Roman Catholics, despite their upward social mobility in the region, struggled throughout the twentieth century to deal with the tensions of both ethnic diversity and class distinctions in New England. At the end of the twentieth century, new Hispanic, Asian, and other immigrants recapitulated the ethnic challenges of earlier decades. Conflict between working-class and "elite" Catholics notoriously erupted in the early 1970s, when leaders attempted to address racial segregation in Boston by busing white and black children to different communities. Priestly sexual abuse, widely reported in the national media after 2001, had a profound effect on New England Catholics. The American Religious Identification Survey, conducted by Trinity College of Hartford and released in March 2009, showed plummeting Roman Catholic membership in New England, with an overall shift from 50 percent of residents in 1990 to 36 percent in 2008. During this same period, churches were closed throughout the region and parishes consolidated.

Some regional changes, of course, have been shared with the nation as a whole. The shift from urban to suburban centers of influence, ongoing throughout the twentieth century, has left many venerable New England church buildings nearly empty on Sunday mornings. At the same time the vibrant urban presence of African American, and more recently Hispanic, Christians in old and new denominations is revitalizing urban worship. The growth of global faiths, largely as a result of immigration, has everywhere changed the ethos of formerly Christian communities and affected local behavior in everything from holiday concerts to patriotic observances. Since the mid-1900s, New England's historic "mainline" churches have experienced declines in membership, and as with the American population in general, New Englanders overall are less religious today than formerly.

As it has since the Puritans' "city on a hill" in the 1630s, New England continues to host a variety of nontraditional and experimental religious communities that regularly challenge the religious status quo. Unitarians, still centered in Boston but united with Universalists since 1961, no longer consider themselves Christian; instead they embrace humanistic principles and honor ideas from many religious traditions. Their progressive social positions on matters ranging from economics to human rights are influential beyond their numbers. Since the end of exclusionary immigration restrictions in 1965, Asian and Near Eastern faiths have proliferated, including Islam and Baha'i. Neo-pagan, New Age, "high demand" Christian and communal groups, such as the International (formerly Boston) Church of Christ and the Twelve Tribes (of Island Pond, Vermont, and Hyannis, Massachusetts) continue the tradition of countercultural—and controversial—religion initiated four centuries ago by dissenter Roger Williams. Sun Myung Moon's Unification Church (the "Moonies") has a significant presence in both Gloucester, Massachusetts, where it purchased a fishing fleet in the late 1970s, and in Connecticut, where in 1992 it acquired a controlling interest in the struggling University of Bridgeport.

Historical ironies abound. Andover Newton Theological School, the successor institution to conservative Andover Seminary—founded two hundred years ago to maintain Congregational orthodoxy and combat Harvard's Unitarian liberalism—today enrolls the largest number of Unitarian Universalist students in the country and shares its campus with Hebrew College, a multid denominational Jewish rabbinical school. In 2007, liberal Harvard Divinity School

instituted a chair of evangelical theological studies. Today Massachusetts, where a single Christian group was dominant longer than in any other region of the country, boasts what may be America's oldest Council of Churches in continuous existence, dating from 1902; the council includes cooperating communions that range from Orthodox to Unitarian Universalist. Across this formerly homogeneous region—and not only in urban centers—radical religious diversity continues to grow apace at the beginning of the twenty-first century. Diana Eck, Harvard scholar of world religions and director of the Pluralism Project there, writes that her university's Puritan founders would be astonished at the diversity in New England today; not only Muslims, Jews, Buddhists, and Hindus, but Sikhs, Jains, and a host of lesser-known groups have a lively presence even north of Boston. And here, where the First Great Awakening effectively began, evangelical churches remain a relatively minor presence, with fewer self-identified evangelicals than in any other region of the country.

Predictions are notoriously inaccurate. Whatever the future of New England's religions may be—and the plural of "religion" here is not insignificant—it is likely the region will continue to be characterized by awareness of tradition, embrace of change, conflict, and a lively and sometimes contentious dialogue about matters of the spirit.

New Religious Movements

New religious movements (NRMs) is the category that scholars use today to describe new, alternative, or nonmainstream religious groups. Earlier generations of scholars used other categories to understand new religions, beginning with the church-sect typology proposed by the German sociologist Max Weber (1864–1920) and expanded by Ernst Troeltsch (1865–1923) and others. The typologies that these intellectuals developed plotted religious groups on a continuum from established or mainstream “churches” to

denominations, sects, and cults. Churches were mainstream religions allied with and supported by the state. They claimed universality and tried to establish religious monopolies. Denominations were churchlike groups that, while remaining on good terms with the state, were not officially supported by it. Denominations competed against each other for converts in societies that lacked officially established religions. Sects were reform groups that emerged within and were often critical of churches or denominations. Finally, cults existed in the greatest tension with the mainstream, were the most radical and innovative, and often were led by authoritarian leaders who attracted adherents from alienated or marginal classes. Both cults and sects could (but did not always) develop into denominations as they attracted followers. As they did so, they often muted criticisms of the mainstream; gave up strategies of separation; suppressed esoteric theological ideas; and developed more routinized, bureaucratic modes of organization.

This older typology was useful in helping intellectuals think about relationships between religious groups and social structures and norms. A number of sociologists in the second half of the twentieth century, however, have criticized this typology and suggested other ways of thinking about religious groups. The category *cult* in particular lost its appeal, in part because lay Americans were using it to categorize certain religions as illegitimate or dangerous. Because the term had these pejorative connotations, scholars in the 1960s replaced it with *new religious movements*. But this term also had its problems. Though scholars had for decades assembled lists of features shared by new religious movements, such as millennial beliefs, authoritarian leaders, and withdrawal from the mainstream, it was no longer clear that new religions shared these characteristics. Many so-called NRMs did not have charismatic leaders or unusual beliefs and social practices; some included under the moniker were not even “new.” (In any case, it is difficult to define *newness*.) The category often used today is “new and alternative religions,” and the focus for sociologists and historians increasingly is how each group is related to its particular historical and cultural context. In a recent article, Gordon Melton (2004) made the case for this turn to particular contexts by insisting that understanding these groups was possible only by understanding how each new religion is linked to its parent religion and to the social and cultural forces that shape it. Perhaps, he wrote, new religions share more with their parent religions than with other so-called new religions. Using this definition, we are drawn to how each new or

alternative religion represents a departure from (and sometimes a critique of) mainstream culture and the ways that it develops out of mainstream culture.

Early Nineteenth-Century Apocalyptic Groups

Though there were innovative Christian groups in early America, the nineteenth century brought with it new discourses on freedom and egalitarianism and a resulting religious creativity that was unprecedented. Innumerable religious groups formed in this period, especially on the rough-and-tumble western frontier, where Americans forged a new spirit of individualism and independence from clergy in their distance from established religious institutions on the East Coast. Areas in central and western New York State were particularly well known for religious experimentation. The area was covered by intense evangelical revivals that sometimes led earnest religious seekers to more radical interpretations of God's will or his punishing wrath. Many new groups were apocalyptic, believing that the end of the world, or its radical re-creation, was imminent. Revival excitements and several personal misfortunes appear to have transformed Robert Matthews (1778–1841), for example, into the messiah Matthias, a lonesome voice crying out against all the devils and delusions that dominated American Christianity. The real church had been lost. His attempt to return America to a biblical, patriarchal society ended when he was convicted for committing violence against family members and women and when the press, making the trial into a national scandal, made widely known rumors about his eccentricities, sexual improprieties, and violent behavior. His household did not, it turned out, look like the Kingdom of God on earth.

Other prophets felt similarly called to cry out to American believers, and one, the Baptist William Miller, predicted that the world would end in 1843. Miller had more success than Matthias, convincing a large number of American Christians in the 1830s and 1840s that Christ's Second Advent was fast approaching. By the early 1840s there was an entire movement, with Adventist lectures, newspapers, revival meetings, hymnals, and conferences. As the 1843 date approached, the movement continued its astonishing growth (abetted by widespread newspaper coverage), and thousands gathered at camp meetings and tabernacles built to accommodate large audiences. Many watched for providential signs. A remarkable and unexpected comet on February 28, 1843, just before Miller's anticipated March 21 deadline, was another sign for those who had eyes to see such things. The

Adventists were disappointed when March 21 came and went, and the popular press issued an onslaught of ridicule, but Miller and others recalculated the numbers and set new dates for 1844. Those dates also came and passed. Many left the movement, but others, convinced that Christ would come again and buttressed in this belief by confirming visions and dreams, soldiered on.

One was Ellen White, who with several associates came to believe that Christ had returned in 1844—though his return, White said, was not to earth but to heaven. White had several other visions that filled out a distinctive Christian set of doctrines concerning health and healing practices, ritual life, and Sabbath observance. This was the beginning of Seventh-day Adventism. Another modern American denomination that emerged out of nineteenth-century Adventism was the Jehovah's Witnesses, a group that continued to set dates for the second coming on into the early twentieth century. The Jehovah's Witnesses also have a set of distinctive doctrines and practices. These include a robust belief in the power of the devil; a sense that the devil controls all humanly created governments; a refusal to salute flags or sing nationalistic songs; an avoidance of holidays such as Christmas and Easter (which they regard as pagan in origin); and active, often door-to-door, missionary activities.

A final apocalyptic group was the Latter-day Saints, or Mormons, a group that also developed out of the evangelical ferment in frontier New York. The founder Joseph Smith (1805–1844) was raised in upstate New York, and like others who lived among the fissiparous evangelical sects of this period, he could not figure out which confession, creed, or practice was the right one. A set of visions and revelations made it clear that none of them were true, that the authentic Christian church had been wholly lost, and that his providential mission involved restoring the church in anticipation of the Second Coming of Christ. He had a number of radical ideas: that God had a body and resided in a physical location somewhere in the universe, that spiritually advanced human beings could become gods, that a patriarchal society should be restored, that the Israelite priesthood and temple rituals should be restored, and that secular and sacred orders should be collapsed into a theocracy. To advance the cause of creating this theocracy (or "theodemocracy," as Smith called it), he announced in 1844 his candidacy for the American presidency. Though Mormon ideas were unusual, it is not usually ideas that get new American religions into trouble. It is practices. In Smith's case, the practices that offended the most were his antidemocratic political philosophy and, probably

more important, his endorsement of polygamy. Smith was killed by an angry mob in 1844. U.S. government officials pursued the Mormons west, and finally the group capitulated to legal and military pressures by renouncing polygamy in 1890. Since that time they have traveled a path similar to other new religions, becoming less prophetic and radical, modifying some of their offensive teachings, and developing a powerful public relations arm that stresses similarities with mainstream America.

Nineteenth-Century Communitarians

In addition to the apocalyptic groups, other radical religions were born in the early nineteenth century, including communitarian groups, groups that lived communally and experimented with ways of organizing society and especially the family. Many of them, like the Shakers, incorporated apocalyptic ideas, though the focus often was less on the end of time and more on achieving perfection here on earth. One of the most successful of these groups was the Shakers, a communally organized celibate group that reconstituted the Christian community into a family. Elders and elderss were like parents to the community; all others were brothers and sisters. Everyone renounced sexual activity, and men and women were separated. All believers gave up private property. In the 1830s and 1840s Shakers experienced a time of spiritual visions and dreams, and they reported other charismatic gifts as well, such as speaking in tongues. Their worship practices incorporated marching, dancing, singing, and shouting, though in time these spontaneous forms of worship were routinized into more structured and orderly dances. This group appealed to many earnest evangelicals seeking more complete ways of consecrating their lives to Christianity. Shakers gained adherents by converting adults and adopting orphaned children.

A number of other communitarians responded to God's call to perfect their lives in every way. One of them, John Humphrey Noyes (1811–1886), an iconoclastic minister trained at Andover Seminary and Yale Divinity School, became preoccupied with the idea of total perfection and started a community of seven or eight families in Putney, Vermont. Gradually his ideas became more radical. In 1846 he and his followers initiated something they called "complex marriage," an arrangement by which members of the community swapped sexual partners in order to overcome the selfishness of monogamous marriage. Noyes fled Putney when charged with adultery in 1847 and relocated to Oneida, in central New York, where he continued his pursuit

of personal and social perfection, and where he came to believe that he had been divinely appointed to establish the kingdom of God on earth. He continued to hone his ideas about perfection in marriage, requiring for instance that during sex men abstain from ejaculation. In theory at least, the point of complex marriage was to increase love, not sexual pleasure (or number of children). In the late 1860s and 1870s new paths to evolutionary perfection were charted, and Noyes selected certain community members to reproduce. The children born of these unions, called stirps, were educated by a special committee. In 1879 local religious leaders stepped up their campaign against these practices, and amidst rumors of arrest for unorthodox sexual arrangements, Noyes fled to Canada, never to return to Oneida. Again, Americans are a tolerant people when it comes to ideas, but practices are another matter altogether.

There were other fervent communitarians, liberal and evangelical, in this period, and many of them had high hopes that their new kingdoms might usher in a more just millennium. These hopes had religious dimensions, as we have seen; they also had socialist ones, for many drew deeply from socialist ideas in this period, especially those of the French utopian philosopher Charles Fourier (1772–1837). The result was a powerful communitarian impulse destructive of older social hierarchies, and many groups, religious and nonreligious, set out to subvert traditional American notions about sex, gender, and marriage. Besides Noyes's groups, others included the communities inspired by Welsh social reformer Robert Owen (1771–1858). Many of them expanded the range of things women could do, say, and preach in public.

Nineteenth-Century Healing Movements

The nineteenth century also saw the rise of an astonishing variety of dietary and body reform movements that linked body control, bodily health, and personal holiness. Starting in the 1830s, religious physiologists and reformers such as William Alcott (1798–1859) and Sylvester Graham (1794–1851) promoted dietary and health reform as a part of a comprehensive plan for physical and spiritual regeneration. These programs of reforming body and spirit had different aspects, including general dietary restraint, the use of whole foods, a vegetarian diet, routine exercise, and moderation in sexual relations. Graham, for one, drew on medical and neurological notions about the problems of overstimulating the self, and he recommended abstaining from anything that would irritate the body and the nervous system, including meat, alcohol, tea, coffee, and sex. Sexual relations—had to

be carefully monitored; indulging once a month was acceptable, though for older couples it could be less frequent. Excessive sex, animal products, spicy foods, or stimulating drinks caused unnatural fevers and excitations, leading naturally to malaise or debility. Tight-laced dresses for women also were unnatural. Always, bodily conditions had spiritual repercussions. For instance, in 1835 and 1836, Alcott insisted that eating too much on the Sabbath led to sleepiness in church and obliviousness to the divine truths preached there.

Even Christians who didn't consider themselves physiologists picked up these emphases. For example, the great revivalist Charles Finney felt sorry for those who indulged in an overstimulating diet, one that turned their bodies into a fierce source of temptation. Many linked diet to salvation: in the 1830s and 1940s temperance hotels and boarding houses emerged offering Graham's diet; colleges instituted dietary requirements; perfectionist communes with vegetarian menus were organized; new religions, including the Mormons and the Seventh-day Adventists, sprang up with strict rules about eating and drinking. Ellen Gould White (1827–1915), the already-mentioned prophetess of Seventh-day Adventism, believed vegetarianism was a key way to overcome original sin and usher in the millennium.

It was not far from these reflections on diet to an emerging discourse on religion, health, and healing, one that became quite pervasive by the second half of the nineteenth century among both evangelicals and more liberal Christians. On the liberal side, an influential stream of new mental-healing movements grouped together under the category "New Thought" argued that spirit shaped matter and that, therefore, the wrong ways of thinking or believing caused physiological imbalance or sickness. Health could be achieved by right thinking. New Thought practitioners spanned a range, from those who ignored the body because they believed it was epiphenomenal to those who recognized its power to shape in reciprocal ways the spiritual self.

In the former category was the founder of Christian Science, Mary Baker Eddy (1821–1910), who thought that matter was an illusion best ignored. Hygienists, Grahamists, and other body reformers, Eddy thought, were starting at the wrong end of the process: they should pay attention not to the body's states but to the mind's. That was the source of all healing and illness. But Eddy was more certain than others that matter was unreal. Though many agreed that spirit/thought determined bodily conditions, they also pointed

out that certain bodily practices helped spiritual processes along, including diet restrictions such as those advocated by earlier health reformers such as Graham and Alcott. The body had at least a shadow reality—and what we did with it influenced the spiritual self within. For these reasons, many New Thought reformers were interested in what and how to eat, how to exercise, and, for some, how (and when) to have sex. Of course, in the twentieth century, slim female bodies and strong male ones continued to be associated with vitality, intelligence, morality, and even advanced spiritual states (Griffith, 2004), so the impulse continues today.

Foreign Religions in America

Another source for innovative religious movements in the nineteenth and twentieth centuries was religious notions coming from other countries. Buddhist and Hindu ideas undergirded transcendentalist ideas earlier in the century. Later as Eastern religious notions were popularized in English translations, books, and the periodical literature, new movements, such as the Theosophical Society, which was organized in New York in 1875, emerged to promote the study of world religions and, more importantly, the development of the mystical potentials that were latent in all human beings. Theosophists believed that all religions contained important wisdom. Their syncretic belief system incorporated key Eastern concepts such as karma and reincarnation to understand how the immortal human consciousness progressed through eternity.

A key event that stimulated East-West interchange and new American religious possibilities was the 1893 World's Parliament of Religions in Chicago, a meeting that brought to America several important Hindu and Buddhist teachers. One of them was Swami Vivekananda (1863–1902), who impressed many Americans at the Parliament and in subsequent lectures at different locations in the United States. Vivekananda introduced many Americans to yoga and Hinduism and, through the Vedanta Society that he founded in 1896, attracted the attention of a large number of liberal Protestants and religious seekers, some of whom were eager to support him financially. Vivekananda espoused a Hindu theology that each person could attain a realization of God through meditation and other worship practices, and he insisted that the different world religions were different paths to the same goal. He directed much of his attention to teaching Americans meditative techniques—focusing the mind, controlling the breath, performing certain bodily postures. But it was an Indian spiritual leader who became

famous several decades later, Mohandas Gandhi (1869–1948), who made the Hindu religion an appealing option the world over and especially in America and other Christian countries. The power of Gandhi’s spiritual disciplines was evident to many.

Also at the 1893 World’s Parliament was the Buddhist monk Anagarika Dharmapala (1864–1933), who, like Vivekananda, toured America and offered instruction on breathing, the postures and practices of meditation, and cultivating attitudes of tolerance and peace. Dharmapala was a pioneer in the Indian revival of Buddhism and a powerful Buddhist missionary to America and Europe. Of course he was not the only person bringing Buddhism to America. It had come much earlier in the century with Chinese and Japanese immigrants to the West Coast starting in the 1840s, and a number of other monks and teachers brought it to the 1893 Parliament and promoted it in different forms in twentieth-century America. With Vivekananda and other Eastern teachers, Dharmapala gave lectures at the cosmopolitan Maine religious retreat center, Greenacre, at the turn of the twentieth century, where Buddhist, Jain, Hindu, Bahá’í, and American religious figures meditated together, exchanged ideas, and celebrated the divinity in everyone.

The Bahá’í faith, born in nineteenth-century Iran, also had its American origins in this period, specifically at the Greenacre retreat center in Eliot, Maine, where its founder, Sarah Farmer, included Bahá’í teachers in the curriculum and converted to the religion herself in 1900. The faith began when Mirza Husayn Ali (1817–1892) assumed the title Bahá’u’lláh (Arabic: “Glory of God”) and claimed to be the divine messenger—a claim that in nineteenth-century Iran was viewed quite seriously and could result in imprisonment or death to the person making the claim. Bahá’u’lláh, though incarcerated and tortured, was exiled rather than killed. He traveled from Iran to Iraq, Turkey, and finally Ottoman Palestine in 1868, where he resided until he died in 1892. Starting in 1892 several Middle Eastern Bahá’í missionaries and teachers came to America, converting about 1,500 Americans of evangelical and liberal Protestant background before 1899. Many saw this faith as the fulfillment of biblical prophecies about the end-times; some could conjure memories of great millennial disappointments at mid-century and see Bahá’u’lláh’s mission as a sign that they had been right all along. For these believers, there was no disappointment after all.

Some Americans, learning from Eastern teachers about this great new day of God, wished to journey themselves to

the Holy Land, to Ottoman Palestine, and those with means did so, including Sarah Farmer in 1900. When Farmer came back, she was convinced that she had found a new divine message of ecumenism that might unite all the different believers of the world, and she tilted her Greenacre retreat center towards an explicitly Bahá’í identity. In twentieth-century America, the Bahá’í community continued to attract religious liberals, though its appeal expanded to more conservative Christians, especially in the South, and other kinds of Americans.

How did mainstream—that is, Protestant—Americans respond to the new religious diversity coming in the wake of the 1893 Parliament? It is worth saying first of all that in 1900 Protestants still were by far the majority faith, representing a full 70 percent of the American population (an additional 20 percent were Catholic). Basically there were three kinds of Protestant responses to religious diversity: conservative, moderate, and liberal. Conservatives then, like conservatives now, believed that Christianity was the only way to salvation; they either boycotted the 1893 Parliament or were on the scene to win others for Christ. Liberal Protestants, a small but highly articulate minority, on the whole accepted as true and even beautiful non-Christian religions. Many liberals believed that all the great religions helped develop the human soul. Moderate Protestants, by far the majority (then and now), believed that Christianity was the best faith but not the only one; other religions contained truth. Arguments among Christians about these questions had practical implications for interreligious attitudes at home and missionary ideology abroad. There was an active twentieth-century debate among Christians, one that is ongoing, about how to understand non-Christian religions and teach their followers about Christ.

Early Twentieth-Century Developments

By the early twentieth century America had industrialized and urbanized, and both older, established religions and new movements emerged to help Americans make sense of these changes. American Christians developed new, social forms of Christianity and new forms of activism intended to bring Christ’s message to immigrants and the urban poor. There were Protestant, Catholic, and Jewish forms of social religion. The African American community, in the midst of a “great migration” from the rural South to the urban North in the period 1890–1930, also developed innovative new religions that combined elements of more traditional religions (African religions and Christianity, for instance) with newer emphases

on economic independence, identity, and peoplehood. Strong black nationalist movements emerged, many of them drawing on Jewish or Muslim religious images, which they used to reject vociferously American Christianity and its legacy of oppression. Beginning in the 1890s, several groups of black Jews emerged that had Jewish ideas and practices and linked the African American community to the lost tribes of Israel. Some of these groups had very specific racial eschatologies: the temporary rule of white people would end in an imminent catastrophe, and the true Israelites, Africans, would emerge as powerful and wealthy.

Black Muslim groups also emerged in this period. A number of reformers, including Noble Drew Ali (1886–1929), initiated black Muslim movements in the early decades of the century. Ali insisted that Africans in America were descended from the Moors who had settled in the northern and western shores of Africa. He also believed that the king of Morocco had commissioned him to teach Islam to black Americans. An early book, *The Holy Koran of the Moorish Science Temple of America*, combined Christian, Muslim, and nationalist emphases. Ali drew on some of the ideas of Marcus Garvey's nationalist movement, which Garvey began in 1914 and which had a more Christian-oriented set of symbols and practices.

When Garvey was imprisoned for mail fraud in 1925, Ali's group, the Moorish Science Temple, successfully recruited many of his followers. Some scholars maintain that one of Ali's associates was W. D. Fard, an itinerant preacher of black nationalism and Islam and a peddler of silks and other products in Detroit early in the 1930s. When Fard disappeared in 1934, Elijah Muhammad led the burgeoning group and moved the headquarters to Chicago, where he helped organize new Nation of Islam temples, schools, housing projects, and businesses. Elijah Muhammad's theology was distinctive. He elevated Fard to Allah (God) incarnate and spoke of himself as a new messenger of Allah. He developed the racial theology created by earlier groups into a way of explaining American racism and justifying racial separation. In his theology blacks were the original human beings, and whites were a cosmogonic mistake, a weaker, paler human type created by an evil scientist named Yakub. Whites were given a specific period of time to rule, and blacks, while waiting for the world to be turned upside down, should prepare for an eventual takeover. They did so by following a strict regimen: avoiding worldly pleasures, alcohol, tobacco, dancing, gambling, and premarital sex. The Nation of Islam called for the separation of the races and for some kind of official redress because of centuries of slavery. This new religion was a

powerful and appealing alternative to many African Americans seeking a more satisfactory way of understanding identity, purpose, and the meaning of being African in America.

During the second half of the twentieth century, the Nation of Islam edged closer to orthodox Islam. One crucial lieutenant of Elijah Muhammad whose story is well known, Malcolm X (1925–1965), made famous this journey from the Nation of Islam to orthodox Islam. Though he was assassinated by Nation of Islam gunmen in 1965, the move towards Islamic orthodoxy was unstoppable, and gradually Nation of Islam officials, including the son of Elijah Muhammad, Wallace Muhammad, dropped antiwhite rhetoric and embraced more orthodox Muslim positions. This took place in the 1970s and 1980s. By 1985, some of the old guard regretted the move away from older Nation beliefs, and a group of men under the leadership of Louis Farrakhan reconstituted the older group.

Other movements also spoke powerfully to the problems of race and city living. Father Divine's Peace Mission, a very successful and wealthy movement from the 1920s to the 1940s, began when George Baker (1882–1965) claimed to be God and opened his Long Island home in the 1920s for worship services and extravagant banquets. Father Divine's racially integrated banquets demonstrated his power to feed people spiritually and physically. At first the gatherings were entirely African American, though it was only a matter of time before Divine's interracial message attracted mixed audiences. When the stock market crashed in 1929 and the Great Depression set in, Divine's generous free meals and worship services gained in popularity. In 1933 he moved his Peace Mission to Harlem, where his disciples lived communally in "heavens" separated by sex, pooling their income in a cooperative economic enterprise, which at its height incorporated three apartment houses, nine private houses, and fifteen to twenty flats. At its peak in the 1930s, the Peace Mission was the largest single real estate owner in Harlem. It also included twenty-five restaurants and many grocery stores, barber shops, and other businesses. As Americans focused on war and then contentment and prosperity in the 1950s, Father Divine's movement declined. The community's diminishing numbers were not helped by Divine's encouragements to practice celibacy.

The Religious Powers of the Mind

The rise of psychological explanations for human behavior in the late nineteenth century led to another development: the mind became a powerful religious metaphor.

New religions and older ones discovered that the mind had a host of previously unknown powers, human and divine, that led to greater happiness, moments of transcendence, and general religious fulfillment. The first group of believers seeing in the mind the power to save and cure is a group that has already been mentioned, New Thought, a group that includes Christian Science, Divine Science, innumerable independent metaphysical churches, and the Unity School of Christianity. All of these groups espouse a kind of radical idealism that holds that the mind's beliefs and ideas are the only real things in the universe. The mind produces all other phenomena. In this formulation sin, sickness and other difficulties are produced by wrong ways of thinking, and salvation comes by holding in your mind the right thoughts and beliefs.

A good example of this religious style is illustrated by Mary Baker Eddy (1821–1910), the founder of Christian Science, who in 1866 cured what was apparently a crippling illness by realizing that, like the paralyzed man in the Bible healed by courage and faith (Matthew 9:2), she too could stand up and walk. What she realized in that moment and taught for the rest of her life was that the material world, a world with sickness and death, was an illusion produced by wrong thinking. Healing comes when believers learn to think correctly about reality, when they understand in particular God's complete goodness and realize that all reality, including human beings, are perfect reflections of this goodness.

A large number of other religious reformers agreed that the mind could heal or resolve sicknesses and personal difficulties. The best known of these New Thought teachers were Warren Felt Evans (1817–1889), Emma Curtis Hopkins (1849–1925), Ralph Waldo Trine (1866–1958), and Charles (1854–1948) and Myrtle (1845–1931) Fillmore, the founders of the Unity School of Christianity. Trine was probably the most popular, and his many books are still available at New Age and Christian bookstores. Trine insisted that coming to a deep realization of our oneness with God and opening ourselves to his in-flowing grace were the crucial religious tasks. His writings, like those of Eddy and other New Thought practitioners, borrowed Christian and psychological motifs. He talked at length about psychosomatic effects, and about how distorted mental and emotional conditions (such as, fear) produced illness. He insisted that meditations and affirmations and other ways of holding correct thoughts in mind healed mental and physical sicknesses. Many in this New Thought tradition believed that the mind had many layers, dimensions,

and mysteries, and that somehow the unconscious was connected to a transcendent being or energy. This powerful and widespread notion in Christian and new religions beginning early in the twentieth century was popularized principally by the philosopher and psychologist William James (1842–1910), who believed he glimpsed evidence of a transcendent “More” in people's religious and psychological experiences, including trances, ecstatic worship experiences, sudden moments of ecstasy, and communications with the dead. James's influence penetrated almost every American religious group and culture.

Though their lineage is considerably more eclectic, incorporating ideas from Buddhism and Hinduism, Scientologists too believed in the explosive power of the mind, and they too shifted the religious emphasis from salvation to therapy and self-realization. (Of course, in an atmosphere in which the transcendent is located in the self, self-realization signals not the loss of salvation but its reformulation.) Scientology's founder, L. Ron Hubbard (1911–1986), was more freewheeling than other believers in borrowing from psychological truths, for he did not merely harmonize psychological notions and Christian ones. Rather, he reworked the entire religious vocabulary with new categories that seemed one part psychology and one part science fiction: the eternal essence of each person became a Thetan, painful unconscious memories besetting individual Thetans were engrams, the therapeutic process of destroying engrams was auditing, and the biofeedback device used in these auditing sessions was a piece of equipment called an E-Meter. Scientology claimed to be both a science of mind and a religion, the Thetan was both soul and mind, and auditing was both worship and therapy—all examples of the powerful twentieth-century move towards psychologizing religion in America. The goal of Scientology's therapeutic process was ridding the self of engrams and the painful emotions and unhealthy, unconscious reactions they triggered, thus achieving a less inhibited, consciously chosen way of life.

Scientologists also have an elaborate cosmology with different spiritual levels that Thetans attempt to traverse with ongoing forms of auditing, training, and initiation. At the higher spiritual levels, esoteric elements of Hubbard's cosmology are revealed to initiates, including what are called “space opera” elements, essentially cosmological myths that detail how nefarious aliens intervened during crucial moments on ancient Earth. Scientology is a small group but has received disproportionate media attention because of several high-profile adherents and because it has

been at the center of lawsuits challenging its status as a tax-exempt organization.

The “New Age”

Americans speak of “New Age” religion as if they know what it is, but in fact the category holds an incredibly diverse set of religious practices, including energy balancing, yoga, channeling, and Native American vision quests. Supplying a basic definition has not been easy for scholars, but in general New Age seems to incorporate (1) a millennial hope that this is a new age of spiritual possibilities, (2) a belief in immanent metaphysical energies and corresponding practices that attempt to harmonize the self with these energies, (3) a belief that harmonizing the self with these energies brings healing and spiritual development, and (4) a religious eclecticism in which believers borrow religious insights and practices from a range of traditions.

Central to New Age religions is a belief in an immanent, divine energy in all things. New Agers draw selectively from science to attempt to prove this point. The New Age celebrity Shirley MacLaine, for one, drew on a particular reading of quantum physics to show that the universe is comprised not of matter but of energies, fields, and information. In *Out on a Limb* she noted that all of us were therefore “God energy”—powerful, intelligent, creative, and in charge of our identities and destinies. Drawing on quantum physics, neuroscience, and Vedanta Hinduism, Deepak Chopra, an earnest former endocrinologist and best-selling New Age writer, has even offered instructions for navigating the “quantum” worlds of fluxing spiritual energies. He argues that the world was divided into three zones: material (matter), quantum (in-between), and virtual (pure spirit). Traveling in the quantum zone is spiritually unstable; most of us are able to glimpse it in intuitions and fleeting moments of bliss. But mystics and other expert “quantum navigators” have the skill to anchor themselves in this zone and feel its signs—sensations of weightlessness, heightened senses, a perception of energy in the body, seeing the “light.” Chopra’s books, like those of other New Age gurus such as Wayne Dyer, draw eclectically on devotional practices, including Eastern forms of meditation and yoga, to create the kinds of focused intentions and imaginativeness that might keep aspirants always in this light. It is striking how often Chopra cites work and key figures in physics, psychology, and consciousness studies to create his religious vision.

The New Age tradition, like the New Thought tradition that preceded it, emphasizes that the mind’s states determine

all spiritual and material realities. It is the source of inner contentment and outer healing—and its effects can even go beyond the self. New Age believers insist that states of mind have even been shown to influence the properties of water and biological matter, such as DNA, even when it is held at a distance from meditators. New Agers are keenly interested in showing this to be true—that psychological forces reach outside of the self. If all matter really is mental energy, why not? Psychokinetic effects can be traced in different forms—precognition, telepathy, clairvoyance, healing, levitation, and homeopathy. All of these phenomena point to the elusive effects of subtle energies and the ways that the mind can move them in the world.

Communicating with departed spirits also is an important practice for some New Agers. The belief that the living can communicate with the dead is not a New Age invention, of course; in different forms it is present in many world religions, and in America it was notably present after the catastrophe of the Civil War, which killed an astonishing 620,000 Americans (out of a total population of 31 million), as well as after World War I. Many yearned for the dead, and a religious movement that offered rituals of communicating with them, Spiritualism, flourished. Modern-day mediums in the New Age network often practice their craft in the context of small Spiritualist churches or informal groups, and worship often can seem quite “Protestant,” with services that include prayer, singing, and a sermon. The distinctive part, however, is the séance, in which a pastor or medium will channel messages from the spirit world. It is hard to know how many Americans believe or participate in this kind of practice, though it is worth noting that in surveys in the 1990s, 69 percent of the U.S. population said they believed in “angels” and 25 percent said they believed in the possibility of talking with the dead (Brown, 1997). Books written by prominent mediums sell well. A number of television shows have featured mediums and psychics, such as the primetime drama *Medium*, as well as daytime talk shows such as *Crossing Over with John Edward*.

The 1960’s Counterculture

The 1960s was a period of growth and diversification for new and alternative religions in America. This was so for several reasons. First, the Immigration and Naturalization Act of 1965 put an end to the restrictive immigration quotas initiated in the 1920s. An especially large number of immigrants from Asia and Southeast Asia came, bringing with them Buddhism, Taoism, and Asian varieties of

Christianity. Second, the 1960s brought a decisive turn away from the celebratory mood of the post-War 1950s and a questioning of America's role in the world, especially its role in Vietnam. One result was an expanding uncertainty about American traditions that led some to revise older theologies and others to seek wholly new faiths. Third and finally, the civil rights movement, which drew strength from uncertainties about America's role in the world, forced American believers to rethink issues related to religion, race, and justice. In many cases painful adjustments had to be made. New liberation and black theologies emerged, and faiths that offered alternative visions of race, peace, and justice, such as the Bahá'í and Quaker faiths, had wide appeal. In general, it was an age of restatements, reformulations, and personal seeking, and in some ways this culture of seeking continues today, especially in the aging baby boomer generation and their children. Growth rates for new and alternative religions in the 1960s were remarkable. The Bahá'í faith, which claimed just 7,000 adherents in 1956, had approximately 60,000 by 1974. The Buddhist organization Soka Gakkai, which had about 300 American members in 1960, ballooned to approximately 200,000 members by 1976. Many other new and alternative religions, including groups such as the Nation of Islam and American Hindu sects, also experienced dramatic growth in this period. (The 1970s and 1980s brought an inevitable contraction in some groups; Soka Gakkai, for instance, shrank to 50,000 by 1992).

The religious counterculture in the 1960s also opened up new possibilities for women in American society. Some of these possibilities became available within traditional confessions. In 1972 the Hebrew Union College ordained the first woman rabbi. Most of the mainline Protestant denominations ordained women by the 1970s. Those who were unable or unwilling to agitate for change within older denominations embarked on a variety of spiritual journeys in some cases producing critiques of Christianity and Judaism and devising new ways of believing. Mary Daly's evolving critique of Christianity propelled her from Catholicism to new forms of feminist spirituality. Her critique of Christianity—that the Church is anchored in irredeemably antiwoman language—is read in introductory theology courses across the globe. Daly's journey into a less patriarchal and more environmentally conscious spirituality has been repeated by many others, men and women, in the feminist spirituality movement, a diffuse but powerful impulse in American culture that attempts to recover pre-Christian religious beliefs, worship of female divinities, and practices that manipulate

the spiritual energies in nature. The movement has always been eclectic, with individual participants drawing from goddess traditions of ancient Greece, pre-Christian Europe, and Native American religion. Feminist spirituality offers both a critique of and a new alternative to American Christianity.

Anti-Cult Agitation and Other Controversies

The radical impulses of the 1960s triggered a set of conservative reactions that opposed feminism, multiculturalism, the sexual revolution, gay rights, and other causes in the liberal cultural agenda. One part of this reaction was the anti-cult movement, which drew strength from this diffuse conservative movement and from several shocking tragedies associated with new religions, including most notably the mass suicide in 1978 in Jim Jones's Peoples Temple. Were new religions dangerous? Should the American people be protected from them? The anti-cult movement had developed before the Peoples Temple tragedy, begun early in the 1970s by concerned relatives of Americans who had joined controversial religious groups in the 1960s. The key problems identified by the anti-cult movement were religious coercion and "brainwashing." For anti-cult operators, rescuing cult members involved abducting, restraining, and deprogramming them. This was usually done by people without mental health credentials. By the late 1970s, however, the anti-cult movement was professionalized, and mental health practitioners assumed a higher profile in the movement. The movement developed professional journals and conferences, and coercive deprogramming was abandoned in favor of counseling. The anti-cult movement had some success in convincing the broader mental health profession (and the public) that conversion to new religions created psychological problems and illnesses.

Nevertheless, by the mid-1980s the anti-cult movement lost momentum for several reasons. First, after the 1960s and 1970s membership in new religions declined, and there were fewer angry parents and aggrieved ex-members. Second, very controversial groups, such as the Peoples Temple, either failed to grow, declined precipitously, or disappeared. Third, many other new religious movements, such as the Mormons, grew and became more mainstream, joining the list of accepted (or almost accepted) American churches (although many people from a variety of faiths still regard Mormons and other distinctive groups as dangerous "cults"). Fourth and finally, a number of sociologists of new religions, concerned that the anti-cult crusade was endangering

cherished religious liberties, condemned the anti-cult movement and demonstrated convincingly that many of its claims—such as the notion that NRMs brainwashed converts—were without scientific basis.

It is perhaps on this final issue, the issue of brainwashing and coercion, that NRM commentators have disagreed most passionately. Those hoping to protect NRMs and religious liberties—that is, the majority of scholars—have insisted that brainwashing does not exist. They insist that medicalizing adherence to new religions—that talking of conversion processes only in terms of physical and mental pathologies—unfairly targets believers of the new religions and adds to the stigmatization of their groups. On the other hand, some insist that new religions manipulate their members, coercing them into joining or remaining members. Arguments on both sides have been acrimonious, in part because they play out not just in conferences and university classrooms but in courtrooms, where scholarly “experts” are paid to instruct judges and juries about the dangers, real or imagined, of new religions. These are crucial arguments, with a lot at stake. Should American citizens be protected from new religions? Should child members of new religions be forcibly removed? What is the role of the state in protecting personal autonomy? What is the role of the state in protecting the children of unconventional believers? How do we balance the potentially harmful effects of religious adherence with our national commitment to religious freedom? While these questions remain difficult to answer, it is certainly the case that asking and debating all of them has led to a remarkably developed literature on conversion and religious choice, with contributions from psychologists, sociologists, and historians.

Many Americans continue to look at new and alternative religions with skepticism, especially when these religions violate cultural norms or engage in unusual practices. Sources of tension between new religions and the mainstream are varied. Many groups, such as the Jehovah's Witnesses, or Hare Krishna, are chary of American popular culture and pursue various strategies of critique and separation. This can create tension. Other groups violate American norms concerning health and healing by refusing to treat illnesses with Western biomedicine. This has been the case, for example, with Christian Scientists, who have been sued repeatedly for refusing to treat children with deadly illnesses. This also has been an issue for immigrant groups such as the Hmong from Southeast Asia, a people whose beliefs about spirit, body, and health neither agree with Western

biomedicine's underlying assumptions nor understand its healing practices. Some new religions may also seem inappropriately authoritarian to people in the American mainstream. New religions have charismatic leaders who may seem tyrannical. Their demands on adherents may leave believers without freedom and autonomy. This is a problematic argument, of course, for all religions demand obedience and sacrificial service and giving. What exactly, then, is the difference between a new and illegitimate religion and an older, established, legitimate one?

Though skepticism about new religions continues, a countertrend is also taking place, as religions and religious practices (such as yoga) that once seemed new or exotic are becoming mainstream. Rising interest in new religions and religious practices has been abetted by an emerging culture of religious openness, a culture not just of increased religious seeking but also of increasing interreligious curiosity among believers in established religious communities. It is no longer difficult to find committed Christians, Jews, or Muslims practicing yoga, learning something about Buddhist meditation, or reading the latest New Age self-help book. In many ways, as we have seen, America's particular history and culture, its ongoing preoccupation with liberty, individualism, and iconoclasm, made this twentieth-century religious openness possible. We have seen signs and hints of a burgeoning religious diversity and innovative spirit in earlier centuries, when new evangelical sects, idiosyncratic communes, and prophetic movements were born. There can be little doubt that these groups will continue to multiply and that American scholars and other observers will continue to wrestle with ways of evaluating and interpreting them appropriately.

New Religious Movements: Black Nationalist Movements

Throughout black history, there have been both individual and collective forms of resistance against the experiences of oppression that black people have endured from slavery to

the present, but collective black nationalist movements did not begin to emerge until the twentieth century. At stake in the black nationalist movements were two fundamental concepts or values: freedom and identity. These two cardinal virtues were lost to slavery and its aftermath, so the movements sought creative ways to overcome the inequality, injustice, and negative stereotypes that society had imposed on black people. Sometimes this meant aggressive moves to demand greater equality and justice, but at other times it meant taking on imaginative identities and recreating historical pasts. The great migrations to the urban north from southern rural areas provided the freedom and anonymity for experimentation with religious allegiances and identity.

Back to Africa: Marcus Garvey and the United Negro Improvement Association

"Malcus" Mosiah Garvey Jr., as his birth certificate reads, was born August 17, 1887, in St. Anne's Bay on the northern coast of Jamaica. When he was fourteen years old, he became a printer's apprentice and learned some journalism. He also made it a habit to visit churches to observe the preaching and oratorical techniques of Kingston's leading preachers. Garvey was fascinated by the power of both the written and spoken word, which he used in organizing his movement.

In 1912 Garvey had a powerful consciousness-raising experience. He was working in London with Duse Mohammad Ali, a Sudanese-Egyptian scholar and nationalist who influenced Garvey's ideas about African redemption, when he came across a copy of Booker T. Washington's *Up From Slavery* (1901), which ignited his imagination. An excerpt from Garvey's papers reads as follows:

I read "Up From Slavery," by Booker T. Washington, and then my doom—if I may so call it—of being a race leader dawned on me . . . I asked, "Where is the black man's Government?" "Where is his King and his kingdom?" "Where is his President, his country, and his ambassador, his army, his navy, his men of big affairs?" I could not find them, and then I declared, "I will help to make them."

Excited by his newfound direction and purpose, Garvey returned to Jamaica to establish a program for the redemption of the black race. On August 1, 1914, he founded the Universal Negro Improvement and Conservation Association and African Communities League, later shortened to UNIA. The purpose was to unite all people of African

descent in a social crusade to rehabilitate the race. The UNIA motto was “One God! One Aim! One Destiny!”

Although he made some headway in organizing in Jamaica, his movement did not flourish until he arrived in Harlem on March 24, 1916. After a year of travel to assess the mood of this new country, Garvey established the New York division of UNIA, which quickly became and remained the largest chapter. His message of racial pride, uplift, and redemption found a receptive audience. This short, stocky, dark-skinned Jamaican was a gifted and charismatic orator who thundered, “Up you mighty race, you can accomplish what you will.” Garvey believed that a black skin was a symbol of greatness rather than a badge of shame.

By 1919 Garvey claimed more than 2 million members in thirty chapters and an estimated 6 million members worldwide. The *Negro World*, UNIA’s New York newspaper, rapidly became the largest black newspaper in the country, with a circulation of 200,000.

A master politician and an astute organizer, Garvey paid careful attention to the influence of religion among black people. His own experiences in Jamaica and his observations in black communities in the United States had taught him that material and spiritual needs are often blended together and that the successful organization must be able to satisfy both dimensions.

UNIA also fulfilled the need for group sharing through common rites and rituals in weekly meetings, which resembled church meetings, and in massive, colorful parades. In 1920 UNIA held its first international convention in Harlem with invited delegates from twenty-five countries. The convention began with a massive parade by thousands of men dressed in the dark blue uniforms of UNIA’s African Legion and of women who wore the distinctive insignia of Garvey’s Black Cross Nurses. Colorfully robed choirs and children dressed in their Sunday clothes followed. The Madison Square Garden arena overflowed with more than 25,000 people. The crowd sang the new UNIA anthem, “Ethiopia, Thou Land of Our Fathers,” and the official colors of that movement became emblematic of black nationalism worldwide: “Red for the blood of the race, nobly shed in the past and dedicated to the future; Black to symbolize pride in the color of its skin; Green for the promise of a new and better life in Africa” (Cronon, 1974). At the convention Garvey was named provisional president of the African Republic, whose members pledged to organize the 400 million people of African descent around the world.

Marcus Garvey founded the Universal Negro Improvement and Conservation Association and African Communities League to unite people of African descent in a social crusade. He advocated racial pride, individual uplift, and African nationalism, ideas that influenced black mass movements that followed.

Garveyism provided a “common faith” based on the doctrines of African redemption and “race first,” which some scholars have interpreted as a surrogate religion. It certainly possessed all the characteristics of a religion, and UNIA often competed with and in some instances was supported by traditional black Christian churches. Garvey remained UNIA’s official statesman and its most perceptive theologian. The idea that “God is Black” is partly rooted in Garvey’s theology. Although whites have always seen God through white spectacles, he said, Negroes must now “see God through our own spectacles.” “We Negroes,” he wrote in the *Negro World*, “believe in the God of Ethiopia. . . . That is the God in whom we believe, but we shall worship Him through the spectacles of Ethiopia” (Garvey, 1924).

The plans to redeem “Africa for Africans” and to lay the foundations for a black independent economic system of

international trade began with the creation of the Black Star Line. From 1919 to 1921 Garvey and his advisers bought several old steamships at exorbitant prices, refitted and renamed them, and sent them into service. Although the Black Star Line was a tangible means of fulfilling dreams of liberation and reaching Africa, it also marked the beginning of Garvey's financial problems and his eventual demise. He used the steamships as symbols of prestige, to encourage people to join UNIA, and to sell stock in the company to them. However, the old steamships also became an enormous financial drain on UNIA's resources, and eventually they involved him in legal difficulties.

In early January 1922 Garvey was arrested on a charge of using the mail to defraud in the sale of stock for another ship. Garvey dismissed his lawyer and defended himself. Although the evidence against him was meager and weak, his lack of legal experience and his courtroom demeanor resulted in his losing the case. He was fined \$1,000 and sentenced to five years in the federal prison at Atlanta. He was released in 1927 and deported to Jamaica, where he tried to revive his organization.

Eventually, the UNIA movement split when Garvey attempted to move the headquarters of UNIA from Harlem to Kingston in 1929. He suffered a stroke in London and died on June 10, 1940, at the age of 53. He was buried in Kingston, Jamaica. Although Dr. W. E. B. Du Bois had been very critical of Garvey, he also recognized his significance. "Garvey made thousands think," wrote Du Bois in the *Spokesman*, "who had never thought before. Thousands who merely dreamed dreams now see visions." Garvey left an enormous legacy. His ideas of racial pride, individual uplift, and African nationalism influenced all subsequent black mass movements. He was a visionary who kept his feet on the ground. Besides the Black Star Line, he also organized black factories, some of which mass-produced the first black dolls in the United States.

The Moorish Holy Temple of Science

Among the black migrants to the north was Timothy Drew, who was born in North Carolina in 1866. Not much is known about his early life before he appeared in Newark, New Jersey, as a street-corner preacher. A magnetic and charming personality, Drew had little formal education, but he had an inquiring mind, always searching for new information. In 1913 when he was 47 years old, he founded the Canaanite Temple. Not much is known about this phase of

his life or the Canaanite Temple, except that Drew reversed the usual valence of biblical teaching; according to Edward Curtis, rather than just being depicted as the enemies of Israel, the Canaanites, like the Moabites and the Hamathites, were "Moslems of the northwest and southwest Africa," all of whom were driven out of Canaan by Joshua (p. 73). Thus, Drew saw the Canaanites as a great people and the progenitors of African Muslims. His teachings about the Canaanites were preserved in the later lessons of the Moorish Holy Temple of Science.

Although Arthur Fauset, who did the original study of the Moorish Holy Temple of Science, indicated that the movement was established in Newark in 1913, later scholarship suggests that the founding date might be as late as 1925 in Chicago. This later founding date also means that Noble Drew Ali's movement and his newly assumed identity were probably influenced by Marcus Garvey's black nationalism. But Drew Ali did not merely repeat Garvey's teachings; rather, he gave it his own interpretation. Thus, he refused to call himself *Negro*, *colored*, or *black*, but he believed that all human beings separate themselves according to national groupings. According to his complex genealogy, African Americans were Moorish descendants of an "ancient Asiatic race," and their creed was Islam. Drew rapidly established temples in Detroit, Harlem, Chicago, Pittsburgh, and numerous cities across the South. Active membership in the Moorish Holy Temple of Science movement reached between 20,000 to 30,000 members during his lifetime.

Confusion about names, national origins, and identity struck deeply into the psyche of many black people, who were the primary victims of racial discrimination at this point. To confirm this ethnic transformation and inward change of identity, Prophet Ali issued "Nationality and Identification Cards" to his followers. Each card was validated by the subscription "NOBLE DREW ALI, THE PROPHET" (Lincoln, 1961).

In Chicago the movement became a problem for law enforcement officials. Drew Ali's followers would accost whites on the sidewalks by surreptitiously bumping them out of the way, a practice that reversed the slavery and Jim Crow custom of southern whites forcing blacks off the sidewalks. The members would proudly flash their ID cards or show their lapel buttons and sing praises of their new prophet, who had freed them, psychologically at least, from white domination. Noble Drew Ali finally issued a halt to the disorders and urged his followers to exercise restraint. Drew Ali was probably a member of the Masons

and Shriners or was influenced by them because he and his male followers wore red fezzes.

The circumstances surrounding Noble Drew Ali's death in 1927 and the responsibility for it remain unclear and unsolved. During an internal struggle among leaders of the movement in 1927, one leader was killed. Although Drew Ali was not in Chicago at the time, he was arrested upon his return and charged with murder by police officials. No trial ever took place, however, and he was released on bond. A few weeks later he died mysteriously. The cause of his death is attributed either to a beating he received from the police while he was in their custody or a subsequent beating from dissident members during the internal strife that haunted the movement.

After Drew Ali's death the movement split into numerous smaller factions, diluting its former strength and influence. Some temples still remain active, especially in Chicago. Some Moors believe in the spirit of Noble Drew Ali, whereas others feel that he is reincarnated in their present members and speaks through the Circle 7 *Holy Koran of the Moorish Holy Temple of Science*, which should not be confused with the Qur'an of orthodox Islam. The Circle 7 Koran, so named because of an encircled number "7," which was viewed as a sacred number, on its cover, was published in 1927. It contained Drew Ali's complex genealogy and the view that Jesus was the Moors' genealogical ancestor.

As mentioned, Drew Ali had an inquisitive mind open to influences from esoteric and theosophical groups that were popular in the 1920s. Aside from his genealogical speculations, scholars have shown that Chapters 1 through 19 of the Circle 7 *Koran* were drawn in exact form from Levi H. Dowling's *Aquarian Gospel of Jesus the Christ* that was written in 1908. Chapters 20 to 44 of the Circle 7 *Koran* were derived from the 1925 publication of Rosicrucian Order, *Unto Thee I Grant* (originally *The Infinite Wisdom*). In present-day Moorish temples, membership is restricted to "Asiatics" or non-Caucasians who have renounced their former identities as "colored" or "Negro." The terms "el" or "bey" are attached to the name of each male member as a sign of his Asiatic status, an inward transformation (for example, Smith-el or Carter-bey). This practice was derived from the Turkish custom of adding "el" or "bey" as signifiers of the status of nobility.

Friday is the Sabbath for the Moors, but meetings were also held on Wednesday and Sunday. Facing Mecca, they pray three times a day (sunrise, noon, and sunset) and enforce a strict code of personal morality. Although they

view themselves as an Islamic sect, Jesus figures prominently in the worship, as do other aspects of Christian ritual, including hymns such as "This Little Light of Mine," which is sung at the beginning of a worship service. Members greet each other with the word, *Islam*, which means peace.

Movements Influenced by Ethiopianism

As St. Clair Drake has pointed out, the theme and myth of Ethiopianism has been consistently influential throughout African American history, both by individuals and movements that desired either a return to Africa, a redemption of Africa, or saw Africa as symbolic of racial pride. Slave preachers referred to the Bible, especially Psalm 68:31 (KJV): "Princes shall come out of Egypt; Ethiopia shall soon stretch out her hands unto God"), to "prove" that "a black people, Ethiopians, were powerful and respected when white men in Europe were barbarians; Ethiopia came to symbolize all of Africa" (Drake, 1970). The first mass movement in the twentieth century to take up the theme of Ethiopianism was Marcus Garvey's United Negro Improvement Association. Garvey and UNIA often quoted Psalm 68:31. UNIA's anthem was "Ethiopia, thou land of our fathers."

Among the many black Hebrew groups in the United States, the Commandment Keepers of Harlem were led by Rabbis Wentworth Arthur Matthew and Arnold Josiah Ford in 1919. Both Matthews and Ford were influenced by Garvey's movement and sought deeper identification with Africa, and Ethiopia in particular. Ford composed the Garvey hymn, "One God, One Aim, One Destiny," in which he predicted that Africa would rise again and her children would be freed. Both men identified with a group of Ethiopian Jews, called Beta Israel (House of Israel) or more pejoratively, "falashas" (wanders, sojourners), who claimed descent from the union of King Solomon of Israel and the Queen of Sheba of Ethiopia. After Haile Selassie I became the king of Ethiopia, Rabbi Ford took thirty followers to Ethiopia to establish a colony for black Israelites. Jacob S. Dorman, in *The New Black Gods*, notes that although the colony failed, the influence of Ethiopianism continued among the Commandment Keepers (Curtis and Sigler, p. 121).

When Wallace D. Muhammad took over the Nation of Islam in 1975, one of the changes he introduced was to call his African American followers "Bilalians," after the Ethiopian slave Bilal who had been freed by Abu Bakr. Bilal was an important figure in the first Muslim community because he was the first to use his melodic voice to call Muslims to prayer.

The religious movement that embodied the Ethiopian theme most deeply was the Rastafarians movement in Jamaica. Although the group was established there in the 1930s, members have become firmly entrenched in the U.S. religious scene, and the movement has been popularized by Bob Marley and reggae music. Its name is taken from the family name of the Ethiopian Emperor Haile Selassie, which was Tafari Makonen. Ras was his title, which literally meant “head” but also “duke” or “prince,” before he became emperor. Leaders of the movement such as Leonard Howell responded to Garvey’s prophesy, “Behold a black God is coming.” When Haile Selassie was coronated as the emperor of Ethiopia, he was immediately identified as the God incarnate or Jah (from Jehovah), fulfilling Garvey’s prophecy. Selassie became the messianic figure who eventually led people of African descent in the diaspora back to Africa, especially Ethiopia. The Rastafari, as members prefer to call themselves, mix African traditions with biblical teachings. Wearing dreadlocks and smoking ganja were sacred elements of the religion. The Rastafari also invented their own language. On April 21, 1966, Selassie visited Jamaica, where he was greatly celebrated by thousands of Rastafari. Although he did not personally believe that he was Jah, Selassie did grant a parcel of his personal land (500 acres) in Ethiopia to his black Ethiopian followers and to the Rastafari movement. Rastafarians have made pilgrimages to the land called “Shashamane,” and a number of members have lived on the land since the 1960s (Barrett, 1977). In the United States, Abuna Ammanuel Foxe, president of the Imperial Ethiopian World Federation, founded the Church of Haile Selassie I in Brooklyn in 1987. Branch churches have since been established throughout Rastafari communities in the United States, the Caribbean, and the United Kingdom. Foxe was later appointed a chaplain in the New York State prison system.

Nation of Gods and Earths: The Five Percenters

The Nation of Gods and Earths, more colloquially known as the “Five Percenters,” was a splinter group from the Nation of Islam that was led by Elijah Muhammad. In 1963 Clarence 13X Smith, who was a member of Malcolm X’s advanced ministry class at Temple No. 7 in Harlem, left the Nation of Islam following a dispute. He asked Malcolm, “Why is this particular black man, Master Fard Muhammad, Allah? Why aren’t all black men Allah (that is, divine)?” The Nation of Islam had taught that the black man is the original man and is of divine origins. Smith also had some doubts

that Fard was black because the only extant photo of him in the Nation of Islam shows him as a white man. When Smith began teaching his views to new members, he was asked to leave. He left and took nine followers with him. These first nine were called “the Nine First Born,” so named because each male member of the Nation of Gods and Earths adds the phrase “Born Allah” to the attribute of God given to him (for example, Knowledge Born Allah, Positive Born Allah, Divine Born Allah). In other words, each black man who subscribes to the group’s beliefs is divine or a god. Women are called “earths” because they are to be productive like the planet Earth and produce and nurture members for the future nation.

The media term “the Five Percenters” stems from the nation’s teaching that 85 percent of black people are in a state of ignorance about their true knowledge of self, 10 percent or the “talented tenth” of the black middle class (preachers, teachers, and black professionals) have some knowledge of self but have sold out to the white man, and the remaining 5 percent are the poor righteous teachers who have achieved true knowledge of self and have the task of awakening the black masses. Smith built on the 120 lessons or degrees that were taught by Elijah Muhammad’s Nation of Islam. He also added two books called *The Supreme Alphabet* and *The Supreme Mathematics*. The alphabet and numbers are correlated with each other to produce new knowledge or insights similar to the esoteric system of Kabbalah.

Smith, who called himself Allah, is regarded as the “Father” of the nation, and he focused on the dispossessed youth of Harlem that the Nation of Islam could not reach. In 1966 through the National Urban League Street Academy program, Mayor John Lindsey’s administration established a street academy with Smith, which he called the Allah Academy in Mecca (Harlem). Another street academy was established in Brooklyn, called the Allah Academy in Medina. After surviving one assassination attempt in 1964 in disputes with members of the Nation of Islam, Smith was killed in an unsolved murder in 1969. The First Nine Born took over the leadership of the movement. Although members of the Nation of Gods and Earths use the trappings of Islam, they do not consider themselves Muslims. They also do not consider their movement a “religion” but, like the Rastafarians, call it a “way of life.”

This fairly decentralized movement has attracted thousands of members, largely poor black youth, spreading from the East Coast throughout the country, and it is found in

most predominantly black middle and high school districts and in prisons. Members meet in parliaments for group discussions once a month on late Sunday afternoons in schools, parks, and also in prisons. The main parliament meets in the Harriet Tubman School in central Harlem. Although it is still a largely black movement, there are now some Latino members and a few whites. A number of hip-hop artists such as Rakim, Wu-Tang Clan, Poor Righteous Teachers, and Nas were members and spread the theology through hip-hop music.

Conclusion

The black nationalist movements depicted in this article, from Marcus Garvey's UNIA to the Nation of Gods and Earths, can be viewed as religions of the oppressed. Many poor black men and women have rejected the Christianity of black churches and have sought new religious paths and identities for themselves. Despite promises by the major political parties, many of the black poor have been frustrated in their search for freedom, justice, and equality in U.S. society. These religions of the oppressed have given them a means to transform and affirm themselves and hope for future redemption.

