VI in 1975, becoming the first canonized saint born in the United States.

On December 9, 1531, a Mexican boy named Juan Diego (1474–1548) is believed to have encountered the Virgin Mary, the mother of Jesus, while walking along a road on his way to Mass. She asked him to request that the bishop build a church on the site, but the skeptical bishop required proof of Juan’s encounter. Juan is said to have met her again and been instructed to return to the site of their first encounter, where he found roses not native to Mexico growing in the frozen soil. When he opened his robe to deliver these as proof to the bishop, the interior of the robe was covered with a magnificent painting of Mary, convincing the bishop that Juan had indeed seen her. A church named Our Lady of Guadalupe was built on the site, and despite the assertion by some scholars that he never existed, Juan Diego was canonized as a saint by Pope John Paul II in 2002.

The veneration of the saints, along with the special reverence given to Mary, is another feature that separates Catholics from some Protestant denominations. Certain Protestant denominations, such as Lutherans, name churches after the apostles but do not pay similar homage to anyone who came after the apostles. Other denominations, such as Baptists and Presbyterians, do not have churches honoring eponymous saints. The cult of the saints is thus a manifestation of piety that Roman and Orthodox churches share. The veneration of specific saints is tied to national and ethnic roots. Even today third- and fourth-generation American Catholics identify with saints who represent their ethnic heritage; Saint Patrick for the Irish, Saint Anthony for the Italians, Saint Casimir for the Poles, to name a few.

Not all of those revered by the faithful were historical figures, however. The existence of some is dubious. Christopher, patron saint of travelers, is one; Philomena is another. Roman martyrology notes a man who carried travelers across a river and one time carried a child who was Christ in disguise. When historical investigations could not confirm his existence, the church removed his feast day from the liturgical calendar, although many Catholics and other Christians continue to name children Christopher (the name comes from the Greek meaning Christ bearer). The reverence for Philomena was based on a discovery as recent as the early nineteenth century, when a vial seemingly containing blood was discovered in a catacomb. The Latin inscription was incorrectly translated Philomena; a biography was contrived, and a following quickly developed to support the claim to holiness of the woman buried there. Later more careful

investigation proved the translation wrong and the story unreliable, so the church (to its credit) removed her from the list of saints.

The lives of people considered of heroic virtue are subjected to careful scrutiny by the church before they are recognized as saints. The Vatican oversees the investigation of their conduct of life, justification for their reputation for holiness, and their activities and writings (if any), and ascertains validated miracles occurred directly as a result of their intercession. The 1983 Code of Canon Law, the church's internal governing laws, streamlined the canonization process by combining the cause for beatification (a step on the way to canonization) and canonization, and by empowering the local diocese to conduct initial investigations. The authority to canonize, however, still rests solely in the hands of the pope.

The Arts

The veneration of the saints has given rise to a remarkable range of artistic representation throughout the church's history. From the origins of Christianity through the late Renaissance, the primary subject of Western art had been religious, beginning with elaborate depictions of biblical stories and figures and moving to the portraits and activities of cardinals and popes. Art history books are filled with religious paintings. There are several reasons for this. Art as an activity and record of culture is devoted to sublime topics and nothing in that period counted as more sublime than God's interaction with the world and humanity. Thus statuary, frescoes, and paintings captured the story of God's message in vivid forms meant to honor God and to inspire and instruct the faithful. The church also served as a patron of the arts, commissioning great artists to decorate churches. One of the finest examples of this is the Vatican's Sistine Chapel, the ceiling and walls of which are covered with the magnificent creations of Leonardo da Vinci, including the Creation of Adam, one of the most recognizable works of art, in which God's hand reaches out to Adam's to instill life. Michelangelo's statue the Pietà, depicting the broken body of Jesus after crucifixion in the arms of his mother Mary, is recognized as one of the finest pieces in the history of art.

Many Roman Catholic churches feature painstakingly executed stained glass windows depicting biblical stories or characters, scenes from the life of Christ, sacraments, the evangelists, saints, and Catholic symbols for the Trinity or the Holy Spirit, among others. These are often quite beautiful, creating an aura of sacred space within the confines of the

church. One knows immediately on entering that the building is no ordinary meeting place. Thus they serve to separate the space from ordinary life and to visually draw the observer into the spiritual story that they depict. Some of the Protestant reformers were critical of such ornate displays and built plain churches that focused on the reading and preaching of the Bible as central.

Saint Augustine wrote that singing is praying twice. Some of the greatest pieces of music were written for church occasions such as the Mass. The church reserves the right to approve the music played for its ceremonies. The music is not for its own sake but designed to serve an end, specifically, to offer praise to God and to inspire people to worship and serve God. One of the oldest and best known forms of this music is Gregorian chant, named for Pope Gregory VIII (590–604), who was a monk before he became pope. The plain chant melodies that characterize this genre have been used by monastic communities since and are common in parish worship as well. Many of the world's great composers, such as Mozart, Beethoven, and Bach, whether or not they were Catholic, have fashioned music celebrating Christian religious themes. The composer Leonard Bernstein wrote and first performed in 1971 his "Mass" at the request of former first lady Jacqueline Kennedy based on the Tridentine Mass, a rite celebrated since the fifteenth century.

Catholic art has added beauty to cultures around the world since the earliest days of the church, which has served as both a patron to the arts and an inspiration for artists. From the Ave Maria to Christmas music, from the Pietà to artwork in contemporary churches, from the enduring architecture of the Gothic cathedrals of Europe to the sleek lines of the cathedral of the archdiocese of Los Angeles to the diverse architectural detail of the Mexico City Metropolitan Cathedral, the church has enhanced cities, countries, and cultures with various art forms.

Sacraments

Besides being a visual religion, Roman Catholicism is sacramental; it celebrates God's presence in the world in concrete manifestations such as saints and symbols; the seven sacraments bring this notion to life in the lives of believers. Baptism, the Eucharist, and confirmation are called sacraments of initiation because these are the gateway to the Catholic-Christian community. In the ancient church they were conferred at the same time, as they still are today for adults at the Easter Vigil. But in the ordinary course of events, they are conferred at various chronological intervals of a

Catholic's life, as are the remaining sacraments of reconciliation, matrimony, healing of the sick, and for those who pursue it, holy orders (priesthood).

Baptism is the first of the three sacraments of initiation. Catholics, like other Christians, become Christian by being baptized in water and the Spirit. The church traces this rite back to New Testament times as witnessed by John the Baptist's baptism of repentance (Mark 1:4; Luke 3:3; Matthew 3:11). John himself acknowledged that his baptism would be surpassed by a baptism with the Holy Spirit.

Infant baptism is the norm in Catholicism. In the Middle Ages fear arose that a baby who died before being baptized would not go to heaven but to limbo. Limbo was a place neither of permanent punishment like hell, nor of temporary hardship like purgatory, but a place between purgatory and heaven in which the souls of unbaptized babies would neither suffer punishment nor enjoy eternal bliss, but exist in a neutral territory for eternity. There is no scriptural basis for limbo. It was the invention of medieval theologians trying to balance the necessity for baptism for salvation (to eliminate the effects of original sin) and the innocence of newborns. A 2007 document sanctioned by the Vatican noted "strong grounds for hope that God will save infants when we have not been able to do for them what we would have wished to do, namely, to baptize them into the faith and life of the Church."

Baptism is the initiation into the Catholic community, and most parents have their children baptized even if they do not practice their religion with any regularity. For nonpracticing Catholics it is a social and cultural event as much as it is a religious commitment. Family history and cultural patterns make it an important symbol, even if for some a theologically ambiguous one.

Baptism initiates one into the church, but it is the Eucharist that sustains the church community on a regular basis. Those unfamiliar with Christianity are often puzzled by the Eucharist; non-Catholic Christians have their own form of it but are troubled by Catholic claims that the bread and wine actually become the body and blood of Christ. The Catholic doctrine, called transubstantiation, using philosophical language that can be traced back to Aristotle and that was refined by Saint Thomas Aquinas in the thirteenth century, holds that at the Eucharist the "substance" of the bread and wine is transformed into the body and blood of Christ but that the "accidents" (appearances) remain the same. The Catholic Church teaches that this transformation occurs when the priest who presides at the Eucharist says the words

"This is my body" and "This is my blood" over the bread and wine. The community who then receives the bread and wine is receiving the body and blood of Christ. Catholic theology then also refers to the community of believers as the body of Christ. How the bread and wine becomes the body and blood of Christ cannot be explained scientifically and is regarded as one of the central mysteries of the faith, along with the Trinity. The biblical evidence for this mystery is the record of Jesus' celebration of Passover with his apostles on the night before he died at which he passed the cup and bread and instructed his followers, "Take and eat, this is my body given up for you."

The Eucharistic liturgy is divided into two parts—the liturgy of the Word and the liturgy of the Eucharist. The liturgy of the Word, as the term suggests, focuses on the biblical message with readings from both the Old and New Testaments. It also includes a call to prayer, a penitential rite asking God to forgive the sins of the community, and a homily delivered by the priest or deacon that reflects on the meaning of the biblical readings for the contemporary Catholic community.

The sacrament of confirmation does what its name implies—it confirms the person's choice and commitment to be Catholic. It completes the sacraments of initiation. The sacrament commemorates the Pentecost event in the New Testament marked as the birth of the church when the Holy Spirit descended on the disciples. The church calls that same Holy Spirit to fill the hearts and souls of those being confirmed that they might enter adulthood with a readiness and willingness to live as Christ's disciples in the world.

In the ancient church this sacrament was conferred at the time of baptism (as it remains the custom in Eastern-rite churches today and at the Easter Vigil in the Latin rite for those children and adults who are being received into the church). Normally, however, the church confers this sacrament on young adults from the ages of about thirteen to seventeen. Some flexibility is exercised in different dioceses and parishes as to the age at which it is conferred. The reception of this sacrament is usually preceded by an intense period of preparation of one to two years. This commonly includes education in the Catholic tradition, a theological understanding of the commitment, a community service project, a retreat, and a discernment of whether one wishes publicly and sacramentally to confirm one's commitment to Catholic Christianity. In the past it was an expectation and obligation. Today many religious educators and pastoral staffs view it as a choice—not their choice, or the parents' choice, but the

candidate's choice. Freely making such a commitment requires a certain degree of maturity. At baptism a child's parents speak for him or her making an initial commitment to Christianity. At confirmation the young person elects to continue that commitment in the Catholic tradition.

The sacrament of marriage is one that Catholic couples look forward to with great hope and anticipation. Marriage is also a time when they want all of the pageantry and ceremony that a sacramental celebration affords. As with the other sacraments, the parish is the connection with the larger church. It is in and through the parish that couples are prepared for the sacrament of marriage. Marriage is the only sacrament not conferred by a priest or deacon; a priest or deacon witnesses the marriage but the bride and groom together are the ones to actually complete the sacrament.

The sad underside of marriage is divorce. Catholics divorce at the same rate as others in North America. The church, however, does not recognize divorce. Referring to the marriage bond, Jesus said, "what God has joined together let no one separate" (Matthew 19:6 and Mark 10:9). For Catholics, marriage is not only a contract, it is a sacrament, and sacraments cannot be canceled. Marriages, however, can be annulled, by the church. An annulment signifies that a sacrament was never conferred. The civil dimension of marriage can be nullified by a civil divorce decree issued in the courts. The civil status of the marriage is not affected by the annulment process, and the children from an annulled marriage are legitimate. There are myriad grounds for the church to grant an annulment, from failure to consummate the marriage to the immaturity of one or both of the parties at the time of marriage. The most common reason that the church annuls marriages is psychological incapacity. This is not related to age but to the maturity, understanding, and ability of a party to enter into a permanent bond. If at the time of marriage a person was not mature enough to understand and accept the sacramental bond of marriage, after proper investigation and procedures that marriage can be annulled by the church. Thousands of marriages are annulled each year in church tribunals.

Laypeople encounter canon law most often in marriage cases, in which a person is seeking to marry someone who is not Catholic or not Christian, or is seeking to annul a marriage. Both of these involve matters promulgated in canon law. Although the first situation may be taken care of with the appropriate permissions and documents, annulments often require written and oral testimony to a marriage tribunal within a diocese. The tribunal is composed of judges who

are qualified by their formal study of canon law. The tribunal members may be religious women or other laypersons, though the overwhelming majority are priests. Pontifical Catholic universities (those sanctioned by the Vatican to grant degrees) in various parts of the world offer degrees in canon law. The Catholic University of America in Washington, D.C., is the principal institution granting these degrees in America. Many priests, however, are trained in canon law at European universities such as the Gregorian University in Rome and the Catholic University of Louvain in Belgium.

The one sacrament not widely received by Catholics is holy orders. In fact, only a small number of American Catholics have even been present for the ordination of a priest. In one sense, this is unfortunate, because this ceremony is rich with word and symbolism that moves the heart and captures the imagination. In another sense, the ceremony symbolizes much that contemporary Catholics, in particular but not exclusively women, object to about the church's structure. Priests are taught to approach their position in the church as one of service to the community, not power over it. Countless priests in America live out their daily ministry in just such a fashion. They take seriously the gospel mandate to be a servant to the people of God and do so at great personal sacrifice and without complaint. Their service is a joy, and they do not count the cost. In return they receive the cooperation, respect, and admiration of the Catholic community they serve.

Priests are called to be many things to many people. They baptize the newborn, bury the dead, counsel the confused, comfort the sick, guide the spiritual lives of numerous Catholics, preach the Word, serve as advocates for the voiceless, instruct the ignorant and the well-informed; they live alongside their parishioners, sharing their successes, failures, and struggles. It is a demanding vocation, to say the least. The vast majority of priests in North America live their vocation admirably. They are happy with their work, fulfilled emotionally and professionally. At the same time, studies show that they are increasingly overworked, sometimes underappreciated, and subject to the same self-doubts that are manifest in marriages and in other career paths.

Ordination to the priesthood is not the only form of the sacrament. Deacons also are ordained. Some, as transitional, take this step on their way to the priesthood; others—permanent deacons—dedicate themselves to a specific lifelong ministry in the church. A number of factors distinguish these two groupings. Transitional deacons in training for the priesthood function as deacons for one or

two years immediately before being ordained priests. Their deaconal ministry may be served partially in the seminary where they finish their academic and ministerial training, and partially in a parish setting where they experience the daily routine and challenges of pastoral life. Permanent deacons, married and single men (even though historically there were women deacons in the church, that practice ceased in the early church and has not been revived), prepare within diocesan training programs part-time for a number of years, after which they are ordained by the bishop and assigned work in either parishes or special apostolates. They may not preside at Eucharist or hear confessions, though they may baptize, witness marriages, and preach.

The sacrament of reconciliation (formerly penance), commonly called confession, is one of the distinctive features of Catholic Christianity. The priest acts as an intermediary between God and the community of believers. Catholic theology holds that priests, by virtue of their reception of the sacrament of holy orders, are set apart (not above) for sacred duties. One of those duties is to forgive sins. The authority to do so stems from the New Testament command issued by Jesus to his apostles: “Those whose sins you shall forgive, they are forgiven. Those whose sins you shall retain, they are retained” (John 20:23).

The intention of this sacrament is to forgive sins and to reconcile the sinner with God and the church community. Priests are instructed to act in an understanding and pastoral manner to reconcile the sinner. Penitents (those confessing their sins) are required to be contrite for their sins and to resolve, with the help of God’s grace, to try not to sin again. Inevitably, the penitent will sin again, but God’s mercy is everlasting and there is no limit to the number of times one may be forgiven in the sacrament of reconciliation.

The ritual and the frequency of reconciliation have changed depending on the historical period. In the ancient church, penance, like baptism, was received only once. There were sometimes harsh penalties associated with it as well. For these reasons most people delayed receiving it until they were dying. In the recent past, before Vatican II, many Catholics would go to confession weekly, usually on Saturday afternoons in a dimly lighted church. Penitents would wait kneeling in pews alongside a confessional box where a priest would sit for hours hearing confessions, forgiving sins, and meting out penances usually requiring the penitent to say a certain number of Hail Marys and Our Fathers. There would be several confessionals in the church, each with a name over the door identifying the priest inside the confessional. On

entering the box, the penitent would begin by saying, “Bless me Father, for I have sinned. It has been one week or one month (or whatever length of time) since my last confession. These are my sins.” After listening to the penitent’s recital, the priest would briefly counsel the penitent to avoid such sins in the future and ask that the penitent recite the Act of Contrition. It is a prayer that every pre-Vatican II Catholic knows by heart:

O my God, I am heartily sorry for having offended Thee, and I detest all my sins, because I dread the loss of heaven and the pains of hell, but most of all because they offend Thee, my God, who art all good and deserving of all my love. I firmly resolve, with the help of Thy grace, to confess my sins, to do penance, and to amend my life. Amen.

Today some Catholics confess their sins to the priest face to face in a room designated for this ritual, but others continue to prefer the anonymity of the confessional booth.

The age of initial participation in the sacrament has varied somewhat, depending on the rules of the local diocese and the religious education program of the parish. The bishops established national guidelines that children should receive the sacrament of reconciliation before receiving First Communion. The general guideline is that children must have attained the age of reason (usually around seven years old) so that they can distinguish, in moral categories, the difference between right and wrong and assume conscious personal responsibility for moral acts. Catholics are expected to receive the sacrament at least once a year if they have committed a mortal sin (of such a serious nature that it completely ruptures one’s relationship with God).

Even at the turn of the twenty-first century, long after the reforms of Vatican II, some Catholics continue to refer to the sacrament of the sick by its old Latin name, extreme unction, or as the last rites, neither of which term conveys the essence of the sacrament. “I’ll [or Let’s] call the priest” sounded an ominous death-knell, bringing terror to all hearts. However, the anointing of the sick is a sacrament intended to bring spiritual comfort to the sick, not an early death notice. The roots for this sacrament go back to the New Testament book of James (5:14–15), which reads, “Is there anyone sick among you? He should ask for the presbyters of the church. They in turn are to pray over him, anointing him with oil in the name of the Lord, and the prayer of faith will save the sick person, and the Lord will raise him up. If he has committed any sins, he will

be forgiven.” At different times in the church’s history, including the first half of the twentieth century, the sacrament was administered only when death was imminent. Although it continues to be administered to the dying, sometimes accompanied by the final reception of holy communion called Viaticum (“food for the journey”), it is intended not only for those who are mortally ill, but also for all who are sick and who may need an additional sign and source of God’s grace to cope with their illness, to be healed, to endure the suffering associated with illness.

The sacrament of the sick may be administered to a chronically ill patient, a person about to undergo a serious operation, or someone who is suffering emotionally or mentally. Although still administered most regularly in hospitals, parishes conduct liturgical services during which the sick and infirm are anointed in the presence of healthy parishioners. Priests also administer this sacrament in private homes, for those who are unable to attend a communal service, and in nursing homes, either in the context of a service or privately in patients’ rooms. If possible, family members are invited to participate in the sacramental ritual, offering prayers and comforting the sick person with their supporting presence.

The sacrament is a sign of God’s grace and healing power, but it is not magic or medicine. The oil used in the anointing reminds the recipient of his or her baptism as the priest recites the prayer: “Through this holy anointing, may the Lord in his love and mercy help you with the grace of the Holy Spirit. May the Lord who frees you from sin, save you and raise you up.” The church’s prayer is for strength, whether to endure an illness, or in severe cases to accept death gracefully. It also reminds the sick person that he or she does not endure these trials alone but is accompanied by the church, which prays with and stands by those who are weakened by illness and cannot participate fully in the life of the community.

Guide to Morality

Alongside its theology, spirituality, and hierarchy, the church provides a moral guide for Catholics with a wide range of teachings that sometimes also attempt to influence public policy on ethical concerns. Best known to contemporary North American Catholics is the church’s unremitting defense of human life, in particular its clear and often articulated stance against abortion. This is but one teaching, however. Rooted in the Ten Commandments, the church’s moral teachings range from opposition to abortion, euthanasia, and stem-cell research to a concern for the poor, justice for the

working class, and a call to personal holiness. One of the most influential institutions in the history of human culture, the church has taken positions on moral issues throughout its history. Although not free of sinfulness itself, the church binds its adherents to a refined moral code. It enforces this code through the sacrament of reconciliation and its public pronouncements on ethical issues that affect individuals and society.

Catholic politicians in North America sometimes face difficult decisions about legislation or public policy because their church has spoken on the issues. Thus, if the church opposes a particular practice and that practice is the subject of legislation, the politician, if he or she is loyal to his or her Catholic identity, should support the church’s position. However, in creating legislation, politicians try to represent the constituency that elected them. If the view of the majority of his or her constituency holds a position that is opposed to church teaching, does the politician vote the view of the majority of the people he or she represents or for legislation that supports the church’s position (when this is different from the majority view)? This question has been thorny for American politics in particular and the subject of some conflict between Catholic politicians and the church. Some of these politicians agree with the church’s teachings personally but do not support legislation that holds such positions as public policy. The most evident conflict involves politicians’ view towards abortion, but this is only one of a number of controversial issues that sometimes divide politicians from the church. Other issues include same-sex marriage, domestic partner benefits, adoption by gay couples, and public health policies on AIDS, sex education, and the like.

The political reach of the church extends far beyond the Vatican. Even a cursory examination of political activity in North America reveals that the church, particularly through its bishops, weighs in on numerous social and political issues. It often assumes the role of moral guardian in society. Making rules and pronouncements designed to bind Catholics, the church also attempts to influence the larger culture by providing moral norms and guidelines, for example, in its marshaling of a well-organized and -funded pro-life effort. In practice, some Catholics ignore some of the norms proposed, and some non-Catholics resent the church for interfering in political policy and personal life as it attempts to set the moral compass for American society. But moral concerns represent a central element of the church’s mission and teaching.

Being Catholic constitutes a social as well as a religious identity. Catholics in North America are joined with Catholics worldwide and identify with a tradition that extends more than two thousand years. They look to Rome and the pope for guidance, they are led by priests and bishops who are approved and appointed by the Vatican, and they are steeped in a tradition they did not create but did inherit. And yet it would be naive and inaccurate to claim that all Catholics in North America are equally attentive to this tradition. For all of its claims to universality, Catholicism is also local. Thus the North American context affects how Catholics appropriate their faith. Indeed, the Catholicism of Canada, the United States, and Mexico differ from each other. Even though gay marriage is opposed by the official church, for example, Canadian Catholics may be more tolerant of it than Mexican Catholics are. And American Catholics may attend church at a greater rate than Canadian Catholics. Each country develops its own appropriation of the tradition, but each can easily be recognized as Catholic.

From the beginning of nationhood in North America, the Catholic Church has played an important role in education. In the United States, for example, the church runs the second largest school system, offering full educational services from kindergarten through university. Historically these institutions were staffed by priests and nuns who devoted their lives to Catholic education. Most were operated by religious orders such as the Sisters of Mercy and the Jesuits. In recent decades, with the decline in vocations in particular to the sisterhood but also to the priesthood and brotherhood, the schools have been staffed mostly by laypersons.

This system of education helped create a Catholic subculture. Millions of boys and girls were exposed daily to Catholic teachings, practices, prayers, liturgies, and discipline. Thus they lived both in their country and in their church on a daily basis. The effects of this extended to the family and the neighborhood, influencing the choice of friends, marriage partners, politicians, and cultural practices. In recent decades in many countries this subculture has declined, resulting in Catholics choosing public or non-Catholic private schools and many Catholic schools educating many non-Catholic students.

The church in North America has made another contribution to society by building a network of hospitals and nursing homes that serve a wide public. Taking its lead from the Jesus who healed the sick and empowered the poor, historically the church has created institutions that serve vulnerable populations. In some eras and places, the church has

been the sole social net to serve the needs of communities. Often these services are rendered to Catholics and non-Catholics alike.

Other Religions

The church has been described traditionally as one, holy, catholic, and apostolic. These characteristics need not be sacrificed in an attempt to acknowledge the value of other religions. Clearly, adherents of many religions live in North America. The Catholic Church, therefore, considers the effects of religions encountering each other on a daily basis within North America and elsewhere. In this regard, the Catholic Church has witnessed periods in its history of both tolerance and intolerance in its understanding of non-Catholics and non-Christians. For much in its history it has denied the value of other religions relying on the assurance of the scriptures that Jesus was the sole way to salvation.

Although a tradition of exclusivity of salvation took shape, it was sometimes softened by more conciliatory stances. The Second General Council of Nicea, for example, in 787 held the tolerant position that Jews who did not wish to convert to Christianity should be allowed to live openly as Jews. Again in 1076 Pope Gregory VII wrote to the Muslim king of Mauritania that Muslims and Christians worship the same God in different ways. However, this tradition of relative tolerance was countered by a number of rigidly intolerant claims. For example, in 1302 Pope Boniface VIII held that “We are required by faith to believe and hold that there is one holy, Catholic and apostolic Church; we firmly believe it and unreservedly profess it; outside it there is neither salvation nor remission of sins.” The Council of Florence in 1442 continued this intolerant approach, claiming that those who were not living within the Catholic Church would be condemned to hell unless they converted before their death. The Council of Trent (1545–1563) dealt with the issue by speaking about a “baptism of desire” for those who, through no fault of their own, were deprived of the formal sacrament of baptism but still may be saved. A mediating tone echoing Trent was struck further in the nineteenth and twentieth centuries. It excused those who were ignorant of the truth from culpability. Pope Pius IX (1846–1878) again reiterated that invincible ignorance was cause for exoneration. Pope Pius XII (1939–1958), in the encyclical *Mystici Corporis* (1943), wrote that non-Christians could be saved if they were bonded to the church “by some unconscious yearning or desire.”

Although the *Nostra Aetate* (“Declaration on the Relationship of the Church to Non-Christian Religions”) is the

shortest produced by the participants of the Second Vatican Council, it deals with the question of the relationship between the Catholic Church and the other major world religions. A terse document that recognizes the positive elements in the world religions and thus commenced a new era in ecumenism, it was more a movement to openness than a plan of action. It signaled an openness to dialogue, beyond the world of separated Christian churches, with those who do not recognize Jesus Christ as “the way, the truth and the life” (John 14:6) in any exclusive way.

Since Vatican II (1962–1965) the church has engaged in sincere and open dialogue with other religions in the hopes of better understanding, greater tolerance, and relationships that benefit each religion and do not condemn the other.

The church’s Good Friday liturgy provides a useful example of the church’s desire to reach out to all. Four of the general intercessions prayed during that liturgy indicate the church’s intentions and hopes for Christians, Jews, non-Christians, and nonbelievers. These prayers articulate the church’s desire for all people to find their spiritual fulfillment, regardless of whether they profess faith in Christ. These characteristics need not be sacrificed by a theology that includes explicit consciousness of other religions for the other major religions are also loci in which the encounter between the divine and the human takes place. This disposition was first articulated in Vatican II, in which the church declared, “The Catholic Church rejects nothing which is true and holy in these [other] religions.” This positive assessment was reaffirmed by Pope John Paul II, who described other religions as “so many reflections of the one truth” and who detected the spirit of God in non-Christians.

Conclusion

Catholic heritage has touched virtually every aspect of culture and society. It has shaped European history deeply, but also influenced a community of believers in North America that make up a sizeable portion of the population. Long established in Canada alongside Anglicanism and Protestantism, Catholicism, especially in French-speaking regions, has informed the life of the country. Sometimes misunderstood and for much of history outsiders to a Protestant-dominated culture in the United States, Catholics have made significant contributions to the fabric of the country and today make up the largest population of any one religion. The dominant religion in Mexico, it would be difficult to understand the history and culture of the country without an understanding of Catholicism. Claiming a

lengthy and rich heritage, Catholicism will continue to influence North America in the twenty-first century and beyond.

Romanticism

The term *Romanticism* is used to encapsulate a variety of trends across several areas including art, literature, philosophy, and religion. An intercontinental movement, romanticism is often seen as a response to the stark rationality of the Enlightenment, an eighteenth-century intellectual movement that emphasized reliance on the mind and reason as the sole source of knowledge and experience. Romanticism, in response, tended to exalt the emotional experience of life, particularly through the individual’s experience of nature (often personified as “Nature”). Those individuals, groups,

and intellectual themes that scholars would label as “romantic,” however, represent an eclectic amalgamation. In the context of religion, “romantics” could be found within traditional religious movements (such as Christianity) and outside of them as well. Although they thought about religion differently, these individuals were united by some themes. Many romantics viewed nature as a divine text that revealed sacred truths. Another theme that united romantics was religious loss and religious ambiguity. Although they responded to loss and ambiguity differently, many romantics were dissatisfied with traditional religious explanations of reality and, especially in the United States, sought new answers in new places. Out of this feeling of loss and ambiguity, however, romantics as a group tended to shift their conceptions of a God that existed externally to the internal, divine qualities of the individual mind. Many U.S. romantics (and European ones as well) also found modern industrialization to be the culprit for religious loss and ambiguity. They substituted the industrialization of the eighteenth and nineteenth centuries into a reinterpretation of the Christian mythos of humanity’s fall into sin. Industrialization in the romantic version separated human beings from each other, from nature, and from “God” (as the term was variously defined). Romantic religious impulses, although often downplaying the presence and activity of the supernatural in favor of the natural, were expressions of a longing for God (if only the God to be found within oneself), natural innocence, and communal relationships.

In the United States, although romantics were united by similar intellectual emphases, romanticism was expressed in diverse ways. Often this diversity depended on regional variation. In the national and antebellum United States, there were three main types of romanticism: New England transcendentalism, northern sentimental romanticism, and southern sentimental Christianity. Although these were the predominant expressions of romanticism, other minor expressions (such as the Mercersburg movement) also demonstrated how much romantic ideals infiltrated religious thought in the nineteenth century.

New England Egalitarian Romanticism

Much of New England transcendentalism was an egalitarian romanticism that developed out of a combination of German philosophy, English literature, democratic political thought, and Unitarian Christianity. German philosophy, after Immanuel Kant especially, tended to focus on questions

about the relationship between human subjects and their objects. In addition Humean skepticism about the perception of things added to the Kantian critique of empiricism to produce in romantic thought a skepticism about religious dogma and institutions that did not destroy a desire to find spiritual meaning through one’s own experience of the world. English literature from romantic authors and poets such as William Wordsworth, Samuel Taylor Coleridge, and Thomas Carlyle, provided New Englanders with a foundation for an approach to nature and human society that elevated humanity’s relationship to and within nature over the industrialization of Western society. Because industrialization removed people from nature, human society was falling from a pristine state of living in nature to one in which human beings needed to recognize their sinfulness and work toward a more beautiful, mature society. The democratic political thought of John Milton and John Locke was another stream in the development of New England transcendentalism. Emphasis on the political primacy of the individual found expression in the philosophical tenet of self-reliance championed by these northern romantics. Many of them, however, rejected Locke’s empiricism. Unitarian Christianity was also an important font for New England egalitarian romanticism, but more often, Unitarianism functioned as a foil instead of as a foundation. Many romantics coming out of Unitarianism considered it to be too socially conservative despite its liberal ecclesiology. Unitarianism, for many, was spiritually “cold” and overly rational, although these romantics also balked at the emotionalism of evangelical revivals. Not all of the New England egalitarian romantics, however, left Unitarianism.

Many of the romantics in New England were transcendentalists. Transcendentalists had little organization beyond a few journals (such as *The Dial*), the Transcendentalist Club, and communal living arrangements such as Brook Farm and Fruitlands. Although having disparate beliefs and social outlooks, the transcendentalists emphasized the presence of divinity existing within each human being. This divinity (often still referred to as *God*) powered the self and was best fostered without the external control of religious institutions.

Egalitarian Romanticism and U.S. Culture

The democratic nature of New England egalitarian romanticism led many of the romantics to be involved in the social causes of the day. Some of the transcendentalists were very involved in attempting reforms in government

and education and advocated the importance of temperance. Others were engaged in matters of equality and justice and the abolition of slavery. Unitarian minister and transcendentalist Theodore Parker actively resisted the 1850 Fugitive Slave Law that required federal marshals to seek runaway slaves in the North and return them to their owners in the South. Parker was involved in several cases of attempting to release slaves held by federal marshals. In the case of Anthony Burns, Parker was arrested for the failed attempt to free Burns; the charges against Parker were later dismissed. He was also a member of the “Secret Six” who had provided funding to John Brown for his preparations to attack the federal armory at Harper’s Ferry, Virginia.

Although other romantics were not as actively involved with reforms concerning slavery, some of them were very vocal about the need for abolition, the praise antislavery advocates were due, and the condemnation of those involved in slavery. Their comments on the national struggle over slavery were often couched in religious terms. After the failed raid on Harper’s Ferry, for example, both Ralph Waldo Emerson and Henry David Thoreau referred to Brown as an angel and claimed that his actions were divine. Thoreau even likened Brown’s death to Christ’s crucifixion.

The romantic impulse was not just a constructive force when it came to U.S. culture, however. In the works of Herman Melville, for example, romanticism also became the means to challenge the ambiguities of U.S. culture and the inadequacy of evangelical Protestantism to provide a workable vision for U.S. democracy. Melville’s works, such as *Moby Dick*, revealed the violence of U.S. culture and postulated the dangers inherent in a democratic society that did not value self-reliance. In *Moby Dick*, the name of the ship, the *Pequod*, evoked the violence of the Pequot War (1637), but the *Pequod* was also a microcosm of a democratic society made up of various faiths and ethnicities. Despite the promise of this democracy, the ship is a slave to its captain’s maniacal obsession with the great white whale. Melville’s vision of U.S. culture is much darker and more pessimistic than is that of Walt Whitman, but they formed from the same romantic impulse.

Many New England egalitarian romantics moved away from historical Christianity into other forms of religiosity. Not many of them, however, abandoned a worldview that included the spiritual. The importance of the individual, the need for self-reliance, and the hope for U.S. democracy were all part of a romanticism that still sought religious explanations and answers for how to exist in the world.

Northern Sentimental Romanticism

Although many of the New England transcendentalists turned to forms of religious expression different from Christianity, others followed a romantic lead into sentimental expressions of Christian life and piety. This sentimental turn often included a liberalizing of Calvinist theology and an emphasizing of domesticity. These sentimental romantics were often very prolific and included writers of fiction (such as Harriet Beecher Stowe) and ministers (such as Horace Bushnell and Henry Ward Beecher). Because of the decrease in evangelical political power after the American Revolution, ministers and other evangelicals used the trope of nostalgia in the context of the Victorian home to understand this loss of political power and to attempt to recapture some of it. The power of character and the importance of personal influence were the virtues this group of religious authors extolled.

Sentimentalists emphasized the importance of the domestic sphere in the production of good Christians and good U.S. citizens as well. The rise of industrialization and the growth of a market culture in the United States participated in the bifurcation of society into public and private spheres. Specialization of tasks and the decreased time necessary for household work gradually moved many women from the workforce to the home with time to become creators and consumers of culture. With the preponderance of men in the workforce and women in the home, sentimentalists gendered the domestic sphere feminine and the business sphere masculine. Americans partially conceptualized this separation in sentimentalized notions of character. The public sphere was viewed as an arena where character was vitally important for moral relationships in commerce. Ideologues turned to the home and mothers to nurture character in male children especially so that when they matured and entered the public sphere they would act ethically in business dealings. Scholars have referred to this conceptualization as “the cult of true womanhood.” Women were supposedly untainted by the immoral nature of the business world, so it was believed that they would be more pious and more able to pass on the virtues of morality and character.

Sentimental Theologians

The “cult of true womanhood” and the elevation of the moral authority of the domestic sphere were combined with the rise of a domestic piety that sentimentalized children and their importance. Although evangelicals nostalgically looked

back to the familial piety of the Puritans and colonial Americans, they developed a new type of domestic piety that shifted notions of children and conversion. Conversion, which Puritans had viewed as an instantaneous, became a process that one moved through throughout life. Sentimentalized children became spiritual guides. Harriet Beecher Stowe's Little Eva from *Uncle Tom's Cabin* is a good example of this type of domestic, sentimentalized spirituality that emphasized the divine nature of children.

Bushnell is perhaps one of the most noted of the sentimentalist theologians. For Bushnell the romantic emphasis on nature was best understood in the domestic sphere. He claimed that women were naturally more religious than men and stressed connections between divine love and motherly love. Furthermore, the family itself was an organic unit meant to produce Christian development. Instead of accepting salvation as an instantaneous process, Bushnell argued that families should develop Christian character in children over time. Drawing on the romantic idea of the innate goodness of children, Bushnell argued that the Calvinist doctrine of depravity could actually work against Christian nurture. Bushnell's reliance on sentiment and the power of Christian nurture gradually moved him away from highlighting doctrinal correctness to propounding the power of Christian influence.

Sentimental romantics used the pulpit, theological writings, and the home to craft a new brand of evangelical religiosity. They also turned to fiction to spread this sentimentality. Stowe's *Uncle Tom's Cabin* was one of the most popular sentimental works in the nineteenth century, but it was not the only sentimental best-seller. Elizabeth Stuart Phelps's fiction, especially *Gates Ajar* and (the less popular) *Beyond the Gates* and *Between the Gates*, were also popular novels in the second half of the nineteenth century. The "gates" of Phelps's novels referred to the gates of heaven. Phelps's novels conceptualized heaven in terms of domesticity. She interpreted heaven in terms of familial piety and children. Scholars have noted how consolation literature such as Phelps's novels sentimentalized heaven as a domestic sphere to offer solace in the face of the massive numbers of death in the mid-nineteenth-century United States, many of which occurred in the Civil War. Heaven became the home of the soul after death—a place for women and children, and one's lost loved ones.

The power of one's moral influence was also stressed by sentimental romantics. Without the ability to coerce one's attendance at religious services or outward moral living, evangelicals began to emphasize the importance of having good moral behavior. Drawing on Scottish common sense

philosophers such as Thomas Reid and Dugald Stewart, these romantics believed that behavior started from the moral sentiments. Proper moral feeling expressed itself as proper moral action. In *Uncle Tom's Cabin*, for example, Stowe closes her narrative with an appeal to the Christians of the North to start the abolition of southern slavery by *feeling* right. "There is one thing every individual can do," wrote Stowe, "they can see to it that *they feel right*."

Historiographical Assessment of Northern Sentimentality

Historians have often been critical of this group of sentimental authors and ministers. Historian Ann Douglas, for example, is very disparaging of the works produced by sentimentalists. Sentimentality, for Douglas, obfuscated the challenges present in the antebellum United States and worked to soothe communities that had no political power. With the finalization of the disestablishment of religion in the United States, ministers found themselves as a marginalized community in shaping the political horizon. Without power, ministers turned to another marginalized group, women. According to Douglas, ministers and women authors used sentimentality as a way to create power through the notion of "influence"—a moral example to shape the men who worked in the masculine sphere of commerce. Influence, however, was actually a red herring that shifted the focus of intellectual thought from a strenuous critique of U.S. culture.

Other historians have challenged Douglas's assessment of New England sentimentality. Jane Tompkins believes that sentimentality was a powerful tool to encourage ethical action. Sentimental literature for these New Englanders was able to evoke the moral sentiment that one's audience would respond. In *Uncle Tom's Cabin*, for example, Little Eva's death is part of an ethical appeal for action in the cause of abolition (and to varying extent colonization) by merging Little Eva's death (and later Uncle Tom's) with the vicarious sufferings of Christ and Christian mythos about sacrifice. Stowe believed that proper feeling (as motivated by the fictional accounts of Eva and Uncle Tom) would find its expression in proper action. By appealing to the divine status of children and child-like characters, Stowe and others attempted to create a moral order in the United States.

Northern sentimental romantics responded to changes in the political, commercial, and religious situations in the United States by sentimentalizing and domesticating religion.

Their response was a conservative one politically. As evangelicals, they sought to maintain as much of their power as possible within a Protestant context. These romantics did not look outside Christianity for religious understandings of the world, but instead they reshaped their understanding of Christianity to the challenge of the modern age.

Southern Sentimental Christianity

Unlike New England transcendentalism and northern sentimentalism, the romantic impulse led southerners to more conservative interpretations of Christianity that were largely shaped by the experience of southern life and culture—particularly in response to how the reality of slavery shaped that culture. Notions of order (especially in terms of “natural” order) marked southern romanticism in distinction to other egalitarian types. In the southern romantic mold, reverence for nature meant reverence for societal order believed to be established by God and revealed in the Bible. “Nature” supposedly justified the patriarchal, agricultural lifestyle of southerners. Men considered women “the weaker sex.” Natural order, then, meant that women were to be subservient to men and that men were to paternally care for women. Romantic ideals in the South also justified racism. Anglo-Saxons were considered a superior race. This superiority, however, was not primarily meant to degrade other races. Anglo-Saxon enslavement of other races obligated whites to control others to teach them important aspects of Western culture (particularly Christianity) to elevate those races out of their degrading conditions.

Historian Michael O’Brien has argued that romanticism is an essential historiographical tool used to understand southern intellectualism. English Romantics such as Coleridge and Walter Scott influenced southern planters, southern journal editors, and even southern historians just as much, if not more, as they did New England transcendentalists. The way southerners interpreted English romantics, however, distinguished them from their northern, egalitarian counterparts. In Scott’s writings, southerners found the trappings of an imagined southern medieval period. From Scott’s medieval romances came such concepts as chivalry, honor, and societal position that elite southerners mapped onto southern society. The antebellum South of the United States had no medieval period, so one was invented as an intellectual construct to justify a hierarchical social order where rich, white males ruled over a society that existed according to romantic values.

Romantic tropes also influenced the writings of southern intellectuals. According to O’Brien alienation and melancholy are two modes that shaped the way southern intellectuals thought about themselves and their region. Alienation found expression in the notion of the South as an outsider to the larger United States. Southern politicians and intellectuals turned this alienation into a legitimation of southern culture. Southerners used romanticism as a way to self-consciously construct what constituted the South and southern culture. Evangelicalism was extremely important in this romanticization of the South. Romantics and evangelicals (although not mutually exclusive) shared beliefs about human and societal regeneration that resonated between systems and among those who espoused them. The acceptance of evangelicalism, according to O’Brien, was a precondition for accepting romanticism, which in turn was necessary for creating southern nationalism in the antebellum period of U.S. history.

Sentimentality and the Lost Cause

The religious and sentimental conceptions of southern nationalism continued into the post-Civil War period in the development of the myth of the Old South and the religion of the Lost Cause. The myth of the Old South was connected to the sentimental notions of southern identity before the Civil War. In the wake of the changes brought about by Reconstruction, the myth of the Old South reaffirmed the antebellum period as a time of honor, civility, and chivalry. Southerners wistfully conceptualized the South before the Civil War as a period of womanly virtue and gentlemanly dignity, overlooking the violence that permeated southern society, especially in the institution of slavery. The religiosity of the Old South was another trope that became useful in interpreting the South’s relationship to the North. Even before the Civil War the South had asserted its moral superiority over the North partly because of the prevalence of evangelicalism in the South but also because of the belief that the agrarianism of the South was more desirable because it kept southerners closer to nature than were the industrialized northerners. The belief that the South was more righteous in the sight of God than was the North carried into the myth of the Old South in the postbellum period.

The religion of the Lost Cause included many of the motifs of the myth of the Old South but was focused around the activity of the Confederacy’s armies and generals specifically. Despite losing the War between the States, southerners

valorized the activity of the Confederacy and its leaders and enshrined their memories as divine actors in a moral struggle. Southerners honored such important leaders as Robert E. Lee, Thomas “Stonewall” Jackson, and Jefferson Davis as saints and regarded fallen soldiers as martyrs. They were enshrined in stained-glass windows and museums; they were memorialized in song, ritual, and monument. The Lost Cause was a romanticized depiction of the past that allowed southerners to cling to the sentimental notions of southern culture and nationalism that developed in the antebellum period.

Persistence of Sentimentality in U.S. Evangelicalism

Both northern and southern sentimentality have continued to be a part of evangelical practice in the United States. Expressions of sentimentality are ubiquitous in various forms of modern evangelical popular culture. Christian romance novels, contemporary Christian music, and Christian inspirational or devotional literature abound with sentimental notions of a social order demarcated by guidelines for gender and the home. Domesticity in notions of the “Christian home,” marriage, and children finds expression in teardrop-eyed Precious Moments figurines, worship songs such as “Draw Me Close to You,” and the writings of popular evangelical authors such as Max Lucado.

Yet there have been changes as well. The boundaries present in the antebellum South between genders and races are much more fluid, and in some evangelical communities, in a state of flux. The notions of Anglo-Saxon superiority, although still present among certain groups, have largely vanished among most mainstream evangelicals. The “proper place” for women is much more open to debate than in the Civil War era, with evangelical women holding prominent positions in business and politics.

The Mercersburg Movement

Although many romantics in the United States evidence the influence of primarily English romanticism, other thinkers have demonstrated the impact of German romanticism. One example of this German–U.S. romanticism is the Mercersburg movement. The Mercersburg movement was the product of the thought of John Williamson Nevin and Philip Schaff, two mid-nineteenth-century professors at a German Reformed seminary in Mercersburg, Pennsylvania.

Nevin and Schaff built their theology from the thought of such German philosophers as Georg Wilhelm Friedrich Hegel and Friedrich Schelling. Nevin and Schaff took from these philosophers the belief that both nature and history were engaged in progression. From this position Nevin and Schaff argued that the history of Christianity also exhibited these qualities and that church doctrine was constantly evolving, although for Nevin and Schaff it evolved according to divine purpose. The Mercersburg theologians believed that both nature and religion were organic, and as the physical body developed and changed through life, the religious body changed and developed as well, striving toward an ideal expression of Christian unity. Neither Nevin nor Schaff accepted Hegel’s naturalist foundation; instead they Christianized some of his thought in developing this new approach to Christian history. Because both Nevin and Schaff believed that church history was a dialectical, organic process and that doctrine was a part of that evolving process, some conservative Protestants charged them as being overly Catholic or promoting heresy.

Nevin and Schaff, however, looked at the revivalism of nineteenth-century Protestantism as heretical. The emphasis on the power of the individual alone to understand religious truth, an important part of revivalism, was an affront to the Mercersburg theologians who saw the individual as participating in the universal truth revealed through the organic life of the church. The church in its specific historical context was a witness to the power and presence of Christ, a project larger than an individual’s private judgment. For Nevin and Schaff the individualism and static approach to doctrine present in revivalist U.S. Christianity represented a loss of the power of their view of Protestantism. Although it did not make much of a contemporary impact in religious thought, later Protestants developed similar ideas. Many people, however, remember Schaff more for his contributions to the development of U.S. church history as a field, rather than for his religious thought.

Religious loss and ambiguity in the face of the challenges of modern life led many Americans toward a romantic or sentimental response. In looking back to the past and questioning the morality of industrialization and the market economy, Americans sought religious answers to what they viewed as a religious problem. Those answers varied greatly from theologically conservative Protestantism to a spirituality that focused on the God within, but they all centered those answers around the individual’s relationship to nature.

S

Same-Gender Marriage

Although there is nothing new, historically speaking, about same-sex intimate partnerships, what is striking at the beginning of the twenty-first century is, first, their heightened visibility and increased social acceptability, and, second, the deeply divisive conflict within religious traditions about whether to grant gay and lesbian couples the freedom to marry.

This controversy is further complicated by the fact that when marriage is the topic, it is not always clear whether the topic under discussion is marriage as a personal intimate relationship, marriage as a civil contract accompanied by a wide range of economic, social, and cultural benefits (civil marriage is a heavily state subsidized and state regulated institution), or marriage as a religious activity. In U.S. history, the authority to regulate marriage (and its dissolution through divorce) has shifted decisively from church to state, so much so that most people now recognize that a couple is properly married only when a state license has been issued, signed, and recorded by the state. At the same time, religious traditions are heavily invested in the marital family, and clergy often function as agents of the state in officiating at state-recognized marriage ceremonies and signing marriage licenses. Nevertheless, it seems that “married in the eyes of God” requires further legitimation “by the hand of the state,” and the dynamic interplay, as well as confusion, among personal, civil, and religious meanings of marriage persists as the topic shifts to the eligibility of same-sex couples to marry civilly, religiously, or both.

Tolerance for Sexual Minorities

Since the 1970s, largely in response to a broad-based gay, lesbian, bisexual, and transgender rights movement, a massive cultural shift has been taking place, away from disdain and persecution of homosexual persons toward tolerance for sexual minorities and, even beyond, to affirmation of their equal moral standing and support for the legal recognition of their full citizenship status, including their right to enter into intimate associations, form families, and parent children. At the same time, because religion has been the primary conveyer of cultural norms regulating sexuality and family, almost every religious tradition is being pressed to revisit conventional assumptions about gender, sexual difference, intimacy, and family patterns, including Christianity, which has long been associated with sex-negative, patriarchal, and anti-gay sentiment.

This renewal effort, although strongly encouraged by some, is strenuously resisted by others. On the one hand, the Universal Fellowship of Metropolitan Community Churches, the Unitarian Universalist Association, the Central Conference of American Rabbis (Reform Judaism), the Ecumenical Catholic Church, OHALAH, the Alliance for Jewish Renewal, and the Reconstructionist Rabbinical Association have endorsed their clergy performing commitment ceremonies for same-sex couples. In addition, the United Church of Christ, the United Church of Canada, the American Baptist Churches, the Christian Church (Disciples of Christ), and various Religious Society of Friends (Quaker) meetings leave it to their clergy, congregations, or local governing bodies to decide whether to perform same-sex unions. The Presbyterian Church

(U.S.A.) and the Episcopal Church in the United States of America allow clergy to bless same-sex unions if these unions are not called marriages. On the other hand, other denominations, such as the Southern Baptist Convention, the Roman Catholic Church, and the Church of Latter-day Saints (Mormons), and parachurch organizations such as Focus on the Family and the National Association of Evangelicals, are opposed to recognizing nonheterosexual families and have supported political and legislative efforts to ban civil marriage for same-sex couples. During the 2008 election season, proponents and opponents of California's Proposition 8 spent in excess of \$75 million to secure or prevent the freedom to marry for same-sex couples, the most expensive ballot measure in this nation's history. Two other restrictive constitutional amendments were passed in Florida and Arizona along with an Arkansas measure that prohibits single adults, as well as same-sex couples, from becoming foster parents or adopting children. By November 4, 2008, in addition to the federal Defense of Marriage Act that Congress passed in 1996 to define marriage as the legal union of one man and one woman as husband and wife and to allow states the right not to recognize same-sex marriages performed in others states, some forty-four states have adopted statutes, constitutional amendments, or both, to ban civil marriage for same-sex couples.

Fundamentalists and Progressives

In religion as well as in politics, gender and sexuality are highly contested matters, so much so that Catholic and Protestant churches are struggling with internal splits between fundamentalists, on the one hand, who defend an absolute worldview of fixed certainties, including the patriarchal marital family as normative, and progressives, on the other hand, who value religious and social diversity, incorporate fresh insights into their religious worldview from the natural and social sciences and from social change movements about the meaning of human sexuality and its varied expressions, and actively promote gender and sexual justice as dimensions of a comprehensive social justice. The prospect of reconciliation between these two poles is unlikely, given the stark contrast in assumptions, values, and loyalties.

Interest in gaining the freedom to marry for same-sex couples has emerged for several reasons, including the ongoing effort to end legal and religious discrimination against sexual minorities. In 1999 the Vermont Supreme Judicial Court ruled that same-sex couples should be afforded marriage and family rights equal to those enjoyed

by heterosexual couples, and in 2000 the Vermont legislature created the legal status of civil unions, thereby granting same-sex couples all the rights and responsibilities of civil marriage except the name. In 2003 the U.S. Supreme Court in *Lawrence and Garner v. Texas* struck down anti-sodomy laws as unconstitutional, declaring that the state has no interest in banning private, consensual sex between persons of the same sex. Lesbians and gay men, like their heterosexual counterparts, have a constitutionally protected right to privacy in intimate relational matters, the Court ruled, and are "entitled to respect for their private lives." "The State cannot demean their existence," the ruling continued, "or control their destiny by making their private sexual conduct a crime." Another significant step took place in 2003 when the Massachusetts Supreme Judicial Court in its *Goodridge v. Department of Public Health* decision granted same-sex couples the right to marry, redefined state-authorized marriage in a gender-neutral manner, and pointed out that the right to marry does not mean much if it does not include the right to marry the person of one's choice, including a person of one's own gender. Other states have followed suit by providing same-sex couples with options of entering into a domestic partnership, civil union, or civil marriage, depending on the jurisdiction. By November 2009, six states guaranteed same-sex couples the freedom to marry civilly. However, forty-four states had statutes, constitutional amendments, or both that restrict civil marriage exclusively to heterosexual couples.

In addition to these public policy developments, two other factors have sparked the interest of gay and lesbian couples in acquiring marriage eligibility. First, the HIV/AIDS pandemic has underscored the social vulnerability of same-sex couples who, because unmarried, have lacked a wide range of partnership protections, including rights to hospital visitation, medical decision making, making burial arrangements, and claiming spousal inheritance. Second, a baby boom among gay and lesbian couples, aided by access to alternative reproductive technologies, has spurred interest in acquiring legal standing and protections for parents as well as children. Securing the right to marry civilly is regarded as the most commonly recognized cultural means to achieve these ends, thereby promoting greater stability and support for same-sex families.

At the same time, the dominance of the marital family has been waning as other family patterns become more common, including single-parent families, childless couples, cohabitating couples, and blended families. The legal system

is increasingly granting legal standing to diverse intimate and familial relationships, both heterosexual and same-sex, and recognizing them as comparable to the marital family, especially because they share similar purposes in facilitating human bonding, economic and other modes of sharing, and the nurturing of children and other dependent parties. Because same-sex couples already “do the work of marriage” by sustaining intimacy over time, proponents of same-sex marriage argue that it is a modest step to grant these relationships full moral and legal standing. Moreover, in response to the feminist call for egalitarian gender relations, marriage should be viewed as a partnership between co-equal persons. Philosopher Richard Mohr, for example, insists that once gender distinction is no longer part of the content of marriage from a legal perspective, then there is no logical basis for requiring that marriage legally unite persons of different genders.

The religious affirmation by some denominations (United Church of Christ, Unitarian Universalist Association, Reform Judaism, and Universal Fellowship of Metropolitan Community Churches, among others) of same-sex partnerships distresses religious conservatives whose opposition to same-sex marriage is grounded in essentialist claims about marriage and family. Traditionalists regard marriage as a transhistorical institution that by definition is exclusively heterosexual, the joining of one man and one woman for the purpose of procreation, a natural and divine mandate that only heterosexual couples can fulfill. Biblical mandates are cited that encourage procreative heterosexual marriage, forbid divorce, oppose abortion, and condemn same-sex eroticism as willful moral depravity and intrinsically sinful. To redefine marriage as an emotional, committed bond between two persons, including two men or two women, threatens to negate the meaning of marriage and family, traditionalists argue, because marriage equality would erase gender differences. Glenn Stanton, for example, argues that gender would be nothing unless such real differences exist between men and women that would require the other sex for completion, Marriage based on heterosexual gender complementarity requires, therefore, a male and a female participant. This gendered arrangement benefits its practitioners insofar as it especially requires young men and women to discipline their sexuality and become mature, responsible community members. Marriage also benefits society as the basic building block of the social order insofar as couples share their resources and form a private “intimate welfare system.” By encouraging adults to care for each

other and their dependents, a marriage culture means that fewer people will need to turn to the community or state for financial and other kinds of support. The heterosexual family, traditionalists insist, is also the normative context in which to nurture children, who have a spiritual as well as psychological need for nurturing by a father-mother dyad, so that they can be properly socialized and prepared for adult (heterosexual) responsibilities.

For these complex reasons, traditionalists argue that marriage deserves special status and protection as an exclusively heterosexual institution. Some argue even further that no actual legal discrimination exists under U.S. law because gay men and lesbian women can already exercise the freedom to marry as long as gay men marry women and lesbians marry men. Finally, when it comes to sexuality, marriage traditionalists argue, sex is moral only when it is heterosexual, marital, and open to procreation. Homosexuality is sinful and non-biblical and indicates willful gender nonconformity (or at least gender confusion). Neither church nor state should encourage gender deviance or sexual immorality.

In turn, advocates for same-sex marriage respond that a valid marriage does not require gender difference, much less gender inequality. A patriarchal marriage model perpetuates an outdated, morally questionable pattern of a dominant husband, even when benign, who is entitled to rule over “his” dependent wife. Defining marriage as exclusively heterosexual maintains this gendered hierarchy as normative. Moreover, the marriage ban places same-sex couples outside the marital family, but as importantly, it keeps heterosexual couples pinned into an unethical dominant-submissive pattern of social relating that naturalizes power inequities between men and women and runs counter to both democratic values and religious commitments to the dignity and worth of all persons. Marriage advocates also observe that the core religious values associated with marriage (committed love, economic sharing, and nurturing of children and other dependents) are also central for same-sex couples seeking legal recognition for their intimate partnerships or a blessing by their religious tradition.

Conceptual Shifts

Enlarging the marriage paradigm to include same-sex couples requires two conceptual shifts. The first step is to rethink marriage as a covenantal relationship or intimate friendship between two erotically attracted individuals who pledge to live together as life partners. Although children are

often a blessing, a marriage is complete as a committed bond of respect and affection between the two partners, an insight in keeping with the Protestant emphasis that the primary purpose of marriage is unitive, not procreative. The second step is to rethink sexual norms and challenge the exclusivist assumption that there is only one right way to be sexual. On the contrary, diverse human sexualities exist, sexual orientation is morally neutral, and what matters ethically is not identity, but rather character and conduct. From this perspective, same-sex love and intimate bonding, making homosexual love is in essence as right and morally good as heterosexual love. The morally relevant point is the shared human need and capacity for physical, emotional, and spiritual intimacy. The morally irrelevant point is the gender of the persons in relation.

In its 2003 *Goodridge* decision, the Massachusetts Supreme Judicial Court ended that state's marriage exclusion by granting same-sex couples the freedom to marry civilly. In 2008, both Connecticut and California instituted civil marriage for gay and lesbian couples (soon followed by New Hampshire, Vermont, Iowa, and Maine), but a November 2008 referendum, under challenge by January 2009, has rescinded the freedom to marry for same-sex couples in California. Meanwhile, New York State and Rhode Island recognize same-sex marriages performed elsewhere, as well as civil unions (Connecticut, New Hampshire, New Jersey, Oregon, and the District of Columbia). Three other states (Hawaii, Maine, and Washington) provide some spousal rights for same-sex couples within the state. Although marriage equality marks a change in the history of marriage law, it maintains the fundamental value of this common cultural practice. In this regard, the movement to recognize same-sex partnerships is a conservative, even traditionalizing move, part of the ongoing effort to promote the basic rights and responsibilities of diverse citizens within a pluralistic society in which some partnerships and families are formed by same-sex couples.

Advocates for this change argue that the freedom to marry is necessary to affirm the full humanity of gay men and lesbians by conceding that they, too, enter into significant human bonds of care and intimacy. The 1999 Vermont Supreme Court *Baker v. Vermont* decision calling for marriage equality noted, "The past provides many instances where the law refused to see a human being when it should have." In acknowledging that gay people also love, form families, and would benefit from the protections and entitlements that civil marriage offers through the state, the court concluded,

"When all is said and done, [this is] a recognition of our common humanity."

Conclusion

Arguments against same-sex marriage pivot on disapproval of homoeroticism and the rejection of same-sex love as morally inferior to heterosexual love, whereas proponents of marriage equality counterargue that viewing heterosexuality and homosexuality as binary opposites reinforces heterosexual supremacy, the contestable presumption that intimate relations and family life can only rest secure on heterosexual pair-bonds alone. In contrast, once the patriarchal cultural construction of gender hierarchy is discredited, and once marriage is valued as a protective, stabilizing context for intimacy and ongoing care between partners with or without dependents, then justifications for excluding same-sex couples melt away. By discarding conventional notions regarding gender complementarity (code language for male superiority and female submission) or assumptions that erotic bonding requires "opposites" to attract, proponents of marriage equality affirm the moral goodness of all social and sexual relations between consenting adults based on mutual respect and care, a fair (and flexible) sharing of power and resources, and commitment to the health and well-being of the intimate partners, and to strengthening of their community. Religious advocates of marriage equality argue that although neither marriage nor sex is necessary for human fulfillment, it is wrong to exclude an entire class of persons from these routes to intimacy and shared commitment. In shifting the focus of attention away from the gender of the partners in relation, progressives seek to refocus attention on the character and moral quality of their relationship and its contribution to the common good.

Advocates of marriage equality highlight that the proper role of faith communities is to educate and equip gay and non-gay people alike for relational authenticity and justice in their intimate and social relating. Such a stance is highly disruptive for traditionalists, but marriage advocates argue that welcoming same-sex partnerships and families stands in continuity with the core religious values of love and justice. At the same time, this stance also lies in discontinuity with much received tradition insofar as ethical sex is no longer considered exclusively procreative, good marriages are not male dominant, and the "right kind" of families do not conform to a single pattern. Postmodern sensibilities about marriage and family affirm diversity and difference as assets that

enrich personal and communal life rather than as problems to be fixed or subjected to religious controls.

Santería

The word "Santería" is derived from the Spanish word *santo*, which literally means "the way of the saints." The term became popular during the 1940s in Cuba as a pejorative word employed by Catholic clerics to signify what they considered to be a syncretism of African traditional spirituality and the veneration of Catholic saints. In reality, Santería is the product of a survival technique by the enslaved Yoruba people, who masked their deities, known as orishas, behind the "faces" of Catholic saints. This allowed them to continue worshipping their Gods while under the constant supervision of their overlords. The clerics may have thought that the simple-minded superstitious slaves were venerating the saints,

but in reality, the slaves knew full well who they were worshipping. In their minds, it was the clerics who lacked knowledge and truth about spiritual matters. Today, some prefer the terms *lucumí* (friendship) or *regal de ocha* (Rule of Ocha), rather than the Christian imposed name *Santería*.

Santería is an earth-centered religion lacking any centralized organization that originated as the faith of the oppressed. Over half of all Africans brought as slaves to the Americas worked on sugar plantations throughout the Caribbean, specifically Cuba. As the faith of the oppressed, Santería is concerned with the everyday trials and tribulation of life, including issues of health, money, or love. The goal is to provide assistance to anyone wishing to find and live in harmony with the destiny they were assigned by ensuring that the proper rituals needed to navigate life are performed. One does not become a devotee of Santería through some profession of faith, but by performing the rituals. Neither orthodoxy (correct doctrine) nor a homogeneous belief system are as important as conducting the correct ritual practices.

Historical Development

The roots of Santería can be traced to when the Yoruba people were brought to Cuba as slaves. The first African slaves arrived on the island in 1511. Each city had its own orisha, but slavery forced them to live together, creating a pantheon of orishas. Different city-states' religious practices began to merge as the different orishas developed familial relationships. These spiritual traditions were preserved because (1) importation of Africans continued until 1886, bringing newer Africans to maintain the original tradition; (2) a system called *cabildos*, or mutual aid societies, maintained ethnic traditions and served as a forerunner to the house-church; and (3) since 1520, runaway slaves formed their own "free" societies in remote mountain areas where they could practice their faith apart from the Spanish overlords.

The African faith of the slaves occurred on an island steeped in an Iberian Christianity shaped by (1) a Spanish folk Catholicism that emphasized holy personages such as the Virgin Mary and the saints rather than holy sacraments, (2) a Counter-Reformation that viewed itself as the sole interpreter of reality, and (3) a faith forged by centuries of struggle against Muslim rule. This form of Catholicism blended with the African orisha worship practices of the Yoruba (forbearers of modern-day Nigeria). Santería was later modified by nineteenth-century Kardecian spiritualism

(named for the pseudonym of the movement's founder, Allan Kardec), which originated in France but was made popular in the Caribbean during the 1850s. Kardecian spiritualism attempted to use observation and experimentation in order to access the spiritual world and benefit from that access. The importance of Kardecian spiritualism is that it revived ancestor worship among African slaves that until then was almost nonexistent. Although there are different historical strands in the establishment of Santería, it would be an error to relegate the faith to the realm of the syncretic. Santería is its own reality with its own worldview, which stands apart from the different strands that originally contributed to its formation.

Followers of Santería have been linked to criminal activities, and thus, persecuted. For example, in 1919, a *brujero* (witch doctor) craze swept Cuba, causing mass lynchings based on rumors that *santeros/as* (priests/priestesses) were kidnapping white children and offering them up as sacrifices. Until 1940, involvement in Santería was a punishable crime. Even after the 1959 Castro revolution, devotees during the 1960s faced arrest, imprisonment, and death. Persecution ceased in Cuba by the 1980s, as the faith was relegated to the folkloric for tourist benefits. As Cuban refugees came to the United States, they brought Santería with them. Many Cubans who did not participate in the faith on the island found Santería as a way of maintaining an identity with their national heritage. In 1961, Mercedes Noble is credited with ordaining the first Cuban *santera* in New York City. Still, the faith somewhat remained underground until June 11, 1992, when the United States Supreme Court ruled that Santería devotees had a constitutional right to engage in animal sacrifices (*Church of Lukumi Babalu Aye v. City of Hialeah*, 508 U.S. 520 [1993]).

The Orishas

Ashé can best be understood as a sacred energy which becomes the power, grace, blood, and life force of all reality, embracing mystery, secret power, and divinity. As a transcendent world force, it is pure power; it is absolute, illimitable, nondefinite, and nondefinable. This energy current, which is amoral, is unable to be seen or personified. It is a neutral cosmic energy undergirding every aspect of existence. All that has life or exhibits power has ashé. The movement of the wind, the elements of plants, fire, and moving water expend ashé. When a candle is lit to an orisha, the act releases power—the power of fire, smoke, burning wax. This ashé is able to feed and empowers the orisha. The most

potent *ashé* can be found in the spilling of sacrificial blood. Through *ashé*, all things came into being, and all things will eventually return to *ashé*. *Ashé* (the impersonal force), the substance of *Olodumare*, is the personified creator of all that is, and all that is, is an expression of *Olodumare*. Originally, whenever anyone needed anything, they would have to come to *Olodumare* for *ashé*. With time, *Olodumare* grew weary of this arrangement and departed. He left intermediates, called *orishas*, in charge. Today, no one worships or sacrifices to *Olodumare*, for he is too high to intermingle with human affairs. Humans instead approach the *orishas*.

The *orishas* are the quasi deities of earthly forces. As secondary gods, they rule certain parts of nature. To worship an *orisha* is to give reverence to the force of nature the *orisha* represents. No one knows how many *orishas* exist. Some claim there are over 1,700, while others list them at four hundred plus one (four hundred is the mystical number signifying a multitude). Only a handful made it to the Western Hemisphere, of which eighteen became the most worshipped within Santería. They are as follows: *Obatalá* (Ruler of the Gods, Lord of the head and King of purity), *Eleggua* (Messenger of the Gods, Lord of the crossroads and trickster), *Orúnla* (God of divination), *Yemayá* (Goddess of the sea and Mother of the fishes), *Chang* (God of thunder), *Oggún* (God of war and Lord of iron), *Oshún* (Goddess of love), *Ochosi* (God of the hunt), *Babalú-Ayó* (God of healings and Lord over illnesses), *Oyá* (Goddess of cemeteries), *Osain* (God of nature and Lord of the forest), *Olocun* (Queen of the ocean's depths), *Aganyú* (God of the volcano and patron of travelers), *Oko* (God of agriculture and Lord of the harvest), *Inle* (God of science and the androgynous healer), *Ósun* (Messenger of *Obatalá*), *Obba* (Goddess of wifely role and patron of neglected wives), and the heavenly twins, *Ibeyi*. Within the United States, special attention is given to the first seven *orishas* named above. They are referred to as *la Siete Potencias Africanas* (the Seven African Powers).

The lives of the *orishas* are recounted as legends known as *patakis*. These *patakis* are not literally interpreted; instead, they are used to provide guidance in the here and now. When they are recited, each *orisha*, person, animal, or earth object signifies a meaning that points to a truth existing beyond the story. *Orishas* and humans exist in a codependent relationship where humans need the *ashé* of the *orishas* in the form of protection and guidance, while the *orishas* need to be fed *ashé* in the form of sacrifices and rituals. Without *ashé*, humans would live aimless lives and the *orishas* would cease to exist. When offering a sacrifice to an *orisha*, the believer is

making an offering to the part of *Olodumare* exemplified by the particular *orisha* for whom the sacrifice was made.

The Rituals and Oracles

Santería can never be understood as a corpus of doctrines, but rather, as a set of rituals. Doctrinal purity is unimportant; what matters is the proper conduct of the rituals. Because Santería is a terrestrial religion, rituals using the earth's elements are central. These rituals rely upon objects like herbs, stones, trees, soils, seashells, water, and so on. It is believed that the earth provides all that is needed to live a full and abundant life. These rituals take place at a *casa de santos* (house of saints), which is also referred to as an *ilú* (home or spiritual community). The *ilú* is usually located in a room or basement within the house church. People come to the house of the *santero/a* seeking a consultation or to perform a ritual. The *santero/a* becomes the *padrino* or *madrina* (godfather or godmother) of the flock who regularly comes to their *ilú*. Those initiated into the faith are called *iyaw* (bride). The high male priests who are able to perform duties (specifically within divination) beyond the ability of *santeros/as* is called the *babalawo* (father of mystery).

There are four basic ways to enter the faith. The first is by obtaining the beaded necklaces called *elekes*. The colors and patterns of the *elekes* correspond to the *orishas*. They protect the wearer for as long as the *elekes* are worn. The second way is by receiving the *Eleggua*. A graven image of *Eleggua*'s head is made and placed close to the front door of the house to protect it from evil spiritual forces. The third way is by receiving the talismans of the warriors called *guerreros*. Four *orishas* (*Eleggua*, *Ochosi*, *Oggún*, and *Oshún*) are the *guerreros*. While the *elekes* protect from dangers, the *guerreros* attack enemies. And finally, one enters the faith by making saint, known as the *asiento* (seat). This is a process by which the individual learns the mystery of the faith and becomes a *santera/o*. The person's mind and body are conditioned to be possessed by supernatural powers and serve as a seat for the *orishas*, who would "mount" them in the form of spiritual possession.

Santería is a dance religion where the festival of playing the drums, called the *bembe*, invites the *orishas* to come and take spiritual possession of some of the participants. In this way, the *orishas* can communicate directly with their devotees. Another way of communicating with the *orishas* is through divination. At the beginning of time, every "ori" (head) prostrated itself before the supreme creator, *Olodumare*, to negotiate its assigned fate on earth. Although fate is

preordained, it is not predetermined. Through Orúnla, who was the only orisha present when fate was handed out, the individual can safeguard against evil spells or spirits designed to wreak havoc upon his or her assigned fate.

The purpose of divination is not to foretell the future, although this may occur. The purpose of divination is to ensure harmony exists with one's destiny. There are three divination systems in existence. The first system is known as the four coconut pieces, or obi (coconut). The dead, known as egun, can serve as spirit guides. These guides can be one's ancestors but need not be a deceased family member. They can be old Congo slaves, gypsies, or Native Americans. Communication with the egun is possible through this yes-and-no divination system known as obi. Anyone who made Elegguá can cast the four coconut pieces, and depending on how they land (curve side up or down), five possible answers can occur. The answer to the yes-or-no question asked can be as follows: (1) tentative yes, but try again; (2) yes, but try again because of error made during the divination procedure; (3) positive yes; (4) no; and (5) no and beware of danger.

The sixteen cowrie shells make up the second form of divination, also known as the regal de ocha. Santeros/as can cast the sixteen shells, and depending on how they land (shell opening facing up or down), they will correspond to a particular odu, which is a specific legend, proverb, verse, or sacrifice. As many as 256 possible combinations can occur, each signifying a complex odu which requires the santera/o to interpret. The most elaborate form of divination is known as the Ifá, and only men who are babalawos can use this system. Through the casting of cowrie shells on a rectangular wooden tray eight times, he creates one of a possible sixteen binary patterns. From these patterns, the babalawo is referred to an odu that can have as many as sixteen verses. It is his job from as many as 4,096 possible interpretations (conservatively estimated) to correctly divine the solution for the problem being asked of Ifá.

Conclusion

Santería attempts to find for the individual harmony with what is seen and unseen. But these ancient goals are in the process of being modernized and mainstreamed. Once the religion of the oppressed, many followers in the United States today are from middle and upper economic classes. Not surprisingly, emphasis on rituals like animal sacrifices is becoming less common. For some devotees, the future of the faith will be its institutionalization. What may presently be occurring is the Americanization of an African spiritual

tradition which took root in a Cuba steeped in Spanish-folk Catholicism that made its way to the United States because of the 1959 Cuban Revolution.

Science

Science, or the systematic study of nature, has had a long and complex relationship with religion in general, and with specific religious movements, throughout U.S. history. Some of the most famous events in U.S. history, such as the 1925 Scopes "Monkey" trial in Tennessee, have been substantially concerned with questions about how science and religion relate to one another. Many present-day issues, such as those concerning health, uses of technology, and bioethics, continue to engage the questions of what religion and science have to do with one another.

Answering the question about the relationship between religion and science is not an easy one, partly because there are so many different religions as well as many sciences. Answering a question like this one is also complex because what "science" is has changed throughout history. On one level, science is about a set of rules for understanding how the world works. Scientific theories rely on certain kinds of explanations that can be tested through experimentation and that are thought to explain why things occur the way that

they do. Science discovers the laws that govern how nature works. On another level, science is the set of practices that a community of trained individuals—scientists—is engaged in. This community scrutinizes and regulates the training of new scientists and the publication of their results. Religious practices have also changed in response to new scientific discoveries and inventions, ranging from germ theory, to atomic weapons, to air conditioning.

Talking about a relationship between science and religion is so complex because sciences and religions both make claims about what the world is and how it works, and because religions and sciences are practiced by communities, each with their own criteria for membership and participation and their own sets of values. In some cases, these have been compatible. For example, in 1951, Pope Pius XII delivered an address in which he stated that some scientific theories, such as the Big Bang theory in cosmology (at that time, not yet a universally accepted scientific theory) could be consistent with a Catholic understanding of nature. In other cases, the relationship has not been harmonious. Many fundamentalist Protestant groups in the United States have long rejected the biological theory of evolution.

Defining Science, Religion, and Their Relationship

Many people have tried to characterize the relationship between science and religion. U.S. theologian Ian Barbour has proposed four categories of relationships: (1) *Conflict*, in which science and religion provide directly contradictory answers to the same questions; (2) *independence*, in which science is concerned with certain types of questions (that is, how do atoms split?) and religion with other questions (for instance, is it ethical to use atomic weapons?); (3) *dialogue*, in which science and religion provide different, but not merely contradictory answers to the same questions; and (4) *integration*, in which science and religion work together to come up with a single answer to questions. Examples of each of these four can be found in U.S. history. The U.S. paleontologist and biologist Stephen Jay Gould (1941–2002) argued that religion and science occupied “nonoverlapping magisteria” or NOMA. This is an example of the independence model. Gould claimed that the areas of concern to religion—such as ethics, spirituality, and the human soul—were beyond the examination of science, but that religion’s domain did not extend to the laws of nature or understanding the physical world. Because they are limited to separate spheres, according to Gould, any apparent conflict was the result of one group of people misunderstanding the limitations of

either science or religion. This principle of NOMA has been particularly influential among U.S. scientists and has had an important impact on the U.S. legal system, after Gould testified as an expert witness in trials concerning the teaching of evolution during the 1980s.

From the perspective of historians, the relationship between religion and science is characterized by the groups of people who ask them, as well as by the questions that are addressed. The social character of science and religion recognizes that some groups of people do find conflict between their religious commitments and the findings of science, whereas others do not, and recognizes that most religious groups accept some scientific discoveries and incorporate some new technologies into their practices, though others do not. Rather than see science and religion as an ongoing story of inevitable and inexhaustible conflict, as some have claimed, historians such as John Hedley Brooke and Ronald L. Numbers have argued for understanding the complexity of this history.

Historians have also pointed out that both “science” and “religion” are relatively recent inventions. The notion of religion as a set of beliefs and practices (and that there could be such a thing as “religions”) began to develop in Europe (and its American colonies) in the seventeenth century and came into something like its modern-day understanding in the eighteenth century. Science, as a specialized and systematized study of nature, began to be distinguished from the larger field of “natural philosophy” around the same time, but people did not begin to speak of themselves as “scientists” rather than natural philosophers until the first half of the nineteenth century. Before these developments, people engaged in natural philosophy saw the study of nature as something bound up with the study of divinity, ethics, and other branches of knowledge today considered to be religious.

The historical development of science and religion as two separate and distinct enterprises that can have some kind of relationship is especially important in the United States. This is partly because science and religion came into being in the same time and by some of the same people who were exploring and colonizing the North American continent, and partly because the nascent principles of both science and religion play an important role in the development of the early United States, its government, and culture.

Scientific and Religious Life of the Atlantic World and Colonial America

It would be remiss to neglect those nations and cultures that inhabited the Americas before European colonization. The

lands that eventually constituted the United States contained a diversity of peoples, each with different traditions concerning nature and how it functions, health and how to maintain and improve it, and technologies and how to apply knowledge. Likewise, these cultures each had elements of ritual and spiritual practices. In this respect, there were sciences and religions in the Americas long before European contact. But these populations did not think about their knowledge as separated into kinds that could be classified as science and religion. That particular way of categorizing types of knowledge was brought to the Americas by European cultures.

The migration and eventual colonization of the Americas by Europeans provided immediate opportunities for both scientific and religious expansion. From the point of view of Europeans, the Atlantic Ocean had once seemed an insuperable barrier; it was now a thoroughfare with a destination on the other side. This shift in geographical perspective has been called the Atlantic World by many historians. Rather than think of America and Europe as two separate continents separated by an ocean, the Atlantic World envisages an ocean ringed by land, whose people readily cross it and carry ideas and objects with them. Though most human movement was to the Americas, naturalists in Europe often travelled in search of new specimens, which were then brought to Europe. Attempts to classify and understand new species, make sense of new geological structures, and even to understand the cultures of native populations were just some of the examples of new scientific discovery undertaken.

Often, these explorations went along with the movement of religious ideas and people across the Atlantic. Many of the earliest European settlements in what became the United States were at least partly prompted by religion. Spanish Catholics built missions in much of the territory that later became Mexico, including what is today California, Texas, and the U.S. Southwest. The Jesuit priest Eusebio Francisco Kino's (1645–1711) travel to the Americas served purposes of scientific discovery and the establishment of religious missions. Many of the British colonies established along the eastern coast of North America had religious charters, some granted to groups whose political rights were limited in England.

The discovery of the Atlantic World led directly to philosophical questions that affected science and religion together. It was *not* the case that the discovery of the American continents by Europeans caused them to reject a biblically oriented notion that the earth was flat. Historian Lesley

Cormack has argued that fifteenth-century Europeans were well aware that the earth was round, and that only in later centuries was this ignorance attributed to them. However, discoveries of plants and animals not mentioned in the Bible posed a theological challenge to some Christians.

For some, contact between different races of people, such as Native Americans or Africans (many of whom were forcibly migrated to the Americas and subjected to slavery) posed questions concerning whether these people were all of a single *species* as well as whether they had souls that could be saved. Arguments among Europeans and Americans of European descent continued into the political realm where the questions were to what *rights* these populations were entitled. Answers to these questions were sought using both scientific evidence (concerning anatomical or cultural studies of people, their abilities, and characteristics) and religious evidence (arguments from the Bible, or from understanding the spiritual aspects of these cultures). Despite the presence of human civilizations in the Americas for millennia, the land was often referred to as “natural” in contrast with a settled Europe. The notion that Native American societies represented human nature unaffected by the effects of civilization was evoked by several political philosophers who later influenced the American and French revolutions.

The British colonies in America that later constituted the original United States served as a location in which new discoveries from the American continent were brought into contact with new scientific theories and technologies from across the Atlantic. Though very few American-born British subjects (such as Benjamin Franklin [1706–1790] were admitted into the Royal Society, the prestigious scientific society of the United Kingdom, members of this scientific establishment corresponded with naturalists scattered throughout the colonies. At the same time, new universities were established in the colonies. Institutions such as Harvard and Yale were established as schools of divinity, aimed at training ministers and clergymen in the colonies, but these institutions and others established in the colonial era included instruction in natural history as well.

The particular nature of some religious viewpoints in the late colonial period gave rise to further engagement between religion and science in the eighteenth century. The middle of the century saw a rise in public displays of religion in what has been called the Great Awakening. From the 1730s though 1750s, Protestant revivalists from the Americas and from England traveled around the colonies, encouraging religious practice that focused on more direct and

enthusiastic engagement with divinity. This evangelical movement emphasized that knowledge of God and religion came through direct personal inspiration. Though the movement focused on direct personal contact with God and rooted much of its theology in the Bible, this was not seen as being contrary to science. Jonathan Edwards (1703–1758), one of the most influential theologians in colonial America, also wrote on natural philosophy and contributed to early understanding of the natural environment of New England.

The Great Awakening contrasts with trends in religious thought that both preceded and followed it. Deism—a belief in a supreme being that created the world, which then operates following laws of nature—flourished in the late seventeenth century and into the eighteenth century in the English-speaking Atlantic world. This coincided with the passage in 1689 of the English Act of Toleration, which allowed some religious liberties to non-Anglican Protestants, and the 1687 publication of Isaac Newton’s *Principia Mathematica*. The spread of Newtonian physics influenced much religious discussion. That objects behaved according to fixed laws of motion, and that those laws extended to the moon and planets as well as to things on earth, gave rise to philosophical questions about the nature and power of a supreme being. The idea that planets did not move in the sky of their own power, but orbited the sun under the predictable law of gravity, bespoke an orderly universe that required fewer appeals to miracles to explain. Many Deists embraced Newtonian physics, claiming it as justification that a Creator God had fashioned a world that was capable of running on its own.

The Great Awakening might be viewed as a backlash against the first attempts to make sense of a Newtonian world, but the deism that flourished in late colonial America after the Great Awakening had expanded and refined the thought of their precursors. This later deism was characterized by the belief that a creator formed a world that could operate under predictable laws of physics and that the act of discovering the laws of nature was a way to better understand the way the creator worked. Some Deists took this to mean that by studying human and other animal societies, one might discover the natural laws that govern the behavior of individuals and civilizations. Some Deists held that God had established moral laws of behavior that could be deciphered by scientifically studying human nature. Immoral behavior was not punished supernaturally, or after death, but was punished by leading to human failings, or to a corrupt society filled with suffering. In effect, these Deists argued that to act in defiance of the moral law was no different than acting in

defiance of the law of gravity—possible, but with dire consequences. Deism was an example of science and religion being integrated. That human beings were capable of rational thought, and of discovering the world around them, was evidence that the Creator wanted people to do science.

These ideas were held in high regard among many of the leaders of the colonies that declared independence from England in 1776 and later formed the United States. Some of these individuals considered themselves to be Deists, whereas others were Christians, or members of some other religion, but incorporated this integration of science and religion into their worldviews. The founding of the American republic bears many traces of these principles.

Science and Religion in the American Revolution and Early Republic

The relationship between science and religion can be seen as a continuous trend that shapes and is shaped by U.S. history in general, from the very beginnings of the country. Thomas Jefferson (1743–1826), author of the American Declaration of Independence, was one of many political leaders of the early United States whose worldview was shaped by deism and science. The Jefferson Bible that he compiled took passages of the New Testament and arranged them to tell the life of Jesus without any reference to miracles or supernatural events. He also made use of mechanical principles to invent new devices, as well as cultivating new varieties of plants. Jefferson’s deistic worldview was also apparent in the Declaration of Independence. In addition to referring to “the Laws of Nature and Nature’s God,” he makes the claim that the equality of all people and the fact of “certain unalienable rights” is “self-evident.” This claim of self-evidence is typical of a deistic perspective on nature that suggests that a moral order to creation can be inferred by observation of human nature.

Several other early leaders of the United States shared Jefferson’s perspective. Others were more expressly Christian, but also held to the concept that an understanding of creation and of a creator could come from the study of nature. The colonies that formed the United States had long been a refuge for religious dissenters from England. This continued after the founding of the American republic. One notable immigrant was the scientist Joseph Priestley (1733–1804). Priestley had been a noted chemist—one of the discoverers of the element oxygen—and experimentalist who discovered properties of air and electricity. His scientific work also related to his sermons and writings on theology, in which he

defended a materialist worldview. Priestley became an intellectual leader of a religious movement that represented a form of Unitarianism. His religious and political views (particularly in support of the French Revolution) had caused such antagonism against him in England that in 1794, he emigrated to Pennsylvania. Priestley was one of the first major scientists of Europe to move to the new United States. Through exchanges with Jefferson (who founded the University of Virginia), Priestley influenced the development of science education in the United States, and, in conversation with others in his new country, helped to shape the scientific enterprises of the new country. The exploration of lands acquired by the United States (during Jefferson's presidency), led by Meriwether Lewis (1774–1809) and William Clark (1770–1838), made many new discoveries of geology, botany, and zoology, as well as obtaining new information about the religion and culture of the human populations west of the Mississippi River.

The Lewis and Clark expedition to the Pacific Ocean has often been seen as a critical moment in U.S. history in its creation of western lands as a “frontier.” This in turn gave strength to the view that the country was destined to expand across the continent. This notion of “Manifest Destiny” put a religious interpretation to the political debates about expanding westward settlement, with some claiming that U.S. political dominion of these lands was divinely ordained. For some, the act of scientific exploration and discovery inaugurated by Lewis and Clark represented the human act of dominion over the earth and its creation, which was outlined in the Bible. The act of naming and classifying newly discovered species in the U.S. West was a religious act in line with divine intentions.

In 1893, the U.S. historian Frederick Jackson Turner put forward a theory that the development of the United States was characterized by the presence of a frontier that represented a kind of “wilderness” that spurred westward migration and settlement. More recently, the environmental historian William Cronon has argued that this notion of “wilderness” as a place of nature untouched by humanity has been idealized and has frequently been misleading. Virtually all of the American continent had been settled and developed in some way by Native Americans long before transatlantic migration and settlement, and the perception of certain spaces as “wild” or “natural” to the exclusion of others was itself a human enterprise. This concept of wilderness also has roots in religion, evoking a biblical conception of an area outside of human society and mores. The idea of vast

expanses of the American continent as a “natural,” unsettled space projected religious interpretations of the American continent as a place untainted by human corruption in either a naturalistic or a moral sense. In this American geography, nature represented both a space without entrenched social practices and a place that was somehow purer for its lack of human influence. This tension between nature as a place where God's word had not yet reached, and the place where God's creation was best preserved and could be best experienced has influenced both the histories of religion and natural exploration in the United States.

In the early nineteenth century, the view of nature as a location for religious insight was exemplified by the transcendentalist movement. Though related to the romantic movements in philosophy, science, art, and literature that took place in Europe in the late eighteenth and early nineteenth centuries, transcendentalism has sometimes been described as the first intellectual movement of American origins. Ralph Waldo Emerson (1803–1882), one of the most noted people affiliated with this movement, wrote that religious discord arose from people's inability to relate to nature. Science's aim is to discover a theory of nature, but its systematic divisions further alienate people. Intellectual abstraction in both organized religion and organized science detract from the individual's experience of truth. Emerson recommended individuals separate themselves from human society and human effects of nature to experience the pure essence of nature. This recommendation became the basis for Henry David Thoreau's (1817–1862) 1845 book *Walden*, written as an experiment of his own retreat and immersion in the “natural” setting of Walden Pond in Massachusetts. Though this movement was critical of both scientific and religious establishments of the day, transcendentalism was rooted in a belief that an individual's scientific and religious experience converged in having a direct perception of nature. This movement has widely influenced U.S. literature, environmentalism, and philosophy, along with science and religion. Transcendentalism's emphasis on individualism and reinforcement of the American continent as a place in which experience of nature could best be achieved contributed to perceptions of the U.S. landscape as a religious space, contributing to what religion scholar Robert Bellah came to call “America's civil religion.”

At roughly the same time as Emerson and Thoreau were writing, a religious movement often referred to as the Second Great Awakening flourished in much of the United States. Like the first Great Awakening, this was a

multidenominational Protestant movement characterized by an emphasis on direct religious experience, and, like transcendentalism, the Second Great Awakening has been viewed as a reaction against organized religious and scientific establishments. It has primarily been characterized as a reaction to deism and other forms of natural religion.

The Second Great Awakening was not an organized movement, but was rather a collection of individual phenomena that historians later considered to be related by a common spirit. This religious movement took the form of public religious revivals and public preaching outside of church settings, and livelier forms of religious expression within churches. Especially in areas further away from the more settled urban centers on the East Coast, the spirit also gave rise to new denominations and to nonaffiliated churches.

Although the religious thought that accompanied the Second Great Awakening did not specifically address science (except insofar as it differed from a science-oriented deism or other forms of naturalistic religion), the rise and spread of religious thought that originated in the period was partly shaped by new science and technology. Scientific discovery and invention contributed to notions of social “progress” that often ran parallel to religious progressivism in this movement. This was an ideology partly grounded in studies of nature and in observations of new technological and medical breakthroughs. This progressivism was also political—in particular giving voice to religious movements against slavery. New publishing and transportation technologies helped these ideas penetrate the South in ways that exacerbated cultural differences during the U.S. Civil War.

Science, Religion, and the U.S. Civil War

In many ways, the U.S. Civil War, lasting from 1861–1865, was the event that has had the greatest impact on national identity and, as such, provides the foundation for many of the beliefs of a U.S. “civil religion.” Religious historian Harry S. Stout has observed that before the war, most U.S. citizens spoke of the “United States” as plural, whereas after 1865, the “United States” was a singular noun. Even though people’s experiences of the war and during the war varied widely, they gave rise to new beliefs that Stout argues were tantamount to a national and collective religious experience. As participants in the war sought to justify the terrible bloodshed and massive loss of lives, the war came to be understood in religious terms, as a kind of “blood sacrifice” out of which a new type of U.S. nation emerged.

The Civil War also led to new developments in science and technology, and acceptance of those developments was incorporated into this religious worldview. Among the important branches of science whose history was shaped by these events were the sciences of human biology—concerning the biology of race and its relation to arguments about equality—and new medical techniques and diagnoses that came in response to the injuries and diseases brought about on the battlefield. In addition, the war led to the development and use of new technologies, some of which were used as weapons. Part of the national understanding of the Civil War that emerged in the immediate aftermath had to explain the role that science and technology played in giving rise to, conducting, and rebuilding the country after the war. The earliest forms of machine guns and ironclad ships were among the military inventions that were developed during the war, and other technologies such as railroads and telegraphs that became more widely used helped promote the growth of U.S. infrastructure during the war. Battlefield surgeons also developed new techniques for amputation and the treatment of wounds, as well as discovering some of the connections between sanitation and infection that led to the first understandings of the germ theory of disease later in the nineteenth century.

At least part of the postwar understanding of why the Union prevailed over the Confederacy in the war was rooted in the more widespread use of industrial technology in the North. A greater use of technology and a greater capacity to transport it to where it was needed conferred a military advantage. To some, this was evidence that the economic model of the Northern states, one tied to industrialism and to growth and expansion, was intrinsically superior to the agricultural economy more tied to sustenance than growth that typified the South. These economic justifications, which invoked a cultural reliance on science and technology as a basis for progress, were connected to moral and religious justifications of the war and its outcome. The idea that industrial progress and scientific development was morally positive was justified by some people in pointing to the outcome of the Civil War.

Some of the most important science–religion discussions in the Civil War era concerned questions of racial equality and the issue of slavery. Samuel George Morton (1799–1851), an anatomist who had studied fossils brought back by the Lewis and Clark expedition, had made studies of human skulls from various parts of the world and had used these to argue for essential mental and physical differences

between races. This research led Harvard natural historian and geologist Louis Agassiz (1807–1873) to conclude that the races were in fact separate species. Other anthropologists and sociologists argued that all races had a single common ancestor.

The question of whether humanity consisted of one or several species was both a scientific and religious one. Many Christian theologians in the United States who supported the abolition of slavery argued that the Bible's account of the creation of humans supported a single species concept, and slavery's supporters also pointed to biblical accounts of slave owning and the claim that the sons of Noah gave rise to the major racial differences of the world, to support their views. In this political debate over slavery, scientific and religious justifications existed on all sides of every issue and were entangled as often as they were used against one another.

For many who lived through the Civil War, the events that took place could only be understood in a religious way. Henry Ward Beecher (1813–1887), a prominent clergyman and abolitionist from New England, denounced slavery from the pulpit and was politically engaged well before the Civil War. He saw science and religion as testifying together to the immorality of slavery and, after the war, came to explain it as a religious event indicative of God's benevolence and the natural development of divine creation. For Beecher, the war was evidence of progress and of civilization's improvement, arguing that war itself had evolved from a human endeavor of cruelty and conquest to an act that brought about liberation.

For others, especially in the South, the war was also a religious event, but not one that signified progress. The number of people killed, the destruction of land and property, and the complete upheaval of the social order gave many the impression that the war was an apocalyptic moment, a break from the natural trend of history that could only be compared to biblical catastrophes. At its root were religious beliefs about the nature of history itself, whether the world was inherently becoming a better place over time or whether history was a story of degeneration. At stake were questions concerning whether the end of history—for many Christians, this meant a return of Christ—could be brought about by human civilization's gradual improvement or would be miraculously brought about by God after civilization's collapse. For many on both sides of the conflict, the idea that the world was progressing to a higher moral state and that people were able to bring about a "Kingdom of Heaven" could not be reconciled with a war that had more efficiently and wastefully killed people than previous U.S. wars.

In the later nineteenth century, the religious concept of dispensationalism began to take hold among more evangelical Protestants in the United States. Dispensationalism is a belief that discrete ages in the history of human civilization are characterized by different relationships with God, as outlined in the Bible. Though versions of how many dispensations and what they are differed, they all held to a belief that a final end-times dispensation would involve miraculous intervention to save some people from a fallen civilization. Unlike some religious conceptions of end times that were more compatible with a naturalistic and gradual view of progress, dispensationalism's incorporation of sudden and miraculous change was outside science or nature's range of explanation. The rise in this belief coincided with the spread of a biological theory of gradual and progressive change—Charles Darwin's (1809–1882) theory of evolution. These different religious views about gradualism and about progressivism may partly explain the complex religious reactions to Darwinian theory.

Darwinism in the United States and the Origins of Science-Religion "Conflict"

In 1859, Darwin's *On the Origin of Species* was published in England and the United States. As Ronald Numbers has described, the impact on U.S. biology was dramatic. Within twenty years, acceptance of evolutionary principles was nearly unanimous within the scientific community. Though other naturalists before Darwin had proposed that species of plants and animals had changed over time, in some cases becoming completely new species, Darwin proposed that natural selection could be the mechanism by which new species came into being. Rather than posit a sudden creative force, or that plants and animals directed their own changes, competition among species and their ability to cope with their environment determined which would survive and reproduce more successfully. The *Origin of Species* also contained a greater compilation of comparisons among various living species to show evidences of similarities that indicated common ancestors.

Public acceptance of Darwin's theory was not nearly as unanimous or rapid. Partly this was because of objections that could be characterized as religious, but this is not the whole story. Some of the early opposition to evolution was philosophical, or even scientific, and some of the support for evolution was religious in its nature as well. The relationship between Darwinism and religion has never been uncomplicated. This complexity begins with Darwin

himself. Historians Adrian Desmond and James Moore have argued that Darwin's formulation of evolution was an attempt to show the common ancestry of all humanity and thus undermine any basis for slavery. Rather than see Darwin as irreligious, they argue that Darwinian evolution was driven by a moral and religious abhorrence of slavery. At the same time, Darwin was concerned that his theory would be interpreted as atheistic and delayed publishing his theories for that reason.

Some of Darwin's most ardent scientific supporters were also deeply religious. Asa Gray (1810–1888), the botanist who was perhaps most responsible for disseminating Darwin's ideas in the United States, was a devout Presbyterian. Gray held reservations concerning whether a divine act would have been necessary to create humans, as distinct from other animal species, but considered himself an evolutionist and not a creationist—one who held that species were separately created. The implication that human beings were not separately created was one of the primary theological reasons for rejection of evolution. The Presbyterian theologian Charles Hodge's (1797–1878) 1874 *What Is Darwinism?* concluded (drawing from Gray) that Darwinism was atheism because it excludes design in nature.

Other antievolutionists raised questions about the progressive character of Darwinian evolution, whether there was any basis at a chemical or physical level to conclude that nature improves. In the early twentieth century, the discovery that physical traits were determined by discrete genes was seen by some scientists as irreconcilable with Darwin's insistence on slow and gradual change. Religious sermons, pamphlets, and books issued against Darwinism in this period often invoked arguments such as these to argue that evolution was faulty science, not that it conflicted with religion. Many of the religious opponents to evolution claimed explicitly that true science and true religion had to coincide because God had created both nature and the human capacity to understand it.

In this period of the late nineteenth century the idea of science and religion being in "conflict" became popularized. Two books from the period have been seen as most responsible for this. In 1874, the historian and scientist John William Draper (1811–1882) wrote the *History of the Conflict between Religion and Science*, and in 1896 Cornell President Andrew Dickson White's (1832–1918) *History of the Warfare between Science and Theology in Christendom* was published. Both books argue that since the dawn of human civilization, natural intellectual discovery has been hampered by human superstition

and the authority of organized religion. Draper particularly faults the Catholic Church as oppressive to rational thought and as using religious dogma to maintain its power, even in the face of truths that undermine those doctrines. White's criticisms are applied to Protestantism as well, but the story is also one in which superstition and primitive religious beliefs were unwilling to accept naturalistic explanations for the world and discovery, but that eventually, truth and independent thought prevailed.

As more recent historians have frequently noted, Draper and White had personal reasons for the views they advocated in their books. For Draper, antagonism toward Catholicism came from his own family history. Cornell was established as a nonsectarian university in 1865, which drew opposition from some religious groups and prompted White's reaction against some forms of religion as inhibitors of scientific knowledge.

Although the claim that science and religion had been in conflict since the beginnings of human civilization is both oversimplified (because not all relationships have been hostile) and anachronistic (because "science" and "religion" as independent modes of thought were not aspects of ancient cultures), this historical thesis from Draper and White had a certain self-fulfilling character. Historians have come to call the idea that religion was opposed to science and that science would eventually overcome the primitive thought of religious cultures the "conflict thesis." Particularly among irreligious or "secular" populations, this thesis gave a moral and historical justification to their beliefs.

Science and Religious "Modernism"

The historical narrative underlying the "conflict thesis," also advanced the positions of some religious groups in the late nineteenth and early twentieth centuries, particularly those who called themselves "modernists." This modernism did not reject religion but was a self-conscious attempt by many different religious groups to adapt theology and religious ritual to new scientific understanding. For religious modernists, the relationship between science and this kind of religion was felt to be in harmony. What conflicted were particular forms of religion that they held to be outdated. Modernism became associated with some forms of religious liberalism in its embrace of scientific progress and the belief that through the use of science, human civilization could progress to a higher ethical civilization.

Some of the most important social movements of the late nineteenth and early twentieth centuries were based in this

religious modernism. The Social Gospel movement was rooted in a belief that a second coming must be brought about by improving human civilization and building a kingdom of heaven on earth. Influencing many denominations and organizations, the theology of the Social Gospel inspired charitable organizations that helped immigrants, workers, urban and rural poor, and many other disaffected groups in the United States. Though its influence in the United States diminished in the mid-twentieth century, among African American churches the Social Gospel movement had a very strong influence on the civil rights movement of the 1950s and 1960s. It also influenced the labor movement and led to many public health initiatives.

Religion and medicine have a long and complex history in the United States, ranging from different religious views toward health and the use of technology in intervening in human well-being, to religious forms of healing. Perhaps one of the most important intersections between religion and medicine is in the area of public health. Public health concerns the treatment and well-being of individuals, as well as the actions taken to understand and promote the overall health of a society or large population. This may include regulation of food safety, protection from environmental hazards, or limiting widespread contagion. Because many of these actions don't primarily influence the health of individuals *directly*, public health is often considered separate from practices of medicine. The shift in thinking about people's physical well-being regarding their social environments as well as their individual health that constitutes public health parallels the Social Gospel view that the role of religion is not only to address the spiritual well-being of individuals for their personal salvation but also to address their spiritual environment by improving the moral conditions of society. A society with less poverty and illness provides fewer temptations to sin.

Some religious organizations and individuals were great proponents of public health, but others were taken aback by what they saw to be the immorality of its excesses. In early twentieth-century United States, eugenics was one of the major elements of improving public health. Eugenics was a movement that applied principles of evolutionary science to try to influence the reproduction and makeup of society. As historian Christine Rosen describes, eugenics had both religious and irreligious supporters. Some aspects of eugenics included prevention of venereal diseases and the tracing of family histories as ways of detecting dangerous genetic traits. "Fitter family" contests and beauty pageants were rooted in eugenics.

Another early twentieth century public health reform partly associated with eugenics was advocacy for birth control—including contraception and abortion. This reform was also connected with feminist movements that promoted the greater rights of women to determine their own health and reproductive practices, along with greater political equality. (One of the signal successes of the latter movement was the 1920 ratification of the Nineteenth Amendment to the U.S. Constitution, ensuring women's right to vote.) Some of the positions advocated by these movements, such as the availability of divorce, birth control, and greater autonomy for women were seen as opposing religious viewpoints concerning gender relationships. Birth control and particularly abortion were seen as objectionable according to some religious positions in the early twentieth century, although religious objections to abortion were not primarily concerned with questions of when human life begins until later in the century.

But by far the most notable and morally reprehensible aspect of U.S. eugenics was the involuntary sterilization of people deemed "feeble-minded," who were determined to be a drain to society. Though virtually every religion had a mixed reaction to this practice, many religious individuals and groups found it to be immoral and contrary to religious principles. Most of the opposition to reproduction issues in the early twentieth century concerned its connections with the wider eugenics movement. Historian Edward J. Larson argues that evolution's association with eugenics was one major inspiration for the religious anti-evolution movement.

The Scopes Trial and Religion and Science in the U.S. Courtroom

Part of the religious reaction to the theory of evolution was opposition; however, this did not develop into an antievolution movement until the 1920s, about the time that evolution and other core concepts of biology became part of the school curriculum. Advocates of social reform had developed the new biology curriculum around its public health applications (focusing on issues such as hygiene, eugenics, and food safety that were related to biological concepts). With this new subject coinciding with efforts to expand compulsory public education, religious rhetoric against Darwinism found expression as a school movement. In 1925, Tennessee passed a law prohibiting the teaching of human evolution from nonhuman species. In an attempt to

have the law overturned, John Scopes (1900–1970) stood trial for violating the antievolution act, and the trial quickly turned into a global media spectacle. The highlight of the trial consisted of interrogation by the renowned defense lawyer Clarence Darrow (1857–1938) of the politician and antievolutionist William Jennings Bryan (1860–1925), who had assisted the prosecution. Darrow's questions created a public impression that the key issue at the trial was whether evolution conflicted with a "literal interpretation" of the book of Genesis. Nearly none of the religious arguments against evolution before the 1920s had anything to do with claims that Earth was 6,000 years old, or that the Genesis accounts of creation could be read as literal truth. Bryan himself did not advocate such a position. Despite the trial's origins in the politics of biology education and defense arguments that modernist interpretations of the Bible were compatible with evolution, the public perception of the trial was one that reinforced the conflict thesis of science and religion. By presenting the issue of the trial as one of irreligious evolution versus literally interpreted Genesis (a view that became much more widely held afterward), the Scopes trial helped create real conflict between religion and science.

Court cases concerning the teaching of evolution appeared in different forms in subsequent generations. The Supreme Court decided in the 1968 case *Epperson v. Arkansas* that prohibiting the teaching of evolution violated the first amendment. The 1981 U.S. District Court case *McLean v. Arkansas Board of Education* and the 1987 Supreme Court case *Edwards v. Aguillard* ruled that teaching "creation science," an attempt to prove the Bible account of creation through interpretation of natural evidence, was also unacceptable. The ruling in *McLean* effectively made the conflict thesis part of the legal relationship between religion and science, affirming that creation science was religious partly because it was not scientific. Most recently, the 2005 case *Kitzmiller v. Dover Area School Board* ruled that "intelligent design" was, like creation science, not a scientific study and could not be included in biology classrooms.

Evolution is by no means the only issue that pitted science and religion against one another in a U.S. court. In 1905, the U.S. Supreme Court ruled in *Jacobson v. Massachusetts* that an individual's religious belief could not supersede state compulsory immunizations. Other issues that have brought religious and scientific arguments into legal settings have included determining the beginning and end of life (issues of abortion, euthanasia, life support, and organ donation) and moral concerns about technology and the environment.

New technologies make new moral questions possible and raise a variety of new religious issues.

Technology and Religion

Since the latter half of the twentieth century, the United States has seen a rapid development of new technologies that raise moral as well as philosophical questions about human identity. Perhaps none has been more consequential than the development of atomic power during World War II. The U.S. government organized and financed the Manhattan Project, which brought together hundreds of physicists, chemists, and many other scientists in a collaborative enterprise. Because of the enormity of the project to build an atomic weapon, and because of wartime security concerns, many of the scientists involved focused only on a small aspect of the overall project. The scope and hierarchical organization of this kind of project made the Manhattan Project the first example of what has come to be known as "Big Science." This changed the way much scientific research is conducted, as well as the relationship between science and the state.

The Manhattan Project both influenced and was influenced by religious worldviews. Several of the scientists involved in the U.S. bomb project were of European Jewish ancestry and had escaped the Nazi regime. Many of the scientists involved, regardless of their religious upbringing or beliefs, used religious language to describe the metaphysical implications of changing elements by splitting atoms. Most important, the violent potential of atomic detonation evoked moral and religious questions among the scientists involved. J. Robert Oppenheimer (1904–1967), the physicist who directed the Manhattan Project, was said to have quoted from the Hindu sacred text the *Bhagavad Gita*: "I am become death, the destroyer of worlds" after the first successful test of an atomic bomb in 1945.

During the Cold War, the threat of atomic annihilation posed a strange challenge to theology. For the first time in human history, the concept of the end of the world was not a supernatural one but an element of U.S. foreign policy. This technological development may have contributed to a decline in the United States of progressive theologies that saw the world as gradually improving and the wider profession of belief in religious worldviews in which an apocalypse, or salvation from an apocalypse, was more central.

The Cold War also led to a cultural dynamic in the United States in which religion and science were perceived

as common allies in a struggle against Soviet communism. The association of communism with atheism reinforced a U.S. self-conception as religious and an acceptance that the moral values fostered by U.S. religions (and the religious toleration that was a hallmark of a “free society”) would give the United States a competitive advantage. Many of the direct forms of cultural competition between the two sides of the Cold War were scientific and technological. Most significantly, the space race, culminating in the moon landing in 1969, was a major source of cultural and technological development during the Cold War. After the successes of the Soviet space program in launching the first artificial satellite in 1957 and launching the first person into space in 1961, the United States took substantial measures to promote improved science education and to encourage more students to become scientists. The creation of more scientists was part of the larger cultural competition of the Cold War and contributed to a U.S. identity as a religious and scientific nation. Ironically, the enhancement of science education in this period also gave rise to renewed religious efforts against the teaching of evolution and other objectionable topics.

More recently, technological developments in fields of biology and medicine have also raised religious questions about the human person. The development of neurology and brain imaging technologies have led to changes in the way people think about death. In the 1970s and 1980s some U.S. states changed their legal definition of death from the termination of heart functioning to the cessation of certain brain activity. This conflicts with some religious interpretations of death. Some Jewish and Christian scholars have rejected a definition of death other than “heart death.” These definitions help determine when it is ethically acceptable for the cessation of artificial life support, or the donation of organs to occur. This conflict has also influenced legal definitions of death. The state of New Jersey, for example, states that an end to either brain function or heart function can be used to legally determine death, but not if the definition of death used violates the definition of death according to the patient’s religious tradition. Similar debates about the beginnings of human life connected to the morality and legality of abortion were also brought into public prominence because of the development of the ultrasound and other ways of measuring life signs of an embryo.

In addition to raising metaphysical and ethical questions that may challenge or augment religious beliefs, scientific and technological developments have also led to changes or questions about religious practice. The widespread use of

electricity, for example, has led to diverse Jewish opinions about whether the use of electricity on the Sabbath (during which many kinds of work, including igniting or extinguishing a fire, are traditionally prohibited). Some Jewish groups have prohibited the use of electricity, but others have accepted it. The discovery of germ theory, and technologies concerning the control of bacteria, posed a ritual problem for many churches in which the ritual of Communion involved the entire congregation partaking of the same cup. This led to some churches but not others holding that Communion from a single cup was essential. The development of mass media technologies, such as television and the Internet, have also greatly contributed to changes in religious practice. Televangelism, in which a religious ritual is broadcast, has enabled a single religious leader to directly reach a larger and more geographically diffuse congregation and has enabled people to seek religious communities regardless of the views and options presented in their locality. The Internet has made the availability and diversity of religious expression even more interactive and mainstream.

In less obvious ways, other technological developments have substantially altered religious practices. Megachurches—churches with very large congregations and buildings designed to hold as many as several thousand members—were not possible before the second half of the twentieth century, when developments in air conditioning, transportation, and amplification made such practices viable. In contrast, “tent revivals,” which were a common religious practice for much of U.S. history, have waned as a result of these same technologies.

The influence of science and technology on religious belief and practices has likely increased in recent decades, but has been present since before the founding of the United States. In some cases, religious groups have identified themselves as opposed to some forms of science or technology. Old Order Amish, for example, refuse the use of many forms of technology, most notably cars and most forms of electricity. A variety of fundamentalist churches and denominations include articles of faith that reject certain scientific theories (such as evolution) or the use of some technologies. As both scientific and religious thought continue to develop, the variety of issues in science and religion has multiplied.

Religion and the Environment

Perhaps one of the most significant moral, and political, questions today that concerns the relationship between religions and science concerns human control, use, and influence over

the environment. This issue has roots in the perception and preservation of “nature” or “wilderness” that constituted much of the identity of the early United States. The issue gained renewed focus beginning in the 1960s, with increases in technology that enabled more rapid change and control over the environment. The mind-set of technologically driven progressivism led to widespread efforts to control the spaces used and occupied by humanity. Under the banner of public health, chemical inventions such as dichlorodiphenyl-trichloroethane, or DDT, were used to eradicate insects that spread diseases such as malaria. Increased industrial production that was vital to growth led to a greater need to procure fossil fuels, through coal mining and oil drilling, and to consume these fuels. Though some people throughout U.S. history have expressed concern about the effects of technology on nature, the idea that humanity could have a permanent effect on nature on a global scale was not well appreciated. After the development of atomic science, and the growing understanding that human endeavor could affect the entire globe, a greater number of people began to question whether technology had a deleterious effect on the environment. The extent of environmental damage is still a matter of much political controversy.

Religious movements have had varied responses to the need for environmental protection. In the early era of the modern environmental movement, those who advocated the greatest need to restrict human effects on the environment were thought to be influenced by New Age spiritualist movements, or influences of religious traditions such as Hinduism and Buddhism, the ideas of which were becoming more widely available. This perceived influence conditioned the reactions of “mainstream” religions to environmentalism. Some held it to be irreligious, or un-Christian. In more recent decades public religious attitudes toward environmental protection have diversified. In 1967, historian Lynn White argued that Christianity’s belief in human dominion of the Earth was responsible for ecological problems. White’s argument is an example of a conflict thesis between Christian religions and environmental science. Although some Christian groups explicitly defended this view, many others claim that the Bible passage enjoins humanity’s stewardship and protection of Earth. In recent years, this thought has come to be known as *ecotheology*.

Bioethics

Advances in life sciences have nearly always raised some religious questions. Some of these, such as the discovery by

zoologists and embryologists of how conception occurred, led to tremendous ethical questions about when, exactly, “life” begins. Shortly after the discovery of conception in the late nineteenth century, the Catholic Church officially changed its position on the gravity of performing or inducing abortions. With new developments in life-preserving technologies, end-of-life treatments are a continual struggle for religious groups to address.

But not all ethical debates are about life and death, nor do they specifically concern human persons. The development of genetically modified organisms (GMO), whose genes have been altered through direct technologies such as splicing deoxyribonucleic acid (DNA), have raised both ecological and biological concerns. On one level, the safety of these organisms for sources of food has been questioned. On another level, there are issues pertaining to whether the creation of new variations or hybrid species is ethically appropriate. These questions also concern the ethics of a technology once it is developed: If GMO foods are safe, is it ethically problematic to grow, sell, and use them, or would it be morally irresponsible not to if these developments can end poverty and global hunger? These issues also involve the morality of undertaking research whose effects are not yet known: Is it ethical to conduct experiments on GMOs if the ability to constrain artificial genetic variation or the effects on humans of their consumption cannot be known with certainty?

Religion and Scientific Research

The ethics of scientific research is a frequent target of religious criticism. Often it is difficult to forecast what the benefits of research will be until after the research has been conducted. The moral costs of some forms of research are therefore often scrutinized. Some research practices are universally condemned, such as experimentation on human beings without their knowledge or consent. In one of the most egregious examples of this in U.S. history, the U.S. Public Health Service carried out experiments on several hundred African American men infected with syphilis from 1932 to 1972. The outrage from the discovery of this project led to greater regulation of human experimentation. Nonetheless, some religious groups have argued that economic incentives to participate in clinical trials subvert the ethical intentions of these laws. Some religious groups have argued that experimentation on animals, whose consent cannot be obtained, amounts to cruelty. Experiments that are not directly conducted on individuals, such as large-scale

physics experiments carried out at national laboratories, have sometimes drawn concerns that they can create health risks for people living nearby.

The most religiously contentious matters involving scientific research are those experiments that most directly affect human health. Most notable among these are biomedical experiments that use human embryonic stem cells. Embryonic stem cells are cells that have not yet differentiated into use for specific organs or functions; as such, research advocates argue, they have great potential in helping understand the ways in which genes operate and cells differentiate and have led to medical breakthroughs for many different diseases. Embryonic stem cells are derived from human embryos grown to a stage a few days beyond conception (in laboratory conditions). Some religious groups, including some U.S. Catholics and evangelical Protestant groups, have opposed this research because the destruction of the embryo necessary to procure these cells is tantamount to taking a human life. The bioethical question of when life begins is connected to religious positions on the use of stem cells. However, some individuals who are religiously against legal abortion argue that the potential for saving human lives is great enough to warrant the use of stem cells. In 2001, President George W. Bush established a federal policy that restricted research on embryonic stem cells to that which made use of existing stem cell lines, but prohibited the destruction of further embryos. This policy was changed in 2009, when the U.S. government allowed federally funded research on new stem cell lines.

Religion intersects with scientific research in quite a different way when religious belief is the object of scientific study. In recent years, attempts to understand the origins of religious belief have attracted the attention of various scientists. The question of why people are religious is not a new one, and Darwin speculated in his 1871 book *The Descent of Man* that a society that has moral and religious beliefs would be more likely to survive external threats than would an immoral one. In the late twentieth century, evolutionary biologists and psychologists expanded on this study. Philosopher Daniel C. Dennett and others have postulated that human beings have evolved with neurological tendencies to believe in a supernatural power with agency over the world. In the early twenty-first century, U.S. geneticist Dean Hamer argued that he had discovered a “god gene”—a specific genetic combination that makes people inclined to believe in a deity. This research has been highly contentious, not least because the advocates of these kinds of studies of religion often appear to claim that religious belief has nothing to do

with religious truth. By implication (and explicitly in some of their works), proving that religious belief has evolutionary origins would show the fallacy of antievolutionist religion and might show that all religion is a delusion.

Conclusion

There are many different sciences and many different religions in the United States. Given this diversity, it is unsurprising that particular scientific and religious ideas have converged at times over U.S. history. More important, science and religion in the United States has been a history of people and various communities, interacting with one another and invoking religious or scientific ideas as a means to interact. The relationship with religion and science is not a sequence of disconnected events, but an interconnected historical narrative that continues to shape personal and social life, influencing politics, culture, foreign policy, human well-being,

Scientology

The Church of Scientology International (CSI) is a new religious movement born in the United States in the mid-twentieth century. Scientology developed out of the investigations of its founder, L. Ron Hubbard (1911–1986), into the nature and workings of the human mind. Hubbard’s system started out as a form of therapy but was quickly transformed into a religion, with its own mythology, doctrines, and rituals. Despite the church’s protestations and efforts to defend itself legally and in the court of public opinion, a varied group of vocal critics continues to challenge its legitimacy in the media and in the courts. From its origins, the Church of Scientology has been enmeshed in controversy, even as it has continued to recruit more members and extend its mission throughout the world.

History

Hubbard first outlined his findings in 1948 in a privately circulated paper, “Dianetics: The Original Thesis.” Literally “through mind” (from the Greek), “Dianetics” for Hubbard referred both to a theory of how the human mind works and a therapeutic program for maximizing its potential. In 1950 he published his reflections in book form as *Dianetics: The Modern Science of Mental Health*. Hubbard believed he had developed the most accurate diagnosis yet of the human condition and that his system of Dianetics offered a therapy that would enable individuals to reach their full potential. *Dianetics* became a best-seller a month after its publication and Hubbard’s teachings gained enthusiastic advocates who worked to put his prescriptions for mental health into practice. But despite Hubbard’s intensive efforts, neither the American Medical Association nor the American Psychiatric Association gave the new therapeutic system its formal stamp of approval. Around the same time as that professional rejection, practitioners of Dianetics began to report unanticipated spiritual experiences, including the

realizations that they had lived past lives. Some of Dianetics’ early partisans rejected such claims as scientifically impossible and drifted away, but Hubbard took such reports seriously and endeavored to incorporate them into his developing system of thought. By 1952, he had formed the Hubbard Association of Scientologists, and by 1954 some of Hubbard’s followers in Los Angeles had formed the first Church of Scientology.

Hubbard remained actively involved in the administration of CSI’s affairs through the early 1960s, but in 1966 he resigned from the offices he held to concentrate on his own research and writing. Over the next decade and a half, he continued to lessen his direct participation in the affairs of the church. By 1980 he had totally withdrawn into isolation. After his death in 1986, the church took a number of steps to preserve the legacy of his teaching unaltered. For example, CSI views Hubbard’s writings as authoritative “scripture” and has taken steps to issue them in official editions; in addition, they have attempted to preserve them for eternity by engraving them on steel plates, which are stored in titanium containers underground in New Mexico.

Some of the current publications of the church, such as *Scientology 0–8: The Book of Basics* and *What Is Scientology?*, combine excerpts from a variety of Hubbard’s works into comprehensive guides to the religion. Another indication of the church’s faithfulness to Hubbard’s teachings is that sermons at Sunday services are read verbatim from a collection of his pronouncements, *The Background, Ministry, Ceremonies, and Sermons of the Scientology Religion*. One organization within the church, the Religious Technology Center, is charged with maintaining the copyrights over Hubbard’s works on Dianetics and Scientology and with maintaining the orthodox interpretation and use of them. For CSI, the canon of authoritative works on Scientology is definitively closed. Hubbard’s teachings are the last word.

The church has an extremely low tolerance for sectarianism or even dissent and vigorously attempts through a variety of formal and informal means to maintain orthodoxy. One of the reasons for that attitude is Hubbard’s unwavering conviction that when Scientology’s principles are properly applied by a person who really wants to change, they will always be successful. Consequently, Scientology’s “tech” is viewed as infallible, and any failure is traced to misunderstanding or misapplication of it. The care with which Scientologists are supposed to treat Hubbard’s teachings is conveyed in an “important note” that prefaces the official editions of his works and urges the reader to make sure to

understand every word of the text as fully as possible before proceeding to the next.

Since its founding, the Church of Scientology has experienced extraordinary growth in membership—so much so that it claims to be the world’s fastest growing religion. The church claims more than 8 million members throughout the world, but critics contend that the actual number may be as low as 50,000. Because Scientology provides services to most participants for a fee, however, “membership” can have a wide range of meanings. But the growth in the number of people who have participated in Scientology since its origins, and the substantial influx of donations that has come with it, has enabled the church to develop, extend, and sustain a complex array of bureaucratic structures that support the church’s mission. The rapid rise and the practices of the Church of Scientology, however, have earned it the enmity of critics and embroiled it in controversies with individuals, families, organized groups of opponents, and even governments across the world. Both internationally and in the United States, the Church of Scientology remains one of the most, if not the most, controversial new religious movements of the twentieth and twenty-first centuries.

Nowhere is that controversy more evident than in the spirited, and often intemperate and questionably grounded, exchanges on many sites on the Internet. For its part, the church has never been reluctant to protect its own interests and has been both vigilant and energetic in responding to what it sees as illegitimate deviation and dissent from within and unfounded criticism from outside. Strenuous efforts to ensure orthodoxy within the church are undertaken by the church’s “Rehabilitation Project Force” (RPF), which addresses theological or ethical lapses by enforcing an extensive daily regimen of study of Scientological principles and work for the church. Some outsiders have sharply criticized the RPF as a coercive attempt at brainwashing, but the church sees it as administering appropriate penitential discipline. CSI has also forcefully engaged with its external opponents, taking on representatives of the secular anti-cult and the religious counter-cult movements in a number of forums. CSI’s greatest success may have been its contribution to the 1996 bankrupting of the old Cult Awareness Network, the flagship organization of the anti-cult movement. CSI continues to respond to what it sees as biased and inaccurate treatments of Scientology and other “new religious movements” through, for example, the publication of essays in its *Freedom* magazine.

Founder

Although critics allege that some of the more colorful elements of Hubbard’s biography cannot be corroborated independently from church publications and CSI has yet to publish an official biography of the founder, the general outline of Hubbard’s life can be sketched. Born in Tilden, Nebraska, in 1911, Lafayette Ron Hubbard moved with his family to Montana, where he claimed to have become a blood brother in the local Blackfoot tribe when he was six. As a teenager, Hubbard embarked on summers of travel that took him to Hawaii, Japan, China, the Philippines, and Guam. He also later traveled to the Caribbean for a scientific expedition. Hubbard enrolled at George Washington University in 1930 but he married in 1933 and never finished his degree. As a young adult Hubbard dedicated himself to writing fiction in a variety of genres, but he was most successful as a writer of science fiction. His stories and novels have continued to find an audience, and in 2000 John Travolta, one of the many prominent celebrity practitioners of Scientology, starred in a film version of Hubbard’s *Battlefield Earth*. Hubbard’s career as an author was interrupted by his service as a lieutenant in the U.S. Navy during World War II. During his hospitalization toward the end of the war, he focused his attention on figuring out the nature of the human mind. The publication of *Dianetics* followed soon after. Although he did return to writing science fiction in the early 1980s, after the publication of *Dianetics* Hubbard focused on the elaboration of his system of thought, refining the practices of Scientology, and developing the organizational framework of the church.

Scientists continue to revere Hubbard as the person who discovered the principles by which all human beings could achieve their full potential. The Scientology centers throughout the world memorialize Hubbard’s impact as a thinker by displaying replicas of his office. After Hubbard’s death in 1986, CSI handled the transition from its charismatic founder to a second generation of leadership with dispatch and decisiveness. The church announced that no one would succeed Hubbard as a spiritual teacher and that his works alone, constituting the canonical scripture of the church, would guide Scientologists. David Miscavige became Hubbard’s administrative successor when he was appointed chairman of the board of the Religious Technology Center (RTC) in 1987, a position he held into the early twenty-first century. The church views the RTC as the ultimate authority within Scientology.

Key Concepts

Hubbard asserted that the fundamental goal of human existence was survival, but the drive to survive could become complicated by the actions of the human mind. In addition to the “analytical mind,” Hubbard identified a “reactive” and a “somatic” mind, though he focused on the first two. Hubbard’s writings show an indebtedness to Freud, but he focused his attention on the reactive mind, which he saw as a storehouse of images that when recalled could impair an individual’s ability to function. Hubbard called those potentially inhibitory images “engrams” and argued that they could be reactivated when someone perceived elements of the whole image of which they were a part. Repeated reactivation of the engrams would be psychologically damaging and would hinder the individual’s quest for survival.

To survive, Hubbard argued, humans need to recognize their true nature. The reports of past lives made by many of the early practitioners of Dianetics convinced Hubbard of some fundamental propositions about human nature. He concluded that humans are immortal spiritual beings, whose experiences extend well beyond a single lifetime and whose capabilities are unlimited even when they are not currently realized. Hubbard called the spiritual nature of humans the “thetan,” from the Greek letter “theta,” which he took to mean thought or life. Church literature sums up this idea by asserting that humans have been misled by the notion that they *have* souls, when really they *are* spiritual beings who have minds and bodies.

The goal of Hubbard’s “modern science of mental health” was to free the individual from the negative impact of the engrams stored in the reactive mind. Human life, from that perspective, should be the quest to recover the full potential of the thetan, our true identity. Over time and multiple incarnations, thetans have lost track of who they really are and have come to see themselves as merely human, enmeshed in the universe of matter, energy, space, and time (MEST). By providing a conceptual apparatus for understanding that falls into MEST and by detailing the practices by which individuals can lift themselves out of MEST, Scientology offers practitioners the possibilities of an improved existence and a better world. From his insights into the human condition, Hubbard developed the distinctive vocabulary that is still used by the Church of Scientology. For the individual, the initial goal of Scientological practice is to become “clear” of the negative effects of stored engrams. Once cleared, individuals can proceed

along Scientology’s “Bridge to Total Freedom” through increasing levels of mastery over their own existence. Overall, the process of moving toward liberation and self-realization involves extensive training in Scientology’s concepts and practices and the ritual of auditing.

Key Practices

In Scientology, “training” encompasses everything from the most basic courses in Scientology, to preparations to become an auditor, to investigation of the most advanced levels of Hubbard’s teaching. All of the training emphasizes that Scientology is a practical system for improving one’s life and discovering one’s true identity. Gradual disclosure of the elaborate mythology that recounts how the race of thetans originally fell into the universe of MEST accompanies the individual’s progress along the Bridge to Total Freedom. The church has endeavored to keep the release of information about that mythology restricted to those who have achieved the appropriate level of spiritual progress, but opponents of the church, including disaffected former members, have released some of that material on the Internet, provoking concerted efforts by the church to regain control of its secret teachings.

Although ministers of the Church of Scientology do conduct weekly Sunday services and officiate at major life cycle rituals, the process of auditing is Scientology’s central ritual. Auditing plays a fundamental role in the lives of members, and it shows how Scientology stands at the intersection of therapy and religion. In many ways an auditing session resembles therapeutic counseling, and the church describes it as a form of “spiritual counseling” administered by a Scientology minister to a parishioner. The trained practitioner guides the person being audited toward the recognition of what is inhibiting his or her psychological functioning. During a session, the person being audited holds onto two electrodes connected to a central console that measures changes in the electrical current passing through the electrodes while providing responses to a series of questions posed by the auditor. The “e-meter” or “Hubbard Electrometer” measures galvanic skin response, which the auditor uses as a guide to determine how the individual being audited may be blocked. CSI describes the e-meter as “a religious artifact used in the Church confessional,” a description that was developed at least partly as a response to charges made by the U.S. Food and Drug Administration in the 1960s that the church was using the e-meter to practice medicine without a license. Scientology now makes it clear that the e-meter, by itself,

accomplishes nothing and that it serves simply as a guide that enables the trained minister to help the subject discern the stored images or engrams that block psychological health and create spiritual distress.

A simple example of the use of the e-meter is Scientology's "pinch test." When the person holding the e-meter is pinched, the needle on the console registers a change. As the auditor repeatedly directs the person being audited to recall the moment of the pinch, the e-meter registers diminishing responses. The auditor then interprets the changes recorded by the e-meter as the progressive lessening of the psychological impact of the pinch. The negative impact of the experience has been recalled, brought to the surface, and recognized for what it is, and its effects dissipated from the mind of the person being audited.

The auditing process is designed to help individuals reach the status of "clear," in which the effects of the reactive mind are eradicated. Becoming clear is a substantial first step along the way to becoming an "operating thetan" (OT). At the levels beyond clear the individual undertakes "solo auditing," without the guidance of a Scientology minister, in the pursuit of complete spiritual freedom. Over the years, the church has identified and released information about some fifteen OT levels, laying out for individuals an extended path toward self-perfection. The church leaves no doubt that progress across the Bridge to Total Freedom involves prolonged and substantial hard work that requires intense personal dedication and monetary commitment. That the church requires payment for services rendered has led some critics to doubt its status as a religion, even to the point of depicting Scientology's claim to be a religion simply as a cover-up for a money-making scheme. Since 1993, however, the church has enjoyed tax-exempt status in the United States, on the basis of a decree from the Internal Revenue Service that ended a contentious relationship that spanned the decades since the founding of the church. CSI enjoys similar formal recognition in many other countries, although nowhere does that prevent the church's critics from continuing to question its legitimacy and good faith.

Organization

The early practitioners of Dianetics participated in small, ad hoc groups that were not part of any overarching organization. Hubbard quickly realized how little control that gave him over the development of his therapeutic system. His formation of the Hubbard Association of Scientologists in 1952 marked the beginning of his efforts to establish an

institutional structure that would promote uniformity of thought and practice among Scientologists. CSI today consists of an array of interlinked organizations devoted to Scientology's mission of "clearing" the entire planet to usher in "a civilization without insanity, without criminals and without war," in which individuals can rise to their full potential. The CSI, established in 1981, is the institutional structure that brings together all of Scientology's individual churches and other organizations. Within CSI, the RTC endeavors to ensure the uniform expression and application of Hubbard's spiritual technology, or "tech." The Church of Spiritual Technology, founded in 1982, is responsible for the preservation of Hubbard's works. Author Services Inc. is focused on Hubbard's fiction. CSI also sponsors a number of Celebrity Centers that serve both ordinary members and celebrities, such as Tom Cruise, John Travolta, Chick Corea, Kelly Preston, and Kirstie Alley, who are practicing Scientologists. The church also publishes the glossy *Celebrity* magazine, which features testimonials from well-known Scientologists. Their comments directly echo Hubbard's claim that when applied correctly the principles of Scientology simply "work." The celebrity participants in Scientology give CSI prominence in popular news and entertainment media, but they draw both positive and negative coverage. Their contribution to attracting new practitioners to Scientology is difficult to ascertain.

Perhaps the most distinctive organization within CSI is the Sea Organization. The "Sea Org" traces its origins to a time from the late 1960s to the early 1970s when Hubbard and the top officials of Scientology based their operations on a small group of ships. The Sea Org returned to shore in 1975 and set up headquarters in Clearwater, Florida. It now consists of those members of the Church of Scientology who choose to devote their lives completely to the mission of the church. To signal their commitment they sign a billion-year contract that commits them to the church through their future lives. In contrast to lay practitioners of Scientology who may dip into and out of their training and auditing according to their own schedules and desires, the members of the Sea Org most resemble a religious order within the church. Numbering between five and ten thousand in the early twenty-first century, they are the church's most dedicated members.

Also included under the umbrella of CSI, particularly under its Association for Better Living and Education, are various social welfare organizations that apply Hubbard's tech to specific problems. For example, Hubbard's early rejection by the medical and psychiatric establishments led to

Scientology's ongoing hostility toward drug-based therapies for psychological maladies. Narconon employs Hubbard's principles, including a focus on nutrition, detoxification, and a variety of "training routines" aimed at social rehabilitation, in a drug-free effort to treat drug addiction. Similarly, Applied Scholastics derives principles from Hubbard's writings to promote study skills and educational achievement. The Way to Happiness Foundation is dedicated to spreading Hubbard's moral code, distilled into twenty-one precepts, throughout the world. Finally, the Citizens Commission on Human Rights, founded in 1969, continues Hubbard's battle against the psychiatric establishment, especially its uses of mood-altering drugs, electroshock therapy, and abusive relationships between psychiatrists and their clients. CSI is thus active on many fronts throughout the world in pursuing Hubbard's vision of a saner and happier world.

Controversies

Scientology's campaign against psychiatry is just one of the areas in which Scientology has been involved in controversy. Since it first identified itself as a religion in 1954, Scientology has consistently had to respond to accusations that it was only masquerading as a religion to reap the tangible benefits, including tax exemption in the United States and social prestige, that come with recognition as a legitimate religion. In response, the church has sought and published—in *Scientology: The Theology and Practice of a Contemporary Religion*, for example—the opinions of a variety of scholars and religious figures who have asserted that it meets the definition of a religion. CSI also publicizes the many expressions of appreciation for its social betterment efforts by individuals, businesses, and government offices. Conversely, the church has responded forcefully to individual members of the anti-cult movement, other public critics, and especially critical former members. Some—such as Bent Corydon, who wrote the fairly representative exposé *L. Ron Hubbard: Messiah or Madman?* in 1992—allege legal action by the church and other forms of intimidation.

One of the most notorious controversies in which the church has been embroiled followed the death of a thirty-six-year-old Scientologist, Lisa McPherson, on December 5, 1995, in Clearwater, Florida, seventeen days after a minor auto accident. Right after the accident, McPherson was taken to the hospital. Because she appeared disoriented but physically unharmed, she was held over for a psychological evaluation. Local officials of the church quickly removed her from the hospital and moved her into the Fort Harrison

hotel, owned by the church. In the following days her condition deteriorated, and she died before receiving medical help. McPherson's death provoked a tangle of litigation and fueled acrimonious indictments against the church both locally and throughout the country. Charges against the church by the county prosecutor were eventually dropped, and Scientology continues to allege that its opponents seized on the incident as an opportunity to discredit the church. A lawsuit brought by McPherson's estate against the Church was eventually settled for an undisclosed amount. The McPherson case remains a primary example of the incendiary emotions that the Church of Scientology can inspire, both against it and on its behalf.

Early Twenty-First-Century Trends

Despite the persistent criticism that it has received, CSI has increased its membership, developed its organizational structure, and extended its activities throughout the United States and all over the world. The church has successfully weathered the transition from leadership by its charismatic founder to a stable second generation. By exercising tight control over the publication and use of Hubbard's teachings, Scientology has maintained a high degree of orthodoxy in its teachings and practices, albeit at the cost of accusations that it employs intimidating and abusive tactics to ensure conformity. There are no indications that CSI will be threatened with substantial schisms over central issues in the near future. Although growth rates are difficult to determine because of the varying degrees of participation by Scientology's clients, from the outside it appears to be a robust and thriving religious organization. For some of its dedicated opponents, that is cause for concern, but for many Scientologists it is another indication that Hubbard's fundamental insights simply continue to "work" in ways that incontrovertibly improve people's lives. Scientology thus is likely to remain a part of the U.S. religious landscape well into the future.

Scriptures: American Texts

The most avid Bible readers on earth, Americans have long sustained a robust market in updated English translations of the sacred text. A few Americans, however, have taken the quest for new versions to a more radical level by daring to improve on more than simply the diction of scripture. Figures as diverse as the nation's third president, Thomas Jefferson, the Mormon prophet Joseph Smith Jr., the Christian Science founder Mary Baker Eddy, and the woman suffragist Elizabeth Cady Stanton, among others, sought to improve on the Bible's actual ideas. In some cases, these distinctively American versions of scripture drew on Enlightenment standards of rationality, especially the notion that science and reason were replacing the superstitions that had allegedly corrupted Christianity. Other American versions of scripture stemmed from a belief in ongoing revelation, or the idea that God's supernatural communication with humans did not cease in apostolic times. In every case these new scriptures confirmed, for those who accepted them, the founding myth of the United States as a "new order of the ages"—a nation in which new light dawned or ancient wisdom was revealed.

Jefferson's Bible

Like the other founders of the republic, Thomas Jefferson (1743–1826) was steeped in the idiom and assumptions of the

Age of Reason. Although he remained outwardly an Anglican his entire life, he was also deeply influenced by the critiques of traditional religion by Deists such as John Toland, who in *Christianity Not Mysterious* (1696) insisted that true Christianity could not require belief either in mysteries or in things contrary to human reason. For centuries, Toland wrote, priests and theologians had shrouded the plain message of the gospel with "Litigious Disputes and vain Subtilties," enthroning themselves as the sole interpreters of the faith. True religion instead was characterized by simplicity—the "noblest Ornament of the Truth." Similarly, Jefferson maintained that the "incomprehensible jargon" of the theologians, as he put it in an 1821 letter to the former secretary of state Timothy Pickering, had to be swept away before Jesus' straightforward ethical teachings could shine through.

For Jefferson, unlearning doctrinal corruptions meant quite literally cutting them out of the Bible. With scissors in hand, Jefferson went to work on a pair of King James New Testaments (he needed twin copies so he could work with both sides of the printed page), along with editions in Greek, Latin, and French. In addition to excising miracle stories, including the Resurrection and apocalyptic material, he eliminated the letters of Paul, whom he regarded as the "first corrupter of the doctrines of Jesus," as he wrote in an 1820 letter to his former secretary William Short, with his abstruse theology of justification and election. When Jefferson pasted the remaining portions in a notebook, he was left with a bible depicting Jesus not as the divine savior of the elect but as a wise teacher who conveyed moral lessons in parables. Jefferson, like modern-day scholars of the historical Jesus, believed that he had found the gold nugget of reliable material buried in the dross of scripture. His version of Holy Writ was a book of teachings *by* Jesus, not *about* him. Jefferson blamed what he called "priestcraft" for turning Christianity into a supernatural religion focused on the resurrected Christ. The Deist God of Jefferson's bible does not violate his own natural laws: the book ends with Jesus' body being laid in the tomb.

Jefferson apparently did not complete his bible, which he titled "The Life and Morals of Jesus of Nazareth," until his retirement in 1819 or 1820, less than a decade before his death in 1826. He kept the text as a closely guarded secret. In the election of 1800, he had endured vilification as an atheist and a French infidel, owing partly to his five years as U.S. minister to France, and he had no desire to reawaken his critics. Not until 1904 did Jefferson's bible appear in the first of several printed editions. Since then, scholars have come to

recognize it as one of the most intriguing texts of the American Enlightenment.

Joseph Smith's Translation

About the time Jefferson was completing his bible, fourteen-year-old Joseph Smith Jr. (1805–1844) was receiving the first of a series of visions that would eventually lead to the publication of the *Book of Mormon* in 1830. The story of Mormonism's epochal text was described by Joseph Smith. The angel Moroni led Smith to a hillside near his home in Palmyra, New York, where he found a trove of writings engraved on gold plates. With the miraculous help of two seer stones, the Urim and Thummim, the unlettered Smith translated the writings, which became the *Book of Mormon*, an account of the ancient inhabitants of America and of the revelations given to them by Christ himself. Because Mormons believe in ongoing revelation, they do not reject the Bible but regard the *Book of Mormon* as a continuation of the story. As the prophet Nephi reports the word of the Lord in the *Book of Mormon*, "Wherefore, because that ye have a Bible ye need not suppose that it contains all my words; neither need ye suppose that I have not caused more to be written" (2 Nephi 29:10).

Soon after the *Book of Mormon*'s publication, however, the Lord revealed to Joseph Smith that the inherited King James Version of the Bible was incomplete or erroneous at points and that Smith should revise it. The Joseph Smith Translation, or Inspired Version, as it came to be known, was not a translation in the conventional sense. Smith did not work from scripture's original Hebrew and Greek but proceeded instead by direct inspiration from God. Over the next several years, Smith dictated the textual emendations to scribes: approximately thirteen hundred changes in the Old Testament and twenty-one hundred in the New Testament. Many of these were only slight clarifications, some designed to modernize the language (*saith* to *said* in some cases, or *that* and *which* to *who* in reference to persons). Other changes had doctrinal import and even amplified, sometimes substantially, the original text. The most dramatic instance is in Genesis, to which Smith added a major preface describing the temptation of Moses by Satan and revealing God's creation of multiple worlds. Another addition occurs in the Sermon on the Mount in Matthew 7, where Smith's translation has the disciples interrupting Jesus with questions.

Besides such additions, shorter alterations sprinkled throughout the Bible helped reinforce Latter-day Saints' teachings. For example, Mormon tradition taught that Joseph

Smith, like Abraham (Genesis 17:1), Moses (Deuteronomy 34:10), and other prophets of old, had seen the Lord face to face. Yet the Gospel of John declares, "No man hath seen God, at any time" (John 1:18; identical statement in 1 John 4:12). Smith added the words "except he hath borne record of the Son" in John 1 and "except them who believe" in 1 John 4. Similarly, Smith signaled the Mormon doctrine of degrees of glory in the afterlife, for persons of varying degrees of righteousness, by modifying John 5:29. The King James verse presents an all-or-nothing opposition between the "resurrection of life" and the "resurrection of damnation"; Smith's emended version contrasts the "resurrection of the just" with the "resurrection of the unjust." Another doctrinal change occurs in John 6:44, which in the King James Version reads, "No man can come to me, except the Father which hath sent me draw him." In keeping with the Mormon emphasis on free will, Smith's translation removes the predestinarian implication, declaring instead, "No man can come unto me, except he doeth the will of my Father who hath sent me."

Historian Richard Bushman, himself a faithful Mormon, has noted that it was "a measure of [Smith's] audacity" that though he was ignorant of ancient languages, "he undertook to improve the most honored and holy book in Western civilization." Smith and his followers were especially sensitive to the charge that he was an imposter and charlatan. Consequently, like Jefferson, Smith made no attempt to publish his entire translation in his lifetime, though some of his emendations or amplifications appeared in other canonical Mormon texts. For example, the Genesis additions became the Book of Moses in the Pearl of Great Price, and the revised John 5:29 became Doctrine and Covenants 76:17. After Smith was martyred in 1844, the original manuscripts of his translation remained with a group of his family members who did not follow the majority of the Latter-day Saints to Utah. This minority group, which formed the Reorganized Church (today the Community of Christ) in Independence, Missouri, published the first edition of the new translation in 1867. In more recent times, LDS scholars in Utah, especially Robert J. Matthews, have studied the text of the translation and produced a critical edition. In 1979 the LDS church published an official Mormon edition of the King James Bible that integrated the most significant variants from Smith's translation in footnotes and an appendix.

Mary Baker Eddy's Science and Health

Next to Joseph Smith, the most famous nineteenth-century American to appeal to direct revelation in revising scripture

was Mary Baker Eddy (1821–1910), the founder of Christian Science. Her fundamental religious discovery after suffering a serious health crisis was the idea that the material world is an illusion. Sickness and death do not truly exist because only mind is real, and it is immortal. Mind is God, and humans are “the full and perfect expression” of the deity. Salvation comes when we understand matter’s unreality, a message that Jesus came to impart. “Atonement,” Eddy explained, “is the exemplification of man’s unity with God.” Eddy elaborated her discovery in what became the bible for her followers, *Science and Health with Key to the Scriptures*, first published in 1875. Unlike Smith’s or Jefferson’s versions of scripture, *Science and Health* is more of a commentary—a key to the Bible rather than a full-scale revision. Yet the book at points rewords central biblical passages, unlocking their hidden meaning in much the same way ancient Christian Gnostics elaborated the esoteric significance of Holy Writ.

Like Smith, Eddy paid particular attention to Genesis, seizing on the idea that God created humans, male and female, in his image. She cited the Hebrew plural name for God, *Elohim*, as well as the plural pronouns in “let *us* make man in *our* image” (Genesis 1:26), as evidence that God is a “unity of Life, intelligence, Truth, and Love”—qualities she equated with both male and female characteristics. Humans mirrored these qualities; thus, the “ideal man corresponds to creation, to intelligence, and to Truth,” and the “ideal woman corresponds to Life and to Love.” Applying this idea of complementary gender attributes to the New Testament, Eddy revised the Lord’s Prayer in a way that anticipated feminist-inspired, inclusive-language adaptations of scripture a century later. “Our Father–Mother God, all harmonious, Adorable One,” her version of the prayer begins, “Thy kingdom is come; Thou art ever-present.”

For Eddy, the unlocking of the Bible’s true meaning in *Science and Health* was the next stage in the progressive enlightenment of humankind. The biblical motto she chose for her movement’s newspaper, the *Christian Science Monitor*, bespoke this idea of unfolding revelation: “First the blade, then the ear, then the full grain in the ear” (Mark 4:28), which rendering she chose from the American Standard Version of 1901. She regarded herself as merely the instrument of this revelation and recounted how the text of *Science and Health* came to her as an “influx of divine interpretation,” without any forethought on her part. This left her in the position of only gradually coming to understand the full significance of her own text. “I have been learning the higher meaning of this book since writing it,” she commented later in life. The

higher meaning of *Science and Health*, she concluded, was nothing less than a revealed system of Divine Science so sublime that no mortal language could fully capture it.

Elizabeth Cady Stanton’s Woman’s Bible

In a different way, Eddy’s contemporary Elizabeth Cady Stanton (1815–1902) also anticipated what she called the “marriage feast of science and religion” and regarded the *Woman’s Bible* as central to this development. Stanton’s upbringing prepared her for the public life she would lead as a social and religious reformer. Her mother came from a prominent New York family and her father was a member of Congress and a state supreme court justice in Johnstown, New York. Early on she showed a precocious interest in history and religion. Unbeknownst to her father, she studied Greek with a local minister and eventually took second place in a language competition at her school, winning a Greek New Testament as the prize. Her father’s response to her award (“Ah, you should have been a boy!”) bespoke the traditional gender expectations against which she eventually rebelled. In the next phase of her school career, at Miss Willard’s Female Seminary in Troy, New York, Stanton shifted the focus of her rebellion from gender roles to her inherited Calvinism. The precipitating factor, as she recalled, was the hellfire revival preaching of Charles Grandison Finney or more likely his local disciple Nathaniel Beman, historian Kathi Kern concluded. “My [former] religious superstition,” Stanton wrote in her autobiography, *Eighty Years and More* (1898), “gave place to rational ideas based on scientific facts.” Some years later, her perusal of Darwin nudged her further toward agnosticism.

In the course of her intellectual odyssey, she married the antislavery activist Henry Stanton and became a leader in the woman suffrage movement. She came to believe that the Bible, as misinterpreted and misused by male clergy, was the chief impediment to women’s progress. When a joint British–American committee published the Revised Version, the first major new English translation since the King James, in 1881 (New Testament) and 1885 (Old Testament), she was disappointed that it preserved the status quo on key passages pertaining to women. In 1886 she attempted unsuccessfully to form a committee of women to undertake their own revision. Undeterred by the reluctance of her colleagues, she resumed her efforts a few years later and finally succeeded in enlisting a number of similarly talented women of elite pedigree. Among them was Clara Bewick Colby, one of the first women to graduate from the University of Wisconsin, who

agreed to publish the first installments of the new bible in her liberal suffrage paper, the *Woman's Tribune*. Other members included Olympia Brown, a radical suffragist and the first woman to be ordained a minister in the Universalist Church, and Eva Parker Ingersoll, wife of the famous agnostic. Lest readers of the time miss the connection, the latter appeared on the committee roster as Mrs. Robert Ingersoll—the only woman listed by her husband's name. Yet for all the prominent names among the revisers, Stanton's closest colleague in the suffrage movement, Susan B. Anthony, declined to lend her weight to the project. As she wrote to Stanton, "I don't want my name on that Bible committee—you fight that battle—and leave me to fight the secular, the political fellows."

Ironically, Stanton's committee never met or worked collaboratively, nor did they actually retranslate the scriptures. The *Woman's Bible* instead interspersed select passages of the Bible, printed in double columns in small type, with commentaries, printed in a single column in larger type, written by individual contributors and signed with their initials. Stanton composed the most commentaries. A few of the committee members contributed none. For Stanton the project was the culmination of a life's worth of reflection: she was eighty years old when the first of the bible's two volumes appeared in 1895. The second was published in 1898, and the whole work subsequently appeared in one volume.

Stanton aimed the book at ordinary women who, in her words, "worship the Bible as a kind of fetish." She devoted the greatest length of commentary to Genesis. Influenced by the documentary hypothesis of the eighteenth-century French critic Jean Astruc, she maintained that Genesis actually contains two independently authored accounts of the world's creation—one in which man and woman are created simultaneously (Genesis 1:1–2:3), and another in which woman is created out of a rib taken from man (Genesis 2:4–3:24). The second story includes the Garden of Eden account, in which the serpent tempts Eve to eat of the fruit forbidden by God, and Eve persuades Adam to join her in this transgression. To Stanton the second story clearly smacked of an attempt to portray women as morally feeble and derivative of men: "It is evident that some wily writer, seeing the perfect equality of man and woman in the first chapter, felt it important for the dignity and dominion of man to effect woman's subordination in some way." The first account, on the other hand, was an unsurpassed expression, as Clara Colby put it, of "the highest aspirations and the deepest longings of the human soul" because it taught that "the image of God is the birthright of man, male and female."

Suffragist Elizabeth Cady Stanton (seated) believed that the Bible was misinterpreted and misused by male clergy and therefore impeded women's progress. She enlisted a number of prominent women and created the *Woman's Bible*, which featured select passages of the Bible as well as commentary written by Stanton and the contributors.

Like Mary Baker Eddy, Stanton identified the Hebrew plural *Elohim* with a Father-Mother deity because, according to Genesis 1:26, male and female humans were created equally in the image of God. "The masculine and feminine elements, exactly equal and balancing each other, are as essential to the maintenance of the equilibrium of the universe as positive and negative electricity," she wrote. Yet successive layers of patriarchy had obscured this primeval recognition of a balanced gender duality. The apostle Paul exacerbated this patriarchy by reiterating the idea, rooted in the second Genesis creation account, that woman was derived from man. A man "is in the image and glory of God; but the woman is the glory of the man," Paul wrote in 1 Corinthians 11:7–8. "For the man is not of the woman; but the woman of the man." An anonymous contributor to the

Woman's Bible scoffed at Paul's words: "And yet this is called 'inspired'! . . . No wonder Paul at last was constrained to say: 'We are fools for Christ's sake.'"

America's New Bibles: Reception and Significance

To question the divine inspiration of even a portion of the Bible has always been a sure recipe for controversy in American culture, and the reception of the *Woman's Bible* is a case in point. Even before the second volume of the work appeared, women in the more traditionally Christian wing of the suffrage movement were calling for a formal censure of the book. When the National American Woman Suffrage Association took up the issue in January 1896, Stanton, the group's president (a largely honorary office), was absent because of declining health. Her friend Susan B. Anthony addressed the assembly with an impassioned plea to embrace freedom of thought rather than censorship. The delegates rebuffed her appeal and censured the *Woman's Bible* by a vote of 53–41. Stanton's alienation of evangelicals, as Kathi Kern has observed, caused her posthumous reputation as a crusader for women's rights to be eclipsed by that of Anthony, who became the subject of a dollar coin issued by the U.S. Mint in 1979. Yet among feminist biblical critics, Stanton has more recently gained honor—not primarily for her scholarship (she herself admitted that no contributors to the *Woman's Bible* were trained biblical specialists) but for blazing a trail for later feminist interpreters and theologians. The collaborative *Women's Bible Commentary* (1992), edited by Carol A. Newsom and Sharon H. Ringe, pays tribute to Stanton's pioneering attempt to read the Bible self-consciously as a woman.

Other distinctively American bibles fared little better than the *Woman's Bible* in their initial reception. No less of a critic than Mark Twain wrote an entire book skewering Mary Baker Eddy's *Science and Health*. He ridiculed her claim that God was the real author of the work and poked fun at her tight control over the book's copyright. "She copyrights everything," Twain quipped. "If she should say, 'Good morning; how do you do?' she would copyright it; for she is a careful person, and knows the value of small things." Twain was briefer, but equally merciless, in lampooning the alleged pretensions of Joseph Smith. Twain found particularly comic Smith's use of King James idiom in the *Book of Mormon* (a text he once derided as "chloroform in print"). "'And it came to pass' was his pet," Twain observed in *Roughing It* (1872). "If he had left that out, his Bible would have been only a pamphlet."

Yet in a nation in which the Bible was both the great religious charter and a household talisman, nothing could be more American than scripturalizing anew as a means of reclaiming the Bible's power. Historian Stephen J. Stein has commented on the process of scripturalizing that took place within America's diverse religious contexts. Sometimes this phenomenon took the form of a canon within the canon, as when Jefferson isolated Jesus' parables and moral teachings as the Bible's only authoritative writings. Other times scripturalizing happened by way of translation, including Joseph Smith's translation by direct inspiration, or commentary, as in the writings by Eddy and Stanton. The end product in each case was a new authoritative text that mimicked the Bible in functioning as Holy Writ for particular individuals or communities.

Indeed, the authors of new scriptures often appealed selectively to the King James Bible for legitimation, as when Joseph Smith identified the "book that is sealed" of Isaiah 29:11 as a prophecy of the *Book of Mormon* (2 Nephi 27:7). Similarly, particular biblical verses could be seen as containing the golden kernel of ideas that were later fully developed in new scriptural texts. This accounts for Eddy and Stanton's interest in biblical hints of gender duality in the godhead, a fascination shared by earlier figures, such as the Shaker leader Philemon Stewart. His own American bible, *A Holy, Sacred and Divine Roll and Book; from the Lord God of Heaven, to the Inhabitants of Earth* (1843), never gained the fame of *Science and Health* or the *Woman's Bible*, but at key points relied on similar logic. If God created male and female equally in his image, Stewart reasoned, then the incarnate Christ (the new Adam) must have come in male and female forms: Jesus and Mother Ann Lee, the Shaker founder.

Thus was scripture ever reinvented in the marketplace of American sects. For the apostles of new versions, the disclosure of revised words of divine wisdom heralded the millennium, whether conceived as the coming of God's kingdom or the advent of scientific progress. The biblical Apocalypse foretold as much. "Behold, I make all things new," says the lamb upon the throne (Revelation 21:5). These words aptly describe the scripturalizing tendency that has long animated American religious culture.

Seeker Churches

Seeker churches focus on people outside the faith who are seeking God. Most are evangelical Protestant churches, and they target what sociologist Wade Clark Roof calls a generation of seekers—unaffiliated individuals of any faith or denominational background who are searching for spiritual fulfillment.

The greatest common value among seeker churches is a desire to remove social barriers that seem confusing or unwelcoming for newcomers. This approach affects everything from greeters to signage, from music to preaching. The intended outcome is an environment that is inviting, physically comfortable, understandable, and approachable by those who have spiritual hunger but hesitancy toward church. A seeker emphasis can involve church architecture, as some facilities are designed to be neutral and familiar rather than to look like churches. They may intentionally avoid crosses, stained glass windows, pews, hymnals, and other Christian symbolism found in traditional churches.

Seeker churches can be any size, but they tend to be larger. Most are tied to a denomination, but they downplay it. Instead they tend to brand themselves with some variation of “not your typical church.” Generally they want first-time worshipers to be pleasantly surprised by an atmosphere of friendliness and joy and by teaching that is practical and relevant to their spiritual needs.

Seeker churches often classify themselves along a spectrum of seeker driven, seeker centered, seeker oriented, seeker sensitive or seeker friendly. Each of these phrases shows the degree to which a church has shaped its format, especially the worship service, with seekers in mind.

According to Scott Thumma and Dave Travis in *Beyond Megachurch Myths*, large seeker churches represent a suburban and exurban baby boomer cultural style. They almost always contain higher percentages of younger people than of older persons. Large seeker churches were founded during, or grew rapidly in, the 1980s and early 1990s. They are less likely to use choirs, organs, or pianos in worship and instead to have a live band, projected song lyrics with multimedia, image magnification, occasional dramatic sketches, and teaching that applies the Bible to everyday issues, told in a style of personal authenticity.

History

Robert H. Schuller, Bill Hybels, and Rick Warren are widely viewed as the originators of the contemporary seeker church model. In 1955, Robert H. Schuller (1926–), age 28 at the time, was sent by his denomination to start a mission church in Orange County, California. Unable to rent a suitable meeting place, he began conducting worship services in the Orange Drive-In Theater. To attract people, he placed newspaper advertisements urging people to “come as you are in the family car” for “an exciting new church.” He also canvassed the local community, ringing doorbells (3,000 in the first year), introducing himself as a new minister in town, and asking those who indicated they were not active in a local church what would attract them to a church. He used their responses to develop various church programs designed to meet these needs. He named his congregation Garden Grove Community Church and later renamed it the Crystal Cathedral. Neither referenced his Reformed Church in America denomination, an unusual decision for that era. He explains in *Your Church Has Real Possibilities* that his mission was to reach the unchurched and that he didn't think the term *Reformed* would appeal to them.

In these ways, Schuller pioneered the use of marketing techniques to reach the unchurched. He was among the first to replace a denominational church name with “community church,” rename his sermons as messages, use nontraditional settings for church worship (in his case, a drive-in theater), conduct door-to-door research that asked, “Why don’t you go to church?,” train other pastors in how to reach unchurched people by launching his Institute for Successful Church Leaders in 1969, and televise a weekly church service, beginning *The Hour of Power* in 1970.

Interestingly, the church does not use the term *seeker* in its Web site and literature. Its mission is “to proclaim the gospel of Jesus Christ throughout the world.” Weekly attendance has never exceeded 5,000, but the television audience is calculated in hundreds of thousands.

In 1971, Bill Hybels (1951–), a youth pastor in Park Ridge, Illinois, started a youth outreach program called Son City. Attendance grew dramatically to more than 1,000. Hybels and other leaders began to dream of forming a new church designed to reach adults as well. Following Schuller’s model, they surveyed the community to find out why people didn’t go to church. Common answers included “Church is boring,” “They’re always asking for money,” and “I don’t like being preached down to.”

These answers shaped the group’s approach to the new church that began in 1975 when Hybels was age 24. Meeting in a Palatine movie theater named Willow Creek, services featured contemporary music and media, such as short film clips and drama to illustrate the teaching. Within two years Willow Creek Community Church had grown to 2,000 in attendance. In 1981 the church moved to its current location in South Barrington, which now includes a 7,200-seat sanctuary opened in 2004 and four regional campuses opened between 2001 and 2006. Total weekly attendance for all services and all campuses averaged more than 20,000 in 2009. The church is nondenominational, although Hybels grew up in the Christian Reformed Church.

Willow Creek was the first church to popularize the term *seeker* to describe its target audience and *seeker-driven* to describe its methodology. According to Hybels and his wife Lynne, “We describe Willow as being a safe place where seekers can hear the very dangerous, life-changing message of Jesus Christ. It’s safe because we have tried to eliminate the artificial barriers that discourage people from focusing on the central message of the Gospel. We want only one thing to be offensive at Willow Creek: the cross

of Christ” (Hybels and Hybels, 2006). Willow Creek’s mission is “to turn irreligious people into fully devoted followers of Jesus Christ.”

Willow Creek also followed Schuller’s model of training other church leaders. By 2009 annual conference attendance was more than 100,000, including satellite uplink sites, plus very large sales numbers for sermons and books.

In 1980, California native and recent seminary graduate Rick Warren (1954–), then age 25, relocated to Orange County, California, invited by his Southern Baptist denomination to start a new church there. Following Schuller’s example, he knocked on doors to ask unchurched people what kind of church they would be willing to attend. After a communitywide mailing of 15,000, the church launched with 205 people present. Again following Schuller’s example, Warren avoided a denominational label in the church’s name, first calling it Saddleback Community Church, and then later Saddleback Church.

The church grew year after year, with Warren’s teaching emphasis calling for different levels of commitment, inviting people to move from the community (occasional attenders), to the crowd (regular attenders), to the congregation (actual members), to the committed (those in small groups and personal Bible study), and finally to the core (lay ministers). Warren described this model as being seeker-sensitive. By 2009 the church had a 3,200-seat sanctuary, five off-site campuses—the first of which began in 2006—and a total weekly attendance of more than 20,000 for all services and campuses combined. An estimated one in ten churches in the United States have used Saddleback-related materials and thereby been influenced to some degree by Saddleback’s seeker-sensitive methodology.

Warren credits business leader Peter Drucker, a leading management theory educator and author, as one of his mentors in reaching outsiders. The long-term Drucker-Warren relationship illustrates how seeker churches are strongly influenced by corporate business practices and values.

Current Status

According to a 2009 internal study by Dallas-based Leadership Network, which has closely monitored the growth of the megachurch movement for twenty-five years, only 10 percent of the 1,400 U.S. megachurches describe themselves as seeker churches, a percentage that was higher in previous years. Megachurches are more likely to describe their approach more generally as “contemporary Christian worship.” Many smaller churches with a denominational

label in their name added “seeker services” in the 1990s and 2000s, but toward the latter part of that era many churches’ approach has likewise moved to a more generic contemporary Christian worship.

The seeker approach has modified itself as U.S. culture has changed. In the early days seekers seemed to want total anonymity, so some churches structured their services almost as spectator events. In the mid-1990s and beyond many seeker churches moved to an approach that involved participation from the congregation. Likewise many seeker churches have modified their formats as newer generations showed increasing wariness of anything that felt slick or contained spin. These churches also made changes as seekers have shown a more ready acceptance of spirituality in day-to-day life.

In 2007 Willow Creek made a major shift in its programming approach that resulted from a self-study project called Reveal. The working assumption had been that church activities create participation that in turn produces disciples. The research indicated that seekers were being reached effectively but the church’s activities did not carry them well beyond a certain point of spiritual development. The study indicated that small groups, active service, and in-depth Bible application were the most powerful catalysts for ongoing spiritual growth, and the church has adjusted its assimilation model accordingly.

Critical Assessment

Sociologist Kimon Howland Sargeant hypothesizes that the greatest weakness of the seeker church movement may be that it relies on a consumerist methodology and therapeutic understanding of religious participation rather than on religious purpose to guide the movement. The end result, according to Sargeant, may be that seeker churches gain more followers, but they are less committed to the spiritual content of Christianity. In turn, this may lead to a kind of secularizing cultural production that harms the spiritual trajectory of such churches.

The strongest criticisms of the seeker church approach have been from within Christianity. The predominant critique is that it’s a watered-down faith and a psychological feel-good gospel. Evangelical pastor John MacArthur, also a widely published author, calls it candy-coating the gospel and entertainment-oriented pragmatism. He also says the seeker approach redefines the church in cultural terms, determining its content from marketing studies of what supposed customers want to hear. Other criticisms have surrounded theological issues, such as Schuller’s controversial

books about self-esteem. Many who oppose his approach have associated his unusual doctrines with his model of seeker church.

At seeker churches such as Willow Creek, Bill Hybels insists that their sole authority is the will of God as expressed in the scriptures. Yet outside observers such as Sargeant, noting Marshall McLuhan’s insight that the “medium is the message,” contend that the form of the seeker church as a shopping mall where people go primarily to meet their own needs may have more influence in the long run on church attendees than will the theological intentions of the pastors. The coming years will decide whether the seeker churches’ accommodation to culture leads to a therapeutic emphasis and a religion of consumerism.

Serpent Handlers

Serpent handlers emerged out of the Appalachian Holiness tradition when it joined with the classic Pentecostal tradition that sought biblical justification for evidence of baptism of the Holy Spirit. Their foundational text, Mark 16:17–18, includes not only the imperative to speak in new tongues (glossolalia) but to take up serpents as well. James Kelhoffer (2000) has demonstrated that this longer ending of the gospel of Mark was written to advance the early Christian claim that like other competing religious groups, Christians also had the power to handle serpents. No persuasive evidence exists, however, that early Christians actually practiced taking up serpents. It was not until the end of the eighteenth century that newly emerging groups of Pentecostals in the Appalachian region began the practice. Jimmy Morrow, a serpent handling pastor and lay Appalachian historian, argues that serpent handling likely had several independent origins, as different believers began to practice all five signs given in Mark 16:17–18. Scholars agree, however, that if there is a St. Paul of serpent handling it is George Went Hensley.

In the first decade of the nineteenth century Hensley gained notoriety for the practice, modeling the handling of serpents as a Church of God preacher across the southeastern Appalachian states.

Early Support for Serpent Handling

The Church of God and the Church of God of Prophecy were among the strongest Pentecostal groups that supported serpent handling early on. They became identified as sign following believers based on their commitment to the signs specified in Mark 16:17–18. Until as late as 1943 articles that supported serpent handling appeared in the *Evangel*, an official publication of the Church of God; however, as the practice increased, believers began to get bitten and documented cases of maiming and death eventually came to light. In the face of these unpleasant realities, the emerging Pentecostal denominations that had supported the practice reversed course and gradually began to denounce it.

In what scholars call renegade churches of God, the practice continues in the early twenty-first century. These

churches are generally small, often with only fifteen to twenty-five members, and typically have the Church of God as part of their name, such as the pastor Jimmy Morrow's Edwina Church of God in Jesus' Name. They are scattered primarily across Appalachia, have no formal accounting as to their exact number or membership totals, and today likely number fewer than a hundred in all of Appalachia. Other serpent handling churches, however, have been identified as far north as Canada and on both coasts of the United States. Many churches are hard to locate because they protect themselves from laws that ban the practice in most of the states where handlers have been active. West Virginia is the only Appalachian state that has never had a law prohibiting serpent handling.

When the Spirit Maims and Kills

Believers handle a variety of poisonous serpents indigenous to the Appalachian region. Water moccasins and a variety of copperheads and rattlesnakes are most common. Handlers also trade and acquire other exotic poisonous serpents, however, such as cobras and coral snakes.

Until recently scientific knowledge about the probability of serpent bites when individuals voluntarily take up serpents has been scant. The probability of a bite, however, has recently been demonstrated to be a simple function of the frequency of handling. As the ritual became established, more handlers were therefore bitten. Likewise, churches that have more handlers, as well as handlers within churches who handle more frequently, increase the probability of bites. Individuals handle on the basis of faith alone or, more commonly, when they sense an anointing to handle. Depending on the type of serpent and the amount of venom injected, individuals can become maimed or die. Ninety deaths from serpent bites since the first documented fatality of Jim W. Reece in Alabama reported by the Church of God in the *Evangel* in 1922 were documented in a single study. The same study, however, also suggests that deaths before this that went unreported are likely. After surviving many bites, George Went Hensley died from one in Florida in 1955. His death was ruled a suicide.

The renegade Churches of God that continue the practice have developed a variety of religious interpretations for the failure to handle successfully. Most handlers simply accept that bites are God's will and that bites and even death can be an assurance of salvation, as long as one has handled in obedience to God. Handlers who are bitten may seek medical attention if they desire, but typically rely on prayer and trust that God's

Serpent handlers emerged from the Appalachian Holiness tradition when it joined with the classic Pentecostal tradition. The textual foundation for the practice is a contemporary application of a statement near the closing of the Gospel of Mark: [Jesus] said to them, "These signs will accompany those who believe: in my name they will drive out demons, they will speak new languages. They will pick up serpents (with their hands), and if they drink any deadly thing, it will not harm them. They will lay hands on the sick, and they will recover." (Mark 16:17-18. New American Bible).

will shall be done. Many powerful serpent handling families have children or grandchildren who continue the practice that killed their parent or grandparent. Those who continue to handle note that the Gospel of Mark says that they shall take up serpents, not that they shall not be bitten. Most churches have members who have been bitten and maimed. In one study serpent handling families told their own stories, including their reactions to bites that maimed or killed family members.

Early in the tradition, children were allowed to handle serpents. Although no death of a child from a serpent bite has been documented, several children did suffer serious bites and received wide publicity in the press and nationally distributed magazines. Today children are prohibited from handling. Handlers must be at some age of consent, usually eighteen years old. The point is largely moot, however, because one is seeking consent for a practice that is illegal in most states. In several Appalachian states, appeals of convictions to state supreme courts have yielded support of the lower court verdict. In addition, even without specific laws

banning of handling of serpents, states and counties have many laws they can use to punish handlers, from public nuisance to endangerment.

Diversity within the Tradition

Serpent handling churches share the diversity that characterizes mainstream Pentecostalism. What makes them unique is that, along with their Bibles, they bring their serpents to church in homemade boxes and place them beside the altar. Although documentaries of this tradition focus on handling, the believers insist on identifying themselves within the mainstream of classical Pentecostal beliefs and practices. Most members of a church do not handle and simply pray for others who do. Serpents are always brought to church, but handling may not occur. When it does it is likely to be for only a small portion of the service. Handlers are quick to note that they are stereotyped for a single practice and that most Pentecostals otherwise share basic religious beliefs and practices.

Based on their understanding of Mark 16:17-18, some handlers also drink poison. Carbolic acid, strychnine, and carbolic acid are the most common poisons. Fewer believers drink poison than handle serpents. Although all poison drinkers handle serpents, many serpent handlers do not drink poison. The distinction between the two signs is that poison drinking is preceded by the proposition "if" in Mark 16:17-18 and thus is not considered mandatory. Nine deaths from poison drinking have been documented, the last being Buford Pack and Jimmy Ray Williams Sr. at the same church service in Tennessee in 1973.

The two most distinctive branches of the tradition split over the issue of baptism. The Oneness or Jesus name tradition baptizes in the name of the Father, Son, and Holy Ghost, which they say is Jesus. The trinitarians do so in the name of the Father, Son, and Holy Ghost without specifying the name Jesus. Both are still likely to baptize new converts in nearby streams or rivers. Both endorse serpent handling, though trinitarians handle less frequently than Jesus name members. Given the difference in baptism, however, these two branches neither worship together nor do they allow preachers who do not support their baptism practice to preach in their churches.

Women have a central role in serpent handling churches. Although not allowed to preach, they have ample opportunity to testify and are free to practice the signs. That more men have died from handling than women is simply a testimony to the fact that more men handle and handle more

frequently than women. Several women have died from serpent bites, however. Some churches in Appalachia are widely known for the major role women play both within the church and in the modeling of serpent handling to other women who might become handlers themselves.

As noted earlier, serpent handling aside, serpent handling churches are characterized by classic Pentecostal beliefs and practices. They accept glossolalia as necessary evidence of baptism of the Holy Ghost. They lay hands on the sick and cast out demons all in accordance with their understanding of Mark 16:17–18. Their preachers are unpaid. They accept only the King James Bible and must “stay within the Word,” or they will quickly be chastised. Services almost always include music, dancing, and testimonies. To an outsider the service may seem chaotic, but to those familiar with the tradition, it is simply evidence of God’s having his way with believers. Services are unscripted and can last several hours. Most meet on Saturday evening and at least one other weekday.

Future of Serpent Handling Churches

Serpent handling churches have a long history of waxing and waning in numbers. Most new churches emerge by breaking away from another but are sometimes also formed when believers move to a new region. Most churches outside Appalachia can trace their roots to a church within Appalachia. Disagreements over the content of preaching, especially identification of sins such as smoking or divorce, most often result in the dissidents forming their own church. Several serpent handling churches might lie within a few miles of one another, each with as few as five members. Fragmentation allows for the survival of the tradition in the face of divergent beliefs.

Although serpent handling churches lack any hierarchical structure, with the exception of differences in baptism noted earlier, churches within one baptismal tradition support one another. Carefully scheduled annual homecomings include three days of services and culminate with a group meal in celebration of their faith. The only essential commonality is that preaching against handling is not permitted and handling is not denied to those who believe. Although many scholars continue to predict the disappearance of these churches, the practice is now in its fourth generation and continues among the more affluent and educated, who simply believe in a ritual that is as central to their faith as the Eucharist is to Catholics. Any obituary for what is arguably America’s only unique form of religious expression is unlikely.

Settlement Houses

Appalled by the social, cultural, and economic conditions of slum districts in cities such as London, Manchester, New York, Boston, and Chicago, small groups of idealistic and reform-minded college-educated men and women of the Gilded Age in the United States and Victorian England, empowered by what Jane Addams in 1892 defined as a religious renaissance, were convinced that they could transform society by the simple act of “settling” or taking up residency in a house (“settlement house”) located in one of these impoverished neighborhoods. They were motivated by the Social Gospel of Christianity, which they perceived needed reassertion to repair the harm done to social relations by economic inequality. In applying Christian social values to the new conditions of industrialism, these urban pioneers offered their education and cultural advantages to the working class and the poor not as traditional missionaries or evangelists, or charity organization agents, but as neighbors.

British Roots: Toynbee Hall

They were following the lead of Toynbee Hall, the first settlement house (established 1884), located in London’s East End slum. Begun by a Church of England minister, Canon Samuel A. Barnett and his wife Henrietta, Toynbee Hall’s residents were Oxford men who had been influenced, as had been the Barnetts, by the ideas of John Ruskin,

Frederick Denison Maurice, Charles Kingsley, Edward Denison, John Richard Green, and Arnold Toynbee.

Settlement Houses Spread: Hull House

The settlement house idea caught on: Oxford House in Bethnal Green was established in 1885. The Women's University Settlement was opened in 1887. Soon the idea was transplanted and adapted for use in the slum districts of U.S. cities. Stanton Coit established the Neighborhood Guild in 1886 in a tenement located on New York City's Lower East Side, the congested, squalid district that was the destination for hundreds of thousands of immigrants. Neighborhood Guild was the first settlement house in the United States.

Smith College graduate Vida Scudder—Scudder and Clara French were the first two U.S. women admitted to Oxford University in 1885, as graduate students in literature—was awakened to the religious and social ferment of the ideas and cross-class efforts of the English Christian socialists. A convert to the Episcopal Church attracted by its wing of Christian socialists, Scudder taught literature at Wellesley College and became one of the founders in 1887 of the College Settlements Association (CSA). Other members also had observed English social reform developments firsthand, especially the activities of settlement houses, and in 1889, the CSA established its first settlement, College Settlement (New York). That same year, Jane Addams and Ellen Gates Starr founded Hull House in Chicago. Addams considered Hull House an outgrowth of Toynbee Hall, adapted to the U.S. scene. Addams, who had joined the Presbyterian Church in Cedarville after returning from England, was influenced by a revival of interest in early Christianity that emphasized the social teachings of Jesus and a democratic church polity. Starr's involvement with Scudder and other socialists in the Episcopal Church framed much of her early thinking.

Make-Up of "Settlers"

Historian Allen Davis views U.S. settlement houses as the vanguard of a multifaceted reform movement from the late 1880s to the 1920s. Quickly adapted to fit the needs of women social activists (not exclusively college graduates) as well as U.S. university men, the movement spread rapidly during the Progressive Era; Roberts Woods and Albert Kennedy in *Handbook of Settlements* (1911) counted 400 houses in the United States. Settlers—the name settlement residents adopted—overwhelmingly were middle- and upper-middle-class Protestants, generally from old U.S.

stock. They saw themselves as *settlers* who were planting roots in common with the neighborhood people, in contrast to charity workers who worked in the slums but lived elsewhere. This made these settlers' forays into immigrant districts in cities an opportunity to construct cultural and social space that modeled cultural and religious pluralism. Settlement houses also created space that was hospitable to politically dissident voices and, for class politics, offered places for workers to organize trades unions.

Settlers also saw themselves as different from missionaries and such rescue and philanthropic efforts undertaken by the Salvation Army or the YMCA-YWCA movement. Although there were settlements with religious affiliations and settlement workers who were also part of the Social Gospel movement, settlement houses were nonsectarian, providing a kind of neutral territory, and welcoming people of all religious and racial backgrounds.

Instead of being paid to do some kind of professional social work, settlers (residents) paid for their room and board and volunteered their services by participating in the social clubs, activities, and classes that were being offered to the adults and children of the neighborhood. They also began to offer services such as day care for the children of working mothers, clinics for health care, and public baths, a basic necessity in tenement neighborhoods without indoor plumbing. Many residents had jobs, or were graduate students, or artists and writers who found the settlement an interesting and even bohemian environment—much more exciting than a typical bourgeois section of the city.

Settlements Encourage Women's Leadership

Settlement houses in the United States had a strong relationship to the emerging women's political culture. In the United States, women dominated the settlement house movement as they outnumbered men as head residents (the name for the director of the settlement) and as residents, even in the houses that were settled by men and women. Historians have argued that settlements were a new form of gendered space in cities because the houses combined both domestic and public functions. For women the communal eating and housekeeping arrangements (shared dining facilities, maid service), combined with private quarters, allowed them privacy and independence.

The settlement movement in the United States derived its strongest leadership from women head residents such as Jane Addams at Hull House; Helena Dudley and Vida Scudder at Denison House, Boston; Lillian Wald at Henry Street

Settlement, New York; Mary E. McDowell at University of Chicago Settlement, Chicago; Jane E. Robbins and Jean Fine of Neighborhood Guild, New York; and Harriet Vittum at Northwestern University Settlement House, Chicago. Settlement houses provided opportunities for college-educated women to find the mutual support and encouragement they needed to pursue innovative careers as social scientists, public health physicians, and social workers. The network of female settlement residents proved a powerful vehicle for a social agenda that advocated legislation to protect and improve the lives of women and children, who were employed in ever increasing numbers in sweat shops, unsanitary and dangerous factories, and mines.

Florence Kelley used her connections to the settlements to forge alliances among women consumers and women workers in her work as the first factory inspector in Illinois (with her official office at Hull House), and later as the director of the National Consumers' League. Julia Lathrop, also of Hull House, used her female network to mount a national campaign for child welfare and lobby for a federal bureau to coordinate this work; she became the first director of the U.S. Children's Bureau established in 1912, coordinating the efforts of female reformers throughout the nation, in what historian Robyn Muncy has called a female dominion.

Settlement houses were not the domain of single women only: married men and women served as residents and as head residents. A leading figure in the movement, Graham Taylor, a Congregational minister, was head resident of Chicago Commons, where he lived with his wife and children. Head Resident Mary Kingsbury Simkhovitch and her husband lived at Greenwich House, New York City.

Settlements Foster Social Scientific Research and Political Activism

Settlements rather than universities became the leading practitioners of social science research in the 1890s. Many settlements had residents who carried out pioneering sociological and public health investigations and used the data that were gathered to advocate appropriate public policy, legislative solutions, or other reforms to remedy existing problems. *Hull-House Maps and Papers*, a collaborative project of the Hull House residents, was the first social survey of its kind when it was published in 1895, and is an example of sociological investigation combined with advocacy that was undertaken at a settlement house rather than at a university. *Americans in Process* (1902), edited by Robert A. Woods, head resident of Boston's South End Settlement,

further developed sociological maps of immigrant neighborhoods. The Pittsburgh Survey (1909–1914) consisted of six volumes documenting life and work in that city with graphs, maps, and Lewis Hine's photography of industrial conditions; it was edited by Paul U. Kellogg and financed by the Russell Sage Foundation.

Settlements were organized to effect change in society. This meant that the residents had political and social ideals and they advocated reform agendas. Here the word *political* is not employed in the narrow partisan sense of being an advocate of a political party and sponsoring a political candidate, although there were times when residents in settlement houses took part in electoral politics. More broadly, settlement houses, particularly during the Progressive Era, were dedicated to social change. To effect social transformations throughout U.S. society, residents created formal networks locally, and in 1911, on the national level. Organized and vocal in campaigns for improved housing, sanitation, parks, and recreation, and advocates of legislation to protect workers and end child labor, settlement leaders had a major influence in shaping the Progressive Party platform in 1912. The Progressive Party nominated Theodore Roosevelt as its presidential candidate when both the Republican and Democratic Party conventions had rejected the social agenda put forward by the settlement house leadership.

In the 1920s most settlements ended up with a combination of programs and activities that included a commitment to reforming society with efforts to provide daily services for people in the neighborhood. These services could include a whole range of vocational, civic, and college-extension classes, health clinics, day care facilities and early childhood programs, recreational opportunities, and programs in the performing and visual arts.

Many settlement houses encouraged different groups in the neighborhood to express their traditional cultural identities in hopes that people of various ethnic backgrounds would come to respect each other's differences. At the same time the settlement houses encouraged and fostered civic engagement, a kind of citizenship that was defined not only by the act of voting for elected officials but also by becoming informed and organizing for social changes, including better working conditions, safety and health measures, adequate and affordable housing, and educational opportunities for all children.

Settlement Houses Lose Social Activism

Conservative political trends after World War I combined with the rise of the Community Chest movement as the

method of funding neighborhood houses and centers ended the social activism of many settlements. In Chicago and New York—cities without Community Chests—social settlements continued to be a force for social change. The 1930s were creative years for settlements such as Chicago Commons, Hull House, Henry Street, and Greenwich House. Invigorated by the federal programs in theater and the arts, these settlements taught education classes, had the funds to initiate art and theater projects that were community-based, and also paid artists, dramatists, dancers, and writers to work with neighborhood groups.

Efforts to create opportunities for interracial and inter-ethnic mixing were controversial, and only a minority of settlements attempted interracial projects in the 1930s and 1940s. The New Deal programs dovetailed with efforts to incorporate African Americans into settlements, as the cities of the North became the destination of the second “great migration” of blacks from the South.

Decline of Settlement Houses

Other changes ultimately recast social settlements. In the 1930s and 1940s most settlement houses no longer required residency for staff and volunteers, thereby foregoing the main ingredient of the original settlement plan. Settlement houses became community centers; workers were paid staff rather than volunteers, and increasingly, directors and staff were trained social workers. Case work and psychiatric social work approaches also are frequently cited as reasons for the transformation of settlement houses into neighborhood social service agencies.

More importantly, the religious and social contexts that produced the settlement houses of the late nineteenth century were no longer the trigger for social reform. In the 1960s, a new generation heard the call for self-sacrifice, and many idealists, with significant leadership from religious groups, were inspired to engage once more in social transformation. College students joined the Peace Corps or became involved in the civil rights movement, the antiwar movement, and the antipoverty campaigns. Community activism revived, but in a different configuration than that identified with the original settlement houses. The crucial combination of higher education and experiential learning in the context of community service—the service-learning movement that emerged in the 1990s—harkens back to the early roots of the social settlements and evokes the ideal of a social ethic that strengthens democracy.

Seventh-day Adventists

The Seventh-day Adventist Church grew out of the Millerite movement of the 1840s that predicted Christ would return in 1843 or 1844. When this did not come to pass, several of the disappointed believers in the United States continued their Bible study in an attempt to discover where William Miller (1782–1844) had gone wrong and where they stood in prophetic history.

Foundational Doctrinal Formation

Central to that group of believers were Joseph Bates (1792–1872), a retired sea captain and an active member of the Christian Connexion denomination; James White (1821–1881), a young pastor in the Christian Connexion; and Ellen G. Harmon White (1827–1915), a member of the Methodist Episcopal church until excommunicated with her family in the early 1840s because of their Millerite advocacy. Of those three, Bates was the early leader. He not only was the first of them to accept the seventh-day Sabbath, but also brought it to the young couple who initially rejected it. In addition, he developed the theology of the

three angels messages of Revelation 14:6–12, which stands at the center of Seventh-day Adventist self-understanding.

In line with the Christian Connexion roots of two of its founders, Seventh-day Adventism arose as a restorationist movement, the goal of which was to restore to the church all those New Testament beliefs and practices that had been neglected, changed, or lost throughout the course of church history. Also in line with restorationism is Adventism's position that the Bible is the only source of authority for doctrine and practice. "Our only creed," Adventists repeatedly asserted, "is the Bible and the Bible only."

Bible study led to several theological positions that provided the theological platform that eventually led to the formation of the Seventh-day Adventist denomination. The first of those so-called pillar doctrines had been brought from Millerism, namely, the soon-coming, visual return of Christ before the one thousand years period identified in Revelation 20. Their study of prophecy in general was also informed by their Millerite heritage and the general understanding of the early nineteenth century, which viewed prophetic interpretation in historicist terms and set apocalyptic prophetic fulfillment as beginning in the time of the prophet, running throughout history, and climaxing at the Second Advent.

A second doctrinal distinctive was the adoption of the seventh-day Sabbath, which they believed Revelation predicted would be restored near the end of time (12:17 and 14:7, 12). It was the combination of their beliefs in the nearness of the Second Advent and the Sabbath that eventually led them to identify their movement as the Seventh-day Adventist Church.

A third pillar was that Christ had begun his final work in the heavenly sanctuary in 1844 in preparation for his return from heaven. The fourth pillar was conditionalism and annihilationism. Those beliefs hold that people are not born with immortal souls, that death is an unconscious sleep, that immortality will be given to the faithful at the return of Christ, and that the wicked will simply be destroyed. They will not face eternal punishment, as others of the time insisted, because a punishment that was eternal would imply that the wicked would also be made immortal, if only to endure eternal fire.

The fifth pillar became the Adventist belief in the continuing importance of the gifts of the Holy Spirit, including the gift of prophecy, until the end of earthly time. Adventists believed that the visions of Ellen White, which began in December 1844, were genuine manifestations of the gift of prophecy. Her gift was not for doctrine, which was to be

determined by Bible study, but for confirmation of that study and application of Bible principles to current issues. The Adventists saw no conflict between the modern gift of prophecy and their acceptance of the Bible and the Bible only, because the Bible taught the importance of all the spiritual gifts until Christ's return.

Organizing for Mission

Like all other groups evolving out of the Millerite Adventism, the early Sabbatarian Adventists were aggressively anti-organizational. Their preference was for no church governance above the local congregation, a position that harmonized in general with their restorationism. They were thus initially held together by their leading periodical (the *Review and Herald*, now the *Adventist Review*) and periodic general conferences of leading clergy and laity.

The lack of structure, however, made it almost impossible for them to focus their mission. As a result, beginning about 1853 the Whites began calling for what they called gospel order. Over the next ten years James White led a vigorous crusade that in 1861 culminated in the Michigan conference, which had administrative authority over the local congregations in that state. The next year brought several more state conferences. In 1863 came the General Conference of Seventh-day Adventists, a body with administrative authority to coordinate the work of the growing number of state conferences.

That organizational structure was enough for a church of thirty-five hundred members, all in the northern United States. By 1901, however, Adventism had spread throughout the world, and an intermediate level (the union conference) was added, with regional authority over the several conferences in each part of the world. The final piece of Adventism's administrative structure was added in 1918, when the church was divided into divisions of the general conference that would oversee the work of the union conferences in various geographic regions. Thus the mature top-down structure of Adventism moved from the general conference to its divisions, to the union conferences and missions in each division, to the local conferences and missions in each union conference, to local congregations in each local conference or mission.

Although such a structure may appear cumbersome, it has been highly effective in spreading Seventh-day Adventism throughout the world, maintaining doctrinal unity, distributing finances, and administering the denomination's extensive

institutional development in the realms of education, health care, welfare outreach, and publishing and the media.

Missiological, Institutional, and Lifestyle Development

By 1848 mission had become the driving force in the development of Seventh-day Adventism. Although mission vision continually expanded from the modest task of evangelizing ex-Millerites in the 1840s to establishing a presence in every population group in the world in the early twenty-first century, it has remained a constant. Seventh-day Adventist mission has been driven by the end-time commission of Revelation 14:6 to proclaim the “eternal gospel” and the message of verses 6 through 12 “to every nation and tribe and tongue and people” before the return of Christ, as described in verses 14 through 20.

Adventist mission grew very slowly at first. Between 1848 and 1874, it largely aimed at the northern part of the United States. Adventism did not send its first official overseas missionary, John Nevins Andrews (1829–1883), until 1874, and he was sent to Switzerland. The next two decades saw growing initiatives in mission to the rest of Europe and also in Australia and South Africa. The aim in all of these endeavors was to share the Adventist message with those who were already Christian (that is, Protestant) in those regions. It was only in the 1890s that the denomination, at the climax of North American mission outreach, came to see its mission as being to all the world, including the so-called heathen and the Latin American nations. The decade thus witnessed the denomination’s mission being taken to every continent and most island groups throughout the world. Mission thrust continued and accelerated throughout the twentieth century and into the twenty-first.

Adventist mission interests in both the United States and overseas eventually led to the development of an extensive set of institutions to aid the church in its outreach. The first was a publishing work that would enable its members to share the denomination’s insights through periodicals and books. Adventism began to publish its first periodical, *Present Truth*, in 1849, and soon after it established its first publishing house, now incorporated as the Review and Herald Publishing Association.

The next area of institutional development was health care. Adventists were in touch with the health reform movement of their day and in 1866 established the Western Health Reform Institute in Battle Creek, Michigan. That small

beginning would eventually grow into the expansive Battle Creek Sanitarium under the directorship of J. H. Kellogg (1852–1943) of cold cereal fame, and from there multiply into hundreds of Adventist health-care institutions around the world.

Adventists had an interest in reforming health practices not only on the institutional level, but also on the personal. Through the urging of Ellen White and Kellogg, Adventists became health reformers themselves. Their theology was based on a holistic view of human nature that held that people to be truly healthy must be so in the physical, mental, spiritual, social, and vocational realms. Their interests in education and health reform were thus rooted in their biblical anthropology. In the personal health realm, their practices and public outreach ran all the way from urging a vegetarian diet in the 1860s through pioneering stop-smoking clinics in the early 1960s.

Beyond their health-related concerns, the denomination founded its first educational institution in 1872. Like its health endeavors, the educational thrust was in harmony with the reform ideas of the nineteenth century. The ideal was the education of the whole person rather than merely the mind.

Adventism from its very beginning has emphasized that accepting Christ means living a Christian life that differs from that of the larger culture. Adventists have thus encouraged such items as modesty in dress, discrimination in entertainment, and the importance of the family. They have also recommended the noncombatant option in the armed services and the stewardship of a person’s entire being, of which tithing is one aspect. Their tithing and offering programs have done much to fuel their extensive mission program and widespread institutional presence.

Adventism in the Twenty-First Century

Present day Seventh-day Adventism is orthodox by evangelical Protestant standards. Salvation is entirely based on grace accepted by faith. The Christian life and good works grow out of a saving relationship with Christ. That understanding was not always clear in the denomination’s past. Legalism is always a threat in a group that emphasizes the importance of keeping God’s law. The turning point for the denomination came at its 1888 General Conference session. A clearer view of salvation in Christ also led Adventism away from some of its founders’ antitrinitarianism and semi-arianism and into a full belief in the Trinity. The denomination’s current statement of fundamental beliefs

lists and discusses the twenty-eight points on which its members unite.

Seventh-day Adventism at the beginning of 2007 had evolved into a movement that its founders would not recognize. At that time it reported 15,115,806 members worldwide, 1,041,685 of whom were in North America. Its growth rate is approximately 7 percent per year. It sponsors an educational system of 7,284 schools (106 of them colleges and universities), one thousand (fifteen tertiary) in North America; 782 health-care institutions, 113 in North America; and 63 publishing houses, 2 in North America.

Beyond those institutional systems, the Seventh-day Adventist Church has established media centers around the world to promote its message. Not the least among media endeavors is Adventist World Radio and various television entities that send out round-the-clock programming.

Also important is the denomination's humanitarian arm. Adventist Development and Relief Agency International (ADRA) has a presence in 112 nations and functions not only in disaster response but also in long-term rehabilitation in disaster situations. Equally central to its work are developmental programs in such realms as agricultural training, developing clean water and irrigation systems, and educational and maintenance projects to promote health and welfare among mothers and children.

As of the beginning of 2007, Seventh-day Adventists operated in 203 of the 229 nations recognized by the United Nations, offered publications in 361 languages, and used 886 languages in their oral work. World headquarters are in Silver Spring, Maryland. Among its flagship institutions in North America are Loma Linda University and Medical Center in southern California, Andrews University in Michigan, the Florida Hospital and Medical Center system headquartered in Orlando, Florida, and the Review and Herald Publishing Association in Hagerstown, Maryland.

Sexuality and Sexual Identity

Because North American sexual mores have been heavily influenced by traditional religious and especially Christian norms regarding women, the body, and sex, human sexuality remains a hotly contested arena, no matter whether the topic is gender roles, nonmarital sex, women's ordination, sexuality education for youth, divorce and remarriage, transgenderism, clergy sexual misconduct, abortion, or same-sex marriage. For many, sex is associated with sin and approached as a danger to be contained or problem to be fixed. Religion is expected to respond with rules and prohibitions. As one social theorist wryly observes, in a Christianized culture, sex is "presumed guilty until proven innocent" (Rubin, 11).

Traditionalist-Progressive Split

At the same time, it would be a mistake to consign religion only to the forces of negation and reaction. Catholic theologian Daniel Maguire argues that there has never been only one Christianity, an insight true also for other religions. Religions should not be viewed as monolithic or fixed, but rather as dynamic, evolving traditions with often deeply conflicting perspectives about a host of issues, including sex, the role of women, and the diversity of family patterns. Consider, for example, the divergent responses to the 2003 election of Gene Robinson as Episcopal bishop of New Hampshire. Bishop Robinson is not only a divorced father of two adult children, but also a self-identified gay man who lives openly with a male partner. In response, Christian traditionalists are agitated that a church body would not call attention to the incompatibility of Christian identity with homosexuality, which they associate with sexual immorality. Religious conservatives contend that homosexuality is intrinsically sinful, that only monogamous heterosexual marriage is biblically authorized, and that the marital family,

the cornerstone of society, is undermined whenever church or state adopts a neutral stance toward non-normative sexualities or sanctions nontraditional families. Religious progressives, on the other hand, welcome homosexuals into the life and leadership of their faith communities, support their full civil, human, and ecclesiastical rights, including the freedom to marry and their eligibility to be ordained as religious leaders, and press for a reformation of theology and sexual ethics in light of the scriptural mandate found in every religion to pursue justice for those marginalized and oppressed.

This split over sexuality, sexual identity, and sexual justice within Christianity and other religious traditions may be characterized in terms of a traditionalist-progressivist dichotomy. In *Christianity and the Making of the Modern Family*, theologian Rosemary Ruether contends that no reconciliation is possible between the two sides of this religious divide because their viewpoints are grounded in irreconcilably different presuppositions. Religious fundamentalists among Christians, Jews, and Muslims, for example, operate within an absolutist worldview that considers gay sex morally objectionable regardless of the nature of the relationship. In contrast, religious progressives show positive regard for a range of healthy and principled human sexualities, place the search for an inclusive, egalitarian justice at the heart of the moral-spiritual life, and welcome the diversity of cultures and religious perspectives as rich assets for community life rather than as threats to religious identity.

Impediments to Discourse about Sexuality

In addition to religious ambivalence, if not outright hostility, toward eroticism, three other factors make discourse about sexuality difficult. First, in a culture in which sex is feared and yet fixated on as both taboo and titillating, related discussion can easily ricochet between the highly clinical, objectifying jargon of medical science and the whispered disclosures of the confessional, often teetering on the voyeuristic.

Furthermore, language about sexuality is seldom exempt from ideological taint, including sexism and heterosexism. For example, the terms *heterosexuality* and *homosexuality* are medicalized categories, but even more telling, they are patriarchal classifications that mystify rather than highlight the qualities of authentic relationship within human intimacy. Moreover, sexual orientation or, more specifically, erotic attraction is widely considered the decisive criterion for ascribing sexual (read, moral) normalcy.

A second difficulty involves identifying an adequate methodological framework for critical inquiry about sex and sexuality. At present, there are two approaches. Essentialism, in defining sex as natural and unchanging, emphasizes “what comes naturally” and the biological imperatives that supposedly determine the so-called normal course of things. Accordingly, both nature and nature’s divinity have been blamed for such oppressive notions as women’s subordination, the presumption that procreative sex alone is healthy and sound, and pathologized same-sex eroticism.

Cultural constructionism, in contrast, contends that sexuality is more complex, more fluid, and more amenable to cultural molding than essentialists admit. This approach emphasizes that humans develop their sexualities and sexual identities only within institutions and systems, never independently of society or history. Sexuality’s purpose and meaning, therefore, cannot be grasped by biology alone. An historical, contextualized method is needed to analyze sexuality within social power relations. This alternative approach argues, first, that sexuality is not a static thing, but rather a dynamic process, constantly being reshaped and reassigned value and meaning in the midst of conflicting social interests. Second, sexuality has a history, some of which is oppressive. Moreover, because sexuality is political and cultural and not solely personal, a social ethic is needed to examine how social structures and belief systems affect sexualities for good or ill. Third, transformations have occurred in social practice and meaning about sex, gender, and social power, but such shifts require social as well as personal struggle and are not accomplished at will.

When it comes to sex and sexuality, an additional reason many religionists find “talking sex” difficult is that their traditions include serious obstacles as well as rich resources. Within Christianity a spiritualistic dualism elevates spirit above body. A related gender dualism elevates males and things associated with men and either disparages or idealizes females and things associated with women. These two dualisms have serious consequences. First, religious sex-negativity or erotophobia, reinforced by a spirit-body dualism, denigrates the body, physicality, and materiality. More simply put, sex is both dirty and dangerous, and should be kept under control and as tightly constrained as possible. Second, sex has also been patriarchal. Because sex must be controlled, patriarchal marriage has been designated as its proper container. As a social control mechanism, marriage has placed a woman’s sexuality for her own good under male authority and

ongoing scrutiny, first by her father, then by her husband, and finally by her son or sons if she is widowed.

Sexual Regulation, But What Kind?

Religionists across traditions share a conviction that sexuality requires regulation, but within and among traditions are conflicts about the kinds of regulation needed and when revision of those regulations is warranted. Although the Christian tradition has had a long-standing bias in favor of celibacy, Judaism, Islam, and most contemporary Christians allow or even encourage sexual intimacy at least within heterosexual marriage, the exclusive site in which sexual expression is granted legitimacy. Typically, marriage is a hierarchically ordered gender-based structure, divinely willed and naturally mandated, that normalizes inequalities of power, status, and role between partners and makes sex respectable only by keeping it under covers, so to speak, controlled and hidden, private and sanitized. Sexual activity that is premarital, extramarital, or nonmarital (as in gay sex or masturbation) is judged abnormal and deviant. Ironically, although deeply invested in maintaining what is called the sanctity of marriage, traditionalists have by and large paid scant attention to domestic abuse, marital rape, and spousal neglect. Only recently, and only because of the efforts of the contemporary feminist movement in religion, has sustained attention been brought to sexualized violence. It is no longer cast as a sexual sin, but rather as ethical, a violation of persons through misuse of power and role, including clergy betrayal of vulnerable persons in their trust. At the same time, traditionalists have given disproportionate attention, almost all negative, to pleasure and its purported dangers. Observers must look long and hard to find a religious case for the moral goodness of erotic pleasure and even longer and harder to find encouragement for women's sexual pleasure or erotic empowerment.

Although sex-negativity and patriarchal bias are currents in every religion, more sex-positive and egalitarian strains challenge conventional wisdom and push for renewal of these traditions as well. Reformists point to the widening gap between traditional moral teachings and how increasing numbers of people live their lives. Although only two options—celibacy and lifelong heterosexual marriage—have been encouraged, that restriction is contested. Many people of faith recognize other options as valid, even if not officially authorized. Countless numbers of single adults, among them older people in retirement, are sexually active and living together “without benefit of clergy.” Many

are active in their religious communities and regard themselves as fully capable of making responsible choices about how to live and love. For their part, many lesbian, gay, bisexual, and transgender people maintain healthy, morally responsible intimate relationships, also without ecclesiastical or legal sanction. Finally, awareness has increased—given high rates of domestic abuse, marital rape, and partner abandonment—that not everything within the bounds of heterosexual marriage is morally acceptable.

The conventional sex ethic—celibacy for singles, sex only in marriage—is currently subject to critique for a variety of reasons. First, the traditional marriage ethic has not been discerning enough of the varieties of responsible sexuality, including nonmarital and nonprocreative sexual intimacy between adults. Second, it has not been discriminating enough in naming the ethical violations of persons even within marriage. From diverse quarters, a reframing of religious ethics is being called for, especially a theological ethic of relational intimacy and relational justice that can realistically address the diversity of human sexualities and focus not on the so-called sin of sex, but instead on the use and misuse of power and on ways to enhance the dignity and well-being of persons of diverse sexual identities, both partnered and not.

Progressive religionists are pushing for a radical critique and transformation of every religious tradition, including Christianity, in more sex-positive, women-affirming, and gay-friendly directions. As the United Methodist theologian John Cobb observes, in a post-Freudian era “most Christians acknowledge that humans are sexual beings and that the desire for sexual contact with others is natural and inevitable” (94), but he carefully qualifies his statement by saying most, not all. Issues surrounding sex, sexuality, and difference remain deeply divisive matters in most traditions.

Science and Reshaping the Religious Paradigm

The impetus for reformation in religious sexual norms comes by and large from two sources. First are the social and natural sciences with their fresh insights about human diversity and psycho-sexual development. Second are social justice movements and the moral wisdom emerging especially from the feminist and gay liberation movements, but also the disability rights movement, the antiviolence movement among survivors of sexual and domestic abuse, and the ecological movement with its nondualistic framework and holistic appreciation of relational systems.

In relation to expanding scientific knowledge, religious traditions at their best have encouraged openness to new

empirical knowledge, demonstrated a nondefensive engagement with changing cultural patterns, shown adaptability to new conditions, and emphasized human freedom, creativity, and responsibility for promoting personal and communal well-being and the care of the earth. Scientific and medical developments, such as effective and inexpensive contraceptives, medically safe and legalized abortion, and the emergence of assisted reproductive technologies, have greatly affected sexual practices. So, too, have health concerns around sexually transmitted disease, including HIV/AIDS, the rise in nonmarital births among Euro-American and other women, and greater public awareness of pervasive patterns of domestic abuse and child sexual abuse. Moreover, by the mid-1960s, the marital family of two adults with dependent children, the post-World War II cultural icon, was no longer a statistical norm.

Of particular significance has been the broad scientific study of sexuality. It has had a significant influence on modern discourse about sex and sexual diversity: in part through the exploration of sex differences between men and women; in part through the cataloguing of varieties of sexual orientations and practices, including homosexuality, bisexuality, transsexuality, and intersexuality; and in part through the promotion of sexual research, sexual health, and sexual therapy. In many respects religionists welcome such developments. The natural sciences, by authorizing the body and, in particular, sexuality as legitimate objects for investigation, intervention, and treatment, have encouraged the development of sexology and related disciplines and thereby expanded knowledge about and public awareness of a range of topics that might otherwise be shrouded in moralisms, secrecy, and shame. Science has been particularly helpful in dispelling myths and correcting misinformation that have caused untold grief and suffering. It matters to individual and community health whether syphilis and other sexually transmitted infections, including HIV/AIDS, are seen primarily as diseases or punishment for sin; whether masturbation is thought to cause insanity; whether women are regarded as insatiable in sexual desire, as merely passive, or as self-directing moral agents; and whether homosexuality is judged a pathological or benign variation. It is also important to recognize the limits of biomedical science as, for example, in its treatment of aggressive sex offenders (only modest results), its inability to redirect sexual orientation (not effective in the long term), and its uncertainty about the causes of sexual desire among humans, including heterosexual erotic attraction.

Science Not Exempt from Ideological Captivity

At the same time, the science of sexuality is not exempt from ideological distortion and therefore must be critically assessed. Scientific explorations of human sexuality are historically situated and, because they are, depend on the intelligibility of reigning scientific paradigms that help organize complex data and create a plausible structure of meaning and interpretation. Even a brief review of the history of sexology indicates that socially constructed paradigms about human sexuality are themselves subject to critique, emendation, and even replacement if a competing paradigm emerges that gains the loyalty of a critical mass of adherents.

With regard to the biology of sex, before the eighteenth century the reigning paradigm about the human body held a one-sex view. Men and women were thought to share a common physique, even as women's bodies were regarded as less developed versions of men's bodies. The vagina was observed to be an inverted penis, the two more similar than dissimilar in form and function. Subsequent to the eighteenth century, this paradigm was replaced by a modernist paradigm of the two-sex body, which emphasizes that men and women have highly differentiated bodies and are therefore to be regarded as more dissimilar than similar to one another. The power of this schema on the social imagination is reflected in popular discourse that speaks of men and women as supposedly complementary opposites.

Modernist and Postmodern Paradigms in Tension

This modernist paradigm is being called into question by biologists and medical researchers as well as by feminist, queer, and other social theorists, for fostering a theory of sexual identity that posits two and only two sexes (male and female) and represents them as opposites. Sexual dimorphism assumes that biological sex, viewed essentially in terms of reproductive function, determines not only psychological identity (that is, a gender identity of femininity or masculinity), but also a person's preferred social role and—significantly—object of sexual desire. This paradigm naturalizes reproductive heterosexuality and presumes that if human sexual development proceeds on track, then a normal adult person will be sexually attracted to an adult of the opposite sex. Paradoxically, this naturalized pattern is also regarded as precarious, especially for males. Because successful development of a functioning heterosexual male cannot be guaranteed (homosexuality is considered sexual deviance resulting from, or at least correlated with, gender confusion

and nonconformity), medical science and psychological theories have sought to account for and provide medical interventions in response to perceived abnormalities, including bisexual and homosexual erotic attraction, transsexuality, and other gender-identity disorders.

In contrast, a postmodern paradigm has emerged that emphasizes human sexuality as polymorphous, both more complex and more diversified than conventional categories allow. This alternative challenges the dichotomous gender assumptions at the core of the reigning paradigm and argues that the biological distinctions between male and female have been overdrawn, are matters of degree, not kind, and are not always clear-cut; that the various indicators (chromosomal, hormonal, anatomical, psychological, social) used to differentiate sexual identity are sometimes ambiguous and even when clear do not necessarily cohere in a single developmental pattern; that social roles and erotic attractions are diverse and not predictable by sex or gender (psychology does not follow biology lock-step); and that the distinctions between normality and deviance (perversion) are cultural and moral judgments, not scientific. Religious traditions, already under pressure to reconsider teachings about gender and sexual orientation, are being further challenged insofar as their foundational stories and moral codes presuppose a strict sexual dimorphism (Genesis 1:27, “So God created humankind in his image, in the image of God he created them, male and female he created them”) that can no longer be taken for granted as empirically accurate.

Impact of Social Justice Movements

The second impetus for rethinking sexuality among progressive religionists is the global feminist and gay liberation movements. This advocacy on behalf of gender and sexual justice for persons of all colors has precipitated a shift toward a justice-centered theological approach that seeks not to control, but rather to empower women and men alike to live more freely in their bodies and more compassionately in their relationships and communities. Religious feminists insist on mutuality between coequals as the normative relational expectation, and, in doing so, have sparked a quiet and not-so-quiet revolution in the bedroom and throughout the social order. What is shaking the foundations even more is a power shift as homosexual, bisexual, and transgender people claim their right to be the subjects of their own lives. Fresh insight emerges as homosexual people are no longer positioned as abstract objects of other people’s discourse, but

rather become self-defining subjects with whom to engage in dialogue.

From their vantage point, homosexual, bisexual, and transgender religionists argue that it is sexual injustice rather than sexual diversity that is dividing religious communities and causing enormous personal and societal suffering. One aspect of the challenge launched by survivors of sex and gender oppression is claiming an appropriate sense of pride by securing a positive sense of self-regard as nonheterosexual persons. Members of various faith communities have joined the Open and Affirming, Welcoming Congregation, More Light, and Reconciling Congregation movements to critique sexual exclusivism, challenge discrimination on the basis of gender, sexual difference, and family pattern, and affirm that same-gender loving people can also model a fully human way to live and love as sexual-spiritual individuals.

Progressive religionists seek to actualize three interrelated components of sexual justice: a strong affirmation of the goodness of sensuality and embodiment; a genuine honoring of sexual difference, including respect for sexual minorities; and attentiveness to both pleasure and pain, including the personal and political dimensions of sexual oppression and exploitation. A revised religious code for regulating sexuality and intimate relationships focuses on a number of core values: the goodness of bodies, bodily self-determination, mutual respect and consent, shared pleasure, fidelity (as a commitment to honesty and fairness and an ongoing willingness to renegotiate relationships to serve the needs of each party), taking responsibility to maintain wellness and avoid disease and unintended pregnancy, and willingness to explore the justice implications of sexuality for individuals and their communities.

From this perspective, good sex is ethically principled and insists on freedom from control, manipulation, and exploitation. Each person should be empowered to claim the goodness of his or her own body and equipped to understand and direct its use. At the same time, each person has a responsibility to respect the bodily integrity and self-direction of others. In sum, it is argued that the central norm for intimate relationships is no longer heterosexuality or marriage, but rather justice—love, understood as mutual respect, commitment, and care, and a fair sharing of power, for gay and straight, marital and nonmarital relationships alike.

Signs of Reform and Resistance

In urging the development of a justice-centered moral discourse about sexuality and intimacy, progressives are

wagering that religious traditions are open to renewal and their own transformation. In the past, significant shifts have occurred, for example, in Christian teaching about slavery and war. At the beginning of the twenty-first century, similar shifts are well under way about women's status within family, faith community, and society, about contraception and abortion, and about the status and rights of LGBT people. Theologian John Cobb cites the rethinking of divorce and remarriage to illustrate the dramatic character of such transformations within Protestant Christianity: "Protestants are becoming so accustomed to this acceptance of divorce and remarriage as the best response in many circumstances that they might forget how drastic a change this is from past Christian teaching." Because Protestants often rely on biblical guidance on moral issues, the change regarding divorce is "particularly noteworthy since it is the acceptance of a practice that is rejected explicitly in the Bible." In fact, Cobb underscores, "It is Jesus himself who opposed divorce" (97). That a reversal on divorce has taken place provides strong evidence about how a dynamic religious tradition may remain open to further revision and internal renewal.

Should further transformations about sexuality and sexual identity occur within Christian and other religious traditions, proponents envision that such change is likely to include several components: increased candor about the tradition's complicity in sexual injustice; a readiness to embrace the body as a privileged site for encountering the sacred in the midst of everyday life; deepening respect for women's full moral standing and their empowerment in their families, faith communities, and social and economic institutions; a greater willingness by men to be held accountable for sharing power equitably and engaging with women as allies and partners in leadership; and the lifting up of gay, lesbian, bisexual, and transgender persons as models of living and loving humanly. No longer would homosexuality be labeled sinful or disordered. The focus would no longer be on fixing the so-called problem of homosexuality. Instead, the ethical issue would be reframed as heterosexism, the institutionalized devaluing of gay people and the privileging of heterosexuality. A final sign would be that religious traditions would no longer fixate on the sin of sex, but instead commit to challenging gender and sexual injustice along with race and class oppression.

For their part, religious conservatives fear that erosion of conventional gender and sexual norms will not only undermine family stability but also weaken the social order, insofar

as a normative moral order depends on compliance with naturally determined and divinely ordained patterns of social relationship and social power. In an increasingly secularized culture, religionists frequently turn to the family and intimate matters to re-exert influence and some measure of control. Both conservatives and progressives argue that the personal is also political and that the family structure is a privileged societal institution in which human psycho-social and psycho-sexual development takes place, and in which people do or do not learn to internalize and abide by prevailing values. Traditional religionists are alarmed because the heterosexual majority, their primary constituents, has increasingly been adopting attitudes and patterns frequently associated with gay men and lesbians, such as the acceptance of contracepted rather than procreative sex as their normative practice, a commitment to equalize gender roles and responsibilities in the family and throughout the social order, and an openness to greater experimentation with ways to organize personal life outside the biological family. What troubles traditionalists is not only that homosexual people may be assimilating into the dominant culture, but also that heterosexual people are apparently engaged in a process of reverse assimilation, or "acting queer." The family values campaign of the religious right therefore seeks not only to keep the LGBT community from joining the mainstream, especially in terms of gaining access to civil marriage rights, but also to push the heterosexual majority back into the conventional sex-gender and marital framework and to warn that sex-gender nonconformity will be subject to stigma and punishment if necessary.

For these reasons, it is evident that the movement toward gender and sexual justice has met with enthusiasm and support in some quarters and with fear and resistance in other quarters. In progressive religious traditions, both women and men are eligible for leadership, including ordination as ministers (mainline Protestantism), priests (Episcopal Church), and rabbis (Conservative, Reform, and Reconstructionist Judaism). Gay, lesbian, bisexual, and transgendered clergy serve in increasing numbers of faith communities that also welcome women's leadership, but not all. The United Church of Christ (Congregationalists) first ordained an openly gay man in the early 1970s. The Presbyterian Church (U.S.A.) permits gay men and lesbian women to serve as pastors, but only if they are celibate or nonpracticing. There is increasing awareness that gay clergy offer leadership in every tradition though not openly. In some traditions, including the Universal Fellowship of Metropolitan Community Churches, the Unitarian Universalist Association, the United

Church of Christ, and both Conservative and Reform Judaism, some congregations permit same-sex couples to marry religiously. Other traditions allow the blessing of covenanted same-sex partnerships.

Case Study

In each religious tradition, voices both support and oppose change. The conflict among competing Christianities may be illustrated by comparing church resolutions on same-sex marriage from the Southern Baptist Convention (SBC) and the United Church of Christ (UCC). Opponents of same-sex marriage argue against extending the right to marry to same-sex couples because of their beliefs about marriage and sexuality. A SBC statement on sexuality defines marriage as exclusively heterosexual, the union of “one man, and one woman, for life.” In 1998 the SBC amended its Baptist Faith and Message by adding a section on the family, which notes three purposes for marriage: to provide a framework for intimate companionship between a husband and wife, to channel sexuality “according to biblical standards,” and to provide “the means for procreation of the human race.” The SBC has offered additional reasons for opposing same-sex marriage by declaring that homosexuality is “not a ‘valid alternative lifestyle,’” but rather a sin. According to this viewpoint, for the church to grant religious affirmation or the state to offer legal standing to same-sex unions would be, in its words, to sanction immorality. In a 1996 resolution opposing the legalizing of same-sex unions in Hawaii, the SBC further elaborated its objections by describing homoerotic relationships as “always a gross abomination . . . in all circumstances, without exception,” as “pathological,” and as “always sinful, impure, degrading, shameful, unnatural, indecent, and perverted.” Leaving no doubt about its opposition to marriage equality, the SBC resolution concludes by stating that the movement to legalize same-sex unions “is and must be completely and thoroughly wicked.”

In opposing same-sex marriage, these traditionalists seek to preserve a model of social relations organized in terms of natural hierarchies of unequal status and power. Although affirming that husband and wife are “of equal worth before God,” a SBC statement on the family describes marriage as an unequal power relation in which the two parties have different roles and expectations. The husband must be the leader; he is to “provide for, to protect, and to lead his family.” A wife is expected “to submit herself graciously” to her husband “as the church willingly submits to the headship of Christ.”

The heterosexual marriage paradigm espoused by the SBC resonates with, and gains cultural weight from, modernist assumptions about gender, sexuality, and family. As noted earlier, a modern sexological paradigm emphasizes biological factors (“anatomy is destiny”), views sexuality as naturally determined and unchanging, and operates within a binary sex-gender schema, in which biological or anatomical sex is presumed, first, to give rise to “proper” masculine or feminine gender identity and social roles, then to generate “normal” heterosexual desires and interest in the “opposite sex,” and finally to lead steadily to procreation in the context of marriage. Traditionalists accept the notions that there are two and only two naturally complementary sexes, that opposites attract, that sexuality is primarily procreative, and that homosexuality signals deviance from the heterosexual norm. In this framework, marriage is as much about gender hierarchy, gender control, and the regulation of sex and property as it is about love and affection.

In contrast, the United Church of Christ (UCC) became the first mainline Christian denomination to give official support for same-sex marriage by adopting a resolution at its 2005 General Synod that affirms “equal marriage rights for couples regardless of gender.” In recognition of the fact that marriage is a changing, ever evolving institution, the UCC emphasizes its commitment to marriage as a covenant of equals and contends that the biblical call to justice and compassion “provides the mandate for marriage equality.” Justice, a value to be embodied in interpersonal relationships as well as institutional structures, should seek the elimination of “marginalization for reasons of race, gender, sexual orientation or economic status” and work to create the conditions for social equality. From this justice perspective, the mandate to pursue marriage equality expresses two interrelated notions of equality. First, marriage is defined as a covenantal relationship based on the “full humanity of each partner, lived out in mutual care and respect for one another.” The UCC is, therefore, affirming equality of partnership within marriage. Second, equality refers to an affirmation of the full humanity of persons with differing sexual orientations. “We also recognize and affirm that all humans are made in the image and likeness of God,” the marriage pronouncement states, “including people of all sexual orientations.” The key implication is that “as created in God’s image and gifted by God with human sexuality, all people have the right to lead lives that express love, justice, mutuality, commitment, consent, and pleasure.” Equality in this second sense means

equal access to marriage, including the moral freedom of same-sex couples to marry, legally and religiously, as well as the freedom not to marry.

The UCC statement affirms marriage, but also acknowledges that there are other ways that responsible people live and love. In fact, there are “many biblical models for blessed relationships beyond one man and one woman.” Marriage is not the only place in which people “can live fully the gift of love in responsible, faithful, just, committed, covenantal relationships.” To underscore this point, the resolution states that “indeed, scripture neither commends a single marriage model nor commands all to marry, but rather calls for love and justice in all relationships.”

The United Church of Christ resolution does not privilege heterosexual coupling. Same-sex and different-sex partnerships are affirmed as covenantal relationships having comparable worth. Such covenants should be regarded equally within the church and be eligible to receive equal benefits and protection under civil law. At the same time, by calling for full equality between marriage partners, the UCC statement challenges the legacy of patriarchal Christian marriage in which the spiritual equality of spouses has been asserted, but men have remained in charge and enjoyed advantages of unequal power and status. Finally, the UCC position paper makes room for covenantal relationships outside the institution of marriage. In doing so, it encourages a single ethical standard for all intimate (and other) relationships: relationships are ethical only when they are loving, just, and based on mutual respect and care for all persons.

Progressive religionists, including those within the United Church of Christ, increasingly find that they have more in common, in terms of faith and values, with their liberal counterparts in other denominations and traditions than with their conservative co-religionists. Even among the Southern Baptists there are dissenting voices, however, including congregations that have been disaffiliated because of their acceptance of women’s leadership and affirmation of committed same-sex unions. A massive realignment is thus taking place within the religious landscape. It may be described as a new ecumenism, because the progressive wings of various denominations seek ways to link together to pursue justice advocacy in both religions and society. Similar alignments are occurring among religious conservatives who seek to forestall further change by reasserting heterosexual monogamy as the exclusive norm for intimate life. It is therefore likely that dissension and conflict will

continue to characterize intrareligious and interreligious responses to contested matters, including sexuality and sexual identity.

Shakers

The Shakers are a Christian communitarian society that took root in America at the end of the eighteenth century. Under the visionary leadership of Mother Ann Lee (1736–1784), their founder, Shakers established eighteen major communities in New England, New York, Kentucky, and Ohio, and four short-lived societies in Indiana, Pennsylvania, Georgia, and Florida. Known initially for their practice of celibacy, for the scandal of female leadership, and for their enthusiastic dances in worship, the Shakers came to be appreciated for a distinctive simplicity in their design of architecture, furniture, and artifacts, no less than in their disciplined lives. Only one community in Sabbathday Lake, Maine, remains active.

When nine travelers from the Manchester environs of England landed in New York on August 6, 1774, few others could have expected that a religious tradition devoted to celibacy would both challenge and reflect core American values over the succeeding two and a half centuries. The Shakers, more officially identified as the United Society of Believers, are at once exceptions to and beneficiaries of American religious principles. Although a dissident group of Protestants who practiced celibacy, perfection, and separation, who held all goods in common, and who saw themselves as the millennial fulfillment of biblical promise, the Shakers also reflected the dreams of religious independence, moral purity, and worldly success held by most immigrants to this country. They argued for abolition, pacifism, communal property, and often for women's equality, but by the beginning of the twenty-first century, as their numbers declined to a handful, the initially radical Shakers have been adopted as a nostalgic emblem of America's folk past and as producers of expensive antiques.

Mother Ann Lee and the Early Days

The Shakers were followers of a woman named Ann Lee, later to be venerated in varying ways as Mother Ann. Lee taught that the agonies attending the search for salvation were solved by abandoning a carnal, sexual life and thus practicing celibacy. If, as she believed, the sin of Adam and Eve was an impatient sexual union copying the animals rather than waiting on God's spiritual instruction, then the cure for sin was renunciation of lustful thoughts and behavior, confession of those sins, and union with a like-minded community. The new community would seek to restore the separate, pure, communal life of the early Christian church.

By so doing, and by following the teachings of this second Christ spirit, Shakers would embody the millennium.

Ann Lee lived only ten years in the United States. After seeing the initial community established near Albany, beginning in 1780 she traveled extensively across Massachusetts and into Connecticut and Rhode Island seeking to convert new members. She died on September 8, 1784. Ann Lee's life and teachings, which had been wrapped together in her energetic and charismatic presentations, were developed into an institutional order following her death. The Shakers benefited from three early leaders who succeeded Ann Lee: the devoted James Whittaker, who had come from England with her and who died within three years; the American-born New Light Baptist, Joseph Meacham (1741–1796), a strong leader credited with gathering large numbers of converts into the order; and his colleague and appointed successor, Lucy Wright (1760–1821), who led the Shakers into the nineteenth century and until her death.

Great Awakenings and Shaker Missionary Ventures

Shaker theology developed and changed over time. From the first, rather rudimentary albeit intense teachings of Ann Lee concerning celibacy and a marked enthusiasm of the spirit in worship and dance, the growing community turned to a more systematic presentation of its theological location in Christian history. The first comprehensive book to introduce Shaker ideas grew out of a missionary venture to the then West of Ohio and Kentucky. Responding to reports of the so-called Second Great Awakening in that region, three Shaker brothers set out on foot on January 1, 1805, arriving in late March; they enlisted enthusiastic new converts and ultimately founded seven communities.

Interestingly, the first large group of American converts to Ann Lee's teachings had roots in the enthusiasms of the first Great Awakening. Joseph Meacham was the son of a minister also named Joseph Meacham, who had participated in the revival meetings featuring Jonathan Edwards in 1741 in Enfield, Connecticut. Sixty-four years later, a second son, John Meacham, was one of the western missionaries. In both Awakenings, emotional and physical enthusiasm, along with carefully parsed theological analysis, signaled an anxious search for salvation and its assurances.

The seven western communities joined eleven eastern communities located in New England and New York. Membership varied greatly over time, with a possible high of some four thousand in the 1840s, but incomplete record keeping, constant fluctuation in membership, and changing fortunes

make any absolute number elusive. Ventures to found two outposts in Florida and Georgia in the late 1890s were short-lived. Shaker fortunes shifted over the course of the nineteenth and twentieth centuries as the nation's religious, social, and economic demands took new forms. Believers sold their lands, consolidated, and then closed their communities. By the first decade of the twenty-first century, only one active community, Sabbathday Lake in Maine, has survived.

Although originally united by ecstatic dancing, whirling, twisting, and jerking, eastern and western Shakers began to choreograph more ritualized dances designed, as they said, to mortify the spirit and bring the body and spirit into control. Similarly, as two groups coordinated teachings across thousands of miles, early Shaker ideas were worked into ecclesiological order. In their first book, *The Testimony of Christ's Second Appearing*, published in 1808, and in the instructive hymnal, *Millennial Praises*, published five years later, Shakers claimed a lineage of heretical, but pure Christian teaching. Although they did not practice baptism or any other traditional religious ritual, they often identified with an Anabaptist history of independent thought that Lutheran and Calvinist traditions rejected as heretical. Shaker historians used the Bible skillfully and knowledgeably, claiming kinship with other religious communities that had practiced celibacy, valued women, actively anticipated the Second Coming of Christ, rejected the Trinity, and defied abusive control by any state or religious power.

Millennial Belief and Christological Questions

Although its biblical and historical roots were subject to various arguments over time, the requirement for celibacy was never seriously contested. Shaker interpretation of the Second Coming, however, has undergone several modifications. The millennial fulfillment of the promised return of Christ has variously been located in the person of Ann Lee, in her teachings, and in the Shaker community itself. The radical demands of celibacy signaled an interruption of traditional religious belief and inaugurated a new era of human life; life on earth could now end and pure, virginal believers could aim for heaven, thus forsaking carnal generation and its multiple sinful problems in favor of spiritual regeneration.

For some believers and in some Shaker works, even in many references to the society as "Believers in the Second Appearing of the Christ," Ann Lee was assigned a status equal to Jesus of Nazareth; the female joined the male as the carrier of the Christ-promise. She brought Jesus' teachings against marriage to fruition; she showed that marriage and the carnal

life of sexuality could, in fact, be overcome. If, as the Shakers sometimes argued, sin had come into the world because of Eve, then it was even more necessary that a woman lead sinners into the final promise. Shaker historians have debated the fervency or the uniformity with which Ann Lee was granted Christological status, and Shakers in the late twentieth and twenty-first centuries have claimed only a Spirit Christology that resides in believers and the church, not unlike the call for all believing Christians.

Dual Godhead and Dual Church Order

With a female Mother Ann joining the male Jesus of Nazareth in the Christological sphere that mediates between God and human beings, a certain theological logic fell into place when the Shaker view of the godhead was elaborated. Again in spite of changing arguments, God was generally understood to be both male and female, with the Heavenly Father identified as power and the Holy Mother as wisdom. The earliest written texts celebrate this logic, according to which a heavenly order reflects the earthly order of male and female. That Woman Wisdom has a long history in biblical texts, both canonical and noncanonical, and that she appears as female in many philosophical and theological traditions made sense to early Shaker theorists. They argued variously that she had been ignored or hidden on purpose, or was awaiting the new revelations of the Shaker Believers, but she came to be seen as Holy Mother Wisdom, companion to the Heavenly Father.

Given their new theological framework and arguing that both celibacy and the attendant opportunity to live in the light of the Second Coming obviated the need for private property, Shaker families moved into communal living arrangements. Hostile treatment also made separation into adjoining farms and cooperative family units a safer arrangement. Gender balance in the godhead was reflected, at least during most of the nineteenth century, in paired male and female leadership of Shaker communities; there were two men and two women in each of the ten bishopric ministries. The center of union of these ministries was located at New Lebanon, New York, and this four-square arrangement was repeated in the spiritual and temporal leadership of every Shaker family. The individual communities usually had a central or church family with a number of outlying family farms that were coordinated by the church family. Membership in any community or individual family was likely to vary depending on space or occupation of that particular family, whether farming or milling, or tending to the

children. Each Shaker site also designated one family to serve as a gathering order—that is, as a transitional home for new members.

Holding all goods in common, believers argued, would reduce both crime and war. Shakers were, in fact, always pacifists, as well as abolitionists. Although the number of African American members was never high, and there are indications that Shakers often evinced stereotyped understanding of both black people and Native Americans, Shakers always spoke against injustice. Their strong principles—and mixed performance—can be seen in their welcome of the visionary black minister, Rebecca Jackson (1793–1871), into their fold in 1847; they hesitated to give her the independent authority she sought, but ultimately found an accommodation that allowed Jackson to establish the only urban Shaker outpost and recorded many visits with her when they passed through Philadelphia.

Shaker architecture reflected the believers' austere but sturdy religious beliefs. The central dwelling houses, particularly of the church families, were usually large structures housing more than a hundred people, with separate doorways and stairways for men and women, modern kitchens in the lower levels, and vast storage spaces in the attics. These often had such features as brilliant colors in the built-in cabinetry, wooden peg boards around the walls for brooms, cloaks, hats—and chairs—and easily removable windows for cleaning. Shaker builders designed both attractive and functional domestic and work spaces and filled them with equally distinctive furniture, work benches, and other equipment. The large Round Barn at Hancock Shaker Village with its central hayloft remains a model of efficient planning for servicing animals, storing feeds, and multilevel access by farm equipment.

Commercial Enterprises

Shakers ventured into many commercial enterprises in addition to farming. Their seed business was successful because of the guaranteed quality of their fresh seeds, and Shaker salesmen traveled as far as New Orleans for many years. Credited with inventing such products as the flat broom and an improved washing machine, Shakers had an entrepreneurial spirit that flowed in many directions. They cooperated in an herbal and elixir business, sold postcards and cloaks, and made sewing goods for the tourist trade. Eventually, as their communal practice and simple style became well known, they marketed themselves by selling Shaker chairs, oval boxes, and baskets. Inventive and hard-working, community members adopted new technologies

and brought in electricity, water delivery systems, and useful machinery when possible.

Era of Manifestations and Aftermath

In spite of the charisma identified with Mother Ann Lee's intense proselytizing and with their robust forms of worship, the Shakers themselves seemed to have been surprised by an outburst of spirit manifestations in 1837 when they reported a number of unusual trances by young girls in the community at the Watervliet, New York. Investigations led only to intensified spirit activity, and the curiosity and then acceptance by the ministers encouraged the rapid spread to other communities. Believers of all ages entertained communications with Mother Ann and other early Shaker leaders, which then escalated to include the Deity, and finally, numerous messages from any number of notable figures who were long dead. The Era of Manifestations, as many now call this period, lasted with some intensity for at least ten years. Shakers collected written records of messages, recorded many inspired songs, and compiled new laws. Although the 1845 version of the *Millennial Laws* has been popularly quoted as a standard of constrained Shaker behavior, Believers did not, in truth, conform to its strictures. Out of this era also came several new ritual practices, two new sacred books intended to confer divine blessings on the Shakers, and a number of drawings. Scholars see this as a time when third-generation Shakers were seeking direct communication and inspiration from Mother Ann, the Heavenly Father, and confirmation of the identity—and attention—of Holy Mother Wisdom.

The Era of Manifestations was a tumultuous time when social, leadership, and theological controversies were debated and tested. Many sought to impose a strict cleansing of so-called worldly possessions and to control many forms of behavior, but the distinctive Shaker-based experiences gave way over time to various forms of séance and spiritualism then gaining traction in the world beyond. Although long debated in the society, among the constrictions placed on believers for a time was access to books and newspapers, leaving the community with fewer historical and theological resources at a time critical to the development of new leadership. Reliance on spirit manifestations, in the long run, though a laboratory for testing ideas, social limits, and spiritual imagination, left the community without well-educated leadership or believers.

By the middle of the nineteenth century, membership was already beginning to decline, although it would take another

fifty years of community closings and consolidations to mark the dramatic change in Shaker fortunes. During the Civil War, the Shaker communities in Kentucky were particularly devastated when troops from both sides of the conflict demanded food, shelter, and even horses as the battles ebbed and flowed over their regions. Neither neutrality nor pacifism offered security, and some have said that these communities never fully recovered from their losses. After the war, many veterans, former slaves, or war survivors might have sought communal life but were drawn, rather, by adventure and new land into the new West.

Following the Civil War, Shakers emerged, along with the rest of the nation, as a more Victorian, respectable, and genteel society, a modification reflected in elaborated decorations on a number of public buildings, no less than in some interior refinements such as rugs and upholstered furniture. Although designed as a major missionary enterprise between 1871 and 1899, the publication of a journal, generically called *The Manifesto*, displayed a less evangelical and more temperate style as it told of Shaker values and virtues. Still dedicated to celibacy, pacifism, and the virtuous life, it aimed to attract new members with a gentle and respectable tone. Frederick W. Evans (1808–1893) and Antoinette Doolittle (1818–1886), who were editors during the brief middle period when it was called *The Shaker and Shakeress*, sought dispatches from different communities, published health news, obituaries, poetry, and described Shaker products, as well, thus making them more like the rest of the world.

The twentieth century found the Shakers closing more and more communities. Their buildings, furniture, and objects became collectable and fueled an antiques market at odds with their commitment to simplicity and economy.

Women and Gender Equality

A continuing question, fueled especially by twentieth-century debates, has been the Shaker commitment and success at developing equal status for women and men. The earliest Shaker theologians reveled in the scandal of a woman's millennial revelation—the divine surprise of God's message to sinners. When the balanced gender elements of the Shaker theological system are added to the early leadership of Ann Lee and Lucy Wright (albeit sometimes contested) and the preponderance of women members and leaders from the late nineteenth century on, one might assume a firm Shaker commitment to equality. Scholars have, however, argued about the Shakers' intentions, commitment, and success, and found that men held power in public life and in finances,

and that the division of labor usually fell along traditional gender lines. Some have noted that equality was a by-product of celibacy, rather than the reverse, and thus was not their initial priority. Many others, however, have pointed out that when Shaker writers did address the questions of equality, spurred by outside forces in the mid- to late nineteenth century, they readily argued on its behalf. To be sure, when traditional educational and social assumptions are taken into consideration, it is striking that the Shakers developed a theological and social system that offered such a fair approach to equality.

Religious Liberty and the Shaker Vision

The Shakers believed and incorporated into many of their writings the idea that the new American nation was a land prepared by God for the practice of religious liberty; certainly, their decision to move across the Atlantic confirmed this idea. At first, however, their expectations met with local skepticism, not only about their religious ideas, which provoked a number of mob threats, but about their political motives. In 1780, as revolutionary forces were gathering, Ann Lee and several others were imprisoned over suspicions that, as recent—and pacifist—arrivals to the contested region of the upper Hudson River, they were spies for England. Discharged from prison with the aid of Governor George Clinton, Ann Lee and her companions settled into their home just north of Albany, New York, and from there launched their aggressive missionary endeavor. Thus, having met with both persecution and legal release, their experience confirmed America's distinctive promise of religious toleration.

Like many other dissenting Christians, the Shakers argued that both Martin Luther and John Calvin had fallen into the same persecuting errors as those Christians who had profited from access to political power, beginning with the conversion of Constantine—a development the Shakers identified as the rule of the Antichrist. Seeking freedom to practice their beliefs but eschewing any political power, the Shakers aligned themselves with the new republic and its early leaders, claiming America as a land dedicated to the rights of conscience. They were particularly fond of George Washington, singing of him in their earliest hymnal: "Here we see what God has done,/By his servant Washington,/Who with wisdom was endow'd/By an angel, through the cloud,/And led forth in Wisdom's plan,/To secure the rights of man." Although the earliest Shakers did not vote and struggled over the years to seek exemption from military service as pacifists,

they did pay taxes. They also used local lawyers and the local courts when they found it necessary.

An interesting irony of Shaker history intertwined with American history can be found in the increasingly popular use of their quick-dance tune, "The Gift To Be Simple." Written in 1848 by Elder Joseph Brackett, the tune was appropriated and woven into Aaron Copeland's *Appalachian Spring* suite in 1944. At one point used in an automobile commercial, Copeland's lilting version of the melody found resonance as a meditative tune after media reports on the national trauma of 9/11. Most recently it appeared on the national scene as the musical interlude arranged by John Williams for the inaugural ceremony of President Barack Obama in January of 2009. That the music of a celibate, separatist, millennialist society critical of private property and devoted to communal living has become associated with the long history of this nation may speak to the decline of the fervent and disciplined Shakers but also signifies a shared dream of American liberty.

Museums, Libraries, and Historical Sites

A number of former Shaker sites have been transformed into historic museums and have educational or recreational facilities available for visitors: Hancock Shaker Village in western Massachusetts; Canterbury Shaker Village near Concord, New Hampshire; Pleasant Hill south of Lexington, Kentucky; South Union near Bowling Green, Kentucky; and Sabbathday Lake, north of Portland, Maine. A number of other sites are tended by local historical societies. The Shaker Museum and Library in Old Chatham, New York, long a repository of Shaker documents and artifacts, is planning to relocate to Mount Lebanon, New York.

In addition to Shaker manuscripts and documents that may be located in historic site libraries or academic institutions, such as Winterthur in Delaware or the Berkshire Athenaeum, many manuscript collections are currently available in microfilm and microform, most notably from the Western Reserve Historical Society, the Library of Congress, New York Public Library, and Hancock Shaker Village, New York State Museum and Library, the University of Kentucky, and Fruitlands Museums.

Sikhs

With more than two hundred temples located throughout North America, the Sikh tradition is well rooted in both the United States and Canada. The history of the Sikh tradition in North America dates back to the nineteenth century, but the larger history of Sikhism begins in the Indian subcontinent.

The Sikh religious homeland is the Punjab, a lush region of the Indian subcontinent. Historically known for the

productivity of its land and people, the Punjab was also fertile ground for religious and cultural developments. Its northwest location was one of the access points into the subcontinent, making it an important cultural crossroads. Hinduism, Islam, and the development of Sikhism have contributed to the region's long history. Now straddling India and Pakistan, the Punjab was an autonomous Sikh state in the nineteenth century. Annexed by the British in 1849, the region was divided nearly a century later during the 1947 partition of the subcontinent into India and Pakistan. As a result certain Sikh holy sites, such as the city of Amritsar, are in India, whereas others are in Pakistan.

Guru Nanak

Sikhs trace their religion to the teachings of their ten gurus, the first of whom was Guru Nanak, a religious visionary born in 1469. Raised in a Hindu family, he was invigorated by the religious traditions around him. These included the devotional practices of Hindu *sants* ("truth seekers"), the yogic discipline of Gorakhnath's followers (called Nath Yogis), and the mysticism of Muslim Sufi masters. At the age of thirty Guru Nanak had his own religious vision. He had gone to the river for morning ablutions, whereupon he disappeared. His family gave him up for the dead, but after three days he returned; his first words—"There is no Hindu, there is no Muslim"—decried sectarian divisions.

Devotional meditation on the Ever-True Reality, the Supreme Lord, through the calling out of God's name was, according to Guru Nanak, all that is necessary. Recitation of the many invocations or names of the Wonderful Teacher, Vahiguru (also spelled Waheguru), opens one's receptivity to and awareness of the Wondrous Being behind and also beyond all names, all conceptions, all being. Promoting a strict monotheism and rejecting mindless forms of ritual, idolatry, and caste and gender divisions, Guru Nanak's teachings cut through religious differences in favor of personal and communal practices that inculcate continued awareness of God.

Hymns by Guru Nanak, as well as works of five of the nine gurus who succeeded him, plus some hymns of other poet saints, form the Guru Granth, the Sikh holy scripture of more than 6,000 hymns. The book is also known as the Adi Granth. As these names indicate, the work is recognized as revelation, as expressions of God. *Adi* refers to the first and that which stands before all, and *Guru* to the eternal and living presence of the teachings. *Sikh* comes from the word meaning "disciple" or "learner," identifying those who follow these

teachings. Devout Sikhs begin each day with a recitation of the *Japji*, the opening verses of the text. Composed by Guru Nanak, these verses serve as a morning prayer, recounting duties and the stages of spiritual awakening. The Dasam Granth (compositions of Guru Gobind Singh, the tenth guru) and the Janam Sakhis (accounts of Guru Nanak's life) are other important texts.

Community

Guru Nanak's teachings emphasize the obligations of community. Sikhs summarize their practices in three principles: *naam japna* (reciting the Holy Name and thus always remembering God), *kirat karo* (making an honest living), and *va chakko* (sharing with others). The first is a reminder that awareness of God should always be present in one's mind and that all actions be selfless service to God; the other two principles reflect the primacy of community. Integrity, without fraud or exploitation of others, is the basis of action, and one should always remember responsibility to others, especially those in need.

Generosity and sharing are cornerstones of Sikhism. At Sikh *gurdwaras* (places of gathering and worship; literally "doorway to the Guru"), people of all faiths, even those of no religion, are welcome. A place for community service as well as religious devotion, the gurdwara traditionally offered shelter to any weary traveler or pilgrim. The *langar*, the community kitchen where food is served to all, expresses the important ethic of sharing, inclusivity, and oneness. By the partaking of food together, Sikhs affirm Guru Nanak's teachings decrying distinctions of regarding caste, social status, gender, or other social categories. According to Sikh doctrine, all are equal; however, different castes exist within Sikh communities.

For Sikhs, the Ever-True Reality, God, is not conceived in anthropomorphic terms; hence, gurdwaras house no images and have no altars. Instead as gateways to religious awareness, they provide a seat for the Guru Granth. No gurdwara is without the presence of this embodiment of the teachings, just as it would be incomplete without the *sat sangat*, the people whose lives are informed by Sikh teachings. The gurdwara offers a gathering place where by listening to the words of the book, singing its verses, hearing its meaning expounded, discussing concerns, and preparing food for the communal meal, community and identity are solidified. For Sikhs, worship entails commitment to the path revealed in the Guru Granth. This commitment is expressed in attitude and actions, and through *seva*, service to others.

In gurdwaras, *granthis* (readers or reciters of the Granth) serve as custodians of the sacred text. As spiritual leaders they conduct the ceremonial singing of its teachings and offer discourses on its meaning. *Granthis* are not ordained priests; in theory any pious and competent person—man or woman—can perform this role. With some exceptions women, however, have typically not assumed this role. The status of religious leaders and equal gender access are among the issues under discussion by North American Sikhs.

The Ten Gurus

In addition to honoring Guru Nanak, Sikhs revere his nine successors. Sikh teachings hold that each was imbued with a spark of the divine. Commencing with Guru Nanak this spark passed successively through the line of teachers to Guru Gobind Singh (1666–1708), the tenth and for most Sikhs, the last of the gurus.

Each is recognized for contributions to the unfolding tradition. Guru Angad, Guru Nanak's immediate successor, created the Gurmukhi script (the "Guru's letters") to record and disseminate Sikh doctrine, important because it ensured community control over the religion. The close association of Sikh teachings with the Punjabi language has contributed to association of ethnic identity with religious identity. The fifth, Guru Arjan (1553–1606), oversaw the completion of the Harmandir ("the temple of God") in Amritsar, the city founded by his predecessor, Guru Ram Das. With entrances facing each of the cardinal directions to emphasize openness to all, the Harmandir (known to outsiders as the Golden Temple for the gold plating on its walls and dome) is the most holy of Sikh sites. It is now part of a huge complex of buildings, shrines, lakes, and walkways that testify to the history of Sikhism. The Akal Takhat, a seat of Sikh authority, is housed with the temple complex and, since 1925, the Shiromani Gurdwara Parbandhak Committee (SGPC), also called the parliament of Sikhs, oversees the management of the Harmandir and other historic gurdwaras.

Among other endeavors, Guru Arjan compiled the Adi Granth and placed it in the Harmandir. The fifth guru's activities, as well as his substantial following, attracted the attention of the Mughal Emperor Jahangir, who perhaps felt threatened by the guru's popularity. As a result, Guru Arjan was eventually martyred because of his refusal to convert to Islam. He was the first of the gurus to face death upholding the faith. The ninth, Guru Tegh Bahadur (c. 1621–1675), was martyred by Aurangzeb, another Mughal emperor.

According to the majority tradition, Guru Gobind Singh is the tenth and last guru. Rather than appoint a successor, he advised the community to turn to the Adi Granth for all counsel, declaring it to be the living word of God and the eternal guru. Under his guidance, a final version was compiled. As well, Guru Gobind Singh gave further definition to Sikhism in his creation of an initiation rite. Under his leadership, the community continued to face persecution. In 1699 at the time of Baisakhi (the spring solstice, a traditional festival day in the Indian subcontinent, now celebrated by Sikhs as their New Year), Guru Gobind Singh summoned his followers. Details vary, but accounts agree that he asked for volunteers willing to sacrifice their lives in a test of faith. Daya Ram eventually came forward and entered the tent of the guru, who then emerged with a bloody sword, asking for another head. Four others followed in similar fashion, but with the last, the men emerged unharmed. In a rite that involved drinking consecrated water, *amrit*, the sweetened nectar of the faith, they became Guru Gobind Singh's first initiates in the Order of the Khalsa. Originally meaning "pure," *Khalsa* now designates the community of the faithful.

The Five K's

The initiation ritual of taking *amrit* (known as Sikh baptism) and the insignia identifying initiated Sikhs are traced to the 1699 rite. Called the *Five K's*, because the Punjabi name of each begins with a K, the emblems express commitment to the religion through their recall of the early challenges of the community. The *kirpan* (a short dagger), the *kara* (a steel bangle protecting the right wrist), and the *kachh* (short breeches allowing for quick movement), have martial connotations. Signifying historic oppression when Sikhs had to fight to defend their faith, these symbols represent the preparedness to face adversity, the willingness to fight for justice and for those in need, strength, self-control and discipline. The circular shape of the steel bangle recalls God as well as eternity. *Kesh*, the uncut hair that Sikh men keep wrapped in the readily identifiable turban, reflects the pristine purity of the body; the *kangha*, a small comb used and worn in the hair, reflects cleanliness. Each of the symbols, as well as the initiation rite itself, is vested with meaning derived from Sikh history and teachings.

Women were not given initiation initially, as the original Khalsa was an order of fighters defending the faith. Over time, the ritual has been extended to women who upon initiation take the surname "Kaur," meaning "princess." Men

take the surname “Singh,” meaning “lion.” Singh remains a common surname identifying Sikhs, but not all Sikhs, even those carrying the name Singh, have undertaken the initiation rite. It is an expression of personal commitment rather than an obligatory rite. In North America, in India, and elsewhere, one encounters Sikhs who adhere to the practice of displaying the five symbols of the faith—hence a turban covering uncut hair—as well as Sikhs who show no visible outward signs of their religious orientation.

The Khalsa represents an assertive community that developed during an oppressive period. Other traditions have emerged over Sikhism’s long history, including the Namdharis, who see the line of gurus extending to the present, and the Nirankaris, a nineteenth-century movement that sought to return Sikhism to its original roots. *Sahajdhari* (“gradualist” or “slow adopter”), a term dating to the eighteenth century, refers to Sikhs who do not maintain the Five K’s. They define themselves as following Guru Nanak’s path or as entering the faith; hence, they have yet to take initiation. They are sometimes contrasted with *kesdharis* (“those with hair”), Sikhs following traditional practices, including binding uncut hair with a turban. Kesdharis are not necessarily members of the Khalsa.

Global Community

Notwithstanding the importance of the Punjab as the Sikh homeland, Sikhs today have a global presence. During the British period Sikh settlements expanded overseas. Deemed to be a martial race by British administration, Sikhs were actively recruited to serve in the Indian Army. The posting of Sikh regiments to other parts of the empire was often the first point of entry into new settlement areas. In 1867 Sikhs were dispatched to Hong Kong to police the colony, a position Sikhs continued to occupy until the 1950s. A sizable community developed as a result, with the first gurdwara built in 1901. World War I saw Sikh regiments serving in East Africa, the Middle East, and Europe.

Sikhs were also sent to Shanghai, Malaya, Fiji, East Africa, and other colonial enclaves. Between 1895 and 1901 more than 3,000 Sikhs were recruited to work on a Ugandan railway, many of whom stayed after its completion. Through the 1960s Sikh communities were well established in Kenya and Uganda, with smaller numbers in Tanzania and Zambia. Kenya’s “Africanization” policies of the 1960s and Idi Amin’s 1972 expulsions changed that demographic. Families with long ties to Africa were forced to leave, many going initially to the United Kingdom. Recent years have seen sizable

populations in the Western Europe and Australia. Historical connections with Britain have resulted in a relatively high concentration of Sikhs in the United Kingdom.

Arrival in North America

Sikh immigration to North America dates to the nineteenth century. Tradition traces it to events surrounding Queen Victoria’s 1897 Golden Jubilee in London. As part of the celebrations, members of Sikh regiments traveled through Canada en route to India and were told that agricultural land in British Columbia, California, and elsewhere was “just like the Punjab.” Once home they spread the word about the economic opportunities in North America, resulting in the first wave of Sikh immigrants. In its claim to date the first Sikh arrival, this story is apocryphal, but it highlights important factors contributing to Sikh immigration. Identifying first contact by members of the queen’s Indian army, the account puts Sikh settlement in North America into a larger history of global migrations.

In other parts of the empire, such as Hong Kong, where Sikhs had settled, travel was facilitated by gurdwaras that served as hostels for co-religionists. Shipping lines connected these ports and cities on the Canadian and U.S. west coasts. Before restrictive immigration legislation enacted in the early twentieth century, Canada, with its connection to the British Empire, offered economic opportunities for Asians in agriculture, the fisheries and forestry, and railroad construction, with cities such as Vancouver serving as access to the United States. As citizens of the British Empire some Sikhs had the advantage of knowing some English, particularly those who had served in the Indian Army. Further, the promise of fertile land in the story points to conditions in the Punjab, where rising land values, matched with population increase and the Sikh custom of dividing property equally among all sons, rendered many land holdings too small for livelihood.

Though 1897 is often cited, nineteenth-century census data show a much earlier Sikh presence. Records show more than thirty East Indians living in the United States each decade from the 1820s to the 1870s; the number jumped to nearly two hundred and then several hundred for the 1880s to 1890s. Identified as “Hindoo,” a term used generically for all non-Muslim South Asians, many were Sikhs. At the beginning of the twentieth century, 90 percent of South Asian immigrants were Jats, members of a farming caste, coming from just two regions, Doab and Malwa, of the Punjab. Most were young males seeking work to send money

home, hoping to return to India in their later years. British Columbia, on the Canadian west coast was a main destination, with other concentrations found in California, Washington, and Oregon.

Organizations such as Vancouver's Khalsa Diwan Society (founded in 1906) and California's Pacific Coast Khalsa Diwan Society (founded in 1912) ministered to their religious as well as social needs. Though faced with prejudice and discrimination, Sikhs were able to prosper in various ventures. By 1908, Vancouver's Khalsa had sufficient capital to build their first gurdwara; within four years another was established in nearby Victoria. The first U.S. gurdwara, dating to 1915, was in Stockton, California, a region that saw highly successful Sikh agricultural ventures. In the traditional model, the Stockton gurdwara provided the community with worship space, a community kitchen, a hostel, and meeting areas where religion, politics, employment, and other concerns could be discussed.

For the next three decades, it remained the only Sikh temple in the United States because these same years saw increasing discrimination directed toward Asian immigrants. Seeing them as competing for jobs, the popular press warned of the "Hindoo invasion." In Washington state, work camps expelled nearly 1,000 laborers. South Asians were refused service in restaurants, were denied the right to purchase property, and faced many other restrictions. In the United States, they were denied citizenship under a 1790 law restricting naturalization to "free whites." A challenge in 1913 restored citizenship rights, but the 1923 Supreme Court decision in the *U.S. v. Bhagat Singh Thind* again denied South Asians the right of naturalization, even stripping U.S. citizenship from those already naturalized. U.S. laws excluding Asian immigration were passed in 1910, 1917, and 1923.

The Komagata Maru Incident

Similar discriminatory policies were in place in Canada. The *Komagata Maru* incident highlights this restrictive period. In 1908 the Canadian government passed a head tax and "continuous passage" legislation that allowed only those overseas immigrants who could travel from their home country to Canada in a single uninterrupted journey. Purportedly aimed at limiting the spread of infectious diseases by eliminating multiple ports of call, the legislation was de facto a blanket ban on immigration from South Asia because no shipping lines operated directly from the Indian subcontinent to Canada.

In 1914, an affluent Sikh businessman in Hong Kong chartered the *Komagata Maru* to challenge the law. Some 376

Indians—and thus British citizens—most of them Sikh, eventually boarded, their destination the Canadian west coast. At Vancouver, authorities prohibited the passengers' disembarkation. While legal negotiations continued, tensions grew, with Vancouver's mayor even organizing a rally opposed to Asian immigration. After a two-month impasse, the Canadian navy forced the ship's departure with 350 passengers still on board. Twenty-six others were permitted entry because they had prior resident status. Although its departure resolved the situation in Vancouver, *Komagata Maru's* story does not end there. Upon arrival in Calcutta, those aboard ran into further problems. Following a dispute with British authorities regarding the terms of disembarkation, troops opened fire, killing nearly two dozen of the would-be immigrants.

Changes in Immigration Policy

In the United States, immigration restrictions remained until 1947 when new laws established a quota system allowing entry to a small number of Indians. These laws also provided for some family reunification, as did the Canadian policy implemented at the same time. Under Canadian immigration law, however, India was not a preferred country. For both Canada and the United States, the number of South Asian immigrants remained low for the next two decades. Only after policy changes—the United States in 1965, Canada in 1967—that opened immigration to any qualified individual, notwithstanding country of origin, did any large-scale immigration from South Asia resume.

With these changes, early Sikh settlements experienced a revitalization with the influx of new immigrants. Highly trained professionals and skilled workers also settled in urban areas throughout North America. In Canada the number of Sikhs more than quadrupled from 1981 to 2001. Economic incentives, family sponsorship, and chain migration—the process by which immigration from certain areas encourages further migration—continue to bring Sikhs to North America.

Demographics

Reliable figures for the numbers of Sikhs living in the United States are difficult to obtain because U.S. census returns do not include data on religion. Estimates in 2009 range from 200,000 to 500,000 people. Some sources suggest that as much as 10 percent of the U.S. Asian American population is Sikh, a significant figure given that Sikhs are just 2 percent of India's population. In Canada, where census

reports do include information on religious affiliation, the proportion of Sikhs immigrating has traditionally been higher than in the United States. In the 2001 Canadian census, 278,415 (or just under 1 percent of the total population) self-identified as Sikh, an increase of more than 130,000 from the 1991 census. Two provinces, British Columbia and Ontario, accounted for nearly 90 percent of the Sikh population in 2001.

Most North American Sikhs are of Punjabi ancestry, with close association between Sikh religious affiliation and Punjabi ethnicity. Recent immigrants account for the largest numbers, but with the presence of Sikh communities early in the twentieth century, and with continued immigration from the late 1940s to the present, Sikhs are also second-, third-, fourth-, and perhaps even fifth-generation North Americans. As with all communities with immigrant history, differences between new arrivals and those long settled occur. Adaptations, such as the use of chairs in gurdwaras, have been challenged by individuals wanting to see a return to uncompromised practices. Leadership disputes, disagreements about community practices, management issues in local gurdwaras, and the negotiation of relations with religious authorities and institutions in the Punjab are all part of community politics. Though tensions sometimes spill over into the news, most disputes are internal to local communities.

Sikhs face the typical challenges of intergenerational transmission of religious and ethnic identity in a diasporic setting. The younger generations whose ancestry is Punjabi, but whose identity is North American as well as Sikh, have to negotiate issues related to dating, marriage, decorum for women, and the public acceptance of visible expressions of Sikhism. Given the contemporary importance given to religious identity, an increasing number of younger Sikhs are expressing their commitment to their tradition by becoming *amritdhari* (baptized) Sikhs. Sikhs of all generations take pride in their tradition, and historically have been willing to take up legal battles to maintain their identity. In some jurisdictions, Sikhs have lobbied successfully for the right to carry *kirpan* (ceremonial daggers) into schools, and in 1990 a highly publicized case won the right of Sikh officers in the Canadian national police force to supplant the Mounties' official headgear with turbans.

Sikhism has also attracted converts. Many *Gora* Sikhs ("white" Sikhs) are followers of the Healthy, Happy, Holy Organization (3HO), a movement founded in 1969 by Harbhajan Singh. Now a transnational organization, 3HO espouses a spiritually reflective lifestyle through meditation,

Kundalini Yoga, and other practices. Conversion to Sikhism is not required, though many 3HO followers embrace Sikh traditions, including the Five K's.

Khalistan

Living in a global community, Sikhs are well aware of international issues. The movement to create Khalistan, a sovereign Sikh state in the Punjab, has affected North American communities. In 1947 the Sikh homeland was split when India and Pakistan were created. Memories of the carnage that accompanied the partition run deep, and though somewhat redressed in subsequent decades, Sikh grievances at the partition of their homeland remained, erupting into more violent agitations in the early 1980s. Coupled with the arrivals of immigrants from that conflict, the situation in the Punjab politicized the diasporic community, particularly in Canada. Rifts developed between more militant Khalistanis and others, with contentions over whose voices were more authoritatively Sikh.

Events culminated in 1984 when the Indian Army launched an assault on the Harmandir to uproot militants sheltered in the temple complex. Known as Operation Blue-star, the military offensive horrified Sikhs across the international community, further politicizing them. A year later, the downing of Air India Flight 182 en route from Canada to India reminded Sikhs as well as other North Americans that no community is isolated from struggles elsewhere. The plane, with 329 people on board, exploded in mid-air just off the coast of Ireland. The bomb aboard was linked to Sikh extremists, though by 2009 only one person had been convicted for constructing the bomb. For the next decade Khalistan dominated Sikh political discussions. Although separatist sentiments remain strong in some circles, most North American Sikhs support more measured positions regarding India and the Punjab.

Sikhism in the Early Twenty-First Century

Sikhs continue to define their traditions in the North American context. In the early twenty-first century gurdwaras remain the focal points of Sikh community life. They are the gathering places where issues are debated and differences expressed, just as they were when the first gurdwaras were established at the beginning of the twentieth century. Welcoming to anyone, many gurdwaras take an active role in making Sikhism better understood by the general public. In the aftermath of 9/11 Sikhs were targets of racist attacks. Recognizing the need for education and advocacy, Sikhs

draw upon the resources offered by current technology to disseminate better knowledge about their religion and its history. Sikh Internet sites offer discussion space for current issues and for the questions Sikh youth face. They offer fora for advocacy and provide linkages with Sikh communities worldwide.

Sikhs are also concerned with larger social issues. In a contemporary expression of *seva*, or service, organizations such as the United Sikhs, founded in 1999, undertake work for the social and economic empowerment of underprivileged groups. With these and other resources in place, and with rich traditions to draw upon, Sikhs have endeavored to lay foundations that will ensure the future growth and stability of their religion in North America.

Social Ethics

Social ethics addresses moral dilemmas that concern society as a whole. Ethical issues, such as racial equality, abortion, and global warming, though they can also be examined from the

standpoint of individuals, are clear examples of social ethics dilemmas. Through much of its history, the field of ethics had emphasized individual morality almost exclusively, yet since the mid-nineteenth century the moral evaluation of social structures and practices has emerged as an important supplement and corrective to this individual orientation. Social ethics has also been a hugely significant phenomenon within religion in America. Indeed, it would be virtually impossible to chart the history of Christianity in America without serious consideration of how various Christian theological camps have expressed their faith in the social ethics arena. Social ethics has thus become a field within both the larger discipline of ethics and the study of religion in North America.

Social Ethics and the Social Gospel

The great nineteenth-century evangelical revivals did much to engender socioethical concern on matters such as consideration for the poor, temperance, women's suffrage, and the abolition of slavery. However, the first self-conscious approach to social ethics arose from the so-called Social Gospel movement. This approach, which dominated social ethics from 1880 to the onset of the Great Depression in 1929 and which was a substantial cause of social ethics courses becoming a staple in seminary curricula during this period, was an outgrowth of liberal Protestant theology. It sought to accommodate the Christian gospel to modern science, which had no place for the supernatural elements of Jesus' ministry, and higher biblical criticism, which held, among other things, that the Bible contained many mistakes in its historical pronouncements. To the social gospelers, the true Jesus of history was first and foremost a social reformer. Jesus' frequent teachings on the kingdom of God and his compassion for the poor and downtrodden of his society revealed a call for his followers to work for a redeemed social order in the here and now. The two luminaries of this view of social ethics were Washington Gladden (1836–1918) and Walter Rauschenbusch (1861–1918). Among other causes, they advocated tirelessly for the rights of laborers in industrialized society and a progressive Christianization of the American economy—for example, in Gladden's *Working People and Their Employers* (1876) and Rauschenbusch's *Christianity and the Social Crisis* (1907). Although social gospelers such as Gladden and Rauschenbusch optimistically believed that all of the ills of society could be healed with a socialized version of the Christian message, they tended to focus their work largely on economic issues and paid far less

attention to other socio-ethical problems, such as race and gender-based discrimination, though they did, at times, acknowledge these problems.

Christian Realism

The bleak realities of World War I and the onset of the Great Depression made it difficult to believe that society was becoming or could become redeemed. These realities cast a shadow of implausibility over the Social Gospel approach to social ethics. It was at this juncture that Reinhold Niebuhr (1892–1971), widely regarded as American social ethics' most significant figure, entered the discussion. His book, *Moral Man and Immoral Society* (1932), set forth a potent critique of social gospel ethics and developed the well-springs of his own social ethic, Christian realism. In stark contrast to the social gospellers, Niebuhr's realism stressed the fallen nature of humanity, particularly the sinfulness of human society. Because of this deep corruption in collective humanity, the Christian ethic of love, depending as it does on the goodness of humans for its application, could not ground social ethics. Only a democratically enforced principle of justice alert to the human propensities to self-interest and self-aggrandizement could do that work. Niebuhr's oft-quoted aphorism from his 1944 *Children of Light and Children of Darkness* was that "Man's capacity for justice makes democracy possible; but man's inclination to injustice makes democracy necessary" (xiii). With this elevation of the notion of justice, social ethics would then have a basis for fighting social evils, such as poor labor conditions, and a ready justification for governmental use of force to eradicate injustice if necessary. Christian realism dominated American social ethics until the early 1960s and is still a prominent view. Other major proponents of it were Niebuhr's brother, H. Richard Niebuhr (1894–1962), and John C. Bennett (1902–1995). Despite its influence, however, Niebuhr's realism has been criticized for taking an excessively pessimistic view of human nature and too often legitimizing the status quo of American democratic power structures.

Liberation Theology and Social Ethics

The Social Gospel and Christian realist approaches were both largely developed by and applied to white, middle-class, Protestant men. Liberation theology, though it shared the basic liberal theology of these other views, broke strikingly from this trend. Developed in Latin America in the 1960s, liberation theology seeks to expisit the main tenets

of Christianity from the standpoint of the poor and the oppressed. It became a force in American social ethics through the writings of such well-known liberationists as James H. Cone (1938–) and Mary Daly (1928–2010). Cone, in his *Black Theology and Black Power* (1969) and *The Theology of Black Liberation* (1970), applied ideas of liberation theology to the oppressed experience of blacks in the United States. Cone found a biblical basis for freedom and equality for African-Americans in the accounts of the Jews' enslavement in Egypt and their subsequent deliverance, and in the sufferings of Christ. Indeed, so strong was the resonance of these accounts that Cone has controversially maintained that the Bible is essentially a black book and Jesus is a black messiah. Daly, by contrast, focused her writings on the rights of women. These writings, such as *The Church and the Second Sex* (1968) and *Beyond God the Father: Toward a Philosophy of Women's Liberation* (1973), have established her as the best-known and perhaps most controversial U.S. feminist liberation theologian. She voiced strong opposition to patriarchal structures in the Catholic Church and in the teachings of the Bible, arguing that the rights of women require these to be set aside. Both Cone and Daly have been criticized, however, for being extremists about their respective causes and for the often militant tone of their writings. Both have also been criticized by other liberationists for systematically neglecting the specific oppression of African American women in their work.

Catholic Social Ethics

The Social Gospel, Christian Realist, and Liberationist traditions all approached social ethics with a liberal Protestant theological orientation. The Catholic Church, though, has compiled a rich history of social ethics engagement as well. It has promulgated a number of directives on social ethics issues in the form of papal encyclical letters and Magisterium teachings, and has produced several influential social ethicists. John A. Ryan (1868–1945), who was deeply influenced by Pope Leo XIII's 1891 social ethics encyclical, *Rerum Novarum* ("The Condition of Labor"), brought a distinctly Catholic point of view to labor issues. Ryan advocated, in his 1906 book *A Living Wage*, for decent minimum wages for workers on the grounds that their dignity as persons required it. Although he accepted private ownership of property and the collection by owners of rent and interest, he argued that these should never be pursued at the expense of the non-owners' rights to decent lives and opportunities to gain ownership for themselves. These were central

contentions of his most important work, *Distributive Justice* (1916). John Courtney Murray (1904–1967) is best known for his advocacy of religious freedom, the right to be free from coercion, governmental or otherwise, in the choice of one's religion. Like Ryan's views, Murray's perspective was underwritten by respect for the basic dignity of persons. Coercing someone on choice of religion, a matter as basic to one's life as any could be, is a fundamental affront to the individual worth of that person. Murray, though his views on religious freedom clashed with those of some church officials, was the principal architect of *Dignitatis Humanae* (1965), the Catholic Church's official pronouncement on religious freedom, and one of the most important pronouncements to arise from the Vatican II Council. Some contemporary Catholic theologians and ethicists, such as the now censured Charles Curran (1934–), have controversially appealed to the idea of religious freedom set forth in *Dignitatis Humanae* to justify their dissent from the Catholic Church's ethical teaching on a variety of other matters, including contraception, premarital sex, abortion, and homosexuality.

Evangelical Social Ethics

Evangelical Protestant theologians took deep exception to the liberal theology (particularly its denial of biblical inerrancy) that underwrote the Social Gospel, realist, and liberationist takes on social ethics. Yet from the 1880 inception of the social ethics movement, evangelicalism, because of its separatist tendencies, had been conspicuously disengaged from the discussion. This began to change when Carl F. H. Henry (1913–2003) penned *The Uneasy Conscience of Modern Fundamentalism* (1947). Henry argued from the Bible that Christians were called to bring healing to the surrounding social and cultural order and that the separated, anti-intellectual, anticulture attitudes of many evangelicals ran completely contrary to this calling. This social healing, however, was to come by winning individuals to Christ, not by governmental legislation. Henry's increased awareness of society paved the way for other evangelicals to begin engaging specific social ethics issues. For example, John Howard Yoder (1927–1997), a committed Mennonite, argued in his book *The Politics of Jesus* (1972) that for those who would follow the way of suffering exemplified by Christ, the proper moral stance with respect to war was total pacifism. Yoder also forcefully criticized Niebuhr for his general support of the use of force or coercion to bring about justice in society. Yoder also trained a number of future social

ethicists, such as the prominent Stanley Hauerwas (1940–), who became a pacifist under Yoder's influence.

Another twentieth-century evangelical writer who exerted enormous influence on the field of Christian social ethics was Francis A. Schaeffer (1912–1984), an early evangelical proponent of environmental concern in his *Pollution and the Death of Man* (1970). His concern arose from his belief that God had created a good world and had ordained humans as stewards over it. Schaeffer, on the grounds that human life, being created in the image of God, was intrinsically valuable no matter what its quality, also argued strongly against abortion, most forms of euthanasia, and genetic modification of humans. In his books, *Whatever Happened to the Human Race* (1979, co-authored with former U.S. surgeon general C. Everett Koop) and *A Christian Manifesto* (1981), he urged Christians to combat these social ills with political activism, including civil disobedience if necessary. Evangelicals seeking to have such an impact on the social and political sphere, however, have been much maligned for what is often seen as an attempt to force their ethical views on a society in which many do not share their religious outlook.

Contemporary Scene

Although the approaches discussed remain live options today, the contemporary social ethics scene is marked by an ever-increasing list of new perspectives and new issues of concern. Basically, any religion, whether it is Native American, Wiccan, Buddhist, or something else, can apply the tenets of its faith to socio-ethical problems and thereby create an approach to social ethics. This is precisely what occurred in North America toward the close of the twentieth century, thereby broadening social ethics to become more than the Christian phenomenon it had been through much of its history. Further, although classical issues pertaining to labor rights, gender and racial equality, and the economically oppressed continue to be discussed, the contemporary field is also populated by a host of new social dilemmas. The issue of gay marriage, which many would not have taken seriously in the mid-twentieth century, has become a nationwide controversy. Innovations in medicine have given rise to unprecedented ethical quandaries over such matters as the permissibility of cloning humans and embryonic stem cell research, as well as a variety of other issues in medical ethics.

Social ethics, like religion, speaks to the most fundamental aspects of human existence—sex and reproduction, work, health, environment, and the treatment of one's neighbor.

This is why social ethics engagement will continue to entwine itself with the practice of religion in the United States and beyond for generations to come.

Social Gospel

The Social Gospel was a Protestant response to industrialization and urbanization following the Civil War. Social Gospel proponents, who reflected a range of theological convictions, responded to labor strife by creating new church-based programs to address social distress. Many Social Gospelers combined social concern with a new theological emphasis on the social teachings of Jesus and the hope of realizing the eschatological goal within history. Social Gospelers provided important foundations for interdenominational efforts and ecumenism in the founding of the Federal Council of Churches. Other Social Gospelers focused on the government as a trans-denominational instrument of Christian reform. The Social Gospel influenced the development of progressivism by sanctioning the idea of positive state action, and like Progressivists, the majority of white Social Gospelers failed to critique or address racial inequality, the problem of the color line in American society, and lynch mob violence against blacks. On the other hand, black American Christians

appropriated Social Gospel ideas and practices, laying the groundwork for community empowerment and the advance of civil rights. The Social Gospel mediated tradition and change during a time of significant cultural transition and population growth by reframing terms of Protestant cultural leadership in a continued quest for a Christian America.

The Social Gospel as Innovation and Recovery: *Walter Rauschenbusch*

Arguably, theologian Walter Rauschenbusch (1861–1918) is the best-known representative of the Social Gospel. His life and work vividly represent many Social Gospel themes. His interpretation of the Social Gospel provided the basis for much subsequent reflection and analysis.

Rauschenbusch, son of a German immigrant, had served as pastor of the Second German Baptist church on the edge of the Hell's Kitchen neighborhood of New York City during the 1880s. Educated both in Germany and in the United States, he maintained a double consciousness, mediating German ideas and American experience. His New York ministry exposed him directly to the impact of the new economic and social conditions associated with industrialization and urbanization. The dominant agrarian and rural ethos comprising the American norm was being displaced by a new social reality associated with cities, manufacturing, and the accumulation of concentrated economic power.

Rauschenbusch gave serious consideration to Christian socialist ideas about economics and history in a book draft, provisionally titled *Revolutionary Christianity*, during the 1890s when deafness made it impossible for him to continue in parish ministry. Parish experience forced him to recognize that the work of the church—to Christianize the social order—must engage the social contexts and material conditions in which human beings struggled to find hope. He concluded that the salvation of souls and the salvation of society must be addressed together and that the church must apply the teachings of Jesus to society as a whole, particularly to the fair treatment of workers in the emerging industrial economy of the United States. As a bicultural historian and pastor, Rauschenbusch appropriated the results of an intellectual revolution that had challenged the Bible as a reliable source of historical data by insisting that the prophetic message of Jesus and the early church had profound implications for twentieth-century America.

Christianity and the Social Crisis, published in 1907 as a revised and updated version of the *Revolutionary Christianity* manuscript, made Rauschenbusch a best-selling author. By

1917 Rauschenbusch, then an eminent professor of church history at Rochester Theological Seminary, argued that human beings had the responsibility and the ability to advance God's kingdom on earth through the Social Gospel. His vocational pilgrimage from an urban pastorate to theological seminary modeled a development that was characteristic of the Social Gospel's emphasis on using the results of historical inquiry to ground a new interpretation of the gospel, emphasizing the application of its social principles to American experience. It also exemplifies the mediating character of the Social Gospel as a movement of recovery and innovation.

Rauschenbusch's conceptions of social sin and social salvation represented a culmination of an escalating critique of economic and religious individualism, which had been mutually reinforcing values in the pre-Civil War United States. The journey of Rauschenbusch's career from religious individualism to the Social Gospel commonwealth represents a decisive shift to sustain the influence of Protestant Christianity during a period of economic change, while the United States was becoming more religiously diverse.

A Changing America

As a German-American, Rauschenbusch was acutely conscious of the influences of European and English thought and experience on his interpretation of the Social Gospel. He sought to use German and other European theological traditions to validate insights from his American experience. At the same time the Social Gospel had a distinctive heritage in American Christianity, particularly in the labors of Protestant Christians in the pre-Civil War period known as the Second Great Awakening. Through voluntary societies and home mission initiatives, American Christians sought to create a Christian society through persuasion and conversion without the sanction of state authority. In fact, it can be argued that by the time Rauschenbusch announced the arrival of the Social Gospel, as the United States prepared to enter the first world war, the Social Gospel was already a movement of the Protestant past, a late development in what historian Robert T. Handy characterized as a Protestant quest for a "Christian America."

The Social Gospel, a response to important changes in the American intellectual and social fabric, sought to articulate a new foundation for Protestant cultural leadership. The theory of evolution and biblical criticism drove an intellectual shift; unprecedented patterns of economic development and the

move towards an urban and industrial economy underlay a social revolution. Together these forces buttressed a strong challenge to traditional beliefs and patterns of understanding. Engagement with the early labor movement and the accumulation of great fortunes by a few captains of industry provoked reexamination of whether the "invisible hand" worked for the greatest good of the community as a whole. Experience and data suggested that this axiom had become problematic for the advance of a Christian society. The convictions of classical economics and evangelical religion about individualism and voluntary persuasion were no longer broadly self-evident. To Christianize the community, the divine commonwealth, it might be necessary to move beyond voluntary persuasion to sanction collective and state action and to conceive of public authority as a means to advance the kingdom of God.

In the post-Civil War economic expansion, during what is often referred to as the Gilded Age, conventional wisdom about economic activity confronted new realities of industrial combination, capitalist power, and incipient worker grievance. The relationship between the forces of capital and labor shifted as larger enterprises gained the capacity to set terms of employment and workers lost individual leverage to negotiate. In the still dominant ideology of personal freedom, economic progress and economic inequality were understood as a development or consequence of individual freedom, the workings of a "natural process" of selection and the survival of the fittest.

From 1870 to 1920 the population of the United States increased from 40 million to 106 million. This increase encompassed a profound change in scale and sensibility and had a dramatic impact on the diversity of American Christianity. The force of this population expansion was absorbed predominantly in the cities of the Northeast and the Midwest. New York's population increased fivefold during this period. Chicago expanded even more rapidly from a much smaller base. Territories in the western part of the country were organized as states, boundaries were settled, time zones were organized, and transcontinental communication and transportation linked the United States together. Within less than a century after President Thomas Jefferson commissioned Meriwether Lewis and William Clark to explore the territories of the Louisiana Purchase, a traveler could book rail passage across the country and travel from New York to San Francisco in five days.

Although it had roots in both the Reformation and post-Civil War industrial expansion, the Social Gospel

also had a legacy that proved influential throughout the twentieth century. That legacy can be recognized even in twenty-first-century public policy debates about the role of government in American life—about balancing respect for individual liberty with the promotion of distributive justice. The Social Gospel's early connections with the so-called "new economics" and its critique of classical laissez-faire ideology form an important link to the development of the idea of state action and policy to promote the common good. In this regard the contrast with the earlier effort to promote a Christian society through voluntary individual persuasion is important. The legacy of the Social Gospel, often rendered in secular discourse, is discernible as a regulator of individual conduct and an arbiter of claims of institutional and individual discrimination and inequality. Public policy arguments that seek to balance individual liberty and social fairness reflect the legacy of the Social Gospel.

From Chautauqua to the World's Parliament of Religions: Social Gospel and the Labor Movement

The Chautauqua Institution became an important early gathering station for social Christianity after its 1874 founding by a Methodist layman and farm equipment inventor, Lewis Miller, and a Methodist minister and later bishop, John Heyl Vincent. Located in western New York State on a lake bearing the same name, it was conceived initially as a Methodist summer camp meeting with programming to support Sunday school education. In the Chautauqua venue, Protestant culture confronted an expanding and changing world, and the Institution transformed itself into a year-round innovation in extension education. Lewis Miller wrote that religious education and secular learning were not distinguishable from God's point of view. All of the creation and all the struggles within creation were worthy of the Chautauqua focus.

Within a decade of its founding, Chautauqua became an important center for adult education at a time when only a small portion of the U.S. population had experience in higher education. By the mid-1880s, the Chautauqua educational program included a faculty of theology and a faculty of liberal arts, as well as the Chautauqua Literary and Scientific Circle, a book club and pioneering program in what is now known as distance learning. William Rainey Harper, later the first president of the University of Chicago, and George Edgar Vincent, later president of the University of

Minnesota, served as the first and second principals of the Chautauqua education department.

Theological Modernism and New Economics: Washington Gladden and Richard T. Ely

In the 1890s Chautauqua faculty and lecturers included, among others, Washington Gladden, pastor of the First Congregational Church of Columbus, Ohio, and Richard T. Ely, a young professor of economics at the Johns Hopkins University in Baltimore, Maryland, and an active Episcopal layperson. Gladden and Ely joined the Chautauqua faculty in 1889, by which time Chautauqua had positioned itself to make substantial contributions to the development of Social Gospel.

Other Social Gospel figures at Chautauqua included Lyman Abbott, John Commons, Jane Addams, Francis Peabody, and Theodore Roosevelt, a representative range of leaders and a future U.S. president who would be strongly influenced by Social Gospel ideas. Josiah Strong, the leader of the United States Evangelical Alliance, also lectured at Chautauqua.

Washington Gladden (1836–1918), the senior member of the Chautauqua community, was an 1859 graduate of Williams College, where he had studied under Williams president Mark Hopkins and also John Bascom, a rhetoric professor who later served as president of the University of Wisconsin. Influenced by the English theologian Frederick Robertson (1816–1853) and the American theologian Horace Bushnell (1802–1876), Gladden established a national reputation as a preacher and was a skilled communicator of modernist ideas about theology and biblical interpretation.

Gladden embarked on a career in ministry and journalism, first in North Adams, Massachusetts, and later in Columbus, Ohio, serving along the way as an editor of the *Independent*, a weekly paper initially founded by a group of Congregationalists that later separated from its denominational foundation. Gladden was engaged by theological modernism, biblical criticism, and the imperative of social reform. In his autobiography he described the experience of reading and absorbing the meanings of Bushnell's *God in Christ* as an "emancipation proclamation" that had freed him from "an immoral theology," which stressed divine sovereignty apart from human deeds. Bushnell, who preached Gladden's installation sermon in North Adams in 1867, had by then become a controversial exponent of a view that emphasized restoration to divine fellowship over and against what he perceived as the fatalistic rigidities of Calvinist theology.

While serving as senior minister in the North Congregational Church of Springfield, Massachusetts, Gladden completed *Working People and Their Employers* (1876), one of the first major statements of American social Christianity. Following the depression and financial panic of 1873, Gladden was invited to address a group of unemployed workers in Springfield. He addressed the relationship between labor and capital and argued that workers had a right to organize for their own protection. Over the next twenty years, persistent labor strife—a railroad strike in 1877, the 1886 Haymarket riot, and the 1893 Pullman strike—persuaded many in the religious community that serious structural injustices existed in American economic and social life.

Richard T. Ely (1854–1943) grew up on a farm in Chautauqua County in western New York. After completing undergraduate study at Columbia College in 1876, Ely travelled to Germany to pursue graduate study in political economy. He completed a PhD in just two years at the University of Heidelberg under the supervision of Karl Knies, a leader in the so-called school of new economists. This group distinguished themselves from classical economists in three respects: rejection of the principle of laissez-faire, advocacy of inductive—evidence-driven—methods of research and analysis, and a view that economic principles reflect particular historical and social contexts. Economic principles could not be described a priori in absolute terms. The new economists were cognizant that urbanization and industrialization in Europe and America were generating new economic and social paradigms, and they understood their discipline to be in the service of improving the human condition. For Ely and his colleagues, the goal of economic study was reform and to strengthen social solidarity among competing forces, including labor and capital. In his 1886 *Labor Movement in America*, Ely argued that the organized labor movement was a constructive and Christianizing force in a more complex economy.

The convergence between the modernist movement in theology and the new economics was nicely captured by Gladden and Ely's 1885 collaboration on the development of a four-point statement of principles for the newly established American Economic Association, in which the state was regarded as "an agency whose positive aid is an indispensable condition of human progress" and "the conflict of labor and capital has brought to the front a vast number of social problems whose solution is impossible without the united efforts of Church, state, and science" (pp. 6–7).

Other important Social Gospel organizations came into being in the in the 1880s and 1890s. Within the Episcopal denomination, the Church Association for the Advancement of the Interests of Labor (CAIL), founded in New York in 1887, focused on forging alliances with the representatives of the labor movement, providing social service support in worker neighborhoods, and helping with union organizing. Among the early CAIL leaders was William Dwight Porter Bliss, an Episcopal priest, who a short time later helped to found and served as president of the interdenominational Society of Christian Socialists. In that capacity Bliss served as editor of its periodical, *The Dawn*. Bliss and his colleagues argued that all social, political, and industrial relationships should be based on the fatherhood of God and the brotherhood of man. In 1891 Ely and a group of colleagues, who were drawn to the interrelationship of the English Christian Social movement and the Social Gospel developments in the U.S. Episcopal Church, established the Church Social Union. Dedicated to the scientific analysis of social problems, the Christian Social Union provided a Chautauqua-like forum for study and discussion where clergy and lay leaders could reflect on the application of Christian ideas and principles to social life.

The Brotherhood of the Kingdom and the World's Parliament of Religions

In August 1893, one month before the convening of the World's Parliament of Religions in Chicago, the first meeting of the Brotherhood of the Kingdom took place at the summer home of New York Baptist pastor, Leighton Williams. It would meet annually to consider social questions until 1915. This group, which initially included Walter Rauschenbusch and another Baptist minister, Samuel Zane Batten, eventually expanded its numbers to include colleagues in other denominations. While this group was never large, it included many leaders of the Social Gospel movement and was influential because of the publications of its members.

The convening of the World's Parliament of Religions, in conjunction with the Columbian Exposition of 1893 in Chicago, provided a high-visibility opportunity to assess the status and development of religion in the United States. The Parliament focused on the relationship of Christianity to other world religions. Richard Ely gave an address on religion as a social force in human society and the importance of moving beyond dogmatic concerns to holding service as a common moral imperative. Washington Gladden gave an

address the same day on the topic of religion and wealth. A review of the Parliament's schedule shows that the modernist-oriented Protestantism of the conference organizers was preparing itself to confront and engage with some seriousness a wide range of religious pluralism.

Reverdy Ransom (1861–1959), an 1886 graduate of Wilberforce University in Ohio and a pastor who would become a leader in the African Methodist Episcopal (AME) Church, was present at the Parliament. He had come to Chicago with one of his college teachers, sociologist Benjamin Arnett, who later served as an adviser to President William McKinley. Ransom was impressed by the ecumenical emphasis of the Parliament and the hope expressed for Christian unity. During his long career, Ransom lived to see the development and extension of the Social Gospel as it influenced race relations in the twentieth century. His participation, however, is a reminder of the limitations of the early Social Gospel with regard to race, a subject that has received much attention in the years following the civil rights movement in the United States.

Overlap with Progressivism and the Issue of Race

The Social Gospel period in American religious history overlaps with the reformist-oriented Progressive movement. In fact, the Social Gospel has been referred to as the religious phase of the Progressive movement. Whether politics or religion was the starting point, Social Gospel proponents rarely addressed race and, particularly, the question of civil rights for African Americans, though they argued eloquently with respect to the demands of the labor movement about the brotherhood of man. Many Social Gospelers were committed to Booker T. Washington's Tuskegee Institute methods of racial improvement, which were based on industrial education. With respect to then recently freed slaves, there was in the Social Gospel, as in American society, concern about whether blacks could ever be assimilated. Some Social Gospelers, such as Lyman Abbott and Henry Potter, were active leaders in the American Colonization Society, which was dedicated to helping blacks move to Africa.

During the 1890s Ida B. Wells (later Ida Wells Barnett), a young investigative journalist, began a campaign against lynch mob violence in many parts of the southern United States. Social Gospel leaders, on the other hand, took no notice of this scourge, emphasizing when pressed the importance of order in civil society. In the American South, the underpinnings of segregation and the "separate but equal" interpretation of the Fourteenth Amendment were

reinforced by sporadic mob violence. During the years of Social Gospel formation, nearly 90 percent of blacks lived in the South, so while there was diversity in the Social Gospel movement, its members' experience with blacks was limited. Race was essentially absent from Social Gospel ideology. The reformist-driven Social Gospel, based on the bond of brotherhood, thus largely failed to address "the color line," which W.E.B. DuBois predicted in 1903 in *Souls of Black Folk* would be the challenge of the twentieth century. Washington Gladden, the senior Social Gospel leader, acknowledged late in his career, after meeting DuBois, that the Tuskegee approach had limitations because it failed to consider directly the relationship of political equality to other reforms. Rauschenbusch did not address the issue. Ely was largely silent as well but did address the question of eugenics in his 1903 *Evolution of Historical Society*.

DuBois, a few years later with Reverdy Ransom and others, would establish a new organization to provide activist institutional leadership for civil rights, the National Association for the Advancement of Colored People (NAACP). During the 1912 presidential campaign Reverdy Ransom, by then editor of the *AME Church Review*, publically broke with his former political ally, Theodore Roosevelt, over Roosevelt's treatment of black delegates to the Progressive Party political convention.

Institutionalizing the Social Gospel in the Progressive Era: Divisions and Distinctions

In his 1948 book *Protestant Churches and Industrial America*, Henry May distinguished three broad patterns of social Christian response during the Progressive period of American history. May argued that the development to which Rauschenbusch gave witness was better interpreted as a heterogeneous group of Christian responses to a series of economic and other changes in the United States. May suggested there were conservative, progressive, and radical patterns of engagement with social questions among the Protestant denominations—Methodists, Presbyterians, Congregationalists, Northern Baptists, and Episcopalians—primarily catalyzed by the need to address what seemed to be new patterns of structural inequality and poverty. May's threefold categorization has been influential, shaping much subsequent analysis of the subject. This framework for understanding the pluralistic cast of social Christianity provides a foundation for distinguishing different patterns of Social Gospel impact following the death of Walter Rauschenbusch in 1918.

Conservative social Christianity, primarily individualist in orientation and based on an evangelical emphasis on individual conversion, focused on providing relief and service to individuals in response to poverty and social disadvantage. May highlighted the work of groups such as the Salvation Army, which carried on important rescue work grounded in an ideology based on changing individual behavior. This pattern, based on the voluntary pattern, was consistent with the methods of the Second Great Awakening before the Civil War. The goal was individual salvation and personal transformation. This approach did not focus on the workings and the relationships among different groups or interests of the social and economic system.

Progressive social Christianity is often associated with the liberal theology that developed following the nineteenth-century theological renaissance, particularly with the work of Friedrich Schleiermacher and Albrecht Ritschl in Germany, Frederick Denison Maurice and Frederick William Robertson in England, and Horace Bushnell in the United States. An important aspect of their work was a renewed attention to experience and historical development as the context for divine revelation. Liberal theology emphasized the immanence of God. In conjunction with the emergence of biblical criticism in late nineteenth-century theological discourse and the development of Charles Darwin's theory of evolution as a new scientific paradigm, an emphasis on social and historical conditions as the arena for divine action developed. Christianity was interpreted incarnationally, as very much a religion of this world. Henry Ward Beecher (1813–1887) would famously preach that evolution is God's way of continuing God's creation. Richard T. Ely would argue that the study of economics and the related social sciences provides tools and methodologies for carrying out Jesus's teaching of neighborly love. While the social Christian response was diverse, proponents held a common concern about inequality, poverty, and the material conditions of human life.

Those drawn to the Social Gospel—or social Christianity, as it was called before 1900—were advocates of what became known as the new or liberal theology, a movement seeking to incorporate the insights of historical criticism and nonliteral interpretation of the Bible and that embraced the evolutionary hypothesis about human origins. Washington Gladden exemplified these modernist tendencies. This theology emphasized the immanence of God in human history, signified preeminently in the life and experience of the historical Jesus. An emphasis on divine immanence provided a

foundation for viewing human experience as not only a prelude but as a kingdom in its own right.

The radical Social Gospel proponents believed that a new kind of economic order would be needed in order to meet the requirements of the gospel. Both early CAIL leader William Dwight Porter Bliss and Vida Scudder, a Social Gospel novelist and Wellesley College professor who joined CAIL in the 1890s and who was deeply influenced by the English Christian Socialists, believed in more fundamental reconstruction and were drawn to socialism. Harry Ward, the author of the social creed of the Methodist Episcopal Church and the first leader of the Methodist Federation for Social Service, was an influential proponent of the Social Gospel who moved in this direction; later, his Union Seminary colleague, Reinhold Niebuhr, would criticize Ward's optimistic assessment of human nature.

Diverse Legacies of the Social Gospel

The Social Gospel followed many patterns of development and implementation. During the 1880s it developed within the institutional church under the leadership of clergy such as William S. Rainsford, rector of St. George's Episcopal Church in New York. In Rainsford's view, the fact that all of human experience was under God's care meant churches must focus beyond Sunday worship on programs and activities that uplift people in need and bond together the privileged and the underprivileged in a single community. Thus, St. George's promoted a range of service, recreational, and educational opportunities for its neighborhood extending well beyond its Sunday congregation. Rainsford suggested at one point that the church must take seriously the social attractiveness of the saloon as a community institution compared with dreary city tenements. Similarly, at the beginning of the twentieth century, Reverdy Ransom, as pastor of an African Methodist Episcopal Church in Chicago, provided support to individuals to battle the destructive influences in urban environments. Institutional churches had a "family resemblance" to secularly based social settlements such as Hull House in Chicago. Conservative social Christianity emphasized individual empowerment along the lines later associated with secular and religious self-help ideologies and therapies.

During the Progressive period, Richard T. Ely, who had moved from Johns Hopkins to the University of Wisconsin, became the focal point of a brain trust, a group that drew on Social Gospel backgrounds to articulate views of the state as a positive force. In their view the state was an instrument of Christian social progress. Ely recruited, among others, John

Commons and the sociologist Albion Small. Commons became one of the leaders of the institutional economists and, with Ely, provided intellectual and policy expertise for the progressive administration of Robert La Follette Sr., who served as Wisconsin governor from 1901 to 1906 before becoming a U.S. senator. Ely suggested that education and research in public universities were the means to complete what religious reformers had initiated with the Social Gospel. This argument became the basis for the Wisconsin Idea proposed in an influential 1912 book by Ely protégé Charles McCarthy.

In 1908 the Federal Council of Churches of Christ in America—an interdenominational confederation dedicated to cooperative work across a wide range of social ministry—was established. It adopted as its creed a formulation from the Methodists, declaring a deep belief that only the teachings of the New Testament could solve the complex problems of industrial life.

The Social Gospel influenced the development of new models of parish ministry in institutional churches; new formulations of the role of the state and the use of public policy; and new patterns of interdenominational cooperative effort, which formed the basis for the development of the ecumenical movement in the twentieth century.

Social Gospel developments also had an important influence in Canada during a critical period of national formation following the establishment of the Canadian Dominion in 1867. From the beginning the divisions between English and French religion and culture, and between Protestantism and Catholicism, have shaped what it means to be Canadian. The concerns of the Social Gospel, predominantly Protestant in Canada as in the United States, were reflected in the 1891 social encyclical of Pope Leo XIII, *Rerum Novarum*, which had a substantive impact on the French-Catholic province of Québec.

In English Canada, Methodist, Presbyterian, Baptist, and Anglican communities found in social Christianity a basis for common cause. Salem Bland of Wesley College in Winnipeg, Manitoba, became an important leader in Canadian social Christianity, and Winnipeg became an important center of Social Gospel activity. Stimulated by the interdenominational dialogue about social concerns, the United Church of Canada was created through a merger of Methodists, Presbyterians, and Congregationalists in 1925. This cooperative venture is considered a major landmark in the history of twentieth-century ecumenism and an important legacy of the Social Gospel.

In the 1950s another young Baptist pastor, Martin Luther King Jr., cited both Rauschenbusch and Mahatma Gandhi as shaping influences on the theological foundations for his understanding of ministry, protest, and the pursuit of civil rights for black citizens of the United States. While the early Social Gospel had not addressed race, he appropriated the Social Gospel tradition as a source of moral leverage.

The Social Gospel legacy has been invoked in connection with numerous theologies of liberation and inspires coalitions of religious and civic reformers of different political persuasions. The Social Gospel was an elite movement, but there were parallel developments among women and blacks who found ways, despite its noninclusiveness, to invoke the Social Gospel to advance their concerns. Like American religious history itself, the legacy of the Social Gospel includes multiple narrative streams and many ironies. Also like American religious history, the Social Gospel emerged from an encounter between the experience of a dynamic environment and demands of Christian faith, interpreted principally by the spiritual descendants of the sixteenth-century Protestant reformers.

Social Reform

Social reform involves acting in the public sphere to bring about change. Reformers in American history have taken up a variety of causes and activist techniques, often informed by religious worldviews. Eighteenth-century America hosted only a handful of societies for the reformation of morals. The nineteenth century witnessed an explosion of popular reform movements, ranging from well-known antislavery societies to more obscure groups dedicated to educating sailors and assisting prostitutes. Although the twentieth century began with a similar reforming spirit brought to bear on new social problems, new sorts of movements emerged. African Americans organized to gain civil rights and conservative Protestants rallied about a variety of social issues. As the twenty-first century dawned, the number of reform voices citing religious inspiration or concern has only grown. In the later twentieth century, for example, many Protestant groups sought to influence school textbook content (particularly the discussion of theories of evolution), just as the Hindu American Foundation has done in the early twenty-first. Social reform has thus come to illustrate both the globalization of society and the extension of social reform efforts outside traditional religious circles. The people who make up reforming groups, the social issues they take up, and the strategies they use have varied widely, but a few impulses persist. As the historian of antebellum movements Steven Mintz has observed, reformers create campaigns aimed at moral suasion, humanitarian outreach, and society's radical transformation.

Scholars of social reform narrate these movements using critical tools to understand them. No matter the reform movement's historical setting or religious grounding, scholars ask whether a movement focuses on changing individuals, providing relief through charity or institutions, or affecting

policy through lobbying or influencing elections. Historians also explore a movement's cultural context, including the religious elements that shape reformers' explicitly stated reform intentions, as well as cultural factors that influence reformers' unspoken expectations and plans for action. Scholars also look at the effects of reforming work, including the way these efforts cement existing structures of power and authority or disrupt the social order. Indeed, they explore how some reforms hearken back to older ideals, and others prove to be innovative forces. In all of this scholarship, historians seek to understand the way religions—as parts of larger cultural and political worldviews—inform reform impulses and actions.

Colonial America

America in the colonial period did not host popular, organized efforts for social reform. Several factors account for the absence. Namely, the colonies were made up of smaller communities of people who did not believe that individuals bore the responsibility to affect social change. Indeed, most colonists did not live in places with enough social and political organization to pursue substantive change, even if they desired it. Places that did have effective political administration, such as Puritan New England and possibly parts of Anglican colonies in the South, had top-down forms of government. In these communities, members expected magistrates and churchmen to handle issues of social welfare and morality. Inhabitants shared the widespread assumption that God's will for the social order would be worked out by careful and wise leaders who advocated for a right social order. They expected these leaders to deal justly, and sometimes forcefully, with those whose actions threatened community life.

Although the colonies did not constitute a setting either politically or theologically hospitable to popular social reform movements, they did have some cultural characteristics that laid the groundwork for later movements. The colonies included their fair share of dissenters, but most inhabitants shared notions of what constituted moral living. Communities instituted social and legal sanctions against myriad crimes, sins, and vices. Religious services among the Puritans, Quakers, and other Protestant groups encouraged moral living, mutual aid, and—eventually—benevolent action toward outsiders. Eighteenth-century Puritans in Boston encouraged right living through groups such as minister Cotton Mather's reforming societies to suppress vice and promote good behavior. Quakers led the way in benevolent

work, beginning organizations to provide relief to the poor, the enslaved, Native Americans, and the imprisoned.

These efforts to promote good behavior and care for the unfortunate reveal that many colonists, or at least their preachers, believed in their community's millennial chosenness. That is, they assumed that God laid a particular claim on the New World. In response, its residents could be expected to establish a society reflecting God's order and justice. The Puritans are famously known for this impulse, most notably in leader John Winthrop's call for the community to be a city on the hill. Members of other Protestant groups also connected their good behavior and society's decent functioning with God's favor.

American colonists not only had religious impulses that predicated the explosion of reforming energies in the nineteenth century, they also had communal practices that would later be taken into the wider public arena. Charity was one of these. Preachers encouraged members to take care of the vulnerable in their midst. People gave money and time, usually through the church, to support the poor and sick, the widowed and orphaned. Colonists also had structures of communal discipline—or ways to deal with transgression—that would later be pushed into the wider sphere. Church members confronted sinners through informal processes of reconciliation and, sometimes, formal church trials. The pattern of identifying bad behavior, confronting it, and calling for change set a precedent for later moral suasion campaigns. Practices of charity portended the massive humanitarian aid movements to come.

Antebellum America

If the colonial period did not feature an environment conducive to mass social reform movements, what changed in the late eighteenth and early nineteenth centuries that allowed for their founding, spectacular growth, and significant cultural power? Historians have seen in the American Revolution and the period following it new possibilities for envisioning a common national life. They have also identified theological shifts that emphasized the importance of moral behavior in personal life and propelled individuals toward moral action in community and public spheres. Concerns about slavery, liquor, crime, and poverty brought the issues of citizenship and right behavior to the forefront. Americans confronted these matters in the midst of important cultural transitions. Patterns of daily village life were upended as the nation experienced a surge of urban living and frontier exploration. A steady influx of immigrants brought challenges ranging from

city management to the nature of national identity. Some Americans sensed that their religious visions supplied the energy, ideas, and impetus needed to confront these concerns. In response, they created a range of movements that historians have called the Benevolent Empire.

Independence demanded conversations about the new nation's religious, social, and political character. Republican democracy needed an informed and virtuous citizenry. The separation of church and state meant that no religious body had singular influence. Mass social reform movements, which together made up the Benevolent Empire, proved to be places where Americans worked out questions of citizenship and change. To be sure, most citizens of the new republic understood themselves primarily as residents of states, and much early social reform activity focused on the state and local level. Further, many Americans remained committed to particular Christian denominations. Nevertheless, the Revolution provided an opportunity for Americans to consider the kind of country of which they wanted to be a part. Many citizens transferred cherished notions about their community's millennial chosenness onto the new nation. In social reform movements, Americans projected their moral visions for the social order, dreams that encompassed individual behavior, social structures, and political organization.

Theological Shifts toward Social Reform

Two theological shifts helped make this transition possible. The first, which affected Calvinist groups such as Congregationalists and Presbyterians, was the notion of disinterested benevolence. Articulated by the late-eighteenth century New England minister Samuel Hopkins, the idea was a departure from more traditional Calvinism. Calvinists had long affirmed that original sin left all humanity depraved and corrupt, in need of God's grace. Hopkins and his followers argued that corruption manifested itself as selfishness. They disagreed with Enlightenment thinkers, who claimed that self-regard led to virtuous actions. Hopkins posited, instead, the virtue of disinterested benevolence, which demanded the movement away from self-love and toward self-denying service to others. Hopkins and others involved in the Calvinist New Divinity movement used the idea of disinterested benevolence, or charitable action motivated not by self-interest but by sympathy, to inspire a wide variety of social reform activity, including some of the country's earliest protests against slavery.

Protestants outside Calvinist circles also experienced theological developments that generated an unprecedented

interest in social reform activity. The eighteenth-century British religious leader John Wesley garnered a broad following in the colonies. His followers, known as Methodists, espoused his theology of perfectionism. Wesley preached that people could and therefore were morally obligated to live lives of personal and social holiness. Believers could overcome both personal and social sin and strive toward perfection. For those convinced by the perfectionist message, immediate change of personal lifestyle and communal standards was necessary. In the antebellum period, the Second Great Awakening, fueled in various settings by the theologies of disinterested benevolence and perfectionism, energized a veritable army of reform societies. Their strategies ranged from moral suasion messages and humanitarian campaigns to agitation for society's radical transformation.

Reformers concentrating on moral suasion created large organizations to foster religious conversion, and thereby better behavior, in the wider public. These efforts were afoot already in the first decade of the nineteenth century, but took off at the national level in the second decade. In 1816 Protestant reformers founded the American Bible Society (ABS), with chapters around the country dedicated to publishing and distributing Christian scripture. A similar movement and organization swelled around printing religious tracts and culminated in the founding of the American Tract Society (ATS) in 1825. By the mid-1830s, the ABS printed three hundred thousand copies of the Bible and the ATS distributed more than three million tracts annually. The societies particularly targeted urban slums and the nation's western frontier.

Contact with urban families and their difficult conditions prompted many Bible and tract reformers to dispense material aid as a form of moral uplift. The city missions movement offered relief to impoverished residents, particularly the poor, unemployed, and orphaned. Their programs included public baths, schools, and activism for better public housing. Various efforts to educate poor children led to the founding of the American Sunday School Union in 1824. In Sunday schools children learned to read the Bible and received lessons about Protestant theology and morality. Participation in the programs was broad, attested to by an 1832 estimate that more than three hundred thousand children in twenty-four states were enrolled in Sunday school.

Temperance activism represents the biggest arm of the moral suasion movement. Although most Americans drank alcohol, or at least did not stigmatize those who did, medical authorities began to question the healthful use of distilled

liquors in the late eighteenth century. Some Protestants concurred. In revival meetings, preachers made a biblical case for temperance, the controlled imbibing of alcoholic beverages. In 1826 those inspired by this message founded the American Temperance Society. Within ten years the society peaked at a membership of 1.5 million, or as many as one in five free adults in the United States. Temperance reformers initially attempted to change lives through persuasion. Later they directed their efforts toward legal change. Their strategy worked. In the 1850s several states passed prohibition laws. The reformers' ultimate victory came after the turn into the next century with ratification of the Eighteenth Amendment.

Besides campaigns to enact moral reforms, humanitarian aid efforts flourished in the early nineteenth century. Activists were outraged by a variety of social conditions and practices. Specifically, they focused on the treatment of people on society's margins. In their efforts to affect social change, these reformers created a host of new institutions. Activists amended state penal codes and played an influential role in founding the nation's first prisons. They started orphanages and juvenile delinquent homes for unconnected and at-risk children. They created asylums and hospitals for the mentally ill. Their work ushered in both modernization and bureaucratization of humanitarian assistance. In all, they sought to alleviate myriad forms of suffering, ranging from efforts to relieve poverty and hunger to legislation to provide public education and end imprisonment for debt.

Some reformers moved beyond addressing social ills to prescriptions for the nation's radical transformation. Utopian and peace movements made up a small part of this reform impulse. Visionary groups such as the American Peace Society, founded in 1828, along with small religious communities including the Shakers and Ephrata Cloister, offered alternative visions for American life. They imagined, respectively, a nation unsullied by war, structured around spiritual rather than biological notions of family, and untainted by sexual sin. The earliest feminist activists in this period also called for a radical rethinking of public life, including family law, legal rights, and church leadership.

Antislavery Activism

The radical movement with the broadest participation and the most explosive public impact was antislavery. Quakers had long taken a stand against the evils of slave ownership and the slave trade. Eighteenth-century Friends such as Anthony Benezet and John Woolman were among the first

spokesmen against human servitude. Although denominations such as the Methodists, Baptists, and Presbyterians took abolitionist positions in the eighteenth century, they retracted their strong stances in the face of white opposition. Yet evangelical revivals in the first decades of the nineteenth century, with their theology of human ability and millennial messages, prompted many believers to agitate for slavery's end. Even though most denominations took, at best, moderate stands on abolition, church members made up the rank and file of antislavery organizations. The American Colonization Society, founded in 1816, advanced gradualist strategies, which sometimes included slaveowner compensation and colonization strategies for free blacks. By 1830, however, advocates of immediate abolition found a broader hearing. Leaders such as William Lloyd Garrison (1805–1879) connected slavery with sin. Believers influenced by Protestant perfectionism, with its message that all sin ought to be avoided, if not obliterated, responded. Garrison's organizations, especially the American Anti-Slavery Society (AAS) founded in 1833, drew in a huge Protestant membership. Despite being torn apart by conflicts over participation by women and African Americans, the AAS nonetheless had a membership of more than a quarter million by 1838. Its thirteen hundred auxiliaries dotted the country. The most radical among them called for the immediate end of slavery in the United States. The fierce debate led, in some cases, to separation. Thousands of American Protestants left their denominations and joined so-called come-outer groups because they refused to worship any longer with churches that had not made dramatic pronouncements against slavery.

Although Mintz's categories of moral suasion, humanitarian aid, and radical transformation are helpful, it is certainly true that antebellum reform movements overlapped. Antislavery work, for instance, articulated a radical social vision, but depended on moral suasion to populate the movement and advocated a variety of humanitarian institutions to assist freedmen and women. Indeed, the overlaps in antebellum reform stretch beyond strategies to participants' reform careers. Efforts at moral suasion sometimes propelled activists into humanitarian relief. For instance, reformers who started out in temperance work sometimes moved on to feminist activism. The army of workers who made up the Benevolent Empire exercised a profound influence on the determination of who citizens were and how they acted. They also acted to face the challenges of urban transformation, immigration, and sectional conflict that pressed the young nation to its limits.

Victorian and Progressive Era America

Post-Civil War America faced the challenges of a new racial order, industrialization, and dramatic waves of immigration. Later, in the first half of the twentieth century, citizens also encountered the rise of fascism and unprecedented economic depression. Religious people, in their own organizations or in formal religious groups, identified these problems and sought solutions ranging from moral suasion, to humanitarian assistance, to demands for radical change. In this period, mass social reforming activity finally moved beyond Protestantism to include a significant number of Roman Catholics and Jews. Women reformers and African Americans also began to articulate and organize for their reforming goals in new and unprecedented ways. As the chorus of voices grew, calls for reform also became more diverse, ranging from women's temperance and Social Gospel activity to African American organizing for civil rights.

In the early part of this period, Americans needed to rebuild the decimated South and deal with the postemancipation situation of former slaves, both in the South and among those who began to migrate to the North. Northern white Protestants populated the movement to educate southern freed men and women. Almost every northern denomination established associations to assist former slaves, but the nondenominational American Missionary Organization (AMO) provided most of the teachers and resources. At the peak of relief activity in 1869, about five thousand northerners had traveled to the South to teach. Some white southerners contributed to this effort as well. For their part, African Americans sought to help the newly freed while lobbying for the full citizenship that freedom entailed. Both old and new independent black institutions joined the efforts.

Much of African American church life in this period centered on worship and mutual aid and uplift. Black leaders and laypeople also advocated in the public sphere about rights issues, particularly as Reconstruction disintegrated and lynchings terrorized their communities. In 1892 Ida B. Wells published widely against lynching, becoming a spokesperson for the movement after her appearance with Frederick Douglass at Chicago's Columbian Exposition a year later. Churchmen and women also criticized the racist policies of institutions such as the Young Men Christian's Association (YMCA), and joined white Protestants in advocating for temperance laws and Sabbatarian reform. Black churchgoers contributed to new groups such the 1909

founding of the National Association for the Advancement of Colored People (NAACP) and other groups dedicated to antilynching activism. Black organizing and rights defense in this period laid the groundwork for the civil rights movement of the 1950s and 1960s.

Impacts of Industrialization and Immigration

Although African Americans experienced some of their greatest trials around the turn of the century, the Gilded Age ushered in difficult times for many Americans. Rapid industrialization undercut the value of labor and therefore laborers. As industries grew at a frenetic pace, the gap between rich and poor widened. An unprecedented surge of immigrants in the postwar years also presented new challenges. Of course, the antebellum period had witnessed a steady increase in the foreign-born population. The pace, however, increased rapidly after the Civil War. During the first three decades of the twentieth century, annual immigration rates at times surpassed one million, placing extraordinary pressures on eastern seaboard cities. The immigrants' ethnicity and religions also challenged many Americans' notions of national identity. More immigrants arriving from eastern and southern Europe led to a rapid increase in the American population of both Catholics and Jews.

In the wake of industrialization and immigration, many Protestants focused their relief and reform efforts on urban residents. Their strategies generally included humanitarian aid, but also some evangelism and messages of moral suasion. Organizations such as the YMCA and evangelical groups, including the Salvation Army and Volunteers of America, offered a variety of services to city dwellers. Officers in the Salvation Army, for instance, worked in soup kitchens, took care of neglected children, and cleaned tenement apartments. Inspired by a Wesleyan understanding of perfection and holiness, Army workers and other urban-focused evangelical Protestants aimed to improve grim urban conditions at the turn into the twentieth century.

Catholic Humanitarianism

Protestants were hardly alone in their focus on immigrants. Indeed, some Catholics and Jews responded to the immigration challenge out of fears that Protestants would evangelize the Italian Catholics and eastern European Jews who had recently arrived. Both Catholics and Jews had widely practiced forms of charity and mutual aid before the immigrant influx, soon increasing their efforts among their own ranks. These efforts propelled some of their members into more

active outlets for reform beyond the charity they performed among their co-religionists.

Among Catholics, nuns played a critical role in offering humanitarian assistance. They worked with women and children made especially vulnerable by the urban situation. They followed Catholic immigrants across the country, working to support immigrant welfare wherever they settled. By 1920 more than ninety thousand women religious had created five hundred hospitals and six thousand parochial schools across the country. The laity, too, participated in this relief work. Laymen led extensive Catholic welfare networks that were usually bounded by ethnic ties, such as the Irish Catholic Colonization Association. In time, laywomen also participated in these relief efforts, in forms such as Boston's League of Catholic Women and the women's wing of the Central Verein, a German Catholic association. Although these efforts might be classified as relief as opposed to reform, many members used their work in these organizations as a platform to enter the world of broader organizing. For instance, many laywomen involved in relief eventually participated in the settlement house movement, campaigns to oppose birth control, and agitation for temperance.

The work of women religious and laypeople had some support from the church hierarchy in the form of papal encyclicals and the American bishops' statements about social issues. Pope Leo XIII's 1891 encyclical *Rerum Novarum* spoke to the responsibilities of governments, business owners, and laborers. It explicitly endorsed the formation of labor unions as one of many ways to overcome the unjust misery and wretchedness experienced by the working class. Other papal statements, sometimes referred to as the social encyclicals, soon followed. Pius XI's 1931 *Quadragesimo Anno* moved beyond the specific issue of labor to a broader consideration of the social order. The document emphasized the need for solidarity in an industrial age that fostered exploitation and threatened fellow feeling.

The backdrop of immigrant need, industrialization's problems, and papal statements influenced some in the American Catholic hierarchy to act. Despite being not necessarily in the Catholic mainstream, Monsignor John A. Ryan pushed hard for social reform. His 1905 book, *A Living Wage*, advocated for worker compensation that provided a decent standard of living, unemployment relief, and insurance. A minority voice in the church, Ryan nonetheless had some followers. To be sure, the hierarchy itself also responded to Ryan's calls. Not all bishops acted to support it, but they did sign on to a reform platform written by the National

Catholic Welfare Conference (NCWC). It advocated better child labor laws, public housing, and supported labor rights. Some lay Catholics, most notably Dorothy Day and her Catholic Worker movement, also took up the banner of social action to uplift working class and poor Americans. Day, who became a Catholic in 1927, started houses of hospitality to feed the poor. Her newspaper, *The Catholic Worker*, brought the church's social doctrine to a wider audience and a circulation of more than a hundred thousand by the late 1930s.

Jewish Activism

American Jews also responded to the immigrant surge that vastly increased their population. The nation's Jewish population of two hundred fifty thousand in 1880 grew to more than three and a half million by 1917. Most of these were from eastern Europe, and immigrants often struggled to adapt to life in the new country. Certainly, American Jews had a long tradition of dispensing charity within their communities. Although these networks did not constitute mass social movements, they did serve as a place for reflection on the law and Jewish social welfare. They proved to be the beginnings of a Jewish advocacy for the poor that would later blossom.

The global situation in the early twentieth century prompted the creation of three Jewish activist organizations. The American Jewish Committee, founded in 1906, lobbied, researched, and promoted diplomacy to secure Jewish interests at home and abroad. In 1913 the Anti-Defamation League was established to deal with the public image of American Jews and fight the common practice of open anti-Semitism in the United States. The group targeted prejudice expressed in the press, the motion picture industry, the U.S. Army, and schools. It also denounced the Klu Klux Klan's rising popularity. The American Jewish Congress, founded in 1918, worked on global Jewish concerns, especially Palestine. These groups focused on security of Jews in the United States and abroad, civil rights, promoting tolerance and, in later years, support of Israel.

The Social Gospel

Although many Protestants, Catholics, and Jews responded to the urban immigrant crisis with an outpouring of humanitarian aid and strategies for moral uplift, some believers took their social critique to a new level and connected it to theology. These reformers, who advocated a Social Gospel, argued that sin was not merely a personal problem but primarily a social one. Unlike their antebellum predecessors who focused on individuals' responsibility for

sin, Social Gospel reformers argued that corrupt and fallen social structures caused people to sin. They claimed that Jesus' message was relevant to both individuals and society. People and the culture needed radical change. They promoted an approach often called environmentalism because of its focus on the effect of people's social and physical environment. Participants in the Social Gospel, then, worked toward society's redemption by eliminating poverty, protecting workers, and feeding the hungry. They and their work would usher in the Kingdom of God on earth.

Social Gospel reformers often focused on the plight of urban residents. Walter Rauschenbusch, a Baptist pastor in New York, highlighted the plight of workers and issues of poverty and crime. Washington Gladden, a minister in Columbus, Ohio, expressed sympathy with the labor movement and called for more unions. His vision for the Social Gospel also entailed interracial and interdenominational cooperation. Although their concerns were similar to humanitarian campaigns of the past, the Social Gospel reformers based their structural approach to issues on the new fields within the social sciences. Using insights from disciplines such as sociology, they sought a radical transformation of the social, political, and economic order. To that end, they started day care centers, launched training programs, and shared ideas with the settlement house movement.

The Social Gospel represented a minority liberal voice among Protestants, but more conservative Protestants also established movements for change. Indeed, Protestants organized new groups and lobbying forms to advocate for what they considered traditions under threat. Just before the turn into the twentieth century, activists took their vision to Washington under the banner of the National Reform Association. They established a Christian lobby working for a variety of moral legislation, including laws against birth control and abortion, Sabbath breaking, obscenity, and divorce. They also lobbied Congress to add language about God, Jesus, and the Bible to the Constitution.

Temperance Advocacy and Women's Suffrage

Once again, temperance proved to be the issue that most effectively galvanized conservative Protestant support. Antiliquor activism had strong antebellum roots. After the Civil War, however, the movement took off and achieved spectacular popularity and political victories. Beginning with the 1874 founding of the Women's Christian Temperance Union (WCTU), temperance groups drew in droves of Protestant women. By the end of the century the

WCTU had more members than other women's organizations, including those aimed at female suffrage. They joined forces with the Prohibition Party and Anti-Saloon League to affect national legislation. The 1919 ratification of the Eighteenth Amendment, which established Prohibition, did not end their work. Indeed, their perfectionist theology inspired radical visions beyond national abstinence. Scholars have observed that the WCTU acted as a political training school for women, and temperance reform made up only one aspect of a broader political platform. They also resisted coverture laws that gave husbands—even drunken ones—rights over their children and property in the case of separation. With their Do Everything policy, WCTU women worked to reform women's prisons, provide day care, support labor activism, and change the legal age of consent. Their most militant organizing, however, involved activism for female suffrage.

If the radical vision for national temperance drew relatively broad support, other equally dramatic reforms did not. Female suffragists were among the most vocal of those seeking to transform the economic and political order. Many participants drew deeply on their religious resources, particularly those involved in the Spiritualist movement. Their activity, though fiercely contested by the general public, met victory when women were extended the franchise in 1920 on ratification of the Nineteenth Amendment. In both the temperance and suffrage movements, women activists displayed a considerable religious and political diversity. Some pushed for radical campaigns, and others took the movement in more conservative directions to secure the necessary public support for both prohibition and women's suffrage.

The late nineteenth and early twentieth centuries brought a host of new challenges. Reformers responded with campaigns in which strategies for moral suasion, humanitarian assistance, and radical transformation continued to overlap. As the women's suffrage episode suggests, many radical reformers relied on messages of moral suasion to garner support for the cause. Moral uplift campaigns easily developed in humanitarian assistance. Throughout the period, a wider array of citizens participated in social reform movements. This trend would continue as the nation became increasingly pluralistic and faced a new constellation of challenges and social concerns.

Reform since the Mid-Twentieth Century

The years immediately following World War II seemed relatively quiet but were merely the calm before the next storm

of social reform activity. The 1950s, and especially the 1960s, brought new challenges and new questions about communal citizenship. Public agitation increased in an effort to gain equal rights for African Americans and women. America's entrance into the Vietnam War provoked a heated resistance. A new wave of immigration, this one bringing people from around the globe, spurred debate about the ethnic and religious composition of the nation. Once again, religions proved a vital resource for citizens attempting to respond to these questions and crises. Indeed, many activists put religious faith at the heart of protest and reform movements. Although many reformers from the 1960s forward have focused on radical transformation, efforts at moral uplift and humanitarian aid have not been entirely eclipsed. Even so, all of these efforts have been bound up in new conversations about the contours of contemporary American society and its engagement with the wider world.

Civil Rights for African Americans

Modern America witnessed its most dramatic social reform movement in the effort to gain civil rights and other freedoms for African Americans. Racial segregation existed across post-World War II America and disenfranchisement characterized the political structure of the American South. Religious bodies—denominations as well as parachurch organizations—participated in the broad practice of segregation. African Americans had a long history of resisting segregation in public institutions, but the first major victories came only in the 1950s and 1960s. The NAACP celebrated its legal strategy to resist segregation with the Supreme Court's 1954 decision in *Brown v. Board of Education*, which declared separate facilities designated for blacks to be unconstitutional. This legal triumph, along with white southerners' resistance to the ruling, served as one of the critical prompts for what has come to be known as the civil rights movement.

In its early years the movement involved leaders and participants engaged in nonviolent campaigns of direct action, including civil disobedience. African Americans staged boycotts, including the 1955 Montgomery bus boycott, which brought the Reverend Martin Luther King Jr. to center stage. Bus boycotts followed in cities around the South, including Baton Rouge and Tallahassee. In 1957 boycott leaders formed the Southern Christian Leadership Conference (SCLC) as a way of organizing their efforts and planning future protest activity. Although many leaders, especially ministers, occupied the spotlight in protests around the

South, some activists concentrated on broader movement participation. African American women involved with the Highlander Folk School, especially Septima Clark, began campaigns for black literacy in 1959. As the spirit of protest spread, activists participated in sit-ins, which had a history going back to the 1940s. A 1960 sit-in at a lunch counter in Greensboro, North Carolina, sparked similar protests across the South. The movement drew demonstrators to church rallies that spilled out into the streets. Local protests also involved marches through cities and eventually between key centers of the movement, including the 1965 march from Selma to Montgomery, Alabama.

Local campaigns peopled by thousands of black protesters were at the heart of the movement. The Birmingham campaign of 1963, built on groundwork established by the Reverend Fred Shuttlesworth's Alabama Christian Movement for Human Rights, focused on mass meetings and direct action. Violent resistance by white segregationists garnered wide media attention and appalled national television audiences. When hundreds of arrests and the deployment of dogs and fire hoses failed to suppress resistance, Birmingham officials came to an agreement with movement leaders. The victorious feeling continued in the August 1963 March on Washington for Jobs and Freedom, which drew more than two hundred thousand demonstrators to the Lincoln Memorial.

Reform energies continued into 1964 and 1965. Young people, both black and white, participated in Mississippi Freedom Summer projects. Organized by the Student Non-violent Coordinating Committee (SNCC), young activists took voter registration campaigns to counties where segregation's hold was strongest and was often enforced with violence. People energized by Freedom Summer and organized by Fannie Lou Hamer founded the Mississippi Freedom Party to bring the push for voting rights into the national spotlight. Their activism met with success in the 1964 civil rights legislation that banned discrimination in public places and in employment and the 1965 Voting Rights Act that protected the franchise. Marches across the South, especially the 1965 route from Selma to Montgomery, sealed these victories.

The connection between civil rights and African American Protestant Christianity may seem obvious. King and other leaders were Christian ministers. The movement's rhetoric abounded with biblical references. Churches often served as sites of communication, training, and solace for movement participants. Songs from the black church, such as "We Shall Overcome," became icons of the movement. Yet scholars have also explored how religion, specifically African

American Protestantism, was mobilized in the movement in both positive and negative ways. They have observed how religion energized black and white protesters, gave them confidence that they were fighting for the right thing, and made them feel confident that they would eventually win. Certainly, religious communities served as sites both for democratic cultivation and resistance to power. Their traditions offered a philosophy that promoted and energized radical activism when political ideologies, such as liberalism, could not. Religion's role in sustaining reformers who faced violence and death cannot be overestimated. At the same time, drawing on the tropes and practices of African American Protestantism also led to a movement with a male-dominated leadership. In areas such as Mississippi, religious leaders often remained neutral, if not sometimes outright resistant to the movement as a way to guarantee their continued social status as some of the only middle-class African Americans. Further, some African Americans involved in the movement found religious inspiration outside Christian theology and traditions. Members of the Congress on Racial Equality (CORE), who instigated Freedom Rides throughout the South, ascribed to a philosophy of Gandhian nonviolence and social action. King also remarked on the way Gandhi served as inspiration and model. Other movement leaders, especially Malcolm X, looked to the Nation of Islam as a theological and communal resource of protest.

Religious visions that prompted participation in the racial justice struggle were not limited to African Americans. Indeed, the movement for black equality brought out broad social reform impulses that had not been on view so clearly since the Social Gospel. A host of white Christian leaders backed the movement, including representatives of the National Council of Churches, some Catholic priests and nuns, and a handful of Reform Jewish rabbis. On the other hand, some white Americans brought their religious worldviews to bear against desegregation and equal rights. Preachers such as Mississippi's Sam Bowers and Douglas Hutchins worked diligently to campaign against civil rights. Yet on the whole, southern white ministers did not actively take up the segregationist banner. Indeed, scholars debate whether this lack of support affected southerners' inability to put forth a mass movement powerful enough to keep segregation in place.

Rights Struggles among Other Minorities

Although the African American civil rights movement has commanded the greatest amount of scholarly attention,

especially concerning its connection to religion, other rights and protests movements of the 1960s shared in the religiously inspired impulse toward reform. Historians are only beginning to recognize the way Catholic faith and social ethics informed movements for Latino and farm workers' rights. If it is clear that most of the American church hierarchy was hesitant to offer support to César Chávez and his activism for agricultural workers, it is also clear that some Catholic leaders and Protestants involved in the California Migrant Ministry played key roles in supporting the movement. Indeed, more robust Catholic support for Latino rights would eventually come in the 1980s, with the American bishops' pastoral letter "The Hispanic Presence: Challenge and Commitment." In the document, the bishops decried injustices faced by Latinos in America, especially in the areas of immigration rights, farm worker treatment, and discrimination.

The broader cultural movement for women's rights presented an especially difficult challenge to religious organizations and their female membership. For many, ideas about women's liberation prompted agonizing and divisive debates about women's roles in religious leadership. In the postwar years, women advocated for, and won, ordination in many mainline Protestant and Jewish groups. At the same time, these internal debates sometimes worked to propel women into activism about broader public causes, including the debate over the Equal Rights Amendment (ERA). The amendment, which ensured women's equal treatment in the workplace, had been presented to Congress in the 1920s and debated for decades. Some women who were energized by victories in the area of women's ordination worked publicly to support the ERA. Most religious women, however, opposed it. Some of them took that dissatisfaction into the public sphere. Anti-ERA sentiment was usually tied to involvement in specific religious cultures, especially those that prized traditional images of women and family and those with substantive networks of connection.

Beyond the ERA debate, it is nearly impossible to generalize religious bodies' responses to feminism and women's rights activism. Some women embraced the goals of feminist organizations. On the whole, however, religious women tended to be less supportive. For instance, many religious women have applauded women's participation in the public sphere and equal pay for equal work. At the same time, they have resisted anything that upsets women's traditional role in the family, such as paternity leave and day care. Activism and debate over women's rights and roles has certainly not ended.

In 1984 the largest Protestant denomination, the Southern Baptist Convention (SBC), declared that women could not have roles of authority over men. In 1998 the convention declared that women ought to live in "gracious" submission to their husband's leadership of the family.

Since the 1960s, Christians have also taken a stand on the question of gay and lesbian rights. In 1968, the same year as New York's Stonewall uprising that brought sexual identity issues into the public eye, former Protestant minister Troy Perry started a Christian fellowship of gay members in his home. These meetings ultimately resulted in the founding of the Metropolitan Community Churches movement, which welcomes those in same-sex relationships. As with women's rights, the new movement prompted bitter debate in religious circles. Only a few groups articulated a public welcome to openly gay and lesbian leaders and members. Even fewer have taken this acceptance and transformed it into public action. One example is the United Church of Christ's 1973 creation of its Office of Gay Concerns, which published a new sex education curriculum. Most groups have been wary of fully accepting openly gay members and leaders. Indeed, some have taken part in moral suasion campaigns to convert people back to heterosexuality, and others have supported political activity aimed at blocking same-sex marriage and adoption rights.

Vietnam and Antiwar Protests

Along with multiple campaigns to secure rights, many activists struggled against the American involvement in the Vietnam War. Religiously inspired antiwar protest involved many believers outside traditionally pacifist groups, such as the Quakers or Mennonites. Protestant, Catholic, and Jewish clergy, as well as religious organizations began to mobilize against the war. In 1965 a group of Protestants founded Clergy and Laymen Concerned about Vietnam. In 1966 the American Catholic bishops warned against the country's continued involvement in the conflict. Individual clergy and laypeople mounted a variety of protests, some quite dramatic. In 1965 Baltimore Quaker Norman Morrison followed the precedent set by some Vietnamese Buddhist monks and immolated himself in front of the Department of Defense. In 1968 Catholic priests Daniel and Philip Berrigan offered a public protest by burning their draft cards. Protest against the war took a variety of inspirations and forms among laypeople. For instance, some Americans turned not only to Jewish and Christian traditions, but also to Gandhian pacifism for inspiration. Some

religious protestors aligned themselves with the counterculture, while others did not. Antiwar young people involved in Baptist Students Concerned, for example, wore traditional clothes and stayed well groomed in order to get a hearing among their more conservative Baptist counterparts.

Although 1960s movements certainly settled down by the 1970s, the rifts they had exposed continued to pose challenges. Indeed, Americans struggled in the aftermath of social reform achievements. A desegregated country with equal rights extended to more of the population, at least in theory, prompted new questions about citizenship. How would the populace adjust to African Americans' newfound electoral influence? How would more women moving into the workplace affect family life? Would a new surge of immigration change the sense of national identity? Once again, people drew on religious resources and mounted reform campaigns, particularly to confront issues such as abortion, sexuality, and globalization.

Conservative Activism

The Supreme Court's 1973 ruling in *Roe v. Wade* declared that the right to privacy made federal and state restrictions on abortion unconstitutional. Roman Catholics had provided the only consistent religious voice against abortion, but after *Roe* more conservative Protestants joined them in public activism. Indeed, the decision made possible a new coalition of Catholics and Protestants. Citing religious inspiration, reformers began to act, lobbying Congress, proposing constitutional amendments, and mounting demonstrations, often near women's health clinics. The most prominent reform movement working to reverse *Roe*, Operation Rescue, gained a huge membership of Protestants and Catholics in the 1980s. The organization gained national prominence in 1991 during massive demonstrations, which they called a Summer of Mercy, in Wichita, Kansas.

Abortion proved to be one of a constellation of issues that conservative religious leaders used to mobilize their followers into greater and more sophisticated reforming political activity. In 1979 three organizations—the Moral Majority, the Christian Voice, and the Religious Roundtable—began their work aimed at shared concerns over homosexuality, evolution, and school prayer. These groups tapped existing membership resources and pockets of discontent, providing Americans a sense of order and way to make a difference. The ability of leaders such as Jerry Falwell and Pat Robertson to channel their followers' reform energies became clear in events such as the 1980 Washington for Jesus Day. At the

rally, leaders showed strong support for Republican presidential candidate Ronald Reagan over Democrat and evangelical Christian Jimmy Carter. As alignment with the Republican Party grew closer, these conservative Protestants, often identified as the Religious Right or the New Christian Right, expanded their list of moral concerns to include taxation, national defense, and school vouchers.

Over time, conservative religious leaders moved beyond lobbying and grassroots organizing to a new level of influence in the electoral process. After a failed presidential bid in 1988, conservative minister Pat Robertson founded the Christian Coalition (CC). Along with Ralph Reed, Robertson turned the coalition into a major platform for conservative Christian social concerns. The CC worked primarily in the areas of lobbying and voter education. Scholars in both religious studies and political science debate the impact of conservative religious voters at the ballot box, though the question is not whether they have had influence, but instead how much. Activities to shape voting continue to be a key strategy. For instance, in 2000 the CC claimed to have distributed seventy million voter guides across the country. Other conservative religious groups have been key players in supporting hotly contested ballot initiatives on gay marriage, teaching evolution, and abortion.

Many conservative religious organizations concentrate on family issues. The late 1970s and 1980s saw the beginning of groups such as the American Family Association, Focus on the Family, Family Research Council, and Concerned Women of America. Group members have promoted public activism on issues related to traditional family life and gender roles. They soon moved toward advocacy on other issues. The American Family Association, to take one example, has encouraged members to object to a Hindu offering a prayer before a session of the U.S. Congress. They have also lobbied Congress in opposition to the National Endowment for the Arts. Focus on the Family encourages activism regarding judicial appointments and stem cell research.

Some scholars predict that the Religious Right has already lost or soon will lose its political power, but the movement's fate is unclear. It has lost some key leaders. Falwell died in 2007. Robertson and Reed are no longer at the CC. Nevertheless, conservative Christian activism on social issues continues. Younger evangelicals articulate an even stronger commitment to pro-life issues than did their parents, even as they show more openness to same-sex marriage. Indeed, the mix of religious activists and the issues taken up might simply be changing. One example of this is

the coalition of Mormons, Catholics, Protestant evangelicals, and conservative blacks and Latinos who backed the victorious 2008 California ballot initiative against gay marriage.

Liberal Activism

Although conservative religious activists' participation in reform movements has drawn considerable attention, liberals have also carved out a much smaller niche in the world of religious social reform. Mainline Protestants have maintained a strong lobbying presence in Washington. In some cases, left-leaning groups draw on the same evangelical heritage as their more conservative counterparts to better inspire public activism. Movements such as Sojourners in Washington, D.C. have advocated for a variety of causes, including immigrant rights, assistance for the impoverished, and urban concerns. These activists made a major impact in their work to assist Central American refugees fleeing conflicts in the 1980s. Although liberal groups have struggled to gain traction, their influence may be growing. Christian groups (such as the Red-Letter Christians) and practitioners of other traditions, such as engaged Buddhists, are putting an emphasis on assisting people at society's margins and serving as public voice for religious concern.

Whether conservative or liberal, myriad groups are active in the public sphere hoping to affect change through a variety of methods. Many movements aimed at radical transformations. Civil rights reformers sought to overturn the standing political order. Pro-life activists continue to advocate significant legal change that would affect women nationwide. Although political activity such as lobbying and electoral influence has clearly dominated in recent years, campaigns directed at moral suasion and humanitarian assistance continue.

New Challenges

Several areas of social reform continued to attract attention in the early twenty-first century. As noted earlier, issues of sexuality have been at the heart of social reform activity since the 1960s. As the issue of gay and lesbian rights continues to prompt debate, patterns of religious activism seem to be shifting. Traditional conservative groups continue to draw support from Mormons, evangelicals, and conservative Catholics in their fight against gay marriage. Yet younger members of these religious groups show much more ambivalence toward same-sex marriage than the older generation, suggesting that the issue might possess less relevance in future elections. Moreover, even as religious activists continue

efforts to shape public opinion and exert influence in the political process, other reformers are adopting new means of reform. Studies of the gay movement reveal that some activists work at the ground level, offering residential programs and advocating more traditional lifestyles to those concerned with issues of sexual identity.

Environmentalism and its potential connections to religious communities also garners scholarly attention. Some environmentalists have cited religious inspiration for their activism since the 1960s. Formal groups, such as the National Religious Partnership for the Environment, have advocated for new policies and practices. As the message becomes increasingly popular, scholars seek to understand how the movement is appropriated at the ground level, asking whether people cite religious inspiration and utilize religious networks to support anticonsumerism activism, lobbying for stricter environmental regulations, and participation in a variety of smaller movements, such as Slow Food and localism. Scholars also look for new sorts of alliances that defy older pattern of religious alignment.

Most significantly, issues of pluralism and globalization stand as serious challenges. The 1965 Hart-Cellar Act ended quotas that restricted immigration from several parts of the globe. Over the next few decades, changing immigration trends created a much more diverse American populace. Advances in communications technologies have made connection to the rest of the planet easier, if not necessary. Religious activists have enacted a variety of responses, ranging from anti-immigrant tirades to paeans to the interconnected planet. No matter whether groups were concerned or pleased about these changes, increased diversity and global ties have brought cultural and economic changes to American life.

Religious groups have responded vocally the nation's increased diversity, including the impact it has had on religious life. For some activists, religious pluralism threatens cherished notions of America as a Christian or Judeo-Christian nation. These activists sense that they must respond to polling data that shows Christianity on the decline in the United States. For these reformers, symbolic episodes take on major importance. For instance, many reacted to the 2006 election of a Muslim to the U.S. House of Representatives. Debates over representations of the Ten Commandments in courts of law across the country have attracted considerable attention. At other times, this activism impacts the everyday world, particularly in the vocal opposition to new immigration and the naturalization of legal resident aliens.

For other citizens, religious ideology and practice prompts an open attitude toward pluralism. Others, especially religious minorities, look to the First Amendment guarantee of freedom of religion as a lodestone for claims for tolerance and equality. Activists of this persuasion support legal freedoms to practice a broad array of religions. They also seek to educate the wider public about minority religious faiths. The Jewish Anti-Defamation League has a long tradition of this work. Newer immigrant groups have joined the effort as well. Muslim groups such as the Council on American Islamic Relations and the Muslim Public Affairs Council work on rights protection and against stereotyping. Hindu organizations such as the Vishwa Hindu Parishad in America and the Hindu American Foundation also work on issues of public representation of India and Hinduism.

Interpreting Movements

Leaders or approving followers wrote the earliest histories of most social reform movements. Antebellum reformers often wrote detailed memoirs of their work. Their close colleagues eulogized them in print soon after their deaths. Later, scholars sympathetic to these movements relied heavily on these accounts to write the first histories of various social reform movements. These works usually included discussions of participants' religious ideals and reflections on movements' successes and cultural impact. They assumed the connection between religion and social reform, dwelling on theology and ethics, sometimes with references to the Holy Spirit as a reform energizer. Scholarly work that combined a sensitivity to religious impulses that shaped reform and a commitment to the importance to understanding a movement's cultural context was long in coming. However, the evolution of scholarship on social reform reflects increasingly sophisticated attempts to understand movements' historical contexts, the religious and cultural influences that shaped activist campaigns, and the ambiguous legacy left by social reformers. Indeed, scholars have begun to ask why certain situations struck reformers as wrong, why they thought they could amend the problems, and what influences shaped their responses. In the end, they have shown that reformers were both maddening in their often-patronizing zeal for change, but also heroic in their dedication to changing some of the nation's most cruel practices and institutions.

Literature on social reform includes brilliant studies of individual reform movements. Some of the most important studies, however, have attempted to synthesize outbursts of reform in the antebellum and Progressive eras. Alice Felt

Tyler's 1944 study of antebellum reform, *Freedom's Ferment*, emphasized reformers' strong commitment to human freedom and faith in progress. Reform movements, she argued, reflected a strong impulse to spread the social goods of freedom to all, including the unfortunate. A perfected social structure would make freedom's full possibilities more widely available. Timothy Smith's 1957 work, *Revivalism and Social Reform*, extended Tyler's argument about reformers' faith in progress, but tied it to evangelical religion and perfectionist theology advanced in the Second Great Awakening. For Smith, reforms were shaped significantly by debates about sanctification. In short, just how good could you expect people and society to be? Was true holiness and perfection possible? How reformers answered these questions affected their reforming stances and strategies.

The 1960s and 1970s ushered in heated debate about reformers' intentions and goals. The question nagging historians was whether reformers used religious vision and inspiration to obscure their desire for social control. For historians advocating this thesis, reformers participated in moral suasion campaigns, and sometimes humanitarian ministries, to secure their position in society and exert control over the popular masses. Some scholars countered that though reformers certainly exhibited paternalism in some of their activities, their efforts to educate, spread religion, and promote moral living reflected their adjustment to the post-Revolutionary situation and effort to achieve social stability, rather than a sinister plot to control the nation. Debates on this question continue, especially as historians take up poststructuralist critiques made by thinkers such as Michel Foucault, who argued that the reformers' founding institutions, including the school, the prison, and the asylum, shaped subjectivity in a manner that pushed normalization, if not control.

Another important subset of reform historiography concentrates on reform's connection to broad trends in American history, especially the growth of market capitalism and secularization. For instance, Thomas Haskell has argued that the humanitarian sensibility that served as an engine for religious reform activity was profoundly shaped by the way in which market discipline began to permeate life in the late eighteenth and early nineteenth centuries. Another example is Ronald Walter's 1978 book, *American Reformers*. Walters surveys the variety of antebellum reform movements, arguing that they became increasingly secular over time. He cites the trend toward institutions, bureaucracy, and professionalism as evidence. To be sure, these authors do not discount the

importance of religion to reformers. Walters, especially, details the ideas and practices that informed antebellum activists. Still, they explore the way religion itself changed over the course of reforming movements' developments.

In more recent monographs, scholars have made an effort to show how religion constituted one of many cultural factors that shaped people's understanding of what needed reform and how reform ought to be achieved. Scholars look at religious inspiration and impulse in relationship to politics, race, regional difference, gender constructs, and economic change. The studies of individual movements in this vein have multiplied, offering readers nuanced and complex accounts of how reformers were shaped by their context and how they in turn shaped their environment. One important work of synthesis in this vein is Robert Abzug's 1994 book, *Cosmos Crumbling*. Religion, Abzug argued, is at the heart of American reform. It is not, however, separate from issues such as politics, economics, and race relations. Rather, reformers tried to make religious sense of the world around them, a world that was rapidly changing, if not disintegrating, before them. Abzug emphasized the creativity reformers displayed as they shaped new cosmologies, or religious worldviews, that spoke to the social challenges they faced.

Interestingly, the most recent scholarship has made a turn back to the personal or internal reality, as opposed to cultural study. There is no trace, however, of the older assumption that religions serve as automatic energizers of reform. These readings of religion are much more ambiguous. For instance, scholars have asked why religion sometimes serves to mobilize people to seek change and at other times promotes defensive responses aimed at community protection. David Chappell's work on civil rights is a fine example, or in another new line of inquiry, scholars have finally recognized that activity for social reform is the exception rather than the rule. Most Americans have not participated in movements to change the world. At the same time, the vast majority of Americans describe themselves as religious. What is there about religion and what about particular social situations drives some to look to religion as a source for dealing with the world's problems?

All of these questions have inspired a long record of reflection on reform movements, but more is needed on the unspoken assumption behind it all: the idea that reform is a quintessentially Anglo-American, Protestant activity. Indeed, the nation's revival-minded Protestant ethos and voluntaristic religious context has combined to create what Catherine Albanese has called a public Protestantism marked by

moralism and activism. Some would argue that the increased diversity of religious voices in social reform campaigns undermines Albanese's claim and evidences a kind of post-Protestant reality. The nation now boasts Muslims active in social reform. In Los Angeles, thousands of Muslims feed the homeless as a way to honor the holy month of Ramadan. Other scholars, however, would interpret this example in quite the opposite way. They would retort that religious minorities working to shape the public culture have been assimilated into America's Protestant propensity for bringing religion into debates about public life. Are American Hindus writing policy briefs on school prayer simply participating in the Protestant-informed practice of bringing religion into the arena of what many people consider to be worldly concerns? Or is social reform in the twenty-first century bound to be transformed by the new social questions that will appear and the diverse array of believers who will address them?

Sociological Approaches

During the twentieth century, sociologists made an enduring contribution to the field of religion in America. From Robert Bellah and Peter Berger to Robert Wuthnow and Nancy Ammerman, sociologists have earned a place in the canon of religious studies. Without their theories, concepts, and findings, scholarship on American culture would look very different than it does in the early twenty-first century.

Standard dictionary definitions of *sociological* usually include words like *social structure*, *institution*, *organization*, and *society*. Such definitions do not convey the richness of sociology as an intellectual tradition. More helpful are the mid-twentieth-century works of sociologists Peter Berger (*Invitation to Sociology*, 1963) and C. Wright Mills (*The Sociological Imagination*, 1959). Such works depict sociology as a

style of thinking that questions taken-for-granted assumptions about the social world. Berger writes that the first truth of sociology is that “things are not what they seem,” warning that people who choose to believe that society is what they were taught in school should beware. This interrogation of taken-for-granted assumptions is at the center of Berger and Thomas Luckmann’s theory of the social construction of reality (1967), which highlights the ways people create their own worlds and promptly forget that they have done so. There and elsewhere, the sociological perspective is shot through with irony, emphasizing the unintended consequences of social action. From Max Weber’s early twentieth-century account of Protestantism as its own gravedigger to David Riesman’s lonely conformists of the 1950s, the work of sociologists has highlighted the ironic character of human social life.

Historians pride themselves on their narrative artistry. Yet as James Spickard reminds us, sociologists are also storytellers, recognizing that “data make sense only when they are embedded in a story that gives them meaning.” Sometimes this storytelling is expressed in grand narratives such as secularization and the decline of community. While many of these stories have fallen into disfavor, they continue to inspire lively debates. More nuanced variants take into account the diversity of national and cultural contexts, as well as the insights of historians. Most of these stories are rooted in the tradition of European sociology. Sociologist Margaret Somers calls them the “metanarratives of modernity.”

The European Inheritance

Sociology began as a response to the changes of modernity. In *The Sociological Tradition* (1966), Robert Nisbet describes how the founders of European sociology attempted to make sense of the twin revolutions of democracy and industrialization. New words like *individualism*, *bureaucracy*, and *ideology* provided the conceptual buildings blocks for such classic sociological narratives as urbanization and modernization. These stories were often told through paired opposites like tradition and modernity, the individual and the community, and the sacred and the profane. According to American sociologist Joseph Gusfield, such dualisms offer dramatic metaphors for sociological storytelling.

Almost all of these grand narratives were created to describe European societies. Though nineteenth-century America had its own sociological thinkers, the Social Darwinism of William Graham Sumner and the pro-slavery writings of southern agrarians have been largely forgotten.

Progressive-era Christian sociology reminds us of the liberal Protestant impulse in early American social science, but it is more focused on Christianizing society than on the study of American religious institutions. Fortunately for the development of American sociology, several European social thinkers incorporated American religion into their most famous works. Such texts have played a key role in adapting a European discipline to the American context.

During the eighteenth and nineteenth centuries, European travelers such as Hector St. John de Crèvecoeur, Harriet Martineau, and Anthony Trollope recorded their impressions of American society. The most famous of these visitors was the French aristocrat Alexis de Tocqueville. Religion figures prominently in *Democracy in America* (1835), de Tocqueville's seminal analysis of American culture. During his 1831–1832 tour, de Tocqueville spoke with an impressive range of Americans, including former president John Quincy Adams, Catholic statesman Charles Carroll, and William Ellery Channing, the same Unitarian thinker who later caught the imagination of the young Max Weber. Impressed by the vitality of American churches and religious voluntary organizations, de Tocqueville did not emphasize the theme of secularization, focusing instead on the progress of democracy.

One of the giants of European sociological theory, Max Weber came to America in 1904, paying a visit to his cousins in North Carolina. There in rural Appalachia, he witnessed an outdoor baptism. Like de Tocqueville, Weber was impressed by American piety. In *The Protestant Ethic and the Spirit of Capitalism* (1905), he portrayed America as the most modern of nations, describing the transformation of Puritan asceticism into the iron cage of capitalism. Quoting liberally from Benjamin Franklin, he argued that capitalism had reached its apex in America. Without de Tocqueville, Weber, and the works of Émile Durkheim and Karl Marx, twentieth-century American scholars would have had fewer resources for developing an indigenous approach to the sociology of religion.

Recurring Storylines in the Sociology of American Religion

Sociologists have used multiple stories to describe American religion. Recognizing this diversity of approaches, James Spickard (2006) discusses six storylines that dominate contemporary scholarship: secularization, religious markets, fundamentalism, religious reorganization, individualization, and globalization. In Spickard's analysis, the stories of fundamentalism and religious markets are depicted as challengers

to secularization. Taking a similar approach, sociologist Nancy Ammerman focuses on the rise and fall of the secularization narrative, calling it a central myth for the discipline. The decline of community has also emerged as a key story in the sociology of religion and the social sciences more broadly. Others have identified race, immigration, and gender as fruitful sites for sociological storytelling.

Secularization and Religious Mobilization

More than any other storyline, secularization has dominated sociological analyses of American religion. Beginning with the founders of the discipline, sociologists have highlighted the tensions between religion and modernity, advancing an evolutionary approach to the development of human culture.

Often described as a single theory, secularization is best viewed as a cluster of social processes that are loosely connected to each other. These include such master concepts as *privatization* (the confinement of religion to the private sphere), *differentiation* (the separation of religion from other social institutions), and *rationalization* (the triumph of economic and scientific rationality).