New Religious Movements: Nineteenth Century

New religious movement is a term used to describe religious groups that introduced innovative beliefs, practices, or forms of organization that caused them to be in tension with the surrounding culture. While the term implies an original creation, almost all nineteenth-century new religious movements had precedents in older, established religious traditions. American religious leaders crafted innovative beliefs and practices and founded new religious movements that both stirred controversy with the larger public and inspired people to join the new faiths. Religious groups in the nineteenth century such as the Shakers, the Mormons, and the Oneida Perfectionists also presaged many developments in contemporary America. The now common "cult" stereotypes of a charismatic leader interested only in manipulating adherents and the deluded follower who is tricked into joining a deceptive religious group were present in many accounts of new religious movements in the nineteenth century. In addition, the groups that this article will consider tended to engage in cultural critiques and deviations that contributed to their marginal status. For example, Mormons created tension with the surrounding culture both because of their belief in the scriptural status of the Book of Mormon and because of the critiques of the mainstream culture implicit in the restorationist and separatist elements in the developing Mormon tradition.

Because nineteenth-century new religious movements frequently represented religious responses to larger social and cultural trends, the study of such movements can bring light to important issues in the American culture at that time. For example, nineteenth-century new religious movements confronted the larger issues of women's roles in a changing society and the responses of oppressed groups to their situations. Other important themes in nineteenth-century new religious movements include reimagining the

social order, the revitalization or restoration of the true faith, self-empowerment through religious practice, the combining of beliefs from different religions in a new synthesis, and the increasing diversity of religions in America throughout the century.

Communal Movements

Among the most important nineteenth-century dissenters were various communal and utopian movements. Communal movements were groups of people who banded together in a common area, shared resources, and worked toward some common goal. Because communal movements saw radical change in social organization as necessary to meet their goals, they were, by their very nature, countercultural. Communal new religious movements in the nineteenth century are among the most controversial of the new religious movements both because of their beliefs and practices and their new forms of organization, many of which were total rejections of mainstream society's values and principles.

Reformers from many different traditions and contexts established communal movements in nineteenth-century America. The transcendentalist movement had Fruitlands. The German pietist tradition contributed the Amana Colonies and the Harmony Society. One of the first, and perhaps still the best known, actually arrived in 1774 when the United States was still a British colony. The United Society of Believers in Christ's Second Appearing, more commonly known as the Shakers because of their vigorous dance rituals, was a communal movement with ties to the English Quaker tradition that had come to America when Ann Lee (1736–1784) and a few followers migrated and settled near Albany, New York.

The first Shakers in America understood themselves to be restoring the early Christian faith through disciplined communal living under the personal leadership of Lee. Shaker theology claimed that God had a dual male and female nature; that perfection was possible through proper living; and that divine revelation, exemplified by Lee's prophetic mission, continued. Converts gained access to this perfected, restored kingdom by living in the communal group and avoiding the sin of Adam and Eve, which Lee understood to be sexual intercourse itself, rather than disobedience to God. Thus, the Shakers required celibacy of all members. Shaker houses not only had separate sleeping areas for men and women but separate entrances, staircases, tables in the dining rooms, and spaces in the worship halls. Shakers also required converts who were married when they joined

to give up their traditional married life. While the Shakers did segregate men and women into traditional, gender-defined work roles, they were unique among American religious groups of the nineteenth century in granting equal authority to men and women. The formal leadership structure of Shaker villages required both a male and a female leader, who had equal authority. This radical rejection of traditional gender hierarchies and married life led to their detractors accusing them of breaking apart and undermining families. However, the Shakers' neat, well-planned, and successful villages, along with their famously crafted furniture, also gained many admirers, especially as the actual number of Shakers declined over the course of the nineteenth century. The Shakers were also among the first American religious movements to face sustained public attacks by ex-members based on accusations that the Shakers broke up families, a common cult stereotype in contemporary culture.

If the Shakers' tensions with society had to do with rejecting sexual activity, the second most famous nineteenth-century communal new religious movement had the opposite issue. John Humphrey Noyes (1811–1886) was a Dartmouth College graduate who studied for the ministry at both Andover and Yale. He developed the belief that Jesus' Second Coming had occurred at the destruction of Jerusalem's Second Temple in 70 CE. For Noyes, that meant that a "perfected holiness" was possible in this life. Noyes began preaching these views, lost his ministerial license, then founded a communal group in Putney, Vermont, to live by the principles he understood to encompass right attitude and right works.

Among those principles was a reconceptualization of the relationship between men and women. Noyes developed the practice of "complex marriage," a system for sexual relations in which each adult member of the community essentially had total sexual access to any other adult member. This system faced the charges of "free love" from outsiders, but it was not an orgiastic free-for-all. Among other regulations, complex marriage required the practice of "male continence," in which men engaged in intercourse without ejaculating. Complex marriage was also linked to Noyes's system of "ascending and descending fellowship," in which more spiritually adept, and usually older, members of the community held more authority. In practice this meant that older men and women introduced younger men and women to sexual activity in the community. This highly controversial practice got the fledgling group into enough

trouble in Vermont to necessitate a move to New York, where they settled near Oneida.

At Oneida, the full communal form developed. Members held daily group business and religious meetings. The practice of “mutual criticism,” where problems among individuals were aired out, developed. The community also began several commercial enterprises to support themselves, culminating in flatware manufacturing. Oneida silverware is still popular today. Later in the community’s history, Noyes also developed “stirpiculture,” a eugenics system, in which certain adult members were chosen to have children. The stirpiculture controversy was exacerbated by the fact that Noyes himself was approved to father more children than any other male member of the community. However, the controversial sexual practices at Oneida did in some respects grant women greater autonomy than they had in mainstream society. The practice of male continence meant that unwanted pregnancies were largely avoided at Oneida. The community also had far less gender stereotyping than the general society. Women were freer to work at traditionally “male” jobs, and vice versa, and because of ascending and descending fellowship, many women held positions of spiritual authority over men. All members were under Noyes’s ultimate authority, however.

Restoration and Revitalization Movements

Many new religious movements begin from the premise that other religions have somehow fallen away from the original, and therefore true, faith. Founders and leaders of religious groups throughout the nineteenth century believed that they were going back to the foundations of their traditions, not introducing new beliefs and practices. Leaders made use of the themes of restoration and revitalization of a tradition, rather than the introduction of a whole new religion, to legitimate their innovations, as well as to provide religious strategies for responding to cultural pressures and tensions.

Certainly the most prominent of the nineteenth-century restoration movements was the Latter-day Saints tradition. When Joseph Smith Jr. (1805–1844) began praying in a grove outside his Palmyra, New York, home in the early 1800s, he was looking for an answer to the religious confusion he saw all around him. The “Father and the Son” responded to Smith’s prayers, telling him that all of the religions were wrong and that he would be shown the true religion. Smith subsequently discovered the Golden Plates, a book made of gold leaves with the story of the migration of

ancient Israelite tribes to the Americas and those tribes’ history on the continents inscribed upon them. Smith’s reading and translation of the Plates led him to claim that his mission was to reestablish the one true faith by creating a community based upon the stories in the two testaments, the Bible and the Book of Mormon, as the translated and published version of the Golden Plates came to be known. Early Latter-day Saints thus understood themselves to be going back to the true faith, as revealed to the Prophet Joseph Smith, when they banded together in communal settlements modeled after theocratic states and began practicing “plural marriage.” Such practices clearly led to the tensions the early Mormon communities faced and played a major role in the both the splintering of the tradition after Joseph Smith’s murder in 1844 and the migration west by Brigham Young and his followers. Also, like many contemporary new religious movements, the early Mormon community was vehemently attacked because of Smith’s claim to prophecy and his claim to be adding to the scriptural canon with the Book of Mormon.

New religious movements also applied the themes of restoration and revitalization to respond to particular pressures that their communities felt at certain times and places. That idea is clearly illustrated by the Ghost Dance, a revitalization movement that took place among Native Americans in two related waves, the first in 1870 and the second in 1890–1891. The movement centered on the ritual round dance, common among many Native American groups, that was performed in a dance arena with a pole or tree in the center. Native Americans performed the Ghost Dance to reconnect with the world of the dead and to facilitate the revival of traditional tribal lifestyles, many of which were under severe threat due to the encroachment of Christian missionaries bent on converting Native Americans and of emigrants from the eastern United States who wanted Native lands.

The first occurrence of the Ghost Dance was in 1870 after a Northern Paiute named Wodziwub (d. 1872?) had a vision in which he saw that traditional tribal life could be restored if the dance were done at night with no fires. That version of the dance caught on for a time among the Paiutes and several other tribes in Oregon and California. However, as it became clear that Wodziwub’s prophecies were not being fulfilled, the movement faded. The 1890–1891 version of the Ghost Dance began when another Paiute, Wovoka (1856?–1932), whose family had connections with Wodziwub, had a visionary experience during an 1889 eclipse of

the sun. Wovoka fell into a trance and was transported to the supreme being in the sky, who showed him the land of the dead and the happy life there. That supreme being promised that the living would have a happy life if a series of rules were followed. Wovoka taught that the round dance, conducted on consecutive nights, with men and women dancing together in a circle with interlaced fingers and shuffling side steps, would promote the return of that happy, traditional Native life.

The 1890–1891 Ghost Dance coincided with the military attacks on the Plains tribes by the U.S. Army. Several of those tribes, notably the Lakota Sioux, adopted the Ghost Dance in the hopes of regaining their freedom and restoring their traditional ways of life. The Plains tribes, again especially the Lakota, also added several new visionary and military traits, including the concept of the “ghost shirt,” a ritual garment that participants believed would lend them military prowess and protection from bullets. The Ghost Dance activity in the Dakotas resulted in a severe backlash by the U.S. Army, culminating in the assassination of Sitting Bull and the massacre at Wounded Knee. Enthusiasm for the dance ebbed after those events, but the dance persisted until at least the 1950s.

In addition to illustrating revitalization themes in a new religious movement, the Ghost Dance, which clearly depended on Christian millenarian themes, ethical precepts, and concepts about one supreme God, as well as on traditional Native American concepts and practices, illustrates the blending of disparate religious beliefs and practices, or “creolization,” that characterized many new religious movements in nineteenth-century America.

The end of the nineteenth century saw the first example of a group of new religious movements that expressed African American religious responses to oppression and discrimination using themes of restoration and revitalization. Many of those movements started from the premise that Christianity, as the religion of the slave holders, should be rejected in favor of Islam or Judaism. The founders of those new religious movements took the themes of freedom, justice, and equality found in all three of the major monotheistic traditions and crafted religious responses to racial injustice, oppression, and economic inequality. Subsequent twentieth-century movements such as the Moorish Science Temple and the Nation of Islam were clearly following in the footsteps of these movements.

One of the first movements in this vein was a black Jewish group, the Church of God and Saints of Christ, founded by

William Saunders Crowdy (1847–1908) in Lawrence, Kansas, on November 8, 1896. Crowdy was the son of slaves and worked as a cook for the Santa Fe Railroad in the Kansas City area when he began having visionary experiences in the early 1890s. He preached about those visions, which he claimed showed him that Africans were the true descendants of the lost tribes of Israel and so should actually be Jews, on the streets of Lawrence. Crowdy and his successors developed the movement by incorporating Jewish and Christian themes. The movement embraced the Jewish Sabbath and generally used Jewish terminology, as well as celebrating Passover as its major holiday. Jesus was primarily seen as a prophet who advocated racial equality. Like many other groups in this general family of African American freedom movements, the Church of God and Saints of Christ made extensive use of the Exodus story and its themes.

Adventist and Millennial Movements

Among the most important of the various nineteenth-century new religious movements are those that were primarily concerned with the date of the Second Advent, when Jesus would return to the earth and inaugurate the final judgment and culmination of history. The speculation about the exact date of the Second Advent and preparations for the event surged beginning in the 1830s, as a result of the activities of a Baptist lay preacher and farmer from Low Hampton, New York, named William Miller (1782–1849). Based upon his reading of the biblical verse Daniel 8:14 and after one false prediction, Miller predicted that Jesus’ return would take place on October 22, 1844. Miller’s preaching convinced many thousands. Stories of Millerites, as believers in Miller’s message came to be known, selling their homes, farms, and businesses and donning white “ascension robes” to await the expected world transformation sparked charges of manipulation and lunacy against Miller and his followers. Nevertheless, Miller, and especially those who followed in his footsteps, established one of the most important themes in the American religious world.

Despite the failure of Jesus to return to earth, the Great Disappointment, as that event came to be known, did not spell the end of Adventism in the United States. The most significant of the groups to come out of the Great Disappointment were the Seventh-day Adventists. This group reinterpreted Miller’s message to indicate that Jesus had entered the heavenly sanctuary to conduct its cleansing on October 22, 1844, and that he would return to earth at an unspecified time in the future when that task was complete.

The Seventh-day Adventists thus managed to keep the Adventist message alive by reinterpreting it to refer to an event that would occur at an unspecified time in the future. Under the prophetic leadership of Ellen G. White (1827–1915), the Adventist reputation as a new religious movement was solidified. White, a follower of Miller's, began having visions soon after the Great Disappointment that appeared to confirm many of the theological reinterpretations of Miller's message others had introduced to explain Miller's failure. White's visions also became sources for the health and diet reforms that the Adventists undertook as part of their preparations for the Second Coming. White taught that abstention from alcohol and tobacco, as well as a vegetarian diet, were part of the biblically mandated life that was required of all believers before Jesus could return to earth. Practices such as vegetarianism, which went against common dietary practices of the nineteenth century, served to set Adventists apart from the larger society and thus contributed to their reputation as deviant.

Other religious leaders interested in the date of the Second Advent established movements throughout the nineteenth century. The most significant of these was the Jehovah's Witnesses, founded by Charles Taze Russell (1852–1916) in 1879, when the first issue of *Zion's Watchtower and Herald of Christ's Presence* was published. The group took off when several small congregations were established as a result of house-to-house proselytizing and the establishment of Bible study groups. As the Witnesses developed, their distinctive beliefs—including such notions as the unified nature of God, who should be known by the name Jehovah; the lesser, created nature of Jesus; and the idea that all who believe their message will be saved—have, in combination with their active proselytizing, made them among the more disdained of the American new religious movements. Yet the Witnesses' active defense of their religious rights has also played a key role in establishing and defending the religious freedoms that so many Americans take for granted today.

New Visions of the Divine

New religious movements frequently include altered visions of the divine forces of the world, as well as new visions of the human link to those divine forces. Many new religious movements also reflect and respond to tensions in the society about fundamental social and cultural issues such as gender roles. Spiritualism, Christian Science, and New Thought all reflect those issues. Those three movements are also prime examples of “metaphysical

religion,” a style of religiosity pervasive throughout American history that is premised on a theory of correspondence, the idea that this world is a reflection of a larger, more perfect universe and that through the proper practices it is possible to access and make use of the larger order to influence this world for the better.

An amorphous religious movement that might best be described as a style or way of being religious, rather than a specific religious movement, Spiritualism posited the existence of an afterlife populated with departed human spirits that could be contacted through either a human medium or specialized equipment such as a planchette, sometimes with a Ouija board. Spiritualism was controversial for several reasons, including the prominence of women as mediums and séance leaders, the frequent linkage of Spiritualist practitioners and believers to social movements such as women's rights, abolition, and marriage reform, and the widespread notion that the movement was populated with frauds and charlatans more concerned with the profit motive than with prophecy.

Spiritualism emerged in the wake of two phenomena. First was Andrew Jackson Davis's (1826–1910) publication of his book about “harmonial philosophy,” *The Principles of Nature, Her Divine Revelations, and Voice to Mankind* in 1847, and the subsequent founding of a journal, *Univercoelum*, to promote Davis's philosophy. The second was a series of events at the home of two teenage girls, Margaret (1836–1893) and Kate Fox (1838–1892), in upstate New York in 1848. The Fox sisters claimed that a series of rappings and knocks that occurred in their house were in fact attempts by deceased spirits to communicate with the world of the living. Just before its demise in 1849, the editors of *Univercoelum* published an account of the Fox sisters' rappings, prompting Davis to explain the events in terms of his harmonial philosophy and simultaneously lending a degree of publicity to the goings-on. The ground was thus laid for the formation of Spiritualism as a religious movement.

As the movement developed, themes that clearly put it at odds with the surrounding religious culture emerged. Spirit mediums, mostly women who claimed to be able to contact the world of the deceased, claimed a religious authority that was outside the traditional hierarchical structures of the male-led Protestant churches dominating most of nineteenth-century America. The notion that mediums could “scientifically” demonstrate the truth of their claims by putting on séances at which people could verify the claims for themselves also undermined traditional authority structures.

The séance, with its implicit “see for yourself” claim to its truth, also presaged methods of legitimation that would be adopted by several later new religious movements. The fact that many of the messages from beyond seemed to support reform efforts such as temperance, women’s rights, and abolition of slavery meant that for many outside the movement, Spiritualism represented a countercultural movement critical of society. Several Spiritualists also believed that the importance of the message and the underlying truths they contained justified any type of theatrics necessary to convince people of the reality of the mediumship. Thus, deceit and fraud were certainly not unknown in the Spiritualist world and contributed to its reputation as a vehicle for emptying people’s pockets more than for communicating with their departed loved ones.

Spiritualists also practiced healing. Using mediumship, Spiritualists believed they could contact the world beyond for information on treatment of illness and injury. Healing was a concern they shared with two other important new religious movements that reconceived the divine-human link, Christian Science and New Thought. Although they have important differences, both Christian Science and New Thought took as a key premise the notion that the divine was a principle pervading the entire universe and that through proper prayer and methods of understanding this principle, humans could eliminate disease, injury, poverty, depression, and even death.

Both movements began in the middle of the nineteenth century with the work of the healer Phineas Parkhurst Quimby (1802–1866). Originally a clockmaker in Maine, Quimby saw a mesmerist demonstration that sparked his interest in the possibility of healing using hypnotic techniques. He refined his healing techniques on the lecture circuit, eventually concluding that disease was caused by false beliefs and thinking; therefore, healing meant ridding one’s self of false beliefs. Quimby ran his own healing practice for several years, and while he was not very interested in the theological implications of his healing techniques, many of his patients were, including a woman with a lifelong history of illness and injury, Mary Baker Eddy (1821–1910).

Eddy had visited Quimby and benefited from his healing techniques prior to an injury she sustained from a fall on the ice in 1866, which her doctor apparently considered very severe, possibly even fatal. Eddy prayed and consulted her Bible as she convalesced and made a full recovery. To understand that experience better, she commenced a lengthy and detailed Bible study that led her to the belief that God was

the principle of love and that the true nature of the world and human beings was entirely spiritual. That being the case, the material world was illusory, and therefore the ills associated with the material world, like disease and injury, had no ontological reality. Healing was a process of discovering, understanding, and putting into practice that truth. Over the next several years, Eddy composed her masterwork explaining those ideas, *Science and Health with Key to the Scriptures*. She also established the Massachusetts Metaphysical College, along with a formal church structure for the Church of Christ, Scientist, and founded a newspaper, the *Christian Science Monitor*.

One of Eddy’s early students was Emma Curtis Hopkins (1849–1925). After a falling out with Eddy, Hopkins left Boston for Chicago, where she founded her own metaphysical college and trained so many early New Thought leaders that she has become known as the “teacher of teachers” among New Thought proponents. Her students included Annie Rix Miltz, founder of the California-based Home of Truth; Myrtle and Charles Fillmore, cofounders of the Kansas City-based Unity School of Christianity; and the author and syndicated columnist Ella Wheeler Wilcox, among many others. The principle difference between Christian Science and New Thought was that New Thought did not deny the reality of the material world. Rather, for most New Thought groups, material conditions were the result of the activity of the mind, which because it had an intimate and innate connection to the divine, it had the power to create real change in the material world. Thus, by understanding the divine and the human link to the divine differently, one could be free from the maladies of the material world.

Neither Christian Science nor the various New Thought groups have ever been particularly large, yet their influence has gone far beyond numbers of adherents. The various modes of religious healing in the United States owe much to these idealistic conceptions of the divine-human link. Moreover, the ideas that inform both Christian Science and New Thought have made their way into popular culture through the work of authors such as Norman Vincent Peale and his *The Power of Positive Thinking* and, more recently, the pop-culture phenomenon of *The Secret*. Christian Science and New Thought also represented an important religious response to the changing social conditions of the late nineteenth century. Especially New Thought, with its focus on the well-being of the self, its empowerment of women, and its sophisticated use of the media to spread its message,

represented a precursor to the way religion would change in the twentieth century, in America. Christian Science and New Thought leaders and practitioners reconceived the divine for people in a changing world with changing needs.

Increasing Diversity

By the end of the century, the American religious scene was clearly on its way to becoming more like what contemporary Americans would recognize as the American religious world. Asian immigrants had begun to bring their traditions to America, and leaders of new religious movements were blending these ideas and practices into their own movements. One nineteenth-century example was Theosophy. Theosophy began with the activities of Henry Steel Olcott (1832–1907), a lawyer and journalist, and a Russian immigrant with an exotic and somewhat mysterious past, Helena Petrovna Blavatsky (1831–1891). The two met on a farm in Vermont where a series of Spiritualist events was taking place and quickly formed a friendship based on mutual interests in spirits, occult practices, and Eastern religions. Olcott and Blavatsky formed the Theosophical Society in New York City in 1875 to examine such phenomena, and for a time Blavatsky's apartment in New York was the site of numerous meetings of the incipient society. Blavatsky also wrote the first major Theosophical book during this period, *Isis Unveiled* (1877). Blavatsky, a prolific author, was the creative force behind the group, eventually publishing her other major book, *The Secret Doctrine*, in 1888, while Olcott was its organizer and public face.

Originally intended as a group to study ancient wisdom, comparative religion, science, and “latent” human powers, as it developed Theosophy took on a number of other influences. Blavatsky and Olcott's interest in Asian religions manifested in the incorporation of concepts such as karma and reincarnation into Theosophical teachings, as well as a move of the headquarters of the movement to Adyar, India, in 1878. The Spiritualism strain soon manifested in the form the messages from the “ascended masters,” or “mahatmas,” spirits living beyond this world who communicated with those of the right training or gifts, such as Blavatsky. The ascended masters were common religious figures such as Jesus and Buddha, as well as more obscure masters such as Saint Germain.

The possibility of communication from beyond this world, as in Spiritualism, meant that authority could be claimed by any number of adherents, and this certainly happened with Theosophy. A number of splinter groups emerged throughout the next several decades, many of

which incorporated elements from their founders' religious interests and traditions. Systems of thought and religious practices such as Neoplatonism, Gnosticism, medieval mysticism, Renaissance philosophy, Buddhism, Kabbalah, and Sufism joined the ascended masters and mahatmas, along with religious influences such as Hinduism and Anglican Christianity in the emerging Theosophical groups. The movement splintered into several subgroups over the course of the 1890s and 1900s. Subsequent leaders such as Annie Besant (1847–1933), Katherine Tingley (1847–1929), and Guy (1878–1939) and Edna Ballard (1886–1971) established branches of the movement that incorporated such disparate elements as Besant's proclamation that a young Hindu, Jid-dhu Krishnamurti, was the incarnation of the coming world teacher; Tingley's establishment of a communal, utopian settlement at Point Loma near San Diego; and the Ballards' I AM movement, which introduced New Thought-style teachings on the power of the mind to Theosophical ideas.

Although Theosophical movements have generally been small and for the most part nonproselytizing, their combinative nature has meant that Theosophy contributed to the introduction of several new streams of religious thought and practice in twentieth-century America. New Age groups in particular can be understood as following in the footsteps of Theosophy. American interest in Buddhist and Hindu ideas owes something to Theosophy. Theosophy also helped to popularize such concepts as reincarnation, karma, and the aura, as well as practices such as yoga.

Probably the most significant religious event at the end of the century was the 1893 World's Parliament of Religions, held from September 11 to September 27, in conjunction with the World's Fair and Columbian Exposition in Chicago that year. The event was organized by several liberal Protestant groups and brought together representatives of many major religions from around the world to give presentations and discuss religious issues. Although the organizers of the event had intended it to be a showcase for liberal Protestantism, the actual effect of the Parliament was to expose many Americans for the first time to charismatic and eloquent representatives of religious traditions from around the world. Several of those representatives went on to found important religious groups in America. Thus, the 1893 World's Parliament of Religions must be understood as one of the first major steps in the introduction to America of several new religious movements with connections to Asia.

The most successful of the Asian representatives to address the Parliament were those who came from places that had

been part of the British colonial empire and who, as a result, spoke English well and understood something of both the cultural and the religious context they were entering. Perhaps the best example was Swami Vivekananda (1862–1902), a disciple of the Hindu teacher Ramakrishna Paramahansa and the founder of the Ramakrishna Mission, the organization that established the Vedanta Society in the West. One of the first important Hindu-based religious movements in America, the Vedanta Society, stressed a monistic Hindu philosophy that posited one reality underlying all the manifestations in the world. Vivekananda's eloquence and charm made him something of a celebrity in late nineteenth-century America, and those characteristics no doubt aided him in the subsequent tours he took around the United States, giving lectures to middle- and upper-class whites and helping to found outposts of the Vedanta Society.

Another central figure in the establishment of Asian religions in the United States to emerge from the World's Parliament of Religions was Shaku Soen (1859–1919), a Japanese Zen Buddhist priest whose influence came largely through his students. These included some of the first Zen monks to settle in America, as well as the layman D. T. Suzuki (1870–1966), whose books helped establish Zen in America. Beginning in the late nineteenth century, American Zen practitioners focused on seated meditation and the use of *koans*, short riddles, to clear the mind of conscious thought. Using Zen methods, practitioners believed they could facilitate *satori* experiences: glimpses of the state of nirvana, the blissful end of the cycle of reincarnation in which all sentient beings are trapped. Zen not only became the dominant form of Buddhist practice for European Americans for most of the twentieth century, but it also became ingrained in the American popular imagination through the work of writers such as Alan Watts and the appropriation of the Zen master image by movies such as *Star Wars* and *The Karate Kid*.

The World's Parliament of Religions was instrumental in establishing Asian religions in the United States. It also prompted interest in religious pluralism and the study of religion, and as a result American colleges and universities began offering classes in comparative religion. The World's Parliament of Religions pointed the way to the pluralistic religious society Americans live in today.

Conclusion

New religious movements in the nineteenth century illustrated the religious creativity, the resistance to oppression, the cultural innovation, the social experimentation, and the

general diversification that came out of life in a rapidly changing American world. Nineteenth-century new religious movements also frequently demonstrated culturally and socially relevant religious solutions to issues that their members confronted. Thus, it is helpful to conceive of them as attempts to keep religion relevant to the lives of adherents. Furthermore, it is helpful for understanding new religious movements to think of the tension created by being a part of an outsider group as helping members of new religious movements bond and so to create stronger, more vital communities.

The nineteenth century is pivotal to understanding the processes that created contemporary religious America. In the year 1800 the American nation was mostly Protestant and was just beginning a major westward expansion. By the year 1899 the country stretched to the West Coast of the continent and was home to representatives of all the major world religions, as well as several new religious movements that were to become important, permanent members of American religious culture. Nineteenth-century new religious movements may have been in tension with the surrounding culture, but they nonetheless played an important role in the formation of American religious culture.

New Religious Movements: Twentieth Century

The term *new religious movements* (NRMs) emerged in the 1970s as a way of delineating sect and cult movements from churches. A *church*, in the U.S. context, is an established religious denomination that traces its origins to one of the historic European confessions. A *sect movement*, on the other hand, is usually formed when members of a church become disillusioned and leave (or are forced to leave) their church and set up a new religious community. A *cult movement* has a great deal in common with a sect movement, in that it tends to have a dense social structure, exists in a significant degree of tension with the surrounding culture, and favors

charismatic leadership. The major difference is that cult movements are not offshoots of conventional churches but, rather, are independent creations of their founders. The adoption of the term *new religious movements* was also a way of moving beyond the word *cult*, which had become the term used by the anti-cult or countercult movements to describe any controversial, nontraditional religious organization. This use of *cult* became particularly pronounced following the November 1978 Jonestown mass suicides. Although scholars recognize that the term *new* is problematic—for example, when discussing the Church of Jesus Christ of Latter-day Saints, which was founded in 1830—the designation remains the standard for scholars of sect and cult movements.

The mid-to-late twentieth century saw two trends that appeared to accelerate the formation and reach of NRMs in U.S. society. First, the 1965 Immigration Act opened the United States to an influx of Asian religious teachers, who brought varieties of Hinduism, Sikhism, Buddhism, Taoism, Jainism, and Islam to U.S. spiritual seekers. Christianity, though still dominant, began sharing the religious landscape with rapidly growing communities (both immigrant and native) of each of these traditions. Second, the 1960s counterculture coincided with a widespread disillusionment with conventional Christian churches. These churches came to be viewed as overly accommodated to the U.S. consumerist, militarist, and secularist mainstream culture. The counterculture promoted a more experiential and experimental approach to religion and provided a steady stream of potential recruits to the emerging NRMs of the late 1960s and 1970s.

Representative New Religious Movements

Several NRMs have gained a high degree of public notoriety during the past forty years and deserve special attention. The first of these, the International Society for Krishna Consciousness (ISKCON), was brought to the United States in 1965 by the Indian teacher, Bhaktivedanta Swami Prabhupada (1896–1977). Prabhupada taught a traditional form of Hindu devotional religion focused on the figure of Krishna. In Prabhupada's view, Krishna is the Supreme Lord of all creation, superior to the traditional triad of Hindu supreme gods, including Brahma, Vishnu, and Shiva. By worshipping Krishna in special *pujas*, or worship rites, and by chanting his principle mantra, "Hare Krishna, Hare Krishna, Krishna, Krishna, Hare, Hare, Hare Rama, Hare Rama, Rama, Rama, Hare, Hare," devotees believe that they

will achieve salvation. ISKCON members revere the Bhagavad Gita, one of Krishna's special scriptures, and distribute Prabhupada's special translation and commentary on this work.

In the early years of the movement, members dressed in traditional Hindu garb, shaved their heads (except for a shock of hair on the rear of the head), and marked their foreheads with two stripes of sacred clay signifying the lotus feet of Krishna. They lived as celibate monks, ate vegetarian food, and chanted daily rounds of the group's mantra. Prabhupada opened centers in major U.S. cities and financed this expansion largely through the sale of books and incense. One successful ISKCON outreach was the offering of free vegetarian lunches at their worship centers or on university campuses. Members took the opportunity to share their beliefs and distribute literature while students enjoyed the free food.

Swami Prabhupada died in 1977, having appointing eleven successor gurus who had regional authority. This provision for his succession was crucial because the group believed that devotees must work under a spiritual master of impeccable lineage. There was also a governing body council (GBC), whose thirty members met annually to elect secretaries to govern administrative zones. In time the successor gurus began to clash with the GBC and each other, leading to charges of exploitation, criminal enterprises, and even murder. One guru, Kirtanananda Swami Bhaktipada, the head of the New Vrindaban community in rural West Virginia, was convicted of racketeering and conspiracy to murder.

Following these developments, many members moved out of the group's communal institutions and set up life as "householders," with jobs in the world and traditional family duties. More scandals rocked the group in the late 1990s, with the disclosure that many children who were sent to the group's boarding schools in the 1970s and 1980s suffered sexual, physical, and psychological abuse. ISKCON has taken significant steps to reach out to these children and offer them counseling and cash settlements.

Church Universal and Triumphant

A second controversial group is Church Universal and Triumphant, founded by Mark L. Prophet in 1958 in Washington, D.C., as the Summit Lighthouse. Prophet believed he had been granted the mantle of "messenger" from the Ascended Masters, the advanced adepts who govern the spiritual evolution of Earth in the theosophical tradition. He began to publish "dictations" from the masters and to build a small following across North America.

The Summit's teachings included the practice of *decreeing*, a form of verbal affirmation that connected the I AM Presence—the divine inner nature of the disciple—with the outer personality and its needs. Followers believed they could overcome negative conditions in the world and in their own lives through this practice.

Members also believed in the path of "ascension," which stipulated that the goal of life was the union of the human soul with the Divine Being in heaven. Each human being was seen to possess a tripartite nature consisting of the I AM presence, the Christ Consciousness (a mediator between the human and divine planes of existence), and a human soul. By following Prophet's graded path of initiation, students hoped to gain freedom from negative karmic predispositions, merge with the Christ Consciousness, and achieve final ascension at death.

Prophet and his wife, Elizabeth Clare Prophet, also taught that the United States was destined to become the world's exemplar of spiritual enlightenment. First, however, evils such as socialism, rock and jazz music, abortion, and pacifism must be overcome. The Prophets adopted a nationalistic and virulently anticommunist political outlook that advocated a build-up of strategic nuclear weapons and the creation of a missile defense system. Following Mark Prophet's death in 1973, Elizabeth Prophet took over the movement and renamed it Church Universal and Triumphant (CUT). She proclaimed her movement the true church of Gautama Buddha and Jesus Christ in the Aquarian age, moved its headquarters from Colorado to Southern California, and successfully established teaching centers and study groups across the United States.

After a bitter lawsuit initiated by an ex-member that exposed the church to a rash of negative publicity in the mid 1980s, the movement transferred its headquarters again to the Royal Teton Ranch in Paradise Valley, Montana. Following a series of dictations predicting the likelihood of nuclear war with the Soviet Union between 1989 and 1991, members began moving to Paradise Valley from around the world and constructing fallout shelters high in the Grand Tetons. In March 1990 members entered the shelters, believing nuclear war was imminent. When this and other prophesied events failed to transpire, membership dropped precipitously, and the church was forced to retrench and reinvent itself. It was labeled a "doomsday cult" by the media, and Prophet appeared on national television programs such as *Oprah Winfrey* and *Nightline* to defend the church's teachings.

CUT was downsized in the mid-1990s and began to sell parcels of its ranch to meet operational expenses. Under new leadership, CUT has jettisoned its apocalyptic teachings and focused on spreading the Prophets' New Age teachings via print and electronic media worldwide. The church has also built international communities where members practice the Prophets' teachings on esoteric spirituality, alternative healing, and children's education. Another crisis occurred in 1999 when Prophet admitted she had Alzheimer's disease. Following Prophet's resignation from her positions of spiritual and temporal authority, the church was turned over to a new president, board of directors, and council of elders. The church is a case study in the hazards of charismatic leadership and apocalyptic ideology.

Peoples Temple

Peoples Temple is practically synonymous with the U.S. public's view of NRMs as "dangerous cults," whose members are "brainwashed" by unscrupulous charismatic leaders. The Temple was founded as the Community Unity Church in 1954 by a white preacher, Jim Jones (1931–1978), in Indianapolis, Indiana. This multiracial, Pentecostal-flavored church was renamed the Peoples Temple Full Gospel Church in 1955 and became known in Indiana for its faith-healing services and controversial teachings on racial justice and "apostolic socialism." Jones visited the Peace Mission movement of Father Divine in 1956 and soon adopted local versions of the Philadelphia mission's social outreach programs, such as soup kitchens and the distribution of food and clothing.

Following his 1961 vision of nuclear holocaust in the U.S. Midwest, Jones took his community to Ukiah, California, believing the Redwood Valley north of San Francisco was an area that would escape this apocalyptic destruction. From humble beginnings, the church grew into a large community of twenty thousand members that included centers in Los Angeles, San Francisco, and Ukiah. Jones' headquarters, Happy Acres, included a senior citizen home, child-care facilities, residences, and meeting halls. Jones hosted a radio program on KFAX and led dramatic services that included faith healing and purported resurrections of deceased members. By the early 1970s Jones was telling selected followers that he was God in the flesh and that his mission was to establish justice, peace, and prosperity in the world. He was awarded various humanitarian awards, gained a seat on the San Francisco Housing Authority, and was courted by local, state, and national politicians.

A negative newspaper article led to the defection of several key aides beginning in 1973, and Jones inaugurated plans to relocate his community to the socialist country of British Guyana in South America. In 1974, the temple leased three thousand acres of jungle and began the construction of the Peoples Temple Agricultural Project. Jones spoke of the project as the "promised land" that was to be a refuge for his people from the injustices and persecutions of the U.S. government. Advance notice of a scathing magazine exposé of the Temple's financial misdeeds and abuse of its members led Jones to take one thousand of his followers to Guyana in August 1977. African Americans constituted most of the community's membership in Guyana, and women outnumbered men by approximately 66 percent to 33 percent.

At first the Temple's Guyana experiment seemed to thrive. It billed itself as a socialist utopia where persecuted minorities could live in dignity free from ageism, sexism, and racism. A group of ex-members called the Committee of Concerned Relatives told a different story, however, claiming that members at the project were subjected to mandatory labor, physical abuse, and extreme isolation from the outside world. The charges prompted California congressman Leo Ryan to lead a delegation of investigators to Jonestown in November 1978. As Ryan was about to return to the United States, several members asked to leave with his entourage, causing upheaval in the tightly knit community. Shortly after Ryan's departure, Jones ordered the temple's security guards to assassinate Ryan and several others as they boarded a small plane on a secluded runway near the project. When news of these events reached Jones, he instigated an act of "revolutionary suicide," in which members and their children drank Kool-Aid mixed with cyanide. When law enforcement officials arrived at the camp, 914 members lay dead on the ground. Jones himself was found shot in the head.

News of the Jonestown mass deaths immediately changed the climate for NRMs in the United States. The anticult movement used the national shock and revulsion at the event to advocate governmental regulation of "dangerous cults," and the media began to cast a suspicious eye on other NRMs such as the Unification Church and Church Universal and Triumphant. Jonestown became a kind of lens through which the U.S. public viewed all new and alternative religious communities. This negative public view of new religions has been reinforced by other sensational episodes of violence in NRMs, such as the 1993 Branch Davidian siege and the 1997 mass suicides of the Heaven's Gate community near San Diego, California. There is still

some controversy about whether the Jonestown event should be considered a mass suicide or a mass murder.

Divine Light Mission

Another significant NRM of the twentieth century is the Divine Light Mission (DLM). This group is rooted in the Sikh-based Sant Mat tradition of North India, which teaches the existence of a universal current of sacred sound that preserves the cosmos. The mission's founder, Shri Hans Ji Maharaj (1900–1966), was a Sant Mat master who taught secret meditation techniques that enabled his students to hear and commune with this current. Following Shri Hans' death, his mission spread throughout the world under the guidance of his wife, Mata Ji, and his four sons. Eventually the youngest of Shri Hans' sons, Maharaji (1959–), was chosen as his father's successor. Maharaji sent missionaries to the United Kingdom in late 1969 and to the United States and Canada in the early 1970s. The “boy guru” first visited the West in 1971, and the Divine Light Mission spread rapidly as he traveled from city to city in the United States. Maharaji often traveled with his mother and three brothers, who collectively were referred to as the “divine family” by devotees. Maharaji himself was called the “Lord of the Universe.”

The basic teachings of the DLM were fairly simple. Followers (called “premies”) embraced ideals of universal love, peace, and devotion to their “Satguru” Maharaji, whom they believed to be the avatar of a new millennium. They practiced four meditation techniques designed to open their spiritual senses, so they could taste the nectar of immortality, hear the universal sound of creation, and see the divine light. The techniques (called “knowledge”) were revealed in a secret initiation ceremony and were never to be divulged to nonmembers. As ashrams appeared in major U.S. cities, a new international headquarters was established in Denver, Colorado, in 1972. Premies (including former student activist Rennie Davis) sponsored huge festivals around the country, including one at the Houston Astrodome in 1973. They took traditional monastic vows of celibacy, poverty, and obedience; sang devotional songs before large photos of Maharaji mornings and evenings; and practiced the “knowledge” meditations.

The first signs of trouble occurred in 1974 following Maharaji's marriage to a California airline stewardess and his mother's subsequent attempt to depose him as head of the mission in favor of her eldest son, Bal Bhagwan Ji. These troubles did not prevent Maharaji from amassing a small fortune that included luxurious mansions in Miami Beach

and Malibu, and a fleet of luxury cars and private jets. As Maharaji entered adulthood in the early 1980s, he decided to close the mission's ashrams and to rename his movement, Elan Vital. He assumed all initiatory powers (formerly his lieutenants or “mahatmas” could initiate followers into the “knowledge”), embarked on a series of teaching tours around the world, and began a distribution company to market his videos, audiotapes, and publications.

During the past twenty-five years, Maharaji has brought his teachings to millions of people in more than fifty countries. Satellite broadcasts of Maharaji's discourses reach eighty-eight countries and are translated into more than sixty languages. The basic thrust of his teaching has remained remarkably consistent throughout his long career: finding inner peace through devotion to Maharaji is the necessary first step to bringing about world peace. Like other NRMs of the twentieth century, Elan Vital has found a way to survive through sophisticated marketing of a charismatic teacher in video, audio, and printed formats.

Unification Movement

One of the more controversial NRMs of the twentieth-century United States is the Unification movement (UM). Its founder, the Reverend Sun Myung Moon (1920–), gained national notoriety during the 1980s when he was convicted of tax evasion and sentenced to prison. Moon made a dramatic comeback in the late 1980s, and today he heads a worldwide empire that includes industrial, commercial, media, and educational enterprises. UM can be described as a messianic movement because its leader, Moon, is believed by his followers to be the messiah who has come to complete the unfinished work of the first messiah, Jesus Christ. UM can also be considered a social movement, in that Moon has created myriad organizations that promote a unified world through conferences, mass meetings, and social activism.

Moon founded his church in 1954 in South Korea and sent his first emissaries to the United States in the late 1950s. Growth was slow during the 1960s but picked up during the early 1970s, when Moon embarked on an evangelistic tour of the United States. His followers increased to about three thousand and soon garnered unfavorable press for their public recruitment drives at bus stations, airports, and university campuses. The church was labeled as a “brainwashing cult” that recruited naïve youth with techniques known as “heavenly deception.” Members of the Unification Church (UC) were among the first to experience coercive deprogramming, a method employed by concerned parents and

cult deprogrammers that included kidnapping, removal to an isolated location, and the aggressive breaking down of a member's belief system.

High points of Moon's missionary efforts during the 1970s included his speech "The New Future of Christianity," at the Madison Square Garden arena in 1974, and his addresses at Yankee Stadium in 1975 and the Washington Monument in 1976. One of his more successful outreaches was the inauguration of the International Conference on the Unity of the Sciences (ICUS), which annually gathered respected scientists from around the world to discuss how science and religion might work together for the good of humankind. The church taught that Western science and the UC's own religious views were wholly compatible. Moon's goal was to help scientists to focus their work on improving the physical life of humanity.

The UC's major theological statement is *Divine Principle*, a treatise that combines both philosophical inquiry and Christian biblical exegesis. The book focuses on the fall and subsequent atonement of humanity and interprets the Genesis narrative in ways that depart from conventional Christian teaching. For example, Moon teaches that Adam and Eve fell in paradise because of an unrighteous spiritual-sexual relationship between Satan and Eve, and then an unlawful physical-sexual act between Eve and Adam. From this act, the stain of sinfulness accrued to the couple's descendants. The redemption of humanity began with God's election of the perfect man, Jesus, to restore humankind to their Edenic state of spiritual innocence. By entering into a Trinity with God and the Holy Spirit, Jesus renewed the divine-human relationship and provided an example for humanity to follow. However, Moon taught that Jesus did not complete the final phase of his mission, which was to marry and produce a family of sinless children. He was thus only able to fulfill the spiritual phase of his mission, leaving the physical part of humanity under the dominion of Satan. Moon believes that it is his task as the messiah of the present age to complete the process begun by Jesus and to establish divine families in an earthly Kingdom of Heaven.

Moon founded the Professors World Peace Academy in 1973. This educational institution acquired a controlling interest in the University of Bridgeport, Connecticut, in 1992. He also created the Unification Theological Seminary in 1975 and established *The Washington Times*, a conservative daily newspaper, in 1983. The *Times* became the darling of many conservatives during the Reagan era and continues to be read by many members of the conservative movement

in Washington, D.C. The UC maintained a fervently anti-communist stance during the Cold War but was able to cultivate high-level contacts within communist countries. For example, Moon was granted audiences with both North Korean Premier Kim Il Sung and former Soviet Premier Mikhail Gorbachev during the early 1990s. With the fall of the former Soviet Union, Moon established federations for world peace around the world and held "sisterhood" ceremonies to promote harmonious relations between women from countries that had at one time been adversaries.

One of the more controversial initiatives by Moon was his sponsorship of International Holy Weddings, mass ceremonies that blessed both members and nonmembers who wished to rededicate their marriages and families to a godly life. Moon's interest in these rituals is rooted in his claim that he and his wife are the "True Parents" of all humanity and that his mission is to reestablish divine families on earth. Although Moon continues to spread his messianic message of world peace and holy families throughout the world, his church has never had broad appeal for U.S. citizens.

Main Issues of Scholarly Research

The study of NRMs became an established academic sub-field between 1960 and 2008. Scholars of NRMs have their own academic journals, such as *Nova Religio: The Journal of Alternative and Emergent Religions*, and the *Journal of Contemporary Religion*. Annual meetings of the American Academy of Religion and the Society for the Scientific Study of Religion feature regular paper sessions on NRMs, and academic organizations such as the Communal Studies Association, Center for the Study of New Religions, and American Family Foundation hold annual meetings that examine the many facets of scholarly research on NRMs. The bibliography of NRM studies continues to grow, and respected academic publishers have created series focused on the study of new religious phenomena across cultures.

Three main issues have stood out as the focus of attention for NRM scholars during the past half-century. These include research into (1) recruitment—who joins a NRM and why, and how NRMs recruit new members and foster their commitment and loyalty; (2) factors that allow for long-term movement success; and (3) NRMs as indicators of larger cultural trends.

Recruitment Issues

Influenced by negative media reports and the anticult movement, the U.S. public has accepted a stereotyped profile of

the people who join NRMs. Converts are viewed as young, gullible, and idealistic—making them susceptible to the charismatic persuasions of cult leaders—or they are seen as maladjusted adults who have failed at conventional life and are seeking a utopian escape from personal responsibility. Academic research during the past forty years suggests that the actual profile of NRM recruits is far more complex and nuanced than this stereotype. This research can be summed up in six generalizations:

1. Members of NRMs are usually recruited by people they already know and trust—family members, friends, coworkers, and neighbors. The anticult movement had claimed that NRM recruits made their initial contact with cult members in public places such as airports, bus stations, and parks. Scholarly research indicates that most recruits were only willing to attend a NRM class or service because they were invited to do so by someone they already trusted.

2. Recruits to NRMs are often more interested in the emotional closeness that a group offers than in the group's ideology or formal teachings. This does not mean that the new religious vision of the group is unimportant, just that the real indicator of member loyalty is the emotional fulfillment recruits experience in the community. In the Holy Order of MANS (a prominent New Age group founded in the 1960s in San Francisco), for example, many members remained loyal to the group even when the teachings of the deceased founder were jettisoned and the community embraced the rituals and beliefs of Eastern Orthodox Christianity.

3. The age profile of recruits depends on the group being considered; many recruits to the NRMs of the 1960s and 1970s were in their late teens and early twenties. But groups such as Scientology, Eckankar, Wicca, the Rajneeshees, and Soka Gakkai attracted members in their thirties and forties, and other groups whose members joined when they were young now have a large proportion of members between forty and sixty.

4. Recruits to NRMs tend to have a higher educational profile than a random sample of the general public. In some instances, such as Buddhist meditation groups and Soka Gakkai, surveys indicated that between 60 and 80 percent of the members had completed at least some college, and many held baccalaureate or advanced degrees. One explanation for this finding is that the teachings of many NRMs are sophisticated and complex. To grasp the teachings a person

needs the abilities that make for success in higher education—the ability to read in depth, to persevere when confronted with new concepts and ideas, and a generally literate intelligence.

5. Although some NRMs seem to recruit a higher percentage of women than men—examples include Christian Science in the 1920s, Soka Gakkai, the Rajneesh movement, and Wicca—on the whole the evidence suggests that women are no more likely to join a NRM than are men, and some groups, including Scientology and the Raelians, have a higher percentage of male members. Moreover, a group's gender profile can change over time. For example, ISKCON recruited far more men than women in its early years in the United States, but over time began to attract a larger number of women devotees.

6. Research indicates that the claims of the anti-cult movement—that people are drawn into NRMs using subliminal “brainwashing” techniques—are inaccurate. Rather, recruits make conscious, rational decisions to join a movement based on their perception of tangible rewards. Among these perceived rewards are (a) a heightened self-esteem and sense of purpose; (b) a new spiritual family that in many cases offers more love and support than the recruit's natural family; (c) esoteric knowledge that promises spiritual enlightenment, self-empowerment, and the secret of the future; (d) new career opportunities; (e) the provision of basic material needs for food, shelter, and health care; and (f) compelling spiritual experiences not available to nonmembers. To the extent that potential recruits find these rewards desirable and have difficulty finding them in conventional society, they may be drawn to NRMs that offer them.

Factors Necessary to Long-Term Success in NRMs

Sociologist Rodney Stark has studied the factors that are necessary to long-term success for NRMs. He has postulated certain conditions that must be met for a movement to grow and achieve a significant degree of cultural influence. The first of these conditions he terms *cultural continuity*. NRMs must not diverge too far from the conventional faiths in the surrounding culture, or they risk being labeled as deviant or dangerous. To cite one example of a group that successfully navigated this challenge, the Mormons accepted the Bible while adding new scripture, the Book of Mormon. The Bible was approved by the people and

religious institutions of the surrounding culture and thus provided a bridge for potential converts to Mormonism.

The second of Stark's conditions is that a NRM must maintain a *medium level of tension* with the surrounding culture. Put another way, the NRM must have elements of familiarity (so as not to appear too deviant), but it must also provide a counterbalancing number of unique features to ensure its competitiveness in the larger religious marketplace.

Stark's third condition stipulates that successful NRMs create strong organizations that clearly specify each member's role and contribution to the community. Part of a strong organization is a leadership hierarchy that is justified in the eyes of members on doctrinal or revelatory grounds and that lays out clear lines of authority.

Stark's fourth condition for movement success is the ability to attract and maintain a representative cross-section of ages and genders. Without young families, for example, religious communities are unable to ensure their continued growth through succeeding generations of children. Having members from the ranks of teens, young adults, middle-aged adults, and seniors makes the new community more appealing to potential recruits from these diverse age groups—many of whom are looking for age peers with whom to share interests and concerns.

Stark's fifth condition for movement success is the requirement that a group create a *dense but open social network*. In other words, successful movements foster a powerful sense of communal belonging while maintaining a sufficient degree of openness to the surrounding society, so the robust recruitment of new members can continue.

A final condition for movement success is the existence of a relatively unregulated religious economy, within which the group can freely pursue new members and create its own institutions. To a certain extent, the conventional religious communities in this economy must be weak, diffuse, and tolerant of diversity. This allows new competitors to emerge and flourish, to the degree that they fulfill the first five of Stark's conditions. When the religious ecology of a society shifts, however, as occurred in the late 1970s in the United States following the Peoples Temple events, the openness and tolerance for NRMs can be severely curtailed, making the survival of new groups much more problematic. The importance of Stark's factors for movement success can be seen in the rather small number of NRMs that ever attain any cultural influence or prominence over time. It is extremely challenging for a movement to achieve success in each of the areas indicated in Stark's model. Moreover, the

final factor, a favorable ecology and relatively unregulated religious economy, is largely out of any individual group's control.

NRMs as Barometers of Societal Change and Forces of Innovation

The study of NRMs has provided evidence that these groups can serve as barometers of socio-religious change in U.S. culture. Put another way, the study of NRMs uncovers the major tensions and problems that are currently at work in the wider society. The specific teachings and practices of a NRM are often designed to address these problem areas in the lives of its members. The founders of NRMs are not simply shifty charlatans out for material gain and self-aggrandizement. Many are highly sensitive and sincere men and women who are looking to advance serious solutions to societal ills. To take a few examples, when a new religious community such as Church Universal and Triumphant creates a private school based on Montessori and other alternative educational philosophies, it is responding to a very real need for educational reform in the U.S. public school system. When a group such as the Peoples Temple provides retirement facilities for the elderly, it is responding to the difficulties low-income seniors have in finding affordable housing and medical care. Whether one agrees with such practices or not, observers of U.S. religion can gain a greater understanding of the problem areas in the larger culture from a study of these groups.

NRMs can also be significant forces of innovation in the larger U.S. cultural milieu. In a sense, they can be viewed as subcultural petri dishes, where experiments with creative solutions to larger social and religious problems can be tried. When the experiments prove successful, the larger culture can adopt these solutions, and the processes of societal transformation and renewal can be sustained. The solutions proffered by these groups range from innovative ways to structure communities and neighborhoods, to new ways to educate children, live in ecologically sustainable environments, grow and process foods, heal the sick, and integrate spiritual practices into everyday life.

An example of this is the Holy Order of MANS, which sought to address the crisis of homeless women and children on the streets of San Francisco during the late 1960s. With the establishment of Raphael Houses in such cities as San Francisco, St. Louis, and Portland, Oregon, the order pioneered some of the first U.S. confidential shelters for victims of domestic abuse. This innovative solution to the problem

of domestic violence has been adopted by the wider culture, with the result that today most medium-to-large-size cities in the United States have confidential shelters for victims of domestic violence.

Conclusion

The study of NRMs is essential to understanding the complex U.S. religious history. Along with the establishment of the Protestant hegemony in the 1800s and the rise of evangelicalism and fundamentalism in the late nineteenth and early twentieth centuries, the stories of U.S. NRMs constitute the very marrow of the U.S. religious saga. Whereas earlier generations of U.S. religious historians (with the notable exceptions of Sidney E. Mead and Sydney E. Ahlstrom) had largely ignored (or dismissed) sect and cult movements in favor of narratives of Protestant exceptionalism, religion scholars since the 1960s, influenced by post-modern and postcolonial studies, began to pay more attention to the contentions for recognition and status by the diverse U.S. religious communities. In this context, a new generation of both historians and sociologists has produced more focused studies of new U.S. religious communities and has crafted surveys of U.S. religion that include prominent sections on NRMs and other forms of alternative religious activity. The works of Catherine L. Albanese, Robert Ellwood, R. Laurence Moore, and Peter Williams have been exemplary in this retelling of the rich religious history in the United States. When the stories of NRMs are erased from U.S. religious history, a distorted picture emerges that glosses over the long history of religious innovation that has occurred in the United States. With the assistance of a new generation of sociologists, anthropologists, and historians, a more accurate account is emerging that does justice to the pluralism that has been the dominant trait of U.S. religion since its founding as a nation. Innovative religious communities will continue to seek creative solutions to pressing U.S. social and religious challenges, even as they sometimes initiate tragic episodes of collective extremism and violence.

Occult and Metaphysical Religion

Occultism has been an enduring theme in American beliefs about the supernatural. Hovering at the periphery of Jewish and Christian institutions, occult beliefs have rivaled biblical religion as sources of personal religiosity. The term *occult* can take on a variety of meanings, making it difficult to define precisely. The word comes from the Latin verb *oculere*, meaning to hide from view. Narrowly interpreted, occultism refers to secretive societies that carefully guard teachings meant to be hidden from anyone except those who have undergone special initiatory training. This is often mistakenly thought to be a defining characteristic of occult systems. In the context of American history, however, few occult systems have been secretive in this sense. What is hidden is not their teachings, but instead the reality to which these teachings attest. What has defined occultism in America has been an enduring interest in dimensions of reality that lie just beyond what is recognized by either our physical senses or our biblical heritage.

Interest in the occult is often characterized as esotericism or as metaphysical religion. What connects these terms is fascination with more-than-physical dimensions of the universe. We sometimes think of interest in practices we label occult as arising from immediate needs that motivate interest in obtaining either supernatural wisdom or supernatural powers. To this extent, the word *occult* would indicate a more or less ad hoc set of beliefs or practices related to more-than-physical realities. In contrast, both the terms *esotericism* and *metaphysical religion* would indicate more developed spiritual philosophies. In practice, however, all three terms

tend to be used interchangeably. What unifies their use is that, at least over the course of American religious history, they refer to beliefs and practices that have occupied a unique cultural territory. Occult or metaphysical systems have appealed to those Americans eager to explore the supernatural reaches of the universe, but willing to do so outside both the nation's established scientific institutions and its established religious institutions.

A wide variety of supernatural beliefs and practices can be identified as occult. For example, divination practices are occult, including such systems as astrology, tarot cards, crystal balls, palm reading, feng shui, Ouija boards, and numerology. Occult practices also encompass various forms of magic (or magick), the use of ritual techniques to control supernatural powers. Examples of magical systems would include sorcery, witchcraft (including Wicca), conjuring, and supernatural healing arts such as powwow or exorcism. Spiritualism (or trance channeling) is also part of the occult, as are interests in parapsychological phenomena such as clairvoyance or telepathy. Although the terms occult, esoteric, and metaphysical are really synonyms, we often use esoteric and metaphysical religion to refer to those forms of occult belief and practice that include sustained study of intricate textual and philosophical traditions. Thus esoteric movements such as ancient gnosticism, Hermeticism, Swedenborgianism, Transcendentalism, mesmerism, spiritualism, Rosicrucianism, Neo-Paganism, and Theosophy are all associated with the American occult tradition. So, too, are heterodox strands of major world religions that veer into supernatural mysteries. Tantric Buddhism, Hindu mysticism, Christian esotericism, and Jewish Kabbalah are examples of the kinds of connections that frequently arise between occult spirituality and major religious traditions.

Finally, the most frankly supernatural practices of American Christians (such as intercessory prayer, veneration of the saints to obtain worldly blessings, Pentecostal healing, speaking in tongues) reveal the difficulty of making rigid distinctions between supposedly mainstream religious supernaturalism and supposedly heterodox occult supernaturalism.

The vast range of interests commonly categorized as occult cautions against facile generalizations about the nature or historical function of American occultism. After all, adherence to any one of these systems by no means indicates acceptance of the others. Yet certain fundamental attitudes have characterized Americans' enduring fascination with the occult. Attraction to the occult is first and foremost a sign of dissatisfaction with both an era's mainstream science and its mainstream religion. Interest in the occult thus expresses a "seeker" sentiment rooted in the conviction that neither science nor institutional religion has a monopoly on explaining life's deepest mysteries. Occultism also has a tendency to understand God as an impersonal, monistic absolute rather than in traditional theistic terms. It is true that some occult systems believe that the relationship between human beings and the absolute is mediated by such supernatural entities as ascended masters, neo-pagan gods or goddesses, spirit guides, or even master beings in UFOs. Yet, for the most part, occultism suggests that the universe consists of many interpenetrating dimensions that exist in a lawful correspondence with one another. Occult systems thereby imply that each of us can learn to establish inner harmony or rapport with "higher" spiritual dimensions. To this extent, occult systems teach a spiritual message at considerable variance with conventional biblical religion. They encourage people to initiate their own connection with the higher powers of the universe and to do so with the explicit intention of enhancing their personal lives. Through disciplined study and by cultivating the mind's hidden powers, adherents of occult systems try to align themselves with potent spiritual powers. And, in so doing, most hope to create a spiritually significant worldview that restores humanity to its rightful role in the ongoing creation of the universe.

Colonial Era

Occult practices were transplanted to North America from Europe, Africa, and the West Indies. European migrants brought a host of beliefs about the supernatural. Interest in astrology, for example, was common among European settlers of all social classes. Almanacs contained considerable astrological information that could be used to identify propitious dates for farming, commerce, and even romance.

Astrology also focuses on principles of healing and maintaining physical health. Colonial almanacs consequently included anatomical charts explaining how various parts of the body are influenced by corresponding astrological signs. Equally prevalent in the colonial era were forms of divination used to obtain otherwise unavailable information about such matters as the location of lost objects or the presence of underground water (for example, using a divining rod for "dowsing" or "water witching"). And, too, almost every European migrant held beliefs about witches and witchcraft. Although only a few colonists actually practiced witchcraft, nearly everyone believed that some people have an especially strong connection with supernatural power and can use curses or hexes to direct this power for good or ill.