Since its publication in 1969, Peter Berger's *The Sacred Canopy* has defined the secularization narrative in American sociology. Drawing on European classical theory, Berger chronicled the eclipse of the sacred in Judaism and Christianity, repeating Weber's claim that Protestantism contained the seeds of its own destruction. He also focused on pluralism and diversity, seeing competition as a threat to religious faith. In the 1960s, Berger predicted the gradual decline of religious belief and the disappearance of faith from public life.

Ironically, the golden age of secularization theory began immediately following the postwar revival of religion. Though the revival had waned by the mid-1960s, Americans continued to attend church at rates substantially higher than did their European counterparts. Belief in God remained well above 90 percent. As early as 1972, the persistence of these high levels of religiosity led Andrew Greeley to declare secularization a myth, a claim repeated by Jeffrey Hadden in 1987. Though recent scholarship suggests that American church attendance statistics may be inflated, they are higher than those in most of the developed world.

Yet for many secularization theorists, it was never about church attendance. Such scholars focused instead on the decreasing significance of religion in American society. They emphasized the withdrawal of religious symbols and meanings from government, higher education, science, and the

media. Still others have called attention to the secular character of American religiosity. In *The Noise of Solemn Assemblies* (1961), Berger took American churches to task for their conformity to mainstream culture, echoing Will Herberg's indictment of the American way of life. Together with the theologian Martin Marty, he identified a central paradox: the postwar religious revival took place in a society committed to this-worldly values. Influenced by neo-orthodox theology, such scholars viewed the emergence of religion in general as an idolatrous compromise with secular culture.

Well into the 1980s, sociologists and historians continued to affirm the plausibility of the secularization narrative. According to a 1993 Yale University survey, 55 percent of American religion scholars agreed that secularization was a dominant trend. Yet by the twenty-first century, it had fallen on hard times. The rise of the new Christian Right in the 1970s and 1980s made it more difficult to accept secularization theory's emphasis on the declining influence of faith. The same was true of the global resurgence of Islam. As José Casanova documented in *Public Religions in the Modern World* (1994), religion had escaped from the private sphere. Berger acknowledged that his earlier predictions were mistaken.

In 1993 R. Stephen Warner proclaimed the emergence of a "new paradigm" in the sociology of religion. Warner portrayed *mobilization* as the master process of American religion, and *revival* and *routinization* as master narratives. Instead of comparing modern America with medieval Christendom, Warner turned his attention to the Second Great Awakening and subsequent revivals. In *A Church of Our Own* (2005), he identified several new paradigm histories, including Nathan Hatch's *The Democratization of American Christianity* (1989), Jon Butler's *Awash in a Sea of Faith* (1992), and Grant Wacker's *Heaven Below* (2003). Such works stressed the role of pluralism, adaptation, and innovation in American religion.

In *The Churching of America* (1990 and 2005), sociologists Roger Finke and Rodney Stark offered a controversial account of the mobilization storyline. In a novel analysis of existing statistical data (including the various waves of the United States Census of Religious Bodies), they documented a two-hundred-year increase in American church membership, a finding that has been disputed by several historians. Especially contentious was their claim that American religious history should be told as a story of winners and losers in a competitive market.

Influenced by Finke and Stark, some scholars have used economic theories to analyze American religion. According to this market model, religion is most likely to flourish in

situations of vigorous competition and to languish under religious monopolies. While many have embraced the market model, many others have rejected its economic view of human nature. Though empirical evidence for its claims remains inconclusive, works such as *Shopping for Faith* (Cimino and Lattin, 2002) and *Religion in a Free Market* (Kosmin and Keysar, 2006) continue to reflect this approach. Such marketing can be seen in the realm of American popular culture where entrepreneurs use new technologies to promote religious faith. From the nineteenth century to the early twenty-first, religion has influenced the development of the American media.

Ironically, some scholars rejected secularization just as more sophisticated versions of the theory became available. In *The Secular Revolution* (2003), Christian Smith has provided an historically grounded account of the secularization of American institutions, reconceptualizing this transformation as a social movement. In *On Secularization* (2005), David Martin has replaced the grand narrative of secularization with several overlapping stories. Expanding his comparative treatment of European and American societies, he has highlighted the importance of geography and religious tradition, echoing S. N. Eisenstadt's focus on multiple modernities. In the United States, this realization has led to a greater focus on the regional variations in American religion. More globally, it has led scholars such as Grace Davie to speak of European exceptionalism.

Today the secularization concept is largely absent from textbooks in American religious history, though the same is not true in sociology. In spite of its shortcomings, secularization theory remains a dominant storyline. Even its critics acknowledge that modern societies have undergone a process of social differentiation, resulting in the segregation of religious institutions from other parts of social life. What is more, new data from the General Social Surveys and the American Religious Identification Survey suggests that the percentage of Americans with no religious affiliation may be growing. Such findings show that claims of secularization theory's demise may be premature.

Cultural Conflict and Class Differences

Recent scholarship portrays the return of conservative religion as yet another key disciplinary narrative. While the rise of evangelicalism has spawned an enormous literature, it is rooted in two overlapping narratives that have an even longer history in the discipline: the story of cultural conflict and the story of class differences. According to sociologist

Thaddeus Coreno, these storylines represent two ways of mapping American religious groups. While the culture model stresses the beliefs and practices that divide Americans, the class model ties these divisions to differences in social standing. Very often these stories are combined. Though such narratives have taken many forms, their origins lie in a century-long conversation about the ways that religious organizations relate to their social environments.

Beginning with Weber, sociologists have written about the relationship between sectarian groups and the modern world. Impressed by the prosperity of North Carolina Baptists, Weber described how Protestant “sects” bolstered the business reputations of their members by embracing a strict morality. In *The Social Teaching of the Christian Churches* (1912), German theologian Ernst Troeltsch extended Weber’s analysis, contrasting the countercultural attitude of sects with the looser ethics of more established religions (which he and Weber labeled “churches”). Troeltsch’s third category of “mysticism” described more individualistic forms of religion that could be found outside formal religious institutions. This comparison of sects, churches, and mysticism paved the way for future maps of American religion.

Building on Weber and Troeltsch, early twentieth-century neo-orthodox theologian H. Richard Niebuhr applied church and sect theory to the United States. In *The Social Sources of Denominationalism* (1929), Niebuhr linked these organizational categories to social class, producing one of the first socioeconomic rankings of religious groups. At the bottom of the social ladder he put the more countercultural sects, which he dubbed the “churches of the disinherited.” Implicit in Niebuhr’s analysis was the assumption that Protestant sects provided an emotional haven for the poor and oppressed.

Following World War II, scholars developed this insight into deprivation theory, locating the emergence of sectarian religious groups in economic, political, and psychological distress. According to Sean McCloud, deprivation became the dominant framework for making sense of religion and social class, most notably in analyses of Holiness and Pentecostal groups. In recent decades, such scholarship has come under fire for its condescending view of sectarian religion. Despite these limitations, it had a major influence on such postwar classics as Will Herberg’s *Protestant-Catholic-Jew* (1955, 1960). Both Herberg and historian William McLoughlin were influenced by Union Seminary President Henry Van Dusen’s articles on the third force in American Christianity, which relegated Pentecostals and other sectarian movements

to the religious fringe. According to Herberg, the sects would remain on the sidelines of religious life, confined to the lower reaches of American society. Though such scholarship proved spectacularly wrong, its focus on conservative Protestantism anticipated the explosion of scholarship on evangelicalism that emerged in the 1980s.

One of the first scholars to take evangelicalism seriously was Dean Kelley, an executive with the National Council of Churches and the author of *Why Conservative Churches are Growing* (1972). Arguing that strict religious groups were more likely to thrive, Kelley cited earlier scholarship on American sects. According to Kelley, sectarian groups had experienced the most dramatic growth.

In *American Evangelicalism* (1983), James Davison Hunter used the secularization storyline to analyze the accommodation of conservative Protestants to contemporary culture. According to Hunter, evangelicalism’s lower-middle-class location in the rural South and Midwest had insulated it from the process of modernization. Because of this demographic isolation, evangelicals were able to maintain a conservative worldview. As they moved into the college-educated professions, younger evangelicals would adjust their beliefs. Other studies were more hopeful about the capacity of conservative Protestants to thrive in twentieth-century America, including Nancy Ammerman’s *Bible Believers* (1987). Seeing more room for resistance, she documented the unwillingness of fundamentalists to separate faith from life. Similarly, Stephen Warner’s *New Wine in Old Wineskins* (1991) portrayed evangelicalism as a dynamic movement, capable of reviving American congregations from within. Locating his study of a small-town church within the lineage of Weber, Niebuhr, and Troeltsch, Warner argued that evangelicalism was where the action was in American Protestantism. Christian Smith portrayed conservative Protestants as *engaged yet distinctive*. According to Smith, sociologists need not see modern pluralism and evangelical distinctiveness as incompatible. Instead, the conservative Protestant encounter with religious pluralism has made it stronger.

In sharp contrast to the vitality of evangelicalism, liberal Protestantism has experienced a dramatic decrease in power and visibility. This declension story has been told in countless works on the crisis, decline, and disestablishment of the Protestant mainline (a tradition that includes such denominations as the Episcopal Church, the Presbyterian Church USA, the United Church of Christ, and the Disciples of Christ). Explanations for this decline have focused on the ambiguity

of liberal theology, decreases in fertility, the gap between clergy and laity, and the secularization of liberal Protestant colleges. Ironically, the term *mainline* did not become popular until after the movement was already losing its influence. Borrowed from a phrase describing the affluent suburbs west of Philadelphia, it was a shorthand way of describing the Protestant upper class. In *The Protestant Establishment* (1964), sociologist E. Digby Baltzell in 1964 chronicled the rise and fall of the white Anglo-Saxon Protestant (WASP) elite. More recent studies have found that liberal Protestants are still overrepresented at the upper levels of American society and maintain an active presence in American public life. Others have focused on pockets of vitality in mainline denominations, identifying clusters of practices conducive to strengthening religious congregations.

The different trajectories of conservative and liberal denominations have led sociologists to examine the internal divisions within American Protestantism. Following earlier work on American denominations, they have developed more sophisticated maps of the Protestant spectrum. While rejecting church-sect theory as conceptually unworkable, these cartographers have continued to be influenced by Weber and Niebuhr, emphasizing the tensions between religion and American society. In *American Mainline Religion* (1987), sociologists Wade Clark Roof and William McKinney classified Protestant denominations into liberal, moderate, and conservative camps, reporting systematic differences in moral and political attitudes. Updating Niebuhr's ranking of religious groups, they traced the shifting socioeconomic status of American denominations. Though conservative Protestants improved their social standing between 1929 and 1987, they still ranked below adherents of more liberal denominations. In *The Restructuring of American Religion* (1989), Robert Wuthnow described the emergence of liberal/conservative divisions *within* Protestant denominations. Many of these divisions were attributable to differences in education, with college-educated respondents reporting more liberal views.

While political scientists uncovered religious cleavages within the electorate, sociologists analyzed conflicts over morality and culture. In 1991, James Davison Hunter's *Culture's Wars* depicted an America engaged in "culture wars"—divided between orthodox and progressive camps. This interpretation went on to shape American political discourse, including conservative Pat Buchanan's speech to the 1992 Republican Convention. Many scholars have criticized the culture wars storyline for missing the complexity of American religion.

Rejecting liberal/conservative conceptions of religion and politics, they have constructed new maps which incorporate multiple axes of comparison. Still others have attempted to disentangle cultural conflicts from social class, emphasizing the presence of conservative and liberal attitudes at all levels of society. While Smith reports that self-identified evangelicals have achieved socioeconomic parity with other religious groups, Michael Lindsay has chronicled the emergence of an evangelical elite. The growth of the evangelical left has further complicated this debate.

It is an open question how well such maps fit non-Protestant religious groups. Scholars have explored the subcultures of the Catholic right and left. Yet for the most part, students of American Catholicism have focused on the vast middle. While sociologist Andrew Greeley has acknowledged the existence of a Catholic culture war, he has emphasized the support of the laity for a pluralistic church. With the exception of an earlier literature on working-class authoritarianism, scholars have not attributed the conservatism of the Catholic right to class.

Sociologists of American Judaism have frequently used a left-right spectrum to map the continuum of Jewish denominations (Reform, Conservative, Orthodox). Historically, these divisions were correlated with social standing. Focusing on the nineteenth century, scholars have noted the socioeconomic differences between German American Jews (who tended to be Reform) and their Eastern European counterparts (who were frequently identified as Orthodox). Sociological accounts of the rise of the Conservative movement link this twentieth-century development to the growth of the Jewish middle class. More recently, sociologists have used the story of modernization to make sense of the resurgence of Orthodox Judaism. In *Tradition in a Rootless World* (1993), Lynn Davidman compares female converts to Orthodox and Ultra-Orthodox Judaism, showing how Jewish women combine aspects of tradition and modernity.

This emphasis on the traditional *and* modern aspects of conservative religion can be found in more recent studies of evangelical women. In *God's Daughters* (2000), R. Marie Griffith writes about the paradox of submission, emphasizing both its liberating and its oppressive dimensions. Noting the emergence of more egalitarian forms of evangelicalism, others stress the fluid character of evangelical family life. While continuing to endorse conservative gender roles, evangelical families defy simple categorization. In *Religion and Family in a Changing Society* (2005), Penny Edgell documents models of family life that transcend left/right dichotomies.

Despite signs of convergence, real ideological cleavages remain in American culture. A 2006 University of Minnesota study documented negative attitudes toward atheism and agnosticism among the general public, despite the growth in the religiously nonaffiliated group. Likewise, social class continues to matter in American religion. Several recent studies show that American denominations remain divided by socioeconomic status. In this sense, little has changed since the days of H. Richard Niebuhr.

What has changed is the way that scholars approach these divisions. While earlier studies focused almost exclusively on the emotionalism of working-class sects, more recent works examine how marginalized groups use religion as a tool of resistance. Research on religion and the civil rights movement reveals the centrality of the black church in the struggle for racial justice. In *Faith in Action* (2002), Richard Wood describes the role of religious community organizers in fostering social change. McCloud's *Divine Hierarchies* (2007) discusses the ways that social class both constrains and enables religious groups. Such studies are a vast improvement over the reductionist approaches of the past.

Community and Individualism

The decline of community narrative has been a part of the sociology of American culture since de Tocqueville's time. To be sure, de Tocqueville was not alone in chronicling the demise of premodern communities. Ferdinand Tönnies wrote of the transition from *gemeinschaft* (community) to *gesellschaft* (society), Émile Durkheim traced the shift from mechanical to organic solidarity. Similarly, Durkheim's *The Elementary Forms of the Religious Life* (1912) described the connections between ritual and social solidarity, showing the ways that religion unites social groups.

During the postwar era, a cottage industry of works explored what Maurice Stein called the "eclipse of community." Such studies focused on factory towns and rural villages, southern communities and urban neighborhoods. In *Community and Social Change in America* (1982), Thomas Bender described a similar literature in the discipline of history. What these scholars had in common was the view that modernity was eroding the basis for social connection and belonging, including religious institutions.

In *Democracy in America*, de Tocqueville portrayed religion as an antidote to individualism. The same approach can be found in neo-Tocquevillian accounts of American culture. In *Habits of the Heart* (1985), Robert Bellah and his colleagues discuss the role of the biblical and civic republican traditions

in counteracting individualism. Such arguments recapitulate Bellah's earlier work on American civil religion, which portrayed the symbols and rituals of the nation as a source of shared meaning. This approach could also be seen in sociologist W. Lloyd Warner's Neo-Durkheimian treatment of Memorial Day in *The Living and the Dead* (1959).

Catholic communitarianism has long been viewed as a counterweight to the dominance of Protestant individualism, an argument most recently articulated in Greeley's *The Catholic Imagination* (2000). At the same time, many scholars question whether American Catholics continue to hold to a communitarian orientation, highlighting the impact of assimilation. Tracing the journey of American Catholics from the urban, immigrant ghettos to the postwar suburbs, the sociological literature is full of what Robert Orsi calls "from-to narratives." This modernist storyline can be found in scholarship on post-Vatican II Catholics that describes the fluidity of belief in an individualistic society. A similar literature has explored the impact of individualism on American Jews, arguing that Jewish identity is increasingly a private pursuit with little impact on public life. Analyzing the influence of assimilation on the grandchildren and great-grandchildren of European immigrants, others have chronicled the fading of ethnic identity. In *Ethnic Options* (1990), Mary Waters discusses the emergence of *optional ethnicity*, a form of belonging that demands little and offers less. Exploring similar territory, Herbert Gans coined the terms *symbolic ethnicity* and *symbolic religion* to describe the weak forms of community he observed in postwar America.

Though rooted in the linear narrative of assimilation, such changes could also be interpreted as an outgrowth of a wider transformation in American culture from a "spirituality of dwelling" to a "spirituality of seeking" (see Robert Wuthnow's *After Heaven* for a discussion of this shift). Since the 1990s, sociologists have developed a more sympathetic analysis of religious individualism, even as historians have rediscovered the nineteenth-century roots of metaphysical and alternative religions. In *Spiritual Marketplace* (2001), sociologist Wade Clark Roof analyzed the spiritual quest of the baby boom generation, arguing that Americans can remain anchored in tradition while exploring a range of religious options. Taking a similar approach, Michele Dillon and Paul Wink have explored the capacity of Americans to combine religious commitment with personal autonomy. Focusing on the changing locus of religious authority, Spickard groups such scholarship under the heading of the individualization narrative.

Though community has often been considered a societal good, many of the classics of postwar sociology warn of the dangers of excessive conformity. Mourning the loss of Protestant individualism, Riesman described the emergence of other-directed individuals in *The Lonely Crowd* (1953). Similar anxieties can also be found in such books as *The Organization Man* (Whyte, 1956) and *The Suburban Captivity of the Churches* (Winter, 1961). During the 1960s and 1970s, this focus on the dark side of community led many to discount the importance of local congregations. Such sentiments led some to abandon traditional religious institutions in favor of a focus on new religious movements. While new religious movements were sometimes portrayed as a response to the loss of community, other scholarship depicted them as an expression of individualism.

In recent years, there has been a renaissance in congregational studies. Much of this scholarship has focused on the themes of community and civic engagement. In particular, Robert Putnam's *Bowling Alone* (2001) has spawned a whole literature on the connections between religion and social capital. There and elsewhere, Putnam portrays outward-looking churches as a boon to civic life. Others have examined the impact of religion on volunteerism and civic engagement. Though many are skeptical about the potential for faith-based social services, others stress the efficacy of congregations in addressing poverty, crime, and other social ills. Some of this research has focused on new immigrant congregations. Because immigrants are often disengaged from the political process, scholars are interested in the ways churches and mosques foster civic participation.

It is unclear whether the stories of individualism and community are helpful for understanding the religious lives of America's new immigrants. In particular, the rhetoric of options and choice seems ill suited for those immigrants constrained by the category of race. Though Warner has emphasized the parallels between post-1965 immigrants and their early twentieth-century predecessors, Antony Alumkal and Russell Jeung have highlighted the discontinuities between white European immigrants and people of color. The literature on Asian American and Latino religion has focused on the relative importance of race and ethnicity in constituting religious communities. While some have noted the capacity of congregations to move beyond ethnic differences (what Gerardo Marti calls "ethnic transcendence"), others have focused on the construction of new forms of racial identity. Research on multiracial churches has documented just how rare such congregations continue to be.

Other scholarship has revealed the struggles of Hindus and Buddhists in a predominantly Christian political and legal environment. Last but not least, recent studies of American public opinion have revealed deep-seated stereotypes of Islam, evidence that it is not easy being Muslim in America.

Conclusion: Balancing Lived Religion and the Big Picture

While the sociology of religion remains dominated by grand narratives, another tradition of sociological inquiry eschews sweeping generalizations in favor of the local and particular. Practitioners of this approach strike a more poetic tone, evoking the look and feel of the social world through ethnographic empathy. Sociologist Andrew Abbott calls this approach "lyrical sociology." In the sociology of religion, this more contextual mode of social scientific inquiry can be seen in feminist scholarship and in recent studies of "lived" and "everyday" religion.

In *Feminist Narratives in the Sociology of Religion* (2001), Mary Jo Neitz argues that focusing on women's experiences has exposed the weaknesses of conventional sociological storylines. The British sociologist Linda Woodhead concurs, noting that the turn to the micro-level of social life coincided with the rise of third wave feminism. Historian Ann Braude critiques the gendered assumptions of secularization theory, arguing that its emphasis on the public/private split ignores the religious lives of women. In its place, she suggests a new metanarrative: the increasing power of women in America's religious institutions. Though some scholars have called for the integration of gender into the metanarratives of sociology, others have emphasized the importance of local stories.

Recent scholarship on lived religion goes beyond sociology's stock narratives, focusing on material culture, the body, and popular spirituality. Critiquing the grand narratives of secularization and rational choice theory, such scholars recognize their inability to capture the subtleties of everyday life. Nancy Ammerman's *Everyday Religion* (2007) and Meredith McGuire's *Lived Religion* (2008) have pioneered this approach. Courtney Bender's *Heaven's Kitchen* (2003) is another example of this turn to practice, exploring the role of religion in a New York City soup kitchen. By freeing themselves from the grip of conventional narratives, such scholars have forged new paths in the sociology of religion. Since the 1990s, historians of American religion have experienced a similar shift, summarized in such volumes as David Hall's *Lived Religion in America* (1997). As sociologists move

in the same direction, the possibilities for convergence become all the more promising.

Increasingly mindful of the role of religion in everyday life, sociologists have not forgotten their discipline's mission to understand the big picture. By using survey research to explore the diffusion of religious practices across American society, quantitative sociologists can complement historical and ethnographic scholarship. Though public opinion surveys often miss the complexity of religion on the ground, they are essential for exploring the national religious map. Articulating the need for quantitative analysis, Robert Wuthnow has criticized the literature on American religious history for giving the "impression that Mesmerists were as widespread as Methodists and serpent handlers as common as Baptists." Today sociologists can use the General Social Surveys, the American Religious Identification Survey, the Baylor Religion Survey, and the various Pew surveys to explore the religious make-up of the country. While sometimes plagued by poor response rates and inadequate question wording, they are some of the best tools we have for understanding America's shifting religious demography.

What does the future hold for the sociology of American religion? As the field enters a new century, the best scholarship will be methodologically and theoretically pluralistic, balancing the local with the global, the little stories with the big stories, and the qualitative with the quantitative. Only then will sociologists make sense of the world of American religion.

The South as Region

The boundaries of the South as a region within America stretch across the continent from the Potomac River to the Rio Grande, from Florida to Oklahoma, from the Ohio River to the Gulf of Mexico, from Maryland to Texas. The religious life of the people in that large area, while diverse, differs from many of those that prevail everywhere else. The most visible quality of the South's distinctiveness is the prominence, often the predominance, of one family of Protestant Christianity—evangelical—that transcends denominational limits.

American Religious Life at Large

Generalizations about the religious life of America are hardly irrelevant to considerations of its regions, but they fail to reveal how distinctive each region is. In the South, diversity exists there but also a measure of homogeneity. The region is not typical of the nation at large. (Perhaps the Middle West comes closest in its dominant groups and membership size.)

Probably the most reliable depiction of the South is based on the make-up of the Confederate States of America (CSA), that independent political entity that prevailed during the Civil War, from 1861 to 1865. Eleven states comprised that separate nation; many citizens and sections within the three "border" states of Maryland, Kentucky, and Missouri showed strong sympathy with the rebel cause and thus have continued to have a southern identity. However, two of the original eleven states that made up the CSA, Texas and Florida, are no longer suited to inclusion on such a regional list because of the extent of immigrant population both from other parts of the nation and from Latin America.

That geographical territory is the part of the nation that possesses the most complex character. In the words of the historian C. Vann Woodward, the South stands as the only

national section that has ever experienced defeat (or seceded). While there is no doubt that there is a region called “the South,” scrutiny necessitates differentiation along historical, demographic, internal diversity, and political lines, among others.

Examining Protestant Christian denominational patterns, first, assists us in making sense of the “religious South.” (By the early years of the twenty-first century, denominationalism did not occupy the central role in Americans’ religious thinking and choosing as it did for in the past.) Several studies, especially editions of religious atlases published since the 1980s, present us with a vivid picture of the religious life of the entire American population on a county-by-county basis. The map of the South makes clear the pervasive strength of a single denomination: the Baptist. Inherently evangelical, that body, existing in many forms, has set the pace. No other section of the United States, not even a single state, claims comparable Baptist strength or such a concentration of evangelicals.

More broadly, the areas in the United States that have experienced large-scale immigration from heavily Roman Catholic countries in Europe and Latin America are New England, the industrial economies of the Middle West, and the Southwest and California, especially the portions closest to Latin America. The prominence of Methodists across the horizontal central strip of population from Maryland and Virginia to Kansas tells the story of the early passion of that tradition’s ministers and people to claim the frontier for the Christian faith. There is not a Methodist section of the nation, although if there is a national church, Methodism can claim that honor inasmuch as it is easily the most ubiquitous, with churches almost everywhere.

Mormonism blankets the intermountain area of the West, with Utah and Idaho the representative examples; it also holds great strength along the west coast. The upper midwestern states contain a large and influential company of Lutherans. Here, too, immigration tells the story. Many thousands of Scandinavians and Germans brought their Old World faith with them to the Dakotas, Wisconsin, and proximate areas. Other Protestant bodies are found here and there (and “everywhere” in some cases), including Pentecostals, Presbyterians, Episcopalians, the Stone-Campbell restorationist groups (that call themselves simply Christian or Churches of Christ), Holiness, the various radical traditions such as the Mennonite and Brethren bodies (the “peace churches”), and unnamed evangelical communions.

Southern Denominational Patterns

The story of the Baptists deserves thorough examination because of the formidable number of Protestants who bear that name—their standing places them second only to Roman Catholicism nationally in number of adherents. Many different, unconnected Baptist bodies, quite beyond the huge Southern Baptist Convention, are noticeable. Baptists have representation all across the land, but especially so in the South, where they present impressive numbers in county after county, in all classes of the society, and as powerfully among African Americans as among Euro-Americans. Taken together, the Baptist tradition itself and Baptist-like practices and approaches suffuse much of the religious life of the South. It has been said that “in the South, Baptists are the center of gravity.” Many counties in several states report dominance or predominance of that tradition: Virginia, the Carolinas, Georgia, Florida, Alabama, Mississippi, Texas, Kentucky, Tennessee, Louisiana, and Arkansas, including both African Americans and whites.

At the same time, there are pockets of strength in other religious groups, among them large Catholic numbers in Louisiana and Texas, as well as in Maryland, Kentucky, and Florida. Lutherans abound in the western sections of the Carolinas and Virginia. Historical knowledge illuminates these data: ethnic and national groups settling in particular places, whether hailing from northern migration into the South, or as immigrants from Latin countries, or from internal migration, such as Catholics moving from Maryland to Kentucky in the late eighteenth century.

Virtually all bodies present in the region are scattered, even those that enjoy concentration in a few restricted places. Traditional denominations such as Presbyterian and Episcopal are present in enough quantity and leadership quality to be prominent, often out of proportion to their size.

Many Pentecostal and Holiness groups—those bodies that used to be referred to as the “sects”—are ubiquitous. The names of several such groups have become quite familiar: Assemblies of God, Church of God (the partial or whole title of several mostly white bodies), various Adventist movements, the Church of the Nazarene, the Church of God in Christ, a huge fellowship serving the African American population, the Pentecostal Holiness Church, and many more, not all of them small and isolated by any means.

Evangelical Protestantism

The numerous Baptist bodies, the several Holiness and Pentecostal groups, many Methodists, and some others

deserve, and desire, to be called evangelical. Protestant Christians of this persuasion hold to a conservative orthodoxy, with intense commitment to the authority of scripture; the meaning of Christ's atoning death; the urgency of a personal experience of salvation, with gaining heaven and escaping the eternal punishment of hell a major motive; and the command to live a virtuous life, both in loving neighbor and in abstaining from ungodly practices. While ranking by priority changes from time to time, abstaining from using alcoholic beverages, faithfulness in marriage, and living righteously—also, recently, opposition to abortion and homosexual behavior—are definitive. Evangelical Protestants must know for certain that they have been saved—if not, they have not. They practice a life of intimate relationship with God and they are forthcoming about their identity as Christians, always being ready to testify to having received that gift and longing to share it with others. No qualities surpass those of knowing who (Whose) they are and what is true.

Fundamentalism is a subset of evangelicalism, comprising perhaps 15 percent of that larger community of conservative Protestants. Fundamentalists are devoted to absolutizing truth and staking out their own singular identity. They shun worldliness and are called to live at odds with people and cultures that compromise the truth by holding to relativist, subjectivist, or heretical ways.

The Restorationist Impulse

The Stone–Campbell tradition came into being on a platform of “restorationism,” their aim—and claim—was to restore churches to precisely what the New Testament church taught and how it was organized. These recoverers of such historical purity wanted to be called simply “Christians.” The most aggressive of them went so far as to insist that they were the only company worthy of bearing that label. Simplicity and authenticity were their hallmarks. In line with their reason for being, they called themselves the New Testament church. Indigenous to the American scene, the movement dates back to the early nineteenth century. Its several institutional manifestations have existed in an identifiable way since 1830 or so.

Three resultant bodies have achieved numerical strength and prominence on the national landscape: the Disciples of Christ (Christian Church); the Churches of Christ; and the middle group, the “independent Christian churches,” properly called “the Christian Church and the Churches of Christ.” The first owes its existence to the Campbells,

Thomas and Alexander, father and son, both Scots-Irish by birth. The Disciples of Christ has evolved as the liberal representative within the tradition. The Churches of Christ have roots in the work of Barton W. Stone, from 1810 or so (formed more identifiably three or so decades later). Its heritage has been aggressively conservative. The third offspring means to stand in the middle; its formal dating is 1927. Within recent years it has given rise to a number of mega-churches and has expanded greatly.

While all three have membership in the South, only the Churches of Christ can point to southern origins. Also this brotherhood (it refers to itself as “undenominational”) is the only one of the three that can call the South its heartland. The others display their greatest strength in the Middle West. A number of other (broadly) Protestant bodies indigenous to America would emerge over the next century. This same goal, that of repristinating the church of any postbiblical time, became a concern of many Baptists in the nineteenth century and still enjoys some currency in the twenty-first century.

British Sources

Nearly all the traditional denominations arose from the broad Protestant movements of the British Isles. The Baptist people have roots in English and Welsh soils. Methodism owes its existence to the leadership of Anglican priest brothers, John and Charles Wesley. The Episcopal Church is the American transplant of the Church of England (Anglican). (This religious–political formation had to cope with being the church of the enemy nation during and after the War of American Independence.) Presbyterians were of Scotland. Notwithstanding having become legally British in 1603, they were spared the “enemy” branding since, in spite of the monarchical uniting of England and Scotland, they safeguarded its identity (Church of Scotland) as separate and distinct. (Lutherans and Roman Catholics, both minority bodies in most of the region, had sprung from other times and places.)

This juxtaposition of de jure and de facto—by law and in practice—would recur in American religious life. That development results in the necessity of examining the contexts wherein the law grants citizens the right to choose and practice religion freely when, in fact, something like an “established church” actually functioned. Such an informal arrangement regularly puts pressure on “dissidents” and grants favored status to one body notwithstanding the provision of equal rights to all.

Religion of African Americans

The significant story of the place of African Americans in the South's common religious life shows up in strength before the emancipation of the slaves but acquires full force immediately after the close of the Civil War. From the early decades of African Negroes' enforced migration to America, some accepted the religion of their owners, but the percentage of these Africans-become-Americans who adopted Christianity to any significant degree remained quite small throughout the colonial period. Recent scholarship has afforded us greater detail in understanding the African traditional religions and sub-Saharan Islam that accompanied the people and cultures making the Middle Passage. Their more organized services and practices followed the new faith for the greater part, but aspects of the tribal import appear in such features as diet and grave adornments.

Episodes of slave Christian conversion with resultant enthusiasm led to the formation of congregations as early as the 1740s in several places, among them low country South Carolina, Georgia, and Petersburg, Virginia. Of more lasting significance is the quantity and quality of the African American attraction to the Christian church toward the end of the eighteenth century. The number of these people who "saw the light" and "caught the spirit" in embracing the religion of Jesus swelled at the same time that greater numbers of the white population were embracing the faith. This concurrence of behavior on the opposite sides of this sharp racial divide—its manifestations were steadily strengthening and expanding, legally and informally—tells a great deal about the shaping of the story of the South as a region, with religion serving a fundamental role alongside the legal, economic, and the political.

The manifestations of these two very different cultures and social sectors were interactive, and increasingly so. That was the case in their shared involvement in the work and business of the society, of course, but it carried over into the felt need on the part of the slave owners to evangelize those persons who were their property.

Why did southern white people dedicate themselves to the conversion and Christian tutelage of their slaves? That is an old question, provender for those disposed to cynicism ("realism") and to compassion ("idealism"). Human motives are always complex (and from the outside, elusive). But we need not doubt that many of the white faithful wanted to save the souls of their black neighbors, who were not

infrequently their friends. The stage was set by the fact that the prevailing Christianity was evangelistic, the identifying feature of which was bringing the lost to salvation through a conversion experience. That theme had caught on in the Great Awakening of the period from the 1740s to the 1760s and the Great Revival that erupted in the first decade of the nineteenth century on the western frontier—Cane Ridge in central Kentucky being the most famous example. Many locales in the South were "on fire" with the preaching of the Gospel. As more and more people responded in their enthusiasm, churches were formed and grew.

Rise of the Popular Denominations

Thus, around 1800, for the first time in regional history, Christian experience became widely shared. This development brought into the churches' fold individuals who had known nothing or a minimum about the religion of Jesus. The denominations that were the most effective in swelling the ranks and influence of the church were those whose polity and style accommodated most effectively the frontier life.

Methodists and Baptists were everywhere and set the pace for the predominance of revivalistic, experiential religion, what turned out to be the South's principal form of evangelical Protestantism. Methodism owed its flexibility to the clergy arrangements provided by its episcopal system (administration by bishops, *episcopoi* in Greek) and the fact that the ministers, commonly referred to as "circuit riders," served multiple churches and preaching stations. With a dearth of clergymen, and great distances often separating local clusters of the faithful, bishops could see to it that a few ordained leaders served multiple places.

Among Baptists, who were devoted to a local church polity, many men, most of them bi-vocational farmers, heard the call to preach. Usually not formally trained, these men provided the frontier population with a generous supply of available leaders from the ranks of the plain folk.

By the 1820s the South was on its way to becoming an evangelical stronghold. In the nation at large (the frontier covered the territory west of the Alleghenies to the north as well as to the south), Methodism became the largest body of Christians by the mid-1840s. In the South, the more traditional Presbyterians and the newcomer, indigenous "Christian" bodies, joined the ranks of the growing groups.

As for the Christianization of the African population, the regularity of interracial interaction once again prevailed as the two large and rapidly expanding Protestant bodies heard

themselves called to preaching the gospel to “their” black people, to save their souls and to train them in Christian ways. Fervor among white Protestants generated mission to those blacks with whom they lived every day. Knowing slaves and caring about them joined the prudential policy of controlling them; the Christian message was viewed as a force to keep slaves obedient and, perhaps, docile.

A Southern Religious Establishment

It is fair to say that a quasi-established religion prevailed across the South from the 1830s forward and would last for more than a century. The net effect of this season of evangelical dominance was to create a religious-cultural norm. Anyone who had not been pressured by some “alien” (even if local) body, such as the Disciples of Christ, or who had long embraced another (more classical) Protestant tradition was likely to be or become Baptist or Methodist. It was much the same among the African American people and those of European stock. The churches and preaching stations were planted and controlled by the largest groups of white people. The Christians who extended their ministry to the slaves, and to free people of color, were the evangelistic churches that seemed to be everywhere. It was their mission to spread the message to the whole population. The few African Americans churches understood Christianity through the agency of white Baptists and Methodists. Much the same obtained whenever and wherever slaves met in secret in what has been called the “invisible church.”

When black people were present in white churches, their presence was registered by several factors. They entered through separate doors and were seated separately. Their musical tradition affected the pace and sounds of hymn singing, resulting in two quite distinctive styles of music being heard, if not exactly blended, each superimposed on the other. Similarly, their vocal responses to preaching were influenced by the manner and content of the sounds heard. The black presence affected the racially mixed congregation. In the black churches, visible and “invisible,” a new brand of Christian music emerged—much of which has been referred to as “spirituals”—that was to achieve a primary place in the national religious and folk music repertory.

In the 1830s and 1840s, the three denominations that comprised the normative strand of southern Protestantism were barometers for the spirit of division going on in American life generally. The denominations struggled with keeping northern and southern bodies together. Methodists formally split in 1844, the Baptists the next year. Among Presbyterians,

there was an internal division in 1837 over theological issues, creating Old School and New School factions. A regional sundering took place in 1861. That the other denominations did not formally go their separate ways may be partially due to their standing apart from the normative patterns in the southern culture. Every religious institution experienced pain and some measure of acrimony, but Episcopalians and Lutherans, having divided along regional lines only briefly during the war, managed to avoid the degree of conflict that embroiled the “big three.” Theology and polity also contributed.

Black Church Denominations

The division among white church people was hardly the only story. The newly emancipated slaves went to work to take advantage of their freedom. Black Methodists formed one new regional *bodya*, the Colored (now Christian) Methodist Episcopal Church, that accompanied the rapidly growing African Methodist Episcopal Church and the African Methodist Episcopal Church, Zion. In Baptist ranks, the National Baptist Convention was organized, followed in the 1890s by the formation of a second body, the National Baptist Convention, Inc.

The remarkable story of the rapid formation of separate denominational structures tells much about the power of religion within the African American population. But there was another basic feature, beyond Emancipation, underlying such dramatic activity. Church was the one social institution in which this sector of the population had acquired the experience of leadership. Even if blacks had belonged to white churches, they often had played some part in leadership roles, generally (but not always) to fellow black members. Yet there had been independent black congregations from the 1780s here and there, most often in towns. And in the North, Methodist denominations had long been well organized; these would play a part in the development of like communities in the South. The impact of religion on the lives of the recently freed people proved to be dominant for a couple of centuries, retaining considerable power up to the early twenty-first century.

The disposition in the young nation would lead organized religious bodies to be schismatic. To this factor, of course, is added the generation of indigenous bodies, “American originals,” a development not always directly schismatic. Organizational stability has never been a hallmark of American religious life, irrespective of location or historical conditions. Causes responsible for such flexibility,

or “erratic” behavior, as some might refer to it, have been multiple: dissatisfaction with the status quo; the ascendancy of charismatic leaders spearheading institutional change; race; geographical movement accompanied by cultural change and context; class; and, not to be “bracketed out,” the spiritual element of a yearning for more authentic doctrinal positions, deeper commitment, and the overthrow of old and worn-out forms and practices in favor of genuineness and energetic action. Making this response inviting to the church populace was the national freedom to believe as one saw fit, unrestrained by any official regulations or binding informal culture. If change were desired, change could, on principle, be brought about.

The South had endured the Civil War, the death of separate nationhood, and the revolutionary shift in the roles of black people. Religious life of African Americans was matched by occurrences comparable to those within the region’s white sector. The racial factor remained but under drastically different circumstances. This time black members of white churches could and did exercise their right to go their own ways. Yet white citizens were creating, or discovering that they possessed, issues of their own that would disturb the religious landscape of regional society—with implications for the separated black members of that society.

The Social Class Factor

The big changes in the white denominations had to do with social class. The largest, the “popular” established denominations, the Southern Baptist Convention and the Methodist Episcopal Church, South (regional Methodism), had enjoyed an economically and culturally diverse constituency for decades. Now, in the late nineteenth century and spilling over into the twentieth, those bodies confronted the growth of towns and cities with a desire to modernize their buildings, programs, music, and institutional life. Simpler forms were replaced by up-to-date architecture, a better educated, ordained ministry, more planned and formal worship, and centrally organized denominational structures. Studies have recently shown both these shifts and the fact that growth of these sorts were not brand new but had precedents in the decades leading up to the Civil War (the foundation of several colleges and the formal organizing of churches at the corporate, regional level, for example).

Concerted negative responses to this tendency to adopt “high-falutin’ measures” erupted toward the nineteenth century’s end. Results were dramatic. Among many Methodists, Baptists, Disciples, and Presbyterians, church architecture,

styles of worship, musical instruments and hymns, and degree of ministerial training changed notably, all becoming more “modernized,” urban, and sophisticated. Methodism, whose reason for existence had been the creation of an expressive, highly personalized spirit, had become more formal, in the process dampening the spontaneous “witness of the Spirit” in testimony and participation. Many members saw the changes taking place with the lower classes, in particular, and were eager to take matters into their own hands. They did so through the formation of aggressive and vibrant congregations, followed soon by new denominational organizations. Several Church of God bodies soon appeared. Forms of Holiness groups did likewise. Pentecostalism caught on rapidly. These new entities, indigenous and evangelical, attracted to membership many who had previously been unaffiliated.

This proliferation of new church bodies might have occurred without the arrival of a new economic institution, the textile industry. Mill villages cropped up in abundance, especially in the piedmont sections of the states from Virginia to Alabama. People were giving up on subsistence farming and “moving to town,” thereby generating a large employment pool. The owners set up churches in the new villages in such ways as to make the believers beholden to their benefactors. Baptists and Methodists claimed many of them, but so did the spirit-filled new groups. All of them were labeled as “sects” by mainstream churches. Churches grew exponentially. What had begun with the frontier revivals after 1800 expanded rapidly under the new socioeconomic conditions of the late nineteenth century.

Jews and Judaism

By the 1920s, the denominational shape of the southern region was largely formed. Nearly all of it was Christian and at that Protestant Christian, mostly evangelical. No non-Christian traditions enjoyed any size of note, certainly not prominence, with the exception of Judaism, which was neither a newcomer nor a stranger. Jews had come early to Charleston and Savannah, as well as Richmond, Norfolk, and Baltimore, in the seventeenth and eighteenth centuries. All these cities were prominent among the wider American Jewish population—Charleston especially, which had achieved the rank of third in size among Jewish populations nationally by 1800.

Jewish families resided in towns and cities across the region, often only a few Jewish families in any one community. A common outcome of this sparseness was the

necessity for those observing Jewish holy days to make a trip to a town of some size, 50 or 100 miles away, where there was a synagogue and a rabbi. People keeping kosher faced the inconvenience of obtaining foods when and where they could. Enjoying relationships with fellow Jews also presented an obstacle, but many had staked out business interests that kept them where they were. The clothing business became quite successful. As part of the economy's mercantile sector, Jews became known, often prominent, members of overwhelmingly gentile communities.

Southern forms of Judaism were characteristically liberal (Reform), not traditional (Orthodox). One reason for this was the tradition of the early settlers, many of whom were in step with the European liberalization of Jewish life brought on by the Enlightenment after 1800. Another was demographics. Commercial success required that Jews fit in with their neighbors. Jewish patterns in foods and clothing might impede the desire to make a good living. Also the small, even tiny, numbers offered less opportunity to experience a Jewish lifestyle.

Generally, the southern Christian society tolerated, and even welcomed, their fellow citizens. Success in business with often strong ethical standards were central to this. Efforts to convert Jews to Christianity were limited and rarely effective, but the South's Jews were well integrated into the regional culture.

Roman Catholicism

Strong negative reactions were directed to the presence of the other non-Protestant force in the region, namely, Roman Catholic Christians. Numerous only in some cities and sections of states, Catholics might blend into local cultures. But the contours of the Catholic faith upset many Protestants and led to awkward personal relations and considerable fear that the number of Catholics might grow and create havoc in the community. The question recurred: "Do you want your child to marry a Catholic and bring into the world offspring forced to be Catholic?" Fear of Catholic influence in the public schools was also common. That fear was eased somewhat by the appearance of parochial schools, but such institutions were not solicited and were often viewed by Protestants with some suspicion. From the Vatican, it was feared, concealed aggressive crusades were hatched, with the goal of taking over America. The establishment of Catholic hospitals and welfare agencies was, when they first appeared, grudgingly

accepted. This attitude persisted in the region until after World War II.

Recent Developments

The long history of religion in the South had achieved stability by the turn of the twentieth century. The form that stability took was cultural normativity. Protestant groups from Presbyterian on the right (traditional) to the "sects" on the left (upstart groups with limited knowledge of the historical church) were familiar and accepted. Episcopalians seemed representative of a certain class and Lutherans were identified by ethnic membership. Baptist and Baptist-like traits and approaches were common among both African and Euro-Americans.

The new directions of religious affiliations and perspectives were scarcely revolutionary. What they did was to threaten stability and play havoc with normativity. As the twentieth century wore on, more liberal, less restrictive positions came to be an attractive option in an increasingly cosmopolitan society. Biblical scholarship, the introduction of psychological concerns and ministries, expanding numbers of people moving into the region from cultures more urban and diverse, and more widespread acknowledgment of social and ethical matters, especially racial justice, began altering the picture. Church membership grew more slowly, and in some cases, such as the Methodist and Presbyterian, declined. A consequence of that pattern was the formation of new bodies in the same traditions, with dispute and acrimony quite common.

These new conservative forces gave rise to informal companies of Methodists, a tradition not inclined to split, and to a separate institution within Presbyterianism. The Southern Baptist case was unique. This huge denomination, with some 16 million adherents, rearranged the pattern of what existed and what came into being. The Southern Baptist Convention was marshaled into a newly strict, agenda-specific majority, with the much smaller dissident ranks condemned as liberal, indeed heretical. The leadership stood true to "authentic" conservatism, carrying with them the central organization and the loyalty of great numbers. Those thereby excluded formed new Baptist alliances or affiliated elsewhere.

A powerful political force accompanied the new religious conservatism. Commencing in the late 1970s, the "Christian Right," devoted to redirecting (rescuing) the nation's collapsing moral life, emerged on the national scene. Gender and sexual and family issues energized the agenda, with

opposition to abortion and the granting of public respect and legal rights to homosexual people and practices the main targets of public action. Southern evangelicals, especially those leaning toward fundamentalism, provided the bulk of national leadership within the movement. One of these, Pat Robertson, a Virginia Baptist televangelist, was a candidate for the Republican Party's nomination for the office of president of the United States in 1988, running unsuccessfully but amassing a large following. While much of the leadership of the Christian Right movement derived from the South, the movement drew support in many other states and sectors. It is still a significant force in the twenty-first century, but its power has been greatly reduced.

Viewed against the backdrop of the South's religious history, the Christian Right movement was somewhat surprising. Abortion and homosexuality had never been prominent moral causes; rather, temperance (prohibition) had headed the list, along with other personal, far more than social, ethical issues. Also, the Baptists in particular had characteristically sought to steer clear of any compromising of "separation of church and state."

Conclusion

The course of southern Protestantism never has run smoothly. The die of its general direction was cast two or three decades before the Civil War, and the region was Baptist-Methodist-Presbyterian until the mid-twentieth century, with some sects on the scene but relegated to the social and cultural fringes. Cultural normativity prevailed, but momentum was being contested by competition (and in some ways, confusion). Predictability yielded to instability and considerable conflict. The South had become an extension of the larger national scene. While formal membership patterns among African Americans changed less than among white people, there too a new era had dawned. Church and Christian message were now rivaled by the option of secular choices.

This perturbation revealed once again how interrelated were the experiences of the two racial groups in the one South. The civil rights movement in the twentieth century had an enormous impact, but African Americans continued to worship in their traditional ways and Euro-Americans worshiped in their accustomed ways, too. Significantly more interaction, however, was taking place between the two ethnic/religious traditions than had been the case in the past.

By the opening of the twenty-first century, newcomer faiths were appearing in the American South. In cities

especially, Hindu shrines, Islamic mosques, and Buddhist temples began to dot the landscape. New Age individuals and groups were small in number but present. Although the presence of immigrants from Latin America is far from new, Latino culture has taken on greater significance as the influx of Latinos has grown exponentially. Diversity brought on a pluralistic attitude. A deepened awareness of the rights of people to embrace other faith forms took hold. Traditional patterns no longer had the field to themselves, but they persisted in marking the South as a distinctive American religious region.

The Southwest as Region

The Southwest region—here defined primarily as Arizona and New Mexico—is characterized by vast stretches of desert, high plains, forests, canyons, mountain ranges, open vistas, near-constant sunshine, and clear blue skies. While its terrain is often difficult, dry, and monotonous, the U.S. Southwest is also known for scenic wonders such as the Grand Canyon and the Painted Desert. Remnants of ancient civilizations—such as the Indian ruins at Canyon de Chelly in Arizona or the cliff dwellings at Bandelier National Monument in New Mexico—stand side by side with the living traditions that grew from those civilizations and the diverse faith communities that arrived in the region more recently. Despite its relatively low population density, the Southwest boasts a great variety of people and a long, variegated religious history.

The Southwest was home to the first European religious “establishment” in what would become the United States—the Spanish Franciscan missions, which began in 1598. When Jamestown, Virginia, was claimed by the English in 1607, European settlement in the U.S. was already well underway. Christian traditions brought to the Southwest were layered onto a range of Native American religions that had long preceded them. Roman Catholicism has dominated the Southwest from the seventeenth to the twenty-first centuries, but Protestants arrived in the region after the Mexican-American War (1846–1847) caused a transfer of the territory to U.S. control. Railroad travel from the 1880s forward opened the region to an even greater diversity of people. A surge of population growth since the 1950s has continued the process, introducing additional Mexican Catholics; more Anglo (white) Catholics and Protestants, especially Baptists, Pentecostals, and other conservative evangelical groups; adherents of Asian religions; those who are “spiritual but not religious”; and those who claim no religious affiliation.

The Southwest’s vast spaces, scattered population groups, and isolation from centers of ecclesiastical authority have created an environment of spiritual openness, independent developments, and innovation. But that isolation also created pockets of poverty and a reluctance of skilled and educated people to serve as leaders, missionaries, and ministers. Until

the mid-twentieth century, religious institutions in the Southwest experienced relatively slow growth. The religious diversity of the region has generated both cooperation and conflict, as Native Americans, Spanish and French Catholics, Methodists, Presbyterians, Mormons, Jews, Sikhs, New Agers, and many other groups have sought to live together. This essay will proceed chronologically, with discussion of both major and minor groups, and it will begin with those who were in the Southwest first—the Native Americans.

Native Americans

More Native Americans live in the Southwest than in any other area in the United States, currently comprising about 10 percent of the population. The first known people in the region, hunter-gatherer nomads, had the region to themselves for thousands of years. From about 700 to 1500 CE the Anasazi people, followed by their Pueblo descendents (including the Taos, Laguna, Acoma, Zuni, and Hopi tribes), established villages, farms, and trade routes in the desert and along rivers in what is now New Mexico and northern Arizona. The Pima and Yuma tribes settled in what is now northern Mexico and southern Arizona. Between the thirteenth and seventeenth centuries, Navajo and Apache groups arrived from the north and Comanche, Ute, and others from the Great Plains. The lives of the settled agricultural peoples were disrupted by the migratory and sometimes predatory ways of the newcomers, with whom they fought, traded, and exchanged ideas.

The early encounters among Native American groups produced the first American religious pluralism—a harbinger of things to come. The diverse spiritual practices of the Pueblos, Navajos, Apaches, and other tribes had commonalities, however, as all focused on the community’s well-being, its relationship to the natural world that sustained it, and proper orientation to sacred objects and places—especially the sun, mountains, striking rock formations, and bodies of water. In 1951, a Hopi man expressed succinctly the unity among Native Americans regarding the vital elements of human existence: “Our land, our religion, and our life are one” (Martin, 2001, p. ix). Although the specific beliefs and rituals of the various Native groups were distinct, sometimes they adopted elements from the others. For example, to teach their children, the Navajo took up the Pueblo practice of making dolls that represented deified ancestral figures (*kachinas*). Many Southwestern Indians shared a belief that Sky Father and Earth Mother gave birth to humans, who emerged from the great hole in the ground later known as the Grand Canyon.

The Pueblo Indians were the first to make contact with Europeans, as Spanish missionaries, explorers, and soldiers ventured northward from Mexico beginning in the late sixteenth century. By 1630 Spanish missions were established in almost every village in the region, but these were largely destroyed in the Pueblo Revolt of 1680. Although the Franciscans slowly reestablished their missions after 1692, most Native communities continued their ancient religion, sometimes combining it with elements of Catholicism. In some ways, Native religious practice was congruent with Catholicism, as both had calendars for rites, sacred altars, and an established priesthood. The Pima and Yuma tribes believed in an afterlife. The Navajo looked to priests to help them find *hozho*—a sense of wholeness or union with the divine. The Zuni and Hopi were thoughtful ritualists. Planters and craftspeople, they developed traditions that were devoted less to war spirits than to effective daily living. Their priests sponsored something like seminaries to pass on their complicated rituals.

From the beginning of contact with the Spanish, however, the Native Americans were confronted with the *requerimiento*, a document claiming the authority of the pope and the sovereignty of Spain. Indians were told that if they converted to Christianity, they would be granted privileges, protected from their enemies, and helped in times of hardship. If they did not submit, however, the Spanish would enter forcefully, inflicting punishments and deprivations on them until they agreed to obey the Church and the Spanish crown. The indigenous people were thus forced not only into a partial acceptance of Catholicism but also an acceptance of traditional Spanish ways of life.

Native Americans in the Southwest remained under Spanish, and then Mexican, domination until the close of the Mexican-American War in 1848, when they came under U.S. jurisdiction and were forced to adjust to even greater governmental and religious pressures. Both Catholic and Protestant groups made efforts to suppress many Native American practices, such as ceremonies, dances, and chants. Most Europeans regarded the Indian ways as “pagan” or “savage,” and few could see anything positive in the indigenous peoples’ spiritual hopes and religious systems. On the other hand, some Catholic and Protestant missionaries, while zealous to convert Native Americans, were often keen to understand and report on tribal traditions and stop the worst abuses of Europeans. One traditional, although controversial, practice that survived involved the use of peyote, a hallucinogenic plant. The Native American

Church (NAC), established in 1918, advocates the use of peyote as a sacrament. In the early twenty-first century, perhaps as many as half of the Navajo people are members of the NAC, and there are NAC chapters among most other Southwestern tribes as well.

After World War I, many Christian church bodies began to rethink the goal of Indian missions, turning their focus away from saving souls—and the cultural imperialism that often went with it—toward ministries of social, political, and economic justice. This change of focus may be seen in the inclusion of Native American rituals within Christian worship, the appointment of Indian bishops by Catholics and Episcopalians, increased Native American self-determination, and an emphasis on social service and cooperation. Many modern religious groups have also been active in helping Native Americans preserve and restore their traditional sacred sites, such as the Taos Blue Lake in New Mexico, Big Mountain in northern Arizona, and the ancient petroglyphs around Albuquerque. In short, aggressive church-state sponsored Christianization has largely changed over the centuries to an effort at cross-cultural accommodation. There is, in addition, an ongoing creative retrieval among the Native Americans of ancient arts, rituals, and customs—proving, once again, the dynamism and resilience of their spiritual traditions.

Catholicism in New Spain (1535–1821)

Roman Catholicism, which arrived in the Americas from Spain, forms the second oldest continuing religious tradition in the United States. The first Spanish explorers and missionaries left a strong Catholic legacy—most visibly in the form of grand missions and pueblo churches—in New Mexico, Arizona, Texas, and California. Once Mexico City had been transformed into the major center of Spanish power and population, land expeditions northward penetrated the Southwest, which became part of the Viceroyalty of New Spain from 1535 to 1821. The Catholicism that early-modern Spaniards brought with them was filled with zeal. In a sense their adventures in the New World carried on three earlier traditions: the crusades that had taken place centuries before, claiming land and riches in the name of the Church; the Reconquista of Spain from Moorish Islam; and the Catholic Reformation, currently sweeping across sixteenth-century Europe. Religious agents—especially Franciscans, Dominicans, and Jesuits—always accompanied the agents of state as the Europeans transferred their baroque Christianity to a new desert home. The persistent themes

of poverty, suffering, and passion in Spanish–American Catholicism, as well as tendencies toward physical austerity, all reflect these origins.

Of all the Catholic orders, the Franciscans, who arrived first, carried on the most extensive work in the Southwest. In 1539, a Franciscan monk named Marcos de Niza walked hundreds of miles north from Mexico to present-day New Mexico, erecting a small cross near the Zuni pueblo at Cibola and claiming the entire region in the name of Spain. Upon his return to Mexico City, he told stories of his travels, which led Spanish explorer Francisco Vázquez de Coronado, in the early 1540s, to organize a more formal expedition to the north in search of the fabled Seven Cities of Cibola. De Niza led the expedition, which itself was not a success, but afterwards the Franciscan order began to establish itself in the region via numerous churches, primarily in the pueblos. Significant numbers of settlers, missionaries, soldiers, and explorers began migrating from Mexico to New Mexico's Rio Grande valley in 1595 and later to Arizona, Texas, and California, establishing Spanish culture and religion in the region as they did so.

By 1610 the royal city of Santa Fe stood as a permanent provincial capital for the Spanish government, and it soon developed into the political and religious capital of the surrounding region. Catholic priests—both Franciscan and Jesuit—soon followed to establish missions in the area, baptizing hundreds of thousands of Indians (according to their own records) in both Mexico and the American Southwest and also creating new citizens for the Spanish empire. Women religious came, too, bringing ministries of social service, education, and mystical discipline. But the missionaries—often relegated to the margins of Native communities—were only able to create a unique kind of Catholicism. Although Native Americans learned the Mass and adopted Catholic saints and holy days, they

By 1610 the royal city of Santa Fe stood as a provincial capital for the Spanish government and soon developed into the political and religious capital of the surrounding region. The San Miguel Church in Santa Fe, built circa 1610, is the oldest church structure in the United States.

combined these practices with their own religious traditions. The sixteenth-century legend of the Virgin of Guadalupe illustrates such Native American–Catholic syncretism: In 1531 an image of the Virgin Mary appeared on the cloak of an Indian peasant on Tepeyac Hill, a sacred indigenous site near Mexico City, speaking the local language and asking for a church to be built in her honor. For centuries the Virgin of Guadalupe has served as a point of identity and pride for people of mixed Spanish and Native American heritage, and her image remains a popular religious emblem in the U.S. Southwest.

In Santa Fe the Indians revolted against Spanish domination in 1680. Seeds of the Pueblo Revolt had been planted long before, however, as Spanish cruelties and exploitation had been going on since their arrival. Some friars had tried to protect Indians from the violent behavior of the conquistadors, but the Pueblos lumped all friars together nonetheless. Twenty-one of the forty Franciscan friars in the region were killed in the Pueblo Revolt, and of all the Franciscan missions, only the one at Zuni survived. Twelve years later, in 1692, the Spanish retook the region, rebuilt their missions as far north as Taos, created towns, and continued their efforts to settle and Christianize the region. There was never another successful Indian revolt in New Mexico.

Meanwhile, in what is now Arizona, the Jesuits began their own missions. Here it was Father Eusebio Kino (1645?–1711), an Italian, who above all others left a palpable mark. Kino travelled through northern Mexico and southern Arizona, mapping as he went, learning Indian languages, building chapels, and instructing the Native Americans in techniques of farming. In 1697, Father Kino founded his largest and best-known mission, San Xavier del Bac, near present-day Tucson. The expansion of Spanish missionary activity in this region, home to the Pima, Yuma, and Apache Indians, brought with it not only Catholicism but also disease and conflict and produced (as it had in New Mexico) several Indian revolts. But on the whole, the Jesuits had better success with the Native Americans than had the Franciscans in New Mexico, as they made more effort to learn the native languages and were less coercive in their proselytizing.

After Kino died in 1711, with Spanish resolve and resources fading and Native resistance rising, much of the Christianizing effort in the Southwest withered away. The Jesuits stayed in the Southwest until their removal was ordered by King Carlos III of Spain in 1767, after which some Franciscans arrived in the region to renew missionary efforts. Spanish Catholicism would subsequently make a powerful comeback in California under the direction of the Franciscan Junípero Serra (1713–1784), who founded the first nine of the twenty-one California missions, a chain that would stretch from San Diego to Sonoma.

Mexican Catholicism

In 1821 Mexico and Central America achieved their independence after three centuries of Spanish rule, making the Southwest—including present-day Arizona, New Mexico, southern Colorado, southern Utah, and southern Nevada—part of Mexican territory. Spanish Catholicism thus became

Mexican Catholicism, and control of Indian missions and Hispanic congregations in the region was transferred from Spanish-born Franciscans and Jesuits to local clergy. A Mexican decree in 1826 exiled all Spanish-born clerics; the Franciscans did not return to the Archdiocese of Santa Fe until 1897. At the conclusion of the Mexican–American War in 1848, all of the Southwest passed into American hands. Although the region remained almost exclusively Hispanic and Catholic, after 1848 newcomers began to arrive—including non-Hispanic Catholics, Protestants, and Mormons.

It is important to note that since the seventeenth century, Hispanic Catholicism in the Southwest has, to a large extent, developed its own traditions and institutions. They continue to flourish despite the vagaries of Spanish, French, Irish, and American involvement in the region's religious culture. Often ignored by the friars, whose primary mission it was to convert Native Americans, Hispanic Catholics built several early churches at their own expense. Under Mexican rule, and even under U.S. domination, grassroots Hispanic leadership produced lay societies, which regularly gathered local parishioners when no priest was available. It was these local, largely lay-driven communities that kept alive Hispanic folk traditions such as the Las Posadas play, the Day of the Dead celebrations, the Matachines dance, the making of *santos* and *bultos* (painting and carvings of Catholic saints), traditional festivals, and pilgrimages to holy sites such as the Santuario de Chimayó in New Mexico. These blended Catholic traditions continue to characterize the spirituality, arts, and culture of the U.S. Southwest.

Anglo Catholicism in the U.S. Southwest

Except for the Spanish, European-Americans had come to the Southwest only in small numbers—as trappers, traders, explorers, and soldiers—prior to 1850. But with the opening of the Santa Fe Trail eastward to Missouri, as well as the first major gold discovery in the western United States near Santa Fe, that began to change. These events, along with the advent of railroad travel to the Southwest in 1878, soon brought an influx of new settlers from the East and Midwest. Many were Protestant, but more were Roman Catholics from all over Europe.

In 1851 a French priest, Jean-Baptiste Lamy, became the first bishop of New Mexico and thus established official ecclesiastical jurisdiction in the Southwest. During his long tenure (1850–1885), Lamy built—with the help of other clergymen and several congregations of sisters—churches,

schools, hospitals, orphanages, and other social services throughout the territory. These missionaries brought with them the more formal Catholicism of northern Europe. Lamy was critical of the local Hispanic clergy and their folk traditions and sent out a call for additional French clergy (followed by Irish, Belgian, German, and Italian), who succeeded in reinvigorating Catholicism in the Southwest, sidelining local leadership in the process. (There would be no Hispanic bishop in the region until 1974.)

Catholics in the Southwest had to deal increasingly with Protestant competition and hostility, as well as with problems arising from ethnic differences among themselves. Until the second half of the twentieth century, Roman Catholicism in the West would continue to be directed from the East, which meant that its hierarchy would remain heavily Irish-American. Furthermore, burdened by heavy immigration from Europe in the late nineteenth century, Catholic authorities in the East had few resources or personnel to expend on the immense Southwest. The people of this region, who were still predominantly Hispanic, agricultural, and rural—and marked by a strong anticlerical streak, would largely have to fend for themselves, supervised lightly (if at all) by a hierarchy not yet prepared to elevate priests and bishops from among the local population.

Protestantism and Mormonism in the Nineteenth-Century Southwest

Protestants were late arrivals to the Southwest. In the latter half of the nineteenth century, however, ethnic schism and lax episcopal oversight among the region's Catholics gave other religious groups an opening. Protestant missionaries—especially Methodists, Presbyterians, and Baptists—who arrived in the Southwest beginning in the 1850s were shocked by conditions there. The region had few schools or hospitals, poverty and illiteracy were widespread, and poor infrastructure made travel difficult. They blamed these conditions on the “backwardness” of indigenous Catholicism. These Protestant pioneers also had to deal with the fact that they, too, were far from their families and from national denominational centers. Despite the work done by Franciscans, Jesuits, and Christian Brothers to bring religion, education, and order, many Protestants felt it was their responsibility to bring greater structure and a higher standard of living, along with their own brand of Christianity, to the region, and they labored hard to do so.

Progress was slow, and Protestant leaders experienced only modest success until the mining rush after the Civil War and

the railroad in 1880 brought more people and resources into the area—first to New Mexico and then to Arizona. The city of Phoenix began in 1870 as a mining camp; thus, unlike New Mexico, central and northern Arizona had no Spanish colonial origin. So the issues that Protestants faced there were somewhat different. But generally speaking, easterners who came to the Southwest left behind them a culture that was predominantly Anglo-Saxon to enter a culture that was predominantly Mexican or Spanish. Protestant missionaries in northern New Mexico were confronted by late medieval Spanish Catholic practices that included severe whipping and self-mortification (notably among a group of lay brothers known as the Penitentes), which they denounced as barbaric, ignorant, fanatical, and superstitious. But the mostly white miners, traders, and prospectors could be equally trying. Many religious leaders—both Protestant and Catholic—found them rough and greedy. Cowboys as well as Indians could be hard to reach and even harder to convert.

Protestant clergy, many of them part of a strong Home Missions movement, came to the Southwest with two goals: to organize congregations for the newly arriving Anglo population and to convert the Hispanic Catholic and Native American populations to English-speaking Protestantism. Unlike the early Catholic missionaries, who had tolerated some mixing of traditions, Protestant leaders insisted on keeping a separate identity as they attempted, largely unsuccessfully, to create the kind of pan-Protestant cultural dominance that existed in other parts of the country. While initially organizing Spanish-speaking churches, they expected the members eventually to learn to speak English and adopt Anglo cultural norms, but they had a hard time making inroads into both the Hispanic Catholic and Native American communities. Before the Civil War Protestants had only managed to convert between 5 and 10 percent of the region's population. From the 1860s forward, the second wave of Anglo immigration finally established a small but influential Protestant presence in the Southwest—especially in the realm of education, as there was no comprehensive public school system in the region until the early twentieth century. Protestant numbers and influence would continue to grow throughout the twentieth century.

The Church of Jesus Christ of Latter-day Saints (LDS; the Mormons) represented the other growing religious body in the region, having arrived in Utah in 1847. Second- and third-generation Mormon pioneers began to fan out into the surrounding area in the second half of the nineteenth century. Many settled in the Southwest, especially in the rural

northern parts of Arizona and New Mexico and in the Salt River valley near Mesa and Phoenix. From the late 1870s to early 1880s, when the U.S. government began to crack down on Mormons, especially on the issue of plural marriage, some polygamist church leaders went into hiding in the region. In the early twenty-first century, the Fundamentalist LDS Church, whose members practice plural marriage, continue to have a presence in southern Utah and northern Arizona.

The Mormons established their own missions to convert the Indians beginning in the 1870s—although they had sent a few missionaries to work with the Zuni and the Navajo as early as the 1850s. A considerable proportion of Mormons in the Southwest today are from Native American backgrounds (mostly Navajo, with some Zuni and Hopi) as a result of 150 years of Mormon proselytizing and religious education. Mormon settlers in the late nineteenth and early twentieth centuries also worked as railroad workers, farmers, and in community industries. To maintain the spiritual cohesiveness for which Mormons were and are renowned, these settlers created Mormon villages in which everything, from cattle companies to irrigation systems to dances, was done cooperatively.

Although Catholics and Protestants alike disparaged the Mormons because of their distinctive theology and religious practices, after World War I most mainline Christians reduced open attacks on the Mormons, and interdenominational cooperation in the region improved somewhat. Many Latter-day Saints, in turn, have tried to reach out by sharing their considerable wealth with non-Mormons and through various ecumenical efforts, themselves becoming more mainstream in the process. The Mormons' strong presence and strong growth in the region have been—apart from sporadic conflict with polygamous groups that identify as Mormon—mostly noncontroversial.

Judaism in the Southwest

Two distinct groups of Jews have settled in the Southwest—the crypto-Jews (or “secret Jews”) of Iberian Sephardic heritage, who immigrated from Mexico as early as the sixteenth century, and “open” Jews, mostly of Central European Ashkenazi ancestry, who began arriving in the region in the mid- to late nineteenth century. Crypto-Jews from Spain, Portugal, and Mexico began emigrating to the farthest reaches of New Spain as early as the late sixteenth century in order to escape the Inquisition. These were the descendants of Iberian Jewish families who had converted either forcibly or voluntarily to Catholicism—thus called

conversos—between 1390 and 1492, when Jews and Muslims were expelled from Spain. Some Jews pretended publicly to be conversos while keeping up the practice of Judaism in private; these were the crypto-Jews who are now claimed as ancestors by some Hispanics in the Southwest. Annexation of New Mexico by the United States in 1846 led to the assimilation of crypto-Jews into Anglo-American society. This assimilation weakened their Jewish traditions, but vestiges continue into the twenty-first century. These include the traditions of lighting candles on Friday evening, refraining from eating pork, and blending Jewish symbols (especially the Star of David) with Christian ones.

Ashkenazi Jews from Europe and the eastern seaboard of the United States began arriving from the 1840s on, working mostly as merchants, peddlers, and shopkeepers. Many Jews participated in gold and silver mining, especially as suppliers, and some became farmers and ranchers. Some also achieved high status as small-town mayors and financiers. The Jews' success in the region can be credited to their adaptivity to the existing culture—a willingness to learn Spanish, for instance, so as to trade in the desert hinterlands. Moreover, Jews found greater social mobility and equality on the frontier than in the east and a spirit of general cooperation among religious groups. Overt anti-Semitism was virtually absent. Thus, Southwestern Jews had an influential role in economic development well beyond their numbers. On the whole, Southwesterners viewed the Jews as good contributors to society—stable, industrious, mainstream, and socially conscious. The growth of the Jewish community in Albuquerque—numbering about 18 in 1880, 120 in 1900, 450 in 1940, and 6,500 in 1980—is indicative of the growth of the Jewish population throughout the Southwest. As Jewish communities became larger, they were able to establish synagogues and temples with regular observance, libraries, kosher butchers, cemeteries, schools, and social services, many of which continue to thrive.

Religion in the Twentieth-Century Southwest

The U.S. Southwest is often described as being “tricultural”—an amalgam of Native American, Hispanic, and Anglo-American traditions. The region has, indeed, maintained the Indian, Spanish, and mainline Protestant heritages inherited from past centuries. But in the twentieth century the region became far more diverse. In addition to the Jewish pioneers of the late nineteenth and early twentieth centuries, African Americans began to move westward in

greater numbers at this time, along with Asians (although they were never as numerous as on the Pacific Coast) and an ever greater variety of Europeans. All brought with them their own religions. As cities and towns in the region grew, religious institutions multiplied. During the Progressive Era (1901–1913), many religious bodies made efforts to work together to improve health, education, infrastructure, and labor conditions in the region. Catholic domination of the public school system, however, brought conflict between Catholics and Protestants after World War II. Protestants enforced the separation of church and state in the region, and Catholics responded by setting up a parochial school system.

The 1920s to the 1940s were a busy period of church expansion and institution building. In the 1930s, the search for economic survival drew migrants who had lost their livelihoods and their homes in the Great Depression. They settled in the growing cities of Arizona and New Mexico and on ranches and farms along the rivers. Many of these migrants, coming from the South and the Great Plains, were Baptist or Pentecostal. In the 1950s, concerted evangelism established the Southern Baptists as the dominant Protestant force in the Southwest, extending the Bible Belt across southern New Mexico, Arizona, and southern California, and creating a more conservative constituency in the region. Institution building during this time included both Catholic and Protestant retreat centers and camps, such as the Benedictine Monastery of Christ in the Desert, the Presbyterian Ghost Ranch, and the Baptist Glorieta Conference Center, all in northern New Mexico.

In the early twenty-first century, evangelical Protestantism in the Southwest is mostly white, but it has attracted a growing number of Hispanic, African American, Asian, and Native American adherents. Old Protestant mainline churches remain in Hispanic communities—a legacy of nineteenth-century missionaries, pastors, and teachers—alongside the newer Pentecostal and evangelical congregations and traditional Catholic parishes, all bolstered by a major resurgence of Hispanic, mostly Mexican, presence since the post-World War II era.

From the mid-twentieth century to the present, the steady wave of Anglo immigration to the “Sunbelt”—especially Arizona—has brought with it a steady influx of Protestants and Jews, bringing somewhat more parity in numbers and influence among religious bodies in the region. Protestants and Catholics were rivals in the region until the mid-twentieth century, when they began working cooperatively on such

social issues as prison reform, health care, and alcoholism. While many rural areas in the Southwest remain mostly Roman Catholic (though eastern New Mexico, like west Texas, is predominantly Baptist), urban areas are increasingly multireligious. On the whole the various religious bodies in the Southwest have been tolerant of each other, with no violent conflicts among them. The Southwest, like the western United States as a whole, has thus earned a reputation for being spiritually flexible, open, and accommodating.

In the latter half of the twentieth century and into the twenty-first, the environment has emerged as the most ecumenical issue for the region. All religious bodies in the Southwest have an interest in protecting the clear air, blue skies, sacred sites, and natural wonders for which the region is known. Environmental issues have become more urgent since 1945, when the world’s first atomic bomb was detonated at Trinity site in southern New Mexico after its development at Los Alamos. New Mexico thus became one of the centers of the Cold War defense economy. Many of the military personnel who came to the state because of scientific work belonged to Protestant churches, with significant numbers of Jews as well. All of the region’s religious bodies have faced painful dilemmas concerning the moral and environmental issues that such developments have presented, and many groups and individuals have worked together to prevent further mass nuclear destruction.

New Thought and New Age Spirituality

The Southwest has long attracted people seeking not only economic opportunity but also sunny weather, better health, and spiritual inspiration. The region’s reputation for healing powers began well before the discovery of antibiotics. The desert climate and high altitude provided a refuge for those with illnesses as varied as malaria and tuberculosis. Once outsiders arrived, they discovered that the Mexicans and Indians had lengthy traditions of healing arts—practiced by *curanderos* and medicine people, respectively—that could serve as an alternative to Western medicine. Given its vast open spaces, the western United States became home to many new spiritual ideas and practitioners. By the mid-nineteenth century, rationalism, atheism, mesmerism, and other departures from traditional Christianity were rooted in the region. A variety of ideas and practices that came to be categorized as New Thought took hold in the United States during the second half of the nineteenth century, though the term was not coined until 1887, spawning movements that flourished in the twentieth century.

New Thought's emphasis on health, happiness, and prosperity; access to, and alignment with, the supernatural; and positive or "possibility" thinking attracted many followers. Such emphases infiltrated the vocabulary of mainline religious denominations as well and inspired various New Age ideas and holistic healing movements in the latter half of the twentieth century. The Anglos' discovery of Native American traditions and ancient folk Catholicism coincided with an increased attraction to supernatural phenomena in general and the search for spiritual adventure. Since the 1960s Asian immigrants have brought the full range of Eastern religions to the area, not only to metropolitan Phoenix and Albuquerque but to the countryside as well. In New Mexico a sizable Sikh community exists in Española, and a Muslim center flourished briefly in Abiquiu, both in the northern part of the state. These new arrivals on the religious scene have proved attractive to some Anglos, building on the longstanding regional interest in Native American shamanism, countercultural and utopian movements, and geographical locations associated with spiritual energy—especially Sedona, Arizona, and Santa Fe and Taos in New Mexico.

Religion in the Twenty-First-Century Southwest

Many spiritual communities in the Southwest have been built on centuries-old indigenous traditions, as well as a long-standing Hispanic Catholicism. In the early twenty-first century, New Mexico and Arizona (together with west Texas and southern Colorado) retain a strong Catholic concentration, although New Mexico is more religious than Arizona on the whole, and New Mexico is becoming more Catholic while Arizona is becoming less so. (Together, New Mexico and Arizona are currently about 24 percent Catholic.) The continuing strong Catholic presence in the region derives in part from the area's proximity to Mexico, from which immigration has given nearly all border counties from Texas to California a Catholic coloration, as well as Anglo Catholicism. One also finds all kinds of Protestants (especially since the 1950s) and Latter-day Saints. Yet the largest group is comprised of those who check "none" when asked for religious affiliation. In the early twenty-first century, the religious groups in the region, in order of size, rank as follows: unaffiliated, Catholic, Baptist, and Mormon.

This variety has flowered mostly in the last 100 years: the region was almost 90 percent Catholic at the beginning of the twentieth century, with the rest being mostly Methodist, Baptist, and Presbyterian. Although its strength appears to be waning somewhat—especially in Arizona and northern New

Mexico—Roman Catholicism is still the predominant church. After 1956, mainline Protestants declined in numbers, while evangelicals and Pentecostals (like the Assemblies of God and Calvary Chapel) have increased; many Hispanics (who comprise about 42 percent of the population of New Mexico and 25 percent of Arizona) have left the traditional Catholic fold in recent decades to join their ranks. Mormons, inhabiting the northern edge of the Southwest since the latter half of the nineteenth century and spreading out from there, grew almost eightfold in the twentieth century. Southern Baptists have been the largest Protestant group since the mid-twentieth century. In sum, the Southwest with all its colorful religious variegation—from the ancient to the new—is doing its part to make good on America's historic promise of religious freedom, as well as to ensure America's status as the most religiously diverse nation in the world.

Spiritualism

Spiritualism refers to a group of religious movements, more or less organized, whose adherents seek communication with the spirits of deceased human beings. Spiritualists believe that spirits can be contacted in gatherings called “séances” through individuals called “mediums,” that spiritual enlightenment results from the experience, and that séance phenomena scientifically demonstrate human immortality. Originally a response to the religious ferment and theological liberalism of the mid-nineteenth century, Spiritualism has weathered perennial challenges to its legitimacy to remain vital, if limited in appeal, in the early twenty-first century.

Origins

Spiritualism emerged as American political, economic, cultural, and religious life, particularly in the Northeast and Midwest, was being transformed by political and religious democratization, religious revivalism, a spreading market economy, urbanization, industrialization, the rising authority of science, and such technological innovations as the railroad and telegraph. These developments sparked experimental religious, social, and scientific reform movements whose cosmologies and programs for action sought to

order a changing society that seemed to many to be fluid, even chaotic.

Spiritualism originated in western New York’s “burned-over district,” so called because of the intense religious revival and ferment generated there by rapid social change. On March 31, 1848, Kate (c. 1836–1892) and Margaret Fox (c. 1833–1893) claimed to hear knockings that responded intelligibly to their questions. The Fox family and others became convinced that spirits communicated through the girls. Joined by their older sister, Leah Fox Fish (c. 1818–1890), the Fox sisters soon claimed to summon a variety of spirits, attracted attention throughout the region—especially among radical Quakers—and began holding regular gatherings. Many visitors sought entertainment and novelty or the recovery of personal relationships ended by death, but many others sought spiritual instruction and empirical proof of immortality.

Public demonstrations by the Fox sisters in Rochester generated publicity that attracted showman P.T. Barnum, who arranged exhibitions at his New York City hotel. Soon after, *New York Tribune* editor Horace Greeley endorsed the sisters and publicized the “Rochester rappings” in his newspaper. As the Fox sisters became nationally renowned, others, mostly women, became spirit mediums and held sittings. The “spirit manifestations” assumed new forms as entranced mediums began practicing healing, speaking, writing, and clairvoyance. In the 1860s and 1870s, the phenomena expanded to include spirit photography and visible spirit materializations. The Fox sisters were eclipsed by these phenomena, but they had helped establish a new religious movement.

Spiritualism’s philosophical and theological foundations, meanwhile, were laid by Andrew Jackson Davis (1826–1910), a Poughkeepsie, New York, apprentice who discovered hypnotism through a demonstration by lecturer J. Stanley Grimes. Experimenting with trances, Davis began experiencing clairvoyant visions and prescribing heterodox medical remedies. He became a traveling demonstrator, initiating a lifelong career as a religious seer and healer. Claiming contact with the spirits of eighteenth-century Swedish scientist-mystic Emanuel Swedenborg and the ancient physician Galen, Davis delivered and published a series of trance lectures titled *The Principles of Nature, Her Divine Revelations, and a Voice to Mankind* (1847). The first of Davis’s many books, it was the most influential statement of an ideology he called “harmonialism.” Combined with the practice of spirit communication, harmonialism became the basis of Spiritualism.

Sources and Beliefs

Spiritualism drew on several contemporary religious, scientific, and social ideologies and movements. It drew above all on Swedenborg, who claimed that spirits had revealed to him *Heaven and Its Wonders and Hell* (1758). This work, whose matter-of-fact style reflected Swedenborg's scientific background, described a heaven and a hell, each consisting of three hierarchically arranged "spheres," with the pivotal earthly sphere between them. After death, said Swedenborg, the soul entered the sphere most suited to it, remaining there eternally. Swedenborg developed a theology in which God influenced the universe through spirit mediators and devised a new and complex method of scriptural interpretation. In the early nineteenth century, followers of Swedenborg in the United States established the Church of the New Jerusalem (or New Church), several of whose members became Spiritualists. Spiritualism derived from Swedenborg the ideas that physical realities reflect causally prior spiritual ones; that the spirit world consists of seven ascending spheres through which souls assume positions determined by their moral and spiritual states; and that spirits mediate between God and human beings.

Above all, Spiritualists made Swedenborg's practice of spirit communication their religion's central and distinguishing feature, democratizing a practice that Swedenborg had warned should be strictly limited. Spiritualists likewise adapted Swedenborg's theology to American notions of progress and upward mobility, envisioning an afterlife of gradual advancement toward perfection as spirits were guided by higher ministering spirits. Despite and perhaps because of their deviations from Swedenborg, Spiritualists made him a crucial symbolic religious figure.

Another major component of Spiritualism derived from the heterodox medical practices of eighteenth-century Viennese physician Franz Anton Mesmer. Mesmer postulated an invisible, all-pervasive, scientifically demonstrable magnetic fluid that bound the universe into a physical and spiritual whole. He believed that manipulating one's personal portion of the fluid during hypnosis—a practice named "mesmerism"—induced physical and spiritual healing. Mesmerists touring the United States during the 1830s and 1840s made mesmerism a national fad and, for those seeking scientific understanding of the mind and soul, a subject of serious examination. Spiritualists incorporated the magnetic fluid into their cosmology and the hypnotic trance into their practice. They believed the fluid, acting

according to natural law, explained the operations of deity on the universe, the meliorative influence of advanced spirits on lower ones, and mediums' ability to produce healing and other phenomena.

Spiritualist religious ideology derived from other sources as well. It integrated French socialist Charles Fourier's belief that social and spiritual harmony required human relationships based on natural forces of attraction. Spiritualists tapped Scottish Enlightenment discourse to develop a concept of "sympathy," which, similar to mesmeric magnetism and Fourierist attraction, they understood as a force of cosmic unity. They also drew on new liberal and democratic Protestant theologies that emerged during the nineteenth century to challenge orthodox Calvinism. From transcendentalism, an offshoot of Unitarianism, came a view of Jesus as human rather than divine, a belief in the soul's divine potential, and an emphasis on inward spiritual contemplation. From Universalism came a rejection of hell and a conviction that everyone would be saved by a merciful deity. Quakerism contributed the belief in an "inner light" that manifested the divine in every soul. From broader liberal currents and a growing philosophical emphasis on developmentalism came an emphasis on gradual spiritual growth over sudden conversion. Spiritualists adopted the deist conviction that God could be understood in terms of scientifically comprehensible natural law from which miraculous deviation was impossible. From traditional Christian orthodoxy they derived their belief in divine sovereignty, human dependence on the divine, the reality of an eternal afterlife, and the authority of the moral standards represented by Jesus. Spiritualists also claimed scriptural support for the reality of spirit communication, although the movement was divided between those (including Davis) who hoped that "modern revelations" from spirits would supplant Christianity and the Bible, and "Christian" Spiritualists who sought only to supplement Christianity and scriptural authority. During the late nineteenth and twentieth centuries, Spiritualism incorporated elements of Hinduism and other Asian religious philosophies as these became increasingly appealing to spiritually curious Americans. An often slighted religious influence on Spiritualism is Native American shamanism, familiar to mid-nineteenth-century Americans and now comprehensible in terms of Christian tradition. The appearance of "Indian guides" at Spiritualist gatherings was common in the nineteenth century and remains so in the early twenty-first century.

Appeal

Spiritualism established its appeal by addressing spiritual longings given specific form by the nineteenth-century American environment. It consoled those whose loss of friends and relatives to premature death—then a common occurrence—left them seeking assurance that the soul survived physical death, the certainty of reunion with loved ones in the afterlife, and an opportunity to maintain severed relationships in the meantime. It tapped currents of revivalism and Romantic idealism that emphasized personal religious experience and direct contact with the divine. While science seemed to encourage philosophical materialism by denying the empirical accessibility and often the existence of the human soul, Spiritualism tapped its authority in proposing that spirit was scientifically demonstrable through the phenomena of mediumship. Religious liberalism supplanted the notion of a personal God with an abstract, impersonal deity, but Spiritualism offered believers a comforting hierarchy of personal human spirits. Convinced that a professionalizing clergy prioritized material comfort and social approval over spiritual vitality and moral leadership, and that institutional churches were spiritually dead, Spiritualists found in spirit communication a source of religious power independent of churches and ministers. Finally, Spiritualists, concerned that the nation's emerging economic and political system seemed to elevate self-interest over moral principle and the common good, enjoyed a ritual (the *séance*) that centered on the private home, encouraged close contact among worshipers, and removed participants from the bustle of everyday life. In their gatherings, they heard spirits predict a millennial age of social harmony to be realized through the combined efforts of spirits and mortals.

These concerns resonated most strongly among the white Protestant middle class, which remained Spiritualism's primary constituency and the source of most of its leadership through the twentieth century. Spiritualism was geographically concentrated where that constituency was most pronounced: the Northeast, Midwest, and, following nineteenth-century migration patterns, the West. Because of its early association with abolitionism and other radical reforms, as well as its cultural and theological distance from evangelical Christianity, the movement's appeal has been more limited, though not absent, in the South. The movement also had a pronounced urban focus; New York, Boston, and, later, San Francisco became major centers of Spiritualist

activity, and such smaller cities as Rochester and Buffalo, New York, Providence, Rhode Island, Cleveland and Cincinnati, Ohio, and St. Louis, Missouri, became secondary hubs. But it also reached rural areas from New England and New York State in the Northeast, to Iowa and Wisconsin in the Midwest, to Tennessee and Georgia in the South. The movement crossed lines of class, race, and ethnicity, having a particular appeal among African Americans, perhaps because it shares its emphasis on contact with spirits with the religions of West Africa and the African diaspora. A significant Spiritualist community developed among the African Americans of late nineteenth-century New Orleans; led by Valmour and Henri Louis Rey, they found in Spiritualism a basis for visions of transracial unity and social action. In the twentieth century, following the Great Migration to northern cities, Spiritualism and the *séance* were incorporated by Universal Hagar's Spiritual Church, an African American organization established in Detroit in 1923 and still present in several eastern and midwestern cities.

Spiritualism's appeal became increasingly transnational in the late nineteenth and twentieth centuries. It became an American export, spreading into France, Latin America (especially Brazil, where it remains enormously popular), and several English-speaking countries, including Canada, Australia, New Zealand, and South Africa.

Reform

Spiritualists found in spirits' millennial promises and the concept of sympathy a rationale for involvement in such nineteenth-century moral and social reform movements as abolitionism, temperance, marriage reform, prison reform, and peace and nonresistance. The notion of spirit assistance was particularly comforting as the antebellum reform impulse waned in the 1850s, and, indeed, constituted an injection of premillennialist disappointment in human efficacy into the postmillennial optimism about human reform capabilities generally characteristic of the period.

Spiritualists, like other American reformers, launched several communitarian experiments. Sometimes existing experimental communities became Spiritualist hubs when their founders embraced the new religion. Prominent examples are Hopedale, created in Massachusetts in 1841 by former Universalist minister, abolitionist, and Christian nonresistant Adin Ballou, and Modern Times, established on Long Island in 1850 by philosophical anarchists Josiah Warren and Stephen Pearl Andrews. Other intentional communities were created by Spiritualists specifically to

enact Spiritualist principles. John Murray Spear, a medium and former Universalist minister, abolitionist, and prison reformer, established Harmonia in western New York in 1852. Like many other communitarian endeavors, it was beset by public disapproval, internal dissension, and financial difficulty, and it dissolved in 1858. Another attempt, the Mountain Cove Community, formed in 1851 in western Virginia by a group from Auburn, New York, similarly collapsed in 1853 due to internal tensions and financial strain. In the latter decades of the century, Spiritualists founded communities in the newly developing states of the West. Thomas Lake Harris established the mystical Fountain Grove community near Santa Rosa, California, in 1875, and in the 1880s John B. Newbrough tried to attract eastern urban religious seekers to the Shalam colony in New Mexico.

Spiritualism was especially important as a vehicle for women's rights. Deriving from Quakerism a concept of individual sovereignty that lodged religious authority in the individual, it assumed spiritual equality among people and implied women's legitimate claim to religious authority. Combined with the idea of social harmony through natural attraction, individual sovereignty prompted Spiritualists to critique the subjugation of women in marriage, urge a more egalitarian model, and propose liberalized divorce laws. Women found empowerment above all in mediumship, which encouraged them to speak publicly, confidently, and influentially on controversial social topics. Healing mediumship likewise propelled women into careers in alternative medicine at a time when male physicians were professionalizing and dominating orthodox medical practice. And while male physicians considered women weak, many medical mediums claimed to overcome disease and experience personal empowerment through spiritual healing and without conventional doctors. In fact, Mary Baker Eddy's route from invalidism to the 1875 founding of Christian Science, a religious movement emphasizing mental healing, involved at least indirect contact with Spiritualism.

Scientific Investigation

Anxious about the nature of religious belief in a scientific age, seeking empirical support, and facing public suspicion of fraud, Spiritualists encouraged scientific investigation of mediumship and complained that the scientific establishment had unnecessarily excluded spirit from its domain. They insisted that spirit was a form of matter that conformed to natural law and was amenable to scientific analysis. Spiritualist

leaders, eager to enlist scientists in their cause, welcomed such conversions as that of chemist Robert Hare. Hare publicized the movement through his *Experimental Investigation of the Spirit Manifestations* (1855), a lecture and demonstration tour, and an unsuccessful attempt to persuade the American Association for the Advancement of Science to address the topic. Spiritualist publisher Samuel Byron Brittan likewise petitioned Congress to launch a scientific investigation. At a time when Americans marveled at the mysteries of electricity and magnetism, postulated invisible fluids to explain them, and were amazed at such new inventions as the electromagnetic telegraph, the notion that science and technology might illuminate the spiritual world seemed feasible to Spiritualists.

Spiritualist claims were investigated several times. A team of professors from the University of Buffalo Medical School investigated the Fox sisters in 1851, and a group of prominent Harvard scientists examined the phenomena in 1857; both groups issued negative and critical conclusions. A damaging wave of well-publicized scientific investigations and debunkings occurred in the 1860s, 1870s, and 1880s, culminating in the unfavorable published report issued in 1887 after an investigation conducted under the auspices of the University of Pennsylvania at the bequest of wealthy Philadelphia Spiritualist Henry Seybert. In 1888, the Fox sisters confessed to having produced the rappings with their toes. During the 1880s and 1890s, Harvard psychologist William James examined mediumship through the American Society for Psychical Research (ASPR), which he established in 1885, but the ASPR, which conducted scientific investigations well into the twentieth century, proposed nonspiritual explanations for the phenomena. The debunking of mediumship continued through the twentieth century, from Harry Houdini's sensational exposés to the activities of the Amazing Randi, and remains an obstacle to Spiritualism's public acceptance and hopes for scientific verification.

Practices and Institutions: From Séances to Spiritualist Churches

The séance has been the defining element of Spiritualist religious practice. Encouraged by the ideas of Swedenborg, Fourier, and mesmerism to commune with like-minded believers and seeking out mediums they considered highly effective, Spiritualists formed from the outset small, often well-structured circles displaying strongly cohesive qualities, as their members forged bonds of religious community. By 1851, more than 150 regular circles were functioning in

New York City and sixty in Philadelphia, with thousands of others nationwide. These circles, typically composed of about a dozen people, have involved more or less formalized religious rituals combining innovative elements with more conventionally Christian ones. Spiritualists generally meet in mediums' homes rather than churches and look for spiritual authority to mediums rather than ordained clergy. (Women continue to occupy many pastoral positions in Spiritualist religious organizations and communities.) At the same time, séance rituals have often retained such conventional practices as opening and closing benedictions, reverential deportment, prayer, hymn singing, homiletic messages, selective membership, a sense of congregational belonging, and sometimes even readings from authoritative texts. Some early Spiritualists, emphasizing the circle's inspirational functions, compared séances to the revivals that had become fixtures of American religious life.

Organization beyond private circles developed more slowly because most early Spiritualists, deeming organized religion stultifying, resisted it. In this, Spiritualism contrasted with other new religious movements of the nineteenth century, such as Mormonism, the New Church, and Christian Science, that built tightly centralized institutional structures around authoritative texts, creeds, and leaders. The only important attempt by antebellum Spiritualists to organize nationally—the Society for the Diffusion of Spiritual Knowledge, formed in New York City in 1854 by several socially prominent Christian Spiritualists—met with hostility and proved abortive. But an organizational thrust was apparent from the start and accelerated as the nineteenth century progressed. Local, state, and regional associations—for example, the New England Spiritualist Association and the Ohio and Wisconsin State Spiritualist Associations—appeared during the 1850s, though they were never supported by the majority of the Spiritualists in their respective geographic areas. State and regional conventions, too, were held on a fairly regular basis beginning in 1852, though these were often wracked by internal conflict over matters of doctrine and social reform commitment.

Spiritualist churches also emerged. The federal census listed 17 in 1860, 95 in 1870, 334 in 1890, and 455 in 1906; membership in 1890 and 1906 numbered in the tens of thousands. The census suggests that these churches tended to be urban, to spread in tandem with the general westward spread of the movement, and to be evanescent (most 1906 churches had existed for fifteen years or less). Authority rested with individual congregations rather than

an overarching organization. Lacking money, they used rented rooms, halls, and private homes; fewer than one-quarter of the 1870 or 1906 churches had edifices, and almost none of those buildings had been erected by Spiritualists themselves. Their services, like those of conventional Protestant groups, include invocations, prayers, hymns, a sermon or lecture, and, not infrequently, use of the Bible as an authoritative text. Yet Spiritualist services have been unique in their doctrinal content, the often entranced state of the sermonizer or lecturer, and the practice of receiving spirit messages through a medium. These and other regularized practices, including midweek message and healing services and personal development classes, have become standard among most Spiritualist groups. Spiritualists also developed regularized procedures for ordaining mediums as ministers; James H. Powell became the first Spiritualist minister in 1869.

Practices and Institutions: From Summer Camps to the National Spiritualist Association of Churches

The outdoor summer camp, another important Spiritualist institution, likewise appeared on a small scale during the 1850s, followed in the 1870s by large permanent camps with attendance in the thousands and increasingly well-structured religious activities. The largest was Lake Pleasant in Massachusetts; the most famous was the Cassadaga Free Lake Association, established in Chautauqua County, New York, in 1879 and renamed Lily Dale in 1906. Lily Dale became the leading Spiritualist mecca of the early twentieth century. Similar camps in warmer climates—including the Southern Cassadaga Spiritualist Camp Meeting Association, established in Florida in 1894 as a counterpart to the New York site—provided winter havens for northern Spiritualists. Most of the camps eventually disappeared due to poor attendance, natural disaster, or chronic debt, although Lily Dale, Florida's Cassadaga community, Camp Chesterfield in Indiana, and a few others remain active.

State and national organization gained momentum in the 1860s as Spiritualists sought to counteract a decline in enthusiasm caused by the damaging Harvard report of 1857 and the Civil War. Spiritualists in several northeastern and midwestern states (as well as California) created formal associations in the late 1860s, and by the mid-1870s most states in those regions had operating organizations. While these institutions did not (and were not meant to) have effective governing power over their membership, they did circulate information, formulate policy for approval or disapproval by

local churches, and push for fair treatment by the government and the press. Spiritualist conventions established two successive national organizations during the 1860s, each fatally weakened by financial difficulty, lack of authority over local churches, and inability to draw lower-level organizations into affiliation. But national organizational efforts strengthened during the late 1870s and 1880s, as Spiritualists struggled not only with financial weakness and sensational exposés but also two new difficulties: the advent of psychical research and the emergence of Christian Science and Theosophy, religious movements influenced by Spiritualism and able to draw away adherents by capitalizing on Spiritualism's association with fraud. Spiritualists organized, then, to define their religion, solidify their membership, seek federal recognition and legal protection, and enhance their fund-raising ability.

The most important result was the 1893 formation of the National Spiritualist Association of Churches (NSAC) in Chicago. Empowered by its constitution to compile statistics, arrange for the education of lecturers and teachers, and raise revenue, the NSAC won the loyalty of most state and local organizations by 1906. It avoided internal squabbling and garnered influence by focusing on organizational, educational, and advisory activities, leaving divisive questions of theology, politics, and reform to the consciences of individual members (it did adopt a formal though loosely worded creed in 1896). It spearheaded Spiritualism's passage from home circles and stage demonstrations to a relatively ecclesiastical character. Rival organizations soon emerged; Spiritualists emphasizing inner spirituality over séance phenomena and science founded the Progressive Spiritual Church in 1907, while those seeking authoritative centralized structures formed such institutions as the Churches of Spiritual Revelation Association and the Spiritualist Episcopal Church, established in the 1940s. But the NSAC remains the largest of the approximately fifty existing national organizations.

Continuing Interest and Current Debates

Despite declining popularity after the 1850s, periodic revivals of interest kept Spiritualism vital through the twentieth century. A 1920s revival was fueled by desire for communication with World War I casualties, publicity generated by debunker Harry Houdini, and the energetic promotional activity of convert Arthur Conan Doyle. Another began during the 1960s amid a broader fascination with occult and alternative spiritualities and the subsequent emergence of eclectic New Age spirituality, of which spirit channeling remains an appealing component.

Both revivals energized the long-standing division between Christian Spiritualists (including the NSAC), who defend the supreme authority of the Bible, and those, including Florida's Cassadagans, who recognize alternative revelations from the spirit world. Spiritualists also remained divided throughout the twentieth century over reincarnation. Both sources of tension were intensified by new Spiritualist works that departed further from traditional Christian belief than did early Spiritualist texts, were accorded scriptural status by some Spiritualist groups, and added reincarnation to established Spiritualist themes. One, John B. Newbrough's *Oahspe* (1882), traces humanity's origins to a lost Pacific continent and predicts a coming utopian age. Another, Levi H. Dowling's *Aquarian Gospel of Jesus Christ* (1907), contains alleged events in the life of Christ, including a trip to India, not found in the New Testament. The more recent and anonymous *Urantia Book* (1955) examines the spiritual organization of the universe, the religious history of earth, and the life of Jesus. These works remain in print and are still widely read by Spiritualists.

Spiritualism's continuing appeal testifies to the enduring individualistic thrust in American religious life, by which believers cultivate inner spirituality and a personal faith, and the continuing quest for spiritual order and cosmic connection.

Spirituality

Spirituality is often used to describe contemporary American religious practice, but it has a long history of its own. In common speech, it usually refers to the idiosyncratic beliefs of those who are said to be “spiritual but not religious”—that is, not tied to any established denomination or local church. Thus, many people associate spirituality with the diverse array of beliefs and behaviors that have sprung up since the 1960s, in settings far outside the boundaries of traditional Christianity or Judaism, or any other world religion.

Discussion of spirituality, then, often veers into categories hardened under the recent “culture wars” over religion and social morality. Some critics see the current trend as a troubling sign of modern social disengagement. At best, they argue, spirituality is the product of a postmodern culture incapable of taking religion seriously. At worst it implies a full-scale erosion of important historic faith traditions and the civic culture they have long helped sustain.

Other scholars insist that the recent turn toward spirituality is neither new nor all that worrisome; wariness toward institutional forms of faith is almost a default mode in American culture. They also point out that the modern American quest for interiority draws on deep roots in both Christian and non-Christian traditions, and while it has a certain extra-institutional energy, amounts to far more than a modern dislike of organized religion. Prejudice against “odd” forms of belief, they argue, should not obscure their contribution toward the long-term success of religion in the United States. In their view, taking into account this experiential dimension, especially in its complex historical unfolding, is

the only way to fully comprehend the scope and enduring strength of American religiosity.

Undeniably, the study of spirituality opens fascinating scholarly ground. Almost immediately, it requires rethinking of what is considered mainstream in American religious culture and what is considered marginal. Although new forms of spirituality often emerge from unusual or overlooked places, they can also be particularly sensitive indicators of emerging cultural tensions and thus useful to historians looking for sources of change and innovation. Attention to experiential religion also allows a broader, more inclusive view of American religious diversity, requiring historians to investigate a broader cast of characters and a wider variety of places than is usually the case in more institutionally based approaches. Catherine Albanese, for example, suggests that “spiritual knowing” comes in a range of different forms: it can include the body (through physical rituals of worship, dance, and the rhythms of daily life), the heart (through the emotional experience of conversion and transformation), the will (through commitment to prophetic social witness and social action), or the mind (through metaphysical exploration).

By far the biggest challenge in studying spirituality is defining the nature of the enterprise itself. All scholars have struggled with a precise definition of a notoriously “airy” subject with infinitely movable boundaries. Who is to say what is spiritual and what is not? Most people would agree that in a general sense spirituality deals with interior experience, as distinguished from the more public realm of doctrine and ecclesiology, or what we commonly refer to as religion. People offer various descriptions for that experience, including feelings of creativity and connection to the divine, ecstatic joy, or deep-centered stillness. But at bottom, scholars who try to analyze these feelings face a series of personal questions about their own approaches to faith: Is it necessary to assume the reality of the experience being described in order to understand it fully? Is it enough to simply describe the external phenomena and leave the final judgment to the reader? Or do scholars of religious experience inevitably become advocates for their subjects?

The debate is complex and difficult to summarize, as it deals with deep questions about subjectivity and the analytical role of the scholar. Robert Orsi, for example, has argued for an “abundant history” that reaches past the externals of a miraculous healing or a Marian apparition and requires scholars to question their own assumptions about modern objectivity and modes of explanation and perhaps even, in

the end, to reject those categories altogether. But the debate also reflects differences between two scholarly disciplines, religious studies and religious history, with the first aimed more at an analysis of “raw religion”—the experience itself—and the second focused more broadly on the various social contexts framing that experience in space and time.

Most scholars avoid drawing such rigid methodological distinctions, and in this respect they have found the theoretical concept of “lived religion” a useful construct. To begin with, it avoids the pitfalls of older theoretical approaches, mostly based on European state-church models, that assumed an opposition between the formal theology of the pulpit and the popular faith of the pews. Lived religion emphasizes confluence between the daily faith of ordinary people and the denominational or theological givens that give rise to specific practices; its subject matter therefore includes everything from gift giving and food preparation to care for the dead and observance of Christian sacraments. Thus, historian David Hall has described seventeenth-century Puritanism as an amalgam of carefully reasoned pulpit pronouncements and widespread folk beliefs in supernatural signs and wonders, a worldview shared by clergy and laypeople alike. The lived religion of Puritanism, or of any system of piety, is neither wholly spiritual nor entirely secular, “top down” or “bottom up,” but the product of continual renegotiation within the crucible of daily life.

Sources

Strictly speaking, *spirituality* is a new word, not in regular use until the mid- to late nineteenth century. Within western Christianity, it usually appeared in a specific theological context, as a technical term for denoting anything nonmaterial or as a particular attribute of God.

Roots in European Christianity

Its earliest English usage simply denoted the clergy; thus, in 1585, English pamphleteer Philip Stubbs’s *Anatomic of Abuses* described the “corruptions and abuses of the spirituality,” or those who held an ecclesiastical office as opposed to a secular one. According to historian Leigh Eric Schmidt, *spirituality* appeared in print in North America only once before 1800, referring to a collection of hymns published in 1768, “Design’d to Promote the Spirituality of That Part of Christian Worship.”

But the idea was there long before the word itself. The theory and practice of interior religion, usually described in English as piety or devotion, tracked far back beyond the

nineteenth century, to the earliest days of Christianity. There the logical starting point is the ascetic practices of the desert fathers, who sought union with God through solitude and regular practice of self-denial. This early link between asceticism and spiritual growth drew from the church’s early experience of persecution and the Gnostic intellectual currents of the Mediterranean world that envisioned the religious life as an upward progression from material constraints into perfect union with the divine. By the third and fourth centuries, monastic communities pursued this intent through explicit rules for a daily life of prayer and physical labor, carried out in separation from the secular world. As articulated by St. Benedict of Nursia (480–597) and then reformulated by Bernard of Clairvaux (1090–1153), the cloistered clergy dedicated themselves to strict personal discipline for the good of the larger church, who received the benefit of their regular supplication to God. From early on, Christian tradition understood the spiritual quest as an ascetic pursuit though not necessarily a solitary one; spiritual growth was also the product of a distinct way of life, forged in human community.

The late Middle Ages and early modern era, often assumed to be a time of rising secularism, witnessed a surge of interest in devotional pursuits. By that time mysticism had emerged as a distinct form of spiritual practice, though part of a tradition going back to the writings of Origen (c. 185–c. 254), the Neoplatonists, and the Cappadocian Fathers. Echoing an ancient Gnostic distrust of the material world, mystics envisioned the spiritual life as an arduous journey upward and inward, bringing the believer into ever closer union with God. Christian mysticism was also influenced by Pseudo-Dionysius the Areopagite, a relatively unknown figure who wrote on “mystical theology” in the late fifth or early sixth century. He described the soul’s journey to God as a path of negation: because God is unknowable, he argued, finding God requires the loss of all human certainty.

This kind of spiritual achievement proved beyond the reach of ordinary laypeople, and by the late medieval era, mystics were a renowned and spiritually gifted few. For adepts like Teresa of Avila (1515–1582), who wrote about her experiences in the “Interior Castle” of the heart, and John of the Cross (1542–1591), who described his “dark night of the soul,” the divine mysteries were accessible only through rigorous inner exploration.

But in other ways, the opening centuries of Europe’s modern era witnessed an expanding array of options for

the pursuit of interiority. Baroque art and music told sacred stories with a bold dramatic flourish, mingling biblical texts with soaring architecture and richly emotional orchestral composition. Moreover, by the sixteenth century, medieval mysticism was evolving into a series of contemplative practices accessible to laypeople and noncloistered clergy alike. Ignatius Loyola's (1491–1556) *Spiritual Exercises* offered a rigorous program of introspection and prayer for the Christian willing to participate in the sufferings of Christ, and the *devotio moderna*, or “modern devotion” of Thomas à Kempis (1380–1471) and his Brethren of the Common Life sought to engage laypeople in serious spiritual pursuit through the “imitation of Christ” in daily communal life.

The Protestant Reformation opened more possibilities for spiritual practice. Certainly, questions about interiority were at the heart of the movement's dissatisfaction with the Catholic Church; Protestantism emphasized the believer's state of heart, not participation in sacraments or church ritual, as the real evidence of salvation. The Reformers' emphasis on *sola scriptura* (the Bible alone) placed greater value on the Bible over the ancillary teachings of the church and also put the text itself directly into the hands of the laity. As a result, the Reformation produced a new, much more Bible-centered piety, a trend affecting everything from personal devotional practices to the naming of children—no longer honoring Christian saints but a roster drawn from the heroes and heroines of the biblical text.

The Reformers also sought to strengthen the institutional church's role in promoting personal piety, rejecting the assumption that ordinary people could, or even should, aspire to the asceticism required of saints and mystics. Thus, Martin Luther's reforms maintained much of the liturgy and sacramental orientation of late medieval Catholicism, but they also generated a vigorous new hymnody and emphasized the catechesis of laypeople, especially around the family table. John Calvin's approach to the spiritual life was more austere—Reformed churches were physically bare and allowed only a minimum of liturgy—but only as a means of freeing the community of gathered believers to pursue God with a minimum of distraction. The Puritan movement within the Anglican Church similarly emphasized interiority, following a trail already blazed by devotional writers such as George Herbert and William Law; indeed, both traditions encouraged daily introspection, prayer, and moral inventory, but always with an explicit understanding of the church's guiding and mediating role.

American Spiritual Roots

The seventeenth-century pietist revival, a response to the rising scholasticism of post-Reformation Protestant thought, extended the emphasis on lay spirituality. Emphasizing the primacy of religious experience rather than correct doctrine, the movement produced important devotional works such as Philipp Jacob Spener's (1635–1705) *Pia Desideria* (1675), a new infusion of hymnody, and a surge of interest in foreign missions and care for the poor. Pietism also carved out new space for spiritual practice, as believers gathered in conventicles for prayer and mutual encouragement—what they called an *ecclesiola in ecclesia*, or a church within a church. Nikolaus von Zinzendorf's (1700–1760) Moravian community at Herrnhut, Germany, became the most famous communitarian experiment of its time. Moravian missionaries also influenced the young John Wesley in the course of a sea voyage to Georgia in 1735, prompting him to seek a deeper experience of salvation, which, as he said, left his heart “strangely warmed.” The movement also figured in the early settlement of North America, as many smaller pietist sects emigrated from Germany to Pennsylvania under the urging of the Quaker William Penn (1644–1718).

By the end of the colonial period, a variety of Christian theological traditions—including Roman Catholic, Lutheran, Anglican, Calvinist, and pietist—provided a basic context for American spirituality. Although the nation itself was not deeply churched, generally lacking much of a denominational infrastructure in scattered frontier settlements and isolated towns, established faiths still shaped the practice of piety among the faithful. Hymnody, devotional literature, liturgies, and the size and shape of church buildings identified individual believers as Lutherans or Catholics or Baptists.

But at the same time, American spirituality was far more than the sum of its European ecclesiastical roots. What some historians refer to as the “Christianization” of the North American continent in the seventeenth and eighteenth centuries assumed the continuing power of European folk traditions, even in the face of Enlightenment skepticism. In fact, Catherine Albanese identifies this old and constantly evolving patchwork of esoteric or metaphysical faiths as a third branch of American religiosity, as important to take into account as evangelical Protestantism and Catholicism. The common bond behind all esoteric religion is the principle of correspondence, that there exist intrinsic connections between the visible phenomena of the material world and

unseen spiritual realms. The purpose of spiritual practice is to access the power and energy within those higher worlds, whether through magical manipulation of physical objects—rings or amulets or the ingredients of a spell—or by a shift in consciousness, so that one finally understands the unity of all things. One of the most influential intellectual figures in the development of harmonial faiths was the German mystic Emanuel Swedenborg (1688–1772), whose theory of correspondence between the seven dimensions of the universe would exercise a formative role in the later development of New Thought movements. Although they were a distinct minority in a largely Protestant colonial world, metaphysical faiths still played an important role in the evolution of American religious culture. Dowsing rods, protective amulets, signs and portents, spells and curses—all of these occult practices intermingled freely within the established religious cultures of colonial America, from highly churching New England to the more beleaguered Anglican establishment of tidewater Maryland and Virginia.

American spirituality also drew from other sources outside of European Christendom. West African captives brought their own religious traditions across the Atlantic, including Islam and other local tribal faiths. Under the duress of slavery, most of these survived in more vestigial and fugitive forms—naming practices, ring shouts, belief in haunts and spirits, and worship in sacred groves—but exercised a distinct influence on nineteenth-century evangelical Protestantism. European settlers also arrived on land already inhabited by Native Americans, whose religious practices shared relatively little in common with European Catholic or Protestant traditions, including their assumptions about what was sacred and what was secular. Summarizing the faith practices of diverse peoples spanning two continents is neither wise nor even possible, except to note the inherent challenge they posed to Western ways of thinking about God. Native American faiths emphasized the importance of sacred places rather than days or times of the year. As author Vine Deloria Jr. has pointed out, Native languages had no single equivalent word for *religion*, nor did they imagine spirituality in the traditional Christian sense, as an upward line of progress toward God.

American Patterns Forming

American assumptions about experiential religion developed over time, reflecting the expanding diversity of beliefs and practices in the population itself. At the time of independence from Great Britain, the United States was a

Protestant country, with few Catholics or Jews but also having little in the way of state-sanctioned religion. An American religious style was fast emerging, however, shaped by the emotional outpouring of what came to be called the first Great Awakening of the 1730s and 1740s.

Great Awakenings and an American Religious Style

Revival preachers such as George Whitefield (1714–1770) and Gilbert Tennent (1703–1764) appealed to the sinner's heart, insisting that the radical transformation of the second birth was available to anyone who repented. This new birth was instantaneous and powerful, often manifested by physical signs—trances, shaking, crying, or shivering ecstasy.

By the early nineteenth century, this “evangelical style” began to define American religiosity. One of its most formidable sites of development was Methodism, a movement that by the time of the Civil War had become the nation's largest religious body. Part of Methodism's appeal drew from Wesleyan teachings that emphasized human agency and the possibility of moral perfection. In contrast to Calvinism's more pessimistic set of assumptions about human nature, Methodist preaching resonated with the democratic currents of American society in the Age of Jackson. But its long-term impact and its phenomenal success rested just as deeply on its experiential base, as encounters in class meetings, love feasts, and revivals created powerful emotional bonds between people in search of spiritual transformation. Religious “upstarts,” such as Methodists and early nineteenth-century Baptists, invested relatively little on institutional infrastructure, insisting instead on an immediate emotional response to God's call, regardless of wealth or station; all stood equal at the foot of the cross.

In that sense, early nineteenth-century Methodism also fostered African American spiritual expression, briefly though notably employing slaves as evangelists and preachers. Historians have long debated the extent to which original African faiths survived the brutal passage across the Atlantic during the early days of slavery. Anthropologist Melville Herskovits, for example, argued forcibly for the persistence of African forms, even under the restrictions imposed by slaveowners. Alternatively, historian Jon Butler has described the eighteenth century as a time of “spiritual holocaust,” when the rigors of American chattel slavery erased all memories of the Islamic and tribal faiths that captives brought to North America. Certainly, early Methodism's expansive program and democratic ethos both Christianized a slave population relatively insulated from European faith traditions and

legitimized the emotional expression of African Americans. Yet the opportunity for interracial religious experience, even within Methodism, proved brief; by the 1830s, slavery's apologists refused to admit any kind of equivalence between the spiritual experiences of whites and blacks. Ironically, however, by the time of the Civil War, many Americans shared a general notion that African Americans were naturally more religious than whites, a stereotype that would underline their cultural marginalization in the era of segregation.

But it would be wrong to describe evangelical Protestant spirituality only in terms of revival-style emotionalism; evangelical piety also had a strong rationalist bent. At the height of the eighteenth-century Great Awakening and in the midst of Enlightenment era concern for reasoned faith, Congregational theologian Jonathan Edwards (1703–1758) had defended emotional religion as the legitimate expression of rationally appropriated truth; in other words, he argued, ecstatic religious experience might draw from the emotions but it was not fundamentally irrational. By the mid-nineteenth century, the majority of Protestants assumed that religious truth was attainable through “common sense,” echoing the arguments of the so-called Scottish Common Sense philosophers Dugald Stewart (1753–1828) and Thomas Reid (1710–1796). Indeed, in contrast to European Christianity, set all but permanently on the defensive by the intellectual and political force of Enlightenment rationalism, American evangelical Protestantism confidently assumed that reasonable religion was an unquestioned ally of democracy and Christian faith.

Seeker and Liberal Spirituality

The evangelical revival is not the whole story, however. Another product of the early nineteenth century was an alternative form of what might now be called “seeker spirituality” emerging within Protestant liberalism. Historians have tended to view liberalism as an intellectual product of the late nineteenth century, when religion and science began to face off as angry sparring partners. Thus, according to this narrative, while conservatives ignored or hardened in opposition to scholarly criticism of the Bible and secular theories of evolution, liberals sought to harmonize the two, accommodating modernity by emphasizing the ethical and aesthetic dimensions of faith rather than the supernatural. But as Leigh Eric Schmidt has argued, many decades before Charles Darwin or Karl Marx, liberalism was a distinct spiritual tradition in its own right. Its point of origin was

New England transcendentalism, an idiosyncratic but intellectually fertile movement that produced both a literature and a set of practices that would profoundly shape modern American religion.

Metaphysical writer Horatio Dresser (1866–1954) described liberal spirituality in terms of several defining elements. First of all, it had a mystical bent, seeking the divine in silence, solitude, and meditation. Liberals also emphasized the immanence of God in nature and in human personality and the value of all religious faiths. They sought not just personal but social salvation, cultivating an ethical earnestness, especially around issues of social tolerance and care for the weak. But above all, liberalism encouraged creative self-expression and “adventuresome seeking”: God was not so much a destination as an invitation to a journey. Though numerically small, especially alongside the burgeoning of evangelical denominations in the nineteenth century, this more interior and individualistic approach to religious practice would form the substratum of modern spirituality. In the nineteenth century it found expression among Quakers and Unitarians, then gradually disengaged from traditional orthodox Christianity. By the late nineteenth century, seeker spirituality was broadening its boundaries to include mystics and contemplatives from non-Western religions, incorporating the Hindu practice of yoga and the ecstatic poetry of Sufi Islam.

In the early twentieth century, seeker spirituality gathered new strength with the emergence of the New Thought movement. New Thought encompassed a variety of sects and denominations, including Mary Baker Eddy's Christian Science church, all of them assuming an intrinsic tie between mind and matter, a fundamental harmony between the supernatural and the material worlds. In that sense they drew on a very old metaphysical tradition, one that assumed a correspondence between the material and the spiritual worlds. In the nineteenth century, harmonial religions found their most popular expression in Spiritualism, a movement based on the conviction that the living could speak to the dead. It also found a home among the metaphysically inclined who followed the mystical teachings of Helena Blavatsky (1831–1891) or Henry Steel Olcott (1832–1907). New Thought borrowed the basic assumptions of harmonial religion but emphasized the transformative power of conscious thought. The believer's active perception of religious truth was key: as members of Boston's Metaphysical Club declared, “as a man thinketh so is he.” Not surprisingly, perhaps, this axiom translated fairly easily into an ethic of

self-help: for example, French psychologist Émile Coué (1857–1926) insisted that the sheer repetition of a statement about oneself (“I am successful” or “I am competent”) could lead to personal transformation. By the mid-twentieth century, even establishment Protestant figures such as the Reformed Church of America’s Norman Vincent Peale (1898–1993) borrowed heavily from New Thought assumptions in asserting the “power of positive thinking.”

The Spirituality of the Home and the Immigrant

Another important site of spiritual formation in nineteenth-century America was the home. Indeed, by the century’s end, the white Protestant middle-class family had become the standard by which all other religions might be judged and found wanting. This primacy came as the result of social changes, as the industrial revolution gave birth to the separate private sphere, a realm apart from the hurly-burly of commerce and politics, and dominated by women. It also had theological roots, most notably Congregational theologian Horace Bushnell’s (1802–1876) influential treatise on “Christian Nurture” (1847). Here Bushnell mounted a key criticism of evangelical revivalism: that it allowed only a limited role for families and did not effectively deal with the spiritual state of young children. Certainly the emotional demands of an evangelical conversion posed difficulties for the very young, and most evangelicals assumed that parents had few options beyond breaking the will in anticipation of a future decision for Christ. Alternatively, Bushnell argued that the daily routine of family life was the true crucible for spiritual growth. An infant might, as he said, “grow up a Christian and never know himself otherwise” through the regular care of godly parents, whose constant love provided the child’s earliest intimations of God.

Bushnell’s sacralization of family life encouraged careful attention to the physical appearance of a “Christian” home, based on the assumption that what family members see around them is reflected in their interior life. Devout families therefore covered parlor walls with scripture verses and pious mottos and purchased large decorative family Bibles for display. Home in this sense became a Protestant sacred space, in many ways more spiritually effective than regular worship in a neighborhood church.

Bushnell’s model of Christian nurture also bolstered the assumption that women were more naturally endowed with spiritual gifts than men: they could simply intuit religious truths that men apprehended by hard-headed reason. Certainly the evidence seemed everywhere on hand: women

formed the vast majority of religious adherents in nearly every sect and denomination. Despite—and perhaps because of—Victorian social conventions, which set the feminine “sphere” securely in the private realm of home and family, middle-class Protestant women busily engaged in moral reform and benevolent organizations. Writers such as Catharine Beecher and her sister Harriet Beecher Stowe sketched out an ambitious agenda of educational reform and social protest around slavery and abolition, without attacking directly the cultural ideal of feminine domesticity. By the late nineteenth century, even the most conservative Protestant churchmen readily agreed that women had a special gift, perhaps even a divinely appointed calling, for causes such as temperance, foreign and home missions, and care for the poor. All of these efforts, however, rarely challenged a fundamental assumption that women’s first calling was to the home and children and that their only legitimate public role expanded on that basic function.

Protestantism’s domestic piety did not, of course, always translate well across theological or social boundaries. Nineteenth-century Roman Catholicism, shaped by a long tradition of clerical celibacy and a devotional revolution that inspired the parish-centered sacramental piety of Irish immigrants, simply could not elevate godly homes into means of grace. That was a function reserved for the Mass. Indeed, Catholic churches stood on ground that a bishop had sacralized for religious use; in a strict sense, therefore, home could never be sacred space for Catholics the way it was becoming for Protestants. And in practical terms, impoverished immigrants making their way through urban New York or Boston could hardly aspire to the genteel conventions of Protestant domesticity.

Still, nineteenth-century Catholics did develop their own distinct practices of regard for feminine spirituality and for nurturing lay devotion. By the 1880s, a growing Catholic middle class embraced its own version of Protestant domesticity, made visible through a small altar in the room of a sick child, a crucifix and font of holy water at the front doorway, or statues of favorite saints. Late nineteenth-century Catholic piety also elevated the role of Mary as a kind friend and intercessor. By the early twentieth century, families were encouraged to “enthroned” the Sacred Heart of Jesus in their homes by having a priest install a picture of Christ pointing to his own broken heart, which was surrounded by a crown of thorns and afire with love. Medals and scapulars, cards with pictures of saints or attestations of miracles served pious Catholics with constant reminders of their particular religious identity.

Throughout the late nineteenth century and on into the twentieth, as Roman Catholics struggled to establish their place within a predominantly Protestant nation, distinctive forms of piety became important markers of difference. Thus in the early nineteenth century, Redemptorist, Paulist, and Jesuit priests led vigorous parish revivals, urging the faithful to deeper consecration to the Catholic Church with stark warnings against sin and the dangers of thoughtless assimilation into American culture. Italian Catholic parishes celebrated feasts of patron saints with boisterous processions through the streets of the city and public rituals of penance and devotion; societies formed to celebrate miraculous healings at Lourdes or visitations by the Virgin Mary. Catholic piety also uplifted the experience of suffering as a purifying gift of God, lending special virtue to invalids and those in pain—and spiritually separating the Catholic faithful from their ostensibly less devout Protestant neighbors.

In many ways, however, the most significant common bond between Catholic and Protestant spirituality was the immigrant experience, the religious longing of people far from home. This is an important underlying theme in many American spiritual traditions, from African American spirituals to the strict catechetical loyalties of Dutch and German settlers in the Midwest. It has even shaped American cultural understandings of sacred space, as something to be discovered and named rather than created by institutions, reflecting the diversity and mobility of the American population.

Issues

One of the most memorable subjects of sociologist Robert Bellah's influential study *Habits of the Heart* was Sheila Larson, who described her personal faith as simply "Sheilaism." Religion, she said, was "just my own little voice," urging her to love and "be gentle" with herself. For a generation of scholars, Sheila's statement became emblematic of American religious individualism, with its disregard for institutions and historical traditions, a trend exacerbated by the spiritual tumult of the 1960s. As mainline Protestant denominations began to tumble, challenged by the rising popularity of evangelical parachurch organizations, many observers assumed that Sheila-ism was just one more sign of religious anarchy in the modern era.

Certainly the 1960s marked a watershed era. By that time, Protestant domestic piety, encapsulated in the popular slogan "The family that prays together stays together," was all but unsustainable in the face of widespread social upheaval over racial and economic injustice. Newer, more

experience-oriented religious currents, most notably the neocharismatic revival in old line Protestant and Roman Catholic churches, challenged old forms and introduced new music, new devotional practices, and entirely new forms of outreach through electronic media. Moreover, new immigration laws that changed the nation's ethnic make-up also changed its religious mix to include ever higher numbers of Hindus and Buddhists from India and Southeast Asia. The so-called turning East of popular religion in the 1960s, typified in the rising popularity of Zen Buddhist meditation and the ecstatic devotion of Hare Krishna followers, fueled the impression that late twentieth-century spirituality had all but lost its moorings with historic American traditions. The rising visibility of esoteric New Age groups, boosted by high-profile celebrity advocates such as Shirley MacLaine, added to another perception that the new religions of the late twentieth century were little more than consumer-driven journeys off the beaten path.

In many ways, however, it is possible to view the entire twentieth century as an "age of the spirit," marked by intense encounter with the third person of the Trinity. The Azusa Street revival of 1906 marked the birth of the modern Pentecostal movement, with gifts of speaking in tongues (glossolalia), healing, and prophecy. Nurtured in the black and white Holiness churches of the South, this desire for a direct, immediate experience of surrender and transformation quickly crossed all the social barriers of race, ethnicity, and gender. Pentecostalism was originally bolstered by the Old Testament prophecy in Joel 2 that in the "latter days" God's spirit would fall on all alike, including both men and women. Though that egalitarian ethic did not survive the pressures of denominational institutionalization, the Pentecostal movement itself was fast becoming the common currency of new Christian outreach in Africa, Asia, and Central and South America. By the end of the twentieth century, the numbers of new converts were nearly impossible to count, with large megachurches in places such as Lagos, Nigeria, and Seoul, Korea, reaching well past the one million-member mark—and sending their own missionaries back to the United States for yet more converts.

Current interest in spirituality also draws from more traditionally religious sources, taking up a long conversation about the "spiritual life" within the Roman Catholic Church. Well before the 1960s, old monastic practices of contemplative prayer, spiritual direction, and personal retreats found new audiences of both Catholic and Protestant laypeople, spurred in part by the eloquence of Trappist monk

Thomas Merton, whose autobiography, *The Seven Storey Mountain*, became an influential benchmark after its publication in 1948. In following decades, Catholic publishing houses began to produce a deep and diverse literature on spirituality, ranging from the Paulist Press series “Classics of Western Spirituality” to the neomysticism of Dominican priest Matthew Fox. More recently, devotional writers such as Richard Foster and Kathleen Norris have begun to bridge the old Protestant–Catholic divide, drawing on the best of both traditions.

But in other ways the modern turn to spirituality allows a range of expression and a theological eclecticism that do not always fit comfortably in an institutional religious mold. Indeed, some scholars argue that the term should also include the growing number of Americans (according to some estimates around 20 percent) who identify themselves as both spiritual and secular. Spirituality, argues Robert Fuller, does not require a set of practices to be authentic but is the province of all those who struggle to understand how their lives fit into the larger cosmic order of things.

All of these developments suggest the futility of attempting to summarize contemporary spirituality or to suggest a single narrative for its development. Certainly the old assumption that the forces of secularization would obviate the need for religion has not proved a good descriptive model for the twentieth century. Religion has not died under the pressure of modernization but rather has taken on vigorous new life in a widening array of social locations. Perhaps sociologist Robert Wuthnow’s description of twentieth-century spirituality offers the most helpful roadmap for those hoping to make some sense of the contemporary situation. The major change since the 1960s, Wuthnow argues, one that has cut across every denomination and church tradition, has been a shift from a spirituality of home to a spirituality of the road, from finding God in fixed and stable places to seeking (and perhaps finding) God in the course of life’s journey. The challenges this new understanding has posed to historic institutions are obvious, especially those still oriented to a pre-1950s domestic piety that does not meet the spiritual needs of many single young adults. But Wuthnow’s image also suggests that the modern search for meaning has many destinations—religious, secular, or even a mix of both—and deep roots in the eclecticism of the nation’s spiritual past.

Spirituality: Contemporary Trends

The term *spirituality* rarely appeared in descriptions of American religion prior to 1950. Since then, and especially since the 1960s, it has become nearly impossible to discuss

American religion without at least some mention of spirituality. And in some cases, as, for example, in the various attempts that have been made to track and analyze the religious identity and practices of those sometimes referred to as the “unchurched” in American society, the language of spirituality has become indispensable. The growing awareness of the complexity and ambiguity of religious identity, especially the recognition that such identity cannot be conceived of solely in terms of formal religious belonging and practice, has changed the way we think about the meaning of religion in American life. In part this is a result of the growing religious diversity in American society. The once widely accepted paradigm of American religion as fundamentally Protestant, Catholic, and Jewish no longer accurately describes the range of American religious identity. Increasing numbers of Americans identify themselves as Buddhist, Hindu, Muslim, or as spiritual practitioners influenced by an eclectic amalgam of traditional and nontraditional religious influences. It is not simply this diversity that makes the language of spirituality significant and necessary for understanding American religion. The spiritual lives of Americans can only be partially accounted for by the categories of religious belonging that have been used most often to measure and assess religious identity. A more supple and subtle language is needed to capture the meaning of spiritual life and experience in contemporary America.

To access, describe, and interpret the often hidden and idiosyncratic spiritual lives of Americans, it is necessary to travel far beyond the conventional maps of religious belonging and ask questions that require a new vocabulary. Spiritual identity often exists independently of, even in opposition to, classic forms of religious belonging; this sensibility is reflected in the increasingly recognizable idiom by which a person describes him or herself as being “spiritual but not religious”—that is, spiritually alive but not tied to a traditional religious organization or ideology. Still, much analysis of American spirituality since the 1950s suggests that such a simple juxtaposition of the religious and the spiritual is often inadequate to describe the religious idioms and practices that characterize the spiritual experiences of growing numbers of Americans. Spiritual identity can and often does exist outside of or in opposition to traditional forms of religious belonging. However, deepening spiritual awareness often serves to enliven the more formal dimensions of religious belonging and is in turn given weight and substance when understood in relation to a historical religious tradition. Yet identifying spirituality too closely with the “inner” dimension of

religious identity may neglect its complex dependence upon and influence of social, material dimensions of existence.

In practice, *spirituality* often refers to the felt sense of the transcendent grounded in the deepest part of one’s being; still, it is increasingly understood that such spiritual awareness arises in response to concrete social, political, economic, sexual, or ecological dimensions of existence and in turn informs a person’s capacity to respond to these realities. Understanding the meaning and significance of spirituality within contemporary American society requires language and categories that are adequate to the task of tracing and interpreting what is without question a fluid, changing, and increasingly influential dimension of American religious life.

Conceptualizing American Spirituality

One of the main challenges in assessing the changes and developments in American spirituality since the 1950s has been articulating a conceptual language precise and subtle enough to capture this elusive phenomenon. Historians, sociologists, scholars of religion, and others have grappled with several issues simultaneously: defining spirituality, in particular the qualities that distinguish it from classical definitions of religion; investigating the historical sources of spirituality, especially those that have shaped American spirituality; assessing and interpreting the spiritual experience of ordinary people, often through painstaking ethnographic research; and providing typologies that can illuminate trends, tensions, and characteristic features of spiritual experience within the shifting American cultural landscape. In addition to these challenges, there is the difficulty of making evaluative judgments about the meaning of key changes within American spirituality. With the possible exception of the most objective reports based on survey data, nearly every assessment offered contains a judgment about the value of the trends being observed—that is, whether they represent a development or advancement beyond what existed before (a freedom from stultifying tradition, for example) or represent a deterioration or erosion of what was once highly esteemed (such as a careless eclecticism that reveals no respect for traditional practices and ideas). It is important when evaluating changes in American spirituality to be as honest as possible about the assumptions underlying our judgments.

A final observation has to do with the living, dynamic character of the subject. American spiritual life and practice has unfolded with astonishing speed and diversity since 1950, often reflecting changes in American society as a whole. Any attempt to describe and interpret this phenomenon needs to

acknowledge the provisional character of the analysis being offered and the importance of balancing broad typological analysis with more partial accounts of specific elements of American spiritual experience. Attention to these crucial issues of definition and interpretation is necessary to arrive at an adequate understanding of what American spirituality has come to mean and how that meaning is changing.

How should American spirituality be understood in relation to those aspects of life and practice that have traditionally been located under the category of religion? The distinction between spirituality and religion has become an increasingly prevalent and important way of addressing this question; however, this distinction is widely seen by scholars of religion as highly problematic and not fully adequate for understanding the changes in Americans' attitudes toward spirituality. In common parlance, the statement "I am spiritual but not religious" usually indicates at least two important things: (1) distance or alienation from organized religion and formal, creedal belief systems, and (2) commitment to a personal, subjectively meaningful orientation to God or the transcendent.

Survey data indicates that this phrase, or something like it, accurately reflects trends that have been increasingly observed in American life: the steady decline in the number of persons who identify themselves as belonging to a formally defined religious tradition or organization, and the increasing number of Americans for whom the quest for a personally meaningful spiritual experience now takes place outside the bounds of or on the margins of traditional religious structures. Robert Wuthnow (1998) has described this distinction as a difference between "dwelling" and "seeking," the former referring to the classical expressions of religious belonging that largely described Americans' approach to religion prior to 1950, and the latter referring to an approach that has become more common since the 1960s and involves a style of spiritual seeking that is eclectic, oriented toward personal fulfillment, and not easily located within the confines of classic religious traditions or structures. Wade Clark Roof (1999) argues that this style of seeking, which he describes under the rubric of "reflexive spirituality," has been especially important for the baby boomer generation and has in fact profoundly shaped an entire generation's approach to spirituality.

One of the primary contributions of this work has been to reveal a fluid, diffuse, and complex pattern within American religious life. Uncovering this pattern has created other interpretive challenges. One of these is the question of the value

to be ascribed to the shifts being observed. Do they represent the liberation of religion from its historic attachment to creeds, structure, and authority? Or are they a reflection of a gradual but steady erosion of religion in American public life, an unmooring of personal experience from public engagement? One of the most influential proponents of this latter position has been Robert Bellah, who in his 1985 book *Habits of the Heart* raised questions about the viability of what he saw as an emerging individualistic and therapeutic culture, especially as these qualities came to shape American's attitudes toward religion. What he memorably described as "Sheilaism"—a style of spiritual practice named for a woman who portrayed herself as having created her own personal spirituality, independent and detached from any formal tradition and not involving any noticeable public commitments—came to stand for the worst excesses of American individualism combined with endless choice. Such spirituality was shown to be shallow and isolating, incapable of sustaining a meaningful life of communal engagement.

Bellah's analysis succeeds in laying bare one of the chief difficulties of the emerging spirituality: the lack of a common language and symbol system to enable communal expression of spiritual experience. What Bellah and his colleagues do less well is evoke the pathos of Sheila's search for meaning, something shared to a greater or lesser degree by nearly all those interviewed by Wuthnow and Roof. *Pathos* describes the serious existential and spiritual questions that however imperfectly formed, have driven many seekers to look beyond the walls of church, synagogue, and mosque for spiritual meaning, in many cases leading to new personal syntheses of meaning comprised of traditional and nontraditional forms of wisdom. That such personal systems of spiritual knowledge have not yet been historically tested or in many cases found stable institutional forms raises serious questions about their long-term viability. It is important to acknowledge the troubling consumerist ethos that continues to drive many of these new expressions of spiritual seeking. But to denigrate them for their inability or unwillingness to adapt successfully to traditional forms of religious practice risks underestimating the profundity of the hunger for honest, authentic experience and practice that has come to characterize much of the spiritual climate in contemporary American culture.

One of the most serious impediments to understanding this phenomenon has been the persistence of an unfortunate tendency to dichotomize spirituality and religion. Often spirituality, characterized as the quest for authentic,

free, and personally meaningful spiritual experience, is celebrated at the expense of religion, which is characterized as conservative, dogmatic, and overly dependent on authority. Alternately, religion, characterized as preserving important traditional ideas and practices, as sustaining coherent theological thought, and as supporting communal and civic engagement, is celebrated at the expense of spirituality, which is characterized as being carelessly eclectic, individualistic, and as having little capacity for inspiring sustained public commitment. That this way of characterizing the relationship between religion and spirituality is so clearly a caricature has done little to prevent such generalizations from taking hold in the popular imagination. Nor has the scholarly discussion of spirituality been entirely free of such polarizing characterizations. There appears to be an emerging recognition of the ways in which spirituality draws upon and shapes religious traditions and of how religious traditions require sustained attention to their own spiritual resources in order to remain vital and dynamic.

But if the complex relationship between spirituality and religion in America is to be adequately understood, at least three significant developments will need to take place. First, there is a need for greater critical attention to the kinds of implicit judgments (what counts as adequate or inadequate) that are often made about the relative value of certain religious and spiritual ideas and practices. As long as these judgments remain implicit and unexamined, there will be little opportunity for developing an honest and inclusive understanding of how Americans are pursuing their quest for spiritual and religious meaning. Second, there is need for greater attention to the variety of ways in which spiritual experience is described and conceptualized within the lived experience of ordinary people. Third, there is a need to contextualize and locate expressions of spiritual experience within particular historical genealogies. Much of the confusion and contention relating to the meaning of contemporary American spirituality is rooted in imprecise or ill-conceived contextualization of the phenomenon. Many aspects of contemporary spiritual practice have deep and complex historical roots, but often these historical precedents and influences are not adequately understood, resulting in an understanding of the emerging spirituality movement as unrelated to any particular tradition.

Historical Analysis and Retrieval

There has been significant progress in recent years in situating the contemporary spirituality phenomenon within

the historical genealogies that have given rise to it. While no consensus has emerged, scholars such as Leigh Schmidt, Robert C. Fuller, and Catherine Albanese have contributed to our understanding of the deep and complex historical roots of what has come to be called in recent years “seeker spirituality.” Schmidt, in his book *Restless Souls* (2005), argues for a complex and subtle understanding of the roots of American spirituality, one that acknowledges the influence of certain ideas and practices emerging from early American Protestantism (spirituality embedded within a coherent religious tradition) but also recognizes that there was a significant disentanglement of spirituality from these model Protestant practices (or at least a significant redefinition of them). Only this disentanglement, Schmidt argues, can account for the gradual separation of spirituality from religion that eventually became prominent in the American experience and the growing sense of spirituality as having to do with unmediated mystical experience of the absolute or divine. Understanding the American invention of spirituality in terms of what Schmidt describes as a “search for a religious world larger than the British Protestant inheritance” (p. 5) helps to account for both its relationship to a coherent religious tradition and its creative expansion beyond it. It is the recurring presence of this open-ended, inclusive sensibility within American experience, the hunger for what Schmidt calls a “cosmopolitan spirituality,” that leads him to argue for the centrality of religious liberalism for understanding American spirituality. He does not mean a single, ideological perspective but rather a historically specific but malleable way of thinking that allows a wide array of spiritual movements, within Christianity and beyond, to be considered under the same broad category. This kind of careful historical-cultural analysis can describe more precisely the fluid and diverse spiritual movements unfolding within contemporary American society.

Catherine Albanese presents a distinct but complementary assessment of the roots and flowering of American spirituality in her anthology *American Spiritualities* (2001), which highlights key tendencies and trajectories in the American spiritual tradition that stretch from the earliest moments of the American experiment up to the present moment. She classifies these tendencies in terms of four ways of “knowing”: through the body (the path of ritual); through the heart (the path of feeling and emotion); through the will (the path of prophecy and social action); and through the mind (the path of metaphysics). This perceptive typology demonstrates

that spiritual life and practice in America has always moved among and between these distinct, if not always compatible, expressions.

The attention to ritual helps to show how American spirituality, more than simply a matter of private, personal preference, has always depended for its meaning on certain embodied ritual expressions. This crucial aspect of American spirituality illuminates practices as diverse as public worship in early Puritan life; Mexican American devotional practices surrounding the Virgin of Guadalupe; classic expressions of Jewish ritual life (Shabbat, Channukah, Rosh Hashanah); and the Sioux Sun Dance.

Similarly, the importance of the heart in American spirituality reflects the intense affective dimension of spiritual experience that links phenomena as wide-ranging as Anglo-American evangelicalism and the spirituality of the heart (not merely a private affair but something that also has a public expression); the sanctification traditions in African American spirituality, at the center of which lies an intense experience of the divine presence after conversion; the ecstatic expressions of various forms of Pentecostal spirituality; the spirituality of EST, with its own commitment to knowing of the heart; and the Hare Krishna movement, at the center of which lies an intense devotional practice of chanting.

So too one sees the centrality of the prophetic strain in American spirituality, in which spiritual practice becomes inextricably bound up with the commitment to social justice. Exemplary expressions of this form of spirituality can be found in Henry David Thoreau's *Civil Disobedience*; Joachim Wach's *Sociology of Religion*; Carrie Nation's spiritual-political activism; Emma Goldman's radical anarchism; and the more recent witnesses of spiritually grounded prophetic witness seen in the life and work of Martin Luther King Jr. and Daniel and Philip Berrigan.

Finally, there is what Albanese calls the "path of knowing," or the "way of metaphysics," a rich and varied part of the American spiritual tradition whose various expressions she has mapped and analyzed in *A Republic of Mind and Spirit: A Cultural History of American Metaphysical Religion*. Included under this rubric are elements as diverse as American transcendentalism; Ralph Trine's New Thought movement; Thomas Merton's retrieval of ancient Christian traditions of contemplation; Annie Dillard's ecstatic naturalism; the theravada Buddhist Vipassana meditation tradition; and the increasing presence of yoga and tai chi practice in contemporary American culture.

This kind of synthetic historical scholarship has a crucial role to play in the work of interpreting contemporary American spirituality. It enables a view of contemporary expressions of spirituality in relation to their historical predecessors and to assess both the continuities and transformations that have taken place as these traditions have assumed new forms in late twentieth- and early twenty-first-century American culture. The ideas and practices that are shaping contemporary American spirituality have particular genealogies, and attention to these genealogies is crucial to making sense of these phenomena. Such work also serves to check unnecessarily narrow assessments of American spirituality, such as those that would view it only against the backdrop of American individualism and argue for a largely privatized, disengaged view. Careful attention to these historical genealogies can maintain a healthy sense of the irreducible diversity of American spirituality. Finally, careful consideration of the historical sources of contemporary spiritual practice can deepen the work of retrieval.

This latter issue plays an increasingly significant role in American spiritual life, as individuals and communities work to retrieve and reinterpret ancient spiritual practices and ideals for contemporary use. This work entails thoughtful scholarly inquiry, something that is reflected, for example, in the efforts undertaken to publish new critical translations of classic spiritual texts. Moreover, scholarly reflection on spirituality has matured and deepened, so that it is now possible to speak of a field or discipline of spirituality. These texts and works of scholarship contribute to the effort to make ancient spiritual traditions available and accessible for contemporary spiritual practice. An impressive array of retrievals of ancient spiritual traditions, such as the revival of ancient Christian contemplative practice in the centering prayer movement; a renewed interest in the Jewish mystical tradition of the Kabbalah; an effort to articulate the shape of a "new monasticism" that can ground the spiritual aspirations of contemporary evangelical Christians; the growth of interest in embodied spiritual practices such as yoga and tai chi; and a renewed interest in spirituality that is attuned to the natural world—rooted variously in pagan, indigenous, and mainstream Western and Eastern spiritual traditions—are witnessed in the early twenty-first century.

The extent to which practitioners of these ancient spiritual traditions are aware of the historical sources underlying them varies immensely. Such knowledge is not always necessary for a person or community to benefit from exposure to spiritual tradition, but the importance of the work of

historical retrieval should not be underestimated. Most vital spiritual traditions have embedded within them some version of a process the ancient Christian monastic sources refer to as “discernment of spirits” or “testing of spirits.” Part of this work involves making crucial judgments about the value and viability of particular practices and ideals, something that often means testing them against the values and ideals that have long sustained the tradition. Awareness of the ancient sources underlying the tradition can serve as a valuable check against unwanted excesses or abuses.

Late twentieth-century American spirituality has, unfortunately, produced numerous cases of excess, including the mass suicides that occurred in Jonestown, Guyana, in 1978 and Waco, Texas, in 1993. While neither of the abuses in these cases can be attributed to any single source, the kinds of checks provided by adherence to historically sanctioned traditions were not present in either of these cases. There are other cases, less extreme but no less pressing for the participants, in which the question of how to interpret traditional sources bears directly upon the ongoing spiritual viability of the tradition: the ongoing struggle to address the marginal status of women in the Catholic Church and the efforts to establish a more egalitarian vision of Catholicism; the impact of continued ordination of homosexuals in the Episcopal Church and the deepening divisions (even potential schism) this issue is creating in that community; the efforts underway in certain parts of the American evangelical community to reclaim a more inclusive, socially progressive vision of their tradition; the challenges facing American Muslims as they search out a vision of Islam that honors the traditions of that religion while also acknowledging the complexity of adapting to life in post-September 11 America.

At the root of each of these struggles is a challenge to determine how to live deeply and authentically out of a given spiritual tradition, and how to allow that tradition to grow and develop without losing hold of its enduring ancient character. One of the great issues Americans face is how to express their spiritual traditions in ways that remain vital and meaningful in the twenty-first century.

Emerging Trends in American Spirituality

The tensions and challenges described account for only some of what rightly deserves to be placed in the category of American spirituality. Much is still coming into being and is so fluid in both its forms and expressions that it remains difficult to describe or categorize. In the early twenty-first century, four key issues appear central to any

future discussions of American spirituality. The first of these has to do with the growing interest in what has come to be called “lived religion.” A second issue is the increasing awareness of the irreducible particularity and diversity of spirituality, whether this is understood as residing primarily in race, ethnicity, gender, generational differences, or in the distinct character of religious traditions themselves. Third, in keeping with Albanese’s sense of the importance of the prophetic strain in American spirituality, there is a growing attention to what some are calling “engaged spirituality.” Finally, there is the enduring question of how to balance the requirements of tradition and innovation in the expression of spiritual experience.

The category of lived religion has become an increasingly important means of describing and analyzing spiritual experience in American life. Taking its name from a long-standing tradition in the French tradition of sociology (*la religion vécue*), historian David Hall and his colleagues, in the book *Lived Religion in America* (1997), see “lived religion” in the North American context in more expansive terms. While it is still indebted to sociological theory and methods, it depends just as much on cultural and ethnographic approaches to the study of religion to interpret American religious history. The focus is on what Hall describes as “religion as practiced . . . the everyday thinking and doing of lay men and women” (p. vii).

The advantages of this approach to the study of religion are many, not least of which is a greater ability to track what Wade Clark Roof, following Mary Catherine Bateson, has called “the arts of improvisation.” One of the most significant expressions of this improvisation, Roof suggests, is the “creative refocusing of religious resources,” or “recombination of symbols and practices,” often in response to personal or collective crisis. And, in an echo of Albanese’s earlier observation about the importance of ritual in American religious life, Roof notes that ritual is often precisely the means by which this creative recombination of religious symbols often occurs, whether it takes the form of the creative reimagining of ancient rituals or the invention of new rituals (1999).

The importance of improvisation or “blending” of traditions comes through strongly in Meredith McGuire’s study, *Lived Religion: Faith and Practice in Everyday Life* (2008). She calls attention to the importance of what she calls the “logic of lived religion,” the fact that in the lived experience of persons and communities, one does not always observe a logically coherent belief system but rather a creative blending of traditions and practices that requires and calls forth from

both persons and communities a “practical coherence.” This careful attention to what works, to what enables a person or community to make sense of the often disparate elements of the world and culture, is one of the hallmarks of much contemporary spiritual practice.

How this creative blending of practices and traditions is characterized in contemporary culture varies widely. Sometimes it is seen as a new, growing edge of American spiritual life, other times as a disturbing and radical challenge to traditional beliefs and practices. That the reality itself cannot be reduced to such a simple dichotomy does little to prevent such characterizations from permeating contemporary cultural awareness. Still, as the twenty-first century unfolds, one of the main challenges for those seeking to understand, interpret, and deepen American spirituality will be the need to find a conceptual language supple enough to describe the ever-shifting and subtle ways in which spiritual practices and religious traditions shape one another. Works such as Ruth Frankenburg’s detailed ethnographic study, *Living Spirit, Living Practice* (2004), or Nancy Ammerman’s *Everyday Religion* (2007), or Robert Orsi’s *Between Heaven and Earth* (2005) are suggestive of the kind of conceptual subtlety and careful observation of ordinary spiritual practice needed to avoid overly simple dichotomies between religion and spirituality and arrive at a more adequate understanding of American spiritual life.

This same principle applies to the growing awareness of the irreducible diversity and specificity of American spirituality. If one interpretive challenge involves the need to find common features across a broad range of spiritual practices, an equally compelling challenge is the need to recognize and describe the character of the different expressions of spirituality that comprise that range. Attention to this diversity and specificity takes different forms. One of the most important emerging trends is the awareness of the character of the spirituality of young people, whether the adolescents whose spiritual life and practice is studied in Christian Smith’s *Soul Searching* (2005), the college students whose spirituality is being tracked in A. W. Astin’s ongoing UCLA study, or in Donna Freitas’s analysis of the relationship between spirituality and sexuality among college students, *Sex and the Soul* (2008).

Greater attention is being given to the ways that race, class, gender, and ethnicity shape spiritual experience. Emerging work in this area is itself diverse and includes historical-descriptive studies of the spiritual lives and practices of particular communities, as well as critical theological reflections on the nature of a particular community’s spiritual

experience. Analyses of the relationship of gender and spirituality includes both critical, feminist analysis of particular religious traditions and constructive efforts to reimagine spiritual experience itself through careful attention to the specific (albeit diverse) character of women’s experience. And while it once seemed possible to describe the spirituality of Americans within the context of Jewish and Christian symbols and traditions alone, as Diana Eck and others have shown, the growing awareness of religious diversity within American culture means that discussions of spirituality can no longer be framed in such narrow terms.

So, too, the notion of American spirituality as narrowly individualistic and unengaged in civic life is increasingly being challenged by an awareness of the currents within American spirituality that invite direct engagement with social and political concerns. This takes many different forms, including the nonviolent resistance advocated by Martin Luther King Jr. and Thomas Merton in the 1960s to more recent expressions that reflect the need to bring spiritual resources to bear upon a wide range of social and political challenges. This broader pattern of spiritually motivated social engagement or “engaged spirituality” (Stanczak, 2006) has become one of the most significant features of late twentieth- and early twenty-first-century American spirituality.

A final word concerns the question of how American spirituality can continue to honor both tradition and innovation. Much of the rhetoric surrounding the shifting landscape of American spirituality since the 1950s has pointed to the novelty of what is emerging, its difference from and perceived superiority to what it has replaced, yet the emerging expressions of spirituality, which are indeed marked by novelty and change, nevertheless often draw on older patterns of spiritual practice. The vitality of what is emerging often depends for its meaning on the richness and depth of earlier traditions. The question of how to maintain this delicate balance as American spirituality continues to grow and develop will no doubt continue well into the twenty-first century.

Sport(s)

From Puritans puzzling over "lawful sports" to professional triathletes practicing "Zendurance," sports have long influenced America's religious culture. A close examination of this relationship reveals how Americans have practiced religion, practiced sports, and articulated their most cherished values—all at the same time. Traditional religion is not the only lens from which to examine this connection. More generally, fans and athletes sometimes transform their athletic arenas into sacred space. From here heroes emerge, myths take form, symbols convey powerful meaning, and rituals unify scores of devoted followers. Put simply, religion can be at work *in* a sport (a touchdown prayer, for example), but religion can also be at work *as* a sport (such as a distance runner describing a run as a "place to commune with God"). In either case mapping the meeting points of religion and sports reveals a unique set of pathways along America's complicated religious landscape.

Religion and Sports in Colonial and Early America

In 1636, living among the Huron in Ontario, Jesuit missionary Jean de Brébeuf penned an account of an Indian stick-and-ball game that he called "lacrosse." (The sticks reminded him of the crosier carried by bishops in religious processions). A sorcerer, wrote the missionary, prescribed the game to a sick man as a cure, but the tribe also played for communal health. Lacrosse probably originated in the early fifteenth century among the Huron and Iroquois tribes in the St. Lawrence River region. As it spread, both the game's rules and ritual behaviors adapted to local customs. In 1890 anthropologist James Mooney described the religious practices apparent in the Cherokee version of lacrosse. Male players began preparing weeks in advance, undergoing a series of cleansing rites and avoiding certain foods and sexual intercourse. On game day, spectators pounded drums and cheered, while medicine men wandered the sidelines, appealing for divine assistance on behalf of their tribe and hexing opponents. The game was often violent. With severe injuries and even death occurring, the Cherokee tagged lacrosse "the little brother of war." Still, tribal mythology emphasized fair play. One legend tells of a lacrosse player so eager to win that he used his hand rather than the stick to pick up the ball. The defiled ball, itself a sacred object, soared upward into the sky and became the moon. Tribe members recount this myth when the moon wanes, emphasizing both

a requirement to uphold the game's rules and, by inference, their entire tribal value system.

Lacrosse was not the only sacred sport for Native Americans. In other regions and tribes, Indians imbued everything from kickball to relay races with religious significance. In contrast, the Puritans of colonial New England would have likely recoiled in horror if they had witnessed such a seamless merging of faith and athletics. Indeed, Puritans imported to North America an antisport theology born from religious conflicts in Europe. Both before and after the Protestant Reformation, British tradition dictated that Sunday mornings were reserved for church services, after which time people could enjoy "festive games" such as footraces, "skittles and ninepins" (a rudimentary form of bowling), and peasant football. Puritans, who envisioned themselves as Church of England reformers, believed that these Sunday afternoon games carried with them the taint of Catholicism. Accordingly, they endeavored to eliminate this tradition in their homeland but had limited success. In New England, however, Puritans enacted strict Sabbatarian laws and banned all recreations associated with British "festive culture." They also outlawed horseracing, shuffleboard, card games, cockfighting, and any other sport that they believed led to sinful behavior, such as drinking, gambling, and idleness.

Despite their pronounced antisport theology, Puritan limitations on leisure activities were not absolute. Community leaders identified certain "lawful sports," or activities that were considered harmless distractions or able to serve some practical end. For example, children were permitted to swim in summer, skate in winter, and play football and bat-and-ball games if these games did not become overly violent. And men could hunt since this provided sustenance. Moreover, young male colonists were legally required to participate in "militia training days," which one 1704 observer in Connecticut compared to the ancient Greek Olympics. Foot races, wrestling matches, and shooting contests were featured activities. Also, despite the legal prohibitions, merchants sold packs of cards; gardeners groomed bowling greens; and innkeepers provided venues for shuffleboard, wrestling, horse races, and even cockfighting. Put simply, people found a way to play whatever they wanted to play, with or without official sanction.

Unlike Puritans in New England, Anglican ministers in the Southern colonies tended to mirror their European counterparts. Accordingly, people freely played and watched a wide range of recreational activities—until the Great Awakening of the 1730s. Thereafter, Methodist circuit riders repeated the familiar line that sports led to gambling,

drinking, and Sabbath desecration. As the decades passed and the new nation took form, evangelical churches settled in the South, and preachers continued denouncing sports. Not everyone heeded these moralistic prescriptions, however. Cockfighting remained enormously popular for black and white men of all classes. Published in South Carolina, *Grit and Steel*, a widely read cockfighting magazine in the nineteenth century, celebrated cocks with demonstrated courage and tenacity. The sport and others like it fed into a male "code of honor," which was decidedly aggressive and frequently destructive. The honor-driven activities of men directly conflicted with feminine and evangelical ideals of home and church, which placed priority on quiet prayer, harmony, and self-control. Antebellum ministers relied on sermons and church discipline to suppress the male sporting culture. But by the late nineteenth century, evangelicals became more involved in public life and advanced a wave of morality legislation, which included prohibitions on Sunday play and certain sports deemed excessively violent.

Ironically, in antebellum America, as the North and South marched toward war, Protestant ministers of both sections seemingly shared an antisport theology. They also witnessed the disparity between what they said and what people did. This would change after the Civil War. In the North's industrial centers, a movement known as "muscular Christianity" gained momentum, purging old Puritan prohibitions on sport and redefining the relationship between playing and praying. In a short time this ideology spread to nearly every region and every faith community in America.

Muscular Christianity

The phrase "muscular Christianity" first appeared in Englishman T. C. Sandars's 1857 review of Charles Kingsley's novel *Two Years Ago*. Thomas Hughes's *Tom Brown's School Days* (1857) elaborated on the muscular Christian ideal, suggesting that a combination of religious commitment and physical strength could fortify a moral sensibility that would shield young men from the supposed sinful pressures of the city. While popular in industrial England, muscular Christianity made little headway in antebellum America. There were exceptions, however, mainly in liberal Protestant circles. In the 1850s Congregational minister Henry Ward Beecher, while initially a stout opponent of sports, discovered that "muscular games" could positively influence one's health and faith, if they did not lead to drinking and gambling. He admired prizefighters in particular for their self-imposed dietary and sexual restrictions.

After the Civil War, northern Social Gospel ministers began sounding more like Beecher. Proponents of the Social Gospel advanced a this-worldly theology aimed at “Christianizing” society. A fit, morally upright body, ministers reasoned, could better transform America and the world. Congregational clergyman Washington Gladden was a leading articulator of this position. An avid baseball fan, he suggested that the game’s reliance on teamwork reflected the Social Gospel’s emphasis on working together for the common good. Moreover, he called sports a “means of grace” that could equal the spiritual edification of a prayer meeting.

Gladden shied away from church-sponsored sports activities, but leaders of “institutional churches” were less reluctant. Under the direction of Rev. William S. Rainsford, St. George’s Episcopal Church in Manhattan was a prototypical institutional church of the 1890s. St. George’s five-story Parish House kept its doors open every day of the week, offering a host of services and programs. The entire third floor was reserved for athletics, with a large gymnasium as the central feature. By the turn of the century, St. George’s sponsored everything from croquet and tennis to basketball and baseball.

Prior to Rainsford’s tenure, St. George’s was a foundering church, but by the late 1890s over 1,000 people regularly attended Sunday services. His enlistment of sports and recreation no doubt contributed to this change, but there is more to the story. For Rainsford and other muscular Christians, the playing fields were a place to teach young men how to be “masculine.” In the nation’s growing cities, women had become increasingly visible in public life and churches, while men worked office jobs that required little physical exertion. An anxious cast of men such as Theodore Roosevelt worried that this signaled the “feminization” of America. Roosevelt would enroll all of his sons at the exclusive Groton School, founded in 1884. At this Episcopal preparatory school, athletics was a core element of the curriculum. School founder and later headmaster Endicott Peabody had become familiar with the muscular Christian movement during his schooling in England and brought to Groton this blend of athletics, piety, and academics.

The Groton School and other preparatory academies became “manliness” training grounds for the sons of elite families. For the white middle class, there was the Young Men’s Christian Association (YMCA). With origins in London in 1844, the YMCA first appeared in New York City in 1852 and then spread across North America. Intended as a

haven for young men and an alternative to saloons and brothels, the YMCA did not originally include physical recreation as part of its mission. In 1865 there were no YMCA gymnasiums, but by 1890 there were approximately 400 gyms, with at least half of the YMCAs employing a physical activity supervisor. At this point most directors agreed with Luther Gulick, head of physical education at the International YMCA Training School, who advised that the gym should always serve as a location for “leading men to Christ.”

The YMCA managed to solicit some of the most prominent Christian athletes of the era, including the noted revivalist Billy Sunday. Sunday was a gifted professional baseball player with the Chicago White Stockings when, in the summer of 1886 after leaving a bar, he and his friends came upon a street preacher. Inspired, Sunday soon converted and became a passionate advocate for the faith. At YMCAs across the nation, Sunday drew enormous crowds who clamored to hear the charismatic baseball player recall his faith journey. In 1891 Sunday quit baseball for a position with the YMCA as an evangelist, teacher, and emissary. Athletic allusions saturated his sermons. He directed crowds to lead a “ninth-inning rally” for Christ and to fling a “fastball at the devil,” and he called Jesus “the greatest scrapper that ever lived.” Moreover, his stage performances were demonstrations of physicality and aggressiveness, as he slid down the center aisle and threw chairs across the stage.

While Billy Sunday blended faith and athletics at revivals, other Christian athletes brought religion to the playing fields. In 1884 Amos Alonzo Stagg attended Yale, where he played baseball and planned to become a minister. But football would have the strongest appeal for Stagg, who spent the majority of his 102 years coaching the sport. He served tenures at Springfield College in Massachusetts (1890–1891), the University of Chicago (1892–1932), the College of the Pacific in California (1933–1946), Susquehanna University in Pennsylvania (1947–1952), and Stockton Junior College in California (1953–1958). An innovator, Stagg introduced the tackling dummy, the Statue of Liberty play, the T-formation, placekicking, and several uniform advances. All the while, the “Grand Old Man” of football forthrightly announced his Christian values, encouraging players to avoid drinking, smoking, and profanity. He was not perfect. The “hidden ball play,” for example, drew criticism from opponents who labeled it “un-Christian.” He reportedly allowed ineligible players into games, and as athletic director at the University of Chicago, Stagg supposedly kept a secret budget for his football team.

One of Stagg's colleagues was James Naismith, a Presbyterian minister who left an enduring mark on muscular Christianity and the sports world. On January 20, 1892, eighteen young men gathered at a YMCA gym in Springfield, Massachusetts, to play his newly invented game called "basketball." Practically, Naismith wanted basketball to meet the physical needs of young men who grew restless during the Northeast's long winter months. More important, he designed the game to be an expression of Christianity, emphasizing grace and beauty rather than brute strength and violence. To accomplish this he placed the basket at ten feet to avoid blocked shots, and he levied "fouls" for rule infractions such as unnecessary contact. But the game was still too intense for the middle-aged businessmen who came to the YMCA on their lunch breaks. In 1895 Naismith's associate William G. Morgan took up the challenge of creating a more genteel game. "Mintonette," as he would call it, was a hybrid of basketball, tennis, and handball. It would soon become known as "volleyball." So alongside new ideas about gender, exercise, and religion, muscular Christians also created new sports that would forever change American athletics.

Women, Sports, and Muscular Christianity

Basketball and volleyball were popular among both men and women in the muscular Christian era. By the 1890s the Young Women's Christian Association (YWCA) was the center of female physical activity in the urban North. First appearing in Boston in 1866, the YWCA mirrored the evolution of its male counterpart. While neither began with a focus on athletics, the Associations would both make sports central to their respective missions. Motivating this change at the YWCA was a consensus that exercise was a fitting antidote to the deleterious forces of urban life, which included physical laxity. Writing in *Playground* magazine in July 1909, fitness advocate Helen McKinstry posited that a "strong, full-blooded, physically courageous woman" would make a better teacher, mother, and wife than a "delicate" and "anemic" woman would. She did not, however, endorse competitive sports. Instead, she echoed Luther Gulick, who two years earlier had theorized that competition would make women too manly and threaten their reproductive capabilities. He prescribed "recreational sports" for women, such as noncompetitive forms of swimming, basketball, tennis, volleyball, golf, archery, and horseback riding.

The competitive spirit of women could not be denied, however. One year after Naismith introduced basketball to men, Senda Berenson Abbott brought the game to women

at Smith College. Other schools quickly followed suit. By the 1930s the women of Immaculata College in Philadelphia, Pennsylvania, began playing basketball, and in 1972 the talented "Mighty Macs" won the first of their three college national championships. Through the decades fans and families packed gyms to watch them play. Meanwhile, the players delighted in their newfound status and invented an array of unique religious practices. In addition to the standard series of pregame prayers (the Hail Mary and Our Father), the Catholic cagers gathered to recite their own "O God of Players."

Muscling into the Mainstream

As the account of Immaculata indicates, the story of religion and sports in America is not simply a mainstream Protestant one. In 1914 an obscure Christian millennial group based in southern Michigan called the "House of David" launched a traveling baseball team. Comprised of men who adhered to the group's prescription neither to cut their hair nor shave their beards, the players were both uncommonly good and a curious sight. Enterprising community members capitalized on this, selling souvenirs with depictions of the shaggy baseballers. Crowds at the games began to thin in the 1920s, just around the time that the House of David began recruiting clean-shaven "ringers." Nevertheless, during the muscular Christian era religious groups like the House of David used athletics to introduce themselves to the mainstream, draw in potential converts, and inculcate their own gender ideals and moral values.

In 1903, while Congress deliberated whether to seat a Mormon senator, the "Salt Lake City Mormons" joined the Pacific Northern League. By playing baseball in non-Mormon locales, the team put a human face on Mormonism. The idea of "muscular Mormonism" was not new in the early twentieth century. Since their origins in the 1830s, Mormons had tended to value physical and spiritual health, celebrating the strength of the pioneers who had endured a multitude of hardships as they traveled from New York to Illinois and finally to Utah. As Mormons entered the nation's sporting world, they both familiarized themselves with outsiders and practiced their own values of fortitude, strength, and temperance. When a small band of Mormon men won a basketball tournament in 1910, admirers credited the victory to the team's observance of "Word of Wisdom," a dietary code prohibiting the consumption or use of alcohol, tobacco, caffeine, and large quantities of meat. Their success, in other words, was a direct result of being observant Mormons.

From 1901 to 1938, twenty-seven boxing world champions were Jewish. Benny Leonard was among the most well-known. Learning the trade in the New York City ghettos like many of his fellow Jews, Leonard held the lightweight championship from 1917 to 1925. Novelist Budd Schulberg recalled watching the boxer in his prime, climbing into the ring with the Star of David on his trunks, giving a sense of pride to the beleaguered Jews of the city. While Leonard battled anti-Semitism with his fists, baseball great “Hammerin’” Hank Greenberg used a wooden bat. With a towering 215-pound frame, Greenberg—a New York native and son of Jewish immigrants—wielded a powerful bat for the Detroit Tigers, amassing 331 home runs and 1,276 RBIs (runs batted in), while maintaining a .313 lifetime batting average. In Detroit, anti-Semitism lingered in the air, as the radio demagogue Father Charles Coughlin joined a host of others in blaming Jews for the Depression. At the same time, however, Tigers fans venerated Greenberg’s skill and ability while also becoming familiar with Jewish customs. In the midst of a tight pennant race in 1934, Greenberg announced that he might forgo a key game against the Tigers’ chief rival, the Boston Red Sox, because the game fell on the Jewish High Holiday of Rosh Hashanah. In response, Anglo sportswriters and fans consulted area rabbis who explained that unlike Catholic bishops, a rabbi could not offer dispensation. Torn between his religious and athletic duties, Greenberg played, reasoning that his responsibility to the team and community took precedence. With two home runs, Greenberg led Detroit to a victory and later speculated that his performance validated his decision. Throughout his career, Greenberg was something of a standard-bearer for American Jews, offsetting prejudice in a time when prejudice was in no short supply.

Notre Dame University’s football teams played a similar role for Catholics. In the early decades of the twentieth century, Notre Dame’s storied tradition took shape and grew further after Knute Rockne’s appointment to head coach in 1918. The team’s chaplain, Father John Francis O’Hara, carefully crafted Notre Dame’s religious identity. He sprinkled holy water on the field, held pregame Communion ceremonies, and distributed saint medals to players. The distinctively Catholic Notre Dame teams defeated America’s finest Protestant and secular universities. They also symbolized a powerful response to nativism, an ideology flourishing among some white, native-born Protestants who worried that America’s growing immigrant population would erode the nation’s fundamental qualities. A principal conviction among nativists was that Catholics could never be “true Americans,” since

their primary allegiance was to the pope in Rome. In Indiana—the heart of Northern nativism at this time—Notre Dame’s players unabashedly showcased their athleticism, piety, and patriotism, and in the process they helped American Catholics maneuver past nativist intolerance and into the mainstream.

Muscular Christianity in the South

After the Civil War, muscular Christianity flourished in the North, and the ideals feeding the movement extended into different regions and religions. Southern preachers, however, kept sports at arm’s length. The brutality of nineteenth-century prizefighting raised the hackles of many Southern white Protestants. Prior to the introduction of padded gloves in the 1890s, bare-knuckle fighting was the norm. Matches could last for dozens of rounds, with competitors often left unconscious or even dead in the ring. Clergymen led the charge to criminalize prizefighting, but laws banning the sport were rarely enforced. In 1882 ministers in New Orleans beseeched public officials to stop a heavyweight bout between Paddy Ryan and John L. Sullivan, claiming that the event would attract “disreputable” people who would leave a “moral stain” on the city. Officials ignored both the ministers’ plea and the Louisiana law prohibiting prizefighting. After the fight one journalist mocked the protest, reporting that crowds were perfectly well mannered.

Football drew similar clerical rebukes. Critics bemoaned that Vanderbilt in Tennessee, a Methodist school, had a football program. In response, school officials enforced academic requirements for players and prohibited play and travel on Sundays. Other schools had decidedly less success in keeping dissenters at bay. In 1887 John Franklin Cronwell, a Pennsylvania native, began his tenure as the president of Trinity College in North Carolina (which would later become Duke University). A Yale alumnus, he argued that football would improve the moral character of young men, excite the student body, and enhance the school’s appeal to prospective students. Trinity soon started its program and experienced a measure of success, but rumors of cheating, drinking, parties, and foul language spread among the president’s opponents. Under pressure, Cronwell resigned in 1894. The new president, a Southern Methodist minister, dissolved the football program, deeming the game inherently evil. Wake Forest in North Carolina, Emory in Georgia, and Henry College in Virginia quickly followed Trinity’s lead and abolished their programs as well.

The tide shifted by the 1920s when college administrators could no longer tell war-hardened veterans of the Great War that athletic contests were too dangerous. Moreover, the passing decades brought a new generation of evangelicals who were more tolerant of sports than their predecessors had been.

“Sportsianity”

In 1947 at a Billy Graham Crusade in Charlotte, North Carolina, world-class miler Gil Dodds dazzled the crowd by running an exhibition race and giving his testimony after. The event was symbolic of a new relationship between conservative evangelicals and athletics, not only in the South but also nationwide. After World War II, many from this camp came to recognize that high-profile Christian athletes could effectively promote the faith to a broad audience. Recent decades have seen a proliferation of “born-again” athletes, or “Sportians” as sportswriter Frank Deford labeled them, who endorse Jesus just as ardently as they would a new sports product. Organizations such as the Fellowship of Christian Athletes have helped nurture this culture of strident religious advocacy on the field of play by, for example, instituting Bible studies and prayer services in locker rooms.

The generally conservative theology of “locker room religion” has been the subject of controversy. Defensive lineman Esera Tuaolo, a ten-year veteran of the NFL, retired in 2000 and soon after announced that he was gay. A professed Christian, Tuaolo recalled feeling alienated and disparaged while at a locker room Bible study meeting, which happened to be on the presumed sin of homosexuality. In 2005 Ryan Church, an outfielder with the Washington Nationals, asked the team’s volunteer chaplain if his ex-girlfriend, a Jew, was destined for hell. The chaplain indicated that she was. The exchange reached the newspapers, causing outrage from the Jewish community and beyond. Locker room religion has not always been exclusionary, however. Earl Smith, a team chaplain with the San Francisco Giants from 1998 to 2004, suggested that his duty was to minister to the faith needs of all players, no matter if they were Muslim, Buddhist, Jewish, or Christian.

Religious Diversity and Sports in Contemporary America

As Chaplain Smith’s encounters would indicate, in contemporary America many of the world’s religions are represented in America’s athletic arenas. Islam arrived most notably through African American converts, such as boxer

Muhammad Ali. Raised in Baptist and Methodist churches, Ali (formerly Cassius Clay) attended a Nation of Islam (NOI) meeting after the 1960 Rome Olympics where he won a gold medal. The NOI’s message of racial pride and separatism initially appealed to the boxer, and the religion’s prohibitions on alcohol, liquor, drugs, and sex complemented his athletic routine. In 1964 Ali announced his conversion and name change after defeating Sonny Liston for the heavyweight title. Many white journalists and fans were wary. For them black Muslims evoked images of violent revolutionaries, and Ali’s iconoclastic proclamations, sometimes aimed at the U.S. government, only reinforced these negative perceptions. The jeers grew louder when he refused military service in 1967, citing religious reasons. But after serving his sentence, shunning the NOI’s separatist message, and staging epic battles against Joe Frazier and George Foreman, Ali’s heroic stature grew. When Ali lit the flame at the 1996 Atlanta Olympics, sportscaster Bob Costas called the event a “distinctively American moment.” Despite the boxer’s rocky past, Costas speculated, Ali’s talent and warm personality had transcended politics and made the boxer “beloved by everyone.”

Arab American Muslims have also made space for themselves in America’s sports world. They have, at times, had to negotiate between the customs of their faith and the customs of American sports. While training for the 2008 U.S. Olympic marathon trials, marathoner Khalid Khannouchi, a native of Morocco and naturalized American citizen, chose to observe the Ramadan fast. To complete 100 miles per week, Khannouchi started his runs at midnight or later so that he could eat and drink proper amounts and still maintain the fast. While he did not make the Olympic team, and the fast might have played a part in this, Khannouchi credited his spiritual and physical health to his Muslim faith.

Other endurance athletes, such as eight-time Ironman winner Paula Newby-Fraser, have drawn upon Eastern religions, such as Zen Buddhism, for insights on training and racing. Writing a foreword for Shane Alton Eversfield’s *Zendurance* (2004), Newby-Fraser speculated that too many elite athletes obsess over results yet ignore their “spiritual fitness.” To correct this imbalance, she advocated “Zendurance,” a religious practice that promises to transform exercise into “moving meditation.” Similarly, a mixture of Zen meditation, New Age spirituality, distance running, and holistic healing are defining features of a Boulder, Colorado, commune named Divine Madness. Mark Tizer started the group in the 1970s and incorporated distance running in 1991, after

watching a six-day race at the University of Colorado. Sometimes covering distances of more than 100 miles at a time, group members believe that running opens doors to heightened spiritual awareness. Tizer is a controversial figure. Some outsiders pejoratively label him a “cult leader,” and former members have filed a lawsuit, charging Tizer with a host of misdeeds including mind control, coerced abortions, sexual impropriety, and emotional abuse.

Alleged indiscretions notwithstanding, *Divine Madness* is part of a broader trend of applying Eastern religions, along with a mix of other faiths, to sports such as golf, tennis, baseball, and—perhaps most notably—basketball. In *Sacred Hoops* (1995), NBA (National Basketball Association) coach Phil Jackson described how he built a successful team with the Chicago Bulls by using the teachings of Zen, Christian, and Native American religions. When he took over the team in 1989, Jackson noticed that players relied almost exclusively on their superstar, Michael Jordan. To be successful, Jackson theorized, the Bulls would need to have a sense of team cohesion and selfless compassion. His unique basketball philosophy resulted in the team’s capture of six NBA titles in the 1990s.

Sports as Religion

According to Phil Jackson, creating a successful basketball team “is essentially a spiritual act” because individuals must “surrender their self-interest for the greater good so that the whole adds up to more than the sum of its parts” (1995, p. 5). Jackson’s words indicated that for him, the game of basketball itself had religious significance, apart from the eclectic religious mix that he brought to it. While touch-down prayers and Notre Dame football are prime examples of religion *in* sports (athletics serving a specific religious end), Jackson’s ruminations call out for another category of consideration: religion *as* sports (athletics as a religious end in itself).

This *in/as* distinction is not perfect, with examples routinely resting along a continuum between these poles. Consider game six of the 1975 World Series between the Boston Red Sox and Cincinnati Reds, which Boston needed to win to force a final game. The game went into extra innings, and in the bottom of the twelfth, Red Sox batter Carlton Fisk hit a ball deep into left field. As it soared down the baseline, the crowd joined Fisk in willing the ball into fair territory. It struck the pole, counted as a home run, the crowd erupted, and the organist began playing Handel’s “Hallelujah Chorus.” Soon church bells rang throughout New England, and as journalist John Rosengren observed, Fisk became a

“lower-case messiah.” Admirers praised Fisk and expressed their joy by using overt religious expressions, all the while blurring the line that supposedly separates baseball and religion.

Comparison is an oft-used tool in the study of sports as religion. Within the Christian tradition, for instance, the sacrament of baptism juxtaposes pollution and purity, promising to wash away original sin and sanctify the soul. One might find similar purification exercises in sports. In 2006 former Maine Senator George J. Mitchell launched an investigation into professional baseball’s “steroid era.” He produced a 409-page document, linking 89 players to illegal performance-enhancing drug use. Mitchell demonized the drug users and lamented that the “real victims,” or players who did not use performance enhancers, would thereafter have to endure the suspicious glare of cynical onlookers. Responding to the report, congressional leaders performed a sort of civic cleansing ritual: a hearing that called upon professional baseball to bleach this stain. The proverbial “dirty athlete” became the symbol of impurity, corruption, greed, and disorder. Critics have argued that Congress has better things to do, but the hearing still represented a remarkable effort to purge a perceived sporting sin.

Similarly, in 1999 the Florida state senate took steps toward protecting a favored local symbol, the Florida State University (FSU) “Seminoles.” Various opposition forces, such as the American Indian Movement, had been protesting to have the mascot removed. With a vote of 38–0, however, legislators passed a bill to make the mascot the legal property of FSU. To be clear, FSU officials prefer to think of the Seminoles as a “symbol” rather than a mascot. Prior to all home football games, a costumed, horse-mounted, spear-holding warrior bearing the likeness of the great Seminole leader, Chief Osceola, gallops on to the field. While the symbol is beloved by fans, opposition groups rightly note that the Seminoles neither rode horses nor threw spears. Moreover, they have objected to FSU’s athletic logo, which displays the head of an Indian ostensibly reared back in a “war chant” position. This awakens a memory of Osceola’s inglorious 1838 death during the Second Seminole War, when federal troops captured him under a truce flag, and killed and then decapitated him. A St. Augustine pharmacist soon displayed the jar-encapsulated head in his storefront window. Complaints about the “symbol” generally fall upon deaf ears, as Seminole tribal leaders have consistently and eagerly supported FSU’s use of it. Nevertheless, this conflict has become something of a “holy war” between those who

endeavor to protect the sacred traditions of the Seminole tribe and those devoted FSU fans who want to protect their own quasi-sacred football traditions.

The process of identifying religious themes, expressions, and ideas in athletics has drawn criticism. Sports historian Allen Guttman (2004), for example, has argued that ancient games, such as the Greek Olympics, were religious rituals first and contests second. In the case of modern sports, he concluded that “religion remains on the sidelines” (p. 25). For those sharing Guttman’s perspective, a hard line separates the sacred from the secular. Without a doubt, claims that sports are a religion are often overstated, but very few scholars have gone to this extreme. Instead, they have tended to echo theologian Michael Novak, who in his landmark book *The Joy of Sports* (1976) theorized that sports represent something of a “natural religion,” not to be confused with traditional religions such as Methodism and Catholicism. Athletics, he elaborated, flow from a “radically religious” human impulse to experience freedom, symbolic meaning, and perfection. While utterly inconsequential on the one hand, sports can also become utterly consuming, providing a vicarious thrill of life’s extremes. At the height of a contest, winning and losing can afford brief interludes with life and death, heaven and hell, and good and evil.

Novak’s insights offer a method for understanding someone like George Sheehan (1978), a medical doctor and philosopher of distance running, who called running “a place to commune with God,” rather than a religion itself. For many others their favored sports serve a similar purpose. To relegate sports to the sidelines would divert scholarly attention away from this very real force influencing the American religious landscape. Moreover, understanding the compelling nature of sports might help scholars explain why they have always been part of the nation’s culture, despite occasional efforts to demonize or contain them.

Directions for Future Study

Future studies of religion and sports will need to explore new territories and challenge the established narrative. As it stands, the historical account of religion and sports revolves around muscular Christianity—its rise to prominence, widespread influence, and lasting mark. Meanwhile, the athletic experiences of others—such as women, ethnic minorities, and racial minorities—remains understudied. In 1908 pugilist Jack Johnson knocked out Tommy Burns to become the first black heavyweight champion. Brash, controversial, creative, and talented, Jack Johnson was also a self-described

churchman and member of the Methodist Church. In 1910 after his mother died, Johnson praised her memory from the pulpits of black churches throughout America, imploring audiences to cherish the guidance of their own mothers. His own drinking and smoking aside, Johnson was most likely an influential Christian athlete for American blacks, but his religious history, along with that of many others, awaits attention.

As for the discussion of sports as *religion*, it too is in desperate need of diversity. Scarce is the study that ventures outside the “holy trinity” of sports: baseball, basketball, and football. Also lacking are ethnographic explorations, in-depth and personal studies of the communities of fans and athletes who inhabit the sporting arena. As new voices and approaches enter this area of study, the story of religion and sports will become more intriguing and complicated, challenging old assumptions about the connections between them.

Stone-Campbell Movement

The Stone-Campbell movement began in the early nineteenth century and was initially centered in the frontier regions of eastern Ohio, western Virginia, and Kentucky. Historians have derived its name from the prominent personalities of Barton W. Stone (1772–1844) and Alexander Campbell (1788–1866). The movement, however, is also known as the “Restoration Movement” because both men sought to restore the ostensible unity and simplicity of the first-century church. In time, the Stone-Campbell movement gave birth to three notable fellowships: the Churches of Christ, the Christian Churches/Churches of Christ, and the Christian Churches (Disciples of Christ).

Historical Development

The seeds for this movement were undoubtedly sown in the British Isles, where foundational doctrinal statements, especially the Westminster Confession of Faith, had been objects of anticreedal protest throughout the eighteenth century. For instance, John Abernethy (1680–1740), a Belfast Presbyterian, became an early voice of the “New Light” persuasion: for him, creeds and confessions had been derived from the fallible “decisions of men,” and he urged his audiences to trust their own interpretive judgments. Moreover, Anglican and Methodist circles were especially influenced by a growing evangelical fervor, and numerous parachurch organizations (such as missionary societies and antislavery societies) had been formed by the end of the century. These societies were instinctively ecumenical, with little regard for creedal or clerical distinctions.

Amid the populist currents of the fledgling American republic, these inclinations were greatly magnified. The tone

was set by leaders such as James O’Kelly (1735–1826), who in protest against the ecclesiastical authority of Bishop Francis Asbury withdrew in 1792 from the Methodist Episcopal Church. First known as “Republican Methodists,” O’Kelly’s churches later adopted the nondenominational, inclusive label of “Christians,” and during the late 1790s they became influential throughout the regions of North Carolina and Virginia. Meanwhile, in New England Abner Jones (1772–1841) and Elias Smith (1769–1846) disavowed their Baptist identities and became the leaders of yet another generic “Christian” movement. Declaring their independence from the ecclesiastical baggage of clerics and creeds, these preachers urged their audiences to embrace the simple, unvarnished doctrines of the New Testament.

Two Pioneers

These developments created the context for Barton Stone, as he prepared himself for Presbyterian ordination. He, too, was reticent about the Westminster Confession, and he was ultimately unwilling to subscribe without a caveat. He accepted the Confession in 1798 but only to the degree that it seemed “consistent with the word of God.” He became enthralled with the fervor of revivalism and played an important role in the frontier manifestations of the Second Great Awakening. His ministry began at Cane Ridge, Kentucky (near Lexington), and his congregation hosted the landmark Cane Ridge Revival in 1801.

In orthodox Presbyterian circles, the revivals were viewed with suspicion, and Stone, who had already placed conditions on his doctrinal fidelity, was tagged as a New Light. In 1803, under the looming threat of ecclesiastical discipline, he withdrew from the Synod of Kentucky; then, in September of 1803, he joined with five similarly disaffected ministers, and they formed the alternative “Presbytery of Springfield.” The following June, however, these ministers dissolved their corporate existence with the “Last Will and Testament of the Springfield Presbytery.” This document was a classic statement of anticlerical and anticreedal sentiment, urging its readers to assert their “native right of internal government” and to find “free course to the Bible.”

Without any illusions of originality, Stone’s followers began to call themselves “Christians,” and the movement grew rapidly throughout the region. Stone’s followers were frequently associated with the O’Kelly and Smith-Jones “Christians,” but there were no ecclesiastical channels to formalize those kinds of relationships. Moreover, there was little opportunity for creedal unanimity: Stone himself

continued to refine his own convictions about significant theological questions. In 1826, however, he began to edit a periodical entitled *The Christian Messenger*, and by 1830 his loose, unofficial, and variegated confederation had approximately 16,000 members.

While Stone's popularity radiated from central Kentucky, a similar movement was forming in the Ohio Valley. It was inspired by Alexander Campbell, an immigrant who settled near the river town of Wellsburg, in western Virginia. Campbell had been raised in the Irish Antiburgher Seceder fellowship, a stridently conservative branch of the Presbyterian Church, and his father, Thomas (1763–1854), had served near Belfast with the Ahorey congregation. Thomas, who had left his family in Ireland and come to western Pennsylvania in 1807, possessed strong misgivings about creedal restrictions, and he was known to fraternize outside the Antiburgher fold. These tendencies had created tensions in his home country, and in Pennsylvania they ultimately provoked his dismissal from the Antiburgher Seceder ministry.

In 1809 Thomas formed a "Christian Association" in Washington, Pennsylvania, to promote "simple evangelical christianity." His principles were outlined in a document called the *Declaration and Address*, where he lamented the fractured condition of the Christian community. He particularly condemned the divisive consequences of creedal orthodoxy, and he urged his readers to be satisfied with the elementary doctrines that are "expressly taught, and enjoined upon them, in the word of God." He subsequently proposed a biblical hermeneutic that would be accessible, without ecclesiastical interference, to every rational mind: it would embrace the straightforward commandments ("express terms") of scripture and would conform to the examples ("approved precedent") of the early Christian churches. Nothing else, insisted Thomas, could be required as a term of communion. It is significant to observe that Thomas did not want the *Declaration and Address* to be treated as a creedal statement, and he declined to identify what would meet his minimal standards.

Upon his arrival in 1809, the younger Campbell became an enthusiastic advocate for the principles of the Christian Association; however, convinced that infant baptism was an unacceptable practice, he soon began to move in Baptist circles. A defining moment came in 1816, when Alexander, addressing the Redstone Association of the Baptist churches in western Pennsylvania, delivered a "Sermon on the Law." In this presentation he affirmed the divine origins of the Old Testament, but he denied the binding authority of its

commandments and examples. His position was controversial, but he developed it further in 1820 during a debate on the subject of infant baptism. His opponent, the Presbyterian John Walker, appealed to the Mosaic example of infant circumcision; Alexander, however, flatly denied the relevance of Old Testament practices. They were, he insisted, the manifestation of an earlier dispensation, and their jurisdiction had been "fulfilled."

Propelled into the limelight by his performance against Walker, Alexander surpassed his father's influence and became an outspoken advocate for anticlerical, anticreedal, New Testament Christianity. He railed against missionary societies, Bible societies, and moral societies, identifying them as centralized bureaucracies for clerical power. In 1823 he began to publish the *Christian Baptist*, an acerbic periodical that elicited both widespread admiration and deep-seated hostility. By that time he was also advocating a sacramental function for baptism, a conviction that served to alienate him from his Baptist connections. Nonetheless, his intellectual, rhetorical, and administrative talents were immense, and his influence spread rapidly throughout the Ohio Valley.

Inspired by the achievements of the early American Republic and the success of his own movement, Campbell attempted to initiate a truly constructive program. He earned widespread Christian support in 1829, when he debated the renowned skeptic Robert Owen. In 1830 he began a new publication called the *Millennial Harbinger*, which eagerly anticipated the improvement of human society. Following his 1837 debate with the Catholic bishop John Purcell, he became a Protestant hero, and with the 1840 establishment of Bethany College, he assumed the mantle of an ecumenical educational reformer.

For many, however, his identity had been formed during the *Christian Baptist* years, and a large percentage of his movement retained the iconoclastic spirit of that earlier publication. Though Campbell held a heroic place in the movement, his early supporters were largely unable to appreciate his later moderation; a crucial point of departure came in 1849, when despite his earlier rhetoric, he sanctioned the formation of the American Christian Missionary Society (ACMS) and became its first president.

Combined Institution

A unified institution, however, had been born in the winter of 1831–1832, when representatives from Campbell's movement gathered with Barton Stone's associates. In that meeting they affirmed their mutual aims and extended fellowship

to each other. Campbell was not directly involved, and many churches declined to ratify the decision; without a centralized structure, this meeting could never produce an actual merger. Nonetheless, it did mark the beginning of a singular fellowship, and Stone's effects gravitated northward while Campbell's influence swept southward. Many of the Stone-Campbell churches were known as "Churches of Christ," but Stone's partisans frequently retained the label of "Christian Churches." Campbell's preference, meanwhile, was frequently retained by those who called themselves the "Disciples of Christ." These names would eventually mark significant lines of division, but they were initially used to identify the disparate elements of a single movement.

The Stone-Campbell churches prospered and had nearly 200,000 adherents by the start of the Civil War. That conflict, however, served to magnify the tensions that had already been provoked by the ACMS. During the war, moreover, some churches, mostly Northern, began to use pianos in their worship assemblies. The controversy surrounding this "innovation" was exacerbated by the North-South divide: throughout the deep south and in Texas, the movement's churches were inclined toward a nonsociety, a cappella position. Under the leadership of editor-preachers such as Nashville's David Lipscomb (1831-1917), who published the *Gospel Advocate*, these congregations were generally known as "Churches of Christ," and by 1906 they were listed as a separate denomination with approximately 160,000 members. Further north (especially in Ohio and northern Kentucky), the movement was known by various names (including "Christian Churches" and "Disciples of Christ"), and it found capable representation in the *Christian Standard* of Isaac Erret (1820-1888). By 1906 these churches had about 920,000 members.

Conservative and iconoclastic, the Churches of Christ were strongly fortified against the encroachments of mainstream Protestant theology. By the end of the nineteenth century, however, the Northern churches were becoming agitated by the issue of "higher criticism"—that is, the literary analysis of biblical text informed by its historical context—which challenged traditional doctrines of biblical inspiration. These currents, paralleled in other Protestant fellowships, were strongly resisted by persuasive conservative voices: John W. McGarvey (1829-1911) exerted the strongest opposition, and he issued his judgments through numerous publications and through his 40-year tenure with the College of the Bible in Lexington, Kentucky. In spite of such protests, however, many ministers became sympathetic

toward theologically liberal trends, and by World War I they had gained a significant coalition, increasingly known as "Disciples," among the Northern Stone-Campbell churches.

The Northern movement maintained a tenuous union, but it became increasingly divided throughout the 1920s and 1930s. Committed to liberal principles, the Disciples were logically estranged from the primitivistic ideals of their forebears, and they pursued a broad ecumenism with the larger Protestant world. Under their leadership (but without a broad consensus), the fractured fellowship became a founding member of the Federal Council of Churches of Christ (FCC) in 1908. Moreover, the Disciples began to advocate an "open membership" policy in their churches, and a similar practice became common when the ACMS joined with five other mission-based organizations to create the United Christian Missionary Society (UCMS) in 1919. With open membership, it was possible for persons who had not been baptized (by immersion) to be admitted to full congregational fellowship.

For traditional Stone-Campbell churches, the mandatory character of immersion was a nonnegotiable standard, and de facto division became formalized over time: many churches, typically known as "Christian Churches," refused to cooperate with the FCC, and unhappy with the UCMS, they began to support "independent" missionaries. Conservative interests formed the North American Christian Convention in 1927, an act that was widely interpreted as a decisive step toward separate existence. The long and painful divorce was essentially finalized by 1950, soon after the Disciples had cast their lot with the World Council of Churches and with the National Council of Churches of Christ. Conservative Christian Churches (sometimes called Churches of Christ) now constitute a fellowship that is distinguished from the more liberal Disciples (sometimes called Christian Churches). That distinction, however, was not officially recognized until 1963, when the Disciples officially established themselves as a structured denomination.

Ultimately, then, the Stone-Campbell movement gave birth to three distinct fellowships with separate publications, colleges, and histories. All three streams have experienced additional divisions, and other fractures are presently threatening. Theologically, Churches of Christ stand close to the Christian Churches/Churches of Christ, and some efforts have been made toward reunion; those efforts, however, have ironically led to new disputes, especially within the Churches of Christ. Meanwhile, the Christian Churches (Disciples) have been challenged by a conservative "renewal

movement,” a development that has set the stage for additional conflicts.

Distinctive Beliefs and Practices

Stone and Campbell held significantly different positions on various issues, and it is difficult to speak of common, distinctive doctrines before the union of 1831–1832. Most notably, Campbell was strongly committed to the practice of adult baptism by full bodily immersion, and he was convinced that sins were remitted at the time of the baptismal act. Stone was less adamant about these convictions, but when the union was realized, Campbell’s influence became predominant and the movement largely embraced his position. Opponents charged the “Campbellites” with the doctrine of “baptismal regeneration,” but for him the ordinance was always regarded as an “instrumental cause” for God’s grace, without any intrinsic merit. Subsequently, the Stone–Campbell understanding was codified by the evangelist Walter Scott (1796–1861), who described baptism as one of the “steps to salvation.” Scott immersed multitudes of people in the regions of eastern Ohio and western Pennsylvania, and his simplistic approach left a lasting impact on the movement.

From its inception, the Stone–Campbell movement has also been marked by its rejection of formal creedal statements and its decentralized congregationalist polity. Even the Baptist “association,” ostensibly lacking any legislative authority, was repudiated as an unscriptural incubator for ecclesiastical power. Hence, the movement operated without ordained clergy and without an official statement of faith. Aside from the periodicals of Stone, Campbell, and their lesser-known associates, their churches had no vehicles to define their collective identity. The anticlerical impulse is best illustrated, perhaps, by the practice of weekly Communion. In the earliest days of the movement, some argued, on the basis of Acts 20:7, that the first-century church met every “first day of the week” to observe the Lord’s Supper. Aside from this justification, however, the practice ensured that the Supper would be given without regard for clerical attendance. In the absence of a centralized polity, the movement’s periodical publications and colleges have played instructional, supervisory roles, but those roles have been limited and unofficial.

The movement has also been characterized by a strong current of rationalism. This might seem surprising in light of Stone’s associations with the Spirit-led revivals of the Second Great Awakening; Campbell, however, disdained emotional

displays and insisted that the Holy Spirit worked solely through the inspired words of scripture. This effect, he believed, was powerful and convincing; thus, his position should not be misconstrued as a rejection of the Spirit’s work. Nonetheless, his emphasis led the movement to place enormous value on the task of exegesis, and the Holy Spirit has never been a theological priority for the churches who followed his line of thought. Ironically, this rationalistic, exegetical emphasis led to the conservative biblicism of the Churches of Christ and the Christian Churches/Churches of Christ, but the liberal biblical scholarship of the later Christian Churches (Disciples) was, in a contrasting way, quite consistent with Campbell’s rationalistic legacy.

Internal Issues and Debates

Deep tensions have always existed in the fabric of the movement, and they have been manifested in some of the controversies noted above. For example, the movement has always been torn between the dual principles of unity and restorationism. According to the original restorationist vision, Christian unity could only be achieved by restoring a simple New Testament pattern of faith and practice. However, as Richard Tristano (1988) has noted, the legacies of restorationism and unity have been difficult to reconcile with each other. The first-century “pattern” has been notoriously elusive and reaching unanimous conclusions about the details has proven impossible. Hence, amid strong disagreements about the identity of the first-century church (and the authority of its examples), many have abandoned the restorationist ideal in an effort to salvage a short list of unifying principles. Others, troubled by the uncertainties of pluralism, have taken refuge in the certitude that restorationism has traditionally claimed for itself. To some degree these differing perspectives are reflected in the division between the Disciples and the rest of the movement; in truth, however, they are currently manifested among those who have the strongest historic commitments to a hard-line restorationist vision. In Churches of Christ and Christian Churches/Churches of Christ, the postmodern challenge is making the restorationist vision seem increasingly untenable.

The movement has also struggled, historically, with the differences between Stone and Campbell. Even the churches that accepted the 1831–1832 agreement of union could never completely square the two traditions. Campbell’s rationalism quickly supplanted the Spirit-led approach of Stone; other tensions, however, were never completely

resolved. In particular Campbell's followers were never able to comprehend fully the countercultural, otherworldly orientation of Stone's congregations, a perspective that Richard Hughes (1996) has labeled an "apocalyptic" worldview. Campbell was extremely optimistic about the progress of American society and openly spoke of his millennial expectations for the United States. Stone, by contrast, placed little confidence in the achievements of human wealth or human societies, and his legacy was eventually characterized by a premillennial disposition that eschewed the national stage. To an overwhelming degree, the movement turned away from Stone's "apocalyptic" outlook and adopted a position more congenial to American culture. That choice came slowly, however, especially among the Southern churches.

It is impossible to overlook the sociological dimensions of the divisions in the Stone-Campbell movement. As David Edwin Harrell (1966-1973) has demonstrated, sectional issues proved decisive. For instance, economically disadvantaged congregations tended to reject the use of musical instruments in worship, and they were suspicious of the benevolence of bureaucratic establishments. In the years that preceded their official estrangement from the Christian Churches (Disciples of Christ) in 1906, the Churches of Christ were largely crippled by the devastation of the Civil War and were decisively poorer than their erstwhile associates. At the same time the most conservative churches were also demonstrably rural, and they urged holding onto their doctrinal positions against the refined, sophisticated "innovations" of urban congregations. There were always exceptions to these tendencies, but poverty and rural identity were predominantly Southern realities, and even today the Stone-Campbell movement is largely divided between the North and the South.

Interpretive Theories

In its earliest days, the Stone-Campbell movement was commonly known as a "reformation." Campbell himself, however, considered reform to be inadequate and took a primitivistic position that sought a "restoration" of the "Ancient Order." Accordingly, some of his early, iconoclastic followers claimed that they had, indeed, restored the faith and practice of the first-century church. This interpretation has been central to the self-understanding of many conservative members and is best reflected in the work of Earl West (1950-1986). From a critical perspective, Richard Hughes and C. Leonard Allen (1988) have placed the

Stone-Campbell movement in the larger context of American antebellum primitivism.

More recently many of the Churches of Christ and Christian Churches/Churches of Christ have softened their disputes with one another and have begun to reconcile past divisions. For them, the movement is best described as a unity movement, and the primitivistic perspective has been tempered by increasingly modest expectations. Interestingly, these perceptions are scarcely premised on Campbell's later ecumenism; on the contrary, they place primary emphasis on the early Campbell with special regard for his father's *Declaration and Address* and for the unifying precedent of 1831-1832. This approach is well represented in Leroy Garrett's historical portrait *The Stone-Campbell Movement* (2002) and by the work of Douglas Foster and Gary Holloway (2002).

Another interpretation describes Stone, Campbell, and their colleagues as self-reliant participants in the progress of the antebellum frontier. This was a significant thesis for Winfred Garrison (1931), who found a connection between the movement's anticlerical emphasis and its geographical distribution in frontier regions. More recently Nathan Hatch (1991) has similarly treated the Stone-Campbell movement as a populist effort to wrest ecclesiastical control from the hands of clerical institutions. Clearly, Stone and Campbell were primitivistic, but in Hatch's analysis, they appealed to the first Christian century in order to circumvent the claims of the professional theologians and clergy. Similarly, the movement was authentically committed to Christian unity, but that priority was expressed as the antidote to clerically inspired divisions.

Critical Assessment

The Stone-Campbell movement is a phenomenon that defies conclusive evaluations because its present-day heirs are diverse and have limited contact with each other. It is best, perhaps, to reflect on the movement's original aims, as identified by its leading interpreters. If this heritage is viewed as an attempt to restore first-century Christianity, it can hardly be rated as a successful effort: its churches have been torn by divergent understandings of "first-century Christianity," and many (in all three streams) are frankly doubtful about the value of the primitivistic enterprise. Moreover, if the movement is viewed as an attempt to unify a nondenominational Protestant world, it has little to celebrate and must confess its own legacy of division. Meanwhile, the movement might be viewed as a successful protest

against creeds and clergy, and it has, technically speaking, survived without either. Its periodicals, missionary societies, and colleges, however, have created centralized bureaucracies for ecclesiastical politics, and most Stone-Campbell members will confess to the existence of unwritten creedal requirements.

What, then, has the movement achieved? In spite of its shortcomings and inconsistencies, the Stone-Campbell movement has played a critical role in the development of significant American religious themes. Primitivism, which was such a powerful concept in the days of the early American churches, has had few advocates who could match the fervor and sophistication of the Stone-Campbell churches. Likewise, the nondenominational impulse, so strong in the early twenty-first century, has scarcely improved upon the original pleas of the Stone-Campbell alliance, and the Disciples, in particular, have translated their nondenominational origins into ecumenical, interdenominational overtures. Moreover, the movement has tested, refined, and in some respects validated the anticlerical attitude that was so congenial to the spirit of the new American republic, and it has thoughtfully challenged the application of creedal statements. The Stone-Campbell movement, therefore, was a quintessentially American phenomenon.

All three streams of the movement continue to struggle with a wide variety of internal issues, and their distinctive futures are uncertain. As their identities shift, they are likely to embrace new priorities and to suffer additional fragmentation. Nonetheless, they are engaged in vigorous new ventures, both at home and (quite significantly) abroad. They continue to produce innovative ministers and capable scholars, and they clearly constitute an important and unfinished chapter in American church history.

Suburbanization

Suburbanization describes American outmigration patterns from the urban core and their subsequent impact on American religious life. Although development outside urban centers occurred as far back as 1820, outmigration intensified during the post-World War II era, when the federal government began subsidizing mortgages for single-family homes and invested in infrastructure that encouraged middle-class families as well as businesses and religious congregations to relocate outside of urban areas. While a shade over 20 percent of Americans lived in the suburbs in 1950, 50 percent lived in the suburbs by 2000. During the same period, the American population shifted from the Northeast to the South and West, or “sunbelt,” a term coined by writer Kevin Phillips in the late 1960s. Moreover, the postwar economic expansion transformed consumer practices and placed the middle-class white family at the center of American life. Suburbanization affected religious denominations, belief systems, worship practices, church architecture, and Americans’ understanding of the relationship between religion and society.

Church Construction in the Postwar Suburbs

Whether measured by increased church membership, religious self-identification, or church construction, evidence points to the institutional growth of religion in the immediate postwar era. Statistics on church membership during the early postwar period show that new affiliations for churches grew faster (30 percent) than the population (19 percent). According to the Bureau of the Census, more than

96 percent of adults identified a religious preference in 1957. The church construction boom followed the growth of residential building: in the wake of the Depression and the war, Americans spent \$4 billion building new churches between 1945 and 1955. This growth occurred across several denominations. As Robert Wuthnow has explained, between 1946 and 1949, the Southern Baptists established 500 new churches; Methodists spent nearly as much on new buildings and improvements as on their operating budget; and Catholics began construction on 125 new hospitals, opened 1,000 new elementary schools, and added 3,000 new parishes.

Denominations embarked on these building programs even as reformers called for increased efforts at ecumenism, or unification efforts, among Protestant denominations in the name of efficiency and the Cold War environment. Protestant reformers such as Paul Tillich called on churches to ensure that church architecture reflected beliefs about fellowship and participation. Reformers argued that a “gathered church” model would foster community by bringing worshipers together inside intimate buildings, where ministers spoke amidst their congregations rather than separated by a dramatic altar. Modern architecture allowed congregations to experiment with different floor plans (circle, ellipse, square), shapes (box, cube, sphere), and building materials (concrete, plate glass) to achieve these concepts. Mainline Protestant congregations in the suburbs such as Lutherans, Episcopalians, and the Disciples of Christ embraced this model.

Early Criticism of Cultural Religion

The suburban environment created concern that churches focused on the social aspects of their congregation to the detriment of doctrine and theology. Suburbanites expected churches to provide a community center environment with child-friendly amenities, extensive programming, and coffee hours. In order to attract and maintain congregants with young families, many churches emphasized popular religion—for example, morals and patriotism—rather than ecclesiastical religion, which adhered to rigorous institution building, traditional rites, and formalized doctrine.

By the 1950s, critics began to suggest that churches had become too comfortable in their suburban environs. Sociologist Will Herberg argued that despite Americans’ increasing secular-mindedness, religion provided Americans with an affiliation around which they could construct an identity: Protestant, Catholic, and Jew. Beyond these identities, each a legacy of the nation’s immigrant past, Herberg located a

common religious orientation in the “American Way of Life” within a Judeo-Christian framework. However, the Americanization of religion had resulted in a loss of each tradition’s sense of “uniqueness and universality,” creating a “culture-religion,” or “civic religion,” that validated, rather than critiqued, American society.

There were also fears that suburban church growth was causing churches to renege on their moral obligation to address social justice issues in the urban core. In describing the role that churches should play in ending segregation, Reverend Martin Luther King Jr. lamented that “the most segregated hour of Christian America is eleven o’clock on Sunday morning.” Many white ministers concurred with King and placed the blame squarely on the exodus of white congregations to the suburbs. Gibson Winter, a Unitarian minister and divinity professor at the University of Chicago, condemned mainline Protestantism’s complicity in residential segregation, raising the question as to how the inclusive message of faith could be mediated through an exclusive group based on social class identity. By dwelling too much on congregational and parochial life at the fringes of metropolitan centers, churches had become refuges for the middle classes. In Winter’s estimation, churches were overconcerned with the private demands and emotional needs of the middle class.

Growth of Conservative Evangelical Churches

Conservative religious traditions, propelled in part by a sense of antagonism toward the suburban environment, grew at faster rates than did mainline denominations during the late twentieth century. Denominations such as the Southern Baptists and the Assemblies of God were particularly successful, especially in California after Dust Bowl migrants established new churches. Sociologist Mark Shibley has argued that the success of southern evangelicalism drove the growth in American Protestantism. Between 1971 and 1990, when the U.S. population grew by almost 20 percent, evangelical churches grew at a rate of 26 percent as mainline churches declined in adherents by 8.5 percent; the percentage change in southern-style evangelical church adherents was particularly impressive, rising 31.3 percent in the South and 88.7 percent in the West. Between 1926 and 1981, the Southern Baptist Convention’s (SBC) rural membership, once its dominant constituency, declined from 72 percent of members to 25.3 percent. In 1990, SBC membership was nearly 19 million. The Assemblies of God, established in 1914 during the Pentecostal movement, expanded into every state and reached a population of more than 2.1 million in 1990.

Scholars such as Robert Wuthnow have suggested that the growth of conservative evangelicalism reflects a longer-term realignment of American religious beliefs organized around conservative/liberal ideology rather than by denomination. This division had the effect of weakening differences on doctrine but strengthening concerns about personal morality. Postwar evangelical organizations often lacked denominational connections, as with “parachurch” groups such as Youth for Christ, which supported a web of independent ministries including that of popular evangelist Billy Graham, or, later, “special purpose groups”—political activist Jerry Falwell’s organization, the Moral Majority, for example—that were oriented around objectives rather than institutions.

The Rise of the Megachurch

Beginning in the late 1960s, suburban development shifted toward “edge node,” or exurban, construction of retail and office as well as residential spaces accessible by vehicle. In addition, the counterculture, while seemingly antithetical to institutional religion, witnessed a revival of spirituality among many baby boomers. Both historical developments influenced suburban religious beliefs and practices.

Despite the success of parachurch organizations, the megachurch came to reflect conservative evangelicalism’s new approach for recruiting membership and organizing worship in the suburbs and exurbs. These institutions were usually Protestant, often nondenominational or quasi-denominational churches with large congregations (membership usually of more than 2,000 and often over 10,000) and a full calendar of recreational and spiritual programs that brought members to the church each day of the week.

Many churches built large complexes in suburban or exurban areas to facilitate evangelism among suburbanites who had been loosened from their inherited religious traditions. The emphasis on recruitment among nonchurchgoers explains why scholars often referred to these institutions as “seeker” churches. Sociologist Donald Miller, who has written about megachurch-style denominations, has argued that the organizations attracted new members with low-key architecture resembling other structures from suburban life; pastors who wore casual clothes and preached about everyday issues; worship services with contemporary music; and programming that emphasized “well-defined moral values” not available in secular culture. As with earlier suburban churches, these institutions often catered to young families.

Willow Creek Community Church, located outside Chicago, Illinois, and pastored by Bill Hybels, is generally

considered to have been the first megachurch. The church eventually established a network of like-minded churches around the world and across denominations. California-based churches such as Calvary Chapel and Vineyard Ministries were both loosely affiliated organizations of large churches that emerged during the countercultural “Jesus Movement” of the 1960s and 1970s. Other megachurches maintained their official denominational ties. For example, Rick Warren’s Saddleback Community Church in California maintained—but did not advertise—its affiliation with the Southern Baptist Convention. Although most frequently associated with suburban and predominantly white congregations, African American megachurches were established, including the Potter’s House, minister T. D. Jakes’ church in Dallas.

Megachurch architecture typified evangelicalism’s comfort with its environs. Church boards looking to build for growth frequently purchased warehouses, supermarkets, or superstores; such spaces offered multiple advantages to church groups. The square footage allowed churches to construct full-service buildings with auditoriums, skate parks, food courts, schools, and ample parking; moreover, the low-key, “unchurchly” architecture facilitated recruitment among believers reluctant to enter a church but at ease with familiar suburban spaces. The transition from retail to religious space did not always proceed smoothly. In places like California, where communities increasingly relied on “cashbox zoning” to provide supplemental funds to local projects and schools, sprawling (and tax-exempt) megachurch complexes ran afoul of zoning boards and homeowners concerned about diminished tax revenues and increased traffic congestion in suburban neighborhoods.

Political and Cultural Activism

The megachurch became an important institution for understanding the nature of community in a culture of sprawl. The work of sociologist Robert Putnam showed that frequent churchgoers were more likely to be engaged in some kind of civic activity, many of which focused on the church itself. As part of an examination of how evangelicals were reshaping community in the suburbs, Putnam focused on Warren’s 15,000-member megachurch in Orange County, California, which bonded the “crowd” of its services into a “congregation” through small groups that met separately, often in churchgoers’ homes.

Suburban evangelicals showed an interest in engaging in both political and cultural reform. As political activists,

evangelicals viewed themselves as the guardians of family values in a society that was increasingly amoral. As early as the 1950s, conservative Christians became key activists in the political culture of Orange County, California, by embracing issues ranging from anti-communism, to abortion, to curriculum reform. Later, national conservative organizations such as the Christian Coalition relied on suburban megachurches to distribute their pre-election voter guides, and Republican political candidates spoke at megachurch-sponsored gatherings.

Evangelicals also engaged with the broader culture by adjusting their beliefs to a landscape in which civic life occurred in commercially owned spaces. In the spaces of suburbia—store, car, school, and home—witnessing, the practice of describing one's born-again experience to a nonbeliever, was the preferred mode of evangelical activism. For this reason, the Christian bookstore became another important suburban institution. In the year 2000, Christian merchandise produced \$4 billion in sales, including \$747 million of music merchandise. With conservative evangelicals emerging as a desirable consumer demographic, Christian music, videos, and literature became widely available at retail outlets.

Suburbanization transformed the nation's built environment, society, and culture as well as its religious institutions and practices, particularly in the period beginning after World War II. In the early postwar years, mainline Protestant, Catholic, and Jewish congregations built new facilities to administer to the spiritual and communal needs of transplanted young families. By the early twenty-first century, however, congregations established religious structures and observed practices that drew heavily from the nation's suburban and exurban landscape and its consumer-oriented culture.

Sunday and the Sabbath

Sunday is a special day in the American religious calendar for Christians and adherents of some other religious traditions. One of the reasons why religious institutions flourish in the United States is the capaciousness of Sunday. The long process of decoupling “Sabbath” from “Sunday” laid the foundation for the temporal elasticity fundamental to religious diversity in the United States. Religious and civic battles over the meaning and observance of Sunday contributed to the development of a society in which adherents of different religions are free to observe different weekly, seasonal, and annual holy days and periods.

To be sure, the “official” week and year in the United States are organized around a version of the Christian calendar put forth by reform-minded Protestants in the seventeenth century—that is, a calendar in which Sundays are the only days on which no official business is transacted. (Today, Christmas and Thanksgiving, which each have religious antecedents, are official public holidays.) The cessation of work and business each Sunday complemented the rising emphasis on work in the 1700s: work, not rest or leisure, was at the moral core of the character of colonial Americans and later generations. Biblical law, religious tradition, local custom, and the law mandated six days of work and one of rest.

Since the 1920s the continuing commitment to differentiating Sunday from the other days of the week but

discomfort with proclaiming its particular religious qualities together laid the foundation for the retention of Sunday's status as a special day in the U.S. calendar, although it is regarded as "the Sabbath" by a minority and treated as just another day suitable for shopping or working by many people. However, the fact that for centuries in the United States, Sundays have warranted special privileges, protections, and expectations has prepared the way for contemporary Americans to tolerate the observance of a great variety of religious holy days, the observance of which is essential for religious continuity and diversity.

Sunday and the Sabbath in Colonial Religious Calendars

In the sixteenth and seventeenth centuries, Catholics settling in the New World transplanted the religious rhythms that had shaped their lives in Europe. In addition to Sunday worship, French and Spanish Catholics observed saints' days, as well as the liturgical moments associated with Christ's birth, life, and death. In their religious calendar, fixed holy days and moveable feasts together provided innumerable days off from the demands of work. Rather than seeking to eradicate native peoples' religious rhythms, Catholic missionaries merged their version of the Christian calendar with local traditions, giving rise to the syncretism that is at the heart of Catholicism in Latin America as well as the southwestern United States. This calendar meshed well with an agricultural economy focused on tradition, subsistence, and continuity with the past: work was irregular, intermittent, and hard, and thus there was room for expansive and at times disruptive religious observances.

In British North America, on the other hand, fervent discord over the religious calendar differentiated the northern from the southern colonies. In New England and the Chesapeake, a variety of Protestant denominations endeavored to implement a rationalized religious calendar in which the only holy days were Sundays. While disagreeing about many theological issues, they all followed the conviction that when Christ rose on the first day of the week (Sunday), he amended the Decalogue's command to observe the seventh day as a Sabbath. Since in their view Sunday had become the "Lord's Day," due to Christ's resurrection on that day, it was the "true Sabbath" and thus should be observed as such. What is more, they looked to the example of the earliest of Christ's disciples, who rigorously treated Sunday as a Sabbath, in contrast to Catholics who mingled religious with festive observances. Thus, in areas in which Congregational,

Lutheran, and Presbyterian churches presided, civil laws mandated that there would be no work or play on Sundays in order to protect the integrity of the Sabbath.

The theological rationale for observing Sunday as the Sabbath, the regimen it dictated, and the folkways it generated (such as baked beans), were particularly distinctive in New England, where civil and religious law resulted in "the Puritan Sabbath," a cultural formation as much lamented as celebrated by its nineteenth-century heirs. In contrast the established church in the southern colonies, the Anglican Church, shared the conviction that Sunday was the Lord's Day and thus a time requiring worship, but in following the precepts of James I, it did not forbid recreation. Throughout the seventeenth century and into the eighteenth, civil law upheld local practices, rooted in the dominant church of the particular region, about what the Sabbath mandated.

Shoring up these theological convictions and prejudices were economic imperatives that also gave Sunday pride of place as the day of rest. After 1650 or so, an increased work effort on the part of all household members cohered well with a Puritan program of calendar reform. Regular work rhythms and patterns, and more work altogether, were the key to what economic historian Jan de Vries (2008) called "the industrious revolution," which characterized both England and the British North American colonies prior to the first industrial revolution of the mid-eighteenth century. Increased efficiency depended on the implementation of technological and organizational innovations, not the least of which was six days of work, one of rest, week in and week out, throughout the year. Within this rhythm Sunday was not only a holy day but also a day of respite from work and trade.

In the eighteenth century Jews and seventh-day believers introduced competing notions about the temporal location of the Sabbath. Since these religious groups observed Saturday as the Sabbath, they found themselves out of step with the dominant rhythms organizing community life, particularly work. Because the work of getting a living was so time intensive, they could not afford to take two days off a week from their fields, workshops, and stores, yet their own religious law mandated that they cease working on Saturday and civil law prevented them from working on Sunday. Not yet possessing the right to practice religion freely, these groups struggled quietly against the dominance of the Sunday Sabbath. At the same time, their presence challenged the assumption that Sunday was the Sabbath. Ironically, then, their continued preference for the Saturday Sabbath introduced the suggestion that the Sunday Sabbath was "a man-made

institution,” as some referred to it in the nineteenth century. Nearly everyone agreed that there was a Sabbath, mandated by God in the Ten Commandments, yet there was no agreement about its temporal location. Simply introducing the question—Did God or civil society transfer the Sabbath to Sunday?—opened up the possibility that the Sunday Sabbath was man-made, and then, too, the possibility that the meanings of the Sabbath, and the requirements for its observance, were man-made as well.

1800–1850: Sabbatarianism and its Opposition

Thus, the groundwork was laid for contests over the temporal location and meaning of the Sabbath when the writers of the U.S. Constitution disestablished the national church and the writers of state constitutions disestablished state churches—and, therefore, their authority over communal times. Although the vast majority of Americans considered Sunday the Sabbath, the knowledge that prior to Christ’s resurrection the seventh day held this honor made inroads into Sunday’s monopoly over holy time. It was a small wedge to be sure, but nonetheless it opened up the possibility that Sunday was not a holy day and, more importantly, that all days could alike be holy. Religious diversity in the United States rests upon this latter possibility: it is not a huge leap from considering as holy any space of worldly time to considering as holy any religious conviction or practice.

The nineteenth century opened with a controversy over the transportation and delivery of mail on Sundays. After Congress passed legislation in 1810 requiring transportation and distribution of mail on all days of the week, some Presbyterian and Congregational churches petitioned in protest, as did a scattering of “Good Morals” societies. In 1814 Congregationalists formed the first local Sabbatarian society in the United States, taking their inspiration from similar organizations in Britain devoted to maintaining the observance of Sunday as the Sabbath. The petitions and efforts of the first self-identified Sabbatarians were to no avail. But in the 1820s during the height of the Second Great Awakening, evangelicals formed the first national Sabbatarian organization in the United States, named the General Union Promoting the Observance of the Christian Sabbath. In addition to seeking the repeal of the 1810 law, the organization sought to still the steamboats, railroads, wagons, and drays that continued to operate on Sundays.

Opponents of the Sabbatarians took great care to emphasize that they respected the sanctity of the Sunday Sabbath, but they insisted that critical public business must take

precedence. Although the 1810 law was not repealed, the social and cultural shift toward evangelical attitudes and practices ensured that at the local level, laws would multiply in the effort to prevent work or commerce on Sunday and that individuals would embrace Sabbatarian attitudes and practices. As a consequence of this cultural shift, as well as of technological innovations in railroading and telegraphy that allowed for rapid transportation and communications, in the 1850s the postmaster general suspended the Sunday transportation of mail along many routes; however, only in 1912 did the delivery of mail on Sunday cease altogether.

The industrial and market revolutions generated among nearly all Americans a devotion to Sunday, for it was the only time that people could legitimately rest. If it was possible to work—and with technological and organizational innovations it was nearly always possible to work—then it was sinful not to be doing so. Prior to industrialization, there were many periods (such as the winter, a stormy day, or when supplies had run out) in which work was not possible. But with technology shrinking space, increasing productivity, and even turning night into day, endless work was possible. Sunday became a welcome break, but one in which dissipation could be kept at bay.

In the 1840s national as well as numerous regional and local Sabbatarian organizations formed, including the American and Foreign Sabbath Union (1843). They held conventions during which speakers, including the former U.S. president John Quincy Adams, emphasized Sunday’s importance as a day of rest. Sabbatarians defined *rest* as the cessation of work and the devotion to prayer and worship. They sought to persuade listeners to cease all work (even domestic work) and to avoid “idleness,” which included drinking, frivolous reading for news or entertainment, playing, gambling, theatergoing, and so forth. Sunday rest was not leisure: it was purposefully focused respite to the body from work and to the spirit from the mundane. These Sabbatarian attitudes reflected Protestant suspicions about leisure, as well as theological assumptions about the interchangeability of *Sunday* with *Sabbath*. They suffused laws, customs, and beliefs such that still today most Americans have a sense, at the very least, that Sunday deserves slightly different behavior than the other days of the week.

1850–1900: Dislocating the Sabbath and “Opening Up Sunday” to Culture

In the 1840s religious resistance against Sabbatarianism took concrete form, expressed most clearly by Unitarians and the

inheritors of that boldly liberal religious tradition. Resistance tended to cluster around the meaning of *rest*, the temporal location of “the Sabbath,” and the wish to “open up” Sunday to the uplifting work of culture in addition to that of Christianity. Unitarians insisted, as did Frederick Sawyer in 1847, that “recreation or amusement are but other names for rest” and therefore were acceptable Sunday activities. They lauded Sunday as a special day but rooted their sense of how it should be observed in Mark 2:27 (AV), in which Christ says, “The Sabbath was made for man, not man for the Sabbath.”

The Unitarians’ expansive view of how people could rest was reinforced by that of immigrant Catholics, who arrived in large numbers in U.S. cities during the 1840s and 1850s. German Catholics in particular cast Sunday as a day for culture—church, music, fine literature, and even beer. Although significant conflict ensued about what constituted “rest,” the irrepressibility of community practices wore down prohibitions against innocent recreations like going to a public park (1850s), the public library (1860s), an amusement park or beer garden (1870s), an art museum (1870s), a fair (1890s), or a concert (1890s). Additionally, activities once characterized as inappropriate for the Sabbath—reading the newspaper or fiction, playing, entertaining visitors, having a big meal—came to constitute the core of Sundays as Americans spent them at home; Americans later added radio and then television to their diversions to make the home more “restful.”

Unitarians’ growing sense that the Old Testament’s precepts about Sabbath observance had no bearing on Christians coincided with a range of religious challenges to the identification of the Sabbath with Sunday. Unitarians argued that there was no biblical law mandating that Sunday be treated as a Sabbath; the conveners of the 1848 Anti-Sabbath Convention (who included abolitionists William Lloyd Garrison, Lucretia Mott, and Theodore Parker) asserted “the Sabbath, according to the Jewish scriptures, was given to *‘the children of Israel,’*—AND TO NO OTHER PEOPLE” (Parkhurst, 1848/1971). Unitarians did not wish to dispense with Sunday as a day of rest; indeed, they argued that the laws of nature confirmed the wisdom of a rhythm of six days of work and one of rest.

Jewish, Seventh-day Adventist, and Seventh Day Baptist doctrines also challenged the assumption that Sunday was the Sabbath: each group insisted that Saturday, the seventh day of the week, was the “true Sabbath.” They did so in pamphlets, in preaching, and in legal challenges to Sunday laws.

While they made few inroads into the long-standing U.S. habit of conflating Sunday with the Sabbath, they did motivate proponents of Sunday as a day of rest to find bases other than biblical text to justify the cessation of work, commerce, and—for some it seemed—life itself on Sundays.

After the Civil War, a range of social reformers and religious liberals began to propose that natural law itself confirmed the necessity of Sunday observance. It is clear that no one wanted to do away with a day of rest altogether, and most thought Sunday was the most convenient choice. After 1900, Sabbatarians and their sympathizers recognized that they would lose the battle for Sunday if they insisted only on a biblical basis for its status as “the Sabbath,” so they joined the quest for “a scientific Sabbath.” Take for instance the eminent psychologist G. Stanley Hall’s characterization of Sunday as “a psychological institution which modern hygiene of the soul and body would have to invent if religion had not already provided it” (Floody, 1901/1906, p. vi).

Early Twentieth Century: Leisure Grows, Sabbatarianism Falters, Sunday Laws Repealed

The battle to protect Sunday from the unceasing grind of market and factory intensified after the turn of the twentieth century, at first largely due to the various movements to shorten the workday and workweek in order to protect the health of women and children but eventually as part of the ongoing effort to protect all Americans from the dangers of ceaseless work. Thus an unlikely partnership of Sabbatarians with union leaders and Progressive reformers resulted in persuasive arguments about the deleterious physical and moral effects of unceasing work. While their definitions of a “day of rest” varied as greatly as did their other views, they were all determined that Americans have the right to at least one day of rest.

Whether to tend to large herds of dairy cows, or harvest acres of wheat or corn, or shovel coal, or tend to a machine, at least some Americans had to work on Sunday, for few owners of farms, factories, or railroads in Gilded Age America could afford to stop operations every seventh day. On the other hand, high per capita productivity eventually meant that many people could stop working on Sunday, since factories and farms produced more than enough to meet most needs. Indeed, by the Great Depression the great economic problem was that of oversupply. As standards of living rose across the board, absorbing some of the great excess of supply, the necessity of working on Sunday to meet subsistence needs diminished. To be sure, Sunday wage-work continued,

though it is impossible to calculate how many people engaged in it at any one time. But the nature of the work shifted: fewer Americans performed manual labor on Sundays, while more worked in the service industry. This shift characterized not just Sunday work but work in the United States as a whole by the end of the 1950s.

Long before the 1930s entrepreneurs realized that they could profit from selling their goods or services on Sunday: after all, it was the day when most people were not working and thus could act as consumers. Commercial leisure more than the retail sector found profit in Sunday business: most amusement parks, baseball fields, excursion lines, and movie theaters had larger audiences on Sundays than on any other day of the week. In 1926, unease with commercialism in general, and with the new culture of mass leisure in particular, led to five days of congressional hearings about Sunday observance as the House and Senate considered whether to pass a bill meant to “secure Sunday as a day of rest” (as the bill’s preamble read) in the District of Columbia (over which Congress had jurisdiction). Congress never did pass the bill, and while many laws against Sunday commerce and labor remained operative, most were repealed over the course of the twentieth century. The pressure on Sunday was lifted, due in part to the gradual shortening of the average workday from ten or twelve hours to eight hours and to the emergence of the two-day weekend. To be sure, many Americans must work on Sundays, but many receive extra compensation for doing so or see the necessity of working for wages on that day as a requirement of their particular industry.

Since the 1950s: Sunday’s Status Affirmed, yet Commercialization Intensifies

In the 1950s and 1960s the courts refereed fights about Sunday commerce. Nearly every state had “Sundays laws” on its books. Some states’ laws were relatively new, such as Georgia’s and South Carolina’s statutes forbidding stock car racing on Sundays; others were centuries old, such as laws banning Sunday liquor sales. Two new legal developments,

Activities characterized as inappropriate for the Sabbath during earlier eras—reading the newspaper or fiction, playing games, entertaining visitors, having a big meal—came to constitute the core of Sundays as Americans spent them at home during the late nineteenth and early twentieth centuries. Radio and television were eventually added to the diversions that made the home more “restful.”

one which rendered the other irrelevant, reoriented Americans toward a commercially as well as culturally and religiously open Sunday. First, states succeeded in affirming their right to legislate Sunday activity, largely on the basis of prosecuting Jewish storekeepers who did a Sunday business. In 1961 the Supreme Court decision in *McGowan v. Maryland* affirmed that state legislatures could prohibit the transaction of business on Sunday. This decision found support in the lengthy history of Sunday’s special status as a day of rest; Justice Felix Frankfurter wrote a supporting opinion of several hundred pages that is itself a celebratory history of Sunday observance in the United States.

The successful prosecution of Jewish Americans who considered Sunday neither a Sabbath nor a day of rest might lead one to conclude that little had changed with regard to Sunday since the 1820s, or 1720s, or 1620s; however, the Supreme Court decision was the death knell for a Sunday free of commerce or leisure. The Court affirmed the specialness of Sunday as a traditional day of rest, but it did not define what constituted rest. Further opening of Sunday to nonreligious possibilities and uses, Title VII of the 1964 Civil Rights Act mandated that “reasonable

accommodation” should be made for employees’ religious practices, including the observance of holy days. Additionally, some state legislatures, such as those in Texas and California, have mandated that employees receive some form of accommodation for time off for religious observances. To be sure, most employers who ignore these provisions do so in the case of Muslim employees who require time to attend Friday prayer or Seventh-day believers who cannot work Saturdays, but even the Sunday Sabbath faithful are not exempt from demands to work on Sunday, as illustrated by Home Depot’s 2005 firing of an employee for refusing to work on Sunday.

Despite *McGowan v. Maryland* and the 1964 Civil Rights Act, which could have been used as tools to still economic activity on Sundays, more and more Americans engaged in Sunday commerce and commercial activity throughout the 1960s. Retailers of durable household goods, such as furniture, opened their store displays on Sundays, promising potential customers that they could “browse today, buy tomorrow.” The United States was sufficiently oriented toward consumption, self-realization, and individualism that definitions of *works of necessity* and of *necessity* itself had expanded dramatically. Some states entertained procedures through which commercial establishments asked customers to sign certificates of necessity affirming that what they purchased was “necessary,” thereby warranting the violation of Sunday laws against work or commerce. Many states skipped this step and just allowed stores to open on Sunday where there was sufficient demand.

By the mid-1970s few states could sustain the fiction of necessity as sufficient cause for the violation of Sunday laws, and state legislatures repealed laws closing grocery stores, movie theaters, shopping malls, and so forth. To this day some “blue laws” remain on the books, limiting Sunday sales of alcohol, and banks generally (but not always) are closed, but for the most part Sunday is one of the most active days of the week in terms of commercial transactions. The commercialization of Sunday, however, does not seem to have diminished Sunday’s importance in the United States as a day of religious observance and rest. Many megachurches have bookstores that do business before and after services, some have ATM machines to dispense cash for tithing, and some accommodate themselves to professional and commercial calendars in which football games and sales punctuate certain Sundays. Consider “Superbowl Sunday,” for example, an extravaganza of the National Football League introduced in 1967.

Critical Assessment

The widespread tolerance of religious holy days as long as they don’t interfere with the commercial calendar rises in part out of the successful incorporation into Sunday of necessary farm chores since time immemorial; of some work related to the railroads and telegraph since the 1800s; of industrial work in factories since the 1850s; of uplifting leisure associated with books, art, and music since the 1880s; of entertainment rising out of spectator sports and the movies, and the electronic mass media since the 1920s; and of commerce since the 1950s. That Sunday can retain its religious significance while people travel, work, play, and shop is testament to the importance of temporal elasticity, as well as to the religious meanings of spaces of time. It also has set the stage for religious tolerance: the holy times of other religious traditions in addition to Protestantism can find a place in the American calendar if their adherents can tolerate work, play, and shopping on their holy days. Because there are no longer limitations to work on Sunday, adherents of other religious traditions can still go about making their living despite the prevalence of a weekly calendar oriented toward the rhythms of mainstream Christianity. Thus in temporal terms alone, Sunday has become an important institution for all religions in the United States, not just those that consider it the Sabbath, the Lord’s Day, or simply a day of rest.

The sense of pride in the religious diversity of the United States, reluctance to discriminate openly on the basis of religion, and ongoing differentiation of Sunday together have laid the groundwork for treating the calendar as elastic when it comes to religious needs. Thus Sunday—as a common time of rest and as a common source of conflict—laid the foundations for temporal elasticity in relation to religion in the contemporary United States. When the Puritans cleansed the religious calendar of all holy days except Sundays, they fashioned what was nearly a blank slate onto which a multitude of traditions could be transposed, and this is precisely what happened once per capita productivity was high enough that the communal work calendar could accommodate different holy days and holidays.

Supreme Court

The Supreme Court is the only court established by the U.S. Constitution and is the final arbiter of its meaning. Religion cases come to the Court under the First Amendment's prohibition of state "establishment of religion" and its guarantee of religious "free exercise." Claims may also arise under Article VI, which provides that federally elected officials cannot be subjected to religious tests as a prerequisite to office. By virtue of its singular authority to interpret these provisions, the Supreme Court's influence on national and local church-state relations in the United States is unparalleled.

Though the Constitution does not stipulate the size of the Court, since 1869 it has been comprised of a chief justice and eight associate justices. Pursuant to Article II of the Constitution, a vacancy on the Court is filled by nomination of the president "with advice and consent of the Senate." The Senate Judiciary Committee may conduct a hearing into the competency of the candidate and report its recommendation to the entire Senate for a vote. The Constitution does not provide any criteria for appointment to the Court; even those without legal or judicial experience may and have been appointed. A simple majority vote in the affirmative is sufficient to grant consent and is almost always obtained from the Senate. In the 220-year history of the Court, only twelve of the president's nominees have been rejected. Nevertheless,

these provisions give democratic politics some, albeit highly limited, influence on the Court. Once justices are appointed, their independence from interference by either presidential or congressional politics is preserved by the Constitution's requirement that appointment to the Court is for life and a justice's salary cannot be diminished while in office. A justice may be impeached, but the one attempt to do so failed and established the principle that a justice may not be challenged for his or her performance on the bench.

The Supreme Court's Role in Religion Cases

The vast majority of religion cases come before the Court under the First Amendment, and the numbers of these cases has grown exponentially throughout the twentieth century. This is so for several reasons. At midcentury, the Court interpreted the Fourteenth Amendment to apply the guarantees of religious liberty and disestablishment to the states. Moreover, with the rise of the liberal state, federal and state governments extended their regulatory authority over activities that once were nearly exclusively church sponsored, such as health, education, and welfare services. This brought more complex and politically charged cases to the Court.

This growth in cases and their complexity was not only due to more federal and state regulatory activity or the Court's placing itself in the crossroads, however. It was due also to an increasing diversity of America's religions and a decreasing authority of Protestantism's de facto establishment. Americans, for all their religiosity, had always been too religiously diverse for one church to dominate another in law. But a broad coalition of evangelical Protestant groups had dominated America's body politic until the first third of the twentieth century, when this coalition began to collapse, eroding the sense of a religio-moral consensus in society. Mid-century Supreme Court cases dealing with official expressions of religion in public schools illustrate this cultural shift. Consistent with the post-Civil War emphasis on equal treatment under the law and the growth of non-Protestant religions in America, the Court began to reason its way to greater neutrality among America's majority and minority religions and between religion and irreligion. The varying results in these cases have led to a rich and, for some, frustratingly complex history of constitutional interpretation of church-state relations.

For several reasons, the Court's First Amendment decisions are not susceptible to being reduced to static rules about church-state relations. Among the most significant

reasons is the nature of jurisprudence itself. Court opinions are most fundamentally interpretations of historical texts—the Constitution, of course, but also case law and statutes promulgated throughout the nation’s history—applied to contemporary factual situations. As such, the Court’s decisions are subject to all the truisms about interpretation and the negotiation of multiple meanings in literal and social texts.

This alone does not explain the evolutionary nature of the Court’s opinions. In addition, change over time is an inherent aspect of American law as a common law system. In such systems any one decision is based upon a comparison of facts and law to previous decisions. As a fundamentally analogical method, legal reasoning requires the comparison of related cases to deduce the appropriate ruling in any case currently before the Court. Thus, the law evolves with the culture that gives rise to the factual disputes that come before the Court. Indeed, the Supreme Court extends its jurisdiction, with a few statutory exceptions, only to cases where the law is unclear or, in other words, where conflicting opinions by lower courts need reconciling by the Supreme Court.

There are rules that limit the Court’s interpretive range, however. First, it may only decide cases, not hypothetical questions raised by the Court itself that are unrelated to an actual controversy. The Court’s opinion must be anchored in the facts brought to it by real parties who feel themselves aggrieved by the actions others. Moreover, the Supreme Court, as its name implies, is the court of last resort. Only after two other tribunals have rendered judgment does the case come to the Supreme Court, and even then the Court is limited to considering whether the lower court properly applied the law to the case. Finally, there is no right of appeal to the Supreme Court. It has discretion whether or not to accept a case and can do so only upon an affirmative vote by four of the nine justices. Of the average ten thousand requests for a hearing each year, the Court hears fewer than 1 percent.

The Court’s decision in a case is rendered as a single opinion, though it need not be and rarely is unanimous. Therefore, most decisions are comprised of two opinions: one speaking for the majority, the other for the minority of justices. The majority opinion constitutes the law of the case and is called the “holding.” The minority opinion disagrees with this holding and is called “the dissent.” Within each of these two parts of the published decision, individual justices may write separate opinions indicating that they are joining either the majority or dissenting opinion with respect to

certain but not all aspects of its reasoning. A wide disparity of opinions in a single case signals that the law is unsettled. Therefore, notwithstanding the designation of a winner and loser in such a case, it is not possible to generalize with certainty to other cases. A split decision and multiplicity of opinions on a single case virtually guarantees further appeals of similar questions to the Court. In theory greater certainty is achieved as analogizing among cases refines issues to the point that new facts do not present new questions; the lower courts achieve acceptable unity in their treatment of similar cases; and the Supreme Court, therefore, has no need to consider the matter further. In matters of religion, such certainty has proved illusory, not least because of the difficulty in defining religion.

The Supreme Court’s Definition of Religion

One of the enduring questions for the Court has been, What is the phenomenon the First Amendment religion clauses seek to protect? As the Court noted in its first religion case, the Constitution does not define the term *religion*. In 1878, when the question first presented itself in the context of the criminalization of Mormon polygamous marriages, the Court looked for guidance in the historical and cultural context of the Constitution. “Polygamy has always been odious among the northern and western nations of Europe,” the justices concluded, “and, until the establishment of the Mormon Church, was almost exclusively a feature of the life of Asiatic and of African people” (*Reynolds v. U.S.*, 1878). As a consequence the Court found it “impossible to believe” that the framers intended the United States to allow such an “odious” practice. Subsequent polygamy cases made the link more explicit between Christianity and the Court’s notion of protectable religion. In *Davis v. Beason* (1890), the Court opined that polygamy was forbidden “by the laws of all civilized and Christian countries, and to call their advocacy a tenet of religion is to offend the common sense of mankind.”

Thus, in early religion cases the Court’s social context was the basis for defining constitutionally recognizable religion in terms of traditional Christianity and, more specifically, Protestantism’s conception of religion as personal belief, not sacramental practice. Religion in U.S. law was, said the *Davis* court, “one’s views of his relations to his Creator, and to the obligations they impose of reverence for his being and character, and of obedience to his will.”

Though unselfconsciously seen as merely “common sense,” this view of religion endorsed a particular kind of religion and was later understood to place the Court at

odds with the establishment clause. *Reynolds'* belief-action distinction endured, but the Court's definition of religion did not. During the early twentieth century the U.S. government became more conscious of the nation's enduring religious diversity, including among Christians, and became increasingly inclined to see its role as one of ensuring fundamental fairness, not moral sameness. When the Court took up the question of religion in *Everson v. Board of Education* (1947) after a long hiatus, it avoided defining religion and simply observed that however defined, religion was the same thing under two clauses of the First Amendment. "Religion' appears only once in the Amendment, but the word governs two prohibitions and governs them alike. It does not," the Court held, "have two meanings, one narrow to forbid 'an establishment' and another, much broader, for securing 'the free exercise thereof.'" In *Torcaso v. Watkins*, a 1961 test oath case, the Court finally abandoned a content-specific definition and placed on equal and protected footing "those religions based on a belief in the existence of God . . . [and] those religions founded on different beliefs."

Also in the 1960s the Court adopted a functional definition of religion that extended conscientious objector status to persons with nontheistic but sincere beliefs related to matters of "ultimate concern." Though Congress had delimited the statute in question by identifying religion with belief in a "Supreme Being," to the Court this was meant as "merely clarifying the meaning of religious training and belief so as to embrace all religions and to exclude essentially political, sociological, or philosophical views" (*U.S. v. Seeger*, 1965). Therefore, the Court held that the test for conscientious objector status was "whether a given belief that is sincere and meaningful occupies a place in the life of its possessor parallel to that filled by the orthodox belief in God of one who clearly qualifies for the exemption" (*U.S. v. Seeger*). That "place" was defined by the Court with a quotation from Protestant theologian Paul Tillich's *The Shaking of the Foundations* (1948): "And if that word [God] has not much meaning for you, translate it, and speak of . . . your ultimate concern, of what you take seriously without any reservation" (p. 57). For the Court, then, religion became defined as a core conviction to which one subordinates all else: it was one's "ultimate concern." The Court would no longer look at the content of the belief in question, only at whether it was "sincere and meaningful." This was, said the *Seeger* Court, consistent with the "ever-broadening understanding of the modern religious community."

Subsequent cases have sometimes employed other indicators to identify religion, such as the existence of a community of believers and a history of organizationally sustained practices. These factors, however, appear to be only helpful markers, not substitutions for the "ultimate concern" test. In 1988, for example, the Supreme Court reversed a lower court's remand of a case for a factual determination of the religious character or legitimacy of peyote use. It was sufficient, the Court held, that the Native American Church was "a recognized religion"; that "peyote is a sacrament of that church"; and that the "respondents' beliefs were sincerely held" (*Employment Div. v. Smith*, 1988). In a lengthy footnote the Court noted other markers that justified recognizing the Native American Church—namely, the existence of an organization, a demonstrable history of ritual practices, and the existence of others who shared the belief that their peyote ritual facilitated experience of the divine. All of these factors appear merely to contribute to the ease with which religion may be identified. *Seeger* remains the standard for defining religion as a conviction regarding "ultimate concerns" that is sincerely held.

Article VI: Theories and Tests

Article VI's prohibition of a religious test oath for public office has contributed little to the development of jurisprudence regarding religion. This is in part because Article VI is a fairly straightforward proposition: "no religious test shall ever be required as a qualification to any office or public trust under the United States." Also, the tendency has been for the Court to read Article VI in concert with the First Amendment: test oaths are deemed to violate proscriptions against religious establishment or limit religious liberty. The controlling opinion was rendered in 1961, when the Court overruled Maryland's requirement that notaries swear a belief in God. Though directly concerned with a test oath, the case was resolved exclusively on First Amendment grounds (*Torcaso v. Watkins*, 1961). In sum neither irreligious nor religious convictions can be a basis for denial of public office, but the Court has not deemed it necessary to look beyond the First Amendment to Article VI for its position.

The First Amendment: Theories and Tests

The First Amendment requires that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." Thus, the ratification in 1791 of the Bill of Rights made explicit that the Constitution's silence on religion was intentional. The federal government

was not to give a preference to or establish any religion; neither was it to interfere with personal religious choice. Therefore, the Supreme Court was also largely silent on religion until the 1870s, when Congress undertook to criminalize Mormonism's marriage practices. Not until the twentieth century, however, did the number of First Amendment cases create a need for theorizing about church-state relations. In the 1940s the Court held that the Fourteenth Amendment made the free exercise clause (*Cantwell v. Connecticut*) and the establishment clause (*Everson v. Board of Education*) applicable to the states. From then on the Court's docket of religion cases expanded dramatically, resulting in a variety of tests for adjudicating church-state relations. Though they often present overlapping concerns, the First Amendment's two religion clauses have separate trajectories of interpretation that began late in the Court's own history.

Free Exercise

In the 1870s the Church of Jesus Christ of Latter-day Saints challenged the constitutionality of federal statutes that forbade its marriage practices. These cases provided the Court with its first opportunity to consider the scope of the protection given religion under the Constitution. The Court's holding remains the starting point for virtually all religion cases to this day. The following words are commonly imported into contemporary religious liberty cases: "Laws are made for the government of actions, and while they cannot interfere with mere religious belief and opinions, they may with practices" (*Reynolds v. U.S.*, 1878). In other words, religious beliefs are absolutely protected by the First Amendment, but actions based on those beliefs are not. The *Reynolds* court asked, "Can a man excuse his practices to the contrary because of his religious belief?" and concluded no: "To permit this would be to make the professed doctrines of religious belief superior to the law of the land, and, in effect, to permit every citizen to become a law unto himself. Government could exist only in name under such circumstances." The *Reynolds* distinction between action and belief is, however, only the beginning of any analysis of religious liberty challenges to state action.

Much depends upon the kind of action at issue. Religious speech, for example, is deemed as protected as belief itself. This is in large part due to the First Amendment's independent guarantee of freedom of speech and the application to religion of the theories that protect speech. Consequently, religious speech may not be restricted unless it poses an

obvious and imminent threat to public safety. The Court strictly scrutinizes any regulations of it and requires the government to bear the burden of demonstrating their constitutionality. The Court has also, held in *Rosenberger v. Rector* (1995), that the state cannot treat religious speech differently from other types of speech by, for example, singling out and refusing to subsidize at a state university a student publication that has a religious point of view. For other forms of embodiment of belief, however, a separate set of standards has evolved.

Exemption of Religion from Generally Applicable Laws

Because the First Amendment clearly forbids laws directly pertaining to religion, most appellants come to the Court seeking a religious exemption to laws applicable to the general population. The traditional test for such cases was established in *Sherbert v. Verner* (1963), which involved the state's refusal to grant unemployment benefits to a fired employee who refused on religious grounds to work on Saturday. The Court imposed a two-tier test to the facts of the case. First, the complainant had to show that the law created a substantial burden on the performance of a religious duty in which she had a sincere belief. Once substantiality was evidenced, the burden shifted to the state to show two things about the law in question. First, it had to be in furtherance of a legitimate, even "compelling state interest." Second, the law had to be narrowly tailored to accomplishing that interest and be the least burdensome means of doing so. The *Sherbert* Court emphasized that "no showing of a rational relationship to some colorable state interest would suffice; in this highly sensitive constitutional area, . . . only the gravest abuses, endangering paramount interests, give occasion for permissible limitation."

In the end, the Court held that the state's interest in protecting itself from spurious unemployment claims was not compelling, especially when weighed against the substantial burden to the complainant. Thus, even laws that are neutral on their face can, under *Sherbert v. Verner*, be found to violate the First Amendment, if the Court deems the burden on religion to be greater than is justified by the state's interests in the legislation.

Exemption of religion from generally applicable statutes can run afoul of the establishment clause insofar as it benefits religion as religion. The Court has seldom entertained that dilemma in free exercise exemptions except to dismiss it, however. In *Sherbert v. Verner*, for example, the Court held

“the extension of unemployment benefits to Sabbatarians in common with Sunday worshippers reflects nothing more than the governmental obligation of neutrality in the face of religious differences, and does not represent that involvement of religious with secular institutions which it is the object of the Establishment Clause to forestall.” During this period, the Court’s tendency appears to have been to allow exemptions where the case involved minority religions and on matters that seemed to have minimal appeal to other citizens. In *Wisconsin v. Yoder* (1972), for example, the Amish in Wisconsin were granted an exemption from state mandatory school attendance statutes, an exemption not likely to appeal to the broader population.

Ten years later in *U.S. v. Lee*, however, Pennsylvanian Amish were denied an exemption from income tax laws. Other cases in the 1980s sided with the state and implied concern that religious exemptions were threatening to swallow the constitutional rule. These decisions included siding against a Jewish military officer asking to wear a yarmulke while in uniform, against a prisoner wanting to attend a religious ceremony under circumstances deemed by prison authorities to compromise security, and against Native Americans objecting to construction of a federal highway through a worship site (see respectively *Goldman v. Weinberger*, 1986; *O’Lone v. Estate of Shabazz*, 1987; and *Lyng v. Northwest Indian Cemetery Protective Association*, 1988). After twenty years of finely drawn factual distinctions leading to highly contested opinions among its justices, the Court’s lack of theoretical coherence and cases’ inherent tension with the establishment clause came to a head with *Employment Division v. Smith* (1990).

In *Smith*, the Court turned away from, though it did not explicitly overrule, the *Sherbert* test by holding that governmental regulations did not have to have a compelling interest. It was enough, said the Court, that the law was neutral and generally applicable. The First Amendment only required the state not to regulate religion directly. That the Native American Church’s practices conflicted with the state’s drug statutes did not per se invalidate the statutes under the First Amendment. Echoing *Reynolds’* fear that religious exemption could permit every citizen to become a law unto himself, the *Smith* Court worried that *Sherbert’s* balancing “would open the prospect of constitutionally required exemptions from civic obligations of almost every conceivable kind.”

With *Smith* the standard of review for religious liberty cases became one of strict neutrality for both minority and

majority religious interests. Only if it could be shown that the government was directly burdening religious practice or otherwise targeting religion would the Court require the state to demonstrate a compelling interest in its regulatory initiatives. Otherwise, the free exercise clause would be satisfied by the contested statute being applicable to the population as a whole. However, because the Court left the state with discretion to exempt religion from a generally applicable statute, the wall of separation appeared quite porous. Moreover, granting states the discretion to exempt religion has worried some that *Smith* will lead to unequal treatment of minority or socially unacceptable religions. Both issues could result in challenges that catalyze evolution of *Smith’s* theory of religious liberty and have encouraged parties to rely on state constitutional guarantees of religious liberty that are not limited by the federal test enunciated in *Smith*.

Disestablishment

Absolute separation of church and state is impossible, of course. Religion in the United States receives a variety of governmental benefits common to all social institutions, including fire and police protection and use of roads and other utilities. Like other charitable institutions, churches are tax-exempt. Finally, as we have seen, religion is subject to general laws governing moral conduct. Thus, most basically the term *no law* has been interpreted to mean that state action must not single out religion as an object of legislative attention. There has been, however, much disagreement on this score among the members of the Court. Whether the establishment clause prohibits any specific-to-religion activity by the government or merely forbids discriminating between religions has been the larger interpretive question. Thus, theories of disestablishment that emphasize neutrality towards religion are challenged by countervailing arguments for strict separation of church and state and for accommodation of religion by the state.

All three of these themes—neutrality, strict separation, and accommodation—are found in standards of judicial review under the establishment clause. In general it can be said that the achievement of a majority necessary to render a decision in establishment clause cases is typically grounded today in the notion that the state may aid religion directly and indirectly, as long as it does not discriminate among religions and between religion and other social institutions.

As with the free exercise clause, the Court’s nineteenth-century justices had few opportunities to opine on the establishment clause. Such cases as came to them concerned

disputes over property obtained by churches from colonial governments (*Terrett v. Taylor*, 1815) or property disputes arising from schism in a church (*Watson v. Jones*, 1872). The first direct challenge under the establishment clause involved the constitutionality of federal funding of a Catholic hospital (*Bradfield v. Roberts*, 1899), but it took another fifty years for the Court to articulate a general theory of disestablishment.

Everson v. Board of Education

Everson v. Board of Education (1947) concerned a state program to reimburse parents for the cost of transporting their children to parochial schools. The *Everson* Court used the occasion to set minimal rubrics for disestablishment cases, many of which seemed commonsensical in the twentieth century: “Neither a state nor the Federal Government can set up a church. Neither can pass laws which aid one religion, aid all religions or prefer one religion over another. Neither can force nor influence a person to go to or to remain away from church against his will or force him to profess a belief or disbelief in any religion. No person can be punished for entertaining or professing religious beliefs or disbeliefs, for church attendance or non-attendance. No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion. Neither a state nor the Federal Government can, openly or secretly, participate in the affairs of any religious organizations or groups and vice versa.” In this list, one can see the general types of governmental action that are prohibited in the interest of separating church and state: laws that discriminate between religions, promote religion in general, or draw the state into the affairs of religion. But beyond such generalizations the Court did not go.

Given the Court’s long list of negatives, one would have expected it to reject the New Jersey reimbursements as “laws which aid one religion.” But by a majority of one, the Court chose to see the reimbursements as intended to facilitate school attendance, not promote religion, and as neutrally available to all private schools, not merely religious ones. Indeed, for the majority, a refusal to subsidize the transportation of religious students was to discriminate against them. The Constitution, observed the Court, “does not require the state to be [religions’] adversary. State power is no more to be used so as to handicap religions than it is to favor them.”

To some extent *Everson* and subsequent cases’ appeal to a nonadversarial relationship between church and state reflects United States historical practice and social circumstance A

singularly powerful contributor to the number and complexity of Supreme Court establishment cases is the history of de facto integration in the United States of religious themes and ideals with its secular institutions. U.S. presidents take the oath of office on a Bible. The Supreme Court building displays an image of Moses bearing the Ten Commandments, and the Court’s ceremonies include such phrases as “God bless this honorable Court.” Congress has a chaplain and prays routinely. In *Marsh v. Chambers* (1983), the Court deemed these to be historic practices that had lost their specifically religious content and, therefore, were neutral expressions of the nation’s past. This effectively removed some governmental displays of religion from the Court’s docket but by no means all. In fact, deciding under what circumstances displays were acceptable became one of the more vexing and common questions for the Court, especially with respect to nativity scenes and representations of the Ten Commandments, as discussed below.

The Lemon Test

Not until twenty-five years after *Everson* did the Court provide a specific test for identifying permissible aid to religion. In *Lemon v. Kurtzman* (1971), the Court was again asked to review laws providing state reimbursement of expenses associated with attending private schools, most of which were parochial. This time, however, the reimbursement was to the schools directly and for the cost of teachers, texts, and instructional materials for secular subjects. The Court found the assistance to the schools unconstitutional, announcing its decision in what became the “*Lemon* test.” The test was comprised of three elements. To pass muster under the establishment clause, a statute must

- have a secular purpose;
- have a secular effect (measured in terms of not “advancing” religion); and
- not result in “excessive entanglement” between state and church.

“Excessive entanglement” usually is deemed to arise from regulatory oversight of the assistance in question. Though such oversight may be nondiscriminatory in the sense that it subjects all recipients of public funds to the same terms and scrutiny, it could result in the intrusion of the state into the governance of religious organizations.

In theory, failure on any one of these grounds would render government action unconstitutional. In practice,

however, application of the *Lemon* test led to a variety of results whose coherence was imperceptible to the public and increasingly criticized by individual members of the Court in dissenting opinions. For example, one justice concurred in the result of a case but refused to join the majority opinion because it applied the *Lemon* test. In *Lamb's Chapel v. Center Moriches Union Free School District* (1993), Justice Antonin Scalia castigated his colleagues for their arbitrary use of *Lemon*: "When we wish to strike down a practice it forbids, we invoke it, when we wish to uphold a practice it forbids, we ignore it entirely."

State Display of Religious Symbols

One of the better illustrations of Justice Scalia's complaint is the Court's attempt to adjudicate the propriety of the state's display of religious symbols. Although long-standing custom has been deemed, as indicated above, to have emptied some symbols of their religious content, more recent practices have posed greater difficulty to the Court. In *Lynch v. Donnelly* (1984), a much criticized case involving a city's display of a crèche during the Christmas shopping season, the Court found that to "celebrate the Holiday and to depict the origins of that Holiday" was a legitimate secular interest. Five years later a contrary result was reached. The pivotal difference in the two opinions appears to have been the locale of the displays. While in *Lynch* the crèche had been displayed in the city's shopping district, in *Allegheny v. ACLU* (1989) the crèche had been placed in the stairwell of the county courthouse. The courthouse location implied an endorsement of religion that the shopping district did not. Similar considerations of intent and location have governed a variety of results in Ten Commandment cases. If the state seems to have intended to assert the primacy of religion and especially specific religious content, display of the Ten Commandments has been found unconstitutional. If, on the other hand, the display merely described the historical evolution of U.S. law and society or was placed on public grounds for no religious reason, the display has been found constitutional. (See *McCreary County v. ACLU* and *Van Orden v. Perry*, both decided in 2005.)

The Endorsement Test and Coercion Test

In the course of their struggle for consistency, different majorities of the Court have employed two additional tests. The first test arose from Justice Sandra Day O'Connor's concurring opinion in *Lynch v. Donnelly* and is called the "endorsement test." It elaborates on *Lemon's* concern for the

effect of the government action. Rather than asking generally whether the effect of state action is to advance religion, the Court considers specifically whether the action gives the impression "to non-adherents that they are outsiders, not full members of the political community, and an accompanying message to adherents that they are insiders, favored members of the political community."

The second test is referred to as the "coercion test" and is a more dramatic departure from *Lemon*. Under this theory a state violates the establishment clause only if it provides direct support to religion or coerces participation in religion. Because schools host a captive and impressionable audience, the Court has repeatedly rejected their sponsorship of religious ideas and practices, such as by teaching creationism, reading the Bible devotionally, and praying publicly. Observing in *Lee v. Weisman* (1992) that "prayer exercises in public schools carry a particular risk of indirect coercion," the Court held, "at a minimum, the Constitution guarantees that government may not coerce anyone to support or participate in religion or its exercise." These alternatives to establishment clause interpretation coexist with *Lemon*, which the Court continues to employ.

Consistency and Divergence in the Court's Treatment of the Establishment Clause

Regardless of the test or combination of tests employed, establishment clause cases reveal a consistent set of questions employed by the Court. These remain well summarized by *Lemon's* interest in the intent and effect of the statutory scheme. A second consistency is revealed by the Court's attention to context. Schools are treated differently than the town square. Courthouses raise concerns that shopping districts and parks do not. Contextual distinctions display at least two enduring concerns: the citizen's right not to participate (coercion) and not to be excluded from democratic polity (endorsement). The third way of organizing the Court's establishment decisions is by the ideologies that inform the majority's choice of questions and concerns. Some justices, especially those of the mid-twentieth century, have been committed to a strongly separationist view of the establishment clause. These jurists have been more inclined to see dangers in mixing religion and politics.

Lemon, for example, shows separationist roots in its emphasis on excessive entanglement between church and state and its requirement that the state not further the general interests of religion, much less a specific religion. At the opposite end of the spectrum are those who take the

position that while the state may not give a preference to one religious body over another, it must accommodate religious interests. For this group the unequal treatment of religion causes civil strife. Moreover, they argue, the conflation of political and religious interests both in the past and present ceremonial activities of government legitimize continuing accommodation. As Justice Scalia put it in *Lamb's Chapel* (1993), "What a strange notion, that a Constitution which itself gives 'religion in general' preferential treatment (I refer to the Free Exercise Clause) forbids endorsement of religion in general." This accommodationist position is further informed by the belief that withholding from religious organizations benefits given to other institutions violates constitutionally mandated neutrality.

Predictably a middle position has developed in order to obtain a majority necessary to render a decision. For these members of the Court, state support of religious activity is constitutional if it benefits religion in general without requiring unwilling participation or causing persons to feel less than full citizens. Thus, centrist majorities are characterized by an emphasis on the state's intent and heightened attention to context (in other words, potential for coercion and endorsement) as a way of satisfying obliquely *Lemon's* entanglement concerns.

In sum, although establishment cases have lacked uniformity in their results, the analysis of the process by which the Court reaches a decision shows discernable predictability in its questions, concerns, and ideologies. Though this approach to First Amendment cases falls short of identifying a single theory or test, it does enable one to plot the trajectory of the Court's decisions during a period of dramatic change in direction for it and the nation on issues concerning the relation of church and state.

Systematic Theology

In the Christian tradition, systematic theology is an attempt to summarize the doctrines of faith and to demonstrate their coherence. The adjective *systematic* can be misleading. Theology is not systematic in the sense that it is the construction of abstract, metaphysical systems, but instead that it is a description of the coherence of Christian faith: first, the coherence of convictions within Christian faith (for example, that Jesus is the Christ as the basis for claims that God is triune); second, the coherence between what Christians believe and how they should live (Christian ethics); and, third, the coherence or intelligibility of Christian faith in relation to a particular historical and cultural context, often described as the task of interpretation or hermeneutics. This third attempt has frequently entailed the use of contemporary forms of philosophy.

One of the earliest instances of systematic theology in the Christian tradition was *On First Principles* by Origen (c. 185–c. 254), which interpreted Christian faith in conversation with the Neoplatonism prevalent in Alexandria. One reason systematic theology became an established genre early in the Christian tradition (it has not done so in Judaism or

Islam) was its concern to make its faith claims intelligible to new cultures and philosophies.

From its inception, American systematic theology has been deeply influenced by European theology and philosophy. A text found in the libraries of many American pastors in colonial New England was *Medulla Theologiae* (1623, translated in 1642 as *The Marrow of Theology*) by the English Puritan William Ames (1576–1633), who had fled persecution in England to Holland and had hoped to emigrate to the American colonies but died in Rotterdam. Four years later his widow did emigrate to the Bay Colony, bringing his book and theology with her. Relying on the dialectics of the French Reformed philosopher Peter Ramus (1515–1572), Ames demonstrated the coherence between faith in God and the convictions that follow from it, and what he called observance, what faith entails in terms of “living to God” (Ames’s description of theology, also borrowed from Ramus).

Ames’s influence on early American theology is significant because it illustrates the derivative character of American systematic theology—that is, its dependence on its European predecessors—and the importance of philosophy in interpreting Christian faith. Much of early American theology was indebted not only to Ramus but also to the works of Francis Bacon (1561–1626), John Locke (1632–1704), George Berkeley (1684–1753), and the Scottish common sense realism of Thomas Reid (1710–1796) and Dugald Stewart (1753–1828). Later examples of American theologians’ use of philosophy are the influence of F. W. J. Schelling (1775–1854), G. W. F. Hegel (1770–1831), and German Idealism of the Mercersburg theologians, John Williamson Nevin (1803–1886) and Philip Schaff (1819–1893), as well as that of Schelling, Martin Heidegger (1889–1976), and twentieth century existentialism on the *Systematic Theology* (1951, 1957, 1963) of Paul Tillich (1886–1965).

Ames’s dialectic of faith and observance was a continuing theme in American Puritan theology, in part because most theologians in America before the nineteenth century were ministers in congregations. As it was for many of their Protestant European predecessors, their context for theological reflection was the regular task of reading and interpreting the Bible, writing sermons, and administering the life of a congregation. The various revivals or awakenings that swept across the country, first in the 1730s and later in the early nineteenth century, raised important theological questions about what was called the evidence of faith—that is, the relation between God’s sovereignty and human agency, the nature of sin, and the meaning of the atonement—but for

most American theologians these issues had their origin not primarily in books written by other theologians, but in the daily lives of those to whom they ministered. The professional systematic theologian, whose primary context was the academy and the guild rather than the everyday life of a congregation, did not emerge until divinity schools and denominational seminaries were established in the nineteenth century. The emergence of the academic theologian brought about important changes in systematic theology. The attention given to the practicality, what Ames had referred to as observance, of Christian faith became less important than issues in the guild of American theology.

If systematic theology is understood as the coherence of a particular theological perspective, then one can describe a theological system even if it takes less than a volume to do so and does not discuss every major doctrine of Christian faith. In this larger sense of the term, many of the major theological movements or schools in American theology are systematic. They offer a coherent interpretation of Christian faith even though that coherence is never in written form. That is certainly the case with the most significant figure in American theology, Jonathan Edwards (1703–1758), whose theology is clearly coherent. Part of his brilliance was the depth and range of his thought. Like Ames, Edwards was concerned with demonstrating that speculative truth about God is of a piece with the practice of Christian faith. At the center of his theology is the sovereignty, glory, beauty, and what he described as the excellency of God, a beauty reflected in the harmony and proportion of creation, the internal harmony of the Bible, and in the incarnation and atoning work of the Word made flesh in Jesus Christ. Edwards’s theology is inseparable from but not reducible to his role in the first Great Awakening and the theological issues it raised. His distinction between natural and moral necessity enabled him to affirm a Calvinist understanding of the sovereignty of God’s grace and at the same time the importance of moral praise and blame.

The work of Edwards’s disciples came to be known as the new divinity. Its practitioners included Samuel Hopkins (1721–1803), whose *System of Doctrines* (1793) was the first attempt in American theology to demonstrate the systematic coherence of Christian doctrines, and Joseph Bellamy (1719–1790), whose *True Religion Delineated* (1750) addressed the pervasive Arminianism (denial of predestination) of the day by arguing that true virtue, especially loving God, was not to be valued because of its benefits but because God alone was intrinsically worthy of love. The Edwardsean

tradition culminated in the New Haven theology of Nathaniel William Taylor (1786–1858).

The Arminians found a defender in the Boston minister William Ellery Channing (1780–1842), who laid the foundations for Unitarian theology by emphasizing the role of reason and morality in Christian faith and by rejecting original sin, the Trinity, the deity of Christ, and substitutionary theories of the atonement. Channing did not, however, make a systematic statement of Unitarian theology.

By the middle of the nineteenth century, new influences, including German Idealism, Romanticism, and the beginning of historical critical studies of the Bible began to influence American theology. Attempts to conserve classical forms of Protestant theology were evident in the Princeton School, especially in Charles Hodge (1797–1878), and B. B. Warfield (1851–1921). Hodge's *Systematic Theology* (1871–1873) and Charles Porterfield Krauth's (1823–1883) *The Conservative Reformation and Its Theology* (1871) were defenses of the classical Reformed and Lutheran confessional traditions. So, too, John Williamson Nevin (1803–1886) in *The Mystical Presence* (1846) and his colleague Philip Schaff (1819–1893) advocated a recovery of both pre-Reformation Christianity and a Calvinism untainted by its Puritan and revivalist traditions. On the other hand, Horace Bushnell (1802–1876)—deeply influenced by Samuel Taylor Coleridge (1772–1834), German Romanticism, and Friedrich Schleiermacher (1768–1834)—laid the foundations for theological liberalism in America with his *Christian Nurture* (1861), *God in Christ* (1849), and *Nature and the Supernatural* (1858). He developed an interpretation of sin and atonement that rejected the positions of both orthodox Calvinism and Unitarianism, arguing that Christ's sacrifice on the cross could be better understood in terms of a theory of vicarious sacrifice based on what he described as the principle of love. Just as Bushnell produced no systematic description of Christian faith, neither did Orestes Brownson (1803–1876), perhaps the most significant American Catholic theologian of the nineteenth century. A convert to Catholicism, Brownson argued that one could intuit certain eternal ideas that were the mind of God. Reason, instructed by the authority of the church, could therefore discern the truths of Catholic faith, such as Trinity and incarnation, although Brownson did not write a systematic description of the coherence of these truths of faith.

American theology in the first two-thirds of the twentieth century was dominated by the emergence of the Social Gospel, the impact of what was sometimes referred to ambiguously as European Neo-orthodox theology, and three major

theologians—Reinhold Niebuhr (1892–1971), his brother H. Richard Niebuhr (1894–1962), and Paul Tillich.

Neither Congregationalist Washington Gladden (1836–1918) nor Baptist Walter Rauschenbusch (1861–1918), major figures in the development of the Social Gospel, wrote a systematic theology. Rauschenbusch's *Christianity and the Social Crisis* (1907) and *A Theology of the Social Gospel* (1917), however, offered a systematic vision of the implications of the biblical symbol of the Kingdom of God for the mission of churches. Reinhold Niebuhr's *Moral Man and Immoral Society* (1932) and his 1939 Gifford Lectures, *The Nature and Destiny of Man* (1941, 1943), affirmed the importance of the social reality of sin, but also offered a stringent critique of the liberal optimism of the Social Gospel movement. Although Tillich immigrated to the United States from Nazi Germany in 1934, his three-volume *Systematic Theology* (1951, 1957, 1963) was probably the single most influential proposal in American theology during the twentieth century. Using a method of correlation, Tillich reinterpreted the major Christian symbols in a manner that made Christian faith intelligible and compelling to a culture caught up in the existentialism of Heidegger, Sartre, and Camus, as well as the new field of psychoanalysis.

The decade of the 1960s was an important period in American society and in theology. The decade began with Vatican II (1962–1965), which led to a rethinking of the nature of the church and Catholicism's relation to Protestantism, Judaism, and other religious faiths. The impact of Vatican II is reflected in Richard P. McBrien's *Catholicism* (1994), as well as *Systematic Theology: Roman Catholic Perspectives* (1991), co-edited by Francis Schüssler Fiorenza and John P. Galvin.

The year 1968 was particularly important in American society. The assassinations of Martin Luther King Jr. and Robert F. Kennedy, the Tet offensive in Vietnam, the riots at the Democratic Convention in Chicago, and the trial of the Black Panthers were several of the large events signaling the unraveling of American society. American theology underwent significant change as well. In December 1968 Karl Barth (1886–1968), the most important Protestant theologian of the twentieth century, died in Switzerland. With his death the neo-orthodox movement in theology, which had become a major force in American Protestant theology, came to a conclusion except at Princeton Seminary and Yale Divinity School. Just as established social institutions in U.S. society lost their authority during the 1960s, so too the established paradigms in Protestant and Catholic theology no longer dominated academic discussion.

Also in 1968, Gordon Kaufman published *Systematic Theology: A Historicist Perspective*. The subtitle is significant. For Kaufman, theology is a continual process of appropriating past revelatory events for the present situation, but the present situation is a matter of perspective, and in the 1960s and 1970s new perspectives and previously unheard voices emerged in American theology. Process theology, derived from the work of Alfred North Whitehead (1861–1947) and Charles Hartshorne (1897–2000), recast reality in terms of the categories of process and becoming rather than being and reinterpreted Christian faith accordingly. Feminist theology, which emerged first in the work of (originally) Roman Catholic theologian Mary Daly (1928–2010) but soon after appeared in Protestant circles as well, attacked a patriarchy deeply entrenched not only in society but also in Christian theology and the church. Feminist theologians have not yet produced a systematic theology in the narrow sense of the word, but *Freeing Theology: The Essentials of Theology in Feminist Perspective* (1993), edited by Catherine Mowry LaCugna (1952–1997), *Feminist and Womanist Essays in Reformed Dogmatics* (2006), edited by Amy Plantinga Pauw and Serene Jones, and Kathryn Tanner's *Jesus, Humanity, and the Trinity* (2001) have been first steps in that direction.

Liberation theology emerged in the African American struggle for civil rights and in the theology of James Cone. An early proposal is James H. Evans's *We Have Been Believers: An African American Systematic Theology* (1992). A Hispanic American liberation theology is explored in Justo L. Gonzalez's *Mañana: Christian Theology from a Hispanic Perspective* (1990).

Other significant texts in American theology at the end of the twentieth century include Methodist Geoffrey Wainwright's *Doxology: The Praise of God in Worship, Doctrine and Life* (1980), *Christian Dogmatics* (1984), and two volumes co-edited by Lutheran theologians Carl E. Braaten and Robert W. Jenson; the two-volume *Systematic Theology* (1997, 1999) by Jenson; *Ethics* (1986), *Doctrine* (1994), and *Witness* (2000), three volumes by Baptist James William McClendon Jr.

(1924–2000); the United Church of Canada's Douglas John Hall's attempt to construct a theology in the North American context in *Thinking the Faith* (1989), *Professing the Faith* (1993), and *Confessing the Faith* (1996); and the second edition of Presbyterian Daniel L. Migliore's *Faith Seeking Understanding: An Introduction to Christian Theology* (2004).

At the beginning of the twenty-first century, systematic theologians continue to describe the coherence of Christian faith, but they are often more modest in their claims than their predecessors in the first two-thirds of the twentieth century. Many of them recognize that every systematic theology is *perspectival*—that is, that their constructive interpretations of Christian faith reflect their social, cultural, racial, and class contexts—and that they must be wary of universal claims about the meaning of Christian faith.

Television

Since the middle of the twentieth century, television has dominated the American cultural landscape as the most popular mass medium and form of entertainment. According to the U.S. Census Bureau, as of 2005, 98.2 percent of American households own at least one television set, the average number of television sets per home is 2.5, and individuals view an average of 4.7 hours of television daily. These statistics reflect the centrality and importance of television as an agent of socialization and mediator of culture. Television is an integral part of everyday life, creating and punctuating individuals' routines, informing and shaping their worldviews.

Religious Responses to Television

For most religious communities in America, the pervasive nature of television prompts reflection and negotiation. Two basic sets of questions arise. First is whether community members should or can watch television and under which circumstances. Second is whether communities should produce alternative programming that reflects the specific values of their community. That is to say, should communities use the medium for their own purposes? The answers to these questions vary from tradition to tradition and from community to community, and are constantly being reformulated as new technologies—such as cell phones with screens for viewing live video streams, as well as prerecorded programming—allow for different permutations of television (that is, more mobile, less domestic, and so on.). Through their responses to television, religious communities reshape and redefine themselves, and sometimes in the process reshape television as well.

For a small minority of communities, usually those that define themselves and are seen by others as closed or inward-looking, such as the Amish and ultra-orthodox Jews, television may be perceived as presenting a challenge to the values and lifestyle of the community. In that context religious leaders may advocate complete avoidance of the medium. Not only are the contents considered potentially problematic because they are uncensored, but the act of watching may also be classified as a practice at odds with a devout lifestyle. Avoidance of television therefore provides the community with an important opportunity for self-definition. In rejecting and avoiding the medium, the community defines its values and attitudes: we do not watch television because we will be exposed to immodest images, it is a waste of time, the culture represented is irrelevant or at odds with our beliefs, and the like.

In communities where evangelism or outreach is a high priority, such as evangelical Protestantism and Chabad, television is more likely to be perceived as a neutral medium that can be harnessed for God's will. Here, the determining factor is the contents, which should be devoted to religious promotion or at least be considered morally wholesome, rather than the nature of the medium. Community members often support these missionary programs because they believe in their potential for recruiting new converts. Audience research, however, suggests otherwise. Financial support for religious broadcasting builds community among believers, but only rarely is it the trigger that prompts a nonbeliever to convert. When it does, other contributing factors usually come into play—a family background in the tradition, interpersonal communication with a member of the community, and so on. Often in these same communities,

ensorship is advocated for programming that is deemed either immoral or not family friendly.

Last are the communities, such as Reform Judaism and Liberal Protestantism, that accept television as a part of everyday life of their constituents but view the church or synagogue or mosque as a place that provides a temporary respite from a media-saturated world. Television may enter through the back door—perhaps as a reference in a sermon—but overall the medium is considered secular. In this context, media criticism rather than censorship is thought to be the appropriate way to influence the industry and promote quality programming.

Early Impact

From the earliest television broadcasts in the late 1940s, religious leaders expressed both hope and fear over the impact of this new medium upon American culture. In Protestant communities these hopes centered on evangelism: how could this new medium be used to reach potential converts? In this period both evangelical and liberal Protestant leaders believed that television could be used to bring about the next revival across the country. The National Council of Churches Broadcast Commission sponsored and aided in the production of religious programming for NBC, CBS, and later ABC. The contents of these programs assumed that the audience would be Protestant.

Although Jewish and Catholic leaders were less inclined to speak in missionary terms, they too viewed the medium's potential in positive terms as offering an opportunity to explain their traditions to the broader public. In that vein, Jewish Theological Seminary, in cooperation with NBC, produced *The Eternal Light*, a program that was broadcast on NBC from 1952 to 1989. *The Eternal Light* explained Jewish practices to the wider public and served as an outreach program for geographically or otherwise isolated Jews. In the same period, a commercial show sponsored by Admiral with Catholic bishop Fulton Sheen, received high ratings. Sheen was a charismatic speaker and teacher and appeared on his show in all of his regalia, a strong visual statement, especially in those early years of the medium. His success on television was perceived by some Protestant leaders as threatening, and behind closed doors some wondered whether Protestantism would be able to compete with Catholicism in the visually oriented world of television.

At the same time, however, there were those mainly liberal Protestant voices who expressed fears of television's impact, especially in the home. If the living room had been a center

for family interaction, how would the new medium affect daily life? Would families still say grace before TV dinners? Would church attendance drop because of conflicting sports broadcasts? Would housewives be distracted from their tasks by a visual medium that required a different kind of attention than radio shows? These kinds of questions encapsulated an ambivalence about the medium of television and its potential impact on religion and daily life in America.

The question of content was next. Did the shows merit the time their viewers devoted to them? What kind of culture was being produced for the airwaves? For certain Protestants, mostly liberal and middle to upper class, television remained low on the cultural priority list. Affluence predicted slow, ambivalent adoption. Working and middle-class Catholics and Jews, however, were quicker to bring the new medium into their homes. The quiz show scandals of the 1950s—which revealed that the producers of several popular shows, such as “The \$64,000 Question” and “Twenty-One,” had rigged the outcomes of their competitions—fed this group's initial antipathy of the medium. Not only was television a waste of time, it was also deceptive and even harmful to its audience.

In these early years, religious broadcasting remained the prerogative of the hegemonic religious establishment, mainline Protestantism. Following the arrangement that had originated in radio, mainline churches were offered free sustained broadcast time so that the channels might fulfill part of their obligations to broadcast for the public good. Based on previous experience in radio, the Broadcast and Film Commission of the National Council of Churches lobbied against paid-time religious broadcasting. One of the fears underlying this policy was that marginal religious opinions would get more air time than mainstream religion because the marginal groups had fewer qualms than mainline groups about using revenue from paid advertising or viewer donors to pay for air time. Despite concerted lobbying efforts, the mainline monopoly was broken in 1960. Under a new Federal Communication Commission regulation, free network air time was no longer the qualifier for programs to be considered public service broadcasting, and networks no longer had to provide it.

Heyday of Network Broadcasting

During the heyday of network television, religious broadcasting remained largely relegated to local stations and Sunday morning or late night hours during the week. UHF stations provided an important outlet for smaller groups and local

communities. Although a few nonevangelical, mainline religious broadcasts from the era of sustained-time broadcasting continued, religious television gradually came to be dominated by evangelical broadcasters, or televangelists, many of whom were loosely associated in the National Religious Broadcasters organization, which had been founded in 1944.

Network television in this era touched on religion only lightly if at all. Dramas such as *Dallas* (1978–1991) and police shows such as *Columbo* (1971–1978) didn't explicitly or regularly address religious issues. Nor were characters typically characterized as religious. Sitcoms were likewise almost exclusively secular, with the possible exception of series such as *Little House on the Prairie* (1974–1982), which showed the family going to church; the long-running *M*A*S*H* (1972–1983), which dealt with war, life and death and showed the chaplain Father Mulcahy in a positive light; and Michael Landon's *Highway to Heaven* (1984–1989).

On news shows religion also received relatively little coverage, and this usually in reference to specific events, such as a papal visit or military conflicts. Religious organizations often complained about biased and negative coverage, and that far too much air time was devoted to scandals, hypocrisy, and violence.

Cable Television

Following the deregulation of cable television in 1984, evangelical broadcasters who had developed funding sources for their programming in earlier decades were ready to take advantage of the new conditions. Pat Robertson was a notable pioneer in this area on the Christian Broadcast Network. The 700 Club adopted a secular format: a talk show, but filled with evangelical content. There was also a news component that mimicked the secular broadcasts but focused on issues important to the evangelical world. Hard news stories were interpreted through an evangelical lens, and human interest stories were presented with an evangelical tone (such as born-again Christians in far-away places who had been touched by the 700 Club). By 2001, after many interim variations, Pat Robertson's CBN channel had evolved into the ABC family channel.

Other entrepreneurial figures in televangelism included Jim and Tammy Faye Bakker, Jimmy Swaggart, Jerry Falwell, and Oral Roberts. All these names would become familiar to readers of the mainstream press in the late 1980s because of scandals, but they also deserve mention for their innovative use of television. The Bakkers not only developed religious programming for children and co-hosted the Praise the Lord

Club, but also used their audience base to fund a Christian theme park and hotel complex known as Heritage USA (1978–1989). Although the complex would close and file for bankruptcy after the indictment and later conviction of Jim Bakker for sex and financial scandals exposed in 1987, the Bakkers' activities illustrated the increasing commodification of evangelical Christianity in the 1980s and 1990s. In many ways, the PTL Club was an infomercial to raise funds for a far wider range of activities, from Heritage USA partnerships to time-share properties to books, albums, and the like. The Bakkers' initiatives mirrored the growing evangelical market and foresaw a more fully developed Christian retail market. Oral Roberts is remembered for his focus on healing and televised healing, including the innovative use of camera angles to help the television audience share in the experience. After founding a complex that included a university and medical center, Roberts would be publicly criticized for calling on his audience to donate before God called him to heaven (a notably successful fund raising strategy). Jerry Falwell was tainted only secondhand by the televangelist scandals (he had purportedly come to aid Bakker by taking over Heritage USA), has been noted for his innovative use of the Old-Time Gospel Hour mailing list as the initial base of support for the Moral Majority, a conservative lobbying group he founded in 1979. Jimmy Swaggart's dramatic televised confession has been viewed retrospectively as a bold public relations maneuver that preceded other similar public confessions.

The presentation of the evangelical worldview as normative within the secular format of television allowed audience members to feel both that their faith and practices were legitimate and that they were part of a larger community. In this sense, religious broadcasting contributed to building an evangelical identity and discourse that spanned across particular denominations or churches across the nation. Notably, the National Association of Evangelicals and the National Religious Broadcasters were founded early on, in 1942 and 1946 respectively. Trinity Broadcasting Network (TBN), the largest religious television network in the United States in the early twenty-first century and known for its prosperity gospel emphasis, was founded in 1973 by Paul and Jan Crouch, who continued the enterprise after cofounders Jim and Tammy Bakker encountered legal difficulties.

Religious Themes

Cable television also provided competition to the networks, which brought changes to the style and content of dramas

and sitcoms. Because specific channels catered to specific markets (the Hallmark channel, the History channel, and so on), there was more room for a wider variety and type of contents. Mirroring what was coming to be described by sociologists of religion as the baby boom search for spirituality in the 1980s and 1990s, religious themes began to enter television programming. These included the Native American spirituality in *Northern Exposure* (1990–1995), the more explicitly religious *Touched by an Angel* (1994–2003), and the family-oriented *Seventh Heaven* (1996–2007). Programs such as *West Wing* (1999–2006), *Law and Order* (1990–), *House* (2004–), and *Lost* (2004–) also began to portray a diversity of religious types and faiths, though often under the rubric of hypocrisy or extremism rather than of tolerance and faithfulness.

Shows such as *Buffy the Vampire Slayer* (1997–2003) and *Xena Warrior Princess* (1995–2001) were sometimes interpreted in religious terms, and viewers would share their reactions with others in fanzines and later in blogs.

Censorship

From the earliest days of broadcasting disputes arose about the contents of programming and what constitutes suitable entertainment for families. One of the early evangelical organizations, formed in the 1980s, was the American Family Association (1977) headed by Don Wildmon, who spearheaded a boycott against advertisers associated with programming deemed morally problematic, including *Three's Company* (1977–1984), *Charlie's Angels* (1976–1981), and *All in the Family* (1971–1979). Jerry Falwell condemned the BBC production *Teletubbies* (1997–2001) for promoting gay lifestyles with its character Tinky Winky, who dressed in purple with a triangle shaped antenna and carried a magic bag. Although these attempts at censorship have been largely unsuccessful, evangelical media activists have been adept at making provocative comments and staging symbolic boycotts to promote their conservative agenda. Although Falwell's remark about Tinky Winky may not have eliminated *Teletubbies* from the screen, it did provoke a discourse about gay lifestyles that would become increasingly controversial by the end of the 1990s.

Video and DVD

In the 1980s the videotape also became a permanent fixture in households, largely because it allowed for far greater viewer control. Evangelical broadcasters, quickly realizing the value in bypassing the network and reaching their audience

directly, began to produce videos for the home, particularly for children. *VeggieTales*, the Christian-inspired but not explicitly evangelistic animation series for children, began as video and only much later aired on television. Chabad likewise produced videos and DVDs for children. The videotape and its younger technological cousin the DVD allowed parents to supervise media consumption far more than was possible on television. Parents were no longer bound to the time schedule of the networks, but could produce entertainment (babysitting?) on demand.

Convergence Culture

Today, as media become increasingly capable of multiple functions (mobile phone as a telephone, camera, web browser, email client, text messenger, and mp4 player), television content becomes even more accessible. Viewers can watch television from their computers, mobile phones, and i-Pods as either live streaming video or on-demand content. Programming can be watched while commuting to work or traveling on holiday. Favorite shows can be saved and watched when convenient. Although the number of programs and channels has risen exponentially in the twenty years since the Cable Communications Act of 1984, the ability of the viewer to censor and selectively view television contents has risen proportionately. Given the number of television markets, all sorts of religious niches develop and survive. The ubiquity of television screens in everyday life—in airports, the back seat of taxis, public restrooms, university hallways—potentially offers more opportunities for religious contents, but it also means more competition. Although generating content for the screen is easier than ever before (witness the number of videos uploaded to YouTube), the simple abundance of content means that the mass audience is becoming a rarer and more precious commodity. Religious communities have more opportunities to create content specific to their needs, but they are also far more limited in who they can actually reach. Traditional religious communication, such as the church sermon, competes with a far greater range of media possibilities than ever before.

Everyday Life

In his seminal essay “A Cultural Approach to Communication,” James Carey distinguishes between two models of communication: transmission and ritual, both of which are applicable in the case of television and religion in the United

States. Religious broadcasting on television is based on a transmission view. The desire to evangelize on the airwaves, or even to “teach” Americans about different faith traditions is based on this concept. Television is considered a linear medium: the message is sent through the medium to the viewer. Informed by this stance, researchers of religion and media in the 1980s focused on understanding how religious programming affected audiences. They asked a variety of related questions: How many viewers claim to convert or change their religious identity as a result of viewing? How many viewers donate money during the program? Do viewers replace their local church meetings with electronic church meetings? How does the audience interpret the programming? Did it identify as the intended audience of the message? How do different preachers fill different needs for different audiences? How do different audiences understand the same message in different ways?

This ritual view of communication is directed not toward disseminating messages but toward maintaining society in time; not imparting information but expressing shared beliefs. For scholars of religion and media, the ritual view offers an opportunity to think about the ways in which television intersects both with everyday life and lived religion. From this perspective, television is significant not only for the messages it broadcasts and the way in which people understand those messages but also for the way in which viewers build their lives around television: weather reports and news shows first thing in the morning, children’s programming after school, news and sports in the evening, entertainment in the evenings and on weekends. Television may serve as a gathering place, a (post)modern day hearth for families, as much as it may send individuals to their rooms and away from the center of the home. Television shows provide narratives as well as facts about the world outside as much as they also provide ethnocentric or negative myths or misinformation.

Television is likely to continue to be transformed as viewers redefine their relationship with the screen at home in relationship to other screens (computer, cell phone, media players). As a site for mythic and symbolic activity, for ritual and transmission forms of communication, television offers one of the more important challenges and opportunities for religion in America.

Theocracy

Theocracy is a term for government by God in which the clergy rule according to his revealed law. The word is thought to have originated with the first-century Jewish historian Josephus, who used it in reference to the government of the Israelites under Moses. Although it is debatable whether an absolute theocracy ever existed in the United States, theocratic-like experiments were tried in Puritan New England and in early Mormonism. Fears of theocratic conspiracies were a recurring feature of Protestant anti-Catholicism from colonial America to the election of John F. Kennedy. In the late twentieth century, the right-wing Protestant movement known as Dominion theology was viewed by many mainstream observers as a renewed threat to the American political order.

Massachusetts Bay

The Massachusetts Bay Colony, particularly under its first governor, John Winthrop (1588–1649), was the most notable colonial example of a society self-consciously ordered according to biblical law. Although church and state technically remained separate, and the clergy were barred from holding civil office, magistrates and ministers were expected to work together in upholding the ordinances of a Bible

commonwealth. Basic to this vision of government was the idea that people were bound by two mutually reinforcing covenants: one with God, whereby they agreed to obey his commands; and one with each other, wherein they agreed to submit to civil and ecclesiastical authorities entrusted with enforcing divine law. This paradigm was not a monarchy, in that the governor was elected and, like the magistrates and ministers, ruled by the mutual consent of the governed, as Winthrop put it in his famous sermon “A Model of Christian Charity” (1630). Yet the theocratic element was unmistakable in that only men who were church members—those judged by the clergy to be “visible saints,” or probable members of God’s elect—could vote or hold office. This not only heightened clerical authority but also guaranteed that all of society’s civil rulers had passed the test of Puritan orthodoxy, which included the belief that innate human depravity required the check of a strong government.

The restriction of the franchise to church members under the first Massachusetts charter provoked controversy when two Puritan aristocrats in England—William Fiennes, Lord Saye and Sele, and Robert Greville, Lord Brooke—proposed to settle in Massachusetts. The noblemen wanted assurances that their social standing alone, not church membership, would qualify them for full civic participation. Theologian John Cotton (1585–1652), the teaching pastor of the Boston congregation, took up his pen to defend the Massachusetts system. In the process, he commented on several forms of government. “Democracy, I do not conceive that ever God did ordain as a fit government either for church or commonwealth,” he declared in a 1636 letter to Lord Saye and Sele. “If the people be governors, who shall be governed?”

God instead ordains monarchy—Massachusetts was still under the king’s ultimate authority—and aristocracy but “setteth up theocracy in both, as the best form of government in the commonwealth, as well as in the church.” Cotton invoked Jethro’s counsel to his son-in-law Moses, in Exodus 18:21, that rulers must be god-fearing. Moreover, Cotton reasoned, just as a godly woman rightly refuses an ungodly man as her husband, the citizens of a Bible commonwealth may refuse an unrighteous man as a ruler, lest they become yoked to him, as in a marriage, without the recourse of divorce. Cotton stressed the voluntary nature of the people’s submission to divine authority and the interdependence of the civil and ecclesiastical realms. “Purity, preserved in the church, will preserve well-ordered liberty in the people, and both of them establish well-balanced authority in the magistrates.”

Like Puritan thought generally, Cotton’s blueprint for a godly society was classic primitivism, emphasizing the restoration of allegedly pure biblical models. For Cotton, the touchstone was Mosaic law, the core of which—the Ten Commandments—had been handed down literally from on high. As part of an effort to delimit the power of the Massachusetts magistrates, Cotton drafted a law code for the colony, titled *Moses His Judicials*, which drew not only on the Decalogue but also on the wider Mosaic legislation governing various aspects of everyday life. The ceremonial, or ritual, laws were excluded. Thus Cotton devised a set of laws pertaining to crime, magistrates, property, inheritance, and other issues, and annotated the whole with copious marginalia containing biblical proof texts. Significantly, his code included the scripturally mandated death penalty for blasphemy, adultery, homosexuality, and murder. His theocratic legal model, first published anonymously in London in 1641, attracted wide notice and influenced, among others, the founders of the New Haven Colony, Theophilus Eaton and John Davenport, who also claimed to have established a Bible commonwealth.

The Mormon West

New England’s earliest legal experiments were short lived. Cotton’s original code was never officially adopted, though it greatly influenced the *Laws and Liberties* issued by the Massachusetts General Court in 1648. In both the Bay Colony and in New Haven, time inexorably eroded the practice of seeking legal precedent in the Bible rather than in natural reason and in the ever-expanding body of common law. Yet two centuries after the New England colonies were established, biblical theocracy enjoyed a revival under the Mormon prophet Joseph Smith Jr. (1805–1844), founder of the Church of Jesus Christ of Latter-day Saints. Like the earliest settlers of his native New England, Smith was deeply influenced by primitivism, as well as by millennial expectation of God’s kingdom. His particular theocratic ideas arose not only from the King James Bible, in which he was steeped, but also from the revelations and visions he received from his boyhood until his murder in 1844. These revelations were codified in the Book of Mormon and later canonical texts such as the Doctrine and Covenants. A revelation in 1831 epitomized the millennial expectation of God’s kingdom on earth. Christ announces, “Ye shall have no laws but my laws when I come, for I am your lawgiver, and what can stay my hand?” (Doctrine and Covenants

38:22). The prophetic words echoed Isaiah 33:22: “For the Lord is our judge, the Lord is our lawgiver, the Lord is our king; he will save us.”

Such millennial zeal was not uncommon in nineteenth-century America. But to many non-Mormons, who were already suspicious of Smith’s claim to be a prophet, his frequent linkage of the millennium with the establishment of a Latter-day Saint Zion sounded politically subversive. War with Mormon opponents broke out in Missouri in 1838, resulting in the death or arrest of a number of Smith’s followers. After Smith himself was arrested, a judge questioned him about his announcements of a coming kingdom that would subdue all others, a reference to another biblical prophecy (Daniel 2:44). Smith’s attorney answered that if Smith were treasonous, then the Bible also was. The judge imprisoned Smith, who eventually escaped. In 1842 he ignited fresh controversy in Nauvoo, Illinois, when he published an editorial in the newspaper *Times and Seasons*, declaring that the “restitution of all things” depended on instituting divine government on earth. Israel under Moses was the model, according to Smith: “Their government was a theocracy; they had God to make their laws, and men chosen by Him to administer them.” Moses received the laws and the high priest Aaron “taught the people, in both civil and ecclesiastical affairs; they were both one, there was no distinction.”

Two years later, during his campaign for the U.S. presidency, Smith coined the term *theodemocracy* for the government he was instituting among his followers. He formed a Council of Fifty, the members of which were chosen by revelation and included three non-Mormons. Meetings were held in secret, and at the gathering on April 11, 1844, Smith was voted “Prophet, Priest, and King.” He believed that the model of a priestly king, elected by a council of virtuous men, would be embraced by Mormons and non-Mormons alike as other earthly governments failed in the last days. As historian Richard Bushman has shown, Smith reverted to the Puritan, biblical ideal of the righteous ruler at the very time when U.S. presidents were abandoning the idea of government by the virtuous and turning instead to rule by political parties. After Smith’s assassination in June 1844, Brigham Young carried the king-and-counsel model on the trek to Utah. What ultimately doomed theodemocracy, however, was polygamy, which Smith and Young had reinstated in imitation of the Old Testament patriarchs. Pressure from the federal government, including the use of military force in the Utah War of 1857–1858, eventually forced the Mormons to

conform to the constitutional separation of church and state and to the common-law standard of monogamy.

Recurring Fears

Restorationist traditions such as Puritanism and Mormonism were not the only sources of controversy over theocracy. Virtually all Protestants in early America feared that the colonial ambitions of France and Spain were secretly an attempt by the papal Antichrist to set up theocratic tyranny in the New World. Antipapal hysteria periodically flared up, as in the Seven Years’ War (1754–1763), when the French and their Indian allies threatened English Protestant settlements. Hysteria recurred in the nineteenth century as anti-Catholic writers warned of the need to establish Protestant control of the western frontier. Protestant minister Edward Beecher (1803–1895) was representative when he wrote in *The Papal Conspiracy Exposed* (1855) that unchecked papal power “will surely overrule, and subdue, and corrupt all the civil authorities of our country—nay, of the world. The central theocracy will control the people by the fears of hell and the hope of heaven.” Not until 1960 and the election of the nation’s first Catholic president, John F. Kennedy, would widespread fears of a papal theocracy finally be dispelled.

By the 1960s, however, a new twist on theocracy was emerging in the right-wing Protestant movement known variously as Dominion theology or Christian Reconstructionism, which seeks to reconstruct American society by giving Protestant Christians dominion over civil government. The term *Dominionism* derives from Genesis 1:28, in which God grants Adam and Eve dominion over all other creatures. The movement’s most controversial figure was the Calvinist philosopher Rousas John Rushdoony (1916–2001), a son of Armenian immigrants, who founded the Chalcedon Foundation in California in 1965. In his *Institutes of Biblical Law* (1973), he resurrected the Puritans’ endorsement of Mosaic law—including their advocacy of the death penalty for adultery and homosexuality—as the only model of a virtuous society. Rushdoony denounced the antinomianism that led other modern Christians to dismiss the Mosaic legislation as no longer relevant. Christians, he insisted, have a covenantal obligation to God to obey his moral laws and subdue all nations under Christ’s lordship. Although Rushdoony’s theocratic agenda struck many of his would-be allies as too radical, his ideas bore some resemblance to the thought of other prominent figures in the Christian Right. Among them was the late Calvinist philosopher Francis

Schaeffer (1912–1984), author of *A Christian Manifesto* (1981), whose advocacy of civil disobedience by Christians influenced the radical antiabortion activist Randall Terry. At the turn of the twenty-first century, Dominionism remained only a loosely connected movement whose ongoing influence continued to be a subject of debate among sociologists and other scholars.

Torah

“Torah,” from the Hebrew word for “instruction” or “teaching,” bears multiple meanings in Judaism. In its most limited meaning, it refers to the Pentateuch, the five books of Moses that comprise the first section of the Hebrew Bible. The handwritten parchment text of the Pentateuch, rolled up into a scroll, is Judaism’s central and most sacred ritual object, and its public reading forms a focal point of Jewish communal worship. More broadly, “Torah,” in different contexts, can refer to the entire Hebrew Bible (Old Testament); to the Bible and Rabbinic literature (the latter known as “Oral

Torah”); and most broadly to the entire corpus of Jewish learning and literature, written and oral, down to the present day. In modern Hebrew, the term also denotes “the teachings of,” as in the “the Torah of Rabbi Joseph Soloveitchik” or the “Torah of liberalism.”

The Torah Comes to America

Wherever Jews migrate, the Torah follows them, for Jewish communal life is impossible without it. So late in 1655, perhaps a year after the first Jewish communal settlement in New Amsterdam (today New York), a Sephardic merchant named Abraham de Lucena arrived in town bearing a Torah scroll, borrowed from the Jewish community of Amsterdam. The presence of a Torah scroll served as a defining symbol of Jewish communal life and culture. It created a sense of sacred space. By its sanctity, the Torah scroll elevated the rude parlor where those early Jews most likely worshipped into a cherished place of holiness; it transformed a private home into a hallowed house of prayer. The return of the Torah to Amsterdam, around 1663, signifies that the community had scattered. The *minyan*, the prayer quorum of ten males over the age of thirteen traditionally required for Jewish group worship and the public reading of the Torah, could no longer be maintained. The subsequent reappearance of Torah scrolls in the city, no later than the 1680s, following the British capture of the city from the Dutch, was a sign that the Jewish community had been reestablished and group worship resumed.

Wherever Jews later created communities in North America, they either brought Torah scrolls with them from home (which is what the Jews who emigrated as a group to Savannah did in 1733) or they quickly borrowed Torah scrolls from elsewhere, as the Jews of Newport did in 1760. Some individual Jews are known to have brought privately owned Torah scrolls with them to the New World. Jewish religious life in smaller eighteenth-century colonial Jewish settlements like Lancaster and Reading revolved around these privately owned Torahs. Whenever a *minyan* could be gathered, usually in the owner’s private home, the presence of the Torah scroll defined the worship service as authentic, for the scroll contains the sacred teachings of Jewish religious life.

The acquisition of a new Torah scroll was often a cause for celebration. One such occurred on the eve of the Civil War in Washington, and Senator Judah P. Benjamin of Louisiana reputedly held the scroll. By contrast, the desecration of a

Torah scroll was a cause for mourning. When Torah scrolls in Charleston in 1787 were “wantonly thrown about the floor” during a robbery, the community called for a special day of fasting and prayer.

The Availability and Cost of Torah Scrolls

Since all 245 columns (10,290 lines) of a Torah scroll must be handwritten in letter-perfect Hebrew by a meticulously trained scribe (known in Hebrew as a *sofer*) on specially prepared, hand-manufactured parchment, Torah scrolls are rare and precious. This was especially true in the New World, since well into the nineteenth century all Torah scrolls had to be imported. No handwritten copy of the Torah is known to have been written in the United States until 1849 when the New York *sofer* Nathan Oettinger wrote one for philanthropist Judah Touro in New Orleans. The experience of Adas Israel Congregation in Washington, D.C., founded in 1869, is illustrative. For several years, the congregation depended for its Torah scroll upon the good graces of a congregant who had brought one with him from Europe and was willing to loan it out. Later, it commissioned a scribe in Germany to write a brand-new Torah scroll for the growing congregation and paid him \$165.50 (almost \$3,000 in today’s money). But the scroll proved to be defective, since it contained numerous scribal errors, and was soon shipped back. Finally, in 1874, a New York Hebrew bookseller sold the congregation a used and probably imported (and inferior) Torah scroll for \$100.

As the number of Jews in America swelled into the millions, with the mass migration of eastern European Jews beginning in the last quarter of the nineteenth century, the number of trained Jewish scribes in the United States increased. The growing number of Torah scrolls written in the United States signaled communal self-sufficiency. American Jews no longer had to depend upon other communities for their Torah scrolls; they could produce them locally. The cost of producing a Torah scroll, however, steadily rose, owing to the burgeoning costs of hand labor and supplies. By the early twenty-first century, a Torah scroll cost between \$20,000 and \$60,000, depending upon its age and quality.

Although almost all Torah scrolls are written by men, and Jewish law, according to many authorities, bars women from serving as Torah scribes, a small number of women have recently entered the field. In 2000 the Kadimah Reconstructionist community in Seattle commissioned what it described as the “world’s first female-scribed Torah,” a group effort. In

2007 Jen Taylor Friedman became the first woman scribe to write a complete Torah scroll on her own.

The Torah in Jewish Liturgy

The Torah has been read in public since biblical times. Jewish practice, as set forth in the Talmud, is for the Torah to be read aloud on the Sabbath, festivals, fast days, and new moons, as well as each Monday and Thursday at morning prayers and each Sabbath at afternoon prayers. The latter three anticipate the reading for the coming Sabbath morning. Many Reform Jewish congregations read the Torah as part of the Friday evening service for welcoming the Sabbath. Traditionally, the Torah is chanted, using ancient musical cantillations (known as *trop*), by trained “readers.” The Torah reading has been described as a dramatic reenactment of the original theophany at Mount Sinai.

Although in ancient Palestine the Torah was read according to a triennial cycle, Jews today read it according to a fixed annual cycle. For this purpose, the Torah is divided into fifty-four portions (*sedarim*), one for each week, with some weeks necessarily assigned double portions. Sabbaths are known by the portions assigned to them (for example, “the Sabbath when we read the portion of Noah”). Each portion is further subdivided into *aliyot* (singular, *aliyah*), so called because people are “called up” to the reading and intone a blessing beforehand and afterwards. The portion is divided into seven or more *aliyot* on the Sabbath, six on the Day of Atonement, five on festivals, four on new moons and the intermediate days of festivals, and three at other times. The first *aliyah* is specially set aside for descendants of Priests (*kohen*) and the second for descendants of Levites, except in Reform congregations, where these ancient designations have been discarded. Non-Orthodox congregations have opened up *aliyot* to women. On festivals, fast days, and the new moon, special sections appropriate to the occasion are read from the Torah. Whenever it is read, the Torah reading serves as the centerpiece of the liturgy. A procession and special prayers accompany the Torah when it is removed from its housing in the holy ark and when it is returned.

The annual Torah cycle concludes, joyously, on the last day of Sukkot known as *Simhat Torah* with the reading of the concluding lines of the book of Deuteronomy. The day is marked by dancing and parading with the Torah. The final reading from Deuteronomy on that day is followed immediately by the reading of the opening chapter of the Book of Genesis—symbolic of the idea that the Torah cycle and Torah study never end.

The Torah, or Pentateuch, consists of the five books of Moses that comprise the first section of the Hebrew Bible. The handwritten parchment text of the Pentateuch, rolled up into a scroll, is Judaism's central and most sacred ritual object, and its public reading forms a focal point of Jewish communal worship.

Torah Ornaments

The Torah is gendered female in Hebrew and is sometimes analogized to a bride, with the community of Israel being the groom. Throughout the Jewish world, Torah scrolls are “dressed” and ornamented. Jewish artists and craftsmen, men and women alike, have long enjoyed ornamenting the Torah. In the United States, the forms of Torah ornamentation have generally followed European precedent.

The Torah scroll in most synagogues is wound on two staves (*ezei hayyim*), secured together with a ceremonial binder, and garbed in an elegant mantle. Silver crowns or finials may adorn its top, and its body is usually further ornamented with a breastplate and pointer.

Local and regional customs abound. German Jews, for example, traditionally fashion Torah binders from linen

strips ceremonially used to swaddle infant boys at their circumcisions. These binders, known as *wimpels*, are elaborately embroidered to include the infant's name; the father's name; and the date of birth; along with the prayer that the newborn, who has just been bound into the covenant of Abraham (circumcision), will likewise be bound up into a life of Torah, marriage, and good deeds. Jews from the Ottoman Empire and the east traditionally keep their Torah scrolls in ornamental cases (known as a *tik*, from the Greek *theca*) that are used to protect and transport them. The cases, which take the place of the mantle, are elaborately and artistically decorated.

Synagogues in the United States house Torah scrolls that reflect these and many other styles of ornamentation. Together, they bear witness to American Jews' diverse origins, as well as the many different traditions that Jewish

immigrants brought with them to the United States and now perpetuate and renew.

Torah Study

For all of its symbolic significance, the Torah primarily underscores the centrality of study and learning in Jewish life. Study, indeed, is for Jews a form of worship. The status of a Jewish community heavily depends upon its level of learning.

Although America, for many years, was considered a backwater in this regard, from the mid-nineteenth century onward conditions dramatically improved. The two leading American Jewish religious leaders of the nineteenth century, Isaac Leeser (1806–1868) of Philadelphia, a traditionalist; and Isaac Mayer Wise (1819–1900) of Cincinnati, a Reformer, wrote, translated, and edited almost 150 different works, including Leeser's influential Jewish translation of the Bible, published in 1853. Between 1850 and 1900 the number of Jewish books published in America per decade practically quadrupled. The Jewish Publication Society, established in Philadelphia in 1888, consciously aimed to elevate American Jewry to a position of cultural leadership in the Jewish world. By the 1960s, thousands of Jewish books were being published in America annually, in multiple languages, including numerous religious volumes that helped to establish America as a "center of Torah" for world Jewry. The publication in America of the seventy-three-volume Schottenstein Edition of the Babylonian Talmud in 2005, and the joint Israeli-American publication of the twenty-two-volume second edition of the *Encyclopaedia Judaica* in 2007, confirmed this status.

America likewise became a center of "Torah learning" through the development of educational institutions. A survey in the late 1990s disclosed that American Jews spent more than \$1.5 billion annually on Jewish education to cover the costs of "nearly three thousand schools and thousands more education programs held in a wide variety of institutional settings." Jewish day care centers, nursery schools, all-day schools, supplementary schools, Sunday Schools, high schools, colleges, university-based Jewish studies programs, Talmudic academies, rabbinical schools, and adult Jewish education programs; as well as a wide range of informal programs, from summer camps, to youth groups, to synagogue retreats, to programs of one-page-a-day of Talmud (*daf yomi*), all worked to ensure that the Torah—in the broadest sense of the word—would be studied, disseminated, and advanced.

Tourism and Pilgrimage

Tourist visitations at religious sites in North America and pilgrimage traditions at North American shrines, temples, tombs, and other places of religious significance establish geographies of sacred places and sublime experiences that contribute to religious, personal, and collective identities. Although distinct in their respective historical developments, tourism and pilgrimage converge in travel practices that include modes of travel and their related infrastructures, as well as aesthetic conventions that facilitate meaningful experiences for travelers. In their journeys to such places as the *Basílica de Nuestra Señora de Guadalupe* (Basilica of Our Lady of Guadalupe) in the Tepeyac neighborhood of Mexico City, Temple Square in Salt Lake City, the Devil's Tower in eastern Wyoming, Civil War battlefields, and even festivals such as Mardi Gras in New Orleans, travelers enter sites and

encounter experiences that hold spiritual significance for them while contributing to their senses of personal and collective identities.

A significant number of North American places of religion attract both tourists and pilgrims into their sacred precincts. Drawn by the aesthetic appeal of divine presence or by the historical importance of these sites, many visitors arrive as much out of touristic curiosity as out of a sense of devotional commitment. Tourists in these sacred places often experience moments of spiritual awareness, and nearly all religious pilgrims indulge in some sort of touristic practices during their devotional journeys. Indeed, tourists become pilgrims while pilgrims act as tourists at religious sites everywhere in North America. At the same time, however, the tourist and the pilgrim occupy distinct worlds of meaning that offer them very different experiences of these sacred places.

Pilgrimage Traditions

Historians of religions have recognized religious travel as a central practice in many cultural traditions throughout the world. Nearly all religious traditions include travel to particular sites of special significance in their canon of religious practices. Many regard such pilgrimage practices as essential to the religious well-being of the community and of individual followers. The hajj, an annual pilgrimage to Mecca, stands as one of the Five Pillars of Islam; Christian shrines attract millions of pilgrims each year to places such as Lourdes in France, Compostela in Spain, and Tepeyac near Mexico City in Mexico; the ancient tales of the Hindu gods come alive for devotees at the places of mythical events that mark the sacred landscape of India; and Buddhists travel to the venerable sites that commemorate the life of Gautama, the historical Buddha. Among these and hundreds of other pilgrim traditions, scholars have recognized at least a few common elements that tend to characterize religious travelers and their sacred journeys. These include the typical structure of the pilgrimage journey: departure from familiar places (“home”), the ordeal of travel (often involving a great distance, but sometimes only a local excursion), arrival at a religiously significant site (the “destination”), and return home. In most traditions of religious pilgrimage, each of these phases has its own significance, usually recognized in specific ritual practices and interpretive conventions.

Yet despite its ubiquity among many diverse traditions throughout the world, pilgrimage does not conform to a single set of experiences that all pilgrims share. Religious travelers pursue itineraries that vary from one to another

across the lines of different religious traditions, between individual pilgrims within the same tradition, and even between journeys by a single devotee. The source of such diverse experiences lies in a number of factors. For instance, different religious traditions emphasize different purposes in their respective pilgrimage practices: Some stipulate the completion of a sacred journey as a religious obligation for followers of the tradition, others offer religious travel as a means of access to divine powers, and still others regard the pilgrim’s experience as an exercise in spiritual contemplation. But the significance of religious travel also relies on the traveler’s personal motives and attitudes. Some go to fulfill a religious obligation, others seek healing in the pilgrimage journey, and some pilgrims wish only for an edifying or spiritually rewarding experience. Each of these different types of motives evokes distinctive experiences. In addition, differing contexts in which pilgrims pursue their destinations determine the nature of their respective experiences: the physical landscape, the socioeconomic class of the traveler, the amount of time available for the journey, and a number of other factors all combine to influence the tone, character, and experience of the pilgrim’s undertaking.

Tourism

Similar to the experiences of pilgrims, tourists also travel with a variety of motives and purposes that determine their experiences of religious places. Some go out of mere curiosity about unfamiliar religious traditions. Others seek the aesthetic attractions of particular sites, including their architecture, gardens, artwork, or cultural performances. Still others visit religious places because of their historical importance. But regardless of their ostensible purposes for visiting a particular place of religion, tourist visitors sometimes find that the touristic experience itself can transform an otherwise ordinary attraction into an extraordinary site of spiritual significance.

In contrast to religious pilgrimage traditions that go back millennia, tourism as a distinctive cultural practice has a much more recent history. In western Europe the emergence of conventional tourist practices began in the Renaissance, Reformation, and Enlightenment movements of the early modern era. With changes that brought greater ease of travel and the need for a broader humanistic education, elite Europeans of the seventeenth century routinely went on a “Grand Tour” of Europe in early adulthood to cap off their years of formal schooling. By the late eighteenth century, this tradition developed into extended journeys for amusement

and enjoyment in addition to, and increasingly instead of, purely educational purposes. By the nineteenth century, rapid advances in travel, especially new modes of transportation introduced with the steam engine, made leisure excursions accessible to many more people wishing to visit destinations in Europe, in North America, and in most other parts of the world. This new global geography of tourism quickly expanded and became all-encompassing in the twentieth century with automobiles, airlines, and even space travel.

The history of tourism in North America exemplifies this greater access to travel by more people over the last two centuries. By the early part of the nineteenth century an elite class of Americans pursued the growing popularity of extended tours both abroad and in the United States. An “American Grand Tour” had become popular by the 1830s and included such destinations as the Hudson River, the Catskills, Lake George, Niagara Falls, the White Mountains, and the Connecticut Valley. Following the Civil War, the astonishing natural wonders of the U.S. West offered new destinations for tourist visitors, and the immense popularity of these destinations relied largely on a rapidly expanding national network of railroads with a variety of accommodations for pleasure travelers. In the twentieth century, the automobile made travel possible for North Americans of even modest means, and state and local governments embarked on promotional campaigns to attract tourist visitors. Meanwhile, airline travel opened the entire world to North American travelers, and falling airfares following deregulation in the 1970s made air travel affordable to middle-class tourists. By the end of the twentieth century, pleasure travel had become a mainstay of North American culture.

Alongside this rapid growth of tourism during the last two centuries, pilgrims from a variety of traditions have maintained their long-standing commitments to devotional travel. Indeed, religious pilgrimage never disappeared from the North American religious experience. Moreover, pilgrims have also benefited from the expansion of travel infrastructure and services. Like tourists, religious travelers of all sorts have easier and more affordable access to their sacred destinations.

Theoretical Perspectives

A variety of theoretical perspectives have been applied to the scholarly study of tourists and of pilgrims. Here we will consider three such perspectives using Temple Square in Salt Lake City, Utah, as an example of how scholarly theories can elucidate both tourism and pilgrimage in the United States.

The first considers religious travel in terms of its implications for sacred space. Second, scholars have focused on experience, specifically the experiences of travelers to sacred destinations. Finally, numerous studies have regarded pilgrimage and tourism for the material and social implications of travel practices.

Sacred Spaces

Millions of visitors travel each year to Salt Lake City to visit Temple Square, the center of the Church of Jesus Christ of Latter-day Saints. On the grounds of the square visitors can view the Mormon Temple, tour the Mormon Tabernacle and Assembly Hall, and learn about Mormon history and religious beliefs in the two visitor centers on the grounds of the square. The site appeals to both Mormon pilgrims and non-Mormon tourists as Utah’s most popular attraction. Many of these visitors recognize Temple Square as a sacred place, highlighting the first of our theoretical perspectives. But in considering the implications of tourism and pilgrimage at such sites as Temple Square, many scholars concede that sacredness is not so much an intrinsic characteristic as it is an attributed feature of a particular place; in other words, a site becomes sacred in the religious experience and imagination of human interaction with space. Travel, or the movement through space, serves as an essential component in this interaction that ascribes meaning to the human experience of places. As people move through space, they attribute meaningfulness to the landscape that differentiates distinct places according to their experience of spatial difference and their respective cultural resources for comprehending and narrating the significance of these differences. Visitors to Salt Lake City recognize Temple Square as sacred in contrast to the surrounding features of the urban landscape, such as the Crossroads Plaza Mall across the street or the state capitol on the hill above the square. As they move through the city, travelers attribute different significances to the spaces they encounter, from the most mundane and forgettable sites to the awe-inspiring places of memorable impressions.

Motivation and Experiences of Travel

This process of attributing meaning to places draws attention to the experiences of travel, the second theoretical perspective for understanding tourism and pilgrimage. The nature of travelers’ experiences relies largely on travel practices that travelers use during their journeys. Scholars of

both tourism and pilgrimage have conceived of these practices quite broadly to include practices that facilitate their travel, those that motivate people to undergo journeys, and those that allow meaningful interpretations of their experiences. Although there is substantial overlap between the practices of various travelers, including tourists and pilgrims, practices that motivate travel and those regarding interpretation tend to differentiate between types of travelers. At Temple Square, for instance, casual tourists arrive with far different motives than do devout Mormon pilgrims, and tourists leave the site with different interpretations of their experiences than the meaningful interpretations that pilgrims typically hold. These differences can be attributed to the distinct practices of travel. Tourists often are motivated by purely aesthetic attractions, including the architecture and musical performances on Temple Square. Motivating practices might include promotional literature and media as well as news reports that portray the aesthetic attractions of the Mormon site. Mormon pilgrims, however, arrive out of devotional concerns. Their motivating practices likely revolve around their association with the Church of Jesus Christ of Latter-day Saints, which reinforces the importance of Temple Square in Mormon history.

The differences in practices that facilitate travel are less pronounced between tourists and pilgrims. Both use the same modes of transportation, facilities for lodging and food, banking and money exchange services, translators, and all the other support services to make their travels possible. Their practices of interpretation, however, usually differ greatly. Pilgrims tend to understand their journey to a sacred site in religious terms as a conventional practice of their tradition. The interpretation of their experiences, therefore, relies on their narratives of religious meaning. These narratives involve the pilgrim's sense of personal identity and its connection to a larger religious community. At Temple Square, for instance, Mormon pilgrims often regard their journey as a connection to a longer history of the Mormon community, going back to the pioneers who first brought the church to Utah. Their strategies for remembering and commemorating their own trips, which might involve taking photos and buying souvenirs, may not seem much different from those of other visitors to Temple Square, but the significance of the items they acquire and the stories they tell of their experiences in Salt Lake City more often affirm their religious heritage and their sense of belonging to the larger church community. In contrast, non-Mormon visitors to Temple Square are more likely to obtain and interpret

souvenirs of their experience as aesthetic signs of difference rather than affirmations of familiarity.

Material and Social Conditions of Travel

The experiences of visitors to religious destinations and other places regarded as special or auspicious according to religious understandings are closely linked to both the material and social conditions of travel, a third theoretical perspective in the study of tourism and pilgrimage. As noted earlier, the distinctions between the different meanings and purposes of a particular destination depend largely on the motivations of visitors to the site. These motivations are bolstered by travel practices that make the place identifiable, attractive, accessible, and meaningful. In this way, the religious aspects of tourism and pilgrimage are tightly bound to the material and commercial realities of travel. Religious places and events, even the people who make up resident communities at travel destinations, all become commodities in a travel economy that makes the site appealing to visitors and promotes it as an attractive travel destination. The purveyors of such practices always profit in some way or another from the traffic of visitors to the site, whether they be the local religious community that controls the site, commercial providers of travel accommodations and services, or local government agencies touting the benefits of their region. This in turn generates complex relationships among travelers, local residents, and other interested parties that include economic considerations in addition to religious or aesthetic meaning. Travel to Temple Square in Salt Lake City, for instance, may appear to involve primarily religious or aesthetic relationships between travelers, both pilgrims and tourists, and the Mormon hosts who greet them on the premises. In fact, there is no admission charge and nothing at all for sale in the precinct of the square. But a closer look reveals significant economic aspects to the social relationships encompassed in visitation there. The site figures prominently in the church's concern for membership, both as a strategy for acquiring new members and for reinforcing the sense of belonging for Mormon pilgrims. The economic realities of the church rely primarily on contributions of members, so this concern for membership carries significant economic benefits for the church. Moreover, local hotels, restaurants, stores, and tour companies, as well as airlines and bus companies, also benefit in more directly financial ways from visitation to Temple Square. These businesses profit from the religious and aesthetic appeal of the site as a destination for both pilgrims and tourists; in addition to their

religious significance, the Temple, Tabernacle, and other features of the square all serve as valuable commodities in the local economy.

Attention to the implications of religious travel in regard to sacred space, to the experiences of various travelers who visit sacred destinations, and to the material and social dimensions of the travel practices involved in making such visits possible and appealing, contributes to a better understanding of places of religious significance that host considerable numbers of visitors and the social relationships involved in sustaining travel to these sites. The remainder of this article will review a variety of popular destinations in North America that attract large numbers of visitors, each with distinctive characteristics that appeal to pilgrims, tourists, and other visitors.

Religious Destinations

The traditional places of particular religions often attract visitors, including both pilgrims who are members of the religious community and tourists who come as curious outsiders to experience the aesthetic, historical, or spiritual value of such sites. Destinations that witness the largest numbers of visitors usually feature a significance within the religious tradition that extends its appeal beyond the followers of the religion to bring others into its precincts. For example, we have seen already how Temple Square in Salt Lake City serves as a pilgrimage destination for members of the Church of Jesus Christ of Latter-day Saints, while attracting tens of thousands of non-Mormon visitors. A similar circumstance can be found at numerous churches, synagogues, temples, mosques, shrines, and other significant religious places.

St. Patrick's Cathedral, New York City

One of the more popular of such sites is St. Patrick's Cathedral in New York City, the city's landmark Roman Catholic church and seat of the Catholic archbishop of New York. A quick perusal of its guest book reveals the diversity of visitors, both Catholic and non-Catholic, who come for a variety of reasons. Some visit St. Patrick's for purely religious reasons, such as fulfilling a vow or to pray for loved ones who are gravely ill or deceased. But many enter the massive neo-Gothic structure on Madison Avenue in Manhattan to experience the aesthetic appeal of its architecture, the artwork, music, or liturgy. Still others are drawn to St. Patrick's for its history, including its fame as the church of celebrity funerals and memorial services, including those

of baseball greats Babe Ruth and Joe DiMaggio, football coach Vince Lombardi, singer Celia Cruz, and U.S. Senator and presidential hopeful Robert F. Kennedy.

Mother Bethel AME Church, Philadelphia

Another famous church that attracts both religious adherents and curious outsiders is the Mother Bethel African Methodist Episcopal (AME) Church in Philadelphia, site of the denomination's origin. Established by denominational founder Richard Allen and dedicated in 1794, this church represents the beginning of one of the oldest and largest African American religious denominations, and it stands on the oldest parcel of land continuously owned by African Americans. Inside are the graves of Richard Allen and his wife Sarah Allen, as well as the Richard Allen Museum where visitors can embark on docent-led tours of the church. But it is more than a monument to the beginning of the AME denomination; Mother Bethel continues to serve the local neighborhood as a center of worship.

Baha'i House of Worship, Wilmette, Illinois

Another worship site that attracts substantial visitation is the Baha'i House of Worship near Chicago in Wilmette, Illinois. The spectacular architecture surrounded by exquisite gardens brings visitors of all religious orientations onto the premises of the only Baha'i worship center in North America, one of only seven in the world (with an eighth under construction in Chile). Serving North American followers of the Baha'i tradition, the twenty-story-high, nine-sided domed temple reflects their theology of world unity, inviting all people to prayer and reflection. Besides reflecting on Baha'i theology or simply enjoying the serene gardens outside, both pilgrims and tourists can view displays about the Baha'i faith in the visitor center or shop in the bookstore. Upstairs is a 1,200-seat auditorium for daily devotional programs, where the House of Worship Choir sings on the first three Sundays of every month and on Baha'i high holy days.

Sites with Historical Significance

Other religious sites attract pilgrims and tourists more for their historical significance than for their spiritual importance. Sometimes history overwhelms religious significance, and sites cease to serve as places of worship to become solely historical museums. Ebenezer Baptist Church in Atlanta, Georgia, is one such site. As the home church where Martin Luther King Jr. was baptized, where he was ordained at age

19, where he served as co-pastor with his father, and where his funeral was held in 1968 before he was laid to rest in a tomb adjacent to the church, Ebenezer has a more national religious significance. The congregation eventually moved across the street into a newer, larger church structure, and the church so closely associated with the civil rights leader's life is now under the auspices of the National Park Service as part of the Martin Luther King Jr. National Historic Site.

Religious Events: Marian Apparitions

In contrast to historical events that overwhelm the religious gravity of a site, auspicious religious events can initiate devotional practices and attract the faithful. Catholic pilgrims, for instance, journey to Marian apparition sites to benefit from the sacred power of the Virgin Mary's reported visitations. The most famous of these sites in the Western Hemisphere is the *Basílica de Nuestra Señora de Guadalupe* in the Tepeyac neighborhood of Mexico City in Mexico. First established as a site of colonial devotion in the sixteenth century, the story of the Virgin's miraculous appearance to a Native American peasant on a hill long devoted to an indigenous goddess has spread over the centuries and made the Virgin of Guadalupe a widely recognized icon of Latino Catholics everywhere. Millions of visitors, both Catholic pilgrims and non-Catholic tourists, find their way onto the crowded grounds where the Virgin Mary purportedly appeared nearly half a millennium ago.

Other, more recent appearances of the Virgin Mary also establish places of pilgrimage and tourism. One such site that gained widespread attention in the 1990s is in Conyers, Georgia, just east of Atlanta. On a farm outside of Conyers, former nurse Nancy Fowler conveyed messages she received from the Virgin Mary on the thirteenth day of every month beginning in October 1990 through May 1994. Thereafter, the Virgin Mary delivered her messages only once each year, on October 13, the anniversary of the Virgin's appearance to three children in Fátima, Portugal, in 1917. The last of these public communications occurred in 1998, when more than 100,000 visitors descended upon Fowler's farm to hear the final admonitions of the Holy Mother. Since then, the location has served as a pilgrimage destination and retreat center, despite internal conflicts between Fowler and the organization that subsequently gained ownership of the farm.

Native American Religious Sites

Other traditional religious destinations popular with both religious pilgrims and tourists are the many Native American

sites found across the continent. Many of these places, however, have long histories of conflict between Native American religious practitioners who still regard these places as holy and the non-Native visitors who come for either religious or secular purposes. One such site is the Devil's Tower in eastern Wyoming. This remarkable geological feature figures prominently in the religious histories of numerous Native American tribal groups. Native peoples journey to the site each year to perform sacred rites, but crowds of tourists visit the Tower as well, including rock climbers who claim their own sacred attachment to its steep rock walls, inciting accusations of desecration by Native groups. In an effort to mediate the conflicting claims there, the National Park Service, which manages the site as Devil's Tower National Monument, has imposed a voluntary climbing ban during the month of June when Native American groups are most active there. Though not entirely successful, the ban has quelled much of the dispute between Native American pilgrims and non-Native tourists.

Nature

Besides the holy places of particular religious traditions, the North American landscape itself has long served as an object of aesthetic appeal with religious overtones. An early example can be found in Thomas Jefferson's 1787 book *Notes on the State of Virginia*, where he remarks on the aesthetic value of the Virginia landscape and encourages European travelers to cross the Atlantic to view the scenery there. Jefferson's nearly rapturous delight in the wonders of the natural landscape continues for many Americans. The "Grand Tour" of scenic destinations in the first half of the nineteenth century relied on aesthetic notions of the sublime and the popularity of U.S. thinkers such as Ralph Waldo Emerson and Henry David Thoreau, who proposed new attitudes regarding the human place in the natural world. Their work, along with the paintings and, later, photographs of artists who brought aesthetic attention to the remarkable features of the North American landscape introduced a new appreciation of nature as the work of divine creation rather than as a frightening obstacle to be conquered and tamed.

In the antebellum period of U.S. history, Niagara Falls ranked as the natural wonder that attracted the most attention. A significant number of visitors regarded the falls with religious sensibilities. Early tourists often described their journey to the cataract as a pilgrimage, and by 1861 Pope Pius IX had established a "pilgrim shrine" there. But the allure of its sacred aura soon faded in the commercial

exploitation of its popularity. As early as the 1830s the carnival atmosphere that developed around the falls led to public outcry and calls for international intervention to preserve the falls from neglect.

The atmosphere at Niagara Falls influenced efforts after the Civil War to develop tourism and pilgrimage at other scenic destinations in the western regions of the continent. California's Yosemite Valley in particular garnered national attention. Reports of the sheer granite cliffs of the Valley and the unprecedented height of its falls astounded readers who learned, for instance, that Yosemite Falls was sixteen times higher than Niagara Falls. The magnificence of the U.S. landscape in places such as the Yosemite Valley evoked an atmosphere of sacrality, and with the blight of Niagara Falls as a background, the call for preservation came quickly. In 1864 President Abraham Lincoln signed the Yosemite Act into law, preserving the Yosemite Valley as a park ceded to the state of California. Eight years later Congress established the world's first national park with the preservation of Yellowstone in the Wyoming and Montana territories.

Today Yosemite and Yellowstone are among the most visited scenic wonders in North America. Other scenic destinations include the Grand Canyon and the Painted Desert in Arizona; Oregon's Crater Lake; Mt. Rainier in Washington; Lake Louise in the Canadian Rockies; the seascapes of California's Big Sur coast and Maine's Acadia National Park; the Great Smoky Mountains; the pastoral landscapes of New England, the Midwest, and the Plains; and innumerable other places where pilgrims, tourists, and recreationists find divine inspiration in stunning scenery. But nature offers more than just scenic splendor to the spiritual lives of visitors. In the tradition of Thoreau's contemplations on Walden Pond, adventurers have found divine communion with the natural world in their retreats from civilized life as they seek solitude in nature's domain, turning mountains and woods, seashores and lakeshores, rivers and streams, and glaciers, prairies, and deserts into sanctuaries of religious contemplation and spiritual renewal.

American Civil Religions

Among the most visited destinations in North America are sites that celebrate nationhood. Sociologist Robert Bellah has drawn attention to the religiosity of national culture with his studies of "American civil religion." The ritualized practices of this quasi-religious, and sometimes explicitly religious, nationalism include the building of sacred places and the traditions of pilgrimage travel to these holy sites of

the United States. They also are among the most popular tourist attractions in the nation.

The greatest concentration of such attractions anywhere on the continent is in Washington, D.C. The city's original designer, Pierre Charles L'Enfant, conceived of the new nation's capital as a monument to the principles of democracy. The subsequent development of the Washington landscape has emphasized its monumental character with shrines to national culture that Jeffrey F. Meyer has called "myths in stone." At the center of this mythic landscape is the U.S. Capitol, with its majestic dome looming above the city, the proud center of U.S. democracy. Radiating outward from the Capitol building along the National Mall and throughout the city are sacred places where patriotic pilgrims renew their national fervor. Among the more popular of these are monuments to iconic and legendary figures of the nation: the Washington Monument, the Lincoln Memorial, and the Jefferson Memorial. At the National Archives, visitors line up to view the original sacred texts of the nation, the Declaration of Independence, the U.S. Constitution, and the Bill of Rights, on display in shrine-like marble and glass cases inside a neo-Gothic "temple" of U.S. freedom. Nearby, the Smithsonian museums along the mall, as well as other museums throughout the city, celebrate the cultural, artistic, technological, and historical heritages of U.S. citizens and the nation. At the Vietnam Veterans Memorial, the World War II Memorial, and the Korean War Veterans Memorial, pilgrims arrive daily to honor the defenders of freedom and democracy, and many cross the Potomac River to visit the Arlington National Cemetery.

Numerous other locations across the country also attract pilgrims of U.S. civil religion and tourist visitors. Chief among these are sacred sites of the nation's founding, most notably Independence Hall in Philadelphia, where both the Declaration of Independence and the U.S. Constitution were created. In Boston the Freedom Trail leads visitors past famous sites of the American Revolution, winding from Boston Common up to the Bunker Hill Monument, site of the first major battle of the revolution. Many battlefields have become pilgrimage destinations that can have powerful emotional affects on visitors. Among the more famous of these are the sites of Civil War battles at Gettysburg in Pennsylvania; Antietam in Maryland; Manassas, also known as Bull Run, in Virginia; and Shiloh in Tennessee. In Texas, the Alamo stands in downtown San Antonio as a monument to sacrifice for the values of liberty. On the sloping hills above the Little Big Horn River in Wyoming, visitors are reminded

of the tragic consequences of U.S. expansion into the traditional lands of Native American peoples. And in Hawaii, the USS *Arizona* Memorial commemorates the bombing of Pearl Harbor on December 7, 1941; the watery grave where nearly 1,200 crew members perished on that day of infamy remains a sobering reminder of the costs of nationhood.

Travel to these and many other places of U.S. civil religion engages visitors' sense of identity at both the personal and collective levels, although not always in necessarily positive ways. Whether visitors celebrate a patriotic sense of self, mourn the tragedies involved in nation building, or abhor the values of nationalism implied in such places, self-understandings can be tested, affirmed, and sometimes transformed when pilgrims and tourists engage with the monuments, memorials, and other spaces of national commemoration.

Critical Analysis of Tourism and Pilgrimage in North America

The presence of travelers at religious sites raises a number of critical issues in the study of religions, religious places, and the experiences of religious people. Foremost among these are the boundaries between the religious and the secular. When does a tourist become a pilgrim, and vice versa? Despite different purposes and contexts of their travel, both tourists and pilgrims share a great deal in the places they visit, the travel practices they use, and the experiences they encounter along the way. Moreover, travelers themselves often understand their motives and experiences differently than do scholarly observers. Denying one's status as a "tourist" has been a part of touring culture nearly from the beginning. Many travelers disdain the tourist label and instead regard themselves as "travelers," "adventurers," "explorers," "pilgrims," or even "scholars," despite their conventionally touristic purposes, practices, and interpretations of their journeys. Likewise, the boundaries of sacred and profane also become less clear at the destinations of such travelers. Traditionally religious places often accommodate visitors with such profane services as souvenir shops, restaurants, and banking machines. Conversely, understandings of religion that emphasize institutional affiliations with church, mosque, synagogue, temple, or other recognized religious community are challenged at places where visitors encounter religious or spiritual experiences outside institutional boundaries. Thus, the travelers' edifying and transformative experiences of nature, or powerfully affective patriotism at sites of civil religion, defy a strict institutionally bounded understanding of religion.

Regardless of how one configures the categories of analysis and draws boundaries between religious and secular, sacred and profane, attention to travelers and their experiences offers valuable insights for the study of North American religions. Three areas in particular yield insightful conclusions from the critical analysis of tourism and pilgrimage: the aestheticization of religion; the commodification of religion; and issues of identity. In creating the desire to travel, in making particular sites appealing to travelers, and in the process of making one's travel experiences meaningful, travel practices constantly aestheticize nearly everything: landscapes, people, cultures, cuisine, architecture, souvenir items, mundane activities of everyday life, and especially religious places, communities, and activities are all made beautiful and appealing to the travelers' tastes and expectations. But this process of aestheticization occurs in the economic context of marketplace capitalism, which consequently commodifies the aesthetic products of the travel industry. Nothing is beyond the reach of the marketplace for travelers, and the economic implications for religious communities and their constituents are central to their participation in (or resistance to) practices that bring visitors to their sites. For travelers, commodified versions of religious experiences are available nearly everywhere they go. Indeed, like most areas of experience in a consumer-oriented culture, religion has become available to the consumer tastes of travelers and even local residents.

But tourists and pilgrims alike are involved in much more than the aesthetic appreciation and consumption of commodified products. Travel involves identity, at both the personal and collective levels. Understandings of the self and of one's affiliations with various communities (ethnic, religious, national, and so forth) accompany travelers and inform their interpretations of what they experience. Travel practices and experiential encounters of foreignness or familiarity can inscribe and reinforce the boundaries between self and other, or they can blur and even erase perceptions of difference. The traveler's journey often affirms or transforms one's sense of self, and sometimes accomplishes both.

Transcendentalism

Originating in nineteenth-century New England, with Boston and nearby Concord (Massachusetts) as its spiritual centers, transcendentalism emerged from U.S. Unitarian Christianity and emphasized the metaphysical transcendence of nature and human intuition. With early rumblings occurring as early as the mid-1820s, the movement took on a wide range of literary, social, and religious manifestations before dissolving in the latter half of the nineteenth century. The movement's most

vibrant years, however, occurred in the decade following 1836, when the speculative discussions and activities of its participants crystallized into a more cohesive movement.

Even in 1836, however, transcendentalists were not single-minded. As late as 1842, in a lecture titled "The Transcendentalist," the well-known poet, writer, and transcendentalist figurehead Ralph Waldo Emerson (1803–1882) remarked, "There is no such thing as a Transcendental party." Insisting, "There is no pure Transcendentalist," Emerson described transcendentalism not as a rigid philosophical system but rather as a disposition toward and appreciation for what he termed the "spiritual side" of life. Transcendentalists understood and applied this appreciation in different ways, and those understandings became manifest in pursuits that were not always complementary.

Philosophical Background

Transcendentalists found common ground just as much in the principles that they opposed as in the principles that they championed. In the 1820s, one primary object of collective scorn was the empiricism of John Locke (1632–1704), the seventeenth-century English philosopher. In the eighteenth and early nineteenth centuries, Locke's notion that humans acquire information only through logical deductions based on the experience of the senses proved appealing to the liberal theologians of New England's Puritan Congregational churches, who used the logic to attack Puritan-style Calvinism.

Although Harvard University's faculty required their students to memorize sections of Locke's *Essay Concerning Human Understanding* (1689) well into the nineteenth century, eighteenth-century challenges and addendums to his approach rehabilitated the idea that innate capacities or ideas preceded experience. Attempting to reconcile a British tradition that privileged experience and a continental tradition that emphasized the role of reason in producing knowledge, the German philosopher Immanuel Kant (1724–1804) proposed that such innate principles of human understanding as space, time, right, and wrong shape experience and produce what humans perceive as universal truths. Emerson later traced both the philosophical underpinnings of transcendentalism as well as the term itself to Kant, whom Emerson praised in an 1842 lecture for "showing that there was a very important class of ideas, or imperative forms, which did not come by experience, but through which experience was acquired." Emerson identified those "intuitions of the mind itself" as "Transcendental forms."

Common Upbringings

Intellectual history alone does not account for any movement, but the philosophical background of transcendentalism has particular salience because of the transcendentalists' common intellectual upbringing and self-conscious intellectualism. With few exceptions, they all studied at Harvard College in the 1820s, and they all trained to be Unitarian ministers. They shared a rigid Harvard curriculum, cultivated a common critique of that intellectual culture, and embraced a common set of extracurricular readings and discussions.

Partly because of the Lockean logic that all knowledge comes from acquiring and reflecting on information from outside the individual, Harvard's curriculum centered on rote memorization and recitation of assigned texts. Class ranks and prizes were awarded on the basis of recitation performance. Believing that this system stifled intellectual curiosity and denied individual intuition, a group of young, dissenting Unitarian liberals devoted themselves to extracurricular readings and discussions.

Those readings drew heavily on Kantian epistemology. The proto-transcendentalists read, for example, Anne Louise Germaine de Staël's (1766–1817) influential survey of German life and thought (1813), which portrayed European philosophical history as an upward progression from Locke to Kant. Future transcendentalists also engaged the work of British intellectuals and writers, including Thomas Carlyle (1795–1881) and such Cambridge Platonists as Samuel Taylor Coleridge (1772–1834).

Coleridge and Carlyle

Channeling Kant, Coleridge drew a sharp distinction between Reason, an innate "spiritual" power, and Understanding, a "natural" product of reason's encounter with experience. For Coleridge, divinity and morality were spiritual, whereas tradition and doctrine were natural. Coleridge saw this distinction as a way of defending an essential Christian faith, for it painted seemingly erroneous or irreconcilable doctrines and scriptures as imperfect human attempts to grasp the spiritual.

This distinction proved popular enough among future transcendentalists that some historians identify the 1829 U.S. publication of Coleridge's *Aids to Reflection* as the beginning point of the transcendentalist movement. In a day when German texts were not widely available in the United States, and few students at Harvard could read whatever German texts

they might have acquired, Coleridge became seen as one of Kant's two definitive spokespersons.

In the 1830s, the English intellectual Thomas Carlyle became Kant's other major spokesperson. Beginning in the 1820s, Carlyle had published translations of German literary works and laudatory analyses of German philosophy and literature in such quarterly periodicals as the *Edinburgh Review*, which future transcendentalists such as Emerson, his cousin George Ripley (1802–1880), and James Freeman Clarke (1810–1888) read regularly. Periodicals such as the *Review* kept New Englanders up-to-date on British books, articles, and emerging fields of thought and occasionally exposed them to critical treatments of New England's religious traditions and authorities. The young liberal Unitarians praised Carlyle above all for insisting that literary men could help their societies see transcendent truths increasingly obscured by industrialization and political and economic despair.

Their concern to promote passion in a dry and stultified world has earned Coleridge and Carlyle designation as European romantics, and U.S. transcendentalism sometimes is seen as the U.S. incarnation of romanticism. Such lineages were charted early: A conservative Unitarian critic of transcendentalism attributed the movement in the 1830s to the influence of "the hyper-Germanized Englishman Carlyle."

Boston Unitarianism

In the 1820s, "hyper-Germanized" dissenting Unitarians began articulating a critique of the tradition that their fathers had established only a decade or two earlier through what became known as the "Unitarian Controversy." The young Unitarians came to see their fathers' dogmatic insistence on tolerance and rationality as little more than a defense of Federalist classism and new religious orthodoxies.

The problem for conservative Unitarians was that their tradition's mythology relied heavily on a vision of reason's progressive triumph over outmoded dogmatisms. Moreover, traditional Unitarians had developed approaches to scripture and morality whose logics proved inherently undermining. Unitarians were among the first Americans, for example, to engage with German historical-critical biblical scholarship, and they had used those tools to topple the doctrinal edifices of Trinitarian Congregationalists. In addition, Unitarian efforts to debunk the idea that God vengefully demanded Jesus' death as penance for human sin had led Unitarians to emphasize such notions as the moral perfection of God, God's creation of humans with a capacity for moral

goodness, and Jesus' moral deliverance of humankind through his demonstration of perfect morality.

These emphases eventually came together with such teachings as William Ellery Channing's (1780–1842) claim that human "likeness to God" exists in "man's spiritual nature," all of which helped make it possible to imagine that morality dwelt in human consciousness innately, independent of Jesus' example. These developments spawned transcendentalism, with its conviction that the divine dwells within humans who need only reflect on their divinely inspired intuition to discover mystical truths.

Dissenting Unitarians

Despite their problems with Boston's Unitarian establishment, most of the future transcendentalists became Unitarian ministers after graduating from Harvard. Exceptions include Margaret Fuller (1810–1850), whose gender kept her out of both Harvard and the ministry, and Amos Bronson Alcott (1799–1888), a friend of Emerson whose intellect Emerson admired. Hailing from Connecticut, Alcott did not attend Harvard and worked instead as a teacher and educational theorist.

Emerson and Clarke provide representative examples of the transcendentalist ministers. Emerson received a license to preach from the local association of Unitarian ministers in 1826. Boston's Second Church made him its junior pastor in 1829, and it soon promoted him. Emerson soon tired of the position, however, believing that Christian rituals such as the Eucharist had little to do with the inner divine. He resigned in 1832 and spent most of 1833 in Europe, where he tracked down such heroes as Carlyle and the poet William Wordsworth.

After completing his graduate studies at Harvard in 1833, Clarke set out not east but west. In the 1830s and 1840s, Clarke and other transcendentalist Unitarians flocked to western frontier states. For Clarke, the inexorable expansion of the frontier embodied the progressive unfolding of the divine mind. In new western states, Unitarians such as Clarke hoped to teach people how to listen to and apply the exhortations of conscience to such moral problems as slavery. Working as a minister in Kentucky, Clarke developed a reputation as a transcendentalist leader through his work as editor of the *Western Messenger*, which became a crucial outlet for transcendentalist essays and poems.

Clarke and Emerson are representative transcendentalist ministers in two ways. First, they never fully agreed on the implications of transcendentalism. Seeing transcendentalism

primarily as a dedication to progress and an openness to new ideas, Clarke remained convinced that Unitarian Christianity provided the ideal outlet for transcendentalist convictions. Some transcendentalists agreed with Clarke, and others with Emerson. Second, the two men illustrate how transcendentalists of different stripes found themselves able to cooperate for a time as well as how they eventually began drifting apart.

A Movement Coalesces

Lacking a space within which to discuss transcendentalist ideas, the young transcendentalist ministers created one in 1836. Known initially by such names as "Hedge's Club," for the group tended to meet when Frederic Henry Hedge (1805–1890) took time away from a ministerial assignment in Maine to visit Boston, the club eventually became known as the Transcendental Club. Participants attended by invitation only and participated on the condition that they never stifle discussion of any subject. In approximately thirty meetings over the following four years, members discussed such topics as "What is the essence of religion as distinct from morality?"; "What are the features of the present time as to religion?"; "Is mysticism an element of Christianity?"; "The character and genius of Goethe"; and "Pantheism."

By 1837, the group began to see itself as more than just a collection of disgruntled ministers. They saw themselves as mystic prophets, both in the sense that they were turning public attention toward neglected religious emphases and in the sense that their writings and discussions actually were widening the world's capacity to hear and respond to the divine. Always critical of the state of U.S. intellectual and literary life, they reasoned that uninteresting U.S. literature stemmed mostly from a lack of sensitivity to the divine mind both within and without each individual. As a result, they saw writing as a primary means of cultivating the sort of moral perfection that Unitarians traditionally termed *self-culture* and of renewing the world outside the self.

This emphasis on the power of print was made possible by a rise in literacy and education in the early decades of the nineteenth century, a development that allowed newspapers, journals, and books to become vital parts of many Americans' lives. Religious groups in particular capitalized on print as a means of presenting themselves to their publics.

Publishing

Particularly notable among early transcendentalist writings was Emerson's *Nature*, which appeared about a week before the

Transcendental Club first met in 1836. Originally published anonymously, Emerson's book represents a kind of meditation on the notion of "correspondence," the idea that the divine dwells equally within individuals and in nature. A variation on the eighteenth-century mystic Emanuel Swedenborg's (1688–1772) idea of hidden correspondences between visible and invisible worlds, Emerson's theory suggested that individuals can gain insight into their own souls by reflecting upon the natural world, to which the soul corresponds.