Occult practices were particularly implicated in colonial folk medicine. Because disease was so poorly understood, most European settlers thought it at least possible that their ailments were the result of evil spells or the presence of malevolent supernatural power. For this reason even upper-class colonists often used some form of conjuring (that is, the use of magical rituals or incantations to control supernatural power) to cure diseases. Folk healers, most of whom were either slaves or lower-class whites, often used herbal medicines they had ritually infused with magical powers. One eighteenth-century witchcraft book explained how sympathetic magic can transform such elements as animal feces, urine, and plants for curing sickness in both humans and animals.

Black Americans, both slave and free, engaged in a wide range of occult practices during the colonial era. Religious beliefs indigenous to Africa, the Caribbean, and the West Indies emphasized the close connection between the natural and supernatural worlds. Conjurers were therefore ubiquitous in black culture: they cured the sick, comforted the grieving, interpreted the unknown, created amulets to ward off evil influence, and cast spells to help the aggrieved gain justice. Caribbean Voodoo linked African supernaturalism with European Christianity in ways that enabled blacks to negotiate between competing cultural influences. African occultism therefore usually reinforced rather than undermined Christianity in the eyes of slave populations, enabling occult practices to survive long after the Christianization of most black Americans.

Nineteenth-Century Movements: Joseph Smith and Emanuel Swedenborg

Some scholars have defended a fundamental difference between magic and religion. In this view, magic consists of

techniques to bend supernatural forces to the service of human will, and religion stems from the human desire to bend or conform to a supernatural order of things. Such a distinction, however, is of almost no value in explaining American religious life. People in every era of American history have sought relationships with higher powers in ways that defy any attempt to draw a line between magic and religion. Consider, for example, the early life of Joseph Smith (1805–1844) whose family moved to western New York State in 1816. Records indicate that by 1820 Joseph was intensely curious about divination, prophecy, and obtaining magical powers. He possessed what he called peep stones, natural crystals thought to have divining powers. It seems, however, that his efforts to charge local residents for his divining services got him into trouble with the law, resulting in his conviction for conniving and fraudulence. Just three years later, what he described as an angel led Smith to uncover strange golden plates that had been engraved in an ancient language. Using two so-called ancient seer stones, Smith translated these plates and realized that his special connection with the spirit world had led him into possession of the Book of Mormon—an ancient text describing the otherwise lost teaching of Jesus during his ministry in North America. Joseph Smith would have mystical visions for years to come, prompting his followers to revere him as “a translator, a revelator, a seer, and a prophet.” The early history of the Church of Jesus Christ of Latter-day Saints was thus a creative hybrid of occult and Christian traditions. For Mormons, as for members of every American denomination, religion and the occult combine to form an avenue to the supernatural.

Joseph Smith was typical of most early American occult practitioners in that he was from the lower end of the social and economic spectrum. Persons of all social classes held beliefs that lent credence to occult practices, but practitioners (such as witches, conjurers, astrologers, and folk healers) tended to come from the lower classes. This began to change, however, as a variety of occult or esoteric movements gained large middle- and upper-class followings throughout the nineteenth century.

Occult ideas and practices made deeper inroads into the middle and upper classes with the promulgation of a series of metaphysical philosophies beginning with Swedenborgianism and continuing through transcendentalism, mesmerism, Spiritualism, and Theosophy. Emanuel Swedenborg (1688–1772) began his career in Sweden as a scientist before numerous mystical visions awakened his interest in the

metaphysical dimensions of the universe. Foremost among Swedenborg’s doctrines was his conception of correspondence, the idea that the universe consists of seven interconnected dimensions (the physical, mental, spiritual, angelic, and so on). This vision of metaphysical correspondence led directly to another of his doctrines, that of spiritual influx. Swedenborg taught that causal power is constantly emanating from God downward through successively lower dimensions of existence. Causation comes from above. Under the right conditions, lower dimensions can receive an influx of causal spiritual energies from higher levels of existence. Through diligent study and by cultivating mystical states of awareness, anyone might obtain the requisite gnosis to make contact with higher spiritual planes. The benefits are thought to be numerous: spontaneous insight into cosmological secrets, conversations with angelic beings, intuitive understanding of scriptural verse, and the instantaneous healing of both physical and emotional disorders.

Nineteenth-Century Movements: Transcendentalism and Mesmerism

The core teachings of metaphysical correspondence and spiritual influx found their way into a second nineteenth-century metaphysical movement, transcendentalism. Ralph Waldo Emerson, Henry David Thoreau, Margaret Fuller, Theodore Parker, and William Henry Channing were among those who proclaimed that true spirituality had nothing to do with church membership, but consisted instead of cultivating mental states receptive to the inflow of higher spiritual energies. For all their literary eloquence, however, it was the spokesmen for a new metaphysical healing system known as mesmerism that translated the concepts of correspondence and influx into a form that could be readily adopted by middle-class audiences. An Austrian doctor by the name of Franz Mesmer (1734–1815) had earlier “discovered” a subtle healing energy he called animal magnetism. Illness, he believed, resulted whenever a person’s supply of this life energy had been thrown out of balance. Mesmer developed the science of animal magnetism, whereby he would induce a hypnotic-like trance in patients so that they might become inwardly receptive to the inflow of this vital healing energy—an energy as yet unrecognized by either the religious or scientific institutions of his day. Mesmer further proclaimed that this *mesmeric* trance awakens our latent spiritual powers, activating paranormal mental abilities and giving us immediate access to cosmic wisdom. American audiences seized on this new spiritual science. Mesmerism was, to them, providing

demonstrable proof that every person possesses an inner portal to transcendent knowledge and power.

Metaphysical beliefs reached even further into popular thought when, in 1843, Andrew Jackson Davis (1826–1910) entered a mesmeric trance and began receiving communications from the spirit world. Davis perfected the art of serving as a spirit medium or trance channeler through whom the spirits of deceased humans would deliver lengthy messages on various metaphysical topics. In more than thirty books, with titles such as *The Great Harmonia* and *The Principles of Nature*, Davis expanded his spirit guides' teachings into the core principles of the Spiritualist movement. Although Spiritualism is often remembered for its gaudy séances, the movement helped occult ideas make their way into the vernacular of the middle class.

Nineteenth-Century Movements: The Theosophical Society

Less known, but even more influential in terms of promulgating occultism to American audiences, was the Theosophical Society, organized in 1875. Madame Helena Blavatsky (1831–1891) immigrated to the United States from her native Russia, bringing with her an eclectic background in mesmerism, Spiritualism, and other occult philosophies. In New York she earned a reputation as a trance medium, channeling messages from advanced spiritual teachers she referred to as the mahatmas. The Theosophical Society she organized became a clearinghouse for all things occult, including Americans' first real introduction to the occult philosophies found in Tantric Buddhism, kundalini yoga, and Vedanta mysticism.

Even at the height of its popularity, Theosophy never had more than ten thousand members in the United States. Yet despite these relatively small numbers, Theosophy has exerted more long-term influence on American knowledge of the occult than any other metaphysical movement. Its literature reached a far wider audience than its actual membership numbers might indicate. One of Blavatsky's books, *Isis Unveiled*, had sold more than 500,000 copies by the end of the twentieth century. Once in circulation, Theosophy's ideas resonated clearly with both church and unchurched spiritual seekers. Theosophy taught, for example, that a few core spiritual concepts make up the inner truth of every world religion. This enabled seekers to believe that they were not so much abandoning Christianity or Judaism as they were recovering the pristine truths that have somehow become obscured by present-day institutions. Even more

important was Theosophy's integration of Eastern religious concepts into Americans' metaphysical vocabularies. It is from Theosophy-inspired writers that most Americans have first learned about such things as yoga meditation, Zen *satori*, the Atman-Brahman unity, astral bodies, *chakras*, or subtle energies such as *kundalini*, *chi*, or *prana*. Theosophy presented Americans with a romanticized, mystical East. Blavatsky and subsequent generations of the movement's writers thus forged an occult synthesis that would shape the spiritual outlook of a few million Americans who have never even heard the term Theosophy.

Contemporary Scene: Varieties of Metaphysical Interests

Estimating the percentage of Americans who hold occult beliefs or engage in occult practices is always difficult. A recent compendium of religious organizations in America, for example, listed one hundred under the rubric Ancient Wisdom Family, a category including Rosicrucians, Theosophy, and Astarta. The same volume listed 153 organizations in the Magick Family, a category including ritual magick, neo-paganism, and Voodoo. Many of these groups have only a few dozen members. Even though Theosophy and the Rosicrucians have been in the United States for well over a century, others organize and dissipate within a decade. The number of viable occult organizations is therefore a poor guide to understanding the extent to which occult belief or practice factors into Americans' everyday lives.

Unlike conventional religion, interest in the occult rarely leads to affiliation with an organization. Occult interests are transmitted in very different ways than the beliefs and practices of mainstream religious organizations. Books, lectures, workshops, and Web pages are the principal routes along which occult ideas travel and become a part of the belief systems of the church and the unchurched. It is interesting in this regard that a sociological survey showed that as many as 55 percent of all church members in the United States privately subscribe to some belief pertaining to the occult. A full 22 percent were found to believe in astrology, 12 percent had consulted a fortune teller, and 11 percent believed in trance channeling. The percentage of those at least curious about occult beliefs would undoubtedly be higher, as indicated by the money spent on advertisements for astrology or psychic readings in popular magazines. Indeed, major booksellers devote considerable shelf space to books on such varied subjects as feng shui, tarot cards, ESP, and various forms of energy healing. It therefore seems safe

to estimate that at least half of the American population at least occasionally contemplates supernatural beliefs and practices emanating from sources other than the nation's Christian or Jewish institutions.

Contemporary Scene: Neo-Paganism

A fascinating example of contemporary occult interest has been the renewal of interest in pagan beliefs that began in the late 1950s. The emergence of neo-paganism is attributable in part to the writings of Margaret Murray (1863–1963) and Gerald Gardner (1884–1964). Murray and Gardner described pagan and witchcraft traditions that they claimed had been faithfully transmitted from ancient, pre-Christian times. This was largely a fabrication. Although it is common for occult movements to believe they are part of an ancient tradition, in most cases they are fairly modern inventions based only loosely on fragments of historical information. Combining information from historical pagan texts with various strands of Western occultism, Murray and Gardner offered modern seekers beliefs suited to contemporary religious unrest. Gardner's publication of *Witchcraft Today* (1954) stimulated a great deal of interest in nature-based religions, the most popular of which came to be known as Wicca. About half of those who claim to adhere to pagan beliefs identify themselves as witches (that is, Wiccan). Others describe themselves as shamanic, Druidic, Gaian, or practitioners of ceremonial magic.

Neo-paganism is self-consciously eclectic. It is probably fair to say, however, that four themes run through the varied expressions of these occult interests: (1) belief that the divine, though both immanent and unified, is best symbolized by polytheistic images, most of them female; (2) belief in the efficacy of mind or consciousness to influence events in non-ordinary ways, a process commonly referred to as magic; (3) affirmation of the interconnectedness of all life and hence the need for both ecological sensitivity and commitment to social justice issues; and, (4) opposition to traditional Western religious institutions whose beliefs and structures are seen to be implicated in the social, ecological, gender, and economic oppression that violates the inherent sacredness of our universe. The most overtly occult of these themes is neo-paganism's interest in the magical powers of the mind. The premise of neo-pagan magic is that our minds can make connection with divine energy and then, through visual imagery and the recitation of ritual formulas, consciously direct this energy to produce desired results in the physical world. The vast majority of neo-pagan magical

rituals focus on healing the self and activating our full potentials—making them fairly similar to Christian or Jewish petitionary prayer, even though they invoke terminology and conceptions of divinity drawn from outside the Western biblical tradition.

Recent studies suggest there may be as many as two hundred thousand neo-pagans in the United States. One study found them to be mainly young to middle-aged adults, urbanites, mostly white, and by slight majority (57 percent) female. Pagans are, in other words, ordinary Americans. They have, however, rejected institutional religion, preferring an alternative spirituality that espouses greater reverence for the sacredness of nature. Those who embrace neo-pagan beliefs typically say they were motivated by a quest for intellectual satisfaction, pursuit of spiritual growth, concern for the environment, or a growing commitment to feminism.

Enduring Attraction of the Occult

The demographic profile of Americans attracted to neo-paganism cannot automatically be assumed to apply to other occult beliefs or practices. It is true that persons who describe themselves as seekers are more likely to have a college education, belong to a white-collar profession, be liberal in their political views, have parents who attended church less frequently, and be more independent in the sense of having weaker social relationships. These characteristics might help us understand who is more likely to be attracted to Eastern mysticism, Theosophy, or alternative healing systems that have occult dimensions, but they would be wholly off base when it comes to other occult interests. Astrology, for example, seems to appeal across all social classes, ages, and ethnicities. Americans of Asian ancestry might well be expected to be more inclined to subscribe to feng shui, acupuncture, or tai chi, whereas Americans of Hispanic ancestry might be expected to be more interested in the power obtainable through Catholic saints or from an Afro-Caribbean tradition such as Santería. Generalizations about who is most likely to be drawn to occultism are thus difficult to make because of the wide range of occult systems and because every conceivable demographic group (including any distinction between church and unchurched) contains persons drawn to occult ideas.

The continued appeal of occult ideas and practices owes less to social or cultural conditions than to their intrinsic appeal. Occult systems picture the universe in exciting ways. They explain how otherwise hidden laws or supernatural agents invisibly exert causal power in our world. They further

explain how various ritual actions, meditation techniques, or initiatory ceremonies attune us to these higher powers, thereby guiding us toward the acquisition of truth and personal prosperity. Occultism, moreover, presents itself as an attractive alternative to either traditional science or traditional religion. Though dealing with the supernatural, occult beliefs and practices do not require the confession of personal sin or acceptance of the literal truth of ancient scriptures. Although describing the lawful mechanisms of the universe that can be harnessed for procuring human satisfaction, occult systems invoke belief in spiritual powers not yet discovered by mainstream science. Occult beliefs thus respond not only to the fundamental human desire for mystery, but also to the fundamental human desire to achieve harmony with the invisible powers that affect our well-being.

Oneida Community

The Oneida community (1848–1880) was one of the most controversial and successful utopian societies in the United

States. It was the product of the theories of its leader, John Humphrey Noyes (1811–1886), the radical political reform movements of the 1830s and 1840s, and an emphasis on the possibility of complete salvation from sin derived from Perfectionist impulses deeply embedded in the Wesleyan Protestant tradition. Noyes was born in Brattleboro, Vermont, to a New England family that had deep roots in America (an early ancestor had arrived in 1634). His father was a member of the U.S. House of Representatives and his mother a member of the influential Larkin family of Vermont. Noyes attended Dartmouth College and in 1831 entered the Andover Theological Seminary at Harvard, later transferring to Yale. He was quickly caught up in the religious revivals that swept the Northeast in 1831 and later became involved in radical theological circles, falling under the influence of Nathaniel Taylor, a Yale theologian who was one of his professors. He was also an active member of the New Haven Anti-Slavery Society.

1830s to 1840s: The Perfectionist and Bible Communism

From 1834 to 1837 Noyes edited a journal, *The Perfectionist*, and became increasingly identified as an advocate of free love, based on his reading of biblical scriptures. A semi-communal group was organized under his leadership in 1841 at Putney, Vermont, and Noyes introduced the notion of *complex marriage* (marriage involving multiple unions and multiple partners) in 1846. Although he was married to Harriet Holton, Noyes took as a “marriage partner” a young female convert. Because he was already legally married, Noyes faced charges of adultery and “lewd and lascivious behavior.” To avoid prosecution Noyes fled the state and moved to central New York, where he had supporters in the Syracuse/Utica area, a center of radical perfectionist belief and reform movements known as the burned-over district, where he had supporters.

From 1848 onward Noyes advocated what was known as Bible communism, wherein individuals chose partners on the basis of mutual attraction. The community closely monitored who was having sexual relations with whom, and over the course of its history some consanguineous relationships did develop between both nieces and uncles and aunts and nephews within the religious system of ascending and descending fellowship. According to this doctrine, individuals were supposed to associate with those who could help them improve spiritually. A distinctive feature of Oneida was the use of a birth control technique (*coitus reservatus*) that Noyes developed as the result, he said, of the stillbirths his wife experienced. During the sexual act, the men of Oneida focused on

The main building of the Oneida community in New York. One of the United States' most successful communal utopian societies, the Oneida community controversially practiced a distinctive form of free love.

the amative (foreplay) aspects and used a self-control technique known within both the Christian and Taoists traditions to avoid having orgasms and going on to the propagative (child-producing) stage. Despite “mistakes” and several planned pregnancies, the community had a low birth rate and both men and women spoke positively about their experiences. Noyes introduced the young women to the technique and young men were tutored by older women, though women avoided men who had not fully mastered the practice.

Bible communism also included abandoning private property, living in common quarters, and sharing all necessary work. In return, the community provided its members with all essential goods and services. Even if work assignments within the community reflected conventional gender roles of the time, a system of rotation from one task to another served not only to train members in a variety of duties but also to prevent boredom and discontent with a fixed routine.

1854 to 1860s: Communal Growth and Eugenic Reproduction

Although the early years were hard, the community was able after 1854 to achieve economic success by producing and

selling animal traps and a variety of agricultural and industrial products. During the early 1850s, Noyes moved between Oneida and Brooklyn, established a communal family in Brooklyn, and was both an active participant in the intellectual debates of the day (taking positions against slavery and for marriage reform, temperance, and women's rights) and an aggressive proponent of Bible communism, though he was careful in the advocacy of the community's controversial sexual practices.

Potential community members were carefully screened about their religious beliefs and had to sign a confession of faith on entry. The community also developed a unique system of internal discipline, called mutual criticism, which allowed members to be chastised for what the community perceived as their faults, by small committees and by Noyes. Such a system had been used in seminaries in the 1830s to “toughen” young missionaries before they entered the field. (The system was later adopted by the 1960s counterculture group Synanon to force drug addicts who joined the group to face their addiction.) Although the group advocated non-violence, several members volunteered to serve in the Civil War on the Union side. By the late 1860s, the community

was a thriving economic and social enterprise visited by thousands of tourists and well-known public figures, including Elizabeth Cady Stanton, a leader in the woman suffrage movement, and Tom Thumb, a popular member of P. T. Barnum's circus.

In 1868 Noyes introduced another radical experiment: stirpiculture. Stirpiculture involved pairing off members of the community to produce children along specific eugenic lines. Just before the new system was inaugurated, Noyes issued a pamphlet explaining the reasoning behind the birth control technique that they were momentarily abandoning. In *Male Continence* (1867), he likened the amative phase to chivalric and courtly love and condemned procreative love because it led to exhaustion and unwanted children; he also condemned abortion as a system of birth control. Influenced by the writings of Plato, Charles Darwin, and Francis Galton (the founder of eugenics), and following the practices of animal husbandry, the community produced fifty-eight children under this new system. Noyes (and later a scientific committee) took both religious and physical characteristics into consideration in making these pairings, but the dominant leadership had more children than any other group. Noyes fathered nine of the children in the experiment. Most of the children born under the stirpiculture plan remained in the area after the breakup.

Noyes used the central metaphor of the heart to suggest how the political and social revivals of the nineteenth century had changed "the heart of the nation," and that a yearning toward social reconstruction had become a part of the core experience of the Americans as a people. He believed that socialism and revivalism were working toward the same end and that the forces of religious enthusiasm moved along the same path as the "infidels and liberals," with the secularists gaining the upper hand for a time, and then the spirit filled moving ahead of them for a time. Noyes believed that these European (socialism) and American (revivalism) elements must come together in the next phase of national history, working together for the "Kingdom of Heaven." Clearly he believed that the Oneida community had brought the two together in a "unitary home" that emphasized work and faith. Over forty years, the colony had amassed considerable economic success through agriculture and the manufacture of traps that made this expansion of "family life" possible.

1870s to 1880: Breakup and Reorganization

During the 1870s Noyes turned over the leadership of the group to his son Theodore Noyes, a Yale-educated physician

and agnostic who did not have his father's charisma. At its height the community had three hundred members and hired both local laborers and Oneida Indians to harvest crops. It even started a boarding house for the workers run along strict lines. Oneida sent its young male members to school at Columbia and Yale and young women to music training in New York City, where the community established a commercial agency to sell its products in the 1860s. Oneida's salesmen traveled all over the United States selling their famed traps (from mouse traps to bear traps), and the society prospered. However, the conflicts engendered by the stirpiculture plan and opposition by Syracuse clergymen (with considerable support from the followers of the puritanical Anthony Comstock) caused the community to break up in the late 1870s. Noyes fled to Canada to avoid prosecution.

In 1880 the community reorganized, and after a difficult period emerged as a joint stock company and major producer of domestic flatware under the name Oneida Community Ltd. The descendants of the community played major roles in the success of the corporation, and its headquarters are today across the road from the Oneida Community Mansion House, a historic site and museum in Sherrill, New York.

Pacific Northwest Region

Oregon, Washington, and Idaho constitute the commonly recognized geopolitical Pacific Northwest, but Oregon, Washington, and Alaska make up a more coherent religious region given their shared religious demographics, practices, and sensibility. The religious profile of northern Idaho resembles that found in these states, whereas southern Idaho, dominated by the Latter-day Saints, is identified more closely, in terms of religion, with the Mountain West.

This other Pacific Northwest of Oregon, Washington, and Alaska is known for having the lowest levels of institutional religious affiliation, and the largest percentage of population not identifying with a religious heritage, of any region in the United States. This historic, long-standing pattern has shaped the region's distinctive religious configuration and dynamic. Every group that has entered has had to contend with and been affected by them.

Individual and institutional religiousness are diffuse and fluid in the Pacific Northwest. Successive waves of immigrants have attempted, often simultaneously, to rebuild religious communities left behind elsewhere, to find refuge from persecution, to create religiously inspired utopian communities, and to be free of religious constraints entirely. The zealous have viewed the region as a field of souls awaiting harvest. Seekers have embraced its array of options. Nature mystics and biocentric visionaries find that the geography and natural beauty have proved an endless source of inspiration. The Pacific Northwest is equally conducive to religious innovation, aberration, and indifference.

Contact, Exchange, and Conquest

Indigenous peoples have lived in Alaska, Oregon, and Washington for more than twelve thousand years and by 2010 constituted nearly 2.5 percent of the population. Their creation stories, cosmologies, religious rituals, and forms of organization reflect the distinct cultures of the Arctic and Sub-Arctic, Pacific Coast, Columbia Plateau, and Great Basin peoples. Spiritual powers in nature, shamanism, and healing are dominant religious features.

Regional Native Americans' encounter with Christianity came first through the fur trade of the eighteenth and early nineteenth centuries. In the Oregon Country, as it was then known, trappers brought Christian—primarily Catholic—devotional practices from Mexico, Ireland, and Quebec. In Alaska, Aleuts and other bands encountered the Orthodox practices of eighteenth-century Russian trappers. Indian-to-Indian transmission of Christianity preceded encounter with missionaries and continued afterwards.

Native Americans approached Christianity as a form of spiritual power, continuing the tradition of openness to other kinds of spiritual power than their own. Their relationships with both Protestant and Catholic missionaries were more complex than the missionaries realized.

The 1830s, 1840s, and 1850s were decades of especially rapid change for native peoples in Oregon. The fur-trade economy ended. The United States took sole possession through treaty with Great Britain in 1846. A steady stream of settlers encroached on tribal lands as did bands from east of the Rockies. The Cayuse (1848) and Yakima (1855) wars and the forced treaties that came in the wake of the latter led to

massive deaths, forced relocation, and significant disruption of native ways. In the post–Civil War years, Christian denominations collaborated with the government in using boarding schools to “civilize” Indians in Oregon and Washington. In Alaska after 1877, the famous Presbyterian missionary of the West, Sheldon Jackson (1834–1909), established missions and training schools and developed a plan to allot regions and tribes to particular denominations that would staff schools. Jackson wanted to minimize denominational missionary conflict, contribute to the Americanization of indigenous peoples, and convert them from their foreign, Orthodox, or indigenous ways. Indigenous peoples continued to negotiate Christianity through these changing circumstances guided by their own interests.

Two major Indian prophets emerged in the Pacific Northwest. The teachings of the Wanapum Smohalla (1815–1895) fueled a revitalization movement among the northern Columbia Plateau Indians in the decades after the Yakima War. Combining traditional beliefs with Christian ideas and symbols, Smohalla’s Washani (spirit-dream prophecy) narrative included whites leaving the land. Among his adherents was the Nez Perce Chief Joseph, who attempted a daring but unsuccessful escape into Canada with his band in the winter of 1877. The movement faded after Smohalla’s death.

John Slocum (1841–?) of the Squaxin Island band of Coast Salish is credited with founding the most successful religious revitalization movement among Pacific Northwest Indians, the Indian Shaker Church. This church, unrelated to Ann Lee and the Shakers, gained its name from the practice of shaking or twitching during prayer, movement Slocum interpreted as brushing off sin and sickness. In Slocum’s 1882 vision, the Christian god promised powerful medicine to natives who renounced gambling, drinking, smoking, and the practices of traditional shamans. Despite opposition from Christian missionaries, who attempted to outlaw it, the movement spread. The Shaker Church was legally incorporated in Washington State in 1892. By the 1930s it had spread into northern California and lower British Columbia, where it remains active, primarily on reservations.

Indigenous religions and forms of Christianity have continued to be key elements in cultural and political interactions within Indian communities, as well as between them and the U.S. government. This has become more visible since the 1971 Alaska Native Claims Settlement Act, which resolved long-standing land disputes and spurred economic development among tribes, and the 1974 U.S. District Court decision by Justice George Boldt (1903–1983) that reaffirmed

the treaty fishing rights of Amerindians in Washington State. Both actions were considered victories by most indigenous peoples, strengthened their political and economic power, and contributed to an emboldened assertion of indigenous cultural practices.

Pacific Northwest Indian religious practices continue to face legal challenges. The Supreme Court’s 1990 decision in *Smith vs. Oregon*, a case that involved the use of peyote in the Native American Church, spurred Congress to pass the Religious Freedom Restoration Act of 1993. Legal contest has also characterized the disposition of the remains of Kennewick Man, a skeleton discovered on the Columbia River near Hanford, Washington, in 1996. Scientists claimed it for study and the Federated Tribes of the Umatilla claimed it as an ancestor and sought possession for burial. Another political conflict was the 1999 resumption of whaling by the Makah. Environmental activists argued against Makah exercise of this treaty right in court, and Greenpeace protested early hunts.

Entrepreneurs, Settlers, and Missionaries

Christianity, Judaism, and other nonindigenous forms of religion followed the fur trade into the Pacific Northwest. The English-controlled Hudson’s Bay Company (HBC) provided the main economic and social infrastructure in the Oregon Country from 1821 to 1846, and religion’s fortunes rose and fell with the interest of HBC employees. Trappers and clerks carried on religious services and practices, not clergy. The HBC provided a separate cemetery for its Roman Catholic employees and did not interfere with Polynesian employees’ practice of their religion.

Clergy arrived first in Alaska, where Russian Orthodox priests followed fur traders in 1794. The priests arrived to an established Orthodox community, because Russian trappers had recognized the spirituality of the Aleuts and baptized hostages and escaped slaves. Priests did not actively proselytize but lived as exemplars of Orthodox Christianity and responded to questions. The rich liturgy and images of Orthodoxy appealed to the indigenous peoples, who appropriated the tradition to their cultures. Indigenous peoples drew on Orthodoxy in maintaining their own cultural integrity while resisting later U.S. colonization.

The arrival of Protestant and Catholic clergy in the Oregon Country signaled intensified international conflict. The Yankee Methodist Jason Lee and his companions arrived in 1834. Then came the American Board of Commissioners for Foreign Missions (ABCFM)—sponsored missionaries, Dr. Marcus Whitman and his wife, Narcissa

Prentice Whitman, along with the Rev. Henry Spalding and his wife, Eliza Spalding, in 1836. That same year, the HBC assigned an Anglican chaplain to Fort Vancouver, the Reverend Herbert Beaver. Beaver and his wife, Jane, were uneasy with the intermarriage of Indians and Euro-Americans. Beaver spent his two-year tenure in barely disguised conflict with Chief Factor John McLoughlin, whose wife was métis.

The HBC then authorized Catholic clergy to enter the Oregon Country. In 1838, the French Canadian Catholic priests Francis Norbert Blanchet and Modeste Demers arrived, coming in response to multiple petitions from HBC voyageurs who had mustered out of the company and settled in the Willamette Valley. The Jesuit Peter DeSmet and companions arrived in 1840. The Roman Catholic nuns came first in 1844.

Both Protestant and Catholic missionaries' presence, work with native peoples, and political interaction with Euro-American settlers were intimately intertwined with international politics, economic ambitions, and religious and cultural conflict. The Methodist and ABCFM missionaries saw their work as part of a divinely ordained project: establishing a Protestant Christian civilization from the Atlantic to the Pacific. Hence the heavy participation in the Oregon Provisional Government (formed in 1843) of Methodists, who had come as part of the great reinforcement in 1840, seemed a normal part of the missionary enterprise.

Catholic missionaries' status as both Catholic and foreign-born, and their greater success among native peoples, made them doubly suspect to Protestant missionaries and Yankee settlers. Competition between Protestant and Catholic missionaries grew from the beginning and was aggravated when in 1843 the Catholic missionary enterprise was elevated to an apostolic vicariate. In 1846 it was made an ecclesiastical province, only the second in today's United States, incorporating all of what is now Oregon, Washington, Idaho, western Montana, and British Columbia. Father Francis Norbert Blanchet was appointed archbishop.

Expanded Catholic presence coincided with intensifying tension between the Cayuse and the Whitmans at their Waiilatpu mission near today's Walla Walla, Washington. Waiilatpu's growing significance as a stopping point on the Oregon Trail alarmed the Cayuse. Dr. Whitman's inability to cure Cayuse children during the 1847 measles epidemic further aggravated the situation and led to the killing of the Whitmans and twelve others on November 29. John-Baptiste Abraham Brouillet, vicar-general of the new Catholic bishop of Walla Walla, and Augustin Magliore Alexander

Blanchet, who had arrived in September of 1847 with priests from Montreal and Oblates of Mary Immaculate from France, found and buried the dead at the Waiilatpu mission.

After the Whitman massacre, most Protestant missions to Indians were abandoned until Grant administration Indian policy made government-supported positions on reservations viable. Catholic missions continued longer but also experienced strain with regard to resources and personnel. Conflict between Protestants and Catholics over access to Indian tribes and land claims continued into the twentieth century.

As noted earlier, within a decade of the U.S. purchase of Alaska in 1867, Protestant missionaries, most notably Sheldon Jackson, were at work. After 1885 Jackson became the federal agent of education in Alaska under the Department of the Interior, charged with establishing schools throughout Alaska. He continued to recruit teachers from Protestant denominations for this project, to resist Roman Catholic efforts, and to view Russian Orthodoxy as foreign and destructive to the long-term future of the indigenous peoples there.

Immigrants, Opportunity, and Religion in the West

Oregon became a federal territory in 1849 and a state in 1859. Washington became a separate territory in 1853 and a state in 1889. Alaska became a federal territory in 1912 and a state in 1958. The Pacific Northwest's space and sparse population made it attractive to immigrants with varied motivations and aspirations. The population's transient nature and general preoccupation with economic goals often worked against the building of robust religious institutions. Most immigrants viewed institutional religion pragmatically and supported schools, hospitals, and orphanages—social services, regardless of denominational sponsorship.

Ashkenazic Jewish traders and small businessmen were present early in the Pacific Northwest. In 1849 Jacob Goldsmith and Lewis May established a general goods store in Portland, Oregon. Congregation Beth Israel was established there in 1858, the first in the Pacific Northwest. Jewish presence in Washington, Idaho, and Alaska grew with commercial, financial, and extractive industry opportunities arising first from the California Gold Rush and later strikes in Washington, Idaho, and Alaska. In the early 1900s Sephardic Jewish immigrants arrived, adding to German, Polish, and Russian Jewish presence.

Religious enthusiasts set their sights on the Oregon Country. In 1856, under the direction of their leader,

Dr. William Keil, the communitarian Christian colony in Bethel, Missouri, began a move to Aurora, Oregon, in quest of better land and separation from the world. By 1867 the entire colony had been relocated. Intracommunity conflict after Keil's death in 1877 led to the dissolution of the colony in 1883, when its enterprises became privately owned. Puget Sound also attracted communitarian experiments in the post-Civil War period through World War I.

The completion of the railroad in 1883 aided institutional religion in the Pacific Northwest. Railroad companies donated land for church buildings in settlements along their routes. Easier transportation made the region a first destination for immigrants from Europe instead of a second or third move. European ethnic populations grew, strengthening religious communities closely linked with ethnic identity and reducing interethnic marriages.

Asian presence in the Pacific Northwest became most visible with the construction of the railroads in the 1870s and 1880s, though Asians participated in the region's life earlier in the fur trade, mining, and as agricultural workers. Chinese workers brought Confucian and Buddhist practices. In 1885 the fewer than 3,400 Chinese in Seattle and Tacoma were driven out as part of the anti-Chinese agitations in the West. Some went to Portland, Oregon, which had a population of about 9,500 Chinese at that time. Japanese farmers—of Shinto, Buddhist, and Christian traditions—arrived in western Washington in the late 1800s and early 1900s. In 1910 about 8,000 Japanese were at work in Oregon and Washington. They engaged primarily in vegetable farming and service industries, until internment during World War II. After the war, few returned to Washington or Oregon. Filipinos came in numbers through the shipping industry, especially after the United States took possession of the Philippines in 1898. They have continued to maintain distinctive ethnic practices in their Catholicism.

At the turn into the twentieth century, Euro-American Catholic numbers outstripped Native American Catholic numbers for the first time. Following streams of immigrants, Sister Frances Xavier Cabrini brought her Missionary Sisters of the Sacred Heart from Italy to the United States. They established an orphanage in Seattle in 1903, where she became a U.S. citizen in 1909. She was the first U.S. citizen canonized by the Roman Catholic Church.

As was the case throughout the United States, the presence of churches in cities and towns of the Pacific Northwest during the nineteenth century signified achievement of a

degree of civilization. Clergy competed with the economic aspirations of immigrants and, except in farming communities that often contained a high degree of ethnic and religious homogeneity, failed more often than they succeeded in gathering a stable group committed to establishing and maintaining a congregation.

Progressive Era to 1960

At the turn to the twentieth century, Christianity in the Pacific Northwest shared a wider progressive impulse. Protestant religious communities expanded social services and engaged in social reform campaigns, notably temperance, anti-gambling, and efforts to end political corruption. The Reverend Mark Matthews, pastor of Seattle's First Presbyterian Church from 1902 to 1939, boasted the largest congregation in the entire denomination in 1911. First Presbyterian had multiple sites around the city of Seattle and offered the types of social services representative of the institutional church movement. Catholics also embraced progressive ideas. In Oregon, Father, and later bishop, Edwin Vincent O'Hara and Caroline J. Gleason, later Sister Miriam Theresa, SNJM (Sisters of the Holy Names of Jesus and Mary), played major leadership roles in the campaign that led to the passage of Oregon's minimum wage law in 1913.

Religion continued to mirror political sentiments. Catholicism remained a "foreign religion," a sentiment on which the Ku Klux Klan, strong in Oregon in the early twentieth century, was able to draw. In the 1924 case of *Pierce vs. Holy Names*, the U.S. Supreme Court overturned the measure that had outlawed parochial schools in Oregon, a measure explicitly aimed at undermining Catholicism in the region.

Although African Americans were in the Pacific Northwest from the early 1800s as trappers and later cavalry soldiers, and though the mulatto George Bush co-led the first wagon train that turned north of the Columbia in 1844, only after the 1880s were African American numbers large enough to organize congregations. The American Methodist Episcopal Church, the American Methodist Episcopal Church Zion, and Black Baptist congregations developed in metropolitan centers in Oregon and Washington, and in Idaho and Alaska in the early twentieth century. A second burst of migration from the southern and eastern states came with the need for workers at Boeing and in the shipyards in Portland, for both World War I and, more so, World War II. Many who came to the region as part of the U.S. military chose to remain after their deployment and continue to do so, especially in Washington and Alaska.

From the origins of the movement at the turn into the twentieth century, Pentecostals have been present in the region in numbers proportionately larger than anywhere else in the country outside of the Old Southwest. In-migrants who worked in extractive industries carried Pentecostalism with them. Until the 1970s, concerted Pentecostal evangelization efforts in the region overwhelmingly saw success with recent in-migrants. Since then, Pacific Northwest Pentecostals have benefited from the national widening popularity of charismatic and Pentecostal forms of religiousness.

Other newer and less conventional religious groups found the Pacific Northwest a congenial home. Seventh-day Adventists settled in Washington and Oregon in the late nineteenth century, attracted to the healthy air and space. Astrological and metaphysical movements were active from the late nineteenth century on, and Oregon quickly became one of the top states for Christian Science after its emergence in the 1880s. In 1905 a former Adventist preacher brought Baha'i to the United States through Puget Sound. The Vedanta Society also was established regionally in the early twentieth century. Sikhs and Muslim laborers worked in the timber industry at the turn of the twentieth century. Agitation among Euro-American workers led to mob action that drove them over the border into British Columbia in 1907, not to begin returning to Puget Sound in any numbers until after 1960.

In the two decades following World War II, population growth and the desire to return to normalcy contributed to the growth of traditional Protestant denominations, Roman Catholicism, and Reform and Conservative Judaism. These built congregations that, for the first time, resembled in size and resources those in other regions. The region's religious leaders were active in movements addressing nuclear issues, promoting world peace, and seeking to lessen racial tensions.

Forms of evangelical Protestantism, including the newer neo-evangelicalism, a less culturally hostile form of evangelicalism seeking to engage the culture more directly, grew steadily in the post-war Pacific Northwest. Billy Graham began regular appearances in Portland in 1950. In 1952 the Southern Baptist Convention voted to expand into the western states, including Oregon and Washington, ending an informal division of mission territory that had left the region to the American Baptists. During the second half of the twentieth century, the Conservative Baptists outstripped American Baptists in Oregon.

Refugees from Hungary settled in the Pacific Northwest in the 1950s, as did Koreans. Later, Vietnamese, Thai, and Cambodian communities developed, bringing their indigenous traditions and Asian expressions of Christianity. The region developed a significant and diverse Buddhist presence.

1960 to 2000

During the 1960s Protestant, Catholic, and Jewish cooperation reached unprecedented levels in the region—one that had an established tradition of cooperation, born of a pragmatic need for collaboration in the light of small numbers, more than a century before it became the practice in other regions.

One of the innovative outcomes of regional ecumenism was “Challenge” on KOMO TV in Seattle. From 1960 to 1975, this widely viewed weekly half-hour telecast featured Father William Treacy of the Archdiocese of Seattle, Rabbi Raphael Levine of Temple de Hirsch, and a rotating set of Protestant pastors, beginning with Rev. Dr. Martin L. Goslin, of Plymouth Congregational Church, conversing about issues from faith perspectives. Discussion topics included celebrating Christmas in public schools, open housing laws, and the question of responsibility for the killing of Jesus.

“Challenge” exemplified a long-standing religious dynamic of the region—openness to exploration of religious ideas and mutual religious identities, albeit through mechanisms more ecumenical, civic, and movement-oriented than denominational. This dynamic contributed to ongoing innovation across boundaries. Pierce County, Washington, has long claimed the largest prayer breakfast in the nation. The Lutheran pastor, John Nelson, and former Roman Catholic archbishop of Seattle, Raymond E. Hunthausen, gained national recognition in antinuclear and peace movements. Seattle churches were early leaders in the Sanctuary movement in the 1980s, helping refugees from the wars in Central America. An ecumenical coalition issued an apology to Native Americans in 1987, and other faith communities embraced the Roman Catholic Bishops' 2001 pastoral letter on the Columbia River.

Ecumenical cooperation and entrepreneurial innovation yielded new ministerial and educational ventures in the Pacific Northwest. Two nationally known organizations, World Vision (Federal Way, Washington) and Mercy Corps (Portland, Oregon) are headquartered in the region. Ecumenical Ministries of Oregon, Church Council of Greater Seattle, Associated Ministries of Pierce County, and the Interfaith Council of Thurston County stand out as continuing vital ecumenical ventures focused on mutual understanding and advocacy for social welfare. Earth Ministries promotes

congregational environmental education. Northwest Leadership Foundation and comparable organizations build community capital. Emerging from a collaboration begun in 1987, the School of Theology and Ministry at Seattle University, a Jesuit institution, created an Institute of Ecumenical Studies that prepares ministers for more than ten Protestant denominations. The Bakke Graduate School of Ministry, a freestanding Christian institution originally founded in 1990, focuses on urban and global issues of ministry.

Newer forms of evangelicalism and Pentecostalism continue to thrive in the Pacific Northwest. The Reverend Casey Treat has one of the longest running entrepreneurial ministries in the region, with a two-site congregation in Federal Way and Everett, Washington. Mark Driscoll, with his Mars Hill Church, has garnered the attention of other evangelicals and the general public for his earthy, often offensive preaching style, authoritarian organizational structure, and capacity to attract large attendance in Seattle. Large congregations of neo-evangelical and Pentecostal persuasion ring Portland, Oregon. The presence Sarah Palin, then governor of Alaska, on the 2008 Republican presidential ticket brought attention to Alaska's largely homegrown community church movement. The region's global, high-tech, knowledge economy centers are fertile ground for such groups, even as the same locations are home to organized, activist atheists.

The region continues to serve as a refuge. The space of the West, the allure of pristine nature, the impulse to find a place where an original Eden can be replanted still draws many to the region. One of the most infamous experiments in communal living over the past thirty-five years was the settlement of the Bhagwan Shree Rajneesh, who in 1981 brought his followers to the 64,000-acre Big Muddy Ranch near the town of Antelope, Oregon, a venture that ended in criminal charges and his conviction and deportation.

The Pacific Northwest, especially the Ashland, Oregon, region and Puget Sound, are centers for New Age and nature religions. Ashland, located near the ancient forests of the Siskiyou, is the home of Neale Donald Walsh and Jean Houston. J. Z. Knight, who gained fame for channeling the three-thousand-year-old warrior Ramtha, resides in Yelm, Washington, where she runs the School of Enlightenment, frequented in the 1990s by followers including actress and activist Shirley MacLaine and actress Linda Evans.

Nature in the Pacific Northwest inspires religious responses in writers. David James Duncan, who was raised as a member of the Seventh-day Adventist Church and later moved to Montana in protest of logging in Oregon, functions

in many ways as the theologian of the region. The Buddhist poet and nature writer Gary Snyder is a product of the region. David Whyte, an English/Irish poet, scientist, and life-guide lives on Whidbey Island.

Evangelicalism has its own Northwest writers. David Miller, the author of *Blue Like Jazz* and *Searching for God Knows What*, is a Portland resident crafting a less institutionally bound evangelical theology. Fascination with the region as a place of revelation is evident in the setting for *The Shack* by William P. Young. Miller and Young capitalize on the region's attraction to nature, embrace of the notion of infinitely new possibilities for culture, and trust in self-reliant individualism to convey a fresher evangelical vision.

Less congenial religious and political visions also thrive in the region. Oregon, Washington, Alaska, and Idaho are home to active Christian Identity and Neo-Nazi movements that recruit from among those who are often not part of the new global, knowledge economy and culture that characterize Seattle, Portland, or Boise. Coalitions of historic mainline faith groups have worked to oppose these organizations, exemplified in the work of William Wassmuth, a former Roman Catholic priest who led the movement against the Aryan Nation in Hayden Lake, Idaho, and founded the Northwest Coalition Against Malicious Harassment, now the Northwest Coalition for Human Dignity.

The protests in Seattle during the 1999 World Trade Organization (WTO) meetings exemplified regional religion's tradition of cooperation and networking. A coalition of union workers, congregations, and students organized to make their statement against the WTO and the impact of its policies. Although the "battle for Seattle" provided a venue for anarchists to gain publicity, a coalition of religious, environmental, and community groups behind the scenes played a larger role in mounting a peaceful protest.

Yet another glimpse of Pacific Northwest religion took place in the wake of the September 11, 2001, attacks. Buddhist communities in Pierce County held a public memorial for the dead. During the same period, interfaith and ecumenical coalitions organized to protect mosques from attack.

Religious Configuration and Characteristics

Religion and Public Life in the Pacific Northwest: The None Zone provided a sustained analysis of the religious demographics and characteristics of the Pacific Northwest, best known religiously at the turn of the twenty-first century for being "unchurched." Most residents negotiate their religious impulses outside the doors of church, synagogue, temple, or

mosque, and have done so since earliest Euro-American settlement, as mentioned earlier. This distinguishes the region from those where institutional religion took stronger hold.

In 1970 the percentage of the Pacific Northwest population affiliated with religious bodies reached the level of the nation at 1890—34.4 percent. Over the next thirty years, the percentage of the region's population affiliated with religious bodies remained in the mid-30 percent range, reaching a high of 37.2 percent, despite a regional population increase of 70 percent. In 2000 the region lagged further behind the nation in institutional religious adherence than it had in 1970.

The minority of the population participating in organized religious bodies, the religious adherents, are more dispersed among different groups in the Pacific Northwest than is the case in other regions. Elsewhere the top five groups capture from 75 to 85 percent of religious adherents, but in the Pacific Northwest it is only 65 percent.

The region's pattern of denominational predominance is strikingly different from the nation's and has become more so since 1970. Catholics make up the largest single denomination, 11.3 percent of the population and 30 percent of all adherents in 2000, only half their percentage of the population nationally (22 percent). Over the course of the twentieth century, the Latter-day Saints grew to be the second largest regional denomination, with 3 percent of the population and 8.1 percent of adherents in 2000. No other single religious body claims as much as 2 percent of the population. A cluster of Holiness, Wesleyan, Pentecostal, nondenominational, and neo-evangelical Christian groups rivals historic mainline, liberal, and confessional Protestants in size. The Orthodox Church is stronger in the region than elsewhere, because of its more than two-hundred-year presence in Alaska and its stability among many indigenous peoples there. The region has a larger presence of adherents to Eastern religions than any other in the country.

The low levels of institutional religious participation and the dispersed distribution of the minority of religious adherents contribute to the most distinguishing feature of the Pacific Northwest: it lacks a dominant religious reference group. No religious body to date has captured and retained a large enough segment of the population to provide the reference group alongside or against which individuals develop their religious identity. This has significantly influenced the development of religious bodies, including the ways they operate in private and public life. Demographic thinness has both fed ecumenical and interfaith ventures and generated a

preoccupation with boundaries and clarity of identity that propels sectarian impulses. It fuels continuing contestation over which religious family can claim legitimately to be the public religious voice and so stamp regional culture and politics. It has guaranteed that to be a public force, religious groups in the region must work through alliances of interest.

This situation weakens religion as a social control in the region. As a result, religion is voluntary in the fullest sense, leaving individuals with the life-long project of negotiating religious identity and participation, one carried out with the freedom to seek, to join, to innovate, or to abandon religious ideas, practices, or communities, largely at will. The connection between participation in religious organizations and other inherited factors such as kinship, ethnicity, education, and social class was eroded, even severed, in the Pacific Northwest well over a century before it weakened in other regions. Further, absent substantial social reinforcement, what is voluntarily chosen must be repeatedly reaffirmed. Making religion real, meaningful, and relevant preoccupies the religious in the Pacific Northwest, feeding spiritual searching and religious innovation.

As a region, the Pacific Northwest leads the nation in the proportion of the adult population who, when asked to identify religious tradition, responded none: 25 percent in 2000 and 2008. The state making that same claim in 2008 was Vermont. The number not identifying with any religious tradition is twice that of the Roman Catholics, and nearly three times that of the combined mainline Protestant bodies. Few who claim no religious tradition identify as atheistic or agnostic. They are, however, disconnected from both active institutional involvement and vestigial emotional bonds with identifiable faith traditions.

The single largest segment of the population regionally consists of those who identify with a religious tradition but do not participate in a local religious body of that tradition often enough to be claimed as adherents. Half of those who identify with historic Protestant denominations fit into this category. The nature and strength of these people's identification with a religious tradition is unclear. Possible interpretations include a vestige of family or ethnic self-understanding, a step on the path to private religion or fully secular identity, dissatisfaction with known available religious communities, and the result of preoccupation with economic or other interests.

For all three populations (adherents, no tradition, and identifiers), geographic scale and the grandeur of nature in the Pacific Northwest affect religiousness. For many people,

nature provides spiritual sustenance, even as it dislocates individuals in ways that lead to new interpretations of the place of humans in the universe. The Siskiyou in California and Oregon, a continuous mountain forest ecosystem since before the last Ice Age; the Tongas in Alaska, a temperate rain forest that is home to old growth; the Ho Rain Forest and active volcanoes in Washington, exemplified in the eruption and three decades of renewal of Mount Saint Helens; and the fate of salmon and orcas reframe understandings of human being and the human project. The fate of nature is imbued with metaphysical significance in the Pacific Northwest, and both attitudes and denominational policy stances toward nature are a litmus test of right belief in contests among Christian bodies. If the Pacific Northwest has a regional religious question, it is about the tensions involved in people being truly free and in a community with other humans, and the more than human, in this place.

Interpreting Pacific Northwest Religion

Despite the low rates of affiliation and participation, religion thrives in the Pacific Northwest, even as it remains fluid, diffuse, and elusive. This open environment continues to spur innovations in organization, leadership, theology, and practice across religious communities of various kinds. Religious activity spills outside the boundaries of conventional religious institutions, and religious inspiration motivates new forms of organization and communication. The conditions of Pacific Northwest religion, which always depend on lay initiative and creativity, has propelled it to incubate religious forms for a postmodern global reality.

In many ways the Pacific Northwest has been a religious bellwether, exhibiting the tensions, trends, and shifts in religious life at play across the United States, but less visible in places where a much larger portion of the population is involved in historic religious institutions. Alternative explanations pose it as a religious backwater, slow to mature religiously because of the pace at which Euro-American settlement proceeded, with major population growth only after World War II, and many denominational bodies finally achieving fiscal independence only in the 1960s. It remains to be seen whether the growth of evangelical groups over the past two decades and their increasingly frequent claim to be the regional religious voice confirms the second interpretation.

Attention to religion beyond easily recognizable institutional forms is therefore critical to understanding the Pacific Northwest. Nature religion and popular or folk religion are

helpful constructs for exploring religion in the region. So too are theories of the emergence of new religious movements, revitalization, place, and modernization. Interpretations that emphasize lay activism and initiative, and individual spiritual quests capture basic features. All offer insights into the configuration of individual and institutional religious sensibility that contributed to the region having the first states in the nation to enact voter-approved assisted suicide laws, Oregon in 1994 and Washington in 2009.

Pacifism and Conscientious Objection

At its core, pacifism seeks a just and peaceful resolution to conflict. Beneath this rather simple description rests a fundamental dialogue about whether pacifism requires renunciation of war in every instance (strict or absolute pacifism) or commits to the eradication of war but recognizes occasions when the use of force might be necessary (pragmatic or conditional pacifism).

Historic Peace Churches

Quakers

The earliest organized opposition to war among European settlers in North America came from the so-called historic peace churches, predominantly the Quakers, Mennonites, Brethren, and Moravians. Among the most numerous and influential of these groups, the Quakers migrated from England to North America beginning in the 1650s. They scattered throughout the Atlantic coast, though by the late

seventeenth and early eighteenth centuries their highest concentration was in William Penn's Holy Experiment of Pennsylvania. Spurred by his optimism in the possibility of a godly government that would propel the conversion of the world, Penn (1644–1718) attempted to incorporate into his colony, at least initially, a strict commitment to passive principles against war. In his "Essay Towards the Present and Future Peace of Europe" (1693–1694), Penn internationalized his vision for peace by calling for an international body to promote peace among the collective nations of Europe and, by extension, Europe's colonies.

Penn's attempt to construct a colony along pacifist lines and his call for European collaboration met with several obstacles that offer insight into pacifism's history in America. In Pennsylvania the need to provide police support to maintain order, a willingness to accept the use of force for defensive purposes, and the decline in support for pacifist principles among many leading Quakers undermined the peace movement. The French and Indian War presented many Quaker political leaders in Pennsylvania with what seemed to them to be an intractable dilemma of government service requiring Quakers to violate their peace commitments. As a result, several Quaker members of the state's assembly resigned their posts in 1756, a move that signaled a shift in Quaker peace activity away from direct participation in civil government to extragovernmental activity.

Among those calling for Quaker removal from political office, though not necessarily political activity, John Woolman (1720–1772) urged Quakers to consider their pacifism as part of a larger challenge to political and social injustice. Woolman traced slavery, materialism, racial intolerance, and war to the same cause—the love of power—and called his listeners to the love and defense of all creation. In so doing, Woolman stands as a central figure in North American pacifism's attempt to link a commitment to peace with a broader concern to actively work for social justice.

Mennonites

The growing sentiment among Quakers that pacifist principles and government service existed in tension, if not opposition to one another, brought them closer to the long-standing sentiments of the Mennonites. Emerging out of the Anabaptist tradition and tracing their lineage to a Dutchman, Menno Simons, Mennonites began settling in North America in the late seventeenth century. The group's earliest adherents renounced Christian political involvement as incompatible with the religious faith and

practice that they traced to Jesus and the early Christian community. Mennonites did not go so far as to vilify human government. In fact, they saw government playing a critical role in promoting order, punishing the wicked, and protecting the innocent. But these very functions appeared to Mennonites as contradictions for the Christian who, they argued, must follow Jesus' model of love of all humankind, even to the length of suffering for Christ's sake. As a result, Mennonites insisted that Christians separate themselves from sinful institutions such as civil government and seek to live in peace with friend and foe, a move they predicted would inevitably lead to their persecution. Mennonites attempted to take this suffering and transform it into a spiritual good that they argued chastened them from the love of the world and prepared them for an eternity in God's kingdom. Mennonites argued that their struggles to achieve this salvation, itself cast in terms of warfare, made the military conflicts of nations pale in comparison.

Moravians

The Moravians, who trace their origins back to the Czech *Unitas Fratrum* of the fifteenth century, offer another perspective on sectarian peace commitments in colonial America. Though nearly wiped out by centuries of persecution in Europe, a small remnant made their way in the 1720s to a refuge on the Saxon estate of Nicholas Ludwig von Zinzendorf. The Moravians adopted Zinzendorf's version of Lutheran pietism, including a deep commitment to missions that led some within the group to immigrate to Georgia in 1735. The immigrants quickly found cause to express their pacifist principles when they steadfastly refused to bear arms for the colony, even in self-defense, or hired substitutes to meet their military responsibilities. Under assault from the colony's leadership, the group abandoned Georgia in 1740 for Pennsylvania, where they hoped their pacifist beliefs would find support among like-minded Quakers.

As it did for the Quakers, the onset of the French and Indian War in 1755 proved a tremendous challenge to Moravian nonresistant pacifism. In response to attacks on their villages and the perception of many Moravians that Quaker political leaders had abandoned the divinely appointed role of the state to protect its citizens, Moravians settled on the propriety of defensive action to protect settlers from attack. They did so with the caution from one of their leaders, August Gottlieb Spangenberg (1704–1792), to use all effort to avoid killing their attackers and to care for those they wounded. In addition, Spangenberg declared the

Quaker vision of erecting a pacifist state untenable on the grounds that such aims confused Christ's command to his disciples to love with the responsibility of the ruling authority to bear arms for the defense of the nation. The former simply could never be placed on the latter, nor had God ever intended such a conflation of responsibilities. In situations when Christians exercised political authority, Spangenberg argued, they needed to take action to protect the innocent. Spangenberg's arguments positioned the Moravians in interesting ways in relation to other pacifist religious sects. Like both the Quakers and Mennonites, Spangenberg vigorously denounced Christian participation in war, but he also recognized the regrettable necessity of violent community action when the civil rulers failed to provide adequate defense. Further, like the early Quakers, Spangenberg believed that Christians had the right to engage in political service, but not that such service could or should strive to implement pacifism.

The conclusion of the French and Indian War brought a return to a stricter pacifism among Moravians. In the Revolutionary War era, the Moravians and members of the other peace churches largely refused conscription into military service, resulting in a mix of hostility, overt persecution, and on rare occasions tepid indulgence. The Pennsylvania Assembly was the only colony to exempt Quakers, Mennonites, and Moravians from militia service, but it did require that objectors pay an assessment to the colony. Everywhere else conscientious objectors experienced fines, loss of property, and imprisonment.

Conscientious Objection and the Constitution

Most of the political leaders who assembled to draft the U.S. Constitution continued to resist calls to accommodate the religious convictions of those who questioned Christian participation in war. James Madison recommended a clause that exempted religiously motivated conscientious objectors from military service, a plea that had the support of three state ratifying conventions. The ratified version of the Constitution, however, did not retain the clause. Opposition to even a small national army, however, remained strong in the United States well into the 1790s. Fear of military rule violating the new-found individual liberties of U.S. citizens provided enough fuel to suppress efforts at a national conscription and preserve the presence of local and state militias. Once the nation finally created a federalized militia, it remained voluntary and far smaller than the traditional European standing force.

At the same time, the close of the Revolutionary War allowed many Quakers, Mennonites, and Brethren to make their way to Canada. As they did in the English colonies to Canada's south, these groups struggled to gain recognition for their resistance to military service. The Militia Act of 1793 formally granted Quakers, Mennonites, and Brethren exemption from militia duties in exchange for the payment of a fine. In part the act arose out of a desire to attract to Canada immigrant groups that would support a stable British presence in North America. But many within the pacifist sects opposed paying the tax because it supported the military. The government's response ranged from confiscation of property to imprisonment. The peace sects responded by petitioning the legislature for the removal of fines. In 1849 the government finally granted the sects' appeals. Thereafter, Canadian law exempted from military service all Quakers, Mennonites, and Brethren age sixteen to sixty who could produce certificates verifying membership in these groups.

This brief history reflects several fundamental issues in the history of North American pacifism. First, although some within these churches actively worked to change social structures, others argued that they could realize their peace principles only by withdrawing from active civic participation. Further, those who attempted to continue to participate in the larger society often differed from those who sought change through participation in political structures and those who focused solely on nongovernmental efforts. Finally, members of the historic peace churches differed in the nature and extent of their responses to conscription laws and war taxes, their willingness to intersect pacifism with other social justice efforts, and the possibility of using coercion to accomplish pacifist goals.

Emergence of Nonsectarian Peace Activity

North American peace supporters began to enjoy a broader nonsectarian popularity after the War of 1812. Caught in the rush of religious revivals, Protestants sought to reform their souls and societies. In the process, thousands of middle-class Protestants in the northeast United States organized nonsectarian voluntary societies. The first one devoted to peace efforts was the New York Peace Society (1815), whose founder, David Low Dodge (1774–1852), sought to abolish war as a violation of Christian principles and an enemy to social health. In 1828 William Ladd incorporated several organizations, including the New York Peace Society, into the American Peace Society. The group's commitments

symbolized two critical components of nineteenth-century peace efforts: an emphasis on the arbitration of disputes between nations and a broad international focus. Ladd called for Christian representatives of “civilized” nations to gather to establish international laws and for creation of an international court to mediate disputes. This international perspective would undergo significant revision over the years, but remained a hallmark within much of the peace activity thereafter.

Signaling a divide essential to understanding pacifism in North America, the American Peace Society’s openness to those who supported military operations in limited, particularly defensive, cases embroiled the organization in controversy that ultimately split the group in two. Led by the radical reformer William Lloyd Garrison, strict pacifists in the organization argued that Christian faith required believers not only to renounce defensive wars, but also to oppose all forms of coercive behavior, including participation in lawsuits, government, and self-defense. Garrison and his followers established the New England Nonresistance Society in 1838 to advocate for nonresistance and a radically democratized “government of God” that refused all distinctions of nationhood, race, gender, and class. Garrison’s “Christian anarchism” eagerly anticipated the erection of God’s millennial kingdom, which he believed would safeguard the rights of all people and impose a radical equality.