Transcendentalists' commitment to writing and disseminating ideas led them to discuss creating their own journal. In the 1830s, transcendentalists had two main outlets for their work: the *Christian Examiner*, the flagship Unitarian journal for which the conservative Andrews Norton (1786–1853) served as an official sponsor and regular contributor, and Clarke's *Western Messenger*. Each of these publications offered its own limitations. Although open to transcendentalist perspectives, the *Western Messenger* constantly struggled for subscribers, financial support, and even submissions. It suffered both because of distance from Boston and because conservative Boston Unitarians began withdrawing their financial support. It stopped publication in 1841. With no editorial control over the *Examiner*, transcendentalists increasingly were denied access to its pages as the movement's profile rose.

Despite the worry of some transcendentalists that a transcendentalist journal would only foster more divisiveness among Unitarians, *The Dial* began publishing essays and poems in 1840. In the first issue's introduction, Emerson suggested that the journal would "make a new light on the whole world." Emerson became the journal's editor in 1842 after Fuller and Ripley both stepped down as the journal's original editors. In its last years, Henry David Thoreau (1817–1862) contributed frequently and helped Emerson with editorial duties while boarding in Emerson's home.

Negotiating Controversies

Apprehensive members of the Transcendental Club were right to worry that *The Dial* would highlight their movement's break from the Unitarian mainline. By 1840, however, the so-called Second Unitarian Controversy already had begun, and party lines had been drawn. Much of the polarization occurred following two infamous addresses. Delivering Harvard Divinity School's 1838 commencement address, Emerson identified his central thesis as "first, soul, and second, soul, and evermore, soul," insisting that the laws of the soul existed outside time and space. Who or what

humans call "God," Emerson explained, merely embodies those laws in their purest form. As a result, if a person followed the laws closely, "the safety of God, the immortality of God, the majesty of God, do enter into that man." For Emerson, Jesus taught above all that each individual is "a newborn bard of the Holy Ghost."

Following the Divinity School address, Emerson's critics took issue primarily with his apparent denial of rational Christian principles. The conservative Unitarian Norton, for instance, insisted that miracles were the "root of faith in Christianity." Ripley subsequently engaged Norton in a vitriolic debate over miracles. A few years later, Theodore Parker (1810–1860) joined Ripley in facing critics who insisted upon the "historical" elements of Christianity.

In an 1841 address titled "A Discourse of the Transient and Permanent in Christianity," Parker lamented that Christians had paid much more attention to the transient "forms and doctrines" of Christianity than to "the divine life of the soul, love to God, and love to man." Noting Christianity's long history of conflicting doctrine, Parker insisted that only one religion or theological system could prove absolutely true and unchanging. "If Christianity were true," Parker asserted, "we should still think it was so, not because its record was written by infallible pens . . . but that it is true, like the axioms of geometry, because it is true, and is to be tried by the oracle God places in the breast."

Summarizing the controversy regarding Emerson's address in the *Western Messenger*, Clarke responded with marked ambivalence. On the one hand, he insisted that the bold spirit of the address had "delighted" him. On the other hand, Clarke appeased the journal's more conservative supporters by claiming that he would find it "quite wrong" if Emerson meant to deny the value of historical Christianity. Clarke displayed similar ambivalence about Parker's address, though he ultimately chose to continue his ministerial relations with Parker and encouraged conservative colleagues to embrace the "dear heretic" after many chose to stop giving Parker the traditional courtesy of exchanging pulpits.

Institutional Manifestations

Partly in an effort to free themselves from the financial support of the very conservatives who hoped to ostracize them, transcendentalists began in the 1840s to create new religious and social structures that embodied their respective understandings of transcendentalism. Many of these institutional manifestations took social reform as a top priority. Although transcendentalists such as Emerson looked inward more

than outward, transcendentalists all valued social reform because of their conviction that economic and social disparities prevented the natural unfolding of humankind's spiritual nature.

For transcendentalists such as Orestes Brownson (1803–1876) and Ripley, humans could not establish the kingdom of God under capitalism's cruel yoke. Brownson attacked capitalism mostly on paper, but Ripley took a more hands-on approach. Disheartened by the growth of urban poverty that followed the financial panic of 1837 and eager to effect greater social reform than his ministry and writing made possible, Ripley resigned in 1841 from a congregation that had tired of hearing his moralistic sermons. The same year, he bought land outside Boston and organized the communal Brook Farm, which required members to purchase shares in the community's corporation to live on its grounds, send children to its schools, and work its farm. The community divided labor equally. The experiment folded in 1847, partly because meager agricultural output strained the finances of the community. Bronson Alcott also helped found a short-lived vegetarian commune known as Fruitlands in 1843, where he lived for six months with his family, including daughter Louisa May Alcott (1832–1888). Louisa Alcott eventually became renowned as a writer and novelist, penning the 1868 novel *Little Women* as well as an 1873 satirical account of her Fruitlands experience titled “Transcendental Wild Oats.”

Clarke took a less experimental approach to social reform. Frustrated by what he perceived as the ossification of church life both in Kentucky and in Boston, he sought a church that would focus on the spiritual perfection and participation of the congregation. Founded in 1841, his Church of the Disciples offered its congregation a range of study groups and pursued diverse social projects among Boston's urban poor.

Engaging Eastern Traditions

In addition to transatlantic romanticism, a variety of other factors both helped shape the transcendentalist agenda and enabled transcendentalists to pursue it. Nineteenth-century developments in literacy and adult education, for example, both nurtured transcendentalists' interest in print culture and fueled a lively lecture circuit. Income from lectures allowed transcendentalists such as Emerson to live in relative intellectual leisure and to challenge the Unitarian establishment that once had supported him financially.

More important to the transcendentalist movement, however, was the growth of Orientalist scholarship about the religious traditions of South and East Asia. All members of

the original generation of transcendentalists engaged this scholarship to some degree, partly because the European romantics whom transcendentalists idolized engaged it themselves. Among the transcendentalists, however, Emerson and Thoreau engaged this scholarship earliest.

After scattered encounters with non-Christian texts in the 1820s, Emerson's engagement picked up considerably in the 1830s, when he read extracts from texts he associated with Confucius, Zoroaster, the “Mahabarat,” Buddha, the Vedas, and the Koran (Qur'an). As editor of *The Dial* he published selections from his readings. As for Thoreau, his 1854 account of the summer he spent alongside Walden Pond in 1845 famously mentions “the stupendous and cosmological philosophy of the Bhagvat-Geeta,” which Thoreau believed made the “modern world and its literature seem puny and trivial.” A number of historians credit Thoreau's 1844 translation of a French Orientalist text as the first U.S. encounter with Buddhism.

Yet Emerson and the other early transcendentalists did not set out to attain comprehensive knowledge of the world's religious traditions. At least initially, they proved far less interested in poaching foreign religious concepts and practices than in using aspects of other traditions that they found conceptually resonant to buttress their conviction that the divine lives in all peoples and things equally. For Emerson, the world's religious texts provided examples of times and places where other peoples had managed to see divinity in ways that westerners generally had not. In addition, foreign texts sometimes modeled new ways of articulating their perspectives.

In subsequent decades, transcendentalists continued to engage with Orientalist literature, with varying results. In the 1850s and 1860s, an explosion in knowledge about traditions such as Buddhism helped liberal transcendentalists see non-Christian traditions as “religions” of the same genus as Christianity, containing both truth and human-made error. Citing Parker as a guide, second-generation transcendentalists such as Lydia Maria Child (1802–1880) and Thomas Wentworth Higginson (1823–1911) eventually began insisting that Christianity obscured “absolute religion” no less than other traditions did. Child, Higginson, and others began attempting to cobble together a kind of universal religion that drew on what they saw as the best of each tradition.

Yet other transcendentalists continued the pattern of using their knowledge of other traditions to buttress their particular transcendentalist positions. Written in criticism of such “radical” transcendentalists as Higginson, for example,

Clarke's *Ten Great Religions* (1871) defended a Christian form of transcendentalism by claiming that Christianity contained all the virtues of other religions, yet avoided their most serious flaws.

Parting Ways

By the time that Higginson and Octavius Brooks Frothingham (1822–1895), a disciple of Parker and minister of an “independent” church in New York City, helped found the Free Religious Association in 1867, the transcendentalist movement was breathing its last breaths. Just ten years later, Frothingham would eulogize the movement in his *Transcendentalism in New England: A History* (1876). Identifying himself as one of the last transcendentalists, Frothingham excoriated critics who dismissed transcendentalism as nothing but once-fashionable “sentimentality.” But he nonetheless insisted that he and others had since moved on from the “speculative world” to a “philosophy of experience.”

To the extent that it ever had cohesion, transcendentalism began unraveling as early as the 1840s. The Transcendental Club held its last meeting in 1840, *The Dial* folded in 1844, and the original generation of transcendentalists began pursuing divergent paths from the 1840s on. Increasingly disillusioned with Emersonian transcendentalism for what he saw as an inattention to social reform, Brownson converted to Roman Catholicism in 1844. Meanwhile, Emerson remained a figurehead for radical transcendentalists, Alcott deepened his exploration of mysticism, and Clarke and Hedge committed themselves fully to a transcendentalism-inflected form of Unitarian Christianity. Clarke and Hedge eventually served as leaders of the American Unitarian Association, edited such journals as the *Christian Examiner*, and assumed Harvard professorships. Convers Francis (1795–1863), brother of Child and eldest member of the Transcendental Club, became a Harvard professor in 1842. Locked out of pulpit exchanges with most Unitarian ministers, Parker founded his own church in 1845. Particularly outspoken critics of slavery, Parker and Higginson became members of the so-called Secret Six that lent John Brown (1800–1859) financial support for his failed revolution.

Transcendentalism unraveled for at least two main reasons. First, Unitarians slowly denied denominational membership to the more radical transcendentalists. In 1865 Unitarian Christians went so far as to form a new Unitarian conference with an explicit Christian confessional stance. Radicals responded by creating the Free Religious Association as a spiritual home for transcendentalists, Spiritualists,

Swedenborgians, and other “come-outers.” But the first reason for transcendentalism’s decline stemmed largely from the second: Transcendentalists’ intense focus on the individual and their attendant mistrust of human social structures made their inherently factious cohort imperfect organizers.

Legacy

The influence of transcendentalism is difficult to quantify, partly because measuring transcendentalism’s legacy requires identifying which sort of influence is in question and what sort of transcendentalism is in mind.

In general, the movement’s historians acknowledge that transcendentalist ministers had little intellectual support from and exerted little intellectual influence on their congregations, who no doubt found it difficult to connect with transcendentalists’ esoteric intellectualism. Transcendentalists influenced congregations mostly by committing them to social reform. In 1876 Frothingham described transcendentalism’s principal legacy as its emphasis on “moral enthusiasm” and its attention to such social issues as the “holy war against slavery.” Transcendentalists also made space for the participation of women and pursued women’s rights through such people as Fuller and Child.

Transcendentalism proved influential in a few other important ways. First, transcendentalist intellectuals ultimately changed Unitarianism by slowly pushing its leaders toward more liberal positions. Francis and Hedge may not have had Emerson’s radicalism, but they retained commitments to more restrained transcendentalist insights as Harvard professors. From those positions, they trained the next generations of Unitarian ministers.

Second, transcendentalists contributed significantly to the development of U.S. forms of mysticism and “spirituality,” lending conceptual support and helping cultivate such practices as solitude, meditation, and spiritual seeking. Although practitioners of New Age religions tend to deny that their tradition has a history, they and other religious liberals sometimes hold up transcendentalists such as Emerson and Thoreau as spiritual ancestors.

Because spirituality and religious liberalism tend to receive dismissive treatments from most observers of U.S. history and religion, however, this area of transcendentalism’s greatest influence ironically has reinforced the tendency for both scholars and the wider public to remember the movement as more literary, intellectual, and reformist than religious. Such a confusion of categories, however, may be precisely what Emerson would have wanted.

Transcendental Meditation

The transcendental meditation technique (TM) as taught by Maharishi Mahesh Yogi (1911?–2008) is a simple, natural, effortless mental technique practiced twice daily for fifteen to twenty minutes sitting comfortably with closed eyes. During the practice the mind experiences thought at subtler and subtler levels of activity until the thinking process is transcended entirely, and the mind arrives at the source of thought, the field of pure transcendental consciousness within.

The technique is easy to learn, but because advocates believe that this practice links them to a deep level of inner consciousness, they claim they must receive personal instruction from a qualified teacher to master it. During instruction the student receives an appropriate mantra as the vehicle for

the inward stroke of meditation. A *mantra* is a word selected not for meaning but rather for its sound quality that attracts the mind toward quieter levels of the thinking process. The student then receives personalized instruction in the correct use of the mantra to allow the process to proceed naturally and spontaneously. Practitioners believe that TM involves no concentration or mind control that would localize the mind on the level of conscious intention. Nor does it involve contemplation or thinking about something that would keep the mind active on the level of meaning. In TM the mind settles down effortlessly motivated by its own natural tendency to move toward fields of greater potential. Although meditators find the experience enjoyable, TM is not practiced for the sake of experiences during the meditation itself. Rather, it is practiced as a preparation for more effective and rewarding daily activity.

Maharishi said that because of the intimate connection between mind and body, as mental activity is reduced during the practice, physiological activity is reduced as well. This leads to the experience of a profound state of restful alertness in which the body is at a deeper state of rest than even the deepest point of a full night's sleep while the mind remains settled but alert. Within this unique fourth major state of consciousness the body's inherent ability to throw off deeply rooted stresses, physiological abnormalities at the structural or material level caused by undue pressure of experience, is enhanced. These stresses inhibit optimal functioning of the nervous system, and when they are dissolved benefits are experienced spontaneously in all areas of life. TM is not a religion, philosophy, or lifestyle, but rather a practical technique of direct experience that can easily be learned and practiced by anyone.

History

Maharishi did not invent the transcendental meditation technique; he revived an ancient Vedic practice that had been lost to all but a few isolated sages who used it contact and draw upon the field of pure transcendental consciousness that underlies all experience. Maharishi graduated with a degree in physics from Allahabad University in India, and he decided to follow his desire for spiritual enlightenment. He was accepted as a disciple by Swami Brahmananda Saraswati. Guru Dev, as Maharishi referred to him, had been selected as Shankaracharya, a custodian of the Vedic tradition, of Jyotirmath in the Himalayas, one of four principal seats established by the Hindu philosopher Shankara many centuries earlier to perpetuate Vedic knowledge. Maharishi

became a reclusive monk and remained with Guru Dev as his secretary until his death in 1953. Maharishi learned the essence of Vedic wisdom and the practical techniques to develop higher states of consciousness.

When Guru Dev died Maharishi retired to a solitary cave in the Himalayas. After two years in silence he found himself moved to return to the world of activity to share his knowledge. In 1957 he left the mountains to travel around India and began what would turn into fifty years of travel around the world teaching the ancient technologies that he learned from Guru Dev; Maharishi first arrived in the United States in 1959. As he traveled he quickly found that he could not cope with the demands for instruction, and in 1961 he began the systematic instruction of TM teachers to help him carry out his work. Maharishi first received widespread popular media attention in 1968 when a group of celebrities including the musical group the Beatles traveled to India to study with him. A huge surge in the number of people learning the TM technique in the U.S. mainstream occurred in 1975 when Maharishi appeared on Merv Griffin's television show along with actor Clint Eastwood, who had encouraged Merv to learn the technique. By 2008, more than 40,000 people had been trained as teachers and more than 6,000,000 people around the world had learned to practice the technique.

In 1971 Maharishi International University, now the fully accredited Maharishi University of Management in Fairfield, Iowa, was founded. All courses emphasize the relationship of the consciousness of the knower to the subject being studied. In 1976 Maharishi introduced the TM-Sidhi program, a set of procedures to train the mind to function and act from within the silent level of bliss consciousness, the self-referral state of pure consciousness that is cultured during the TM technique. Research has shown that the benefits of the TM technique are significantly enhanced with the practice of this advanced technology. Maharishi died in 2008, but his teaching continues through organizations that he founded around the world. In the United States his programs are taught under the auspices of Maharishi Vedic Education Development Corporation.

Modern Science and Vedic Science

Maharishi often spoke about the relationship of the objective methods of modern science to the subjective methods of ancient Vedic science. Modern science looks deeply into the object of study searching for underlying laws of nature, and quantum physics has glimpsed a unified field that underlies all the diversity of the universe. The self-interacting dynamics

of this field are seen as the basis of all phenomenal existence. The Vedic seers used systematic subjective techniques to explore consciousness and believed they had discovered a unified field of pure Being at the level of least excitation.

They found that the self-interacting dynamics of the knower (rishi), the process of knowing (devata), and the known (chandas) within this field give rise to all experience. Vedic rishis' descriptions of this underlying reality are remarkably similar to how physicists today describe the unified field of all the laws of nature, and many agree that an understanding of consciousness is essential for a holistic understanding of the universe. In Maharishi's teaching the two approaches are seen as complementary. Unfortunately, Maharishi said, the teaching of the Vedic techniques became distorted over time and they lost their effectiveness. In India the Vedic texts remained, but the techniques that lead to the experiences that gave rise to them had largely been lost.

Before Maharishi's introduction of the TM technique meditation had been considered primarily as metaphysics, mysticism, and religion. Maharishi, however, insisted that TM was a practical, universal technique, and he actively encouraged the objective scientific study of the results of the practice both during the meditation and in the field of activity. The research on the TM and TM-Sidhi programs is now extensive. More than 600 scientific studies conducted at 200 independent universities and institutions around the world and published in more than 100 leading peer-reviewed scientific journals have demonstrated that Maharishi's programs actually do cause positive changes in mental potential, health, social behavior, and the social environment.

Critics of the TM movement have argued that the research on the programs is pseudoscience rather than real science and that Maharishi used scientific jargon to disguise the fact that he was really teaching religion, noting that Maharishi was a Hindu monk and modern Hinduism looks to its roots in the Vedic texts. Critics also point to a 1979 ruling by the Third Circuit Court of Appeals that barred New Jersey schools from introducing a curriculum that combined TM with the classroom teaching of the science of creative intelligence, a course that relates experiences during the practice to the structure of consciousness and the physical universe, because the ideas in that course advanced religious concepts.

The TM organization notes that hundreds of the studies have been published in peer reviewed scholarly journals and that papers that present new scientific paradigms receive especially close scrutiny when considered for publication.

Furthermore, findings in each area of study have been replicated many times, and rigorous meta-analyses have found a high degree of consistency in the results. TM representatives note that the technique does not involve any religious belief or practice. However, neither does it conflict with religion. Adding the practice of the TM technique does not conflict with meditators' practice of their own religions. Maharishi said that he had no desire to influence people to convert to Hinduism. He said that it would be best for people who wanted to pursue a religious life to remain within the religious and cultural traditions in which they were raised. The technique is universal, and the benefits enjoyed as a result of the regular experience of the state of transcendental consciousness would better enable them to appreciate the truth and value of their own religion.

Research Findings

Research on the TM technique first appeared in the journal *Science* in 1970 and dealt with changes in physiology during the practice. Findings show that the body underwent unique physiological changes that suggested a fourth major state of consciousness, a state of restful alertness, differentiated objectively as well as subjectively from waking, dreaming, and sleeping. During the technique the physiology became deeply rested with significant reductions in respiration, minute ventilation, tidal volume, and blood lactate, and with significant increases in basal skin resistance. Other research findings during the practice include increased orderliness of brain wave activity, increased blood flow to the brain, increased muscle relaxation, and decreased plasma cortisol, a stress hormone.

Findings on physiological variables in activity include increased brain wave coherence, more efficient information transfer in the brain, lower heart and respiration rate baselines, increased autonomic nervous system stability, faster recovery from stress, and faster reactions and reflexes. Subjects averaging fifty years of age who had been meditating at least five years had a biological age twelve years younger than their chronological age. Medical researchers found that cardiovascular risk factors such as high blood pressure and serum cholesterol were reduced. Large health insurance studies found a 50 percent reduction in both inpatient and outpatient medical care utilization compared with controls. Hospitalization was 87 percent lower for heart disease and 55 percent lower for cancer. Meditators older than forty years old had approximately 70 percent fewer medical problems than did others in their age group.

Psychological and sociological findings include enhanced creativity, broader comprehension and improved ability to focus, improved memory, accelerated cognitive development in children, increased cognitive flexibility in the elderly, increased academic achievement and grades, higher levels of moral maturity, increased self-confidence and self-actualization, and healthier family life.

Maharishi had estimated that 1 percent of the population practicing the TM technique, or as few as the square root of 1 percent practicing the TM-Sidhi program, together would create a coherent influence in collective consciousness that was capable of neutralizing the stresses that are the root cause of social problems. Despite considerable skepticism, often replicated research shows that when these conditions are met positive trends in society increase while negative trends decrease significantly. In his final years Maharishi focused his attention on programs to establish world peace from the level of the unified field of consciousness.

U

Unaffiliated

According to the 2008 U.S. Religious Landscape Survey conducted by the Pew Forum on Religion and Public Life, 16.1 percent of Americans count themselves as “unaffiliated” with any religious tradition. Sixteen percent, roughly one in six, may seem a relatively small number. It is, in fact, a much lower percentage of religiously unaffiliated than would be found in most other industrialized nations. But 16 percent represents a substantial portion of a nation that thinks of itself as having a deeply religious character.

It is important to remember that this 16 percent represents only those people who very consciously do not affiliate themselves with any group. They answered “no” when asked if they aligned themselves with Protestants, Catholics, Mormons, Orthodox, “other Christians,” Jewish, Muslims, Buddhists, or Hindus. They might be called “staunchly unaffiliated.”

But many others in the remaining 84 percent are unaffiliated as a matter of practice. Among those who describe themselves as mainline Protestants, 12 percent said religion was not important in their lives, and 23 percent attend worship seldom or never. Among Catholics, 9 percent said religion was not important, and 19 percent attend seldom or never. Even among evangelical Protestants, 3 percent said religion was not important, and 13 percent attend seldom or never. So the real percentage of people who are “practically unaffiliated” is considerably larger than one in six. It is worthwhile to distinguish the staunchly unaffiliated from those who are nonattenders of religious services or nonmembers of religious organizations.

According to the Pew survey, 27 percent of Americans attend worship seldom or never, with another 18 percent attending only “a few times a year.” So 45 percent of Americans rarely attend worship, a figure that corresponds to other national studies. How many Americans, then, are truly religiously unaffiliated? The answer is somewhere between one in six and roughly half, depending on the criteria used to decide.

Who Are the Unaffiliated?

Unlike the staunchly unaffiliated, most nonattenders and nonmembers are people who have commitments to faith traditions—at least historical commitments within their families or ethnic groups—but who choose not to participate regularly in religious organizations within those traditions. They may celebrate rites of passage such as christenings, marriages, and funerals in their faith traditions, but they may not be official members or, if they are, they may not attend. Reasons for their nonparticipation vary widely and can be very passive. Many nonattenders do not *intentionally* avoid participation; they simply do not participate. But the staunchly unaffiliated—the 16 percent—are much more likely to distance themselves intentionally from religious organizations or activities.

This is not primarily because they are atheists. It is true that 22 percent of the staunchly unaffiliated do not believe in God, and another 10 percent are uncertain, but fully 60 percent of the staunchly unaffiliated are either absolutely certain or fairly certain of their belief in God. True atheists make up only a small portion, something like 3 to 4 percent of the total U.S. population. Therefore, about

12 to 13 percent of the U.S. population believes in God but remains staunchly unaffiliated. This constitutes some forty million people.

This 12 to 13 percent represents the strongest case of religious individualism. This individualism and its causes are surely related to the causes of nonmembership or nonattendance; but this strong case represents a higher degree of independence, especially in a society where some religious affiliation, whether weak or strong, remains the norm.

Better-off, better-educated nonaffiliates get disproportionate attention in research and in the media, creating the impression that disaffiliation is highest among intellectuals. But, in fact, those with the least education and lowest income are the most likely never to attend or participate in religious organizations, just as they are most likely not to vote, to participate in school activities, or to join other civic groups. Individualism and anti-institutionalism run across the full range of American society and are manifest in religious participation just as they are elsewhere.

Brief Historical and Sociological Background

The most famous account of the relationship between organized religion and religious individualism comes from Ernst Troeltsch's *Social Teachings of the Christian Churches*. Troeltsch establishes the master types of church, sect, and mystic. To summarize very briefly, the church type of religious organization is coextensive with the society in which it is embedded. In the European case, where Troeltsch was writing, the "church" usually meant the state church, such as Catholicism in Italy, Greek Orthodox in Greece, or Anglicanism in England. Salvation is found within the bonds of the church. Membership is by birth or ethnicity. Leadership is by appointed office, often within a hierarchy. Membership rules are sometimes lax because people are presumed to belong by virtue of who they are.

Sects, by contrast, are opposed to, or at least independent from, the government and the ruling elites. Salvation is between the person and God directly. Membership is by choice or by election. Leadership is often charismatic and particular, perhaps limited to someone with a special gift or calling. Membership rules can be very strict because inclusion is not guaranteed.

Troeltsch recognized a third, nonorganizational type, comprising individuals who opt out of the mainstream but also do not affiliate with countergroups. Such individuals feed their spirituality through direct apprehension or revelation. Salvation is through their personal experience. These

he termed mystics. By definition, these individualists are hardest to analyze or categorize. Although the metaphysical composition of mysticism is beyond empirical investigation, certain social conditions clearly favor and sustain religious independence.

From the outset, America offered a mix of church-like and sect-like groups. The Puritans were certainly sectarian back in England, where they protested both to the Anglican Church and to the Crown itself, but in some of the new colonies they became very church-like as their religious beliefs and practices formed the foundation of society's mores. In other American colonies, however, Anglicans and Catholics were the dominant groups. Gradually America became the quintessential case of "denominationalism," a hybrid religious form that mixed church-like and sect-like qualities in organizations spanning the spectrum from very mainstream and integrated to very countercultural and separate.

The variety of denominations and their theological and cultural views is covered elsewhere throughout the present volume. But the very fact of religious pluralism created a context in which religious individualism inevitably flourished. Puritans may have held a de facto religious monopoly for a while in New England, as Catholics did in parts of the middle colonies, but these monopolies were destined to give way as the colonies sought a way to unite politically despite religious and cultural differences. "Disestablishment"—the conscious decision that American government would not recognize or prefer any type of religion as dominant—was written into the U.S. Constitution by the late eighteenth century. The Constitution went further, though, to guarantee liberty of conscience and the right to choose one's religion. Americans were provided by federal law, if not always by local practice, with freedom *from* religious coercion and freedom *to* choose as they wished.

This combination of disestablishment and free exercise created a de facto religious marketplace in which individuals were the consumers. This analogy can be overdrawn; few begin life with a religious blank slate and then choose freely from a menu of options. Socially constructed presuppositions guide and circumscribe our choices. Still, religious communities have always been especially fluid in America. No single group had the official status of "church"; few of the sectarian groups were entirely separatist. Protestant denominations, which developed in America by the dozens, had the seeds of religious individualism built into them because they challenged the ideas that the church was

unitary and that salvation could only be found within it. Once people widely accepted the notion that salvation was between an individual and God, rather than limited within the bounds of any single organization, people were freed both by conscience and by law to affiliate as they saw fit. It is not necessary to overstate the amount of religious switching or changing to establish that switching and changing were possible and routinely practiced.

The majority of Americans have always chosen to affiliate, but this is likely true in part because the social scope of religion contracted to fit their personal preferences, which mirrored other political and economic realities. As Alexis de Tocqueville noted in the early nineteenth century, religion did not directly govern the state or market in America. How could it? Religion focused more on moral character, and on churches and homes as the places this character was formed. These persons of character then acted in the public, political, and economic arenas. The two Great Awakenings of the eighteenth and nineteenth centuries reinforced the idea that salvation was about moral rectitude and a personal commitment to God.

Tocqueville thought religion was indispensable to American life because democracy and capitalism might push people toward lower tastes and passions while religion would lift their values. But the influence of religion is necessarily more diffuse in America than in societies where the church is coextensive with government. Given the personal, even privatized, influence of religion and the proliferation of multiple religious groups, none of which could claim to be the official standard bearer, it is hardly surprising that affiliation gradually became more and more a matter of individual preference.

Seen from the angle of religious organization, then, a number of factors made America fertile ground for religious individualism: constitutional disestablishment of religion and the absence of a national church, constitutional guarantee of free exercise, proliferation of religious organizations having both church-like and sect-like qualities, and individualistic concepts of salvation intrinsic to Protestantism. But other ideas percolating in American society also pushed toward spiritual independence.

“Whoso would be a man must be a nonconformist.” “Nothing is at last sacred but the integrity of your own mind.” Ralph Waldo Emerson in the nineteenth century wrote these words in his essay “Self Reliance.” In them, he carries a tradition of independence and suspicion of institutions, including religious institutions, running back to the

founders and beyond. Benjamin Franklin said, “Lighthouses are more helpful than churches” and “The way to see by faith is to shut the eye of reason,” in addition to the widely quoted, “God helps them that help themselves.”

America’s tradition of heroic individualism is self-evident. From the pioneer stories of Daniel Boone and Davy Crockett to the up-by-the-bootstrap millionaire stories of Horatio Alger to the romantic lone cowboy of Louis L’Amour novels and John Wayne movies, America has idolized and idealized those who go it alone. This tradition does not work against spirituality as such—these heroes are likely to believe in God and perhaps also in divine providence—but its anti-institutional sentiment finds room to flourish in a country where religious practice is diffuse and particular. Freedom from religious establishment, freedom of religious choice, and privatization of religious influence link up with suspicion of religious organizations and the ideal of self-sufficiency to create a strong and persistent current of religious individualism. The wonder is not that 16 percent are staunchly unaffiliated but that this number is not much higher.

Contemporary Context

Is religion thus weaker in America than in societies with established national churches where most citizens are presumed to be members from birth? It depends on what one means. In one sense, religion *must* be weaker. There are no religious leaders with official public standing, no leaders who could claim to speak for all believers. Religion, by definition, lacks codified institutional power.

But seen from another angle, the diffusion, particularization, and individualization of religion in America may make religion as a whole a stronger force. The proliferation of religious groups and opinions, plus the legitimacy of independent, self-chosen, spirituality, means that in America there is something for everyone. Perhaps this is why rates of affiliation, membership, and attendance are higher here than in most other industrialized societies and why staunch disaffiliation is relatively low.

Even Americans who are suspicious of religious organizations and their practices tend to profess individual spirituality. Sociologists and survey takers joke about the number of times they have been told, “I’m spiritual but not religious in the traditional sense.” To understand this thinking, in a setting of deeply rooted religious pluralism, is to understand religious individualism in the contemporary context.

Differentiation and Privatization

Changes in religion in general, and American religion in particular, owe much to the differentiation of institutions throughout Western society. Although it is possible to overdraw the distinctions, it is fair to say that religious, economic, and political power were once much more tightly bound together. Kings ruled by hereditary right, with God's presumed consent. Popes and kings shared authority, their relative power varying by situation. Kings controlled enormous economic power, especially the ability to grant or rescind title to property.

Through complicated historical processes these institutions gradually diverged to varying degrees throughout the West. Religious power and authority were no longer intertwined with political authority. This process culminated in the official separations of disestablishment and free exercise written into the U.S. Constitution; however, there was a de facto separation even in European countries that still supported state churches. Markets ran on their own capitalistic logic. States regulated markets and used taxation to achieve social goals; religion exerted ever less influence in the marketplace.

It is hardly surprising, then, that over time religion's direct influence tended to be localized within smaller groups, families, and even individuals. The degree to which religion was truly privatized can be overstated, but there can be no doubt that religion lost public authority relative to both state and market.

Secularization

This loss of public power or social authority is one way to imagine the process of secularization. Secularization is the idea that a culture's ideas and practices are gradually losing their religious, spiritual, or mystical qualities and moving toward rational, empirical, and scientific explanations. In the mid-twentieth century, scholars such as Bryan Wilson, David Martin, and Peter Berger theorized the advance of science and reason would explain away more and more of the questions once only answered by religion, to the point that religion itself would gradually fade.

It is now apparent that religion did not disappear. Americans living in the early twenty-first century appear to be no less personally spiritual than those living in the early twentieth. But this does not necessarily mean secularization theories were baseless. Over that same century, mainline Protestantism lost its status as the religion of the nation's

elites. Most restrictive laws about what could be done on the Sabbath—so-called “Blue Laws”—were repealed nearly everywhere. Public, civic displays of Christianity were replaced by displays that were either patriotic—what some have called “civil religion”—or by very general rituals capable of encompassing many different faith traditions. In a multitude of court cases ranging from religious clothing to the use of hallucinogens, the state's broad interests overrode any religion's particular ones.

In short, belief in God and personal spiritual questing remained strong, while religion as a system of social organizations ceded public authority. Religious affiliation is not a legal requirement for full participation in the market or the state. In very small market segments affiliation still matters in nonlegal ways—think of Hasidic Jews engaged in the diamond trade—and in politics Americans still prefer their leaders to have spiritual qualities. But the days when particular affiliations were prerequisites for the boardroom or elective office are well behind us. Contemporary levels of nonaffiliation, nonmembership, and nonattendance must be viewed in the light of these much larger social changes. Affiliation, membership, and attendance may be personally important, or important within very small groups, but they are continually less important in the public sphere.

Therapy

Because no single religious group has a majority, and no religious organization has priority, American religion is incapable of directly competing with the powerful forces of a large state and all-pervasive market economy. Not surprisingly, then, religion *responds* to those forces. Religion responds by applying political or economic pressure in some instances, but most often it responds by focusing on theology and character development for its members. Put another way, it provides frameworks of meaning, personal and social goals, and coping strategies for individuals and their families. Religious organizations serve as mediating institutions that buffer the impersonal, often harsh, effects of state and market in a society with three hundred million members.

Any evangelical bookstore, like most secular bookstores, will be full of therapeutic books about how to be one's best self, with more happiness, money, and fulfillment of every kind. Televised ministries trumpet the attitudes and practices necessary to overcome life's problems, usually by infusing an impersonal world with personal meaning. The mediating institution of religion supports, and is supported by, the mediating institution of family. Contemporary pastors spend

much of their time providing counseling. Far from dictating or compelling certain kinds of religious behavior, most religious organizations guide and advise. From a Promise Keepers rally aimed at urging men to be better husbands and fathers to an Episcopal support group for parents of gay and lesbian children to a Joel Osteen sermon about wealth and happiness, multitudes of religious programs promote personal balance and fulfillment.

In this therapeutic context, where individuals are the focus, it is inevitable that some individuals will choose self-help or will look to alternative spiritualities. Others will remain loosely affiliated with organized religion while pursuing independent spiritual strategies. Many people count themselves as believers while remaining either staunchly or practically unaffiliated. To the degree therapy—with a focus on the individual—is the model of self-realization, then religious affiliation is but one option among many.

Alternative Spiritualities

Forty-eight million Americans are unaffiliated, but only about eight million are nonbelievers. This leaves some forty million believers of some sort who are staunchly unaffiliated. Some of these unaffiliated believers have turned to alternative spiritualities, many of which are practiced individually rather than in groups or organizations. In recent decades, Indian spiritualities and their offshoots have attracted much interest in America. Transcendental Meditation (TM) maintains a small but steady following. For a while, “New Age Spirituality,” with echoes of spiritualism from the early twentieth century, had a broad, if very loosely attached, following. These New Age philosophies mix science and ecological awareness with some supernatural elements such as channeling reincarnated spirits as a means of leading people toward self-fulfillment.

For the most part, alternatives like TM and New Age spiritualities are also therapeutic, helping individuals or small groups develop frameworks of meaning or coping strategies for living in a complex, sometimes hostile, environment. But the fact that therapeutic approaches are so strong in spirituality both within religion and without reinforces just how individualized the religious impulse has become for a large proportion of the population.

Eastern and New Age spiritualities have received a disproportionate amount of press attention from time to time both because they are novel and because their adherents are literate. But it would be mistaken to assume that most of the forty million spiritual-yet-unaffiliated believers are involved

in alternative spiritualities. The majority likely maintain some personalized version of religion that includes much from the dominant Judeo-Christian tradition, possibly mixed with pieces of Hinduism, Buddhism, alternative spiritualities, and homegrown alternatives. In America, religious boundaries are porous and doctrines generally lax, since individuals are able to choose for themselves and any group, whether traditional or newly syncretistic, can enter the religious marketplace without barrier.

Entrepreneurialism

Because individual choice is possible, and it is relatively simple to join, leave, or switch religious attachment, America is a booming marketplace of religious ideas. Recently, scholars such as Rodney Stark and Roger Finke have used economic theories to suggest that entrepreneurialism is one reason nonaffiliation and nonmembership rates are relatively low in America compared to other industrialized countries. Not only is there something for everyone, but believers of every stripe are actively marketing to target audiences.

Televangelists and their predecessors, radio evangelists, are only the most obvious example of religious marketing. Many American denominations have a research wing that studies demographic trends and searches for ways to attract new potential members. All over America, churches experiment with “contemporary worship” and new locations. Churches appear in storefronts and strip malls. Empty suburban lots see metal, pole-barn structures spring up almost overnight. Counselors and authors fill offices, bookstores, and airwaves with spiritual and religious therapy. Alternative spiritualities lure religious consumers with new forms of diet, meditation, and physical strategies such as yoga.

There are no barriers to entering the religious marketplace in America: no formal, national licensing or credentialing standard for the title of minister; no state monopoly on religious organizations; no limit on what one can think or say. Moreover, religious organizations receive favorable tax treatment. Little surprise, then, that religious entrepreneurs exist to fill every possible market niche.

The most obvious reading of spiritual or religious entrepreneurialism is that it keeps adherence rates high, if one considers adherence in *all* groups. It stands to reason that a society with thousands of organizational alternatives would be able to attract more members than a society with only a few, unless membership in those few were somehow compulsory.

But the very notion of consumer choice likely works against religious adherence in the long run by continually

reinforcing the notion of individual preference. To the degree that religious adherence has become one of many lifestyles and even an elective *leisure* activity, it loses some of its sacred, set-apart qualities. Put another way, if 12 percent of mainline Protestants and 9 percent of Catholics say religion is not important to their lives, and 23 and 19 percent, respectively, say they attend seldom or never, how tightly can a “choice” model hold its adherents?

Likely Future of Individual Spirituality and Nonaffiliation

A number of social trends at work in America suggest religious belief and personal spirituality are strong and steady. The constitutional guarantee of free exercise opens the playing field to all three hundred million of us. Entrepreneurial competition in the marketplace of ideas ensures that the playing field will remain vibrant. The turn toward the therapeutic—toward life strategies, meaning-making, and character development—means religion and spirituality will continue to meet a social need unlikely to be met by either state or marketplace.

But many other trends work against religion’s favored or unique ability to meet these needs. At the very least, religion has long since lost its near-monopoly status in discerning and maintaining ultimate meaning. The differentiation of institutions, with state and market gradually separating from religious influence, pushed religion toward the private sphere. The process of secularization limited the scope of religious authority. Disestablishment guaranteed a monopoly could not be maintained by force.

These trends—whether promoting or enabling spirituality or working against religion as an organizational force—favor the growth of religious individualism, which portends ever lower rates of affiliation. In coming decades we should expect ever weaker ties between religious organizations and their members. People will still belong, or remain nominally affiliated, based on ethnic and familial ties, but the numbers who have rock-solid, long-term commitments will likely decrease. The number of staunchly unaffiliated and the number of nonmembers or nonattenders will correspondingly increase.

Unification Church

The Unification Church (Tongil Kyohoe in Korean) is one of many new religious movements emerging in post-World War II Korea. It developed around the teaching of Sun Myung Moon, born in 1920 in Sangsa-ri in North Korea, then under Japanese rule. His parents were farmers shaped by the Shamanic, Confucian, Taoist, and Buddhist amalgam characterizing traditional Korean culture. The family became Christians (Presbyterians) in 1930. Moon reported having a vision of Jesus while praying on a hillside on Easter in 1935. He believed God called him to continue Jesus’ mission of establishing the Kingdom of God on earth. For a decade, Moon wrestled with his visionary experience, searching sacred texts, while studying engineering in Japan. Returning to Korea, he worked as an electrical engineer. He was arrested in 1944 for links to the Korean independence movement, tortured, and released in 1945. In 1946, he went to North Korea to recruit other Christian pastors to cooperate in bringing the Kingdom of God on earth. His overtures were rebuffed. In 1948, he was arrested in North Korea and sentenced to three years of hard labor. He was freed by UN forces after the outbreak of the Korean War in 1950. Sun Myung Moon made his way to Pusan in South Korea and there rebuilt his community of followers.

In 1954 in Seoul, Moon and four disciples founded the Holy Spirit Association for the Unification of World Christianity (HSA-UWC), popularly known as the Unification Church or the “Moonies.” It grew to more than thirty churches across Korea by 1956, despite opposition. Unlike

other hybrid millennialist religions, the HSA-UWC had a global vision and soon sent missionaries abroad to Japan, the United Kingdom, and the United States. In the early 1970s, Moon moved to the United States

Teachings and Beliefs

Eastern cultures lack a term equivalent to “religion.” There it is common to refer to *chiao*, meaning teachings. The central teachings of the HSA-UWC are found in *Wolli-Kang-ron* (1966), translated into two official English texts, *Divine Principle* (1973) and *Exposition of the Divine Principle* (1996). Written by Hyo Won Eu, it was based on the *Wolli Wonbon* (original text of the *Divine Principle*), written by Moon. Combining Asian and Christian thought, it is divided into two parts: Creation and Restoration through Indemnity. It follows the classic Christian structure of creation, fall, and redemption but refracts it through an Oriental familial lens.

Central to *Divine Principle* is teaching concerning God’s purpose in creation and the three blessings. God’s purpose in creation was to have a world in which humanity returned joy to God. This joy could emerge only if a four-position foundation were fixed and the “three great blessings” fulfilled. The four-position foundation is a husband and wife centered on God and their offspring, the God-centered family. The three blessings are “to be fruitful, to multiply and fill the earth, . . . and have dominion,” understood as growing to personal, marital, and social perfection, or the God-centered person, family, and world. If these are realized, the Kingdom of God would exist on earth.

According to *Divine Principle*, since the fall, God has sought the restoration of humankind in a history found in the biblical story beginning with Adam and Eve and reaching a spiritual turning point in Jesus. That purpose was only fulfilled spiritually but not actually in Jesus’ time. It remains for a future “Lord of the Second Advent” (unnamed in the *Divine Principle* but believed by Unificationists to be Moon) to complete this purpose. This figure would fulfill the second blessing and realize the God-centered family. With the four-position foundation in place, the process of realizing the God-centered world, the Kingdom of God on earth, could begin.

In addition, Unificationists believe that Moon had access to the spirit world and received direction from God. In 1996, when Moon established the Family Federation for World Peace and Unification and announced that the era

centered on world Christianity was over, he underscored the teaching of continuous revelation. Fuller truth would now be found in *Cheon Seong Gyeong* (Heavenly Scripture).

The Unification Church/Movement in America

In 1960, Moon married Hak Ja Han, the seventeen-year-old daughter of a North Korean church member. His followers regarded this marriage, Moon’s second, as a providential event establishing the “position of true parents.” Later that year, the couple presided over a blessing ceremony for thirty-six Unification couples, the first of what outsiders would call “mass weddings.” The ritual extended the second blessing to other couples. Over the years, this practice grew, leading to a 1992 blessing of thirty thousand couples in Seoul’s Olympic stadium.

Moon moved to the United States in 1971, and by 1972, all fifty states had Unification Centers. In 1974 Moon met President Richard Nixon and addressed both houses of Congress. During the Watergate investigations, Moon published ads in American newspapers, urging Americans to forgive Nixon and to unite with Nixon to further America’s destiny. Soon Moon found himself under attack for his political views, his unorthodox Christianity, alleged sexual improprieties and “brainwashing,” his business connections, and his anticommunism.

By 1975, Unification Church missionaries labored in 120 countries and the Unification Theological Seminary was established in Barrytown, New York. The faculty included one Unificationist, Young Oon Kim, formerly a professor of New Testament and comparative religion at Ewha Women’s University in Seoul, a Rabbi who taught Bible, and Christians from varied backgrounds who taught a conventional seminary curriculum. As well, annual international conferences on the Unity of the Sciences, launched in 1968 to combat the alleged conflict of science and religion, continued, even drawing some Nobel Prize winners.

Earlier, Moon had established the Professor’s World Peace Academy in Korea that expanded through international conferences. Ecumenical activities initiated in Korea extended globally through the Unification Theological Seminary, the New Ecumenical Research Association (1980), the Council for the World’s Religions (1982), the International Religious Foundation (1983), the Religious Youth Service, and the Assembly of World Religions (1985). Much interfaith activity was incorporated into the Inter-religious Federation for World Peace in 1993,

renamed the Interreligious and International Federation for World Peace (IIFWP) in 1999. In 1982, the *Washington Times*, a conservative newspaper, was founded in Washington, D.C.

Investigations and Legal Issues

In the United States, Moon and his activities continued to be the focus of controversy. Rumors and allegations abounded despite some scholarly studies that offered contrasting viewpoints. In 1977 and 1978, a congressional subcommittee investigated activities of the Unification movement, reporting alleged financial misdeeds, but no indictments were forthcoming. In 1984, Sun Myung Moon was indicted for tax evasion, related to interest earned in an account in Moon's name. Lawyers argued that Moon held this account for the church. Moon was found guilty and sentenced to eighteen months in a federal correctional institution. An appeal, arguing that it was a common practice for church funds to be held in the name of leaders, was denied, despite support from other religious groups. Moon served thirteen months.

By the late 1980s, the movement shifted its focus from the unification of world Christianity to interreligious and international efforts for world peace. Conferences brought together global religious leaders, scholars, and heads of government to chart ways to move toward a more peaceful world. In 1996, Moon declared that the mission of the HSA-UWA had been completed; now the movement would be known as the Family Federation for World Peace and Unification. Since then peace festivals have been held around the world, especially in Africa, Asia, and Latin America.

Moon challenged "godless communism" from the beginning of his ministry. Following the fall of the Berlin Wall in 1989, Moon organized a meeting in Moscow. In 1990, he met with Mikhail Gorbachev and then began financial support for several humanitarian and educational projects in the former Soviet Union. Likewise, Moon continued to bring former governmental leaders to develop a consensus on moral principles to govern world affairs. These activities were greatly expanded in the 1990s. In 1991, he met with North Korea's Kim Il Sung to facilitate the reunification of families separated by the Korean War.

Also by the late-1980s, there was more public discourse on Father and Mother Moon as "true parents" and the Moon family as the "true family." Meanwhile, there were public defections from the family. The question of leadership

after the founder's death was resolved in 2008 when Hyung Jin Moon, Moon's youngest son, was named the successor and head of the Family Federation for World Peace and Unification.

Critical Assessment

Though a product of American missionary efforts in Korea, Sun Myung Moon came to the United States intent on reviving world Christianity, but he did not repeat the missionary message. He offered a new message, claiming that God was working to establish God-centered families and a God-centered world through his efforts. Moreover, his message reflected a Confucian reading of Christianity centered on the family, not the individual redemption of Protestant Christianity or the collective church of Catholic Christianity. Yet it attracted several thousand willing to join a Korean messiah in his efforts to create a new world. By 2010, North America was home to only a few thousand Unificationists. Estimates of the number worldwide range from three hundred thousand to just over one million.

Unitarians

The term "Unitarians" has two distinct but interrelated meanings. Historically, Unitarianism was the Christian doctrine that emphasized the unity or oneness of God. Originally derived from the Latin word *unitas*, meaning unity, "Unitarian" was first used in 1687 to describe someone who

espoused the doctrine of Unitarianism and denounced the doctrine of the Trinity. These Unitarians are known as theological Unitarians. Theological Unitarians maintained that the godhead was only composed of one person. Many Unitarians viewed Jesus and his teachings as an important moral guide but denied the divinity of Jesus. Trinitarians, in contrast to theological Unitarians, maintained that the godhead was composed of three persons, so that God, Jesus, and the Holy Spirit were each equally divine.

In the contemporary United States, “Unitarians” is also used to refer to people who belong to the Unitarian Universalist Association. These denominational Unitarians may or may not be theological Unitarians, which means that they may or may not believe in the unity of God, and they may or may not self-identify as Christians. The Unitarian Universalist Association is the heir to the American Unitarian Association, which was formed in 1825 to unite churches that espoused the doctrine of the oneness of God. Although Unitarianism did not become a unified denomination until the nineteenth century, the roots of Unitarianism in the United States can be traced back to seventeenth-century Puritanism.

Puritan Roots

Persecuted in England, many Puritans came to North America in the early seventeenth century to establish a “city upon a hill,” as John Winthrop (1587–1649) famously stated. Colonial Puritans such as Winthrop held to the teachings of the French theologian John Calvin (1509–1564). The Calvinism of the Puritans generally stressed the doctrines of predestination, total depravity, and the Trinity. Although the Puritans tended to have a rich emotional component to their Calvinism, they were also very rational and intellectual.

Because of their desire to distance themselves from the Church of England, the Puritans of New England created a system of church governance that became known as Congregationalism. This system allowed each church or congregation to govern itself without the interference of outside bishops. Although congregations were autonomous, they were connected to each other through social events, periodic synods, visits from neighboring pastors, and similar doctrinal beliefs. But by the end of the seventeenth century, it seemed as if the Puritan dominance was waning in New England as membership in churches decreased. Puritan pastors such as Increase Mather (1639–1723) and Cotton Mather (1663–1728) preached jeremiads, or sermons that emphasized a declension narrative and called for repentance.

The Eighteenth Century

In response to the decline of Puritanism and other sociological changes, an eruption of religious revivals took place in the 1730s and 1740s. Known as the (first) Great Awakening, these revivals began in New England, spread to the middle colonies, and then occurred in Europe. Some theologians, such as Jonathan Edwards (1703–1758), reinforced the Calvinist doctrines of predestination, total depravity, and the Trinity; while other theologians such as John Wesley (1703–1791), an Anglican priest who started Methodism, denounced Calvinism in favor of Arminianism. Wesley believed that sanctification allowed one to reach a state of holiness or perfection in this life. This became known as the doctrine of perfectionism. Itinerant preachers such as George Whitefield (1714–1770) put great emphasis on emotionalism and the need for a conversion experience. Whitefield and revivalists like him defied convention by preaching in fields and marketplaces rather than in churches. Such preaching was dramatic and encouraged emotional outbursts.

Although the revivals of the first Great Awakening found popular support throughout the colonies, there were many clergy who were in adamant opposition to the evangelical Christianity that the revivals represented. Charles Chauncy (1705–1787) was a Boston clergyman who wrote *Seasonable Thoughts on the State of Religion in New England* (1743), which was a response to Edwards’s *Some Thoughts concerning the Present Revival of Religion in New England* (1742). Chauncy negatively labeled the emotionalism of the revivalists as “enthusiasm” and condemned it as dangerous to religion, which instead should be rational. Because he wanted to combat Calvinism as well as revivalism, Chauncy was viewed as a liberal Arminian. Chauncy’s Arminianism consisted in denouncing the doctrine of original sin and highlighting instead the innate goodness of human nature. While Edwards and his fellow revivalists claimed that everyone needed to experience an emotional conversion, or “new birth,” because everyone had inherited a sinful nature, Chauncy saw no need for such a conversion because he did not believe in this inherited sinful nature. Moreover, Chauncy insisted that no one needed to be converted because everyone would be saved—a position known as Universalism. Chauncy’s Universalism was in keeping with his Unitarianism, which maintained the oneness of the godhead.

Jonathan Mayhew (1720–1766) was also a Boston clergyman and was also considered to be a liberal Arminian. Believing in the doctrine of the unity of God, Mayhew preached that Christ was subordinate in station to God the

Father. Mayhew's theology was intimately intertwined with his politics, and he became famous for criticizing the British from the pulpit. Chauncy and Mayhew may have been two of the first well-known American Unitarians, but they were certainly not the last. After the American Revolution, an increasing number of churches in New England began to espouse a Unitarian theology. In 1785, King's Chapel, an Anglican church in Boston, was the first church in the newly formed United States to have all references to the Trinity removed from its liturgy. Orthodox Congregational churches, especially those that wanted to protect the Calvinism of their Puritan forbearers, were appalled by such liberal theology and practice.

By the late eighteenth century, there was already an emerging Unitarian tradition that developed outside of the New England paradigm, mostly concentrated in Pennsylvania. Leading this movement was British clergyman and scientist Joseph Priestley (1733–1804), who immigrated to the United States after experiencing political turmoil in England. Because he was heavily influenced by Socinianism, Priestley did not believe in the preexistence of Christ or in the doctrine of the Trinity. Priestley found that these views were controversial not only in England but also in America. Despite controversy, Priestley founded several Unitarian churches on both sides of the Atlantic.

Early Nineteenth Century

By 1800, there were a number of churches espousing the doctrine of Unitarianism in the United States, mostly concentrated in Boston. However, for many of these churches, Unitarianism was not the sole doctrine that composed their theology. Influenced by the Enlightenment, Arminianism, deism, and the thought of Chauncy and Mayhew, many liberal churches considered their views on human nature and its relationship to grace to be more important than their rejection of the Trinity and embrace of the doctrine of the unity of God. Yet these liberal churches came to be labeled "Unitarian," as if that one doctrine summed up their whole theology, perhaps because the more orthodox churches thought it to be the most offensive doctrine.

Most of the churches in early-nineteenth-century New England remained Congregational in the tradition that the Puritans had constructed. Each Congregational church was autonomous, with no outside hierarchy as with Anglican churches. However, Congregational pastors still exchanged pulpits and had a great degree of interaction with other churches besides their own. At the turn of the century, some

friendly relationships between orthodox and liberal pastors were beginning to be strained. The widening gap between orthodox and liberal churches finally gave way to controversy in 1805.

Henry Ware Sr. (1764–1845) attended Harvard and became a pastor in Massachusetts. Ware was considered a liberal by orthodox pastors who were uncomfortable with his Unitarian beliefs. It was no surprise that the orthodox pastors were upset when, in 1805, Ware was elected the Hollis Professor of Divinity at Harvard. His election caused a rift between Ware's liberal supporters and his orthodox opponents. This became known as the "First Unitarian Controversy." Convinced that Harvard had been taken over by the liberals, orthodox pastors like Jedidiah Morse (1761–1826) rallied together and founded Andover Theological Seminary in 1808 as a traditionalist alternative. After the Unitarian Controversy and the founding of Andover, pulpit exchanges between liberal and orthodox pastors ceased. Long-standing relationships between the two sides ended abruptly as the orthodox pastors called for a breach in fellowship.

Opposition to Revivalism

In response to this perceived growth of liberalism, the first half of the nineteenth century ushered in another wave of revivalism known as the Second Great Awakening. Moderate revivalists like Timothy Dwight (1753–1817) and Lyman Beecher (1775–1863) sought to restore Edwardsean Calvinism to New England. Less orthodox revivalists like Charles Finney (1792–1875) stressed Wesleyan perfectionism. Although Finney did not dispute the orthodox doctrine of the Trinity, he did rid his theology of the doctrine of original sin, which led him to adopt a very positive view of human nature. Much like the first Great Awakening, the revivalism of Finney and others emphasized passionate emotionalism. Barking, jerking, fainting, laughing, and crying were all appropriate emotional responses at revival meetings.

Also like the first Great Awakening, the Second Great Awakening had its detractors. Unitarian James Walker (1794–1874) wrote an article entitled "The Revival under Whitefield" in 1827, which drew on Chauncy's criticisms of the first Great Awakening that Walker used to critique the Second Great Awakening. Walker saw revivalism as too emotional and divisive, while he saw Chauncy's liberal theology as rational and better for society as a whole. For Walker, both the first and Second Great Awakenings were merely reactionary responses to the liberalizing effects of the turn to rational religion. Rather than provide intellectual

arguments against liberal theology, Walker argued, orthodox Calvinists had reverted to emotional enthusiasm.

Agreeing with Walker's distaste for revivalism, William Ellery Channing (1780–1842) complained that such evangelical emphasis on a personal conversion experience led people to be selfish. If people were only focused on their own salvation, then they could not be focused on the greater good of society. Channing thought that the social ethic of Christianity was much more important than the privatized faith that was produced by the emphasis on conversion. Although Channing was willing to respect Edwards's commitment to the greater good, he indicted Whitefield for this turn toward a self-centered faith. Even though Edwards could be respected, Channing noted that he was not able to impede the spread of the negative aspects of revivalism.

The Unitarian Platform

Born in Rhode Island, Channing became a pastor a few years after he graduated from Harvard in 1798 and lived in Boston for the rest of his life. After the "First Unitarian Controversy" in 1805 and Morse's subsequent efforts to alienate Unitarians, Channing became frustrated with orthodox pastors like Morse. Although there were obvious theological differences between liberal and orthodox pastors, Channing did not believe that there should be a breach of fellowship for such differences. This breach of fellowship, Channing argued, would be the downfall of the Congregational system that the Puritans established. Moreover, Channing firmly maintained that religious people should be charitable to everyone, no matter the circumstances. However, by 1819, Channing and his liberal colleagues became resigned to the fact that liberal and orthodox factions would never be united again. It was at this time that the liberals decided that they needed a platform on which to stand. Channing provided that platform and became the mouthpiece for the Unitarian movement when he gave an ordination sermon entitled "Unitarian Christianity" in Baltimore in that year. Channing here maintained the authority of scripture and insisted that human reason should be used to interpret the Bible. In addition to using reason, one could and should employ biblical scholarship to understand scripture. Biblical scholarship here referred to German higher criticism, which greatly influenced Channing and his fellow liberals. Channing went on to argue that the unity of God was a more biblically sound doctrine than the doctrine of the Trinity, despite what trinitarians believed. Not only did Channing believe in the unity of God but also in Christ's

single human nature. Channing rejected the Calvinist doctrines of predestination and total depravity, believing these doctrines to represent an angry, judgmental God and to represent a depressing view of human nature. Instead, Channing favored a God who gives humans free will as well as a more positive Arminian view of the human condition. Humans were able to achieve holiness by simply loving God, loving Christ, and loving one's fellow humans.

Channing's "Unitarian Christianity" sermon was subsequently published as a pamphlet. Some have argued that the only pamphlet that had been more widely circulated in the United States than Channing's sermon was Thomas Paine's "Common Sense" (1776). As evidenced by Channing, early American Unitarianism was not solely focused on the debate about the Trinity, but it was also very concerned with larger social issues, such as the nature of the human condition. Unitarian theologians and moralists were influenced by Scottish common sense philosophers who argued that common sense was available to all human beings as a basis for one's moral life. In 1820, not long after Channing's popular sermon, Leonard Woods (1774–1854), an orthodox Calvinist and the first-hired professor at Andover, wrote *Letters to the Unitarians*, in which he insisted that the doctrine of total depravity was an empirical fact. Although Channing provided a theological platform for Unitarians and would have been the most obvious person to respond to Woods's challenge, Channing was very deliberate about trying to avoid theological debates with those who did not agree with him, orthodox or otherwise. The burden of responding to Woods was therefore left to Henry Ware, mentioned above as the controversial Hollis Professor at Harvard. What followed was labeled the "Woods 'n' Ware Controversy," with Woods speaking for the orthodox Calvinists and Ware speaking for liberal Unitarians. The debate lasted four years and covered the gamut of theological arguments, from free will versus determinism to total depravity versus the innate goodness of human nature.

The Second Unitarian Controversy

To formalize the Unitarian solidarity that existed among Ware, Channing, and other liberal pastors and churches, the American Unitarian Association was formed in 1825. Yet it was not long before the young liberal denomination was challenged by an even more liberalizing force, namely, transcendentalism. Ralph Waldo Emerson (1803–1882) was born in Boston, the son of a Unitarian minister. After his father died when he was eight years old, Emerson's family

became members of Channing's church, and for years afterward Emerson greatly admired Channing. Emerson attended Harvard Divinity School and became a liberal minister in 1829. Soon after his first wife's death in 1831, however, Emerson became disenchanted with Unitarianism in general and ministry in particular. In the same way that orthodox Calvinism was the hegemony of traditionalism for early Unitarians, Unitarianism became hegemonic for some in Emerson's generation.

Emerson resigned from ministry in 1832 to become an independent lecturer, writer, and editor. His 1838 commencement speech to the graduating class of the Harvard Divinity School—usually known as the “Divinity School Address”—challenged the “orthodox” Unitarian position by attacking the latter's insistence on the historical reality of the miracles attributed to Jesus in the New Testament. This provoked a rebuttal by Andrews Norton (1786–1853)—nicknamed the “pope” of Unitarianism—that launched what came to be known as the “Second Unitarian Controversy.” Emerson and his small group of like-minded allies denied that they constituted an organized movement, but became known as transcendentalists, and asserted that spiritual truths could only be ascertained through one's intuitive faculty rather than through logic, empirical evidence, or revelation. Although they were united only in their independence of mind, they tended to stray beyond the specifically Christian identity that Unitarians like Norton fiercely defended.

Theodore Parker (1810–1860) was a Harvard Divinity School student in the 1830s when he began to attend the Transcendental Club meetings and came into contact with Emerson and other influential transcendentalists. Parker viewed his transcendentalism as genuinely religious, but in the end he was ostracized by Unitarian ministers for not believing in miracles or the final authority of the Bible. Although orthodox Calvinists found Unitarians to be too liberal, transcendentalists like Parker felt that Unitarians were too traditional. As the nineteenth-century Unitarian movement reaffirmed its explicitly Christian identity, the transcendentalist movement was trying to distance itself from conventional Christianity.

Many important nineteenth-century American figures were influenced by both transcendentalism and Unitarianism. The renowned woman's rights activist Margaret Fuller (1810–1850), for instance, grew up in a Unitarian household and in the company of many leaders of the Unitarian movement. Later on in her life Fuller leaned more toward

transcendentalism as she became friends with Emerson and like-minded thinkers, most of them of Unitarian origin. Fuller's strong personality was said to have been the inspiration for the main character in Nathaniel Hawthorne's most famous novel, the *Scarlet Letter* (1850). Hawthorne (1804–1864) himself also was influenced by Unitarians. His family belonged to liberal churches that affiliated themselves with the American Unitarian Association in 1825. Hawthorne drew on the experiences of his family, especially his Puritan ancestors, in his writings. Hawthorne also drew on his experiences at the transcendentalist commune, Brook Farm, to criticize transcendentalism in his novel *The Blithedale Romance*. In addition to Fuller and Hawthorne, famous nineteenth-century reformers like Horace Mann (1796–1859), Susan B. Anthony (1820–1906), and John Quincy Adams (1767–1848) were influenced by Unitarianism.

Late Nineteenth Century

Although there was a reforming impulse present in the Unitarian movement, only a few Unitarian ministers were considered radical abolitionists in antebellum America. Most Unitarian ministers supported antislavery legislation without becoming too excited about the abolitionist cause. These ministers believed that abolition should be achieved gradually over time, so they became known as gradualists. Slavery should be confined to the places where it was already practiced, like in the South. Then southerners should become educated about the evils of slavery so that they supported antislavery policies. This would lead to the gradual extinction of slavery. Only one Unitarian minister, from New Orleans, was known to be a supporter of slavery.

Following the Civil War, tensions again began to emerge within the denomination over the issues of Christian identity. The American Unitarian Association remained firmly based on Beacon Street in Boston, and the joke emerged—playing on a phrase by James Freeman Clarke celebrating human progress—that Unitarians believed in “the Fatherhood of God, the Brotherhood of Man, and the Neighborhood of Boston.” In 1867, Francis Ellingwood Abbot (1836–1903) and others founded the Free Religious Association, which was to be a fellowship for those—including Unitarians, Universalists, liberal Jews, Quakers, and others—who wished to harmonize their beliefs with Darwinism and other contemporary scientific currents outside the trammels of traditional Christianity. This humanistic strain of religiosity would become particularly influential among Unitarians outside the Boston orbit.

Early Twentieth Century

By the turn of the twentieth century, Unitarians were not only partnering with progressives for the pursuit of free inquiry but also for the pursuit of social justice. Unitarians became involved in the Social Gospel, a late nineteenth- and early twentieth-century progressive Protestant movement centered around the idea that Christians are supposed to be actively engaged in trying to reform society by helping those in need. By 1908 the concern for social justice was institutionalized with the creation of a special department dedicated to public service within the American Unitarian Association.

Although the Social Gospel gave Unitarians a positive outlook, World War I and World War II did not. Many Europeans and Americans, Unitarians included, wondered how a loving God could allow such evil and destruction in the world. Much like other denominations, Unitarians sought to combat these negative forces by establishing formal aid societies. During World War II, the Unitarian Service Committee was formed to help those persecuted by the Nazi regime. The Service Committee later expanded its aid to help those around the world. After the end of World War II, Unitarians were among those who called for disarmament and supported the formation of the United Nations.

Greatly influenced by nineteenth-century transcendentalism, Unitarians had long given up their identity as exclusively Christian and instead had sought to incorporate Eastern religions into their faith. By the middle of the twentieth century, Unitarians were not beholden to a strict theism. Humans, not a distant divine figure, were in charge of the fate of the world, Unitarians reasoned. It was the responsibility of humans to protect the rights of other humans. This humanist thought within the Unitarian denomination led many outsiders to be attracted to it. During the 1950s, Unitarianism spread beyond its traditional New England stronghold to create lay-led “fellowships” in other parts of the country that lacked a critical mass to support a formally organized church with a professional minister.

Late Twentieth Century

Although the Unitarian denomination was growing, the Universalist denomination, with close ties to Unitarianism, was dwindling. Within Christianity, Universalism is the doctrine that all human beings will eventually be saved by God and go to heaven. Universalism became popular in Europe and America during the seventeenth and eighteenth centuries.

Then, in 1833, the Universalist Church of America was formed. These denominational Universalists were not concentrated in urban centers like the Unitarians, but were rather spread out in rural areas. Also, while denominational Unitarians tended to be educated elites, denominational Universalists tended to be less educated and more agrarian. However, it should be noted that there were never any strict doctrinal boundaries between theological Unitarians and theological Universalists. Many denominational Unitarians accepted theological Universalism, and some denominational Universalists accepted theological Unitarianism.

Therefore, it came as no surprise when the American Unitarian Association and the Universalist Church of America merged together to form the Unitarian Universalist Association of Congregations in North America (UUA) in 1961. The UUA does not hold to any doctrinal creeds, so that people who are denominationally Unitarian Universalists may not actually believe in the doctrine of Unitarianism or the doctrine of Universalism. Moreover, the UUA does not identify itself as a strictly Christian denomination, so other religious traditions, such as Buddhism, Judaism, and New Age spirituality, inform the teachings of the UUA. Since both the American Unitarian Association and the Universalist Church of America grew out of the Christian tradition in the United States, the UUA can be considered to be post-Christian.

Critical Assessment

Theological Unitarianism, or the belief in the oneness of God, began in seventeenth-century England and was adopted by eighteenth-century American liberal theologians, like Charles Chauncy, who wanted to combat the evangelical excesses of the first Great Awakening. By 1825, the American Unitarian Association was formed by liberal ministers tired of orthodox Calvinism, such as William Ellery Channing and Henry Ware. Around a decade later, the Unitarian denomination birthed an even more liberal movement known as transcendentalism, with Ralph Waldo Emerson as one of its key leaders. In time, transcendentalism encouraged Unitarianism to expand its religious horizons to incorporate other faith traditions besides Christianity. With the creation of the UUA, Unitarian Universalists became even less beholden to traditional Christianity. However, it should be remembered that both theological and denominational Unitarianism in the United States grew out of, and in response to, traditional Christianity.

Unitarianism—along with its “country cousin” Universalism, with which it eventually merged—has endured as a primary form of American institutionalized religious liberalism, although a tension has always existed within the movement between the pulls of liberalism and institutionalization.

Unitarian Universalist Association

The Unitarian Universalist Association (UUA) is a liberal religious movement that has approximately 1,050 congregations mostly in the United States and about 220,000 members.

Congregations are self-governing, with a denominational headquarters in Boston that provides services in social action advocacy, religious education, worship, and the credentialing of ministers and religious educators. The denomination was legally created on May 15, 1961, as the final act of consolidation between two separate religious denominations, the American Unitarian Association (AUA) and the Universalist Church of America (UCA). When the initial directory for the consolidated movement was published, the first president of the UUA, Dana McLean Greeley (1908–1986), wrote that it was “the result of many years of sustained effort on the part of the Universalists and Unitarians not only to work together but to be together in one liberal religious denomination.”

Late Eighteenth and Nineteenth Centuries

The AUA was formed in 1825, as an organization for individuals, after William Ellery Channing (1780–1842) had provided a theological manifesto with “Unitarian Christianity” (1819). There was no ecclesiastical body of member congregations until 1865, when the National Conference of Unitarian Churches was established. At that organizational meeting in New York, a “Broad Church” group brought relative unity to a disparate theological mix. Some delegates present claimed that “Universalists were waiting to be added to our body,” and a resolution was passed “looking to union with the Universalist body.”

The Universalists organized in 1793, and for many years they differed from the Unitarians stylistically, if not in deeply substantive ways. The Universalists tended to spread their gospel message in a more evangelical style than the Unitarians, especially in rural areas to working people and an aspiring middle class. Many of the New England Unitarians inherited former Puritan and Congregational churches that initially had status and privilege as tax-supported institutions. Even after disestablishment, their members were often the wealthy and educated elites. This was not necessarily the situation in the rest of the country, especially as Unitarianism spread west, where more liberal theologies emerged in new congregations. A central belief in freedom of inquiry caused many congregations to move beyond Christianity, as they organized in the name of “Freedom, Fellowship, and Character.”

Many Universalists followed Hosea Ballou (1771–1852), who proclaimed that all people would be saved immediately upon death; but others, called Restorationists, began to question this deterministic theology, wanting to interject

some component of free will in matters of salvation. They advocated a period of limited punishment and a further development of the soul after death prior to an ultimate universal salvation. This theological rift within Universalism resulted in many cases where Unitarian churches would consider Restorationists as candidates for their pulpits. There were other isolated instances of cooperation as well, such as when the Universalists in Philadelphia permitted the English Unitarian preacher and scientist Joseph Priestley (1733–1804) access to the pulpit of their church, which helped in the establishment of Unitarianism in the mid-Atlantic states in the 1790s. By the end of the nineteenth century, Unitarians and Universalists became more and more alike.

In an 1899 edition of *The Universalist Leader*, Willard Sellack asked, “What is the Difference between Universalism and Unitarianism?” He noted that there had been a convergence with respect to class, scholarship, and theology. Sellack implied that by the turn of the century differences between the two were minimal, except that Universalists were more interested in theology and things spiritual and that a conservative Universalist might be uncomfortable around a radical Unitarian, many of whom were rejecting the confines of Christianity for a more inclusive faith. The following year, both groups passed resolutions favoring greater cooperation. This cooperation also sometimes occurred on the local level, where some Unitarian and Universalist churches merged, especially when it appeared that a community could only support one liberal church.

Early to Mid-Twentieth Century: Consolidation

When the AUA published a comprehensive report on a vision for the future, *Unitarians Face a New Age*, in 1936, the report said it had “long been a dream of our leaders that there should be a closer relationship with avowedly liberal groups . . . especially the Universalists.” Until that time the closer ties were mostly characterized by “the expression of hopes and the pleasant interchange of occasional courtesies.” Both denominations had believed that cooperation might be furthered by the creation of the Free Church Fellowship (1933); and while this never had much grassroots support and performed few tangible cooperative actions, it kept the merger discussion alive. One positive fruit that emerged from the period between the world wars was joint efforts to enhance worship. *The Beacon Song and Service Book*, a hymnal for children, was published under the auspices of a joint committee in 1935; and then Hymnal Commissions from

both groups produced *Hymns of the Spirit* (1937), which included materials that were nonscriptural and targeted the growing humanist membership in both denominations. Ministers who held dual fellowship between the two groups also helped to lead to greater cooperation. When Louis Cornish (1870–1950) left the presidency of the AUA in 1937, his first act was to apply for fellowship as a Universalist minister. He wrote that he had “been heartened by Universalist ministers seeking Unitarian fellowship in testimony to their desire for closer understanding between our two liberal religious bodies. . . . Our two great traditions, each of them precious in the religious history of this country, I believe to be supplementary.”

After World War II, both denominations began taking important steps toward consolidation. This started with the creation in 1953 of the Council of Liberal Churches, a group that fostered administrative efforts to combine various denominational functions in the areas of religious education, publications, and publicity, with the best success in educational programming. The youth movements in the two denominations were the first groups to merge, creating Liberal Religious Youth in 1953. Within three years a Joint Merger Commission was established, and by 1959 it was clear that complete consolidation of the two religious movements was the goal. That year a final report on how consolidation would be accomplished was shared, and a joint meeting of the two groups in Syracuse, New York, approved the new UUA name. The most significant conflict was not over structure, but theology. There was a lack of agreement over what the new denomination stood for. This was described by participant Charles Eddis: “The Unitarians voted to strike God from the principles and purposes. The Universalists voted to add Christianity.” A compromise was reached when both sides agreed to change a reference to “our Judeo-Christian heritage” to “the Judeo Christian heritage,” making it more of a statement of fact rather than personal faith. In May 1960 the two movements celebrated their future together in their historical homes in Boston, when the delegates of the two movements voted in favor of the consolidation while sitting in adjoining rooms. This followed a previous plebiscite, conducted from December 1959 to April 1960, when the congregations voted overwhelmingly for the new plan, even though there was organized opposition on both sides, with more Universalists opposing merger. The following year, 1961, the bylaws and constitution, which affirmed the continuation of congregational polity and a noncreedal faith, were adopted.

In the first election for president of the consolidated denomination, Dana McLean Greeley defeated William Rice (1905–1970), who had been chair of the Joint Merger Commission. While Greeley needed to steer the new movement in a unified direction, there were also larger social issues that threatened it. Growing from a faith that centered more on ethics than theological beliefs, both denominations had a long history of wanting to effect social change through programs that promoted peace and justice. The Unitarian Service Committee had been formed in 1939 to rescue Jews and others who were being persecuted in Nazi-occupied Europe, and it merged its efforts with the Universalists in 1963 in an independent organization, the Unitarian Universalist Service Committee (UUUSC). Of special interest to the new administration were issues of war and peace and civil rights. Although not historically a peace church, the Unitarian Universalists were early opponents of the Vietnam War, and this caused much strife within the local congregations. A pacifist, Greeley called the war “America’s greatest moral calamity,” and he began to advocate for a more comprehensive response. The Arlington Street Church in Boston was the site of a draft card burning, and some clergy hid draft dodgers in their attics. There were frequent annual meeting resolutions at the General Assembly throughout the 1970s calling for disarmament. The division in the church over the war had a negative effect on fund-raising and membership, and this became especially apparent in the forthcoming controversies over black empowerment.

Mid- to Late Twentieth Century: Rights for All

On March 8, 1965, the Rev. Dr. Martin Luther King Jr. sent a telegram to the UUA headquarters asking Unitarian Universalists to bear witness to the “disease of racism which seeks to destroy all.” Many UU clergy responded and descended upon Selma, Alabama. The next day, after police had turned marchers back, one of the ministers, James Reeb (1927–1965), was clubbed by a group of white men as he went to eat supper with his friends. He died two days later, becoming a martyr for the movement and a catalyst for the passage of voting rights legislation. More than two years later, the UUA’s Commission on Race and Religion called for an emergency conference on how to respond to the “Black Rebellion.” This culminated in the establishment of a Black Affairs Council (BAC), which advocated for black control of programs funded by \$1 million in UUA money. Concerns about black power coupled with an administrative

financial crisis led to the board’s rescinding its actions, with consequent anger and pain lingering among many. The UUA has continued to promote programs that would contribute to achieving racial justice in the denomination and the world at large. In 1997 the General Assembly resolved to commit itself to be an antiracist UUA.

While the denomination struggled with divisive issues that led to a period of decline in the 1970s, a new era was inaugurated with the passage of the Women and Religion Resolution in 1977. This asked the denomination to examine its assumptions and policies around issues of language, but its effects were ultimately far-reaching. At that time, UUA president Eugene Pickett (1925–) said, “By changing women’s situation within the institution, your impact can be enormous in affecting sexist attitudes, assumptions and behavior.” This built upon a history of advocacy for women’s rights including the 1863 ordination of the first woman with full denominational authority by the Universalists, Olympia Brown (1835–1926). In the 1970s the Principles and Purposes were revised, and groups were formed to examine the language that was used in worship services, especially the words of hymns. Heralding a greater inclusion of women in language, and then in deed, the denomination soon experienced an upsurge in the number of women who trained to be UU clergy, so that by 1999 the majority of UU clergy were women. Many UUs were also active in the pro-choice movement. Ten years before *Roe v. Wade*, in 1963, the denomination affirmed a woman’s right to choose to have an abortion.

Another critical issue that faced Americans in the latter part of the twentieth century was gay rights. Drawing on a long theological tradition that proclaims God’s love for everyone on an equal basis, UUs became early and vocal advocates for the equal and full acceptance of gay, lesbian, bisexual, and transgender persons. This began with a resolution in 1970 against discrimination, but then a more symbolic event occurred when a denominational Office on Gay Affairs was created in 1973. Ultimately this led to support for a UUA Welcoming Congregation program, where congregations explicitly affirm that sexual minorities are welcome as full participants in all church programs and governance. More recently, congregations have had active involvement in the campaigns for marriage equality. These liberation movements have had far-reaching effects upon the UUA, which has achieved some membership gains in an era of mainline denominational decline. New UUA Principles and Purposes were formulated in 1985, emphasizing the denomination’s

current religious pluralism, an eclectic mix of theological perspectives from humanist to Christian to an increasing number of UUs with a Buddhist orientation. The UUA has been active in the International Council of Unitarian Universalists (ICUU) since its formation in 1995. One popular initiative has been the Green Sanctuary movement, where local congregations promote environmental activism. In recent years, under its first African American president, William Sinkford (1946–), there has been an increased emphasis on making this most rational of religions much more spiritual and devotional while maintaining an active social witness. At the 2009 General Assembly, a new president of the UUA, Peter Morales, was elected by the delegates.

With a membership of 221,000 adults and children, the UUA in 2009 returned to nearly the same numbers it recorded at the time of consolidation in 1961. At that time, after a brief period of growth, membership declined to approximately 170,000 members in 1982. Since then there has been a slow but steady increase. Much of this growth has taken place in the West and the South, while the traditional areas of strength in the Northeast have remained stable. Membership in the congregations reflects a median age of more than fifty-five, and two-thirds of the members are women. The congregations are generally very highly educated groups with mostly liberal political persuasions. The 1,752 fellowshipped clergy in 2009 doubled the number of 1961, reflecting an increase in the number of community-based ministers who work outside the parish.

Universalists

Universalists adhere to the distinctive idea that no humans will reap eternal punishment, regardless of their conduct during life. Rather, all will ultimately receive eternal salvation. Universalists insist that these ideas have roots in the earliest teachings of Christianity, although there is no single thread that connects the Universalist movement that began in the eighteenth century directly with New Testament Christianity. Hints of universal salvation are found, for example, in the teachings of several of the early Greek church fathers, particularly Origen, who was influential in Alexandria in the second century. Hints of Universalism also come in the writings of many of the Gnostic leaders, documents suppressed when fourth-century church councils declared Gnostic teaching heretical.

Pietist and Evangelical Roots

One antecedent of modern Universalism lies in strands of German pietism, a quietist devotional movement with a strong mystical orientation that emerged in the later seventeenth century. Another is found in some expressions of later English Puritanism that rejected the staunch Calvinism that shaped its formative years. Some radical pietists, for example, came to believe that God's intention was to restore all creation to its original goodness in a mystical union of all with the divine. If that were the case, then none would reap eternal damnation.

George DeBenneville (1703–1793), born in London to French Huguenot parents, early on had a similar mystical experience. A physician and preacher both, DeBenneville labored in France and Germany, where he was drawn to the more radical pietist circles where Universalist teaching prevailed. A near-death experience reinforced his conviction that all would reap salvation. In time he identified with the German Baptist Brethren, who advocated ultimate restoration, and with other kindred spirits he migrated to Pennsylvania in 1741. Regarded by some as the father of American Universalism, DeBenneville traveled throughout eastern Pennsylvania and New Jersey promoting Universalist ideas until his death in 1793.

Universalist ties to expressions of evangelicalism that rejected key Calvinist teachings gave more solid foundation to this religious movement. By the eighteenth century English Puritanism had spawned several offshoots, including some that advocated universal salvation. Most remained small and on the margins. In the mid-eighteenth century, however, an evangelical associate of Methodist founder John Wesley began to give fresh theological underpinning to Universalist claims. James Rely (ca. 1722–1778), who severed ties with Wesley around 1761, insisted that the death of Christ was devoid of meaning if it did not serve to restore all humanity to a right relationship with God. This radical notion of the atonement (the significance of Christ's Crucifixion) thus became the basis for another manifestation of universal salvation besides DeBenneville's.

Colonial Universalism: John Murray and Charles Chauncy

Although Rely's movement remained numerically small, it did reap some converts. Among them was John Murray (1741–1815), who migrated to the English colonies in North America in 1770, travelling as an itinerant evangelist for the Universalist cause until he settled in Gloucester, Massachusetts, in 1774. Working there with a small group that had imbibed Rely's teaching, Murray helped found what is usually regarded as the first Universalist church in North America in 1779. Murray's thinking reflected an interesting blend of traditional theological notions with more radical ones. For example, he accepted the notion of original sin and claimed that all humans were caught in sin, thanks to the sin of the first Adam. But drawing on Paul's discussion of the first Adam and the second Adam (Christ) in the New Testament book of I Corinthians, Murray argued that if all were sinners because they participated in the sin of the first Adam, so all were restored and freed from the effects of sin because they participated in the triumph of the second Adam.

When Murray arrived in the colonies, the Great Awakening had already stirred many to become itinerant evangelists. But it had also provoked strident opposition, some of it coming from individuals who personally were sympathetic to Universalist theology. Charles Chauncy (1705–1787), formidable pastor of Boston's First Church, was one of those. As early as the 1750s, Chauncy had penned some theological treatises in which he called universal salvation "the mystery hid from ages and generations" described in Colossians 1:26. Chauncy, however, knew that the religious climate was not ripe for such thinking and kept his views

unpublished for several decades. He came to espouse universal salvation in part because he questioned the orthodox interpretation of original sin, which in strict Calvinist understanding decreed that infants who died before they experienced election to salvation were doomed to eternal damnation. In Chauncy's view, a benevolent deity could not punish infants who knew not that they were sinners. It was a short step for Chauncy to declare that a benevolent deity must by nature want the ultimate happiness of all creation and therefore must intend finally to provide salvation for all.

Chauncy had also vigorously opposed the evangelical revivals of the Awakening era in part because of what he saw as their elevation of emotion above rational reflection. Such use of reason would in time become another hallmark of American Universalism. Chauncy also believed the revivals showed disdain for church order in their reliance on itinerant evangelists who challenged the authority of regular pastors. Chauncy attacked Murray in print not because Murray was a Universalist (though the two differed over the doctrine of original sin) but because he was an itinerant evangelist. Chauncy's theological position suggested, however, that a more rationalist approach to religion was finding a home in Puritan New England. Murray's Gloucester congregation soon helped similar churches form elsewhere. Clearly the Universalist approach resonated with many cultural currents. It was the Age of Reason, but also the era of American independence, when challenges to any kind of traditional authority, whether political or religious, echoed throughout American culture.

The Beginnings of an American Movement

After American independence had been achieved, these diverse strands of colonial thought began to move slowly toward the form of denominationalism, that distinctively American form of religious organization. The Universalist message was at first spread mainly through the efforts of free-lance evangelists such as Massachusetts-born Elhanan Winchester (1751–1797). A Baptist who had misgivings about the orthodox understanding of original sin and repentance, Winchester for a time served a Baptist congregation in South Carolina, where his opposition to slavery and his insistence on organizing a congregation for slaves drew much opposition. By 1781, though, Winchester had relocated to Philadelphia, where he was instrumental in starting a Universalist church. A convention of the movement's advocates—including the founding father and all-purpose intellectual Benjamin Rush—met in that city in 1790 and drew up a platform that

included a fundamental belief in universal salvation and also avoided any explicit affirmation of the trinitarian Christianity that their Unitarian counterparts were simultaneously repudiating. A more enduring confessional statement was the Winchester (New Hampshire) Profession of 1803, which affirmed the ultimate restoration of humanity through Jesus Christ to “happiness and holiness.”

Although Universalism would expand throughout the nineteenth century to establish numerous outposts throughout the South and the Midwest, it, like its Unitarian counterpart, always remained primarily a movement rooted in the religious soil of New England. (In 1850, 285 of 529 Universalist churches were located in New England; a century later, the ratio was 200 out of 300.) Although the Philadelphia Convention did not succeed in establishing a firm institutional base in the mid-Atlantic states, a similar New England Convention in 1785 laid the groundwork for an organization that would in 1833 coalesce into the General Convention of Universalists in the United States, eight years after the founding of the American Unitarian Association in Boston. The two movements, which paralleled one another from the beginning and would eventually merge, nevertheless constituted differing religious cultures in their early years.

Unitarianism was firmly rooted from its beginnings in a cosmopolitan urban culture, and by the early nineteenth century it had virtually taken over Harvard as its intellectual center. Though its theology remained explicitly Christian—minus the doctrines of the Trinity and original sin—its emphasis was on the cultivation of the individual and the transformation of the social order through reason, education, and morality.

Universalism was instead the product of the liberal wing of the radical religious culture of the Great Awakening, which combined a popular Enlightenment rationalism with a piety that was deeply rooted in the evangelical ethos. This was a culture that was far more popular on the farms and in the small towns than in the metropolis and tended to appeal more to autodidacts than to Harvard-educated liberals or Yale-trained evangelicals. The difference in ethos between the two liberal communities was waggishly summarized by the Unitarian minister Thomas Starr King, who quipped that the Universalists believed that God was too good to damn them, while Unitarians believed that they were too good to be damned.

Denominational Development in the Nineteenth Century

As it began to take the shape of a denomination, Universalism found a theologian of some stature in Hosea Ballou

(1771–1852), the self-educated, New Hampshire-born son of a Baptist farmer-preacher. Ballou, who accepted the Universalist message in 1789, became the minister of a series of churches in Massachusetts and New Hampshire as well as a prolific author and editor of, among other things, *The Universalist Magazine* (established 1819). Ballou’s most influential work was his *Treatise on the Atonement* of 1805, which has been described by Ann Lee Bresler as “scholasticism for the common man.” Although influenced greatly by the piety of Jonathan Edwards and his followers, Ballou nevertheless rejected their central Calvinist precepts of the vitiating power of original sin on human character and the predestination of only a part of humankind to salvation. Instead, he substituted the central, Universalist belief in universal redemption, believing this to be not only biblical but also a firmer basis for the individual’s conversion from self-centeredness to benevolence than the Calvinist stress on the terrors of damnation.

As Universalism became institutionalized and dispersed in the course of the nineteenth century, it retained a decentralized congregationalist polity and an emphasis on social reform based on its optimistic view of human possibilities, exemplified in the careers of prominent lay adherents such as the journalist Horace Greeley (1811–1872) and the showman P.T. Barnum (1810–1891). Although Universalists were too decentralized to present a united stand on the slavery issue, they were pioneers in the nascent feminist cause: it was a Universalist congregation that in 1863 ordained Olympia Brown (1835–1926) as the first woman to be recognized as a Christian minister by an organized denomination. Brown, who had earlier studied at Mount Holyoke and Antioch Colleges, became the first woman to graduate from the Theological School at St. Lawrence University, founded by Universalists in 1856 as the first coeducational college in New York State. Other Universalist-affiliated institutions included Tufts University (1852) in Medford, Massachusetts, and Lombard College (1853–1930) in Galesburg, Illinois. All three had divinity schools associated with them; the only one to survive, at least in part, is the Meadville Lombard Theological School in Chicago, the result of a merger with the Unitarian-affiliated Meadville Theological School in the 1930s.

Merger with Unitarians

As the distinctive regional religious cultures that had nurtured both the Universalist and Unitarian impulses during the nineteenth century became eroded in the twentieth, the

two denominations came to the mutual conclusion that their survival as independent entities was a wasteful duplication of resources. The names and legacies of each are preserved in the Unitarian Universalist Association, the result of an institutional merger in 1961.

Utopian and Communitarian Experiments

Utopian and communitarian religious experiments in the United States are attempts to implement religious ideals in everyday life—to establish “heavens on earth” in the form of communities devoted to that purpose. Utopian thinking within the context of religion has a long history, most often expressed in literary tracts describing societies centered on religious ideals—*utopia* meaning no place, a place existing only in the imagination. This article discusses the many attempts by members of religious sects to implement their ideals within small, utopian communities in America. When these ideals are implemented within the context of small communities, and these communities are part of a larger social movement, they are said to be communitarian in nature. Because the ideas on which these sects and communities are based are often new and untried, they are often referred to by scholars as “experiments.” Although most intentional communities do not last very long, those that do last tend to be religious rather than secular. Thus, religious commitment

seems to be a frequent motivational factor for starting a community, as well as a factor in its longevity. The fact that this communitarian phenomenon is so widespread in the United States, both before its founding and since, indicates that the cultural, intellectual, and political environment has been generally open to this kind of experimentation.

Because of the newness of this political territory and the relative freedom it provided, the colonies in North America became a destination for groups fleeing religious persecution in Europe. The distance of North America from the European seats of political power made self-determination a possibility. Indeed, the founding of the Plymouth Colony by the first of many groups fleeing religious persecution in Europe provides a model for the study of later religious communities.

Many of the experiments were transient in nature, but others filled a void and blossomed into mainstream religions in time. Since there was never an established religion in the United States, there tended to be a less structured religious dominance, and multiple communities developed side by side. When conflict did arise, as it did in the early New England colonies, individuals and groups relocated and started over. However, many utopian religious communities encountered conflicts both within their own ranks and with the larger society.

The formation of utopian religious communities is part of the larger tendency to form “intentional communities” as one response to cultural and social stresses, especially group oppression and radical changes in the physical and social environments. Anthropologist Anthony F. C. Wallace listed “utopian societies” as one form these revitalization movements take. He also noted the formation of new religions as a part of this phenomenon, a tendency currently recognized in the study of new religious movements (NRMs) within the social sciences. Religious persecution, the rapid shift from an agrarian to an industrial economic base, and population shifts from rural to urban areas in the nineteenth century all served as motivations for the establishment of new religious communities to help cope with these rapid changes. The formation of these utopian religious communities became part of a long communitarian tradition in the United States and helped to contribute to its religious and cultural diversity.

An examination of the creation of utopian religious communities across the centuries reveals patterns: community as political/religious refuge, community as a place of material well-being and equality, community as a place of

sexual experimentation (celibacy and plural marriage), and community as a place to realize social ideals through religious practices. In the beginning, refuge was the primary motivation for forming communities.

The Seventeenth Century

The seventeenth century and the arrival of the Pilgrims in North America mark the beginning both of one of the national founding mythologies and of utopian religious communitarianism in what was to become the first independent (noncolonial) nation in the New World, the United States of America. Unlike the Puritans, who vowed to work within the Church of England to purify its doctrines and turn it away from what they considered the shortcomings of its Catholic legacy, the Puritan separatists, later to become known as Pilgrims, broke altogether from the Church of England and fled to Holland, where they were able to live without oppression from the state religious officials. Eventually, wanting to preserve their culture and language among their children, the 102 men, women, and children sought refuge in the New World of North America, arriving in 1620.

According to Nathaniel Philbrick, although the Pilgrims were relatively secure in Leiden, Holland, the turmoil of European politics and the fear that their religious situation would not continue led them to make the fateful decision to establish a new community in North America. Here they established the most successful colony to date and even maintained a relative peace for a generation with the Native Americans they encountered. The ideals that drove them to leave behind all that they knew, the ordeals they had to face once they encountered the actual reality of their choice, and the resolution of the disparities between the two marked a process that future utopian religious groups would also face.

Only a few religious utopias were tried in the seventeenth century: Horekill, founded by Pieter Cornelius Plockhoy in 1663; Bohemian Manor (1683–1727) in Maryland, founded by Labadist refugees from Holland; the Society of Women in the Wilderness (1694–1708), also known as the Contented of the God-Loving Soul, an all-male, German Pietist community founded by Johannes Kelpius near Philadelphia; and Brethren in America (1697–1699), founded by Bernard Koster in Pennsylvania. These communities heralded the greater influx of immigrants who founded religious utopias in the following years of a new century.

Although North America would be characterized by a strong individualism, private property, and family-based social structure (and this was the case with the Pilgrims), many of

the utopian religious communities experimented with communalism, beginning with monastic communities that would characterize many utopian religious experiments.

The Eighteenth Century

The communitarian impulse picked up in the eighteenth century, which is also characterized by the arrival of dissenting European sects in North America, the establishment of these sects into distinct communities, and the expansion or eventual collapse of these sects. With the establishment of far more stable communities, the nature of communal living—its pros and cons—became more apparent. Besides being intent on implementing material equality among members and living modest lives according to the example of Jesus, communalism (in which all members shared a common purse or common community income) was also a practical way of surviving in an environment in which meager subsistence was not only an ideal but a reality.

In spite of their ideals of communalism and equality, many utopian religious communities relied on centralized leadership, while some others attempted to divide the leadership. The role of charismatic leaders in utopian religious communities is a significant factor in their survival or their eclipse, often determining whether these communities successfully negotiated the usual societal pitfalls of gender, sexuality, subsistence, and relationships to outside groups. For example, celibacy became a central focus in many eighteenth-century communities. Likewise, the ability of these communities to become self-sustaining often created ties to the larger community, bringing the stability necessary to contribute to the cultural life of the nation as a whole or generating conflict.

Whether or not these utopian religious communities saw themselves as threatened by the larger community, they seemed to have contributed to the welfare of the society as a whole by contributing to the cultural and economic life of their communities. For example, the necessity of writing their beliefs also created greater literacy among the populace. Their penchant for producing unique architecture through their dwellings, music through their hymns and entertainments, as well as other arts and crafts led to the general enrichment of their local environments.

The Ephrata Cloister (1732–1814)

The Ephrata Cloister was founded by Conrad Beissel in 1732 as a celibate community of men and women who considered sex, in or out of marriage, to be a sin. The community was set so that members shared a common purse,

practiced full-immersion baptism, and believed that salvation was in the hands of God and there was nothing that individuals could do to affect it. The sexes were separated physically. Women were responsible for the gardens, textile production, canning of foods, and the making of candles and related items. Men engaged in farming barley, corn, and wheat; tended vineyards and orchards; made clothing and shoes; and did the cooking and the baking. The Ephrata Cloister produced religious music, mystical poetry, and illuminated religious manuscripts.

Like other religious communities, Ephrata had its own special rituals: full-immersion baptism, Communion, mutual foot washing, holy kisses, and a belief that God was unknowable. It also ran a Sabbath Bible School for neighboring children and a boarding school, the Academy of Classical Studies. Thus, it provided an important service to the surrounding community while maintaining its own identity. Like many other communities, Ephrata experienced conflicts over child discipline, finances, and the decisions of its charismatic leader, Conrad Beissel. Eventually leadership was taken over by Brother Onesimus, who made the Cloister profitable and became the spiritual leader. Industries expanded under him, but this shift toward greater prosperity bothered some of the members, because it seemed in contradiction to the desire to lead humble lives. Eventually Beissel resumed leadership in 1745, and the Cloister took a downward turn economically. Beissel died in 1768 and was replaced as leader by Brother Agrippa. A typhoid epidemic doomed the Cloister, and it shifted from communalism to personal property ownership in 1786, although the land and buildings remained communally owned. In 1814, the four remaining members became the Seventh-day Adventist Baptist Church.

Ephrata illustrates how the contradiction between ideals and reality can generate dissension within a community. It also illustrates the vulnerability of early communities to disease epidemics and other environmental hazards. The shift from communalism to personal property ownership is one that would be repeated many times in communities across the centuries.

The Shakers (1774–2005?)

In 1774, the “Shaking Quakers” or Shakers arrived on the shores of North America with their leader, Mother Ann Lee, who had founded the Church of Christ’s Second Appearance (or the United Society of Believers in Christ’s Second Coming). Following their charismatic leader, the members had adopted celibacy as the central tenet of their faith and

communalism as their practice in daily life. Mother Ann Lee prophesied the second coming of Christ in the form of a female and became her symbol incarnate. The removal from the Old World to the New signaled new possibilities, including that of a female messiah. Characterized by pacifism, direct revelations from God, equality between the sexes, and celibacy, the Shakers became one of the longest-lasting of the religious utopian communities. By the early twenty-first century, however, only a handful of elderly folk remained at one community in Maine. With their passing, this experiment may also die out.

The Nineteenth Century

The rise of some of the most impressive religious utopias in the nineteenth century was the product of both European immigration and new American groups. While immigrants continued to flee religious persecutions, new religious communitarian movements began in the United States in reaction to the massive social changes that took place as the growth of industrialism led to the urbanization of the country. In addition, westward expansion and the availability of land made such communities possible and provided a more solid economic basis in agriculture for their development. Although intentional communities continued to come and go during what some have referred to as the Utopian Socialist period of U.S. communitarianism (approximately 1828–1848), the utopian religious communities proved to be the ones with staying power; even though they often changed their organizational structures (for example, from communal to personal property organizations), they seemed to provide belief systems that fostered deep commitment in their members.

The Shaker communities continued to prosper and grow. But new groups of German Separatists (also known as Pietists) arrived. Indeed, the nineteenth century could easily be called the Pietist Century—except that the United States itself was giving rise to new religious communities; and immigrants from Eastern Europe, as well as Asia, also brought new religious communities to North America. Joining the Pietists were the Anabaptists (Mennonites, Amish, Hutterites) and Jewish immigrants from Russia. Add to this the American religious communities of the Oneida Perfectionists and the Mormons, both of which experimented with different forms of marriage. These new groups for the most part moved away from the celibacy of the Shakers and the Harmonists, emphasizing other values, such as communalism, direct contact with God, adult baptism, and even polygamy.

The nineteenth century also witnessed the Civil War from 1861 to 1865, dividing the century into separate halves with shifts in power and influence changing after the war. Before the war, the tremendous changes in the United States from agrarian to industrial means of subsistence and from rural to urban residence accompanied by economic panics and political machinations ushered in the Utopian Socialist period of American communalism and communitarianism, and while many of the communities formed were secular rather than religious, the changes forced many people to find solace in forming communities with others of similar disaffection and belief. This period lasted until roughly the 1850s. After the Civil War, there were great population shifts favoring the move westward into California, Oregon, Washington, and other western states, and with these moves new religious communities arose as well. However, the Midwest remained a vital area for communal experiments in the first half of the century.

The Pietist Separatists

The Lutheran Church represented the established religion in both Germany and Sweden during the eighteenth century. In 1743, groups of Pietists—those who disapproved of the church and wished to separate from it—were denied the right to assemble, and members along with their leaders faced massive persecution. As this persecution increased, more of the Pietists viewed immigration to the United States as a viable alternative. As the eighteenth century in Europe closed, immigration became even more desirable. The Harmonists, the followers of William Kiel, the Zoar Separatists, and the Church of True Inspiration all established religious communities in the Midwest United States. The German religious groups tended to immigrate in large numbers.

The Harmony Society (1803–1916)

Founded by Johann Georg Rapp, later known as Father Rapp, in 1805 in Pennsylvania, the Harmony Society had its origins in Württemberg, Germany, as a separatist movement whose followers sailed to Philadelphia and eventually settled in western Pennsylvania. This was one of the most successful of the Pietist communities in terms of both its longevity and its contributions to American culture.

In 1803, Rapp preceded his congregation to the United States and purchased land in western Pennsylvania. In 1804, about six hundred members followed Rapp to the United States, and in 1805, they formed the Harmony Society in western Pennsylvania, the first of three sites that they would

occupy. At that time there were more than seven hundred Harmonists or Rappites, as they would come to be called. As with many struggling communities, the Harmonists became communal, pooling all of their resources and, in turn, guaranteeing for all the basics of subsistence and care in old age. In 1807, they decided to become a celibate community, but they did so with relatively little fanfare. On the five thousand acres that Rapp had procured for them, they established their church, school, mills, workshops, and homes; they raised sheep and ran a woolen mill; they grew a variety of crops, including flax, hemp, rye, wheat, and others; they planted a vineyard and produced wine.

By 1814, Rapp and community members were ready to relocate the community to Indiana, building the community of New Harmony, Indiana, into a fairly prosperous experiment that benefited even those outside of the community. By 1817, more members from Germany had joined the community. Although the community did well, they sold the property in 1824 (to Robert Owen, to set up his secular utopian Community of Equality), moved back to Pennsylvania, and set up Economy Village in 1825. With each move, the Harmonists had grown more prosperous and industrious and had managed to build a thriving community based on their religious ideals.

The community began to experience trouble when, in 1831, under the leadership of a newcomer, Bernhard Müller (known as Count Maximilian de Leon), factions developed, resulting in the loss of about two hundred members of the community, who either followed their leader to Louisiana or joined another German immigrant community in Bethel. Meanwhile, in spite of this disruption, Economy continued to prosper until the death of Rapp in 1847.

Although some key businesses were sold (silk and cotton mills and the winery), other investments in railroads, coal mines, and oil drilling provided a lucrative income for the community. Community prosperity continued well into the 1890s. While communalism was retained, much of the labor in the community was performed by nonmembers for wages, a considerable transformation over the earlier decades. The Harmony Society in its three locations lasted more than one hundred years, dissolving only in 1916.

The Harmonists contributed to the economy of wherever they were located. Their skills as farmers and laborers, and the successful sale of their properties in each location, provided a good life for them and for others in their vicinity. They also provided generous assistance to their fellow German-speaking communitarians when necessary.

Economy is maintained as a historic site and museum where visitors can learn about the community and its history.

Bethel and Aurora (1844–1883)

William Kiel, a German immigrant and medical doctor, founded the community of Bethel in Missouri in 1845 in the tide of the Second Great Awakening. The 650 members of his community were made up largely of disaffected Rappites and others who heeded Kiel's call, and they also adopted a communal way of life. Basing their subsistence on agriculture, they eventually developed businesses that created some economic stability—mills, textiles, tanneries, and carpentry. The community remained relatively unstructured and informal in its operations.

In 1855, Kiel and his followers left Missouri for Oregon, where they established a colony at Aurora in 1856 with about four hundred members. They turned their four thousand acres of timberland and farmland into economic prosperity once again, diversifying into a number of businesses. Following the Civil War, Aurora grew into a prosperous religious center with more than a thousand members, while Bethel shrank. Although the property—all legally owned by Kiel—was eventually divided among the many families, it was not until Kiel's death in 1876 that both Bethel and Aurora ceased to be communal.

Although founded by German immigrants, Bethel and Aurora differed from separatist communities in their informality and lack of legal status. However, the association of former Harmony members with Kiel and his group points to the importance of common cultural and religious roots.

The Separatist Society of Zoar (1819–1898)

Established in 1817 by three hundred Pietist separatists from Germany led by Joseph Bimeler, Zoar was founded on five thousand acres of land in northeastern Ohio not far from Harmony, the Rappite community. Because of the extreme poverty of the members, the group chose to live communally, signing a charter to this effect and naming their community after the biblical town to which Lot fled.

The members of Zoar practiced celibacy for ten years—a practice that seemed common among many immigrant groups of the day—but the practice collapsed when Bimeler took a wife. Zoarites experimented with children's houses, much like the Israeli *kibbutzim* would later do, but the practice did not last long. Families also lived in their own homes and ate together there, even though food was prepared communally. Families kept their own gardens.

In 1830, Zoar became officially recognized by the state of Ohio. At Zoar there were always more women than men. For example, the 1924 covenant was signed by one hundred women and only sixty men. Because of its proximity to the Erie Canal, Zoar was able to prosper by providing labor, food, and services. The amount of land Zoarites owned increased, as did their membership. Unfortunately, a cholera epidemic and the death of Bimeler in 1853 led to changes. Young people began to leave the community, some to join the Union army during the Civil War. Eventually, the community's economic prosperity declined due to competition from the industrializing society around it and the generational disparity in ideas and a growing criticism of communalism, including that of Bimeler's own grandson, Levi. In January 1898, the members of Zoar divided its property among themselves and dissolved the community, which became a state historic site.

The Community of True Inspiration at Amana (1842–)

The Amana community serves as an excellent example of how a community maintains itself by adapting to changing environmental conditions. Amana did not begin as a communal organization, experienced a long period of communalism, and then retreated to a noncommunal organization. Like the Harmony Society and the Separatist Society of Zoar, the founding members of the Amana colonies were Pietist separatists who fled Germany for the religious freedom of the United States.

In 1817, the group under the leadership of Christian Metz re-formed and in 1842 immigrated to New York to found their first community on land near Buffalo. In 1854, they left Buffalo, and in 1855 they finally settled in Iowa near Cedar Rapids and established the seven Amana villages that remain in that location to this day: Main Amana, Middle Amana, South Amana, West Amana, High Amana, East Amana, and Homestead. Living communally from 1854 until 1932, the members of Amana built a thriving set of colonies.

The Hutterite Brethren (1874–)

Although most Americans are familiar with Mennonites and the Amish, fewer are familiar with what is probably the longest-lasting communal society in North America, the Hutterites, whose name comes from their early leader, Jakob Hutter. Opposed to childhood baptism, state religions, the military draft, and worldly things, the Hutterites immigrated to North America from the Ukraine in 1874, taking up

residence in South Dakota and eventually spreading into Canada. Today, they live in about four hundred communal colonies (or *bruderhofs*) and have managed to maintain their communal way of life in spite of the many trials and tribulations they have faced since coming to the continent.

The Hutterites illustrate human adaptability and persistence. As farmers on the prairies of North America, they have a history that goes back to the sixteenth century—a history that includes alternating periods of communalism and private settlement, persecution and martyrdom. Although there were also Hutterites who lived independently after their immigration to the United States, the 433 who took up communal living would grow into the population that continues to this day. Hutterite colonies divide at 150 people, replicating themselves in these small groups, making the maintenance of communalism possible. They established contact with other German-speaking communities, such as the Harmony Society and Amana.

In 1905, the Hutterites became the Hutterite Society of Brethren and received official recognition by the state. By 1917, there were nineteen Hutterite colonies in the United States, but the coming of World War I and its hostilities to people of German descent in combination with the outrage over their refusal of military service led the Hutterites to sell or abandon their property and move to Manitoba and Alberta, Canada, where they were given exemption from military service. Eventually, in the wake of the onset of the Great Depression, they were invited back to South Dakota to take up their abandoned property and help to stimulate the local economy.

The Hutterite commitment to a specific set of religious beliefs once deemed radical, to a shared community of property, and to isolation from the world has sustained itself for more than one hundred years in the United States and Canada, and this utopian “experiment” has remained viable into its fifth century overall.

Bishop Hill (1846–1861)

Founded in Illinois in 1846 by Eric Jansson, also known as “the prophet,” from neither Lutheran nor Pietist roots, Bishop Hill would represent the perfectionism espoused by Jansson, who saw the Bible as a social gospel and himself as the embodiment of Christ, very much in a millenarian fashion. As a consequence of his radicalism and denouncing of the state church, Jansson suffered persecution by the state, giving him an incentive to leave Sweden and move to the United States to start his own community. In 1846, Jansson

and his followers immigrated to Illinois and began to build their perfect world, facing all of the hardships of others who had to build in the wilderness. Several hundred people followed Jansson to Illinois, many of them dying in short order due to the difficult climatic conditions.

Jansson encouraged his followers to study English, and to sustain themselves they raised barley, corn, wheat, potatoes, and livestock and built flour mills, sawmills, and other buildings. They lived communally, and in the beginning they often practiced fasting to cope with food shortages. Eventually, the community became economically viable, adding to the general prosperity of the area in which it was located; it was officially incorporated in 1853 after the shooting death of Jansson by his brother-in-law in 1850. Overcoming the loss of its charismatic leader, the colony prospered, increasing both its land holdings and its size to about seven hundred individuals. However, internal disputes eventually disrupted this relatively peaceful community—disputes concerning the abolition of marriage and the implementation of celibacy, the arbitrary expelling of members from the community for disagreeing with the trustees, the mismanagement of community finances in the midst of a general economic decline, and the development of opposing factions. In 1861, the community formally dissolved, and a court case ensued that eventually forced members to sell land and property that had been part of their settlement to cover the enormous debt that resulted from the former trustees’ bad investments.

Nonimmigrant American Religious Communities

The nineteenth century also saw a flourishing of nonimmigrant utopian and religious experiments, although these were sometimes influenced by imported ideas. In spite of the relative ebb and flow of religious tolerance in the United States, it generally remained open to new religions and their views, which often deviated from those of mainstream religions, sometimes as a result of seeking solutions to problems that mainstream religions did not undertake. But Americans faced different sets of problems from those of European immigrants, and the solution to these problems often took the form on new religious communities.

One of the biggest factors leading to utopian and religious experimentation in the nineteenth century was the rapid transformation of the American social and economic landscape. As the United States began to industrialize, it also experienced the growth of urban areas and the migration of people from rural areas into the cities. The technological

changes that brought about shifts in traditional ways of life often happened faster than they could be absorbed, leading to reactions against change itself or attempts by individuals to shield themselves from the loss of identity that often accompanied these changes.

At the same time, one of the emerging characteristics of utopian religious communities in the nineteenth century was the willingness to experiment with sexuality. Although many of the eighteenth- and nineteenth-century groups were experimental in the sense of focusing on celibacy as a major feature of their traditions (and abstinence could be viewed as radical because of its deviation from focus on marriage and reproduction), the pendulum seemed to have swung in the opposite direction for many of the groups. Although many of the conflicts that arose with earlier groups centered on the contestation of religious doctrine and the hostilities that these invoked, sexual experimentation also generated massive conflict between these groups and the larger American public.

The Oneida Perfectionists (1848–1881)

Founded by John Humphrey Noyes, this community was intended to implement the moral ideals of Noyes, who had trained as a minister and believed that perfection lay in attitude rather than actions. His creed would become known as Perfectionism and his followers as Perfectionists. Noyes and his followers believed that their way of life would lead to a kind of heaven on earth. Theologically, Noyes believed that the second coming of Christ had already occurred, and his brand of millenarianism concluded that heaven on earth would eventually be achieved. The Perfectionists organized themselves communally, eventually living in a huge mansion located in upstate New York and in additional communities. There they practiced plural or complex marriage in which the goal was to erase the egotism and imperfect outcomes of monogamous family groups (and especially the loyalty of spouses to one another) in favor of loyalty to the group.

The Church of Jesus Christ of Latter-day Saints (Mormons) (1830–)

Mormonism was founded in 1830 by Joseph Smith Jr., after the publication of the Book of Mormon, and adopted a communal way of life almost immediately, although communalism was never comprehensive. Based on the revelations of Smith, Mormonism (as this religion would come to be known) was a new branch of Christianity that arose in a community context but eventually grew into a mainstream

American religion. Beginning in Palmyra, New York, as the Church of Christ in 1830, the religion had its origins a decade earlier when Smith reportedly discovered gold tablets and dictated the Book of Mormon. Eventually, Smith and his followers changed the name to Church of Jesus Christ of Latter-day Saints (later known as the LDS) and built the first temple in Kirtland, Ohio, which became the church headquarters in 1831. This was followed by moves to Zion, Missouri (1838), and Nauvoo, Illinois (1839). After the assassination of Joseph Smith Jr. by an angry mob in 1844, Brigham Young assumed leadership and moved the group to Utah territory, formally instituting polygamy as a practice. In Utah, the Mormon settlement for a time continued to echo its earlier communitarian ideals. But by the end of the nineteenth century, with the formal renunciation of polygamy and Utah's movement toward statehood, the utopian ideal receded. However, even in the design of Salt Lake City, with the temple complex forming the center of a grid pattern of streets, that vision of the ideal community, once named Deseret, still endures.

The Woman's Commonwealth (1867–1983)

Also known as the Sanctified Sisters, the Woman's Commonwealth was founded in 1867 in Belton, Texas, by Martha McWhirter. The emergence of this community from the participation of evangelical women in church groups is reminiscent of the experience of Ann Hutchinson in the Massachusetts Bay Colony. At first their enthusiastic participation in their churches was welcomed, but later it was spurned as their criticisms began to challenge church doctrine. The women developed a doctrine of sanctification, receiving revelations through dreams and other communications with God. They supported celibacy and wanted to avoid abuse by husbands. The Commonwealth always had some male members, although a majority were women.

By 1891, the Commonwealth had thirty-two members who lived communally. Outcries against the Women's Commonwealth took many forms, including accusations of insanity and attempts to have some members legally committed to insane asylums. In 1898, the Commonwealth moved to Washington, D.C., finally adopting written rules and regulations in 1902. The community ended in 1983 when its last member, Martha Scheble, died.

The Koreshan Unity (1894–1961)

The name of this group derives from that of its leader, Cyrus Teed, who changed his name to Koresh, a Hebraic form of

his first name. Once again, a new religious community relied heavily on the charismatic personality and ideas of its founder and leader. The community practiced both celibacy and communalism and entertained one of the most original belief systems ever created. Cyrus Teed was a medical doctor with a scientific bent that often strayed into nonscientific areas. It was during a moment of religious ecstasy that Teed was called upon to save the human race.

Eventually, Teed left his home in New York and combined his medical practice with preaching and gathered followers from several states, although his most vigorous following seemed to be in Chicago. Invited to Estero, Florida, in 1894 by Gustav Damkohler, who had read some of Teed's work, Teed visited the state and decided that he would locate his community in Estero. Initially, there were twenty-four members of the community.

Teed combined his belief in communalism with his "Cellular Cosmogony"—a view that proposed that the earth itself was enclosed within a giant sphere. Teed's beliefs became known as Koreshanity or Koreshan Universology. Although at first Teed's belief system seems to be more failed science than religion, he taught that his cosmogony was related to the consciousness of God. If one wanted to know God, one should attempt to do so through an understanding of God's creation, the Earth, and its place.

The original twenty-four members eventually grew to two hundred, living on seven thousand acres. Although they became prosperous, they also constituted a threat to the local politicians, who perceived them as a political voting bloc and who circulated rumors about them and their practices. Since Teed formed his own political party and published his own newspaper, he continued to be a threat. Ultimately, Teed was physically attacked by a local law enforcement officer and remained in poor health until his death in 1908.

The community continued, although internal conflicts following the death of the leader led to a decrease in population. In 1947, steps were taken to turn the community into a state historic site, and this was finally achieved in 1961, forming the basis for the state historic park that exists there today, with many of the original buildings still intact and some restored.

Early-Twentieth-Century Experiments

The diversity of utopian and religious communities that characterized the nineteenth century would continue in the twentieth century, expanding to include communities based

on Eastern religions such as Hinduism and Buddhism or variations on them. The twentieth century would see an explosion of intentional communities in general, many of them religious in orientation. The United States was now producing its own utopian religious experiments rather than importing them from foreign shores, with the exception of Eastern religions, and the West became more engaged in religious experiments in community. These new communities continued to explore the many facets of Christianity. Spiritualism and Eastern religious influences often combined to create new religions that found their stability within a community based on their religious ideals.

At the turn of the twentieth century, a number of religious experiments were undertaken by a variety of groups. The Social Gospel movement—a movement whose members applied Christian doctrines to problems of oppression in society—generated a number of communities, such as the Christian Commonwealth Colony (1896–1900); the Straight Edge Industrial Settlement in New York and New Jersey (1899–1918); the South Co-operative Association (in Florida) of Apalachicola (1900–1904); the Salvation Army farm colonies in California, Colorado, and Ohio (1897–1909); and the Christian Cooperative Colony.

The question of sexuality and unorthodox marriage arrangements remained a bone of contention within some communities and between communities and the larger public, and monasticism within some communities perpetuated the practice of celibacy that had characterized so many of the early religious communities in the United States.

Many communities in the earlier part of the century had to contend with the economic crisis caused by the Great Depression, which lasted well over ten years and sometimes determined which communities continued to exist and which fell on hard times and dissolved. World War I and World War II would also have an effect on communities, sometimes creating the conditions for their formation as a retreat from the losses that war brought and sometimes depriving them of resources. But these wars would also create a focus on peace as the outcome of religions belief systems and the social gospel.

Another factor that would influence early twentieth-century communities was the question of race in American society. Communities would be formed that were reactions against the racism that blacks suffered in the form of racial segregation in the South or racial discrimination and economic oppression in the rest of the country.

Israelite House of David/Mary's City of David (1903–)

Benjamin and Mary Purnell founded the Israelite House of David in Benton Harbor, Michigan, on April 3, 1903. This long-lived utopian religious community was the culmination of a long line of prophets in the Christian Israelite/Jezreelite tradition, which began in London, migrated to Australia, and then came to the United States. In 1895, Benjamin Purnell proclaimed himself as the seventh prophet in the Israelite tradition, but this assertion was not accepted by the followers of the Detroit church with which he and Mary were associated, so there was a parting of the ways. Nevertheless, Benjamin Purnell saw as his mission the gathering together of the lost tribes of Israel in preparation for the Second Coming of Christ. Although actually founded in 1902 in Fostoria, Ohio, in 1903 the Israelite House of David was established on 281 acres of land in Benton Harbor.

The Israelite House of David was organized communally, and its members practiced vegetarianism and celibacy. The community had a huge economic impact on the area. They operated the Eden Springs amusement park and had their own baseball team, basketball team, and zoo. They had a farm, ran a hotel and restaurant, and operated other businesses. At its height, the community had as many as seven hundred members. Women in the community voted in 1903 and held office as well. After Purnell's death in 1930, the community divided into two: Mary's City of David and the House of David.

International Peace Mission Movement of Father Divine (1914–)

George Baker Jr., also known as Reverend Major Jealous Divine and Father Divine, founded a religiously based social movement that ministered to the poor and needy in response to the problems of poverty brought on by the years of the Great Depression and exacerbated by racial segregation and racial discrimination. He was probably the son of freed slaves, although not much is known about his meager beginnings. Starting as the pastor of a small, independent black church in Brooklyn, New York, and later moving to Sayville, Long Island, and then Harlem, Father Divine was revered as a savior of the poor and as a charlatan by those he annoyed. However, his continuing social activism on behalf of the poor won him a huge following.

Father Divine's following, which had been inspired by his ministrations to the poor, began to wane as the United States began to experience a period of affluence in the 1950s. He

died in 1965 in Gladwyne, Pennsylvania, but various members have carried on his work on a much smaller scale.

Holy City (1919–1950s)

Founded by William E. Riker in 1919, Holy City stands as one of the most unusual religious utopias in American history, primarily because of its promotion as a perfect government based on racism and the charismatic leadership of its founder, who was the sole owner of all of its property located near Santa Cruz, California. A blatant racist, economic opportunist, and exploiter of women, Riker nevertheless managed to sustain a community for more than thirty years in California. Centered on Riker's church, the Perfect Christian Divine Way (P.C.D.W.), Holy City was promoted as a heaven on earth. Riker and his followers built a thriving community of shops, services, and industries that attracted and thrived on the patronage of California tourists.

During the 1920s and 1930s, Holy City survived by offering alcoholic beverages during Prohibition, peep shows, and other activities that brought the attention of the larger public to the community. In spite of accusations of larceny and mistreatment of women and children, Riker managed to maintain his community. With a mixture of racial metaphor and sexual mythology at its base, Riker's religion allowed him to indulge himself and his beliefs in any way he wished, and he ran for governor of California four times, promoting paternalism, the total disenfranchisement of minorities, and harebrain economic schemes that he challenged others to prove wrong. He aimed to bring a new religion that he called "Whitemanism" to blacks and Asians. In 1942, Riker was arrested and charged with sedition for corresponding with Adolf Hitler. An unrepentant narcissist who testified on his own behalf, Riker was acquitted due to the effectiveness of his defense attorney, Melvin Belli. Although the place itself continued on into the 1960s, the "community" itself ceased to exist in the 1950s.

Holy City demonstrates that in addition to whatever spiritual sustenance religious communities afford people, they can also be used by those who wish to exploit others for their own purposes. Riker was successful in getting people during America's Great Depression to turn over their resources to him and work on his behalf with the hope of relieving their own suffering. These ploys in combination with the scapegoating of minority groups and exploiting the California tourist industry allowed Holy City to thrive for a while. But once the economic depression affected Holy City, Riker was unable to sustain what vestiges of

community remained. These negative examples are rare among religious intentional communities, and although they are always sensational for their perversity, they illustrate the vulnerability of people in dire circumstances and how susceptible they are to the promise of the end of suffering and the comfort of community.

Self-Realization Fellowship (1920–)

This church and monastic community was founded by Paramahansa Yogananda (1893–1952), who first came to the United States from India in 1920 to attend the Congress of Religious Liberals in Boston and stayed on to lecture and found the Self-Realization Fellowship (SRF) that same year. In 1925, he established Los Angeles as the headquarters of SRF. In 1945, *Autobiography of a Yogi* was published and became one of the most influential spiritual books of the twentieth century. Yogananda referred to SRF as the church of all religions and taught direct access to truth and experience of God through the method of kriya yoga. SRF, with branches in Del Mar, California, and San Diego, was headed by Daya Mata, a direct disciple of Yogananda. After Yogananda's death in 1952, a number of his direct disciples founded their own communities or centers for the practice of kriya yoga.

Koinonia Farm (1942–)

This community was founded by Clarence and Florence Jordan and Martin and Mabel England in 1942 in Americus, Georgia. As Baptist ministers, Jordan and England wanted to train poor and rural folk in scientific agriculture and also to train more black ministers. The community operated with a common purse and grew pecans and peanuts and operated a mail-order business. Koinonia was to be an interracial religious community in the segregated South. Although accepted at first by both blacks and whites in the vicinity, some whites became incensed at the equal treatment of blacks, especially during meals, and the community became a target of violence during the civil rights movement. Because of boycotting of the community, death threats, bomb threats, and drive-by shootings, the population of Koinonia became greatly reduced as families fled for safety.

Following the civil rights movement, the violence eventually stopped, and another couple, Millard and Linda Fuller, joined the community. Koinonia embarked upon a program of building low-cost housing for local families and changed its name to Koinonia Partners. The Fullers embarked upon a similar house-building program in Africa before returning

to Georgia to found Habitat for Humanity in 1976. Jordan died in 1969, leaving behind a legacy of Christian charity, his Cotton Patch gospels, and an example of steadfast non-violence in the face of violent threats.

The Late-Twentieth-Century Communitarian Explosion

The rising affluence in the United States following World War II would have a profound effect on the formation of utopian religious communities, as the postwar baby boom generation came of age armed with an idealism that fomented a virtual cultural revolution. The period between 1965 and 1975 was not only the most intense period of community building in the United States, it also witnessed the rise of many new religious movements anchored in community. These movements were rooted in both Christianity and Eastern religions, such as Yoga and Zen Buddhism. Fed by the coming of age of the baby boomers, the retreat from mainstream religion, the changes instigated by the civil rights movement, the Vietnam war, the women's movement, the rise of the human potential movement, and the general pursuit of personhood by many different groups, the radical changes taking place generated these new revitalization movements, which were to have a profound effect on American life well into the twenty-first century.

Although many of these new communities were fleeting, serving as transitional phases for their members in search of identities, stability, and meaning in their lives, others provided a long-term alternative to survival in the rapidly changing cultural, social, and political environments. In addition to the reinvigoration of Christianity through the various Jesus movements that arose, this period of religious communitarianism bolstered and was a part of the rise of New Age spirituality. Such communities as Ananda Village in Nevada City, California, founded by Swami Kriyananda, a direct disciple of Paramahansa Yogananda; and Jesus People USA, an urban commune located in Chicago and founded in 1972, typify the kinds of communities from this period.

Conclusion

Toward the end of the twentieth century, people began returning to mainstream churches, most of which had themselves undergone transformation. Although some held to traditional ways, others changed in the ways society itself had changed—allowing women and minorities into the ministries and integrating advanced technologies into their services.

Utopian and communitarian experiments in religion, which still occur but with lesser frequency, reveal many things about the nature of religion, the nature of communalism, and the nature of community. Their history in America reveals much about American culture as well. For example, no single version or religious ideal is adequate for everyone; religious variety has characterized American culture from the beginning. Religious communities have allowed people to test out a variety of ideas and ideals, such as communalism, celibacy, plural marriage, and new traditions. Most of these communities afford critical minorities the opportunity to adjust to major changes in the larger society, while maintaining connections so necessary for human welfare. They also serve as a refuge and testing ground for women and minorities and members of oppressed groups. Although most of these communities have positive benefit for their members, occasionally they demonstrate what paths do not work and are, in fact, harmful. All of these communities contribute to the life of the nation in which they reside, even if they choose to maintain strong boundaries of separation. Occasionally, they tap into needs not previously fulfilled by the larger society and become transformed into mainstream religions.

V

Violence and Terror

Violence and terror have been associated with religion in America in many ways, in reports of religious experiences as much as through conflicts between groups over religious differences.

Enchantment and Colonialism

Europeans who explored the Americas in the sixteenth and seventeenth centuries were amazed and terrified by the natural wonders of the New World, and in this particular aspect of their worldview they differed little from the indigenous peoples who had a long history of habitation in the Americas. Explorers reported their observation of all manner of wonders, from the beautiful flora, natural features, and climates of the Americas to the equally beautiful and genial indigenous peoples, such as the Tainos, whom the Spanish, in their earliest encounters, thought handsome, charmingly innocent, and childlike. Columbus, near the mouth of the Orinoco River, believed that he had found the passage to Eden, the enchanted land *par excellence*, described in the Bible and sought by explorers virtually throughout the history of Judaism and Christianity. Conquistadors set off for villages made of gold, where precious stones lay thick on the streets and the sunlight reflected off the silver buildings was blindingly brilliant. Others became interested in the Fountain of Youth, a spring whose waters could restore health and virility, and, as its powers were amplified in retellings of its existence in the uncharted interior of the American landmass, restore youth. Rainbows, clouds, and comets, omens for Native Americans, were omens as well for

Europeans. The behavior of animals—a flock of birds startled into flight or the early morning growling of elk—were signs of the workings of invisible powers. The hand of God, God's Providence, was visible in all manner of events, from the sudden appearance of vast schools of fish to timely rainfall and spectacular sunsets.

What was beautiful was also terrifying. Those who sailed to the Americas were well aware of the possibility of being attacked by evil, cunning sea monsters, which sometimes consumed ships full of sailors and sometimes carried them to underwater lairs to imprison, torture, and toy with them. Hurricanes, lightning, and earthquakes were amazing spectacles, striking terror into the pious hearts of sailors and landlubbers alike, for such things were from God and meant as punishment for sin. The alligator, rattlesnake, Gila monster, and other extraordinary creatures were regarded as living embodiments of the power of evil and, like the wolf in Europe, potentially an agent of demonic force. The wolf in the forest was a formidable enemy, as much for its teeth and claws as for its demonic stare, which conveyed its collaboration with the powers of darkness. Euro-Americans and Indians alike experienced a world full of terrible wonders, one that threatened injury, pain, and death through evil agency. The world was enchanted, but in a way that cut in both directions. It was beautiful, and it was horrifying.

Violence and terror of human origin in the early Euro-American communities arose against the background of such an enchanted view of the world. The colonial enterprise is itself inherently violent: militarily superior expeditions seeking resources—raw materials, precious stones, labor—force dominated indigenous communities to yield

them. Victories over indigenes and the acquisition of assets are understood in connection with religion, intertwined with beliefs about divine favor, divine justice, and religious destiny. Colonialism in North America was never merely a foray to bring gold, lumber, fish, and slave-made commodities back to Europe. It was a broader exercise in making a world. Euro-Americans understood their domination of Native Americans as a kind of wonder, a gift from God, as it were, a sign of divine Providence and promise from God to bless their achievements and aspirations for colonialist expansion and further domination. Because of that close interweaving of religion and the violence that came with colonization, and because that interweaving took place under an umbrella of deep investment in the enchantedness of the world, what was thought a gift from God could in fact reveal itself to be a nightmare. The land that was an overflowing bounty of food could lose its fecundity, and famine could follow. The natives who seemed noble or innocent could become fearsome and deadly opponents. Evil was proximate and powerful. Violence and terror were the dark underbelly of the colonial self-understanding. In an enchanted world that was made volatile through the constant back-and-forth power dynamics of colonial domination, much could go wrong. Euro-Americans accepted violence and terror as part of their stake in colonialism, justifying their own acts of violence through recourse to their religious view of the world. Native Americans, for their part, did the same, but as dominated peoples, their experiences differed in important ways from those of the Spanish, French, Dutch, Portuguese, and British.

Purities and Cleansings: The Seventeenth and Eighteenth Centuries

A history of conflict between religious groups in Europe translated into conflicts between religious groups in America, where the circumstances of colonialism further inflamed them. Protestants and Catholics had been at war from the early sixteenth century, and in the seventeenth century, the Thirty Years' War (1618–1648—a spectacular episode of religious violence between Protestants and Catholics) ruined a large part of Germany and sharply reduced the European populations of all of the engaged parties. Deep-seated antagonisms and memories of persecutions conditioned the thinking of colonists, so that hatreds between Catholics and Protestants in the Old World survived in the New. Jews, who had suffered for centuries as “Christ-killers” and were hunted periodically because they were thought to

kidnap and murder children—whose blood, according to myth, was required in Jewish ceremonies—remained locked in volatile relationships with Christians. The rhetoric of religious hatred shaped encounters between all of these religious groups, including Protestants versus Protestants, and served as the foundation for violence when it broke out. Hatred, as a kind of dysfunctional attachment between these groups, regularly led to bloodshed.

The extreme nature of religious violence—the preoccupation with purity and the concerted programs of cleansings undertaken to achieve purity—was conceived with an eye to the Old Testament. Among the many accounts of warfare between the ancient Jews and their opponents, one stood out in the sixteenth and seventeenth centuries as an inspiration to thinking about religious enemies. The story of the Amalekites, which was written in 1 and 2 Samuel, Judges, and the Pentateuch, set the terms for hatred of others and was used to justify harsh treatment of them. The Amalekites were a tribe that was kin to the Jews but turned on them while the Jews were fleeing slavery in Egypt. Setting upon the weak and elderly in the rear of the caravan crossing the desert, the Amalekites assaulted the Jews and stole from them. Moses eventually presided over a victorious battle with them, after which the Lord said to him: “I will utterly put out the remembrance of Amalek from under heaven” (Exodus 17:8–16). Later accounts told of God’s promise to “blot out the remembrance of Amalek from under heaven” (Deuteronomy 25:17–19) and recounted God’s command to enact genocidal violence on them for their treachery: “Now go and smite Amalek, and utterly destroy all they have, and spare them not; but slay both man and woman, infant and suckling, ox and sheep, camel and ass” (1 Samuel 15:2–3). In the hands of English writers, the Amalek imagery was refined for use against Catholics after the sixteenth century and was adapted for deployment against other religious enemies as well. The central logic remained the same: those who are religious kin are the worst of enemies once they conspire to betray, and the appropriate response of the betrayed is hatred and violence approaching genocide in its breadth and intensity. Religious warfare, as manifest in the Thirty Years’ War and elsewhere, was a project undertaken in vengeance against betrayal, and the ruthless cleansings it sought were justified by appeal to the Bible.

Europeans believed that Native Americans were their kin. The exact nature of that kinship remained ambiguous, and the details about how related groups came to live so far apart in the world, and then reengage, were debated and

challenged throughout the colonial period. But many colonists came to understand Native Americans as the descendants of the Lost Tribes of Jews who were scattered from the eastern Mediterranean in ancient times. Spanish writers such as Bartolomé de las Casas (1484–1566), Garcilaso de la Vega, Pedro Cieza de León, and José de Acosta read in Indian rituals and ideas, material culture and language, vestiges of Judaism. Other Spanish and French missionaries saw that background as well, and the Puritan missionary John Eliot, the Jewish rabbi Menasseh ben Israel (in Amsterdam), and the English Presbyterian cleric Thomas Thorowgood, among others, wrote forcefully about the strength of the Indian linkage to the Jews. Some believed that Native Americans, moreover, had been visited by Jesus Christ after his resurrection and had become his followers but had lost the rudiments of their faith over time. All of this meant that Indians were distantly but importantly related to European Christians and that their past was a *praeparatio evangelica*, a preparation to receive the gospel that Christians brought with them to the Americas. Some Europeans, then, and especially missionaries, imagined Indians as religiously attached to them. As religious kin, Native Americans accordingly bore the responsibility of responding to Christian outreach in ways that Europeans imagined were appropriate. When that did not happen, they were viewed not merely as uninterested in Christianity and the Christian cultures of Europeans but as traitors to the imagined bonds by which Europeans had come to conceive an ancient attachment to them. In the worst of situations, they were compared to Amalekites.

Colonists and Indians often collaborated in making cultural worlds in which to live in North America. They also frequently fought each other. The trigger for violence rarely was religion per se. English and Indians ordinarily did not fight over competing interpretations of doctrine or disagreements about the manner of performance of certain religious rituals. Warfare broke out over land claims, trading authority, fair exchange, social and family orders, and a range of practical issues arising from the domination of Indians by colonial powers. The colonial rhetoric of war, however, was often deeply religious, particularly so when disagreements were deep and offenses to colonists were experienced as profound. In such cases the New England clergy cast Indians as Amalekites and called for their extermination. When Indians allied with the French, they were considered doubly traitorous because the French were Catholics and New Englanders were Protestants. The New England Puritan Cotton Mather

urged on colonial forces against Indians who had joined the French in 1689 by exhorting them to get “the Track of those Ravenous howling Wolves and then pursue them vigorously; Turn not back until they are consumed; . . . Tho’ they cry let there be none to save them; But beat them small as the Dust before the Wind. . . . [They] may . . . by their Diabolical Charms, keep our Dogs from hurting of them, but they shall not so keep our Swords from coming at them . . . against the Amalek that is now annoying this Israel in the Wilderness.” Aroused by such rhetoric, Euro-Americans sometimes conceived their troubles with Native Americans as resolvable through genocidal violence. The reduction of the fortified Indian village of Mystic in 1637, in which the entire population of over six hundred persons—mostly women and children—were burned alive, was one such instance. Major John Mason, the leader of the English forces, cast the event in starkly Old Testament terms, noting that God, “laughed his Enemies and the Enemies of his People to scorn making [the Indians] as a fiery Oven. . . . Thus did the Lord judge among the Heathen, filling [the fort] with dead Bodies.”

New Englanders, who were committed to an ideal of religious purity in their towns and villages, defended their brand of Protestantism against competing groups and individuals. Executions for witchcraft began early in the history of Massachusetts and reached their peak in the hanging of nineteen persons in Salem in 1692. Women, such as Margaret Jones, who was executed in Charlestown in 1648, were especially liable to be accused of witchcraft. Violence against witches was largely violence against women in colonial America. In the case of Puritan persecution of Quakers, the victims also were mostly women. Mary Dyer, a Quaker missionary, was tortured and then executed in Massachusetts in 1660. Anne Hutchinson, whose theological views differed from the views of her Puritan neighbors, was banished from the colony in 1638. In the view of some Puritans, the various enemies—witches, Quakers, Indians, and Hutchinson—were cut from the same cloth. New Englander Nathaniel Morton, stressing the duplicity and traitorous behavior of all of them, bemoaned their “great endangering of the whole,” meaning of both church and commonwealth. In Virginia, Thomas Jefferson concluded that Quakers were similarly hated and escaped execution purely by chance during the colonial era. Elsewhere in the South, there was violence against Native Americans, Baptists, Catholics, and others, carried forward by various religious groups.

Some of the most visible religious violence in the South was between Catholics and Protestants. In the shadow of

war in England between Puritans and royalists in the 1640s, Catholics in Maryland came under attack from a largely vigilante force led by the militant Protestant Richard Ingle, who was captain of the ship *Reformation*. Maryland had been founded as a Catholic colony but had accepted persons of other faiths as settlers. Ingle's campaign, known afterward as The Plundering Time, so terrorized the Catholic populace that it chased most of them from the colony, along with the Catholic governor, Leonard Calvert. Ingle was motivated by a belief that British Americans should swear allegiance to the new English Parliament as well as by his hatred of Catholics. Acting accordingly, he plundered Catholic property and arrested Jesuits, bringing them back to England in chains. His eventual allies from Virginia, who disputed land claims made by Maryland, enabled him to roam the countryside freely, harassing and assaulting Catholics or their sympathizers. It was not until the Battle of Severn, which was fought in 1655 between Catholics who had returned to Maryland and a force made up primarily of Puritans who had settled in Virginia, that the dispute and bloodshed diminished. In the aftermath of the battle, which killed nineteen persons and injured many more, the government of Maryland was established firmly enough to discourage further violence.

Catholics suffered elsewhere as well, and in some instances it took place under the umbrella of legal protection. In colonial New York, as was the case in Maryland, English politics overflowed into North America and shaped an environment that put the small Catholic minority at a deepening disadvantage. Following the deposition of James II, the Catholic ruler of England, in the Glorious Revolution (1688), English overseers of the American colonies sought to limit or curtail the influence of Catholics in British North America. They persuaded some colonial governing bodies to create legislation that variously revoked toleration of Catholics, prohibited the preaching of Catholic doctrines, excluded Catholics from public office holding, and other measures. In New York, where a law prohibiting Jesuits in the colony was enacted in 1700, Father John Ury was tried and executed the following year for being a Catholic priest and practicing Catholicism, as well as for sedition, understood in his case as his informing an African American that God would forgive his sins.

The relations between the British colonies and New France likewise were conditioned by events that transpired in Europe, so that religious enmities that flared in Europe were felt in America. Religion and politics had been

intertwined in Europe for centuries, and the case was the same in North America. No act of religious violence was ever purely religious in its origins; but when disputes intensified and armies began their marches toward each other, religious rhetoric served a crucial role in justifying force and shaping the consciousness of participants as defenders of religious values and ways of life. During the French and Indian War (1754–1763), which pitted the British and its American colonies against the French and their Indian allies, the New England military relied on religious exhortation of troops that cast the French as cunning and malignant Catholics. Ministers who preached about the war foretold doom if the French were victorious, calling forth scenarios in which Catholic rule would destroy the world's only hope for a purified Christianity (on the model of New England Puritanism). So certain were Protestant clergy that Catholics were dedicated to destroying their carefully wrought holy commonwealths—the religiously organized towns of New England—that they compared a potential French victory to the end of the world. Apocalyptic thus was blended with other hate speech to create a vision of terror for New Englanders. The fight against the French accordingly was understood as a fight of cosmic dimensions, as good battling evil, and the violence that was required to obtain victory was presented as a desperate struggle for the life of Christianity and therefore justified in whatever ways it might unfold. The political and military engagement thus became a religious battle, framed in terror and enacted in holy violence.

Large-scale religious violence in the seventeenth and eighteenth centuries took place between rival Protestant groups as well as between Protestants and Catholics. Baptists and some Presbyterians, Quakers, and Moravians joined forces to oppose the Anglicans and their allies who held power in Virginia and North Carolina in the 1770s. As was generally the case, land, politics, trade arrangements, and taxation policy contributed to the frictions, but a central issue was one of religious difference and especially divergence of opinion about individual freedom in religion. In North Carolina the fiercely separatist Baptist side formed as the Regulators, in the Piedmont, or western part of the region, near Sandy Springs, a Baptist community begun by transplanted New Englander Shubal Stearns in the mid-1750s. The backcountry Regulators voiced a number of complaints, including their unwillingness to support through their taxes the Anglican Church, which claimed authority over them. Anglicans (who soon were to be known formally in America as Episcopalians), for their part,

did not wish to see other groups succeed in their evangelizing the local population, because it would undermine the potential base for an expanded state church. At Alamance, which was near Sandy Creek, the Regulators fought a pitched battle with the largely Anglican militia in 1771. They were defeated, and a number of Regulators were hanged and Baptist properties despoiled. Because the Regulators had organized by joining one religious congregation to another, and because they had imagined the colonial government theologically as evil in its attempts to deny them their religious and political individuality, they felt the defeat especially keenly as religious violence.

The complexity of religious hatred and violence was apparent in the constant and boldly stated suspicions that religious groups voiced about competing groups. With the exception of Tories, colonists harbored fears about the agenda of the Anglican Church, which was thought to include plans to make Anglicanism the state church of all of the colonies. The writings of colonial agitators against Anglicanism in the 1760s and 1770s formed an important part of the rhetorical justification for revolution. Suspicions about Native Americans were more profound. Even when Indians converted to Christianity, their religious status was, for many colonists, ambiguous. Some debated whether Indians could ever truly be converted. That ambiguity led to many tragic encounters with Christians, as was the case at Gnadenhütten, Ohio, in 1782, when whites massacred approximately ninety Moravian converts, suspecting them of having caused trouble in the region. Until the last hours the whites praised the Indians for their faith and their diligent practice of Christian virtue. They were treated like Christian kin and then led—men, women, and children, singly or in pairs—to the killing house and murdered.

As the slave trade increased and the African American population grew, slave overseers and owners who endeavored to prevent blacks from practicing African religions terrorized them through physical punishment, family separations, and by other means. While it is true that African Americans converted to Christianity in large numbers, it is also the case that traditional religions were forcibly discouraged, and a great amount of the religious culture of slaves accordingly was lost. Islam, which was the religion of somewhere between four and twelve million Africans who were brought to North America, was almost entirely extinguished. Some elements of traditional religions were incorporated into the Christianity of African Americans, but the distinct local traditions of Africa, alongside Islam, were

largely consumed in what has been referred to as the “African spiritual holocaust” in North America.

The Nineteenth Century

Immigration of Catholics, Jews, and others in the nineteenth century made non-Protestant religious communities more visible, and, being more visible, more of a threat to many Americans. At the same time, new religious movements such as the Mormons challenged the religious views of members of most of the other denominations. During the nineteenth century, moreover, African Americans made major strides in organizing churches and denominations, and the Methodists utilized a form of worship that distinguished them from most other Protestants and accordingly placed them on the margins for a while, a threat to some of the more established Protestant denominations and a provocation to the relative decorum practiced in most houses of worship. The frictions that emerged during this period led to the development of several species of scurrilous literature—from fictional stories of girls forced into Catholic convents to serve the pleasures of priests to fabulous tales of Jewish conspiracies to dominate the world and Mormon plans to subvert democracy. That literature presented a terrifying view of religious others and fueled all manner of violence, in large cities, in small towns, and on the frontier.

The Shakers established a matrix of a dozen villages in the first decade of the nineteenth century. Protestants from more established denominations criticized them for their unorthodox belief in a God who was male and female, their certainty that the Second Coming already had taken place, their loud and seemingly poorly structured worship, and their desire to live in cloistered communities apart from the rest of society, a choice that, in the nineteenth century, easily could mark a group of religious persons as potential conspirators against the social order. Shakers consequently suffered vigilante regulation and were attacked by mobs, as in Enfield, New Hampshire, in 1818, and in Harvard, Massachusetts, during the summer of 1782. In the latter case a mob whipped, beat, and continuously terrorized a group of male and female Shakers for miles after running them out of town. Protestants took issue also with early Methodism, which they disliked for its freeform worship, which could be enthusiastic and loud; its radical theology of rebirth and perfection; and its comparatively informal means of credentialing preachers and ministers. Methodist camp meetings in antebellum America were sometimes visited by individuals or mobs who harassed worshippers by shouting and

laughing or assaulted them with clubs and guns. In some cases persons died in these confrontations, and by the second half of the nineteenth century, even after Methodism had become one of the largest denominations in the United States, some state legislatures deemed the problem so severe that specific statutes were enacted to make the disruption of camp meetings a crime.

The founding of the African Methodist Episcopal (1816) and the African Methodist Episcopal Zion (1821) denominations, and the increase in the number of black denominations after 1800, mixed religion and race in a way that brought greater attention to black congregations. Some of that attention was unwanted, for it led to confrontations between whites and blacks, some of which were violent, and, especially, it precipitated a long-running series of black church burnings that continued into the twentieth century. Opponents of black churches argued that African Americans were not fit to wield authority within a Christian church and that their example was an insult and corruption to other Christian churches. Woven into white opposition was the fear that as blacks organized themselves into religious bodies, they would improve their social status, moving beyond the strictures placed on them through slavery and segregation. Black clergy routinely were harassed and assaulted, and arsonists kept busy throughout the year. In the first six months of 1877, fifteen black churches were burned in Texas alone. Churches with schools were especially prone to arson. On a night in May 1866, a mob in Memphis moved through the city methodically burning the black churches and schoolhouses.

The emergence of Mormonism in the 1830s challenged not only Protestant churches but Catholics as well, and, in fact, concerned virtually all persons who were not Mormons. The revelations given to Joseph Smith, the founder of the Church of Jesus Christ of Latter-day Saints, appealed to a rapidly growing body of Americans (and Europeans who later immigrated to America), and the missionary zeal of the church ensured that its message would be heard far and wide. That zeal was met by the frenzy of critics and, within a year or so of the church's organization, by mobs who beat and tarred and feathered Smith and his followers, destroyed their property, and drove them from the communities where they had settled. The first anti-Mormon book, *Mormonism Unveiled*, appeared in 1834. It presented Joseph Smith and his family as charlatans who schemed to fleece the gullible of their property by persuading them to believe in outrageous stories about the history of North America, God's

plan for humanity, the true life of Jesus, and the reality of ongoing revelation from God. By the time plural marriage became an accepted part of Mormon life, at midcentury, opponents were able to charge Mormons with a long list of offenses that was anything but superficial: they were immoral, dishonest, stupid, corrupt, antidemocratic, conspiratorial, duplicitous in commerce, unpatriotic, blasphemous, and greedy. Wherever Smith's followers settled, the charges followed them, and their critics found ways in which to confirm these through observation of the evils of Mormonism.

In 1838, Missourians worried that Mormon immigration to the area was being organized with a view to taking over towns, then counties, and eventually the state. As frictions increased, the militia collected Mormon firearms, and harassment and assaults on Mormons increased. Following a Mormon attack on a militia encampment, Governor Lilburn Boggs issued an "order of extermination" against the Mormons. A battle at Haun's Mill consequently left eighteen Mormons dead and chased most others eastward across the Mississippi River, where they made the town of Nauvoo (formerly, Commerce) their core community. Tempers soon flared in Nauvoo as well, and when news of polygamy began to circulate broadly, locals raised the pitch of their opposition. A former Mormon, William Law, established a newspaper, the *Nauvoo Expositor*, in order to air his dissatisfaction with the church and to promote opposition to Mormons, charging them with immorality and anti-Christian agendas. After Mormons destroyed Law's office and press in 1844, Smith was arrested. A few days later he and his brother Hyrum were shot to death by a mob that broke into the jail. In the wake of such violence, Mormons organized a trek to the Utah territory and established there a way of life that included polygamy ("plural marriage"), a theocratic social order, a heightened ambivalence toward the federal government, and a zealous ministry to westerners. Increasingly cast by their opponents as antidemocratic in spirit and anti-American in their tribalism and radical interpretation of Christian history, Mormons in 1857 faced the prospect of battling a force of 25,000 troops sent by President James Buchanan to remove their governor, Brigham Young. That year Mormons massacred a wagon train of 120 Protestant men, women, and children in Mountain Meadows, Utah, an offense that illustrated for all the violence that was imbedded in relations between Mormons and non-Mormons. Young was removed as governor the following year. Tensions between Mormons and non-Mormons remained strong,

and anti-Mormon bias continued to surface in various ways, including in the 2008 Republican presidential primary, when polls indicated that many would not vote for candidate Mitt Romney because he was a Mormon.

Catholic emigration from Ireland surged in the 1840s because blight on the potato crop destroyed the rural Irish food base, leading to over a million deaths by famine. Those who arrived in American ports tended to stay there, building neighborhoods, gaining local power, and drawing attention to themselves because of their rapidly increasing numbers. By that time Catholics had been a part of the nation's religious landscape for two hundred years, however, and immigration basically served to heighten anxieties between Catholics and Protestants rather than generate new kinds of issues. In Boston in the 1830s differences already were breaking into violence. A war of words and the emergence of an incendiary exposé literature that pictured convent life as a species of slavery led to the burning of the Charlestown convent by a Protestant mob in 1834. More serious were the pitched battles that broke out in Philadelphia in the spring and summer of 1844. Protestants feared that Catholics were organizing to take the Bible out of the public school curriculum, and they worried as well that Catholics, who were becoming more engaged in building parochial schools, were part of a conspiracy, headquartered in Rome, to overthrow the American government and with it the informal Protestant establishment. Early in May a mob in the Catholic Kensington neighborhood set fire to St. Michael's and St. Augustine's churches, destroying them, along with many Catholic residences. In July the Native American Party, an organization that resisted immigration, Catholics, Jews, and others, scheduled a parade. Fearing that the parade was a pretense for further mob violence, Catholics persuaded the sheriff and governor to post soldiers to protect the church of St. Philip Neri. A riot involving thousands ensued, and the militia was successful in defending the church with cannon fire. The mob for their part responded by taking a cannon from the wharf and bringing it to the church, and a full-pitched battle—with firearms, cannons, and hand weapons—left many dead. Dozens of Catholics, and some Protestants, died again in 1870, in another instance of massed forces in battle, in the New York City Orange Day riot. Religious violence in the matter of Catholic differences with Protestants—just like the case with Mormons and their opponents—was not merely a matter of isolated instances of assaults on individuals in drinking establishments or altercations between small groups in alleyways.

The violence was performed on a large scale, furnished in regular military weaponry, and deadly in its outcomes. From Governor Boggs's "order of extermination" to the cannon fire traded in Philadelphia, religious violence emerged from hatreds deeply engraved on all the parties involved.

Violence against Catholics was fueled by Protestant paranoia that Catholics in the United States operated on secret orders from Rome to destroy the legacy of the Reformation in America and to establish a theocracy ruled by the pope. The Catholic "secret" confession of sins to a priest was but one illustration offered by Protestant critics of the underhanded and conspiratorial ways of Catholics. Catholics, for their part, were not helped by a Roman leadership that declared democracy to be a modern error—along with separation of church and state—and claimed that the pope was infallible. Such doctrines appeared to non-Catholics as evidence of Catholic antirationalism, fanaticism, and willingness to be led like sheep, manipulated and deceived by a corrupt European priestcraft. The American Protective Association (APA), founded in Iowa in 1887 at a time when Catholic immigration again was surging, advocated the removal of Catholics from public office and from teaching positions in public schools. Members were initiated with a pledge that obliged them to use their influence power to strike the "shackles and chains of blind obedience" to the Roman Catholic Church from the consciences of Catholics in order to "retard and break down the power of the Pope." The APA spread fear of Catholicism in various ways, and especially through circulation of phony Catholic documents, such as a papal letter urging Americans to rise up and exterminate Protestants on the feast of St. Ignatius in December 1893.

Violence against Native Americans remained a problem throughout the nineteenth century. The forced relocation to reservations tore Indians from sacred lands and geographically coded traditions. Once settled onto reservations, Indians were subjected to the judgment of commissioners who often took a dim view of Indian religious rituals. The Sun Dance among the Plains Indians was made an offense in the 1880s and 1890s. Other dances were banned as well. Federal overseers greatly delimited the roles of medicine men and women, including, in some places, prohibiting the office of "medicine man" itself. Indian children were separated from their parents and enrolled in mission schools, which were run by the various denominations, both Catholic and Protestant. The practice of Indian religious traditions and languages—which were the central conveyors and sustaining structures of

tradition—was prohibited, replaced by Christian ritual and catechesis. Richard Henry Pratt, a military officer who took an interest in Indian education, pointedly explained the approach to an audience in 1882: “Kill the Indian in him, and save the man.” Newspapers, magazines, and politicians continued to call for campaigns against Indians, invoking Amalek imagery and declaring the need to “exterminate” the Indian. The motto Civilization or Extermination animated such writing. It was grounded in a view of the requirement that Indians become Christian in order to be civilized and at the same time represented skepticism about the possibility of converting the Indian, an opinion often voiced in the nineteenth century. If it were found, wrote H. C. Cushing in 1880, that it was impossible to “civilize” Indians, logic required that they be “exterminated.” Such statements inflamed hatred and offered rhetorical justification for genocide, and kept observers focused on religious developments with Indian communities. When Indians began performing the Ghost Dance, a religious ritual with political overtones, in the 1880s, many took notice, fearing its potential to revitalize Indian religion and strengthen resistance to federal agendas of containment and control. On the Sioux reservation in South Dakota, Chief Sitting Bull was arrested shortly before Christmas 1890 for failing to curtail the Ghost Dance on the reservation. Two weeks later, in an atmosphere charged with mutual suspicions and fears, United States troops massacred over 150 Sioux, mostly women and children.

The Twentieth Century

The transition to the twentieth century took place in a religious landscape that was rapidly changing. There was more diversity due to immigration, significant geographical rearrangement of religious groups as a result of internal migration, and alterations in gender roles in religious life as in the rest of society. Such changes were met with retrenchments such as fundamentalism, the Men and Religion Forward Movement, and a “muscular” Protestant revivalism, among other developments. Of particular importance was the rebirth of the Ku Klux Klan. The Klan was founded in Tennessee after the Civil War and described by a federal grand jury in 1870 as a terrorist organization. Although it stumbled organizationally in the late nineteenth century, it reemerged in force after 1915. It was revived in Georgia and spread quickly throughout the South and Midwest, in both urban and rural areas, and especially in places where immigration of African Americans had changed traditional demographics. Best known for its campaign of terror against

blacks, it also was anti-Catholic and anti-Jew. The Klan was an expression of Protestantism, not a marginal movement but one, as Kelly J. Baker has written, that was in the mainstream of American religious life. Its membership included bankers, lawyers, doctors, political figures, and business and civic leaders alongside farmers, mechanics, factory workers, and laborers. The preoccupation of the Klan with racial and religious purity, and its far-reaching program of terror carried out in the name of Protestant Christianity, represented the extent to which religiously inspired hate rhetoric could foster violence.

The Klan’s deadly crusade against African Americans led to beatings, kidnappings, torture, and murder, all of which came to be represented in lynching, the “Southern rite of human sacrifice” (according to Donald Mathews), a performance steeped in Christian theological ideas. Not all victims of Klan violence were African Americans. The second coming of the Klan in 1915 in fact took place in Atlanta in the immediate wake of the mob lynching of a Jew, Leo Frank. Some of the members of the mob, who called themselves the Knights of Mary Phagan, after the girl Frank was accused of murdering, met several months later to form the new Klan. Imagined as a vast national organization, which in time it became, the Klan was relaunched under the leadership of Georgian Thomas Edward Watson, who conceived it as a defense of the “common man” and Christianity (that is, Protestantism) against African Americans, Catholics, Jews, and some other groups. The Klan established a reign of terror in many places throughout the United States, not only through lynching but also by burning houses of worship, desecrating cemeteries, assaulting and murdering clergy, and by other means all justified as defenses of the Christian gospel, as it was interpreted in the light of the burning crosses that became the Klan’s trademark. The Klan’s obsession with purity and its record of exterminating opponents embodied the spirit of a deeply ingrained Old Testament view of the world, one that foregrounded the lesson of the Amalekites. The Klan was also infused with a sense of its own victimization, however, in ways that suggested, ironically, parallels to narratives of the suffering of Jews in antiquity. A three-day battle between Klan members and young men from the University of Notre Dame, which took place in South Bend, Indiana, during a provocative Klan rally there in 1924, led to an increased litany of Klan protestations that it was the guardian of national Christian ideals and suffered persecution for its patriotism and active defense of Christianity.

Some Catholics, alongside Protestants, fashioned their own anti-Jewish agendas. Father Coughlin, later dubbed “the Father of Hate Radio,” commanded the radio airwaves during the Depression with his message of hope for the workman blended with strongly anti-Semitic rhetoric. Like the Klan, Coughlin pictured himself not as persecutor but as a victim, and he sought to explain his inflammatory speeches about Jews in language suggesting that large, impersonal historical forces, not human agency, were responsible for religious violence, stating matter-of-factly in 1938 that persecution of Christians “always begets persecution of the Jews.” His weekly sermons were tuned in by an estimated forty million listeners each week, many of whom were prepared to receive his message because of their previous exposure to anti-Jewish literature. Such literature included, most importantly, *Protocols of the Learned Elders of Zion*, a spurious Russian account of Jewish conspiracies to dominate the world. Translated into English, it was popularized in the 1920s by Coughlin’s Detroit-area counterpart Henry Ford, an Episcopalian and right-wing extremist who initially published it in his anti-Semitic newspaper, *The Dearborn Independent*. Long discredited as propaganda, *Protocols* nevertheless has been republished in the United States periodically since that time, most recently in the Arabic-language newspaper *The Arab Voice*, in New Jersey, which serialized it in 2002. That was three years after the 1999 “Summer of Hate,” as the Jewish Anti-Defamation League termed it, when, owing to a summer of increased anti-Semitic violence, the final annual tally of 1,532 religious hate crimes recorded by the FBI included 1,198 against Jews.

Members of Jehovah’s Witnesses, a religious group that emerged from Adventism in the nineteenth century and grew steadily in the twentieth century, were the object of violence for their doctrine of pacifism and their refusal after the 1930s to salute the flag. Their enemies believed that the Jehovah’s Witnesses conspired to establish a theocratic order in the United States and that they were “fanatics” and morally depraved. Subjected to mass arrests by the government for their refusal to perform military service, members of the church suffered ongoing harassment and assault throughout the country. During the 1940s, large mobs attacked congregations from rural Maine to Klamath Falls, Oregon, burning houses of worship and beating members. In such cases, as with many others involving additional religious groups, the violence was interwoven with a certain understanding of patriotism, and the complaints against the Jehovah’s Witnesses mingled suspicion of the religious practice per se with

disagreements about politics and the role of America as a “Christian” nation.

Suspicion of covert unpatriotic tendencies likewise was a factor in the internment of Japanese Americans in camps during the Second World War. The religious element played a role, however. Americans had been suspicious of Asians who practiced religions other than Christianity, and newspapers, especially on the West Coast, regularly published accounts critical of the religion of the Chinese joss houses; Christian Americans, outside of a small group of intellectuals, were deeply suspicious of Buddhism, many wondering if it was a religion at all. Violence against Chinese, which took place on a large scale throughout the West—California, Wyoming, and Washington being sites of particular importance—often took the form of vandalism against religious property and mob assaults. The state program of terror against Japanese Americans included the incarceration of Buddhist priests in Hawaii for the duration of the war. Some Americans believed that the intermingled Shinto/Buddhist traditions of many Japanese Americans still tied them to obedience to the Japanese emperor, who, in the context of state-sponsored Shinto, was an object of reverence for Japanese. Buddhist priests, as leaders of the religious community, accordingly were deemed a threat to national security.

With the relaxation of immigration restrictions in the 1960s and the subsequent increase of Asian immigrants, religions such as Hinduism, Sikhism, and Buddhism, among others, became more visible. As had been the case throughout American history, such visibility often led to a negative reaction within local communities. The success of the Unification Church, which was a blend of Christianity and the religious ideas of its Korean founder, Rev. Sun Myung Moon, brought it attention from parents who complained that the church was brainwashing their children who had joined it. A series of court cases in the 1970s revealed the degree to which Americans were opposed to the church, and to other religious groups that were associated with Asian leaders or traditions. They also evidenced the extent to which some would go to “rescue” family members (through kidnapping and forced “deprogramming”) who belonged to such groups. Some Americans came to understand all religions of Asian background as similarly corrupt in their recruitment of members and unpatriotic in their refusal to abide by a patriotism that was interwoven with a traditional Christianity.

The Moonies, as they were called, were among the most visible of twentieth-century new religious movements

(NRMs) that drew extreme criticism and suffered violence. Some other NRMs that have been terrorized, either by the state or other opponents, are known because of their predicaments ending in bloodshed. The Branch Davidians, an offshoot of the Seventh-day Adventist denomination who organized themselves as a community within a protected compound in Waco, Texas, were attacked by agents from the Bureau of Alcohol, Tobacco, and Firearms in April 1993. The agents, acting on flawed reports of abuse of children in the compound (an accusation routinely leveled against nonmainstream religious groups since the early nineteenth century) and under increasing pressure from the federal government and local officials who misunderstood the Davidian religion, committed to a high-profile raid rather than an arrest of the group's leader, David Koresh. They assaulted the main building with tanks, set it afire, and burned to death over seventy men, women, and children. The American anti-cult movement (ACM), an informal coalition of self-appointed "cult experts," defenders of conservative Christianity, and officials concerned about politically subversive organizations, framed the tragedy as the consequence of religious deviancy and of political recklessness on the part of the Branch Davidians. Emboldened by the decisive action of the government, they gained a louder voice in commenting on other nontraditional religious groups, and in some cases succeeded in precipitating action against them. Such was the case again in Eldorado, Texas, in 2004, when Texas Rangers raided the community of the Fundamentalist Church of Jesus Christ of Latter-day Saints, acting on reports of a since-discredited informer about abuse but also on solid intelligence about underage marriages. They removed more than four hundred children from their parents and detained them for two months in a makeshift shelter, until the Texas Supreme Court ruled that the removal was unwarranted.

The Twenty-First Century

Violence against Muslims both before and after September 11, 2001, was deeply interwoven with political concerns. Terror against Muslims surged immediately after 9/11, and it has been sustained in the years since. The wars in Iraq and Afghanistan, alongside ongoing global terrorism by groups claiming Islamic affiliation, led to an increase in the number of Americans who came to associate Islam itself with violence. Complicating the problem is the fact that in the years leading up to 9/11, the radical Christian right began to assert that Christianity in America was under attack internally by

Americans who had drifted from a grand Protestant vision of national destiny and had embraced religious and cultural diversity. Such persons, said conservatives, had lost their moral compass and threatened to lead America from its historic moral foundations. The religious right—who, ironically, were the ideological descendants of the nineteenth-century nativist and religious purity advocates who frequently led the campaigns against other religious groups—complained loudly about their victimization. Confusing separation of church and state with religious persecution, they lamented court orders keeping the Ten Commandments out of an Alabama courthouse and the legal defeat of a creationist curriculum in Pennsylvania. At the same time they pointed to extremist Islamic communities in Asia and elsewhere as examples of what the United States could become if conservative Christianity were not vigorously defended and promoted. Their campaign against 2008 presidential candidate Barack Obama included frequent assertions that he was in fact a Muslim in disguise, part of a dedicated Muslim global machinery that was on the verge of taking over the nation and the world. International concerns about Muslims accordingly were joined with anxieties about cultural processes internal to the United States to fuel a growing fear of Muslims, and to authorize opposition to them, in a global arena and in the domestic one.

Religion thrives on deep feelings and especially volatile ones that can be brought to the surface in religious practice. In monotheistic traditions, as well as some others, fear and terror are central components of religious life, and hatred often emerges in connection with them. Religion in America is emotional religion, and the violence and terror in American religion emerge prominently from that core of feeling.

Visual Culture

Visual culture categorizes a wide array of objects and their study, including paintings and Web sites, ritual movement and furniture arrangement, architectural motif and graphic design. In the study of religion, visual culture is one species of the genus of material culture, often with an emphasis on the study of images and icons within explicitly religious contexts such as worship sanctuaries or home altars. If the category of *material culture* encompasses religious belief and practice, then visual culture tells us how it looks, and to whom and to what theological, experiential, and cultural effect. Yet increasingly visual cultures of religion incorporate more ordinary locations and less obviously sacred objects, including tourist tchotchkes, outsider art, and billboard advertisements. As the documentary evidence for visual culture expands, so do the strategies of studying it. Whereas once studies in visual arts may have focused solely on

iconological readings of individual paintings or biographical interpretations of an artist's craft, newer work seeks to account for social reception, commercialism, and the effects of pluralism on the construction, distribution, and identification of visual medium. Although many of the examples discussed here focus on the images and objects of visual culture, the study of visual culture is, at its best, an investigation into the political, economic, domestic, and institutional interface between practitioners and visual technology.

Visual Culture's Relationship with Art History

To distinguish visual cultures from other aspects of material culture, the investigator finds materials and impressions acquired through sight. What is visualized produces mental images of forms that may be materially manifest or virtually perceived. When one thinks about the visual, then, one must think simultaneously of the object designated by sight, but also the image constructed from that sight. The images produced by such observance are the optical counterparts of objects produced by an optical device, and include everything from imitations in solid forms (such as a statues), a likeness of an object (as in a photograph), or a picture produced on an electronic display (a television or computer screen). Visual representations vary in their imitative approximations of their object, from those that pursue an exact, a tangible, or an illusory likeness. This is how one comes to interpret visual representations as resemblances, incarnations, or apparitions, all of which correlate to discussions within religious cultures of devotional icons and spirit figures manifesting incremental forms of divine power.

This description of the visual emphasizes the singular image, be it an apparitional appearance or a statue of the Virgin Mary. This imitates practices of art history, in which an image is set apart as the object to be studied, with other graphical objects or sets of objects considered lower forms of scrutiny. Hence, the divide between so-called high art and low art (the latter often described as kitsch) schematizing much scholarship. Martin Berger has called this the study of privileged objects in which each work is enshrined as a "rare and singular artifact" possessing its own form of sacredness by the sheer fact of its rarity (2005, p. 15). To emphasize singularity is to tempt implicit hierarchies of quality, lines that may decide that some works, such as the frescoes of Michelangelo, are worthy of close readings, whereas others, such as the murals of Catholic children, are not. In her study of mid-twentieth-century prescriptions for church décor, Sally Promey shows how religious leaders have reified such

aesthetic dichotomies. During the years following World War II, self-described modern Protestants sought to assign a certain aesthetic discernment to their parishioners. They recommended modernist abstraction over what they described as sentimental images, such as Warner Sallman's *Head of Christ* (1940), because abstraction was understood as an "authentic art" that would remodel the modern church in a more masculine style. Just as the United States battled godless communists abroad, leading churchmen and Protestant artists prescribed certain aesthetic forms that would entice so-called real men to the pews of these churches. Developments in art history intersect here with shifts in religious culture, in that the desire to repopulate the church in a time of national crisis led to idealized notions of singular works of artistic production.

Mimicking art history, early studies of the visual arts within religious studies focused on formalist readings of paintings, printmaking, photography, drawings, and sculpture. This descriptor of visual arts denotes those artifacts that occupied worship spaces. Visual arts also came to include works outside those sanctuaries (hanging instead in ostensibly secular art museums) showing religious content such as John Steuart Curry's *Baptism in Kansas*, a 1928 canvas that depicted a black-clad preacher providing a full immersion baptism to a long-haired woman in white. The latter subset of visual arts provided a profusion of scholarly material, including paintings of evangelical camp meetings to Works Progress Administration (WPA) photographs of rabbis teaching Jewish children.

The study of visual culture incorporates such materials, but acknowledges as well other images and objects not historically included in the canons of art history, objects that include everything from home furnishings to trading cards, advertisements and dollar bills, cemetery tombstones to shirt buttons, maps and astrological charts. Visual culture frames a wider swath, incorporating both broader visual pictures and a more diverse range of objects. Included in the survey of visual culture might be topographical vistas, urban cityscapes, and exhibition halls, as well as furniture, table settings, floral arrangements, costumes, and personal accessories. This is to broaden not only the scope of the visual (from a single mountain to a mountain range, for example) but also its culture, including but not limited to its geographic, ethnic, gender, aesthetic, historical, sociological, and economic settings. Considerations of locality and embodied performance bear weighty consequence in the study of religion, because much of religious ideation focuses on descriptions of proper

mode and method, teaching practitioners what is sacred and what is not, or what are appropriate markings and what are iconoclastic acts. Pulling together the proper elements of a Passover seder in Jewish traditions, or the appropriate layout of a Hindu shrine, or the right decorations for an Islamic mosque all involve elements of religious visual literacy in addition to requiring knowledge of ritual codes, local custom, and theological imperatives.

Every religious culture has a visual culture, some of which is ordered by traditional expectation, some constructed by regional resources, and some mandated by interpretations of scriptural law. For example, the author of Genesis 1:27 wrote that God created man in his own image, a phrasing that has produced dramatically divergent ideas among sects and denominations, both Jewish and Christian, about how humans appear relative to their chosen divinity. Language of the visual contributes to multiple prohibitions of religious representation, including traditions within Islam that prohibit images depicting the Prophet Muhammad. Likewise, the sparse formalism of Shaker dress, home décor, and personal drawings represent their belief in the value of mystical experience, godly labor, economical thrift, and communal living, as well as their rejection of excess ornamentation as a sign of worldliness. To study either Muslims in America or Shakers in America through visual culture would necessitate pursuing the encapsulations of a singular religious decoration or design (such as a head scarf worn by a member of the Nation of Islam or an oblong Shaker box) as well as the longer histories and cultures, aesthetic and theological, that produced them and were informed by them.

Icons of Visual Culture

Even as American religious studies turned toward cultural studies of the visual, the common lexicon continues to apply categories of religion and art history in an undisciplined vernacular. For instance, the word *icon* seems to categorize a wide variety of objects, products, and people within the mediations of modernity. Traditionally, an icon has referred to a conventional religious image painted on a small wooden panel and used in some Christian devotions, especially Eastern traditions. From such a peculiarly Christian context, the category of icon gained comparative utility to define other pictorial representations of figures in indigenous and institutionalized religions. This use of Christian vocabulary as the comparative standard for other religious objects, visual and otherwise, is not unusual for religious studies or the history of art. Because much of Western art rotated around

John Steuart Curry's *Baptism in Kansas* (1928) is an example of visual art with religious subject matter appearing outside of a strictly religious context, hanging instead in ostensibly "secular" art museums.

explicitly religious subjects, studying the visual culture of religion rests on a vocabulary with a predominantly Christian idiom. Yet this initial leap of noncontextual application inaugurates a process by which *icon* becomes a word so variously applied, in so many traditions and locations, that its classification seems potentially bankrupt.

Another way to view the problem, however, is to consider the ways words like *icon*, like other exported visual categories of religion such as *shrine* or *amulet*, as they travel hither and yon carry new definitions and invitations to research religious phenomenology. To continue the example of the icon, then, is to find that it was over the course of the twentieth century used in contexts that were not obviously religious. Such an icon could be an emblem, such as "the

Chrysler Building is an icon of New York City," or an emblematic individual, such as "Judy Garland is a gay icon." This application of the word *icon* suggested that whatever or whoever was labeled iconic had a symbolic potency akin to a religious icon. A Christian may, for example, look on a painted icon that represents St. Mary of Egypt and meditate on the power of repentance, viewing the representation of an unkempt and starving older woman with a sense of her hagiography and the narrative of faith that explains her significance and placed her on that wooden panel. A Christian who possesses that icon might place it prominently in the home and pass by it regularly, might pray before it occasionally, or might keep it out of sight for years on end. But the icon's visual purpose is as ritual reminder and holy

remembrance, meaningful within layers of theology, ritual, and institutional process that put that saint on that wooden board for that believer's witness.

A commercial icon—be it a celebrity or a building or a product—complicates this relationship, begging us to ask what are the practices of visualization that surround, for example, entertainer Judy Garland (1922–1969). A study of the iconicity of Garland would necessarily include simultaneously a study of the content of her productions (albums and films), the consumption practices of her audiences (Broadway, film, and gay), and the multiple histories (Hollywood, vocal, biographical, and queer) in which her story is knit as emblematic. A scholar might then be able to discern what meanings (theological, moral, or gendered) could be discerned from a visual culture of her gingham dress and ruby-slipper costume from *The Wizard of Oz* (1939) or the posters for her live concert *Judy at Carnegie Hall* (1961), both of which have become, within several communities, iconic.

Some historians might argue that this icon represents a plural society seeking unifying emblems. In such a social context, the celebrity stands in as an ecumenical divine, inviting diverse people to listen to their music and dance en masse, to quote their famous film quips like lines from a scripture, or track their personal lives as morality plays. Within the ranks of the visual, the rarified role of the modern artist (such as Pablo Picasso, Jackson Pollock, or Andy Warhol) partially depended on his or her image as such an agnostic icon, liberated from the restrictions of any ties, denominational or institutional. Modern art too contained these conversions of iconicity from strictly religious to something more ambiguous. Thus Marcel Duchamp's installation of a urinal in an art gallery under the title *Fountain* (1917) cannot be understood apart from the kinds of Western sculpture it rebuked. When contemporaneous photographer Alfred Stieglitz remarked that the found-object *Fountain* looked like a Buddha, he was, as James Elkins has observed, naming one way *Fountain* might be reinterpreted into fine-art meanings by making its profane actuality (it is where men urinate) a commentary on sculptural traditions that include pietas. The *Fountain* looked like a Buddha because it was, in its exemplification in a gallery, set apart, treated ritually, and understood universally. Duchamp's urinal was, in this sense of how it was treated and where it appeared, a likeness of a religious icon.