Divisions within both the American Peace Society and New England Nonresistance Society over abolition and the possibility of the use of violence shifted followers’ peace activity as the United States crept toward civil war. The recalcitrance and even expansion of slavery ultimately led many within the peace movements to accept the use of violence in the service of emancipation. Even Garrison came to support the Union war effort. With the nonsectarian peace advocates supporting war in 1861, strict pacifism once again remained largely the domain of members of sectarian religious movements, particularly the Quakers and Mennonites, along with newer groups such as the Seventh-day Adventists. Members of these groups in the North and South faced conscription requirements. However, both the Union and Confederacy made allowance for conscientious objectors who held membership in one of the religious groups with historic peace articles that prohibited bearing arms. In such cases, objectors could pay a substitute or accept noncombatant duties.

The post-Civil War era gave birth to a stronger emphasis on practical peace efforts, particularly those to create binding international law and a world court. Very few among the

nonsectarian reformers in the late eighteenth and early nineteenth centuries advocated the more radical nonresistant pacifism of the earlier Garrisonians. Rather, the new peace advocates often considered military preparedness as necessary to preserve order and prevent war.

Pacifism and the Challenges of the Twentieth Century

World War I shifted the focus of peace efforts in new directions, even as it posed new challenges for those who refused military service. In addition to emphasizing international law, advocates of peace took greater aim at eliminating the social conditions they saw giving rise to war: imperialism, economic inequality, and racial injustice. Those whose conscience prohibited them from participating in war faced the Selective Service Act of 1917, which required all males in the United States between the ages of twenty-one and thirty to register for military service. In 1918 the U.S. Congress expanded the act to include all males age eighteen to forty-five. Unlike its Civil War predecessor, the act did not permit objectors to pay for a substitute. It exempted only ministers, theological students, and members of a religious group with historic documents of faith and practice that forbid participation in any form of war. Even more, the government forced those receiving an exemption into confinement under military supervision and only later offered the option of service in a noncombatant role. Similarly, in Canada, the Military Service Act of August 1917 required military service for all males age eighteen to sixty, though in general Canada provided broader grounds for claiming conscientious objection outside of membership in historic peace churches and more favorable alternative forms of service for those who objected during World War I and World War II than the United States. The United States did not offer provisions for nonreligious based conscientious objection until 1970.

The early twentieth century also brought significant diversification to the number of participants and forms of peace activity. With female suffrage nearly in hand in the United States in 1919, women, always an important presence in peace activity, undertook new efforts for peace. In that year, Jane Addams helped form the U.S. section of the Women’s International League for Peace and Freedom, a pacifist organization committed to social justice. Fanny Garrison Villard carried on the work of her father, William Lloyd Garrison, when she formed a nonresistant group called the Women’s Peace Society in 1921. Both organizations affiliated with the larger War Resisters International, established in

1924, a group committed to the abolition of war and the eradication of the causes of war.

American Catholics

American Catholics also began to lend themselves to peace activity in the late 1920s. The Catholic Association for International Peace emerged in 1927. Perhaps the most active opposition to war came from Dorothy Day and the Catholic Worker Movement. Day and her followers dismissed the just war doctrine that dominated Catholic teaching from as far back as Augustine. They also rejected the main currents of early twentieth-century liberalism's optimism regarding human progress through a preeminent state and the expansion of capitalism. Instead, Day's Catholic Workers sought a vibrant activism in the form of personal acts of self-sacrifice and love for humanity. As fascism gripped Europe, the question of war became central to Day's thought. The violence and national aggrandizement of war seemed to Day to embody all that was contrary to her personalist movement of individual responsibility for others. In the late 1930s and beyond, Day used her newspaper, the *Catholic Worker*, as a vehicle for what she called Catholic pacifism, or a complete rejection of war in favor of a commitment to Christ's kingdom of peace.

Day's efforts received support from her Worker colleagues, who established PAX in 1937 as a group of Catholic conscientious objectors. The group was later renamed the Association of Catholic Conscientious Objectors (ACCO). The organization primarily sought to gain public support for conscientious objectors and provide materials that encouraged men to consider refusing to register for the draft. Bucking Day's principles, some PAX supporters turned to the just war tradition to denounce conscription. If the government forced men to enlist against their will, they reasoned, Christians could not consider the war a just struggle.

Christian Realism and Reinhold Niebuhr

Just as some American Catholics began to engage in peace activity, many Protestants who had once laid claim to pacifist positions renounced those beliefs in the face of the devastation of World War I and the military expansion of Japan, Germany, and Italy in the years leading up to World War II. Among the most prolific was Reinhold Niebuhr, who in the 1920s claimed pacifist principles and used his interpretation of Christian realism to justify war in cases he thought might result in deterring or challenging greater violence. Although Niebuhr adamantly criticized those who sought to defend war as a specifically Christian value, he challenged what he

considered Christian pacifism's naïve assumptions about human perfectibility, the inevitability of the peaceful entrance of God's kingdom, the depths of human sinfulness, and the limitation of human moral agency to acts of love. Justice, along with love, remained incumbent on Christians. For Niebuhr, this responsibility to work for justice in a world deeply scarred by individual and social sin made violence a regrettable, but ideally only occasional, necessity.

The post-World War II era ushered some of the most substantial challenges to pacifism, as well as some of the most profound accomplishments for peace. The popularity of the Allied war effort, the Holocaust's challenge to traditional pacifist optimism about human nature, the growth of the national security state, the dominance of deterrence in United States foreign policy, and the retreat of mainline Protestantism from pacifism all signaled the waning of popular, institutional, and political support for pacifism. Despite such tremendous challenges, two mid-twentieth-century movements brought unparalleled attention and success to North American peace efforts. Civil rights activity and opposition to atomic weapons and atmospheric testing brought peace activity both new supporters and new traction.

Pacifism and the Civil Rights Movement

In December 1955 in Montgomery, Alabama, African Americans organized a boycott of the public bus system in response to the city's segregation policies. The long simmering dispute finally erupted when police arrested Rosa Parks for refusing to give up her seat in the front of a bus to a white man. Martin Luther King Jr., as president of the Montgomery Improvement Association, successfully implemented nonviolent direct action through the boycott and peaceful protests. Deeply influenced by the ideas of Gandhi and representatives of similar action in the United States, including Bayard Rustin, who helped establish the Congress of Racial Equality (CORE) in 1942, King insisted that nonviolence was not a passive alternative for those who lacked the courage to use violence, but was direct, even coercive, action to challenge social injustice without violating moral and religious values committed to love. King firmly believed that resort to violence and hate not only violated the Christian ethic of love to all humans, but also perpetuated the very systems of oppression that resisters sought to overcome.

In 1956 the Supreme Court upheld a lower court's ruling that the Montgomery bus segregation was unconstitutional. The decision helped launch nonviolent direct action as the central mechanism for the civil rights movement in the

United States. It also thrust King into the antiwar movement in the 1960s. As the Johnson administration escalated the U.S. military presence in Vietnam, King and other African American leaders took an active role in opposing the war. King assumed the chair of the interfaith organization Clergy and Laymen Concerned about Vietnam. One of the more highly publicized and controversial points of intersection between opposition to Vietnam and civil rights occurred in 1967 when boxer Muhammad Ali, then a member of the Nation of Islam, refused conscription to the army on racial and religious grounds. Ali's selective opposition to war found little support among American lawmakers or members of his draft board, who refused to allow military exemptions to religious or nonreligious adherents on selective grounds. In 1971 the United States Supreme Court overturned Ali's draft violation on a technicality, but in the same year made clear that selective opposition to war did not qualify one for an exemption from military duty.

Nonviolent social action in North America was by no means limited to the United States. Inspired by the 1968 Conference of Latin American Bishops in Medellin, Columbia, many Central American leaders, for instance, incorporated nonviolent social action to challenge social, economic, and political oppression in their nations. Called *firmeza permanente* (relentless persistence), proponents viewed their action as grasping forcefully for truth in ways that implied a constant action to overcome oppression.

Nuclear Disarmament

The second major peace effort in North America that emerged during the mid-twentieth century sought nuclear disarmament. If the Holocaust offered one of the most powerful arguments for the necessity of military action against inconceivable violence, the catastrophic destruction caused by the nuclear bombs dropped on Hiroshima and Nagasaki compelled many to mobilize to seek alternatives to war that, in a nuclear age, clearly held the potential for the annihilation of life on earth. Ironically, the very scientists who helped develop the atomic bomb were also the first to mobilize against its proliferation. The Federation of American Scientists, which as early as 1946 claimed 90 percent of those who developed the first atomic bomb, worked intensely for international control of atomic energy. Although their calls met with steep resistance from the U.S. government and many within the population at large, the scientists' efforts received important support in the 1950s and 1960s from those opposed to atmospheric nuclear testing and the health risks

due to the accompanying fallout. Beginning in 1957, several clergy joined with nonreligious leaders to found and support SANE, an organization committed to ending nuclear testing and realizing nuclear disarmament. The organization achieved one of its earliest successes in 1963 when the United States and the Soviet Union signed the first nuclear test ban treaty. Other organizations, such as the Catholic movement PAX Christi-USA and the National Council of Churches, joined with more secular organizations in seeking to significantly reduce or ban nuclear weapons.

These attempts continued throughout the 1970s, taking shape in the early 1980s, when prominent religious leaders such as William Sloan Coffin Jr. and Jim Wallis called for a nuclear freeze. In 1983 the U.S. Catholic Conference of Bishops issued *The Challenge of Peace: God's Promise and Our Response*. The wide-ranging document demanded a halt to all phases of nuclear weapons production and testing. It also identified pacifism as a legitimate position for Catholics. Although the bishops allowed for a limited policy of nuclear deterrence, other Christian groups, particularly the United Methodist Church and its critical document, *In Defense of Creation*, challenged the doctrine of deterrence and the very existence of nuclear weapons.

Many within the North American Jewish community joined in the challenge to nuclear arms. Jewish reflection on war, like much of that within Christianity, has generally resisted a strict pacifism. However, some Jews, most notably Rabbi Everett Gendler, have argued that Jewish tradition not only offers examples of Jewish rejection of violence, it provides the grounds for opposition to war in the nuclear age. Among the formal groups committed to the opposition to war, the Jewish Peace Fellowship, founded in 1941, has sought to expand conscientious objection rights beyond Christian denominations and to advocate for Jewish perspectives on nonviolence. In the early 1980s the Union of American Hebrew Congregations, the Rabbinical Assembly of America, and the Synagogue Council of America all issued statements calling for a halt to nuclear weapons production and deployment.

More recently, some within the rapidly growing Muslim community in North America have also participated in public peace efforts, including forming the Mohammed Said Farsi Chair of Islamic Peace at American University.

Iraq War

The 2003 U.S.-led invasion of Iraq shifted North American peace efforts more squarely on antiwar activity than at any

time since the close of the Vietnam War. Opponents of the Iraq War organized in various ways, including gathering as many as ten million people from around the world in 2003 to protest the war. Reflecting the deep concerns among public and political leaders in North America, Mexico joined with eight other permanent and nonpermanent members of the United Nations Security Council in refusing to approve the U.S. proposal.

The Iraq War, the proliferation of nuclear weapons, the increase of state sponsored terrorism, and repeated instances of ethnic war continue to capture the attention of strict and pragmatic pacifists in North America in the early twenty-first century. These challenges are compounded by significant political and legal concerns among those whose conscience does not allow them to participate in the armed forces or, in the United States, register for Selective Service. Conscientious objectors do not have the opportunity for exemption from military service in Mexico or registration with Selective Service in the United States. The historic and philosophical differences between pragmatic and strict pacifists suggest that their responses to these challenges may well be quite different. Their shared aim, however, will remain the eradication of conditions that have brought so much bloodshed to human history.

Pentecostal Denominational Family

Pentecostal denominations emerged around the beginning of the twentieth century. Often called *classical Pentecostals* as distinct from the charismatic renewal, Pentecostal denominations emphasize the immediate work of the Holy Spirit, with particular attention to speaking in tongues, and signs and wonders, including divine healing. This experience and theology brought already existing denominations into the movement and facilitated the birth of new denominations. Although many are ethnically diverse, this entry discusses primarily those that are predominately Caucasian.

Numerous denominations that became Pentecostal were already part of the U.S. Holiness movement. They taught the doctrine of sanctification, highlighting John Wesley's theology of "going on to perfection," as a work of grace following justification that replaces original sin with God's perfect love. Consequently the sanctified Christian no longer has a propensity to sin. By the end of the nineteenth century, many Holiness adherents used language from the Acts of the Apostles describing the Holy Spirit given to the church on the feast day of Pentecost. They viewed the Holy Spirit baptism described in Acts 2 as their sanctification. The Pentecostal movement emerged when some taught that Spirit baptism was an experience following sanctification and accompanied by speaking in tongues. This distinction divided the Holiness movement and created Pentecostal denominations. An initial common core of the Pentecostal movement was the fivefold gospel—salvation, sanctification, Spirit baptism with the evidence of speaking in tongues, divine healing, and the premillennial second coming of Jesus.

Restoring the Apostolic Church

A foundational drive of the Pentecostal revival was the belief that God was restoring New Testament Christianity, including ministerial offices, spiritual gifts, charismatic worship, and church polity. Many believed the New Testament church had been lost but was being recovered. Numerous insider histories anchor their denomination's roots in the New Testament and claim preeminence or exclusivity as the restored church. This restorationist impulse led to a preference for names based on biblical texts such as "Church of God," "Assemblies of God," or "Apostolic."

Charles Fox Parham (1873–1929) adopted the name Apostolic Faith Movement. He taught that God was

restoring apostolic ministry and gifts, and that Spirit baptism with accompanying tongues speech was a “last days” supernatural means of world evangelism. As self-appointed “Projector of the Apostolic Faith,” Parham chose state directors and published *The Apostolic Faith*, later called *The Apostolic Faith Report*. Although other leaders soon eclipsed Parham, he continued to lead a network of Apostolic Faith congregations and a Bible school in Baxter Springs, Kansas. This denomination divided in 1951 when some organized the Full Gospel Evangelistic Association. The latter denomination publishes *Full Gospel News* with headquarters in Houston, Texas.

Following Parham’s example, African American William Joseph Seymour (1870–1922) used the name the Apostolic Faith Mission for his multiracial congregation in Los Angeles, which is commonly known as the Azusa Street Mission. Their revival (1906 to 1909) influenced countless evangelists, pastors, editors, missionaries, and denominational leaders. Florence Louis Crawford (1872–1936) experienced sanctification, Spirit baptism, and divine healing at Seymour’s mission. Following several evangelistic trips she settled in Portland, Oregon, and founded the Apostolic Faith Mission, later known as the Apostolic Faith Church, in 1906. “Mother” Crawford served as general overseer of the denomination for thirty years. She began publishing *The Apostolic Faith*, later called *Higher Way*, in 1908. Crawford taught a strict Holiness lifestyle code and followed Parham and Seymour’s practice of living by “faith.” Rather than soliciting offerings, a collection box located at the entrance of each church provided an opportunity for financial support. Her son Raymond Robert Crawford (1891–1965) succeeded her as general overseer, highlighting the reality that although women have been instrumental in establishing Pentecostal congregations and denominations, succeeding generations often limited their roles.

Evangelism has always been a priority for Pentecostal denominations. In 1910 the Apostolic Faith Church acquired a horse-drawn wagon as a means of evangelism, followed by a car in 1912 and an airplane in 1919. The church holds an annual international camp meeting in Portland, Oregon, where members also built an extensive printing ministry and print literature in multiple languages. Although the church does not have a membership process, in 1994 members reported 4,500 adherents and 54 churches in the United States. The church also has extensive international ministries claiming 600 congregations in Nigeria alone. In some countries, the church uses the name Trinity Apostolic Faith Church.

Ethnic Diversity

From its beginning the Pentecostal movement has included Latino/a and African American denominations. The earliest African American denomination was the United Holy Church of America, and the largest is the Church of God in Christ. The United Holy Church of America dates to May 2, 1886, when Isaac Cheshier led a meeting of Holiness adherents in Method, North Carolina. Seeing the call to holiness as the center of the Christian life, members referred to themselves as “Holy People,” eschewed “worldly” pleasures including alcohol, tobacco, and opium, and avoided associations such as secret lodges. This intentional separation from U.S. culture characterized Pentecostal denominations until the last decades of the twentieth century.

The Holy People held their first convocation in Durham, North Carolina, on October 13, 1894, and adopted a discipline in 1900. First known as the Holy Church of North Carolina, they chose the name United Holy Church of America in 1916. They hold an annual convocation, as well as district convocations for business and fellowship. Although they value speaking in tongues, they do not view tongues as necessary or “initial” evidence of Spirit baptism, unlike most Pentecostal denominations. They are primarily located along the eastern United States with some international ministries. Separations include the formation of the Mt. Sinai Holy Church of America in 1924, which was founded by Ida Robinson (1891–1946) in Philadelphia and ordains women as bishops.

The Church of God in Christ is the largest predominately black Pentecostal denomination. Its roots go back to 1896, when Charles Harrison Mason (1866–1961) and Charles Price Jones (1865–1949) organized a Holiness fellowship among black Baptists. They adopted the name Church of God in Christ from the biblical text 1 Thessalonians 2:14 (KJV), “For ye, brethren, became followers of the Churches of God which in Judea are in Christ Jesus. . . .”

In 1907 Mason visited the Azusa Street Mission and was baptized in the Spirit. His experience divided Mason and Jones as it did countless others in the Holiness movement. Mason and ten other congregations formed the Pentecostal Assembly of the Church of God in Christ. The courts eventually granted Mason the right to use the name Church of God in Christ, with Jones’s group adopting the name Church of Christ Holiness USA. Under the leadership of Mother Lizzie Woods Robinson (1911–1945), an influential women’s department developed in Church of God in Christ.

Although women serve as evangelists and missionaries, the denomination excludes them from preaching or ordination. The denomination practices an episcopal form of church government and publishes *The Whole Truth*. In 2007 the denomination reported an estimated six million members in fifty-nine countries.

Latino/a Americans have participated in the Pentecostal movement from its earliest days. About one third of Latino/a Pentecostals belong to predominately Latino/a denominations. Many Latino/a congregants are not full members because of stringent membership requirements, making statistics difficult to establish. Latino/a denominations in the United States also face serious challenges with children transitioning from Spanish to English, as well as the mobility of the Latino/a population.

The Apostolic Assembly of Faith in Jesus Christ is likely the largest Latino/a denomination originating in the United States and began with the ministries of Luis López and Juan Navarro, who attended the Azusa Street revival in 1909. Converts preached and organized congregations among Mexican migrant workers, holding their first general convention in 1925. Francisco Llorente became their first president. Adopting Oneness theology (discussed below), members view speaking in tongues as a necessary sign of salvation. The denomination's strict Holiness code requires women to wear head coverings during worship and does not ordain women as ministers. The denomination's earliest growth was in the Southwest, but it has expanded to include missions to Mexico and Latin America. The denomination emphasizes ministry to immigrants and their descendents and remains a bilingual denomination. With headquarters in Rancho Cucamonga, California, the denomination practices an episcopal polity with a president and board of directors. District bishops make up an "Episcopal Body." Smaller U.S. Latina/o denominations include the Spanish Christian Church on the East Coast and Latin American Council of Christian Churches in Texas.

The Church of God Movement

The oldest predominately white Pentecostal denomination is the Church of God with offices in Cleveland, Tennessee. It is often denoted "Church of God (Cleveland, Tennessee)" to distinguish it from the non-Pentecostal Holiness denomination by the same name in Anderson, Indiana. The first Pentecostal Church of God congregation was established on August 19, 1886, in Monroe County, Tennessee, as the Christian Union. Baptist ministers Richard Green Spurling

(1857–1935) and his father Richard Spurling (1810–1891) rejected the exclusivity of the Landmark Baptist movement that dominated life in their region. Seeing themselves as a reformation of Protestantism, they desired a church based on the New Testament rather than "man-made creeds and traditions," in which individuals had "equal rights and privilege" to interpret the New Testament.

The younger Spurling planted several congregations and fellowshipped with a Holiness band led by William Franklin Bryant (1863–1949) in nearby Camp Creek, North Carolina. Bryant's group had been expelled from its Baptist churches following an 1896 Holiness revival. Speaking in tongues and healings were among their spiritual experiences, although they did not yet have a Pentecostal doctrine of the Holy Spirit. Spurling and Robert Frank Porter (1879–1944) organized Bryant's band in 1902 using the name Holiness Church. When the Quaker home missionary Ambrose Jessup Tomlinson (1865–1943) joined in 1903, they gained an extraordinary administrator who led them to international expansion. The Church of God fully embraced a Pentecostal theology in 1908.

Although the denomination's earliest structure was congregational, an assembly in 1906 led to the development of "centralized government," in which ministers and members of local congregations meet in a biennial international general assembly to set doctrine and practice. Tomlinson became the first general overseer in 1909 and promoted theocratic government, by which he meant God governed through the general assembly and the office of general overseer. Eventually the General Assembly established an international executive committee to oversee ministry departments that are advised by an international executive council. In the United States the denomination is divided into state or regional territories with administrative bishops. The Church of God authorizes women to preach and pastor, but excludes them from the office of bishop. The denomination's magazine, *Church of God Evangel*, began in 1910. Lee University opened as Bible Training School in 1919; the Pentecostal Theological Seminary began in 1975; and Patten University, established in 1944 by evangelist Bebe Patten, became an affiliate university in 1997.

The international memberships of many Pentecostal denominations eclipse their numbers in the United States. The first international ministry of the Church of God occurred in 1909, when Edmond and Rebecca Barr returned to their native Bahamas from Florida. By 2009 the Church of God reported 1.1 million members in almost 7,000

churches in the United States and Canada and a global total of 6.8 million members in 181 countries and territories. Strategic amalgamations with established denominations in nations such as South Africa, Romania, and Indonesia contributed to this growth. By the end of the twentieth century congregations outside North America had become a mission force sending missionaries to the United States, especially to immigrant populations.

The Church of God is strongest in the Southeast. Expansion among African Americans became especially difficult with the passage of Jim Crow laws in the early twentieth century, so black leaders requested a parallel structure in 1926. This resulted in the Church of God Colored Work until reintegration in 1966.

From its beginning the Church of God considered creeds divisive and inferior statements of biblical truth. Distinct from a creed, the denomination adopted a simple list of “Teachings” with biblical references in 1911. Along with classical Protestant beliefs these included sanctification, holiness, baptism with the Holy Ghost, speaking in tongues, spiritual gifts, signs following believers, washing the saint’s feet, and common Holiness lifestyle commitments, such as abstinence from alcohol and tobacco as well a prohibition of jewelry and ornate decoration. Like many Pentecostals, a large number of the church’s early members were pacifists.

Over the years the church’s stance on some issues has shifted as the denomination matured. For example, the denomination adopted a literal reading of Mark 16:16–17 regarding “signs following believers.” When ministers preached from the Markan text about speaking in tongues and healing, detractors tested them by bringing snakes to worship services. In many cases ministers and members handled the snakes rather than shrinking from the challenge. By the late 1920s leadership had discouraged this practice, however. Contemporary groups that collect and handle snakes are not related to the Church of God. By 1948 controversy over the nature of sanctification led to the adoption of a creedal Declaration of Faith, and in 1988 the general assembly revised the teachings to focus on positive commitments, such as to the sanctity of life. Although the Church of God will support an individual’s rights as a conscientious objector, the denomination has an active ministry to military personnel.

Disputes about the nature of the church and church government have led to divisions in the Church of God and the resulting splinter denominations. The most significant division came in 1923 when the denomination excluded

General Overseer Tomlinson amid charges and counter-charges about church government and financial management. Tomlinson insisted that the general assembly had abandoned theocratic government, and he went on to establish what later became known as the Church of God of Prophecy. The new denomination taught an accentuated view of their movement as the bride of Christ. This view was constructed into the development of the biblical park, Fields of the Wood near Murphy, North Carolina. Other developments included the adoption of a church flag in 1933 and an emphasis on the airplane as a tool for spreading the gospel. Tomlinson stressed being a racially inclusive church with both Latino/a and black leadership in North America. His son Milton (1906–1995) succeeded him at his death in 1943 and served as general overseer until 1990. A succession of nonfamily members as general overseers has brought about a decline in the isolationism and exclusivity of the denomination.

By the early twenty-first century there was considerable cooperation between the Church of God and Church of God of Prophecy. Yet the theological yearning to restore God’s church has led to further divisions when some stress particular persons or doctrines. In 1917 Joseph L. Scott organized the (Original) Church of God in Chattanooga, Tennessee, arguing that the larger body had abandoned earlier doctrines and practices, especially when teaching tithing. In 1943 A. J. Tomlinson’s son Homer (1892–1968) claimed to be his father’s rightful successor. When his claim was rejected, he established the Church of God, with initial offices in Queens, New York. Homer was one of the most colorful leaders of a Pentecostal denomination and on four occasions ran for president of the United States on the Theocratic Party ticket. Grady Kent promoted the office of general overseer over the general assembly and separated from the Church of God of Prophecy in 1957 to found the Church of God (Jerusalem Acres), which embraced Jewish customs including feast days and Saturday worship. Robert Pruitt led the Church of God (Charleston, Tennessee) schism in 1993, claiming the Church of God of Prophecy had abandoned theocratic government. Wade H. Phillips left the Church of God of Prophecy in 2004 and organized Zion Assembly Church of God with an emphasis on the church representing God’s government on earth.

Other Holiness Pentecostal Denominations

A parallel denomination to the Church of God is the Church of God Mountain Assembly, with headquarters in

Jellico, Tennessee. This group also began among Baptists who had accepted the Holiness doctrine of sanctification. In 1902 the South Union Association of the United Baptist Church in southern Kentucky called for the exclusion of ministers who preached sanctification and the possibility of backsliding. On August 24, 1907, excluded ministers met together to form a new association and held their first annual assembly that October. They called themselves Church of God but added Mountain Assembly to their name in 1911 to distinguish themselves from the Cleveland, Tennessee, group. The Mountain Assembly built a tabernacle in Jellico for its annual general assemblies.

The International Pentecostal Holiness Church is the result of a merger of three denominations. Benjamin Hardin Irwin (1854–?) founded the Iowa Fire-Baptized Holiness Association in Olmitz, Iowa, in 1895. A lawyer turned Baptist minister, Irwin had joined the Iowa Holiness Association and eventually the Wesleyan Methodist Church. He also began seeking what Wesley's associate John Fletcher had called a "baptism of burning love." Irwin believed this baptism would follow sanctification, and he called this "third blessing" a "baptism of fire." Irwin's third blessing, along with a strict Holiness code that included a ban on pork and neckties, set him apart. In August 1898 he organized a national Fire-Baptized Holiness Association in Anderson, South Carolina. This organization included followers in eight states and two provinces of Canada and published *Live Coals of Fire*. Irwin resigned as general overseer in 1900 after a confession of sin, and Joseph Hillery King (1869–1946) became general overseer.

Methodist Minister Ambrose Blackman Crumpler (1863–1952) organized the North Carolina Holiness Association in 1897. He established local congregations including one in Goldsboro, North Carolina, which was the first congregation to use the name Pentecostal Holiness Church. Crumpler also published *The Holiness Advocate*. Attempting to silence Holiness preachers, the Methodist Episcopal Church, South, brought Crumpler to trial in 1899 for preaching without the permission of the local pastor. Crumpler left the Methodist Church and organized the Pentecostal Holiness Church of North Carolina.

Presbyterian Nickles John Holmes (1847–1919) organized the Tabernacle Pentecostal Church in South Carolina. Holmes had left the Presbyterian Church in 1898 after adopting the Holiness view of sanctification. He formed a network of congregations and the Holmes Bible and Missionary Institute in Greenville, South Carolina. Later known as Holmes

School of the Bible, the college is reported to be the oldest Pentecostal educational institution.

These three denominations radically changed when Gaston Barnabas Cashwell (1862–1916), a minister in the Pentecostal Holiness Church of North Carolina, returned from Los Angeles preaching the Pentecostal message. Beginning in January 1907 with a month-long meeting in Dunn, North Carolina, Cashwell quickly spread the Pentecostal message throughout the southern United States.

In 1911 the Fire-Baptized Holiness Church and the Pentecostal Holiness Church of North Carolina merged to become the Pentecostal Holiness Church. The Tabernacle Presbyterian Church joined them in 1915. The denomination changed its name to the International Pentecostal Holiness Church in 1975. Although heavily influenced by Methodist roots, they adopted a modified congregational form of government.

Among their most important early leaders was George Floyd Taylor (1881–1934), who was elected general superintendent in 1913. Taylor founded the Franklin Springs Institute, which became Emmanuel University, published the *Pentecostal Holiness Advocate*, and established Advocate Press (later LifeSprings Resources). The *Pentecostal Holiness Advocate* was discontinued in 1996, with the denomination publishing *IssacharFile* from 1997 to 2003 and initiating *IPHC Experience* in 2004.

Along with Emmanuel University, educational institutions include Southwestern Christian University (1946) and Advantage College (founded in 1974 as Pacific Coast Bible College), which features nontraditional education. Holmes School of the Bible never became an official Pentecostal Holiness Church institution but continues to attract members as students, faculty, and staff. One of the best-known favorite sons of the Pentecostal Holiness Church was Oral Roberts (1918–2009). Roberts became an internationally known healing evangelist following World War II and established Oral Roberts University in Tulsa, Oklahoma, in 1965. But Roberts left the denomination in 1968 to join the United Methodist Church, remaining a Methodist until 1987.

In 2007 the International Pentecostal Holiness Church reported almost 258,000 members in 2,010 churches in the United States. Outside the United States the denomination participates in the World Pentecostal Holiness Fellowship and has international ties with more than three million members. The Pentecostal Holiness Church of Canada remained part of the U.S. denomination until 1971 when it gained its own charter. Other affiliate groups include the

Methodist Pentecostal Church of Chili, the Wesleyan Methodist Church of Brazil, and the Togo Pentecostal Church. Within North America the International Pentecostal Holiness Church has an affiliate relationship with the United Holy Church, the Congregational Holiness Church, and the Pentecostal Free Will Baptist Church.

The Congregational Holiness Church was founded in 1921, when Watson Sorrow and Hugh Bowling rejected the International Pentecostal Holiness Church's prohibition of medicine. Most early Pentecostals opposed doctors and medicine. They suspected the medical profession as a whole, they believed in divine healing, and few could afford the luxury of doctors and medicines. Sorrow and Bowling were open to the use of medicine along with prayer, however. In 2005 the Congregational Holiness Church reported 25,000 members in 225 churches, with headquarters in Griffin, Georgia.

The Pentecostal Free Will Baptist Church formed out of the Cape Fear Conference of the Free Will Baptist Church in North Carolina. Toward the end of the nineteenth century the Cape Fear Conference of Free Will Baptists accepted the Holiness movement's doctrine of sanctification. They came into the Pentecostal movement in 1907, when Cashwell brought the Pentecostal message to Dunn, North Carolina. The Wilmington, New River, and South Carolina conferences of Free Will Baptists also became Pentecostal. In 1943 all but the New River conference united into a general conference. These conferences completely merged in 1959 using the name Pentecostal Free Will Baptist Church. With headquarters in Dunn, they publish *The Pentecostal Free Will Baptist Messenger* and operate Heritage Bible College.

Concerns about growing segregation led to division among the Fire-Baptized Holiness Church members in 1908, before merger with the Pentecostal Holiness Church of North Carolina. Irwin ordained African American William E. Fuller Sr. at the 1898 organizational meeting in Anderson, South Carolina. Fuller established Fire-Baptized Holiness churches in South Carolina and Georgia and served as assistant general overseer from 1900 to 1905. He withdrew from the Fire-Baptized Holiness Church in 1908 and organized the Colored Fire-Baptized Holiness Church in Greer, South Carolina. The new denomination began publishing *The True Witness* in 1909, and changed its name to Fire-Baptized Holiness Church of God of the Americas in 1926. This denomination has an episcopal polity with a quadrennial council and annual conventions. The school and offices are located in Greenville, South Carolina.

The Assemblies of God

The Assemblies of God is the largest predominately white Pentecostal denomination in the United States. Each local church is an assembly, and the governmental structure is known as the General Council of the Assemblies of God. The denomination developed when about 300 "workers" and ministers came together in Hot Springs, Arkansas, April 2 to April 12, 1914. In 2007 the denomination reported 1.7 million members with 2.8 million adherents in more than 12,000 churches in the United States. The Assemblies of God (USA) is a member of the World Assemblies of God Fellowship, which reported more than 60 million constituents in 212 countries and territories. These global statistics include the Pentecostal Assemblies of Canada and the Pentecostal Assemblies of Newfoundland and Labrador. The Pentecostal Assemblies of Canada received its charter in 1919, publishes *Testimony*, and reported 232,000 adherents in just over 1,100 congregations in 2007. The Pentecostal Assemblies of Newfoundland and Labrador began in 1911 and was incorporated in 1925. In 2004 it reported 26,400 adherents in 128 churches.

Many of those who met in Hot Springs were independent ministers wary of denominations. Some had been excluded from other denominations because of their Pentecostal experience, so they distrusted denominational authority—fearful that a denomination might attempt to control ministries or impede the Holy Spirit. Yet they saw a need for limited organization to guard against false doctrine, credential ministers, facilitate legal benefits, enable fellowship, and promote ministries such as education and world evangelism. Networks had already begun to form among these ministers, including the Church of God in Christ and in unity with the Apostolic Faith Movement.

Many of the Hot Springs delegates were from Reformed traditions that differed theologically from the Holiness movement. Their understanding of sanctification was influenced by the Higher Christian Life teachings of the English Keswick conferences. Although they held to a Holiness lifestyle code, they rejected the doctrine of sanctification as a second work of grace. Most followed the theology of William H. Durham (1873–1912), a prominent Chicago pastor who argued that the sanctifying work of Christ was finished with Jesus' death on the cross. Durham's "Finished Work" theology created a significant chasm in the Pentecostal theological landscape.

Despite misgivings about becoming a denomination, the Hot Springs General Council elected officers, recognized

publications and schools, established a headquarters, and incorporated. The council elected Eudorus Neander Bell (1866–1923) as chairman (later called general superintendent) and Joseph Roswell Flower (1888–1970) as secretary-treasurer. They also selected an executive presbytery to act between meetings of the general council. The delegates recognized Bell's *Word and Witness* as their official periodical, along with Flower's *Christian Evangel* as an approved weekly. Rueben Benjamin Chisolm's Neshoba Holiness School near Union, Mississippi, and Thomas King Leonard's Gospel School in Findlay, Ohio, garnered their approval as educational institutions. The Findlay school also served as headquarters and publishing plant. Over time the governmental structure added a general presbytery and district councils. National offices and printing moved first to St. Louis and finally relocated to Springfield, Missouri. The two periodicals evolved into the *Pentecostal Evangel*. By 2007 the Assemblies of God reported nineteen educational institutions in the United States. Among these, Evangel University was established as an arts and sciences college in 1955, and the Assemblies of God Theological Seminary began in 1973. Both are located in Springfield along with Global University, which provides distance education. Also in Springfield is the Flower Pentecostal Heritage Center, which is the world's largest Pentecostal archives.

The Assemblies of God's combination of congregationalism with Presbyterianism has fostered the development of creative and entrepreneurial ministries resulting in rapid growth and diversity. These factors also provide challenges in maintaining ministerial accountability and theological unity. Defections of those seeking independence have been common, as in many denominations in the twenty-first century. Ministers such as Jim Bakker and Jimmy Swaggart have been involved in public scandals. In the 1940s the denomination was deeply divided by a movement opponents labeled "New Order of the Latter Rain," which emphasized the impartation of gifts by the laying on of hands along with the contemporary ministry of prophets and apostles. Ongoing conversations about the role of tongues speech abound.

Oneness Pentecostalism

One of their earliest examples of theological conflict was the emergence of Oneness Pentecostalism. Shortly after the formation of the Assemblies of God, the denomination's reticence to speak authoritatively about doctrine was severely tested and quickly abandoned. Pentecostal denominations are part of the Protestant theological tradition, and most view

water baptism and the Lord's Supper as ordinances commanded by Jesus. Many also practice foot washing after Jesus' example in John 13. Central to Pentecostal theology is the conviction that Spirit baptism leads to an emphasis on the person and work of Jesus.

Some denominations radically stress the name of Jesus, however. These frequently name themselves "Apostolic" to bolster their claim that they are restoring a New Testament doctrine. Often called Oneness Pentecostalism, this theological minority developed out of a 1913 revival near Los Angeles, when R. E. McAlister suggested that the apostles were baptized in the name of the Lord Jesus Christ as directed by Peter in Acts 2:38. Soon some Pentecostals were re-baptizing each other in the name of Jesus. Sometimes referred to as "Jesus Only," they stress that the one God's name is Jesus, and that God works in the modes of Father, Son, and Spirit. This "New Issue" quickly divided Assemblies of God ministers. Their fourth general council in 1916 drafted a trinitarian seventeen-point "Statement of Fundamental Truths" to which all ministers had to consent.

Barred from the Assemblies of God, Oneness ministers met in Eureka Springs, Arkansas, in December 1916 and organized the General Assembly of Apostolic Assemblies. When they discovered they lacked legal standing to claim exemption from military service, they merged with the Pentecostal Assemblies of the World in 1918. The Pentecostal Assemblies of the World had begun in Los Angeles in 1907. Under the later influence of the black Indianapolis pastor and songwriter Garfield Thomas Haywood (1880–1931), the Pentecostal Assemblies of the World grew quickly, especially in northern states among black Pentecostals. In 1925 the denomination reorganized with an episcopal polity, and Haywood was elected as presiding bishop. The denomination publishes *The Christian Outlook* and in 2006 reported 1,500,000 members (likely a global total).

Despite efforts to be racially inclusive, in 1924 the Pentecostal Assemblies of the World divided under the pressures of racial and regional challenges. Most white ministers withdrew and organized into three primarily regional bodies. The two largest denominations merged in 1941, eventually adopting the name United Pentecostal Church International. With headquarters in Hazelwood, Missouri, this organization publishes the *Pentecostal Herald*, operates several regional bible schools, and sponsors Urshan Graduate School of Theology. Although its position on sanctification is finished work, members remain heavily influenced by the U.S. Holiness movement and adhere to a strict lifestyle code. Officially

the denomination does not allow female members to cut their hair or ministers to own televisions. The denomination reported 646,000 members in 2006.

Younger Denominations

When the Assemblies of God adopted its Statement of Fundamental Truths, some who had been wary of denominational control left and established the Pentecostal Assemblies of the USA in 1919. After several name changes it became the Pentecostal Church of God. John Chalmers Sinclair (1863–1936), an original member of the Assemblies of God's executive presbytery, served as the general bishop. Over time the denomination has acknowledged the need for cooperative ministries and developed a structure with a general council and ministry departments. With headquarters in Joplin, Missouri, the denomination publishes the *Pentecostal Messenger* and operates Messenger College. In 2007 the denomination reported 88,000 constituents in the United States.

The International Church of the Foursquare Gospel grew out of the ministry of Aimee Semple McPherson (1890–1944), a former Assemblies of God minister. Affectionately known as “Sister,” McPherson was born in Igersoll, Ontario, Canada. Her parents were Methodist and Salvation Army, but she became Pentecostal under the evangelistic ministry of Robert Semple. She soon married Robert, and they ministered in Chicago with William H. Durham, father of the finished work doctrine. While they were serving as missionaries in China in 1910, Robert died, and Aimee returned home with an infant daughter.

A vibrant and flamboyant preacher, McPherson began an evangelistic career in 1915 that included meetings in tents and major auditoriums across the United States. Her ministry expanded with the publication of *The Bridal Call* (later renamed *The Foursquare Advance*) in 1917. An emphasis on the Foursquare Gospel emerged out of her preaching from Ezekiel 1:4–10, where she related Ezekiel's four-faced cherubim to Jesus' ministry as “Savior,” “Baptizer with the Holy Spirit,” “Physician and Healer,” and “Coming King.”

McPherson relocated to Los Angeles, established the Echo Park Evangelistic Association, and built the 5,300 seat Angeles Temple. Dedicated on January 1, 1924, the worship center was often filled three times a day, seven days a week, with McPherson preaching many of the sermons. The Lighthouse of International Foursquare Evangelism (LIFE) Bible College sent out students who planted branch congregations. McPherson preached her first sermon on radio in 1922 and is said to be the first woman to preach on the medium and

the first woman to operate a radio station. Convinced of radio's potential she applied for a broadcast license and opened KFSG (Kall Four Square Gospel) in 1924. The radio broadened her national appeal. Locally her ministry stressed care for the poor, and during the Great Depression the Angeles Temple commissary distributed 1.5 million meals.

The ministry incorporated in 1927 with McPherson serving as president until her death in 1944. The ministry's national government includes a president assisted by a team of vice presidents, board of directors, and district supervisors. The movement is particularly strong in the western states. In 2006 the denomination reported 255,000 members in the United States in 1,875 churches. By 2009 the denomination reported 8.4 million members in 144 countries and territories. In compliance with Canadian law, congregations in Canada are registered as the Foursquare Gospel Church of Canada with their own constitutions. The International Church of the Foursquare Gospel actively promotes women in ministry, and husband and wife co-pastors serve many congregations.

Also strong in the west, Open Bible Churches are the result of the merger of two denominations. Fred Hornshuh organized the Bible Standard Conference in 1919 with ministers concerned about the exclusivity and rigid control of the Apostolic Faith Mission in Portland, Oregon. These ministers established Eugene Bible College in Eugene, Oregon, and published *Bible Standard*. In the Midwest several International Church of the Foursquare Gospel ministers withdrew after the divorced McPherson remarried in 1931. They were also unhappy that the denomination held all church properties and formed the Open Bible Evangelistic Association in 1932. These two denominations came together as the Open Bible Standard Evangelistic Association in 1935, later shortened to Open Bible Churches. With headquarters in Des Moines, Iowa, the denomination publishes *Message of the Open Bible*, reported 45,000 members in 2007, practices congregational government with a biennial national convention, and is divided into five regions.

Conclusion

In the early twenty-first century, Pentecostal denominations continued to grow, although much more slowly than in the twentieth century. Much of their growth has been among immigrants, particularly Latino/a populations where commitment to Spirit empowered and enthusiastic forms of worship remain. Pentecostal styles of worship continually influence non-Pentecostal denominations especially regarding music. At the same time some Pentecostal denominations

seem to be minimizing their distinctive and traditional practices. They are less characterized by a strict Holiness lifestyle, more inclusive theologically, and less concerned with denominational labels.

Pentecostal denominations also face the challenge of an increasingly urban and diverse United States. Although denominations previously developed by planting congregations in numerous small towns, today's constituents often prefer the range of ministries provided in the megachurch or the intimacy of the house church.

Pentecostals

Pentecostalism is a movement of spiritual renewal emerging in early twentieth-century America from the eighteenth- and nineteenth-century Wesleyan and Holiness revivals. Although the catalyst for the movement was undoubtedly the 1906 Azusa Street revival in Los Angeles, California, similar revivals were emerging in other parts of the world (Wales, India, Chile, and Korea) nearly simultaneously. The Pentecostal movement became global from 1906 onward and within one hundred years was, along with the related Charismatic and neo-Pentecostal groups, widely acknowledged as the fastest-growing movement in Christendom. By the first decade of the twenty-first century, it had an estimated 500 million adherents worldwide, 25 percent of all Christians. In the United States, as in other parts of the world, Pentecostals are noted for their vibrant worship services, marked by lively music and preaching, charismatic manifestations, such as speaking in tongues (*glossolalia*) and prophetic speech, and for their belief in miracles, including healing.

Key Concepts

Pentecostals are Christians who believe that the infilling or baptism in or with the Holy Spirit (Spirit baptism, Holy Ghost baptism) is an experience subsequent to regeneration. Wesleyan-Pentecostals believe that Spirit baptism is subsequent to *sanctification*, a second work of grace in the life of the believer. Finished Work Pentecostals believe that regeneration and sanctification are a part of the initial conversion experience and are followed by the experience of Spirit baptism. Oneness Pentecostals or Jesus' Name Pentecostals have a non-trinitarian theology, maintaining that the Father, Son, and Spirit are all modes of the one God whose name is Jesus and that baptism is salvific and must be performed in the name of Jesus. Oneness Pentecostals also use the term *apostolic*, maintaining that their theology and practice is congruent with that of the apostles. Classical Pentecostals (including Wesleyan-Pentecostals, Finished Work Pentecostals, and Oneness Pentecostals) are those who can trace their origins, doctrine, or spirituality to the Pentecostal revival of the beginning of the twentieth century. Most classical Pentecostals believe that speaking in tongues is the initial physical evidence of Spirit baptism.

Biblical Foundations

Pentecostalism understands its scriptural warrant to be found in the life of the apostolic church as evidenced in the book

of Acts. The experiences of Spirit-empowerment as described in Acts are understood to be normative of the Christian life. To be filled with the Spirit is understood as a command of Jesus and a promise of the Father. Like those who tarried in prayer awaiting the descent of the Spirit, Pentecostals understand that each believer is to likewise tarry, or wait, for empowerment by the Spirit. Every church should be a Spirit-empowered community of believers replicating the experience of the church in Acts. The miracles that marked the ministries of the apostles are to mark the ministries of those filled by the Spirit.

Following the interpretation of Peter in Acts 2, this outpouring on the church is understood to be a fulfillment of the prophecy of Joel 2: the Spirit will be poured out on all flesh, male and female, young and old, slave and free. Again, following Peter's interpretation, Pentecostals believe this is a promise in perpetuity, for all generations to come. Continuing with this appropriation of the Joel prophecy, Pentecostals adopted his references to the former and latter rains (Joel 2:23) as descriptive of this new outpouring of the Spirit. The latter rain has now been poured out in the Pentecostal movement itself.

Pentecostals interpreted the New Testament Day of Pentecost event in light of the Old Testament feast of Pentecost or Feast of Tabernacles. This feast, as discussed in Deuteronomy 16, was a celebration of the first fruits of the harvest. The significance of the outpouring of the Spirit on the Day of Pentecost was that it signified a beginning of the full harvest, when they would experience all of the fullness of God. Until that day, they would continue to bring in the harvest.

Pentecostals built a doctrine of tongues as the "Bible sign," later "initial evidence," built on the instances described in Acts 2:4, 10:45–46, and 19:6. In each of these instances, it is said that those who are filled with the Spirit, or on whom the Spirit was poured out, spoke in other tongues.

As important as the Acts narrative were the words of Jesus to his followers as recorded in the so-called longer ending of Mark, found in Mark 16:9–20. Of particular importance in early (and later) Pentecostalism is the commission of verses 15–18. Pentecostals seized on the language of "signs following believers," specifically speaking in tongues, laying hands on the sick, and casting out demons. More debated was the meaning of the other signs, such as drinking deadly poison and taking up serpents.

American Roots

Donald Dayton has shown that Pentecostal terminology, such as *Baptism in the Holy Spirit* and *Pentecost* had already

been used by the British Methodist John Fletcher (1729–1785) in the Wesleyan revival of the eighteenth century to describe the experience of sanctification. This hermeneutic was adopted by Holiness preachers in America, who were readers of Fletcher's works. More recently, Laurence W. Wood has shown the use of such language may be traced back to Wesley. More specifically, D. William Faupel has shown that the Pentecostal revival was anticipated in the revivals of the nineteenth century and particularly in the period of optimism just before the American Civil War, when Holiness revivalists began emphasizing not only Wesley's concepts of entire sanctification but also a postmillennial vision in which the whole church would be sanctified. This revival, it was believed, would result in a moral change in society. In 1856 William Arthur (1819–1901) published *The Tongue of Fire*, calling for an infusion of Pentecostal power so that a worldwide revival could occur, ushering in the millennium. The beginnings of what promised to be such a revival came in 1857 and 1858, when Holiness advocate Phoebe Worall Palmer (1807–1874) began conducting meetings, first in Hamilton, Ontario, which contributed to an ethos of revival known as The Third Great Awakening or the Layman's Prayer Revival. Palmer, wife of Dr. Walter C. Palmer (1804–1883), and her sister Sarah Worall Lankford (1806–1896) had been promoting the Wesleyan doctrine of entire sanctification and the "Higher Life," through their "Tuesday Meetings for the Promotion of Holiness" and publications such as her *Guide to Holiness*. This revival ethos spread throughout North America, especially in the urban north of the United States. What marked these meetings, in addition to a high level of millennial expectation, was a unity transcending denominational lines. The revival wave quickly spread to the British Isles and to Sweden and Australia.

The despair of the post-Civil War period in America, however, caused Holiness adherents to rethink their eschatology, shifting from a postmillennial optimism to a more pessimistic premillennialism anticipating the soon return of Christ. This shift was informed by both the claims of William Miller's (1782–1849) millenarianism, whose predictions of Christ's return in 1844 were proven false, and the subsequent reinterpretation by John Nelson Darby (1801–1882). This new form of premillennialism, dispensationalism, took its name from its view that the Bible revealed a scheme that divides history into a series of distinct chronological dispensations, associated with various covenants making a careful demarcation between Israel and the church. Dispensationalism became a dominant eschatological view in American evangelicalism.

The late nineteenth century also saw the birth of the divine healing movement and the articulation of a belief in healing provided in the atonement. Beginning with the work of Dr. Charles E. Cullis (1833–1892) in Boston, the theology of divine healing and the practice of prayer for the sick, especially in accordance with James 5:14, became a major component of the Holiness movement in America. By the end of the century, prominent evangelical and Holiness preachers, such as A. B. Simpson (1843–1919), A. J. Gordon (1836–1895), and Carrie Judd Montgomery (1858–1946), were advocating anointing with oil and prayer for the sick in churches, conferences, and camp meetings. In addition, these advocates established healing homes, modeled after similar homes in Europe, nationwide. It is estimated that by 1887 there were thirty such homes in the United States.

In addition to Simpson's Fourfold Gospel (Jesus is Savior, Sanctifier, Healer, and Coming King), other Holiness evangelists began preaching that there could be further transformative crisis-experiences in the Spirit beyond that of entire sanctification or Spirit baptism. One such preacher was Benjamin H. Irwin (1854–?), founder of the Fire-Baptized Holiness Association, a group that began in the Midwest but quickly spread throughout the Southeast. Irwin's teachings had some influence during the formative years of the Church of God (Cleveland, Tennessee). Tracing its roots to the formation of the Christian Union in Barney Creek, North Carolina, in 1886, and the 1896 Holiness revival in Cherokee County, North Carolina, those leaders—who later formed the Holiness Church at Camp Creek (Cherokee County, North Carolina) in 1902 (later the Church of God)—undoubtedly came under the influence of Irwin's school in Beniah, Tennessee. The Pentecostal Holiness Church, organized in 1898 during the Holiness Revival in Goldsboro, North Carolina, later merged with the Fire-Baptized Holiness Church in 1911, no longer under the leadership of Irwin, retaining the name Pentecostal Holiness Church.

At this time, another Midwestern evangelist, Charles F. Parham (1873–1929), under the influence of Frank W. Sandford (1862–1948) of Durham, Maine, began reexamining the book of Acts with a worldwide missionary movement and accompanying revival in view. This reading led Parham to begin advocating a Pentecostal outpouring marked by the phenomena described in Acts, especially speaking in tongues. It was this particular phenomenon that Parham understood to be the Bible sign of being baptized in the Spirit. Though many revival movements had witnessed these and similar phenomena, Parham interpreted the tongues of Acts as *xenolalia*

(missionary tongues), the ability to speak languages of the nations previously unknown to the speaker. It was this ability that would allow for a great missionary movement. On January 1, 1901, Agnes Ozman (1870–1937), a student at Parham's Bible School in Topeka, Kansas, reportedly spoke in tongues according to Acts 2:4. In 1905 Parham moved his Apostolic Faith headquarters and opened a similar school in Houston, Texas. Members of the African American community in Houston apparently came in contact with Parham's teaching.

Lucy Farrow (1851–1911), a former slave, pastor of a Holiness church in Houston and employee of the Parham family, introduced William J. Seymour (1870–1922) to Parham and his teaching. Seymour, a son of former slaves, was a native of Centerville, Louisiana, and had been raised in a Baptist church but, through his travels in Indiana and Ohio, had been converted to Holiness doctrine. Farrow, while traveling with the Parham family as Parham expanded his evangelistic ministry, experienced Spirit baptism with the Bible sign. Following his appointment as pastor of Farrow's church in her absence, Seymour, too, became convinced of Parham's interpretation of the book of Acts. Because of Jim Crow laws in the South and because of Parham's adherence to British-Israel theory (the belief that western Europeans are the descendants of the ten lost tribes of Israel), Seymour was not allowed to sit in the classroom of Parham's school or with white worshipers in Parham's evangelistic meetings but was allowed to listen in through the window. Despite this obvious discrimination, Seymour became a disciple of Parham's doctrine of Spirit baptism with the Bible sign or Bible evidence.

Azusa Street Revival as a Catalyst

Early in 1906 Seymour accepted an invitation by Julia Hutchins (1860–?), a pastor in Los Angeles, to move to California and become pastor of the mission she had founded there. Hutchins had a desire to go to Liberia as a missionary. Seymour began preaching in Los Angeles on February 24, 1906. In the first few sermons he apparently preached on regeneration, sanctification, divine healing, and Spirit baptism with the accompanying manifestation of tongues. In short time Hutchins rejected Seymour's preaching of a third blessing, specifically baptism in the Spirit with Bible evidence of tongues, though apparently she later embraced it. This was followed by a rejection by the Holiness Church Association in Los Angeles.

Seemingly undeterred, Seymour moved in with a couple from Hutchins' congregation, Mattie (no dates) and Edward S. (1859–?) Lee. The Lees, along with Seymour and others

from Hutchins' church as well as Frank J. Bartleman (1871–1936), a white evangelist, began praying together regularly. Outgrowing the home of the Lees, in March, the group moved to the home of Richard (1859–1936) and Ruth (c. 1856–1934) Asberry on 241 North Bonnie Brae. The meeting grew with other African American friends and acquaintances joining, as well as Bartleman and other local white Holiness adherents and leaders regularly attending the prayer meetings. On April 9, at the Lee home, Seymour and the recently arrived Lucy Farrow, laid hands on Edward Lee to receive the baptism of the Holy Spirit. Lee immediately spoke in tongues, falling to the floor. They walked to the Asberry home, began the prayer meeting with a song and Seymour's exposition of Acts 2:4, and several others were baptized in the Spirit with the evidence of speaking in tongues. News quickly spread throughout the Los Angeles Holiness community and the Asberry home became crowded with seekers. On April 12, Seymour himself was baptized in the Spirit.

As a result of the revival, the Asberry home soon became too small for the dozens who were crowding it. The meeting moved outside and then to a large building at 312 Azusa Street, a former African Methodist Episcopal church, but more recently a livery stable. The racially mixed group began to clean up the old building so that services could be held on Easter Sunday, April 14. By April 17, news of the revival at 312 Azusa Street, now called the Apostolic Faith Mission, was reported in the *Los Angeles Daily Times*. The report covered a Tuesday evening service and appeared under the headline "Weird Babel of Tongues." Lampooned in the papers were not only the manifestations of tongues but also the interracial nature of the meeting.

The Azusa Street revival lasted for approximately three years and by the end of that period similar Pentecostal meetings were being held in Europe, Asia, South America and Africa, as well as all over the rest of North America. Through its monthly periodical, *The Apostolic Faith*, with a circulation of up to forty thousand by 1907, testimonies, news of the revival, and missionary reports, as well as doctrinal discourses and sermons were disseminated throughout the world. In addition, scores of those who attended the revival over the years left to carry the message and experience to other parts of the United States and the rest of the world. From Azusa, missionaries—some trained in Holiness missionary schools, others untrained—traveled to China, India, Japan, Egypt, Liberia, Angola, and South Africa. This model, which included revival meetings, publishing, and sending, was replicated in other parts of the United States and Canada. Centers of

Pentecostalism would soon be founded in Chicago, Illinois; Portland, Oregon; Oakland, California; Atlanta, Georgia; Memphis and Cleveland, Tennessee; Indianapolis, Indiana; Falcon, North Carolina; Rochester, New York; Dallas, Texas; Providence, Rhode Island; and Toronto, Ontario. Bible schools were established as well as benevolence endeavors such as orphanages, feeding and clothing ministries, homes for indigents, and even rehabilitation programs for alcoholics. In some places, camp meetings, schools and orphanages, and even entire denominations established during the Holiness revivals were swept into the Pentecostal movement; in other places, entirely new organizations emerged. Within a decade, denominations with a decidedly Pentecostal doctrinal commitment were forming, though other churches chose to remain independent or only loosely associated with other similar bodies.

Theological Shifts

As the movement spread, the doctrine was quickly codified. Although many of the earliest adherents would have considered themselves anticeedal, statements of faith did in fact emerge. The earliest Pentecostal adherents sat firmly in the Wesleyan–Holiness camp, advocating an experience of sanctification subsequent to conversion. Some Pentecostal centers, Azusa being the prominent example, published doctrinal statements from the beginning. In the inaugural September 1906 issue of *The Apostolic Faith*, a statement of faith is found that includes statements about justification, sanctification, healing, and Spirit baptism accompanied by evidentiary tongues. Similarly, the Pentecostal Holiness Church, then primarily in the Southeastern United States, produced a statement that included the three-stage view—justification/regeneration, sanctification, Spirit baptism. It, too, advocated speaking in tongues as evidentiary, using the term *initial evidence*.

Other groups and emerging denominations began to develop what amounted to rules of faith, whether written or unwritten, as issues and crises emerged. These issues sometimes involved controversy but at other times were simply answers to questions raised about training members or ministers in the faith. Some of the earliest of these statements, or lists, were developed as a way of testing orthodoxy. The earliest statement that may be called a doctrinal statement in the Church of God was published in the August 15, 1910 edition of the *Evangel*, a list of "the teaching that is made prominent." A committee had been appointed at the 1909 Church of God General Assembly with the purpose of composing a list

of beliefs. These teachings were to be used in qualifying ministerial candidates. Included in the extensive list are tenets clearly distinguishing the group as Wesleyan-Pentecostal. A similar list is found in *The Bridegroom's Messenger*, a Pentecostal periodical published in Atlanta, Georgia. In June 1908, M. M. Pinson (1873–1953) warns that only those ministers who subscribed to the doctrines of repentance, faith, regeneration, sanctification, Spirit baptism (with Bible evidence), and premillennialism should be endorsed by Pentecostals.

Early Pentecostals tended to view initial conversion (regeneration and justification) and the second experience (sanctification) as works of grace. To distinguish the second work from the subsequent experience of Spirit baptism, they often articulated an explanation that included a claim that sanctification was the last work of grace, implying that Spirit baptism was not such a work. This polemic was meant to distinguish the newly developed doctrine of Spirit baptism from that of their Holiness predecessors who used the terms *sanctification* and *Spirit baptism* interchangeably. Pentecostals carefully defended Spirit baptism as “power for witness upon a sanctified life” (*The Apostolic Faith*) or “subsequent to” the experience of sanctification.

The first notable reworking of Pentecostal doctrine clearly came as a result of experience. Those following Parham had taught that *glossolalia* would be missionary tongues (*xenolalia*). Though some evidence in the testimonies of those in the early movement indicates a belief that they had been given a particular language to serve a particular people group, this view was rarely articulated in doctrinal formulation. There were apparently those who followed their inclination and traveled to a foreign land in anticipation of being able to communicate the gospel in the dialect of the people, only to find that they would have to learn the language through study. The vast majority, however, did not attempt this kind of foreign missionary activity. It is clear that the majority in the United States who were a part of the movement understood that speaking in unknown tongues was a “sign” or “evidence” of their infilling by the Holy Spirit. An insistence on *xenolalia* as a part of the “power for witness” quickly gave way to an insistence on *glossolalia* as a sign.