Functions of Visual Culture in Religion

Much of the literature on visual culture emphasizes that even the categorization of visual culture indicates the

profusion of options, of sects, and of the visual itself in the modern period. Although one could, with enough evidence, describe a visual culture of Byzantium, it seems inconceivable to narrate any part of modern history without an emphasis on visualizing in the age of mechanical reproduction. "Visual culture seeks to find ways to work within this new (virtual) reality to find the points of resistance in the crisis of information and visual overload in everyday life," explains Nicholas Mirzoeff (1998, p. 8). Within this overload, Sally Promey and David Morgan have created four subcategories of visual cultures of religion, emphasizing just what those objects *do*. First, they identify images that communicate ritually between human and divine realms, such as intercessory prayer at a shrine, or tools for divination. Second, some artifacts within religious cultures establish a social basis of communion by consolidating allegiances. Illustrations in a nineteenth-century schoolbook might foster a national Protestant identity, or the National Shrine of the Immaculate Conception in Washington, D.C., might shape Catholic identity in America. Third, Promey and Morgan turn to those shrines and memorials that commemorate experiences, inspiring not only ritual acts of visual culture, like mementos mori left at the Vietnam War Memorial on the National Mall, but also create and organize memory, as in a genealogical chart maintained in the family Bible. Finally, images within religious visual cultures may personalize spiritual experience, as in the case of Tarot card readings or fortune-telling practices within Vodou (voodoo). These four subcategories of visual culture within religions suggest the manifold ways images and objects function in the ritual and theological imagination of the users, observers, and authorities.

In space remaining, locations of such communicating and commemorating materials are observed. One might subdivide the study of visual culture into the religious work that the visual object does, as Promey and Morgan do, or the genres of object visualized, such as food, clothing, buildings, and art. Emphasizing instead generic locales of production, dissemination, and display of visual culture, however, allows us to consider the concentrated patterns of visual culture. Identifying venues in which religious artifacts are encountered (such as sanctuaries, homes, museums, streets, and stores) tracks the historiography of visual culture in American religion—beginning with the most traditional site of visual cultural study, sanctioned bodies of communal worship, and concluding with the most nontraditional, the store. Such examples will develop a sense of the organizational,

material, and social problems that create visual cultures of religion, not as singular artifacts, but instead as multifaceted sensorial localities. Rather than emphasize visual culture as a certain thing or as an overarching denominational aesthetic, this structure will approach visual culture as a process of religious encounter. In any given practitioner's life, he or she might have visits or spiritual moments within every arena, seeing processions in streets, meditating at a Zen center, and visiting the quiet of a museum.

Such practitioners may move from place to place also carrying their own visual culture, demonstrating that no location is discrete and no object singularly located. Clothing, for instance, moves from place to place. In an article on sumptuary laws in the early American colonies, Leigh Eric Schmidt (1989) explains that clothes could signal religious occupation, as well as indicate gender and family roles often prescribed by churches. From clothes intended for the Sabbath ("Sunday best") to baptismal gowns, mourning dress to wedding garb, items of clothing had assigned ritual purpose. Clothing and accessories also had doctrinal significance. Body coverage, ornamentation, and clothing colors would indicate the wearer's relationship to ideas of modesty, sin, and perfection. Hats and other accoutrements distinguished many religious groups in subsequent centuries, allowing the viewer to know quickly whether someone was a Hindu or an Orthodox Jew. Singular items of clothing, like the Quaker bonnet, might carry the image of an entire denomination in its singular profile. For some, religious wardrobe also maintained symbolic ties to alternative nationalities or identities. The Cherubim and Seraphim Church (C&S), an independent church founded in 1925 in Nigeria, is best known for its white garments, fashioned to resemble angelic beings. No matter where you are, from Owo, Nigeria, to Chicago, Illinois, a member of the C&S church may be discerned by that uniform, which has prescribed coloration, stitching, and draping (Renne 2009). Clothes supersede location, communicating religious identity and sanctifying the wearers wherever they move.

Like clothing, periodicals cannot be cordoned to single site. They travel in circuits supplying messages beyond the author's pen to whoever may find their pages. In the nineteenth century, Bret Harte's *Overland Monthly* translated the practices of new immigrants into recognizable narrative conventions (Maffly-Kipp 2005). Among Harte's correspondents was the Reverend Augustus Ward Loomis, a veteran missionary to China who took over Presbyterian mission work in San Francisco in 1865. Because of Loomis's reports,

more than ten thousand subscribers were introduced to Chinese temples, holidays, proverbs, and ceremonies. Just as Loomis sought to explain the Chinese Other to neighbor merchants, miners, and ranchers, Catholic periodicals such as *The United States Catholic Miscellany* and *Illustrated Catholic American* sought to translate their devotional lives to the nativists who surrounded them. By explaining Catholic rituals through the lens of the Enlightenment, and casting them alongside icons of the American Revolution like the eagle and the Declaration of Independence, Catholic authors tried to prove the inextricable relationship between being a good Catholic and being a good American. In recent years, ArtScroll Publications, an Orthodox Jewish publishing house, has offered an independent source for pamphlets purporting to help Jews recuperate an "authentic" religious tradition (Stolow 2007). These Bible commentaries, cookbooks, and ritual programs attracted the attention of Jewish leaders who worry that the interpretations offered by ArtScroll represent a fundamentalist perspective. The pervasive mobility of print culture can therefore provide incitement to curiosity, translations of peculiarity, and provocation to controversy if for no other reason than they appear more ubiquitous, casually in your mailbox or local store. The appearance of these periodicals, then, is provocative twice over—by their look (graphic design, photos, content) and by their saturating arrival.

Worship Spaces

Worship spaces are those areas designated for communal or individual ritual experience. Within the established scope of that space, the individual believer may feel insignificant or empowered or ensconced by the structures of that space. Different spaces will encourage different reception through their visual conveyances. "What happens in space lends a miraculous quality to thought, which becomes incarnate by means of a *design* in both senses of the word," writes Henri Lefebvre. "The design serves as a mediator—itsself of great fidelity—between mental activity (invention) and social activity (realization); and it is deployed in space" (1991, pp. 27–28). The enormity of a Gothic Catholic cathedral may remind the believers of their relative insignificance in the divine order. The ornate decorations of a Mormon temple may encourage ritual participants to feel the splendor of their faith. The clean lines of a bamboo floor in a meditation center might connect the contemplative to a more ascetic sensibility. Affects are more complex than this, because the adherent is not a blank canvas, nor is the sacred space an

unmitigated construction to which they arrive. Space is never empty, and the task of visual culture has been, in part, to repopulate space with, as Irit Rogoff has written, “all the obstacles and all the unknown images, which the illusion of transparency evacuated from it” (Mirzoeff 1998, p. 22).

One of the ways scholars have done such repopulation has been through the ways spaces are constructed to be sacred not only by their design, but also by the performances of sacralization that occur. One’s participation in deliberate ritual activity is what often occasions the transition from experiencing a place as a *topos*, a mere location, into a *choro*, a place that carries energy and power. A McDonald’s fast food restaurant is just a McDonald’s, explains Belden C. Lane, until you’ve had a life-changing conversation at one (2001, p. 54). Then it becomes more than a space, but instead a site of commemorative significance. In cultural studies of religion, such a description is unsatisfying; a sacred place is better and most readily defined as a site over which conflicting parties disagree about ritual activity. The study of sacred space is in this rendition not a study of its phenomenological recasting into a *choro*, but a study of the construction of that visual landscape by human hands.

Churches and temples supply the most ready visual encapsulations of sacred space, but the natural world too invites response and ritual events. The Great Medicine Wheel, high in the Bighorn Mountains of Wyoming, is an 80-foot diameter circle of rocks with a cairn in the center and twenty-eight spokes radiating out to the rim. Used once by the Tewa and Navajo Indians, the wheel now attracts tourists and researchers, Native Americans from sixty-nine tribes, New Age enthusiasts, artists, and naturalists. Although each visitor may have a different experience of the wheel’s layout, context, and meaning, one scholar discerned that whatever “the primitive spell” of the terrain might be, it is “broken by the huge white sphere on the mountain’s crest nearby—an air-traffic control tower erected by the FAA” (Lane 2001, p. 59). This interpretation is not necessarily that of everyone who comes to that circle of rocks, because for many the air-traffic control tower could be incorporated into the ritual imagination of the site.

Cemeteries too present locations of contrast and possible contradiction. Sometimes in rural outposts, yet often mapped in the middle of densely populated areas, cemeteries can be carefully landscaped retreats, or large flat expanses of graves with commercial billboards hung just outside their gates. In the seventeenth century, visitors to burial grounds may have shared the space with rutting pigs digging up the

graves, as well as sheep and cattle pastured there. The rural cemetery movement of the nineteenth century was in part a rebuke to such chaos, suggesting a more hygienic layout as well as a desire to prescribe pastoral sentiment about the nature of death. As Colleen McDannell has written about Laurel Hill Cemetery in Philadelphia, the cemetery was designed to be a space apart, landscaped to establish designed lines of sight from and within its walls. Like a church, it would exude reverence through the designed denial of the profane outside its gates. In addition to these more traditional cemetery spaces, places such as Gettysburg Cemetery in Pennsylvania, for example, or Wounded Knee in South Dakota commemorate moments of violence, hallowing places that were once ostensibly secular (like a farmer’s field or an Indian reservation) for the loss of life on them.

Within the worship spaces of churches, the visual culture shifted and changed throughout history to meet new cultural expectations and denominational reforms. In the American Catholic Church, for example, the nineteenth century witnessed alterations in the church vestments that reflected ecclesiastical developments. Whereas vestments were once relatively plain, bolder, more visibly religious fabrics began to be used that were adorned with geometric motifs, stems, and woven designs of angels and humans. As the Catholic Church became more established, these more elaborately garnished silk vestments communicated key devotional Catholic tenets, including the elevated position of the priest and the centrality of the Eucharist. Likewise, in her effort to consolidate leadership in her growing Church of Christian Science, Mary Bakker Eddy attempted to underline the image of the mother through new stained glass installed in her Boston church. Although the Catholic vestments proved to encourage central dictates of the sect, these windows confused the followers of Eddy, leading some to believe it was she who was divine. In her attempts to correct the visual persuasion of that stained glass, Eddy diluted some of her organizational sway (Kilde 2005).

Shrines supply worship spaces that often function as satellites of larger institutional operations, even as they are founded on lay revelation and organization. El Santuario de Chimayo, New Mexico, marks a Tewa Indian site for healing ceremonies where a nineteenth-century Spanish peasant repeatedly found a crucifix in the ground. The sacred dirt from the hole where that reappearing crucifix was found inspired some miraculous healings. Combining Native American traditions and Iberian Catholic ideas of veneration and pilgrimage, the shrine sits in a cave-like room,

constructing its own respite from the beating sun outside, the temptations of sacrilege, and the universality of suffering. Many miles to the east, another shrine offers a similarly womb-like space, albeit within the conic roof of the Our Lady of Charity shrine. Built on Biscayne Bay near Little Havana, the enclave of the Cuban émigré community in Miami, the Our Lady of Charity shrine was dedicated in 1973 and has since become the sixth largest Catholic pilgrimage site in the United States. In his study of the shrine, Thomas Tweed (1997) used a variety of ethnographic materials to prove that Cubans seek out the shrine to link themselves spiritually to the Cuba they left behind, as Our Lady is the Patroness of Cuba. Entering the shrine, participating in ritual events, and honoring the shrine with offerings are ways these émigrés practice a diasporic nationalism. Dark in its interior, visitors who may be Cuban exiles metaphorically ensconce themselves in their national womb while standing on American soil. The design of the shrine creates the sensory experience of religion it prescribes.

Homes

The cemeteries, shrines, and church spaces described all have a degree of public access to them. Although some religious spaces, like temples within the Mormon church and meeting centers of the Church of Scientology, are off limits to non-members, the majority of worship spaces seek to entice more congregants or encourage more ritual behavior. Homes too may host religious rituals, but they are highly personalized rather than communal agreements with institutional or communitarian prescription. Even as elements of home visual culture may be laid out in a prescribed manner to show respect to sectarian principle or after a denominational fashion, homes ultimately reflect the biography, genealogy, and sociology of the practitioners occupying them. Décor including prints of religious figures, calendars of cyclical rites, needlepoint pillows with scriptural passages, hymnals near instruments and prayer books by bedsides represent in their selection and arrangement the believer's disposition toward theology, community, and practice. They suggest the continuity of the self over time by maintaining traces of the past in the living domicile, even as that continuity can be at any point interrupted, edited, or reconsidered.

If churches, synagogues, and temples have, historically, been the domain of men, homes were traditionally the terrain of women and children. Because women were often excluded from public devotional leadership, they developed pious authority at home through its design and lay

ceremonial management. Religious prints placed on the wall offer more than one message. They may promote a personal relationship with the image represented (with Jesus or Kali, for example). They may encourage viewers to think outside themselves, to remember their deity, a creedal position, or an important scriptural idea. Images too may be commemorative of a ritual event, or a significant moment in their life. Occasionally religious prints are attributed miraculous powers, or as key facets of a larger home shrine. Catholic theories of images, for example, maintained that the exemplary representation of the saint or other holy figure acts as an intermediary between the human and the divine realms. Finally, though, religious prints may become a part of the backdrop, blending into family portraits and other wall hangings as the scrim for the everyday occurrences.

Home shrines are also a concentrated site of visual culture, combining framed prints, small statuary, souvenirs, relics, remembrances, candles, and anything else that condenses the religious values of a family into a crafted location. Shrines, sometimes known as home altars, required effort and supply multiple levels of sensual experience. They are maintained; they are viewed; they are smelled; they are felt. They may be in the more public sitting rooms of the home or in private resting spaces, sequestered from visiting eyes. Shrine building capitalizes on traditions of collage and assemblage that deemphasize formal structures or prescriptive design, exemplifying instead the owners' stories, faithful emphases, and particular spiritual needs. Shrines are increasingly inspired works by Latino/a artists as they bring into the ostensibly secular space of the art gallery the sacred constructions of home devotions. The home altar then converts into another form of visual expression, an object for trade in the fine arts marketplace.

If religious prints and home altars present religious areas in the home, the home itself offers an image of piety in American culture. Aside from any denominational or sectarian particulars, the myth of an American Dream incorporated the home and its emblematic suburban owners as icons requisite for the completion of any individual American's heroic self-fashioning. Periodicals, television shows, and films promote the home as the necessary ritual space of personal care and social preparations. Jon Pahl has argued that the myth of the suburban home as a haven was enacted particularly through rituals of purity, control, competition, and display centered on super clean kitchens and pristinely manicured front lawns. "The parlor piety of women inside the home focused on purity," he explained, whereas "the

public piety of men related to the lawn was communicated in idioms of control and competition” (Laderman and León 2003, p. 588). Objects were needed to concoct this disciplined kitchen and unnaturally green expanse of grass, gadgets for mowing and baking, chemicals for cleansing and fertilizing. But most of all the family itself was needed, practicing pieties of labor, reproduction, and nuclear affections that make the image of the intact, smiling home a ceaseless tug against its lived realities of family tragedy, marital dissolution, and children’s travails. In this instance, the visual culture is as much a portrait of wellness in the American imagination as it is an actual series of objects or arrangements of icons.

Museums

The majority of museums were built without a relationship to a specific religious context. Museums divided into genre, with those bent on entertainment, such as P. T. Barnum’s American Museum, separated from those bent on education, like the Art Institute of Chicago. Even as they served purposes pleasurable and pedagogical, museums also became a sort of sanctuary, ordering culture into commensurable subsets and narrating social virtues through selected works. “The culture of enlightenment that produced museums in their current forms framed these institutions as quintessentially modern entities,” Sally Promey explains. “Emptied of contemporary ‘religious’ content, museums instead elevated and sacralized art and culture and traced civilizing trajectories” (2009, p. 19). The museum posited itself as a space of neutrality, wherein anyone of any creed or race might enter and imbibe the elected objects, images, and narrated experiences. In the absence of a long architectural tradition in America, museum designers quoted styles from a profusion of cultural, national, and decorative sources to construct a look that seemed simultaneously commanding and socially cohering.

The design of the Pennsylvania Academy of Fine Arts (1872–1876) indicates the amalgamated style that would dominate many urban exhibition venues built in the late nineteenth century. In addition to touches of Venetian Gothic and French Second Empire styles, the academy also incorporated strong evocations of Near Eastern architecture. Such details—brilliant coloration, a minaret tower, diamond-patterned wall coverings, and intricate decorative brickwork—inspired little criticism from contemporaneous observers, however, as its incorporation of Jewish and Islamic visual idiom seemed appropriate to Victorian

viewers who anticipated eclecticism as a natural extension of imperial accumulation. Called a temple of art by its 1870s promoters, the academy emerged in a moment that Neil Harris has identified as a key transition in the history of the visual arts, when the religious leader increasingly functioned as artistic spokesman (1982, pp. 307–09). Indeed, at the opening of the academy on April 22, 1876, liberal theologian William Henry Furness, father to the building’s main architect, Frank Furness, dedicated the structure with the words of Moses. The academy was sanctified by religious rites and suffused with a pastiche of religious symbols to construct a site specific and universal, inviting and elite.

Images inside the museum offered icons worthy of pilgrimage given their celebrated singularity, such as Picasso’s *Les Femmes d’Alger* or *Les Femmes d’Alger*. They also offered images that might press religious contemplation, mediation, or spiritual peace. Works such as William Inness’s *Christmas Eve* (1866) at the Montclair Art Museum or *The Pines and the Olives* (1873) at the gallery for American art at Phillips Academy in Massachusetts possibly offer all three. In *Christmas Eve*, the moon breaking through clouds makes visible a small figure of a man walking toward a nearly indistinguishable farm house. The overwhelming coloration, murky nighttime shadows, and subject matter could leave the viewer with a sense of melancholy and isolation. The precision of the moon’s placement, however, offers tranquil repose to the lonely scene, a sense that nature concocts its own equilibrium. *The Pines and the Olives* depicts a similar Inness subject orientation, as a small figure exists again in an uncanny natural landscape. Unlike *Christmas Eve*, *The Pines and the Olives* depicts a reddish dusk light as a white-robed, hooded monk retreats, lost in meditation. With a dark foreground of funeral pine trees and a retreating daytime sky, the painting conveys a religious mysticism typical of Inness’s works. Inness preferred to be known as the author of civilized landscapes even as he often captured natural settings. Asked about the goals of his art, Inness replied, “The true use of art is, first, to cultivate the artist’s own spiritual nature, and secondly, to enter as a fact in general civilization” (Werner, p. 17). A follower of mystic Emanuel Swedenborg, Inness might be studied as a religious painter, even as his paintings offer no obvious religious imagery. Echoing German Romanticism, and anticipating Surrealism, these Inness paintings express the powerful relationship between the individual, the environment, and the contemplative beyond.

Over the course of the twentieth century, the museum deconstructed and reconstructed itself. The lines between art

and science, the aesthetic and the anthropological became more difficult to draw, as the American Museum of Natural History in New York incorporated indigenous arts of Asia, and the Museum of Modern Art began to exhibit cultural artifacts like automobiles, home appliances, and utensils. As the museum began to show a wider variety of objects, so did traditions within mainstream painting and artistic production diversify what might be considered art. Even as fewer annunciations were being painted, the move to abstraction in art included a readily exposed affinity to the spiritual, beginning with Wassily Kandinsky's *Concerning the Spiritual in Art* (1912). Much later, the 1986 Los Angeles Museum of Art exhibition *The Spiritual in Art: Abstract Painting, 1890–1985* demonstrated definitively the associational ties between individual artists and movements including theosophy, spiritualism, Rosicrucianism, Taoism, and Zen Buddhism. Several abstract expressionists also claimed exposure to and evocation of American Indian arts in their work. Images of masks, abstracted animals, and other forms of pictographs enter into the visual idiom of the abstractionist to, as John Dillenberger has argued, fuse the primordial and the subconscious. Icons of religion were now surprising when encountered, often stirring controversy. Andres Serrano's *Piss Christ* (1988) was a glossy, five-foot high Cibachrome photograph of a crucifix submerged in urine. Shot with bright red in a murky yellow, this image won an award partly funded by the National Endowment for the Arts. After considerable protest from the American Family Association, a Christian organization, Congress told the NEA not to fund indecent or obscene art. Even as it was being dismissed as obscene, Serrano, son of a Cuban mother and a Honduran father, credited his Catholic upbringing for part of the inspiration for the work. The painting might be read as a response to the history of Christ in Western art, as a religious articulation by a religious man, or as an altar in the postmodern museum.

Streets

On the public streets of America, religion is everywhere: in the public art of murals, in parades like the Sikh Vaisakhi Day Parade in New York City, and in the exposure of the religiously accessorized and costumed body. If the museum is clean, ordered, and relatively quiet, the city street is dirty, chaotic, and boisterous. Indeed, the museum was built in part as a reply to urbanization's excesses. Strolling the street, one might see the skyline of church steeples next door to department stores, gas stations, or imperious marble museum structures. Scholars have noted how American church architecture

borrowed from a variety of styles, but most frequently from Neoclassical and Gothic Revival techniques. Popularized by the ecclesiological movement in the 1840s, this style predominated the dense northeastern cityscapes, determining "what a church should look like," no matter its denomination, over the next one hundred years (Williams 1999, p. 377). The Gothic style and the cathedral as iconic metaphor for Christian holiness worked themselves out in the decades before the twentieth-century triumph of the aniconic international style in Euro-American architectural ideology. No matter what the signature style of the specific church in question, the cityscape pressed comparisons of church amidst the emerging abundance of structural alternatives.

From the height of the grandest cathedral to the eye-level stroll on the street, religion may be tracked within the din of urbanity or the quiet of small town America. Religion in the streets might be, as Robert Orsi has explained, a mechanism of bodily control where even people in public space find themselves monitored by the gaze of their families, their fellow church goers, and their member churches. Through the rites of the annual fiesta of the Madonna of Mount Carmel along 115th Street in Harlem, for example, Orsi finds that dislocated residents of Italian Harlem cohere in a procession that reflects traditional, local, and changing elements of the participating body. Such processions will, by their public nature, be more raucous than what transpires within nearby churches. At any moment, a plane might scream overhead or a storm cloud may gather to darken the proceedings. In the religion of the streets, the public display of a rite or an idealized icon may be defaced by communitarian graffiti or interrupted by nativist acts of violence.

Religion in public space can therefore be threatening, critical, and controversial, as was the debate over the display of the figure of Muhammad in the north courtroom frieze of the U.S. Supreme Court. In February 1997 a coalition of sixteen Muslim groups petitioned the Supreme Court to remove the face from that figure. For those protesters, the representation of the Prophet's face was an instance of idol worship prohibited by their faith. For then Chief Justice William Rehnquist, the frieze was defensible because it represented Muhammad in a line of lawgivers, not as a prophet to a major world religion. To assuage the protesters but protect this act of public display, the Supreme Court subsequently distributed brochures that identified Muhammad as the prophet of Islam rather than its founder, adding this qualification: "The figure . . . is a well-intentioned attempt by the sculptor, Adolph Weinman, to honor Muhammad

and it bears no resemblance to Muhammad. Muslims generally have a strong aversion to sculptured or pictured representations of their Prophet” (Morgan and Promey 2001, p. 41). One of the ways to appease the controversies of public display, then, is to invoke the original intentions of the artist, to explain the potential conflict of the critical out group, and to make the secular neutrality of the public sphere a visual given of any governmental artifice.

Not all public displays are as easily resolved, as performances in the streets contest constantly the content of that public square in plural America. More often than not, street displays have relied on inclusion, excess, and the preservation of the suffering parties’ visual expression over and above an incorporation of that vernacular expression. Spontaneous memorials supply a strong instance of the latter, especially at the sites of tragic and traumatic death. Roadside memorials appear alongside the nation’s highways, and makeshift shrines are common at locations of catastrophic trauma, such as lower Manhattan after 9/11. Art historian Erika Doss recounts that after the school shooting in Littleton, Colorado, such a spontaneous memorial began to grow in a grassy knoll near the school’s parking lot. First, students just piled flowers, teddy bears, and school jerseys of their murdered classmates. Eventually, the objects left behind were less specifically connected to the lives of the deceased, and were instead testimonials of the mourning—condolence cards, personal letters and poems sealed inside plastic bags, and bed sheets inscribed with biblical passages. Craft objects (origami cranes), patriotic emblems (the American flag), and evocative religious materials (votive candles arranged around photos) testified to the many layers of reply that led to that area’s sanctification. During its two-week existence, tens of thousands of people wandered through, many leaving behind testimonies of grief, others merely tourists, others still buying soda and hotdogs from vendors around the site. Food vendors were not the only visual evidence of the public nature of a memorial in a commercial, suburban district; banners from area businesses and multinational corporations offered condolences, and dozens of television vans and satellite towers squatted as they reported the unfolding aftereffects of the tragedy. It was, as Andreas Huyssen would describe urbanity, a palimpsest of memory and cultural production.

Stores

All the spaces discussed include aspects of commercial economy. Although some narratives of American religion suggest that market forces arrived within religious culture to

eventually trump its persuasive sway, scholars increasingly insist on the interactivity of market culture and religious culture. From tabloids suggesting that Jesus was seen in Takoma Park, Maryland, to products offered to balm one’s tired soul, the overlapping of religion and capitalist sale is presented visually within stores, open-air vendors, and mail order catalogs. The Easter parade offers a knotty historical example of the commingling of commercialism and religious representation. From the 1880s until the 1950s, the Easter parade included elaborate floral decorations, new clothes, fancy millinery, chocolate bunnies, greetings cards, and other gifts. It served as a cultural rite of spring to match the Gilded Age that produced it, inviting holiday displays outside churches and in shop windows. The Easter parade down Fifth Avenue was in part a fashionable promenade meant to advertise new spring fashions, including elaborate millinery, as well as tour different churches and their floral decorations. Largely the production and display of feminine beauty, childish innocence, and pastel sentiments, the Easter parades encouraged market competitiveness among the Protestant denominations yet benefited dry-goods stores by centering of the store as an exhibition space and materials distributor for décor requisite to celebrate a Christian holiday.

Over the subsequent century, different formats for commercial behavior invoked religious events. Shopping malls frequently seem to have the dreamy, absurdist intensity of pagan festivals, where stores solicit and commodities enchant. As one study of American religions observed, “advertising and witnessing have become interchangeable” (Laderman and León 2003, p. 426). Whether it is actual Christian retailing ventures or just a Gap outlet, stores sell you not just on their product, but what their products can do to transform you. No example makes this more obviously apparent in the ranks of visual culture than the rites and locations of tourism. Tourism is propelled by pictures of a grander reality, be it photographs taken in front of the Liberty Bell or the geyser Old Faithful in Yellowstone Park. This picturing achieves new overt clarity at Disneyworld in Orlando, Florida, where signature Kodak triangles indicate where families ought to stop and take a scenic photo, ideally with the Kodak film and camera equipment also sold in the park. But such pictures are not limited to the cartoon fantasies of Walt Disney. Nearly every tourist destination encourages forms of visual portraiture, including pictures of historical reality (Old Sturbridge Village), of educated mourning (Holocaust museums), or of proper ritual transition (spring break, the honeymoon). Tourism sells us mental pictures that we might

actualize. Climactic in the American scene is Las Vegas, Nevada, where that hotbed of sin and family fun promotes notions of transgression, excess, and marital passage under the screaming neon, false facades, and verdant greenery within a vast ocean of desert. The visual culture of Las Vegas offers the real and surreal, ritual and chaos, sacred and profane of religious ideation in the United States.

Visual Culture: Painting, Sculpture, and Graphic Arts in Early America

Religious belief intersected with the visual and material culture of early Americans in formal and informal ways, in both public and private spaces. This discussion covers paintings and prints, gravestones, and a variety of artifacts that commonly displayed religious messages and images in early American public and domestic settings. Some of the images and objects discussed were used in religious ritual, others

made religious beliefs present in the activities of daily life. All of them reveal the pervasiveness of religious belief in early American visual culture. Although certain items tended to be made locally—needlework and inexpensive pottery, for instance—many objects with religious content were imported, thus reflecting the religious culture of the place of origin as well.

It is worth considering how we define visual culture of religion for early America. One sense would include images and objects that reflect and convey religious belief, those produced with the authority of an institution or religious tradition behind them, and to meet local religious needs and representing folk religious culture. We can also include visual performance, for instance, the visual aspects of a mass or worship service, or the choreography of a religious processional or festival. Finally, we can include ways of ordering the world, and this might be visible only in a certain spirit of craftsmanship, a material restraint or exuberance, or order and cleanliness. This discussion focuses on the first, most obvious category of visual culture but at times engages the other, broader meanings of the term.

Eastern Seaboard

Puritan New England, because of its Calvinist roots and consequent mistrust of religious images, did not produce certain kinds of religious art: religious painting and sculpture are most notably absent. The myth of the dour Puritan who thought art was frivolous is now largely debunked, yet there is truth in the notion that Puritan arts were restrained, and that the fabled plain style favored utility over ornament. Overt religious imagery was minimal in religious settings, though found frequently in books and prints of religious education. Some rituals, such as baptism, requiring only a simple bowl of water, and marriage, commonly took place in the home. Puritan visual and material culture centered on the practical, the subdued and contemplative (*memento mori*, that is, images and objects that served as reminders of mortality), and the domestic.

The visual culture of religion in the Anglican South was restrained but refined, reflecting strong ties to England. In Anglican church interiors one could find Baroque painting of cherubs and decorative detail that emphasized the “beauty of holiness,” but overt iconic expressions of religious beliefs among Protestants, as in New England, were rare. In the slave communities, decorative objects displayed the influence of African belief—for instance the persistence of the custom of decorating graves with pottery, shells, and

bottles to free the spirit of the dead and hold off undesirable specters. By the end of the eighteenth century, the blending of African and Christian visual traditions was evident in worship practices; more extensive blended artistic traditions developed in the nineteenth century.

The inhabitants of the middle colonies, with their continental religious traditions, tended to have a richer and more visible visual culture of religion. German and Dutch immigrants, especially, continued the artistic practices of their native lands, where Protestants were less suspicious of religious pictures and predisposed to incorporate illustrations of biblical stories and religious mottoes on a wide variety of domestic artifacts. Catholics in the middle colonies, though far from the majority, were comfortable with a lively and boldly graphic tradition of religious art.

Prints

Paintings were rare in early America, but prints were common. By the eighteenth century, relatively inexpensive European prints were widely available in America, and many of them illustrated religious stories or themes. Because prints were ephemeral, generally not framed but tacked to interior walls, it is difficult to quantify their use. They do appear commonly in household inventories, however, indicating that they were a widespread form of visual culture. A person who owned no prints would certainly have at least seen them on the walls of taverns and other public spaces.

Prints that treated religious themes included popular engravings of portraits of well-known divines such as Jonathan Edwards or the evangelist George Whitefield, illustrated paeans to the lives of prominent, pious citizens, and political broadsides that used religious imagery to intensify the emotional reaction of viewers. One such image, a 1768 broadside by Paul Revere, shows a group of resolute patriots being prodded by the devil and his minions, bravely facing the yawning maw of hell rather than compromise their political principles.

Prints with specific religious content were also available. In the 1775 catalogue of the British printer and engraver Sayer and Bennet, for instance, one could find copperplate prints or mezzotints of many religious scenes, by and large copied from paintings: Barbieri's *The Holy Family*; *A Crucifix & A Dead Christ* by Lourie; a variety of small prints of scenes from the Old Testament (*Adam and Eve*) or the life and passion of Christ (*Our Saviour Healing the Blind*), along with illustrations from the lives of the saints. The popularity of such prints increased tremendously in the nineteenth

century, but evidence suggests that the trend began before the Revolution.

Illustrated Books

Printed, illustrated books were a primary means of transmitting religious belief from generation to generation. American editions of illustrated Bibles do not begin to appear until after the Revolution, yet many previously published religious books incorporated images. The first illustrated book published by Europeans in colonial America was the *New-England Primer*, an elementary reader that went through hundreds of editions and sold at least three million copies between 1680 and 1830. The most important component of these books, the illustrated alphabet, emphasized religious and moral themes. In a 1727 Boston edition, A stands for Adam, “In Adam’s Fall/We Sinned All,” and B for Bible, “Thy Life to Mend/This Book Attend.” Other letters represent Judeo-Christian history, such as Q for Queen Esther, “Queen Esther comes in Royal State/To Save the JEWS from dismal Fate.” Primitive woodblock prints accompanied each letter, helping communicate doctrine.

A sizeable proportion of the books printed and owned in early America were religious titles, and their illustrations promoted a visual understanding of a Christian history and world view. Illustrated copies of John Bunyan’s popular *Pilgrim’s Progress*, for example, graphically depicted Christian as he traveled the demanding path of virtue. Other popular illustrated volumes included copies of emblem books, such as John Bunyan’s *Divine Emblems*, and sensational, religious-themed fiction, such as *The Prodigal Daughter* (c. 1750). The frontispiece to this edition shows a young girl, the formerly prodigal daughter, emerging from her coffin to the delight of the minister present after being in a death-like trance for several days, during which she had a vision of the Other World. Another illustration in the same volume shows the newly virtuous daughter at her dressing table, now immune to the entreaties of the dark, horned, fork-tailed devil who pursues her.

The first illustrated book published by Europeans in Colonial America was the *New-England Primer*, an elementary reader that went through hundreds of editions and sold at least three million copies between 1680 and 1830. The most important component of these books, the illustrated alphabet, emphasized religious and moral themes.

Painting

The few known religious paintings in New England and the South tend to be copies made from print sources by local artists. Scripture paintings were popular among the Germans in Pennsylvania and the Dutch in New York, but their overall impact in all the colonies was much slighter than that of religious-themed prints or illustrated books. The dominant form of painting in early America was portraiture. Hence the majority of important early American paintings with

religious content are portraits of ministers or significant members of religious groups. A portrait was a way of honoring important pastors and church leaders, and these might further be engraved and reproduced as popular prints.

Samuel King's 1770–1771 portrait of Ezra Stiles, pastor of the Second Congregational Church of Newport, Rhode Island, and later president of Yale College, shows not only the face of the Gentle Puritan, as he was known, but the tools of his trade. He wears the black robe and white Geneva bands of the Puritan minister and holds a book (probably a Bible) in his left hand and places his right hand over his heart. On the bookshelf behind him are scholarly books, including *Plato*, *Livy*, *Newton/Prin*, and collections of the works of Mather, Hooker, and other Puritan divines. Behind Stiles, King painted what he described as an “Emblem of the Universe or Intellectual World” with the Hebrew word *Yahweh* at the center. Stiles recorded in his diary that he was pleased with the painting, and that “These Emblems are more descriptive of my Mind, than the Effigies of my Face.” Although early American portrait painters did tend to draw with remarkable individuality the details of the sitter's face, art historians have noticed an inordinate attention to material details that tell of the sitter's character and profession.

Jewish and Anti-Semitic Images

Portraiture was important to early America's small Jewish community, particularly among prominent families desiring to assert their positions of community leadership. Within Jewish households, faith would have been visibly evident in ceremonial objects, spatial practices, and rituals such as Shabbat and the maintenance of dietary laws, but outside the home their identity was less evident. Unlike later immigrations of eastern European ethnic Jews, these largely Sephardic communities of Newport, New York, Philadelphia, Savannah, and Charleston tended to blend in and even intermarry with Christians. A rare American portrait of a rabbi is a posthumous painting of Rabbi Haim Isaac Carigal (1782), who was a visitor to the colonies in 1773. Rev. Stiles himself commissioned the portrait from his painter Samuel King. Stiles took a great interest in the rabbi's visit and was impressed both by his erudition and his striking appearance, noting that he “was dressed in a red Garment with the usual Phylacteries and habiliments, the white silk Surplice: he wore a high brown furr [sic] Cap, had a long Beard.”

Among non-Jews, anti-Semitic attitudes were no doubt more prevalent than Stiles's respectful curiosity. Caricatures exaggerated the physical features of Jews, ridiculed their

dietary laws and other rituals, and placed them in opposition to Christianity. One such image, probably painted after the Revolution but based on an earlier print source, is Frederick Kemmelmeyer's oil on canvas painting “The Bloody Sentence of the Jews Against Jesus Christ, the Lord and Savior of the World.” Kemmelmeyer was an itinerant artist working in the upper South after the Revolution and painted this canvas in Baltimore sometime between 1788 and 1802. The painting shows in narrative fashion all the stages of Jesus' trial by the Jewish judges and Pontius Pilate as depicted in apocryphal texts such as *The Gospel of Nicodemus*. In a marble columned chamber with a checkered floor, a draped Christ, the Man of Sorrows, sits before Pilate, his illuminated, thorn-crowned head bowed. Behind him the Jewish judges engage in animated conversation. A mob peers in the window behind Jesus, exclaiming, “If you let this man go you are no friend to Cesar. Crucifie him, Crucifie him. Let his blood be upon us and our children.” Visual imagery was unfortunately a common way to mock those with differing religious beliefs: Catholics and unfamiliar or threatening religious movements and sects were also the target of caricature.

The rich ritual life and associated material culture of American Jews was largely hidden from non-Jewish eyes, and the remaining material evidence is slim. Scholars have looked at the work of prominent New York silversmith Myer Myers for evidence of his religious identity in his work. Myers created magnificent Jewish ritual objects, such as the silver and brass Torah Finials he crafted for synagogues in Newport, New York, and Philadelphia. Yet he also made a set of three alms basins for the First Presbyterian Church in New York, and the majority of his commissions were domestic.

Domestic Objects

The ordinary domestic objects in American homes often displayed religious themes or reflected spiritual principles. More than any other object type, decorative needlework produced by girls and women tended to illustrate religious stories and beliefs. The process of needlework was itself associated with domestic virtue, something gained from hours of working patiently with needle and cloth, following the example of the biblical Dorcas. Mottoes on samplers reflected this emphasis on godly feminine virtue. In the early seventeenth century, Myles Standish's daughter Loara embroidered “Lord Guide My Heart that I may do thy will/And find my hands with such convenient skill/As will conduce to virtue void of shame/And I will give Glory to Thy name” on her work. Girls' samplers often include a strong statement of virtue, such

In Frederick Kemmelmeyer's oil on canvas painting "The Bloody Sentence of the Jews Against Jesus Christ, the Lord and Savior of the World," Jews were caricatured by exaggerating their physical features, ridiculing their dietary laws and rituals, and placing them in opposition to Christianity. *From the Collection of the Museum of Early Southern Decorative Arts, Old Salem Museum and Gardens.*

as the 1774 sampler of ten-year-old Esther Coggeshall in Newport, Rhode Island, on which she stitched, besides the alphabet and a decorative floral border, an image of Adam and Eve in Eden and the phrase, "Esther Coggeshall is my Name./ And so I Tread he [the] Clod [Earth]/And O that Every step I take/May Bring me Nearer God." Adam and Eve is a common visual trope on these samplers and pictures, although other more obscure subject matter is not uncommon. Some needlework samplers were entirely pictorial, such as Mary Williams' 1774 picture, now at the Smithsonian, titled "The Queen of Sheba Admiring the Wisdom of Solomon." This 22-by-18-inch petit point panel shows the meeting of Solomon and Sheba in vivid colors, in colonial attire, under a medieval tent. Delightful images such as this were joined by others that could be surprisingly unsentimental, such as the

circa 1776 image by Prudence Punderson now in Preston, Connecticut, of a dead "Judas Iscariot, Who betray'd his Lord and hang'd himself," lying beneath a tree to which the noose was still attached.

Most large decorative surfaces occasionally served as the site for a religious scene or verse—a quilt, the long side of a painted chest, or domestic pottery. A circa 1667 English earthenware jug in the collections of the Winterthur Museum bears the saying, "If God is for us, who can be against us?" and a late eighteenth-century brass trivet in the same collection exclaims, "Give your heart to God now." American iron founders often cast firebacks, iron tablets placed in the back of the hearth to protect the bricks, with biblical images; one such circa 1742 plate from Pennsylvania at the Bucks County Historical Society bears an elaborate

image of the Wedding at Cana, where Christ turned the water into wine. The proliferation of such biblical decoration was most common in the middle colonies, where Dutch and German immigrants were simply repeating the decorative traditions of their continental homelands. Apparently quite popular in the colonies were imported Dutch, tin-glazed earthenware fireplace tiles, hand painted with biblical scenes. Dutch factories produced these tiles from the late seventeenth through the eighteenth century, and they were very common in northern European countries, where they covered floor-to-ceiling open hearths. Many nonbiblical scenes were painted on these tiles as well. It is difficult to know how prevalent such tiles were in early America, but we do know that their use was not uncommon, and it is interesting to imagine a family sitting by the hearth, surrounded by bright images of Bible stories flickering in the firelight.

Gravestones

In the colonies of the eastern seaboard, the dominant if not the only form of religious sculpture was gravestone carving. These stones, surviving in large numbers, have been thoroughly studied, both from the craft perspective (identifying artists, shops, and carving methods) and for their symbolic dimension, as representatives of a Puritan visual language. Burying grounds typically sat in the center of communities, near the meeting house or church, and thus these sculptural images were an ever-present reminder of mortality and the Christian promise of a blessed afterlife for believers. As the archaeologist James Deetz demonstrated three decades ago, a chronology of the images decorating the upper edge of New England headstones reveals a progression from largely undecorated stones, to stones showing a winged death's head (or skull), to winged cherubs. Scholars have interpreted this evolution as evidence of softening ideas about death and judgment. In the period following the Revolution, the winged head gives way to sentimental, neoclassical imagery such as weeping willows and memorial urns. These gravestones represent the core iconography of Puritan art—symbols of mortality, death, and resurrection—that emphasize the critical importance of conversion.

Ephrata

The communal experiment at the Ephrata Cloister presaged the proliferation of better-known communities, such as the Shakers, in the decades following the Revolution and offers an interesting example of the production of religious art by such settlements. A small group of Pennsylvania German

celibate brothers and sisters established their separatist community in Ephrata in 1732. Membership peaked at several hundred in the following decade and then, because of internal conflict, declined precipitously; the last sister died in 1813. Ephrata's religious roots were radically pietistic, emphasizing individual revelation and intense devotion. The community established a disciplined life of ascetic spiritual practices and produced a remarkable, visionary visual and material culture. Concerned about material temptations, the brothers and sisters lived a spartan life in simple buildings with plain, whitewashed walls; they slept on narrow benches and distinguished themselves from the outside world by wearing plain, uniform garments. As did later communitarian groups, the Ephrata residents valued self-sufficiency, growing their own food and promoting domestic industries such as weaving and printing.

Scriptural study and singing were core disciplines of the community, and its printers and artists created beautifully illustrated hymnals and texts, illuminated in the European monastery tradition. This work is clearly related to the robust German vernacular tradition of *fraktur*, documents intricately adorned with ornamental writing and decoration that mark significant life events such as weddings. In Germany the images on *fraktur* were predominantly religious; in Pennsylvania the pictures were more often of flowers and birds, though religious themes persisted and the documents themselves marked sacramental events such as baptisms. Although the work of their hands is beautiful, the Ephrata sisters who laboriously produced these meticulously illuminated works did so as much for mortification of the flesh as for the value of the product. One image from a 1754 hymnal at the Winterthur Library depicts a large angel blowing a trumpet, surmounted by two angels flanking the Holy Ghost portrayed as a dove. Although some features of the Ephrata work are unique—such as their pale hues and the rigid discipline of the line drawing—it is closely connected with the German tradition as well as with the Moravians, another German sect flourishing in Pennsylvania. Although the Ephrata drawings never had wide circulation, they illustrate the intensely focused artistic impulse that was often a hallmark of America's religious communarians.

Catholic Visual World

The Catholic settlers in French Louisiana and Spanish Florida brought a richly visual European religious tradition that contrasted markedly with Protestant restraint to the north. Catholic Mass, as well as highly visual processions,

pilgrimages, feast days, and festivals highlighted the complex ritual aspects of the faith that brought religion out of the churches and into the streets. Rather than the text-based religious images and mottoes found on objects in Protestant homes, Catholics were more likely to own images and objects with ritual significance, such as rosaries and crucifixes.

Catholic Southwest

Explorers, missionaries, and colonists hoping to Christianize Indians and establish prosperous settlements headed north from Mexico into New Mexico, establishing the community of Santa Fe early in the seventeenth century. By 1630 fifty mission churches had been built in New Mexico. These chapels were decorated with sculptures and paintings of saints, detailed altar screens, and other religious objects imported from Spain and Catholic regions worldwide. A rich visual and material culture of religion of the early American Southwest developed through a dynamic interchange between European examples, local materials, and indigenous practices. In addition to paintings and sculpture, missionaries brought with them European-trained craftsmen who could continue in those trades and train further generations.

Religious art in the exuberant and colorful baroque style was dominant in early eighteenth-century Europe and had a lasting impact on the arts of the Southwest. As in other regions of early America, small domestic items reflected religious belief—crosses of tin and small painted miniatures worn as jewelry, for instance—though the more pervasive aspect of Catholic visual culture was the tradition of depicting images of Jesus Christ and the saints with the emblems of their miracles and martyrdoms. This most common type of religious art was known as *santos*, a Spanish word meaning holy person or holy subject. Santos took two forms: *retablos*, or two-dimensional images, usually small paintings or larger altarpieces; and *bultos*, carved and painted three-dimensional statues. One example of New Mexican work is a late eighteenth- or early nineteenth-century statue of St. Joseph holding Jesus. Over a wood base, the carver applied smoothing coats of gesso before decorating the statue with pink, orange, and blue-green paint. Although the importation of foreign-made santos continued, the market was strong enough to encourage local artisans, *santeros*, to create their own. This led to the development of a regional style that used local woods and paints and most frequently depicted images of Christ, Mary, and the saints most typically revered by the colonists, such as San Isidro Labrador: Santo de la

Terra (Saint of the Land, that is, St. Isidore, the Farmer) and Our Lady of Guadalupe, patron saint of Mexico.

The artifacts and rituals of New Mexico's religious festivals and processions were an important part of Catholic life. Santa Fe's first documented Holy Week procession took place as early as 1660. Particularly striking aspects of the visual culture include penitential practices such as the self-mortification performed by the brotherhood of the *penitentes*, and the haunting imagery of the annual Mexican El Día de los Muertos (Day of the Dead) celebrations, a ritual rooted in native Indian traditions.

Conclusion

In the visual and material religious practices of early Americans, one can already see the rich pluralism that would mark the country's future. Even within the least visual of early American religious traditions—English Protestantism in its Puritan and Anglican forms—there was depth and variety of expression. If we wish to recover an understanding of the religious life of pre-Revolutionary Americans, it is important to attend to the everyday pictures and things that gave shape to their beliefs.

Visual Culture: Painting, Sculpture, and Graphic Arts from the Revolution to the Civil War

The visual culture of religious life from the beginning of the American Revolution in 1775 to the advent of the Civil War in 1860 encompassed not only painting, sculpture, drawing, and traditional printmaking but also imported and home-manufactured decorative arts, ritual objects, and devotional, didactic images for illustrated Bibles, religious tracts, broadsides, and journals. After Great Britain recognized the United States in 1783, government bodies as well as civic, fraternal, and cultural organizations encouraged the production of visual images that fostered republican ideals and cast the struggle for independence in sacred terms as fulfillment of history's divine plan. During the nineteenth century, evangelical revivalism intensified American Protestants' self-identification as God's chosen people, the inhabitants of a new Israel. However, territorial growth, immigration, technological growth, and socioeconomic growth contributed to denominational, sectarian diversity and a proliferation of images that expressed spiritual ideas and metaphysical experiences outside of traditional institutional religion. Responding to individual soul-searching and fears of national disunion over slavery and westward migration, religious representations before the Civil War increasingly blurred doctrinal distinctions in quest of universal truths.

Deism and Freemasonry

With a mobile population spread over thirteen states, the founders developed national symbols that expressed the motto of *E pluribus unum*. Designed by several congressional committees after the signing of the Declaration of Independence in 1776, the emblematic all-seeing eye on the reverse side of the Great Seal of the United States proclaims a deist, Enlightenment conception of natural religion. Encased within an equilateral triangle surrounded by a solar glory of light, the Great Seal's providential eye floats above an ancient, Egyptian-style pyramid to suggest that the divine Creator, transcending all sectarian, denominational religions, is smiling on a new, rational order of the ages.

The seal's Egyptian masonry and all-seeing eye parallel the hieroglyphic imagery of Freemasonry, a social fraternity steeped in the religious, biblical lore of stonemasonry, geometry, and the arts of design. Imported to the American

colonies from Great Britain during the 1730s, Freemasonry attracted members of the elite as well as artisans such as Boston silversmith Paul Revere (1735–1818). Revere crafted Freemasons' silver jewels worn by lodge officers and engraved Masonic lodge certificates representing Solomon's Temple, Noah's Ark, the all-seeing eye, and numerous other emblems.

Freemasons became self-identified nation-builders, associating themselves with President George Washington (1732–1799), the new republic's leading Mason. In 1793 Washington had led a Masonic procession to lay the cornerstone for the U.S. Capitol in Washington, D.C. Wearing aprons decorated with symbols of the stonemason's craft, lodge brothers conducted cornerstone-laying ceremonies sanctifying construction of public buildings and patriotic monuments. Freemasonry's ritual use of Christian emblems attracted American Protestants, whose churches remained relatively bare of religious imagery.

Many American Jews viewed Freemasonry's biblical imagery as a vehicle for promoting religious identity and social acceptance in the new republic. Isaac Nunez Cardozo (1751–1832), a London-born draughtsman who lived in New York, Philadelphia, and Easton, Pennsylvania, illuminated family registers with names listed between columns of Solomon's temple and beneath an arch protecting an all-seeing eye and other Masonic emblems. Cardozo also framed drawings of the Ten Commandments, written in both Hebrew and English, with similar Masonic-inspired representations of Solomon's temple.

Solomon's temple served to bridge Freemasonry with Judeo-Christian faiths, but the Freemasons' appropriation of Noah's ark more broadly appealed to deists as an inclusive, nonsectarian archetype of God's creation preserved and improved by responsible human stewardship. In Philadelphia, the artist-entrepreneur Charles Willson Peale (1741–1827), deist and Masonic initiate, painted *Artist in His Museum* (1822), a self-portrait of the artist promoting his museum of art and natural history. Akin to Noah's Ark, the museum displayed the variety and orderly harmony of God's universe. In concert with Freemasonry's cult of divine wisdom, museum exhibits ranged encyclopedically from minerals, animal and bird specimens, and the skeleton of a prehistoric mastodon to portraits of statesmen and men of learning such as Benjamin Franklin, one of the nation's most outspoken advocates of Masonic fraternalism and Enlightenment deism.

Peale's Museum also housed Native American artifacts collected by Meriwether Lewis (1774–1809) and William

Clark (1770–1838) during their exploration of western territories acquired in the Louisiana Purchase of 1803. Where Peale used taxidermy to display stuffed birds and animals, Native Americans decorated animal skins and woven articles of clothing with geometric animal designs, the better to capture the animal's universal spirit. In Peale's museum, a beaded garter belt features abstract bird motifs of a line symmetrically flanked by outspread, triangular wings. Anglo-American artists regarded Native American geometric designs as a mysterious form of writing related to Egyptian hieroglyphics. Secretive Indian religious rituals stirred some revolutionary-era fraternal organizations, such as the Saint Tammany Society, to adopt Native American costumes and ceremonial symbols.

American History and Biblical Types

Themes of fraternalism and Christian martyrdom pervade the revolutionary battle paintings of Connecticut-born artist John Trumbull (1756–1843). Trumbull's battle scenes of the American War for Independence, exemplified by *The Death of General Joseph Warren at the Battle of Bunker's Hill, June 17, 1775* (1786), honor American Revolutionary War generals as sacrificial types for Christ, their bodies protectively cradled by brotherly subordinates. In his *Autobiography* (1841), Trumbull credited Christ's endorsement of fraternal love in the Gospel of St. John (15:13) for inspiring the self-sacrifice of Revolution-era patriots. Trumbull's contemporaneous drawing of *Joshua Attended by Death at the Battle of Ai* (1786) visualized an epic poem by Congregationalist clergyman Timothy Dwight (1752–1817). Dwight's *The Conquest of Canaan* (1785), draws a parallel between Israel's conquest of the Promised Land and America's struggle for independence. The Israelite commander Joshua, an Old Testament type for George Washington, is accompanied by an apocalyptic personification of Death. More frequently, as seen in a late eighteenth-century engraving of *Washington Giving the Laws to America*, the first president was compared with Moses for leading the nation to freedom under the constitutional rule of law.

After his death, Americans virtually deified George Washington as a Christ-like savior or embodiment of divine

wisdom. Popular prints memorialized him rising heavenward, emulating Christ's Resurrection and Ascension. In 1817 Trumbull received a commission to paint four large murals for the U.S. Capitol Rotunda, including *The Resignation of George Washington, December 23, 1783* (1822–1824), which celebrated the victorious American general's selfless abdication of power, his indifference to earthly ambition in favor of a loftier, eternal glory. After he completed his Revolutionary War murals, Congress commissioned four other artists to paint additional Capitol Rotunda panels that focused on

European exploration and Christian settlement of the New World, including John G. Chapman's *Baptism of Pocahontas at Jamestown, Virginia, 1613* (1836–1840), an imaginative representation of Native American conversion to Christianity.

Protestants and Religious Imagery

Wary of Catholic image worship, Protestants still generally resisted the pictorial, sculptural decoration of churches. John Ritto Penniman (1782–1841), a Masonic New England artist, painted a *Last Supper* (1812) for the chancel of Boston's Anglican Old North (Christ) Church. Focused upon a youthful Christ, the picture was veiled for fifteen years shortly after being installed above the Communion table. Yet Protestant Americans were fascinated by Catholic forms of worship and flocked to panoramic and more modestly scaled pictorial representations of European Catholic church interiors. The American artist George Cooke's (1793–1849) *Interior of St. Peter's Basilica* traveled throughout the southern states for fifteen years beginning in 1829. More famously, a version of *The Choir of the Capuchin Chapel* (c. 1814), by French artist François-Marius Granet (1775–1849), was exhibited in various cities for some forty years after its arrival in the United States in 1818. Philadelphia painter Thomas Sully (1783–1872) copied Granet's deep perspective view of mysteriously illuminated monastic church architecture and Catholic ritual.

In Pennsylvania, German-speaking folk artists, belonging to Lutheran and Reformed churches as well as Moravian, Mennonite, and other Pietist sects, vividly expressed the Protestant predilection for devotional imagery. Using colorful animal, floral, and paradisiacal motifs, they illuminated hymnals, psalm-books, family registers, birth and marriage certificates, and religious broadsides in a calligraphic style known as *fraktur*. By the early nineteenth century, instructional manuals in manuscript illumination disseminated the practice to other religious communities. Illuminated Pennsylvania German "heaven-letters" offering communications from the spirit world found a counterpart in New England and New York Shaker communities. By the 1830s, Shakers—the United Society of Believers in Christ's Second Coming—were communing with their Christian prophetess, Mother Ann Lee (1736–1783), and other deceased luminaries through drawings from beyond the grave. Shaker women in particular served as what Shakers termed instruments for designing the gifts, decorated with flowers, trees, leaves and heart-shaped cutouts framing heavenly messages.

Commercial and missionary dissemination of biblical imagery through engravings, lithographs, and book illustrations progressed rapidly during the early republic. Before the Revolution the British government had given English publishers a monopoly in printing English-language bibles. But in 1791 the Worcester, Massachusetts, printer and publisher Isaiah Thomas (1749–1831) sought to demonstrate that his luxury folio Bible, illustrated with fifty copperplate engravings, could rival London competition. Thomas employed Connecticut-born Amos Doolittle (1754–1832), a fellow Freemason, and several other Masonic-affiliated engravers to copy illustrations from an English Bible. Many of these reproductions aroused criticism from Protestant clergymen who objected to bare-breasted female characters. Similar criticisms greeted Philadelphia publisher Matthew Carey (1760–1839), an Irish-born Roman Catholic, whose 1801 and 1803 Bibles featured more sensational illustrations of violent, sexual subjects.

Stemming from the religious revivalism of the Second Great Awakening, Protestants from mainstream denominations formed alliances to create missionary and religious voluntary societies charged with spreading Christ's Gospel. After its 1816 founding the American Bible Society, headquartered in New York City, used power presses and new stereotyping technology to print thousands of inexpensive Bibles distributed by a national network of local, auxiliary Bible societies. By the 1830s competing publishers of lavish, illustrated Bibles were including maps and topographical landscapes of Palestine, Canaan, and Judea. The more realistic images gained favor as a way of authenticating the historic truth of God's Word. Harper's *Illuminated Bible* (1846), published by an innovative electrotyping process, included more than sixteen hundred images printed not on separate plates but rather on the same pages as the written text. This richly bound volume by Harper and Brothers of New York featured not only topographical views of Holy Land sites but also images of virtuous biblical heroines, an acknowledgment of women's importance in American religious life.

Nineteenth-century voluntary societies printed other forms of religious literature enlivened by visual images. The illustrated *Christian Almanac*, founded in 1821 by the Protestant evangelical New England Tract Society, published domestic scenes of family conflict and tragedy to warn readers of life's transience. Expanding distribution of the *Almanac* and other publications, the American Tract Society employed the wood engraver Alexander Anderson (1775–1880), whose early printing career included Masonic lodge certificates. An

1825 Anderson engraving represents members of a wealthy family benevolently distributing religious tracts to a grateful lower class family. Working for the missionary society into the 1840s, Anderson's images often featured pastoral views of the pious poor, beneficiaries of mass-produced religious tracts.

During the Second Great Awakening, American Protestant women also organized voluntary associations, missionary societies, Sunday Schools, and auxiliaries for local churches. At female boarding and day schools, young women produced watercolor and needlework reproductions of biblical illustrations and inspirational Christian prints.

Church-affiliated quilting groups collectively stitched patchwork quilts for presentation to charities or for itinerant preachers and beloved ministers.

Benjamin West

Although he lived in London as president of England's Royal Academy of Art, exhibitions and engraved reproductions of his work helped Pennsylvania-born artist Benjamin West (1738–1820) gain a reputation in America as a grand-manner history painter of biblically inspired subjects. Fulfilling an 1801 commission, West sent *Christ Healing the Sick in the Temple* (1815) to the Pennsylvania Hospital in Philadelphia. The eleven-by-eighteen-foot painting of Christian healing was displayed in a Gothic-style building specially constructed for generating exhibition revenues.

Thanks to West's success with *Christ Healing* and an even larger *Christ Rejected by the Jews* (1814), exhibitions of large-scale, multifigured religious paintings became commonplace in urban America. New York painter, Freemason, and theatrical impresario William Dunlap (1766–1839) profitably exhibited pictures of Christ's Passion and the Christian Apocalypse in cities and towns from New England to Urbana, Illinois. The opening of the Erie Canal in 1825 facilitated Dunlap's westward tour through areas burning with the revivalist fervor of the Second Great Awakening.

Similarly, Rembrandt Peale (1778–1860), second-oldest son of Charles Willson Peale, exhibited *The Court of Death* (1820), a huge, gloomy allegorical painting. First exhibited in Peale's Baltimore museum, the painting traveled to cities throughout the United States with many clergymen delivering supportive sermons warning against the deadly consequences of intemperance and other social vices.

Benjamin West's paintings and self-identification with Quakerism influenced Edward Hicks (1789–1849), a Pennsylvania Quaker minister and self-taught artist, who from the

early 1820s to 1849 painted more than sixty versions of *The Peaceable Kingdom*, each visualizing the Old Testament prophecy of Isaiah 11:6. Hicks's imagery of a harmonic animal kingdom led by a Christ-like child derives from an English Bible illustration. His Peaceable Kingdom series, however, included landscapes situating the subject within recognizable American settings. The Christian utopian theme responded to a Quaker schism that erupted in 1827, when the artist's cousin, Elias Hicks (1748–1830), led a movement opposing orthodoxy in favor of a more liberal Quaker faith.

Washington Allston

Succeeding Benjamin West, Washington Allston (1779–1843) became by the 1820s the nation's most renowned biblical history painter. South Carolina-born and Harvard-educated, Allston expressed the evangelical spirit of religious revivalism with paintings inspired by Old Testament prophecies. Based in Boston by 1818, Allston became most famous for obsessively laboring upon *Belshazzar's Feast* (1817–1843), a grand-scale picture of Babylon's pagan king, his doom pronounced by the prophet Daniel interpreting handwriting on a wall. Boston's merchant elite, supporters of Protestant missionary societies, financially invested in the painting. Never finished, *Belshazzar's Feast* symbolized Allston's quest for spiritual perfection. Displayed at the Boston Athenaeum soon after the Episcopalian artist's death, the picture expressed American identification with ancient Israel. Its theme of Jewish liberation from Babylon foreshadowed the rebuilding of the temple in Jerusalem, an Old Testament type for the advent of the Christian millennium.

Yet *Belshazzar's Feast* also ominously alludes to the divisive issue of African slavery. Perhaps expressing his own sense of guilt as the heir of a slave-owning South Carolina plantation family, Allston included a dark-skinned figure among the Jewish captives situated to the immediate right of Daniel. Standing just below Daniel's outstretched hand, this black African is the only one who looks directly at the glowing light emanating from the prophetic handwriting. Allston's painting draws an implicit analogy between ancient Jewish captivity and contemporary African enslavement.

Thomas Cole and American Landscape Painting

An admirer of Allston, the English-born artist Thomas Cole (1801–1848) found religious inspiration in the disappearing wilderness areas of upstate New York and New England. Cole interpreted American scenery as God's handiwork, a revelatory book equivalent to holy scripture. In Cole's *View*

from *Mount Holyoke, Northampton, Massachusetts, after a Thunderstorm (The Oxbow)* (1836) dying, mountain-top trees symbolize Christ's Passion, the meandering Connecticut River below forms a providential, all-seeing eye, and a distant hill on the horizon appears inscribed with Hebraic lettering.

Cole painted numerous biblical landscapes, including his largest canvas, *The Angel Appearing to the Shepherds* (1833–34), its exhibition specifically targeting New York City's Protestant activists, organizers of religious voluntary associations. Cole's later *Voyage of Life* (1839–1840), is a series of four paintings representing the stages of human life, *Childhood*, *Youth*, *Manhood*, and *Old Age*, as a treacherous spiritual journey toward heavenly salvation. Reproductive prints made *Voyage of Life* one of the most popular works in the history of American art.

Cole's students Frederic Church (1826–1900) and Asher B. Durand (1796–1886) similarly painted biblically inspired American landscapes, though with greater attention to naturalistic detail. The cosmic sweep of Church's *Niagara Falls* (1857) provides viewers the exciting panoramic perspective of an all-seeing eye hovering over waters rushing toward the Horseshoe Falls. At the same time, Durand expressed a Unitarian optimism that the Christian millennium could be achieved through human agency. The golden morning light of Durand's *Progress (The Advance of Civilization)* (1853) suggests the dawn of a new age achieved through the transformative power of American industry and technology. Telegraph wires and poles follow a busy road leading toward a canal, river and railroad, transportation arteries for Christian civilization.

Durand's telegraph poles stand in tribute to Samuel F. B. Morse (1791–1872), inventor of the telegraph, a fellow painter and president of New York City's National Academy of Design. The son of a conservative Congregationalist clergyman, Morse was vehemently anti-Catholic. Painted in Italy, Morse's *Chapel of the Virgin at Subiaco* (1830) reticently refuses to depict a pilgrimage shrine's statue of the Virgin: its hidden presence suggests the secretive, suspect rituals of Catholic image worship. Morse feared that poor European Catholic immigrants would overwhelm and subvert America's Protestant identity. Such fears only increased with the nation's westward expansion.

Catholic Art in Hispanic America

After 1846, when the United States began to occupy the territories of California and New Mexico, Catholic Hispanic artists rejected Protestant authority by continuing

to produce *santos*, religious icons focused on Christ and the Virgin Mary. In the Santa Cruz Valley of New Mexico, José Rafael Aragón decorated village chapels and churches with painted *bultos* (wooden sculptures) and *retablos* (panel paintings). During Holy Week, penitents carried in public processions devotional images of the crucified Christ, his emaciated body marked by streams of blood-red paint. Worshippers attributed miraculous powers to sacred images, believing they manifested the presence of the holy persons being portrayed. Visual intermediaries, *santos* helped bridge the spiritual distance between heaven and earth.

African Americans

Wary of African as well as Catholic idolatry, Morse, Cole, and other Protestant artists identified with missionary societies that sought to Christianize black slaves. But, with the support of white abolitionist allies, African American clergymen also assumed leadership roles in organizing their own church congregations, religious denominations, and fraternal societies. In 1810 Raphaelle Peale (1775–1824), eldest son of Charles Willson Peale, painted the portrait of Absalom Jones (1746–1818), a former slave who became the nation's first black Episcopal priest. Dressed in clerical robes, the founder of Philadelphia's St. Thomas African Episcopal Church grasps a large, leather-bound Bible, thereby asserting his intellectual, moral authority as an interpreter of God's Word. Contemporaneously, a ceramic pitcher manufactured in Liverpool, England, about 1808 portrays a silhouette profile of Jones amidst Masonic motifs. The pitcher was commissioned by Jones's brother Masons, members of Prince Hall Freemasonry, a network of black Masonic lodges formed during the revolutionary era.

Whereas free blacks attempted to elevate themselves socially and culturally by establishing their own Christian identity, many slaves retained traditional animistic African rituals. In Alexandria, Virginia, a late eighteenth-century figure, nearly a foot long, was excavated at the site of a blacksmith's shop and slave quarters. The figure's stiff, ritualistic pose and formal characteristics relate to West African iron figurines and suggest that American slaves sought to communicate with African spirits and gods through cult objects. Other excavations of slave quarters have uncovered polished stones, crystals, beads, shells, and other objects used in bundles of magical charms. Deriving from West African religious practice, such bundles both conjured prophetic, healing spirits inhabiting the earth and protected households against disease and misfortune.

Mormonism

Occult practices were widespread in antebellum America. In western New England and upstate New York, seekers of esoteric wisdom thought that sacred, golden treasures lay hidden in the region's hills and valleys, buried perhaps by ancient Indian tribes, who by legend had migrated from Egypt and the Holy Land. Joseph Smith Jr. (1805–1844), prophet-founder of the Mormon faith, the Church of Jesus Christ of Latter-day Saints, employed seer stones in practicing the occult art of divination. Attuned to Masonic rituals and symbols, Smith asserted that these luminous stones had the penetrating vision of an all-seeing eye. In 1827 Smith's angel-assisted vision unearthed golden plates bearing the Book of Mormon and magical jewels for translating the sacred, hieroglyphic text. Believing that a celestial New Jerusalem would appear in the American West, Smith's followers completed their first Mormon Temple in Nauvoo, Illinois, in 1846. Surviving sunstone relief sculptures for the capitals of the destroyed building's pilasters display the sun's radiant visage as flanking trumpets announce the apocalyptic advent of Christ's heavenly kingdom.

Spiritualism and Abolitionism

For many, occultism and modern science went hand in hand. By the late 1840s Spiritualist mediums were arguing that just as the recently invented telegraph could transmit electromagnetic messages across vast distances, so might spirits from a higher life beyond the grave communicate through a spiritual telegraphy. Belonging to the Religious Union of Associationists, or First Church of Humanity, a socialist religious group practicing Spiritualism and transcendentalist nature worship, the Massachusetts artist Fitz Hugh Lane (1804–1865) painted coastal New England views that distill nature's elemental flux into crystalline images of ethereal perfection. These luminous mid-century pictures suggest a spiritual continuum between heaven and earth.

Similarly, the expatriate artist Hiram Powers (1805–1873), working in Florence, Italy, conceived his white marble sculptures of female nudes in visionary, Spiritualist terms. Beginning in 1847 Powers exhibited his *Greek Slave* (1843–1846) in American cities as a visual sermon celebrating the Greek war of independence against the Islamic Turks (1821–1832). Powers verbally clothed his idealized female nude with an exhibition catalogue narrating the chaste Greek woman's Christian resistance to Muslim enslavement. Northern abolitionists praised the phantom-white sculpture as a coded denunciation of American slavery.

A follower of the Swedish mystic Emanuel Swedenborg (1688–1772), Powers influenced the African American landscapist Robert Duncanson (1821–1872), whose paradisiacal painting *Uncle Tom and Little Eva* (1853) focuses on the angelic child heroine of Harriet Beecher Stowe's abolitionist novel *Uncle Tom's Cabin* (1852). Like a prophetess or spiritual medium, Duncanson's Eva points heavenward where all souls are free and equal.

In contrast to little Eva's longing for an egalitarian afterlife, the German-immigrant artist Emanuel Leutze (1816–1868) envisioned in more material terms an ethnically, racially inclusive American mission. A mural in the U.S. Capitol, painted during the Civil War, Leutze's *Westward the Course of Empire Takes Its Way* (1861–1862) foregrounds a free African American leading the donkey of a poor Irishwoman among pioneers who cross the Rocky Mountains as if they were the Children of Israel entering the promised land.

Throughout this period, Americans of differing faiths deployed the visual arts as means to access the invisible world of spirit. For most, matter itself seemed infused and animated by the light of God's Word. Nature was a revelatory book open to all who possessed a mind's eye for reading visual forms as providential signs of a future, perfected state of being. The artist's medium itself became a vehicle for religious communication independent of narrative subject matter.

Visual Culture: Painting, Sculpture, and Graphic Arts from the Civil War to World War II

In the wake of the Civil War, modernization increased the production, distribution, and consumption of a Protestant print culture that permeated middle-class American life in the Northeast and, gradually, culture generally from coast to coast. Old Master and academic art established the iconography and ways of seeing that saturated this visual landscape, composed of permanent and travelling exhibitions of fine art; popular prints and reproductions in mainstream periodicals; illustrated Bibles and volumes on the Life of Christ, the Madonna, and the saints; stereo photographs and domestic amusements; and myriad forms of commercial entertainment.

Late nineteenth-century Americans characterized the Old Masters as artists who worked before the nineteenth century and established the criteria for great art. Giotto, Fra Angelico, Raphael, Guido Reni, Albrecht Dürer, Rembrandt, and Peter Paul Rubens, among others, were well known through prints and reproductions that had circulated since the early days of settlement and were now available to a mass audience. Academic artists such as William-Adolphe Bouguereau, Thomas Couture, and Jean-Léon Gérôme were the natural heirs of the Old Masters; they attended and perpetuated the values of the European art academies that replaced the medieval guild-apprentice model of training artists during the Renaissance. The academies organized public exhibitions of contemporary art; institutionalized art training; and established a hierarchy of subjects, with history paintings that depicted biblical, classical, literary, and mythological themes at the pinnacle. They also helped maintain and propagate the assumption that fine art exemplified taste and presented eternal truths. American artists, collectors, and viewers focused their attention on masterpieces and academic art because they shared this faith in fine art as a source

of aesthetic and moral values. Indeed, they imbued it with an important civic responsibility to inculcate European-American Protestant principles and socialize lay audiences into middle-class standards of deportment.

Concerned with the rise of industrialization, the influx of immigrants, and the growing threat of urban and working-class unrest, cultural leaders, tastemakers, and publishers ensured that middle-class audiences had access to fine art and the analytical tools they needed to appreciate it. They founded museums for its permanent display and sponsored its presentation in the era's other popular exhibition sites—department stores and world's fairs. Popular travel-lecturers like John L. Stoddard used colorful narratives and stereopticon slides of Old Master and academic art to guide their audiences to far-off destinations they could not afford the money or time to visit firsthand. Individuals, families, and groups also staged tableaux vivants, or living pictures, of well-known paintings in upper- and middle-class parlors, charity fundraisers, and civic and religious pageants. In addition, newspapers and general periodicals such as *Harper's Weekly*, *Century Magazine*, and *McClure's Magazine* included art history and criticism, as did more specialized publications like *Brush and Pencil* and *The Craftsman*. Women's magazines in particular educated their publics on art's history. They highlighted the work of contemporary American and European artists and even acted as patrons. Edward Bok, the long-time editor of *Ladies' Home Journal*, commissioned Henry Ossawa Tanner to produce four illustrations for a Women of the Bible series published in 1902 and 1903. The potential of fine art to influence behavior, refine taste, and cultivate the soul encouraged America's cultural producers to expand its reach into the hearts and homes of American consumers.

The boom in art publishing after the Civil War was aided further by the belief that the home—its architecture and material culture—had the power to shape the character of its inhabitants. Tastemakers published home decorating manuals that encouraged women to hang high-quality reproductions of fine art in every room of their homes, and educators called on teachers to present children with specific works of painting and sculpture depending on their age and level of education. Progressive Era reformers, too, turned to art to assimilate working girls, immigrants, and former slaves into middle-class Protestant American life—or more specifically, into the model of civilization and progress embodied by Euro-America. The Hull House in Chicago, for example, operated a circulating picture gallery, where

framed prints of fine art paintings by artists like Abbot Hander Thayer, Jean-Francois Millet, and Fra Angelico could be checked out for two-week periods and displayed in the “bare, ugly” rooms of working-class Chicagoans.

The work of Nathaniel Currier and James Ives, the most well-known and prolific printmakers in the second half of the nineteenth century, enabled homemakers, school teachers, and reformers to follow this advice. Between 1834 and 1907, the self-proclaimed Publishers of Cheap and Popular Pictures produced millions of lithographs under seven thousand different titles. The line separating the Old Master copy and its original, the plaster cast and its classical antecedent, and the mass-produced print and its fine art precursor was fluid, and painting, mass media, photography, illustration, and commercial art overlapped in complicated and significant ways. Publishers walked in the same social circles as museum trustees and art dealers; artists decorated their homes with prints, worked on commission, and produced art with distribution and large audiences in mind; and art critics and tastemakers celebrated the democratization of art. The ideological distinctions between fine and popular art, high and consumer culture, began solidifying in this period, but they remained nonetheless in flux and reliant on one another.

The Holy Land in America

One of the major themes animating Protestant and American print culture in the second half of the nineteenth century was the search for the historical Christ: what he looked like, the places he lived, and the roads he walked. Books, magazine articles, illustrated volumes, stereo cards, lithographs, and oil paintings sought to delineate Christ’s visage, define Christ’s character, and walk in Christ’s footsteps. The quest was rooted in a complex blend of theological apologetics, intellectual debates, and national ideologies.

German biblical criticism, an interpretative strategy that located the biblical text within human rather than divine history, was central to American religious thought by the second half of the nineteenth century. Sponsored by liberal Protestants who sought an alternative to a religion based on creeds and dogma, this so-called new criticism situated Christ in his temporal and physical environments. German biblical criticism’s focus on the historical Jesus coincided with increased tourism, missionary work, and geographic and archeological discoveries in the Holy Land. Photo narratives like *Earthly Footsteps of the Man of Galilee* (1894) attempted to document every place Christ visited, road he walked, and view he beheld. In this particular publication,

more than four hundred photographs taken by Robert T. M. Bain in the areas now known as Israel, Egypt, Lebanon, Syria, Turkey, Greece, and Italy were arranged chronologically according to events recorded in the New Testament, beginning with “Early Days in Israel” and ending with “Paul in Italy.” By enabling visual access to the landscape, these photographs testified to the Bible’s authenticity and reaffirmed the centrality of scripture to Protestant belief.

The almost obsessive documentation of the biblical landscape was due in part to American self-identification as God’s chosen people and the United States as the New Israel. Americans—beginning with John Winthrop and the Puritan colonists—cultivated a typological relationship between the Holy Land and the American continent; they read American history as the fulfillment of scriptural events. The landscape of Palestine authenticated and naturalized the union of the American present and biblical past. This same landscape also served to integrate evolutionary theory and biblical narrative in an attempt to secure religion in the modern age. Believing that nature contained the truth of history, Americans considered the Holy Land capable of explicating biblical passages and revealing religious truths. In essence, the Holy Land functioned as tangible evidence for Christ’s material reality.

The resulting literary and visual representations of Christ’s life sought to accomplish two, interconnected objectives: first, to domesticate Christ and to locate him within European-American history and contemporary life; and, second, to enable readers and viewers to insert themselves into the biblical narrative. For example, writers imagined Christ’s reincarnation by describing what Christ would encounter if he returned to earth, as in *If Christ came to Chicago!* by William Stead (1894). Others sought to fictionalize Christ’s life, like the best-selling novel of the nineteenth century, Lew Wallace’s *Ben Hur: A Tale of the Christ* (1880). Stereoscopic images brought the Holy Land into the homes—and hands—of middle-class Americans. At Palestine Park in Chautauqua, New York, visitors were encouraged to dress in oriental garb and traverse a scale model of the Holy Land made of stumps, sawdust, and sod. Perhaps the most elaborate illustration of America’s appropriation of the biblical story as its own national history and destiny was the Jerusalem section of the Louisiana Purchase Exposition in 1904, an 11-acre recreation of Palestine that included the Church of the Holy Sepulcher, the Wailing Wall, and more than a thousand residents of the Holy Land who were “imported” for ethnographic authenticity. These multisensory, embodied experiences were

understood to present history and progress as well as the essential nature of religious truth. Faith was affirmed through personal observation and experience.

The American Christ

Widespread interest in the historical Christ accompanied and animated discussions about what Christ looked like. Although scholars debated whether an authentic likeness of the historical Christ existed, most agreed that historical representations of Christ formed a composite image commonly accepted by most Western believers. Modern depictions of Christ competed with this mental image and were laden with theological, ideological, and practical dilemmas. Jesus was supposed to be both human and divine; a historic agent and contemporary presence; a Jewish man and composite Son of God; and strong and just, patient and consoling, traits associated with masculinity and femininity, respectively.

Mihály Munkácsy (1844–1900), a Hungarian artist working in the academic tradition, produced two paintings that captured the public imagination and helped consolidate its mental image of Christ: *Christ before Pilate* (1881) and *Christ on Calvary* (1884). Both large-scale paintings, surpassing thirteen by twenty feet, were painted and circulated by the entrepreneurial art dealer Charles Sedelmeyer, who sent them on tours of European and American cities, where they were often displayed in theatrical settings replete with curtains and special lighting. When *Christ before Pilate* was first exhibited in New York City in 1886 and *Christ on Calvary* in 1887, American critics, religious leaders, and spectators greeted them with fantastic reviews and critical acclaim. Millions viewed the paintings on its multicity tour and read about it in newspapers and popular periodicals. In addition, more than 35,000 Americans purportedly purchased copies of the works to display in homes, schools, and churches. Munkácsy's Christ—a European male with long, brown hair who wears long, flowing white robes—embodied popular conceptions of the sacred figure, conjured from Old Master paintings and Holy Land visual culture.

The most commercially successful representations of the modern Christ were produced by the French painter James Joseph Jacques Tissot (1836–1902) a few years later, who produced more than five hundred illustrations of the New Testament that toured the United States in 1898 and were published in two folio volumes accompanied by the Latin text of the Vulgate, its English translation, and the artist's archeological notes on Oriental life and customs. The artist represented Mary and Christ as “Jewish types” in settings

purportedly derived from Palestinian life and predicated on firsthand observation of Oriental life and customs. As a result, Tissot's illustrations were seen to authenticate the biblical narrative by providing physical evidence for Christ's historical reality. In addition, they brought the biblical past into the present. Critics noted that Tissot did more than represent Christ; he presented a living Jesus to beholders. The historical past and immediate present were fused in Tissot's sacramental vision, which enabled a reconciliation of scientific study and religious belief.

The popularity of Munkácsy's paintings and Tissot's imagery inspired three Cleveland, Ohio, businessmen to commission prominent American academic artists—including Kenyon Cox, Frank Vincent DuMond, John LaFarge, and Gari Melchers—to paint their personal conceptions of Christ in 1906. The resulting paintings formed a traveling exhibition that visited a number of U.S. cities and was widely discussed in contemporary literature. The most thorough reviewers began their commentaries with the central problem in depicting Christ: how artists embody the mental image, spirit, personality, character, or idea of Christ (as it was variously called) into material form. After all, reviewers noted, so much was left to inference. The important role of inference in translating spirit into physical form raised a second important question. What sources and interpretive models should artists use to construct their mental and material images of Christ? The paintings' titles highlight the variety of visual, textual, and cultural antecedents for the artists' conceptions: Christ's utterances from the New Testament (“He that is without sin among you, let him first cast a stone”); biblical passages describing Christ (“In Him was life, and the life was the life of men”); art historical types (The Man of Sorrows); aspects of Christ's character (Christ the Preacher); and theological notions (The Old and New Jerusalem). The artists' stylistic choices and modes of representation were shaped in turn by art historical precedents, popular interest in the historical Christ, contemporary ideals, and their academic training.

The most celebrated work in the show was Charles Curran's *Come unto Me*. Curran represented Christ as lean and muscular, his physique emphasized by his off-the-shoulder robe and raised arms. Curran parted Christ's hair on the side, eliminated his halo, and emphasized the scars on his hands. Critics praised what they called Curran's modern and powerful representation of the figure, echoing Curran's desire to present a universal Christ that embodied both compassion and strength. The acclaim garnered by Curran's picture was

consistent with the general sense that popular representations of Christ rendered him effeminate and weak. The equation of sentimentality and religious faith that characterized the mid-nineteenth century had inspired a revolt by those that sought to reclaim Christ's virility. So-called Muscular Christians aimed to turn Jesus into a masculine ideal for an urban, industrial age, and thereby to masculinize the church and save it from feminization. Curren's work pictured such a savior, one that could provide comfort in times of distress but nonetheless thrive in the rough and tumble world of modern life.

Although Americans looked for a Christ that corresponded to archaeological investigations and contemporary conceptions of manhood, representations deemed too tainted by modernity risked public condemnation. For example, the American entrepreneur Salmi Morse attempted to stage a Passion Play in San Francisco (1878) and New York City (1880) with a cast of two hundred, a chorus of eighty, and a full orchestra. He modeled his production on the popular Oberammergau Passion Play, performed once a decade in Germany. The day-long multimedia event featured the local people as the sacred figures as well as dramatic tableaux of every aspect of Christ's life based on fine art paintings. Nevertheless, Morse's productions met with cries of blasphemy. Civic and religious leaders imagined the rural villagers of Oberammergau as part of a distant time and place uncontaminated by modern life. In contrast, Morse's spectacle appeared polluted by commercial desire.

The American fine art photographer F. Holland Day faced similar challenges when he and a coterie of friends and professional models ascended a hill outside Boston to perform Christ's life, death, and Resurrection for the camera in 1898. Selected for their presumed resemblance to the biblical figures, dressed in costumes determined by archaeological findings, and fastened to crosses just as the Christ was supported in the Oberammergau Passion Play, the participants helped Day produce more than 250 studies—with the artist playing the role of Jesus Christ. Despite Day's use of conventional iconography, discordant critics judged the work according to where they located the work's meaning. This controversy hinged on the nature of the photographic medium. If the photograph served a documentary function, its meaning rested principally on the artist's intention and the image's subject matter; if its purpose was aesthetic, its significance hinged at least in part on the work's formal qualities and the beholder's interpretation of it. For those who advocated photography's relationship to the real, Day's

project was offensive because he sought to represent an individual who had died almost nineteen hundred years earlier. Critics who believed in the photograph's ability to evoke emotion praised the sacred series for its piety and religious feeling.

By the end of the century, representations of Christ's life were far more accepted in all forms of mass media. Indeed, the Passion played a central role in the development of narrative cinema. Early film followed a format similar to that of vaudeville and variety shows and drew on traditions of popular entertainment like lantern slide shows, magical theater, and stereographs. Viewers acknowledged the visual tricks produced by the director or performed by the demonstrator and marveled at their technological innovation. Early film versions of the Passion Play were no different; the individual showman choreographed a presentation of more than twenty films (purchased individually or in sets), lantern slides, lectures, and music. For example, *The Passion Play*, filmed in Horitz, Austria, was a ninety-minute multimedia presentation accompanied by a lecture, slides, organ music, and hymns. In 1898, when shown in Boston, Massachusetts, the local newspaper declared it an impressive spectacle that enabled the spectator to extricate the performance from its representational form and witness, firsthand, Christ's life and death.

American Madonna

Americans were surrounded by idealized representations of Anglo-American womanhood. Dressed in antique or loose-flowing drapery, placed within a nondescript landscape or domestic interior and depicted at rest or leisure, these representations adorned the walls of state capitals and commodities, art museums and advertisements, and world's fairs and parlors. Cultural leaders bestowed cultic significance on the ideal woman because the fate of American civilization rested on her domesticity, piety, and purity. She served as the primary medium for the salvation of men and children, the redemption of the nation, and the progress of civilization. The Madonna best incarnated contemporary conceptions of womanhood because she referenced the historical mother of Christ, epitomized chaste maternity, and mediated the earthly and heavenly realms. Not surprisingly, then, virtually all turn-of-the-century popular and fine art images of motherhood were granted sacred status; they presented Euro-American, middle-class women as madonnas and helped viewers access the transcendent.

Late nineteenth-century American Protestant artists drained Mary of her Roman Catholic heritage and charged

Among Gertrude Käsebier's famous photographs is *The Manger* (1901), which features a symbolic Madonna dressed in white, seated in a stable and holding a swaddled infant.

her with signifying a set of potent but contested ideals about contemporary womanhood. The English art critic Anna Jameson made the Madonna safe for Protestant consumption in her "Legends of the Madonna, As Represented in the Fine Arts" (1852), the first extensive study of Marian iconography. Jameson contended that the cult of Mary stemmed from two separate but related trends. It was the amalgamation of all types of a divine maternity, represented by Eve of the Old Testament, Astarte of the Assyrians, Isis of the Egyptians, and Demeter and Aphrodite of the Greeks, among others. It also developed in tandem with new ideas of what was referred to as the moral and religious responsibility of women in civilized societies, namely, the separation of male and female spheres. Jameson articulated the associations among her history of art,

model of ideal womanhood, and theory of social progress in the opening paragraph, when she asserted that representations of the Madonna served as what she called the visual form of female character, characterized her "beneficence, purity, and power," and illustrated her mediating role between the Deity and humanity.

Jameson's conception of the Protestant Madonna shared a number of similarities with her Roman Catholic counterparts, but their social roles were considerably different. For Roman Catholics, Mary remained tied to centuries-old theological debates and ritual traditions under the purview of the organized church. The rise in Marian apparitions, papal decrees, and clerical emphasis on private devotion throughout the nineteenth century ensured that Catholics, from the pope to the Italian-American immigrant, appealed to Mary for divine aid. Marian devotion was a primarily paraliturgical activity, occurring outside the sacrament of the Mass. The liturgy was public, enacted by the priest, and mandated by the Catholic Church, but devotions were linked to specific events and rituals, accompanied by artifacts such as rosaries and scapulars, and performed by individuals in confraternities and sodalities within the parish system. Lay devotions, in other words, took place outside the church building but remained under the control of the institutional hierarchy.

Jameson's conception of the Madonna as the quintessence of Protestant womanhood created a language and usable past that enabled writers and artists to divorce Mary from her Roman Catholic doctrinal, liturgical, and ritual contexts. Her success was revealed forty-five years later, when Estelle Hurlll, the editor of Jameson's works in the 1890s and fine art critic in her own right, produced her own analysis, *The Madonna in Art* (1897). Hurlll avoided the theological underpinnings of Marian imagery almost entirely to focus on her conceptualization of Mary as the universal mother. She described her book as "a study of Madonna art as a revelation of motherhood" and isolated love, adoration, and witness as motherhood's most prominent aspects because of their centrality in Old Master portrayals of the

Virgin Mother. By relying on the sacred nature of the Madonna to consecrate women's role in American culture and art's long history to universalize those attributes, Hurl contributed to a larger Protestant discourse that sacralized conceptions of ideal womanhood through their implicit associations with the transcendent.

In addition to the extensive number of mass-produced items decorated with the Madonna in the middle-class marketplace, contemporary artists flooded art galleries, exhibition spaces, museum and private collections, and popular periodicals with their own representations of the Virgin Mother. Indeed, a brief survey of those who relied on Marian associations at some point in their careers is a virtual who's who of American art at the turn of the century: George de Forest Brush, Mary Cassatt, Alvin Langdon Coburn, Sarah Jane Eddy, Lewis Hine, George Hitchcock, Gertrude Käsebier, Mary Macomber, Elizabeth Norse, Charles Sprague Pearce, Jessie Wilcox Smith, John Henry Twachtman, and Amelia Van Buren. The sheer popularity of Marian imagery meant that Protestant artists could remove the traditional iconography associated with her yet still sacralize the presumed natural and eternal character of women's domestic role.

A number of tensions characterize Protestant dedication to the Madonna. American Protestants presented a standard of womanhood that no mortal could possibly fulfill by imaging her as both Virgin and Mother of God. They depended on Mary's historicity to underscore the eternal and sacred nature of women's intercessory status, but at the same time considered the Madonna an abstract concept that could and should be embodied by contemporary women. Finally, they mined the Roman Catholic tradition of icons by treating women as material means to the transcendent and erasing the iconography and institutional apparatus that facilitated that practice. Marian imagery, in other words, represented the real and ideal simultaneously and fostered individual devotion to a communal symbol.

Mural Painting: Violet Oakley and John Singer Sargent

In 1890 John Singer Sargent (1846–1925) embarked on a mural series for the third floor special collections hallway of the Boston Public Library titled the *Triumph of Religion*. He was commissioned to decorate the entire room, which measured 85 feet long, 24 feet wide, and 26 feet high at the peak of the vaulted ceiling, and was allowed to select his own subject matter. After deciding against his original

idea—themes from Spanish literature—he decided to depict the history of religion or, more specifically, the development of religion as part of the progress of civilization. He gave visual expression to the immensely popular writings of French scholar Ernest Renan, whose *Life of Christ* (1863) and five-volume *History of the People of Israel* (1887 and 1893) presented an evolutionary model of Western civilization that began with paganism and ended with Christianity. Renan argued that progress reached its apogee in Jesus' Sermon on the Mount, which presented ideal religion as anti-institutional and subjective. It was predicated less on authoritative dogma and more on the individual's experiential relationship with the divine.

Renan's history of religion provided the framework for Sargent's mural series, but the history of style provided the artist with his visual vocabulary. Sargent associated forms of religious belief with modes of artistic expression. He linked institutional religion to conventional and symbolic styles, and interior religion to spiritual and subjective styles. As a result, Sargent painted what he and others considered the most primitive and superstitious stage of religious history, *Pagan Gods*, in material modes of representation, or those associated with the allegories, emblems, and symbols propagated by the institutional church. In contrast, he intended to paint the *Sermon on the Mount* in a modern, expressive style, which he linked to the rejection of formulae and the embrace of private, individual religious belief.

Although Sargent worked on the murals for almost three decades (1890–1917), he never painted the final episode. Instead, the figures of *Synagogue* and *Church* that Sargent intended to frame the *Sermon on the Mount* served as the conclusion to his visual narrative, the former blindfolded and collapsing to the ground and the latter steadfast and staring directly at the viewer. Although Sargent believed both were antiquated forms of institutional religion and, as a result, represented both through the iconography of the medieval past, contemporary viewers did not see the mural series as he did. Instead, controversy ensued as soon as the allegorical pair was unveiled in 1919. Both Jews and Christians argued that Sargent presented a living Christianity emerging from the ashes of a dying Judaism—a historical fiction. Its location in a public institution heightened concern because of the murals' potential to confirm and inflame the escalating anti-Semitism of the American public. More generally, critics questioned the legality of presenting sectarian bias in a public space.

Sargent's interpretation of religious history in a public building was one of many mural projects commissioned and completed in the late nineteenth and early twentieth century that considered religion's role in American history. Built between 1901 and 1906, the new Pennsylvania State Capitol in Harrisburg was intended to embody the history of William Penn's Holy Experiment. The architect, Joseph H. Huston, choreographed the architectural, sculptural, and mural programs in the Renaissance Revival building to concretize Penn's philosophy of religious freedom and invited the famed woman muralist Violet Oakley (1874–1961) to decorate the frieze in the governor's reception room. In 1906 Oakley completed a set of murals for the Pennsylvania State Capitol Building in Harrisburg titled *The Founding of the State of Liberty Spiritual: Representing the Triumph of the Growing Idea of True Liberty of Conscience in the Holy Experiment of Pennsylvania*.

Historical, narrative, and philosophical progress impelled the viewer through Oakley's mural series. Presented in chronological order and from left to right, the thirteen panels were intended to show the historical harbingers of religious liberty, its eventual embodiment in William Penn, and its culmination in the founding of Pennsylvania. Influenced by Italian Renaissance frescoes and contemporary illustrations, Oakley outlined her figures, placed them along the lower edge of the canvas, and allowed them to "speak" in quotations that appeared in scrolls decorating the upper edge of each panel. The more than six-foot figures theatrically presented what one art critic called the march of enlightenment.

Although Oakley intended to present the growth of religious tolerance under the leadership of William Penn, Roman Catholics denounced the series for its anti-Catholic bias. Citing her selection of historical events, the ideological narrative she created, and the written descriptions that accompanied the murals, organizations such as the American Catholic Historical Society and the Knights of Columbus lodged formal protests, asking the governor and the Capitol Building Commission to reject Oakley's frieze. They argued that Oakley's historical imagination was predicated on a dominant Protestant model that located the origin of progress and freedom in the Reformation. More important, they feared that even well-meaning Protestant visitors would interpret the capitol through that familiar historical lens, which celebrated Protestant progress, liberalism, and democracy over and against Catholic medievalism, superstition, and hierarchy. Because of art's critical role in educating the

public and cultivating a moral citizenry, Catholic leaders feared that Oakley's murals would perpetuate these myths and stereotypes, which would be further enforced and even naturalized by the official sanction bestowed on them by their location in the state capitol.

Folk Art: Harriet Powers

Harriet Powers (1837–1911), born into slavery, is well known for producing two Bible quilts after the Civil War that have become canonical examples of pictorial quilt making in general and African American religious expression in particular. Composed of squares of differing lengths framed by sashing, Powers's brightly colored quilts included appliquéd figures and animals that referenced conventional religious iconography, local lore, and contemporary events. When interpreted in relationship to one another, they present sophisticated theological reflections that picture African American interpretive processes.

Powers's first quilt (1886) presents the biblical story and its protagonists in eleven episodes that can be read from left to right: Adam and Eve in the Garden of Eden; Eve bears a son; Satan amid the seven stars; Cain kills Abel; Cain, forced to leave, goes to Nod to find a wife; Jacob and the angel; Christ's baptism; the Crucifixion; Judas Iscariot and thirty pieces of silver; the Last Supper; and the nativity. By beginning with Adam and Eve and ending with Mary, Joseph, and Christ, Powers presents a typological interpretation of the Bible; the sins of Adam and Eve prefigure Christ's sacrifice and Mary's sufferings. Specifically, Powers begins with human sin and ends with its redemption through Christ's birth, a theme she reiterates in the biblical figures she includes: Cain, Jacob, the criminal next to Christ on the cross, and Judas. All these men sinned against God but ultimately received divine mercy.

Powers's second quilt, *The Creation of the Animals* (1898), further exemplifies African American religious practice. Rather than representing the hope of new life, however, she depicts natural occurrences and apocalyptic events alongside the biblical figures. For example, in the second frame, Powers depicts May 19, 1780, better known as Black Friday. On that day, the sky grew dark at around 10:00 A.M. and stayed that way for thirty-six hours. Lacking other explanations, those who witnessed the event in New England determined it was the day of judgment. That interpretation was passed down from generation to generation and from New England to the American South, where Powers included it along with other meteorological events like the falling stars of

1833, the “creatures frozen in the cold night” of 1895, and the red light night of 1846. By integrating the biblical past with contemporary life, Powers used a common preaching technique practiced by many Protestant and African American religious leaders that called attention to the presence of God in the natural world, clothed the biblical protagonists in familiar garb, and identified the past and present as pre-figurations of the future.

Contemporary Art: Henry Ossawa Tanner

Unlike many artists who worked in a variety of genres, Henry Ossawa Tanner (1859–1937), an internationally renowned painter at the turn of the century, focused on religious subjects after establishing his position in the art world. His father, Benjamin Tucker (B. T.) Tanner, was a minister and later a bishop in the African Methodist Episcopal (AME) Church. The church, described as “the greatest Negro organization in the world” by W. E. B. DuBois in *The Souls of Black Folk* (1903), focused on religious conversion, evangelism, and African American uplift. Along with their Euro-American counterparts, they deemed Christianity the primary means to individual respectability, a civilized society, and the success of American democracy on an international scale. Tanner’s upbringing in the AME Church shaped his visual interpretations of the biblical text and led him to create paintings that engaged the viewer’s emotions and at the same time modeled a form of religious experience that was disciplined and restrained.

Tanner’s biblical paintings posited a relationship between seeing and believing, a theological formulation consistent with Methodism’s emphasis on experience as a means to the divine. Even a cursory glance through the biblical subjects Tanner chose to represent calls attention to the presence of the divine in human life. Daniel sits unharmed in a den of lions, angels appear before the shepherds, Gabriel approaches Mary, Lazarus rises from the dead, and the disciples and the three Marys stare into an empty tomb. Significantly, Tanner did more than simply represent God’s intervention in human history; he encouraged viewers to experience that presence before his paintings. His reliance on Christian iconography and the visual vocabulary of the historical Christ resulted in naturalistic renderings of biblical figures, and his use of more expressionistic brushwork encouraged spectators to personally engage the work of art and view it as a permanent presence rather than a historical record or instructional object.

The value Tanner placed on the importance of sensory experience in obtaining knowledge of God built on the

notion of object-centered learning, a notion that obtained widespread currency among cultural and religious leaders who believed that the study of art could cultivate the soul and encourage religious feeling. Throughout the nineteenth century, two general forms of popular religious art appeared: didactic imagery, which instructed, taught, and was used to facilitate conversion; and devotional imagery, which was contemplated by the viewer and intended to nurture and aid in character formation. Although both modes remained active throughout the century and many images encouraged both forms of engagement, emphasis began to shift during the nineteenth century from the didactic to the devotional. As Protestant attitudes toward the visual began to parallel those of Roman Catholics, many turn-of-the-century Americans turned to art to encounter the divine.

Visual Culture: Painting, Sculpture, and Graphic Arts since World War II

The dominant ideas and beliefs of a society or region are reflected in the art forms that make up its visual culture. Visual culture consists of both fine and commercial art forms as they exist within and outside organized faith traditions. This may include paintings, sculpture, and the graphic arts as well as still photography, television, film, and artifacts. Since the end of World War II in 1945, one of the most significant ways North American religious beliefs and values have been communicated has been through visual culture. Traditional as well as alternative and counter-approaches to religious subjects and themes have been reflected. Some artists, in fact, view their vocation as prophetic.

Popular Traditionalism and Elite Postmodernism

In spite of shifts after the war from traditional narrative approaches toward greater abstraction, an audience for traditional narrative and realistically rendered religious subject art remained outside mainstream fine art circles. For example, most of the altarpieces, wall paintings, and stained glass windows in churches and temples continued to be created within narrative and realistic art styles. Most of the imagery of holy figures and of pilgrimage sites on the walls of people's home did as well. Since the war no religious subject art work has been more widely embraced than the 1941

painting *The Head of Christ* by commercial illustrator Warner Sallman (1892–1968). Referenced as the most popular Protestant representation of Christ, this painting and others that depict Jesus with European features were increasingly criticized during the later years of the twentieth into the twenty-first century. Critics have pointed out that such representations of Jesus without reference to his Jewishness historically were used to support colonial missionary efforts. Although increasing attention has been placed on multicultural representations of Jesus, meant to symbolize how all persons are created in God's image, globally Sallman's *The Head of Christ* remains the most popular. This popularity is credited to mass marketing over the years on everything from wall hangings and lamps to prayer cards. Among other widely distributed Sallman illustrations is the poster *The Christmas Story*, in which a soldier is shown reading the Bible with an image of the holy family and the American flag in the background. During the Christmas of 1942, this poster was distributed to U.S. soldiers in support of the war. Increases in the variety of faith traditions aside, the popularity of Sallman's *The Head of Christ* reflects the continued domination of traditional Protestant Christianity and its imagery in much of America and the world.

Shifts after the war away from representing religious subjects within traditional narrative approaches helped usher in the postmodern era. Increasingly, much of fine art creation moved away from the church and other faith institutions and into museums. Critics argued that previous traditional approaches would prove inadequate for the approaching era. Based on G. W. F. Hegel's 1828 Berlin lecture, the critic and philosopher Arthur Danto has described this shift as the end of art or the death of narrative art as primary. No longer would artworks be understood simply as a part of a neatly defined linear historical narrative. Instead, there would be no agreement in the fine art world about what constituted art, and anything could in effect be art. In increasing numbers, artists would embrace interrelative approaches to the secular and religious, within expanded definitions of religion. From a Christian perspective, Colleen McDannell presents an expanded definition in her *Material Christianity*: "Religion is more than a type of knowledge learned through reading holy books and listening to holy men. . . . Throughout American history, Christians have explored the meaning of the divine, the nature of death, the power of healing, and the experience of the body by interacting with a created world of images and shapes" (1995, p. 2). Such statements highlight that religious artwork includes images

of traditional religious subjects, as well as images that portray mythical themes and awe-inspiring experiences in ways that reflect Americans' values.

Increasing Abstraction in Art

New directions in North American visual culture evolved out of the destruction of the war. The center of the fine art world had shifted from Paris to New York. Although Americans no longer first looked to Europe to define new trends, one of the ways Europe continued to influence American art as well as American theology was through the artists and theologians who migrated to the United States and Canada. The American Abstract Expressionist movement embodied the growing need for new ways of thinking after the traditional ways of interpreting the world had been shaken by the realities of a second worldwide war. This movement had influenced the shift from Paris to New York. Abstract Expressionists took explorative approaches to art making as spiritual ritualistic practices. They embraced

freedom of expression through form and color in ways not necessarily bound to object representational and narrative approaches. In the 1940s Robert Motherwell (1915–1991), Jackson Pollock (1919–1956), and Willem de Kooning (1904–1997) were among the artists who embraced this expressive approach. David Smith's (1906–1965) large geometric sculptures also helped define the movement. Motherwell described the artist's vocation as functioning "to make actual the spiritual so that it is there to be possessed" (Museum of Modern Art, 1959, p. 15). Mark Rothko (1903–1970), whose approach was in keeping with the movement, also spoke about his vocation in religious terms: "I'm interested only in expressing basic human emotions—tragedy, ecstasy, doom, and so on. . . . The people who weep before my pictures are having the same religious experience as I had when I painted it" (Lucie-Smith, 1996, p. 223). Both Motherwell and Rothko countered the idea that only traditional figurative imagery could be seen as religious in subject. Later taking a related approach to painting in the 1950s, William Ronald (1926–1998) founded the Painters Eleven, a group of Canadian artists committed to abstraction.

Much of the art of the 1950s represented delicate balances between the traditional and new as well as the religious and secular. The decade began with the United States again focused on national patriotism in relation to a military conflict, the Korean War. As it had been during World War II, this patriotism often was interrelated with religious beliefs that God was on the side of the United States. The decade ended with the international influence of Abstract Expressionist artists continuing, as evident by the New American Painting exhibition that circulated throughout Europe in 1958. Through the fame of artists such as Andy Warhol, the Pop Art movement that had begun in the 1950s received greater attention. Warhol highlighted how the blurring of the lines between fine and commercial art paralleled the blurring of other previously accepted cultural boundaries. He represented the effects of modern mass-production by presenting everyday objects such as soup cans, shipping boxes, and comic strips as fine art subjects. In addition, artists such as Jasper Johns (1930–) were embracing both elements of the Pop Art movement and a type of Neo-Dadaism. Johns represented American cultural icons in ways that called for seeing the traditional in new ways. In his *Flag* painting (1954–1955), Johns reduced the flag to an abstract pattern of colors and shapes, thereby prompting the viewer to question when an image of the flag is iconic and when is it not. Also during this decade Georgia O'Keeffe (1887–1986) painted images of nature, such as in

her *Winter Cottonwoods, East V* (1954), in which she embodied haunting spiritual qualities within a unique approach that was both representational and abstract.

Realism and Social Conscience in Photography

Although much of the art world was moving toward abstraction, a new group of photographers were moving away from the painterly effects of their predecessors and embracing realism in ways that called viewers to moral action. At the turn into the twentieth century, many of the most prominent American fine art photographers had created soft-focus pictorial techniques that gave photographs a painterly feeling. These techniques along with focus on traditional religious subjects supported their arguments that photography could function as a fine art. Two photographers who lived well into the twentieth century and who early in their careers had embraced the pictorial approach as a part of Alfred Stieglitz's (1864–1946) famed Photo-Secession group were Edward Steichen (1879–1973) and Alvin Langdon Coburn (1882–1966). Other photographers not part of the group were nonetheless influenced by it. For example, the landscape photographs of Ansel Adams (1902–1984) show influences from both Hudson River landscape painters such as Thomas Cole (1801–1848) and the Photo-Secession group. Adams's photographs embody a spiritual quality that celebrates the beauty of North American landscapes as spiritual and Eden- or paradise-like. His landscapes also can be seen in relation to theological concerns about the ethics of ecology. Perceptions of American landscapes as Eden-like date back to the first European settlers, who understood themselves as having a covenant with God and defined America as the New Promised Land.

Moving away from pictorialism, other photographers chose instead to document the economic hardships of specific underserved communities in ways that called viewers to take moral action. This new interest in documenting realism in ways that often blurred the divide between fine art and documentary photography was influenced by uses of documentary photography during World War II. For example, Arthur Fellig who used the pseudonym Weegee (1899–1968) photographed the harsh realities of New York crime scenes and published the photographs in a volume titled *Naked City* in 1945. Gordon Parks focused on the continuing struggles of African Americans as the descendents of slaves. In the 1942 photograph *American Gothic*, he presented janitorial worker Ella Watson with a broom and mop standing in front of a U.S. flag. This was a counterinterpretation of Grant

Wood's 1930 painting *American Gothic*, which had achieved a type of iconic status suggesting how hard labor was a part of the American mythic ideal. Organized lynchings of African Americans, which continued into the 1960s, were another harsh reality of U.S. life documented in photography. These photographs were widely distributed in newspapers and magazines as photojournalism as well as on post cards as propaganda, and have since been published as a book, *Without Sanctuary*. African American leaders of the nineteenth and early twentieth centuries as well as others that followed, such as James H. Cone (1938–), described lynchings as a type of crucifixion.

African American Artists and the Radical 1960s

The movement toward social justice in photography had a parallel in the broader art world in the 1960s. Immediately after World War II prominent African American artists had already begun representing their experiences as Christians and U.S. citizens. Some of them had previously been a part of the Harlem Renaissance or New Negro movement (c. 1918–1937). They celebrated the diversity of African American experiences in ways that made statements about Christian justice and suffering in attempts to counter stereotypes. For example, Romare Bearden (1911–1988) experimented with media and style usually within a Cubist approach, and presented images of human suffering in works such as his *Passion* series (1945). Jacob Lawrence (1917–2000) also embodied a Cubist approach and in his 1947 *War* series depicted his experiences as a member of the Coast Guard during World War II. Most African Americans understood their experiences as Christians and Americans as interrelated. Both experiences influenced their struggles for political and social justice.

The 1960s brought a period of radicalism and diversity in which the previous more simplistically perceived boundaries between the profane and the mundane were blurred. This period of change brought a heightened social and political consciousness inspired by the civil rights movement, the women's movement, and the countercultural movement that supported protests against the Vietnam War. These protests reflected that a growing number of citizens no longer perceived U.S. war efforts as necessarily rooted in justice. The civil rights and women's movements helped draw attention to art created by minorities and women, in ways that highlight the diversity of American experiences. The Black Arts movement of the 1960s and after can be seen as a type of continuation of the 1920s New Negro movement and

Harlem Renaissance, in which African Americans attempted to affect the moral issues of equal rights, social liberation, freedom, and justice, often from a Christian perspective. For example, in the Chicago outdoor mural titled the *Wall of Respect* (1967) a part of the history of African American accomplishment was represented. More recently, at the turn into the twenty-first century, Carrie Mae Weems (1953–) has taken a critical and creative photographic approach to redefining daguerreotypes of enslaved persons of African descent. Kara Walker (1969–) has confronted viewers with black silhouette images that both embody and critique the shocking stereotypical ways African American women were represented before the Civil War.

The Holocaust and Nuclear Holocaust

Part of the Pop Art tradition, George Segal (1924–2000) created haunting sculptures of human figures cast from life that represented situations of injustice. In *The Holocaust* (1984) he presented images about the death and encampment of more than six million Jews during World War II. In *The Bread Line* (1991) he represented the poverty of the Great Depression. *The Bread Line* relates to the earlier work of Dorothea Lange (1895–1965) and others commissioned by the Farm Security Administration to photograph the realities of U.S. rural poverty during the period.

Continuing concerns about the existence of nuclear weapons have also been represented in art. New ethical concerns and anxieties developed after nuclear weapons were used to ensure the Allied victory in World War II and after atomic weapons continued to be developed in large numbers during the Cold War (1945–1991). These concerns exist within awareness that the United States and other nations now have weapons that can spark a nuclear holocaust. Theologians such as Gordon D. Kaufman have contemplated the ethics of living in the nuclear age. The possibility of a nuclear holocaust has been illustrated in fine art works such as Andy Warhol's silk screen *Atomic Bomb* (1965) and were a primary concern in the countercultural prophetic approach of Tony Price (1937–2000), who turned atomic salvage into sculptured religious symbols. The ethics of developing and using nuclear weapons have also been questioned through popular

works such as the television movie *The Day After* (1983), which presented what life in America might entail after a nuclear holocaust.

A New Theology of Art

One of the most significant theologians of the early post-war period was Paul Tillich (1886–1965), who in 1933 immigrated to the United States from Germany to escape

threats from the Nazi government. He is considered the first Western theologian to give in-depth focus to the visual arts. Within his correlation theological method, Tillich highlighted how the Christian Church and secular society are interrelated. According to him, religion in the universal sense, or religion as ultimate concern, is valid when focusing on the church as well as the secular, because religion in this wider sense gives meaning to all cultural creations, including art. Tillich argued that art can function as both a reveler to cultural understanding and an indicator of the character of a spiritual situation that otherwise would remain beyond human awareness. He described art history as the history of continuous discoveries about our spiritual beliefs and practices as they relate to our secular beliefs and practices. Tillich spoke of art as having the potential to unite humanity, and the artist's role as having a prophetic character that expressed the dynamics of society beyond the present and the mundane.

Although the idea that anything can be art was accepted within much of the fine art museum world, as the continuing popularity of works such as Warner Sallman's *The Christ Head* shows, the end of traditional approaches was not embraced by many in the Christian Church and in other areas of mainstream America. The result was a diversity of approaches and debates about what is authentically religious art. The debates can be seen in relation to not only what Arthur Danto has called the end of art but also the God is Dead movement that gained momentum in the 1960s. This movement was rooted in Friedrich Nietzsche's nineteenth-century declaration that humanity had killed God and was left contemplating how to comfort itself. God's existence and involvement in human history were no longer necessary beliefs for all. Within a new radical theology, scholars in the 1960s such as Thomas J. J. Altizer (1927–) declared traditional images of the Creator God obsolete. Altizer argued for a new approach to finding the sacred within a secularly driven world, in which traditional ideas of God were no longer necessary to explain the existence of the universe. The theologian Gordon D. Kaufman's (1925–) later definition of God as creativity can be seen in relation to Altizer's theology. Arguments that art and God were dead critiqued traditional beliefs that many no longer accepted as adequate for the postmodern era.

Andy Warhol of the Pop Art movement also used depiction of Jesus to make statements about the boundaries between religious-subject fine art and mass-produced commercial art in his 1986 *Last Supper* series. By combining the

composition of Leonardo da Vinci's *Il Cenacolo* (*Last Supper*) with Dove soap and General Electric logos, he showed how consumer culture had become a new type of American icon. Warhol's work embodied not only the new philosophy that anything could be art but the theological hope that the overthrow of previously accepted societal divisions would allow anyone to be anything he or she wished.

Controversies over Representations of Jesus

In reaction to nontraditional representations of religious subjects, public debates have continued about whether National Endowment funds should be used to support artists such as the fine art photographer Andres Serrano (1950–). Serrano placed a small plastic crucifix in a jar of his urine and entitled it *Piss Christ* (1989). Chris Ofili's 1996 collage *The Holy Virgin Mary*, in which the artist covered a representation of the Virgin with elephant dung, also gave rise to debate. One of the most vocal opponents of Ofili's work was Rudolph Giuliani, then mayor of New York, who also objected to the African American photographer Renee Cox (1960–), whose work he called anti-Catholic. In *Yo Mama's Last Supper* (1996) Cox models nude as Christ surrounded by black apostles, except for Judas, who appears to be white. Such approaches to creating postmodern reinterpretations of biblical subjects often exist in part as critical statements about aspects of the church and American society.

Postmodern works of various media have prompted debates about which representations may be defined as authentic and iconic. For example, as the result of the contest headed by the Catholic nun and art historian Sister Wendy for a more inclusive representation of Jesus for the new millennium, Jane McKenzie's *Jesus of the People* was declared the Jesus of 2000. McKenzie's painting has been embraced by many and condemned by others. She presents Jesus as a young black man surrounded by symbols that reflect a multicultural world. Other artists have taken more abstract and symbolic approaches. For example, in the fine art painting *Crocifisso 2* (1960), William Congdon presents the crown of thrones on a cross. Although questions about the iconic value of such representation may still be asked, questions about how Jesus looked and whether the artist has presented most viewers' preferred interpretation become less important. Films such as Martin Scorsese's *The Last Temptation of Christ* (1988) and Mel Gibson's *The Passion of the Christ* (2004)

have prompted public debates about what constitutes an authentic representation of Jesus' life.

Native American Art and Electronic Imagery

During the later half of the twentieth century and into the twenty-first century, the work of Native American artists such as the Canadian Norval Morrisseau (1932–2007), also known as Cooper Thunderbird, gained attention. Morrisseau created a unique painting style known as the Woodland school of legend or medicine painting, through which he represented some of the tensions between Native Americans and people of European descent. Using this approach, he originally painted ancient Ojibwa legends on found materials such as animal hides, but later included representations of Christian subjects in his work.

North Americans' religious values and beliefs are increasingly communicated through popular media, including film, television, print forms such as magazines, and new media forms such as the Web and mobile technologies. Values are communicated in the stories and events presented through genre such as dramas, sitcoms, talk shows, westerns, science fiction, and televised religious services. Christian symbols such as angel wings or Madonna and child imagery are used to persuade viewers to purchase everything from undergarments to baby formula. New virtual communal worship rituals take place through sites such as the Anglican Cathedral of the Second Life. Although many of the religious and iconic roles of such images and practices are different from traditional approaches, they still communicate messages about Americans' religious beliefs and practices.

Since World War II, diversity has been a key theme in the transition from the modern to the postmodern era. The move has been from ideas of art as necessarily embodying universal messages toward greater awareness of multiculturalism and how art communicates the particular circumstances and traditions of specific communities. Technological developments have greatly influenced the increased access we now have to the graphic arts and popular media as viewers and producers. Since 1945 North American visual culture has moved in new directions but remained entwined with major religious, civic, and social currents. The faith beliefs, myths, hopes, debates, protests, and turmoil of the continent have always been and will continue to be embedded in its visual culture.

Voodoo

Voodoo traces its origins back to traditional spiritual practices of West Africa. *Vodu* refers to its African origins, *vodun* to its Caribbean expressions, and *voodoo* to its development in North America. The latter word has come to refer to a variety of magico-religious customs, reflecting African roots and New World adaptations. For the Fon-speaking peoples of Dahomey (now the republic of Benin), *vodun* refers to a god, a spirit, or a sacred object. *Vodu* refers to different deities and to a system of religious belief and ritual through which the gods could possess humans who then danced to the movements of the gods. The name suggests "spiritual forces." In this African worldview, humans interacted with spirits of trees and rivers, and the ghosts of dead ancestors continued to intervene in the lives of descendants. Humans had easy access to spiritual forces for decision making and for achieving healing from harmful forces. Spirit possession was an essential feature of West African religion. In particular rituals,

individual men and women would allow a deity to enter their bodies. When these persons spoke, it was believed that the deity was determining what was said. The West African tradition gave much authority to fate, with divination considered useful in understanding a person's destiny, and a sorcerer could often help an individual circumvent an unhappy future. Slaves brought the religion to the New World, and its early history in North America focuses on the South, specifically New Orleans, the Carolina and Georgia Low Country, and rural plantation districts with large slave populations.

Nineteenth Century: Arrival and Growth of Voodoo in America

Arrival of Voodoo in New Orleans

Voodoo, like other circum-Caribbean religions based in African traditions such as Santería, Shango, and Candomble, had a pantheon of gods and spirits, priests and priestesses who conducted services, a congregation of the faithful, and a defined belief system. Its essentials came to the French Louisiana colony with the earliest slaves. In the first decade of the nineteenth century, some ten thousand people fled the slave uprising that led to the new republic of Haiti and arrived in New Orleans, bringing the Haitian vodou religious traditions with them and easily melding them with the Louisiana version. Haitian vodou began on sugar plantations at the height of the slave trade, with huge African populations and small numbers of French planters. The demographics enabled the recently arrived Africans to replenish their spiritual traditions in the New World for generations. The Roman Catholic Church of the French planters acknowledged the humanity of the Africans and sent priests to convert them, leading to a syncretic faith in which sorcerers from West Africa and their descendants thrived and priests and priestesses became powerful political and social leaders.

The Roman Catholicism of French New Orleans similarly interacted with this African-based religion, resulting in a syncretic new tradition that became voodoo. Slaves received instruction in Catholicism in New Orleans and found congenial its conception of a supreme deity, angels, and saints—all of whom they could relate to their own spiritual beings. Just as they had prayed to spiritual beings as intermediaries to higher gods, so they embraced the Virgin Mary as intercessor to Jesus. Africans honored their deities with festivals and prayed for practical assistance, and Catholicism offered parallel experiences. Evidence suggests that nineteenth-century

voodoo practitioners identified specific Catholic saints with African deities. Marie Laveau called St. Peter “Laba,” or “Papa Limba,” terms that may have been variants of Legba, a Dahomean spirit who is the guardian of entrances, gate keeper to the spirit world, and a well-known figure in blues music lore as the protector at Mississippi Delta crossroads. The other African deity, in addition to Legba, who appeared often in New Orleans voodoo was Damballa, also called “Li Grand Zombi” and symbolized by the serpent. The snake was at the center of New Orleans voodoo, its image seen in homes of voodoo practitioners; it was a central part of ritual altars throughout the nineteenth century.

Open Practice and Spread of Voodoo in the American South

Voodoo “queens,” or priestesses, dominated voodoo activities in New Orleans in the nineteenth century. The homes of voodoo priests displayed impressive altars, composed of statues and images of saints, candles, flowers, fruit, and other gifts to the spirits. The feast day of St. John the Baptist, June 23, was marked by special rites on the shore of Lake Pontchartrain. Voodoo worship, in general, included chants, drumming, dancing, and Catholic prayers, all aimed at creating an atmosphere in which the priest or priestess could summon the spirits into the bodies of the worshipers and those spirits speak to everyone assembled through those possessed. The most famous voodoo queens were the two Marie Laveaus, mother and daughter. They were free women of color and prominent French-speaking Creoles who combined their magical powers, organizational abilities, and business sense to enable voodoo to survive despite opposition from political opponents.

Although New Orleans was the most famous center of voodoo in the nation in the nineteenth century, voodoo was also found in the Low Country of South Carolina and Georgia. Folklorist and historian Charles Joyner identifies a tradition of “magical shamanism” as a subterranean culture that derived from African vodu. Slaves and free blacks used it as protection or for malevolent purposes. When ill, for example, slaves in the area typically went to the priests of the old religion rather than to their masters. Illness was caused by imbalances between the spiritual and material realms, and sorcery was necessary to summon the spirits of the dead for their counsel and cures. This magic could cure illness, kill an opponent, or gain someone's love. The spirit of Damballa was as present in the Low Country as in southern Louisiana: snakeskins were featured in initiation ceremonies into

voodoo, snake charming was a part of rituals, and folklore in the region attributed supernatural power to serpents.

Shift from Ritual to Hoodoo Magic

During the nineteenth century, the ritual aspects of voodoo gradually declined not only in New Orleans but in other areas of large slave and free black populations, and voodoo as a system of magic came to more prominence. *Hoodoo* became the term for this magic, which placed less emphasis on spirit possession and more on healing practices and the ability to influence people and events. Voodoo implies the supernatural at work, but hoodoo workers rely on the efficacy of their prescriptions for individual clients, whatever the source of their power. *Conjure* is part of the same belief system as voodoo and particularly hoodoo. It involves influencing human behavior through the casting of magical spells. Those practicing this faith are called hoodoo doctors, root doctors, or conjurers. Women practitioners are sometimes called Madam, Sister, or Reverend. Its power rests in the community's acceptance of its effectiveness, based in previous experience with a conjurer helping or harming people. The anchoring in a community of believers gives conjure a claim as a folk religion. The conjurer's power derives partly from giving people of little social status the perceived ability to influence the life of a stronger person by harnessing the power of the spirit world.

Twentieth Century: Adaptation and Resurgence

Zora Neale Hurston and the Spiritual Churches

Zora Neale Hurston, an anthropologist as well as a novelist, gave a detailed picture of hoodoo in the 1920s and 1930s, when she participated in several initiations and apprenticed herself with New Orleans hoodooists. Hurston was initiated by Luke Turner, reputedly the most powerful Louisiana conjurer and nephew of Marie Laveau. Hurston wrote of altars, images of saints, candles, oils, waters, beef hearts, beef tongues, black chickens, black cats, sheep, elaborate feasts, and spirit possession. By this time, though, the ceremonies did not express the earlier religious complexity but aimed at using belief in the spirits to achieve such practical results as bringing lovers together, punishing enemies, winning lawsuits, or causing death.

A rich material culture of conjure has contributed to its work. Women often wore beaded necklaces as "charm strings" intended to foster good luck. Conjure makes good use of herbs and roots. Its practitioners regard John the

Conqueror root as the most potent one. John the Conqueror is sometimes associated with Saint John, Christ's apostle. Also, it is believed to stimulate sexual attraction; several blues songs mention it, including Bo Diddley's "I'm a Man" and Muddy Waters's "Hootchie Kootchie Man." A *mojo* hand is a conjurer's bag containing items used to place or remove spells. It is a cloth sack that might contain parts of dead bugs, scorpions, lizards, bones, horse hair, or intimate items from the hexed person. Conjurers add powders, herbs, roots, and commercial products to bodily waste, clothing, hair, or fingernails from the body of the person affected to create a concoction to heal or afflict. The conjurer's spell, his or her infusion of spiritual power into these items, is the key to their efficacy for believers.

In the early twentieth century, the Spiritual Churches of New Orleans adapted voodoo and related religious practices into their new faith. It became a new religious institution that used the term *spiritual* in its name to suggest its basis in a spiritualism that communicates with those in an afterlife. Mother Leafy Anderson, a minister who had come south from Chicago, founded the Spiritual Churches in 1920 and reclaimed the more purely religious aspects of voodoo, as distinct from its magical elements, combining them in a new synthesis with features from nineteenth-century Spiritualism, Pentecostalism, and Roman Catholicism. The Spiritual Churches focus worship on the Holy Mother, adoration of the saints, and Catholic-related sacramentals to distinguish themselves from more secular hoodooists. Many members of the Spiritual Churches in recent times have repudiated the magical charms associated with hoodoo. In any event, the adaptation of voodoo in the Spiritual Churches shows its importance as an institution for women in leadership roles.

Immigration and a Resurgence of Voodoo

The nation has recently experienced a new infusion of voodoo religion based partly in immigration of Haitians to North America. A rebirth of interest has taken place in New Orleans, with Haitian priests and priestesses from the island founding temples that cater to mostly white seekers of spiritual enlightenment. Voodoo shops and spiritual advisers abound in the French Quarter. This recent expansion of interest in voodoo in New Orleans is partly a popular religious phenomenon, as whites may combine voodoo elements with New Age or other contemporary religious expressions. These voodoo priests and priestesses bring the Haitian religious practices that undoubtedly remain closer to traditional African vodu than what had evolved into hoodoo

in twentieth-century Louisiana. They conduct performances for tourists to support themselves, and their workshops and Web sites educate Americans on their faith. Haitian vodou in Miami and New York City came into contexts with less historical rooting of voodoo-related spirituality than in New Orleans. Haitian immigrants celebrate the rites and beliefs of their faith in their homes, and hundreds of their healers serve their uprooted followers. Loyalties to family, land, and the spirits have long defined Haitian vodou, along with Catholic sacramentalism and devotionism, and these continue to flourish in North America.

Wicca and Witchcraft

The word *witch* often conjures up images of women who have sold their souls to the devil to obtain supernatural powers that they use to harm others. To the contrary, contemporary witches and Wiccans are both women and men who practice a religion—albeit an untraditional one—that neither recognizes Satan nor worships him. It is a religion that celebrates the cycle of the seasons, believes the divine is in nature and in each of us, and venerates a Goddess most commonly in conjuncture with a God but in some cases alone. Witches do use magic, but their ethical code requires that they never use it to harm others. The most common magical spells, like the most common prayers in Christianity, are for healing. Witches can either practice alone, as solitaires, or in groups called covens.

The terms *witch* and *Wiccan* are sometimes used interchangeably and at other times refer to related but different branches of the religion. M. Macha Nightmare (2001) claims, “Wicca is a subset of Witchcraft (yet in no sense lesser)” (p. 26). According to Nightmare, both are involved in the celebration of the seasonal cycles of the year, the waxing and waning of the moon, and both practice magic. Wiccans, however, venerate both the Goddess and the God, worship in mixed-sex groups, and are followers of an older initiatory tradition. Nightmare contends that witches are those who practice in single-sex groups, worship only the Goddess, or are solitaires. Other authors and some witches, such as Margot Adler, use the terms more interchangeably, while still others view witches as those who practice magic and Wiccans as those who participate in rituals that celebrate nature.

Wicca is the largest and most influential form of contemporary paganism. There are a number of different forms of paganism that share with Wicca a notion of celebrating nature and a belief in polytheism but vary in how the seasonal holidays are celebrated and which gods and goddesses are venerated.

Because witches, Wiccans, and pagans are a hidden population—that is, they often keep their religious identity secret—it is difficult to determine exactly how many there are in any country. In the first decade of the twenty-first century, estimates of the number of witches in the United States varied from 50,000 to a million. There may be 400,000 witches in the United States. In Canada, which has a smaller population, estimates of the number of pagans range from 27,000 to 100,000; about 60 percent of those would be witches.

Wicca: A Brief History

Gerald Gardner, an English civil servant, is credited with the creation of Wicca in the 1940s. He claimed to have been initiated into a coven that had been hidden since the English witch trials in the early modern period. Ronald Hutton, an historian, concluded in his comprehensive study of this religion that there is no evidence to support the notion that Wicca is an old religion. Hutton’s (1999) exploration of the records suggests that Gardner created the religion from five sources: folklore, traditional Western magic, freemasonry, the occult, and Theosophy. Folklore, particularly as presented in the works of Margaret Murray (1921), provided Gardner with a mythology of witchcraft as an old religion that was allegedly practiced by the common people in rural areas. The religion as described by Murray celebrated the fertility

of the land and venerated both divine female and male. According to this mythology, the witch trials were an attempt by the increasingly powerful Christian religion to subvert its predecessor—the old religion of witchcraft.

From freemasonry, Gardner, who was a member, incorporated the notion of the coven as a secret society with three degrees or levels of knowledge. The initiation ceremony that is commonly practiced among Wiccans is adapted from that of the Freemasons. Magical teachings that are part of the secret knowledge passed down from the elders are a combination of traditional folk magic that was practiced in English villages and more general occult beliefs that have waxed and waned in import in England since the Renaissance. Theosophy, a religion developed in the United States in the nineteenth century, brought together an interest in Eastern religions with occult or paranormal phenomena and was popular at this time in England. Gardner formed these influences into a new religion, one that has not only survived past his death but has been exported to most of the developed world. The relative newness of Wicca does not make it any less “true” than other religions. It is common, however, for new religions to claim antiquity, as it often gives an air of greater legitimacy.

Practices and Beliefs of Wicca

The religion that Gardner initially developed is practiced in covens, which ideally are composed of thirteen people: a high priestess, six other women, and six men, with one of the men serving as high priest. Gardner considered it important to have balance between male and female “energies” and therefore saw a coven with an equal number of women and men in addition to the high priestess as ideal. Balance was also maintained through worship of a Goddess of fertility and a God of the Hunt. The Goddess is viewed as eternal but is believed to transform from maid, to mother, to crone, and ultimately back to maid, to begin again the eternal cycle. The God is born of the Goddess at Yule, December 21, grows to manhood and becomes her consort on Ostata, March 21, dies at Samhain (pronounced “sow-en”), October 31, and is reborn again the next Yule. The seasonal cycle of the year and corresponding changes in the relationship between the Goddess and the God are celebrated in the Wheel of Year. There are eight *sabbats* during the year, which fall on the equinoxes, solstices, and the cross-dates between them. Each of these corresponds to the beginning and the height of a season as they are experienced in southern England where Gardner lived. These are consistent with the seasons in most

of Europe and the United States, but they do not correspond to those in the Southern Hemisphere, where the dates have been shifted by six months to more closely correspond to that hemisphere’s seasons.

Customarily in Gardnerian circles, the participants perform rituals skyclad—that is, nude. It is believed that nudity places one closer to nature and helps to eradicate status differences among people. If the ritual is done outside or if children are involved, robes are worn—long flowing gowns much like caftans. Although there is variation, a typical sabbat involves the high priestess and the high priest casting (symbolically creating) a circle. This is done by holding a ritual knife called an *athama* while walking around in a circle, encompassing all present and chanting a call to the divine, most commonly the Goddess but at times the Goddess and the God. The circle and all within it are then consecrated with symbols of the four elements (water, air, fire, and earth) such as salted water, a feather, a lit candle, and a stone. A central altar normally holds all of these elements. Gods and Goddesses associated with the four quarters—north, south, east, and west—or the energies associated with these quarters are called into the circle by the high priestess and priest or at times some of the other participants.

A reading or meditation is then done that addresses the larger significance of the sabbat. For example, if it is Samhain, the Wiccan New Year, there may be a reenactment of the death of the God. People will remember their family members or friends who have died, particularly those who died in the past year. They will often also focus on this as a period of death in the natural world and contemplate what that might mean for their own lives. For example, participants might think of things they would like to “die” in their lives, such as procrastination or unhappiness. At Beltane, which celebrates spring, participants will perform rituals for those things that they hope to “grow” in their lives, such as a new job or new relationship. Rituals typically involve dancing, singing, chanting, or meditating, to raise “energy” that can be used for a magical working, such as healing the Earth or healing an individual. Once the ritual is completed, the four quarters, also referred to as the “watch towers,” are bid farewell, the circle is symbolically “taken down,” and there is normally a feast provided by the participants that is said to “ground” them, or bring them back to normal life.

In addition to a celebration of the sabbats, the moon cycles, particularly the new and full moons, are celebrated at *esabats*. The rituals take a form similar to those used to celebrate the sabbats, in that the circle is cast at the beginning

and taken down in the end and energy is normally raised. During the full moon esabat, the moon is said to be drawn down into the high priestess—that is, the force or power associated with the moon enters into the high priestess and through her into the circle. The format of the rituals, the chants, meditations, songs, and magical workings are kept by each witch in a notebook called a “book of shadows,” which is traditionally handwritten. The Wiccan Rede (pronounced “reed”)—Do as you will as long as you harm none—combined with the Law of Return—Whatever you do, for good or ill, will return to you threefold—serve as the ethical basis of Wicca.

Wicca and Witchcraft in the United States

Rosemary and Raymond Buckland, who were initiated into Gardner’s coven, are credited with bringing Wicca to the United States in the late 1960s. Once on American soil, the religion grew and changed as it was influenced by the social movements of this time—particularly the women’s and environmental movements. From its inception witchcraft had an open nature, which resulted in alternative sects or forms of Wicca. This process began shortly after Gardner published his first book on the religion. Some of these sects were begun by groups who claimed that they too had been practicing the old religion in secret; other sects were direct branches begun by Gardner’s students. The religion has no central bureaucracy, book, or individual who can speak for it. This openness is one of the things that made the religion appealing to youth in the 1960s and 1970s, who were questioning all forms of authority. It was also this openness that made it possible for the religion to be so easily transformed by its encounter with the social movements of that era and those that followed.

Wicca arrived in America at a time when some feminists were searching for a female face for the divine. Although the religion as initially presented by Gardner was not feminist—the high priestess, for instance, was required to step down when she was no longer young and pretty—the openness of the religion meant that the roles of the high priestess and of the Goddess could be rewritten, and they were. Zsuzsanna Budapest, a Hungarian immigrant, was instrumental in these changes. In 1971 she created the first all-women’s feminist coven that worships the Goddess to the exclusion of the God; it served as a model for feminist witchcraft. Budapest drew on and rewrote Wiccan mythology and rituals in creating feminist witchcraft. In turn, her form of witchcraft influenced Wicca to be more aware of gender issues.

Miriam Simos, who both was initiated into a Wiccan coven and trained with Budapest, provided a link between feminist and more traditional Wicca. Simos, who writes under her wicca name, Starhawk, helped create in the San Francisco Bay area the Reclaiming Tradition, which is feminist, environmentalist, and activist. The Reclaiming Tradition has spread around the United States and throughout much of the Western world through Witchcamps, which are gatherings in which both women and men are trained in the tradition and encouraged to take it back to their home communities. Unlike Budapest, Starhawk’s version of witchcraft included the veneration of both the God and the Goddess and encouraged both male and female participants. But unlike Gardner, Starhawk views the Goddess as more central than the God. Furthermore, Starhawk contends that the celebration of the Goddess provides new role models for women and men, roles that are more in keeping with feminist ideals. Starhawk was one of the earliest American authors on witchcraft and is one of the most popular. Her first book, *A Spiral Dance* (1979), has sold more than 300,000 copies. Her influence has gone beyond those who have read her books, as her ideas have become part of the fabric of contemporary Wicca. Not all branches or members of the religion are feminist or attuned to those issues. There continues to be some tension among practitioners, but nonetheless feminism can be seen as one influence on the religion.

The focus on nature, particularly the belief that the divine is in nature and that Mother Nature is viewed as the Goddess, a goddess, or the body of the Goddess, makes the religion appealing to some environmentalists and those sympathetic to environmentalism. As with feminism, the influx of individuals who hold these views helped to increase the import of environmentalism as part of the worldview of the religion. Whether or not this results in individuals becoming more politically active for either environmental or feminist issues has been a matter of debate (see for example Adler, 1986; Berger et al., 2003; Finley, 1991; Jensen and Thompson, 2008; Letcher, 2000).

Prior to the wide use of the Internet, the major places that witches and other pagans interacted, shared information, and at time debated one another was in journals and at festivals, both of which are the work of umbrella groups. These groups provide services for which individuals pay, such as a subscription to their journals or attendance at their festivals. Unlike more traditional religions, Wiccans do not typically form into churches where dues are paid or donations made. Instead they pay for services or items as they are

used. One of the earliest and most important journals was *Green Egg*, which had a policy that it would publish any letter that was submitted. This resulted in this journal becoming a forum in which individuals would argue with one another about any number of pagan topics, including the place of feminism within the religion.

Festivals are retreats that normally occur in the countryside in the late spring, summer, or early fall, at a campground or at a children's summer camp prior to or after the children are in residence. Sarah Pike (2001), who has studied the festivals in the United States, notes that these have similarities to religious retreats as they are a place where individuals come together with others of their faith and share an intense time of learning and spiritual practice. But she also notes that they have the air of summer camp for adults. This is a time that witches and other pagans can walk around in ritual robes, openly wear religious symbols, such as a pentagram or images of goddesses. Rituals and classes are held throughout the gathering, and a ritual fire is lit that serves as the center of the festival. At night individuals come to the ritual fire, drum, dance, and visit. Pagans come from around the country and at times from other places in the world to share chants, songs, and details of rituals.

In addition to festivals, which also occur in England, Australia, New Zealand, Canada, and several non-English-speaking European countries, individuals in each of these countries also meet at open rituals to celebrate sabbats. These are often organized by the same umbrella groups that organize the festivals and journals. The rituals are held in parks, rented rooms in liberal churches, or in backrooms of occult bookstores and provide a venue for people in the same area to meet and exchange ideas. In Canada, England, New Zealand, and Australia, there are also pub moots—these are informal meetings that take place in local pubs.

Turn of the Century and Beyond

In the last decade of the twentieth century, the religion was further changed by publication of how-to books on witchcraft and the growth of the Internet. These popular books, which tend to be basic, are believed by many of the Wiccan elders to have “dumbed down” the religion. The books also made it possible for individuals to learn about and practice witchcraft outside of the coven setting. The growth of solitary practitioners was further accelerated by the Internet. Today more witches are solitary practitioners than are members of covens.

The Internet has had several effects on the religion. It permits individuals to be “instant” experts, training others when they themselves may have little training or knowledge. Cowen (2005), who investigated online interactions on Wiccan sites, discovered that many of the sites consist of no more than information cut and pasted from another site. Berger (1999) noted that although it is possible for individuals to create their own version of the religion, this was rare, because of the tendency of homogenization—that is, the tendency, when there is uncertainty in how to proceed, for organizations, groups, and individuals to look to others in the same field for a successful model, which results in a growing similarity among practices.

The Internet made it possible for individuals to keep their witchcraft identity secret, and to come out of the “broom closet,” as Witches refer to the process of informing others of their nonconventional religious identity, only online. This made it easier for young people to become witches. Because of legal concerns, few covens will accept underage members without parental consent. How-to books and the Internet meant that the young could join the religion without getting parental consent, in fact at times without their parents knowing.

Lewis (2007) compared census data from the United Kingdom, Canada, Australia, New Zealand and survey data from the United States (where religious affiliation is not included in the census) from two periods, the 1990s and the early twenty-first century, and concluded that there has been an explosion in membership by several hundred percent worldwide. He attributes this to two factors: the Internet and the growing interest in the religion among teenagers. According to Aloï (2007), “Andrew Flemming’s popular 1996 film *The Craft* has undeniably been the single greatest influence on the growth of teenage witchcraft in America” (p. 18) The film, which shows four teenage girls using witchcraft to deal with life in an American high school, is noted for including some realistic rituals. Although an American film, it was shown internationally and resulted in the increase of interest in witchcraft throughout the developed world. This film was followed by other films and television shows, such as *Sabrina the Teenage Witch*, which provided positive images of teenage girls who are witches.

Although the media increased interest in witchcraft among teenagers, only a small percentage of those who explored the religion converted. The media furthermore is only one cultural factor that makes witchcraft an appealing spiritual alternative for contemporary adolescents—others

include a cultural interest in environmentalism, an acceptance of notions of gender equity, the growth of interest in metaphysics, an interest more generally in individuals constructing their own spirituality, and the growth of interest in magical realism. All of these factors are the cultural background against which some teenagers become witches. Berger and Ezzy, in their study of teenage witches in the United States, England, and Australia (2007), found that those who did convert were seekers, who tended to see themselves as different and enjoyed that status, and had a long-standing interest in the occult.

Many of the elders in the religion, those who joined in the 1960s and '70s, are concerned that the young who have learned about witchcraft from how-to books and on the Internet are less well trained and less serious than those in their parents' generation who were coven trained. Johnston (2007) and Berger and Ezzy (2007) found that those young people who go beyond dabbling and convert or commit to the religion are serious about their spiritual practice. This does not mean that some are not also uninformed or poorly trained, but they are not just dabbling—they are seeking out information on the religion and are serious in their explorations.

The growth of solitary practitioners, adolescents who joined, and the growing role of the Internet are resulting in changes in the religion. Wicca always had two strands: one focused on changing the self; the other encouraged joining with others not only to venerate the Goddess but also to protect nature and to work toward greater social equity. In part because of the age of the participants and in part because of their relative isolation, there is an increasing emphasis on self-development. As Charles Taylor (1989, 1992) argues, this does not necessarily result in selfishness, but it has resulted in the religion's shift toward one direction.

Wicca is a living religion. Since its inception in the 1940 in the United Kingdom, the religion has been exported throughout the developed world and has gained in membership. There are indications that the spectacular growth in membership during the 1990s has slowed, but the religion remains vibrant. This vibrancy is at least in part due to its inclusion of contemporary social concerns within a religion that permits individuals to build their own spiritual paths.

Women

Women have played central and varied roles in the development of religion in North America. Historian Ann Braude (1997) has argued that “women’s history is American religious history” (p. 87), pointing out that the majority of people who have participated in religion, especially Christianity, within the country, since the colonial period, have been women. Women’s centrality to American religion runs deeper than simply numbers, though.

Religion is about power—divine or transcendent power as well as the human claiming of authority in describing the divine and developing appropriate worship practices. While the first type of power is typically understood to be available to all humanity, religious authority has traditionally been arrogated to males. Despite women’s majority population within most religious groups, historically women have not had significant access to power within those groups. Religious communities, steeped in patriarchal understandings of male and female roles, have often withheld intellectual and social leadership (as theologians or clergy) from women. While innumerable women, worshiping in the pews or in their homes, have found a fulfilling spiritual life within such patriarchal contexts, embracing traditional understandings of female roles and religiosity, others have found such contexts limiting and have challenged male control over religion, claiming the capacity and right to contribute to religious thought and practice. As a result, religion has been a key site of women’s struggles to develop and pursue their own agendas within the patriarchal contexts of North American society.

Women’s presence in American religious history can thus be viewed through three lenses: (1) attention to those women who have developed meaningful and empowering religious lives and identities within the traditional contexts of their respective groups, (2) attention to those who have struggled to develop fulfilling religious lives against contexts they found limiting and, as a result, have critiqued those contexts, and (3) attention to those whose efforts to escape or move outside of the established norms have resulted in creative invention or reinvention of religious practices or ideas. Each of these categories of experience

points to the dynamic among the individual, the particular religious tradition, and the sociocultural contexts within which the latter two exist. Examples of all of these categories can be found throughout the history of North America.

Colonial Period: Claiming Voice

In the early colonial period, English Puritanism and Roman Catholicism dominated religious life in the colonies. Women in these strongly patriarchal contexts had little autonomy in developing religious meaning and few opportunities to become religious leaders. Most developed their religious lives well within the boundaries of their traditions. Yet a few women took on important leadership roles, challenging their communities to reconsider women’s participation in Christianity.

Protestants

Puritan poet Ann Bradstreet (1612?–1672) both accepted and critiqued her Puritan tradition. For the most part, Bradstreet developed her religious identity well within the accepted parameters of the Calvinist faith of her community. She wrote compellingly of her Puritan faith, her family life, and her writing. She wrestled with the meaning the destruction of her home by fire when she was in her early fifties, and she reflected on the relationship between the physical world (nature, material possessions, family attachments, life on earth) and the spiritual or heavenly realm to come in which all such physical things would be abandoned. Nevertheless, her poetry also gave voice to human desires and intellectual tensions that constituted a critical posture toward Puritan theology of her community. Further, she struggled with what we now call patriarchy, rebuking men for their dominance over women and their disdain for women’s intellectual accomplishments. Religious identity, however, transcended such annoyances for Bradstreet, and her relationship with God remained separate from such earthly cares. For Bradstreet, and many other women, strong faith in God and their own religious tradition did not necessarily mean that they were unaware of socially imposed gender limitations stemming from the patriarchal culture that shaped the tradition.

Bradstreet was not alone among Puritan women in championing women’s abilities. Anne Hutchinson (1591–1643) opened her home to Bible study and theological discussion, in which, contrary to Puritan tradition that denied women intellectual and particularly religious

leadership, she frequently served as the leader or teacher. A gifted theologian, Hutchinson attracted both women and men to her meetings and earned the praise of some of the foremost male divines of the period. Hutchinson's theological interpretations, however, not only directly conflicted with those of other male ministers but also implicitly critiqued their sincerity. Some leading ministers, she asserted, were deceiving themselves if they thought they were truly among God's elect. Her transgression of gender norms and her outspoken theological opposition to the Puritan leaders prompted the leadership of the Massachusetts Colony to charge Hutchinson with behavior not appropriate to her sex in 1638. Although several months pregnant, the intellectually sharp Hutchinson responded to several days of questioning during this civil trial with biblically based arguments justifying her work. Yet there was to be no place for a woman theologian within the rigid Puritan patriarchy. Hutchinson's last-ditch appeal to a different type of religious authority, claiming that her knowledge obtained directly from God and that "divine inspiration" was the foundation for her theological critique of male religious leaders and of the court (all male), smacked of the heresy of antinomianism, and she was convicted. Soon after, the Puritan church in Boston found Hutchinson guilty of blasphemy charges. She and her followers were excommunicated and banished, exiled to the dangerous wilderness of Rhode Island.

Despite the achievements of Bradstreet and Hutchinson, most Puritan and other Protestant women lived their religion quietly—in the pews of meetinghouses and in their homes. Although men outnumbered women in church attendance in the first half of the seventeenth century, by the end of the decade, the numbers of women in the pews surpassed those of men. Reasons for this early—and continuing—domination of women are debated by scholars. Within Puritan society, women's roles were restricted to motherhood and domestic work, although in reality many worked long hours in agriculture and artisanal crafts. Once married, a woman existed within the "coverture" of her husband: she had little legal standing as an individual, could not own property in her name, and owed her husband obedience. Under this system, church attendance was another form of obedience to authority, and women, raised to be obedient, would naturally observe its directives. Yet the church offered women a good deal. Pious women could enjoy a spiritual, if not earthly, equality with men, and many were acknowledged as "saints"—that is, they were considered to be among the elect, those people whom God had chosen for

salvation. Examples of female piety echoed deeply with Puritan society, and families frequently marked the grave-stones of women with epitaphs praising the deceased's faith.

An exception to the general lack of opportunities for women's religious leadership during this period arose when Quakers, a sect founded in England in 1650, began to disrupt Puritan society with their conviction that individuals could experience the Inner Light, or God, directly. Testifying to others about one's experience of the Inner Light became a central religious practice, particularly in the Massachusetts Bay Colony, where Puritanism, with its strict Calvinist outlook and theocratic government, held sway. Because the Inner Light could be experienced by women as well as men, a theology that at least pointed toward gender equality, Quakerism afforded women a distinctive foundation for religious leadership. Among those who embraced this role was Mary Dyer (d. 1660), a friend of Anne Hutchinson, who had been among those banished to Rhode Island. Dyer had returned to England with her husband, learned of Quakerism from its founder George Fox, and then returned to Massachusetts to spread the new religion. The Massachusetts Puritans, however, brooked no Quaker dissent and banned Quakers. Dyer, who repeatedly challenged the law, was arrested and eventually banished again, only to return. In 1660, Puritan authorities executed her and several male co-religionists for heresy.

"Stepping out" of women's prescribed domestic place as did Hutchinson and Dyer could thus prove quite dangerous, yet staying quietly within it carried no guarantees for women. During the infamous Salem Witch Trials (1692–1693), many women living in Salem, Massachusetts, had their religious convictions questioned by authorities who believed youthful witnesses accusing them of associating with the devil. Accused women, faithful to the church, found themselves with few options for defending themselves, and thirteen women—along with six men—were put to death as witches before this religio-civic debacle ended.

Catholics

Catholic women in North America during the sixteenth and seventeenth centuries also functioned within a distinctively patriarchal religious system, yet as members of religious orders these women experienced some autonomy in pursuing their own agendas. Spanish colonizing forces, in the form of the first bishop of what would become Mexico, brought "women religious" (that is, women who have taken holy orders—nuns) to the Americas to assist in converting the

native populations, particularly women, to Christian life. The Conceptionist order established the first convent in 1550, but in a twist of fate, it and the others that followed attracted not native women but the daughters of conquistadors, settlers, and other Spanish immigrants, who struggled to maintain their elite social position despite the travail of life in the colonies. For these young women, who were not allowed to marry men of lower rank but who had few prospects for finding husbands of high rank, the convent was the best and most available recourse. Within its walls they found shelter and education. Devoting their lives to prayer, they brought benefit to their families and the community. Convents were thus prized institutions within many communities.

These Spanish and Mexican women religious, like their counterparts in Europe, functioned in a highly patriarchal culture that prescribed their activities and their movements. Convents proliferated with Spanish colonization, and in most cases, the women who lived in them were not allowed to travel outside the walls. Yet while these institutions restricted women's movement, they also provided physical, intellectual, and spiritual shelter, and from within their walls, women developed effective means of influencing colonial society. Intellectual achievements that would not have been possible for women outside the convent were commonplace for those within, and women such as Sor Catalina de Jesús Herrera (1717–1795) and Sor Juana Inés de la Cruz (1648–1695) brought the writings of women religious to the public. The convents also produced many accomplished poets, writing on spiritual or even mystical experience, among them Sor Josefa de la Concepción de Castillo (1671–1742).

Farther north, French Ursuline nuns similarly built fulfilling religious lives within the parameters of their religious orders. Ursuline sisters arrived in Quebec in 1639 to establish a convent and a school that attempted to teach the Algonquian girls of the region. Foundress Marie de l'Incarnation (Maria Guyart, 1599–1672) was noted for mystical visions, a powerful source of religious authority, that she had experienced during her earlier years in France. In Quebec, although her visions ended, she learned and wrote extensively in four Native American languages, including Huron and Algonquian, and produced religious material, including catechisms, in three. An extraordinary figure in seventeenth-century colonization, de l'Incarnation's authority and stature in her later years derived from her work with the native peoples and from her extensive body of writing, which included historical chronicles and letters

to her adult son (born to her before she entered the convent). He, too, entered the church, and, as a priest, aided his mother in getting her work published.

Native Americans

French, Spanish, and British incursions into the continent were intrusions into the lives and territories of a host of indigenous groups, each with its own distinctive social organization and system of religious belief and practice. What little we know about the women in these societies comes from those European and British Christians whose observations of native peoples were heavily filtered through their own understandings of gender and expectations for women's behavior. For instance, because Native American women performed a number of tasks within their communities that Europeans considered inappropriate for women, these early reports frequently opined that indigenous women were particularly degraded by their societies. Native women gathered, planted, and harvested foodstuffs in addition to preparing and preserving food. They cleaned hides and gathered materials for lodgings, and they raised and broke down these lodgings as their groups moved between summer and winter locations. These types of labors, in European eyes, were male duties, and for women to be engaged in them was understood as a measure of their degradation. Yet such tasks were essential to the survival of Native American tribes, making women's labor central to the communal systems that these groups practiced and forming the foundation of women's power and often considerable influence within the societies. These labors also figured into the religious systems of Native Americans. While it is impossible to generalize among the hundreds of indigenous tribes, female spiritual roles were often defined with respect to the work they did and the life stages (menarche, childbirth) they experienced. Some women gained leadership roles within tribes through individual abilities in healing and the use of medicinal plants or through visions and prophetic abilities.

Although Europeans, particularly French Catholics, endeavored to convert Native Americans to Christianity in the seventeenth century, relatively few conversions were made, and just what conversion consisted of is debated among historians. One of the few Native American Christians included in the historical record is Kateri (Catherine) Tekakwitha (1656–1680), a Mohawk woman who lived in what is now east-central New York State. Sister Kateri has remained in the public eye due to the efforts of a Jesuit priest named Claude Chauchetière, who wrote a hagiography of

her in 1695. Chauchetière focused on Kateri's piety and the bodily mortification practices she embraced and encouraged among other Algonquian women; later hagiographies focused on her healing abilities and vows of chastity. This evolutionary process of historical interpretation by European commentators well illustrates the difficulty historians face in developing full understandings of indigenous women. These European accounts favored ideas and trends of their own period. What Kateri actually did or thought is lost to history.

Growing Participation in the Eighteenth and Nineteenth Centuries

Protestantism, dominated by Puritan Calvinism in New England and Anglicanism in the Southern colonies through the seventeenth century, became more diverse but also more hegemonic in the eighteenth century as immigration to North America increased and as a variety of new religious groups developed. A central feature of this new diversity was the growing popularity of evangelical perspectives that countered Calvinism. In contrast to the doctrines of predestination and limited atonement embraced by the latter, evangelicals asserted that God's salvation was available to all but only through his gift of grace. Methodism, for instance, founded by English divine John Wesley, asserted that individuals must accept the gift of grace by turning to God to confess and repent their sins and by striving for a more pious existence. A profound conversion experience marked the salvation of the individual.

These ideas offered some Christians new access to God and divine power and provided women with new opportunities to shape both their own religious experience and that of others. Piety had been the central component of Puritan women's religious experience and practice, and with the rise of evangelicalism, the value placed on female piety, and by extension, female morality, soared. In the context of the growth of industrialization and the competitive and, in the view of many, immoral arena of production it created, religious women, safely ensconced in domestic activities, were held up as morally superior to men and exemplars of Christian life. By the nineteenth century, this idea of moral superiority provided one foundation upon which women gained voice and religious influence.

Moral Reform

Female moral reform societies, missionary societies, and Bible societies, founded, staffed, and financially supported by

women became an outlet for women's religiosity-based social activism. Lydia Root Andrews Finney (1804–1847), the wife of revivalist Charles Grandison Finney, pursued moral reform agendas from an early age, praying, for instance, for the conversion of her future husband upon meeting him when she was eighteen. Reshaping the role of the minister's wife, Lydia launched into evangelism, organizing teams of churchwomen to visit door to door to distribute tracts and invite people to revival meetings, as well as hosting mixed-gender prayer meetings in her home. In 1834 she served as the first director of the New York Female Moral Reform Society, dedicated to combating sexual licentiousness and eliminating prostitution. Later, when Charles became president of Oberlin College, Lydia joined the Oberlin Moral Reform Society and the Maternal Association, serving on the Ladies Board of the college. In this latter position, she opposed the efforts of a female student, Antoinette Brown, to complete the theology curriculum. In this, Finney found working for moral reform within the existing perspective of evangelicalism acceptable, but she was not interested in challenging fundamental gender constructions within evangelicalism that limited women's religious participation. She believed that ministry and the religious leadership it entailed were not appropriate for women.

Abolitionism became another cause that women embraced on religious grounds, but doing so posed some significant challenges to gender standards of the period. Quaker Lucretia Coffin Mott (1793–1880) founded the Philadelphia Female Anti-Slavery Society in 1833, acquiescing to proscriptions against gender mingling in established public organizations. Soon, however, she and other women achieved admission to the American Anti-Slavery Society. In 1840 she led the U.S. women's delegation to the World's Anti-Slavery Convention in London, where she and others became radicalized when the women present were sequestered and not allowed to participate in the proceedings. Such efforts to limit women's antislavery work spurred some women, including Mott and her friend Presbyterian Elizabeth Cady Stanton (1815–1902), to expand their critique of the denial of human rights beyond enslaved people to women more generally.

As much as some women tried to minimize their challenge to gender norms regarding appropriate female behavior, moral reform work inevitably took them out of their normal sphere. Women who participated in moral reform societies learned organizational and communication skills, including petitioning and public speaking that automatically

placed them outside of appropriate female behavior. Speaking to mixed-gendered audiences, for instance, as did Quaker sisters Sarah and Angelina Grimké, was forbidden in most venues, and even when allowed, women speakers were often heckled. As a result, some women developed critiques of those gender norms and began to challenge them publicly, launching the women's rights movement in the United States. Former slave Sojourner Truth (1797–1883), a Methodist, delivered her “Ain't I a Woman” speech to counter stereotypes of women's meager physical and intellectual abilities. Stanton and Mott organized the first women's rights convention in the United States in 1848. Held in the Wesleyan Chapel at Seneca Falls, New York, the convention ratified a document written by Stanton and modeled on the Declaration of Independence. This “Declaration of Sentiment” called for the recognition that “all men and women are created equal” and presented an argument based on the concept of human rights. Later, Unitarian Lucy Stone (1818–1893) joined Mott and Stanton in founding the American Equal Rights Association in 1866, and, in 1869, the national Woman Suffrage Association.

While these activities might be considered secular rather than religiously based, these women were cognizant of the fact that many who restricted women's work on public issues did so based on religious justifications. For example, the New Testament First Letter to the Corinthians (1 Cor. 14:34), usually attributed to the apostle Paul, was often cited to suppress women's voices, since it urges that women remain silent and not be permitted to speak in the churches.

Taking on the foundational text of Christianity, Stanton and a group of women penned a biblical commentary that offered a radical critique of its historical characterization of women. Examining all female characters in the New and Old Testaments, *The Women's Bible* was a proto-feminist assessment of women's positive, negative, and contradictory depictions, which laid the groundwork for later theological and historical analyses of Christian attitudes toward women.

The moral reform impulse among evangelical women eschewed such critiques of patriarchy but aimed nevertheless at changing male behavior, particularly with respect to alcohol use. Temperance advocate Frances Willard (1839–1898), founder of the Women's Christian Temperance Union (WCTU), struggled against the restrictive view of “women's place” that her Methodist Episcopal denomination imposed upon women. Stepping out of that place, Willard addressed public, mixed-sex audiences on a range of

topics, starting with temperance but soon including women's suffrage and women's role in the church. Thousands of women across the country founded and joined chapters of the WCTU in the 1870s, 1880s, and 1890s and organized rallies and carried out other resistance activities against saloons. Carry (Carrie) Nation (1846–1911), a Kansas temperance advocate, believed that Jesus called her to banish alcohol by any measures and gained a reputation for smashing saloons with rocks; she was arrested several times.

Despite the many ways in which nineteenth-century reform activities transgressed and challenged restrictive gender norms for women, most of the women engaged in reform activities upheld those norms. Advocacy against prostitution and alcohol grew from a desire to protect women, children, and the ideal home, which activists felt were threatened by sinful male behavior. Few of these women conceived of their work as “religious leadership” on a par with the responsibilities of ordained clergy.

Spiritual Leadership

In addition to the idea of female moral superiority, another new avenue for women's religious participation and leadership emerged: direct access to God's revelation. Quakers were among the first to claim this type of religious authority. By the nineteenth century, evangelical women also claimed access to God as a foundation for their religious activities. At church services and camp meetings, they publicly testified to their experiences of the Holy Spirit and their conversions, standing up in public to explain their previous sins and the effect of God's grace on their “new” lives. Methodists, who embraced lay preaching and leadership rather than seminary education, provided a platform for some women, including Julia A. J. Foote (1823–1900), a member of the African Methodist Episcopal Zion (AMEZ) Church in Boston. Foote pursued her call to preach in the face of resistance from her parents, husband, and minister. Persisting, she addressed congregations throughout the eastern seaboard and into Canada. In 1879 Foote published her autobiography, *A Brand Plucked from the Fire*, and toward the end of her life, she became the AMEZ Church's first woman deacon. In 1900 she was ordained its first woman elder.

With the development of the Holiness movement, an interdenominational movement built upon Methodist understandings of sanctification and perfectionism, the belief that individuals could directly experience the Holy Spirit received a significant boost. In some circles, women were thought to be particularly susceptible to perception of

the Spirit. Having experienced the power of the Holy Spirit itself, women leaders such as Phoebe Palmer (1807–1874) pursued religious vocations into the public arena, drawing upon the Holy Spirit to legitimize their activities. Palmer, a preacher, theologian, and author, became highly influential, advancing Holiness doctrines of sanctification, perfectionism, and baptism in the Holy Spirit. Like all of these early women preachers, Palmer faced significant obstacles to fulfilling her call, including disparagement and ridicule from both men and women who felt women did not belong in the public arena and were not appropriate religious leaders. When women preachers were warned to keep away from revivals in New York City in 1857–1858, Palmer wrote in defense of women preaching and prophesying in a book titled *The Promise of the Father*, which carefully negotiated between her respectable, Victorian, middle-class status and her conviction that God baptized both women and men in the Pentecost and called both to Christian vocations.

Another outlet for women's interest in divine power arose in the 1840s with a wave of interest in Spiritualism—the belief that communications between the living and those who have died (“crossed over”) can occur. Women involved in Spiritualism, a movement that directly countered Protestant orthodoxy, were, according to historian Ann Braude, rebelling against both death and earthly authorities. Through séances, spirit possession, and mediumship, women claimed direct access to supernatural (that is, divine) power; this legitimated behaviors that would otherwise be deemed highly transgressive: speaking in public, teaching or directing the activities of men, and participating in political activities. Not surprisingly, many Spiritualist women became involved in the suffrage and women's rights movements.

With the possible exception of Quakers, these movements did not directly confront the patriarchal organization of Christian society, even as they allowed certain “exceptional” women access to religious leadership. Radical rethinking of and challenge to patriarchal social organization did occur in the case of a communitarian group seeking to restructure Christian life along wholly new lines: the Shakers. Ann Lee (c. 1742–1784), the woman who transformed this marginal English sect into one of the most successful communitarian societies in America, advanced a view of the divine as encompassing both male and female. Her followers claimed that she herself was the female counterpart to Jesus or the Second Appearing of Christ; together, she and Jesus formed the Christ. This theology of a dual

Christ was increasingly refined through the Shakers' most productive period, initially guided by Joseph Meacham, who required male and female governance in all communities and appointed Lee's protégé Lucy Wright (1760–1821) as his own counterpart and spiritual leader of the Shakers, as well as head of women's orders. Yet gender inequality, and specifically women's subordination to men, was deeply entrenched, despite Lee's efforts. It would take many years before Shakers fully accepted gender equality in governance. And, in fact, because women's and men's activities were strictly segregated, “equality” among the Shakers had little to do with eliminating prevailing gender roles, consisting instead of the idea that women's domestic work was of equal importance as men's agricultural and craft work. Further, in expectation of the imminent return of Christ, Shakers took vows of celibacy and renounced marriage, creating a social situation that radically altered the usual power relationships between men and women. Upon Meacham's death in 1796, Wright took over leadership of the Shakers. An able administrator, she advanced Shakerism from its initial settlements in New England and New York into Kentucky and Ohio.

Other groups of this period also experimented with gender roles, sexual mores, Christian millenarianism, and women's leadership. The Church of Jesus Christ of Latter-day Saints (the Mormons), founded in the 1830s by Joseph Smith, for instance, brought new revelations to its followers, including Emma Hale Smith (1804–1879), Joseph's wife. Emma founded the Nauvoo Female Relief Society, which provided aid for widows and jobs for single women. Through the society, she also countered Joseph's efforts to institute “plural marriage” (polygyny) in the community. In contrast, the Oneida Community, founded by John Humphrey Noyes, advanced gender equality and what Noyes called “complex marriage” within a millenarian context aimed at establishing the kingdom of God. Women and men were considered equal within the community, marriage was banned, and all members were encouraged to partner sexually with a series of their co-religionists. Whether this arrangement was beneficial for women, proto-feminist, or detrimental has been a significant debate among scholars of women's religious history.

African American and Immigrant Women

While Protestant women negotiated their religious identities within these contexts, African American women and immigrants dealt not only with the expectations set by the

predominant Protestant society but also with unique racial and ethnic contexts. African and African American women, whether enslaved or free, were generally perceived through white Americans' eyes as degenerate and not fully capable of salvation. Nevertheless, by the early 1800s many enslaved and free African American women had embraced several forms of Christianity.

Some enslaved African Americans received Christian instruction from white slave owners. Some white evangelicals took their slaves to camp meetings, and some in the North taught them to read and write, using biblical verses as a primer. A number of women, including Harriet Tubman, used their rudimentary knowledge of Christianity, particularly biblical stories of suffering and redemption, as the foundation for resisting slavery and advancing social justice.

Free blacks in the North often joined white churches but were often relegated to second-class status within them. Objecting to discriminatory treatment, African Americans in Philadelphia left the predominantly white Methodist Episcopal Church in 1794 to establish Bethel African Methodist Episcopal (AME) Church under the leadership of freedman Richard Allen. In 1800, Allen's wife, freedwoman Sara Bass (1764–1849), joined him in his work at Bethel and during the next four decades spearheaded a number of church-based initiatives. She organized churchwomen to sew clothing and provide food for the mostly impoverished ministers of the new AME Church and formalized their work in 1827 by forming the Daughters of Conference, an organization that survives in the early twenty-first century, supporting the AME ministry and pursuing social service. She also formed the AME Woman's Missionary Society, aided fugitive slaves, and pursued abolitionism.

In free black congregations, just as in white ones, women outnumbered men in the pews, yet experienced significant opposition from men as they tried to pursue certain religious and social agendas. As an African American middle class began to emerge in the latter decades of the nineteenth century, women established auxiliaries within their congregations and used them to improve their communities. As historian Evelyn Brookes Higginbotham has demonstrated about the National Baptist Convention, black women around the country worked through these organizations to provide education and social services, advance social justice agendas, including racial and gender equality, and promoted African American self-help. Although the individual, male minister in the pulpit emerged as the iconic symbol of

African American religious power, the thousands of women working to advance racial justice from within religious organizations have been a powerful force for change.

Catholic Immigrants

Catholic women in North America in the eighteenth century fell into two categories: laywomen and women religious. In the latter category, French Ursulines from Rouen, France, arrived in New Orleans in 1727 to establish the first community of Catholic women religious in what would become the United States. Initially intent upon the traditional Ursuline missions of teaching and advancing Christianity, the community took up nursing and hospital work in this frontier town, thus making settlement feasible in the malaria-ridden area. The sisters also continued teaching, and, as historian Emily Clark has argued, played a significant role in creating the high levels of female literacy in the region.

As immigration expanded during the nineteenth century, many more Catholic women religious arrived in the United States, setting up their communities to provide health and hospital care, education in both Christianity and nonreligious subjects to young people, and charity to the poor. At mid-century, when Catholic immigration, particularly from Ireland, increased, women religious were occasionally targeted by anti-Catholic groups. The Ursuline convent in Charlestown, Massachusetts, for instance, was ransacked and burned to the ground in 1834 in a riot spurred by Protestant demonstrators attempting to free women whom they were convinced were being held inside against their will.

Regardless of such attacks, the work of Catholic sisters in education, health, and social welfare provided a structural framework that helped thousands of new Catholic immigrants gain a foothold in American communities. These women made the parochial system of schools possible, providing the low-cost teaching force that would remain the foundation of Catholic culture in the United States until the 1960s. Women's skills in these areas and the attendant respect afforded them for their contributions pointed to their importance as religious leaders, but their power was limited. Within their religious communities, they were self-governing, and while they could influence male clergy on broader questions, they were also required to defer to them. In the twentieth century, as women made greater inroads in gaining religious authority, it was frequently women religious who led Catholic women in claiming broader rights, including ordination.

Catholic laywomen also played important roles in the development of the church in America during the

nineteenth century. Strongly influenced by church emphasis on women's roles as wives and mothers, Catholic women took the lead in developing a distinctive culture of home-based devotionism. Purchasing material objects and furniture to construct home shrines, forming an enthusiastic audience for the growing reams of devotional books and other publications written, often, by women, and participating in a host of practices from purchasing and using holy water from the Brothers of the Holy Cross at the new University of Notre Dame to advancing devotions to specific saints, new Catholic immigrant women focused their families' religious lives on the home.

Jewish Women

Jewish women experienced and participated in significant transformations in their religious identities and practices during the nineteenth century. For them, traditional female religious identity was distinctly different from that of males. Women's religious duties that were brought from Europe centered on three crucial tasks: lighting the Sabbath candles, preparing *challah* and burning a small piece of the dough in commemoration of the tithe paid to the priesthood in ancient times, and observing the laws of marital purity. Synagogue attendance, although central for men, was optional for women, who were excused from time-bound rules, and in Europe, it was uncommon for women to attend synagogue. In America, however, Jewish women began to attend synagogue, mirroring the common practice of church attendance followed by the dominant Christian society. Because women were not allowed on the main floor of synagogues—a space reserved exclusively for men—their presence required accommodation in galleries ringing the main room of the synagogue. By the mid-1800s, however, Jewish women increasingly balked at being separated from the main floor, causing many non-Orthodox congregations to eventually adopt mixed-sex, or family, seating.

In a broader cultural context in which women's moral authority was deemed central to a community's religious identity, Jews' struggle with acculturation often centered on the roles of women. Authors such as Anzia Yeziarska, *Bread Givers*, and Abraham Cahan, *Yekl and the Imported Bridegroom*, illustrated the problems and issues Jewish women faced, as the premodern aspects of their traditional faith bumped up against life in the modern United States. Central aspects of women's religiosity changed, from the custom of married women covering their hair with wigs or scarves to the rebuking of such practices as tearing one's clothing at the

death of a family member. Struggling between tradition and change, Jewish, like Catholic laywomen, grounded their religious influence in domestic practices.

Yet many Jewish women extended their religious lives beyond the home and synagogue, becoming involved in public reform activities. Among the earliest of Jewish women reformers was Rebecca Gratz (1781–1869). Gratz first became involved in public service shortly after the turn of the century when she began working with Protestant women to found several nonreligious charitable institutions, including the Philadelphia Orphan Asylum (1815). Recognizing that the needs of Jewish people were not always well served by the nonsectarian organizations that nevertheless had a strong Christian identity, she founded the Female Hebrew Benevolent Society in 1819. Similar charitable organizations soon sprang up in other localities, often founded by men but dependent upon Jewish women's supporting work. Gratz also advanced religious education, founding the first Hebrew Sunday School in the United States.

By the late nineteenth century, as Jewish immigration from Eastern Europe surged, Jewish women had carved out new roles for women in Judaism. Rachel (Ray) Frank (1861–1948), dubbed the “woman rabbi,” preached powerful sermons from Jewish pulpits. Rosa Sonneschein (1847–1932) used the pages of her short-lived magazine, *The American Jewess*, to advocate for Zionism, denounce the increasing social ostracism that Jews experienced, and encourage the expansion of women's roles as religious leaders. These women set the stage for the next generations to advance Jewish women into the highest levels of leadership in the rabbinate.

Striving to Achieve Religious Leadership

As we have seen, women through the eighteenth and nineteenth centuries slowly took on leadership roles in their religious communities and congregations by claiming religious authority on a number of grounds: direct access to the Holy Spirit (Jarena Lee, Ann Lee, Phoebe Palmer), female moral superiority (Lucretia Mott), and inalienable human rights (Elizabeth Cady Stanton). By the end of the period, new female leaders were emerging, claiming their authority on new grounds and redefining women's religious identities in the process.

Healing

While healing had long been an important means through which women aided their families and communities, with the rise of the male-dominated medical profession in the

nineteenth century and the concomitant removal of women from the sickroom, women's healing abilities were eclipsed. Yet doctors' abilities were limited and their practices often mistrusted. In this context, physical healing of the body through direct access to the power of God became a religious leadership strategy available to women.

Mary Baker Eddy (1821–1910), founder of the Church of Christ, Scientist (or Christian Science), drew upon the power of prayer and “right relation” with God to cure the ills of the body. Embracing a metaphysical, neo-Platonic view of the world, Eddy argued that the material is illusion; only the spiritual is real. Using this lens to reinterpret the Bible, she wrote the seminal text of her new sect, *Science and Health with Key to the Scriptures*, developing a unique new theology and religious practice. Eddy, however, refused credit as a theologian, attesting that God had revealed the text to her. Eddy attracted thousands of followers, founded a number of schools across the country in which the healing practices of Christian Science were taught, and oversaw the construction of several churches in the Boston area. Eddy's undeniable success in founding a denomination that remains viable into the twenty-first century attests to her stature as a religious leader.

In the early twentieth century, Pentecostal leader Aimee Semple McPherson (1890–1944) also established her religious credentials through faith healing, as she traveled the United States delivering her message of baptism in the Holy Spirit. Speaking in tongues and healing the sick, McPherson grounded her early career in authority that came directly from God. Although one of her central goals was integrating the spiritual gifts of Pentecostalism into mainline denominations, McPherson, like Eddy, founded a new denomination, the International Church of the Four Square Gospel, and erected its central church, Angelus Temple, in Los Angeles.

Many women followed McPherson's path to local and even national success through combining the Pentecostal idea of gifts of the Spirit with healing. In the 1940s, for instance, revivalist Katherine Kuhlman (1907–1976) offered healing services that she asserted were a modern-day analogue to Spirit-filled services experienced by the very first Christians. As her popularity grew, she founded the Denver Revival Tabernacle and soon moved into radio and later television, becoming, with McPherson, one of the first female celebrity preachers. In the cases of McPherson, Kuhlman, and others, Pentecostalism, with its premise of direct access to the Holy Spirit, provided women with opportunities to preach and evangelize, yet even within

Pentecostalism, women were generally excluded from participation in church governance and from ordination. Even though these popular leaders founded and led their own organizations, most women within established churches had limited opportunities to lead.

Missionary Work

As higher education became increasingly available to women in the late nineteenth and early twentieth centuries, many looked for new ways to combine their religious convictions with their educations to work for the betterment of society. Three important areas of endeavor, each having deep roots in the previous century, coalesced: missionary work, social welfare work, and religious education. Each of these areas was dependent upon and transformed by the participation of educated, middle-class women in early decades of the twentieth century.

By the 1890s, religiously affiliated colleges and universities across the United States opened their doors to women students. Those new students at evangelical institutions were often inculcated with the same missionary zeal that young men had embraced for nearly a century. Women's missionary boards had been in place for years, raising funds and praying for male missionaries. But with well-trained women available, these boards grew more independent, raising funds for women missionaries. Although such organizations attracted some criticism from those who claimed they were competing with denominational (read, “more legitimate”) organizations, women missionaries usually worked under the direction of male ministers, often their husbands. Episcopal, Baptist, Congregationalist, Methodist, Presbyterian, Disciples of Christ, and Pentecostal women, just to name a few, took up posts in China, India, and Africa in efforts to spread Christianity. By the 1920s, however, the tenor of missionary work changed from conversion to service, as missionaries grew sympathetic to the human needs of the populations among whom they were living. By mid-century, providing medical aid, agricultural assistance and food aid, education, and community organization were the primary activities of missionaries. Throughout the period, women also moved steadily into leadership positions in local and national missionary organizations.

Social Service

Educated women also advanced social movements ranging from the Social Gospel to the deaconess movement. Vida Scudder (1861–1954) and Jane Addams (1860–1935) opened

settlement houses in New York City and Chicago, respectively, to counter social class divisions by bringing social and cultural opportunities to immigrant and working-class neighborhoods. Similarly, Jewish settlement houses, such as the one founded in Seattle by that city's chapter of the National Council of Jewish Women in 1906, addressed a range of needs—material, nutritional, educational, cultural, and religious—of new immigrants. *Catholic Worker* founder Dorothy Day (1897–1980), whose houses of hospitality would be adopted in cities across the United States by the mid-twentieth century, established her first experimental houses out of a desire to express her devotion to service. The Women's Convention, an organization of Baptist African American women, advanced education, funded foreign missions, fought racism and prejudice, and established several settlement houses, including the National Training School for Women and Girls, in Washington, D.C. Mormon women used their Relief Societies to provide for the needs of the poor, erecting dozens of buildings for their society's meetings. Responding to a spiritual directive to save wheat for use during future periods of want, they also built granaries for storage throughout Utah. Deaconess organizations within several denominations—Lutheran, Episcopal, Presbyterian, and others—founded hospitals, schools, and other service institutions around the nation.

Women's activism in religiously based social welfare work was transformed in the 1920s as various denominations—Mormons, Presbyterians, Methodist Episcopalians, and Congregationalists, among others—consolidated many women's organizations into broader groups, a move that often resulted in the contracting of women's opportunities. Male-led organizations, advanced in some cases out of a fear that the church was becoming “feminized,” absorbed the work previously done by women's groups, leaving the women disempowered. While these women had tried to work within the system to carve out meaningful religious lives and activities, the system itself shifted to once again exclude them. Not surprisingly, this contraction during the 1920s would engender prompt new critiques of the unfair treatment of women by church organizations and foster growing interest in women's ordination.

Religious Education

Another area saw women's increased participation around the turn of the century: religious education. Protestant women had been deeply involved in the Sunday school movement since its inceptions in the late eighteenth century, acting as

teachers of young children, but with their greater levels of education in the late nineteenth century, women slowly began to move into leadership roles in the area. Although the number of female Sunday school superintendents never rivaled the number of male ones, women produced materials, taught courses, and headed up local Sunday school boards.

The expansion of opportunities for women to gain higher education and their subsequent demonstration of their ability to work on the same level as men in theology, history, and biblical exegesis propelled many Jewish and Christian women to respond to calls they felt to achieve the highest level of service and leadership: ordination. Doing so within denominations that prohibited female ordination required years of struggle and negotiation, with no guarantees that the goal would be achieved. Yet by the late 1890s there were signs that attitudes were changing. Jewish women, for instance, found encouragement in Ray Frank, as well as in Christian women such as Jane Addams, Susan B. Anthony, and Florence Kelley, who had been invited to speak from the *bimah* in several progressive synagogues. Henrietta Szold (1860–1945) followed Frank in pursuing a public career as a religious leader. Convinced that Judaism embraced gender equality, Szold pursued intellectual work—writing, editing, and translating—advancing Zionism and an American Judaism. Szold became the first woman to be admitted to the Jewish Theological Seminary in New York City, although her admission was dependent on the condition that she not pursue the rabbinate upon graduation. Thus denied ordination, Szold found other outlets for her religious energy and creativity, continuing her distinguished career, shattering traditions (upon her mother's death, she said the mourner's Kaddish, a prayer traditionally spoken by a male member of the family), advocating for Zionism, and, in 1912, founding Hadassah, a woman's organization dedicated to charitable service to Palestine. Although Szold's work brought the possibility of women in the rabbinate to public debate, it would be decades before a woman—namely Sally Priesand in 1972—would be ordained as a rabbi.

Protestant Christian denominations also wrestled with the question of women's ordination. Early ordinations included Oberlin graduate Antoinette Brown in the Congregational Church in 1853, Unitarian Olympia Brown in 1863, and Louisa L. Woolsey in the Cumberland Presbyterian Church in 1889. Methodists, the largest Protestant denomination, allowed women to be ordained as local preachers in the nineteenth century but withheld full ordination until 1956. The vast majority of Protestants and

Catholics refused to ordain women. Throughout the twentieth century, women worked with educational institutions and denominational organizations to address the gender-exclusive character of the ministry. By the 1980s, women outnumbered men in Protestant seminaries, and most Protestant denominations had accepted women's ordination. The notable exception was the Southern Baptist Convention, which voted in 2000 to prohibit women from serving as pastors, rendering ordination irrelevant. The Catholic Church, while allowing women to perform some ministerial duties (perhaps because of a lack of male priests) maintains a male-only priesthood.

Mid-Twentieth-Century Activities

Civic Activism

In the post-World War II period, many women—Catholic, Protestant, and Jewish—brought their religious convictions to the public sphere by participating in a variety of political issues. African American women members of many churches across the South helped launch the civil rights movement in the 1940s. By the 1950s, individuals such as Rosa Parks, Fanny Lou Hamer, and Joanna Robinson all were working through their churches to fight racism, and collective actions such as the Selma bus boycott were successful in large measure because of women who worked through church networks. Hundreds of women associated with northern churches and synagogues participated in the Freedom Summer and continued public work on civil rights for decades.

Similarly, women from several religious groups participated in the ensuing civic debates in the 1950s and 1960s. Efforts to “ban the bomb” were supported by women drawing upon religious notions of peace and dialogue, as was many women's participation in the anti-Vietnam War movement. Catholic women religious formed collective bodies opposed to the war; and their activities spurred new efforts to achieve women's ordination in the Catholic Church, including the founding of organizations such as Roman Catholic Womenpriests, which continue to advocate for ordination.

Second-Wave Feminism

Just as feminism of the late nineteenth and early twentieth centuries spurred some women to critique the religious foundations of women's position in society, the “second-wave” feminist movement of the 1960s and 1970s brought

even stronger critiques of the patriarchal social structures and cultural assumptions that have oppressed women, including those associated with religion. Women students training to become theologians, ministers, and rabbis were among the leaders of a movement that attempted to reconstruct a history of women and gender with respect to religion—particularly within Judaism and Christianity, but also in Buddhism and other religions as well—and to recreate religious understandings and practices that would be more meaningful to women's experience and gender.

Interest in women's historical participation in religion surged in the 1970s and 1980s, and scholars and journalists began to review historical records and seminal texts with an eye toward uncovering women's stories and experiences. Despite the fact that many traditional scholars claimed there were no reliable historical sources available that would shed light on women's activities, a wealth of material illuminating women's contributions to a variety of religions was brought to bear, resulting in new appreciations of both the often oppressive, patriarchal character of ancient traditions and of the many creative ways that women found meaning within and influenced those traditions. The work of many women from previous centuries was unearthed during this period, and feminists used this material to build arguments for institutional acceptance of women's religious leadership. Jewish scholar Blu Greenberg, for instance, emphasized the profound contributions of such central biblical figures as Miriam to support her arguments in favor of ordaining women in Orthodox Judaism. Examination of historical figures also led to interrogation of the gender assumptions that limited their participation and provided new avenues for analysis. Leonard Swidler's landmark essay, “Jesus Was a Feminist,” for instance, reread the Gospels with an eye toward Jesus' treatment of women in relation to the gender norms of his day.

Textual examinations also led to a questioning of the assumptions carried in the language used to describe the divine. Building on liberal Protestant critiques of the limitations of human language to represent God, authors such as Roman Catholic feminist theologians Rosemary Radford Ruether and Mary Daly, who later identified herself as post-Christian, interrogated long-held, gender-based discursive practices regarding the divine—namely the almost exclusive gendering of God as male—and developed new theological themes based on women's experience. Virginia Ramey Mollenkott combed the Bible and history for language and images that emphasized female attributes or actions of God

to balance the traditional masculine tropes. As a result, some mainline denominations adopted gender-inclusive language, although not always without controversy.

Central among the new themes that feminist theologians brought forth were the role of the body in religious experience and the role of the religious imagination in knowing and in language. Poet Adrienne Rich and theologians Carol Christ, Penelope Washbourn, and Paula Cooney, among others, have explored these topics. Attention to the body as a central component of religious life precipitated attention to a host of related areas as well, including sexual identity and gay, lesbian, and transgendered experience. Interest in ecology and the human relationship to nature has also informed this work. African American theologians Jacquelyn Grant, Alice Walker, Dolores Williams, and Katie G. Cannon developed a perspective called “womanist theology” that interpreted and advanced black women’s experience in America in order to work toward justice for black women the world over. What these theological perspectives have in common is an interest in social ethicism and women’s ways of knowing. As historian Mary Farrell Bednarowski (1999) has demonstrated, feminist theologians share a commitment to theologizing as an activity with “practical outcomes in its uniting of critique and construction, ethics and epistemology” (p. 29).

While feminist theologians and scholars developed new ways of thinking about women and religion, women across many traditions began developing a host of new practices and rituals to more directly engage their own experiences and religious imaginations, emphasizing what Bednarowski calls “experience over doctrine” (p. 35). Some women, for instance, embraced female deities—goddesses—aided by scholarship on ancient goddess worship. The Wiccan movement provided many women with opportunities to worship a female deity and to develop meaningful new practices. Others integrated goddess perspectives with Christianity, drawing upon historical understandings of Divine Wisdom as female: Sophia. Buddhist feminist Rita Gross brought both scholarship and religious imagination to bear in her exploration of the patriarchal aspects of Buddhism. Jewish feminists, including Judith Plaskow, Aviva Cantor, and Rabbi Lynn Gottlieb, developed new rituals grounded in and celebrating women’s experience. These practices, generally well received by Reconstructionist (which developed the Bat Mitzvah in the 1920s), Conservative, and Reform groups, are renounced by Orthodox Judaism.

Christian women’s efforts to develop new practices have had similarly mixed results. In 1993, for instance, an

interdenominational group of Protestant women in Minnesota sponsored a “Re-Imagining Conference” to mark the midpoint in the World Council of Churches’ “Ecumenical Decade of Churches in Solidarity with Women, 1988–1998.” The conference drew together many themes—the critique of patriarchy and women’s oppression through Christianity, the body, women’s experience, Divine Wisdom (Sophia), and social justice—to reimagine Christianity outside of its traditional patriarchal contexts. The visceral response among Christian conservatives and some moderates, both men and women, to the conference’s re-visioning of the Eucharist demonstrated how far apart the liberal and conservative wings of Christian church had grown.

Outside of the feminist context, conservative Protestant women in the late twentieth century transformed their religious participation even while embracing traditional gender roles. Some, like Tammy Faye Bakker, worked with their husbands to establish ministries, local and national. Others, such as Anne Graham Lotz, founder of AnGeL Ministries, and Jane Hanson Hoyt, president of Aglow International, have developed national ministries in their own right. For the most part, though, women, whether religiously conservative, moderate, or progressive, generally support their congregations through traditional means that accept male religious authority, such as working in education, administration, counseling, and support positions.

Immigrant Women’s Experience Revisited

With the relaxing of U.S. immigration laws in 1965, the population of immigrants from non-Western countries, representing a number of religious traditions, has grown substantially. Like their counterparts among nineteenth-century Catholic and Jewish women, contemporary Muslim, Buddhist, Hindu, Sikh, Hmong, and other women find themselves negotiating between the traditional ideas and practices of their homelands and the modernized American society in which they now live. For many, this means negotiating between practices rooted in patriarchal contexts and American practices that allow greater autonomy for women. In many families, first-generation immigrant women continue the traditions of their homelands (although this varies significantly with educational background), while second-generation women find themselves in an often uncomfortable “in-between” position, in which gender becomes one of many arenas for negotiation. Muslim women immigrants to North America, for instance, have found that their choice of clothing,

particularly the *hijab* or headscarf, has become a point of contention and has thus taken on new meanings. For some Muslim women, wearing the *hijab* has become an act of solidarity and identity with Islam itself. In contrast, some Americans, steeped in gender equality, view it as women's acquiescence to patriarchal power. Muslim immigrants have also sought new forms of participation in their traditions. Asra Nomani, for instance, has pursued gender equality in the mosque, holding mixed-sex prayer sessions led by women. Resistance to their efforts, however, has been strong among traditionalists, who feel that women are not appropriate religious leaders and that prayer services should remain gender segregated. Hindu, Sikh, Jain, and other immigrant women have similarly found themselves negotiating between worlds.

Buddhist families descended from Chinese immigrants in the mid- to late nineteenth century have pursued fairly traditional practices for decades. In the 1960s and 1970s, however, they were joined by a growing number of converts from other traditions, particularly Christianity and Judaism, who infused American notions of gender equality into a religion that traditionally was patriarchal in character. As a result, opportunities for women to pursue leadership in several Buddhist traditions have opened up far more quickly in America than in other countries, with several women now holding positions as Zen *roshi* or masters. Nevertheless, recently, immigrants from South Asia—Vietnam, Laos, and Cambodia in particular—have built new Buddhist communities across the United States in which women continue to find meaning in the traditional practices of their homelands.

Native American Women

Native American women found their lives profoundly changed as white settlers and the U.S. government drove tribes off their lands in the late 1800s. Christian missionary work in the late nineteenth and twentieth centuries, in particular, had highly deleterious effects on Native American women. Working in tandem with governmental policies that undermined Native American cultures, Christian missionaries attempted to impose an agriculturally based, Western lifestyle on native populations, sometimes removing children from their communities to educate them in isolated boarding schools. Much of the effort of missionaries, both men and women, was aimed at transforming Native American women's roles and activities by teaching them the domestic tasks of cooking and housekeeping based on

European models and imposing white, middle-class models of female gender subordination. As a result, Native American women lost their central role in community survival, their control of food and materials, and consequently, much of their power. Along with their traditional ways of life, they also lost the religious systems tied to their former lifestyles and to the landscape that their ancestors had practiced.

Not surprisingly, movements to restore and preserve traditional Native American practices in the late twentieth century were often spearheaded by women who as children had experienced such cultural re-education in Christian boarding schools. Native American grandmothers from many tribes across the United States and Canada have provided leadership and inspiration for efforts to reclaim and advance indigenous practices. Works such as *Night Flying Woman* by Ojibwe author Ignatia Broker and *Buffalo Bird-woman's Garden*, recounted by a Hidatsa woman named Maxi'diwiac, retell stories of tribal life from women's perspectives, shifting the focus of Native American scholarship from the activities of men to those of women. The works of Joy Harjo, Leslie Silko, Linda Hogan, and many others point to efforts to heal and revitalize contemporary life through knowledge of Native American perspectives, values, and practices.

Conclusion

Given the varieties of religious understandings and experiences, making generalizations about women and religion in America is less useful than pointing out a few patterns, all of them stemming from the premise that most religions in America have deep patriarchal roots that have shaped their construction of gender, understandings of appropriate female behavior, and, to varying extents, women's relationship with the divine and their participation in religious organizations. Many women have found deep meaning within these systems. Others have struggled against and challenged the manmade social standards for women while embracing the understandings of the divine harbored within. Still others have rejected some religious traditions entirely in an attempt to build and experience a relationship with the divine untinged by patriarchal influence. Although these three categories provide only a general framework, and the experiences of many women fall into the gaps between these outlooks, they do illuminate the variety of relationships that women have had with religion in the United States.

Women Religious

Women religious, commonly referred to as “nuns,” are women of various Roman Catholic and Protestant orders and communities who assume a monastic way of life restricted to a population of female initiates. The terms “nun” and “sister” are often used interchangeably in popular parlance, although the two are not, in fact, synonymous, especially under the auspices of the Catholic Church’s canon law. The distinction between a nun and a sister primarily concerns the difference between the degree of vows they profess, with solemn vows for a nun and simple vows for a sister. These vows, including poverty, chastity, and obedience for both nuns and sisters, are similar in content but vary in scope and application. The concept of patrimony adds another degree of difference between the two: a nun, having professed a solemn vow of poverty, must forfeit her material wealth and possessions completely, whereas a sister, having professed a simple vow of poverty, may retain her inheritance but must apply its resources for the benefit of others besides herself.

Although most frequently associated with Roman Catholicism, communities of women religious have made significant contributions to Christian traditions outside of the Roman Catholic orbit, particularly within the Anglican Communion, Lutheranism, and Eastern Orthodox churches. The cloistered life, both in its traditional heritage and modern practices, has offered women in North America the opportunity to venture into pioneering missions work, to embrace an identity of female singlehood otherwise considered out of place within conventional social norms and roles, and to pursue a spiritual calling unhindered by the trappings and responsibilities of the traditional domestic role of wife and mother. The culture and appearance of women religious have changed dramatically over the centuries, but the presence and impact of these women living in spiritual communion have remained a constant in the history of

women and religion in America. Within Roman Catholic canon law, women religious are members of enclosed orders and maintain a strict internal rule of liturgical life and spiritual discipline.

The religious vocation of the celibate woman religious has offered a unique female space, social mobility, and educational opportunities that were otherwise limited to men. The role and identity of women religious, however, never served as a romantic escape from other, wholly cruel social and ecclesiastical realities. Like the venerable, traditional roles of wife and mother, the honorable alternative of this religious vocation also entails benefits, opportunities, and drawbacks for those who undertake it. Although giving women an important choice, the choice between wife and mother and nun is often framed in dichotomous terms, in which women are both relegated to what is deemed the lesser realm of the body and carnality (as distinct from the greater spiritual realm often associated with masculine roles and identity) and also celebrated when they occupy and fulfill that sphere as a dutiful Catholic wife and mother. Women religious, on the other hand, pursue a life that extends different opportunities and roles, the ability to remain celibate without social censure and to pursue a life wholly dedicated to spiritual aims. Within this dualistic schema, however, such a choice involves a partial denying of womanhood and embracing an identity and role more akin to that of men, although this never translates to equal authority and status in church or society.

Yet this choice also affords the ability to cultivate a uniquely feminine form of piety not directly available to Catholic wives and mothers. Women religious could revere the Virgin Mary and aspire to be like the female saints or live in a manner more closely resembling these often unattainable models, and their worldly celibacy not only precluded typical social attachments with men (and the subordination and responsibilities these attachments often included), but also denoted their singularity unto God as the chosen brides of Christ. In a unique way, women religious embody this biblical notion of the bride of Christ in a way that no man or married woman ever could. Although Catholic women's orders are still overseen by the male hierarchy of the Church, communities of women religious have provided a great deal of relative autonomy and equality for the women involved. The cloistered life also provided many women with the ability to fulfill the traditionally feminine and female roles in a way that did not limit their service and responsibility to a single household or family. The trope of

spiritual motherhood based on an ideology of feminine nurturing deeply pervades the perceptions and culture of women religious, as they care for many in the human family beyond the membership of their churches or orders and as they cultivate feminine virtue and piety in a more universal rather than domestic context. To be sure, the domestic elements of these feminine elements were emphasized and even exploited by the male clergy in some cases, but conformity to the superstructure of the church did not make women religious ecclesiastical or domestic puppets. Their numbers, presence, and work were critical to the survival and growth of women's religious orders in general in North America, as well as in their home church bodies.

History and Seminal Figures

Although English Catholicism maintained a dominant presence and influence during the colonial period in America, the importance of French and Spanish Catholicism and the communities of women religious they established should not be underestimated. If anything, the culture of English colonial Catholicism did little to encourage a significant movement toward developing numerous women's religious orders in the New World, whereas French and Spanish Catholicism experienced a revival of women's orders in the colonies of Mexico and South America that helped establish a tradition of women's religious devotion in communities that would spread throughout North America. English Catholic women who wanted to pursue such a vocation typically returned to Europe to do so, but the lasting impact of the Catholic Reformation in Spain ensured that Spanish America created space and opportunities for communities of women religious to thrive. For Spanish Catholic women, convents served as much of a social role as an enclave for spiritual discipline, for they offered refuge for the female descendants of settlers who could no longer sustain themselves and the Spanish conquistadors who had met with financial ruin. Spanish orders were more focused on the cloistered life and cultivation of the classical spiritual disciplines, entailing a pious life of steadfast prayer and devotion separated as much as possible from worldly concerns. Although these orders initially catered to a sort of socioethnic elite demographic—women of Spanish descent—eventually orders were established to include all women, regardless of socioeconomic status or ethnic/racial identification. French Catholic communities of women religious, arriving first in Quebec and Montreal, offered more opportunities for missionary work and charitable

service, especially in educating and providing hospital care to the poor and marginalized of society. Such service was considered an integral part of cultivating the spiritual disciplines of traditional convent life and not as a competing practice. Marie of the Incarnation (Marie Guyart, 1599–1672), Marguerite Bourgeoys (1620–1700), and later Jeanne Mance (1606–1673) and Marguerite d'Youville (1701–1771), for example, were influential in establishing this legacy of combined service work and ministry in the territories of New France. In the 1640s, Guyart cooperated with male French missionaries to convert local Native American populations to Catholicism; she helped found a girls' school in Quebec open to native students. In 1657, Bourgeoys opened several schools of a similar mission in Montreal. In the seventeenth and eighteenth centuries respectively, Mance began a hospital in Quebec, and d'Youville oversaw a hospital in Montreal. The eventual spread of French orders into other regions and cities in North America, like the Ursulines in New Orleans, resulted in the greater development of Catholic charity work in the New World.

Republican Period and Beyond: Practicalities of Women Religious in America

During the Republican period and beyond, the survival of European Catholic orders in the United States was strained. Whereas European nuns could rely upon the established and secure support of church structures and the financial sources they provided, the reality for American orders was quite different. The great majority of women religious in America did not function in a traditional cloistered context simply because the American church lacked the resources and long-standing establishment of support needed to sustain the strictly enclosed and contemplative life associated with traditional convents. The culture of American Catholicism, partially from need and partially from the pioneering sensibilities involved in developing and sustaining Catholic life on American soil, seemed to prefer the more active service of sisters rather than the sequestered life of the classical monastic, which was largely considered an unsustainable privilege if not completely unproductive.

For these reasons, the European-established orders began to diminish, while the uniquely American orders, attuned to the needs and cultures of their home continent, survived and adapted. Elizabeth Bayley Seton (1774–1821), for example, founded the first indigenous American sisterhood in 1809. A widowed convert, Seton had to adapt the sisterhood, even under the weight of French ecclesiastical pressures to pattern

it after another sisterhood (the Daughters of Charity, founded in 1633 by St. Vincent de Paul and Louise de Marillac, to serve the poor), so it would survive local financial constraints and socioeconomic realities. Without an official endowment of any kind, Seton, with the counsel of John Carroll (1735–1815), an influential archbishop, recognized the infeasibility of serving only the poor in the community and made plans for change. She modified the scope of the Sisters of Charity so that the members could teach and serve both the poor and the wealthy, thereby ensuring a modest income for themselves and the continued existence of their sisterhood and mission. The French orders, the Religious of the Sacred Heart, brought to St. Louis from France by Philippine Duchesne (1769–1852), and the Ursulines of New Orleans, well established through territorial expansion in the United States, continued, but others became defunct, unable to sustain themselves in the socioeconomic realities of America without the political, ecclesiastical, and economic infrastructure taken for granted by the orders so well established in Europe.

The economic realities required that American orders of women religious take creative measures to sustain themselves. Many pursued agriculture and animal husbandry along with other domestic industries to support their communities without benefit of the ecclesiastical endowments of the European churches. During the nineteenth century, education offered by women's religious orders became a particularly useful way to offer spiritual instruction and service and to sustain the orders themselves. These economic and cultural differences between European Catholic tradition and American Catholic conditions served as a continuous source of tension, as the conflict between tradition and adaptation often forced American sisters to exhibit agility in their expressions of loyalty to European centers of Catholic power and their need to survive and adapt to American needs and realities. At times these tensions were tempered more with gendered conflict between American sisterhoods and the male hierarchy of the church rather than sheer economic or cultural differences.

The male hierarchy of the Catholic Church was alternately supportive and critical of the sisters' work and ways, although women religious often had an advantage in that the male clergy frequently needed the services provided by the sisters to preserve and increase Catholic work "on the ground" in the American context. Thus, communities of nuns could effectively lobby selective causes and win some battles because the nuns themselves were critical to the

expansion and management of Catholicism in America, especially in their reach to communities and spaces otherwise limited to men and the centralized, foreign-based hierarchy of the Catholic Church. In some matters, nuns believed that it was not worth compromising their cooperation and influence for the Roman Church and to concede on more peripheral matters. They believed it was in the best interests of the church to both preserve tradition and church teaching and to make necessary accommodations conducive to the expansion of Catholicism in a variety of sociocultural and geographic contexts.

At the same time, disagreements continued to arise concerning more structural elements of convent life, despite the practical needs and appeals of American Catholic nuns. Strict regulations regarding secluded cloister life and minimal contact with the outside world had taken shape in a European context, in which well-to-do women who joined religious orders brought with them considerable dowries that could support the insular life of the religious communities. Many American Catholic nuns came from poorer backgrounds within pioneer culture; this reality combined with the lack of established financial and institutional support from a developing American Catholic Church rendered many such trappings and conventions of convent life as unnecessary luxuries and even burdensome accoutrements. Such incongruities became increasingly apparent as Catholicism spread into developing territories, where it was more practical for nuns to interact with laypeople themselves rather than to seek the formal clerical intermediaries who would have served as the proper managerial channels of more established church hierarchies in Europe. When church authorities would not concede on matters considered more urgent or critical by American Catholic nuns, some nuns would transfer to other dioceses so they could seek the approval of more lenient or amenable bishops. In more radical cases, some split from their European roots entirely to establish a new constitution more appropriate for their American situation and needs.

Mid-Nineteenth Century: Catholic Women Religious Overcome Nativism through Service

During the mid-nineteenth century, the influx of Catholic immigrants to the United States resulted in significant growth in the numbers of communities of women religious. This increased the value of and necessity for the services of women religious, but it also contributed to burgeoning ethnic tensions between Protestants and Catholics in America,

a relationship that inherited a degree of animosity from the colonial period and from within the American Catholic Church itself. Linguistic, socioeconomic, and cultural barriers continued to challenge the work and ways of American sisterhoods. A pattern of sensationalist attacks on Catholicism via communities of Protestant women religious emerged, in which certain elements of the cloistered lifestyle assumed by nuns were subject to popular ridicule and portrayed as superstitious spectacle. This trend was mostly fueled by vehement Protestant sentiment but also drew upon the ethnic and socioeconomic tensions emerging at this time.

Women religious who wore the distinctive habit were at times forced to don more secular attire for public outings to avoid harassment. The swelling of nativist sentiments in response to Catholic immigration also produced a series of exposés and tabloid-like stories that permeated popular culture, with images and stories about alleged Catholic conspiracies that shaped communities of women religious to the detriment of those involved. These reports, such as Maria Monk's *Aufful Disclosures of the Hotel Dieu Nunnery of Montreal* (1836), stirred up scandals and engendered hostile attitudes toward Catholic nuns. Monk (1816–1849) sold approximately 300,000 copies of her lurid account prior to the Civil War, after which time it continued to be printed, although Monk herself was eventually discredited. Sisterhoods were depicted in these publications as embodying the antithesis of the American ideal of freedom and the prevailing (thoroughly Protestant) model of true womanhood that emphasized the natural, traditional roles of wife and mother. Exaggerating and parodying Catholic themes of penance and the cloistered life, such stories depicted convent life as little more than a religious prison for women, a trap thinly veiled as a sanctuary that lured innocent young women in and then exploited them as little more than slaves to the male hierarchy of the church. The underlying assumptions operating in this conspiracy theory suggested that no upright woman would willingly sacrifice the sacred roles of wife and mother, so women religious must be either immoral and subscribe to a sort of perverse, masochistic rule of church order or be the unwilling victims of a hegemonic and superstitious Catholic Church.

As time passed, however, and as Protestants became increasingly aware of the realities of Catholic work as opposed to the sensationalized myths, nativist sentiments were offset to some degree by a growing appreciation for the work of sisterhoods with orphanages, education, nursing, and social service. Women religious served a great

social need in caring for children in orphanages run by church congregations, along with free schools for poor children. During health crises, when infectious epidemics affected large swaths of major American cities, the responsive care of Catholic women religious greatly assisted in changing and correcting misconceptions and prejudices about Catholic sisterhoods. During the Civil War, women religious accounted for a much larger number of nurses caring for wounded servicemen than in proportion to their presence in the greater population. They opened their convents wholeheartedly and sometimes traveled directly into battle zones to provide medical care for Union and Confederate wounded alike. Although Protestant suspicion of Catholicism in general and women religious in particular remained, Catholic sisters' public service and charity work had the effect of reducing the hostility directed at them.

When Catholic parochial schools were declared a requirement for children of Catholic families in the late nineteenth century, women religious again proved a staple in the expansion of the American Catholic Church. Restricted finances, the ability to help preserve the ethnic, cultural, and linguistic traditions of immigrant Catholics in need of education outside the scope and offerings of the nation's public schools (which were often perceived as overwhelmingly Protestant and by law indifferent toward religious education), and the desire to transmit Catholic ethics and values to younger generations all demanded that American Catholic nuns once again serve as the lifeline of the church's expansive mission in North America. The work of women religious in positions of social service, such as serving in infant homes, maternity hospitals, penitential programs and homes for prostitutes, and educational and support centers for ethnic and racial minorities, contributed significantly to addressing the genuine human needs of those around them. Women such as Mother Austin Carroll (b. 1835), who served as a nurse during the Civil War and led her fellow sisters in establishing numerous schools, convents, libraries, and residences for the poor, and Esther Pariseau (1823–1902), who likewise established academies, schools, orphanages, hospitals, and homes for the elderly, made great pioneering efforts to galvanize the resources and members of religious sisterhoods for the spiritual service to those in need. Katherine Drexel (1858–1955), a wealthy Philadelphia heiress, founded the Sisters of the Blessed Sacrament for Indians and Colored People in 1891. The sisters in her order supported several schools, missions, and other services for members of the local

black and Native American communities. Although the efforts of such sisterhoods were often earnest, altruistic, and well intentioned, they were also often culturally insensitive, just as were those of their white, Protestant counterparts. This was especially true in terms of ministry to black and Native American populations. For this reason, various attempts were made by some orders to begin congregations of Native American sisters. These, however, did not survive, unlike the black sisterhoods, and the remaining Native American Catholic women who chose to continue or pursue the religious life ultimately had to join white orders.

Orders such as the Oblate Sisters of Providence and the Sisters of the Holy Family were founded specifically to serve those in the black community. The Oblate Sisters, founded in Baltimore in 1829 by a French Priest, Father Joubert, and four female refugees from Haiti, primarily offered education to black girls, but they also served as nurses during an 1832 cholera epidemic and oversaw orphanages for black children. It was the first order in the United States for women of African descent. The Sisters of the Holy Family was founded in New Orleans in 1842 by Henriette Delille (1813–1862) and Juliette Gaudin (1808–1888). Its members focused their efforts on education of the poor and underprivileged, especially of slaves, although their work included the establishment of an orphanage and a hospice care center where they would visit and tend to the sick. The Sisters of the Holy Family also served as nurses during a local epidemic of yellow fever in 1853. As black Catholics, these women and the orders of their time represented a double minority; their slight numbers were disproportionate to the impact they had on the communities they served and the role they played in expanding the religious life to women of all backgrounds.

The collective efforts of women religious were not always successful, in that they did not always fulfill the expectations of the church hierarchy and perhaps did harm to communities in which goodwill was intended. The spirit and impact of their work, however, remained a vital source of compassion extended by a caring Catholic hand at times shunned by the Protestant majority as superstitious and untrustworthy. Catholic feminist theologian Rosemary Radford Ruether notes that between 1790 and 1830, twelve Catholic women's religious orders were founded, with an additional 106 between 1830 and 1900, by which time there were 40,000 nuns in the United States, thereby outnumbering Catholic priests 4 to 1. A half-century later, there were 177,000 nuns in 450 various congregations that oversaw thousands of schools, hospitals, and other social

service institutions organized and maintained by Catholic women religious.

Late Nineteenth Century: Female Diaconate among Protestant Women

In the Protestant context, the second half of the nineteenth century saw the deaconess movement, which presented an alternative model of female ministry similar in function, if not form, to the Catholic communities of women religious. Whereas Catholic sisterhoods provided an institutional branch in which women could pursue a religious vocation, Protestant women often had fewer options for church leadership and ecclesiastical mobility outside of missionary work. Internal issues over women's participation in ministry revolved more around the office and role of the deaconess and women's ordination. A modern revival took place in Germany concerning the female diaconate, whose model of Christian service and mercy to the suffering through the work of deaconesses was similarly revived and adopted in America. Several Protestant denominations, notably the Lutherans, Episcopalians, and Methodists, and other smaller groups attempted once more to take up this office and service and experienced greater success in their efforts.

When a female diaconate was first introduced to America by the Lutheran Church, it attracted few American women to its fold. Successive efforts proved more fruitful, as it took some time to counter the prevailing Protestant suspicion toward anything resembling a Roman Catholic model of monastic religious community, even for an innovative and distinct sisterhood of Protestant women. German and Scandinavian Lutheran communities in America developed the first successful deaconess motherhouses, which oversaw social charity work similar to that of Catholic sisterhoods. The Episcopal sisterhoods followed a more traditional monastic model—that is, an ordered and cloistered life of religious devotion and contemplation that was considerably less concerned with active social service. The similarities between such sisterhoods and the Roman Catholic model of convent life were at times a source of friction, as evidenced by the delayed official Episcopal approval of the female diaconate. The Episcopal Church, however, declared its national recognition of women's ministries by passing a deaconess canon, defining such ministries as primarily service oriented and thereby differentiating them from the Episcopal sisterhoods that were more focused on the cloistered, contemplative life of a convent-like community. National recognition of the ministries of the deaconess did

not render her the equivalent of a male deacon, who had the power to exercise authority in the church, to officiate over liturgical functions, to be ordained, and to pursue the priesthood following service in the diaconate. Given that these gendered distinctions were recognized and followed and that deaconesses were subject to male clerical authority, the role and service of the deaconess were welcomed by many as a much-needed addition to the ministerial palette of the Episcopal Church in the United States. This new office for women was taken seriously and valued highly by the church, as evidenced by the establishment of theological schools for the training and education of deaconesses.

The greatest success of the deaconess movement was realized within Methodism, due largely to the work of Lucy Rider Meyer (1849–1922) and her Chicago Training School founded for the training of nurses and including a deaconess order and home. Local evangelism and social service were the initial fruits of Meyer's school, but later graduates went on to foreign mission posts and to establish similar deaconess homes and training institutions elsewhere in the country. Her efforts also came under Protestant scrutiny, but she delivered a biblical and practical defense, arguing that Protestant deaconesses and Roman Catholic nuns were qualitatively distinct. Pointing to the facts that Protestant sisters did not take vows and were not required to wear a nun's habit, Meyer was able to withstand the criticisms leveled as the legacy and impact of her training school extended far beyond its more local, humble origins. The fact that the office of deaconess was service oriented—and therefore not a threat to other (male) positions of authority in the church—and closely associated with traditional female roles of self-sacrifice, maternal nurturing and care, patience, and humility, allowed the new sisterhoods to thrive amid church polity otherwise cautious and restrictive regarding women's leadership in the church.

Despite these ecclesiastical cautions, the official approval of deaconesses granted women official status within the church and promoted them to the forefront of public church service. Although the deaconess movement never gained major traction in the United States, it opened doors for many women in Protestant ministry. Ecclesiastical ambivalence toward the office eventually led to its decline, as debates about its clerical status and biblical legitimacy were continually debated and as similarities between the Protestant deaconess and the Roman Catholic nun served as a continued source of tension regarding the office. Professionalization of many of the roles served by nuns and

deaconesses alike—social worker and nurse especially—in the public sphere, however, enabled many women in the twentieth century and later to pursue the same work beyond the auspices and polity/politics of the church-sanctioned offices of women religious. Not only were these salaried positions more attractive to many women, but the increased frenzy over the issue of women's ordination also contributed to the decreased significance of the office of deaconess. Clearly, hopes that female diaconates would deflect these debates over women's leadership or constructively channel and delimit the energies of ambitious women seeking to contribute to and participate more fully in the life of the church, and public life in general, were lost. Despite the eventual decline of the deaconess movement, its flourishing lifespan of a half-century proved an important and critical stepping-stone in the advancement of women and religion in America and especially in the official positions of both Catholic and Protestant churches regarding the roles, status, and work of women religious.

Early Twentieth Century: Women Religious in Parochial Schools and Foreign Missions

By the turn of the twentieth century, the long-standing option of the cloistered life available to Catholic women had in some ways been eclipsed by the increased access Protestant women were gaining to formal religious leadership. Yet this historical alternative to traditional marriage and motherhood continued to provide many Roman Catholic women with the opportunity to serve the church in unique ways. Although the American Catholic Church was certainly better established at this time than during the colonial period, it was now confronting papal challenges regarding modernist theology and the Americanist movement, both perceived as major threats to the stability of the Roman Catholic Church structure, teachings, and traditions as they stood on American soil. The need to make Catholicism's presence more visible and assertive prompted the expansion of the parochial schools previously required of each parish by the Third Plenary Council. Increased enrollment in the twentieth century, combined with the economic realities faced by the church and the increase in American standards for teaching credentials, forced the church once again to rely on the critical mass of women religious to fulfill these rising demands. This automatically limited the vocational choices available to many sisters, as the pressing need for teachers from within the church fold was of practical, political, and spiritual concern for those women who had dedicated their

lives to religious service. In addition to this parochial-educational response to cultural and ecclesiastical threats perceived by Rome in the American context, papal bulls and other documents were issued that emphasized and implemented stricter standards for the cloister culture and practices of nuns. The need and desire to restrict contact with the outside world became a priority in what many Catholic clergy considered to be a volatile American context.

Even with the increased demand for women religious serving in some educational capacity within the American Church, nuns' work in nursing, charitable work, and other vocational alternatives continued to give Roman Catholic women religious additional opportunities for vocational service. Additionally, Roman Catholics became more interested in the enterprise of foreign missions, which had already occupied most Protestants for a century or so. Whereas Catholics had long considered their mission work in America to be focused on reaching out to fellow Catholics in communities, to non-Catholics and the unchurched, and to ethnic and racial minority groups, the twentieth century saw a great shift in the direction of Catholic missions, including the efforts of women religious. The efforts of Mary Josephine Rogers (1882–1955) were particularly noteworthy in promoting Catholic missions abroad. She and her cohort of laywomen developed a missionary journal, *The Field Afar*, and convinced male Catholic leaders in Rome and America that women could indeed serve as foreign missionaries, as she had observed in Protestant traditions. With the expansion of Catholic missions, women religious also took their tradition of medical care into foreign mission posts. Although more recent canon law declared such medical work to be inappropriate for nuns, largely based on teachings and traditions of female modesty, some foreign cultures allowed only women to provide medical care for indigenous women, so Roman Catholic women religious interested in the combination of foreign missions and serving as nurses found a means by which they could pursue such work. Indeed, this tradition was formally solidified in the Medical Mission Sisters organization, founded by Anna Dengal (1892–1980), who had previously formed a lay association of women who served as missionary physicians.

Mid-Twentieth Century and Vatican II

In the mid-twentieth century, American women religious saw many changes concerning their roles and service in the eyes of the Roman Church. Various conferences were

established to provide better educational preparation to sisters before they pursued the different kinds of service work available, whereas previously many bishops and priests assumed that sisters needed no higher education to teach children, and they provided little if any support for proper education for the myriad other services and occupations nuns provided and fulfilled. Many women of this time felt that nuns needed a broader, more comprehensive, and formal preparation for religious service, an education that tended to the variety of spiritual, apostolic, intellectual, professional elements involved. Catholic colleges created exclusively for women not only provided female students with proper education and training, but they also allowed nuns the opportunity to serve as college presidents at a time when few women college presidents existed in Protestant or secular institutions. When the Second Vatican Council (Vatican II), the major council called by Pope John XXIII, convened, American women religious had already begun to modernize their work such that they could be more effective in their cultural context and in addressing the particular needs of the American communities they served. Vatican II (1962–1965) encouraged women religious to return to their orders and invest time and energy in recovering their history and heritage, so they could revise their cloistered practices and roles in light of the Christian gospel. At this point, Catholic sisters were no longer required to wear full habits—a strong visual statement about the immense changes ushered in under Vatican II.

This landmark council was not a wholly positive event for Catholic women religious, as few women were permitted to attend its deliberations until halfway through, and those who did were allowed neither a voice nor a vote in the process itself. For some, the swift currents of change proved to be overwhelming to an otherwise ordered way of religious devotion and a life of service; some women religious left their orders and others dealt as best they could with the distress and tension stirred up in the aftermath of the council. Because the Vatican had requested that 10 percent of the nuns in the United States volunteer in Latin America, many fulfilled that call and encountered the emerging culture of liberation theology. Exposure to such revolutionary, nascent theology compounded the spirit of reform heralded by Vatican II, with both negative and positive effects on women religious. Many began participating in civil displays of protest and consciousness raising about global injustices, with some running for and claiming political offices, although the Church's hierarchy was generally displeased by such public displays of political

activism and by the trend toward supporting increased women's liberation, especially in church leadership.

The Catholic Church was not alone in its appraisals of the “new nun” brought about by Vatican II. Just as the nativist press of the mid-twentieth century molded a distinct public image of the American nun, heralding her as both victim of and co-conspirator with the mounting reign of the Catholic Church in the United States, so American popular culture following Vatican II promulgated its own tropes and caricatures to depict its perceptions of contemporary cloistered life. Some characterizations came across as playful jabs at a unique religious culture that was still largely misunderstood and equally subject to the punch lines of religiously slanted humor, a comedic subgenre gaining a wider audience as entertainment culture in the United States continued to flourish. Others were more pointed in their criticism. *Nonsense* (1985), a play developed by Dan Goggin (b. 1943, of Catholic background) and based on a line of greeting cards, is a primary example of a theatrical representation of clerical figures and life. Of course, the humor in such productions can be as disarming as it can be trivializing, using comedy to open safe avenues for exploration and witty criticism of Catholic culture and traditions. Such caricatures also run the risk of making, quite literally, a laughingstock of the religious and personal lives of nuns and other church figures.

A predecessor to *Nonsense* was *Sister Mary Ignatius Explains It All for You* (1979), by Christopher Durang, a play more starkly critical in tone and presentation. Durang (b. 1949), also of Catholic descent, centers the play on a nun, Sister Mary Ignatius, who performs the ritual of catechism (religious education via formulated questions and answers), providing both the subject and structure of the play and a dramatic teaching tool used to explain the basic tenets of Catholicism to the audience. These theatrical depictions of Catholic life certainly helped give rise to other images circulated later within popular culture. Such depictions were often based much less in personal religious experience or background than in the thriving, secular entertainment industry and its shrewd use of previous comedic portrayals to catapult the success of its own motion pictures, such as the comedy films *Sister Act* (1992) and *Sister Act 2: Back in the Habit* (1993). These two films provide a more or less lighthearted critique of Catholicism, championing what it portrays as the up-and-coming generation of hip, cool, and socially aware nuns over the stodgy traditions and rigid dogmas of the largely obsolete Catholic Church. The educational, cultural, and comedic value of such tropes and

images is difficult to determine, however, when considering at whose expense such jokes have been told. After all, history alone suggests a significant gap between such parodies and the religious and social lives and experiences of Catholics, and especially nuns, in the United States.

In the decades following Vatican II, the Roman Catholic Church effectively disowned many of the more radical positions promulgated at Vatican II, including those with progressive implications for the roles and status of women religious, even as many American Catholic sisters began to publicly identify with the emerging women's liberation movement. Although sisters in the previous century certainly benefitted from opportunities afforded by the earlier phase of this liberation movement, they were not usually inclined to identify so publicly with it and often assumed a stance of indifference toward it in favor of focusing on their spiritual service rather than gender politics, whether in the church or society at large. By the late twentieth century, self-identification with the movement was much more common for women religious, as they more openly embraced its tenets and sought vocally within the church to expand and extend religious leadership opportunities available to women. The Sister Formation Movement was mobilized to demand that women religious placed in Catholic schools as teachers receive adequate education in preparation for their work. African and Hispanic women religious began to refine and voice concerns and interests unique to their own communities, with African women developing Womanist thought in reaction and response to the religious and feminist thought dominated by Anglo-Catholics. Hispanic Catholic women religious developed *Las Hermanas* as a means of reviewing the treatment of women, especially Hispanic women, by the larger Catholic Church community, including white Catholic feminists, as well as the distinct traditions of Hispanic Catholicism.

Interpretive Theories and Critical Assessment

The communities, identities, and roles of women religious in America have changed much in form and function over the centuries. Their presence in and contribution to religious service as well as in American public life has remained a constant, even among those embracing a more traditional monastic life behind the cloistered walls of a convent. The current landscape in America includes not only Catholic and Protestant nuns and women religious from Christian traditions, but also women religious from many other traditions, both old and new, claiming a space and home in a

country some consider to be the most religiously diverse in the world. Many women are finding their way to the cloisters to pursue the contemplative life of theological reflection and spiritual service amid a frantic and frenetic cultural backdrop. Some embrace a life of celibacy and poverty to counter the excess and materialism that has seeped its way into large swaths of American religious culture. Others cultivate a life of piety in community with like-minded women who long for an alternative to traditional marriage and motherhood. Perhaps there is something deeply appealing in the universal call to sisterhood in service, a social-spiritual imperative to seek a greater purpose in community with others of shared values, but whatever that appeal may be comprised of, the traditions of women religious continue to draw women to life in community and religious devotion.

Considering the long-standing history and global reach of communities of women religious, both Catholic and Protestant, there appears to be a disproportionate lack of sustained, scholarly work offering interpretive theories and critical assessments of the cultures, structures, and members of communities of women religious. Because women religious often occupy positions and livelihoods of in-betweenness—fulfilling leadership roles without access to the inner precincts of power in male-dominated hierarchies, assuming roles of wife and mother in unconventional ways, living in sequestered seclusion within the male hierarchy and as a community with a population and reach that excludes men—it is perhaps not surprising that they are often viewed as a potential threat to the established church, even as they have served as the sustaining repositories and transmitters of church culture and tradition.

It is impossible to declare cloistered sisterhoods as wholly positive or wholly negative for the women who have claimed these communities as their homes and families and their practices and cultures as their ways of life. Even within feminist circles, women religious are viewed by some as embodying patriarchal order in the church and by others as a radically theocentric community comprised for, by, and of women exclusively. Post-Christian thinkers such as Mary Daly generally contend that any participation in traditions steeped in patriarchal practices amounts to cooperation with and maintenance of those practices and that women must reach outside the orbit of traditional religion to find true liberation. Other thinkers, such as Rosemary Radford Ruether, argue more for a recovery of the feminine divine. The gyno-centric qualities of communities of women religious would likely lend themselves well to such work,

especially given the traditional Catholic emphasis on the Virgin Mary, female saints, and unique forms of female and feminine piety. Again, given the increasingly diverse religious landscape of the United States, this complex issue is complicated further by the fact that monastic communities of women in America are no longer, nor have they ever been, the exclusive province of Christian women religious. Monastic or communal life in general as a mode of social organization has been practiced in many socioeconomic, cultural, and geographic communities for a wide variety of reasons and structured in a wide variety of ways. Such communities have served a range of social, political, and theological purposes. For some, religious sisterhoods represent the pinnacle of female solidarity, whereas for others they serve as a means to a greater spiritual end that is more easily sought in the company of fellow women.

Women: Evangelical

Since colonial days, women have been numerically dominant in evangelical churches. Evangelicals embrace three core beliefs: salvation comes through a conversion experience resulting in a personal relationship with God through Jesus Christ (a “new birth”); believers should share the good news of salvation through Jesus with others (“proselytize”); and a believer’s life must be guided by God’s revealed, authoritative word, the Bible, which the individual is able to interpret for herself (a “common sense reading”). With these emphases, women found evangelicalism a hospitable religious home. Nonetheless, evangelicalism has had a tortuous relationship with women, at times granting them leadership opportunities unparalleled in the surrounding society and at other times severely limiting their roles, depending upon the application of theology to the historical moment.

Colonial and Revolutionary Periods

Prior to the Great Awakening, a period of religious revival in the eighteenth century, colonial women had been expected to take responsibility for the spiritual lives of those within their household: themselves, their children, servants, and slaves. Arising out of the revivals, which emphasized individual experience of grace in conversion rather than formal religious instruction, evangelicalism was a democratic, individualistic, and populist style of religion. It opened the door for the laity to take more authority in their religious lives, thus giving women their first opportunity for public roles in church.

Women immediately began to testify publicly about their conversion experiences, pray aloud, and “exhort” in public meetings. Exhortation was a style of public speaking in which the speaker warned of God’s judgment and urged repentance. In some separatist churches (those that separated from the state-sponsored, “established” churches such as the Congregationalists in New England and Anglicans in Virginia), women took part in business meetings and voted. Women even began to preach (meaning to teach authoritatively on the Bible not just from their own experience) based on the justification that God’s grace transformed their “feminine weakness” into strength.

Most Puritan ministers held that aside from defending herself against an accusation of wrongdoing and singing psalms, a woman speaking in church would be defying scripture. Churches that allowed women to preach, though, such as the Free Will Baptists, Separatist Baptists, and

Methodists, positioned themselves in opposition to the more respectable, recently disestablished churches, taking pride in their anti-intellectualism and enthusiastic practice of religion. For dissenting churches, women's preaching made both theological and practical sense: evangelicals believed that the Lord would be returning soon to usher in his kingdom. With a shortage of male ministers, separatist churches were more concerned with the harvesting of souls ripe for God than with social conventions of gender. Additionally, women's preaching served to symbolize evangelicals' distance from the secular world; however, religious leadership opportunities for women in the colonial era never extended to governing authority. Women were not allowed to perform sacramental ministries, nor did any church advocate for women's enfranchisement in the political sphere.

Female preachers were not licensed ministers, yet women such as Bathsheba Kingsley in the 1740s preached the gospel as itinerant evangelists, and Sarah Wright Townsend, who preached in her Baptist church nearly every Sunday for fifteen years, beginning in 1759, addressed mixed-gender audiences. Even women who confined their teaching to female audiences stretched traditional boundaries. In the 1740s, Sarah Osborn began a young women's religious society. In the 1760s, she expanded her instruction to include African Americans, whom she taught to read. Osborn's minister, Samuel Hopkins, whom she helped to call to her church, considered her a mentor and published her memoirs.

Although more northern evangelical women stepped into public roles, southern women, too, responded to the egalitarian implications of the revival message. Southern women prayed and exhorted publicly. Some preached, but their audiences were limited to slaves on their plantations. Resistant to earlier attempts at conversion, large numbers of slaves responded to revival-style Christianity. As a result, both slave men and women testified to their faith, prayed aloud, and exhorted at church and in secret slave gatherings. One slave woman in Georgia, Clarinda, at first known for her lack of piety, became respected even by white women, after her conversion and ensuing efforts at street corner evangelism. Yet southern evangelicalism never allowed for the same level of freedom as women had in the North. As the cornerstone to social order in a society built on slavery, women in the South still were subordinate to men and not allowed in the pulpit.

Women's public roles in the burgeoning of American evangelicalism were short-lived, however; with the coming of the Revolutionary Era, women heeded the call to

manage household affairs and to raise the next generation of virtuous, democratic citizens.

Revivalism

Evangelicalism sowed the seeds for an increase in women's equality that could never quite be reversed through a second wave of revivals. Similar to the Great Awakening, the nineteenth-century revivals, sometimes called the Second Great Awakening, were marked by fervent religious renewal and large-scale preaching events that emphasized an emotional, practical faith appealing to many women. Evangelical churches led these revivals, as they had grown in number and size and were better suited to the new competitive, democratic environment following the disestablishment of religion after the Revolutionary War. These churches also were willing, again, to utilize women to accomplish the goal of converting sinners to Christ.

The Second Great Awakening began in the South in a series of camp meeting revivals. One revival could attract thousands and last for days. Many preachers, both black and white, proclaimed the gospel. Effects on their listeners included jerking, jumping, laughing, running, collapsing, and barking. In the turbulent atmosphere of camp meetings, women were encouraged to raise their voices in prayer and exhortation. Women as well as men prayed with sinners at the "anxious bench," seeking God's redeeming grace.

Soon this second season of revivals moved north, and it was a northerner who became the most famous revivalist of his day. Charles Finney (1792–1875) believed that the right use of constituted means could ensure conversions. Toward this end, he instituted pragmatic "new measures" (although many were taken from camp meetings) to manipulate human sensibilities, such as praying for individuals by name, all-night prayer meetings, and the "anxious seat," where those on the verge of salvation could receive special prayer and exhortation. These practices and Finney's theology proved favorable to the expansion of women's religious roles. Women publicly prayed for men at his revivals and served as exhorters at the anxious seat. Also, Finney's perfectionist teaching (a belief in the power to lead a sinless life), focus on ability over doctrine, common sense reading of scripture, and definition of ministers as "soul-winners," fostered greater freedom for women.

Church documents indicate more than a hundred female preachers during this period, many of whom were quite popular. Some of the best known were African American, such as Zilpha Elaw (c. 1790–?), who took the gospel

message to southern states and across England, and Jarena Lee (1783–?), the first woman licensed to preach by the African Methodist Episcopal Church, in 1819. Her preaching drew both men and women and blacks and whites. At times Lee and Elaw toured together. Perhaps the most recognized is Sojourner Truth (1797–1886), born a slave, who was also an abolitionist and advocate of women's suffrage.

The most famous woman of this period, though, was Phoebe Palmer (1807–1874). Palmer was a mother, humanitarian, perfectionist teacher, writer, and sought-after speaker throughout the mid-nineteenth century. In 1837 Palmer began leading a women's group, which by late 1839 men were attending. Her distinctive theology taught that sanctification came as a result of a "second blessing" of the Holy Spirit and fire that followed salvation and the baptism of water. Palmer promoted her ideas in several publications, including *The Way of Holiness* (1845), a foundational book in the Holiness tradition. Palmer's influence extended throughout the Methodist and Holiness denominations, such as the Wesleyan Methodists and Church of the Nazarene; to individual leaders such as Frances Willard (1839–1898), the temperance leader and social reformer; Evangeline Booth (1865–1950) of the Salvation Army; Amanda Berry Smith (1837–1915), a foreign missionary; ministers, theologians, and bishops.

As evangelical churches gained respectability and moved from the margin to the center of American cultural life, they began to restrict women's roles. By the middle of the nineteenth century, Methodists and Baptists constituted two-thirds of all Protestant church congregations. With their new numerical supremacy and social respect, the freedom and relative equality of women became problematic, and women's authority was once again limited. In the broader American culture, women were limited to the domestic sphere, yet women were the majority of members in the Baptist and Methodist churches. Thus, it was essential to limit women's roles for Baptists and Methodists to be accepted in the mainstream of society.

Reform Movements

The increase in women's leadership activity during the nineteenth century was not limited to religious roles. Since colonial days, women had been seen as pious, pure, and submissive. Increasing industrialization in the Victorian Age led to a split into public (political and economic) and private (domestic) spheres of life, with women confined to the domestic. The home became the location where spirituality was cultivated, as women were thought to be more naturally

pious and moral than men. Religion, now disestablished from the state, evolved into a semi-public, civic arena. Evangelicals believed, however, that in addition to being pious, pure, and domestic, women should be useful. Conversion of the individual should lead to the reform of society. Thus, revivalism also resulted in the creation of numerous voluntary associations (many still in existence) to further the public good, as evangelical women brought their strengths to bear in the civic arena.

Many organizations were founded for religious purposes, such as prayer, Bible tract societies, the Sunday school movement, and missions. Evangelical women also founded orphanages, female moral reform associations to convert and reform prostitutes, temperance groups, abolitionist societies, and women's colleges. Mary Lyon (1797–1849), who as a pious educator fostered frequent revivals among her students, founded Mount Holyoke Seminary (now College) in 1837. Elizabeth Cady Stanton (1815–1902) was educated at Troy Female Seminary, founded in 1821. Charles Finney opened doors for women's education, too, co-founding Oberlin College, the first coeducational college and the school from which Antoinette Brown (1825–1921), the first woman in America to be ordained, graduated. Many evangelicals involved in benevolence, such as Frances Willard, abolitionists Sarah and Angelina Grimké, and Antoinette Brown, were also active in the suffrage battles and were so crucial to its success that Protestant Christianity has been called one of the three pillars of the early women's movement.

Women's reform activities were conducive to the development of leadership skills and expanding their sphere of influence. Through colleges and seminaries, women were trained to be missionaries and teachers, thus creating an alternative career track to wife and mother in the nineteenth and early twentieth centuries, and as a result of their benevolence and reform work, evangelical women learned how to organize and lead.

Missions

By the beginning of the twentieth century, more women participated in foreign missions than in social reform and women's rights combined. The earliest female missionaries traveled overseas at the beginning of the nineteenth century as "assistant missionaries" to their husbands. (Only married women were commissioned.) These pioneers were expected to evangelize and teach native women and improve their character, serve their husbands, and bear and raise their own

children, often while educating others.’ Of the first three missionary wives sent abroad, all were educated at women’s colleges. One was almost forgotten: Roxanna Nott returned after two years in India due to her husband’s ill health. Another, Harriet Newell (1793–1812), was embraced as a martyr after she died within a year, having spent most of her time at sea. The third, Ann Judson (1789–1826), toiled as an “assistant” in Burma for more than a decade. She opened a school for Burmese girls, translated the biblical books of Daniel and Jonah into Burmese and the Gospel of Matthew into Siamese, wrote both Burmese and Siamese Christian catechisms, all in addition to giving birth, running a household, and keeping her husband alive in prison for two years.

The most influential catalyst for international missions began in the final decade of the nineteenth century. Based in collegiate revivals began by urban revivalist Dwight L. Moody, the Student Volunteer Movement vowed to evangelize the world in its generation. It encouraged students, through gatherings at men’s and women’s colleges, to sign a pledge that they would become foreign missionaries. Within the first year, more than a thousand students, both men and women, signed the pledge. By 1910, 4,338 volunteers, about one-third of them women, had sailed for mission fields. These women traveled to Asia, the Middle East, South America, and Africa, performing roles on the field that they could not at home. They served as doctors, nurses, translators, and teachers; they founded schools, hospitals, dispensaries, and colleges.

An even greater number of women provided support for those on the field than went abroad. Thousands of women raised funds from home and assisted in agencies founded to send and support missionaries in the field. After the Civil War, evangelical women organized their own separate mission agencies. Women had long been the best fundraisers for missions, but they were given little authority over how the money was spent. Convinced that the needs of female missionaries were being neglected in favor of male missionaries, women formed their own groups, which became important avenues of power and training in organizational leadership. But as concern grew that religion was being feminized, given its association with the domestic sphere, women’s predominance in the pews, and women’s new leadership roles, the women’s boards were merged with the men’s within the first few decades of the twentieth century.

Fundamentalism

While women in the mainline evangelical churches found mission work one of the few acceptable leadership avenues

available (along with teaching), women in the fundamentalist wing of evangelicalism surpassed the national trend for female employment after World War I. They were Christian education workers, youth workers, camp leaders, counselors, parachurch workers, missionaries, and Bible teachers as well as social workers, teachers, secretaries, typists, receptionists, bookkeepers, and other clerical and office support staff.

Fundamentalism arose in late nineteenth-century America. Early fundamentalists (until around 1930) were both theologically conservative and pragmatic premillennialists, who believed that Christ would soon return to earth. Time, therefore, was urgent. The harvest (of souls) was ripe, and laborers were needed. They were not so concerned about the gender of the evangelist. They believed the Hebrew prophet Joel’s prophecy that “your sons and daughters will prophesy” (Joel 2:28; NIV) had been fulfilled at Pentecost. As well, early fundamentalists accepted that the apostle Paul’s prohibitions on women teaching were not meant for all people at all times. Women were to remain submissive, but as long as they did so, their activities were largely unlimited.

Henrietta Mears (1890–1963) illustrates the circumscribed freedom of women in fundamentalism. Mears began her career teaching a girls’ Sunday school class but soon was also teaching young men. As the director of education at Hollywood Presbyterian Church, Mears mentored several evangelical luminaries, including the evangelist Billy Graham and Bill Bright, founder of Campus Crusade for Christ. She started a publishing house, Gospel Light Publications, to distribute Sunday school materials she authored. She was instrumental in the founding of Forest Home, a Christian Conference center, and Campus Crusade. Nonetheless, she refused to preach from the pulpit and showed limited interest in female students, preferring to focus on men as spiritual leaders.

Several factors, related to the need to impose order in what was perceived to be a liberalized and feminized world and church, led to greater restrictions on fundamentalist women. In society, women were suffragists, flappers, and social reformers, and battled over women’s roles. In mainline churches, the clergy appeared to fundamentalists to be inadequately rigorous intellectually, overly emotional, and controlled by women. The number of women in public roles in their own movement caused fundamentalists to fear the feminization of their faith. To combat the chaos, they professionalized the ministry and its training grounds, Bible schools and seminaries, thus limiting women’s access.

Fundamentalists also reemphasized the Victorian sentiment of women as submissive, domestic, and pure, while adding the corollary that “woman is either greater or worse than man.” If a woman were potentially worse, then the church must be guarded from her. Two novel theological doctrines, dispensational premillennialism and inerrancy, provided the means for protection. Dispensationalism was a method of scriptural interpretation that divided biblical history into epochs. Because of the way fundamentalists calculated the various eras, the fulfillment of Joel’s prophecy could not have occurred yet but could only happen after Jesus’ second coming. Thus, women still should not speak publicly. Inerrancy taught that the Bible contains no errors and led to a literal reading of scripture. Paul’s injunction against women teaching men, therefore, was as true for their day as it was for the time and place that Paul first wrote. The end result of these changes was that instead of women being the keepers of faith, as had been true in late nineteenth- and early twentieth-century America, men became the guardians of faith.

This remained true for fundamentalists throughout the twentieth century, although studies have indicated that women found other avenues of power in spite of restrictions. Exclusively female ministries and events cultivated women’s spiritual abilities and provided them with a political power base within their communities. Also, although preachers such as Bill Gothard led seminars that taught women how to be submissive to men, fundamentalist women were able to subvert male headship by using it as a means of power to improve their marriages. Author Marabel Morgan purported to teach Christian women how to manipulate their husbands to get their way—including through the use of sexuality—but never to directly usurp male authority.

Holiness and Pentecostal Women

Pentecostalism arose out of the Holiness movement. It taught that Christians needed a second baptism of the Holy Spirit to bring about sanctification, which was evidenced by the ability to speak in tongues (to pray or prophesy in an unknown language). Like earlier manifestations of evangelicalism, the Holiness and Pentecostal movements felt compelled to evangelize and were willing to utilize women to this purpose. As well, the decentralized nature of these movements and the emphasis on the Holy Spirit allowed women’s preaching and leading to be accepted. Influential leaders in the Holiness movement included Evangeline Booth and Hannah Whitall Smith (1832–1911), author of *The Christian’s*

Secret of a Happy Life (1875), one of the most popular books on the sanctified life ever published. The most famous evangelist of her day was a Pentecostal woman, Aimee Semple McPherson. After having led revivals as an itinerant preacher from 1913 to 1923, McPherson founded and led her own church, Angelus Temple, which became the cornerstone of the International Church of the Foursquare Gospel denomination. Initially a member of the Assemblies of God, McPherson left the Assemblies in 1922 over increasing restrictions on women’s ability to perform “priestly” functions. Ironically, the denomination she founded decided to bar women from ministry after her death.

It was not the fear of feminization that led leaders in the Pentecostal Movement to limit women’s roles. Rather, it was Pentecostalism’s growth, increasing institutionalization, and emphasis on a literal reading of scripture. In 1935 the Assemblies of God voted to again ordain women as elders (essentially pastors), but with reservations that severely limited their leadership capabilities. Other Pentecostal denominations continued to explicitly forbid women from serving as pastors.

Evangelical Feminism

After the Scopes Trial in 1925, it looked as if fundamentalism had died. Its retreat into an underground network, however, strengthened it and helped lead to a surprising resurgence of political and theological conservatism in the later part of the 1970s and 1980s. Although most fundamentalists clashed with the societal changes wrought by the 1960s, there was a group of younger evangelicals who desired to not merely react against culture but to relate the Bible in a meaningful way to the pressing social problems of their day: the war in Vietnam, racial inequality, poverty, and women’s liberation. Their efforts led to the creation in 1973 of the Evangelical Women’s Caucus, an organization dedicated to the proposition that when interpreted correctly, the Bible teaches the equality of men and women. Leaders of the movement have included author Letha Scanzoni, editor and professor Nancy Hardesty, and Virginia Mollenkott, professor of English.

Central to their efforts was the need to reinterpret scripture in a way that upheld a traditional conception of the Bible as the authoritative rule of faith, yet also revealed the Bible’s egalitarian message. In the early years, evangelical feminists were united around this work of biblical reinterpretation. By the mid-1980s, however, evangelical feminists had split over the issue of homosexuality. At the heart of

their disagreement was the issue of biblical authority: Was a view of scripture that held it was infallible compatible with an acceptance of homosexuality? In the end the two groups divided into separate organizations: the Evangelical and Ecumenical Women's Caucus (EEWC; formerly the Evangelical Women's Caucus) and Christians for Biblical Equality (CBE), founded in 1987. The women of CBE, led by Catherine Kroeger, a professor of classical studies, thought that it was not and concentrated on the goal of spreading the egalitarian message of the gospel to the evangelical world. Those who remained in EEWC, including Scanzoni, Mollenkott, and Hardesty, developed inclusive goals to encourage feminists from all Christian traditions, including liberal, mainline, and homosexual communities. Ultimately, the majority of the evangelical movement rejected the tenets of the EEWC and vigorously debated the theological arguments put forth by CBE. Women and men of CBE, such as Professor Craig Keener and author Rebecca Merrill Groothuis, regularly spoke and published on the topic of evangelical feminism.

The Evangelical Family

In 1987 pastor John Piper and Professor Wayne Grudem founded the Council on Biblical Manhood and Womanhood (CBMW) to counter the teaching of evangelical feminists. According to CBMW, evangelical feminists distorted or neglected "the glad harmony portrayed in Scripture between the loving, humble leadership of redeemed husbands and the intelligent, willing support of that leadership by redeemed wives" ("The Danvers Statement"). Such teaching exhibited a backlash to both evangelical feminism and liberalizing trends regarding gender roles in American society in general.

Evangelicals believed that family, church, and state were the pillars upon which civil society was based. Changing conceptions of morality, such as open sexuality and the rising divorce rate, undercut the basis of a culture in which citizens made good ethical choices. Women's changing roles and sexuality were deemed a particularly pernicious and symbolic menace, since they threatened to destabilize all three foundations of American society. The maintenance of traditional family values, then, was essential to combat the moral decline in secular society. Thus, less than one decade gave witness to the rise not only of CBMW, but of the Moral Majority (1979) and several other ministries dedicated to preserving the family, including Focus on the Family (1977) and Concerned Women for America (1979). It also witnessed the defeat of the Equal Rights Amendment (1982).

Such ideology, though, has been at least as much a response to culture as a central tenet of faith to be upheld without contingencies. Although evangelicals have been more conservative in gender ideology than nonevangelicals, this has not correlated with practice. In 2000, the Southern Baptist Convention added an article to its doctrinal statement that a wife is to submit to her husband and serve him as helper. In the late twentieth and early twenty-first centuries, though, few evangelical marriages operate this way. Studies show that husbands and wives make decisions together; they share household work and coparent; they divide chores based on who is better suited to the task; and evangelical wives are as likely to work outside the home as nonevangelical women. Such dissonance suggests that one way evangelicals take a stand against a more liberal American culture is by maintaining traditional gender ideology.

Conclusion

The relationship of women in American evangelicalism has been erratic. When evangelicals have been outsiders to the mainstream of American culture, as was the case with the revivalists and dissenting churches in the eighteenth and nineteenth centuries or during the early years of fundamentalism, women were allowed more leadership opportunities within the church. In those factions of evangelicalism, such as the Holiness and Pentecostal movements that emphasize leading by the Holy Spirit, women have been given more freedom to use their talents to serve the church. Whenever evangelicals had gained in public prominence and respectability, however, women's roles have been limited. Such was the case in the years following the nineteenth-century revivals when evangelical churches combined to be the largest form of religion in America. The same has been true for evangelical women in the latter part of the twentieth century and into the twenty-first, as evangelicals struggle to maintain distinct boundaries from a society in which they fully participate.

Women: Jewish

American Jewish women may best be defined by the confluence of multiple components that shape their identities. They are, of course, Americans, Jews, and women, but also, over the course of their lifetimes, they are or may be daughters, wives, mothers, grandmothers, activists, volunteers, workers, teachers, judges, rabbis, students, scholars, writers, actors. Even as they craft their self-conceptions out of multiple roles, American Jewish women share with their fathers and brothers, husbands and sons, the project of reinventing Judaism and the meanings of Jewishness in the American setting. For some women, the cadences of Judaism, its Sabbaths and festivals, and its dietary laws ring out as major forces in their lives. But others express the Jewish thread of their identities through communal commitments, social welfare, politics, or the cultural productions they create and consume. Still, for others, being Jewish pales beside other paramount commitments in their braided identities. These women have let the Jewish threads in the fabric of their lives fade as they choose to highlight strands of other colors and commitments.

American Jewish Women: 1654–1881

In the late summer of 1654, twenty-three Jews left Brazil bound for New Amsterdam. Landing that September, the women among them discovered that although the place was new, the rules governing their lives and behavior were not. Judaism's Sabbaths and festivals, its dietary laws, and its laws governing marital relations fixed patterns in the lives of America's earliest Jewish women.

In the colonial era, many Jewish women lived out their lives as respectable matrons overseeing Jewish households. Perhaps New York's Abigaill Franks (1696?–1756), whose letters form the largest body of extant writings by a Jewish woman in the British North American colonies, was typical. She honored the Sabbath and holidays and kept the religious dietary laws of *kashrut*. She ensured that her daughters as well as her sons learned Hebrew, a surprising adaptation; typically, it was felt that Jewish girls did not need to learn the biblical language. While pious, Franks nevertheless lamented Judaism's idle ceremonies and superstitions and yearned for religious modernization. Franks displayed an independence of mind that would, in time, characterize many American Jewish women leaders.

In attending services in the synagogue, women emulated their churchgoing Christian neighbors. In fact, they seem to have participated in public worship in the American colonies in greater numbers than was customary in Europe. American synagogue architecture reflected women's greater presence. When the Jews of Newport, Rhode Island, built a synagogue in 1763, its raised gallery for women jettisoned the grilles and curtains typical of European synagogues, establishing a new pattern of communal worship in which women could see and be seen within the sanctuary.

Overseeing a Jewish household and attending synagogue did not safeguard Franks from living out the challenges minority faiths faced in the New World. When her daughter Phila married outside the faith, Abigaill Franks's spirit was crushed. Moreover, none of Abigaill Frank's two dozen grandchildren seem to have passed on Judaism to the next generation.

While Abigaill Franks adhered to Jewish women's traditional roles and behaviors, other early America's Jewish women proved far more relaxed in their religious practice. For example, to what degree colonial era women observed the traditional regulations governing sexuality within marriage is unknown. Under Jewish law, the timing of a woman's monthly menstrual cycle sets the pattern for permitted sexual relations within marriage. A Jewish community must maintain a *mikveh*, the bath required for ritual purification following the cessation of a woman's menstrual cycle and a requisite waiting period of an additional seven days. Yet not until 1786 did the Jews of Philadelphia build a *mikveh*, and later evidence suggests that it was not widely used.

In America Jews lived out their lives in a Christian milieu, and, on occasions, they invited gentile friends to celebrate with them at weddings and circumcisions and to visit their

synagogues. In the early United States, Jewish women joined with Christian friends and neighbors in organizing to aid others. In 1801, Philadelphia's Rebecca Gratz (1781–1869) and some twenty Christian and Jewish women founded the Female Association for the Relief of Women and Children in Reduced Circumstances, and her lasting legacy was the array of organizations she founded for Philadelphia's Jewish community. In 1819, she established the Female Hebrew Benevolent Society to aid impoverished Jewish women and children, many of them new immigrants from the German states, hoping to introduce them to the Jewish faith. In 1838, when Gratz established the first Hebrew Sunday school, she launched the prototype of a new educational setting for Jewish children and also opened a new avenue for Jewish women's communal activism as teachers. Over the course of the nineteenth century, Jewish women across the United States would weave a web of local Jewish communal organizations—benevolent societies, sewing circles, fuel societies, ladies' auxiliaries, hospital societies, soldiers' aid societies, and orphanages—to sustain their communities and to provide relief for the increasing numbers of often impoverished immigrant Jews arriving in each succeeding decade. Benevolence, for nineteenth-century Jewish and Christian women alike, constituted a central component of their religious lives.

Literature stands as another important public venue for reflecting Jewish women's religious lives. In Charleston, South Carolina, poet Penina Moise (1797–1880), superintendent of her synagogue's Sunday school, wrote the first American Jewish hymnal. In the early 1880s, poet Emma Lazarus (1849–1887) became so deeply disturbed by Russian violence against Jews, whom she met as refugees through her work with the Hebrew Emigrant Aid Society, that she called for founding a Jewish state in Palestine. Her 1883 magnum opus, "The New Colossus," inscribed on the pedestal of the Statue of Liberty, portrays America as the "Mother of Exiles" welcoming "the huddled masses yearning to breathe free." Periodicals directed at American Jewish women, such as *Die Deborah*, published in German between 1855 and 1902, and the *American Jewess*, the first English-language magazine for American Jewish women, also provided vehicles for engaging debate about women's evolving roles in American Judaism.

Over the course of the nineteenth century, synagogues instituted changes that affected American Jewish women's religious experiences. Some synagogues began experimenting with an array of reforms that transformed the character of public worship, as Jews deliberately sought to adapt an

historic tradition to the modern world. Some of these shifts deeply affected a woman's place in the synagogue as synagogues introduced confirmation services for boys and for girls; allowed for men and for women to sing together in a choir; and ended the long-standing pattern of segregating the sexes in worship by abolishing the women's gallery and introducing, in its stead, mixed seating in family pews.

Eastern European Jewish Women in America

But the next wave of Jewish women to immigrate to America would craft different responses to the melding of Judaism with American life. Between 1881 and 1924, some two million Eastern European Jews, propelled by grinding poverty, violent pogroms, and the dislocations of revolutionary turmoil and wars, set off for America. This was overwhelmingly a migration of families, even though, in many cases, the male head of the household journeyed ahead, scrimping and saving until he could send home steamship tickets for his wife and children.

In the crowded tenements of immigrant enclaves, such as New York's Lower East Side, mothers and daughters created new Jewish homes. Even if immigration meant, for many, discarding the wig that traditionally covered a married woman's hair, other traditional behaviors—lighting candles on the Sabbath and holidays and keeping a kosher kitchen—were not jettisoned as easily. Immigrant women also sustained Judaism through the special foods they cooked and served to their families—braided challah bread to bless on the Sabbath, chicken soup with matzoh balls at Passover when no leaven is eaten, even cheesecakes to signify the dairy foods associated with the late spring holiday of Shavuot. In time, these and many other foods, often significantly adapted to regional culinary tastes, would constitute the Jewish expression of American ethnic cuisine celebrated in books like Joan Nathan's *Jewish Cooking in America* (1994).

Yet sustaining Jewish households amid immigrant poverty was often difficult and at times sparked communal outrage. When the price of kosher meat soared from 12 to 18 cents a pound in New York City in 1902, immigrant mothers broke into butcher shops, set meat afire, and even interrupted worship services to demand that their community honor their kosher meat boycott.

For many immigrant women—the young, the unmarried, sewing until their aching fingers bled, earning pennies an hour in dingy sweatshops—improving the lot of the worker became their *cri de coeur*. Yet these demands, too, could be infused by religious sensibilities. When, in 1909,

twenty-three-year-old Clara Lemlich (Shavelson, 1886–1982) roused the shirtwaist makers to strike, the young women swearing to stand fast did so with the Hebrew oath, based on Psalm 137, “If I forget you, O Jerusalem, may my right hand forget its skill!” (NIV).

Organizing Jewish Women

Meanwhile, well-to-do American Jewish women, those whose families had come to the United States years or decades before, expanded nineteenth-century benevolence to meet the crushing press of immigrant needs. In an era when there was much conversation among Americans about shifting gender roles and the “new woman,” Jewish women carved out new directions for communal activism. The urgencies of helping the new Russian Jewish immigrants prompted much of this activity. The National Council of Jewish Women, founded in 1893—the first nationwide Jewish women’s organization—pioneered social service to immigrant Jews. Stationing Yiddish-speaking agents at Ellis Island, it tried to protect immigrant girls traveling without guardians from falling into what was then called “white slavery.” Jewish women played leading roles in establishing vocational training schools for young women and English-language night schools to help the immigrants adjust and adapt. In New York, Jewish women created sisterhoods of personal service; they required their members to take on the mantle of “friendly visiting” to the poor to assess for themselves needs and to make recommendations. There, too, Lillian Wald (1867–1940) pioneered public health nursing and established the Henry Street Settlement House (1895). Such examples would be multiplied many times over in every city and town where Jews formed communities. All demonstrated Judaism’s traditional concern to care for widow and the orphan, indeed for any in need in its community.

Although American Jewish women came to national organizing rather late, founding the National Council of Jewish Women amid the spurt of women’s activism following the 1893 World’s Columbian Exposition in Chicago, the next several decades saw an explosion of new Jewish women’s associations. At the local level, synagogue ladies’ auxiliaries, increasingly known as “synagogue sisterhoods,” had long encouraged women to be both exemplary Jewish wives and mothers who would create a Jewish version of the home beautiful and also would extend their domestic activities into the synagogue. Synagogue ladies’ auxiliaries equipped kitchens, catered lunches, and provided prizes for students in the religious school. Between 1913 and 1923, in

each of the major branches of American Judaism—Reform, Conservative, and Orthodox—women created national associations to affiliate the local synagogue sisterhoods and to become forces for Jewishness.

But the synagogue and the forms of Jewish religious life it represented constituted only one venue for women’s Jewish commitments. Other American Jewish women found places in the ladies’ branches of *landsmanschaften*, local associations organized by those who hailed from the same European town or village, or in the socialist brotherhood of the Yiddish-speaking Workmen’s Circle.

Finally, Zionism, the movement to create a Jewish homeland in the promised land of milk and honey, commanded a great share of American Jewish women’s energies and enthusiasms. In 1912, Henrietta Szold (1860–1945), a teacher, writer, editor, translator, and leading Jewish communal activist, indeed one of the most remarkable Jews of her era, transformed a small Zionist study circle into Hadassah, the Women’s Zionist Organization of America. In time it grew into the largest women’s organization in the United States. Hadassah women helped create the infrastructure for the health care system of the future State of Israel. Other women’s Zionist groups, appealing to constituencies such as Orthodox women or laboring Zionist women, followed in Hadassah’s footsteps. Into the twenty-first century, these organizations remain leading forums for American Jewish women’s ongoing support of the State of Israel and a reflection of Judaism’s commandment to seek the welfare of Zion.

In the 1930s, even as the Great Depression strained Jewish households, American Jewish women turned their attentions to the growing menace of Nazi persecution. The women of the American Jewish Congress picketed stores to boycott the sale of German goods and drew attention to the malicious anti-Semitism broadcast over American airwaves. Hadassah took on a new project, Youth Aliyah, which brought German Jewish children out of Nazi Germany to safety in Palestine. Shelters that American Jewish women’s groups established in the 1930s to house refugees fleeing Nazism soon housed Allied soldiers as America entered World War II.

The years of World War II sorely tested Jewish women on this side of the Atlantic. Some sent sons off to war; others sent young husbands; many staffed soldiers’ canteens and sold war bonds; a few went to war themselves. Those with families trapped in Nazi-occupied Europe waited with great trepidation for news. Learning only toward war’s end of the

scores of their relatives murdered by the Nazis, they improvised memorials for the dead.

Jewish Women in Postwar America

In the years after World War II, American Jewish women continued to infuse religious sensibilities into their homes, their families, and the numerous Jewish organizations they created and sustained. Now, however, they lived in new settings, in emerging Jewish suburbs and in cities with expanding Jewish populations, such as Miami and Los Angeles. They made these neighborhoods their own, inscribing Jewish identity into the local landscape, shopping at Jewish bakeries, bagel shops, and kosher butchers, and sending their children and teens for educational and social programs to the new temples and synagogues built on the major thoroughfares of these new communities. Bat mitzvah, a coming-of-age ritual for twelve- or thirteen-year old girls—parallel to the traditional bar mitzvah for boys, which had first emerged in the United States in 1922—gained increasing popularity. Jewish women imported Chanukah lamps and candlesticks from Israel and sold them in the gift shops they managed in their new suburban temples. With anti-Semitism waning in American life, these women, many the daughters and granddaughters of the East European Jewish immigrants, discovered opportunities to acculturate ever more fully into American life. Hence, for many, Jewish identification, whether expressed as religion or defined as ethnicity, became but a single strand in the design of their lives. Moreover, over the course of life, the intensity of Jewish commitments and identifications could wax and wane, perhaps more intensive when the children were young and less so before and after.

A high level of education and increasing labor force participation came to characterize most American Jewish women in the latter decades of the twentieth century. By 1990, more than 85 percent of Jewish women ages 30–39 had gone to college, and 30 percent had gone on to graduate school. Significant numbers of Jewish women stood out for achievement in the professions, the entertainment industry, business, and the arts. The Jewish Women's Archive provides biographies of hundreds of such accomplished Jewish women. For some, Judaism was foremost in their lives, supporting a range of Jewish charitable causes and endeavors. Others believed that Judaism held little meaning for them. The openness of late twentieth-century American society allowed for both choices.

However, changes in educational and labor force patterns do not characterize all American Jewish women. Hasidism,

a Jewish religious movement whose members express deep piety and who observe, with punctiliousness, the many Jewish laws, including the emphasis on strictly gendered roles, has grown substantially in North America. Hasidic women, easily identified by their modest dress—long skirts, never pants; covered arms; and, for the married, wigs or kerchiefs to conceal their hair from anyone other than their husbands—stand visibly apart from the rest of America's Jewish women. Hasidic daughters mostly eschew higher education. They marry young, often meeting their husbands through matchmakers, and have large families, a decided contrast to postwar American Jewish women with their family size of 1.9 children. Although many in the Hasidic world were born into it, increasing numbers of Jewish women have turned their backs on the secular world or the liberal expressions of Judaism to choose the Hasidic way of life.

Jewish Women and Feminism

Of the many social movements of the second half of the twentieth century, feminism has had an enormous impact upon American Jewish women. The roster of Jewish women who helped pioneer what is commonly called the second wave of feminism, which emerged in the 1960s, includes a hall of fame of feminist luminaries, among them author Betty Friedan (1921–2006), Congresswoman Bella Abzug (1920–1998), and Supreme Court Justice Ruth Bader Ginsburg (1933–).

But most significantly for American Judaism, secular feminism sparked the creation of Jewish feminism. The first Jewish feminists, like the women who founded *Ezrat Nashim* in New York, found that while feminism promised them political, social, and intellectual equality with their male peers, Judaism relegated them to second-class status within the walls of their synagogues and within the corpus of Jewish law.

These Jewish feminists began by seeking to reconfigure the synagogue as an egalitarian institution. In time this came to mean for some women wearing the prayer shawls and head coverings traditionally worn only by men; the inclusion of women in the quorum of ten necessary for a valid prayer service; and women learning Hebrew and acquiring the liturgical skills they needed to play leading roles in their synagogues.

The iconic marker of Jewish feminism's success was the ordination of women as rabbis. While the question of ordaining women, debated by American Jews since the end of the

nineteenth century, had propelled a handful of women to try to become rabbis, not until 1972 was Sally Priesand (1946–) ordained in American Judaism. A dozen years later the Reform, Reconstructionist, and Conservative movements—those movements within American Judaism not strictly bound by tradition—were ordaining women, and already some were challenging American Orthodoxy to do the same.

Occupying an historic place in the annals of American Judaism, female rabbis have been uniquely positioned to disseminate Jewish feminism to their congregants. Their creativity has produced new prayers and ceremonies for sanctifying the birth of daughters and the sexual and reproductive cycles of women's lives. They have designed new communal rituals, such as the bat mitzvah for adult women and the feminist seder, modeled on the Passover seder, which honor women from the Jewish past and decry women's oppressions in the present. Jewish feminists have reinvented the *mikveh*, the ritual bath, as a space for women to mark a milestone or to bring closure to a crisis. Finally, some have worked assiduously to open up space in Jewish life for those traditionally marginalized by their Jewish communities—the single, the divorced, and especially gays and lesbians.

Undergirding women's new visibility within the synagogue and this ritual invention is a growing body of theology and scholarship. Even as feminist theologians such as Judith Plaskow (1947–) and Rachel Adler (1943–) critique Judaism's androcentricity, they work from within the body of Jewish tradition seeking avenues to the theological, legal, and liturgical transformations essential to redress the wrongs of women's exclusion. Feminist liturgists like Marcia Falk (1946–) offer gender-inclusive prayers for understanding and speaking about God. Their work forms part of the growing canon of Jewish women's and gender studies that have found a home in the academy. No subfield of Jewish studies—Bible, rabbinics, history, sociology, anthropology, literature—remains untouched by this feminist scholarship.

Scholars are not the only writers energized by Jewish feminism. Female rabbis from across the denominations interject women into much of their writing. Novelists reimagine women from the Jewish past, as Anita Diamant (1951–) did in her successful *The Red Tent* (1997), and invent characters inspired by feminism, as Cynthia Ozick (1928–) has in her novels.

Jewish feminism has also deeply affected the Orthodox. The bat mitzvah has made its way into many sectors of Orthodoxy—although the particulars of the Orthodox daughter's bat mitzvah vary considerably from the bat

mitzvah ceremony in the other sectors of American Judaism. Orthodox girls now customarily receive intensive Jewish educations, even studying texts once forbidden to women. It has become customary among some sectors of American Orthodoxy for teenage girls to spend the a year after completing high school continuing their religious educations in Israel—just as their brothers have long done. There, Orthodox girls learn in schools founded only in the past few decades to teach women the Torah and rabbinic texts.

Feminism has also affected Jewish communal life, transforming the so-called secular Jewish world, the network of national and local advocacy, welfare, and communal agencies that constitute a major aspect of American Jewish society. Pointing to the gross gender imbalance in Jewish communal leadership, Jewish feminists demanded a restructuring of Jewish communal life to fully include women as leaders, both lay and professional. Organizations such as Ma'yan: The Jewish Women's Project regularly issue critical updates on women's progress in this sphere.

At one time the Jewish community relied heavily upon unpaid female volunteers. For many Jewish women, voluntarism was a major commitment in their lives, and the organizational, managerial, and financial skills they required for leadership, especially at the national levels, were comparable to those required for a professional or business career. But with the majority of adult Jewish women under sixty-five in the workforce, the Jewish community came to compete for women's limited time for voluntarism and desire for tasks commensurate with their skills. Today Jewish women assert influence over an array of worthwhile political, cultural, and (nonreligious) philanthropic causes that became open to them in an increasingly meritocratic society. This has resulted in a decline in numbers and an aging of volunteers in many of the established Jewish women's organizations and has compelled some historic Jewish women's organizations to seek to reinvent themselves to attract contemporary Jewish women.

As Jewish women move forward into the twenty-first century, the various strands of their identities may well increase, as Jewish women and men, in greater numbers than ever before, marry those of other faiths and ethnicities. The response Abigail Franks once gave to intermarriage—to resolve never to see her daughter again—ill fits the multicultural society that America has become. Some of these marital partners, more often wives than husbands, convert to Judaism, adding small numbers to the community—although likely not fully balancing converts out—and increasing

communal diversity. That diversity is apparent in other ways, too; for example, Madeleine Albright (1937–), former secretary of state, surprisingly discovered her Jewish origins, and Alysa Stanton, an African American woman raised in a Pentecostal family, became a rabbi.

What will be the directions for the future of American Jewish women in the twenty-first century? If past may serve as prologue, they will continue to weave threads of Jewish commitments into the fabric of their lives and to play leading roles in adapting and reinventing Judaism, in all its various expressions, well into the future.

Women: Muslim

Muslim women have established distinctive social, cultural, and religious patterns of identification in the United States. In recent history and particularly since the attacks of 9/11, however, Muslim women have been targets of discrimination.

They have derived certain elements of their socioreligious identity in relation to challenging stereotypes and building alliances across various ethnic, racial, and economic strata. The U.S. Muslim population is diverse in country of origin and ethnic background. Scholars estimate that approximately one-third of U.S. Muslims are indigenous, meaning that they are neither immigrants nor the direct descendents of immigrants. Many of these are African Americans who first began converting during the 1950s and 1960s, some to more mainstream Islamic groups and others to the Moorish American Science Temple, the Nation of Islam (NOI), and the Ahmadiyya movement, which originated in India.

Other U.S. Muslims have been mostly immigrants or descendants of immigrants from Asia, Africa, and the Middle East. The earliest traces of Islam in the United States can be found during the period of the slave trade, in which slaves brought Islamic beliefs and customs from West Africa. These influences were not recorded with much precision, however. There are roughly five well-documented waves of Muslim immigration in U.S. history reaching from the late nineteenth century through the twentieth century. Muslim immigrants have settled across the United States in many large cities, such as Chicago and New York, but also in smaller enclaves, such as Dearborn, Michigan, and College Park, Texas. Whereas earlier immigrants were concerned with survival in a foreign land, more recent immigrants have benefited from the established mosques and other Muslim institutions, many of which were funded by Saudi oil money and missionary efforts in the 1970s. These institutions have helped Muslim immigrants cultivate distinctive U.S. Islamic identities into the late twentieth and early twenty-first centuries.

Colonization and Veil Debates

In the early twenty-first century, one of the topics most frequently discussed about Muslim women has been that of veiling. Questions such as, Why do Muslim women wear the veil? Is veiling oppressive or is it liberating? have been asked many times by U.S. newspapers, magazines, and seemingly in every media outlet. The wearing of the veil has been linked historically with responses to European colonialism and Islamic revivalism, and although neither of these movements originated in the United States, they have strongly influenced political discussion and identity politics in the United States.

Although as a country it did not directly participate in the physical colonization of various parts of the traditionally Muslim world, including North Africa, parts of Asia, and the

Middle East, the United States inherited to a considerable degree the colonial attitude of its European counterparts toward Islam and Muslim people. Colonialism was the physical European presence and dominance in certain non-European parts of the world that lasted well into the twentieth century, as well as a way of conceiving relationships among people. As Edward Said pointed out, the intellectual power of “Orientalism” resided in its peculiar and yet persuasive way of representing the world so that Westerners were superior and Orientals (including but not limited to Muslims) were inferior.

This colonial disposition is reflected in several stereotypes about Muslims from these parts of the world, and with regard to gender, one of the most tenacious stereotypes has been that of the veiled and oppressed Muslim woman. In this caricature, the Muslim woman is portrayed as both powerless and as a seductive sexual object at the same time, and images of the harem and the veiled seductress have proliferated among Western audiences of both commercial film and news media. In the war in Afghanistan in the early part of the twenty-first century, some soldiers from the United States declared that the burqa (burka)—the head-to-toe garment worn by many Afghani women under Taliban rule—served as the equivalent of a battle flag, a sign for war. Thus, Muslim women around the globe have been objectified as “other,” as both essentially different from Western women but at the same time in need of being rescued from their religion and culture.

The type of thinking in which the Muslim became “other” originated in the psychology of European colonialism. Some European colonizers viewed women in the Islamic world as symbols for the confrontation of Western values with Islamic values. In one regard the liberation of Muslim women from the hands of Muslim men justified the colonial project. These colonizers claimed that Muslim men treated “their” women poorly. Leila Ahmed, an Egyptian-born scholar on the subject of Islam and gender, recounts the story of Lord Cromer, the British colonizer who, although vehemently rejecting the cause of women’s suffrage in Britain, insisted that Muslim women needed to be freed from oppressive and backward Islamic customs, such as veiling. European colonial attitudes toward veiling were paradoxical, but at the same time, many contemporary non-Muslim Americans have uncritically adopted the idea that the veil is oppressive to women.

The emergence of the veil as a distinctly modern Islamic symbol for femininity occurred in the context of the rise of

the Muslim Brotherhood in Egypt and Islamic revivalism more generally in the latter half of the twentieth century. During this time, some Islamic nations and groups began to promote the veil as a symbol of Muslim female modesty. After the Iranian Revolution of 1978–1979, the Islamic Republic mandated that women cover their heads in an effort to forge a national Islamic identity, and the veil took on an Islamic and a nationalist connotation. The leadership proliferated images of chador-clad women on street signs, postage stamps, and other forms of media that communicated the veiled Muslim Iranian woman as a national symbol.

U.S. Muslim women have had the option of choosing to wear or not wear the veil and other forms of Islamic clothing. In the absence of state laws mandating particular modes of dress, Muslim women who have chosen to veil give different reasons for doing so. Some of the most common reasons that have been offered are purity, or curtailing sexual appetite or appeal, and solidarity with other Muslims who have been targets of racial and religious discrimination, especially after the terrorist attacks of 9/11. Some individual families have put pressure on girls at a young age to begin dressing modestly, including wearing the *hijab*, or head scarf, but there has been no consensus among Muslims in the United States about how believing and practicing women should dress. Many Muslims have stressed that veiling is a choice, and thus choosing to veil or dress modestly is one expression of Islamic piety.

Although many non-Muslim Americans have regarded veiling with suspicion, the U.S. Constitution protects freedom of religious expression. In this regard, the United States is unlike France, which in 2004 banned headscarves from public schools in an apparent effort to protect the freedom of young Muslim women *from* their religion. In recent years, however, U.S. law has had to arbitrate disputes about the extent to which freedom of religious expression in the form of veiling can be allowed. In Florida, Alabama, and California, among other places, Muslim women have sued over the right to wear headscarves in driver’s license photos or in other public spaces such as courthouses and jails. Many of these cases have been dismissed, but the relative frequency and publicity of these cases has revealed increasing disagreement about how much civil law ought to accommodate religious difference and in what circumstances.

Conversion to Islam

U.S. women have converted to Islam for a variety of reasons, such as the desire to adhere to Islamic social and moral

principles, the need to forge an identity against racism and economic exploitation, and the wish to live in solidarity with other Muslims, including in some cases their husbands. In short, the reasons for converting to Islam reflect a combination of an individual's social, religious, and cultural needs.

In the middle part of the twentieth century, some African American women began to turn to Islam to address problems of white racism and economic injustice. Many of these women also found in Islam an affirmation of identity and a strong social network, as well as a sense of personal faith before God. Gwendolyn Zohara Simmons, who converted to Islam from Christianity, was active in the civil rights movement during the 1960s. After working in the southern United States on voting registration and other civil rights projects dealing with racial injustice, Simmons converted to Islam. She followed the Sufi branch of Islam, which is representative of the more mystical aspects of the tradition, and studied under Sheikh Muhaiyadeen until his death. Simmons went on to earn a doctorate in religion from Temple University in Philadelphia with a focus on Islam and has taught and researched in the areas of Islam, African American religion, race, and gender studies.

Although Simmons's work and experiences led her to follow a Sufi teacher, other African American women chose to become part of other Islamic groups during this time. One such group was the Nation of Islam (NOI), founded in the mid-twentieth century by Elijah Muhammad. During the 1960s and 1970s, some African American women felt drawn to the NOI because they viewed it as a program of moral improvement, for U.S. society at large but especially for the African American community. The NOI was the first completely indigenous Islamic movement in the United States. (Many of the NOI's teachings were incompatible with orthodox Islam, such as its insistence on the inferiority of white people in its affirmation of black strength and power, a view later abandoned.) The NOI encouraged female modesty and the assumption of more traditional gender roles for men and women. Women took on more duties within the home, viewing men as protectors and guardians of women and children. Women's political participation was limited, and men became the central public figures in the NOI.

For some African American women and men, the connection with Islam may have been a way to remember their Islamic heritage in Africa before the Atlantic slave trade. Some evidence, which is not well documented, indicates that some slaves practiced Islam before being captured and in many cases were forced to convert to Christianity. Thus,

reconnecting with Islam meant reconnecting with an African tradition that was not intimately associated with slavery and white domination, as Christianity had become.

The number of female Latina and Native American converts to Islam has increased in recent years, and women who choose to convert do so for various reasons, including the resources within Islam to deal with economic injustice and racial discrimination. In the later part of the twentieth century, a larger number of Anglo women began to convert to Islam for different reasons, often viewing conversion as a meaningful commitment to Islamic principles. Some Anglo women converts were drawn in particular to Sufism in the 1960s and 1970s, and studies have shown that in the early twenty-first century, U.S.-born Muslim women have been joining Sufi groups, such as the Bawa Muhaiyadeen Fellowship near Philadelphia.

Yvonne Haddad, Jane Smith, and Kathleen Moore (2006) looked at several personal reasons that U.S. women have chosen to convert to Islam. Among them are the sense that Islam is personally compelling in its insistence on monotheism (worshiping one God alone), that the Muslim way of life affirms family values in a way that U.S. secular individualism does not, that Islam is more convincing as a way of life than is Christianity, and that Islam supports and protects its female members in a special way with its emphasis on modesty and respect for women as persons, rather than being targets for sexual objectification. Among U.S. Muslim converts, scholars have identified a need to reject secular ways of life that are inimical to harmonious family and other social relationships. Some women convert for very practical reasons, such as having a husband or fiancé who is Muslim.

Aminah Beverly McCloud has noted that racial and national tensions have flared up between groups of Muslims, converts and indigenous Muslims alike, in the United States during the twentieth century. Her work has examined how Muslims self-segregate in the United States, despite claims to universal fellowship. U.S. Muslims have faced the difficult questions of how to preserve Islamic values in a way that is culturally meaningful. The diversity of cultures associated with and represented in Islamic communities has at times caused conflicts of custom and tradition.

Family and Social Values

In Islam generally, the family is an important locus of social and religious ties. Muslim women in the United States, like their non-Muslim female counterparts, have to make choices about whether to work outside of the home

and how to share parenting responsibilities with a spouse. Some Muslim women think that women should work primarily inside the home as a way of living Islamic principles, but others think it is important for men and women to share the duties of housework and work outside of the home. Moreover, it is traditional for women and men not to mix socially, especially in religious settings such as the mosque, where the sexes are often segregated for prayer and other activities. However, this is not always the case—in the United States, mosques function like churches and synagogues as places of community social gathering, rather than just for worship.

Muslims have wanted to pass on Islamic values to their children, and some Muslim women have supported the establishment of Muslim parochial schools in the United States. Of general concern has been that children will absorb and preserve their Islamic heritage, and this is often tied to issues of preserving culture. In the later part of the twentieth century, Muslim women immigrants often felt the pull between maintaining their identity of origin and the pressure of assimilation, which can be described as total integration, or more negatively as the erasure of one's original cultural identity.

In the late twentieth and early twenty-first centuries, immigrant Muslims benefited from an established network of mosques and Islamic educational and cultural centers in the United States, making it possible for Muslims to foster distinctively Muslim identities. Whereas earlier generations of immigrants may have struggled to assimilate and be perceived as “American,” during this time the focus shifted somewhat to cultivating authentic Islamic identities. This move also reflects a transition in U.S. thinking about identity politics and multiculturalism, in which the idea of the melting pot—where everyone who comes to the United States abandons distinctive cultural or religious markers and comes out “American”—has lost popularity. Globally, the type of Islam that has dominated the late twentieth century has been more conservative and concerned with loss of moral values. This has had an impact on U.S. Muslim thinking and reactions to U.S. culture. Some U.S. Muslims have criticized what they perceive to be lapses in ethical and moral judgment, especially when addressing liberal culture that condones sexual permissiveness, crime, and drug use, among other vices.

U.S. Muslims have viewed marriage as a central institution for preserving Islamic values and identity, but because of the nature of living in a multicultural setting, sometimes

the goals of communal preservation have conflicted with individual needs. Although traditionally, in many Muslim cultures, the families participated in the selection of marriage partners (“arranged marriages”), in the late twentieth and early twenty-first centuries, social mobility and other considerations have weakened this practice considerably. One pressing issue that many Muslims have faced is whether to marry outside of the religion or to have an inter-faith marriage. Islamic custom permits men to wed Jewish and Christian women in addition to Muslim women, but Muslim women may only wed Muslim men. Children derive their religious identity from their father, which means that a non-Muslim father cannot suffice. Marcia Hermansen (1991) noted that many Muslim Americans, regardless of sex, who married outside of the faith experienced stress from their communities because of the emphasis on preserving and maintaining a distinctively Islamic identity.

U.S. Muslim women have found models for Islamic feminine virtue in the examples of women from the early formative period of Islam and within the Qur'an and Sunna, or deeds of the prophet Muhammad. Conservative Sunni women in the United States look to the wives of the Prophet, such as Khadija and Aisha for guidance; Shiite women look to Fatima, the daughter of the Prophet, wife of Imam Ali, and mother to Husayn. Many Muslim women have insisted that the Qur'an stipulates the equality of men and women. As the most authoritative book for Muslims, what the Qur'an says about marriage, divorce, and family life holds much power, although how to interpret certain verses is debated. Azizah Al-Hibri has argued that the Adam and Eve story, so influential in the oppression of Jewish and Christian women because of the prevailing interpretation that sin is the result of Eve's choice to eat the fruit, is re-told in the Qur'an so that Adam and Eve share equal blame for their action in the Garden of Eden. In Islam, Al-Hibri argued, “woman” alone did not bring sin into the world.

Muslim Feminism and Forms of Feminist Activism

U.S. Muslim women have reacted to, and engaged with feminism in a variety of ways since the rise of U.S. political feminism during the 1960s and 1970s. Feminism, although a complicated subject in its own right, can be defined as the notion that men and women are politically equal, and thus should have equal access to material and social goods. Feminists have criticized the existence of social hierarchies based on gender difference (in addition to race and class

differences) and the often unquestioned power that men tend to hold in societies worldwide.

Although some feminist critics of religion and of Islam in particular have insisted that religion is inherently oppressive to all women, some Muslim women have adopted some of the central critiques of feminism and applied them to their tradition. They have claimed the need for reform of aspects of the Islamic tradition according to changed ideas about women and women's roles in the home, in the workplace, and in politics. This position, more generally known as reformist, has been espoused by Muslim women and men who understand the message of the Qur'an and Sunna (the sayings of the prophet Muhammad, collected in reports called the *hadith*) as one that stresses the social and political, in addition to the spiritual, equality of women and men. Therefore these critics have argued that Muslims must work to correct the abuses of patriarchy through a reexamination of Islamic tradition. One method has consisted of careful attention to Qur'anic exegesis (*tafsir*) on verses dealing with women. This method has been popular among scholars such as Khaled Abou El Fadl, Amina Wadud, and Kecia Ali.

Some reformists have sought to change elements of Islamic tradition that have been male-dominated through more public action. One type of activism that has made newspaper headlines is for women to lead the Islamic call-to-prayer. In March 2005, African American Muslim scholar Amina Wadud led the call-to-prayer in New York City for a mixed group of a hundred men and women. Traditionally, women are not permitted to lead prayer services for men; some scholars of Islam have argued that this custom does not originate in the Qur'an or Sunna and is an addition that was adopted from contact with other patriarchal cultures. Asra Nomani, an Indian American Muslim journalist, was the main organizer of the worship service over which Wadud presided. Both Nomani and Wadud have publicly advocated for the political equality of women and men as a central tenet of Islamic belief and practice. Their reasons for challenging the patriarchal aspects of Islam are not explicitly "feminist," although their views of Islam are largely compatible with feminist arguments for the equality of women and men.

Other forms of scholar-activism among Muslim American women have also been prominent during this period, such as campaigning on behalf of women's human rights worldwide. Simmons has been active in advocating for an end to domestic violence and other forms of discrimination against women. She has been part of a global network of Muslim women working for increased liberties for Muslim women,

using international human rights forums and language developed in the Universal Declaration for Human Rights (1948) and the Beijing Platform (1995). Some U.S. Muslim scholars, such as Saba Mahmood, have rejected the use of liberal feminist methodology (including human rights discourse) to describe and understand the experiences of Muslim women.

Many U.S. Muslim women are ambivalent about feminist ideas, specifically the idea that equality between the sexes implies that the sexes are the same and should occupy gender roles interchangeably. Instead, these women understand gender relationships as fundamentally complementary, in which women and men are endowed with different abilities because God has designated biological and social roles proper to each sex. For instance, the male is to be the provider for and the protector of the family, working outside of the home, and the female is to be the nurturer for the family, raising children and cooking meals. In this respect, this view resembles closely the views of more conservative U.S. Christians and Jews. To work to undo these gender distinctions as they are lived out in defined social roles would be equivalent to going against God's will for humanity. Traditionalist Muslims have perceived the collapse of defined gender roles as related to the degradation and exploitation of women that is allowed by liberal societies.

Women: Ordination of

In Christian practice, ordination is a religious ceremony, sometimes called a sacrament, whereby clergy are "set apart" by prayer and laying on of hands to a vocation of Word and Sacrament. Jewish authorization of rabbis is also considered an ordination. In some denominations, there are two levels of ordination: ordination as deacon and ordination as elder. Ordained deacons or deaconesses (women) are laity authorized for ministries of service, and, in some traditions, becoming a deacon is a step along the way to full-status clergy ordination (variously called elder, presbyter, or priest).

Ordination is not only an event; it also confers an ongoing distinctive clergy status. Ordained clergy preach, teach, oversee religious rites, and generally care for local faith communities. In the Christian tradition, ordained leaders are said to carry an indelible mark that sets them apart from ordinary people (laity) for the rest of their life. Within Judaism, a rabbi is an observant Jewish man or woman who keeps the 613 commandments, knows Jewish law and tradition, resolves disputes, and instructs other Jews.

Who Should be Ordained?

Given the way in which ordained leadership is highly valued throughout religious history, communities of faith

continually debate the criteria for ordination. Is ordination for married or celibate persons, well-educated or charismatic persons, males or females, heterosexuals or homosexuals? The answers to these questions create rivalries and difficult choices. In the Western European Christian Church, for over a thousand years, canon law has dictated that clergy were to be celibate male heterosexuals. In practice, the law was not always followed, and in the sixteenth century, Protestant reformers challenged the principle of celibacy.

The second most debated issue around the question of ordination is the concern for education and its relationship to spiritual gifts, or natural *charisma*. Should the churches and synagogues insist on "learned" educated clergy, or are people better served by Spirit-filled charismatic leadership? Seeking to correct abuses in Roman Catholic practice, Protestant Reformers emphasized the importance of educated clergy. Ornate vestments were replaced with simple academic robes. Sectarian or left-wing Reformers, however, argued that education was not enough and authentic clergy needed to have spiritual gifts. Ideally, persons with both learning and charisma deserved ordination.

Third, the question of gender and ordination became increasingly important after the sixteenth century. Although many groups (Roman Catholics, Eastern Orthodox, conservative Protestants, and Orthodox Jews) continue to insist that females should not be ordained or exercise clerical authority in their churches, other Protestant and Jewish groups ordain women. Roman Catholics maintain that only ordained male priests can mediate the presence of Christ in worship because the male gender of a priest functions as an icon of Christ, who is the new Adam. Conservative evangelical Protestants argue that only men should be ordained based upon the biblical concept of male "headship." The scripture states that the husband is head of the family and male clergy are head of the church. Although women have important responsibilities in family and church, it is not God's intention for women to rule over men in the church.

Finally, fourth, issues of sexual identity and same-sex love relationships shape attitudes towards ordination. When self-avowed lesbian, gay, bisexual, and transgendered persons have sought ordination, Christian and Jewish communities have debated their legitimacy. Some groups bar all homosexual people from membership in local congregations; others embrace them but consider their sexuality flawed and seek to restore them to "natural" heterosexual life; and still others may affirm and welcome them as full members but still refuse to ordain them to leadership. As health

professionals have moved to define homosexuality as “sexual orientation,” not as a lifestyle choice or character flaw, religious people have continued to disagree over biblical texts that condemn homosexuality. Some refuse to ordain any openly homosexual persons. Others will ordain them if they are celibate or in a long-term, stable relationship. Still others insist that sexual identity should not even be considered when weighing the question of ordination.

How American History Shaped the Issue

Although sporadic concern for women clergy did arise in northern Europe in the eighteenth century, the movement towards ordaining Christian and Jewish women has been uniquely shaped by American history. Christians and Jews outside North America rarely raise the issue until exposed to American arguments and practices.

The colonial period, and the Declaration of Independence leading to the formation of the United States of America, changed the way ordinary citizens (colonists and immigrants from Europe) looked at authority. Political thinking that flourished in early America insisted that power flowed from the people to their elected leaders, and this attitude about power at the grassroots affected the churches. Americans considered themselves a self-governing people. They believed that every citizen had “rights.” These attitudes strengthened the role of laity in church life and eventually reshaped attitudes about the place of women in church and society.

In Europe, most ordinary people had little say about their political, social, and religious situation. Religious authorities (bishops, monks, and priests) and political leaders (monarchs, princes, and landowners) made decisions for all. In colonial America, however, things were different. Because English religious and political leaders were far away, colonists enjoyed a great deal of political and religious independence for two hundred years. The Revolutionary War, in the eyes of most American patriots, was a war to preserve freedoms already enjoyed, not to claim new freedoms.

In New England, where churches organized as local congregational bodies, each congregation governed itself—rejecting all hierarchical religious authority. The so-called “Congregational Way” insisted that when faithful people gathered together under the guidance of the Holy Spirit, they could (should) govern their churches themselves. Congregational churches called their own pastors, designed their own meetinghouses, and wrote their own covenants.

Even in colonial Virginia, where more hierarchical Anglican Church customs dominated, colonial vestries assumed

powers unknown back in England. In England, wealthy patrons nominated a rector, and the bishop “inducted” the priest into a parish. Once inducted, a rector had tenure and could not be removed unless he had serious lapses. In Virginia, however, local parishioners played a direct role in selecting their clergy. To avoid getting stuck with a rector they did not like, Virginia vestries often waited months, even years, before presenting any minister for “induction.” Laity maintained control of their parishes by simply hiring clergy from year to year. Like most Americans, they were committed to freedom from authority: political and ecclesiastical.

As colonial settlements spread west over the mountains, periods of revivalistic enthusiasm produced amazing religious diversity. Americans grew comfortable with varieties of religious practices and convictions. Independent churches and lay driven religious movements flourished. People regularly questioned old orthodoxies and were suspicious of ecclesiastical power. In hierarchical traditions, such as the Roman Catholic Church or the Church of England, they found creative ways openly to challenge authority.

After the War for Independence (1775–1783), the religious enthusiasm of frontier revivalism (what scholars call the Second Great Awakening) focused upon results, not status. If a man or woman was able to call down the Holy Spirit and bring crowds to salvation through Jesus Christ, gender did not matter. In this religious environment, women, as well as men, broke away from ecclesiastical and denominational camps. They were suspicious of and rejected formal educational credentials. They strongly affirmed the work of so-called “female laborers” in frontier revivals. They quoted the prophet Joel, remembering that God promised to “pour out my spirit on all flesh; your sons and your daughters shall prophesy” (Joel 2:28–29).

“Female laborers” were led by the Spirit, but they also took the Bible seriously, anguishing over texts stipulating that women needed to “be silent in the churches” and that women should not “rule” in the church. Through prayer and Bible study, they developed an interesting argument to justify their ministry. The Holy Spirit, they said, flows equally through both women and men. When Paul objected to women “ruling,” he never meant to prohibit women from praying aloud, singing, witnessing, exhorting, and preaching *in public*. As long as women did not “rob men of their rightful authority” inside the church, the public evangelistic ministry of women was acceptable. Early female laborers did not seek ordination; they expected and invited men to carry out all church governance roles. At the same time, they

founded many churches, refusing to deny the power of the Holy Spirit in their preaching. Ordained male clergy tended to the life of the churches, while Spirit-filled women spread the gospel. Unfortunately, after several decades, church people became more concerned about maintaining stable congregations than saving souls, and by the 1830s, female preaching ceased to be valued as a miraculous sign of God's grace and often came to be viewed as a sin against nature.

In American history, as immigration increased and religious enthusiasm spread across the expanding frontier, there were simply not enough ordained male clergy to meet the needs of the population. It was common for the wives of Protestant clergy to partner in ministry with their clergy husbands. Sometimes when a husband died, a pastor's wife stepped into his vacant pulpit. Among Roman Catholics, women religious (nuns) rendered important ministries in education, hospitals, and large parishes when no male priests were near. More and more people had firsthand experience with effective female leaders and without worrying about biblical or theological traditions; they affirmed and even

ordained women because they genuinely believed them to be called by God.

Prior to the Revolutionary War, Congregationalists dominated New England and Anglicans controlled tidewater Virginia. In the long run, however, the openness of the Middle Colonies and the varieties of religious practice in Pennsylvania, New York, New Jersey, and Delaware produced patterns of religious diversity that prevailed. Groups with unorthodox beliefs and practices that had been persecuted in Europe flourished in America, and female religious leaders of sectarian religious groups overwhelmed masculine assumptions about religious leadership.

The Rationale for Women's Ordination

As already noted, frontier "female laborers" held revivals and founded churches in the late eighteenth and early nineteenth centuries, but they did not seek ordination. Later, when a handful of women in more established churches actively sought ordination, they were ignored and/or denied. Finally, on September 15, 1853, a woman named Antoinette Brown

(1825–1921) became the first woman ordained to the Christian ministry in a major established denomination of that era (Congregationalism). This action was not taken by a large ecclesiastical body concerned with gender equality. Rather, Brown felt God had called her to “preach the gospel,” and after graduating from Oberlin College, where she had been allowed to study for ministry, she was invited to serve a small Congregational church in South Butler, New York. Brown was ordained within a Protestant denomination where local congregations govern themselves and regularly choose their pastors, so her ordination did not cause a big stir. Over the next fifty years, a small number of denominations with similar polity (governance systems), or more liberal national structures, also ordained a handful of women. Yet even when church leaders affirmed the “ordination of women,” women clergy were considered “exceptions to the rule.” Most of the women ordained before 1870 did not demand equality with men; they simply wanted to do what they believed God was calling them to do.

Yet slowly a rationale for women’s ordination developed, building upon new ways of thinking about women’s place in society. In 1838, Quaker abolitionist Sarah Grimké linked the question of women’s equality to antislavery thinking. In her *Letters on the Equality of the Sexes, and the Condition of Woman*, she argued that women and men are equal children of God. She also rejected the idea that men and women should have “separate spheres” of activity dictated by gender. Grimké insisted that women can and should be leaders in politics, education, and religion. In 1848, a women’s rights convention was held in Seneca Falls, New York. It affirmed a statement on the rights of women modeled after the *Declaration of Independence* and launched the women’s suffrage movement.

Eventually, arguments for women’s ordination were linked to new understandings of “human rights” and an expanding vision of women’s place in society. They focused on biblical texts, arguing that all persons are called to the ministry by their baptism and that there is “neither Jew nor Greek, male nor female in Christ Jesus” (Galatians 3:28). Discussions about ordination became part of wider social conversations about gender. The pressure to ordain women was no longer driven by individual women asking to be ordained, or by churches and synagogues encouraging women to seek ordination, or even by the need for more clergy. Decisions for or against the ordination of women became mixed up with how religious traditions embraced or resisted modern ideologies of gender equality, how they viewed the sacraments,

and how they responded to the inerrancy of the scripture when confronted with modern historical, critical study of the Bible. New opportunities for women in medicine, law, education, and music expanded professional expectations and options. Encounters with female evangelists, lay sisterhoods, deaconesses, single women missionaries, and Roman Catholic nuns stretched long-standing attitudes about women’s role in church and society.

Women’s Ordination in Mainstream American Protestantism

After the Congregationalists ordained a woman in 1853, other groups with decentralized, congregationally based decision making, and with progressive attitudes towards women, began ordaining women—Universalists (1863), Christians (1867), Unitarians (1871), and Disciples (1888). Because the Baptists, the largest denominational family in American Protestantism, split into Northern and Southern Baptists and into white Baptists and black Baptists, it is difficult to generalize about Baptists. In 1894, white Northern Baptists (later called American Baptists) ordained a woman; and in 1895, when the black National Baptist Convention was founded, it did not prohibit the ordination of women. Unfortunately, it was a long time before many African American Baptist women were affirmed as clergy. Many Southern Baptists (mostly white) still remain steadfastly resistant to the idea of ordaining women. The ordination of the first Southern Baptist woman did not take place until 1964. As more Southern Baptist women sought ordination, the Southern Baptist Convention (SBC) formally prohibited female leadership, ruling in 1979 that women should be barred from all positions of authority. In response, several progressive Baptist groups withdrew from the SBC and formed women-friendly alternative Baptist fellowships.

Methodism also went through controversies over slavery and the ordination of women. Before the Civil War (1844), Methodists broke into northern and southern denominations. Even earlier (1830), Methodists had split over the role of the laity and whether the church should be governed by bishops. In 1880, two women sought ordination in the Methodist Episcopal Church, North (with bishops). After their request was denied, one of them appealed to the Methodist Protestant Church (no bishops), and in 1892, she was ordained. It was not until 1924, however, when the predominantly white Methodist Episcopal Church, North, approved the ordination of women. At first, women were ordained as local preachers and did not have full equality as Annual

Conference members. Finally, in 1956, after a 1939 reunion of several Methodist groups into the Methodist Church, women were granted Annual Conference membership. Finally, in 1968, when the Evangelical United Brethren Church (EUB) completed a merger with the Methodist Church to form the United Methodist Church, irregular policies around the status of women clergy in the EUB were corrected, and all women gained full clergy status.

The African Methodist Episcopal Church (AME) was a separate black Methodist denomination established in Philadelphia in 1816 by Richard Allen. Soon thereafter, a female preacher named Jarena Lee requested a license to preach. Allen resisted and never ordained her, but she is considered the first female preacher in the AME church. Formal regulations allowing the ordination of women in black Methodism came slowly—African Methodist Episcopal Zion Church in 1898, African Methodist Episcopal Church in 1960, and Christian Methodist Episcopal Church in 1966.

Also, after a series of nineteenth-century Wesleyan Holiness revivals, a number of small new Holiness denominations broke away from Methodism. The Wesleyan Methodist Church (1891), the Church of God (Anderson, Indiana, 1885), and the Church of the Nazarene (1908) all ordained women from their founding. Only later, when biblical inerrancy thinking overwhelmed Holiness commitments to the power of the Holy Spirit, did Wesleyan Holiness denominations begin to discourage the ordination of women.

Reformed, Presbyterian, Lutheran, and Episcopal denominations made limited progress towards the ordination of women until the 1960s and 1970s. The Presbyterian practice of ordaining lay ruling elders as well as teaching elders (clergy) complicated the issue. Some congregations in the small populist Cumberland Presbyterian Church ordained a woman to clergy status in 1889. Other Presbyterian bodies took action much later—the (Northern) Presbyterian Church in the USA (that in 1958 united with the United Presbyterian Church) ordained women clergy in 1955; and the Presbyterian Church in the United States (Southern) did so in 1964.

Lutherans in America trace their roots back to Scandinavian and German immigrant groups. Lutherans linked to Scandinavia eventually came together to form the Evangelical Lutheran Church in America in 1987. Most of those groups had approved the ordination of women in 1970. Lutherans linked to more conservative German traditions, especially the Lutheran Church—Missouri Synod, still reject the ordination of women.

Throughout these years, the Episcopal Church, sensitive to its place in the global Anglican family, continued to debate the question of the ordination of women. After 1970, when the ordination of women as deaconesses was approved, Episcopal bishops voted in favor of ordaining women priests, but laity in the General Convention rejected the idea. Only after an irregular ordination of eleven women priests in 1974 did the General Convention regularize the ordination of the eleven and formally approve the ordination of women to both the priesthood and to the episcopate.

This brief outline of events in mainline Protestant denominations is only half the story. Census data show that over fifty percent of all ordained women since 1853 served in independent Holiness, Pentecostal, and evangelical congregations. As late as 1977, only seventeen percent of women clergy could be found in the ten largest Protestant denominations. It seems that when women were denied ordination, they found it easier to start their own independent congregations.

Women's Ordination in Judaism

The movement of American Judaism to ordain women did not come to pass until the 1960s and 1970s. By that time, there were four sub-groups within the American Jewish community. Many Jewish women were well-educated leaders in the secular “women’s liberation movement.” Often they were part of Reform Judaism, a progressive brand of Judaism that found ways to blend Jewish law and practice with common American values, especially gender equality. Reform Judaism ordained its first female rabbi in 1972. In 1968, another progressive group of Jews, who called themselves “Reconstructionists,” started a new rabbinical college based on the egalitarian thinking of Rabbi Mordecai Kaplan. Their school admitted women and men from the beginning. The first female Reconstructionist rabbi was ordained in 1974.

The majority of American Jewish women tried to walk a line between tradition and feminism, aligning themselves with Conservative Judaism. At first they rejected the idea of female rabbis, focusing upon the need for lay women to have more power in synagogues. They challenged Jews to reinterpret Jewish law. In 1977, the Conservative Rabbinical Assembly appointed a study commission to examine the issue of women’s ordination, and eventually it recommended that women be admitted to study to be rabbis. The first female Conservative rabbi was ordained in 1985.

Not all Jewish women went along with these developments. Women within Orthodox Jewish communities resisted the pressures of second-wave feminism completely, reaffirming traditional roles for women with new zeal. Many Orthodox Jews, who had come to the United States from Eastern Europe with personal memories of the Holocaust, felt a responsibility for the future of Judaism. Orthodox women did not think that women should be rabbis and accepted their distinct female roles in the family. They believed that separate was not unequal and that gender differences were essential for the future of Judaism. Although many Orthodox Jewish women have become respected scholars of scripture and tradition, there are no Orthodox Jewish women rabbis.

Women's Ordination and Roman Catholicism

As Protestant groups debated the issue of women's ordination, the Roman Catholic Church stood aloof, resisting any expansion of roles for women in the church. Resistance was not justified so much by citing biblical texts but by upholding a high sacramental view of clerical authority. It was not until the Second Vatican Council in the 1960s that things began to change.

Initially, women were optimistic, as religious orders and liturgical practice modernized. Some Roman Catholic women enrolled in seminaries, anticipating that priesthood for women might be possible in their lifetime. In 1975, a large Women's Ordination Conference was held in Detroit, Michigan, promoting the ordination of women.

In 1976, the Vatican issued a formal "Declaration on the Question of the Admission of Women to the Ministerial Priesthood," rejecting the idea that ordination is a woman's right. Only a male priest, with a "natural resemblance" to Christ, could officiate at the Eucharist. Yet the Women's Ordination Conference has continued to meet, keeping the issue alive. From time to time, renegade bishops ordain a handful of women in what they call "ecclesiastical disobedience," but the official position of the Church does not change. In 1994, the Vatican restated its position against the ordination of women, with an admonition against debating the issue. American Catholics stubbornly affirm the ordination of women. In a 2005 Associated Press poll, over sixty percent of American Roman Catholics said that they supported the ordination of women.

Conclusion

After many centuries of exclusive male leadership in Christian and Jewish communities, in nineteenth-century

America, attitudes about gender roles began to change. Women and men, especially in American churches and synagogues, embraced new ways of looking at religious leadership and began developing arguments supporting the ordination of women. During the past two hundred years, Christians and Jews in many parts of the world have been influenced by four American developments.

(1) From the earliest colonial settlements, American religious life depended upon strong lay leadership (male and female). People were eager to reform religious as well as political institutions. They gave women new opportunities for leadership and after several generations, many people changed their thinking about women and ordination.

(2) The popularity of Charismatic and Pentecostal leadership in American congregations created a culture of openness towards women. If the Holy Spirit expands where it will, then it can (and does) call women as well as men to leadership.

(3) Throughout much of American religious history, there have not been enough male clergy. Women have often stepped in as temporary or ad hoc, priests, pastors, and teachers, and they were even ordained. This is not so much because people were on a campaign to ordain women, but because leadership was needed and women obviously could do the job.

(4) Sectarian religious groups (Quaker, Shaker, Christian Scientist, and so on), alongside thousands of independent female pastors and evangelists in frontier revivals and urban storefronts, stretched traditional religious attitudes about women's role. Once people had firsthand experience with strong female religious leaders in marginal religious groups, reasons not to ordain them faded.

Women: Protestant

As a dominant division of American Christianity and as a significant formative element in the American political climate, Protestantism has provided women with a means of advancement, both as they have worked within the tradition and acted outside its traditional confines. This dynamic relationship between the ways in which women can function within traditional Protestant thought and critical thought about these very traditions and practices has allowed women to make large political and social strides. As women examined Protestantism, they examined themselves and grew to find the ways in which they wanted to exist as wives, mothers, citizens, churchgoers, and members of society.

Distinct strands of religious observance and devotion wind through each period of Protestant history. One can see throughout U.S. history Protestant women's deep commitment to political and social issues; they stood upon and within a religious platform to examine their own views and to enact social change. A blend of religious observation, religious rebellion, political savvy and activism, and concern for domestic welfare and the public welfare moved women to understand themselves in the context of a patriarchal country. Protestantism has evolved to fit the needs of women so that they now largely have the opportunity for leadership, a political platform for reform, and a set of religious beliefs to begin to claim and own as both female and Protestant.

1600s–1700s: The Puritans and a New Nation

Protestantism made its way to the American colonies in the 1620s when John Carver (1576–1621) and William Bradford (1590–1657) arrived with followers from England. These budding colonies clung tightly to religious convictions—both because their beliefs had taken them across the ocean

and because they needed these convictions to maintain a sense of normalcy and to secure their English identity. While men took on the task of structuring the new colonial nation, women were charged with maintaining the domestic sphere. This emphasis on domesticity led to what historians have termed the Puritan “Good Wife,” or a standard of behavior and ideal image of the Puritan woman.

The Good Wife played the important role in the new colonies of embodying Christian piety—she raised her family according to Puritan values, attended church herself, and ensured that her household participated in church. She fulfilled charitable roles, including caring for orphans and visiting the sick. Moreover, as her sobriquet suggests, she was a deferential wife, adhering strictly to the Proverbs 31 ideal of the reverent wife who quietly submitted to the authority of her husband. Her submission to her husband's guidance and leadership was considered to be a reflection of the Puritan church's submission to the headship of Christ.

This pattern of deference and the emphasis on piety and virtue has continued to shape female Protestant identity throughout American history. The tendency to describe religious piety and virtue as being inherently female while somewhat excusing males in the religious arena has led to what Ann Douglas has termed a “feminization” of religion. The importance placed on individualism and individual conversion within Protestantism has blended with the concept of female deference such that women were able to find both a subordinate position within the church and home and, simultaneously, personal growth and communal development. This paradoxical stance gave women a forum for reform, especially through the medium of the church.

The 1600s

Anne (Marbury) Hutchinson (1591–1643), wife of a prominent merchant and clergyman, was one Puritan woman who used religious settings as a venue for social reform. During 1635 and 1636 Hutchinson began holding meetings in her home on Sunday evenings in which the Sunday sermon was discussed at length. Hutchinson questioned the authority of the church and scripture as the ultimate will of God and, by extension, the political leadership of the Massachusetts Bay Colony. She became an influential lay preacher. Eventually the Massachusetts Bay Colony banished her and the First Church in Boston excommunicated her for her radical teachings and challenges to the authority of the church. The dispute over her teachings was known as the Antinomian Controversy.

Hutchinson was not alone in her reform efforts, as other women and men also stepped forward against the Puritan Church. For example, the Society of Friends, or Quakers, was born out of reform efforts. Also excommunicated from the Massachusetts Bay Colony, the Quakers promoted a more radical, egalitarian structure, dividing their meetings along gender lines and allowing women to conduct their own weekly meetings. This egalitarian structure allowed for several women to step forward as Quaker leaders and social reformists. Mary Dyer (1611–1660), a contemporary of Hutchinson, was banished to Rhode Island with her husband. In the years following her excommunication, Dyer continued to visit imprisoned Quaker friends in Boston, where she was eventually hanged in 1660 for her affiliation with the Quakers and her outspoken critiques of the Puritans.

Several women met a similar fate for abdicating traditional female roles and embracing the egalitarian nature of the Quakers, including missionary and preacher Elizabeth Hooten (1600–1672) and Margaret Fell (1614–1702), the latter commonly known as the “Mother of Quakerism.” Margaret Fell and Quaker founder George Fox (1624–1691) advocated an equality of Adam and Eve prior to the Fall. Fell defended her position as a preacher in an important 1666 tract entitled “Women’s Speaking Justified, Proved and Allowed of by the Scriptures.”

These teachings increased persecution of Quaker men and women within the Massachusetts colony, to the extent that Quaker preacher Mary Fisher (1623–1698) was imprisoned and shipped to Barbados. In addition to the condemnation and banishment of dissenting women, a paranoia of witchcraft swept through the colony. These trials are not unique to Puritan America, as there is a long legacy of witch hunting in Christianity dating back to the Middle Ages. Allegations of witchcraft began in Boston around 1647 and culminated with the Salem witch trials in 1692; there were over ninety-seven trials and several executions.

These acts of violence against women indicate the level of importance placed upon the image of the “Good Wife” within Puritan America and, moreover, the extent to which Puritan women were needed to retain a normative social structure in which the church was a high authority and men held the sole responsibility for and power to enact social reform. While Hutchinson, Dyer, and others provide striking examples of women working towards social change and dismissing the role of the Good Wife, they did not represent the majority of Puritan women, who complied with and

respected the teachings of the church. Poet Anne Bradstreet (1612–1672) adhered closely to Puritan teachings, as is evidenced in her work originally titled “The Tenth Muse” and later changed to “To My Dear and Loving Husband.” As the title suggests, Bradstreet’s poems contain a level of deference to and respect for both her husband and God and indicate a reverence for the God-ordained nature of submission within her marriage.

The 1700s

Despite the influence of women like Hutchinson and the influence of the Quakers, this dominant paradigm of submission continued as an important characteristic for Protestant women in the 1700s. While the violence gradually subsided, the Puritan ideal still reigned supreme throughout the colonies. The subsidence in violence, however, allowed Quaker preachers to travel and speak where they chose. These preachers included the well-known Sophia Hume, granddaughter of Margaret Fischer. A few women even began to preach in churches. These included Barbara Heck, who established the first Methodist Church in America in the 1760s with a group from Northern Ireland. As these sects became more well-known, however, they gradually conformed to traditional values and pushed women out of the pulpit.

Puritan values held broad sway throughout the 1700s and well into the American Revolution. While the 1600s church saw high female attendance due to an emphasis on female piety, the early 1700s saw an influx of male churchgoers with the first Great Awakening (1730–1747). Spurred by the preaching of figures such as George Whitefield (1714–1770) and Jonathan Edwards (1703–1758), the Great Awakening spread throughout the northern and southern colonies. During this revival women were able to jump upon the evangelistic bandwagon and gain some church leadership roles.

Massachusetts resident Bathsheba Kingsley experienced a revival-like conversion during the first Great Awakening, and she took on the role of a public evangelist. Continually denounced for her “preaching,” Kingsley was told that she could share her faith but was not allowed to speak publicly. Similarly, contemporary Sarah Osborn (1714–1796) was moved by the preachings of Whitefield to lead a young women’s religious society in her home. It met for fifty years, and Osborn eventually led a group for African Americans in the 1760s. Criticized for abandoning her household duties to take up religious leadership, Osborn

nonetheless began giving spiritual counseling and teaching reading and writing. These women built the foundational precedent for female ordination within the Protestant Church and slowly pushed back the boundaries around the ideally pious woman; she need not be only quietly religious.

The first Great Awakening gave way to American colonial independence from Britain in 1776. The patriotism that crossed the newly formed America gave women a new identity, termed by historian Susan Hill Lindley (1996) the “Republican Mother.” This identity gave women a sense of inclusion in the politics of the forming society. This inclusion, though, hinged upon a maternal obligation to raise sons to be virtuous, educated citizens and daughters to be, again, Republican Mothers.

The 1800s: An Era of Moral and Social Reform

This transition to a more political role for women, if only nominally, led to American Protestant women taking on the role of social reformer in the 1800s. Nineteenth-century America saw the birth of several political and moral reform movements, including temperance, abolition, prison reform, capital punishment, and poverty eradication. These movements were largely spearheaded by Protestant women’s groups.

Within the context of these religious groups, women were able to exercise a new political freedom, one that was divorced from the wifely duties of the Puritan Good Wife and eventually stepped away from the Republican Mother ideal. The booming industrialism of the 1800s led to a greater distinction of social spheres for men and women. Also, the teachings of the Second Great Awakening (1790s–1840s) emphasized renewed personal salvation during church revival meetings. Together these brought about a new ideal for womanhood—the “Cult of True Womanhood.” This ideal emphasized four cardinal virtues: piety, purity, submissiveness, and domesticity.

Social Reform Work

Industrialization led to more leisure time for women, which could be interpreted as an explanation for their greater piety—men were seen as being too busy for religious concerns. Additionally, industrialization saw the role of the American woman change as factory work and businesses slowly began to take over household tasks, thereby freeing women’s time for other efforts—including social reform work.

Education reform was a high priority during the early nineteenth century with women like Emma Hart Willard (1787–1870) and Mary Lyon (1797–1849). Willard opened Troy (New York) Female Seminary in 1821, which intended to offer young women students a secondary education equivalent to that offered to young men. The curriculum focused largely on social graces of the time, including moral instruction, drawing, painting, dancing, and the art of being a wife and mother. However, the founding of such a school was a distinct step towards both bettering female education and promoting a view that women were deserving of a quality education. Shortly after Troy Seminary was opened, Lyon opened Mount Holyoke Female Seminary with a central focus on Christian education.

Similarly, deaconess education was popularized in various Protestant traditions during the late 1800s. Methodist Lucy Rider Meyer founded the Chicago Training School for City, Home, and Foreign Missions in 1885. The school specialized in biblical training, missions, sociology, and social service. The Chicago Training School provided women with a more socially acceptable way to become involved in church leadership than female ordination (almost unheard of), and it gave women an opportunity to become more empowered within their own religious tradition and their congregations.

The empowerment of women through education was similarly marked by their involvement in social reform groups. Wearing the mantle of religious service, women were able to step into the political realm and have lasting socioeconomic impact through these reform movements. As early as the 1830s, women began organizing against slavery in the United States. Many women spoke out actively against slavery—both of African Americans and “white slavery,” or prostitution—including Quaker minister Lucretia Coffin Mott (1793–1880) and Quaker sisters Sarah (1792–1873) and Angelina (1805–1879) Grimké.

White slavery was addressed by several organizations, including the Female Moral Reform Society (FMRS) founded in 1834 by Lydia A. Finney. FMRS was created for the purpose of preventing prostitution and encouraging sexual abstinence. Providing an outlet for publishing, this group also circulated *The Advocate of Moral Reform*, to which a large number of urban and rural women subscribed. The first successful settlement house was designed by Jane Addams for women to undergo training in health, hygiene, and etiquette.

This reform effort indicates an adherence to the ideal of the Cult of True Womanhood—that women should seek to

instill a sense of piety and sexual purity in other women—and points to the class distinctions between those Protestant women with access to the political arena and lower-class women. The social gains made by Protestant women in the nineteenth century, though beneficial across economic classes, were mainly driven by white women of the upper economic echelon with access to education and a more leisurely lifestyle that allowed them time to devote to religious activity.

While most of the issues of women's moral reform became deeply entwined with each other, two of the most intertwined issues were those of temperance and women's rights. In 1837 Francis Willard (1839–1898) established the Women's Christian Temperance Union (WCTU). The WCTU, established as part of the temperance movement, eventually focused on women's suffrage. Within the temperance movement, women gained opportunities to publish articles, tracts, and periodicals—such as Amelia Jenks Bloomer's (1818–1894) newspaper, *The Lily*. Additionally, at the 1848 Seneca Falls Meeting in New York a collection of women discussed the role of women in society as well as the temperance movement sweeping the nation.

Mission Work

This trend of upper-class white women enacting social change can also be poignantly traced in the foreign missions movement. While the 1800s provided a small political platform for women, it also led to an emergence of a new type of religious leadership. In 1800 Mary Webb (1779–1861) organized a small group of Baptist and Congregational women in the formation of the Boston Female Society for Mission Purposes. This society launched a movement that was supported by almost all Protestant groups by the end of the twentieth century. Mission work, both at home and abroad, gave women the opportunity to travel and teach, opportunities scarce within the traditional Protestant woman's life. Missionary wives were seen as important in teaching the “heathens” the ways of a Christian household and as integral to maintaining the piety of the missionary family.

Additionally, several unmarried women began traveling as missionaries well before the Civil War. Various women's mission boards were formed, including the Women's Union Mission Society (1888). On these boards women were able to develop their autonomy and leadership as they designated how money would be spent for missions and how mission operations would be conducted. They published their own teaching materials and targeted a wide range of donors. As

with the Chicago Training School for deaconesses, the field of foreign missions offered women a way to become involved in religious teaching and instruction, as well as publication, without meeting opposition from male clergy and laity. Women's groups provided a space for women to enter the public sphere and exert political thought and action without diverging hugely from their socially acceptable place in the home. Women slowly began to emerge into the public sphere over the course of the nineteenth century, laying the foundation for the prominent women's suffrage movement at the turn of the century and for women to assume more roles of religious leadership.

The 1900s: Ordination and Ecumenism

The turn of the twentieth century saw the culmination of several of these women's groups in the female suffragist movement. Although not all members of women's groups considered themselves feminists or suffragists, their actions are often cited as protofeminist, and their organizations opened the gateway for the formation of the National American Woman Suffrage Association (NAWSA) in 1892. NAWSA was originally headed by suffragist leader Elizabeth Cady Stanton (1815–1902), who resigned in 1894 to begin exploring the connection between religion and women's rights. In 1895 she published *The Women's Bible*, which focused on realigning biblical passages to the interests of women's liberation and approached scripture as being written by human hand, not divine ordination. Her text created a great stir among church clergy and an almost equivalent reaction from NAWSA, which largely wished to dissociate itself from her work. Nevertheless, Stanton's work set an important precedent for future feminist religious scholars who would examine scripture through a lens of sexism and gender bias.

The early feminist movement on the whole reflected the tone of Stanton's work, as it asserted that before being wives and mothers women were individuals and citizens. Women gained the right to vote and exercise political thought as they also slowly began to enter the American workforce. Women were leaving the domestic sphere and building a bridge between their public and domestic lives. This period of change (1848–1920) has become known as the first wave of feminism.

As women began to enter the workplace in greater numbers, the division between the public and private sphere became even more obsolete. Though women still represented the majority of churchgoers, the elevated idea of

female piety established by notions of the Good Wife and the Cult of True Womanhood slowly began to fade from popular thought.

Women in the Ministry

Antoinette Brown (1825–1921), later Antoinette Brown Blackwell, had been the first woman ordained in a Christian church—in 1853 as a Congregationalist minister. Though her ordination was controversial, several denominations followed suit and began ordaining women in the church. In 1894 in Poughkeepsie, New York, Julia A. Foote was the first African American woman ordained in a Protestant church. Following on the heels of the popularized deaconess education movement, Foote, a member of the African Methodist Episcopal (AME) church, was ordained to deacon's orders over fifty years before the predominantly white Methodist Church granted full conference membership to women.

As female ordination and female religious education became more accepted, women began to take on leadership roles in institutions of higher religious education. Georgia Harkness (1891–1974) was an important figure in the movement for women to gain ordination, and she was also one of the first women to teach theology within a seminary, first at Garrett Biblical Institute in Chicago and later at the Pacific School of Religion in Berkeley, California. Author of over thirty books, Harkness was one of the first significant female theologians.

Feminism and Ecumenism

Harkness advocated for an ecumenical understanding of the Christian church, and this ecumenism carried over into the religious thought during the second wave of feminism in the 1960s. America saw a shift to the “personal is the political” mind-set among feminists, who believed the mistreatment of women extended beyond the legal field of ensuring the right to vote and receive an education into the personal domain. Feminist groups began consciousness-raising groups, akin to earlier women's groups and maternal associations, in which women would come together and discuss their social position. Similarly, ecumenists united for the collective goal of raising the religious and social consciousnesses of various Protestant and other religious strands.

The Evangelical and Ecumenical Women's Caucus (EEWC), for example, was established as a branch of a group first known as the Evangelicals for Social Action (ESA). Founded in 1973, the ESA caucused annually with a specific list of concerns, including racism, sexism, peace, and simpler

lifestyles. Out of this group the Evangelical Women's Caucus developed to combat sexism in a religious context, including noninclusive language of worship, ordination rights, and inequitable family structure dynamics. In 1990 the organization's name was changed to Evangelical Ecumenical Women's Caucus to reflect its increasingly inclusive nature.

Organizations like the EEWC reflect the ways in which stratified Protestant groups began to unite under common social and political causes—causes that had been spearheaded by various women's reform groups in the mid- to late nineteenth century. Rev. Dr. Joan Brown Campbell (1931–) of the Christian Church (Disciples of Christ) and the American Baptist Churches, for example, is a leading ecumenist who was the first woman to be named executive director of the World Council of Churches. She also served for a decade as the general secretary to the National Council of Churches, the nation's largest ecumenical body with thirty-two Christian denominations and over 42 million members.

The Language of Worship

The tenets of equality and egalitarianism in religious relationships have extended beyond the ecumenical movement into the ways in which female theologians have been re-envisioning the language of worship and scripture. Several more liberal Protestant denominations have gender-neutral liturgies in their services, and the Unitarian Universalists encourage congregants to worship at an individual level, which can include a female deity. Protestant theologian Ruth Duck (1947–) has encouraged a new hymnody that incorporates female imagery. Duck has published several texts about her work with language in worship, including *Gender and the Name of God: The Trinitarian Baptismal Formula* (1991). Twelve of her hymns are a part of the 1995 United Church of Christ hymnal, and eleven are in the Disciples of Christ *Chalice Hymnal* (1995). Building on the long tradition of female hymnists, Duck revises the tradition by pulling into worship a vernacular that fuses reverence with egalitarian language.

The Twenty-First Century

Harkness, Brown Campbell, and Duck represent the gains women have made in assuming roles of leadership in Protestant churches and organizations in the twentieth and twenty-first centuries. Ordination is still an issue of contention among Protestant denominations. Several more conservative denominations, including the Southern Baptists, the

Presbyterian Church of America, and Pentecostal strands, do not ordain women. They hold closely to the belief that men alone should be ordained, and they find a scriptural basis for the importance of maintaining distinct gender separation within church leadership roles. These denominations draw upon traditional, Puritanical gender beliefs that men are the head of both the household and the church and that women act in a supporting role to each in each of these domains.

However, most mainstream Protestant denominations, like the United Methodist Church, began ordaining women in the mid-twentieth century. In 1989 Barbara Harris became the first female Episcopal bishop. The first presiding female Episcopal bishop, Katharine Jefferts Schori (1954–) was ordained in that position in 2006. While the number of male clergy is still higher than female clergy, the trend is shifting with increased female enrollment in seminary. This divergence among denominations demonstrates the very flexibility Protestantism provides women.

Protestant women have been a dominant force in American social and political reform. The image and definition of the Protestant woman has been in a constant state of revision alongside the changing sociopolitical climate of the United States. Since the founding of the American colonies, religious forums have provided women with a platform for exercising political and social power. Moreover, the belief systems and religious convictions of Protestants have motivated these women to organize and impact social change. Within Protestantism women have had the ability to move through various social roles. They have played the part of volunteer, nurturer in the home, missionary, social reformer, evangelist, pastor, and theologian. The complexity of the role of Protestant woman has reflected and guided the evolving role of women within society at large as well as evolving social mores.

Women: Roman Catholic

The stories of Catholic women in North America are not easily reduced to commonalities. Roman Catholicism is a global religious tradition that is anchored by a centralized hierarchy yet develops in unique ways all over the world. Catholic women in North America claim heritage in all of these communities, including indigenous traditions. Their experiences of being female and Catholic in North America are therefore wonderfully diverse. Such diversity should be studied and celebrated for its own sake, as well as embraced as a natural guard against overgeneralization.

Common Threads

At least three common threads do appear in North America that bind Catholic women together. First, Catholic women,

whatever their heritage, were forced by necessity to negotiate multiple identities. As members of multicultural colonies and nations, they defined themselves by class, race, ethnicity, and gender as well as by nationality and faith tradition. Scholars who bring questions of identity to these women's experiences greatly enrich the study of Catholic women. For example, instead of assuming that Catholic women looked at themselves in similar ways (as taught by the Catholic Church), historians now ask how factors such as race or gender contributed to how they defined themselves and the choices they were forced to make. A Native American woman may have had to choose between losing her culture through forced conversion to Catholicism or losing her life; a Catholic woman in colonial New England might have felt a tension between her faith tradition and her national identity; a free Catholic woman of color in nineteenth-century New Orleans would find herself part of a majority religious culture, but an outsider because of her race, class, and status; a twentieth-century Latina in the United States might find herself torn between both national and religious cultures.

Each of these women would have struggled to define not only who she was, but what shape her Catholicism would take and how it would influence her life. This brings us to the second theme. Catholic women in all their diversity engaged with Catholic tradition, shaping it through their own experiences as they adapted it to the environment in which they found themselves. In the United States and English-speaking Canada, Catholic women had to adapt not only to environmental conditions far different from those in Europe, but also to their minority status in nations suspicious of popery. From the beginning they created new forms of Catholicism to fit within (or stand in opposition to) Protestant cultures preoccupied by individualism and independence. Even women in predominantly Catholic areas such as Mexico and Quebec found that the North American context not only forced perhaps unforeseen adaptations of Catholic community structures and practices, but also encouraged creative re-imagining of Catholic tradition that reflected individual experiences in the New World. Since the last third of the twentieth century, particular attention has been paid to traditionally female rituals, such as devotions to particular saints or to the Virgin Mary. Although the nature of those practices is of great interest, such studies also contribute to our knowledge of power dynamics within Catholic families and church communities, and between Catholicism and the surrounding culture.

Finally, Catholic women in North America shared the struggle to understand their role as valued yet unequal participants in the church's governance and mission. Perceptions of gender roles changed over time in North America, but the global Catholic Church's perception of gender rarely kept pace. As a result, generations of Catholic women have been confined by strictures that limited women's participation in decision-making and ministry. Studies of recent history are particularly helpful in understanding conflicts over gender construction and women's rights in the North American church. It becomes more and more clear that many Catholic women did in fact object to their position in Catholicism and applied feminist theory to their faith to challenge the injustice. Meanwhile, others continued to accept limitations on women as God's will and tried to use their gifts as they could. These women, too, are more frequently becoming subjects of study as researchers seek to understand the nature of Catholic conservatism and women's place within it. Each of these three threads can be traced through the history of Catholic women in North America.

Colonial Period

The earliest history of Catholic women in the Americas is one of brutality. Because only men undertook the European voyages of discovery, the first Catholic women in the American colonies were forced converts. Those who refused to convert and obey were subject to slavery, rape, and death, but even conversion did not save many from these fates, which the Spanish proclaimed the will of God. From these first contacts with indigenous women of the Caribbean, Catholicism spread to Mexico, Central America, South America, and what is now the American Southwest. It then travelled with French explorers into present-day Canada and New England, the northern Midwest, and down the Mississippi River to Louisiana. British Catholics brought their own brand of Catholicism to the Chesapeake region. Catholic women who were members of European cultures, indigenous women who encountered Catholic cultures, and African women brought into them by force all had unique experiences.

The Spanish colonies of North and South America in the sixteenth and seventeenth centuries developed into class-stratified societies dominated in nearly all aspects by the Catholic Church. The women included Catholic natives of Spain, Creoles born in the colonies, those of mixed Spanish and indigenous ancestry (mestizo), and those descended from powerful indigenous civilizations. A woman's

experience of Catholicism was thus determined by her class and ethnicity. Pious Spanish and Creole women often strove to emulate Old World standards for holiness, hoping to be compared to European saints. Mestizo and indigenous women might have shared such aspirations, but the dominant culture was reluctant to embrace them. It took nearly a century, for example, for women of color to be allowed to take vows as nuns.

Catholic women in New Spain responded—at first to the brutality of forced conversion, and then to racist discrimination of Catholic culture—with syncretic religious practices (mixing Catholicism with indigenous religions). The best example of this in the sixteenth century is veneration of Our Lady of Guadalupe. In 1531 the Virgin Mary appeared to Juan Diego, an indigenous peasant, in the form of an indigenous woman. She sent Diego to the Spanish bishops, and when they refused to listen sent Diego back with her image on his cloak and a miracle. The story empowered nonwhites by demonstrating that the Christian God shares in the struggles of the lowly and is reflected in their image. Furthermore, the image of Our Lady of Guadalupe is an amalgamation of Christian and Aztec religious symbolism. For example, the blue-green of her cloak was a symbol of Aztec royalty, and the black sash around her waist symbolized pregnancy. The enduring popularity of this figure in Mexican culture shows how Catholic women were able to adapt a faith once forced upon them.

Seventeenth Century: Mexico

Options for pious women expanded in Mexico and in the Spanish missions of the American Southwest in the seventeenth century. Married and single women participated in confraternities, or single-sex religious organizations, dedicated to the devotion of particular saints. In addition, the number of convents increased and women of color were slowly accepted as holy women. To be a nun was not the only option for women. Lay women could become *beatas*, women who dedicated their lives to prayer but remained within their own homes. Nuns and *beatas* had some power in this culture where they were valued for their prayer, advice, and example. Nevertheless, to be a pious and holy woman in colonial Mexico was to face restriction; the Catholic Church's battle against the Protestant Reformation translated into strict obedience to traditional codes of behavior for women who would dedicate their lives to Christ.

Religious women found it difficult to choose their own paths, as their choices were often subject to the approval of

male clerics. One such individual was Sor Juana Inés de la Cruz (1648–1695), a phenomenally intelligent Creole nun who entered the convent because it afforded her freedom to write poetry and study philosophy. Her work was much praised, and she ultimately amassed one of the largest libraries in New Spain, but she was eventually forced to withdraw from public life after she publicly questioned her bishop's power to control her.

Seventeenth and Eighteenth Centuries: New France

Catholic settlement in North America expanded in the seventeenth and eighteenth centuries to include the colonies of New France. French missionaries worked to convert native tribes in Quebec and Louisiana, and nuns arrived from France to establish convents modeled on their European orders. Indigenous women who converted to Catholicism were welcomed into European settlements, and often rejected by their own people, yet New France too was unwilling to fully accept people of color. The first indigenous woman allowed to take a vow of chastity in New France was Kateri Tekakwitha (1656–1680), daughter of a Mohawk father and a Catholic Algonkian woman. Her decision to be baptized and her subsequent zeal for her faith put her at odds with her tribe, and she was forced to flee to an established community of Catholic indigenous people where she adopted a life of penance and prayer. Recognized at the time as a saint, hagiographers in the century after her death described her in terms normally reserved for European saints. Historians argue that this was an attempt to validate Kateri's sanctity by linking it to the old world. One may read this in a negative light, observing that European experience clearly set the standard for holiness in North America; conversely, one could argue that through Kateri other indigenous women were being encouraged to view themselves as participants in a larger tradition.

Seventeenth and Eighteenth Centuries: English Colonies

Catholic women also lived in the English colonies, but their experiences diverged sharply from their counterparts in New France and New Spain. At first, British Catholics in North America were primarily elites who chose the opportunities of the colonies over the restrictions of Catholic life in England. The most famous of these women was Margaret Brent (1601–1671), a wealthy, single laywoman and extensive landowner well known for her success as a business woman and her ability to argue the law. Brent defied all expectations for

a nontitled Englishwoman. She served as attorney to Lord Calvert, the governor, and even restored order to the colony in the face of a local rebellion after his death. In 1648 she stood before the Maryland Assembly and demanded two votes, one as Calvert's attorney and one as a landowner in her own right. Her request was denied, but she is credited as the first woman to request the right of suffrage in America.

Margaret Brent's life was extraordinary, but it does speak in one way to the nature of women's experiences of Catholicism in early America. Catholic women in Maryland in the seventeenth and eighteenth centuries exercised considerable control over religious matters in their communities. Because churches and priests were scarce, Catholic practice was often centered in the home, the locus of women's authority. In lieu of weekly Mass, women would often lead prayers or devotions at home with their families and neighbors and were known to baptize their own children.

Maryland and Louisiana Catholics also brought another group of Americans into the Catholic faith, their African slaves. Laypeople, priests, and nuns frequently owned slaves, and many made their conversion a priority. An estimated three thousand Catholic slaves lived in Maryland by 1785. Catholic free women of color, mainly members of the French West Indian émigré community, also practiced their faith in Maryland. The call to serve the Catholic free black population in Baltimore led a small group of African American Catholics to found the Oblate Sisters of Providence in 1828, a daring proposition for a community that already held a precarious position in the larger society by virtue of its race and free status.

Nineteenth Century

An examination of nuns in the nineteenth-century United States reveals a great deal, not only about the specific experiences of Catholic women, but about the power dynamics of Catholicism in America. The majority of nuns who established convents in the United States in the first half of the century arrived as immigrants from European orders, though religious orders could be homegrown as well, such as Elizabeth Seton's Daughters of Charity, founded in 1809. In either case, communities were subject to the authority of a priest and the local bishop, a practice that often brought tensions over authority and obedience to a head. The leadership of the American church in the early nineteenth century attempted to adapt its minority religion to the new American context of independence, a difficult feat in an authoritarian church determined to uphold tradition at the expense of

individual liberty. Women religious learned to use this conflict to their advantage; when local bishops demanded that women religious reject the rule of their European convents, give up their chosen work to teach in local schools, or leave their cloisters, nuns often appealed to Rome and won.

In other ways, nuns did wish to explore the possibilities that American Catholicism might hold for them, which could put them at odds not only with their male supervisors in America but also with their superiors in Europe. Many traditional practices simply did not work in America; for instance, nuns in the United States did not pay dowries and therefore their communities lacked endowments. As a result, American convents needed to be self-supporting, and nuns learned how to take initiative and adapt the charisms, or spiritual gifts of their orders, to the realities of the local community and its people. These changes were not easy and often entailed pitched battles over the critical (if mundane) details of dress and diet, and the more central questions of vocation and authority.

Yet over the course of the nineteenth century, American nuns built and administered large educational, charitable, and medical institutions that ministered to Catholics and non-Catholics alike and constituted the infrastructure that sustained the national Catholic population. These institutions included a large network of women's colleges that served the growing numbers of Catholic middle-class women in the nineteenth century and into the twentieth. Institution building is something they had in common with women religious in Canada in this period. In contrast, Protestant women in both countries rarely encountered such opportunities. Catholic laywomen did not enjoy such opportunities either. The Catholic hierarchy preferred to place power in the hands of those it could most easily supervise and control.

By the mid-nineteenth century the numbers of Catholic laywomen in the United States had reached unprecedented levels; massive numbers of immigrants, first from Germany and Ireland, and eventually from southern and eastern Europe, greatly increased the Catholic population and forever changed the way Catholicism was practiced in the United States. In the 1830s Catholic immigration sparked anti-Catholic hysteria, resulting in suspicion at best and riots at worst. Nuns' gracious service as nurses in the Civil War helped mitigate that suspicion to some degree, but it never disappeared. In response, the burgeoning Catholic community turned inward, building its own institutions, as we have already seen, and turning back to a more traditional form of Catholicism (and hierarchical authority) favored by Rome

and the Irish priests and nuns who dominated church leadership in the second half of the nineteenth century.

Late Nineteenth Century

The Catholic Church in Mexico and Canada experienced a similar inward turn in this period; all three were reacting against the emerging forces of modernity, which included calls for gender equality. The Catholic hierarchy demonstrated its fear of change by attempting to reinforce traditional gender roles, most particularly for women. Catholic women in North America were inundated with sermons and prescriptive literature designed to teach them how to be a “Catholic True Woman.” The Catholic true woman had much in common with her Protestant counterpart, yet she was also distinct. Catholic authors took Mary as the model for all women, claiming self-sacrifice, docility, silence, obedience, and suffering to be Marian virtues.

Historians have learned to treat such injunctions with care. How many women internalized this ideology of womanhood? Did women receive it as restrictive, as many would today, or did they find it empowering? Responses to these gender prescriptions differed from community to community and from individual to individual, of course. We can, however, draw a few conclusions. Many women did find agency and power within the confines of the Catholic true woman ideology. Catholic laywomen, though expected to be obedient and docile, were also charged with the education of their children in the ways of the faith. Some women reveled in such responsibility and believed that theirs was a major contribution to the preservation of the church.

In addition, Catholic women from diverse communities—eastern and southern European immigrant enclaves, Latinas in the United States, Mexicans, the Canadian frontier—practiced various forms of popular religion both in their homes and in their parishes in which they had a central role. Recent scholarship has explored how popular forms of piety such as devotions to saints, community religious festivals, or home altars and family prayers have empowered women even as church teaching has sought to undermine their power and importance. Popular religious devotions are a means of self-expression and control that have been stubbornly maintained by diverse groups of women who exercise little power elsewhere in the church.

Twentieth Century

The twentieth century saw continued attempts to affirm Catholic women’s traditional roles, but many factors

encouraged women to seek new identities in the church and new ways of contributing to the mission of Catholicism. Catholic enclaves were not and have never been immune to cultural changes. Women sought work outside the home in larger numbers and became more actively involved in political issues. Gradually Catholic women began to leave the security of the ethnic Catholic urban enclaves of the United States in favor of more isolated, suburban, and secular neighborhoods. Catholic women’s colleges also provided opportunities for students and sisters to explore new roles. These and other changes led to new opportunities and ways of being Catholic. A thorough melding of the Catholic and the modern can be found in Dorothy Day, a convert who helped develop a radical interpretation of Catholicism found in her newspaper *The Catholic Worker* and her movement to found “houses of hospitality” to meet the needs of the poor starting in the 1930s. Another, more conservative, option for laywomen seeking new opportunities was an organization called the Grail, which starting in the 1940s built communities of women focused around liturgy and prayer.

The sisterhoods of nuns also began to undergo transformations in the middle decades of the century; in fact, nuns were often on the cutting edge of movements for change in the Catholic church throughout North America. In the United States, nuns sought to change the very nature of their identities as women religious. Nuns suffered from a lack of professionalization in their chosen fields because their access to education was often limited by the need to enter service immediately, as well as by a misplaced desire to keep women religious isolated. The Sister Formation Conference (SFC) was formed in the 1950s to encourage educational and spiritual development for America’s sisters. The results were striking. By bringing young progressive sisters (called New Nuns) from different orders together to study and pray, SFC led to fundamental changes in religious orders across the country. Women religious developed new, more active apostolates (work) that were responsive to the present needs of the communities in which they lived. They changed their habits, revisited their congregational histories, and adapted their rules to the new realities in which they found themselves.

This spirit of reform predated the seismic changes brought by the Second Vatican Council (1962–1965), a worldwide conference that reformed the church in radical ways. All Catholic women in North America were affected in profound ways, from how they participated in Mass and

received Communion, to the understanding that laypeople would now be empowered to shape and enact the church's mission as the "People of God." Vatican II, however, did little to address women's roles or needs in the church. In fact, the church had to be forced to admit women into the Vatican Council meetings, and then only as nonvoting observers. Seemingly, the hierarchy was attempting to usher the church into the modern world without adjusting its long-standing limitations on women. Evidence of this came when the church officially condemned artificial birth control in 1968, disregarding its own commission that had advocated the acceptance of contraception. One of the greatest shifts for women in the church came in the last quarter of the twentieth century, when massive numbers of Catholic women quietly chose to disregard the church's teachings on birth control.

Mid-Twentieth and Twenty-First Centuries

The Catholic feminist movement in North America emerged in response to those who wished to keep women as they had "always been"—helpful, obedient, and silent. Catholic feminists began their push for the liberation of women on two fronts. First, they poured into the field of theology, a path denied women in the United States until the 1960s. In doing so, Catholic feminist theologians such as Elisabeth Schüssler Fiorenza and Rosemary Radford Ruether demonstrated the importance of women's experiences in the interpretation of scripture and Catholic practice as they exposed the roots of women's oppression in religion itself. Second, Catholic feminist activists worked for the ordination of women into the priesthood and diaconate, the elimination of sexist language, and the transformation of the church into a more egalitarian, open, less clerical institution. Feminist activist organizations included the Women's Ordination Conference in the United States, the Canadian Conference for Women's Ordination, and *Mujeres para el Dialogo* in Mexico. The Vatican's official declaration against women's ordination in 1977 dashed the hopes of many and caused feminists in North America to seek alternatives to parish life in a church that seemed to reject them. Some women chose to leave the church entirely; others established communities of women dedicated to the enactment of church outside the bounds of traditional Catholicism.

In the twenty-first century, Catholic women continue to negotiate their multiple identities and make sense of their church and their roles within it as the context around Catholicism continues to shift. The sisterhoods are

decreasing, and the church must learn to cope with this loss: in 2002, there were 75,000 women religious in the United States, compared to 180,000 in 1965. Catholic immigrants continue to pour into and move within North America from Central and South America as well as from South Asia, Southeast Asia, and Africa. Their presence challenges once again the notion of what it means to be a Catholic woman on the continent.

World War I

The war that began in Europe in August of 1914 drew American attention immediately, but the United States did not enter the war until April of 1917, and it took another year to field a numerically significant fighting force. Two religious factors played significant roles in moving America and Americans from putative neutrality to active participation in war: the covenantal vision of President Woodrow

Wilson and American clergy's energetic sanctification of the war and demonization of the enemy.

Americans and their political leaders had long imagined the United States and the colonies from which they grew as favored by God. Woodrow Wilson, son of a Presbyterian minister, stood firmly in this tradition and drew upon its power as he argued that his great and peaceful nation must make war against Germany. Wilson used his second inaugural address in March of 1917 to insist that the "fires" of war would "purge" America of faction and "purify" the nation as never before. He reminded Americans also that they stood "in some sense apart" and served interests that "transcended the immediate issues of the war itself" (Leonard, 1918, p. 27). Predictably, Wilson's covenantal thinking also had an international dimension. In keeping its covenant violently, America would punish Germany, which was incapable of covenanting faithfully. Germany, Wilson noted, favored "secret covenants" and "separate and selfish compacts" (Leonard, 1918, pp. 96, 108), not the "open covenants of peace" (Leonard, 1918, p. 97) that defined righteous governing. Like public figures from John Winthrop in the seventeenth century to Henry Ward Beecher in the nineteenth century, President Wilson used the notion of covenant to unify a collective and to authorize violence against an enemy.

American clergy, Protestant and Catholic, were often far less subtle. Their wartime sermons included declarations of the righteousness of the Allied cause and assertions of the devilish nature of the German enemy. Not all had the fire of Billy Sunday, who declared during revival campaigns in 1917 that if you "turned hell upside-down you would find 'Made in Germany' stamped on the bottom of it" and "Jesus will be our Commander in Chief and he has Hindenburg beaten to a frazzle," but clerical sentiments were often similar (McLoughlin, 1955). After touring army training camps in 1917 and meeting several chaplains, the young and typically self-critical theologian Reinhold Niebuhr said that they were mixing the worship of the "God of love" and the "God of battles." He was right, but different groups mixed this worship differently.

Clergy of a progressive stripe justified waging war based mainly on their belief that German militarism constituted a serious obstacle, if not the final obstacle, on the road to a more perfect world and, perhaps, the millennium. If, as post-millennialist clergy believed, history had a generally upward trajectory and human effort was required to bring about its consummation, waging one last war to "end all war" could be both just and righteous.

More conservative fundamentalist and profundamentalist clergy, even those who embraced Darbyite premillennialism and thus treated human actions as basically irrelevant to the culmination of history, came to justify the war as a struggle to keep lighted the lamps of Christian civilization in the face of infidel Germany's attempts to extinguish them. True to their tendency to see political developments as "signs" of the approaching end times, these clergymen looked on the British conquest of Palestine as evidence that the war might indeed create conditions that would facilitate Christ's dramatic return.

Pentecostals, who in 1917 were deeply skeptical of nations and were working feverishly to bring Spirit baptism and salvation to the world, saw the war generally as God's judgment upon a fallen world. But even as they lamented the killing of those not yet "baptized in the Spirit," they had to reckon with the personal burdens of worry and loss as they saw their sons and brothers drafted into service. Pentecostals reacted to these burdens by turning from antinationalist and pacifist sentiments.

America's Catholic clergy approached the war with an enthusiasm that was initially tempered by sympathies for either a German homeland or Irish struggles against Britain but soon rivaled the nationalism of liberal and conservative Protestants. The wartime patriotism of Catholics and Jews was tinged with the hope that service to the nation would provide an unequivocal answer to persistent questions about loyalty and the ability to assimilate. Father Francis Duffy and Rabbi Lee Levinger were two of the many non-Protestant chaplains in France who offered strong, enduring arguments against Protestant nativism.

Both Catholic and Protestant leaders came together in national bodies organized to demonstrate their support for the war effort. The Protestant Federal Council of Churches of Christ organized the General War-Time Commission and the Catholic Church in the United States established the National Catholic War Council. These bodies coordinated the support efforts of denominations and parishes and even established committees to assess the spiritual fitness of the American soldiery. Religious auxiliary organizations such as the Catholic Knights of Columbus, the Protestant YMCA, and the Salvation Army supported the war effort by providing soldiers with a mix of religious instruction, worship, hospitality, and "wholesome" entertainment.

The military chaplaincy on the eve of the Great War was hardly the organization that it has become in the twenty-first century. There was no uniform mechanism for

appointing chaplains, no set curriculum to prepare them for service, and no agreement as to the rank chaplains should wear and how they should be paid. Each of these issues was resolved during the course of the war due largely to the efforts of Episcopal bishop Charles Brent, who served as chief of chaplains for the American Expeditionary Force. As Brent worked to create and staff a professional chaplain corps, volunteer “secretaries” of the YMCA and the Knights of Columbus also provided chaplain services.

The First World War and the Faith of the Doughboy

For decades prior to the First World War, American boys and young men had been regaled by cultural custodians trumpeting the value of struggle and strain and by clergy attempting to masculinize and even militarize Christ. The late nineteenth and early twentieth centuries saw the rapid growth of “muscular Christianity” and the spread of its institutional manifestations, such as the YMCA. Through contact with such organizations a generation of American men learned to value the spiritual benefits of exertion and struggle and to imagine Jesus Christ as the most rugged individual ever to have walked the earth. Indeed, many American soldiers wrote of the war and its meaning using language that reflected the righteous, muscular Christianity of American clergy as well as the national and international covenantal views of Wilson.

Stars and Stripes, the soldier-authored public voice of the American Expeditionary Force, was full of images and allusions that encouraged American soldiers to think of themselves as crusaders, beyond moral reproach in their struggle with a demonic enemy. Editorial prose and illustrations repeatedly asserted the devilish, anti-Christian nature of German leadership and German soldiers and the presence of God and Christ on the side of the Allies. The diaries, letters, and memoirs of American soldiers, though often less articulate, were no more ambiguous in their description of the conflict. Soldiers described themselves as “crusaders” and wrote of Allied sufferings as being Christ-like.

Moreover, a great many soldiers harbored the belief that the experience of war would and did make them better and redeem them from lives that had become limited and limiting. The notion that war experiences would transform a person for the better and that service to nation would enhance a man’s social and civic value was promulgated by Wilson, Roosevelt, and the influential psychologist G. Stanley Hall, and it was affirmed, though with subsequent regret,

by W. E. B. Du Bois. Du Bois was an early and energetic supporter of African American participation in the war in spite of the fact that black soldiers were segregated and, in many instances, led by white officers. African Americans stood to gain immeasurably, he believed, from faithful service. War, he argued, could redeem a captive people. The words of African American veterans suggest that Du Bois reflected the beliefs of his intended audience.

Religion, Soldier, and Nation in Postwar America

A great deal has been written about the disillusioning experience of the First World War and the literary expression of that disillusionment among Lost Generation authors. While these effects are undeniable among the Hemingways and the Fitzgeralds, an equally powerful and more widespread effect among American soldiers was “reillusionment”: a strengthened commitment to the ideals that had drawn so many men to war in the first place. The most influential institutional manifestation of reillusionment was the American Legion, founded in March of 1919 by veterans of the Great War. Their purpose was to keep alive what they saw as the spirit of the Great War, the spirit of struggle and sacrifice that had shaped so many soldiers’ experiences. By the end of 1919, 800,000 former doughboys had joined the Legion.

No organization before or since has worked harder and been more successful at establishing the privileged place of the soldier in American social and civic life. Nor has any other organization more forcefully, more broadly asserted the sanctity of the nation and the nobility of complete devotion to it. As a lobbying organization the Legion was instrumental in the founding of the Veterans Administration (today the Department of Veterans Affairs) and in keeping before the eyes of an often ungrateful nation the service that soldiers had rendered. As a political and sometimes vigilante force, the Legion used the yardstick of “one hundred percent Americanism” to measure the loyalty of individuals and organizations. As the self-proclaimed watchdogs of a nation under threat, the Legion persecuted those it believed to be pacifists, socialists/communists, and “alien slackers,” who had come to America to enjoy the benefits of freedom but were not willing to sacrifice for the nation. The Legion also stood against what it viewed as the excessive moralism of Christian fundamentalists and the anti-Catholic, anti-Jewish politics of the Ku Klux Klan and its sympathizers. The themes that united the Legion’s intolerance of political difference and its tolerance of religious difference were the importance of unity as a chosen people and the righteousness of

covenanting to a sanctified nation. Those who troubled the unity or questioned the nation could expect to draw at least rhetorical fire as did the “demonic,” untrustworthy Germans against whom Wilson and American clergy had directed the nation’s might.