In 1911, as the various revival centers became centers of major networks or organized as denominations, the first major internal theological challenge to the Wesleyan-Pentecostal three-stage formulation was made. William Durham (1873–1912), a prominent Pentecostal pastor in Chicago, began to rethink his theology. Although he had testified to and preached an experience of entire sanctification from

about 1901, and testified to an experience of baptism in the Holy Spirit in 1907, Durham modified his theology in 1910, accommodating it to his Baptist roots. This new Pentecostal soteriology disclaimed sanctification as a second definite work of grace, seeing justification and sanctification as occurring at the moment of conversion. Durham based his theology on what he termed the *Finished Work* of Christ on the cross. This move, in effect, collapsed the three stages into two by combining initial conversion and sanctification into one work.

Durham's new soteriology was zealously evangelized from his Chicago headquarters to Los Angeles. The message was received as a new revelation and gained wide acceptance but brought major division in the movement. It was denounced by Charles Parham, William Seymour, Florence Crawford (1871–1936), Elmer Fisher (1866–1919) and the Southeastern United States Pentecostal groups—the Church of God, the Pentecostal Holiness Church, the Church of God in Christ—but nonetheless became the dominant message of Pentecostalism. When the Assemblies of God General Council convened in 1914 in Hot Springs, Arkansas, the opening sermon, preached by Pinson, was titled “The Finished Work of Calvary.” The resulting formation of a denomination, by 2009 the largest Pentecostal denomination in the world, clearly fell in the Finished Work, and therefore non-Wesleyan, camp.

Although the doctrinal shift has been primarily understood as affecting one's understanding of sanctification only, a Baptist-Reformed view as opposed to a Wesleyan view, this was in actuality a major paradigm shift, significantly altering Pentecostal theology and resulting in two distinct models of Pentecostal soteriology. The Finished Work Pentecostal focus on looking backward, claiming what was already accomplished on the cross, inevitably began to include all that was provided in the atonement, including healing of the body. In contrast, the Wesleyan-Pentecostal model proposed an ongoing life in the Spirit in which one moves from one experience in grace to the next in a soteriological trajectory that is teleological and forward-looking. Healing, then, is a sign both of the time when all will be healed and of the resurrection of the body.

This shift led to the next major division, also a doctrinal one. Known as the New Issue, this turn was even more divisive and led to an irreconcilable schism. It came to fruition in 1914 as a new revelation about the name of Jesus during a sermon at the World Wide Pentecostal Camp Meeting in Los Angeles, in April 1913. Canadian Robert E. McAlister

(1880–1953) commented that according to the book of Acts, the early church baptized believers in the name of Jesus rather than of the Trinity, as indicated in the book of Matthew. One listener, John G. Schaepe (1870–1939), intrigued by McAlister's suggestion, reportedly received a new revelation that true believers should be rebaptized in the name of Jesus, having been given a glimpse of the power of that name. Frank J. Ewart (1876–1947), Durham's successor, preached his first "Jesus Name sermon" outside Los Angeles in 1914.

Faupel suggests that this New Issue began as a consideration of a new baptismal formula, evolved into contemplation on the name of Jesus, and emerged into a reformulating of the understanding of the godhead. The orthodox understanding of the Trinity was rejected in favor of a *unipersonal* understanding of God, with the person of Jesus as the expression of the entire godhead. A new soteriology using Acts 2:38 as the paradigm for salvation experience quickly emerged. This paradigm saw repentance, baptism in the name of Jesus, and reception of the Holy Spirit as programmatic. The Jesus Name or Oneness Pentecostal movement adopted the designation *Apostolic*, previously used as a description of the whole Pentecostal movement, seeing themselves as those who were true to apostolic Christianity. Ewart understood the terms *Father* and *Holy Spirit* as designations of the various modes of Jesus' person. Baptism in the name of the Father, Son, and Holy Spirit was a pseudobaptism and believers must be baptized in the name of Jesus. He further collapsed the experiences of the *ordo salutis* (order of salvation) by seeing regeneration, sanctification, and Spirit baptism as one event, and that being received in water baptism by immersion in Jesus' name. Further, speaking in tongues was understood as essential to the experience.

By 1915 some leaders in the newly formed Assemblies of God had been rebaptized, including Eudorus N. Bell (1866–1923), then head of the group. The schism reached a climax in October 1916 when a General Council of the Assemblies of God was convened to settle the issue. Pinson, J. Roswell Flower (1888–1970), and Stanley Frodsham (1882–1965) argued persuasively for the trinitarian position as orthodoxy, appealing to the Council of Nicea. Bell was won back but those convinced of the Oneness position were unmoved by appeals to the history of the church that had fallen into apostasy after the apostolic period. The result was that more than one hundred congregations and 156 of 585 ministers left the Assemblies of God and Trinitarian Pentecostalism. Following this schism, many of these ministers and congregations followed the trajectory of the earlier movement, forming

denominations or associations of ministers and congregations. The short-lived General Assembly of the Apostolic Assemblies (GAAA) formed in early 1917; the Pentecostal Assemblies of the World (PAW), chartered in 1907, was transitioned into an association for Oneness ministers through the organizational efforts of Garfield T. Haywood (1880–1931) in January 1918. In Canada, Franklin Small (1873–1961) organized the Apostolic Church of Pentecost (ACPC). Others were to follow.

Pentecostal Spirituality and Distinctiveness

Like all religious movements coming of age, Pentecostalism in North America can no longer be described in stereotypical ways. As Pentecostal groups and churches have become both more organized and aligned and amalgamated with other religious groups, and therefore influenced by them, they have taken on different forms and structures to both the benefit and the detriment of the movement. On the one hand, this is no surprise, given that at the heart of the Pentecostal ethos is a belief that the Spirit is continually moving and doing new things. On the other hand, some would say that what has been called a rush to respectability has blurred the lines of distinction and stifled the creativity of the movement.

If one tries to identify what is distinctive about Pentecostalism and its spirituality, many scholars would conclude that the most appropriate way to describe it is to look at the earliest incarnation of the movement. Walter Hollenweger has identified the first ten years as the heart of it (as opposed to its infancy). In this view, in examining this well-documented era one may discern what is distinctive about the spirituality.

There has been little argument from the onset of the Pentecostal revival that the experience of Spirit baptism, with its accompanying manifestation of speaking in tongues, has been the most notable of the distinguishing characteristics of the movement. This is not to suggest that Spirit baptism and *glossolalia* are the only distinguishing features; neither is it meant to suggest that this experience can or should be isolated from other experiences and doctrines central to the spirituality of the movement. The Pentecostal doctrine of Spirit baptism is not an add-on to evangelical theology, nor is the experience simply an ecstatic episode. Pentecostal theologian Steven J. Land maintains that the point of Pentecostal spirituality should not be to have one experience or several but to experience life in the Spirit as a part of the larger Christian story. This suggests that a new understanding of baptism in the Spirit, and the accompanying manifestation, distinguished these believers from their contemporaries and from the

churches from which they came. Although many viewed this distinction as divisive and sectarian, for those who had experienced Spirit baptism it served as a marker signaling that they were now a part of a Last Days move of God. It was this belief that they were a part of the Last Days Latter Rain outpouring of Spirit onto “all flesh” of its followers that gave Pentecostals the passion to preach the full gospel everywhere.

Hollenweger’s groundbreaking research established that Pentecostalism was generated from an African root, identifying several characteristics of this root system: the oral nature of the movement’s liturgy, its use of narrative (including dependence on narrative sections of biblical text as well as the narrative testimony of believers in evangelization), significance given to visions and dreams (in both public and private worship), communal participation in worship and decision making, and an integrated view of the body-mind relationship (most notable in prayer for the sick).

Over and against fundamentalism, a movement contemporary with Pentecostalism, and in keeping with its Holiness roots, Pentecostals opted for a hermeneutic, or interpretation of scripture, that was more sacramental than literalist. Although believing in the veracity and historicity of the biblical text, Pentecostals’ interaction with it was more dynamic than defensive. Pentecostals believe that what is possible for the characters in the biblical narrative is possible for them as well. In fact, they are actors sharing the biblical drama and experience. In this way, there is an expectation that on the one hand, God will intervene and save, or that, on the other, God will judge and discipline. More than “claiming promises,” scripture becomes the word of God for an individual believer or a Pentecostal community. The interpretation of the biblical text may be confirmed by inspired speech or by signs and wonders.

The process of discerning the will and work of God belongs to the community. The relationship between the text, the Spirit, and the Pentecostal community is dynamic. John Christopher Thomas, a Pentecostal biblical scholar, cites the story of the deliberations of the Jerusalem Council in Acts 15 as a model of this type of interpretive process. Like Wesley, Pentecostals give place to the role of experience in biblical interpretation. An experience may force the individual or the community to reexamine what was formerly believed about a text and make new conclusions in its regard.

Pentecostal Practices

It is this ongoing dynamic process that gives structure and sets boundaries. Grant Wacker has pointed out that though

to the outsider it may look as if there are no limits to what a Pentecostal leader or preacher may declare or proclaim, it is clear that Pentecostals are able to discern when one has moved outside the boundaries. This discerning is a part of the distinctive practice of Pentecostal community. Interpretation of messages in tongues, prophetic or other inspired speech, or actions always falls within the purview of the community, under the direction of the Spirit and Spirit-anointed leaders.

In a Pentecostal community it is understood that other members are brothers and sisters and as such one is accountable to them, all sharing responsibility for one another. Although it is clearly understood that the Pentecostal ministerial vocation includes pastoral care, it is equally understood that all Pentecostals are to care for one another. This care includes care for the sick, the bereaved, the destitute, the orphaned, and the abused.

Pentecostal communities emphasize the importance of fellowship, often taking the form of meals together. But fellowship is also understood to be a meeting together of Pentecostals for one of the most notable of Pentecostal practices, worship.

What may prove to be Pentecostalism’s most significant contribution, or at least the most obvious one, to the Christian church as a whole is its characteristic worship. From the beginning, Pentecostals were noted for demonstrative worship. This distinction, however, was apparently taken to new levels in the Pentecostal revivals. Pentecostal worship expressions were denounced not only by the secular press and nominal churches but as well by the leaders of Holiness churches out of which it had been birthed. The combination of the ecstatic nature of Spirit movements and the influence of African American culture resulted in exuberant and often noisy demonstrations of worship. Pentecostal worship services were marked by physical manifestations such as dancing in the Spirit, shouting, the jerks, and of course ecstatic speech. Prayer was most often “in concert,” with the entire community praying out loud at the same time. Believers anointed each other with oil, most often in praying for the sick. They used the laying on of hands in praying for those who were sick, troubled, or seeking further experiences. They lifted their hands as they sang and prayed. As in African American worship, they shouted back at the preacher in affirmation.

In addition, Pentecostals were noted for their loud and joyful music and singing. The singing was often spontaneous. At Azusa Street and in other centers of the revival, groups of believers were documented as singing together “in the Spirit,” a phenomenon that was called the Heavenly Choir.

Though that particular phenomenon has not had longevity within most Pentecostal circles, the concept of Spirit-anointed singing has. Musicians, singers, or groups of singers expect that the Holy Spirit will anoint them as they lead in worship. Gospel songs, songs that give testimony to the work of God, are used as a way to give witness.

By the end of the twentieth century, the Praise and Worship Music movement, generating from the Pentecostal and Charismatic traditions, had influenced the music of the evangelical, fundamentalist, mainline, and Roman Catholic churches. Accompanying these worship choruses, even in non-Pentecostal settings, are guitars, digital keyboards, drums, and other percussion. Using the latest technology, worship leaders project visual images, including words to the songs, as a part of the worship experience. The worship leaders and congregation alike may be seen to lift their hands, clap, and even sway or move to the music. It is this influence that has led some to talk about the Pentecostalization of the church in the later twentieth century.

Pentecostal worship has as its goal an encounter with God. With this goal in view, the worship service is structured so the congregants are led into this encounter. The encounter may occur at any point: as scripture is read, during prayer, as songs are sung, as the sermon is preached, or at a time of corporate prayer at a space designated as the altar. As the songs are sung or as the sermon is preached, it is expected that one will hear from God or come in contact with God through the Spirit. Pentecostal preaching, though biblically driven, is more than didactic. It is a proclamation of the Word, in a way congruent with neo-orthodoxy and the theology of Karl Barth (1886–1968). Beyond that, however, this proclamation is led by the Spirit and is understood to be prophetic. It may be interrupted by prophetic or inspired speech on the part of the preacher or a congregant. It is anticipated that transformation will take place while a message is preached, not just in reflection on it.

It is believed that this transformation will result in witness. As explained in Acts 1:8, being empowered by the Spirit culminates in transforming the believer into a witness. As the Pentecostals are filled and continue to be filled with the Spirit of God, they bear witness to Jesus. This empowerment and the eschatological fervor characteristic of Pentecostalism have resulted in a major force for evangelism and missions in the world. The Protestant tenet of the priesthood of all believers infused with the transformative reality of the prophethood of all believers has energized the movement, so it has grown exponentially around the world.

Pentecostalism has given voice to both men and women, the rich and poor, the young and old, the educated and uneducated, and those of every race. Its message of transformation, full salvation, healing, and blessing has seemingly connected with the needs of some people everywhere. Observers of global Christianity have sometimes suggested that Pentecostalism's experiential nature, as well as its emphasis on community, position it to gain new ground in the twenty-first century.

Cultural Shifts

The leading scholar on the Azusa Street revival, Cecil M. Robeck, has shown that one of the most distinctive characteristics of the early movement was its multiracial and, most would argue, intercultural nature. Robeck contends that the Apostolic Faith Mission at Azusa Street was primarily an African American congregation, with an African American, Seymour, clearly acknowledged as pastor. It is notable, however, that Seymour was assisted by a group of leaders both black and white and male and female. Robeck has documented membership including not only blacks and whites but also Latinos, Asians, and Native Americans.

Gaston Barnabas Cashwell's story is illustrative. A Holiness preacher from eastern North Carolina, Cashwell (1862–1916) traveled to Azusa in 1906 after hearing of the revival. When he arrived and saw the interracial congregation, he realized he would have to be prayed for by African Americans. Unable to move beyond this at the first service, he returned to his hotel and prayed about his prejudice. He returned to the mission the next night, asking Seymour and others to lay hands on him and pray that he might be baptized in the Holy Spirit. By his account, he immediately received the experience. In an age of Jim Crow segregation, the influence of British-Israel theory in populist politics and religion, and in both the academy and society, the Pentecostal outpouring “on all flesh” was scandalous to the outsider, but a sign of authenticity to those on the inside. Bartleman, eye-witness and participant, famously remarked, “The color line has been washed away by the blood.”

Other lines of distinction also faded at Azusa and in other expressions of early Pentecostalism. Although often characterized as a movement of the poor or disenfranchised of society only, careful examination of the records of these early Pentecostal groups by Robeck, Wacker, and others reveals that Pentecostal adherents were from among the rich, the middle class, the poor, the educated, and the uneducated. Whereas Seymour, Farrow, and others were former slaves or the sons of former slaves, others, such as Joseph H. King (1869–1946), a

leader in the Fire-Baptized Holiness Association and then the Pentecostal Holiness Church, were seminary trained. Florence Crawford apparently came from a privileged family. Nickels J. Holmes (1847–1919) was a Presbyterian minister, trained in law at the University of Edinburgh, and from a wealthy family in South Carolina. He became a committed Wesleyan and founded a school called Altamont Bible and Missionary Institute, now Holmes Bible College, near Greenville, South Carolina. Holmes and the student body experienced a Pentecostal outpouring under the ministry of Cashwell in 1907.

Racial Division and Reunion

The divisions occurring in the first ten years are obviously doctrinal. Not as clearly seen are the racial divisions that occurred at the same time. Parham, at Seymour's invitation, had visited the revival early on and was outraged by what he saw as fanaticism, more to the point, interracial worship, and immediately set up a rival mission across town. This blatant act of racial prejudice did not dampen the fires of the revival; however, by 1909, some fragmenting was evident. Bartleman records that Seymour acted in an uncharitable way toward a group of Mexicans worshipping at Azusa in 1909. Others had begun organizing new works in other parts of the city along racial lines. In 1911, when Durham attempted to take control of the mission, the attempt was put down by Seymour and his board. Durham claimed that this rejection was by the blacks in leadership only, rather than on the basis of what Seymour believed to be an erroneous doctrine. Durham's two-stage soteriology did eventually become dominant in Pentecostalism, but significant white leaders rejected it. Across town, Durham's meetings were attended for the most part by whites. Apparently Durham's rejection of Seymour and the work at 312 Azusa played into these latent prejudices and led to more division. Two years later, the call to convene the council organizing the Assemblies of God, issued by Bell and H. A. Goss (1883–1964), was issued only to the white ministers who had been issued ministerial credentials by Charles H. Mason (1866–1961) and the predominantly black Church of God in Christ.

Unfortunately, most Pentecostals, like other Protestant Christian groups in the United States, began to accommodate to segregation, the dominant cultural norm. Most worship services were dominated by one race, and leadership structures in Pentecostal organizations fell along racial lines.

In 1948, twenty-four Pentecostal groups organized as the Pentecostal Fellowship of North America (PFNA). The goal of this group was to foster fellowship and unity among

Trinitarian Pentecostals. The group was dominated, however, by white leadership from the predominantly white Pentecostal denominations: Assemblies of God, Open Bible Standard, Church of God (Cleveland, Tennessee), International Church of the Foursquare Gospel, and International Pentecostal Holiness Church. By 1992, the group realized that they had failed to attract minorities and initiated a series of meetings with African American Pentecostal leadership. The result was a vote to disband the group in 1994 and to reorganize as a multiracial organization, the Pentecostal/Charismatic Churches of North America (PCCNA). This was symbolized at a historic meeting in Memphis at which white leaders washed the feet of black leaders, an occasion dubbed the Memphis Miracle.

Following this lead, other organizations as well as some denominations began to take seriously the issues of racial and ethnic inclusion, correcting inequalities with regard to representation through appointments or elections of African Americans and other minorities to leadership positions. Although many individual congregations have also taken this issue seriously, most remain dominated by one racial or ethnic identity.

By the end of the twentieth century and the beginning of the twenty-first, the majority of new Pentecostal churches in the United States were being planted by Hispanic Pentecostals.

As the Pentecostal movement has grown in Latin America, and as Hispanic immigration to the United States has increased significantly, it stands to reason that there would be a significant influx of Hispanic Pentecostals. Many Pentecostal leaders and pastors in the United States, as with their counterparts in other Protestant and Roman Catholic churches, found themselves in a difficult position on the issue of illegal immigration. This circumstance was especially tenuous given the generally conservative political stance of most white U.S. Pentecostals.

Another salient feature of the early Pentecostal movement was a relative egalitarianism with regard to gender. As in most Spirit and revival movements in history, women were empowered to lead and to preach. As these Pentecostal centers and denominations began to struggle with organizational issues, a shift began. Relatively early on, restrictions or limitations began to be articulated. Although most groups allowed women to preach, in some expressions and Pentecostal centers, women could not serve as pastors; in some they could not be ordained; in some they were barred from administering the sacraments. In response, some women

organized their own denominations in which they and other women could lead. Most prominent of these was Aimee Semple McPherson (1890–1944), founder of the International Church of the Foursquare Gospel.

Evangelical and Pentecostal Alliance

As the U.S. groups grew, most began to mirror the evangelical churches. Classical Pentecostal denominations joined forces with these evangelicals in the formation of the National Association of Evangelicals in 1942. Following World War II, when women were returning to the home as their primary place of carrying out their vocation, both evangelicals and Pentecostals seemed to take their cue from the postwar white culture in America, even giving biblical grounding for this model as the biblically mandated one.

The alliance with evangelicals is reflected in the nomenclature used for ministerial ranks in some groups and accompanying qualifications for eligibility. In 1948 in the Church of God (Cleveland, Tennessee), for instance, the nomenclature for male ministers who had achieved the middle level of the credentialing process changed from evangelist to licensed minister. The nomenclature for female ministers remained unchanged, however. Female ministers at that level were still designated lady evangelists. Although this middle level was later changed for both genders to ordained minister, it remains the highest level female ministers can achieve. Evidence has shown that this alliance with evangelicals corresponded to a decline in numbers of women being credentialed in both the Church of God (Cleveland, Tennessee) and the Assemblies of God. By the beginning of the twenty-first century, there was some evidence that this trend was reversing. In most U.S. Pentecostal groups, however, the positions of power were still predominately male.

By the end of their first hundred years in the United States, Pentecostals had become more educated, gained economic standing, and grown more vocal. Like evangelicals, they had begun moving into positions of political and economic power. The movement, initially dominated by the powerless in society, gained power in the marketplace as well as the political arena as it grew in size. Prominent Pentecostal or Charismatic television evangelists, such as Pat Robertson and John Hagee, began joining forces with fundamentalist or evangelical ones in the latter years of the twentieth century, helping shape the right-wing base of the Republican Party. Meanwhile, the growth of black Pentecostal churches and the prominence of their leaders and pastors in both local and national politics played a major role in influencing the

Democratic platform. T. D. Jakes, an African American Pentecostal preacher, was recognized as one of the most influential in America, leading the Inauguration Day prayer service for the Obamas and Bidens in 2009. By the beginning of the twenty-first century, Pentecostals were major players as party leaders, candidates, and presidential cabinet members. Bush-era Attorney General John Ashcroft, 2008 vice presidential candidate Sarah Palin, Democratic party executive Leah Daughtry, and Josh Dubois, head of the Obama Administration's Faith-Based and Neighborhood Partnerships Office, were all noted for their involvement in Pentecostal churches.

Ironically, it is this rise to power that may prove the greatest challenge that U.S. Pentecostals face in their second hundred years. Following the trajectory of many religious renewal movements throughout church history, some see Pentecostalism in the United States as nearly fully institutionalized, losing in the process some of its vibrant spirituality. The rise of the Health and Wealth or Prosperity Gospel, a theology equating spiritual well-being with physical health and financial prosperity, parallels the rise of Pentecostalism as a political and economic force and is seen by many as a threat to the integrity of the movement. This form of Pentecostal/Charismatic spirituality and theology, in many ways, is a mirror of the American dream and perhaps a product of America's self-proclaimed manifest destiny.

Pentecostals: African American

African American Pentecostalism began in Los Angeles during 1906. The Azusa Street revival (1906–1909, 1911), a product of the African American Holiness movement of the late nineteenth century, served as the center for the emergence of black Pentecostalism, in particular, and Pentecostalism, in general, as a national and international movement. Within 100 years, African American Pentecostalism had grown into more than 125 denominations within the United States, with most of these denominations consisting of fewer than 50 congregations and the largest denominations being the Church of God in Christ (COGIC) with approximately 10,000 congregations, the Full Gospel Baptist Church Fellowship with approximately 2,000 congregations, and the Pentecostal Assemblies of the World with approximately

1,800 congregations. At the Azusa Street revival, African American Pentecostalism began on the margins of the black church, and over the subsequent decades it has moved towards the center of black church and community.

The Azusa Street revival began in a small African American Holiness congregation that was headed by Julia Hutchins. The revival, or series of nightly religious meetings, was led by William J. Seymour (1870–1922), who preached the Pentecostal doctrine of the baptism of the Holy Spirit. Seymour's Pentecostal doctrine has been interpreted in terms of pneumatology as a movement of the Holy Spirit; in terms of eschatology as having an end-time message; in terms of its missions work as using missionary tongues, or supernaturally learned languages; and in terms of its ecclesiology as encouraging an interracial and egalitarian community of faith that challenged segregation and the racial hierarchy of the early twentieth century.

The revival relocated to a small house church located on 214 Bonnie Brae after a theological disagreement between Seymour and Hutchins about the Holy Spirit. When the audience outgrew this site, Seymour secured facilities at 312 Azusa Street, the former makeshift sanctuary of St. Stephen's African Methodist Episcopal Church (later renamed First AME Church), to accommodate the larger audience. Seymour named the congregation the Apostolic Faith Mission and attracted the attention of local whites, African Americans, and Latinos, especially those involved in the Holiness community. Within twelve months, the revival became a national sensation, known as the Azusa Street revival, and spawned an international movement and a monthly newspaper, *The Apostolic Faith*. From 1906 to 1908, Seymour, the Apostolic Faith Mission, and *The Apostolic Faith*, gave the movement a center and early leadership.

African American Holiness congregations were sites where the emerging black Pentecostalism was nested across the United States from cities ranging from Portland, Oregon, to Memphis, Tennessee, to New York City. The African American Holiness movement served as fertile ground for the birth of black Pentecostalism. As the context for black Pentecostalism, the thirty-year plus African American Holiness movement emerged within historic African American denominations such as the African Methodist Episcopal Church and the National Baptist Convention, focusing on sanctification as did its white counterparts, but also emphasizing African American leadership, racial equality, and African missions. By 1906 the African American Holiness movement demographically had encompassed an ever-increasing proportion of the black church. With a group of approximately

300-plus assemblies, the African American Holiness movement surpassed the number of black Episcopal, Congregationalist, and Union American Methodist congregations, each group having between 200 to 230 congregations, and almost equaling the African American congregations within Cumberland Presbyterians and the Presbyterian Church (northern stream).

The demographic growth of African American Pentecostalism would basically be sparked by denominational families who had roots in the African American Holiness movement. Seven major denominational families within black Pentecostalism, who have their origins within African American Holiness fellowships of the late nineteenth century, intersected with the Azusa Street revival directly or indirectly: the United Holy Church of America family (1886); the Church of the Living God family (1889); the Church of God in Christ (COGIC) family (1895); the Church of God (Apostolic) family (1897); Fire-Baptized Holiness Church of the Americas family (1897); Triumph the Church and Kingdom of God in Christ family (1903); and Christ Holy Sanctified Church family (1903). These denominational families formed the organizational structure of African American Pentecostalism, along with the denominational families that emerged during and after the Azusa Street Revival, such as the Apostolic Faith Mission (1906), the Pentecostal Assemblies of the World (1907), and the All Nations Pentecostal Church (1924). From these denominational families can be traced the majority of African American Pentecostal groups. While black Pentecostal congregations existed within predominately white denominations such as the Church of God (Cleveland, Tenn.), most African American Pentecostals belonged to black Pentecostal denominations throughout the twentieth century.

By 1909 a conservative estimate would place the number of African American congregations associated with Pentecostalism to be more than 100. By 1926 the religious census conducted by the U.S. government reported more than 875 black Pentecostal congregations out of a total of 42,585 black congregations in the United States. Some argued that the numbers should have been much higher, perhaps more than 1,000 congregations, since the religious census did not include at least ten African American Pentecostal denominations that existed during the 1920s.

Theologically, African American Pentecostalism can be clustered into a Wesleyan wing that emphasized conversion, immediate sanctification, and the baptism of the Holy Spirit, and a Reformed wing that stressed conversion and progressive sanctification as one religious experience followed by

the baptism of the Holy Spirit. The Wesleyan wing embraced the COGIC and the United Holy Church; the Reformed wing included the Pentecostal Assemblies of the World. Additionally, there were theology differences regarding the doctrine of God: a classical trinitarian perspective that focused on the divine unity in three persons as the Father, Son, and Holy Spirit; a Oneness perspective that accented divine unity in three manifestations rather than personhood. Regarding church governance, some leaders espoused congregational independence, while others argued for minimal structures of accountability between congregations by forming associations of congregations. Basically, common practices among black Pentecostalism included baptism, the Lord's Supper (or Communion), evangelism, singing, testimonies, prayer meetings, healing, and preaching, along with revivals and camp meetings. Undergirding many of these practices was an emphasis on prayer and fasting, ranging from all-night prayer vigils called "shut-ins" and consecrations, to three-to-four-hour prayer meetings, and weekly, or twice a week fasting, along with periodic forty-day fasts.

The Post–Azusa Street Revival Era

A vital feature of early African American Pentecostalism was the impulse toward interracial engagement and cooperation. Prominent black and white Pentecostal leaders promoted the interracial vision of the Azusa Street revival across the country during this era of legal racial segregation. The COGIC, an association led by African Americans and predominately black in its membership, admitted two white fellowships into its organization: Howard Goss, a white clergyman, led one group of white Pentecostals, and Leonard P. Adams, a white clergyman, led a smaller group. In 1914 the Goss faction left the COGIC to participate in the formation of the predominately white Assemblies of God; afterward, two other white groups joined the COGIC: William Hoyt, a white clergyman, led a small white group out of the newly formed Assemblies of God in 1917, and in 1924 August Feick, a white clergyman, likewise led a small white group out of the Assemblies of God. The Pentecostal Assemblies of the World would incorporate a large influx of whites who withdrew from the Assemblies of God over doctrinal differences related to the Oneness teachings. Most whites eventually left over the next decade but, by the 1920s, the Pentecostal Assemblies of the World embraced a group of Latino congregations. The African American leadership of both the COGIC and Pentecostal Assemblies of the World struggled to foster the interracial impulse within their respective

denominations through various institutional arrangements for more than twenty-five years.

Women occupied various ecclesial positions within the nascent African American Pentecostal movement: evangelist, ordained minister, and bishop. While the majority of the Pentecostal denominations restricted ordination to males, most offered women at least ministerial positions such as evangelist. There did emerge, though, a host of denominations that granted women full gender equality among the ordained ranks. These denominations fall into two types: full access to the pastorate and full access both to the pastorate and bishopric. The vast majority of African American Pentecostal denominations, which embrace full gender equality within the pastorate and bishopric, are denominations founded by African American women. The pioneer of female-led black Pentecostal denominations was Magdalena Tate of the Church of the Living God, Pillar and Ground of the Truth. Subsequent denominational heads included Ida Robinson of Mt. Sinai Holy Church, organized in 1924, and Lucy Smith of All Nations Pentecostal Church.

Other features marking the formative era of African American Pentecostalism were educational schools, religious media, missions, and Christian activism. The early educational institutions were often literary and industrial schools with Bible departments such as Saints in Lexington, Mississippi, along with its counterparts in Geridge, Arkansas, and Hearne and Memphis, Texas—all sponsored by the COGIC. African American Pentecostals occasionally had control of former Holiness schools, such as the Boynton Institute in Virginia that the United Holy Church of America managed for a few years, as well as opening Bible institutes such as Christ Bible Institute in New York City, sponsored by the Church of Our Lord Jesus Christ of the Apostolic Faith. Religious media included periodicals such the *Holiness Union*, *Whole Truth*, *True Witness*, *Voice in the Wilderness*, *Christian Outlook*, and *Contender for the Faith*.

Missions were also an emphasis of African American Pentecostalism. Liberia was the mission site for a number of missionaries from Seymour's Apostolic Faith Mission. The Reverend and Mrs. J. R. Ledbetters represented the Pentecostal Assemblies of the World in Liberia from 1914 to 1924. Around 1918 the United Holy Church raised funds to sponsor its first foreign missionaries, Isaac and Annie Williams, who were assigned to Liberia. In 1919 a group of African Americans organized the United Pentecostal Council of the Assemblies of God to support missionaries to Liberia; their first missionaries, Reverend Alexander Howard and

Margaret Howard, a husband-wife team, arrived in Liberia in 1920. In 1919 the COGIC began sending as missionaries to predominately black countries: Jamaica in 1919 and Trinidad in 1924.

Pacifism during World War I characterized the Christian activism of many African American Pentecostals, who condemned war and discouraged draft-age men from enlisting. For a sector of African American Pentecostals, black religious nationalism was an additional characteristic of their Christian activism. Marcus Garvey (1887–1940) and his Universal Negro Improvement Association went so far as to promote the emigration of African Americans to Africa. In 1919 Elias Dempsey Smith hosted Garvey at the national meeting of his denomination, Triumph the Church and Kingdom of God in Christ.

The 1920s as the First Major Turning Point

The 1920s marked the first major turning point for African American Pentecostalism. In cities such as Chicago, Houston, Memphis, and Philadelphia, black Pentecostalism emerged as the second largest category of congregations, only surpassed by the Baptist. By the 1930s, African American Pentecostal congregations, denominations, and leaders began to participate in black ecumenical organizations as well as civic organizations. Black Pentecostal denominations were represented in the National Fraternal Council of Negro Churches, a Protestant ecumenical organization of congregations and denominations that represented liberal, moderate, and conservative theological views. Later, during the 1960s, African American Pentecostals joined other theologically conservative black Protestants in founding the National Black Evangelical Association. African American Pentecostal women participated in the establishment of the National Council of Negro Women, a civic federation of women's organizations. The COGIC was among the religious observers at the founding of the United Nations in 1945 and tenth anniversary celebration in 1955.

During the early 1950s, African American Pentecostal leaders were involved in the civil rights movement on the grassroots level. Medgar Evers, who had been raised in the COGIC, became a community organizer with Mississippi's Regional Council of Negro Leadership, a civil rights organization. Smallwood Williams led a legal battle against segregated public schools in Washington, D.C. Jasper Roby in Birmingham, Alabama, and J. O. Patterson Sr., in Memphis, along with other African American Pentecostal leaders, participated in the local civil rights campaign in the 1950s. During

the 1960s, more African American Pentecostal leaders had become active in civil rights efforts across the United States, albeit most African American Pentecostals withheld their support of the movement. Mason Temple, the COGIC headquarters, served as the site of Martin Luther King Jr.'s 1959 and 1968 speeches in Memphis.

Between the mid-1920s and the late 1960s, the public face of African American Pentecostalism would be associated most with the emerging African American gospel music movement. According to music scholars such as Horace Boyer, the black gospel music movement emerged through the combined efforts of Baptists such as Thomas Dorsey and Pentecostals such as Arizona Dranes. In the African American Pentecostal Church, black gospel music served as the primary carrier of the religious folk music associated with enslaved and west African musical culture, which was noted for its call-and-response style, percussive sound, improvisational techniques, polyrhythmic qualities, and diatonic harmonies. Established black Pentecostal recording artists of the 1920s, such as Dranes, Sallie Sanders, and Ford Washington McGee, introduced the broader Protestant community to the black Pentecostal sound, a sound that nearly erased the distinctions between sacred and secular music, echoing the cultural fount tapped by sanctified church music, jazz, and blues.

The popular enthusiasm for African American gospel music led to the invitation of black Pentecostal singers and musicians, along with their Baptist counterparts, to perform in venues ranging from nightclubs and auditoriums to concert halls. The famous black Pentecostal musical artist during the mid-twentieth year was singer-guitarist Rosetta Tharpe. As early as the 1940s, singer-guitarist Rev. Utah Smith performed at a concert series sponsored by the Museum of Modern Art in New York City. The impact of this group of musicians on popular music, ranging from jazz, blues, soul, rhythm and blues, and country-western, has been noted by popular artists who grew up in African American Pentecostal churches such as Fats Waller and B. B. King, as well as by outsiders to the tradition such as Johnny Cash and Elvis Presley.

A lesser known trajectory within African American Pentecostal music is sacred steel guitar music. Introduced to the Church of the Living God family of denominations in the 1930s, the pedal-steel guitar had gained popularity earlier through its association with Hawaiian music during the early twentieth century. According to Robert L. Stone, Troman and Willie Eason, two brothers, created the African American

Pentecostal trajectory of sacred steel guitar, and Willie toured with the Bishop J. R. Lockley's Gospel Feast Party.

The late 1960s marked another turning point within black Pentecostalism, with the American cultural context shifting from hesitancy to more acceptance of black Pentecostal culture, especially music, by various sectors in the black and wider society. The music chart cross-over popular hit, *O Happy Day*, by Edwin Hawkins signaled the cultural acceptance of black Pentecostalism by these sectors. Hawkins wrote gospel choral music that borrowed from a variety of jazz and calypso sounds, while Andrae Crouch composed ballads and incorporated the melodies of soul and pop music. Impervious to distinctions between sacred and secular music held by their Pentecostal predecessors, Hawkins and Crouch ushered in a new phase within black religious music and the black church.

The 1970s as the Second Major Turning Point

During the late twentieth century, African American Pentecostalism would be recognized as the third major stream within black Protestantism, and the COGIC would be deemed a historic black denomination alongside the African Methodist Church and two other Methodist and three Baptist denominations. African American Pentecostals would distinguish themselves among Pentecostals by establishing the first fully accredited Pentecostal seminary in the United States: the Charles Harrison Mason Theological Seminary in Atlanta, Georgia. Sponsored by the COGIC, the seminary opened in 1970 as a member of the Interdenominational Theological Center, an ecumenical consortium of African American Methodist, Baptist, Presbyterian, and Pentecostal seminaries. Mason Theological Seminary would serve as the postcollege level institution whereas Saints College, headed by Arenia C. Mallory, provided the baccalaureate. Saints College during the mid-twentieth century would be among the few colleges headed by a black woman. In 1978 the COGIC joined six other African American denominations in organizing the Congress of National Black Churches, an ecumenical group.

In the 1970s a number of African American Pentecostal theologians began conversations concerning the modern black theology. Different writers began to engage black theology from a Pentecostal perspective. William Bentley and Bennie Goodwin Jr., leaders in the United Council of the Assemblies of God and the COGIC, respectively, sought to incorporate the social critique of black theology within black Pentecostalism and infuse black theology with

Pentecostal spirituality and evangelical themes. James Forbes of the United Holy Church of America along with others sought to interject the liberationist agenda of black theology in black Pentecostalism. Within these quarters, African American Pentecostals participated in a serious dialogue with liberation theology.

Social activist organizations founded by leaders of some African American Pentecostal denominations during the late twentieth century include the Black United Front, led by Herbert Daughtry of the House of the Lord Church, among others; the Pentecostal Coalition for Human Rights, led by James Tinney of the COGIC; the African Christian People's Organization, also led by Herbert Daughtry and others; and the Pan-African Charismatic Evangelical Congress (PACEC), led by Charles E. Blake and Eugene Rivers, both of the COGIC. The Black United Front, founded during the late 1960s, was created as an avenue to address the plight of African Americans and promote a black nationalist agenda. The Pentecostal Coalition for Human Rights was founded in 1980 to promote human rights as a topic among Pentecostals. The African Christian People's Organization, established in 1983, advanced the black nationalist agenda under Christian leadership. The Pan-African Charismatic Evangelical Congress (PACEC) defined itself as a new advocacy group that was committed to a multifaceted strategy of political action. The formation of these activist organizations and the election of African American Pentecostals to public office demonstrated the political prowess of this movement.

During the late twentieth century, the protest orientation within the African American Pentecostal movements found clear expression. According to the study by C. Eric Lincoln and Lawrence Maimiya during the 1990s on the political attitudes in the COGIC, the majority of the respondents supported civil rights protest with a 78 percent positive response. Similarly, the results of the ITC/Faith Factor Project 2000 study of black churches revealed that a majority of clergy in the COGIC approved of civil rights protest. In both studies, however, the rate of approval within the COGIC samples were less than that of the black church samples overall.

Accompanying the acceptance of African American Pentecostal culture is the rise of black neo-Pentecostalism. During the late twentieth century, Pentecostalism attracted clergy and members within the historic black denominations, especially the African Methodist Episcopal Church and the Baptist Church. Neo-Pentecostal ministers began occupying pastorates of the African Methodist Episcopal Church. The

focal point for the movement during the early 1970s was St. Paul AME Church in Cambridge, Massachusetts, under the pastorate of John Bryant. By the 1980s, neo-Pentecostal AME Church congregations were among the largest in the denomination: St. Paul in Cambridge, Bethel in Baltimore, Allen Temple in Queens (New York), and Ward Temple in Los Angeles. Two neo-Pentecostals, Vernon Byrd and John Bryant, were elected bishops of that denomination. Within the African Methodist Episcopal Zion Church during the 1980s and 1990s, the center was John A. Cherry and his congregation, the Full Gospel AME Zion Church in Temple Hills, Maryland, a suburb of Washington, D.C. In 1999 Cherry withdrew from AME Zion and established a new denomination, Macedonia Ministries. Among United Methodist Churches, Kirbyjon Caldwell and his pastorate, Windsor Village United Methodist Church, would promote neo-Pentecostalism. The focal points for neo-Pentecostalism among African American Baptists were Roy Brown and his Pilgrim Baptist Cathedral in Brooklyn, along with Paul Morton and the St. Stephen Full Gospel Baptist Church in New Orleans. During the 1980s, Brown organized a denomination, the Pilgrim Assemblies, and Morton spearheaded a neo-Pentecostal Baptist fellowship, the Full Gospel Baptist Fellowship.

African American Pentecostalism participated in the rise of black televangelism. During the 1970s, the "Word of Faith" movement intersected with African American Pentecostalism. Frederick K. C. Price emerged in 1973 as the Word of Faith pioneer among black Christians after establishing Crenshaw Christian Center in Los Angeles. This movement rejected the antimaterialism of earlier black Pentecostalism and interpreted financial prosperity as a Christian birthright, along with salvation and healing. These leaders introduced a new preaching style that countered the homiletic practices of the black Pentecostalism stressing instruction rather than inspiration. While African American Pentecostals often emphasized Christian instruction in Bible studies during an average week, the sermon had embraced a different aim. The Word of Faith preachers specialized in introducing their audiences to the ways of accessing God's promises of health and wealth. Black televangelism promoted by African American Pentecostals included the broadcast ministries of Gilbert Earl Patterson, Juanita Bynum, and T. D. Jakes. Jakes created a new movement within black Pentecostalism with his multifaceted ministry of conferences, books, tapes, music, film, and plays.

By 2000 it was estimated that there were more than six million African American Pentecostals across the nation. More than 75 percent of the members belonged to two

black Pentecostal denominations: the COGIC, with approximately three million members, and the Pentecostal Assemblies of the World, with approximately one million members. Through its global ministry, U.S.-based African American Pentecostal denominations have congregations in nearly sixty countries in Africa, South America, Europe, and Asia. Consequently, they have spread its religious and cultural influence around the world. From the margins of the black church in 1906, African American Pentecostalism has joined the black Baptist and Methodist traditions in constituting the religious center of the black church and the black community. Ranking among the major religious movements in the United States, African American Pentecostalism affects American culture, the civic arena, and the country's religious tenor.

Philanthropy

Philanthropy, as a descriptive term, has evolved over time. In its U.S. usage, it has designated a literal and general "love of humanity"; a rational and systematic approach to the elimination of social ills; the process of distribution of money and goods by the wealthy; and, most recently, voluntary action (gifts of time, commitment, and the like) for the public good.

Religious Philanthropy and Colonial America—A City Set upon a Hill

Religious philanthropy, like philanthropy itself, designates a changing set of ideals throughout the centuries in America. In the religious context, one must discern the relationship of philanthropy to religious concepts of giving, sharing, and community. Though some argue that philanthropy is a secular and scientific alternative to religious "charity" and other acts of giving, many assume that the two are closely related. Philanthropy motivated by religious impulse combined with traditional notions of religious charity can together be termed *religious benevolence*.

American history predates the European conquest. The worldview of many Native American groups valued gift giving as sacred—not just in terms of one individual giving to another, but in the way sharing resources reflected divine reality. As one gave (and received) in appropriate ways, the world itself remained in harmony. A sense of reciprocity saturated Native American cultures—supernatural powers, the fertility of the earth, and the proper working of society were all woven together in a worldview that gave fundamental recognition to the give-and-take nature of reality.

The Europeans who came to the continent brought a different set of assumptions and worldviews. As well, within the various European settlements in the New World, there were disparate points of view about the purpose and function of the New World. Some were almost entirely commercial; others, less so.

An especially enduring perspective, at least in terms of the history of American self-understanding, was articulated by John Winthrop, the first governor of the Massachusetts Bay Colony, in his lay sermon, "A Model of Christian Charity" (1630). It presented a vision of a godly society, where members were knit together into one body. It concluded with a reminder to the colonists that "we shall be as a city upon a hill. The eyes of all people are upon us." The sermon advocated a Christian society wherein men and women would

work and provide one for another in such a way to reflect the ideals of the Kingdom of God. There is every indication that those early settlers indeed tried to establish such a commonwealth wherein all, at least in theory, would be cared for. The spirit of such an endeavor carried through the seventeenth century, from the time of Winthrop's tenure as governor, into the early eighteenth, where that spirit was celebrated in the work of the famous New England clergyman Cotton Mather in his *Magnalia Christi Americana* (1702).

Of course, the dream of a New Israel, as some of these early religious settlers understood their mission, was not shared by all. The communal aspect of society came under pressure from the growing development of market economies. Indeed, the waning of communal living coincided with the rise of individualism that the growing capitalist system of economics inevitably fostered, and over the course of the eighteenth century into the early nineteenth, the lifeways of New England Puritans eroded in a manner that protests against such an economy were reduced primarily to a nostalgic yearning (by some) for a way of life long past.

One important development of the eighteenth century that played into the philanthropic work of societal moral reform derived from the revivalist New England minister Jonathan Edwards. In his work, interacting with Enlightenment figures on the question of ethics and virtue, he developed the notion of disinterested benevolence. Much of Edwards's emphasis lay in his belief that the heart of virtue lay in a disinterested benevolence toward God. By this, he meant a love of God that was selfless—a love of God for God's sake, apart from any good one derives from God. His work was modified in the writings of some of his followers, especially Samuel Hopkins. In the latter half of the eighteenth century, Hopkins began to think of disinterested benevolence as an applicable concept for how one acted toward humanity, teaching that God is glorified through disinterested benevolence toward those made in God's image. Here, Hopkins believed a human being should be loved in and of himself or herself, apart from any benefit such love would bring to the one who loves. In fact, according to Hopkins, to some extent the true measure of disinterestedness could be gauged by the amount of self-denial necessary to enact benevolence. From his pulpit in the port city of Newport, Rhode Island, he began to apply the notion of disinterested benevolence to social problems such as the slave trade, preaching from his pulpit against the subjugation of Africans in the dehumanizing system of chattel slavery. Such a system violated the good order of the world as God had

created it. In the work of Hopkins resides a proleptic look into the wider abolitionist movements of the nineteenth century, where many people, motivated in part by religious sentiment, joined together to work toward ending slavery in the United States.

From the Revolution to the Civil War: The Flowering of Voluntaryism

After the Revolutionary War and the adoption of the U.S. Constitution, one sees the disestablishment of churches at the state level, just as the Constitution banned the establishment of religion at the federal level. The final disestablishments occurred in Connecticut and Massachusetts in the early 1830s. Thus, churches came to exist as voluntary associations. As such, they exhibited tremendous potential for growth as various Christian groups competed for members. If there were going to be a Christian society, it would have to be shaped by those willing to give time, commitment, and money to the cause.

In addition, other religious voluntary associations arose, drawing support from a large number of individuals to support causes oftentimes beyond the ability of a single congregation, or even a group of congregations, to undertake. For example, the American Bible Society was founded in 1816, with one of its goals being the translation of the Bible into different languages, both for use at home (especially among Native Americans) and abroad. There were missionary societies that supported missionaries and the institutions needed to train them, an endeavor in which Christian women took great interest. One sees in Mary Lyon and the founding of Mount Holyoke Female Seminary (later Mount Holyoke College) a combination of philanthropic efforts on behalf of education and missions. And there was a concern, as the nineteenth century progressed, to see Protestant Christianity move westward.

Much of this latter concern is best summed up in the work of Lyman Beecher's *A Plea for the West* (1835). Therein, Beecher combined a number of different interests, including the need for churches, schools, and colleges; the necessity of seminaries for the training of clergy; and the need to stop the progress of Catholicism across the West. He strongly advocated the role of religion in public life and promoted the value of voluntary associations. Beecher meant to inspire those with the means to contribute to the salvation of the West, through prayers and monetary donations, and through action. He encouraged people to move to the West to help build the institutions necessary for the progress of, in his terms, religion and freedom.

Of course, the religious uplift of Beecher's essay was only uplifting to those who held Beecher's Protestant views—it carried within it all the hallmarks of nativist anti-Catholicism, and it was dismissive of other religions as well. Beecher's call to philanthropy was also a call to defend Protestant America.

And so-called Protestant America was changing. The nineteenth century witnessed a great influx of non-Protestant people into the United States. In the latter part of the eighteenth century, there were only about thirty thousand Catholics in the country, but that would change during the next century. In addition to immigration, the numbers increased as the young United States added territory through the Louisiana Purchase in the early nineteenth century, a territory in which large numbers of Catholics lived. Indeed, in New Orleans, one sees the establishment of the first home for orphans in 1729, maintained by Ursuline nuns.

Back in the area of the original thirteen colonies, however, Catholics encountered great suspicion. Moreover, Catholics understood the public school system to be so thoroughly Protestant that they realized they would need to found their own educational system. Thus one sees, in addition to the building of parish churches, the establishment of Catholic schools. Foundational to the work of these schools was the service of nuns, whose efforts on behalf of the Catholic Church through educational work represented a vast commitment of human resources, without which monetary contributions would have achieved little. Elizabeth Seton worked to establish the first American religious order. The Sisters of Charity of St. Joseph was recognized in 1809. By 1810, Seton had created the first free Catholic school in the United States, which would serve as the model for Catholic education in America.

Judaism as well had come to American shores early in the history of European colonization. Jews had settled in New Amsterdam (later New York) in the mid-1650s, and the first synagogue appeared in 1730. As with other religious groups, one sees the impact of the voluntary spirit as a variety of congregations and associations sprang up. The first Reform congregation was established in 1824. B'nai B'rith, a fraternal organization, formed in 1843. The first national organization of Jewish congregations, the Board of Delegates of American Israelites, appeared in 1859.

But perhaps one of the best representatives for understanding not just Jewish philanthropy but philanthropy in general is Rebecca Gratz. Born to a wealthy Philadelphia merchant family, Gratz epitomized a number of trends in

nineteenth-century philanthropy—her concern for religious work, education, and the poor; and the role that she, as a woman, would take in organizing associations for the advancement of these causes. She founded the Female Hebrew Benevolent Association in 1819 to provide relief for poor women and children. As Jonathan Sarna pointed out in *American Judaism: A History*, this event epitomizes two important nineteenth-century developments: the increasing role of women in Jewish philanthropy and the establishment of community-wide Jewish organizations outside the confines of the synagogue.

All the religious cases, causes, and efforts detailed above invite questions about the definition of philanthropy. How does one (and to what extent must one) distinguish between self-interest and the interests of others in assessing the philanthropic? Can self-help be considered philanthropy? Two replies can be made. The first is that there is no need to assume that self-help and other-help are necessarily mutually exclusive. If one's view of the good society includes greater diversity and inclusivity under the law, then one may argue that efforts that benefit a particular group can be seen to benefit the larger society. The second point is that it is naïve to assume, as some have done, that nonsectarian, secular philanthropy is not self-interested—it has been argued that all philanthropists seek to impose their own particular vision of society on others. Philanthropic activity, just as religious activity, is multifaceted in its purpose and effects and complex in its power relationships.

Indeed, perhaps nowhere is this point better understood than in relation to the African American community. Religious institutions have served, from very early on, as community support centers. Though often not wealthy, the African American churches became economic systems that supported a variety of needs within the African American community—as a bank, in some cases, or a traditional source of charity, in others. From within the African American religious community and its organizations, leaders were developed, social networks grew, and the betterment of the community—sometimes a matter simply of self-survival, sometimes more—certainly served, in the long run, to establish an African American presence that contributed to the betterment of the larger society. From supporting the work of the Underground Railroad, whereby slaves moved into free states, to the establishment of African American schools after the Civil War, through Reconstruction, and into the Jim Crow era, African American churches worked for the establishment of a more just and perfect society, oftentimes against

the greatest of odds. It is within the example of the African American churches that one finds support for several important lessons: that a small amount of capital can sometimes make a great amount of difference; that the work of a people can be restricted but not bound by economic disparity; and that a society's improvement can work hand-in-hand with an oppressed segment's self-help, self-interest, and self-improvement. (If one were to jump forward in a full story of African American religious philanthropy, one sees this to be the case especially in the civil rights movement, where religious leaders such as Martin Luther King Jr. and other pastors formed voluntary associations such as the Montgomery Improvement Association, organized in 1955 in Montgomery, Alabama, to fight segregation in the public transit system.)

Finally, the Civil War itself saw the development of voluntary associations that addressed the pressing needs of the time. Associations such as the Freedmen's Aid Society (1862) and its various branches sought to help with the education of African Americans in the South. During the war, the Christian Commission was established to minister to soldiers. And it was during the Civil War that an older tradition of fund-raising, the charity fair, reached new heights. These fairs were held to support the work of the U.S. Sanitary Commission, set up to support soldiers. The sanitary fairs, run by women, helped provide a large portion of the twenty-five million dollars raised during the four years of the commission's existence (1861–1865). Based on the experience of running these fairs, religious women continued to manage charity fairs for the rest of the century, running out of steam when the nature of American philanthropy, at least among the wealthy, began to change under the sway of financial magnates.

Changing Approaches to Philanthropy

A number of reform movements predated the Civil War period. During the course of the war, abolition overshadowed other concerns. With the cessation of hostilities, however, the remainder of the nineteenth century and then the early twentieth witnessed a burgeoning of reform movements, many influenced especially by religion. If philanthropy can be defined in such a way as to include the contribution of a person's time and effort as well as monetary largesse to further the public good, as many in philanthropic studies now assert, then these movements—including the temperance movement, the social gospel, and the Catholic Worker movement—can be viewed as philanthropic concerns.

Although the goals especially of both the social gospel movement and the Catholic Worker movement tied the improvement of society to a particular theological vision, other forces worked in a very different manner. The age of the social gospel had seen the rise of tremendous wealth in the hands of a few, a situation to which the Catholic Worker was, in part, a response. Such names as Rockefeller and Carnegie became associated with philanthropy. During the early twentieth century and well into midcentury (and later), the monied class developed a view of philanthropy that emphasized the nonsectarian, scientific, and professional nature of philanthropic work. Though religious philanthropy continued apart from the work of the extremely wealthy, one finds that the concerns of those philanthropists did, in fact, take hold in the larger culture. Thus, one finds that some religious philanthropy came to mirror those new emphases.

Though many of the wealthy philanthropists supported their own religious institutions, they emphasized nonsectarian giving. The use of money for philanthropic ends should not, they thought, be restricted by denominational loyalties. Thus, much of the emphasis in the new philanthropy centered on education, medical research, and the scientific elimination of social problems, all undertaken from a nonsectarian perspective.

While the social gospel and later the Catholic Worker trumpeted their theological orientation, it is interesting to note that the religious group that has long maintained a presence in philanthropic work is one that during this very time sought to downplay its original sectarian nature. The Salvation Army, founded in England by William and Catherine Booth, came to the United States in 1880, bringing a very distinctive approach to urban mission. Known for its boisterous services and evangelical religious outlook at first, the movement transformed itself in the early twentieth century by downplaying its particular religious appearance and focusing instead on disaster relief and help for the poor. Through a conscious decision to appear nonsectarian, especially under the leadership of Evangeline Booth starting in 1904, the Salvation Army became one of the largest religious philanthropic organizations in the United States.

While the Salvation Army is a representative embodiment of the push toward nonsectarian appearance in religious philanthropy, giving based on social scientific methods and data has also played a large role in the reimagining of religious philanthropy. Here one can see the way that the social sciences became authoritative in determining social needs, possible solutions, and consequences of action. Again, as one sees

a turn toward social scientific data among the elite philanthropists of the early to mid-twentieth century, this same turn occurred in religious philanthropy.

It has been argued that although sociology as a discipline certainly has nineteenth-century European origins, the earliest implementation of sociological study in the United States was connected to the work of religiously minded people. Albion Small, generally seen as a founding figure in American sociology, established in 1895 the longest-running sociology journal in the United States, the *American Journal of Sociology*, and chaired the first U.S. department of sociology at the University of Chicago. He studied theology at Andover Newton Theological Seminary, and though he was never ordained as a minister, he forever maintained a focus on ethical principles in the study of sociology; for him, sociology was to be a tool for social reform.

One sees this trajectory as well in Graham Taylor, a professor at the Chicago Theological Seminary, adjacent to the University of Chicago, who attempted to solve social problems both through cogent social scientific analysis and personal engagement. He established at his school a department of Christian sociology, the first of its kind. He worked closely with Jane Addams, founder of Hull House, helping to establish and then living in Chicago Commons, a settlement house, whence he could observe firsthand and work on problems related to urban poverty.

Finally, following the third of the emphases coming out of the new philanthropic elite of the first half of the twentieth century, there developed an emphasis on the professional nature of philanthropic work. Schools of social work came into being. This is another contribution of Graham Taylor: he helped create a graduate school of social work that later became the University of Chicago's School of Social Service Administration. Though much religious philanthropic work maintained its volunteer nature, a new class of managers emerged. Philanthropic endeavors were run like businesses. This became especially important as the scope of religious philanthropic work increased. Both within religious institutions and across institutions and denominations, there was the sense that as the social corpus required an approach that moved beyond focus on simply the individual, so the method for analyzing, collecting, distributing, and accounting for gifts, especially of money, must move to something like the corporate model, with appropriately trained professionals to implement policy.

With these new emphases in philanthropy, however, one still had problems that arose due to the power dynamics

embedded in philanthropic endeavors, religious or secular. The vision held by philanthropic givers does not always square with the vision that the recipients of aid have for themselves. Funding for African American education in the late nineteenth and early twentieth centuries captures this dilemma.

Many organizations, especially religious ones, devoted money, resources, and time to develop educational institutions for African Americans after the Civil War. The question arose: what sort of education would be appropriate? Some educators and religious leaders held to the view that African Americans should have full educational opportunities, including college with a curriculum in the liberal arts. One finds, for example, at the 1895 Congress on Africa, held in Atlanta, a call by several African American leaders for a system of education that moved beyond industrial training, so African Americans could explore the full range of academic subjects. Many of the major philanthropists and philanthropic organizations, including those run by white religious philanthropic boards, discouraged the study of the liberal arts for African Americans. In many cases, funding for African American schools was directly affected by a school's decision about diverging from the industrial school model. Recipients of philanthropy were forced to choose between pursuing their own community's vision of proper education without the necessary resources or acquiescing to pressure to pursue less than desirable goals, but with greater funding. With the change to a philanthropy that so valued the "professional" manager and the growing corporate atmosphere of philanthropic work came concerns and allegations about heavy-handedness and solutions being imposed from the top down.

Giving Goes Global

The twentieth century saw a turn toward the global among both secular philanthropies and religious philanthropies. As knowledge of the world, its problems, and its suffering increased, American religions moved toward organizing to alleviate some of that suffering.

Going abroad was not new with the twentieth century. Especially among Christian groups engaged in missionary work abroad, it became more and more common to see educational, medical, and agricultural aid as part of the evangelistic impulse. Still, one can say that as the twentieth century progressed, more and more of the concern—as religious concern—lay with organized efforts to make the world a better place through such things as hunger and disaster relief,

creating self-sustaining agricultural practices, and providing basic shelter.

Though many groups sprang up to deal with these issues, some became quite large organizations. From the American Catholic Church came Catholic Charities, USA, originally founded in 1910. It serves as an umbrella organization for more than seventeen hundred local agencies devoted to religious philanthropic work. Though it serves constituencies in the United States, it works with Caritas International, an international network of Catholic charities. Among its several goals is to work toward social justice based on its understanding of Catholic social teaching; thus, it is very much concerned with a vision of a better society.

Founded somewhat later (1946), Church World Service (CWS) is the relief arm of the National Council of Churches, which represents thirty-five American denominations, including Protestant, Anglican, and Eastern Orthodox communions. It is engaged as well in international relief efforts, long-term development, and refugee work. CWS's most successful fundraising event each year is its CROP Hunger Walks, which is promoted as an interfaith, multicultural event. Each year, more than two thousand communities participate. The money that is raised is shared with the local community for its hunger projects, while the part that goes to CWS is used to support its grassroots hunger-fighting development programs, undertaken with its international partners.

Though reliant overwhelmingly on religious congregations and their members to support their work, it is the corporate nature of these organizations, each of which helps to redistribute funds from millions of individual religious givers, that characterizes them as international players in modern philanthropic circles. In many ways, they act as any other philanthropic organization, and they are subjected to scrutiny and grading, especially in regard to the amount of money they spend on administrative costs versus the amount that goes out to those in need.

In addition to these institutionally based religious philanthropies, others have taken shape outside traditional religious structures. For example, Habitat for Humanity International was founded to provide affordable housing in the United States, but it has moved on to the international field, operating in ninety countries. Founded in 1976 by Millard and Linda Fillmore, it is an ecumenical Christian organization. Through a combination of no-interest loans, "sweat equity" (or volunteer labor), and community involvement, more than 300,000 homes have been built by Habitat. Another organization, World Vision International, started work in 1950.

Originally an organization that used sponsorships to provide for children (in 1953 the first sponsorships were created to address the problem of the hundreds of thousands of orphans in Korea), it is now an agency that works for hunger relief, community building, and social justice.

It is important to note that often these groups, while providing subsistence, also share with nonreligious philanthropic groups an emphasis on education and self-help, both of which are seen as necessary for groups of people to be able to develop into self-sustaining communities that in the best of outcomes would eventually move away from the need to be philanthropic recipients and toward becoming enablers of others.

Though the focus in this essay has been on Western religious traditions, non-Western religious traditions have certainly made important contributions to philanthropic outlooks. As one example, one could point to concerns about the global environment, including such issues as global warming, sustainable lifestyles, and eco-friendly governmental policies. Many of the leaders in this area have drawn upon the religious traditions of American Indians; Eastern religious traditions; and spiritualist, new age, and neopagan strands of spirituality to form communities of concern and voluntarism to address pressing environmental issues.

Government and Religious Giving

From Winthrop's Massachusetts Bay Colony to Barack Obama's presidency, government and religion in the United States have always had favorable associations. Though the First Amendment banned the establishment of religion by the federal government, it also has served to protect religion. The fact that religion figures into the First Amendment at all is perhaps a sign of how intertwined government and religion have always been.

Though the Christian commonwealth idea eventually passed away even among the states (albeit only after a two-hundred-year period in parts of New England), governments at the state and at the federal level still had to deal with religious questions, whether in the form of immigration policies in the nineteenth century (this particularly in regard to anti-Catholicism among some mainline Protestants); or in terms of how to come to grips with the growing Mormon presence, especially once its stronghold in Utah was established; or how to treat religious organizations in terms of taxation.

This latter issue has had a tremendous effect on the proliferation of philanthropic organizations registered with the IRS, both with religious and nonreligious groups. The tax

code gives the government a great deal of power to encourage religion, in that it gives indirect subsidies to religious groups registered with the IRS by providing them a very desirable tax-exempt status. Though the Revenue Act of 1913 provided a way for charitable contributions to be tax-deductible, the income tax was so low that few institutions took advantage of this part of the law. This changed greatly in 1942. Congress revamped personal income tax law, with much steeper and progressive rates than had been in force before. This provided a great incentive to give money to those groups registered as tax-exempt and eligible to receive tax-exempt donations.

The philanthropic enterprise reached even greater heights when, in the revision of the tax law in 1954, Congress created the 501(c)(3) category, whereby favorable tax-exempt status and tax-exempt donation status was given to approved scientific, religious, and charitable organizations. The effect this has had is staggering. According to Peter D. Hall in “The Welfare State and the Careers of Public and Private Institutions since 1945,” the number of charitable tax-exempt organizations registered with the IRS has grown from about twelve thousand in 1940, to fifty thousand in 1950, to three hundred thousand in the 1960s, to the current estimate of one and a half million entities. This situation obviously involves the federal government in deciding what group is or is not a legitimate religious or charitable organization, which has also pulled in the federal legal system.

In addition to simply determining tax status, however, the government has partnered with specific religious congregations and other religious philanthropic bodies to meet the needs of the poor in the United States. The Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (pertaining to welfare reform), enacted during President Bill Clinton’s term of office and containing the so-called Charitable Choice provision, evolved during George W. Bush’s presidency into the Faith-Based Initiative of 2000. Under this legislation, religious congregations and other religious groups obtain government aid to dispense in social service ministries. Some have viewed this state of affairs as simply a continuation of government’s historical support (though not establishment) for religion. Others see it as a dangerous line that has been crossed and understand it very much as a type of establishment of religion. This program has also been subject to review by the courts.

A third area in which one can examine the government’s interaction with and oversight of religious philanthropy is its approach to Islam. Though present in the United States since

the introduction of slavery (a small percentage of the slave population was Muslim, though because of the conditions imposed on slaves, no institutions that would sustain Islam were allowed to be created), and despite a period of migration in the latter part of the nineteenth century (many of the immigrants returned to their countries of origin after a period of time), the real increase in the Muslim population did not come until the second half of the twentieth century. Initially many of the early immigrants came as students in the 1960s, and immigration policies changed somewhat in the 1960s as well. With the increase in the Muslim population came an increase in institutions—especially mosques and schools.

Philanthropic work began to flourish in Muslim communities during the 1990s. In addition to mosques and schools, foundations were created. These foundations saw to the needs of the poor and needy, helped with disaster relief, and furthered educational efforts.

Then came 9/11. As the government scoured bank records of charitable Islamic organizations, and as the mood of some in the country became suspicious toward Muslims, the work of the 1990s suffered. It has been estimated that three-fourths of the charitable organizations have folded—donors have become uneasy having their contributions viewed through the lens of terrorism. Though groups such as the Islamic Society of North America and the Council on American-Islamic Relations have worked tirelessly to restore Islam’s image in the United States, it has been suggested that it will take years to rebuild philanthropic structures to be equal to the pre-9/11 levels of giving and aid assistance.

Conclusion: The Future of Religious Philanthropy

Religion has and continues to play a large part in America’s philanthropic activities. In terms of money alone, the figures are compelling. One-third of all monetary donations went to religious organizations (one hundred of approximately three hundred billion dollars given in 2007), and more people give to religious causes than any other. And this is just one telling statistic to add to a very long history of monetary and volunteer support for social causes and cures. From alleviating hunger, to founding orphanages and hospitals, to supporting educational institutions, American religion has been intimately involved in the public arena, putting forth various visions of the good society and pursuing the means necessary to produce results.

Of course, not all money given to religious causes is used for philanthropic purposes; indeed, much of the money stays

in-house, so to speak, to pay for the maintenance especially of houses of worship. Still, some of the gifts do make their way out of the religious institutions into the larger world. Also, there are many religiously inspired and motivated agencies that are institutionally separate from denominations and congregations, and they devote themselves to the eradication of social ills. What is more, oftentimes even houses of worship serve as centers for voluntary activities that have a social outreach—from hosting CROP Walks to Alcoholics Anonymous meetings to food pantries and clothes closets. The power of religion to motivate will continue to make an impact on the varieties of philanthropic activity undertaken by many Americans.

This being said, it must be noted that philanthropy itself, apart from a religious context, invokes great commitment on principle. Indeed, it is interesting to note that Jewish people, who, as a group, tend to give a higher percentage of household income to philanthropic causes, have more and more moved toward secular rather than religious giving. Questions of identity frequently find their way into investigations into Jewish philanthropy. It has been noted that for some Jewish activists, philanthropy has become a way to express Jewishness. Indeed, at one point and time, a rift seemed to have developed between the synagogue and the federations that joined Jewish people together in common philanthropic enterprises (from food relief, to help for Jewish immigrants, to support for Zionism and Israel, to the array of cultural institutions supported by Jewish philanthropies—schools, hospitals, orphanages, and so forth). Work continues to bridge the gap between federation and synagogue—for example, the United Jewish Communities/Jewish Federations of North America, an umbrella organization that is a merger of older and long-standing Jewish philanthropic groups and one of the largest charitable organizations in North America, has as one of its goals to enrich Jewish life, which includes drawing on the resources of Judaic wisdom to help form identity. Still, there lies within this case evidence that philanthropy can itself become an expression of personhood and peoplehood and that such a commitment to an identity based on philanthropic work can transcend traditional religious outlooks to become, in a religious studies sense, religious-like. Thus, our cultural context is, and has been for some time, one in which we may give religiously, so to speak, of money, time, and self, without participating in religious giving, strictly understood.

Philosophical Theology

American philosophical theology is broadly characterized by its orientation toward theological interpretation anchored primarily in reason, rather than being guided by the constraints of confessions and creeds. It reprises the role of “Athens” in Tertullian’s query, “What has Athens to do with Jerusalem?” A distinctive feature of American philosophical theology is its openness to and valuing of human experience. Jonathan Edwards (1704–1758) is its most original and important figure. Following Calvin, Edwards emphasized in novel ways the absolute sovereignty of God and the beauty of God’s holiness. Yet these themes do not sufficiently encompass the contours of American philosophical theology. A broader context is necessary both to situate Edwards’s thought and to trace the development of three principal trajectories of American philosophical theological thought: (1) the balancing of confessional stances with philosophical language and methods; (2) the skeptical rejection of confessional stances and the commitment to the primacy of philosophical methods oriented toward human experience; and (3) the rejection of the tradition of theological thinking on the grounds of its implicit biases, both epistemological and sociocultural.

Greek and European Roots

Understanding the context within which American philosophical theology emerged requires a cursory historical overview. Philosophical theology has its origins, putatively in Greek pre-Socratic thinking, and developed through Platonic, Aristotelian, and Stoic lines. Its preoccupation with the soul’s relation to God was appropriated by the Alexandrian school (Origen and Clement) of Christianity, which, in turn, achieved its formative expression in the work of Augustine. Thomas Aquinas recast the Augustinian perspective in Aristotelian terms; for much of the history of Christian philosophical theology through the Middle Ages, Augustinian and Thomistic formulations predominated. With the emergence of humanist study in the northern Italian city-states, a more pronounced valuing of human experience began to inform the thinking of humanist reformers (Erasmus, Calvin, Zwingli, Karlstadt). This emphasis, in turn, colored their efforts in the translation of the Bible into the vernacular. By joining learning with faith, their efforts helped extract the Bible from its iconic Catholic framework. Moreover, the vernacular translations enjoyed popular reception, ensuring a new vitality for the Bible.

The response of Orthodox Confessionalism, however, in its attempt to establish uniform belief, eschewed biblical translation in favor of scholarship that would not disturb the stability of religious practice—thereby the joining of faith with learning was effectively sequestered. The intensity of the response of Pietism (a seventeenth-century movement associated initially with Philipp Jakob Spener and August Hermann Francke within the German Lutheran church that aimed at reviving devotion and practical Christianity), with its intent to rehabilitate biblical translations from the rigid encroachments of Lutheran orthodoxy, achieved a renewed iconoclasm. By reinvigorating study of biblical sources and new translations, the Pietist aim of revitalizing of the Bible was not, however, the only outcome. A resurgence of interest in sources deemed apocryphal by the Western church posed a new dilemma that John Locke noted in 1685: what of the Bible reflected divine authority and what merely human artifice? The arguments of the deists (a group of seventeenth-century thinkers, primarily English, whose critical principles of religion substituted the values of natural reason for revealed truth) exploited this dilemma, seeking to undermine the idea of the authority of the Bible, on the grounds that it was a human invention that was constantly reinventing itself, and to promote instead the authority of reason. English (Thomas Hobbes, John Locke, David Hume) and Continental (Rene Descartes, Benedictus Spinoza, Gottfried Leibniz) thinkers alike offered interpretations of the biblical literature that varied from the deists but nonetheless were not dependent on confessional theology. Christian Wolff (1679–1754) even attempted to develop an interpretation of the entirety of Protestant Christianity driven entirely by the (adapted) principles of Leibnizian philosophy.

The (politically dominant) Pietists who succeeded in sacking Wolff from his University of Halle professoriate effectively recast the contours of the issue: the lines were drawn between confessional theology and philosophical theology as rightful interpreters of the significance of scripture. Immanuel Kant (1724–1804) later reinforced these lines through his critical philosophy, in which he denied theoretical knowledge of God and subordinated practical knowledge of God to the reality of freedom: only that of scripture conforming to the contours of moral freedom could be reckoned intelligible.

From this brief review, it becomes evident that the tension between a (confessional) theologically informed reading of the Bible and a (nonconfessional) critical philosophical theological interpretation of the Bible was the crucible in which

American philosophical theology was forged. It also becomes possible to appreciate the genius and originality of Jonathan Edwards in holding together both parties. His emphasis on beauty, proportion, and the affections was infused into his confessional stance in a fashion that resonates with the zeal of the earliest Pietists.

Transcendentalism

The transcendentalists (Emerson, Thoreau, Channing, and Fuller), however, emphasized a nonconfessional approach to the Bible, pursuing lines of inquiry that were influenced by Locke, Hume, and Kant. For them, the canons of reasonableness (consonance) of biblical themes with human experience predominated. A less strident approach to biblical interpretation, which followed the influence of Kant and the post-Kantians (especially S. T. Coleridge), appeared in Horace Bushnell's (1802–1876) "Preliminary Discourse on Language" and "Our Gospel: A Gift to the Imagination," and in James Marsh's (1794–1842) "Preliminary Essay" to Coleridge's *Aids to Reflection*. For both, the role of biblical language as metaphor that shaped and formed human religious self-understanding permitted a reading of biblical literature and its relation to human confessional stances that was more permeable than had been the transcendentalists. Bushnell's figurative linguistic sensibilities, in particular, encountered conflict with the biblical literalism of the confessional Princeton theology (Hodge), whose (Calvinist) perspective stood as one legacy of the Edwardsian inheritance. What was emerging in American philosophical theology, nevertheless, especially as it distanced itself from the protocols of confessional theology, was thus an increasing openness to, and marked valuing of, human experience. This emphasis remained consistent with the experiential pole of Edwards's thinking.

Pragmatism and Culture Protestantism

The privileging of human experience inchoate in the early American proponents of philosophical theology crystallized in the thought of the pragmatists (Charles Peirce, William James, George Mead, and John Dewey, who taught that the truth of propositions was to be found in the effects or consequences of actions guided by them). For them, the significance of religious themes lay not so much in their "intrinsic" value as in the fruits that they bore. The truth of religious themes, in other words, was to be measured in their effects in action; what mattered about biblical themes—indeed, their truth—was the way they played out in human behavior. This experiential emphasis of the pragmatists stood in paradoxical

relation to the idealists (William Harris, Henry Brokmeyer, Josiah Royce)—inasmuch as many of the pragmatists had Hegelian leanings—for whom the working out of the idea of Christianity provided a guide for the interpretation of human experience. The spirit of the American Hegelians resonated, as well, with the followers of the post-Kantian Albrecht Ritschl (1822–1899), who claimed a link between scriptural teachings (independent value judgments) and moral progress in culture that could appeal to both the idealists and pragmatists. Faculties at the Divinity School at Chicago, Union Theological Seminary, and Yale Divinity School were drawn to variants of the Ritschlian program as a way to emphasize biblically inspired social transformation while simultaneously thwarting the advance of biblical orthodoxy.

For a brief period, American theologies of "Culture Protestantism" (the identification of obedience to Christ with loyalty to the highest ideals, institutions, and practices of a society) and philosophical theology (in its pragmatic guise) achieved a rapprochement, if not an alliance, in the face of a common adversary: a renewed effort to establish the primacy of the Bible and the inerrancy of scripture. This new orthodoxy sought to unmask the pretensions of delusions of Culture Protestantism: Locke's dilemma of the divine or human status of biblical materials reappeared, along with the conviction that only as the Bible was emancipated from its Enlightenment interpretation could its truth represent itself. Despite the resurgence of the experiential orientation in Paul Tillich's (1886–1965) philosophical theology, turning upon the problem of human anxiety and the promise of a new sense of being (grounded in the courage to reject theism), and its concomitant introduction of themes from post-Kantian idealism and Heideggerian "existentialism," the new wave of biblical orthodoxy (along with variant forms of neo-orthodoxy) extended its reach.

Death of God Theology and Responses (A-Theology)

The "Death of God" themes of Thomas J. J. Altizer (1927–), William Hamilton (1924–), Paul van Buren (1924–1998), and (from a slightly different perspective) Richard Rubenstein (1924–) carried the claims of the new orthodoxy to their logical conclusion: if God alone was the truth of the biblical materials, and nothing of human cultural artifice was to be entertained, then there existed no point of contact between the divine and human spheres to which either confessing theologies or philosophical theologies could attach. Accordingly, the Bible's reinvention of itself abruptly had

come to an end in the apocalyptic moment of the self-realization of God *as wholly other*. Confessing evangelical theologians found this conclusion abhorrent; philosophical theologians tended to embrace it.

Some philosophical theologians found in this conclusion the warrant for continued exploration of the human imaginative processes (Julian Hart, Ray Hartt, Robert Scharlemann, Langdon Gilkey, Edward Farley, Gordon Kaufman, Peter Hodgson, David Tracy) or for alternative interpretive structures, such as “Process” philosophical theology (Henry Nielson Wieman, Daniel Day Williams, Charles Hartshorne, Bernard Meland, Schubert Ogden, Marjorie Suchocki, John Cobb, David R. Griffin). Others saw in this conclusion the requirement to develop critiques of modernity (Leszek Kolakowski, Alasdair MacIntyre, Judith Butler, David Kolb). Alongside these explorations of human imaginative processes and modernity critiques, far-reaching assaults upon the unstated assumptions of philosophical-theological interpretations of human faithfulness emerged. These assumed the form of liberation advocacy and incorporated emphases on race, gender, sexuality, ethnicity, and ecology; eventually they began to inform the philosophical-theological endeavor (Cornel West, John Cobb, Ellen Armour, Catherine Keller).

But the most aggressive response to the “Death of God” themes came from those who saw in them profound ties with Continental philosophers’ calls for the end of “onto-theology” (Martin Heidegger, Emmanuel Levinas, Jacques Derrida). The preoccupation of the late Heidegger (1889–1976) with problems of language and writing were pushed to new frontiers in both Levinas (1906–1995) and Derrida (1930–2004). A new generation of American philosophical theology appeared; pursuing the irreducibility of any writing to a single, definable meaning (John Caputo, Mark C. Taylor, Carl Raschke, Charles Winquist), these philosophical theologians announced the “end of theology” (confessional theology), and the triumph of “a-theology.”

In effect, this group of “deconstructionist” philosophical theologians repeats the skepticism of the deists. It was the deists, after all, who were early persuaded that it was theology, and not the Bible, wherein the fundamental problem lay. And in a fashion that inversely mirrors the desire of eighteenth-century metaphysicians to develop the contours of an underlying rationality that can incorporate biblical themes independent of a confessing theological stance, these deconstructionists have attempted to mount an a-rational, post-modern, a-theology that negates the founding principles of American philosophical theology: as Mark C. Taylor (1945–)

expresses it, the antagonism between confessing and philosophical theology proves itself chimerical in the space that appears “after God.”

Philosophy

This entry makes no presumptions concerning a firm definition of *philosophy* in the context of religion in the United States because *philosophy* can refer to any number of intellectual trajectories. Instead, this entry focuses on prototypical philosophy in colonial North America, deism and religion in the context of the American Revolution, America's native transcendentalism, classical U.S. philosophy (pragmatism), and the combined impact of these historical movements on contemporary philosophical schools and traditions. Philosophy can and should be connected with liberal and political theology as expressed in U.S. Catholicism, other forms of Christianity, or, for that matter, other forms of religious traditions that also contribute to a rich understanding of the philosophical climate of religion in the United States. In the present context, early philosophical thought in the United States is the domain of the philosophical amateur; the first "American" philosophers were preachers, theologians, intellectuals, and, only vaguely, philosophers.

Philosophy and Religion in Colonial North America

Some of the earliest philosophical thinking in North America came from the Puritans and Congregationalists, represented by individuals such as John Winthrop (1588–1649) and Jonathan Edwards (1703–1758). Philosophy in the United States therefore developed in a theological, cultural framework. *Theology* can mean the systematic study of theoretical religious problems, and in Calvinism, the default Protestant view of many colonial groups such as the Congregationalists, theology can include the philosophical articulation and clarification of doctrines such as original sin and the covenant that extends from each individual to the entire Congregational community.

Early religious attitudes toward nature view scientific knowledge and discovery as religious activity insofar as the

observation of nature is simultaneously the activity of discerning the will of God, and hence of benefit morally, spiritually, and philosophically. Edwards's desire to boldly seek firsthand accounts of nature and God expresses his appreciation of John Locke's (1632–1704) invitation in his Epistle to the Reader in *Essay Concerning Human Understanding* (1690) to be dissatisfied with secondhand opinions and to follow truth wherever the trail leads in an air of free inquiry.

Edwards's focus on a "religious empiricism" is an early form of naturalism in U.S. religion. Finding its roots in philosophers such as Locke and represented by thinkers such as Thomas Reid (1710–1796), Scottish common-sense realism was formative for early U.S. articulations of the empirical, natural, and religious. Demonstrated by way of analogy with a mirror, Edwards suggests that whatever is reflected in the world is a result of God, an expression of God, and remains present only as long as its image is retained in God's mind. Our being ultimately and absolutely depends on the moment-to-moment display of images before the mirror: images or ideas for God, but empirical realities for human beings. Edwards understands God not as a super being but as the activity of being itself. God continuously participates in worldly events; therefore, we relate with God in our existence, in our very being. What Edwards calls "God's Excellency," his creation and participation in relations in the world, is revealed within nature. God is the perfection of relations—relating all with all.

Events of religious historical significance in the United States such as the Great Awakening (religious revivals starting roughly around 1740 to 1742 and continuing into the nineteenth century) raised issues about the limits of religious enthusiasm, and a major concern in early Congregational communities was the establishment and maintenance of a rational foundation for the faith. Contrary to some caricatures Calvinism has a clear rational component, the default theological perspective of most Protestants in Colonial America, and in Congregationalism in particular. On a more popular level, revivals provide a return to a more emotional and radical expression of Protestantism. The conversion experiences brought on by the Great Awakenings were either accepted in communities as momentary irruptions of the Holy Spirit that could be tempered by reason or were rejected as irrational and enthusiastic distortions of true religious feeling. Such decisions influenced the formation and degradation of religious communities, as people's experiences were accepted or rejected and as authority was reinforced or challenged.

The possible conflict between the emotional and intellectual components of U.S. Protestantism foreshadowed later tensions between scientific and religious knowledge, but early U.S. thinkers were predominantly interested in the *lines of relation* between science and religion; only since the beginning of the twentieth century have many U.S. philosophers and scientists opted to sever such ties.

Congregationalists enlist the arguments of French logician Pierre de la Ramée (1515–1572, also known as Peter Ramus) for self-regulated religious congregations. Congregationalism possesses a community covenant that requires each member to adhere to the authority of the community because God's covenant is binding on the community as a whole, as well as on the individual. One's life in general, and one's religious experiences in particular, must run the gauntlet of congregational acceptance. The role of the religious community extends from a collective form of the covenantal relationship with God to an understanding of how knowledge is shaped by communal experience. Sources for knowledge could be deemed acceptable by the community or denied, leaving the individual somewhat determined by the wider social community.

Communal epistemological consent would either come to a close (in the restricted Congregationalist sense) or expand to become a pluralized principle where one's experiences meet the challenges of a much more eclectic gauntlet; the narrowness or wideness of permissibility of this gauntlet is a precise way of speaking to the emerging liberal and conservative trends in philosophy and religion in the United States. The resemblance to the forum of public opinion today is striking.

Edwards may be the best representative of the period: He believed that religion in general was first and foremost evangelical—namely, it should effect spiritual and psychological transformations at the most basic levels of human experience. Edwards avoided both excessive emotionalism and intellectualism in *A Treatise Concerning Religious Affections* (1746) and viewed the practical results of acting in the world as one positive indication of the religious state of being of an individual. Edwards's psychology of affections included the whole range of human faculties, but one particular positive outcome of religious affections was the practical turn to action as proof of a saintly character. The benefits of experiences such as conversion would be revealed in due time through the righteous action of the converted, and in this context Edwards began a long tradition in U.S. philosophy and religion of referring to the biblical pragmatic dictum "You will

know them by their fruits" (ESV: Matthew 7:16). Right ethical action and behavior corroborate claims to relations with the divine. Edwards's religious philosophy treats conversion as a radical transformation whereby one sees God's excellent relations established in the world of nature. This "new sense of the heart" established lines of relation between individual believers and all other creation, emphasizing a connection between a religious, transformative experience and relations as a felt experience of connection in the world. To be religious was to feel related to God and all creation. He therefore believed conversion was a controlled ecstasy that did not provide any new knowledge about scripture or about revelation per se but enabled the right orientation toward revealed knowledge.

Despite Edwards's heavy involvement in the Great Awakening and his qualified acceptance of revival experiences in his religious community, he nevertheless insisted on the connection between religious experience and rationality. Religion is a matter of the affections, having feelings and thoughts at its core, but it needs to mesh with the expected repertoire of empirical knowledge, scriptural knowledge, and communal expectations.

The strategic use of powerful language in these prototypical stages of both philosophy and religion in the United States cannot be underestimated. The Great Awakening was successful partly because figures such as George Whitefield (1714–1770) and Edwards were masters at using language to create emotional, religious responses. Oratory is acknowledged as being of paramount importance for affecting the U.S. public, whether in eighteenth-century revivals or twenty-first century presidential elections.

The idea of a communal covenant in New England only works insofar as there is cultural homogeneity. With religious and political pluralism rapidly emerging, a widespread covenant necessarily became untenable. Nevertheless such a theological context provided sources for the first birth pangs of philosophy in North America. The focus on feelings, affections, and nature were all themes that resurfaced in future expressions.

Following Edwards's trail, later U.S. intellectuals attempted to identify as either philosophers or theologians. Theologians were trained to be aware of the predominant trends in natural philosophy (what would later become natural science) and were the front line for conveying philosophical ideas on a public and popular level. Other figures loomed large during revolutionary times when religion still played an active role in intellectual culture, even if the architects of the new nation

viewed their desire for liberty in more rational terms than in religious ones.

Deism, Liberty, and Revolutionary Religion

Philosophy never takes the place of faith in the United States, even when that faith appears to be more philosophical than religious. Deism focuses on God's majesty and perfection as Creator, with God famously likened to a watchmaker and reason our tool for accessing the divine machinery. The Deists—in this context including Benjamin Franklin (1706–1790), Thomas Jefferson (1743–1826), James Madison (1751–1836), Thomas Paine (1737–1809), and George Washington (1732–1799)—formed a new nation as a combined result of Enlightenment ideas, a desire for a republican form of government, and a naturalistic appreciation of the creative genius of God.

Paine, while critiquing Christianity, nevertheless was a religious individual who saw nature as an expression of God. Nature is the Deists' Bible. The Deists assume a universal belief in God and argue for an interpretation of religion that rejects and avoids superstition or the authority of revelation. The Deists were also early empiricists in the U.S. tradition following Locke's lead. Nature's rationality was suggestive of divine rationality—not just suggestive, but derivative of God's rationality.

Paine's *The Age of Reason*, commenced in 1794 and completed in 1795, expresses the Deists' rejection of all explanations of religion that involve recourse to supernaturalism. Deists therefore criticize the shortcomings of human superstition and celebrate the "perfection of the Deity" as witnessed throughout creation. The cue taken from Paine's critique of Christianity as revealed religion is sometimes exaggerated into the mistaken belief that he was not religious, which is inaccurate. In *Common Sense* (1776) he argued the biblical foundations of republican liberty, suggesting that the emergence of a king in the Old Testament was an unfortunate result of a mass delusion. Before the anointment of the king, the Hebrew people were a roughly shaped republic. The reasons for rejecting a king are related back to the sin of holding anyone or anything up to an equal level with God. The idea of not bowing before any king besides God is attractive to Deists and other Protestants alike because it reinforces a rational principle of autonomy for some and an emotional covenant for others.

The persistent existence of war, hatred, and intolerance, attributed to superstition and blind allegiance to revelation, were part of the justification for such a revision of traditional

Christian notions of God. However, the revolutionaries in colonial America fostered a religious attitude that made the situation there quite different from the atheistic revolution in France. The Deists were intellectually responsible for the creation of the nation but Protestants saw divine providence written all over it.

The political anti-imperialism of the revolution bears an affinity to the antiestablishment attitude of many Christian communities in the United States, and ultimately this shows itself in the nineteenth-century example of the liberal avoidance of traditional, institutionalized religion.

Transcendentalism

Bold reactions against traditional constraints on philosophy and religion continued in U.S. intellectual culture into the eighteenth and nineteenth centuries. The most cited example of a distinctively U.S. style of philosophical and religious thought is New England transcendentalism. This heterogeneous group, unified more by geography than by philosophy, included figures such as Ralph Waldo Emerson (1803–1882) and Margaret Fuller (1810–1850), and later influenced such individuals as Francis Ellingwood Abbot (1836–1903). The right of free inquiry was a key component of their principles. With Emerson's support, Abbot went on to form the Free Religious Association in 1867 that declared free inquiry a necessary element of its understanding of "free religion."

Emerson was influenced by the Enlightenment and German idealism, but access to this philosophy was acquired through romantics such as Thomas Carlyle (1795–1881), Samuel Taylor Coleridge (1772–1834), Johann Wolfgang von Goethe (1749–1832), and William Wordsworth (1770–1850), rather than Immanuel Kant (1724–1804) and Georg Wilhelm Friedrich Hegel (1770–1831). Transcendentalism may be the first truly U.S. philosophy partly because it revamped transplanted philosophical ideas—for better or for worse. Some scholars prefer to call transcendentalism a literary movement rather than a school of philosophy.

A few elements from the European Romantics played out in transcendentalism: the interconnected nature of all beings, intuitive powers of humans, repugnance to metaphysical dualisms, and rejection of positivism. Nature is an organism rather than a machine. The creative artist becomes the ideal type, the ultimate person. Romanticism was most certainly not a Christian intellectual development, but the Romantic focus on intuition fits nicely with the basic transcendentalist emphasis on naturally uncovering the secrets of the world by being in it and experiencing it through intuitions that

transcend the ordinary. This represents a new U.S. philosophical *and* religious perspective.

As a representative philosophical perspective, transcendentalism is a reaction against both pietism (emotionalism) and rationalism (intellectualism) for being too constraining on religious freedom. Emerson thought transcendentalism to be groundbreaking enough to suggest that it was a cutting-edge U.S. form of German idealism. The transcendentalists also expressed some of the quintessential preferences of U.S. religion and culture. Imagination, creativity, and action all supersede reason, theory, and contemplation. The traces of such a hierarchy extended to the later-nineteenth- and early-twentieth-century suspicion of religious institutions (theology among them) as the social sedimentation of vicious intellectualism—an intellectualism that is dogmatic and absolute. Transcendentalism was religious, secular, and humanist. Transcendentalism is pivotal for understanding religious trajectories within U.S. culture that do not conveniently fit in the category of “Christianity,” or other standard religious, denominational distinctions. Emerson’s lamentations about the individual’s reliance on the wisdom of other saints and sages, rather than reliance on one’s own intuitions, suggests a clear distinction between secondhand experience and firsthand experience. He also interestingly enough laments not having enough indigenous, U.S. wisdom and U.S. religious literature. Emerson extended Kant’s dictum *Sapere Aude!* (dare to think) into the religious and spiritual realm. It might be helpful to think of transcendentalism as a religious extension of some of Kant’s ideas—for example, scholars suggest that Emerson’s Over Soul or Universal Mind is a religious result of Kant’s transcendental unity of apperception, a technical, unifying feature of experiencing the world, made into an absolute Spirit by Hegel, and eventually spiritualized and made immanent by the transcendentalists. Emerson was a universalist in the sense of believing in a higher being to which we are all intimately connected.

In *Nature* (1836) Emerson asks why his generation is doomed to an indirect relation with the world, and he laments that we no longer see nature face to face, but only through the eyes of previous generations. He simultaneously outlines the basic idea of the contextualization of all encounters of experience—the epistemologically important idea of how our previous experiences radically shape what we will see in the future—and reacts against mental petrification, admonishing the reader to find the new and novel in experience. Such insights suggest a desire for directness and immediacy when it comes to talking about and experiencing God,

but also speak to the spiritual need for a uniquely U.S. religious vision. An essential component of Emerson’s transcendentalism is the uniquely U.S. flavor of such a trailblazing spirituality.

The theology latent in liberalism seeks to erase the remoteness of God and replace it with an intimacy resulting from an immanent idea of God. The traditional Christian response was to make immanence problematic because it suggested no need for the sacrifice of Jesus if God has always been of one “substance” with the world. Liberals typically humanized Jesus with the corollary that critics of liberalism suggested that sin went unacknowledged. The converse was also true: Transcendentalism partly affirmed the divinity of human beings rather than one particular being. In this vein we might conclude that the humanization of Jesus is synonymous with the divinization of humanity. This is what John Dewey (1859–1952) formulated in the following century.

Under the cultural guise of transcendentalism we also have an early intellectual analysis of gender in Fuller’s *Woman in the Nineteenth Century* (1845), and many of the Promethean themes in Emerson are reflected in Fuller’s avoidance of mediocrity. Fuller set the stage for a much more sophisticated feminist understanding of society with the social work and thought of such exemplars as Jane Addams (1860–1935). Addams echoed Dewey’s belief that religion is more bound up with our possibilities as human beings within this world.

With Charles Darwin’s (1809–1882) evolutionary theory, religious orthodoxy required new philosophical foundations. Nature did not operate like clockwork; it was ambiguous, brutal, inefficient, arbitrary, and random. Speaking about the world as the “perfection of the deity” would fall on many deaf ears. So the Darwinian controversy became a cultural issue because the arbiter of culture shifts from the minister to the scientist, but the scientists turn away from the public and establish technical journals. Thus philosophy, in its quest to merge or become synonymous with science, loses its comprehensive, “synoptic” function. But before we lament the end of a special era in U.S. philosophy, let us more adequately grasp this new way of looking at traditional philosophical problems.

Classical U.S. Philosophy

“Classical American philosophy” is a currently accepted term for U.S. pragmatism; the term emphasizes that some thinkers who belong to the era of classical U.S. philosophy were not explicitly pragmatists, and, perhaps more importantly, classical

U.S. philosophers were discussing issues that include but go beyond today's understanding of pragmatism. Nineteenth-century philosophers were wrestling with personal religious crises, but philosophy was already becoming a professor-bound endeavor by the end of the nineteenth century. U.S. philosophical culture bore traces of the religious before the twentieth century, but *philosophy* eventually emerged as a distinct intellectual discipline outside of theology. This came at the cost of philosophy losing its intimate affiliations with U.S. religious ideas.

Speaking in 1852 in Rochester as an abolitionist and free-man, Frederick Douglass (c. 1817–1895) encouraged free and critical debate surrounding slavery because he was convinced that through philosophical debate issues such as slavery are brought out into the open, into the public forum. In this forum Douglass rightly predicted a short life for the philosophy of the slave master. Slavery was abolished, and philosophy in the United States developed out of the religious and political aftermath; the clear pragmatic differences between the two sides in the Civil War would reiterate the U.S. need for direct and immediate fruits for religiously motivated action.

U.S. transcendentalism may be the first bona fide U.S. amateur philosophy. The foundations laid by intellectual figures such as Emerson helped engender associations such as the Metaphysical Club, a gathering of individuals including William James (1842–1910) and Charles Sanders Peirce (1839–1914) who discussed a variety of topics, religion among them. The Metaphysical Club was a philosophical and intellectual cultural circle and suggests the best of the U.S. culture of amateur or popular philosophy.

Philosopher and Harvard professor James's Gifford Lectures were published as *The Varieties of Religious Experience* in 1902. *Varieties* is a philosophical and psychological description of religious and mystical experience. Foreseeing Dewey's later refusal to admit the existence of any essence called "religion," James settled on a sequence of self-defeating definitions, but only after much struggle, and ended up delimiting religion as a feeling of continuity with something seemingly divine in our solitary life: a vague definition supporting James's own vague sense of being religious. *Varieties* serves as an excellent historical timepiece for how U.S. culture publicly and popularly referred to religious experiences, most of which in *Varieties* are Protestant conversion experiences. James focused on individuals who claim experiences, manifest the benefits of religious experience through their actions, and show the fruits of their labor in a social setting—hence

James's preference for the saintly, "this-worldly" religious hero, a Promethean prototype based partly on the "heroic mysticism" of James's godfather, Emerson.

James, before Dewey, did not think that there was any essential thing that the word "religion" referred to. Dewey explicitly rejects any essential element of religion, but opts to talk about the quality that makes any experience potentially "religious." Dewey's idea of religion takes away the need for institutions and religious authority to maintain a corporate hold on "religion." The turn away from institutions has been criticized as shortsightedness by James because his focus on the individual implies a demotion of the social, but his and Dewey's intentions were more than an exaggerated focus on the individual self; if there is no essential "religion" lying at the core of all of these various human practices, it being rather the immediate social context of experiences that determines the "religiousness" of the moment, then no institution should claim any sort of exclusive or special access to such a "phenomenon."

With some classical U.S. philosophers, such as James and Dewey, perspectives on religion underwent a radical paradigm shift because religion no longer necessarily involved the supernatural. Dewey suggested that both atheists and religious people make the mistake of claiming that religion must deal with the supernatural. In Dewey's day the *Oxford English Dictionary* defined God as an unseen power, and Dewey rejected the definition and one kind of idea about religion, which James never clearly did. The divine and the natural are connected and not dualistically separated in this scheme. For the pragmatists nature is "God's great poem," but the implication is that the poet stands inside rather than outside of his work. The turn toward nature effected by Edwards and Emerson continued radically with the pragmatists, but such naturalism was not pressed in the service of arguments from design for the existence of the classic supernatural God. Dewey relocates religious concerns by taking them away from a supernatural context and placing them into a natural world of human social experiences.

The pragmatists are naturalists not because they choose to focus on what can be seen versus the unseen, but because there is no necessary supernaturalism; what is seen and what is unseen all takes place within the natural world and not in a transnatural reality. James affirmed the idea of amateur philosopher Benjamin Paul Blood, expressed in the 1874 pamphlet *The Anaesthetic Revelation*, that the secret of Being was hidden and overlooked, while remaining right beneath our feet, not off in another world, dimension, or heaven. The

really real (God, that which most truly “is”) is temporal, in the world, intimately embedded in human experience, and not absolute. Although immanent and intimate, the real is elusive and vague because it is hidden by being embedded within nature. Because of such embeddedness, Dewey talks about the humanization of divinity and the divinization of humanity in *A Common Faith* as a way for nonreligious thinkers to still see the religious within their own philosophical, social, and ethical experiences. Dewey produced a religious philosophy for the scientist who does not have a capacity to be traditionally religious, but we should also bear in mind Dewey’s emphasis on the idea of education as itself being an essentially religious enterprise.

Edwards, James, and Dewey all call on the already-mentioned biblical idea of knowing the truth of something “by its fruits, not its roots.” The fruits of action outweigh concerns about the origins or roots of one’s actions; the significance of the actions comes from the context of the actions themselves rather than from any metaphysical shell or architectonic structure that purports to contain and determine all possible interpretations and contexts of an action. Such a focus on the community as arbiter of experience resonates with later concerns for the need for our ideas to run the pragmatic gauntlet within the collective social world of experience. James and Dewey express a tolerance of religion based on its verifiability within social practice.

James’s notion of relations within the world as bearing religious fruit is best expressed in *A Pluralistic Universe* (1909), which concludes with an unexpected picture of a pluralistic universe as hyper-intimate, closely connected through myriad relations within the world, and having a clear sense of the divine as embedded in such a world. The emphasis on relations is historically connected with Edwards’s celebration of the excellency of God reflected in God’s ability to establish relations and be the relations between all things. Within the world of relations and experience, the world of vague betweenness was a religious mystery that James believed substitutes for other traditional religious objects (supernatural Gods and experiences), primarily because the pluralistic, mystical universe was also ineffable.

The importance of the role of the power of language as seen in the Great Awakening was not lost in the classical phase of U.S. philosophy. We see the manifestation of a passion for the power of words in James’s discussion in *Varieties* of the effects of mystical language on the sympathetic listener or reader: Such words affect one like music by mixing or integrating aspects of religious feeling and philosophical

thinking. The United States is swayed by and sways by way of the right use of effective forms of language that trigger more than purely intellectual or philosophical responses.

Not all classical U.S. philosophers were purely identified with the pragmatist tradition. Josiah Royce (1855–1916) holds a unique position in the history of philosophy and religion in the United States, being considered one of America’s representative philosophers while expressing the philosophical position of absolute idealism, a position traced back to Hegel that ultimately distanced Royce from the general tenor of U.S. philosophy, even while Royce developed an interest in the mechanics of Peirce’s philosophical system. James and Royce were both public philosophers in the sense that they believed that a discussion of philosophy was suitable for the general public and necessary for social edification; at the same time, however, the discipline became increasingly internally bureaucratized. When philosophy loses its “synoptic” role in the university, it has also lost its synoptic role culturally, and such a loss cuts to the heart of the proactive, dynamic, and religious aspects of classical U.S. philosophy. “Uniquely American” religion is the result of a combination of factors: a sense of personal initiative about what is good or bad theology; a sense of a personal relationship with God, the world, or other individuals; the divinity of humankind as stressed by transcendentalism; and the emancipation of the religious from the supernatural.

The Legacy of U.S. Philosophy and Religion

As U.S. philosophy became increasingly professionalized, its cultural ties with U.S. religion became weaker. Hyper-specialization, the emergence of logical positivism, and the analytic, philosophical approach downgraded the importance of the philosophy of the pragmatists as being, at best, formative but pre-professional. Although the early U.S. tradition did inform a functional and “use-oriented” approach in the mainstream professional understanding of philosophy and language, nevertheless some figures continued in the U.S. style along similar lines as James and Dewey to maintain a connection between philosophical and religious discussions.

The Chicago School of Theology was a classic manifestation of the enormous influence of James, Dewey, and George Herbert Mead (1863–1931). In the early twentieth century numerous professors of religion and theology claimed allegiances with pragmatism—for example, Edward Scribner Ames (1870–1958), George Burman Foster (1858–1919), Shirley Jackson Case (1872–1947), Gerald Birney Smith (1868–1829), and Shailer Mathews (1863–1941). By

mid-century the Chicago School came under fire from Karl Barth (1886–1968) for being too liberal. Currently connected with the Chicago School is the Highlands Institute for American Religious and Philosophical Thought, publishers of *The American Journal of Philosophy and Theology*. Members of the institute focus on naturalism in both theology and philosophy and promote the connections between U.S. traditions of philosophy and liberal religion.

General themes of process, relation, and creativity in contemporary theological and philosophical work indicate the legacy of classical U.S. philosophy. The empirical tradition in U.S. religious thought is connected with process theology, where God is envisioned as intimately connected with the world and affected by the relations and experiences of novelty within the world of process and experience. Such trends are best represented in the U.S. context with the thought of Alfred North Whitehead (1861–1947) and Charles Hartshorne (1897–2000), but they also owe a debt to the creative philosophy of Henri Bergson (1859–1941). We see the influence of Bergson most succinctly in James's *A Pluralistic Universe*. Jerome Stone and other religious naturalists see a religious response in the world as possible “naturally,” without an overarching supreme being or foundation of all being. Stone traces this historically in U.S. intellectual culture back to George Santayana (1863–1952), a student of James and Dewey and a philosopher not easily lumped in with the pragmatists, and Henry Nelson Wieman (1884–1975). Wieman was influenced by James when Wieman articulated religious ideas about relating to a higher power continuous with our own lives, recalling James's vague definition in *The Varieties of Religious Experience*. Wieman's empirical theology analyzes how to actualize such an experience. The creative process within nature is suggestive of God, but Wieman is not a supernaturalist, and in this vein it is best to describe Wieman's thought as radically empirical along the lines of James's emphasis on the reality of experience as starting point for an empirical perspective.

A sophisticated understanding of pluralism is essential to properly situate the U.S. religious visions of James and individuals such as Addams and Mary Parker Follett (1868–1933), both of whom used pluralistic attitudes at the heart of their social work and writings. Perhaps we can see the social work that Addams and Follett accomplished is a creative and social expression of the early pluralistic perspective of “interactional pluralism,” where, for example, Follett presents reality as the most dynamic precisely in the “activity-between”—the interactions between things create new possibilities within society.

The educational emphasis of Addams and Follett make their work intimately connected to Dewey's sense of the educational as “religious” or emancipatory.

The connections between first-wave feminists such as Addams and the classical U.S. philosophical tradition are clear. Key themes in exclusively male philosophy from the nineteenth and early twentieth centuries were also part of the intellectual armament of women philosophers and intellectuals. After documenting the misogynistic aspects of classical U.S. philosophy, some feminist philosophers (such as Charlene Haddock Seigfried) suggest that there are lines of overlap between the basic epistemological models of a general theory of feminism and the organic logic behind pragmatism. Feminist theologians have both critiqued the classical U.S. philosophical perspective and applauded the various advantages of a nonhegemonic, epistemological starting point (see, for example, the recent work of Grace Jantzen). Future trajectories may draw a more intimate genealogical connection between classical U.S. philosophy and the basic philosophical questions and approaches in U.S. feminist philosophy and theology.

Black theology of liberation attempts to theologize the social plight of those discriminated against and oppressed. The second wave of black theology of liberation can be represented by the popular and ecumenical Cornel West, who crafted a response to African Americans in a broader Marxist socialist critique that does not reject the religious and Christian components of the U.S. cultural situation. West intends to show the way out by a return to earlier U.S. traditions of philosophy such as pragmatism to build a uniquely U.S. vocabulary of liberation.

West's discussion in *The American Evasion of Philosophy* of the Niebuhr brothers, Reinhold and H. Richard, demonstrates a range of possible philosophical and religious attitudes in the United States. West believes Reinhold Niebuhr continues the evasion of “epistemology-centered philosophy” that was cultivated by Emerson and later classical U.S. philosophy by focusing on the moral life. H. Richard Niebuhr criticizes his brother for reading religion through the lens of mystics and ascetics, instead of through St. Paul, St. Augustine, Martin Luther, and John Calvin. Such a difference reiterates the U.S. propensity for philosophical and intellectual culture that is either more liberal, emotive, and experiential, or more rationally rigid but still, nevertheless, connected to the religious.

When Winthrop wrote the sermon “A Model of Christian Charity” aboard the *Arbella* in 1630, he could not have

foreseen the long-lasting footprint of his metaphorical vision of the future. Even though Winthrop's admonitions were part of a sermon warning Puritans in the New World that they were on display, nevertheless he contributes to the basic philosophical vision latent in the United States that sees its destiny to be both unique and emblematic of the best qualities of an active, rational, and spiritual soul. Winthrop's vision of creating a city on a hill, a spiritual beacon for the world to see, is philosophical in the sense that religious intellectuals in the United States quickly appropriated "nation-building" metaphors for their new experiences and used this magnetic symbol to yield new U.S. philosophies. For example, "trailblazing" could indicate territorial as well as spiritual and intellectual expansion, and it is precisely in that sense that in one of his first articulations of pragmatism, "Philosophical Conceptions and Practical Results" (1898), James refers to philosophy's primary function of trailblazing, of making the strange familiar and the familiar strange, ideas taken up repeatedly by later philosophers such as Richard Rorty.

Rorty provides a renewed Deweyan interpretation of religion toward the end of his life in his dialogue with Gianni Vattimo published as *The Future of Religion* in 2005. Here religion is viewed positively as a key part of the lives and experiences of human beings. Rorty repeats the ultimately "anticlerical" stance in the U.S. tradition, viewing institutions of religion as static and hurdles to the divinization of humanity and a focus on "this world." Rorty's anticlericalism could be integrated with Dewey's methodology of placing all objects of inquiry in their rich context, suggesting a future philosophy that continues the naturalized perspective while continuing to acknowledge, study, and critically evaluate the cultural influences of religious institutions.

Pietism

Pietism, a Protestant movement of renewal that began in Europe in the seventeenth century, has had a long influence in America. Two strands of Protestantism intertwined in pietism. Those in the first strand, known as churchly pietism, remained loyal to the established Protestant churches. The second strand was radical pietism, the separatist wing, which often generated new groups. The two strands cannot be easily separated. Pietism in general has had an impact on Christian theology and ethics, education, devotional life and practices, benevolent work, and mission impulses.

Definitions

The deeper roots of pietism are in English Puritanism with its desire for godly living and evidence of lively faith, and

especially in those Puritan influences in the Netherlands in the seventeenth century. In the Netherlands a renewal movement emerged known as the “further reformation” (*nadere reformatie*). Its leaders stressed Sabbath observance, disciplined Christian living, and worthy reception of Communion, and sometimes small group meetings for devotion. This movement spread to Germany in the 1660s through the German Reformed pastors who studied in the Netherlands. Thus reformed pietism preceded Lutheran pietism. In addition to these roots, a native German spiritual tradition, including Johann Arndt’s *True Christianity*, as well as more esoteric influences such as Jacob Boehme and Christianized Kabbalah, contributed to pietism. Christian Kabbalists were a small network of people in the seventeenth and eighteenth centuries who sought deeper spiritual insights into the Bible by exploring Jewish mystical texts such as the Zohar and adding Christian interpolations. Many pietists were interested in Roman Catholic quietist writings translated into German. Quietists such as Antoinette Bourignon, Miguel Molinos, and Madame Guyon sought deeper spiritual experience, which they believed was accessible through total spiritual passivity, sometimes implying that the sacraments were not paramount for awareness of God’s grace. Thus, pietism was a movement emerging from many roots with heterogeneous emphases.

Defining pietism is problematic; it depends on how widely or narrowly it is defined. More narrowly defined, pietism refers to the renewal movement within German Protestantism, especially Lutheranism, as well as the various separatist individuals and groups that came from radical pietism in the seventeenth and eighteenth centuries. However, pietism from Germany, both within and outside the established churches, spread well beyond Germany and continued to generate movements well after the eighteenth century. W. R. Ward places pietism inside a larger movement of Protestant renewal that he calls evangelicalism in his book *Early Evangelicalism: A Global Intellectual History, 1670–1789* (2006). Although the exact boundaries of pietism are still debated, it is clear that many interests and people from both pietism and evangelicalism influenced each other in America, Europe, and beyond.

Narrowly speaking, pietism began in European Protestantism in the seventeenth century. Pietism in the Reformed tradition developed from Puritan and Dutch sources around the mid-seventeenth century. Pietism in the Lutheran tradition began when a minister, Philipp Jakob Spener (1635–1705), introduced small group meetings for edification in his

congregation in Frankfurt, Germany, in 1670. Johann Jakob Schütz (1640–1690), a wealthy lawyer, helped to instigate the groups. Schütz prized Christian mystical literature as well as Christianized Kabbalah that developed in the seventeenth century. The small groups (*collegia pietatis*), along with Spener’s moderate anticipation of the “last days,” have been viewed by some scholars such as Johannes Wahlmann as the defining characteristics of pietism.

By the 1650s small groups had already been used in pietism in the Netherlands by the pastor Jadocus van Lodesteyn. The German Reformed minister Theodor Undereyck (1635–1693) introduced them in his congregation in Mühlheim just ahead of Spener in Frankfurt. Spener knew that Jean de Labadie (1610–1674) had used small groups in the 1660s, which eventually led to the latter’s dismissal from the Reformed Church in the Netherlands. Labadie, a Jesuit turned Reformed minister, who later separated from organized churches completely to form his own group, had met Spener in Geneva. One of Labadie’s followers, Anna Maria van Schurman, corresponded with Schütz in Frankfurt. Thus, the use of small groups was neither original nor unique to Spener; however, he anchored them within pietism, despite later reservations. Spener, who had read Puritan writers as a youth, also promoted more extensive use of the Bible, a practical faith rather than theological propositions, and pastors as moral examples of reform.

Spener’s younger associate, August Hermann Francke (1663–1727), was appointed minister at Glaucha on the edge of Halle, Germany, in 1692. Francke preached more explicitly about spiritual rebirth and the struggle for repentance that precedes it. He transformed the academy at Halle into a university. He also launched charitable institutions, including an orphanage, publishing house, pharmaceutical enterprise, and schools for boys and girls. Halle trained ministers to serve parishes in Germany and around the world, illustrating the transnational and transconfessional characteristics of pietism.

Radical pietism’s beginnings were intertwined with churchly pietism, beginning in Frankfurt. Johann Jakob Schütz, who criticized the church more harshly and had a more radical view of the end times, adored mystical and esoteric literature. Schütz, well acquainted with the followers of Jean de Labadie, withdrew from church attendance and gathered some friends to form the Saalhof Circle, which included Eleanora von Merlau (1644–1724). Later she married Johann Wilhelm Petersen (1649–1726), and they spread their radical expectations of Christ’s return through their connections with the Philadelphian Society in England led by Jane Leade.

This network of so-called Philadelphians drew on the concepts of Jacob Boehme. More broadly, the network of pietists both outside and within the organized churches helped many immigrants to America.

Reformed Pietists, Radical Pietists, and the Brethren

The first traces of pietism in America were introduced by Dutch colonists through reformed pietism. After Dutch settlers in the Delaware Valley failed in 1682 to acquire a pietistic pastor, a congregation in New Jersey called Theodorus Jacobus Frelinghuysen as pastor in 1719. He preached against gambling, dancing, alcohol, and tobacco use as contrary to spiritual living, and he tried to admit only the spiritually awakened to receive Communion.

Other pietists in America were more radical. Although the followers of Jean de Labadie were technically prior to pietism, two of them came to America in 1683. Jasper Daenkerts and Pieter Sluyter purchased land on the eastern shore of Maryland at the head of the Chesapeake Bay. Ultimately about 100 Labadists came to work the land, living communally. But by 1723 they had disbanded. In 1694 a group of German radical pietists arrived in Germantown, Pennsylvania. They had gathered around Johann Jacob Zimmermann (1634–1694) in Germany. Zimmermann, a Boehmist, had predicted Christ's impending return. When Zimmermann died in Rotterdam they chose the youthful Johannes Kelpius (1670–1708) as their leader. Upon arrival in North America much of the group dispersed. A few men lived as celibate hermits along the Wissahickon Creek near Kelpius. The group was sometimes known as the Society of the Woman in the Wilderness. They wrote hymns, devotional material, and corresponded with Boehmists in England and Germany.

Among other radical pietists coming to America was a small group known as the Reborn. They followed their prophet, Matthias Baumann, who arrived in Pennsylvania from Lamsheim, Germany, in 1714. He taught the possibility of sinless perfection. The group disbanded after Baumann's death around 1727.

In 1719 a group known as the Brethren (*Schwarzenau Neu-Täufer*, or New Anabaptists from Schwarzenau) came from Krefeld to Germantown with one of their ministers, Peter Becker. They resumed worship in 1723. The group originated in Schwarzenau in 1708 under the leadership of Alexander Mack Sr. They adopted some Anabaptist practices, such as adult baptism, which they administered by threefold immersion. They practiced foot washing at their love feast,

which included a shared meal and Communion. The Brethren were pacifists and practiced church discipline, a feature of both reformed pietism and Anabaptism. Their attempt to recover ancient Christianity had its roots in the Bible and Gottfried Arnold's historical writings during his radical pietist phase. Most of the group made their way to Pennsylvania by 1750.

Another radical pietist, Conrad Beissel (1691–1768), came to Pennsylvania in 1720, reportedly to join Kelpius's group. Beissel had attended meetings of the Community of True Inspiration in Germany. In 1724 Beissel was baptized into the Brethren group in the Conestoga region of Pennsylvania. In 1728 he convinced a breakaway group to observe the seventh day (Saturday) as the Sabbath and preached the superiority of celibacy. Four years later, in 1732, he founded a community called Ephrata in Lancaster County, Pennsylvania, made up of male and female celibates and married families. Beissel taught Boehme's views of an androgynous God whose female aspect was personified as Sophia. Through celibacy, believers could overcome sexual desire and find spiritual gender balance. The Ephrata community created over two thousand hymns for which Beissel developed a unique style of composition. By 1814 the celibate orders had died out at Ephrata, but celibates continued at their daughter congregation, Snow Hill, until 1895. The Ephrata Cloister is now a historic site preserved by the Commonwealth of Pennsylvania.

Christopher Sauer I (1695–1758), a radical pietist whose wife, Maria Christina, left him for Beissel's group, returned to Germantown with their son and became a printer in 1738. Sauer printed the first Bibles in a European language in America, along with much pietist literature. By 1745 the celibate brothers at Ephrata had also established a press. They translated and printed the Mennonites' *Martyrs Mirror* for the first time in German, the largest book produced in colonial America. Ephrata and Sauer also published popular works by Gerhard Tersteegen, a reformed pietist mystic with friends at Ephrata.

The Moravians and the Great Awakening

Another pietist group that greatly influenced America formed in Germany in 1727 on the estate of Count Nicholas Ludwig von Zinzendorf (1700–1760). The renewed Moravian Church, as it is known in English, combined elements of Zinzendorf's piety with remnants of the old Czech Unity of Brethren (*Unitas Fratrum*, who had no connection to the Schwarzenau Brethren) from the fifteenth century. Refugees from the Unity had come to Zinzendorf's estate a few years

earlier. Zinzendorf had a unique mystical devotion to Christ and his wounds and stressed Christ's grace and his role as savior. Indeed, Zinzendorf developed a bridal mysticism of the soul's marriage to Christ. In his new town, Herrnhut (which means "The Lord keeps watch," or "The Lord protects"), created in 1722, Zinzendorf organized the Moravian Church into subgroups known as choirs, divided by gender and age for devotional meetings. He introduced a devotional service ending with coffee and rolls, known as the love feast. The Moravians evangelized energetically across Europe and the world, including to indigenous tribes in America. The group developed a rich tradition of hymnody and instrumental music.

One group of Moravians settled near Savannah, Georgia, in 1735 under the leadership of August Gottlieb Spangenberg, building on their settlement in St. Thomas in 1732. Although the Moravians left Georgia in 1740 because of internal problems, they made a lasting impression on a young Anglican minister, John Wesley (1703–1791), during his unsuccessful ministry in Savannah in 1736. Wesley attended Moravian devotional meetings when he returned to London, and there he had a conversion experience in 1738. He parted ways with Zinzendorf in 1741 over the question of perfection. However, Wesley adapted Zinzendorf's organizational pattern by creating Methodist classes and bands and introducing the love feast.

The Moravians from Georgia went to Pennsylvania, where George Whitefield (1714–1770), the English evangelical preacher, invited them to settle on land he owned in the forks of the Delaware River in 1740. Whitefield hoped to build an orphanage on the pattern of Halle. However, theological differences ultimately arose between Whitefield and the Moravians, and they created their own town nearby, Bethlehem, in 1742. The Moravians formed other settlements in America, including Salem and Bethabara in North Carolina in 1753, but Bethlehem remained the most important in America. In 1742 Zinzendorf was present at the dedication of Bethlehem. That same year he attempted to bring the German religious groups of Pennsylvania into an ecumenical unity, but this effort failed over theological disagreements and personality issues.

At this time the Great Awakening was under way (1740–1742) in New England. There, Jonathan Edwards (1703–1758) preached and wrote about religious affections and spiritual rebirth. His campaign grew out of the long interest in Puritanism in moral conduct as providing signs of response to faith. This interest sparked a mutual curiosity between

New England and Halle pietism, depicted in the correspondence between Cotton Mather and August Hermann Francke from 1711 to 1726. George Whitefield preached rebirth on both sides of the Atlantic, thereby demonstrating the interfaces between New England and British evangelicalism and pietism. In recent research, W. R. Ward, Hartmut Lehmann, and Bernard Bailyn have pointed to these developments to illustrate how pietism, more narrowly understood, is part of a wave of renewal impulses throughout the seventeenth and eighteenth century spanning the Atlantic.

The Halle pietists were slow to gain a foothold in America because German Lutherans lacked sufficient ministers and connections to territorial jurisdictions in Germany. Halle supplied two ministers after 1734 to Savannah, Georgia, for about two hundred Lutherans expelled from Salzburg, Austria, by the archbishop. Zinzendorf's arrival in America in 1741 and his bid to be recognized as a Lutheran clergyman hastened Halle's involvement. In 1742 Gotthilf August Francke, son of August Hermann Francke, sent Henry Melchior Muhlenberg to Pennsylvania to organize Lutheran church life. In doing so, he put a pietist imprint on early Lutheranism in America. Muhlenberg strove valiantly against the Moravians and the dissenting groups in Pennsylvania.