Opportunities for Further Study

The First World War as an American experience offers seemingly infinite opportunities for further study. A fuller accounting of its religious dimensions would bring us closer to an understanding of the religious dynamics of the interwar period and to the reshaping and rearticulation of American civil religion during that time. The war’s myriad unfulfilled promises clearly fueled the rise of pacifist movements, contributed to a deepened skepticism of state motives, and more broadly complicated progressive readings of history. Yet the war also gave rise to a nationalist religion, manifested in the American Legion, and helped birth the patriotic theologies of midcentury fundamentalism and Pentecostalism. These developments and the numerous interwar clashes among those shaped by them make the “Great War” an important interpretive key to the religious lives of Americans in the middle decades of the twentieth century.

World War II

Disappointment over World War I, combined with fascism’s threats to peace, justice, and Western civilization, led most religious organizations to respond to World War II with “a cautious patriotism,” according to historian Gerald Sittser (1997). While they supported the Allied cause, loyalty to God and their faiths’ principles took precedence over unqualified patriotism. Thus they met national wartime needs while exercising their critical prophetic voices when the United States violated American or religious values.

Nothing shaped this tempered approach more than religious groups’ naïve jingoism during the Great War of 1914–1919 and their subsequent embarrassment upon learning of the war’s baser imperialistic motives and America’s failed effort to create a new world order. As expansive fascist dictatorships arose in Europe in the 1930s and Japanese militarists sought to build an Asian empire, most American religious communities urged the United States to remain neutral and seek peace. Faith groups saw in this developing conflict the same drivers that had caused the world’s previous conflagration. Their pacifism mirrored the nation’s.

Divisions

When Europe slid into full-scale war, France fell under Nazi control, and Britain’s survival became tenuous under German bombing in 1940, America’s religious communities entered the national debate over how to respond. They split generally into two factions: one urging America to preserve its neutrality at all costs and the other willing to support interventionist aid to the Allies short of war. These factions split congregations and denominations (including Methodists, Congregationalists, and Catholics), as well as created strange alliances across the political spectrum from socialist to conservative.

For example, devout neutralists included Quakers Herbert Hoover and Rufus Jones, socialist Norman Thomas, and conservative “America First” spokesperson Charles Lindbergh. They also included absolute pacifists like A. J. Muste

(Fellowship of Reconciliation) and Dorothy Day (Catholic Worker Movement); as well as practical pacifists like Reverend Harry Emerson Fosdick (Presbyterian); Francis Talbot, editor of the Catholic journal *America*; and Charles Clayton Morrison, editor of the Protestant *Christian Century*. Neutralism, they asserted, would best position the United States to be a peace broker as well as aid war victims on both sides. They also feared the negative repercussions of war, such as lost civil liberties, the temptation to expand government's powers toward totalitarianism, bolstered imperialism even among the Allies, and cooperation with communist Russia. Finally, they doubted that war could stop evil in the world; to them, only goodness and Christ-like nonviolence could do that. They accused interventionists like Union Theological Seminary professors Reinhold Niebuhr and John Bennett of sacrificing their earlier Christian pacifist values on the altar of relativism by allowing events to change their position.

Interventionists had indeed moved with events. Niebuhr and Bennett saw something worse than war threatening Western civilization: tyranny. With others they launched a new journal, *Christianity and Crisis*, to urge Christians to exchange an impractical adherence to pacifist ideals for a realism that discerned between greater and lesser evils in a sinful and interdependent world. Whereas neutralists favored the power of love to conquer violence, interventionists argued that power must confront power to achieve not simply peace but a just peace. Like the neutralists, however, interventionists understood that America was imperfect; it must guard against pride and ambition as it participated in war to defeat a greater evil. The interventionists and neutralists agreed that World War II was no holy war. Even most conservative groups, such as the Southern Baptist Convention and the Reformed churches, which saw defense of nation as a Christian duty, dubbed this war a necessary evil. Jews were eager to fight while resisting glorification of the war as well, but early in the war the army gave many Jews the cold shoulder.

Service

Japan's bombing of Pearl Harbor in December 1941 turned most practical pacifists and neutralists into cautious supporters of the war. With few exceptions only the traditional peace churches, such as Quakers, Brethren, and Mennonites, as well as absolute pacifists such as the Fellowship of Reconciliation (FOR) and Catholic Worker Movement (CWM), remained opposed. But these groups divided in

their expression. While claiming conscientious objector status for their members, most peace churches supported the nation's efforts in nonmilitaristic ways by funding and administering Civilian Public Service (CPS) camps. As an alternative to military service, young men worked on CPS projects of national interest such as building and repairing infrastructure. These churches also urged the purchase of civilian rather than war bonds. Through these efforts, they exhibited both their patriotism and religious values. Members of the FOR and CWM, however, remained opposed to the war and all alternative service, preferring nonviolent resistance instead.

With few exceptions (such as Christian Reformed and certain fundamentalist churches), nonpacifist groups supported the rights of conscientious objectors, including those who objected to particular wars. Obedience to one's religious conscience took precedence over loyalty to any earthly power. Therefore, many donated to the CPS program, and both Protestants and Catholics fought the Burke-Wadsworth Conscription bill (1940), which would have restricted conscientious objector status to members of peace churches only.

Nearly all religious groups embraced the war as an opportunity to extend their faith's influence in society, whether through evangelism or service projects. Such efforts reinforced competition among Protestants, Catholics, and Jews, as well as between theological liberals and conservatives. Ironically, this drive to expand their influence, combined with their desire to meet practical wartime needs, enhanced both ecumenical and interfaith bonds. Protestants and Catholics of all stripes increased their evangelistic efforts to call Americans back to God. But Protestants created ecumenical organizations and interfaith connections that matched their theological orientations. For example, liberal mainline Protestants supported the Federal Council of Churches and plans to unite various ecumenical groups into both a National and World Council of Churches after the war. Neoevangelicals created the National Association of Evangelicals (1942) and Youth for Christ to unite their organizations in cooperative efforts. Fundamentalists meanwhile created the American Council of Christian Churches (ACCC, 1941), as well as worked through the World Christian Fundamentals Association to extend their message while responding to war needs.

Service activities drew the effort, money, and sacrifice of nearly every religious group, for they emphasized good citizenship during national crisis, even while dubbing the war

a grim necessity. Protestants, Catholics, Jews, and members of other faiths across the theological spectrum got behind rationing drives, war bonds, increased taxes, collective relief funds for refugees, and military service. They organized an array of programs to meet both the spiritual and social needs of servicemen and -women, as well as Americans working in the defense industries. Many religious-based colleges allowed the military to use their campuses for training purposes. Groups got together to pray, assemble care packages, and send religious literature to soldiers overseas. They also created programs to help Americans deal with the dislocations of war. There were few wartime service tasks in which religious groups were not engaged.

The greatest responsibility of religious denominations was providing the military with a quota of chaplains commensurate to their representation within the population. Meeting rising military demand meant many faith groups suffered clergy shortages at home. The elimination of draft deferments for pre-seminary students did not help. Nevertheless, denominations made the necessary sacrifices, in part because they refused to fall behind their competitors. The military's chaplains unit received General George Marshall's praise as "the best run group of the army." Overwhelmingly popular, chaplains provided numerous services regardless of soldiers' religious affiliation, including sacraments, worship opportunities, counseling, funerals, religious education, whiskey rations, dances, and lessons on condom use.

Prophetic Criticism

On the whole religious organizations did not sacrifice their critical voices amidst the patriotic drive for victory and unity. For example, although reluctant to protest forcefully the government's internment of Japanese Americans from the West Coast, most religious groups called it an unjust deprivation of civil liberties. They blended mild criticism with a call to members to aid internees in every way possible. The American Friends Service Committee took the lead in helping internees find guardians for their property, pack, and settle in the camps. Working with the War Relocation Board, they also helped Japanese American students escape the camps to colleges further east. And they assisted internees in finding housing and jobs after the war.

Most mainline Protestant, Jewish, and Catholic organizations also criticized the beatings and imprisonment of Jehovah's Witnesses who refused to salute the flag or join the military because of their religious beliefs. The sacred right of religious conscience united them. Only conservative faith

groups, such as neo-evangelicals and fundamentalists, showed little interest in defending civil liberties.

To varying degrees, religious organizations also overwhelmingly criticized the hypocrisy of America's racial discrimination toward African Americans in the face of its wartime rhetoric that promoted freedom and condemned the Nazis' racist ideology. The American Jewish Congress, Jewish Labor Committee, and the Anti-Defamation League of B'nai B'rith worked particularly hard to end discrimination in the workplace, not only for blacks but for anyone on the basis of "race, creed, color, or national origin."

Catholic, Protestant, and Jewish organizations had solid information from Europe about Hitler's attempts to eliminate Jewish populations there. While their members varied in their attention to, belief in, and willingness to act upon that information, the religious press carried stories about the Holocaust as it happened. Protestant groups admired the courage of those few German Protestants and Catholics who condemned Hitler and refused to allow the state to control their churches. Ecumenical and interfaith groups signed statements urging aid to Jewish refugees and a relaxation of America's strict immigration rules, as well as a halt to anti-Semitism. But these efforts largely failed to move the public until after the concentration camps were liberated. Jewish chaplains played a lead role communicating between Holocaust victims and the U.S. military. After the war both Christians and Jews united to support the creation of a Jewish state. Over half a million Jews had served in the war, feeling America's victory as their own. Their experience fighting as a religious minority in a sea of Christians, and against the Nazis, enhanced their sense of Jewish identity.

While most Americans supported firebombing civilians and using atomic weapons to bring a brutal war to a quicker close, many church leaders did not. The Federal Council of Churches, for example, called the nuclear bombing of Japanese cities an "atrocious act of a new magnitude," an unnecessary act against an already beaten foe. Conversely the fundamentalist ACCC saw the new weapon as a gift from God justly used.

Fundamentalist and liberal Christians parted strongly over the postwar creation of the United Nations, too. Liberal mainline Protestants, under the Federal Council's leadership, helped brainstorm, refine, and sell the concept of the United Nation to their constituents. They saw it, and its later Declaration of Human Rights, as a foundation for a new world order most consonant with Christian values. Conversely, fundamentalists' biblical interpretation of the end times left

them fearful that the United Nations might lead to a fore-told world government that would trigger Armageddon.

All in all, most religious groups viewed World War II as a necessary war, one that required their sacrificial service and loyalty, but not at the expense of their highest values or prophetic voices. They also knew this crisis was a turning point in human history that required their influence. This enhanced both religious competition and ecumenical and interfaith organization, all of which expanded after the war.

Worship: Anglican

The Anglican Communion, including those churches in Canada and the United States, has its origins in the Church of England founded during the English Reformation. All the national churches within the Communion ultimately derive their worship patterns from various revisions of the Book of Common Prayer (BCP) produced by the archbishop of Canterbury, Thomas Cranmer, in 1549 and 1552, during the English Reformation. The BCP was subsequently revised in 1558 under Elizabeth I and again in 1662 after the Restoration. The 1662 book became the basis for most Anglican worship until the twentieth century, with the notable exception of the Episcopal Church in the United States.

The Church of England in the Colonies

Anglican worship is assumed to have commenced in North America with British colonization and been formalized in

the settlement of Jamestown, Virginia, in 1607. In 1610 the colony imposed martial law, requiring colonists to attend services. Worship would have followed the Elizabethan prayer book (1558) and, as was common at the time, would have consisted primarily of the Great Litany, the pro-anaphora or “fore-mass” from the Holy Communion Service, and Morning and Evening Prayer.

During the colonial period Anglican priests would have been required to travel to England for ordination by a bishop, and part of the ordination rite required an oath of allegiance to the British monarch. Needless to say, after the Revolutionary War such an oath would have been unacceptable, not to mention treasonous, for a citizen of the United States. Consequently the emergent Episcopal Church looked elsewhere for Episcopal ordination.

Samuel Seabury traveled to Scotland in 1784 where he found the Scottish bishops willing to consecrate him to the episcopate. The Scottish Episcopal Church had refused the loyalty oath to William and Mary in 1688 when they had replaced the Stuart line on the English throne at the close of the Glorious Revolution. Consequently its clergy, known as Non-jurors, had been free of the constraints of the 1662 Book of Common Prayer and developed their own liturgy based on the 1549 Book of Common Prayer and newly discovered ancient texts. In a series of “Wee Bookies” they had restored the shape of the Eucharistic Prayer to its original form, thus overcoming the various rearrangements and revisions of the prayers that had been the result of argument and compromise between traditionalists and reformers since the first prayer book.

The Scottish Church’s condition for Seabury’s ordination was that the new American Episcopal Church adopt the current Scottish Book of Common Prayer, the distillation of the scholarship and experimentation of the Non-jurors. The Americans assented, and it was this book that Seabury brought to the General Convention of 1789 for ratification. Such ratification would place Anglican worship in the United States, especially in the shape of the Eucharistic Prayer, in a direct line from Archbishop Cranmer’s original reworking of the Gregorian Canon of the Sarum Rite. In Canada, which would remain part of the Church of England, worship would continue to use the forms of the 1662 BCP until the twentieth century.

Despite a movement to excise trinitarian language from Episcopal worship, the trinitarians prevailed, and the 1789 Book of Common Prayer took its inspiration and, most important, the structure of its Service of Holy

Communion from the Scottish book. This structure was much closer to the rites of the medieval Western Church than was the structure of the 1662 Prayer Book and would be more easily adapted to the dramatic changes in ritual and architecture that were the next great watershed in Anglican worship.

Nineteenth-Century Medieval Revival

That watershed began in 1840 with a series of pamphlets called “Tracts for the Times,” which gathered a wide group of followers who called themselves Tractarians. Their aim was the reform of the Church of England modeled on the spirituality and worship of the pre-Reformation English Church. These reformers, because of their espousal of medieval ritual and ecclesiology, began to be called Anglo-Catholics. At the same time, reformers from the more Protestant side of the *via media* (the Anglican “middle way”), the evangelicals, began to call for a reform of the church and of the moral and spiritual life of the people. Their spirit was particularly in evidence in the American Great Awakening.

From the point of view of worship, it was the Anglo-Catholic movement that would have the greatest influence. The Oxford movement of the Tractarians and the subsequent scholarship of the Cambridge Camden Society, centered on recovery of the medieval heritage of liturgy and church architecture, would influence all subsequent American prayer books. To understand their impact, we must first examine the nature of typical Anglican worship through the middle of the nineteenth century, before the Oxford movement and the Gothic Revival movement in church architecture.

Reformation controversies, especially those surrounding the sacrificial nature of the Mass and the relationship between the ordained priesthood and the laity, had led to a distrust of Eucharistic worship in which the people did not receive Communion. As Holy Communion in the Book of Common Prayer was to be celebrated only when it included Communion, it tended in most places to be celebrated from four times a year to once a month. At the same time, Cranmer had been anxious to restore the Daily Office, which he condensed into two offices of Daily Morning and Evening prayer, to the common worship life of Anglicans. The basic pattern of Anglican worship, then, from the time of the Reformation until the middle of the nineteenth century, consisted of Morning Prayer, the Great Litany (the first piece of the prayer book to have been

translated from the Latin of the Sarum Use), and the pro-anaphora or fore-mass; that is, the Holy Communion service through the Prayer for the Whole State of Christ’s Church. On Communion Sundays, the worship would simply have continued with the Eucharistic prayer (currently referred to by the more ancient title of the Great Thanksgiving) and the Communion of the people.

One of the goals of the Anglo-Catholic movement was the restoration of weekly Communion as the central act of Christian worship on the Lord’s Day. The first result of this initiative was the now almost ubiquitous 8:00 a.m. Eucharist or Holy Communion that begins each Sunday in Episcopal and Anglican churches across North America. Many of the other customs now most identified with Anglican/Episcopal worship date as well from the second half of the nineteenth century: the use of the cassock and surplice for clergy at the Daily Office and, in many places, at the Holy Communion; the use of stoles and chasubles in seasonal colors (green for ordinary time; white or gold for Easter, Christmas, and certain feasts of saints; red for Pentecost and, in a deeper color, for feasts of martyrs; purple for Lent and Advent); the use of candles and a cross on the altar.

The rediscovery, during the Romantic movement, of medieval English heritage led to a new interest in Gothic architecture. This was reflected both in secular (the Pre-Raphaelite painters, for example) and sacred art and architecture. Churches began to be built using the floor plans and architectural details of the medieval cathedrals and parish churches. This Gothic Revival set the direction for church architecture until the second half of the twentieth century. The typical Gothic Revival church divides the worship space into three principal areas: the nave where the people sit in pews; the chancel where the choir sits facing across the area; and the sanctuary, which, divided from the chancel by the altar rail, contains the altar. Many Gothic Revival churches imitated their medieval counterparts by including a stone or wooden screen, the “rood screen,” to separate the nave from the chancel.

The late nineteenth century saw also the rediscovery of chant and the adaptation of plainsong (a simplified form of Gregorian chant) settings for the psalms in worship. With these changes, even Anglican/Episcopal churches that would not have considered themselves Anglo-Catholic took on many of the appurtenances that, to the generation before, would have been identified as High Church. The varying worship styles in North America, as throughout the Anglican Communion, from this time coalesce into patterns

referred to as High Church, Low Church, and Broad Church or latitudinarian. These terms refer exclusively to the ritual style of worship, as the text used in almost every instance continued to be the Book of Common Prayer in its various revisions.

The Canadian book, as the Prayer Book of a part of the British Commonwealth, continued to be the 1662 Book of Common Prayer until it was revised in 1918 and subsequently in 1962. A French translation, *Le Recueil des Prières de la Communauté Chrétienne*, was published in 1967. The American book went through revisions in 1892 and 1928. Then major revisions took place in both Canada and the United States beginning in the 1970s.

Twentieth-Century Liturgical Renewal

The twentieth-century liturgical movement, sparked by the discovery of ancient liturgical sources and by the need for liturgical reform, had lasting effects on the worship life of all liturgically centered churches, including those in the United States and Canada. As early as the 1960s trial rites began to appear based on an increasing body of scholarship about the history of liturgy and on the need to involve the laity more actively in worship. Central to these trial rites were the recovery of a baptismal ecclesiology, the restoration of ancient and engaging practices such as the liturgies of Holy Week and the Great Vigil of Easter, and the recovery of the ancient Eucharistic prayer structure that many believed was exemplified by the prayer in the *Apostolic Tradition*, a third-century church order attributed at the time to Hippolytus. Needless to say, these rites had to be adapted to current usage and could only be translated into contemporary English. The change from the Tudor English of the Canadian versions of the 1662 Prayer Book and of the American Episcopal 1928 Book of Common Prayer was one of the most controversial and difficult facets of prayer book renewal.

The series of trial rites eventuated in the 1979 Book of Common Prayer of the American Episcopal Church and in the 1985 Book of Alternative Services of the Anglican Church of Canada. Unlike all their predecessors, both books included a choice of Eucharistic Prayers (Great Thanksgivings). These included at least one based on the traditional Anglican prayer of Thomas Cranmer, one modeled after the Prayer of Saint Basil (one of the prayers in the Orthodox Churches), and several based upon the structure of the prayer from the *Apostolic Tradition*. While the American BCP was a new prayer book replacing its American

predecessors of 1789, 1892, and 1928, the Canadian book was intended to coexist with the 1962 Canadian Book of Common Prayer, itself a version of the 1662 book used by the Church of England.

The process of liturgical renewal did not, however, end with the adoption of the 1979 Prayer Book in the United States. In 1982 a new hymnal replaced the 1940 hymnal, and continuing revision of the worship texts proceeded with the publication of inclusive-language prayers, including three new Eucharistic prayers; new rites for visiting the sick in two volumes entitled *Enriching Our Worship 1* (1997) and *Enriching Our Worship 2* (2000); as well as three additional authorized hymnals, *Lift Every Voice and Sing* (a collection of African American hymnody), *Wonder, Love and Praise*, and *Voices Found* (hymns by or about women). Other rites and propers for feast days are included in two books continually in the process of revision, *The Book of Occasional Services* and *Lesser Feasts and Fasts*.

The process of gradual return to Eucharistically centered worship has continued for most of the United States and Canada. In both churches, the vast majority of parishes celebrate the Eucharist as the “principal act of Christian worship on Sunday,” as called for in the American book. Movement away from the fixed rites of the Book of Common Prayer and experimentation with other forms has gained impetus from two directions. One comes from the adoption by some Anglican and Episcopal bodies of worship practices developed during the American Great Awakening, the Charismatic Movement of the 1970s, and the biblical literalism of the fundamentalist churches. The other derives from the desire for more inclusive and expansive language about human persons and God and the recognition of the multicultural diversity of the global Anglican Communion.

Worship: Contemporary Currents

Since the 1960s several movements have significantly reshaped Christian and Jewish worship practices. Although these movements have distinctive approaches, they all advocate the use of contemporary music, language, and performance style. These contemporary forms are valued for relating religious truth to present-day situations, facilitating participation, and attracting new members. Because worship services are also one of the chief ways religious communities maintain identity over time, however, changes have generated considerable conflict. At the turn into the twenty-first century, debates concerning “contemporary” and “traditional” worship among Protestants were widely described as “worship wars.” Similar “liturgy wars” occurred among Roman Catholics. These conflicts are rooted in developments that began in the 1960s.

Three distinct approaches to worship advocating contemporary forms emerged: the liturgical renewal movement, seeker services, and praise and worship. By the end of the first decade of the twenty-first century, more than a generation had been shaped by various forms of contemporary worship, and significant countermovements had emerged. Many of these were marked by an emphasis on the recovery of tradition, albeit in an intentionally postmodern context.

Traditional and Contemporary

Contemporary worship emerged as a particularly potent category in the last third of the twentieth century because the preceding decades had strongly emphasized tradition. Traditional religious practice was valued for providing a sense of order amid suburban migration, the baby boom, and the threat of the Cold War. Theological movements such as neo-orthodoxy and neo-Thomism emphasized the recovery of the riches of religious tradition that had been previously deemphasized. Liturgical reform among

mainline Protestants and Catholics was shaped by a strong orientation toward recovering the historic forms of worship. Few new congregational songs entered the Protestant repertoire in the thirty years preceding 1965, but many compositions from earlier centuries gained popularity. Church buildings were often constructed in Georgian or other historic revival styles. When they were modern, Protestant churches typically embraced a more traditional interior arrangement than the auditoriums common at the beginning of the century. The 1940s and 1950s defined tradition in American memory.

The 1960s, by contrast, brought a substantial emphasis to the expression of religion through the forms of contemporary culture. Discussion of the cultural captivity, particularly the suburban captivity, of religion was widespread. Movements for civil rights, peace, and women’s liberation supported the belief that fundamental religious significance was to be found in contemporary events. The need for religious institutions to be relevant and shaped by the surrounding culture was promoted across the theological spectrum. Liberals celebrated the call of Dietrich Bonhoeffer, the slain German theologian, for what he had termed “religionless Christianity” and the “servant church.” Evangelicals followed Donald McGavran and C. Peter Wagner of Fuller Theological Seminary in stressing the need to meet the cultural preferences of potential church members to facilitate church growth. Contemporary styles of architecture, music, and language were increasingly used in worship.

Liturgical Renewal

Much of this focus on the contemporary was linked to the liturgical renewal movement, which had been at work among some Catholics and Protestants throughout the twentieth century. It emphasized the active participation of the people in a service of worship centered on the reading and preaching of the scriptures and the celebration of the Eucharist. For Catholics this meant that the Mass was not merely a ceremonial sacrifice offered by the priest. For Protestants it meant that worship was not primarily the sermon and prayers offered by the minister. To both, liturgical reformers explained that the liturgy was a communal celebration through word, prayer, and sacrament of Christ’s work of redemption. Through the liturgy, Christians participated in Christ’s saving acts and were shaped to be his body for the world. Where the movement was implemented, convergence between Catholic and Protestant worship was considerable.

The liturgical movement was strongly shaped by historical research on worship in the early church, particularly the second to the fifth centuries CE. It sought to reform the spaces, orders, words, and actions of worship that had developed since the Middle Ages according to the simpler forms of early Christianity. It taught that liturgy should be conceived of not as text, but instead as a set of ordered actions. It also sought to affirm the presence of God in the world and that the church was not an institution but instead a servant community. It emphasized the need to express the fundamental actions of Christian worship in forms that facilitated full participation. To accomplish these goals, it embraced a modern aesthetic and the informality of contemporary culture.

In 1963 the Second Vatican Council (1962–1965) adopted most of the ideas of the liturgical movement and authorized a thorough reform of worship. Between 1964 and 1967 the Mass shifted from Latin to the vernacular. The new liturgies were phrased in unadorned modern sentences. God was addressed as “you,” not “thou.” Congregations were expected to sing, and though some hymns were borrowed from Protestants or older Catholic usage, Catholics composed a great deal of new music. Much of this was in a folk style and accompanied on guitar. The ideal space for worship was not a solemn temple, but a living room in which people gathered around a table. Church interiors were reconfigured and dress and deportment reflected this new understanding of the space.

Similar liturgical changes took place among mainline Protestants. The reforms were shaped by scholarship on the early church and understood by their proponents as continuing the work of reformers such as Martin Luther and John Calvin in purging worship of medieval corruptions. But because the revised services were expressed in modern language, abandoning antiquated pronouns and verb forms long used in Bible translations and worship, many worshippers understood the services chiefly as contemporary.

Out of the liturgical reform, however, a basic pattern developed that Catholics and mainline Protestants (at least in their official texts) now share. The normal Sunday service is a celebration of the Lord’s Supper. The congregation gathers, hears the Word proclaimed through scripture reading and sermon, responds in profession of faith, in prayer, and through offerings, and then gathers around the Lord’s table for Eucharist. The three-year cycle of readings, or lectionary, introduced by Catholics in 1969 was widely used by Protestants, especially in modified forms that were standardized in

1992 in the Revised Common Lectionary. Not only in the readings but in the Eucharistic rite itself similarity across denominations is considerable. Full Eucharistic prayers were adopted by Lutherans and others who had used only the Bible’s account of the Last Supper. Shaped by ancient texts and modern sensibilities, the new rites sought to transform the Lord’s Supper from a penitential rite of remembrance to a joyful celebration of thanksgiving. With its emphasis on ritual action and symbolism, the liturgical movement offered new sacramental theologies that transcended old divisions and enabled many Protestants to affirm a richer understanding of sacraments as instruments of God’s presence.

Liturgical renewal was somewhat top-down in its approach. New official rites were authorized by denominational leaders but not uniformly embraced by congregations. Weekly Communion, for example, did not take place in most churches. But even where only partially embraced, the revised rites increased the frequency of Communion and reshaped Protestants’ experience of sacraments and liturgy.

After the initial round of reforms, feminist critiques came to the fore. In the 1970s and 1980s, the first generation of contemporary liturgies was exposed as being, if anything, more masculine in language than their traditional counterparts. This awareness gave rise to a new generation of liturgies. Texts that excised references to God as Lord or called God, Sophia or Wisdom sparked controversy, but inclusive language for people was widely accepted by mainline and even some evangelical Protestants as in the *New Revised Standard Version* of the Bible (1989). Catholic officials resisted such changes to official texts as a more conservative liturgical policy took hold in that church. In other communities, by the twenty-first century new liturgical prayers, such as some in *Evangelical Lutheran Worship* (2006), used a harmonious variety of images for God that went far beyond early efforts.

Cultural diversity in worship was also increasingly affirmed. Many hymnals incorporated songs from around the world. An emphasis on cultural relevance also fostered the affirmation of distinctive African American, Asian American, and Latino/a practices. In each case, however, the use in worship of controversial forms of popular culture, such as hip-hop, generated controversy. Particularly important in many communities was the greater place for a variety of types of dance.

Jewish communities also engaged in liturgical reform. The Reform movement published *Shaarei Tefillah: Gates of Prayer* in 1975. It contained the liturgy for weekdays, Sabbath, and festivals; additional volumes in the *Gates* series

followed. The Conservative movement published a new prayer book, *Siddur Sim Shalom* in 1985. Like contemporary Christian liturgies, it used modern language in its English translations and also responded to the expanded role of women in the Conservative community. More openness to tradition and the symbolism of liturgy was also reflected, such as when the Reform text restored the statement “for in six days the Eternal God made heaven and earth,” which liturgies had earlier omitted out of concern for scientific accuracy. Within the Reform tradition, a later revision of the liturgy, *Mishkan T’filah: A Reform Siddur* (2007), was designed to open as a Hebrew book (that is, with the spine facing to the right rather than to the left, because the Hebrew language is written right to left), not as an English one. At the same time, it reflected the Reform tradition’s emphasis on diversity in the alternative texts it offered.

Seeker Services

The other two movements emphasizing contemporary worship were rooted in the evangelical tradition and embraced rock music in their services. This style became the defining characteristic of contemporary evangelical services. Indeed, for many worship came to be equated with singing. Dress at such services was typically casual. The worship space focused on a stage on which a band sat or stood, and vocalists known as worship leaders either performed or led songs. The order of worship began with music and concluded with a message by the pastor, who spoke from the stage rather than from a pulpit.

Beyond these common elements were two distinct approaches to worship. Seeker services were rooted in an evangelical Protestant approach that emerged from nineteenth-century revivalism and saw the primary purpose of worship as drawing the unchurched into the Christian life. Services were crafted pragmatically to accomplish this goal, without regard for traditional norms. Seeker services shared this approach and this goal, but dispensed with the traditional call to the altar or invitation to discipleship in order to present a more welcoming environment.

Seeker services were closely associated with megachurches that developed the service form and organized conferences to share it with other churches. Foremost among these megachurches was Willow Creek Community Church in South Barrington, Illinois. Willow’s founders developed the basic form of the seeker service as youth ministers at another church in 1973. They were also shaped by the Church Growth philosophy of Peter Wagner, which

emphasized identifying a target demographic group and researching what sort of service would attract the group.

Seeker services were characterized by a desacralized environment. Willow first met in a movie theater, for example. Theater-style seats are therefore found in most churches built for seeker services, and religious symbols such as the cross are not. All of this was designed to make the unchurched feel comfortable. The worship service was carefully structured to communicate a message relevant to the seeker’s life. Four basic elements were typically included: music, drama, visual media, and message. Music included both Christian songs and secular contemporary music that expressed a theme related to the message. Often this was performed by the worship leaders. Congregational participation was not expected. A skit often dramatized the problem the message would address. Elaborate multimedia presentations introduced the message. Finally, the message offered a Christian perspective on everyday issues without using traditional theological language. It was designed to be positive, uplifting, and nonjudgmental, but ultimately to bring individuals to Christ.

Everything was crafted to attract and capture the attention of the seeker by offering relevant messages in a familiar setting. Some congregational singing took place but was not emphasized. When a collection was taken, visitors to the church were asked not to contribute because they were guests. Members were expected to attend the midweek services in which more emphasis would be on congregational singing and the message would be oriented around the exposition of a biblical passage or theological theme.

Other prominent megachurches popularized variations on this approach. Rick Warren of Saddleback Church in Lake Forest, California, spoke of “seeker-sensitive services.” He believed that worship could be a witness to seekers and sought to craft services that would serve believers but be attractive to the target seeker population. Walt Kallestad, pastor of the Community Church of Joy, a Lutheran congregation in Glendale, Arizona, developed a variety of services that differed in style of music and extent of traditional liturgy. Many other congregations also began holding services in different styles. As technology advanced, some churches began holding simultaneous services with different styles of music that all received the same message by video from the pastor. Such catering to different musical preferences reflected the increasingly personalized character of musical experience made possible as radios became portable and then gave way to MP3 players.

In the 1990s, as seeker services attracted media attention, critics questioned whether they were inappropriately “dumbing down” worship services. The term *worship wars* emerged in Lutheran circles, where many rooted in Lutheranism’s confessional and liturgical heritage were alarmed by Kallestad’s advocacy of what he called “entertainment evangelism.” Others argued that Willow Creek’s distinction between the weekend seeker services and midweek worship services for believers did not work in practice. Still others objected to services’ embrace of the ethos of consumer culture. Seeker and even seeker-sensitive services were faulted for being focused not on God but instead on the worshipers.

In time the seeker-sensitive model prevailed over the seeker model. At Willow Creek more active worship engagement characterized the weekend services, though they still were designed as seeker services. In 2007 Willow Creek announced that it was reevaluating its work in response to an internal survey among its members. The survey had revealed, it said, a desire for more spiritual depth. It would therefore devote more attention to teaching in mid-week programs and to worship on the weekend.

The seeker service was also judged to be limited to the particular background of its initial target group. Baby boomers attracted to Willow Creek usually had had substantial background in a church as children and felt that the church did not relate to their real-life experiences. Younger generations were less likely to have a church background and more likely to value elements of traditional Christianity that were new to them. They also preferred more recent and participatory musical styles.

Praise and Worship

Praise and worship services featured a musical style and architectural arrangement similar to that in seeker services, but their approach to worship was rooted in the Pentecostal tradition’s emphasis on the experience of the Holy Spirit. The movement’s roots are traced to the Latter Rain movement of the late 1940s and early 1950s, which brought to Pentecostalism a new focus on the personal experience of God in worship and encouraged the singing of short scripture songs or praise choruses. These practices spread beyond Pentecostal churches as the Charismatic Movement developed in the 1960s. One aspect of this was the so-called Jesus movement. Emerging out of the counterculture, its gatherings took the form of rock concerts, with a band performing and the audience joining enthusiastically in songs of praise. Some of these musicians joined Calvary Chapel, an independent Charismatic

church in Costa Mesa, California. In response to the demand for recordings of these new artists, the church started Maranatha! Music, which released its groundbreaking *The Praise Album* in 1974. Among other songs, the album featured “Seek Ye First” and “Father I Adore You,” which were soon used in many denominations. Praise and worship was most prevalent in Charismatic churches and Charismatic fellowships within mainline denominations.

A typical praise-and-worship service began with a period of singing lasting twenty-five to forty-five minutes and followed by prayer, announcements, a sermon, and sometimes what was called a ministry time of prayer and charismatic activity. The free-flowing period of singing is usually structured to lead from joyful songs to quieter, prayerful pieces. Two models for discussing this structure are common. Pentecostals use the image of the biblical temple and speak of worshipers moving from outside, through the courts, into the temple proper, and finally into the presence of God in the Holy of Holies. Those influenced by John Wimber, leader of the Vineyard movement, speak of five phases: invitation, engagement, exaltation, adoration, and intimacy. Fundamental to either approach is the idea that *praise*, a focus on God’s greatness, leads to *worship*, a more personal communion with God’s presence.

Praise and worship services are highly participatory: worshipers sing, clap, raise their hands in adoration, and sometimes dance. Song lyrics are usually projected on a screen. On the stage, the singers and instrumentalists who make up the “worship team” see themselves not as performers but as worshipers leading others toward God. Worship leaders often rival the pastor in importance. They are responsible for selecting songs, planning the “worship set,” and adjusting it in response to the worshipers’ reactions.

A considerable industry has developed to supply Contemporary Worship Music to congregations. This includes song writers and performing artists such as Matt Redman, publishers such as Maranatha! Music, magazines such as *Worship Leader*, and copyright clearinghouses such as Christian Copyright Licensing, Incorporated. Such clearinghouses charge congregations an annual fee for permission to reproduce songs (typically on video screens), survey the congregations on the music they use to determine royalty distributions, and publish lists of the most widely used songs.

Worship songs, like seeker services, have frequently been criticized for a lack of substance and for not sustaining a language of faith uniting Christians across generations. Among the problems cited with some songs is that they

focus on the worshipers rather than on God—on their desires, their praise of God, or their experience of God. Others find the songs not so much wrong as thin, lacking in theological substance and biblical allusion. The songs also tend to focus on a narrow spectrum of attitudes of worship. Services crafted from praise choruses do not generally emphasize the communal nature of the church, the need for intercessory prayer, the sacramental presence of God, or explicit personal confessions of sin. The focus is more narrowly on the praise and experience of God.

Defenders of contemporary worship music point to the God-centeredness of the lyrics and the personal dedication and communion with God that honestly singing them demands. What the lyrics lack in doctrinal breadth, defenders maintain, they make up for in intensity and focus. Defenders also point to the growing diversity and sophistication of the repertoire and its inclusion of more traditional hymns. Early worship songs were short and focused on the worshipers' praise of God. More recent popular songs have more than one stanza to complement the repeated chorus and incorporate a larger variety of images and themes. Recent years have seen a number of artists record new settings of traditional hymns. Many young evangelicals were introduced to traditional hymns such as "O Worship the King" through recordings such as *Hymns: Ancient & Modern* by the Passion Worship Band.

Countermovements

By the end of the twentieth century, some form of contemporary worship, whether informed more by seeker services or praise and worship, had become dominant in evangelical churches, but significant countermovements had also emerged, many grouped under the label *emergent*. The most common characteristics of emergent worship were that it was a reaction to seeker-sensitive worship and identified with the generations that followed the baby boom, often termed Generation X and millennial. Individuals in these generations had often been raised completely outside the church or within contemporary worship traditions. Many found traditional rather than contemporary forms attractive. Their appropriation of tradition, however, was often eclectic. A similar movement of emergent Jewish communities also took shape.

Leaders of emergent communities were deliberate about the need to embrace new forms of theology and ministry appropriate to a postmodern culture. Where seeker services were associated with the suburbs, auditoriums, a unified

focal point, linear sequencing, and a rejection of tradition, emergent worship was associated with the inner city, living-room-like space, multiple focal points, a nonlinear sequence, and the embrace of ancient practices and symbols. An explicit emphasis on artistic creativity and the importance of senses such as smell and touch was often found. Services were often highly participatory, with a strong attempt to cultivate a sense of community and mystery. They included a wider variety of musical styles and more extensive use of the visual arts. Historic creeds and prayers were included. Many churches included more frequent, even weekly, celebrations of the Lord's Supper.

Related to this emergent movement was a new engagement on the part of evangelicals with the ideas and practices championed by the liturgical movement. For more than thirty years, Robert Webber, a professor at Wheaton College, promoted the ideals of the liturgical movement among evangelicals; he also celebrated the convergence of the charismatic and liturgical movements in the common emphasis on worship, an activity Protestants had long neglected. Toward the end of his career, Webber promoted his vision of contemporary liturgical worship under the name Ancient Future. In 2008 the evangelical magazine *Christianity Today* featured a cover story on the movement and acknowledged that several of its senior editors were supporters of the movement and members of Anglican or Episcopal churches.

A renewed emphasis on tradition can also be seen among Roman Catholics. In the beginning of the twenty-first century, various regulations heightened the traditional distinction between lay and clergy roles in worship and between Catholic and Protestant practice. In 2007 Benedict XVI gave general permission for the celebration of the pre-Vatican II Latin Mass. New English translations of the Mass promised to use a heightened style to be more traditional or at least more formal. Recent and remodeled church buildings have also embraced a more traditional style and arrangement, and traditional devotions are also on the rise. Although by no means embraced by all Catholics, the more traditional practices are often most popular among the young.

The liturgical movement, seeker services, and praise and worship marked a new era in the history of worship. Liturgical renewal redefined liturgical tradition, and the other forms of contemporary worship brought a new style and body of music to churches of many denominations. Technological advances gave individual congregations great freedom in crafting their services from a variety of sources and raised congregations' standards for professional presentation.

Future developments will likely be marked by continued oscillations between an orientation toward traditional and contemporary forms.

Worship: Eastern Orthodox

The Eastern Orthodox Church has a rich tradition of worship with a wide array of diverse expressions that stem back to early Christianity. For the Orthodox, liturgical and sacramental worship is a central dimension of the Christian life. Indeed, the Orthodox believe that worship is not only a means by which the believer draws closer to God but also a way in which God unites the believer to himself. According to Eastern Church Fathers, the purpose of liturgy is for believers to become “partakers of God according to grace”; the Church becomes a meeting point of heaven and earth.

Americans unfamiliar with Orthodoxy will likely find its worship highly distinct from other forms of Christian worship encountered in the United States. The Orthodox believe that God is manifested in beauty, and therefore everything connected to church and worship is meant to reflect God's beauty: the architecture of the church building, the iconography that adorns its interior, the vestments the clergy wear, the music of the service. (Great composers, such as Tchaikovsky and Rachmaninov, have composed music for Orthodox services.) The service is a feast of the senses, as worshippers light candles before icons and the clergy burn incense. Everything in the service is sung or chanted (including the scripture readings), usually as responses between the clergy and the choir. For most of the service the faithful remain standing; indeed, in the “mother churches” of the Old World there are not even pews. The service is very solemn and “high,” yet there is also freedom of movement as worshippers often mill about, lighting candles and venerating icons. The celebrant will usually give a sermon, but this is not the centerpiece or focus of a Sunday morning Divine Liturgy; rather, the Eucharist is the center.

The Eastern Orthodox Church follows a unified liturgical tradition known as the Byzantine rite. This tradition evolved gradually in the millennium of the Byzantine Empire between the fourth and fifteenth century, though the rite has remained stable since that time. The Byzantine rite represents a synthesis of diverse liturgical traditions of the East that were brought together in the Great Church of Hagia Sophia in Constantinople, the capital of the Byzantine Empire.

The Divine Liturgy

The most important worship service for Orthodox Christians is the Divine Liturgy, celebrated every Sunday morning throughout the year as well as on major feast days. In some monasteries and cathedrals, the Liturgy is celebrated daily. There are two primary liturgies in the Byzantine Orthodox tradition, the Liturgy of John Chrysostom, which is served most frequently, and the Liturgy of Basil the Great, which is appointed for ten times a year (such as the Sundays during Great Lent). The primary difference between the two is the *anaphora*, the lengthy prayer for the consecration of the Eucharist. There is also a Liturgy of the Presanctified Gifts, for which the elements of the Eucharist are consecrated on the previous Sunday; it is appointed for the weekdays of Great Lent, when the celebratory mood of the Divine Liturgy is considered inappropriate.

The structure of the Divine Liturgy is as follows: it begins with the Preparation, when the priest prepares the bread for the Eucharist. This is followed by the Liturgy of the Word (or the Liturgy of the Catechumens), which culminates in the reading of the Epistle (a selection from the Letters of Saint Paul or other letters from the New Testament) and the Gospel, followed by the homily; the readings follow a set lectionary that assigns the readings for every day of the year. The culmination is the Liturgy of the Faithful, which begins with the solemn Great Entrance, when the clergy process with the bread and wine through the Church, and centers on the *anaphora* or Eucharistic prayer and the communion of the faithful.

Sacraments

The Eucharist is regarded as the sacrament par excellence, as ordinary elements of this world are transformed by the power of the Holy Spirit. The Orthodox believe that the Eucharist is truly the Body and Blood of Christ, but they accept this as a mystical reality rather than something which can be explained analytically as in the Catholic doctrine of transubstantiation, according to which the bread and wine are literally, physically turned into Christ's flesh and blood. So also baptism and chrismation, as rites of initiation, are central: baptism is not a mere "sign" of one's faith, as in some Protestant traditions, but it is an event when the believer is actually, spiritually united with Christ and becomes a member of his Body. Chrismation is an anointing with oil that is the sacramental parallel to the Catholic rite of confirmation, but it is performed by the priest immediately following baptism. The Orthodox baptize infants or children, who then receive Communion directly after baptism.

The Orthodox do not make hard and fast distinctions between what is and what is not sacramental. Some of the church fathers spoke of two sacraments (baptism-chrismation and the Eucharist), others of as many as eleven—the number is not important, though the number seven has been used in recent centuries under Western influence. While baptism-chrismation and the Eucharist are the two central and most important sacraments, marriage, ordination, confession, and the sacrament of anointing (healing) are also considered sacraments.

Consecration of Time

The Orthodox attempt to consecrate time, both in the daily cycle and in the annual cycle, with worship. Thus there are daily liturgical forms of worship that mark the morning and

the evening (Vespers and Matins). Moreover, the Orthodox celebrate an annual cycle of feasts, especially ones that commemorate key moments in the life of Christ and the Virgin Mary but also revered saints. The high point of the year is the celebration of Pascha (all languages of Orthodox nations retain some variant of the Hebrew for "Passover" to designate Easter), the resurrection of Christ, a service that typically takes place at midnight.

The fundamental building blocks of Orthodox services are the scriptures. For example, appropriate psalms are chosen to serve as the fundamental elements of Vespers and Matins. Another basic element is the petitions or prayers of supplication. Finally, the services employ a rich tradition of hymnography. There are hymns appointed for every day of the year, for example celebrating the particular saints commemorated on that day. The *Menaion* contains the hymns for the feast days, and the *Triodion* contains the services for Great Lent.

In addition to the cycle of feasts, the Orthodox also observe fasts. Naturally, different people fast to greater or lesser degrees, though most Orthodox believers are at least aware of the ideals set forth by the church. Fasting usually means abstaining from certain foods (particularly animal products such as meat and dairy). The church designates most Wednesdays and Fridays throughout the year as fasting days and sets aside particular seasons of the year, such as before Nativity (Christmas) and Pascha.

Some Orthodox Christians (Russians and Serbs, for example) still follow the Julian calendar (the original calendar of the church), which is thirteen days behind the Gregorian calendar, and they therefore celebrate the Nativity of Christ (Christmas) on January 6 (which is December 25 according to the Julian calendar). Other Orthodox Christians, such as the Greeks and Romanians, adopted the Gregorian calendar in the twentieth century and therefore celebrate Christmas at the same time as Western Christians. The issue of the calendar has been one of the most contentious pertaining to Orthodox worship, both in America and in the rest of the world. All Orthodox celebrate Pascha at the same time. Since there is a different procedure for establishing the date of Easter, it sometimes falls as much as a month apart from Western Christians.

Iconography

Another distinctive feature of Orthodox worship is iconography, sometimes referred to as "theology in color." Icons decorate Orthodox Churches, most notably the *iconostasis*, or

icon screen, that separates the altar from the nave. During the iconoclastic controversy in the eighth and ninth century, the Orthodox Church developed an explicit theological justification for the use of icons in response to the charge that this violated the commandment not to make “graven images.” The core argument in defense of icons stems from the belief that Jesus Christ is the Son of God incarnate: the prohibition against images is primarily against depicting God the Father, who is invisible (and is traditionally not depicted in Orthodox iconography). But since the Son of God became human, he became visible and therefore can be depicted. Moreover, images depict the Gospel for the illiterate, as most people would have been before the modern age; this, however, is not the most important reason for icons, and they still play an important role even when most people are literate.

Orthodox Christians do not worship the icon but what is depicted in the image; making a crucial distinction between worship and veneration or honor, the Orthodox believe that icons are worthy of honor because they serve as vehicles to make Christ and the saints present, though worship is reserved for God alone. The two-dimensional Byzantine iconography used to be regarded by art historians as somehow primitive and lacking in the knowledge of perspective “discovered” in the Renaissance that makes painting more realistic. We now know that the ancients understood perspective; traditional Orthodox icons are intentionally “unrealistic” because they are meant to draw the worshipper away from this world. They are “windows to heaven” that are meant to represent spiritual realities. Every aspect of the icon, every color and gesture, is coded in its own profound symbolic language.

Orthodox Worship in the United States

All Orthodox Churches follow the same rite for worship services. Thus on an average Sunday morning in any Orthodox Church, the same Divine Liturgy will be celebrated. The difference between Greek and Russian practice, for example, is primarily in the music and language. One controversial aspect of Orthodox worship in the United States has been the language issue. Immigrants who came to America employed the languages of their homeland for services, which are usually an archaic form of the spoken language (such as Old Church Slavonic as used in Russian and Serbian churches) not readily understandable to native speakers, let alone later generations born in America. Throughout the twentieth century, there have been tensions between those who want to maintain the traditional language and

those who wish to use English for the services. Though these decisions tend to be made at the individual parish level, there are different trends in the various Orthodox Churches in the United States: most parishes of the Orthodox Church in America, for example, will use predominantly English, whereas most Greek Orthodox Churches will use a mixture of Greek and English.

The second important liturgical development in the United States has been the Eucharistic revival. In the Middle Ages it became customary in Orthodox Churches for the faithful to receive Communion only a few times a year. The theological rediscovery of the meaning of the Eucharist, led by professor Alexander Schmemmann of St. Vladimir’s Seminary in Crestwood, New York, led to a revival of frequent Communion and had a dramatic impact on Orthodoxy in America, especially, though not only, in the Orthodox Church in America.

Worship: Jewish

Jewish worship in America can be divided into four stages: Sephardic (Sefardi) and Ashkenazi origins: 1654 to 1895; classical Reform dominance to the emergence of Conservative Judaism: 1895 to 1946; postwar suburbia and Conservative dominance to the Six Days' War: 1946 to 1967; and liturgical renaissance: 1967 to present.

From the beginning, the insistent U.S. separation of church and state has encouraged newly arriving ethnic groups to acculturate as Americans while retaining their ethnic independence in the form of religious preferences. At the beginning, therefore, Jewish worship constituted the primary symbolic expression of ethnic distinctiveness—as Jews, relative to other Americans and as one kind of ethnic Jew rather than another. Only recently, in stage four, is ethnicity disappearing, making worship no less an index of identity, but identity rooted in stylistic preference, rather than ethnic inheritance. Often, but not always, worship style reflects a larger attitude toward halakhah (Jewish law) because halakhah for Jews is the functional equivalent of theology for Christians. Theology is a consideration, especially for Jews who pray in the vernacular rather than the original Hebrew and Aramaic, and who must come to terms with the content of what they are saying. But choosing the vernacular is itself a halachic decision, so that halakhah remains primary.

For most Jews, however, neither halakhah nor theology has been probative. As a function of identity, Jewish worship should be seen holistically as an aesthetic combination of prayer content and performance (better described as worship choreography). Variation is to some extent limited because Judaism is fully liturgical: Having a required order and content of prayers, synagogues cannot improvise altogether novel scripts for worship. Choreography, however, is less determined. Even relatively traditional worshipping communities may feel less constrained to perpetuate inherited performance elements such as music, spatial arrangements, length of service, the presence of a sermon, and the like.

In the middle of the nineteenth century, the expanding frontier led competing Protestant churches to “franchise” religious preferences by institutionalized denominationalism. Jews followed suit, so that, broadly speaking, both ethnic heritage and personal style have correlated with movement affiliation. Since the postwar era (stage three), it has been common to think of Jews as arrayed denominationally from right to left in terms of traditionalism, measured officially by

halachic stance, but unofficially by liturgical style: Orthodoxy on the right, Reform on the left and Conservative in the middle (a fourth denomination, Reconstructionism, is a relatively small offshoot of Conservative Judaism, usually liberal on social issues but conservative in worship style).

Sephardic and Ashkenazi Origins: 1654 to 1895

Sephardic Jews (those hailing originally from Spain and Portugal) arrived in the American colonies when Portugal conquered the Dutch colony of Recife in Brazil. They had emerged in Protestant Holland after escaping the Spanish Inquisition. Fearing that Portugal would reinstate the Inquisition in Recife, they fled to Dutch New Amsterdam, later (under England) New York. From there, they spread to Newport, Philadelphia, Charleston, and elsewhere, establishing the distinctive worship patterns that differentiated them from their cultural rivals, Ashkenazi Jews of central, northern, and eastern Europe. Sephardic worship featured its own version of the traditional prayer text, Hebrew pronunciation, music, lectionary, decorum, and seating arrangement. The Touro Synagogue in Newport (built 1763), for example, the oldest extant synagogue in the United States, replicates Sephardic architecture and seating patterns of the great synagogue of Amsterdam (1675) and Bevis Marks Synagogue in London (1701).

Sephardic Jews were soon outnumbered by Ashkenazi émigrés from central Europe. At first, they joined Sephardic synagogues already in place, but were emerging independently as the century drew to the end. Between 1820 and 1840, the U.S. Jewish population increased from 3,000 to 15,000; by 1860, it reached 150,000. Almost all the newcomers were German-speaking Ashkenazi Jews. Many took advantage of U.S. freedom to drop religious affiliation altogether. Of those for whom religion mattered, some were Orthodox, but most sought to achieve religious reforms that reactionary rulers in the wake of Napoleon, and then again after the abortive 1848 revolution, had denied them. German reform dominated the United States until the end of the century, when eastern European Jews, in turn, swamped the central Europeans, prompting the “German crowd” to adopt ever more extreme reforms to distinguish their worship from what they considered the backward Orientalisms of new arrivals. Traditional Jewish prayer preached a doctrine of Jewish exile; God would eventually send a messiah from the House of David to return all Jews to their land and restore the ancient sacrificial cult in Jerusalem. God would wreak vengeance on Israel’s enemies, then resurrect the Jewish dead

and bring them home to Jerusalem. Reform prayer books denied resurrection and proclaimed the diaspora home. The notion of a personal messiah was replaced by the idea of a messianic age that would be achieved by human effort, not by God, as Jews and non-Jews together worked to fulfill the prophetic mandate of universal justice. Prophetic Judaism became especially central in the 1990s, influenced by the Social Gospel movement in Protestant circles.

Accompanying this altered worship message was a radical change in choreography. Ashkenazi cantorial tradition had nurtured the use of traditional musical modes, chanting of the weekly scriptural readings (Torah and haftarah), and artistic cantorial solos enhanced by stylized improvisations; Jewish law banned musical instruments in worship. People *davened*, a term describing a sing-song style of congregational participation whereby worshipers “muttered” aloud the same paragraph together, more or less *sotto voce*, but at individually selected speed and volume. Women were excluded from the main worship space, not encouraged to attend, and not counted as part of the worship gathering when they attended anyway. Reform Jews replaced cantorial chanting with sophisticated musical compositions in Western notation that soloists, four-part choirs, and an organist could perform to a relatively passive congregation. Family pews replaced segregation by sex. Traditional worship garb disappeared, as Reform Jews acted out a message of modernity, decorum, and appreciation for the high artistry of Western culture. Worship was enhanced spatially by grand sanctuaries with elaborate internal design and architectural lines reaching toward heaven. Central to the service was the sermon, matching a corresponding Protestant emphasis on great evangelical preachers such as Billy Sunday (1862–1935) or liberal “princes of the pulpit,” such as Phillips Brooks in Boston (1835–1893) and Harry Emerson Fosdick in Manhattan (1878–1969). In keeping with the style defined by Rudolf Otto, God was represented as wholly transcendent, awe-inspiring beyond description, and a numinous presence that the great music, the King James English of the liturgy, and the flowing sermonic rhetoric of the rabbi could at best suggest.

The two most influential prayer books that contributed to this message were *Minhag America* and *Olat Tamid* by Rabbis Isaac Mayer Wise and David Einhorn, respectively. Wise was the chief architect and denominational founder of Reform Judaism, but a relative moderate liturgically; Einhorn was more radical, and in 1895, a *Union Prayer Book*, based largely on Einhorn’s prototype, was adopted officially

by the Reform movement—a reaction to the eastern European newcomers.

With the prayer text came new music. Early Reform rabbis such as Wise had imported the music of Viennese cantor and composer Salomon Sulzer, who had notated traditional music so that it sounded “cultured.” Wise himself celebrated Sulzer for “abolishing the prevailing chaotic mood of worship” and doing away with the “screaming” by daveners. In an 1854 newspaper review Wise applauded his own service in Cincinnati for its “difficult pieces of vocal music” that made “an indescribable impression” on worshipers. Those present “felt once more the beauty and sublimity of Hebrew poetry,” going far toward producing a divine service “worthy of the name.”

In 1897, Cantor Alois Kaiser of Baltimore compiled a hymnal designed to increase the modern repertoire of melodies with music that would be qualitatively as rich as the musical heritage of the Church, but on Jewish themes. As late as 1907, however, rabbis bewailed the widespread use of Christian classics, albeit shorn of their Christological content. In 1920, the same body of rabbis complained of the utter passivity of congregants who refused to sing hymns the way neighboring Methodists did. The Reform service had stagnated.

By then, German immigration had virtually ceased, and the eastern Europeans against whom the message of radical Reform identity had been directed had become the majority of U.S. Jews.

Classical Reform Dominance to Emergence of Conservative Judaism: 1895 to 1946

Between 1881 and 1914, some two million Jews arrived from eastern Europe (mostly Russia, Ukraine, Romania, and what is now Poland). They shared the general eastern European opinion of Germans as arrogant and were unfamiliar with the high German culture that classical Reform worship featured. Rather than follow the railroads west, as the German migrants had done, these Jews remained in the east, largely in New York. Many dispensed with religion altogether, some became socialists, and others simply concentrated on escaping Lower East Side poverty. A few retained their Orthodoxy, praying just as they had in Europe, but in ethnic synagogues representing the towns, or even villages, whence they had come.

Not all German Jews had become Reform, but even German Orthodoxy valued decorum and altered its worship as much as its perspective on Jewish law allowed. Eastern

European Orthodoxy was different. Instead of decorum, it featured the worship favored by Hasidism, a movement dating back to the eighteenth century and rooted in a popularization of the mystical system called Kabbalah. Stylistically, it was evangelical, joyous, and noisy. Anxious to socialize their poor cousins rather than be embarrassed by them, Reform Jews encouraged a new mixture of tradition and modernity that became known as Conservative Judaism. Its development was retarded by the Great Depression and World War II, but in 1946, the first generation of Conservative-trained rabbis announced its denominational identity with a newly edited liturgy, generally known as “the Silverman Prayer Book,” after the prototype already developed by Rabbi Morris Silverman from Hartford, Connecticut. By then, liberal Jews had two options, both of them reflecting rival ethnicities: Reform Judaism for Germanic Jews, Conservative Judaism for eastern Europeans.

The Conservative message was revealed in advertisements that heralded “a modern traditional prayer book . . . [printed] in an attractive format and bound in the best Wavy pattern Cloth.” Its very makeup mirrored the ambivalence in identity felt by second-generation eastern European Jews. On the one hand, they demanded traditional “authenticity,” as opposed to German Reform Jews, whose worship (they said) “threw out the baby with the bath” and created services that were “cold and uninspiring.” On the other hand, these second-generation Jews wished to demonstrate their full acculturation as Americans. Worship included the traditional text of prayer, barely altered, and delivered in Hebrew with cantorial music and no instrumentation. Prewar Conservative worship had been less doctrinaire, but the hardening of a distinctive Conservative identity brought with it an equal freezing of liturgical style.

The content of the prayers differed somewhat. Most of the Silverman Prayer Book simply reproduced the traditional prayer text, but the left page provided translations, and some new English prayers supplemented the traditional corpus. Conservative Jews did not go as far as praying for a return of animal sacrifice, but the book did look forward to a return to Zion, reflecting not just traditional sentiment but also Zionism as a central tenet of their faith—the book appeared only two years before the birth of the state of Israel. By contrast, still viewing the diaspora as home, Reform Judaism officially opposed Zionism. Its *Union Prayer Book*, which had gone through two revisions by then, included a single paragraph applauding efforts at rebuilding the Land of the Bible, but it continued to exclude traditional prayers for a return to it.

The Conservative prayer book polemicized not just against Reform but also against a philosophy of Judaism preached by Mordecai Kaplan, a prominent professor at the Conservative seminary itself. Kaplan had made history in 1934, with a manifesto that faulted all existing varieties of U.S. Judaism and called instead for “reconstructing American Jewish Life.” Among other things, he denied the doctrine of chosen peoplehood and did away with a supernatural deity altogether, preferring to see God as a power in the universe “that makes for salvation.” Although he valued traditional worship style, he advocated changing prayer wording to reflect his philosophy—instead of praising God “who chose us *from among* the [other] nations,” for example, he offered praise for “choosing us *along with* the [other] nations.” When Kaplan’s liturgical works began appearing in 1941, Orthodox rabbis actually excommunicated him. Conservative editors in 1946 drew attention to the “patent weaknesses” of Reconstructionist worship, which Conservatism sought to combat. Much of Reconstructionism was eventually co-opted by individual Reform and Conservative rabbis who preached Kaplan’s message without adopting his liturgies, and in 1968, the Reconstructionists opened their own rabbinical school, formally declaring their independence.

Postwar Suburbia and Conservative Dominance to the Six Days’ War: 1946 to 1967

The postwar years brought about a religious awakening, at least in institution building (if not actual piety), as Americans in droves settled the suburbs, dotting them with churches and synagogues on every corner. Since most U.S. Jews then hailed from eastern European stock, Conservative Judaism dominated. But even though Jews joined their newly erected religious institutions, they did not generally attend weekly worship faithfully. Architects therefore designed synagogues with small sanctuaries and a collapsible wall that opened onto a social hall large enough to accommodate the crowd that did continue to come for the High Holy Days (Rosh Hashanah and Yom Kippur). Conservative Judaism retained traditional *davening* style, but tended also toward some degree of performance-oriented worship that featured passive congregational appreciation of cantors and choir.

Reform Jews were already used to performance worship. So postwar composers, influenced by atonal style, wrote sophisticated but somewhat inaccessible music that Reform worshipers were expected to appreciate through listening. Architectural design colluded with these musical offerings

by featuring stage-like areas facing the congregation, where rabbi and cantor (or soloist) led worship.

The time of Sabbath (Shabbat) worship was being renegotiated as well. Traditionally, morning worship far outweighs evening prayer in popularity, length, and emphasis. Friday night services were short preludes to the main celebration of the Sabbath at festive home dinners. But most German Jews had been shopkeepers who could not easily close their stores on Saturdays. Reform worship had therefore enhanced worship on Friday night at the expense of Saturday morning. Valuing traditional practice more, Conservative Judaism preferred maintaining the supremacy of Saturday morning, but until 1946, many Conservative synagogues (and Orthodox ones too) emulated Reform in building up Friday night as well. After 1946, Conservative (and certainly Orthodox) Jews retreated to their traditional stance, urging people to celebrate Sabbath eve at home, and to observe the Sabbath day by worshipping instead of working. As time went on, Conservative and Orthodox Jews were once again meeting for prayer primarily on Saturday mornings; Reform Jews, by contrast, worshipped almost exclusively on Friday nights, even moving the central reading of scripture (Torah) from Saturday to Friday.

Jewish law calls for worship daily, not just on the Sabbath, but except for small oases of tradition (usually in Orthodox circles) the reality of life in the United States had shrunk the existence of weekday prayer dramatically. Reform Jews rarely met then at all, except when a death required the recitation of the *kaddish*, the mourners' prayer, as part of a worship service in which case special services were held in mourners' homes. Orthodox, Conservative, and (sometimes) Reconstructionist synagogues retained daily worship as much as possible, even though it sometimes took great effort to ensure the necessary "ten men" required for a *minyan* (a prayer quorum, without which halakhah prohibits a complete worship service). The task became all the more difficult for Orthodox and Conservative Jews because, in keeping with tradition, neither movement included women in the count. Reform, by contrast, had granted women worship equality in 1845, although, ironically, it also abolished the need for a *minyan*, making the matter of counting moot. From its inception, Reconstructionism adopted the Reform stance on women.

Liturgical Renaissance: 1967 to Present

By the 1970s, all liberal Jewish liturgies were under pressure to reflect the tectonic changes that had transformed postwar

Judaism. In 1961, the trial of Adolph Eichmann had raised the Holocaust to full consciousness among Jews who had hitherto been unable to face the fullness of its horror. An entire generation of Jews had meanwhile grown to adulthood as college students rebelling against the Vietnam War and championing civil rights for African Americans. Israel had come into its own as a Jewish state, but was newly threatened by the Six Days' War in 1967. And within Orthodoxy, the remnants of great Hasidic dynasties had come here after the Holocaust, altering the demography of Orthodox Judaism and moving it farther and farther to the right. As always, Orthodox worship resisted change—all the more so as liberal Jews adopted it. But for the other movements, it became increasingly impossible to pray without some reference to the Holocaust, Israel, and the liberal agenda that had seized the baby boomer generation coming out of college. Liturgical reflections of political liberalism proved momentary; consciousness of the Holocaust, Israel, and Jewish particularism generally proved momentous.

Developments among Christians proved decisive as well. By the 1960s, the Second Vatican Council was asking Catholics to liberalize their worship by (among other things) replacing Latin with vernacular prayer, building congregational participation, and emphasizing the joy inherent in the Christian message. Mainline Protestants too joined the liturgical renewal, creating new worship books of their own. In the 1970s, evangelical Christianity too began emphasizing joy in its worship, as its adherents gave up separatism for full participation in U.S. process and debate. Feminism leveled a worship critique within Christian and Jewish circles equally. Simply put, worship per se had taken center-stage in U.S. religious consciousness. Jewish dissatisfaction with its pre-Holocaust and pre-state of Israel liturgies merged with the general feeling that a new liturgical age was dawning everywhere.

The first signs of change came from high school students, who began designing "creative liturgies" that were hastily composed each week and then copied on "modern" mimeograph machines. New prayers on the themes of Israel, the Holocaust, and liberal causes became commonplace. More lasting was the popularization of the guitar-led folk idiom, fed with compositions by young U.S. Jews (most notably Debbie Friedman) trained in summer camps, and by similar songs drawn from annual Israeli song festivals. The centrality of a Jewish state where Hebrew was spoken virtually ended singing in English, even though worshipers did not understand the Hebrew words of the songs they were memorizing.

Seeking greater intimacy, these young Jews abandoned sanctuaries and prayed in small circles that emphasized egalitarianism and sought God's presence not in cathedral-like majesty but in the immediacy of human contact. The search for less formal, more intimate, and fully inclusive worship was enhanced by the feminist critique that grew with time, particularly after 1972, when the Reform movement began ordaining women; in 1974, Reconstructionism followed suit, as did Conservative Judaism in 1985. Feminist influence can also be seen in an emphasis on personal healing and a sense of wholeness, not just in body and mind, but in spirit. Throughout the 1990s, separate healing services became common, and even regular worship began newly emphasizing prayers for the sick.

In 1975, the Reform movement replaced the venerable *Union Prayer Book* with *Gates of Prayer*, a liturgy that featured separate services for Israel Independence Day and Holocaust Day, restored Hebrew to prominence, favored Zionism, restored Jewish traditions that classical Reform had jettisoned, and adopted gender-neutral language that, for example, no longer referred to "men" alone, as if women were obviously included. A decade later (with the ordination of a significant cohort of women rabbis clamoring for change), masculine referents to God were dropped as well. Rabbis and cantors doffed their specifically clerical robes, joined their congregants in rediscovering traditional prayer garb, moved off the pulpit to be with the people, replaced sermons for congregational conversations on the weekly Torah portion, and moved Sabbath worship to small spaces conducive to informal worship in the round.

New Conservative and Reconstructionist liturgies followed. The Conservative movement remained conservative: Worship was solely in Hebrew; only a few traditional prayers were dropped or significantly altered. But prayers regarding the Holocaust and the new state of Israel were added, as were optional English worship supplements. Reconstructionist worship, however, changed dramatically. The era of the 1970s had given birth to *chavurah* Judaism, small worship groups that leaned toward tradition but eschewed denominational affiliation. *Chavurot* implemented fully participatory worship that breaks down the distinction between the prayer leader and the congregation; in keeping with this democratization, everyone was urged to achieve competence at worship leadership. A loose coalition of *chavurot* eventually merged with the Reconstructionist movement adding a populist, and even New Age, quality to what had formerly been the highly

rationalist approach to prayer favored by Kaplan, the movement's founder. By then, New Age Judaism had emerged more formally in gatherings that described themselves as "Jewish Renewal," influenced especially by the neo-Hasidic views of Zalman Schachter-Shalomi. Renewal worship varies widely, combining a high regard for tradition with intense creativity and new forms of spirituality, including meditation practices borrowed from Eastern religions. Just as mainstream denominations once absorbed the Reconstructionist innovations of Mordecai Kaplan, so too are they now engaging, at least around the edges, in spiritual practices of Renewal Judaism.

This liturgical renaissance has transformed even Jewish Orthodoxy. A new and sharply designed Orthodox prayer book was published in 1960 but proved a failure because its modern appearance contradicted Orthodox identity as keepers of the faith and purveyors of tradition. Orthodox Jews preferred the old prayer books—precisely because they were old. By contrast, throughout the 1980s, a set of attractive ArtScroll liturgies emerged, each outfitted with marginal summaries of traditional commentary. These have virtually become universal among Orthodox Jews, an index of the revival of Orthodoxy generally. A 2000 survey showed Orthodoxy having grown from some 5.5 percent in 1990 to 8 to 9 percent nationally. With that growth has come a sense of confidence: no longer just a defensive measure against rampant reforms elsewhere, Orthodox Judaism has become a proud and proactive alternative for U.S. worshipers. At the same time, its worship has moved far to the right, generally erecting a visible barrier (a *m'chitzah*) between men and women, instead of separating them simply by an aisle.

Jewish worship remains in a state of remarkable flux, fed by the technological ability to produce ever more attractive liturgies and the Web-based competence to access new music and ritual from around the world. In 2007, a new Reform prayer book replaced *Gates of Prayer*, restoring the classical Reform emphasis on universalistic prophetic ethics without compromising identification with the Jewish people specifically and with its traditions. Musically speaking, a host of new composers have arisen, some of them (Craig Taubman, for example) introducing entire bands, now commonplace, especially in Reform circles. Elsewhere, traditional cantorial music is being challenged by the music of Shlomo Carlebach, a neo-Hasidic charismatic figure who died in 1994. Carlebach outfitted many traditional liturgical texts with a joyous syncopated sound that requires no

instrumentation and is especially attractive to contemporary Orthodoxy. In New York City, a Conservative-style synagogue (B'nei Jeshurun) has imported a new liturgical sound from Argentina.

Long-term expectations, then, include continued experimentation and emphasis on liturgical joyfulness and communal participation. Ever-evolving denominational liturgies will compete against worship books published privately by rabbis attracted to the technology of desktop publishing. Trends from evangelical megachurches are appearing as well—the use of projected liturgies and song lyrics, for example. Dominating worship, ever since the renaissance era began, has been an overriding demand for personal spirituality, especially as religious search has come more and more to imply an authentic expression of the self. Another trend since about 2000 has been the reassertions of Judaism's ethical mandate, especially as U.S. governmental policy has urged faith-based social initiatives to combat widespread hunger and poverty. Concern for the planet too is increasingly being reflected in Jewish worship, as entire sanctuaries are being designed with ecological consciousness in mind. As the second decade of the twenty-first century approaches, with baby boomers aging and being replaced by the next generation, surveys find the importance of ritual, spirituality, authenticity, inclusivity, prophetic justice, and engagement with tradition increasing. We can expect all of these to figure prominently in the liturgical expression of Jewish identity for the foreseeable future.

Worship: Muslim

Muslim Americans, for the most part, have followed the established worship practices of Islam found throughout the world. The term worship indicates religious or devotional exercises and observances that are performed on group and individual levels alike. Though we can distinguish worship practices from matters of belief and doctrine, they are often standardized within a given tradition as well. In this sense, most American Muslims have been united in their attempt to remain faithful to the Five Pillars of Islam—also known as *‘ibadat*, or acts of worship—that are part of the *Shari‘a*, or Islamic law. At the most basic level, these consist of *shahada* (testimony of faith in one God), *salat* (ritual prayer service), *zakat* (almsgiving), *sawm* (fasting during the holy month of Ramadan), and *hajj* (pilgrimage to Mecca).

However, Islam (unlike, say, Eastern Orthodoxy or Roman Catholicism) is, in many respects, a decentralized religion—that is, authority tends to be distributed and administered more locally—and thus many Muslim practices and styles of worship have differed according to group and region. This decentralization means that almost every aspect of Muslim worship in America—including but not limited to physical settings, ritual components, the garbs and demeanors of those in attendance, sex and gender roles, and the like—often has a wide range of variation depending on the individuals under observation. Furthermore, though the large body of Islamic historiography and scholarship frequently construes the worship practices of majority Sunni Islam as normative, Shi‘i, Sufi, and African American Muslims (who can be Sunni, Shi‘i, Sufi, or members of one of the newer Muslim American movements, such as the Nation of Islam, Moorish Science Temple, or Five Percenters) have made significant and often-overlooked contributions to Islam's rich and colorful history. These diversities are particularly evident in the United States.

The Five Pillars

Shahada

The first pillar of Islam is the *shahada*, the declaration of faith in God's unity or oneness and Muhammad's status as prophet. Normally, professing the *shahada* (*La ilaha illa*

Allah. Muhammadun rasul Allah, or, “There is no god but God. Muhammad is the Messenger of God”) once in one’s life—with heartfelt sincerity, in a formal setting, and in the presence of another Muslim—is all that is formally required to become a Muslim in America. Some Americans, though, have maintained the shahada must be pronounced three times or more before one is considered a legal or legitimate Muslim. So central is this tenet to the Muslim faith that a majority of congregations in America have displayed a calligraphic depiction of the shahada in their Islamic centers and mosques, and the Islamic Society of North America (ISNA) has even provided certificates to those who have taken the shahada. (This certificate is required by Saudi Arabia for a person to be allowed on Hajj.)

The meaning of the shahada has been the same for a majority of American Muslims. Still, the statement took on a uniquely American connotation in the Nation of Islam (NOI). Specifically, when NOI members have recited it, the name “Allah” in the first part of the shahada has been conflated with the person of Wallace Fard Muhammad and “Muhammad” in the second part conflated with the person of Elijah Muhammad. This is in conformity with the NOI understanding of Wallace Fard Muhammad as God incarnated and Elijah Muhammad as his last earthly prophet. Nevertheless, this is a highly controversial belief that many American Muslims consider to be a kind of idolatry.

Salat

The second pillar of Islam is *salat*, the formal prayer worship directed toward the primary Islamic sanctuary (or *Ka’ba*) in Mecca, the holy city in Saudi Arabia, and performed five times daily: early morning, noon, midafternoon, sunset, and evening. Additionally, there has traditionally been a required congregational service (including a sermon/oration, or *khutbah*) on Fridays as well as other days that mark various occasions (such as funerals and major festivals). Salat is a highly regulated form of worship that involves an initial call to prayer (called the *iqama*, traditionally announced from atop the mosque, but often accomplished with speakers and recorded voice in America), ritual washing, proper attire, and a series of postures that culminates in total prostration. Shi’i Muslim Americans occasionally include an expression of admiration for ‘Ali in their prayers. Likewise, the Shi’i call to prayer can also include expressions of ‘Ali’s authority. Many American mosques have debated whether to use English as the primary language during certain parts of the services. It is common for the imam—who is, traditionally, always

male—to deliver the *khutbah* in the local language (more often than not English) while directing the formal rites of prayer in Arabic.

We should also note that NOI members have not typically prayed five times a day, and, moreover, they have prayed while sitting in pews. Furthermore, while most American Muslims have considered the mosque to be the official house of worship and the imam to be the *salat* leader in addition to general religious teacher, NOI members, showing the influence of African American churches, have preferred the term temple to mosque and minister to imam. Though Warith Deen Mohammed, upon assuming leadership of the movement in 1975, abandoned many of these elements in his reforms and attempts to align the NOI with mainstream Sunni Islam, Louis Farrakhan has retained much of the original NOI practices and styles of worship.

As with the other pillars, Muslims in America have had to modify certain elements of the *salat*. For instance, many preexisting buildings have been converted into houses of worship and thus American congregations have not always prayed while facing the front of mosques, but rather, they have used electronic devices to orient themselves toward Mecca. Similarly, many American Muslims, depending on the rules of individual workplaces and schools, have had to adjust prayer times and places accordingly. Certain Muslim students have even joined with Christian ones to petition for the freedom to pray, or, barring that, to form prayer groups that meet before, between, or after classes. For another example of Muslims adapting to American society and culture, many American mosques, located in residential and commercial neighborhoods, have either adopted playing a recording of the call to prayer or giving it inside the mosque or Islamic center instead. Lastly, some mosques have begun holding communal prayer services on Sundays in America due to the fact that most Americans must work on Fridays.

Zakat

The third pillar of Islam is *zakat*, the practice of obligatory almsgiving. Traditionally, *zakat*—conceived as an annual tax comprising 2.5 percent of one’s wealth that supported the Islamic community and state—has been distinguished from voluntary acts of charity. The practice of *zakat* in modern-day America has been complicated by a number of factors. For one, there has been the question of whether Muslims should still be compelled to pay a *zakat* tax when they already pay income taxes well above 2.5 percent. For those

communities that have ceased to interpret zakat as compulsory, furthermore, there has been the question of how to finance the construction and maintenance of mosques within a system of voluntarism—that is, without state support of religious institutions. This peculiarly American situation has often been in stark contrast to the system of state-supported mosques many emigrants from Islamic countries have left behind. (*Ithna ‘Ashari*, or Twelver Shi‘a have not encountered this problem to the same extent because they levy a twenty percent religious tax, in addition to zakat, that pays for Islamic centers and the salaries of administrators.)

In addition, there has been debate over the means by which American Muslims should pay their zakat and the authority to which it should be paid. On the former question, many American Muslims have submitted their zakat payment via the Internet with credit and debit cards. Conversely, many American Muslims have reinterpreted the submission of zakat to include nonprofit service carried out in their community. The latter question of authority has become particularly problematic since the events of September 11, 2001. The United States crackdown on funding certain Islamic groups (in particular those thought to be associated with terrorism) has made it difficult to give money freely because the status of some groups is still questionable or undecided. The ISNA has alleviated some of these problems by creating a zakat fund that it has used to support various national services and social programs. NOI members have generally contributed a portion of their income to the NOI itself that was then applied to the funding of Muslim schools and other services.

Sawm

The fourth pillar of Islam, and one of the most followed and well-known forms of Muslim worship in America, is *sawm*, the act of fasting during the holy month of Ramadan. By tradition, observant Muslims around the globe abstain from eating, drinking, smoking, lying, violence, and sexual relations between dawn and dusk in the ninth lunar month. The breaking of fast (*iftar*) at the end of each day is a time of joy and giving thanks, when Muslims everywhere gather together with friends and family. American Muslims have widely regarded fasting during Ramadan as a time of both physical and spiritual reflection. Many immigrants to the United States have regarded the time as one where Muslims can renew their religious devotion to God and their involvement in the global Muslim community, as well as

use the month to promote interfaith conversations. For instance, the Council on American–Islamic Relations (CAIR) has provided a number of ways everyday American Muslims can educate the community about Islam in general and the significance of Ramadan in particular, in addition to ways of reaching out to the larger community through volunteer work.

Since American Muslims are not a homogenous group, there have been discrepancies and disagreements over certain aspects of sawm and Ramadan. For one example, NOI members have always observed Ramadan in December rather than in the lunar month. For another example, non-NOI Muslims have recognized the new moon as the end of Ramadan and the beginning of the minor canonical festival, *‘id* (or *‘eid*) *al-fitr*, the Feast of Breaking the Ramadan Fast. However, a debate has developed in America over whether to follow “official” Meccan sightings of the moon or to follow one’s own sightings. Many Muslims in the United States have also added distinctively American elements to Ramadan, such as coordinating potluck-style meals or charitable food drives. Lastly, though many advances have been made in recent years, Muslims in America have faced a unique difficulty in petitioning for certain allowances to be made during Ramadan and for official recognition of the Islamic holiday in schools and the workplace. The United States Postal Service honored the Eid holidays in 2002, 2008, and 2009, respectively, with 37-, 42-, and 44-cent stamps.

Hajj

The fifth and final pillar of Islam is *hajj*, the pilgrimage to Mecca during the holy month of *Dhu al-Hijja* at least once in one’s lifetime. This pilgrimage is incumbent upon all adult Muslims who are financially and physically able. As the hajj is the most expensive and time-consuming act of worship, it is also perhaps the most highly anticipated. American Muslims, like those from other countries, have spent years saving money and making preparations for the journey. Once there, pilgrims—who typically number in the millions—dress in ritual garb (males don simple white clothing symbolizing unity while females wear a variety of garments that symbolize diversity) and perform a number of rituals, such as circumambulating the Ka’ba (paying particular attention to the “black stone,” which marks the covenant made with God), throwing pebbles at a pillar representing the devil, and sacrificing an animal that symbolizes the ram Abraham sacrificed in lieu of Ishmael (rather than Isaac as is believed in Judaism and Christianity). This act, always

performed on the tenth day of the lunar month and celebrated by Muslims around the world, begins the major canonical festival, *'id* (or *'eid) al-adha*, the Feast of Sacrifice. Lasting three days, the festival is a time of joy, worship, and sharing. Muslims in America have customarily commemorated the occasion by purchasing *halal*, or permissible, meat that is regulated in a way similar to kosher Jewish food.

Traditionally, the hajj has been less important for NOI members than for other Muslims. A primary reason for this discrepancy was Elijah Muhammad's interpretation of the practice. Although E. Muhammad and others made the pilgrimage partly in an attempt to bolster their credentials as "true" Muslims, they have read the act through the singular lens of NOI understanding. Specifically, Elijah Muhammad understood the "black stone" of the Ka'ba as a sign of himself, whom he considered the most recent messenger of God and the one who would ultimately lead black Muslims the world over out of oppression.

As with the other pillars, distinctively American issues have developed with respect to the hajj. For one, it is only recently that Muslims in the U.S. Armed Forces have secured permission for leave of duty to make the hajj. Likewise, and analogous to the situation with the festival of breaking fast at the end of Ramadan, public schools and businesses have only just begun recognizing the Feast of Sacrifice as a major Islamic holiday.

Beyond the Five Pillars: Other Components of Muslim Worship in the United States

To give a better understanding of the topic at hand, it is helpful to turn away from the Five Pillars and highlight some of the details of typical weekly Muslim worship in America. First and perhaps foremost among these components are the actual settings where Muslim worship takes place. Of course, solitary worship—such as individual prayer performed five times daily—may take place almost anywhere. (Nevertheless, there have been interminable debates—especially since the events of September 11, 2001—over the rights of individuals to pray in public places such as schools and airplanes.) In Muslim and non-Muslim countries alike, however, acts of public worship—such as congregational services on Fridays and other days marking special occasions—traditionally take place in a mosque.

A mosque, in the most basic sense, can be any physical structure Muslims use for worship. In predominantly Muslim countries, mosques are often sophisticatedly crafted structures comprising domes, minarets (from which the call

to prayer, or *iqama*, is made), an ornate space for ritual washing, and the like. However, there are no formal regulations or restrictions on a mosque's architecture, and thus, in the American context, mosques in the United States vary in appearance. For instance, many Muslim communities—when necessary financially—have frequently converted buildings formerly used as homes or businesses into mosques. Similarly, in America's more crowded urban areas, the issue of noise ordinances has come up and, as a result, the call to prayer has regularly been announced via speakers and recorded voice.

The first thing one ordinarily sees when entering a typical American mosque is a place for shoe storage and an area set apart for ritual washing; past these is a larger space designated for prayer. The prayer space is relatively empty—there are no pews (with the exception of NOI temples), but chairs are provided for those physically unable to go through full prostration—although the walls of many mosques contain calligraphic Qur'anic verses and decorative patterns. (The depiction of personages is, however, considered idolatrous in Islam and strictly disallowed.) In addition, at the eastern end of American mosques are a *minbar*, or pulpit—from which the imam officiates—and a *mihrab*, the niche that marks the *qibla*, or direction of Mecca.

A distinctly American innovation on the mosque is the Islamic center. In Muslim countries—where most facets of one's social and cultural life operate within a single system—mosques do not need to offer services beyond the acts of worship mentioned above. Yet the American context—in which Muslim communities, often comprised of first- and second-generation immigrants, are frequently isolated minorities—has necessitated the construction of all-encompassing, family-centered institutions that provide certain unmet services and facilities for recreation, education, and the like. Usually seen in larger cities—Washington, D.C., is home to the first and perhaps most famous one, known simply as The Islamic Center, which former president Dwight D. Eisenhower dedicated in 1957—these establishments unite families from a number of ethnic or national backgrounds and even attract the growing number of Muslim Americans who self-identify as "un-mosqued" and otherwise do not worship or attend religious services at traditional mosques.

Another significant factor in worship for Muslim Americans is that of sex and gender roles. Many Muslims in the United States have come from predominantly Islamic countries where women and men have very different—and often

unequal—rights and responsibilities. For instance, in some parts of the Islamic world women are not allowed to marry non-Muslims; men, conversely, may marry non-Muslims so long as they raise their children within the Islamic faith. Although examples such as this—whether they are founded in cultural or legal considerations—are less prevalent in non-Muslim countries like the United States, distinct sex and gender roles have continued to exist in various forms. For one, many Muslims in America have been divided on whether women should wear a *hijab*, or veil, in public. While some women have chosen to adopt secular norms regarding societal garb and demeanor, others have opted to don the traditional covering (in some cases, against their family's wishes), arguing that it allots them a modicum of modesty in the face of Western indecency, as well as forcing others to respect women for their minds rather than their bodies.

An additional issue has been the physical segregation of Muslim women and men in American mosques. As with the *mechitza* (*m'chitzah*), or partition, seen in Orthodox Judaism, the sexes in Islam have traditionally separated during worship: women and men reside in opposite sides of the worship space or, as is often the case, women come together in an area or balcony behind male worshippers. Women and men also have separate areas for ritual washing. Those in favor of this situation have normally maintained that segregation cuts down on distractions during worship. However, some American Muslim women—such as Amina Wadud—have recently begun leading contentious mixed-gender prayer services.

Shi'i and Sufi Muslims

In addition to the aforementioned modes of worship, minority Shi'i and Sufi Muslims have had a number of unique practices not observed in majority—or what is often called “mainstream”—Sunni Islam. While following the Five Pillars of Islam, Shi'i Americans have also placed importance on additional practices and acts of worship. Some of these are as follows: *jihad* (or struggling and striving to please God; not to be confused with “holy war,” *jihad* is separated into lesser/external and greater/internal forms and is sometimes regarded as the Sixth Pillar of Islam), enjoining the good, forbidding the evil, and venerating the Prophet Muhammad and his family. In addition to the canonical festivals observed by Sunnis, Shi'i Americans, like all Shi'i Muslims, have commemorated *Ashura*—the anniversary of the prophet's grandson Husayn's death and martyrdom at Karbala—which takes place on the tenth day of the first Islamic calendar month (*Muharram*). However, for American Shi'a who cannot make

the pilgrimage to Karbala, certain transplanted rituals have developed in the United States. These include assemblies, sermons, public processions, special meals, physical rites of mourning, artwork (such as calligraphy and stained glass), poetry recitations, scale-model reconstructions of the town of Karbala, and even blood drives in place of self-flagellations, all of which are often performed in *Imambargahs*, or structures designated specifically for these types of worship. As with mosques, the issues of whether to use English or segregate women and men in *Imambargahs* have been contentious ones.

Though Shi'a have obtained more rights to worship freely in the United States than in some predominately Sunni Islamic countries, some of these rights to worship have been hard-fought or are even ongoing. For just one example, certain prisons, such as New York's Fishkill Correctional Facility, only supply Sunni chaplains, services, literature, and programs for their diverse community of Muslim prisoners.

Historically, Sufi Muslims—a widespread and influential group of mystics and ascetics—have emphasized the inner, often esoteric, way toward God (*tariqa*) in tandem with God's external or exoteric law (*shari'a*). Thus Sufis, like Shi'a, have observed the Five Pillars in addition to other, distinctive forms of worship. Also similarly to American Shi'a, Sufis in the United States have been unable to keep all of the practices to which Muslims in Islamic countries adhere, such as regular pilgrimage and tomb visitation. However, there are exceptions. For instance, Sam Lewis and Bawa Muhaiyaddeen each have a *mazar*, or tomb, where Americans make pilgrimage.

For Sufis, including those in the United States, one of the primary religious practices is *dhikr* (rendered *zikr* in some languages): literally, “remembering” or “mentioning” God. Although this practice has usually taken either a silent or spoken form (sometimes incorporating counting beads, or *tasbeih*), *dhikr* has sometimes had a musical component accompanied by instruments, singing, and dancing. The members of the Mevlevi Order of Sufis, founded by followers of Jalal al-Din Rumi in the thirteenth century and known more commonly as “Whirling Dervishes,” are perhaps the most famous performers of this particular style of *dhikr*. Other Sufi orders in America have practiced musical *dhikr* as well. For just one example, Hazrat Inayat Khan's later disciples—especially Sam Lewis and Shahabuddin David Less—originated the Dances of Universal Peace in New York in the 1960s and 1970s. However, more “traditional” or “sober” Sufi groups in

America—such as Naqshbandi-Haqqani Sufi Order of America and the Bawa Muhaiyaddeen Fellowship—have continued to practice nonmusical forms of dhikr.

In addition to dhikr, Sufi Americans have also participated in prayer litanies, secluded meditation, night vigils, and initiation rites. Lastly, Sufis across the world have retreat centers or lodges known as *tekke* or *tekkiyeh* (also called *khanqahs*). These structures, like mosques, have provided space for worship such as prayer, meditation, and dhikr. However, unlike mosques, these centers also contain quarters for the Sufi master and teacher (with the title *pir* or *sheikh/shaykh* rather than imam) as well as Sufi pilgrims. The first Sufi center in the United States was the Kaaba Allah Lodge, established by Hazrat Inayat Khan's group (founded in 1910, they were simply dubbed the Sufi Order) in Fairfax, California, in the 1920s.

Conclusion

In short, Muslim Americans, while abiding by the standard forms of worship to which all members of Islam adhere, have been compelled to innovate and adapt certain practices due to the geographical, political, and social environment in which they currently find themselves. Whether Sunni, African American, Shi'i, Sufi, immigrant, or native-born (or a combination of any of these), Muslim styles of worship in the United States have reflected the country's diverse array of cultures. For this reason, Muslim Americans as a whole have composed a significant and distinctive subculture within the larger global Muslim community.

Worship: Protestant

Protestant worship encompasses a variety of services in which Protestants offer praise and prayer to God, hear the scripture read and interpreted, attend to the presence of the Holy Spirit, and celebrate baptism and the Lord's Supper. Defined as the adoration of God, the term worship is used by Protestants in various ways. Sometimes it refers only to the nonpreaching portions of a service or the act of singing praise. Other times, worship designates the all-encompassing framework for Christian life. The focus here is on the history of communal gatherings for worship, especially Sunday services.

As Protestants took different approaches to reforming medieval Christian worship, distinct families of practice developed. Historian James F. White identified nine traditions of Protestant worship. These are defined by their distinctive institutional networks, theologies, and ritual structures. Five traditions coalesced prior to Protestant settlement in America: Lutheran, Anabaptist, Reformed, Anglican, and Puritan. Four emerged after settlement, though often in an international context: Quaker, Methodist, Frontier, and Pentecostal. Frontier designates the tradition that emerged from nineteenth-century revivalism and became the most pervasive in America. Like Puritan and Pentecostal, this tradition shapes worship in several denominational families.

The traditions differ in how they regulate worship. The Anglican, Lutheran, and to lesser degrees Methodist and Reformed traditions employ official texts prescribing the order and often the words of worship. Because of these written liturgies, these traditions are sometimes described as liturgical. Traditions that reject standardized texts and emphasize local autonomy, such as the Anabaptist, Puritan,

and Frontier, are often described as free church. It is sometimes helpful to define other traditions within the free church grouping, such as that rooted in African American experience or in the early nineteenth-century Restoration movement stemming from Barton Stone and Alexander Campbell. Other traditions, such as the Quaker and Pentecostal, go beyond an emphasis on local autonomy to affirm the Holy Spirit's role in actively leading worship.

In liturgical traditions, worship has long been a subject for reflection. Scholarship on these traditions is the most developed. In the Pentecostal tradition, worship is prized as a central practice and means of communion with God, though not often of critical reflection. In other traditions, worship per se is less important and the scholarship less developed. At times, Sunday assemblies in these traditions have been conceived as "preaching" or "meeting" rather than worship or liturgy. Music and preaching are the most studied aspects of worship in these traditions, but a focus on the importance of religious practice in both churches and the academy has substantially advanced research in recent decades.

This essay begins by introducing the traditions present in colonial America, identifying their major characteristics, and tracing their early history. It then proceeds chronologically, describing developments that shaped several traditions and the emergence of new traditions. Developments since 1960 are primarily discussed in the essay on contemporary currents in worship. While the Anglican tradition with its developed liturgy has greatly influenced other traditions, it positions itself between Catholicism and Protestantism and is discussed in a separate essay.

Puritans and the Free Church Tradition

Puritans settled in New England beginning in 1620 seeking liberty to worship, free of the requirements of the Church of England and its *Book of Common Prayer*, which they felt were not sufficiently reformed of Catholic beliefs and practices. While theologically Puritans belonged to the Reformed tradition, their rejection of liturgical texts made them a distinct free church tradition of worship. They sought to worship according to biblical principles, free of human inventions.

Sunday morning and afternoon services occurred in meetinghouses that focused on a pulpit occupied by a clergyman. Each service was composed of prayer, the reading of a chapter of the scripture, psalm singing, preaching, and additional prayer: it lasted about three hours. Because of concern about vain repetition, they did not recite the Lord's

Prayer. Similar concerns about the "dumb reading" of the scripture meant that often an exposition followed the reading. If a teacher was not available to give an exposition, the reading was sometimes omitted. Believing that only words provided by the Bible should be sung in worship, they did not sing hymns but only metrical translations of psalms.

Puritans observed two sacraments, as did most Protestants. Like Anglicans, Lutherans, Reformed, and Methodists, they baptized infant children of church members. They observed the Lord's Supper between six and twelve times a year at the conclusion of the morning service. Like many early Protestants, Puritans emphasized the Bible's statement that those who eat and drink the Lord's Supper unworthily, eat and drink "damnation" to themselves (1 Corinthians 11:29). All were expected to engage in preparation and self-examination before Communion. Only full members of the church could partake. The Bible's accounts of Jesus's Last Supper provided the outline as well as the warrant for the rite. The pastor recited the story, pausing after mentioning each action (blessing God, breaking the bread, distributing the bread, blessing God, sharing the cup) to perform it. Communicants remained seated while deacons served them the bread and wine. The mood was somber as the pastor exhorted at length on Christ's sacrificial love and the need for Christians to be penitent and thankful. Puritan sacramental theology was ambidextrous, affirming that the sacraments were reliable seals of what they represented but cautioning against too close an association of the sacramental elements with what they signified.

Puritans' insistence on the freedom of individual churches to follow biblical norms caused worship to be strongly shaped by local events and theological preoccupations. Worship practices changed over the decades in many congregations, particularly in the eighteenth century after Anglican churches appeared in New England and evangelicalism emerged. The Lord's Prayer became more common. Pipe organs and hymn singing were introduced. Services became shorter and standards of church membership were often relaxed to encourage more to partake of the Lord's Supper.

The emphasis on biblical authority and local autonomy made Puritan worship a diverse and influential tradition. It was continued not only by the Congregationalists, as later members of Puritan churches were known, but also by Baptists and Unitarians who separated from them. Baptists believed the Bible stated that baptism requires a profession of faith, thus they rejected infant baptism. Likewise, they usually insisted on baptism by immersion. Unitarians

insisted that a reasonable interpretation of the scripture left no room for the harsh doctrines of Calvinism or the traditional theology of the Trinity.

Quakers

Out of seventeenth-century English Puritanism, George Fox and other early Quakers, or Friends, pursued a more radical reform of worship. They dispensed not only with written liturgies but also with song books, hired clergy, and the rites of baptism and the Lord's Supper. At the heart of Quaker worship is the idea that God is accessible to all as an inner light. True baptism and Communion were inward experiences. They did not require external rites. In Pennsylvania and other settlements, Quakers erected unadorned meetinghouses. These lacked a pulpit, containing only simple benches facing one another. Until well into the nineteenth century, men and women met separately. They sat in silence, waiting to be moved by the spirit. When moved, an individual would speak or sing. Sometimes all would sing together. Elders exercised leadership by gently reproving those who transgressed the boundaries of acceptable speech. They also signaled the end of the meeting.

Beginning in the 1830s, many evangelical Quakers were influenced by revivalism and embraced "programmed worship," that is, prepared sermons, music, and prayers such as used by other denominations. The form of traditional Quaker worship changed little over the years, but as the Quaker tradition developed, silence was sometimes prized not as a means of being open to the spirit but as a practice in and of itself. For some liberal Friends, the goal was not to be vessels of the spirit but through silent reflection to access their true selves.

Anabaptists

Eighteenth-century immigration brought another free church tradition from Europe. Anabaptists, including Mennonites, Amish, and Hutterites, shared with Puritans an insistence on relying on the Bible for the regulation of worship. They tended not to emphasize the authority of the Old Testament, however, and like Baptists rejected infant baptism. Most also rejected the use of set liturgical texts. They did embrace hymnody, however. Many early hymns reflected the witness of their martyrs during persecution by the state churches in Europe. In later years, they adopted hymns from other groups

Anabaptists remained a small tradition in America. Those who assimilated most fully into American society adopted

the worship practices of other evangelicals, although they often retained unaccompanied singing and the practice of foot washing whenever the Lord's Supper was administered. Others, such as the Amish, retained more distinctive traditions of worship, including worship in homes instead of in church buildings.

Lutherans

Among the first generation of Protestants, Martin Luther was the most conservative in his liturgical reforms and retained many aspects of medieval liturgy including images, vestments, the liturgical year, and a traditional structure of lectionary readings. He excised the Mass of prayers that presented it as the church's sacrifice, reducing the canon to the words of institution recounting the Last Supper. He retained, however, the service's traditional structure and many of its texts. He and the Lutheran confessions insisted on the realism of baptism and the Lord's Supper. Sins were truly remitted in baptism; Christ's body and blood were truly present in the bread and wine. They also, however, insisted that most of the ceremonies were not essential. They were *adiaphora*, things indifferent. Accordingly, some Lutherans preserved a traditional form of liturgical worship, while others, especially under the influence of pietism and rationalism, dispensed with liturgical tradition and ordered worship as seemed to best reflect the gospel of salvation by faith alone. Lutherans, however, were united by another legacy from Luther: congregational participation by singing hymns, not just psalms in worship.

Lutherans brought to America no single liturgical text. Swedish settlers in Delaware and Pennsylvania initially maintained the high-church ceremonies and sung liturgy of the Church of Sweden. They later modified their services to make them more like the services of neighboring churches. In 1748, American Lutherans' first synodical body, the Ministerium of Pennsylvania, adopted a German language liturgy prepared by Henry Melchior Mühlberg. Based in part upon the liturgy of a German congregation in London, it was similar to German and Scandinavian liturgies, including prayer texts, a lectionary, the *Gloria in Excelsis* hymn, and the creed. The Lord's Supper was not a regular part of the Sunday service but had to take place on Christmas, Easter, and Pentecost. In 1786, a revised form of this liturgy was printed, and in 1795 an English translation was published.

The influence of rationalism and evangelicalism together with acculturation to American practices drew the services in many Lutheran congregations more in line with free

church traditions. The liturgy prepared for the New York Ministerium in 1814 consisted mainly of rubrics for the minister. In many churches, extemporaneous prayers were substituted for written ones and the pastor's chosen sermon text for the appointed lectionary readings. Yet Lutheran services continued to be distinguished by occasional use of liturgical text, the observance of the liturgical year, and the signing of Reformation hymnody. Continued immigration multiplied the number of Lutheran denominations and liturgies until efforts to develop a common liturgy emerged late in the nineteenth century.

Reformed

The Reformed tradition, whose early European leaders included Huldreich Zwingli and John Calvin, was committed to a thorough reform of worship according to principles derived from the Bible and the early church. Vestments were abandoned, images were removed from churches, and, until the eighteenth century, only biblical texts, chiefly the psalms, were sung in worship. Baptism and the Lord's Supper were shorn of their medieval ceremony. Reformed abandoned the medieval custom, retained by Anglicans and Lutherans, of kneeling for Communion. They sat at tables or later, in pews. They also differed with Lutherans and insisted that Christ's body was not physically present in the bread and wine. This is not to say that for all Reformed the sacraments were "mere" symbols. Calvin, for example, insisted that the bread and wine truly conveyed Christ's body and blood to those who received them in faith. On the whole, worship had a strongly didactic character. Learned sermons were prized and sacramental rites were marked by exhortations that explained their meaning.

The Dutch Reformed in New York and the German Reformed in Pennsylvania both used versions of the "Palatinate Liturgy" of 1563. In either version, it was a pulpit liturgy used by the minister, not a prayer book used by the people. It provided texts for sacramental rites and some instructions and prayers for the regular Sunday service. The Lord's Supper was to take place between six and twelve times a year. While the Dutch were slow to embrace hymns, the influence of Lutherans on German Reformed was evident in their hymn signing and the inclusion in their hymnal of liturgical material, including the collects, epistles, and gospels for Sundays and other holidays and the Apostles' and Nicene Creeds. In both groups, evangelical revivals and the dominance of free church worship in America placed pressure on their distinctive traditions.

In Britain, the adoption of the *Westminster Directory of Worship* in 1645 meant that English Puritans and Scottish Presbyterians would regulate their worship through a collection of guidelines and a few model prayers rather than a written liturgy. For this reason, Presbyterian worship in early America could be placed in the Puritan tradition instead of the Reformed. American Presbyterians adopted a revision of the *Directory* in 1788 which with slight revisions regulated their worship until more substantial revisions in the 1960s. Beginning in the mid-nineteenth century, however, various Presbyterians looked to earlier Reformed texts to revive a distinctively Reformed approach to worship.

Administering the Lord's Supper in multiday "sacramental occasions" was a distinctive Presbyterian practice. At these events, ministers from neighboring churches joined together. Typically, two days of sermons were preached in preparation. As in many churches of the time, those who had prepared to receive Communion were presented with a token that admitted them to the Lord's Supper. On Sunday, the supper itself was framed by long orations. The occasion concluded with services of thanksgiving on Monday. These festivals were frequently attended by large numbers of believers and visited by emotional experiences of conviction and conversion. In the nineteenth century, they became the primary basis for the emergence of the camp meeting.

Methodists

Pietism and the evangelical revivals of the eighteenth century affected all Protestant traditions with their emphasis on the inward experience of God's grace. Strict views of what constituted proper worship were challenged by practices that conveyed spiritual experience. Preaching to the felt needs of the congregation was judged more important than following a set cycle of the liturgical year. Extemporaneous spirit-anointed prayer was preferred over set texts. Evangelical hymns challenged the exclusive singing of psalms. This pietism was expressed in several immigrant groups from the continent including the Moravians (*Unitas Fratrum*) and the Brethren, but the largest tradition to emerge from eighteenth-century revivals was Methodism.

Methodism began as a renewal movement within the Church of England, led by John Wesley, an Anglican priest. Accordingly, Methodist worship was shaped both by Anglican liturgy and the practices of Methodist meetings. These meetings were freely structured, consisting of prayer, preaching, testimony, and the signing of hymns, very many of which were written by John's brother Charles Wesley. Methodist

spirituality focused on the importance of religious experience and testimony to that experience. This was highlighted in the practices of love feast, watch night, and covenant renewal and catalyzed through the intensity of the quarterly conference and camp meetings. These occasional services in turn shaped the nature of the weekly worship.

Methodists adopted the love feast from the Moravians. It focused on lay testimony. The basic format included a hymn, prayer, the taking of bread and water, the relation of religious experience, almsgiving, singing, prayer, and benediction. Often held a few days before the Lord's Supper, it provided an opportunity for reconciliation prior to the sacrament. Admission was limited to members and serious inquirers. This generated criticism, but it enabled women and men, often of different races, to speak openly in a context of Christian love. In the twentieth century, as Methodists came to see themselves more as a churchly denomination and less as a religious society, the love feast fell into disuse.

Watch night services, nighttime services of singing, prayer, and exhortation, initially occurred throughout the year. Gradually, the service came to be fixed on New Year's Eve, and it became the occasion for the renewal of believers' solemn covenant with God, an independent Wesleyan tradition.

Quarterly conferences, a part of Methodist polity, were also important occasions of worship, often combining love feast, watch night, preaching, and the Lord's Supper in a two-day event. Because of the limited number of ordained clergy, these were often the only occasions when Methodists received the Lord's Supper. They were the major worship occasions for early American Methodists and functioned as a regular time of revival, one of the forerunners of the American camp meeting.

In 1784, when Wesley permitted U.S. Methodists to organize separately from the Church of England, he sent the church his own abridgement of the *Book of Common Prayer* to be its liturgy. *The Sunday Service of the Methodists in North America* provided texts for Sunday morning and evening prayer, the Lord's Supper, baptism, marriage, burial, and ordination. It also reflected Wesley's theology of Christian perfection in his redaction of some of the prayers. Wesley stated that the Lord's Supper should be celebrated weekly. This was attempted in some urban areas but soon abandoned.

American Methodists had been shaped more by distinctively Methodist services than by Anglican liturgy, so in 1792, one year after Wesley's death, the liturgies in the *Sunday Service* were revised and placed in the denomination's *Book of Discipline*. In place of morning and evening prayer, directions

were given that Sunday morning worship consist of singing, prayer, the reading of a chapter out of the Old Testament and another out of the New, and preaching. Other services were largely unchanged, though the liturgy of the word was removed from the Lord's Supper, leaving only a sacramental rite to be appended to a preaching service. Preachers generally used these forms for sacraments and rites of passage, though even these were sometimes altered.

Revivalism and the Frontier Tradition

Revivalism generated a distinct free church tradition characterized by a strong focus on preaching for conversion and a pragmatic approach to determining the proper forms of worship. The early distinctive form of this Frontier tradition was the camp meeting, where preachers, often of many denominations, preached for several days to thousands gathered in an outdoor assembly. The landmark 1801 camp meeting at Cane Ridge, Kentucky, was convened as a Presbyterian sacramental occasion, but Methodist quarterly conferences and Separate Baptist preaching assemblies also contributed to the form. While camp meetings often included the Lord's Supper, their distinctive elements were preaching for conversion and the emotional response of the awakened. This introduced a new structure and norm into Protestant worship.

A noted spokesman for this approach was Charles G. Finney, a Presbyterian who served as an urban revivalist. Finney advocated a number of controversial new measures including inquiry meetings, protracted meetings, and the anxious bench where those who were troubled concerning the state of their soul sat to be addressed directly by the preacher. In *Lectures on Revivals of Religion* (1835), Finney defended these innovations, insisting that forms of worship were not set in the Bible or by tradition but should be evaluated on their ability to accomplish the desired goal.

For Finney and many others, this goal was conversion. Whereas other traditions saw worship services as primarily concerned with the worship of God and the ongoing formation of Christians, this tradition tended to see its purpose as reviving lapsed Christians and making converts. This approach was revolutionary but well attuned to Americans' pragmatic spirit and the free-market environment of American religion.

It became the most widespread approach to worship, characterizing the worship of most Baptist and independent churches and strongly reshaping the services of Methodists and other evangelicals. The initial portion of the service was essentially preparation for the sermon. It consisted of singing, prayer, and perhaps scripture readings.

Prayer included intercession for the concerns of the community, but it often focused on making the congregation responsive to the sermon. As the focal point of worship, the sermon played something of a sacramental role, serving as a means of grace. It led to the final part of the service, an invitation or “altar call.” Here, those who wished to respond by professing their faith in Christ might be invited to come forward while the congregation sang a hymn of invitation such as “Just as I Am.”

In many respects, this approach focused worship services on the people, instructing them and appealing to them for a decision. At the same time, it reaffirmed a community’s beliefs and provided a ritual of weekly personal renewal. The songs most characteristic of this tradition are gospel hymns. They are typically phrased in the first or second person as hymns of dedication, testimony, or exhortation. One prolific author of these texts was Fanny Crosby, a Methodist, who wrote “Blessed Assurance,” “Rescue the Perishing,” and thousands of others. Auditorium-style buildings became popular after the Civil War in part because of the attention they directed on the preacher and choir as individuals addressing the congregation and in part because they made members of the congregation visible to one another, creating a sense of community and social pressure.

In addition to the Sunday morning service, this tradition developed several distinct forms of worship. Sunday evening services were typically more informal, with music in a more popular style. In the late nineteenth and early twentieth centuries, assemblies opened and closed Sunday school classes. These also employed popular music and were more likely to feature creative forms of worship, new rituals, and specially written liturgies focused on a didactic theme. Mid-week prayer meetings provided an opportunity for lay testimony and intercessory prayer. Revivals featured a series of special services often led by visiting musicians and preachers. The annual calendar was strongly marked by periodic mission emphases, national holidays, and other special days such as Children’s Day and Mother’s Day.

A distinctive tradition to emerge on the American frontier was the Restoration tradition stemming from Barton Stone and Alexander Campbell. Responding to denominational diversity and objecting to the strict Calvinism of their native Presbyterianism, they insisted on the New Testament as the sole norm for Christian faith and practice. For them this meant baptism by immersion for the remission of sins upon profession of faith, the observance of the Lord’s Supper each Lord’s Day, and the rejection of instrumental music

in worship. Despite observing the Lord’s Supper weekly, this tradition was strongly influenced by Enlightenment rationalism and saw the Eucharist chiefly as a memorial. It also initially rejected ordained clergy, and within the various denominations of this tradition lay presidency at Communion remained customary.

African Americans

African Americans found a home in every tradition, but they were most numerous in Methodist, free church, and Pentecostal traditions. In part, this was due to an emphasis on experience and free expression that created an amenable environment for indigenous African spiritual practices, including spirit possession, dance, and call and response singing. Through their contributions to interracial religious gatherings, African Americans shaped the development of evangelical worship even as it was practiced in white congregations.

While African Americans sometimes worshiped in the same manner as other ethnic groups, many shared several distinctive practices. Many African American Baptist churches maintained a distinction between two parts of a Sunday service. The “devotion” led by the deacons featured long formulaic prayers and the lining out and slow singing of older Protestant hymns. This was followed by “worship” led by the pastor with a much livelier musical style. Walter Pitts has suggested that this two-part service may reflect an African ritual structure that catalyzes spirit possession.

Other characteristics predominant in African American churches include elaborate ritual surrounding the sermon and the Lord’s Supper, including special garments worn by leaders and fixed expressions of ritual language. This heightened ritualization served to affirm human dignity among a historically oppressed group. The ritualization of hospitality through the formal welcoming of guests helped serve the same purpose. Distinctive musical repertoires, including the use of music in the sermon, are also shared by many African Americans across different traditions.

Rationalism

Along with revivalism’s emphasis on emotion and pragmatic approach to forms of worship, the rationalism of post-Enlightenment America reshaped older traditions of worship. Rationalistic Protestants saw the primary purpose of worship as being to instruct and edify. The main task of preaching was to encourage a moral life in worshipers. This led many away from liturgical tradition.

More pervasively, rationalism transformed understandings of the sacraments. Increasingly they were seen simply as “ordinances” that must be followed. Their significance was primarily in the interior reflection they prompted. Unitarian minister Ralph Waldo Emerson reflected this view in 1828 when he explained that the whole aim of the Lord’s Supper “is but this, to make those who partake of it better.” Four years later, he became so convinced that the Lord’s Supper was not necessary that he resigned his pastorate rather than administer it. While Emerson is an extreme example, with little controversy, the Lord’s Supper came to be widely seen as a human act of remembrance and an urging to good behavior. It was not a means of grace in which God took an active role.

Liturgical Revival in the Nineteenth Century

There were occasional protests against this low view of the sacraments and the dominance of revivalism and the free church traditions. These first became prominent in the 1840s. The most theologically substantial was led by John Williamson Nevin and Phillip Schaff, professors at the German Reformed seminary in Mercersburg, Pennsylvania. In the *Anxious Bench* (1843), Nevin presented a scathing critique of revivalism, arguing that the emphasis on the creation of a crisis moment for conversion overturned the gradual work of sanctification. In subsequent works, Nevin rejected not only new measures of revivalism but also the prevailing views of the sacraments. He sought to recover Calvin’s strong affirmation of Christ’s mystical presence and, influenced by Romantic thought, emphasized the role of the incarnation in God’s ongoing work of grace through the church and its sacraments. In 1847, the German Reformed Church authorized the composition of a new liturgy. Nevin helped prepare a “Provisional Liturgy,” released in 1857, and a revised version published in 1866 as *An Order of Worship for the Reformed Church*. These used a full Eucharistic prayer for the Lord’s Supper, rather than simply the words of institution. They created a controversy that persisted until a Presbyterian-style *Directory of Worship* was adopted in 1884. It permitted liturgical diversity, leaving the Mercersburg theology a living practice in a few congregations, but largely a movement to be celebrated by liturgical reformers a century later.

There were also minor movements to recover liturgical texts to provide for orderly worship in other denominations. Charles Baird published *Eutaxia; or The Presbyterian Liturgies* anonymously in 1855, but he was confident enough two years later to release under his own name *A Book of Public*

Prayer prepared from sixteenth-century Reformed liturgies. In 1867, Charles W. Shields argued historically that with minor amendments, the *Book of Common Prayer* was an authentically Presbyterian book. Thomas O. Summers spearheaded the effort to revive Wesley’s *Sunday Service* for optional use, receiving permission to publish the *Sunday Service of the Methodist Episcopal Church, South* in 1867. The (Dutch) Reformed Church in America entertained resolutions to establish more uniformity in liturgy in 1848 and again in 1853. A provisional liturgy published in 1857 was not officially approved by the denomination’s regional bodies. In 1882, a revised liturgy was officially adopted.

Among Lutherans, liturgical recovery was complicated by the large number of Lutheran bodies in the United States, their various languages of worship, and contest over Lutherans’ relations with other Protestants. The most significant development came in 1883 when representatives of three bodies began to prepare a *Common Service*. Guided by Reformation Lutheran orders, they agreed on a basic pattern that included the *Kyrie*, *Gloria*, New Testament lessons, creed, sermon, general prayer, and the Eucharist without a Eucharistic Prayer. Completed in 1888, the service was initially published in different versions by the three bodies. But their joint acceptance of a hymnal containing the *Common Service* in 1917 facilitated their union as the United Lutheran Church in 1918. In the coming years, the service would be adopted by almost all English-speaking Lutherans.

The growing prosperity and cultural sophistication of many Protestants together with the example of the Episcopal Church strongly motivated many of these liturgical efforts. Debating the liturgy in 1873, the Reformed Church in America considered simply adopting the *Book of Common Prayer* as its liturgy. While there was considerable desire to differentiate Protestants from the more controversial doctrines emphasized in the Catholic revival in Anglicanism, many Protestants desired the order, decorum, and congregational participation that characterized the Anglican service of morning prayer. While the whole Anglican service was adopted by few, from the late nineteenth century onward many Protestants, particularly those in upper classes, did model their services on it. Hymnals provided standard orders of worship and supplied texts for responsive readings and tunes for singing canticles and acclamations such as the *Gloria Patri*. In the late nineteenth and early twentieth centuries, these became common practices in many upper- and middle-class Protestant churches, and distinctive evangelical practices, such as Methodist love feasts, diminished.

Concern for social issues led to broadly accepted changes in Communion practice. As the temperance movement grew in strength, many were troubled by the use of fermented wine. In the 1870s, the marketing of Dr. Welch's Unfermented Wine provided an alternative that was eventually embraced by all except some Lutherans and Presbyterians who did not support temperance. The discovery, also in the 1870s, that disease was spread by germs challenged the use of a common Communion cup. Individual cups, filled prior to the service and passed on custom-made trays, began to be used in the 1880s and were practically universal by the 1920s. Lutherans concerned about the disposal of surplus consecrated wine, however, objected to them. Many Lutheran congregations retained the common chalice; others made accommodation for a cup to be filled from a chalice just prior to Communion.

Pentecostals

The Pentecostal revival of the early twentieth century created a distinct tradition of worship found not only in Pentecostal churches but also in the widespread charismatic movement. It is distinguished by its emphasis on spontaneity, experience, and the exercise of spiritual gifts. To the familiar rites of evangelical worship, it added speaking and singing in tongues, the interpretation of tongues, healing, prophecy, being "slain in the Spirit," and physical expressions such as raised hands and holy dance.

For many in the Pentecostal tradition, worship is the Christian way of life. They understand acts of worship as means of communion with the presence of God and all experiences of God's presence as worship. Awareness of the presence of God yields concern for the needs of others. Thus, ministry constitutes an important component of worship services. This includes healing rites and personal intercessory prayers for others, sometimes with the laying on of hands.

Pentecostal worship has been described as having a strongly oral quality. There is generally no written liturgy, and the songs and choruses sung change over time and are often committed to memory. This oral character gives agency to the worshipers. Spontaneity is valued with the Holy Spirit functioning as the ultimate liturgical leader.

Despite the emphasis on spontaneity, there are often three sequential clusters of activities in a service: worship and praise, sermon or biblical-pastoral message, and the altar response rite. Within these three rites there are many gestures and practices that are important: exclamations such as

"Glory," or "Hallelujah," upraised hands, touching, hand-clapping, and communal singing in tongues. The altar response rite is not merely the invitation characteristic of evangelical services but is a time of "tarrying" in God's presence in which spiritual gifts are enjoyed and forms of ministry take place. Baptism in the Holy Spirit is the key rite of passage, but unlike water baptism, it is not a rite that is administered but an experience that must be sought through prayer. Some churches in the Pentecostal tradition have de-emphasized the practice of paranormal spiritual gifts often out of a concern for the perception of visitors and the desire to present a well-organized program to the church.

Liturgy Revival in the Twentieth Century

In the twentieth century, services rooted in the Pentecostal and free church traditions continued to develop and flourish, but there was also a marked increase in liturgical traditions of worship, particularly among mainline Protestants. Methodists published a standard order of service in 1905 and Presbyterians published their first *Book of Common Worship* in 1906. The most significant developments, however, took place after World War I. In the 1920s, there was a surge of interest in the aesthetics and psychological experience of worship. Writers such as liberal Congregationalist Willard Sperry and Congregationalist-turned-Unitarian Von Ogden Vogt emphasized the need for objective forms of worship that suggested the reality of God and did not focus directly on forming various feelings in the worshiper, but rather led them through a set of objective acts of worship. Many writers advised ordering the elements of worship according to the stages of mystical experience they discerned in the prophet's account of his vision of God in Isaiah 6. Protestants of many denominations built churches with divided chancels that focused on an altar or Communion table, not on the choir and pulpit. In this and other ways, their vision of liturgical worship was shaped largely by the practice of the Episcopal Church, particularly on morning prayer and sermon. Service books were published for all traditions, including Congregationalists' *Book of Church Services* (1922). Individual congregations also began to reproduce their own orders of service.

From the 1930s to 1960s, the influence of ecumenism and neo-orthodoxy directed Protestant interest in liturgical worship in a more historical and theological direction. Liturgists in many denominations directed attention to the historic liturgies in their traditions. These forms were often valued for their theological content, particularly their emphasis on

human sinfulness. Greater acknowledgement was also made of the traditional seasons of the church year. Ecumenical conversations directed new attention to historic sacramental theology, yielding a greater attention to the sacraments as conveying God's grace. This ecumenical and historical orientation was reflected in the liturgies and hymns contained in books published toward the end of this era, such as the *Lutheran Service Book and Hymnal* (1958) and the *Methodist Hymnal* (1966). Ecumenical contacts also brought a few Protestants, particularly among Lutherans, into contact with the international liturgical movement, which would soon dramatically reshape much of Protestant worship.

The 1960s began a new era marked by convergence among denominations in liturgical practice, the use by many Protestants of a three-year common lectionary, and an emphasis on forms of worship that would relate to the contemporary world. The decades that followed also saw contemporary worship emphasized in free church traditions, as seeker services developed from the evangelical emphasis on pragmatic forms and praise and worship emerged from the charismatic branch of the Pentecostal tradition. These and other developments are discussed in the essay on contemporary currents in worship.

Worship: Roman Catholic

Roman Catholic worship centers on the Mass. Here scripture is read, prayers offered, and in the sacrament of the Eucharist bread and wine become the body and blood of Christ. Together with the liturgy of the hours (formerly the divine office), a cycle of daily prayer, the Mass and the celebration of the other six sacraments constitute the church's official liturgy. Various popular devotions also play a role in public worship.

Reforms authorized by two ecumenical (or churchwide) councils shaped the history of worship. After the Council of Trent (1545–1563), the liturgy was officially distinguished from popular devotions and standardized in the *Roman Missal* (1570) and other books that prescribed the words and actions of liturgy throughout the world. Despite a high degree of standardization, worship practices varied somewhat among ethnic groups and changed in some ways over the centuries. These changes pale in comparison to the substantial revision of liturgical books authorized by the Second Vatican Council in 1963. Dramatic changes followed: revised rites reflected new theological and historical judgments, liturgical language shifted from Latin to modern languages, the practice of popular devotions declined, and cultural diversity in liturgy was advocated. These changes began a new era in the long history of Catholic worship. They also generated controversy and resistance, and at the beginning of the twenty-first century, several were being reversed.

Worship after Trent

To understand Catholic worship between Trent and Vatican II, it is useful to consider four elements: authority, sin, ritual, and the miraculous. Authority rested with the clergy who alone had the power to perform the sacraments. The chief

concern of worship was to secure God's grace upon sinners. The liturgy was replete with words and gestures emphasizing human sinfulness. Each Mass presented Christ's sacrifice on the cross anew to God as a meritorious sacrifice for particular intentions. These could be temporal or spiritual, but most commonly the Mass and other devotions were offered for the dead, to reduce the suffering of the souls in purgatory and speed their entrance into heaven.

The efficacy of the sacraments and devotions required precise performance of rituals. In the Roman rite to which most Catholics belonged, liturgies were conducted in Latin by a priest. Mass took two major forms; in both the priest usually faced an altar with his back toward the people. At Low Mass he said the liturgy, and an attendant made the necessary responses. At High Mass he chanted the liturgy; a deacon and subdeacon assisted; and a choir sang the *Kyrie*, *Sanctus*, and other parts of the Mass. Portions of the Mass had to be said inaudibly, and often all of the Low Mass was spoken this way.

Laypeople were required to attend Mass every Sunday. Kneeling in silence, the people might follow the Mass in a bilingual translation. More typically they performed other devotions. Some said the rosary, a devotion focused on the Virgin Mary. Others followed books that provided prayers appropriate to various parts of the Mass or forms for making an act of spiritual communion.

The Mass focused on the miraculous transformation of bread and wine into Christ's body and blood. As the moment of consecration approached, bells rang to direct attention to the altar. After consecrating the bread and the wine, the priest elevated each so they could be seen and adored. All had a clear view of the elevated sacrament and of the central tabernacle where consecrated wafers were reserved for Communion outside of Mass and enshrined for adoration. The people's role was to pray silently.

While the Council of Trent had advised Catholics to receive Communion at each Mass they attended, they were required to receive Communion only once a year. Many regarded eating Christ's body as too holy an act to be performed frequently. Prior to Communion, it was necessary to receive the sacrament of penance and not to eat or drink after midnight. Since priests were also under this obligation, Masses took place in the morning. The laity often received Communion not during Mass with the priest but before or afterwards. They received only the bread, not the wine. They did not touch the bread; the priest placed it on their tongue. All this served to emphasize the authority of the priest, the

sinfulness of humans, the importance of ritual, and the miracle of the Eucharist. These elements also characterized the other six sacraments: baptism, confirmation, penance, holy orders, matrimony, and extreme unction.

The liturgy structured time through a cycle of daily prayers and annual festivals. Monastic communities held eight daily services, known as the divine office. Clergy and members of religious orders were also required to pray them, though not in community. Most Catholics experienced the divine office only if they attended the parish service of Vespers on Sunday afternoon. The liturgical year included both the cycle of seasons and festivals dated with respect to Christmas and Easter and saints days occurring on fixed dates.

In addition to the liturgy, public devotions that emerged in the late medieval and early modern period formed an important part of Catholic life. These included the Forty Hours Devotion, benediction of the Blessed Sacrament, and holy hours, together with public celebrations of the stations of the cross, the rosary, prayers to the Sacred Heart of Jesus, and other devotions. These devotions, unlike the Mass, were celebrated in the vernacular and could take place in the evening.

Ethnic Diversity and Public Celebrations of Devotions

Worship in Spanish colonies reflected Baroque culture and featured devotion to many saints. Along with preaching the pageantry of the liturgy and outdoor processions on festival days served missionaries as tools of evangelization. The commemoration of Christ's passion in Holy Week received particular emphasis, with members of lay organizations known as *penitentes* engaging in public displays of extreme devotion.

In British colonies, a plain-style Catholicism prevailed, shaped in part by the values of the Enlightenment and in part by legal restrictions on Catholic public worship. A typical Mass was said by a traveling priest, either in a church or in the parlor of a house where he most likely dressed in street clothes, not vestments. Since priests only visited infrequently, nearly all present made their confession and received Communion. In the absence of a priest, laity were advised to meet on Sundays for English prayers and readings.

English also played a significant role in the Mass. Prior to becoming the first bishop of Baltimore in 1789, John Carroll argued for the celebration of the sacraments in the vernacular. In 1791 Bishop Carroll showed more caution but still instructed that on Sundays and feast days the gospel

be read in English. He also specified English prayers to be said aloud by the people. Through the first several decades of the nineteenth century, significant portions of other sacramental liturgies were often said in English.

The worship favored by other early American Catholics was shaped by the visual extravagance and the connection between the senses and religious sentiment characteristic of the Baroque period. Ambrose Maréchal, who became archbishop of Baltimore in 1817, lamented the lack of color and statuary in the Classical Revival cathedral commissioned by Carroll. He also attempted to prevent the publication of an English translation of the missal. Plain-style liturgical piety was largely interior and focused on the Mass and the divine office, with little attention to the saints. The piety encouraged by Maréchal, on the other hand, emphasized the visual aspects of Catholicism and devotion to the Sacred Heart of Jesus, Mary, and other saints. These were increasingly represented in churches by colorful statues and windows.

As immigration surged after 1840, other groups brought diverse worship traditions. Among the Irish, silent Low Masses were nearly universal. Germans insisted that devotions and sermons be conducted in German. They used more music in worship, including, by the twentieth century, congregational German hymns corresponding to the parts of the Mass. Poles and other Eastern Europeans emphasized special services linked to the liturgical year, such as a vigil before a replica of Jesus' tomb on the Holy Saturday.

Given traditions of anticlericalism among Mexican and Italian Americans, their piety did not center on the Mass and clergy-led devotions. Instead annual festivals involving street processions, such as the one in honor of Our Lady of Mount Carmel among Italians, were central rituals of public worship. Mexican Americans emphasized attendance at rites of passage such as baptism, weddings, and funerals and at church on Ash Wednesday and Good Friday. As these groups became more Americanized, however, they increasingly conformed to the Mass-and-sacraments Catholicism promoted by the Irish American hierarchy.

The greatest liturgical diversity came with immigrants from Ukraine, Romania, Syria, and neighboring lands that brought Eastern-rite Catholicism to North America. Although in communion with Rome, these churches do not follow the Roman liturgy but rather ancient Eastern liturgies in their own ancient or modern languages. Most are known as Byzantine or Greek Catholic and use the same liturgies as the Eastern Orthodox, principally the Liturgy of St. John Chrysostom. Others, including Armenians and Copts, use

liturgies shared with Oriental Orthodox churches. Maronites, members of a Lebanese rite, have their own liturgy.

The period from 1840 to Vatican II was marked by a strong emphasis on popular devotions. One widespread devotion was to the Sacred Heart of Jesus. Defined by visions received by St. Margaret Mary Alacoque between 1673 and 1675, it focused on Jesus' love and continual suffering from human ingratitude. Pius IX made the Sacred Heart a universal feast in 1856. First Friday communions as reparation for Jesus' suffering became common, as did the observance of a "holy hour" on Thursday evening to share in Christ's sufferings in the Garden of Gethsemane. The Forty Hours Devotion was also widely observed. Introduced to the United States in 1853, the core of this devotion was the exposition and veneration of the Blessed Sacrament over three days. The event began with an elaborate procession and included special liturgies, talks by a visiting priest, and the entire parish receiving Communion. Public performances of devotions, such as the rosary or prayers to a particular saint, largely replaced Vespers as the Sunday afternoon service. Many parishes scheduled a midweek devotion as well. Like Vespers, evening services were always concluded by the benediction of the Blessed Sacrament, in which the priest blessed the people with a consecrated host.

In 1886 Leo XIII extended devotions into the Mass when he stipulated that the priest lead certain prayers to Mary, St. Michael, God the Father, and the Sacred Heart of Jesus. The papacy's role in promoting and standardizing devotions fostered an international Catholic culture centered in Rome. Devotionalism strengthened the bonds of Catholic identity and community, marking a boundary between Catholics and their Protestant neighbors. Devotions also reshaped the year: May and October focused on Mary, March on St. Joseph, June on the Sacred Heart, and November on prayers for the dead.

The popularity of devotions rested largely in the fact that they were celebrated in the vernacular, involved active participation by the people, and expressed a warm and affective piety that united the personal concerns and life experiences of the devotee with the emotional experience of Jesus and the saints. They also partook of the sentimental culture of nineteenth-century America. At the same time, they reinforced Catholic and ethnic identity.

Frequent Communion and the Liturgical Movement

In the twentieth century two reform movements reshaped Catholic worship. In 1905 Pius X called the faithful to

frequent, even daily, Communion. Rather than an exceptional event preceded by scrupulous preparation, Communion was to be a regular event that sustained a holy life. Pius advised that if only venial sins had occurred since one's last confession, the sacrament of penance was not required prior to Communion. In 1910 he lowered the age for first Communion. Formerly Catholics had made their first Communion between ages ten and fourteen; soon it was a rite of passage for seven-year-olds. Confirmation, which had taken place before Communion, now became an adolescent rite. With vigorous promotion by many clergy, the frequency of Communion increased. By the 1950s monthly reception was the norm for pious Catholics, and some communed daily. Alterations in the pre-Communion fast facilitated frequent reception. In 1953 Pius XII announced that drinking water did not break the fast. In 1957 the fast was reduced to three hours for solid food and one hour for liquids other than water, thus facilitating evening Masses.

The other force reshaping worship was the liturgical movement. This movement argued that since the texts of the liturgies showed that they were communal services, the laity should not simply witness them but fully take on the role assigned to them. In 1903 Pius X provided a rallying cry when he called "active participation" in the liturgy by the laity the "most important and indispensable source" of the true Christian spirit. This European-centered movement began in the United States in 1926 when Virgil Michel, a Benedictine at St. John's Abbey in Minnesota, founded the journal *Orate Fratres* (after 1951 *Worship*). Michel emphasized that the liturgy's communal character was the foundation of the reform of both church and society. The liturgy showed that the people were called to an active role in the church's work and demonstrated the mutual obligations of members of a Christian society to one another.

The initial focus of the liturgical movement was on increasing appreciation of and participation in the existing liturgy. Easy-to-follow service books such as *My Sunday Missal* (1932) enabled worshipers to follow the words and action of the Mass and thus "pray the Mass" silently, instead of performing other devotions. Beginning in 1940 annual Liturgical Weeks in different cities promoted the movement. By the 1950s in a few places, worshipers were singing the responses at High Mass. In other places a "Dialogue Mass" was practiced where worshipers recited the responses. To facilitate this, sometimes one priest said Mass in Latin at the altar while another led the congregation through the Mass.

This cumbersome arrangement demonstrated the need for reform of liturgical texts and regulations. Beginning in 1927 some European countries received approval for translation of the *Ritual*, containing the services of baptism, marriage, and extreme unction, into the vernacular. Not until 1946, however, did a few U.S. Catholics form the Vernacular Society to lobby for English liturgy. In 1954, despite the opposition of high-ranking American bishops, a newly translated *Ritual* was approved for the United States. As the bishops' resistance suggests, the spread of the liturgical movement in the United States was limited. It was strongest in the Midwest and among German Americans, but many parishes were almost untouched by it and, thus, unprepared for the dramatic changes that soon arrived.

Vatican II and Changes in Practice

The Second Vatican Council (1962–1965) overwhelmingly approved the Constitution on the Sacred Liturgy in November 1963. Fundamental to the Constitution was the call for the "full, conscious, and active participation" of the laity in the liturgy. It also called for liturgical books to be revised so the liturgy would more clearly express its meaning. The first reforms took effect on November 29, 1964. Most of the liturgy was conducted in English. A layman read a scripture lesson and led general intercessions. (Women were formally permitted to be readers in 1970.) The people were instructed to sing an opening song, to say the responses, and to sing the parts of the Mass formerly sung by the choir. The priest faced the people throughout the service, standing behind a freestanding altar. At Communion in many churches, people received standing and were offered consecrated wine as well as the bread. The pre-Communion fast was reduced to one hour, and the devotional prayers introduced by Leo XIII were omitted.

Early opposition to these changes was not widespread. They were greeted with an attitude of acceptance rooted in Catholic obedience to authority. Many people were confused by the changes, and the reasons for them were not well explained in some parishes. Others were disoriented at being asked to say things previously delegated to servers or the choir. Still others relished the ability to hear and participate in the liturgy in their own language. While official reforms emanated only from Rome, the spirit of the reform and the knowledge that further changes were forthcoming encouraged experimentation. Collections of experimental liturgies circulated widely. This trend increased in 1967 when permission arrived for the entire

liturgy to be said in the vernacular. An English liturgy required new musical settings along with English hymns and songs. Some were taken from Protestant or Catholic collections. Others were newly composed, often in a folk style. The guitar-accompanied folk Mass soon became a common feature of Catholic life.

Widespread theological and cultural movements gave liturgy a much stronger emphasis on the immanence of God. The chief understanding of the Mass was no longer that it was a sacrifice performed according to a precise ritual but rather that it was a celebratory meal. Thanksgiving was emphasized more than sacrifice, comprehension more than mystery, community more than contemplation, celebration more than reverence. The language employed in the official translations that began to appear in 1967 was simple and direct. Required vestments were simplified, and new vestments were made in simpler fabrics than the traditional silk brocade. Worshipers' attire also changed as American culture became more informal.

These changes in Catholic worship dramatically accelerated movements for liturgical reform among Protestants. Many denominations joined Catholics in adopting a liturgical agenda focused on the participation of the people in a weekly celebration of word and sacrament. This produced extensive convergence in the theology and practice of worship among Catholics and Protestants.

Church architecture also reflected this worldly emphasis. Kneeling rails that separated the people from the altar disappeared. In many churches the people were arranged surrounding the altar. In most churches the tabernacle was moved away from the center axis of the church. Elaborate decorations were deemed distracting with a plain, modern aesthetic valued instead. Rather than the early-modern throne room, or Gothic cathedral, the model liturgical space was an early Christian house church or a modern living room.

The emphasis on the Eucharist as a meal was also reflected in the practice of Communion. Churchgoers received Communion much more frequently. By 1976 more than half of those attending any given Mass received Communion. Twenty-five years later nearly all attendees did so. Some parishes replaced wafers with Eucharistic bread that looked and tasted like real food. Laypeople were authorized to assist priests in distributing Communion in 1973. In many places they began to receive Communion in the hand instead of on the tongue, and this widespread but controversial practice was formally permitted in the United States in 1977. All of these changes had the goal of transforming the

liturgy from an action performed by the priest to the work of the entire gathered community.

Reformers promoted the liturgy as the official and communal prayer of the church and deemphasized devotions as reflecting a sentimental and individualistic piety. This was one factor contributing to a major decline in popular devotions. Since the Council of Trent, devotions had occupied a second-class status in both official and popular theology. Now the Mass was just as accessible to laity: like the devotions, it was conducted in the vernacular accompanied by music in a popular style. Devotions had lost their distinctive role. Many devotions had been associated with a Catholic subculture and the "God-and-country" piety that prevailed in the Cold War. The increasing integration of Catholics into American society and the fragmentation of Cold War consensus by the Vietnam War and the civil rights movement took their toll on devotionism. Furthermore, television and other innovations competed for evening leisure time. Services that had been popular for many decades, including Forty Hours devotions and First Friday Communion, rapidly disappeared.

A new Catholic charismatic movement, which began in 1966, expressed some of the piety once expressed through devotions. Charismatic prayer meetings were typically held outside of the church proper and incorporated Bible reading, singing, testimonials, fellowship, speaking in tongues, and sometimes healings. The movement influenced the style and music of liturgical worship, particularly on retreats and in other informal settings.

Process of Liturgical Reform

The revision of the liturgy took place in three major steps. First, instructions or revised liturgical books were prepared in Latin by an international body centered in Rome. From 1964 to 1970 this was the Consilium for the Implementation of the Constitution on the Liturgy. After that the work was taken up by the Congregation for Divine Worship. Second, bishops oversaw translation into their nations' vernaculars. Bishops of English-speaking countries created the International Commission on English in the Liturgy (ICEL) to prepare a common English translation. Third, the reformed texts were implemented at the local level.

The Consilium consulted with many scholars, including those of Protestant and Orthodox churches. They were strongly influenced by research into early Christian worship. Particularly important was the *Apostolic Tradition*, a text believed at the time to date from early third-century Rome.

While many parishioners encountered the changes as “the new Mass,” it was for others a liturgy shaped by the primitive forms of Christian worship. Most of the new Latin liturgies were completed between 1969 and 1973.

Official English translations appeared over a twenty-year period. Among these were liturgies for the baptism of children and marriage in 1969, the *Roman Missal* in 1973, and the Rite of Christian Initiation of Adults in 1986. Following the methodology of dynamic equivalence, authorized by Rome in 1969, these translations sought to communicate the meaning of a Latin passage in a manner appropriate to modern English. They employed a spare English style and simplified the content of many Latin prayers.

A new cycle of scripture readings for Sunday Mass was introduced in 1969. This lectionary stipulated a reading from the Old Testament and a Psalm in addition to the Epistle and Gospel and replaced a one-year cycle with a three-year cycle, providing for more of the Bible to be read in worship. Many publishers provided extensive homiletical resources keyed to the lectionary. Required at Sunday Mass, homilies were typically about ten minutes long and focused on an exposition of the Gospel reading. With the new lectionary came a liturgical year that reduced the number of feasts that could take precedence over Sunday in order to emphasize the centrality of the weekly celebration of Christ’s death and resurrection. Protestants were attracted to the three-year lectionary and widely adopted it, particularly in the modified form known as the *Revised Common Lectionary* (1992).

The high point of the liturgical year is the celebration of Easter, particularly the Triduum or “Three Days” liturgy composed of the Mass of the Lord’s Supper on Holy Thursday, Liturgy of the Lord’s Passion on Good Friday, and the Easter Vigil in the night before Easter Sunday. Initially reformed in 1951, it was further revised after Vatican II. The Easter Vigil is the principal and most complex service of the liturgical year and the culmination of the Rite of Christian Initiation of Adults (RCIA). Modeled on the practice of the early church, RCIA is a multistage rite through which adults entering the Catholic Church are brought before the congregation on several Sundays for special prayers while participating in a series of classes. They then receive the sacraments of initiation (baptism, confirmation, and Eucharist) in the Easter Vigil. (Those previously baptized in other Christian groups are not rebaptized.)

Pastoral rites also changed. The sacrament formerly known as extreme unction was restored to its original purpose of the anointing of the sick and began to be practiced not only at

the bedside but also in communal services. Its popularity benefited from the charismatic movement’s emphasis on healing and an increasingly holistic approach to health. The sacrament of penance became known as reconciliation. New forms of confession were introduced, including face-to-face confession where pastoral counseling might occur and seasonal communal penance services that included opportunities for individual confession. Before any reform of this rite, however, the frequency of confession dramatically declined. Surveys show that the number of Catholics going to monthly confession dropped from 38 to 17 percent between 1965 and 1975, while the number who stated that they “never” or “practically never” went to confession increased from 18 to 38 percent. These numbers never recovered.

There were many reasons for this change. Advocates of frequent Communion had long advised that one did not need to go to confession to be absolved of venial sins prior to Communion, and some priests impatient with hearing minor sins discouraged frequent confession. Also, laity now heard and recited publicly the penitential rites of the Mass, which may have seemed to many to serve the same function as confession. On the other hand, many liturgical reformers actively sought to orient Catholics away from a penitential piety. Finally Paul VI’s unexpected reaffirmation of the ban on contraception in 1968 dissuaded many from confession.

Implementation of the reforms at a local level generated a new network of liturgical experts and resources. These were represented by organizations such as the Federation of Diocesan Liturgical Commissions; the Bishops’ Committee on the Liturgy; Liturgy Training Publications; and the North American Academy of Liturgy, an interfaith scholarly group. Many parishes hired liturgy directors in addition to music leaders and clergy. While the goal of this new cadre of liturgical leaders was active participation by the laity, many churchgoers experienced liturgical experts as heavy-handed and unsympathetic to existing habits of piety. Dramatic changes in worship left some Catholics feeling a “piety void” and others feeling disrespected by a movement that intended to empower them. On the other hand many embraced the implementation of the reforms, and others complained that they did not go far enough.

Liturgical Reform and Cultural Diversity

In calling for full participation in the liturgy, Vatican II not only permitted the translation of the liturgy but also the development of “legitimate variations” for different cultural groups. Minority ethnic groups in the United States,

especially Latinos and African Americans, have insisted on the development of distinct liturgical traditions. African Americans had conformed to Euro-American Catholic practices, but in the context of Vatican II and the civil rights movement, a desire for a distinctively African American Catholic liturgical tradition emerged. Black Catholic liturgies incorporated highly rhythmic music, musical improvisation, dance, spontaneous participation, and richly poetic prayer and preaching.

By the 1980s, however, many black Catholic leaders were frustrated by the U.S. hierarchy's support for merely "adapting" the liturgy to African American culture, since this approach assumed that the European culture imbedded in the Roman rite was normative. They, like other Catholics around the world, spoke of the need for "inculturation," an approach whose goal was for the liturgy to express itself in the forms of speech, song, and action belonging to each local culture. This meant recognizing that the Roman rite expressed Catholic worship in forms drawn from European culture and that the liturgy should be authentically expressed and enriched through African American culture.

Controversy over the extent of change, and the proposal to create a separate African American liturgical rite, resulted in a small but well-publicized schism when George A. Stallings founded Imani Temple in 1989. In 1994 Rome's Congregation for Divine Worship and Discipline of the Sacraments (CDWDS) issued the instruction *Varietates Legitimae* embracing the language of inculturation but limiting its extent and insisting on the need to maintain the unity of the Roman rite. Services employing African American music and dance continued, but official liturgical texts incorporating African American forms of language and action were not forthcoming.

While African Americans sought to develop a distinct tradition, Latino/a Catholics sought to have their historic traditions more fully accepted within the Church. The popular devotions that had developed over the centuries of Latino/a Catholic experience did not suffer the decline that such devotions did among U.S. Catholics at large. The distinctive impetus of liturgical reform among Latino/a Catholics has been to recognize the importance of popular devotion and break down the division between it and the liturgy. This effort has forced proponents of liturgical reform to reassess many of their ideas about the relationship between inculturation and popular devotion. As the Latino/a population in the United States has grown, Spanish Masses have become more common throughout the nation and parishes.

Spanish was recognized as a liturgical language of the United States in 1985, allowing American bishops to standardize the various translations in use. Another sign of the growing Latino/a presence is the new shrines to Our Lady of Guadalupe erected in many churches. In 1999 John Paul II named her patroness of the Americas, making her feast obligatory throughout the hemisphere. Early morning celebrations now occur in many parishes each December 12, her feast day.

Opposition to Reforms

Since the late 1960s many Catholics have criticized the liturgical reforms, and a small number have rejected the authority of these and other reforms from the Second Vatican Council. The Society of Pius X, founded by French Archbishop Marcel Lefebvre, is the largest such group in the United States, claiming some 100 chapels and 60 priests in 2008. More significant are those who recognize the legitimacy of the reforms but are critical of the way the Constitution on the Sacred Liturgy was implemented. These critics seek a greater degree of formality, tradition, reverence, and distinctively Catholic identity. They favor the restoration of the tabernacle to a central position in the church; a preference for classical or traditional styles of architecture, music, and vesture; traditional signs of reference for God and the Eucharist, such as bowing and kneeling; clearer demarcation between the roles of priest and people; less emphasis on inculturation; and more emphasis on the formal unity of the Roman rite. They also seek renewed attention to Marian piety, Eucharistic adoration, and other devotions.

Leaders of the liturgical reforms were not unsympathetic to some of these criticisms. ICEL had begun a revision of its translation of the *Roman Missal* in 1982, aiming to replace the sparse language and plain style of the existing translation with language in a more elevated style that would communicate more of the complexity of the Latin. It also, as in the previous translation, prepared additional liturgical material, including opening prayers corresponding to the three-year lectionary cycle.

By the 1990s, however, conservative criticisms of the liturgy began to be backed by official power. While early reports in ICEL's slow and deliberate process generated little comment, a 1992 report to U.S. bishops yielded well-publicized criticism. In particular, objections were raised to the use of inclusive language and the free translation of the Latin. These proposed changes provided a cause around which liturgical conservatives coalesced. The instruction on inculturation issued by CDWDS in 1994 indicated Rome's

intention to pursue a more conservative liturgical policy. By the mid-1990s several organizations had been formed, including a scholarly society (Society for Catholic Liturgy), a popular reform caucus (Adoremus), and a graduate program (the Liturgical Institute at Mundelein Seminary).

After further revision the revised ICEL translation of the *Roman Missal*, which it, as in 1974, called by the more ancient term *Sacramentary*, was approved by U.S. bishops and forwarded to Rome for the required *recognito* in 1997. The same year CDWDS rejected ICEL's recently submitted translation of the ordination rites. The same fate befell the *Sacramentary* in 2002. In the interim the Holy See announced the publication of a new edition of the *Roman Missal*. The corresponding edition of the *General Instruction of the Roman Missal (GIRM)* was released in 2000, two years before the Latin missal. The revised missal is less significant for changes in the Latin text than for changes in how the Mass is translated and celebrated.

The translation will be in accordance with the principles contained in the instruction *Liturgiam Authenticam* issued in 2001 by CDWDS. Rejecting dynamic equivalence, it insists on great fidelity to the Latin. It also cemented recent changes giving Rome more control over translation. Subsequently, a completely reorganized ICEL prepared translations that were Latinized in sentence structure and word choice. In 2006 U.S. bishops began the multiyear process of approving these new translations. They rejected some proposed changes because they were too awkward in English and departed too far from the familiar translations. However, they did approve changes in commonly recited parts of the Mass. For example, Catholics will respond "and with your spirit" instead of "and also with you" and will sing "God of hosts" rather than "God of power and might." Proponents of such changes see not only a greater fidelity to the Latin but also the preservation of biblical and patristic allusions. Opponents see a departure from ecumenically agreed upon translations and a rejection of living language in liturgy.

Changes in the actions of the Mass mandated in the revised *GIRM* and the 2004 instruction from the CDWDS, *Redemptionis Sacramentum*, have been implemented. Many have the effect of widening the distinction between priest and people and increasing the devotion shown to the Blessed Sacrament. Priests may no longer permit laypersons to preach the homily. Likewise laity may participate in distributing Communion only when not enough priests and deacons are present, not as a means of manifesting their participation in the liturgy. While Communion continues to take place standing, the laity are to make the gesture of

reverence authorized by their bishop before receiving, most commonly bowing.

The most dramatic sign of the reconsideration of liturgical reform came in 2007 when Benedict XVI gave general permission for the celebration of the pre-Vatican II Latin Mass. More limited permission had been given in 1984. The Mass as revised after Vatican II may also be celebrated in Latin. Although it is doubtful that Latin Masses will be widely celebrated, they draw a faithful congregation in at least one church in most metropolitan areas. While they are a reaction to liturgical reform, these Latin liturgies are not typical of liturgy before the Council but reflect the influence of the liturgical movement. The people are fully aware of the liturgical action of the Mass. They often follow the liturgy in bilingual missals and take their part in saying and singing the responses.

The conservative trend is also reflected in a modest increase in popular devotions. The emphasis on reclaiming tradition directed new attention to devotions, as did the sense among some liturgists that the reform had been too centralized and not significantly engaged with popular piety. Official support for increased attention to popular devotion has come in several forms, including a 2001 Directory on Popular Piety and the Liturgy from CDWDS.

The emphasis on tradition is driven by a number of factors. Some church leaders feel that one reason for the dramatic decline in priestly vocations is the degree to which the unique identity of the priesthood has been deemphasized. A reversion to more hierarchical norms is intended to address this problem. Also, many Catholics appreciated the more open liturgical style of the post-Vatican II era as a contrast to earlier constraints and within an intellectual framework shaped by the religious education of the pre-Vatican II era. More recent generations do not bring this background to the liturgy. The amount of time devoted to religious education has dramatically decreased since the Council. Among a generation not schooled in tradition, traditional forms seem new, substantial, and empowering. This turn toward tradition has also been noted among many observers of post-baby boom generations across American religion. At the same time the reforms stemming from the Second Vatican Council have set the context in which Catholic worship in America will continue to develop in the twenty-first century.

Zen Buddhism

Although plagued by misunderstandings and inaccurate stereotypes, Zen has the distinction of being one of the most recognizable forms of Buddhism to Americans. A diverse movement, Zen coalesced in China (beginning perhaps in the seventh century CE but taking five or more centuries to fully develop) around a mythical lineage of great patriarchs who passed special teachings down from the original Buddha in India. This emphasis on lineage transmission replicated Confucian filial piety models within the celibate Buddhist monastery, and by venerating new “Zen masters” as living Buddhas, these lineages helped shift attention from India as the homeland of Buddhism to China as the authentic inheritor of the Buddhist tradition. Zen also came to be associated strongly with meditation practice and the “sudden enlightenment” side of the debate within Chinese Buddhism over whether awakening occurred in a gradual or all-at-once manner. An extremely literary movement, Zen eventually produced many new genres of Chinese Buddhist writing, especially collections of earlier patriarchs’ alleged sayings, known as koans. Originally scriptures intended for study, koans came to be used as innovative meditation techniques designed to push the mind toward dramatic epiphanies. From China, Zen was taken to Korea, Vietnam, and Japan. It is from Japan in particular that Zen has impacted North America (Zen is the Japanese term for the school; in China it is Chan). It should be noted, however, that Chinese, Vietnamese, and to a lesser extent Korean forms of Zen also are operating in America. Among the immigrant populations these are typically mixed with other forms of Buddhism, while for newer

converts to Buddhism the characterizations herein of Japanese-derived Zen practice largely apply also to forms originally taught by missionaries from China, Vietnam, and Korea.

History

Japanese Buddhism came to have a more highly sectarian nature than in most parts of East Asia, and Zen entered Japan at the historical moment when this sectarianism was on the rise. Eventually this gave rise to a number of competing Zen sects. The largest of the Zen sects in Japan is Soto Zen. Its meditation techniques focus on silent illumination rather than koans, letting thoughts and feelings arise and pass without any particular meditative focus, since perfect seated meditation is itself akin to Buddhahood in this school. Rinzai Zen is a broader umbrella, covering more than a dozen different major lineages that developed in Japan, although with fewer total members than Soto. This form focuses on koan study and was strongly associated with the ruling classes, including the samurai, giving it an aristocratic nature that often included personal cultivation through the fine arts. Obaku Zen, an outgrowth of further Chinese developments in the Rinzai school, is a small school that combines more overt Pure Land Buddhist material than do other forms of Japanese Zen. Pure Land is a school of Buddhism that tends to deify the Buddha and looks for rebirth in a mythic “pure land” or ideal realm for those who put their faith in the Buddha. There are also Zen new religious movements of the modern age, such as Sanbo Kyodan, a tiny reformist sect in Japan that has had an outsized influence on American Zen.

Given Zen’s prominence in current English-language works on Buddhism, it is perhaps surprising to find that it

received no particular attention in the first encounters of Americans with Buddhism. Nineteenth- and early twentieth-century travelers to Japan gave it no special notice, and early on it was Jodo Shinshu Pure Land Buddhism that seemed to act as the primary Japanese conduit for information on Buddhism to the West. This changed only very slowly. Zen's first big splash in the West came at the famous 1893 World's Parliament of Religions, where the Rinzai teacher Soen Shaku (1859–1919) delivered a well-received address along with representatives of several other forms of Buddhism. Soen was a modernist and reformer, and in 1897 he sent his lay student Suzuki Daisetsu (1870–1966; known in the West as D.T. Suzuki) to assist influential liberal religious publisher Paul Carus (1852–1919) in his Chicago-based Buddhist translation and dissemination efforts. Suzuki was key in helping to get early information about Zen into English-language forums, and his apprenticeship during this period was an important prelude to his extremely successful efforts to promote a highly idiosyncratic vision of Zen to America during the mid-twentieth century, by which time he had become a major scholar of Buddhism.

Japanese Immigrants and Missionary Zen Priests

Zen's history in America largely breaks into two different, though at times overlapping and mutually influencing, streams: the first, the Japanese immigrants who brought Buddhism with them as their family faith, the second, the Americans from a non-Buddhist (and largely non-Asian) background who took up elements of Zen as individuals. Japanese immigration began in the 1860s and increased dramatically in the 1880s and 1890s. Most immigrants were members of non-Zen schools of Buddhism, but there were nonetheless some Zen Buddhists in the mix, and they began to form new Buddhist institutions in the West. The first temple was established in Honolulu in 1913, with others being established in Hawaii and on the West Coast in following years. The Japanese experienced intense prejudice, both racial and religious, and their temples often became places of refuge, where Japanese could be spoken safely and taught to the children, traditional foods and arts practiced, and solace sought through rededication to religion. Such discrimination peaked in two particularly significant events: the 1924 Immigration Act, which banned most of further Japanese immigration to America, and the 1942 forced expulsion of West Coast Japanese Americans from their communities into internment camps, based on unfounded suspicions about their loyalty during World War II. With

immigration cut off and then most of their assets confiscated, Japanese American Buddhism, Zen included, was dealt severe blows that prevented it from growing widely in North America. Nonetheless, pockets of immigrant Zen practitioners and their descendants kept the faith alive, holding services in the wartime camps and eventually reopening their temples when they were released. These temples still are few in number, and while they have assimilated into American society—adopting English, pews, Sunday services, boards of directors, nonprofit status, and other elements—their primary patrons are still Japanese Americans, with the temple continuing to serve as an ethnic community center as well as a religious organization.

Beyond the numbers of immigrants who came to America for economic reasons, a smaller variety of missionary Zen priests came in the first half of the twentieth century to work among Americans of non-Asian background. Priests such as Sokei-an Sasaki (1882–1945) in New York City (beginning 1930) and Nyogen Senzaki (1876–1958) in Los Angeles (beginning 1922) founded small mediation-oriented study groups. Numerically insignificant, these pioneers nonetheless contributed to the later Zen boom by beginning to work out a vocabulary for Zen Buddhism in English and fostering early networks among alternative spiritual seekers that would later prove useful to successive waves of Buddhist sympathizers in the 1950s, 1960s, and 1970s. Their memory also served later generations of American Zen practitioners in the production of an imaginative lineage of Zen masters in the West, domesticating Zen in America in a process similar to how it originally arose in China.

Zen in the 1950s and 1960s

Zen as a phenomenon among non-Asians in North America really began to take off in the 1950s. The war between the United States and Japan had dire consequences for Zen practitioners in America of Japanese background, but for non-Japanese it was the catalyst that would lead to Zen becoming a major religious alternative in the West. The war in the Pacific forced the United States and Japan to deal with one another first as enemies, then as occupier and occupied, and finally as staunch allies, all of which necessitated an ever-deepening entanglement that brought many Americans to Japan and vice versa, as well as driving the rapid assimilation of information about Japan by Americans. Some Americans were exposed to Zen during the war, such as prisoner of war Robert Aitken (1917–), and immediately

afterward, such as Philip Kapleau (1912–2004), who covered the trials of Japanese war criminals; and many more began to add Japan to their itinerary as postwar generations sought personal renewal and spiritual discovery via travels in Asia.

In 1949, D. T. Suzuki returned to the United States to lecture on Zen in Hawaii and on the mainland. His many publications and public appearances helped to spark a wider interest in Zen. That year Aitken moved to Hawaii and began to teach Zen to American laypeople. Zen actually had a significant advantage over other larger sects such as Jodo Shinshu because it was so thinly represented on the ground in America: this allowed it to be divorced from actual practices and structures as found in Japan and to be creatively reimagined as an iconoclastic, personalized path of freedom and mystic insight, in part because of the revisionist, ahistorical depictions that Suzuki provided. Soon members of the West Coast literary revolution began to promote this decontextualized Zen as an antidote to postwar conformist values—these included the Beats, such as Gary Snyder (1930–), who subsequently spent years in Japan studying Zen, and Jack Kerouac (1922–1969), as well as Alan Watts (1915–1973), a major popularizer of Asian spirituality. Kerouac immortalized his circle of hip Zen renegade poets in such books as *On the Road* (1957) and *Dharma Bums* (1958), which remain popular both in high school and university English classes and the wider culture.

Scholarly understandings of the central place of ritual, discipline, and hierarchy in Asian Zen have advanced since the 1950s; but for the average American, Zen remains indelibly stamped by these early impressions of free spirits finding personal inspiration in the puzzling, nondualistic, anti-institutional statements of famous Zen masters. The 1960s saw an explosion of countercultural activity, much of it overtly inspired by growing contact with Asian cultures. Many important Zen training centers were founded, including the San Francisco Zen Center (1962) of Suzuki Shunryu (1904–1971), Philip Kapleau's Rochester Zen Center (1966), and the Zen Center of Los Angeles (1968) of Maezumi Taizan (1931–1995). The Zen center model was a new evolution in Buddhist practice, offering modified practices normally reserved for the monasteries to a noncelibate lay population, many of whom were not explicitly Buddhist in belief. Above all, meditation practice—a rare activity for laypeople in Asia—was advanced as the core of Zen, and many Japanese Zen ceremonies and other elements were left out of the programs of these new centers. Americans from non-Asian backgrounds, especially Caucasians, flocked to

these Zen centers, often demanding a nondevotional and nonritualistic approach to Buddhist practice that fit the streamlined version of Zen earlier promoted by D. T. Suzuki though was at odds with mainstream Zen practice.

Zen in America at the Turn of the Twenty-First Century

Zen centers continued to proliferate from the 1960s onward and remain a growing phenomenon found in most urban parts of the country in the early twenty-first century. In the intervening decades they have undergone a number of shifts. American Buddhism, including Zen, was rocked by sex and power scandals centering on major teachers in the 1980s who were naively treated as virtual Buddhas and given far-reaching power over their disciples and organizations with little in the way of checks and balances. The most famous of these was the meltdown at San Francisco Zen Center in 1983 over feelings that head teacher Richard Baker (1936–) had abused his position, turning regular Center members into a poorly paid labor force and cheating on his wife with married Zen students. Outside the major centers there have also appeared fake “Zen masters” with no actual training in the tradition, who look to cash in on the popularity of Zen. In response to the scandals, some Zen centers developed more democratic governance models, sought to elevate the status of women within American Zen, and underwent self-criticism. Zen also became more overtly bureaucratized, and national organizations with some ability to serve as credentialing institutions—such as the American Zen Teachers Association—emerged both to help deal with problems with actual Zen teachers and to censure scam artists claiming Zen authority. Over time more ceremonial elements have begun to appear within the Zen centers, such as funerals, rituals to deal with abortion, and other forms of practice, that partially de-center the emphasis on seated meditation. Zen has also been applied to various social issues, giving rise to Zen hospices, Zen prison ministry, and other forms of engaged Buddhism. And Zen has become involved in interfaith encounters; the stripped-down American Zen has even proven congenial to dual practice as Christian-Buddhists or Jewish-Buddhists for many people.

One effect of Zen's meteoric rise in popularity has been the commercial appropriation of Zen by wider market forces. The term Zen is now used to sell all manner of products, from baby swings to stock market advice, and is especially common in the health food industry. Applying the word Zen to tea, crackers, water, hot dogs, or virtually any

other product is intended to associate it with balanced living, inner peace, and exotic Asian aesthetics.

Zen in America is thriving but also faces serious challenges for the future. Most centers do not offer programs for children, and converts to Zen have proven largely unwilling to pass the tradition on to their families. Thus while some centers have a healthy number of young adult practitioners, Zen overall has experienced a pronounced graying effect. The status of American meditators as neither real monks nor normal laypeople remains a source of confusion and occasional problems. And the way that Zen has been nearly universally psychologized and divorced from more traditional Buddhist worldviews sometimes presents difficulties in differentiating it as a religion, rather than a self-help fad, leaving it vulnerable to shifting tastes in American pop spirituality culture.

Zionism

Zionism is the self-identifying term that Jews and Christians in the late modern era have given movements to support the building of a Jewish commonwealth in Palestine. Translating religious yearnings into political messianism, Zionists initiated the settlement of Jews in Palestine beginning at the turn of the twentieth century and led an international diplomatic

campaign that culminated in the establishment of the state of Israel in 1948. Zionism also wished to modernize the Jews and transform Jewish values and culture. Between 1920 and 1980, many Jews, including in the United States, embraced Zionist ideals. At the turn of the twenty-first century, Zionism is popular among modern Orthodox Jews and conservative evangelical Christians, while others have moved to define themselves as post-Zionists or have come to express doubts over the Zionist ideals.

Origins and Early Beginnings

The origins of Zionism are both religious and secular. The spiritual roots of Zionist movements lie in Jewish yearnings to return to the Land of Israel and rebuild Jerusalem and in the Christian eschatological belief that Jewish restoration in Palestine is a necessary step towards the return of Jesus to earth. While Judaism as a whole had accommodated itself to a life without a political and religious center, hopes for return to the ancestral land had remained part of the Jewish spiritual agenda. Jewish yearnings for political and spiritual redemption gave rise occasionally to messianic movements, the largest of which took place in the mid-seventeenth century. Protestant hopes for a Jewish restoration in Palestine as a necessary step in the Second Coming date back to the sixteenth century.

Christian political initiatives for the restoration of the Jews in Palestine predate the rise of political Zionism. Throughout the nineteenth century, a number of pietist and evangelical Christian leaders, mostly in English-speaking countries, petitioned their governments to take upon themselves international diplomatic efforts that would lead to the returning of Palestine to the Jews. One such outstanding initiative was the “Blackstone memorial” of 1891. Motivated by a biblical eschatological faith, William Blackstone, a businessman and evangelist from Chicago, organized a petition requesting that the U.S. government work towards the establishment of a Jewish commonwealth in Palestine. Hundreds of prominent Americans—members of Congress, governors, mayors, editors and publishers of major newspapers, as well as financial magnates and church leaders—signed the petition, demonstrating the strong effect of a biblical Protestant worldview on American culture. Protestant sentiments would continue to play a vital role in supporting Zionist initiatives.

The first self-declared Jewish Zionist groups that promoted the settlement of the Jews in Palestine started in Europe in the 1880s and 1890s. A few thousand Eastern European Jews immigrated to Palestine, establishing farming

communities there. These immigrants were in a minority; most Jews wished to improve their lives in the communities in which they lived or to immigrate to countries that offered them better opportunities. However, by the late nineteenth century, partly as a reaction to noninclusive attitudes, acculturated European Jews promoted the idea of creating a Jewish commonwealth in Palestine.

Influenced by European ideas about peoples' need for self-expression and contemporary struggles for the creation of national states, Theodore Herzl (1860–1904), the father of political Zionism, came forward with plans for the return of the Jews en masse to Palestine and the building of a nation-state there through international consent. He first publicized his ideas in his book *The Jewish State* (1896). Published a few years later, *An Old-New Land* described a utopian Jewish commonwealth organized according to the values of Western liberals. Herzl considered Palestine “a land without a people,” taking little notice of the indigenous Arab population. Organizing a conference in 1897 in Basel, Switzerland, attended by proponents of the Zionist ideal from various parts of Europe, Herzl began a global campaign towards the creation of a Jewish state. Zionism, however, did not remain a united or uniform movement, and different supporters developed varied interpretations of its goal.

Suggesting a plan for the redemption of the Jews, Zionism secularized Jewish messianic yearnings. Those who joined the new movement often felt the experience as a conversion to a new faith. The Zionist ideal offered its adherents an all-encompassing cultural and political worldview and an alternative means of constructing a Jewish identity. This identity held the Jews to be an active nation, not merely a community of faith, whose members could find their homes anywhere on earth. Zionism followed in the footsteps of the Haskalah, the Jewish Enlightenment, which wished to see the Jews “normalize”; that is, develop their bodies as much as their minds, acquire new skills, and adopt new occupations. Zionists were mostly secular modernists who promoted a progressive messianic view of the future. Influenced by the optimistic mood of Western nations between 1870 and World War I, many liberal Jews, as well as non-Jews, were certain that they could create through reason and social and economic planning a perfect European society, in this case on the eastern shores of the Mediterranean. Building an ideology of a total change of the Jewish psyche and culture, many Zionists rejected the entire historical Jewish experience as a nonindependent, dispersed people outside of the land of Israel.

Theodore Herzl, the father of political Zionism, proposed plans for the return of Jews en masse to Palestine and the building of a nation-state there through international consent. The ideas were first publicized in his book *The Jewish State* (1896).

Many Jews, including Ultra-Orthodox leaders, rejected the Zionist ideals, insisting that Jews should not become politically active and instead should wait for the Messiah to deliver Israel and restore its people to the land. They also resented the mostly secular character of the movement. Other groups of Jews, whether socialist or acculturated liberals, also objected to the idea of a national state where all Jews would build their homes. “Shlilat HaGola,” the rejection of Jewish life in the diaspora, which was part of the Zionist ideology, stood on the way of American Jewish acceptance of the new movement and its goals.

Zionism in America: Colonial Times through the Nineteenth Century

In its early years Zionism did not appeal to American Jews. When Jews arrived in America in the colonial era and established the first congregations in what would become the

United States, they brought with them, as part of their identity, the self-consciousness of a dispersed people. While they integrated successfully into urban colonial societies, they prayed for the redemption of Zion.

While colonial Jews maintained a benign longing for Zion, American Protestants often understood their own experience in the New World in biblical terms, as Israelites in covenant with God arriving in Canaan to build Zion, “a city built upon a hill.” The New England Puritans also expected the redemption of the Jews in Palestine, and in the nineteenth and twentieth centuries many American Protestants looked favorably upon the Zionist settlement of Palestine as an experience that was similar to that of their own in settling the New World. New Christian messianic movements that envisioned the imminent building of the kingdom of God on earth appeared on the American scene, promoting at times the return of the Jews to Palestine. One such group has been the Church of Jesus Christ of Latter-day Saints, which while considering America to be the promised land where the tribe of Joseph (themselves) would gather in the fullness of time, has also expected the tribe of Judah, the present-day Jews, to congregate in Zion. American Jews have not shared that vision.

By the late nineteenth century, some American Jews openly considered America to be their promised land. “The country wherein we live is our Zion,” declared leaders of the Reform movement that swept through American Judaism from 1850 to 1890. The messianic era of righteousness and prosperity, they concluded, would come through human progress, not messianic intervention. The mission of the Jews, they asserted, was to spread the knowledge of the one God and his moral commandments among the nations.

Zionism in America: Twentieth Century

By the turn of the twentieth century America was home to one of the largest Jewish communities on earth. However, the masses of Jewish immigrants that were arriving from Eastern Europe at this time, as well as the better-settled German Jewish elite, saw little merit in the Zionist program. The immigrants were busy building a life for themselves in “the Golden State,” as Yiddish-speaking Jews related to America, and viewed their new country as the promised land, an understanding not much different from that of the more veteran American Jewish elites.

The first groups in America to call themselves Zionists were small organizations that began their activities in the

late 1880s. Their membership never exceeded a few dozen, turning into a few hundred when Herzilian Zionism came on the scene at the beginning of the twentieth century. American Zionism remained small and not very significant until World War I. It grew considerably when American Jews began reconciling their identities as Americans and Jews with the Zionist ideal, discovering in Zionism a convenient means of creating Jewish solidarity and a sense of loyalty towards their heritage.

The architect of an American Zionist ideology, U.S. Supreme Court justice Louis Brandeis (1856–1941) found a rationale for an American brand of Zionism, legitimizing it and turning it into a popular ideal that gave expression to American Jewish sentiments. Brandeis asserted that in order to be good Americans, Jews needed to be proud of their identity. To accomplish that, they should become Zionists. Brandeis’ American Zionist ideology did not speak about the ingathering of all Jews in Palestine but rather about American Jewish support for a Jewish national home, which would provide a haven for underprivileged Jews from around the world. In the 1920s Zionism, in different forms, began making inroads into the American Jewish agenda.

A series of parties emerged within American Zionism, reflecting both international Jewish trends and local American preferences. Liberal, free-market-oriented American Jews established the Zionist Organization of America (ZOA). Immigrants from Eastern Europe imported labor-oriented forms of Zionism, such as Poale-Zion, which also served as a social and cultural support group. Modern Orthodox Zionists organized a local branch of HaMizrahi. In the 1930s some Revisionist Zionists settled in America. All these groups also sponsored Zionist youth movements, often organized by Zionist emissaries from Palestine. Zionists established the largest Jewish Women’s organization in America, Hadassah, which has sponsored medical and educational programs in Israel. Cultural Zionism particularly impressed American Jewish intellectuals. It argued that a Jewish commonwealth in Palestine could not provide the Jews with a safe haven but would serve as a cultural center that would help ensure Jewish national survival and creativity. Jewish American thinkers, such as Judah Magnes (1877–1948) and Mordechai Kaplan (1880–1983), found cultural Zionism compelling, as it meshed well with their humanistic and universalistic worldview.

By the 1930s Zionism had become the largest Jewish ideological movement in America, serving as a means of expressing Jewish identity and solidarity. The rise of the

Nazis to power in Germany eroded much of the opposition to Zionism among members of the Jewish social elite; the creation of a Jewish state where persecuted Jews could find a haven seemed more attractive than ever. Following World War II, the dividing line between Zionists and non-Zionists blurred, with almost all American Jews supporting the Zionist agenda, even if they did not identify themselves as Zionists. Following the destruction of European Jewry, American Judaism became the leader of world Jewry, and American Jewish organizations and donors became the major supporters of Zionist activity, contributing extensively to cultural, medical, educational, and welfare activities in Palestine.

The campaign of Jewish leaders and Protestant supporters, who organized to lend public encouragement to the Zionist program, helped persuade President Harry Truman to support the establishment of a Jewish state in May 1948.

1948 and Beyond

After the birth of Israel in 1948, Arab opposition to Zionism and to Israel remained firm, and the Soviet bloc too came to look upon Zionism as an instrument of Western imperialism. American Jews, however, looked upon the outcome of the Zionist efforts in Israel with admiration, often romanticizing the young Israeli state. Zionism and Israel became central features of American Jewish culture, and support for the new state became a priority for American Jewish groups. Evangelical Christians too delighted in the new state and its absorption of immigrants from all around the world.

Following the June 1967 war between Israel and its Arab neighbors, American—Jewish and Christian—involvement with and support for Israel became even more extensive. American Jews took pride in the Israeli victory and felt that Israel stood triumphant on the battlefield of the Cold War, defending itself against Soviet-backed armies. The Israeli victory, including the taking of the historical parts of Jerusalem, convinced many evangelical Christians that Israel was created for a historical purpose and that the Jewish state was to play an important role in preparing the ground for the arrival of the Messiah. Regarding themselves as Christian Zionists, conservative evangelical Christians became an

important part of the pro-Israeli lobby in America, urging Washington to take a favorable line towards Israel.

Liberal and left-wing thinkers have been less favorably impressed. The Israeli occupation of Palestinian territories taken from Egypt and Jordan and the settlement there of Jewish groups who have viewed themselves as representing a new Orthodox-nationalist revival of Zionism have increased the critique of the Zionist project. New post-colonial intellectual trends have also worked against the public image of Zionism. Many Israelis have come to define themselves as post-Zionists. They consider the older Zionist teachings to be irrelevant to current realities and argue that the state of Israel having been accomplished, they now wish to build a pluralistic society and promote peace between Jews and Palestinians. Likewise, in the 1980s to 2000s, many American Jews have become more critical of Zionism or have distanced themselves from it altogether. Both Jews and non-Jews continue to confront the historical significance of the movement and differ in their evaluations.