When Gotthilf August Francke died in 1769, rationalism had the upper hand among the professors at Halle. Rationalist philosophy, which already had a long career in England and France, prevailed in Germany. Although institutional pietism passed from the scene with the death of the younger Francke, pietism continued to generate religious developments in the nineteenth century.

Methodists, the Second Great Awakening, Harmonists, and the Amana Community

In the last decades of the eighteenth century new movements emerged in America from pietist influences. John Wesley's ordination of Thomas Coke to be superintendent (or bishop) of Methodists in America and Coke's ordination of Francis Asbury allowed the Methodists to develop leadership in America at the cost of unity with the Church of England. Philipp Wilhelm Otterbein, a German Reformed minister who lived in Pennsylvania and Maryland, cultivated experiential faith and moral living, along with friendly relationships with Methodists and Mennonites. Otterbein and Mennonite minister Martin Boehm organized the Church of the United Brethren in Christ in 1800. Around the same time, Jacob Albright (1759–1808), a Lutheran minister in Pennsylvania, adopted Methodist principles and founded a

separate group in 1803, known after 1816 as the Evangelical Association. The United Brethren and the larger part of the Albright group, later known as the Evangelical Church, joined in 1946 to form the Evangelical United Brethren. This German counterpart to the Methodists joined them to form the United Methodist Church in 1964.

The Second Great Awakening at the end of the eighteenth century into the nineteenth century spread from New England to the Ohio Valley. It prompted the Stone-Campbell movement or Restoration movement, a quest for ancient Christianity led by Alexander Campbell (1788–1866) and Barton Stone (1772–1844). The Disciples of Christ and the Christian Church movements in America are rooted in this revival. Although this and subsequent revivalism are in some respects outside of pietism, their interests in the laity reading the Bible, an experience of salvation or spiritual rebirth, and concerns for godly living overlap with pietism. The similar emphases in American evangelicalism and pietism illustrate their relatedness and the difficulties of overly narrow definitions.

Pietism continued to generate new groups in America and Europe. In western Lancaster County, Wesleyan piety and concern for holiness prompted a group of mainly disaffected Mennonites to organize in the 1780s. The Brethren and Martin Boehm influenced the group, who were known as the River Brethren and later as the Brethren in Christ. They combined Anabaptist commitments to discipleship with a livelier, experiential faith.

In 1787 Georg Rapp (1757–1847) started a separate fellowship in Germany molded by radical pietism, including Boehme, interests in Kabbalah and alchemy, along with the unique amalgam of Württemberg Pietism from Johann Albrecht Bengel (1687–1752) and Friedrich Christoph Oetinger (1702–1782). But Rapp had to flee repression by the duchy and the advance of Napoleon. In 1803 he arrived in America from Württemberg. His followers, the Harmonists, came in 1804. From 1814 to 1824 the Harmonists sojourned in western Indiana and then returned to western Pennsylvania. Late in life Rapp returned to more conventional Lutheran views.

A few settlements spun off of Harmonist divisions in the 1820s and 1830s, locating in Pennsylvania and Louisiana. Some defectors joined a new immigrant, Wilhelm Keil, in a communal settlement at Bethel, Missouri, in 1844, and Aurora, Oregon, in 1856. A completely unrelated small group from Württemberg formed a communal settlement, Zoar, in eastern Ohio in the 1820s.

Pietist groups continued to arrive in America in the mid-nineteenth century. The Community of True Inspiration arrived in the Buffalo, New York, area in 1844. Founded by Eberhard Ludwig Gruber (1665–1728) and Friedrich Rock (1678–1749) in 1714 near Frankfurt, the Inspirationists believed in direct revelations from the Holy Spirit to women and men prophets. They developed a system of elders' leadership. Rejecting water baptism, they held love feasts similar to those held by the Schwarzenau Brethren. The prophet Christian Metz (1794–1867) directed them to America to escape compulsory public schooling for their children and military conscription in Germany. In 1855 they moved to Iowa and established six communal villages, now known collectively as the Amana colony. They abandoned communal living in 1932, but the Amana Church Society continues.

Scandinavians, Readers, and Mennonites

Scandinavian pietism provided new immigrants in the 1840s. Pietism infiltrated Denmark, Sweden, and Norway through contacts between some government officials and Spener and through students who went to Halle at the end of the seventeenth century. Later, Zinzendorf and Moravian missionaries went to Scandinavia.

In Sweden pietism was initially friendly to the government, despite measures as early as 1726 to prohibit small group meetings. Those who participated in small groups were called "Readers" (*läsare*), for reading the Bible. Some Readers wanted to stay within the Lutheran Church, whereas the more radical Readers criticized it and left. In 1840 Erik Janson (1808–1850), a self-proclaimed prophet, had a conversion experience and began to preach publicly in Hälsingland province north of Uppsala. He tapped into the century-long presence of the Readers here. He prophesied judgment, elevated himself as prophet, and preached perfectionism. After imprisonment, Janson left Sweden in 1845 for America, creating a communal settlement in northern Illinois called Bishop Hill, named for Biskopskulla, Janson's birthplace. Internal conflicts and disease disrupted the community, and Janson himself was murdered in 1850. Subsequent internal divisions led to the abandonment of communal life in 1862. Most of the members joined a nearby Methodist church made up of Swedish settlers.

Meanwhile, other Readers came to America from Sweden among the Scandinavian immigrants of the second half of the nineteenth century. Many settled in northern Illinois, Wisconsin, Minnesota, Iowa, and even Kansas. The crossover

influence of Methodists and Baptists among the Swedes and other Scandinavians created a fertile setting for new religious developments. Some Swedish Lutherans formed groups to support mission activity, sometimes questioning the role of the Lutheran confessional writings. Eventually a group separated from the Lutherans completely to form the Swedish Evangelical Covenant Church in 1886. They founded North Park College and Theological Seminary and Covenant Hospital, all in Chicago.

The Mennonites in Europe felt the aftereffects of pietism in the nineteenth century. A Swiss Reformed minister in Leutwil, Samuel Heinrich Froehlich (1803–1857), rejected a new catechism in 1830 that he felt was too rationalist. He was dismissed from office the following year and began to preach throughout Switzerland, arriving in 1832 at Emmental, home to Mennonites. He attracted some of them, and they influenced him to adopt pacifism. He organized new congregations, but he was expelled from Switzerland in 1843. He then went to Strasbourg, where he died in 1857. His congregations were called New Anabaptists (*Neu-Täufer*, with no connection to the Schwarzenau group of that name from 1708). In America they were known as the Apostolic Christian Church. Their first congregation in America was formally organized in 1852 in Croghan, New York, among Mennonites. Members from Europe emigrated to the Midwest. Members of this church practice adult baptism by immersion, are pacifists, and hold many beliefs similar to Mennonites and Brethren.

Mennonites in Russia experienced a pietistic renewal in the 1840s in their Molotschna settlement. New settlers in the area had had contact with Moravians and a nearby German Lutheran who preached about conversion and godly living. Some of those influenced by these ideas held small group meetings in the 1850s. And some of them criticized their church's internal discipline. They held a separate communion service in December 1859. In January 1860 these Mennonites formally organized into the Mennonite Brethren (they had no connection to any other group named Brethren). The Mennonite Brethren faced opposition from some Mennonite ministers and neighbors, but the movement spread. When Russian Mennonites began to immigrate to America in 1874–1880 to escape military service, the Mennonite Brethren also came. They settled primarily in the Great Plains, spreading to Canada in 1888. More immigration followed World War I and the Russian Revolution. The Mennonite Brethren have spread around the world, earlier as refugees and also through missions.

Many pietist groups joined in the broader Protestant movement of international missions in the nineteenth century. In the late nineteenth and early twentieth centuries many churches from pietist and evangelical origins engaged in social benevolence, part of the broader Social Gospel movement. During this era orphanages, homes for the elderly, clinics or hospitals, and centers to aid the urban poor were opened. Some of these pietist-related groups opened institutions of higher education and seminaries. These developments reflected broader trends in Protestantism in the nineteenth century, as well as echoes of earlier concerns in pietism.

Twentieth and Twenty-First Centuries

Albrecht Ritschl's *History of Pietism* (1880–1886) was the most famous and most critical work on pietism in the late nineteenth century. Ritschl judged that pietism was un-Protestant, was unfriendly to culture, and was a sentimental flight from the world. His verdict became the stereotype of pietism that endured until the mid-twentieth century.

Serious scholarship on pietism in America emerged only after World War II. Among the scholars leading this development were Ernest Stoeffler, Donald F. Durnbaugh, Dale Brown, and James Stein. Pietism studies in America lag behind the work in Europe of the International Commission for Pietism Research, founded in 1965. Still, new work continues. In 1988 Elizabethtown College (related to the Church of the Brethren) launched the Young Center for Anabaptist and Pietist Studies. North Park Theological Seminary and its *Covenant Quarterly* promote research on pietism. And in 2000 the Pietism Studies Group formed as a subgroup of the American Society of Church History.

The earlier neglect of research on pietism in America is regrettable in view of the importance of the international role of pietism in settlement and communication patterns between Europe and America. Pietists published prolifically in America, and pietism supported interests in education prior to free public education. From pietism came a rich hymnody tradition, including Johann Anastasius Freylinghausen's *Spiritual Hymnal* (*Geistreiches Gesangbuch*, 1704, 1714) from Halle and *Das Kleine Davidische Psalterspiel* (Small Davidic Psalter) published by Sauer in America in 1744 and used by many of the sectarian groups. Many pietist groups created their own collections of hymns, although the hymns of the Wesleys became the most popular in America.

Some radical pietists created alternative understandings of gender in the seventeenth and eighteenth centuries. Kelpius,

Beissel, and Rapp had a concept of an androgynous God with a female aspect personified as Sophia. Ephrata and the Moravians offered opportunities for women to live together with some internal leadership by women, although never far from male supervision. Some groups embraced alternative views of sexuality, such as adopting celibacy. However, most pietist groups accommodated the traditional patriarchal constructions of women's roles and sexuality.

Although the boundaries of pietism are still difficult to define precisely, knowledge of and serious scholarship about pietism in America is growing as the twenty-first century opens. Pietism as a movement has been long gone institutionally, but some of its offspring are alive and well as critical research on pietism's legacy enters a new era.

Pilgrims

Pilgrims is the modern term used to denote the group of separatist Puritans who emigrated from England to Plymouth colony via Leyden in 1620.

English and Dutch Backgrounds

The English Reformation of the sixteenth century resulted in a centuries-long debate over the proper course and

characteristics of the newly formed Church of England. A diverse group of radicals known generally as Puritans advocated a return to a primitive Christianity modeled on Christian relations as described in the New Testament of the Bible. Although those labeled—by their opponents—Puritans varied greatly, most advocated a repudiation of the episcopal form of church government (governance by bishops) and sought a presbyterian or congregational system in its place. Although most of these Puritan groups sought to reform the Church of England from within, a few, known as Separatists, believed the Church of England to be hopelessly corrupted by Catholic and pagan influences. These separating Puritans were convinced that ecclesiastical purity could be obtained only by leaving the Church of England. Many reformers hoped that James I, who ascended the English throne in 1603, would be more sympathetic to their ideals than previous monarchs, because James, as king of Scotland, had ruled over a primarily Presbyterian country. But they were to be disappointed. James recognized the important intersections between English religion and politics, summing up his position with the succinct phrase, “No bishop, no king.” Through the Archbishop of Canterbury Richard Bancroft, James I attempted to reduce the Anglican clergy to orthodoxy, often removing nonconforming clergy from their livings and excommunicating and even jailing them.

John Robinson (d. 1625), a popular preacher with Puritan leanings in the parish of St. Andrews in Norwich, was one such minister who suffered from the church's displeasure. After being removed from his curacy, Robinson became the pastor of a group with separatist leanings in the Scrooby congregation in Nottinghamshire. Persecution followed there as well. As William Bradford, later governor of the Plymouth colony, remembered it, members of the congregation were “hunted & persecuted on every side. . . . For some were taken & clapt up in prison, others had their houses besett & watcht day and night, & hardly had escaped their hands: and the most were faine to flie & leave their howses & habitations, and the means of their livelihood” (William Bradford, *Of Plymouth Plantation*).

Aware of the more religiously tolerant environment in the Netherlands, the 125 members of the Scrooby group decided to emigrate in order to escape the persecution of the Church of England and to raise their children according to their own version of Christianity. After a brief sojourn in Amsterdam in 1608, the group settled in Leyden where they remained for over a decade. Although the group was able to

worship without fear of reprisal, most found it difficult to find lucrative jobs and so were mired in poverty. Many members of the congregation also became uneasy under the more permissive culture of the Netherlands. As Bradford recalled, “many of their children, by these occasions, and the great licentiousness of youth in that countrie, and the manifold temptations of the place, were drawn away by evil examples into extravagante & dangerous courses, getting the reins off their neks, & departing from their parents” (Bradford, *Of Plymouth Plantation*). A portion of the congregation then decided to emigrate to North America, where, they hoped, they might worship as they pleased and exercise greater control over their children.

Nomenclature

Modern Americans refer to the settlers who decided to immigrate to Plymouth as the “Pilgrims,” although the group did not refer to themselves in this way except in the sense that any group who traveled for religious reasons might be termed pilgrims. Indeed, modern usage of the term *Pilgrim* is often remarkably imprecise. Some authors restrict the use of the term to mean the group of Separatist Puritans who emigrated from Leyden to Plymouth in 1620. Others use the term to refer to all Separatist Puritans who immigrated to the Plymouth colony, and still others refer to all residents of the Plymouth colony as Pilgrims. The settlers from Leyden sometimes identified themselves as “saints” to distinguish themselves from the “strangers” who came to Plymouth for primarily economic reasons, but they did not identify themselves as “Pilgrims” per se. The term appears to have been widely adopted only in the late eighteenth and early nineteenth centuries, as Americans (and particularly New Englanders) searched for an origin myth to legitimize the new nation.

Voyage to Plymouth

The Leyden Pilgrims were not in a position to fund their proposed voyage to the New World nor to negotiate particularly favorable terms with merchants who might sponsor them. Ultimately, they obtained permission from the Virginia Company to settle in the northern part of its jurisdiction to the south of what was then New Netherlands. They then bargained with the Merchant Adventurers of London to finance their passage to North America. The terms of their agreement, which were not entirely settled until after the first wave of Pilgrims had left for North America, required them

to travel with non-Pilgrim “strangers,” who made up the majority of the colony in its early years. Ultimately, the group was forced to agree that they would work communally for the first seven years of the venture and return all of the profits of the colony to the Adventurers as repayment for the cost of their passage and initial supplies. The agreement, however, would prove to be short-lived. English men and women, used to laboring for the good of their own households, resented working for a common store. Indeed, the arrangement proved to be so unproductive that it was abandoned within the first three years of settlement. Shortly thereafter, twelve “undertakers” agreed to assume private responsibility for the colony’s debt to the Adventurers.

On August 5, 1620, the group of “saints” and “strangers” attempted to leave Southampton, England, on board the *Speedwell* and the *Mayflower*. But the master of the *Speedwell* quickly determined that the ship was not seaworthy and refused to pilot it across the Atlantic. On September 6 the group set sail from Plymouth, England, packed tightly into only the *Mayflower* and leaving some of their company behind. The two-month voyage was reasonably uneventful until the group reached the east coast of North America just off of Cape Cod. The ship had been blown off course, and because of strong currents it was unable to make its way south to its original destination within the jurisdiction of the Virginia Company. According to Bradford, when it became clear that the group would have to land outside of the jurisdiction of its patent, a number of the “strangers” on board with “discontented & mutinous speeches . . . [declared] that when they came a shore they would use their own libertie; for none had the power to comand them, the patente they had being for Virginia, and not for New-england” (Bradford, *Of Plymouth Plantation*). To provide a legitimate basis for government in the new colony, the group drew upon ideas about voluntary compacts, which the Pilgrims had used in gathering their churches, to devise what later became known as the Mayflower Compact. The terms of the Compact, signed on November 11, 1620, which was meant to be temporary but which endured until Plymouth was incorporated in to the Massachusetts Bay colony in 1692, provided that the group would form a civil body politic, enact just and equal laws, ordinances, acts, constitutions, and offices, and meet from time to time.

Although many have interpreted the Mayflower Compact as an intentional precursor to later forms of republican government or even as a Lockean contract (that is, one intended to build up a new society out of a state of nature), its

intention was significantly less radical. Faced with potential anarchy, leaders of the expedition intended the compact to be a stop-gap measure until the Plymouth colony could obtain a legal charter. The compact remained in force until the end of the seventeenth century only because the colony never did obtain an independent charter.

After scouting parties spent about a month surveying the land around Cape Cod, the party decided to settle in an area they named Plymouth. They disembarked from the ship piecemeal, and if they stepped onto any particular rock contemporary sources fail to document it. The group had landed far too late in the year to plant crops. Nor were the provisions they carried with them sufficient to see them through until the following harvest, and so the colonists supplemented their meager stores by hunting. Nevertheless, the first winter proved devastating for the colonists. By spring more than half of them had died of cold, illness, and malnutrition. Fortunately for the Plymouth colonists, but unfortunately for the Native Americans living there, the English settlers of 1620 were not the first Europeans to make contact with those living in the area around Cape Cod. In fact, "Plymouth" had once been the Indian village of Pawtuxet. By the time the Plymouth colonists arrived, European diseases had wreaked havoc among the indigenous population, killing entire villages but providing cleared land on which the English colonists could build their town and plant their crops.

In March 1621 the Plymouth colonists made contact with an Abenaki man named Samoset, who, to their surprise, spoke basic English. Samoset introduced the colonists to Squanto, whose English was fluent because he had lived for some time in England. Squanto had been captured in 1614 and taken to Spain where he was sold as a slave. He had then made his way to London, traveled back to North America, and jumped ship near his home only to find that his entire village had been wiped out by disease. Squanto not only instructed the Plymouth colonists in New England agriculture but also introduced them to Massasoit, a friendly local Indian chief. The meeting between the Plymouth colonists and Massasoit ushered in a period of peace and alliance nearly unique in the history of American settlement. The period of amenity would continue, largely unbroken, until the outbreak of King Philip's War in 1675.

The "First Thanksgiving"

In the fall of 1621 the Plymouth settlers celebrated what later Americans would describe as the "First Thanksgiving."

Only two sources document this event: a passage from William Bradford's diary and a letter from settler Edward Winslow. The sources suggest that this was not a day of thanksgiving in the usual seventeenth-century sense of the word. Many colonial governments (Puritan and Anglican alike) proclaimed days of thanksgiving that were set aside to give thanks to God for a particular blessing, to attend divine worship, and to eat a special meal. Neither source documenting the 1621 celebration uses the word *thanksgiving*, and there is no indication that church services were held. Rather the 1621 event appears to have been a traditional English harvest home festival in which the colonists rejoiced in a bountiful harvest. Such celebrations usually occurred annually in England.

The some fifty colonists who had survived the previous winter gathered for three days of feasting and games. They were outnumbered almost two to one by about ninety Indians, including Massasoit, who joined in the celebration. The meal was significantly different from what modern Americans consider to be a "traditional Thanksgiving" meal. Although cranberries were abundantly available in the Plymouth region, the sugar that would have made them palatable was prohibitively expensive, and there is no evidence that any English settler ate cranberries in the seventeenth century. Likewise, it is very unlikely that the celebrants feasted on pumpkin pie, a dish unknown to them and one that would have required milled wheat flour, sugar, an oven, and other things the colonists were unlikely to have in 1621. The Indians brought venison to the feast. Although wild turkeys were indigenous to the area around Plymouth, it is more likely the colonists contributed ducks and geese to the celebration. Fish, shellfish, salad greens, corn, and some other type of grain probably made up the complement of the meal. The games most likely consisted of shooting contests and other seventeenth-century English sports.

Relations with Massachusetts Bay

In 1630 a large group of non-separating Puritans settled the Massachusetts Bay colony in the area around Boston, triggering the Great Migration that would eventually bring about twenty thousand colonists to New England before immigration dried up during the English Civil Wars. Although Pilgrims from Leyden and other settlers continued to augment the population of Plymouth, the Pilgrim settlement was quickly dwarfed by the Massachusetts Bay colony to the north. The two colonies maintained reasonably friendly relations, and Plymouth survived in large measure by selling

Massachusetts Bay settlers the cattle and foodstuffs they needed to get their colony off the ground.

Religious Beliefs and Ecclesiastical Practices

The Pilgrims suffered from a chronic lack of ordained clergy from their settlement until the 1660s, when John Cotton Jr., son of the famous John Cotton of Massachusetts Bay, accepted a call to the Plymouth church. John Robinson, the congregation's minister in Leyden, had planned to emigrate to Plymouth and assume leadership of the church there, but he died in 1625 before he could make the journey himself (Robinson had remained in Leyden to help facilitate the emigration of the rest of his congregation to North America). Although the Plymouth church managed to obtain the services of a few ministers in the period before Cotton's arrival, most stayed for only brief periods and appear to have provided indifferent leadership. Consequently, the Plymouth church remained in the hands of its lay leadership, most notably of the church's elder, William Brewster.

Like the Puritans of Massachusetts Bay, the Pilgrims were Calvinists. They espoused the doctrine of the absolute sovereignty of God, along with the related doctrines of election and predestination. In other words, they taught that God alone had power over the salvation or damnation of individual souls and that people themselves were powerless to effect their own salvation through prayer or good works. Following the teachings of John Calvin and later theologians, they believed that God had chosen or "predestined" some people to be saved and some to be damned. Those destined for a heavenly afterlife were God's "elect."

Like the Puritans, the Pilgrims attempted to base their church on the early Christian church as described in the New Testament. Accordingly, they rejected most of the offices of the Church of England, including that of the bishop. They recognized only ministers, teachers, elders, and deacons as leaders of the church. Their churches followed a congregational system in which individual churches were formed by the covenant of their members and operated free from the governance of any outside human agency. Prospective members were required to provide evidence of saving grace before being admitted to the covenant and the sacraments. Although the Pilgrims recognized it was not possible to know conclusively who was among the elect and who among the damned, they strove to make their earthly "visible" churches mirror the invisible church of God as closely as possible. These "gathered" churches were to be separate from the profane world. Limited evidence suggests, however,

that most of the colonists who applied for membership in the Plymouth colony churches were admitted. The Pilgrims, like the Puritans, also rejected the Anglican liturgical calendar. Their only holiday or holy day was the Sabbath. The Pilgrims did not celebrate Christmas, Easter, or any of the many saint's days that were typically observed in England.

In accordance with their desire to mimic the New Testament churches, the Pilgrims partook only of the two sacraments for which they saw biblical justification (and then only when they had clergy to administer them): baptism and the Lord's Supper. Although both sacraments were visible signs of adherence to the church, neither was believed to have any innate efficacy. The Pilgrims, like most seventeenth-century Protestants, practiced infant baptism. They rejected the requirement by the Church of England that all infants born within the borders of a parish be baptized. In Plymouth only those children who had at least one parent who was a church member were eligible for baptism. Despite dwindling church membership after the first generation at Plymouth, the Pilgrims continued to require that all candidates for baptism have at least one covenanted parent. When faced with a similar predicament, many of the Puritan churches in the Massachusetts Bay colony in 1662 embraced the Halfway Covenant, which allowed the children of those who had been baptized but had not joined the church to have their children baptized. The Pilgrims, even though aware of the Halfway Covenant, chose not to enact a similar policy.

The Pilgrims rejected most of the sacraments of the Anglican Church. Individual churches ordained ministers by the laying on of hands. Although they limited the power to administer the sacraments to the clergy, they did not treat the ordination of ministers as a sacrament. Because parents did not take vows for their children at baptism, there was no need for the sacrament of confirmation. Evidence of conversion and participation in the Lord's Supper brought one into full communion with the church. Likewise, the Pilgrims rejected sacramental marriage; they considered marriage to be a holy but civil contract. Magistrates, not ministers, performed marriage ceremonies in Plymouth until 1692. That year, Plymouth was incorporated into the Massachusetts Bay colony, and its new charter specified that ministers should be empowered to conduct weddings. And like the Puritans of Massachusetts Bay, but, unlike the English, the Pilgrims occasionally allowed marriage contracts to be dissolved in cases of adultery or desertion. Because they rejected the doctrine of purgatory and the related practice of praying for the dead,

the Pilgrims also rejected elaborate funerals. Although a minister might accompany the deceased and his or her family and friends to the churchyard, neither prayers nor sermons were common at burials.

The Pilgrims differed from most people in the Western world in the seventeenth century in that they did not, at least initially, attempt to compel church attendance or to provide support for the ministry via taxation. Nor did they limit the franchise to church members as the authorities in Massachusetts Bay did. Admittedly, in 1620, surrounded by non-Pilgrim “strangers” and financed by a group in England unsympathetic with their religious motives, the Pilgrims were not in a position to compel religious conformity. Later, however, in response to a perceived degeneration among the inhabitants of the colony, the General Court ordered that those who neglected public worship be fined or whipped. In 1657 the General Court also ordered that all members of the colony be compelled to support the church financially. The decision displeased at least one colonist who complained that “now we must have a State-Religion . . . a State-Minister and a stateway of Maintenance; And we must worship and serve the Lord Jesus as the World shall appoint” (quoted in Robert M. Bartlett, *The Faith of the Pilgrims*).

Although the Pilgrim churches of Plymouth and the Puritan churches of Massachusetts Bay were quite similar in both theology and church governance, they differed in their relationship to the Church of England. The churches of Massachusetts Bay considered themselves to be within the fold of the Anglican Church even though they rejected those aspects of the English church they believed smacked of Catholicism or paganism. In the minds of Massachusetts Bay colonists, their churches were purified Anglican churches that they hoped would serve as an example to English churches, as well as sustaining their own spiritual needs. The Pilgrims, by contrast, considered the Church of England too corrupted with practices lacking a scriptural basis to be reformed. The Pilgrims were separatists who left the Church of England in order to form their own primitive churches. That said, it is possible to make too much of the distinction between the separating churches of Plymouth and the nonseparating churches of Massachusetts Bay. Both colonies, after all, were an ocean away from Old England, outside of the bounds of any Anglican parish, and beyond the power of the Anglican hierarchy. On a practical level, the Anglican Church’s relationship with the church of Plymouth and that with the church of Massachusetts Bay were not entirely dissimilar.

Historical Sources

Historical sources for understanding the Pilgrims are surprisingly limited. Court records, including probate inventories and wills, survive in good numbers, as do some travelers’ accounts, and letters to and from the settlers. By far the most comprehensive primary source for the history of Plymouth is the journal of the colony’s second governor, William Bradford, which is now in print in several editions under the title *Of Plymouth Plantation*. The journal was not written for publication, was not published until the late nineteenth century, and was generally unavailable to scholars before its publication. Because it was not published until all who were immediately concerned with the events it chronicled were long dead, it did not inspire the refutations that might have allowed historians to balance Bradford’s account. Bradford’s journal is supplemented by *Mourt’s Relation*, probably authored by William Bradford and Edward Winslow, which was published as a promotional tract in England in 1622. A somewhat different account of Plymouth’s early years can be found in *The New English Canaan*, written by Thomas Morton, a much more hostile observer. The many sermons and narratives published in and about seventeenth-century Massachusetts Bay have few corollaries in Plymouth. Plymouth lacked a printing press throughout its independent existence. Perhaps as important, Plymouth suffered from a chronic shortage of clergymen before John Cotton Jr.’s arrival in 1667. Although the Pilgrims themselves doubtlessly discussed both theology and practical godliness, they lacked a strong ministry to develop and, more important from a historian’s perspective, to publish their developing theology. To some extent the extensive publications of John Robinson, the Pilgrim’s mentor in Leyden, can fill in these gaps, but Plymouth never had the equivalent of the Massachusetts Bay’s Increase Mather or Cotton Mather to set down their sermons or their stories.

Modern Conceptions

Much of what passes as common knowledge about the Pilgrims of Plymouth is based as much on eighteenth- and nineteenth-century legends as it is on historical documentation. Indeed, much of the recent scholarship on the Pilgrims concerns the development and vitality of various Pilgrim myths rather than the band of colonists themselves. It is neither surprising nor particularly interesting that Americans should have gotten their history wrong. What is interesting is the ways in which Americans have used icons such as

Plymouth Rock, events such as the “First Thanksgiving,” and documents such as the Mayflower Compact to provide themselves with a congenial history, a set of precedents for later historical developments, and a justification for their actions in the present.

Pledge of Allegiance

“I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one Nation, under God, indivisible, with liberty and justice for all.”

Standing at their desks with right hands over hearts, most American schoolchildren begin the day by reciting these familiar thirty-one words. Newly minted Americans also conclude their citizenship ceremonies with the same patriotic ritual.

While often perceived as a timeless summation of the nation’s common values, this loyalty oath has had a fascinating and occasionally checkered history since first spoken in 1892.

Origins

As the four hundredth anniversary of Columbus’s arrival in America neared, editors of *Youth’s Companion*—the nation’s most popular weekly—began a campaign to raise “the U.S. Flag over every Public School from the Atlantic to the Pacific.” Looking for a way to promote the upcoming World’s Columbian Exposition—the world’s fair to be held in Chicago, Illinois, in 1893—organizers asked *Youth’s Companion* to spearhead a day of celebration for schoolchildren. This comfortably meshed with the magazine’s patriotic mission, and the editors immediately agreed. President Benjamin Harrison added his official imprimatur by proclaiming that all public schools should mark the groundbreaking for the Chicago World’s Fair on October 12, 1892.

As the *Youth’s Companion* staff designed the program for what soon was known as the National Columbian Public School Celebration, newly hired staffer Francis Bellamy (1855–1943) sought to craft an oath that would reaffirm America’s historic values. To articulate the meaning of national loyalty, Bellamy landed upon these words: “I pledge allegiance to my Flag and the Republic for which it stands: one Nation indivisible, with Liberty and Justice for all.”

First recited by schoolchildren on Columbus Day in 1892, the Pledge of Allegiance was born not just of patriotic pride but also of economic and nativist anxieties. Bellamy had been a Baptist clergyman until his increasingly radical religious views conflicted with those of his congregation. In late-nineteenth-century America, growing socioeconomic inequalities led to innumerable labor strikes, leading many to believe that the gap between rich and poor, between industrialists and their workers, threatened to undo the social comity upon which a flourishing republic depended. Bellamy believed that free-market capitalism, with its rapacious appetite for wealth and its survival-of-the-fittest ethos, departed from Jesus Christ’s vision of humans living in loving cooperation. Given his worldview, Bellamy’s invocation of indivisibility may be read as a Christian socialist’s urgent plea for recovering American egalitarianism.

Ironically, Bellamy’s socialist vision of universal equality masked a very particularist sense of who should be allowed to fully participate in American democracy—and on what terms. The Pledge’s author deeply feared that new immigrants risked diluting the “authentic” Anglo-Saxon heart of American identity. He hoped that the loyalty oath would serve as an engine for assimilation, articulating the principles by which aliens must live if they were to be welcomed as full members of the American family. Regardless of his personal

ideology, however, Bellamy had given birth to an oath that captured the imaginations of all kinds of fellow patriots.

Changes and Challenges

Thanks in large part to energetic efforts by civic organizations such as the Grand Army of the Republic (a Union Army veterans group founded in 1866) and the Woman's Relief Corps (an auxiliary to the GAR created seventeen years later), flag-salute exercises—often, but not always, including the Pledge—grew increasingly common as the twentieth century unfolded. The oath became more ubiquitous between the two world wars: by cementing Americans together through common patriotic rituals, public leaders hoped that the Pledge of Allegiance could serve as a bulwark against radicalism.

As the Pledge grew in importance, a small debate ensued when the descendants of *Youth's Companion's* editor, James B. Upham, claimed that it was in fact he—and not Bellamy—who had authored the Pledge. But in 1939, the U.S. Flag Association officially proclaimed Bellamy as the oath's sole author.

Generally speaking, however, since its inception the Pledge of Allegiance has engendered two kinds of controversies. The first: can schoolchildren refuse to say the Pledge, or can the state compel them to recite it? Before the Second World War, more than thirty states made the ritual mandatory, sometimes conditioning the ability to attend public school upon a student's compliance with that law. The most culturally consequential objections came from religious families, who found the compulsory flag salute to be an unwelcome intrusion of militarism into public education, or as an idolatrous act that wrongly sought to raise loyalty to country over loyalty to God. Dissenters often met with tragic consequences. For example, in 1925, in a particularly harsh enforcement of a state law mandating the flag salute, a Washington State judge arrested the father of a nine-year-old who, for religious reasons, refused to take part in the Pledge. The parents belonged to the Elijah Voice Society, which rejected such patriotic exercises as too militaristic. They remained steadfast in their noncompliance, and the judge removed the boy from his home and placed him in state custody. (The boy and his parents finally reunited—a full two years later.)

In the 1930s, members of the Jehovah's Witnesses, who believe it is forbidden to swear fealty to anyone but God, began to run afoul of similar state laws compelling recitation of the Pledge and the accompanying flag salute. The movement's leader, Joseph Rutherford (1869–1942), publicly

called for all Witnesses to dissent and noted that Germany's "Heil Hitler" salute mirrored the same stiff-arm motion many schoolchildren raised to the American flag. After his two children were expelled from their Minersville, Pennsylvania, public school for refusing to say the Pledge, Walter Gobitas—a Jehovah's Witness—sued. In 1940, the United States Supreme Court upheld by an 8–1 vote the state's right to compel children to recite the Pledge of Allegiance. In his majority opinion, Justice Felix Frankfurter wrote that "the ultimate foundation of a free society is the binding tie of cohesive sentiment." Because the preservation of American freedoms rests upon a shared identity, he reasoned, public schools have the right to promote national cohesion by compelling the Pledge.

The Court's decision met with immediate criticism and an unprecedented outbreak of religious intolerance. School expulsions increased, and Jehovah's Witnesses in many places found themselves, their personal property, and their worship centers attacked. In a West Virginia town, a sheriff's deputy rounded up Witnesses and roped them like cattle—he and American Legion members forced those who resisted to drink castor oil. In Nebraska, hoodlums castrated one Witness; a mob in Wyoming tarred and feathered another.

This ongoing persecution, and a rising tide of public criticism, led the Supreme Court to change its mind. In a remarkably swift about-face, three years later the Court reversed its earlier opinion. A group of Jehovah's Witnesses had challenged a West Virginia law that expelled noncompliant children from school and threatened fines and imprisonment for their parents. Announced—intentionally—on Flag Day in 1943, *West Virginia State Board of Education v. Barnette* ruled unconstitutional laws compelling students to say the Pledge of Allegiance. Writing for a 6–3 majority, Justice Robert Jackson wrote, "to believe that patriotism will not flourish if patriotic ceremonies are voluntary and spontaneous instead of a compulsory routine is to make an unflattering estimate of the appeal of our institutions to free minds."

A second set of controversies arose from changes in the Pledge's wording. In 1924, on Flag Day, the words "my flag" were altered to read "the flag of the United States of America." This unremarkable change was followed thirty years later by another augmentation—this time with long-lasting cultural and legal ramifications. In the midst of a cold war contest between American and communist ideals, religious and political leaders sought to more clearly distinguish the United States from the avowedly atheist Soviet Union by reaffirming that God belonged firmly on the American side.

To reify the civic consensus that the country's institutions rested upon a divine foundation, the Knights of Columbus (a Catholic fraternal organization) in 1952 called upon Congress to add "under God" to the Pledge. The Reverend George Macpherson Docherty enthusiastically endorsed this idea in a sermon at Washington, D.C.'s New York Avenue Presbyterian Church on February 7, 1954—and won the hearty agreement of President Dwight D. Eisenhower, seated in the front pew. With public momentum building, eighteen different members of Congress introduced bills to add new words to the Pledge. By late spring 1954, Congress finally agreed upon one bill that added the words "under God" to the Pledge of Allegiance. As he signed this linguistic change into law on Flag Day (June 14), President Dwight D. Eisenhower pronounced, "From this day forward, the millions of our school children will daily proclaim . . . the dedication of our nation and our people to the Almighty." In so doing, citizens would be fortifying "those spiritual weapons which forever will be our country's most powerful resource."

This conspicuous addition catalyzed later disputes regarding the Pledge and the nature of American identity embodied in its ritual recitation. Earlier Pledge controversies had concerned the free exercise of religion: could the state penalize those citizens who objected, for religious reasons, to reciting the Pledge? After 1954, objections to the Pledge more often raised a different issue. Does having the words "under God" in the Pledge of Allegiance violate the First Amendment's establishment clause by unconstitutionally endorsing religion?

More concretely, if public school teachers—as government employees—lead the recitation of the Pledge of Allegiance, is it legal? Atheist Michael Newdow believed the practice was not legal, and in the early twenty-first century, he sued for exactly that reason on behalf of his daughter, who attended a public school in California where teachers began the day by leading the Pledge. Though students were not forced to say the oath, Newdow argued the state was nevertheless unconstitutionally establishing religion because its employee (the schoolteacher) invoked God in reciting the Pledge.

Deciding against Newdow, the United States Supreme Court allowed the voluntary practice of reciting the Pledge. Five justices ruled that, because his wife had sole custody of their daughter, Newdow had no legal standing to sue in the first place. But in agreeing with the case's outcome, three other justices wrote concurring opinions that affirmed their position that it *was* constitutional for public school teachers

to lead the Pledge of Allegiance. (Justice Antonin Scalia agreed with this reasoning but recused himself from the case because he had already said so publicly.)

In oral arguments before the Supreme Court, Justice David Souter had asked whether the invocation of God during a civic exercise "is so tepid, so diluted, so far from a compulsory prayer that it should in effect be beneath the constitutional radar." (Having "In God We Trust" on American money, using public funds to pay for congressional chaplains, opening Supreme Court sessions with "God save this honorable Court"—each has engendered similar reflections.) As a constitutional matter, most Supreme Court justices have so far answered Souter's question with an unequivocal "yes."

More legal challenges may await, but the Court's current view reflects public opinion. A poll by the Associated Press in 2004 found that 87 percent of Americans agreed that the phrase "under God" should remain in the Pledge. And as of 2006, forty-three of fifty-three states and U.S. territories require the public school day to begin with the Pledge. Despite pockets of dissent, the voices of most of the nation's schoolchildren affirm loyalty to God and country each morning by reciting the same thirty-one words.

Significance

A perennial American question: what to make of those citizens who refuse to say the Pledge of Allegiance? Though the Supreme Court in *Barnette* had ensured that students could choose not to recite the oath, those who opt out of the Pledge have commonly been ostracized. And viewing the Pledge as a test of someone's national loyalty has hardly been confined to schoolchildren. For example, in the 1988 presidential campaign, Republican George H. W. Bush attacked as unpatriotic his Democratic opponent, Governor Michael Dukakis, for vetoing a law that would have required all public school teachers in Massachusetts to recite the Pledge. "What is it about the Pledge of Allegiance that upsets him so much?" Bush asked. "It is very hard for me to imagine that the Founding Fathers—Samuel Adams and John Hancock and John Adams—would have objected to teachers leading students in the Pledge of Allegiance to the flag of the United States." By implication, someone "against the Pledge" does not fully support American ideals.

Many Americans remain mystified by just how much controversy sometimes surrounds the Pledge of Allegiance. For them, the Pledge is a harmless, inoffensive, but nevertheless important reaffirmation of national loyalty. On par with singing the national anthem at public events, or celebrating

the Fourth of July with parades and fireworks, saying the Pledge is an act of public piety that reminds citizens of their common identity. Such acts of patriotic faith, or civil religion, stand unthreateningly alongside—rather than in conflict or competition with—an individual’s particular religious commitments.

For Americans to view the Pledge of Allegiance in this way—as a generic invocation of eternal, broadminded civic values—is likely as common as it is historically simplistic. Born in an era when white Protestants worried that America’s character might be threatened by a rising tide of immigration, the Pledge’s public profile has been an important harbinger of underlying social, religious, and political anxieties. The Pledge’s cultural salience has usually increased in times of national crisis, when public leaders have worried that enemies—whether real or imagined, whether foreign or domestic—threaten the nation’s (perceived) ideals or (perceived) social cohesion. Ironically, this oath that serves to bind Americans together often enters the public spotlight at exactly those cultural moments when those national bonds seem most at risk of fraying.

Pluralism

E pluribus unum. These Latin words familiar to those who have looked at U.S. currency translate simply as “out of many, one.” Although the reference was to the multiple colonies

that came together to form one nation, the phrase also indicates something of the character of U.S. religious life. In this one nation, many religions and even many variations of the same religion flourish. The two words most frequently used to describe this multiplicity of religions in one nation are *pluralism* and *diversity*. For some, the two terms are nearly synonymous. Both suggest that no single religion or form of religion captures the whole story. *Diversity* also highlights variety, indicating that even among religious beliefs, practices, and institutions that appear remarkably similar, considerable variation prevails when one looks beneath the surface.

Others distinguish between *pluralism* and *diversity*, believing that *diversity* historically accents the domination of strains of Christianity in U.S. religious life, with other religions sometimes only reluctantly tolerated and often marginalized. But in toleration one finds diversity in the simple recognition of various alternatives. *Pluralism* assumes that variety is a positive good and that no single form of religion has or should have the dominant influence.

Yet others insist that pluralism and diversity have changed meaning since the arrival of the first Europeans on U.S. soil. Early in the U.S. experience, pluralism highlighted the variety of Protestant groups that took root in the British colonies. Often that pluralism had an ethnic component, a feature of diversity that remains vital to many traditions. Prejudice against groups perceived as “other” makes achieving pluralism a struggle. By the mid-twentieth century, most strains of Christianity—whether Protestant, Catholic, or Orthodox—and the various branches of Judaism function in similar ways in the United States, especially in providing a moral framework for supporting responsible citizenship. Even so, an undercoating of ethnic diversity enriched virtually every discrete tradition. By the twenty-first century, greater elasticity prevailed, with a host of other religions—from Hinduism to Islam—growing rapidly, and a more complicated diversity within existing groups in style and ethos increasingly important. This last understanding informs the discussion that follows.

Diversity is not limited to the United States but describes religious life throughout North America, in different degrees and dimensions. It marks Canadian religious life, for example, in the complex history that intertwines French Catholicism, Anglicanism, the United Church of Canada, and a host of other groups. Pluralism also is evident in Mexico, although there strains of Hispanic Catholicism fused into indigenous practice are more obvious. However, the United States stands out as a nation where diversity and pluralism have been

central to the story of national religious life. Diversity and pluralism as they have shaped United States religious culture will be the primary focus here.

Early Signs of Diversity

More than 500 indigenous tribal cultures had made a home for themselves in North America before Christopher Columbus sailed into the Caribbean in 1492. None had a written language; none had a word for *religion* in the way that Europeans understood the term. And no two tribal societies operated in exactly the same way, although there were some common patterns depending on whether cultures were oriented toward cultivation of crops or relied on hunting and gathering for sustenance. Patterns also varied depending on region. This range of tribal approaches indicates that diversity was a feature of North American religious life long before the arrival of European invaders and colonists. That diversity expanded as early Spanish and French colonial missions added an overlay of Christianity to tribal traditions in areas under their control. This interaction that fused indigenous and Christian ways together continued to add diversity to Native American religious life after the arrival of other European colonists and particularly after the United States expanded its geographic reach from the Atlantic to the Pacific. Numerous revitalization movements, from that associated with Handsome Lake in the early nineteenth century to the Ghost Dance among the Lakota Sioux that led to the Wounded Knee massacre in 1890, demonstrate that ongoing blend of native and Christian dimensions, for they drew on millennialist hopes common to Euro-American religions to give fresh meaning to native tradition.

Most analysts of pluralism in the United States note that few Europeans who came to the English colonies embraced ideas of diversity. Most believed that they alone possessed absolute truth, and few were willing to tolerate alternatives. In areas where the Church of England enjoyed legal establishment, other religious options were allowed, though not supported by the government, but only after policy in Britain required it. In New England, dominated by various groups of Puritans, alternatives were gradually and reluctantly tolerated; in the early decades, those who represented minority viewpoints—individuals such as Roger Williams or groups such as the Quakers—were either banished or punished. In places such as New York, once a Dutch colonial outpost, other strains of European Protestantism dominated for a time. With the Dutch, one sees an early example of the ethnic component of diversity.

Pennsylvania unwittingly became the model for later developments, although designed as a haven for Quakers, a dissenting group in England subject once to much persecution. William Penn, the colony's founder, opened the area to any wishing to come, provided they did not upset public order. His move was pragmatic; the colony needed to recruit settlers to survive. But German Protestant sectarian groups found Pennsylvania particularly attractive, as did other Protestant bodies that were marginalized minorities elsewhere. By the time of U.S. independence, Pennsylvania had the most diverse religious complexion of any of the new states, including a Catholic presence that may have surpassed that even of Maryland, founded as a haven for Catholics.

In areas of the South where the Church of England enjoyed legal establishment, diversity also became evident in the colonial period. For example, South Carolina, although ultimately granting the Church of England special privilege, opened settlement to all who believed in God. One result was that by the time of independence, South Carolina had welcomed scores of French Huguenot dissenters and nurtured a substantial Jewish community. Then, from the early eighteenth century on, Scots-Irish migrants and others whose settlements stretched southward along the eastern slopes of the Appalachian colonies planted a more evangelical style. Pluralism, in the sense of having a multiplicity of religious groups, prevailed everywhere at the time of U.S. independence.

The Constitution's Pluralistic Marketplace

The extent of prevailing diversity, as well as reservations about the kinds of ties between religion and government existing in Britain, led delegates to the Constitutional Convention in 1787 to omit all reference to religion, save for a provision that there be no religious test for federal public office. Simply put, no particular religious group claimed the allegiance of a majority of the new nation's citizens. Some, fearing that later establishment could follow, urged framers of the Bill of Rights to include in the First Amendment to the Constitution the words, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof."

Later widely touted as fixing the U.S. principle of church and state, the amendment ensured that pluralism and diversity would continue. With no national religion, Americans were free to choose what religion if any they would practice; nor would government dictate what religious beliefs were acceptable or even what practices, providing they did not

undermine the general welfare of the people. When religion became voluntary and the religious world a marketplace, pluralism was certain to grow. Yet interpreting what the wording of that amendment means has caused ongoing controversy. Countless court cases, many at the level of the Supreme Court, emerged. In one sense, regardless of the specifics of the case, all are signs of the pervasiveness of pluralism and a grappling with its implications. Some, for example, have concerned the rights of minority groups such as serpent handlers, those who refuse certain medical protocols on religious grounds, or newer immigrant practices associated with Santería. Cases concerning public schools and public property have stirred more controversy, because “public” embraces all Americans in theory.

Generally the courts have refused to define religion or rule on matters of doctrine. Since the middle of the twentieth century, the trend has been to restrict or prohibit any religious exercise or expression that is required of everyone, such as prayer and Bible reading for devotional purposes in the public schools. The trend has also been to affirm rights of individual adults in matters of practice; hence courts might intervene to mandate a medical protocol for a minor that an adult could reject on religious grounds. Critics insist that the courts have jettisoned the popular democratic notion of majority rule and become overzealous of minority rights. Yet even framing the problem in terms of *majority* and *minority* highlights the prevalence of pluralism. The main consequence of the amendment, though, remains the theoretical placing of all religious forms on an equal footing before the law, with all perspectives protected.

Nineteenth-Century Diversity Brings New Challenges

The constitutional ideal of a free religious marketplace did not mean, however, that religious prejudices ended. If all religions were equal before the law, translating that equality into tolerance and acceptance, two hallmarks of a thoroughgoing pluralism, was a difficult process. For most Americans, at least in the first half of the nineteenth century, pluralism meant the multiplicity of Protestant denominations, all seen as variants of the same truth. Consequently it also meant only reluctant toleration of others, such as Roman Catholics and Jews. Sometimes it meant outright hostility toward those groups and others. Hence some historians have insisted that a broad evangelical Protestantism that took many different denominational forms was akin to an unofficial religious establishment in the United States.

At the same time, though, the number of alternative religious options exploded. Many individuals started their own religions or sought to attract followers. Some succeeded more than others. One of the most successful is the Church of Jesus Christ of Latter-day Saints, or Mormons, based on teachings the American Joseph Smith received presumably by direct revelation. Numerous communitarian groups such as the Shakers and the Oneida Community found a home in the United States. So, too, following a burst of millennial interest in the 1840s did a number of Adventists. Others claimed to reconstitute the Christianity of the apostolic era. When regional divisions over slavery divided the nation, so, too, many religious groups split along sectional lines, adding another dimension of diversity. Even today, region plays a signal role in shaping religious styles. Later in the nineteenth century, movements such as Christian Science and New Thought added another layer to pluralism in their efforts to harmonize religion and science by drawing on the power of mind.

Ethnicity added its own features to expanding pluralism, particularly within existing traditions rather than creating new religious forms, thanks to the rapid rise in immigration between the Civil War and World War I. The millions who came from southern, central, and eastern Europe, for example, brought an ethnic diversity within U.S. Catholicism, as parishes serving Slovak, Italian, and Hungarian constituencies flourished alongside those with Irish, English, and German adherents. A similar ethnic richness pervaded U.S. Judaism, giving it an internal diversity in Reform, Conservative, and Orthodox expressions. This wave of immigration also swelled the ranks of Russian and Greek Orthodox Christians in the United States. When World War I erupted most U.S. citizens may have identified with one of the standard Protestant denominations, but hosts of other alternatives were available. Undercurrents of bias flowed, but diversity was wearing more faces. Some Protestants, fearing that the old unofficial establishment was eroding, hoped that by converting immigrants to Protestant ways Protestants could “Americanize” the immigrants to become better citizens. Even these fears indicate how the scope of pluralism was expanding.

Within U.S. Protestant Christianity, the opening decade of the twentieth century witnessed the eruption of Pentecostalism, adding yet another dimension to pluralism. Emphasizing direct experience of the Holy Spirit, Pentecostalism gave ecstatic religion fresh credibility, resulting in formation of a cluster of denominations.

Pluralism and Diversity at Mid-Century

Patterns in place by the 1920s remained relatively stable for a generation. World War I slowed immigration, and legislation in the 1920s severely restricted immigration, both in the total number of immigrants who could enter the United States in any given year and the number who could come from any particular country. The complex formula put in place strongly favored religious and ethnic communities with roots in northern and western Europe. That is, it was a mechanism to sustain Anglo-Saxon Protestant Christian influence in U.S. culture. The Great Depression also muted new forces of pluralism because economic issues took precedence over religious ones. Not until after World War II did the ways pluralism had developed over the preceding half century come into focus, thanks to the emergence in the Cold War era of a new enemy, “godless communism.”

Evidence for a revamped pluralism comes in a widely cited sociological study called *Protestant, Catholic, Jew*, first published in 1955. Its author, Will Herberg, demonstrated that the many Protestant denominations, Roman Catholicism, and the various branches of Judaism all had plausibility in the United States; that persons tended to view all of them as valid ways of being religious and therefore of training adherents to be moral and responsible citizens; and that their common features—which other commentators began to lump together as “the Judeo-Christian tradition”—had greater significance in the public square than did their differences. Herberg also identified a parallel “religion of the American way of life” centered on increasing conspicuous consumption rather than on rigorous commitment to the ideals of faith. One consequence seemed to be a muting of religious intolerance; many pundits pointed to the 1960 election of the Roman Catholic John F. Kennedy as president of the United States, a symbol that religious bigotry was eroding. It had not dwindled in matters of race. Religious groups still organized along racial lines. Those calling for affirmation of the civil rights of African Americans and those calling for legally maintaining racially segregated social institutions all drew on religion to advance their positions. If lip service to the Protestant-Catholic-Jewish triad suggested that one sort of religious pluralism had gained social acceptability, divisions regarding race reminded Americans that pluralism bred its own intolerance.

Vital in pushing pluralism in a new direction were changes that followed congressional passage of the Immigration and Nationality Act (Hart-Celler Act) in 1965. Removal

of quotas in place since the 1920s allowed stunning increases in immigration from Latin America, Asia, Africa, and the Near East. Consequently, the numbers of Americans identifying with the Hindu, Buddhist, Sikh, and Muslim traditions began to grow rapidly; ethnic connections influenced how Asian immigrants in particular sought to plant their indigenous religious ways on U.S. soil. So, too, the numbers of Latino/a immigrants, most identified with the Christian tradition, skyrocketed. Diana Eck has insisted that this new immigration transformed the United States from a Christian nation into one of the most religiously pluralistic nations in the world. Although scholars debate whether the country was ever Christian in any narrow sense, Eck’s argument is that recent immigration has pushed pluralism in a fresh direction because much of it lies outside the orbit of the Judeo-Christian or even the Abrahamic traditions. As well, this “new” immigration brought significant differences in how these religious approaches responded to the U.S. context. William Hutchison found that the newer immigrants resisted mere toleration as minority groups amid a cluster of dominant traditions. Instead, they insisted on full equality and recognition of legitimacy. They took the guarantees of the First Amendment seriously.

Other trends added to the diversity within U.S. religion. By the middle of the 1970s, evangelical Protestants started experiencing significant growth; long dominant denominations with roots in the colonial era—Episcopalians, Congregationalists, Presbyterians, Methodists, and others—continued to decline. Many evangelicals identified with megachurches and other congregations that eschewed denominational affiliation. By the end of the twentieth century, Pentecostals were mushrooming. Some of that increase resulted from immigration, especially from Latin America. The surge spanned more than Pentecostal denominations, however, to encompass charismatically inclined congregations across the spectrum of denominations. By the early twenty-first century, trends also indicated that for the first time since U.S. independence, the proportion of the U.S. population identifying as Protestants was about to dip below 50 percent of the population. Pluralism was thus not only a historical feature of U.S. religious life, it had become one of its defining characteristics.

From the time of European conquest of North America to the present, diversity and pluralism have marked religious life. If at one time pluralism denoted a multiplicity of Protestant groups whose combined influence stamped the culture with a particular style and marginalized other bodies, the

understanding shifted. By the end of the nineteenth century, Roman Catholicism could claim to have been the largest religious body in the United States for half a century. Then, by the middle of the twentieth century, especially to contrast the United States as a righteous nation with “godless communism” of the Cold War era, analysts spoke of the mutual influence of the Protestant-Catholic-Jewish triad. New immigration, as well as switching among religious groups, brought an explosion of pluralism. Religion in the United States had become so diverse that the choices seemed infinite, although a small but growing number claimed no religious identification at all. Pluralism thus remains a key to understanding religion in U.S. life. The marketplace sanctioned by the First Amendment continues to flourish.

Politics: Colonial Era

During the seventeenth and eighteenth centuries, religion and politics constantly intertwined for residents of the British North American colonies. Several colonies had distinctively religious foundings, while others were strongly informed by

religious ideals. Whereas the politics of New France to the north and New Spain to the south were colored by their identification with Roman Catholicism, Protestant Christianity supported the British colonial endeavor. Religion shaped political practices (political sermons, church establishments) and political decisions (during the Glorious Revolution or in debates over religious toleration). Religion colored the practice of international relations, as Protestant forces clashed with Roman Catholic imperial enemies. At the end of the period, religion also contributed to the growing tensions that would produce independence from Great Britain.

Religion and Politics in New France and New Spain

The interaction of religion and politics in British North America occurred against the backdrop of contrasting arrangements throughout the Atlantic world, the zone within which Europeans, Africans, and Native Americans interacted and formed new societies. European involvement throughout the Atlantic world was connected to religious identity and sense of mission. Settlers adopted colonial strategies to further the goals of their home societies, hoping for societal replication. Religiously, this meant the continuation of Reformation-era divisions. As Catholic nations settled New Spain and New France, it is no surprise that their Catholicism shaped their political lives.

From the time Christopher Columbus claimed the Indies for the “most Catholic” majesties Ferdinand and Isabella, religion played an important role in the Spanish colonial endeavor. The advancing Spanish often used the *requerimiento*, a legal proclamation read in Spanish to uncomprehending natives, which demanded that native populations simultaneously convert to Christianity and pledge their fealty to the Spanish crown or be considered at war with Spain. Religious legalism thus helped justify Spanish conquest. Both Franciscans and Dominicans conducted missionary endeavors. They usually travelled with Spanish *conquistadores* and made sure that conquered natives were baptized and brought into the officially Catholic realm of New Spain. An important part of the “reduction” of the colonies was the destruction of native religions—even though the attempts usually led to syncretism, rather than a total reorientation of religious belief and practice. As the Spanish developed their colonial institutions, religion was inseparable from their political societies. On the *encomienda* land grants, proprietors built multiple Spanish institutions, especially chapels for Catholic worship. Despite the abuses produced by linking

religion to the colonial endeavor, it was also Catholic missionaries—led by the Dominican Bartolomé de Las Casas (1474–1566)—who called for improved treatment of the Indians under Spanish rule.

For French settlers, Catholicism was also the default belief—especially as Louis XIV limited the rights of Huguenots in France as well as French colonies. Many public institutions such as schools and hospitals in New France were run by religious orders, thus providing many of the early sinews of colonial public life. French colonial strategy was unique in the shape of the missionary endeavors the French sponsored. In contrast to the more rigid orders in New Spain, the French commissioned the Jesuits as their religious representatives to the Indians—primarily the Hurons. The Jesuits used a more culturally sensitive and contextualized approach to evangelism. The *Jesuit Relations* recount efforts to learn native languages, understand the cultures, and present the Catholic faith. Although many natives declined to believe, many others did, and the Jesuits subsequently gathered them into Indian communities near French settlements. The practice of French godparents, Catholic worship, intermarriage, and trade brought these Native American converts into French communal and political life. Many of these natives consequently joined the French in imperial wars, and religion played an important role in inspiring their involvement. French settlers were united in their Catholic identity and their acknowledgment of the Catholic nature of the colony.

Religion and the Founding Ideals of British North American Settlements

The Chesapeake: Virginia and Maryland

Religious motivation lay behind many of Britain's various colonial endeavors. As early as Richard Hakluyt, religious reasons had mixed with economic and imperial justifications for colonial expansion. Such mixed motivations are apparent even in Virginia, the first successful settlement. From the beginning, the chaplain Robert Hunt had ministered to the Jamestown settlers, and after his death in 1608 other priests followed. After the initial faltering years, a new governor, Sir Thomas Gates, put into place a rigorous legal system of *Lawes Divine, Morall, and Martiall*. The *Lawes* required twice-daily attendance at divine service and additional instruction on Sundays. They punished both blasphemy and the questioning of the Trinity with death. The *Lawes* were quickly abandoned, but the Anglican element endured. Governor

William Berkeley (governor 1642–1676) worked to strengthen the Anglican character of the colony as part of his larger policy of making Virginia a royalist reproduction of England. The result was a colony where Anglicanism supported the patriarchal rule of white men over their wives, children, indentured servants, and slaves.

Maryland's religious purposes differed from many of the other colonies. The Lords Baltimore—George Calvert and his son Cecilius—founded Maryland as a refuge for English Roman Catholics, at a time of Protestant ascendancy in England, establishing St. Mary's in 1634. Tension soon developed as Catholics held positions of power in the colony, even though they were outnumbered from the beginning by Protestant settlers. The "Act concerning Religion" (1649)—granted under pressure during the English Civil War—guaranteed toleration, allowing both Protestants and Catholics to practice their religion without abuse, but this failed to satisfy the ever-increasing numbers of Anglican immigrants. Disagreements on religious grounds would grow until the Glorious Revolution.

New England: Plymouth, Massachusetts Bay, and Rhode Island

In New England, the first permanent settlement of Plymouth Plantation also came about for religious purposes. The group of separatists who would become known as Pilgrims began their wanderings in 1608 when they fled English laws demanding religious conformity and traveled to Leiden, the Netherlands, in search of greater religious freedom. Dissatisfied with Leiden, they decided to resettle in the New World, boarding the *Mayflower* in 1620. Blown off course, they found themselves off the coast of Massachusetts, rather than the region of Virginia for which they had aimed. Lacking an enforceable charter, they required that every male—both Pilgrim "saints" and non-Pilgrim "strangers"—sign the Mayflower Compact. This document officially "founded" their settlement. In it, they declared their intents: "Having undertaken for the Glory of God, and Advancement of the Christian Faith, and the Honour of our King and Country, a Voyage to plant the first Colony in the northern Parts of Virginia. . . ." To fulfill these religious motivations, they reconstituted a government, agreeing to "covenant and combine ourselves together into a civil Body Politick . . ." (quoted in *The Federal and State Constitutions, Colonial Charters, and Other Organic Laws of the States, Territories, and Colonies Now or Heretofore Forming the United States of America*, edited by Francis Newton Thorpe). From its founding, then, Plymouth

affirmed the religious character of its settlement. Gaining some stability under William Bradford's leadership (1590–1657; governor 1621–1657), the colonists established laws they believed to be biblical. Even the Pilgrims required colonial support of their own church, now able to conduct worship as they deemed appropriate. Despite their experience of persecution, the Pilgrims did not abandon the ideal of political support of the church, nor of religious sanction of the governing bodies.

The Puritans of Massachusetts Bay migrated to establish a political and ecclesiastical order that was more fully purified from Catholic accretions according to biblical standards. With the Archbishop of Canterbury William Laud restricting their opportunities and the growing threat of Catholic activism on the European continent, Puritans undertook the “Great Migration” in the 1630s under the leadership of John Winthrop (1588–1649). Puritans aimed to reshape society according to their own Reformed lights. They were not interested in religious freedom or even the toleration of those who differed from them—as Quakers would discover.

The Puritan model for the establishment of their societies centered on their understanding of *covenant*, as a formal agreement between contracting parties in the sight of God. Individuals obtained salvation through joining, by faith, the “Covenant of Grace.” In the absence of Anglican churches in Massachusetts, Puritan communities created new churches through covenants that set forth both the doctrine and the discipline of the churches. Those who agreed to form towns also entered into covenants regarding land use. The forms of these covenants mirrored one another, revealing how covenantal thinking structured Puritan thinking about all levels of society.

The writings of both John Winthrop and John Cotton (1584–1652) clearly articulated Puritan ideals of governance. In his famous lay sermon “A Modell of Christian Charity” (1630), Winthrop revealed how he believed the colonists ought to relate to one another through love. Only this Christian virtue would sustain the settlers and harmonize their naturally unequal social conditions into one society. With love, the colonists could fulfill their special divine mission. As Winthrop stated it, “We are entered into covenant with Him for this work. We have taken out a commission.” Successful planting in the New World was proof that God had ratified the covenant, and he would expect it to be scrupulously honored. This high standard was necessary because the combined religious and civic institutions would be “*as a city upon a hill. The eyes of all people are upon us.*” Similarly, in his 1645

“Little Speech on Liberty,” Winthrop described a Puritan theory of magistracy. The type of “civil” freedom that he hoped for Massachusetts to maintain was connected to obedience to law and to elected governors, God’s appointed rulers. From the ministerial side, John Cotton contributed to the distinctive shape of Puritan New England, particularly in three 1636 works. In *Moses His Judicials*, he gave a defense of the use of Old Testament law as the basis for New England society—a strategy evident in the “General Laws and Liberties of Massachusetts.” Finally, in “Letter to Lord Saye and Seale,” he defended the Puritan commonwealth from attacks in England, arguing that the state should be shaped for the benefit of the Church, rather than vice versa.

This close connection of church and political institutions proved difficult for Puritans to maintain, since it depended on the conversion of each generation by the time they reached adulthood and began having children. Although this arrangement worked in the first generation, its limitations soon became apparent. In the second generation, ministers noted what they believed was spiritual declension, symbolized by the decline in professed conversions. To remedy this, Puritan ministers fashioned the Half-Way Covenant (1662), which allowed those parents who had themselves been baptized but not converted to bring their children to be baptized. Baptism thus carried not only religious but also political meanings for inducting members into the Puritan commonwealth.

Rhode Island took its approach to church and state matters from its founder, Roger Williams (1603–1683). Williams came to Massachusetts Bay as a Puritan with a zeal for higher levels of purity in the church, which he hoped to accomplish through the extrication of the churches from political matters. After being ejected from Massachusetts Bay and sparring in print with Rev. John Cotton, Williams wrote *The Bloudy Tenent of Persecution, for Cause of Conscience* (1644). Williams offered a strong defense of the liberty of conscience, which translated for him into full religious liberty in the colony. Although Puritans sniffed at the odd collection of religionists who gathered in Rhode Island, the colony proved to be free of religious violence, although not religious dispute.

Pennsylvania

In Pennsylvania, the Quaker convert William Penn (1644–1718) directly shaped the colony’s religious character. Penn hoped to use the land he received from Charles II as a refuge for other Quakers. This ideal confronted seeming difficulties from Quakers’ opposition to English society. Their principle

of the “inner light” that illumined every person made for an egalitarian outlook on society, which cut against the social hierarchies of England. Moreover, their refusal to take oaths (based on Matthew 5) undermined their reliability in a court of law. Finally, their pacifist stance would seem to make them unable to support a colony’s defense. Penn set out to offer a contrasting grounding for Quaker politics in his 1682 “Frame of Government.” He drew on both biblical and classical sources to sketch a government functioning for the good of its citizens. He hoped a moral citizenry would undergird a just legal system, where government would both be respected by the citizens and would protect the people from the abuse of power. Although the “Frame” itself proved unworkable, Penn soon replaced it with a “Charter of Privileges” in 1701.

The actual functioning of Quakerism in Pennsylvania political life made for a tolerant and welcoming colony. Penn worked to maintain positive relations with the Indians, signing treaties and compensating them for land the English wanted. Many Quakers immigrated, with Philadelphia the center of settlement. Their quiet, industrious manner helped turn Pennsylvania into a “peaceable kingdom.” The colony also proved religiously tolerant, and it attracted other religious groups, including many German settlers.

Religious issues colored the disputes within Pennsylvania politics. One early battle was between Penn’s heirs as proprietors and the elected Assembly. The Assembly originally had little power, and to gain it they had to challenge the standing of the Penn family. The ascendant Assembly was at first primarily Quaker. With the increasing assault of Indians involved in the French and Indian War, however, conscientious Quakers refused to support the raising of a colonial militia. Pacifist Quakers thus surrendered political power to Quakers and non-Quakers who would use military force and govern Pennsylvania as any other British colony.

The Low Country: The Carolinas and Georgia

In the low country of the Carolinas and Georgia, other religious attitudes took root. The Carolinas were founded by eight proprietors, who received grants from Charles II: to pursue commercial colonies along the lines of England’s Caribbean sugar plantations. The proprietor most responsible for religious matters was Anthony Ashley Cooper, the first Earl of Shaftesbury (1621–1783). A great believer in religious toleration, he worked with the philosopher John Locke (1632–1704) to draft the Fundamental Constitution in 1669. The Fundamental Constitution granted outright religious

liberty to all religious groups except atheists. A subsequent revision of the constitution allowed for a future Anglican establishment, which the Anglican elites near Charles Town (called the Goose Creek Men) pushed through in 1704 with the Exclusion Act, meant to remove all but Anglicans from colonial offices. When the Crown rejected the act, the colonists created the Church Act in 1706 to establish the Anglican Church but avoid offending other groups. This hearty toleration made the Carolinas hospitable to a wide variety of immigrant groups, including French Calvinists (Huguenots), German Reformed, Presbyterians, and Jews.

North Carolina separated from South Carolina in 1729, but it was always a very different environment. It had a large Quaker population, as well as Baptists and others. Subsequently, Anglicanism never established a firm public place in North Carolina. Religious benevolence helped drive the founding of the last colony of Georgia. General James Oglethorpe (1696–1785) viewed the colony not only as a buffer colony against Spanish Florida and hostile Indians, but as a place for reform for debtors and prisoners. Oglethorpe’s religiously informed vision hoped for the reformation of its settlers and the establishment of stable families, and it aimed to do so by outlawing liquor and slaves. This vision failed to attract settlers, however, and Georgia became a royal colony with established Anglicanism but practical toleration in 1751.

Religious Establishments

Given these religious backgrounds, the various forms religious establishment took in the colonies make sense. Established churches created a powerful link between the church and the political instruments of the colony and the larger British Empire. Not only did established churches receive financial support from colonial taxes, but they also helped define the limits of acceptable religious discourse within the colony. The southern colonies of Maryland, Virginia, North and South Carolina, and Georgia all sponsored Anglican establishments, but those establishments varied widely in practice. Virginia possessed the strongest, most well-supported, and most uniformly practiced establishment. Early in its existence, Maryland officially established Anglicanism, but its Catholic proprietors limited their support of the Anglican Church. With the Glorious Revolution the Crown ordered a strengthened Anglican establishment that mirrored neighboring Virginia’s. North Carolina’s establishment was exceptionally weak, existing more on paper than in reality. Even with their establishments, South Carolina and Georgia still hosted many dissenting (non-established

Protestant) groups. In New England, the colonies of Massachusetts Bay, Plymouth (later merged with Massachusetts), Connecticut, and New Hampshire all had Congregational establishments. New York presented an interesting case, with Anglicanism the established church in the city of New York and the counties of Richmond, Queens, and Westchester. Outside of that, local areas could disburse monies to whatever church the majority favored, including Dutch Reformed churches in many areas. When governors tried to expand the Anglican establishment they met resistance. For a variety of reasons, no establishment existed in Pennsylvania (Quaker toleration), New Jersey (ethnic and religious diversity), Delaware, or Rhode Island.

Underneath the colonial establishments, however, religious diversity increased in the colonies, and the attitudes toward establishment shifted. Establishments could not prevent the growth of many nonestablished religious groups. Immigration from England and intercolonial movement brought dissenting groups to all of the colonies. German, Dutch, and Swedish immigrants brought their distinctive Protestantism to the New World as well, including Dutch Reformed churches, Swedish and German Lutherans, Moravians seeking new missions, and some Sephardic Jews in Rhode Island and South Carolina. The Great Awakening also helped spur the growth of dissenting groups. These groups grew and were largely unmolested, especially after the Glorious Revolution enshrined a principle of religious toleration. The Toleration Act of 1689 legislated ongoing limits for Roman Catholics but made arrangements for protecting the liberty of conscience for all Protestant groups. Although the Church of England still received preferential treatment, the act helped establish a “religious free market” for Protestants. Groups such as Baptists and Quakers still complained about having their tax monies support established denomination, but they were allowed to worship freely. The toleration the colonies practiced was not full religious liberty, but it allowed for greater diversity than had been possible in Europe a century before. The presence of establishments thus created a structural presence of religion in colonial political life, setting the ground rules under which all members of society would have to act, while not determining which Protestant group its citizens would join.

Religion and Social Order: Metaphor and Practice

Religion contributed a vital aspect to colonial society and politics, demonstrated both in the language colonists used to describe their society and in their actual practice. First,

Protestantism formed an important element of British patriotism. As Carla Pestana and Linda Colley have demonstrated, Protestantism formed a key component for defining and holding the empire together. Although the Church of England was favored by the imperial government, many Protestant groups found shelter under the Anglican umbrella provided by the empire. As the colonists increasingly asserted their British identity, they simultaneously stressed their Protestant character, believing that English liberties and Protestantism were intimately connected. The other side of this claim was a strong anti-Catholicism that stressed the politically and religiously oppressive nature of Roman Catholicism (demonstrated in the Spanish Black Legend).

In describing how the political order ought to relate to the churches, the majority of colonists (Quakers and Baptists excepted) favored the “nursing father” metaphor. Drawn from Isaiah 49.23—“kings shall be thy nursing fathers, and their queens thy nursing mothers”—this idea appropriated a prophecy made to the ancient Hebrews and transferred it to the Christian churches. Popular since the Middle Ages, this outlook posited that since Christianity was true and the source of salvation, the monarch had a duty to encourage it and to protect it from error and harm, suggesting a close relationship between the powers of the state and the established church.

Other political language also contained within it a powerful religious element. The image of the “body politic,” for instance, traditionally made room for the operation of faith. Just as a body needed a soul to animate it, so the body politic needed the spiritual life provided by the churches. Similarly, many colonists especially in New England described the family as a “little commonwealth.” The principles of order, rule, and hierarchy that pertained to the kingdom also applied in the family. Just as a king was responsible for the religious condition of his subjects, so a father was responsible for the spiritual lives of his wife, children, and servants. Thus, religious oversight as part of the government’s domain stretched from the highest to the lowest in society.

These ideals received powerful public enactment. In New England, laws required weekly church attendance, and deacons would investigate absences and recommend fines for offenders. Similarly, officials with public and religious roles collected tithes and other monies to support the churches. Beyond Sunday worship, many political gatherings also possessed a religious component. A sermon would precede the responsibilities of election days, and those mustered for militia training would also hear preaching. Other

sermons commented on public issues, whether the character of a “good ruler” or the providential and political implications of wars or natural events like earthquakes and droughts. These sermons would often be printed, leading to increased circulation of their content. Governors would also call for both fast and thanksgiving days. As official events, these would also be marked by divine services and observed in every community.

In the Chesapeake, the practices differed, but religious life was still a public matter. Due to the increased distances served by churches, worship was less frequent; however, that invested each service, with greater import. As a public event, church services were a time to gather, to see and be seen—and often as a prelude to other forms of sociability, including horse racing and courting. Religious services were also connected with the legislatures—such as the Virginia House of Burgesses. Public figures made a point to be present and visible for the appropriate Anglican worship. By contrast, further south in the Carolinas, there was very little tradition of public expressions of religion. Piety was present, but this rarely led to political implications.

Religion and the Glorious Revolution

The Glorious Revolution proved to be significant not only in England but also in America, where the political upheaval carried with it a number of religious overtones. The ascent to the throne of Catholic James II in 1685 troubled many Protestant colonists—just as it did their coreligionists in England. Colonists grew even more concerned as it became apparent that James was dedicated to using the colonies to generate revenue, the better to allow him to rule independently of Parliament. In America, this meant the presence of Sir Edmund Andros (1637–1714), who was charged with governing the newly reorganized Dominion of New England (the New England colonies plus New York and the Jerseys). Not only did Andros increase taxes, but he limited New England town meetings and replaced local officials. He stopped the financial support of Congregational clergy and set up an Anglican congregation in Boston as a prelude to creating an official Anglican establishment. Such abuses seemed calculated to disrupt the Puritan commonwealth. Throughout New England, ministers provided leadership to resist these changes.

News of the arrival of William and Mary in England and their reception by Parliament traveled slowly across the Atlantic, and the lag between the first news of the event and official confirmation produced instability and dramatic

change in several colonies, particularly Massachusetts, New York, and Maryland. In Massachusetts, colonial leaders organized a quick, popular uprising against Andros’s authority. In April 1689, colonial leaders filled Boston with two thousand militiamen. They quickly arrested Andros and imprisoned him until they could receive royal instruction. They immediately declared their loyalty to the new, Protestant monarchs, making clear that they did not intend to revolt against the proper British authority. Even though Massachusetts’s actions received royal approval, they still produced some instability. While Massachusetts was waiting for its new charter, the Salem witch trials occurred (1692), partially as a result of the breakdown of governance.

In New York, the response to the revolution—Leisler’s Rebellion—produced much more division. When news of events in England arrived, Jacob Leisler (1640–1691) took command and quickly captured the fort at Manhattan. Leisler’s support primarily lay with the older Dutch Reformed population, and he himself was a zealous Calvinist and deacon in the Reformed Church. With no direct instructions from London, Leisler remained in power. He proved to be authoritarian himself and isolated a number of people, especially the newer British settlers. When direct instructions from the Crown arrived, Leisler refused to submit. As a result, he was caught and convicted of treason. Leisler’s Rebellion revealed the continuing ethnic and religious divisions within New York society. Many of Leisler’s supporters were the ethnic Dutch who were refusing to assimilate with British culture, and many of them subsequently migrated into New Jersey.

Maryland would witness the most successful colonial uprising. The Protestant majority under the Anglican planter and malcontent John Coode used a delay in recognizing William and Mary as a pretence to form the Protestant Associates and arrest the Catholic governor, William Joseph. The Crown endorsed these actions, and William revoked the Calvert family’s charter, making it another royal colony. Here, too, resistance grew out of the close connection of Protestantism and British patriotism.

Religion and Foreign Affairs

Because of the close identification of Protestantism with British patriotism and empire, religion also energized the colonists’ participation in imperial wars. British Protestantism fed a strong anti-Catholicism that inflamed passions against the colonists’ two major imperial rivals, France and Spain. This element was present in all of the major conflicts the

colonists engaged in from the late seventeenth century onward. The support the colonists had given to Protestants William and Mary echoed in their involvement in King William's War (1689–1697). Their (largely ineffectual) attacks against New France supported William's strategy in Europe to check the moves made by Louis XIV. War renewed with Queen Anne's War (1702–1713), fought as part of the larger War of the Spanish Succession in Europe. Colonial expeditions attacked both St. Augustine in Florida and Acadia in Canada. Later, in the War of Jenkins's Ear (1739–1742), colonists again directed their attacks against Catholic Spain, with some colonists even fighting in the Caribbean at Cartagena.

The interconnected concerns about the French, their Indian allies, and Catholicism were apparent in several conflicts primarily involving New England. During Queen Anne's War in 1704, a combined Catholic and Indian force raided Deerfield, Massachusetts, slaughtering some of the residents and taking many others as captives. Taken to New France, they came into close contact with both French Catholicism and their Indian captors. Although many, like the town's minister John Williams, resisted the religious pressures put on them, others wavered and converted to Catholicism. Some, such as Williams's daughter Eunice, even maintained their conversion when they were free to return home. The Deerfield Raid was still fresh in the minds of colonists when news came that a Jesuit named Sebastien Rale in Maine was stirring up his Wabanaki converts to attack New England. The resulting frontier fighting earned the title "Father Rale's War" (also called Dummer's War, 1721–1725). When an armed expedition reached Rale's base, he died fighting rather than surrender.

As the eighteenth century continued, the ongoing conflict with France called forth increasingly strong religious language. During King George's War (1744–1748), New Englanders again rallied to attack Canada. Massachusetts Governor William Shirley organized an expedition under the command of William Pepperell to capture the well-defended fort at Louisbourg. Pepperell convinced the famous itinerant preacher and awakener George Whitefield (1715–1770) to help generate enlistments, and fasts called by Governor Shirley helped unify the colony. When Louisbourg surrendered, colonists celebrated it as a providential victory and interpreted it as part of a divine millennial plan. The religious significance of the capture of Louisbourg helps explain the shock and disaffection that resulted from Britain's returning the fort to the French in the Treaty of Aix-La-Chapelle.

With the traditions forged during the Louisbourg campaign, colonial support—especially in New England—for the French and Indian War came naturally. Local ministers and itinerants both supported the cause. Many clergy signed up as chaplains. Again, soldiers marched north to confront the "antichrist" of papist France. Both the great Congregationalist theologian Jonathan Edwards (1703–1758) and evangelist George Whitefield encouraged New Englanders during the war, even when things looked bleak early on. With the victories at Québec and Montreal (1759, 1760), the colonies rejoiced. Finally, the French menace had been removed, and many hoped for even greater signs of a coming Protestant millennium.

Religion and the Coming of the American Revolution

The interaction of religion and politics in the colonial period formed part of the cultural matrix within which the contests of the Revolutionary era transpired. Scholars, however, continue to debate the exact significance. One still-contested question centers on the relationship of the Great Awakening and the American Revolution. Ever since Alan Heimert in *Religion and the American Mind* (1966) provocatively posited a close connection, historians have attempted to understand how the two events related. Most have come to agree that the Awakening was important but not centrally causal for the American Revolution.

Even so, several events in the late colonial period caused colonists to question the power of the British government and the Anglican establishment, including controversies over the Parsons' Cause and a resident Anglican bishop. In Virginia, Anglican clergy received payment in tobacco or its cash equivalent. When drought struck in 1758, the Virginia House of Burgesses set the cash equivalent of a pound of tobacco at two pennies—much below market valuation. When the clergy protested to London, the imperial government disallowed the act. Several priests in Virginia then sued for damages—the Parson's Cause. In opposition to them, the young frontier lawyer Patrick Henry (1736–1799) convinced the jury that the act had been for the common good and had been popularly supported, so the suit should be dismissed. This struggle over the social and economic standing of the established clergy contributed to discontent with imperial rule and a greater sense of shared interest between dissenters and Anglican laity.

In the North, many also feared the ongoing calls for settling an Anglican bishop in the Colonies. Anglicans,

especially in the South, wanted a bishop to ordain priests for the colonies. Anglicans believed they were losing out to other religious groups because all of their clergy had to be ordained in England before coming to America. Undoubtedly, an Anglican bishop would strengthen both the church and Anglican establishments in the colonies. This was exactly what many dissenting groups feared. A resident bishop represented the combined power of the English church and state. Groups as diverse as Congregationalists, Quakers, and Baptists all had memories of religious persecution, and the very suggestion of a resident bishop forced them to question the intents of the imperial government.

Socially dissenting groups—those most influenced by the Awakening—challenged the social order of Anglican and Anglicized elites. As Rhys Isaac has demonstrated for Virginia, social elites strongly supported a hierarchical society and a decorous Anglicanism. By contrast, the dissenters—many of whom lived on the frontier along the Appalachian Mountains—undermined such ideals. Their worship services were more lively and egalitarian. This religious vision reinforced a more democratic social outlook. This contrast was most dramatic in the South. In the Middle Colonies, Presbyterians especially organized against Anglican dominance in public life. In New York, political alliances often reflected religious differences. In New England, the distinctions were more muddled since some Congregationalist elites would still side with England, but even here, the ethos of the Awakening challenged elite sentiments.

Simultaneously, preaching and religious language dealt with the political matters of the day. In New England, ministers such as Jonathan Mayhew articulated a language of religious resistance to political tyranny as early as 1750. Interestingly, Mayhew and his allies were not strong supporters of the Great Awakening but were rationalist Old Lights, skeptical of the emotionalism and social implications of the Awakening, who were influenced by British Whig principles. However, in the 1760s, many pro-Awakening New Lights adopted very similar language. As conflict grew, ministers often turned to a potent combination of republican, millennial, and providential language to fuel increasingly firm resistance to the British government. Using republican phrases, ministers could portray the defense of liberty as a “sacred cause.” As J. C. D. Clark has demonstrated, this “language of liberty” was particularly appealing to the dissenters who formed a majority in the American colonies. A vision of God’s millennial (end times; apocalyptic) plan helped energize opposition to both French Catholicism (during the

French and Indian War) and the British (after 1763). The antichrist (a symbol of concentrated evil from the Book of Revelation) who opposed American liberties increasingly became the British. Finally, believing that they could clearly understand God’s providential plan, the colonists portrayed themselves as a separate nation with a divine mission and divine sanction. Put together, these languages—which all had previous uses in the colonial era—helped drive a wedge between Britain and her American colonies.

Assessment

The interaction of religion and colonial politics thus shows a strong pattern of diversity. The colonies represented a diversity of origins, with religious motivations directing some but not all of the colonial settlements. Varying religious motives led to differences in practice and in the shape of church establishments within colonies. Furthermore, as the colonial process continued, it produced a greater diversity of groups within each colony. This multiplicity of groups made the domination of any single group within a given colony more and more difficult.

Still, across this diversity some commonalities existed, and these shared characteristics increased after the Glorious Revolution through the process of Anglicization. As James Hutson has demonstrated, one ideal was the growing concern for religious toleration. Although not yet a conception of full religious liberty, the colonial period saw a marked increase in both *de jure* and *de facto* toleration of many Protestant sects. With some exceptions, the animus between the groups largely subsided, as they together forged a shared colonial existence. Furthermore, colonists generally accepted the principle that religion and politics were closely connected. They saw the laws as reflecting a Protestant Christian ethic and the government as supportive of the church’s concerns. The churches reciprocated by instilling habits of obedience and deference in their congregants. Finally, many colonists saw it as their duty to be involved in political activity—whether passing laws or supporting a military campaign—as an outgrowth of their faith. They thus practiced politics as a type of lived religion, engaging in political matters as a concomitant responsibility to their faith.

These colonial conditions suggest that the Revolutionary era exhibited both continuities and discontinuities with the period that went before it. Some elements continued in the new American republic. The Continental Congress continued to issue fast and thanksgiving day sermons. Some states held on to their religious establishments into the nineteenth

century. Many colonists transferred the providential hopes they once held for Britain onto the United States. By contrast, the Revolutionary era would also see a flowering of full religious liberty, expressed both in the First Amendment to the Constitution and in the push for disestablishment. The arguments made by Thomas Jefferson and James Madison supporting disestablishment in Virginia would prefigure claims made in many other states. The end result was to place religion and politics in the new nation on a course different from that of the colonial period. Nonetheless, without the religious diversity of the colonial period or the growth of the practice of religious toleration, it is unlikely the American republic would have been able to develop the religious traditions it did.

Politics: Nineteenth Century

American politics in the nineteenth century was shaped in part by multiple engagements with religions. Extending beyond the formal limitations of law and government, the relationship of American religion and politics can best be understood by focusing on enduring areas of concern and engagement by which different groups and individuals have defined themselves over time.

Tumult in Politics and Religion

No period of American history can be described as completely tranquil, but the nineteenth century was especially tumultuous. It began with a newly constituted nation not yet certain of its identity. Was it a democracy, and, if so, to what degree? Was it a republic, and, if so, how much state power would it require? Was it a rough federation of sectional alliances or a nascent centralizing power with an identity of its own? Amidst disagreements about such questions, American

political culture and religions developed sometimes with clear direction and sometimes haphazardly, but consistently with mutual influence.

American politics took shape through successive phases of state-building following the founding era, which established the institutions of government and constitutional rules in an effort to situate democracy in various forms of public administration. The Jacksonian era sought to establish a “people’s bureaucracy,” forming the cornerstone of the party political system. Major sectional conflicts developed, leading eventually to the Civil War and continuing with the populist campaigns in the decades thereafter. In the background was the continued expansion of the United States beyond the original thirteen colonies until the closing of the frontier, as well as numerous wars, including not only the Mexican-American War, the War of 1812, and the Civil War, but also continued military engagements with Indians. By the conclusion of the century, the Progressive era had begun, and populist reformers abandoned the Jacksonian party state in favor of rationally administered policies designed to undo disparities of wealth and power. Finally, the country’s population grew steadily, in waves of immigration that yielded lasting religious diversity, as both a response to and contribution to the nation’s growing urbanization and industrialization.

American patriotism ebbed and flowed considerably during these decades, often turning on tensions between allegiance and dissent, individualism and communitarianism, and resistance and accommodation to changes. Amidst the considerations of political unity and pluralism, there were analogous religious speculations of what religion scholar Catherine L. Albanese refers to as the relation between “the One and the Many.” The religious creativity of the nineteenth century was spurred on by manifold social changes and contributed directly to them. As American demographics changed generally, American religions multiplied and broadened their range of influences, ideas, practices, and communities. One significant change was the increase in the number of immigrants’ faiths, such as the varieties of Catholicism between the 1830s and 1880s; the Judaism of refugees from European ghettos and pogroms, particularly the influx of Ashkenazic immigrants in the 1880s and 1890s; and the beginning of significant immigration of South Asian and East Asian Buddhists, Hindus, and Muslims toward the end of the century. Another central factor in religious creativity was the revivalism of the Second Great Awakening (c. 1790–1840), whose injunction to save individual souls and to regenerate the social order was central to many nineteenth-century reform movements.

Following the Civil War, the alignment of liberal and conservative Protestant factions represented a major reorientation with regard to new developments in intellectual and social life. An under-regarded factor in American public life in the nineteenth century, the immense proliferation of new religious movements, from communitarian experiments such as Brook Farm to Christian Science, Mormonism, and multiple apocalyptic expressions of Christianity, was of considerable influence because many movements were rooted in criticism of the social order. The growing power of African American religions, particularly the liberationist Christianity nurtured in the “invisible institution” and emergent pan-Africanism, further transformed nineteenth-century politics. And the creation of new Native American rituals and modes of identity, most obviously in the form of the Ghost Dance and the prophecies of Wovoka Jack Wilson, constituted a further reminder of how inextricably linked were religious and political matters in this century.

Methodological Considerations

Such examples reveal how nineteenth-century religions both provoked and responded to larger sociopolitical changes in ways that raised questions about the integrity of pluralism, the validity of the founders’ visions, and the achievement of unity amidst diversity. These questions seemed especially acute when measured against the deep religious obligations of many Americans. In other words, nineteenth-century American religions were in many ways ineluctably political, just as nineteenth-century American political culture was defined by religions. These intersections can be understood in multiple ways, depending on how terms are defined. Political histories may downplay the importance of “religion,” however this slippery term is defined, but if we focus on the influence of religions in public life, we may learn a great deal about political matters. To do so, however, it is helpful to avoid conventional orientations toward such matters, which can be limiting. The study of political cultures often looks simply to institutions or social movements alone, and the study of religion has often held a narrow conception of politics, hewing either to concepts such as “prophetic” social criticism or concentrating on law and public policy.

The complex interplay between American religion and politics is lost when any one orientation is emphasized, for religion and politics are not simply discrete and easily distinguishable phenomena. Throughout American history, they have met, merged, and clashed in public life, sometimes seeking to limit or criticize each other, and sometimes merging

into powerful expressions of passion, concern, or identity. Debates about the mix of religion and politics predate the country's founding, and American religions have always been objects of political scrutiny and vehicles of political advocacy. Particularly in the nineteenth century, the controversy surrounding the politicization of religions and the insistent engagement of religions with matters of public concern meant that these two phenomena were only analytically distinct; on the ground, they remained mutually entangled and at times inseparable.

Conventional orientations are not misguided, nor do they fail to provide helpful ways of thinking about religion and politics. But an exploration of their limits will help us to approach nineteenth-century religion and politics with a sufficiently broad field of vision, so that its complexities and main issue emerge more fully. First, a long-standing presumption holds that religious expressions relating to politics are best understood by thinking through the framework of "church and state." This orientation emphasized institutional life, equating politics with the sphere of the government, and religions with spaces of worship. Yet religions are expressed and enacted in spaces far more plural than those of temples, churches, or mosques, just as politics exceeds the boundaries established by the administrative expression of political power in the state.

Second, many studies examine the dynamics of allegiance and dissent through reference to the languages of civil religion (those affinities that unite citizens in spite of their differences) and the jeremiad (a "prophetic" form of criticism directed against social immorality or complacency). Although useful in pointing to modes of democratic faith or civic piety, these ideas do not always resonate outside their original contexts in the colonial and revolutionary periods. Further, although these themes—defined differently by various interpreters—focus on the important relationship between religious convictions and the obligations of citizenship, their apparent attention to beliefs and convictions, rather than a wider range of situated or embodied practices, fails to capture the extent of often agonistic, fractious expressions of religious dissent.

Third, still other interpretations of religion and politics have focused on how public figures have articulated their viewpoints on matters of the day. Although examining the effects of religious speech and arguments in the public sphere is instructive, this too is a limiting orientation. Texts and criticism—as well as religious support for elected officials or policies—are fascinating windows into religio-political life,

but their engagement with discourse, symbolism, narrative, and rhetoric can only partially capture the messiness of religion and politics in lived history.

In taking stock of the incredible changes of the nineteenth century, then, what pathways might help us make sense not simply of religion and of politics but of the shifting, combinative experiences in which the boundaries between them blur? The range of ideas, actions, and movements defining religion and politics during this period took shape not only in government, with its legal, administrative, and institutional connotations, First Amendment jurisprudence, or debates about religion in the public square. Rather, politics in the nineteenth century was also defined by matters related to autonomy and self-determination, as these are experienced in shared social spaces and in relation to shared social goods or matters of common concern.

The religions of nineteenth-century America were political not just in their concern with governance but in their concern with power, with identity and not just the public square. These concerns do not mean that all aspects of social life are political, but this expanded view helps us to see the inescapably political power of religions in nineteenth-century matters of conflict, debate, dissent, separatism, and contests over resources.

Instead of organizing traditions chronologically, a rich understanding of their articulation in the nineteenth century can be achieved with a thematic organization. Several abiding themes and modes of concern defined American religion and politics during this period. These were the issues and passions around which religions became politicized, understood themselves as political actors, and were called on to seek change or resistance in their own lives and in the lives of their fellow citizens. These enduring concerns are (1) the authority of the Constitution and its implications for the relation of religions to public life; (2) the dynamics of dissent and allegiance, seen especially in conflicts between political and religious obligations under the rule of law; (3) debates surrounding economic and distributive issues, ranging from wealth and poverty to social goods more broadly considered; (4) issues related to religion and the body, including well-known concerns about race and gender as well as impulses requiring temperance or censorship; (5) religious concepts of the nation itself, ranging from a commitment to its providential history to Jeffersonian dreams of a republic or Tocquevillean civil religion; and (6) issues relating to religious community and pluralism, especially separatism and new religious movements.

American religious traditions have lined up on all sides of these issues and debates, which have continued from the constitutional era to the present. They have shaped arguments, motivated practitioners, and ultimately transformed American culture, revealing the cyclical nature of American debates about religion and political life. Although the themes overlap regularly, and certain events or individuals move between them, they enable us to make our way through this complex field of study using both conventional narrative and thematic comparison.

Constitutional Legacies

The pluralism and public religiosity that regularly provoke reflection on constitutional fundamentals became unavoidable over the course of the nineteenth century. The context was shaped by well-known disputes about the role of religion in public life, which focused initially on the Constitution's minimal reference to religion, prompting partisan debates between those who favored a secular document and those who demanded some acknowledgment of a deity therein. The First Amendment sought to generate a conceptual framework for considering presumptions against a religious establishment by governments and for measuring the scope of religious liberty. Despite the republican context of its inception, this framework favors liberal political principles such as individual liberties and rights of immunity, seeking thereby to establish a clear demarcation between a public life guided by rational inquiry and a private sphere wherein personal beliefs may flourish, sometimes supplemented by the associational life making up civil society.

With religious disestablishment complete by 1833, when Massachusetts ended government support of churches, the Constitution was left presumably to settle not only debate about religion and politics but also to clarify the duties owed to the state, the state's proper orientation to and role in religions, and the permissible expressions of religions in political life. Yet throughout the nineteenth century, contests over these topics persisted. The fractiousness surrounding the relation between religion and politics, and between public and private life, was manifest as early as the 1800 presidential campaign. With its attacks on the "infidel" Thomas Jefferson, this campaign was widely seen as a referendum not only on the First Amendment and the possible consequences of disestablishment but also on positions, articulated earlier in Jefferson's "Notes on the State of Virginia" and James Madison's "Memorial and Remonstrance," that endorsed religious pluralism and a complete disentanglement of religion

from political matters. Here we see the inklings of long-standing debates positioning religious virtue against a "naked public square."

There was broad agreement among the framers of American government that religion was best kept out of government affairs, but many of these figures also saw merit in public religions, whether directed toward the cultivation of good character or toward the reform of social customs. Opinions on the structure of the state, as either the source or opponent of liberties, were not as central to political life or to policy as they would become in the twentieth century. Still, two issues provided occasions for considering the reach of state power and the meanings of establishment.

First, disagreements about the character of public life surfaced in 1810 in the form of a federal law mandating Sunday mail delivery. The law seemed to critics the apotheosis of constitutional secularism, apparently undermining a fundamental obligation of those who insisted on the Christian character of public life. Alternative versions of this legislation were proposed between 1810 and 1817. These proposals led some to believe that the constitutional system, which stressed individual liberties, pluralism, and protection from coercion by external authority, was in danger. If that system had promised to promote unity by settling divisive religious issues, it now seemed to create divisions by asking citizens to choose one set of obligations over another. Although the state initially prevailed by insisting that economic vitality, not religious observance, was at stake, hundreds of petitions to Congress—backed by the General Union for the Promotion of the Christian Sabbath, co-led by Lyman Beecher—kept the issue alive. Congress, during the Jackson administration did not rescind the law, even under such pressures, but the practice slowly faded away, owing in part to the growth of the railroad and telegraph industries that made Sunday delivery moot.

Second, questions about religious establishment led to changes in public schools. Even though the state would not begin to rigorously enforce its power to eliminate religious establishments in schools for decades, in mid-nineteenth century questions began to emerge about the power of the state to dictate the content of education and thereby the socialization of the youth. During the 1830s and 1840s, as sectional change, political conflict, and immigration transformed the culture broadly, reformers and humanitarians such as Horace Mann and Catharine Beecher believed that government should sponsor a system of "common schools" that would provide students not only a shared body of

knowledge but also civic identification with the basic features of American public life and patriotism. Civic-minded reformers in general and specific parties such as the Whigs, who promoted righteousness as a kind of social glue, saw education as a means for generating social harmony, political stability, and economic prosperity.

Yet even if this common school system was deemed necessary in an increasingly pluralistic society, in their first decades these schools continued to teach some version of Protestant nationalism. Over time, disagreements developed over the possible effects of the school system. Some worried that public schooling would reduce the role of family, community, or church in education, and many raised serious questions about curricula. Because most Protestant schools were integrated into the new system, some Protestants worried that religious subjects or even religious language would eventually be censored by state religious authorities. Religious critics complained that common schools were too expensive and that they undermined “traditional” morality and religious values, which, if openly expressed in schools, would violate the First Amendment. Constitutional concerns deepened with regard to issues of taxation: Which schools could the government support without violating the First Amendment? These issues were not resolved in the nineteenth century, but they pointed to lingering instability in the very notion of what constituted an American identity, of what meaningful preparation for citizenship was like, and of the power of constitutional principles to shape public life.

Courts did not begin to adjudicate on the religion clauses until the twentieth century, but several cases were heard during the nineteenth century that touched on religion in public life. Several cases were particularly significant. In *Vidal v. Girard's Executors* (1844) the Supreme Court assessed challenges to the will of Stephen Girard, who founded a school for orphan boys, but stipulated that no religious instruction would be offered. The Court upheld the will as it stood and warned of public conflicts that might issue from affairs “connected with religious polity.” Even in the context of affirming the role of Christianity in common law, the Court’s acknowledgment of the legitimacy of individual liberties shaped its later emphasis on neutrality. In *Minor v. Board of Education of Cincinnati* (1870), a superior court initially defended a ban on Bible reading in public schools, emphasizing neutrality in a way that later became normative. In *Reynolds v. United States* (1878), plaintiff George Reynolds—a practicing Mormon—sought to

overturn his bigamy conviction on the grounds of free exercise. The Court ruled against Reynolds, stating that freedom of conscience could not be regulated, but actions could be if they were in clear violation of the rule of law. And in *Church of Holy Trinity v. United States* (1892), the Court considered the legality of hiring a foreign preacher to serve an American church, which the circuit court had found in violation of the Contract Labor Act of the period. The Supreme Court found no violation, citing as historic rationale that the courts (and by extension the state) should not regulate religious affairs that were clearly distinct from those of government.

The logic of the opinions in *Reynolds* and *Holy Trinity* was the Fourteenth Amendment, which sought to restrict the power of states to abridge individual freedoms. The amendment’s guarantee of due process and equal protection indicated that the government would intervene in local affairs (possibly even practices supported by religions) if deemed necessary. Although the language of the courts seemed to support neutrality with respect to conscience, there was a frank acknowledgment both of the admixture of religion and politics in American life, and of the possibility of regulation. As the federal government grew larger and its reach longer, as pluralism became unavoidable in public life, many religious practitioners sensed less overlap between religious and political obligations, a sentiment held not just by those belonging to a divided Protestant majority, but by other religious populations who did not experience a concordant fit between their religiosity and the demands of American citizenship. Such questions about the boundary between confessionalism and civic obligation, public and private, and the limits of state power shaded naturally into considerations of dissent and allegiance.

Dissent and Allegiance

The dynamics of allegiance and dissent are integral to nineteenth-century religion and politics. The shifting understandings of religious liberty and legal authority often yielded ambivalences about allegiance to political order. Nineteenth-century American life was at times characterized by reverence for order, as illustrated by the veneration of George Washington and the Constitution in the early part of the century and efforts by the National Reform Association to ratify a “Christian amendment” to the Constitution in the late years of the century. It was also marked by religiously inspired dissent.

One source of unity was “civil religion,” a common set of public rites, articles of political faith, and self-understandings that created a shared loyalty to and belief in the United States. During this period the phrase “In God We Trust” was added to U.S. currency. The Pledge of Allegiance, without “under God,” was written in 1892 by Christian socialist Francis Bellamy. Even Horace Bushnell’s broad-based gradualism, a theory of the development of Christian character, was linked intimately to the growth of the person in the spheres of education, church, and the nation. It was French author Alexis de Tocqueville, however, who most famously described the ways in which American laws and customs were undergirded by religion: no “habits of the heart” or political opinions were devoid of religious support, in Tocqueville’s estimation, even as they were not overly constrained by such support.

Each of these formulations point the way to the convergence of religious ideals with political ideals. Yet no history can avoid attention to those occasions where division with regard to first principles leads to religious citizens expressing dissent from political order. When the sovereign is understood to be making demands that are at odds with religious norms and practices, religious dissenters have often marked their difference from what might otherwise be a deeply grounded patriotism. Some of these expressions have been directed against “big government,” as with the populist campaigns of the 1880s and 1890s, which denounced the intrusions and moral waywardness of the state. Elsewhere, the weight of religious obligations has been understood by practitioners as necessitating direct forms of public protest, as with William Lloyd Garrison’s 1854 burning of a copy of the Constitution as a protest against slavery and Shawnee leader Tecumseh’s protest against the religious “impurities” risked by wearing clothing or food produced by European-Americans.

These sensibilities emerge in the context of debates over specific issues and challenges in nineteenth-century American life and reflect the shifting understandings of religious and political authority. The issue of warfare and militarism provides one of the most enduring tests of religious allegiance. Prior to the twentieth century and the introduction of conscientious objector status, religious pacifism was not as central an issue as it later became. The groups that did profess radical pacifism—the Amish, Quakers, and small numbers of Buddhists—were usually not sizable enough to constitute a notable public resistance to militarism, even if they were occasionally singled out and attacked for their alleged lack of patriotism. Yet theological laments, such as President

Lincoln’s suggestion that God was on no side in the Civil War, and religiously inspired or influenced denunciations of warfare, such as Walt Whitman’s “The Wound Dresser” and Mark Twain’s “War Prayer,” served to highlight tensions between religious presumptions against doing harm and those enjoining service to the nation.

The Nation and Religiopolitical Space

Religious interpretations of national destiny are bound up in these tensions, constituting an enduring expression of religion and public debate in the nineteenth century. The archetypal representation of America as a “city on a hill,” whose providential course is a beacon to others, guided not only understandings of national legitimacy but also relationships to the land itself. John Winthrop’s “A Model of Christian Charity”—the source for many of these foundational images—echoed throughout nineteenth-century proclamations that America is a “Christian nation,” from well-known public addresses, such as those delivered by Timothy Dwight in 1812 and Ezra Stiles Ely in 1827, to a more generalized sensibility evident in evangelists ranging from Charles Finney to Dwight Moody, whose reform campaigns and mass evangelism facilitated new engagements with urban American and its challenges, all buoyed by the notion that American society leaned toward redemption and a godly destiny.

Aside from contentions that God’s plan was unfolding in American history—something also embodied in the sacred history of the Church of Jesus Christ of Latter-day Saints (LDS)—many Americans during this period understood the obligation to establish a religio-political example somewhat differently. One tendency was to establish an aggressive, militaristic orientation to land and nationalism. This sensibility is present in attempts to tame and domesticate the land: in Lyman Beecher’s “Plea for the West,” with its quasi-missionary zeal in transforming the polity’s religion; in government coercion of native culture and religions during the drive to close the frontier; and in religious expressions of manifest destiny such as Josiah Strong’s “Our Country.” An alternate tendency suggested that political life—expansionist, materialist, competitive—was contrary to religious expression and improvement. Exemplars of this orientation—from the transcendentalists to a clutch of separatist new religions, including the Oneida perfectionists and Bronson Alcott’s Fruitlands—rejected dominant conceptions of political society in favor of a nature-oriented or communitarian spirituality that was to ground a new social and religious order.

Economy and Social Justice

Other visions of a religiously reformed society were crafted in and around distributive issues, especially matters related to poverty and industrial capitalism. Robert Baird, author of *Religion in America*, observed that American religions were clearly distinct from government, but their reformism and voluntarism could serve the causes of social betterment. While reformers were conducting anti-dueling campaigns, domestic missions, and multiple humanitarian efforts, American religions also were responding to changing economic realities. Concerns about such matters became especially pronounced following the Civil War, owing to the challenges of Reconstruction, urbanization and industrialization, and centralized economic power. The disruption of agrarian life, workplace safety and fairness, and disparities of wealth all produced religious responses.

One response was manifested in the anger of populist campaigns. Stretching from Texas to North Carolina and elsewhere, populists decried the centralization of power, the reach of the state, and the tyranny of “elites” over the common interests of “the people.” Various expressions of populist discontent were fueled by evangelical ideals of egalitarianism and justice, positioned against state “bigness” and unchecked capitalism. Elsewhere, socialist-influenced Christians such as Adin Ballou, Bellamy, and “Mother” Jones sought to address social conditions by fusing Marxist social analysis with Christian ethics on economic justice and care for the downtrodden. Related organizations included the Knights of Labor and the Christian Labor Union, whose advocates saw the Bible as an anticapitalist reformer’s text to be consulted when arguing against economic inequities. The Progressive Movement occasionally sponsored specific initiatives—most famously in Jane Addams’ Hull House, both safe haven and reformers’ base—that attempted to fuse Christian charity with practical engagement in the works of mercy.

Although countervailing impulses existed in the late nineteenth century—exemplified by Russell Conwell’s claim, in *Aces of Diamonds* (1890), that amassing wealth was a spiritual duty whose benefits would trickle down to the needy—the majority of responses were located in concerns about prizing wealth over justice. The emergence of the Social Gospel movement in the late nineteenth century focused on replacing the “sinful” structures of capitalism with the “sharing” cultures of Christianity, a moral emphasis on justice and equality replicated in Isaac Meyer Wise’s insistence—during and following the establishment of the Central Conference of American Rabbis in 1889—that the moral law needed to

be reimagined for America, specifically in relation to issues of justice and poverty. Catholics, too, declared the need to reform the market so as to align more clearly with principles of economic justice and human dignity. In addition to charitable organizations to help the poor, such as the Society of St. Vincent DePaul, Catholics supported workplace reform, living wages, and defended labor unions. Much of this activism benefited from the support of Pope Leo XIII, whose encyclical *Rerum Novarum* (1891) was an official declaration of Catholic commitment to social and economic reform.

The Body

If the language of rights figured occasionally in religious efforts to reform the economy, it was central to religious action dealing identity and the body. Self-improvement campaigns, such as the temperance movement, or religious arguments in support of censorship of “lewd” materials, most famously in the 1873 Comstock laws, exemplified reformers’ influence. But the two most powerful intersections of religion, politics, and the body focused on race and gender.

Black Christians began to strengthen liberationist tendencies in the early nineteenth century, emphasizing themes of justice and deliverance from suffering in the context of slavery. Support for abolition also came from outside these communities, from Quaker condemnations of slavery, relief stations for escaped slaves, and the Underground Railroad. Against the backdrop of slave rebellions led by Denmark Vesey, Gabriel Prosser, and Nat Turner, the abolitionist cause gained momentum not only through such collective actions, but also through figures such as Frederick Douglass, whose July 4, 1852, address condemned the “unholy license” of racism, David Walker, and Garrison, as well as the Liberty Party. Disputes over the issue split many mainline denominations, with supporters of the institution represented publicly by Charles Colcock Jones, who claimed that scripture supported slavery. Following the Emancipation Proclamation and the end of the Civil War, the Reconstruction era was characterized by continued discrimination and by increased activity from groups such as the Ku Klux Klan. Some freedmen drew on extant arguments, initially articulated by Martin Delany and Henry Highland Garnet, about the desirability of repatriation to Africa. Among them, Henry McNeal Turner and later W. E. B. DuBois grew skeptical that the United States would ever be hospitable to African Americans. As part of their pan-Africanist leanings, they also began to criticize Christianity’s historic concept of the deity as white; indeed, Turner encouraged the worship of a black God.

Many participants in the abolitionist movement were women, who also used religious arguments about equality and rights to articulate a religious feminism. Early Christian advocates of women's rights included Sarah and Angelina Grimké; Sojourner Truth, whose speech "Ain't I a Woman?" was central to this movement; and Lydia Sexton. Perhaps the most important single event was the 1848 International Women's Rights Convention in Seneca Falls, New York. Elizabeth Cady Stanton and Lucretia Mott, among others, argued for women's suffrage and property rights, claiming that patriarchy had long been supported by both scripture and custom. (Convinced that the Bible consistently degraded women, Stanton published the *Women's Bible* in 1895.) Such arguments facilitated increased women's roles in alternative religious communities—for example, Phoebe Palmer in the Holiness movement, and, in activism, Frances Willard in temperance campaigns. Later in the nineteenth century, reassertions of masculine power and privilege surfaced in American religious life, most notably in the "muscular Christianity" supported by organizations such as the YMCA and prominent evangelists like Moody.

Pluralism

Pluralism and community—malleable and beloved categories of American self-understanding—were registers in which religion and politics defined themselves in the nineteenth century, either because they self-consciously fashioned themselves as political or were marked as political by others. Public celebrations of religious pluralism—specifically the 1893 World's Parliament of Religions—occurred at century's end, but earlier decades had witnessed targeting of particular religious minorities and thereby rejections of this very pluralism. An especially virulent anti-Catholicism circulated in the mid-nineteenth century, exemplified by the 1834 burning of an Ursuline convent in Charlestown, Massachusetts, Beecher's warnings about the church's political aspirations to political parties such as the Know-Nothings or the American Party, and the salacious text, *The Awful Disclosures of Maria Monk*. Warnings about Catholicism were crafted in the idiom of social concern for the good order. Similar panics arose with regard to various new religions accused of sedition or of undermining American sacred history, which resulted in the jailhouse murder of Mormon founder Joseph Smith and the federal ban on the Ghost Dance, with its apocalypticism and aspirations of Indian unity. Indeed, Native American culture and religion were at the center of attempts

to constrain pluralism, from President Jackson's Indian Removal Act to resistance efforts such as those led by Chief Joseph and the Nez Perce.

Although many continued to celebrate pluralism as one of America's most vital signs, others sought to separate themselves to maintain their identity. The LDS migration to Utah was the fullest expression of that group's explicitly theocratic, and separatist, ambitions. Other separatist experiments, such as Ballou's Hopedale Community or New Harmony, pursued separatism as a critical impulse, insofar as they rejected dominant social understandings of property and social organization. Separatism was not always geographic. Indeed, the growing impulse of Christian apocalypticism, which resurfaced vigorously among the Millerites, the Seventh-day Adventists, and the Jehovah's Witnesses, articulated their critique of American culture by advocating separate customs, not only in terms of their suspicion of state power but also in terms of health and religious observance, all of which served to mark them off from their peers.

The changing shapes of nineteenth-century religion and politics reveal these abiding areas of concern and argumentation, which also serve as ways for interested readers to think about and group together the issues by which religious practitioners defined their identities. Appearances to the contrary notwithstanding, even Protestant unity on sociopolitical issues could not be assumed by the early nineteenth century, as all groups were found on all sides of all issues. The influx of immigrants combined with larger changes to provoke new questions about the integrity of pluralism, the validity of federalism and the Jeffersonian romance, and the appropriate balance between political order and religious observance. Answers to these questions were crafted in a context of religious liberty, teeming pluralism, and sometimes antagonistic conceptions of politics and its demands. Any appreciation for these varied questions and answers must consider multiple perspectives and issues, if one is to take stock of the many ways Americans have contemplated the relation between religions and politics.

Politics: Twentieth Century

Americans have long cherished the idea that a strict wall of separation divides church and state. In the twentieth century, as in previous centuries, this was more myth than reality. Religion and politics have always been closely entwined. From the social gospel movement of the 1900s and 1910s, to the antievolution crusades of the 1920s, to the populist critiques of injustice in the 1930s, to the baptism of the Cold War in Christian rhetoric in the 1950s, to the civil rights movement of the 1960s, to the culture wars of the last decades of the twentieth century, religion has shaped political debate in the United States and politics have influenced the agendas of the faithful. In the early twenty-first century, the

tight interrelationship between religion and politics shows no signs of waning.

The Progressive Era

Americans at the beginning of the twentieth century faced a host of dramatic challenges. Mammoth corporations were consolidating small, independent businesses; the population was shifting from rural areas to cities; record numbers of immigrants were arriving from eastern and southern Europe, Mexico, Asia, and just about everywhere in between; and the United States was expanding its influence around the globe in pursuit of new markets and additional military bases. At the same time, U.S. Protestant leaders, who for centuries had dominated religious life in the nation, faced a crisis. As the nation urbanized and diversified, they found their influence declining. In response, they built the Social Gospel movement in an effort to make faith relevant to the nation.

Broad in scope and diverse in tactics, the Social Gospel movement grew out of liberal Protestants' efforts to integrate faith with social issues. Among the movement's early pioneers was Washington Gladden (1836–1918), a journalist-turned minister, who witnessed brutal labor conflicts in Ohio. Committed to the Golden Rule ("Do unto others as you would have them do unto you"), he sided against wealthier members of the community—including those in his own congregation—and instead advocated for the rights of labor. From his pulpit and in dozens of books, Gladden demonstrated that the Christian faith had tremendous significance for modern problems.

Other Social Gospel leaders, such as Walter Rauschenbusch (1861–1918), lived among the poor. A minister in New York's "Hell's Kitchen," he witnessed the many problems of urban life on a daily basis. Rather than separate issues of faith from the problems of the city, he worked to clean up the community around him. Women also played significant roles in the Social Gospel movement. Jane Addams (1860–1935), an educated, upper-middle-class woman moved to Chicago and opened a settlement house to serve the needs of the local immigrant community. She wrote of the renaissance in Christian humanitarianism taking shape throughout the broader progressive movement. Her life illustrated some of the new ways in which women blended religious faith and humanitarian activism to carve out social and political space for their gender. Finally, many African Americans also contributed to the Social Gospel movement. Facing brutal Jim Crow laws in the South and increasing segregation everywhere, African Americans—especially black church

women—built playgrounds, opened kindergartens, and provided day cares all in the name of their faiths.

In the first decades of the twentieth century, Catholics in the United States also discovered new ways to make their religion relevant to the problems of U.S. society. Pope Leo XIII's 1891 encyclical *Rerum Novarum*, "On the Conditions of the Working Classes," made explicit Catholic social thought. U.S. Catholics saw alleviating poverty, fighting corruption, and supporting organized labor as legitimate applications of their theology. Because immigrants composed such a large percentage of the U.S. church, looking after the needs of poorer parishioners became fundamental to Catholic ministry in the United States. Church leaders did, however, struggle to reconcile workers' efforts to build broad labor unions with the church's hope that Catholics would maintain their own independent religious organizations. Eventually, U.S. Catholics joined secular unions and became essential players in the U.S. labor movement.

As the number of Catholics grew in the United States, new issues arose that forced all Americans to reconsider what the establishment and free exercise clauses of the First Amendment meant for minority faiths. This became explicit for Catholics in debates about public school curriculum and funding. Catholics did not want the government to use their tax dollars to support schools that emphasized a normative Protestantism in their curriculum, and ecclesiastical leaders took advantage of government funding opportunities that could be used to support parochial schools. Debates about the proper role of government in education often led to court battles, the most significant of which was *Everson v. Board of Education* (1947). In a five-to-four decision, the Supreme Court ruled that the state (in this case, New Jersey) could use publicly financed school buses to transport students to parochial schools. In the decision, Justice Hugo Black famously invoked Thomas Jefferson's statement that the First Amendment created "a wall of separation" between church and state, which became the standard used by the courts in many subsequent cases.

The issues that had the broadest appeal, however, among religious activists in the first decades of the twentieth century were temperance and Prohibition. Church leaders throughout the 1800s had worked to "temper" the amount of alcohol consumed in the United States. By the late nineteenth century the cause was most powerfully championed by the Women's Christian Temperance Union (WCTU). Under the energetic leadership of Frances Willard (1839–1898), the WCTU broadened its focus to include a variety of reform

issues including women's suffrage, labor rights, and curbing the influence of alcohol. In the twentieth century, the Anti-Saloon League, which claimed to be the political arm of the Christian faith, joined the WCTU in its crusade. Together they built alliances with numerous groups and a handful of dedicated Christian lobbyists located in Washington, D.C. As World War I began ravaging Europe, these lobbyists helped bring the issue of Prohibition to the attention of Congress. The timing could not have been better. As Americans grew comfortable with a more intrusive wartime government, worried about grain shortages and the production costs of making alcohol, and sought to root out all German influences from their culture (including German beer), most came to see banning alcohol as a means of helping win the war. Ultimately, the efforts of Christian reform organizations and their lobbyist allies, in conjunction with the impact of the war, secured the passage of the Eighteenth Amendment.

The Interwar Era

Americans of all faiths in the first couple of decades of the twentieth century wrestled with the relationship between religion and their culture. Many were hopeful, believing that the long-sought millennium was just around the corner. They believed that the world was getting better and humans were evolving in positive ways. The war, however, shattered this idealism, forcing many Americans to begin reconsidering the ways that faith issues spoke to contemporary problems.

Immigration emerged as one of the most controversial issues in the 1920s. During the war, many Americans questioned the loyalty of immigrants, especially those from non-Allied nations. After the war, a series of nativist organizations arose to defend what they called the "traditional" U.S. way of life. The most notorious was the second Ku Klux Klan (organized in 1915). The Klan defended "Nordic" civilization and Protestant Christianity. Klansmen from Atlanta, to Indiana, to California warned their fellow citizens that, along with African Americans, Jews and Catholics threatened the nation's foundations. Klansmen further believed that immigrants were disloyal. To combat this perceived menace, the Klan worked with some success at local and state levels to influence politics. Although the Klan attracted members from across the Protestant spectrum, leaders framed their campaign as a fight for old-fashioned Christian values. Their work came to fruition when Congress—lobbied by many different groups for many different reasons—passed the Immigration Act of 1924, severely limiting immigration from non-Protestant nations. The United States already had

sizable Catholic and Jewish populations, but the act curtailed the modest immigration of Hindus, Buddhists, and Muslims to the United States.

Perhaps the most famous event of the interwar era was the Scopes evolution trial. During the previous few decades U.S. Protestantism had fractured. A liberal, or modernist wing arose, which affiliated with the social gospel movement, and a conservative, or “fundamentalist” wing developed. Fundamentalists felt anxious about the changes they saw around them—the impact of immigration on Protestant authority, the application of literary criticism to the Bible, theories of Darwinian evolution that undermined their understanding of the Genesis creation account, and the systematic study of world religions that seemingly negated Christian distinctiveness. To counter these trends, fundamentalists worked through a variety of organizations inside and outside of churches to try to protect what they viewed as the “fundamentals” of the faith. Along with other like-minded conservatives, they began lobbying school boards and then state legislatures to outlaw the teaching of evolution in public schools. Their most dramatic success, which led to their most embarrassing public debacle, was convincing the Tennessee state legislature to ban the teaching of evolution from the schools. The American Civil Liberties Union (ACLU) decided to use the Tennessee law to test the constitutional validity of the ban. The ACLU hired famed attorney Clarence Darrow (1857–1938) to defend Dayton High School biology teacher John Scopes (1900–1970), and the prosecution recruited popular politician and crusader William Jennings Bryan (1860–1925). The trial was broadcast over the radio and covered by all of the major newspapers. Although the judge initially upheld the statute and the jury convicted Scopes, over time much of the nation came to see the antievolution movement in a negative light. Nevertheless, the Scopes trial was just the beginning of an antievolution crusade that has continued unabated.

Working alongside antievolution crusaders in the 1920s was a new crop of celebrity preachers who blended religion and politics. During World War I and in the immediate aftermath, Billy Sunday (1862–1935) mixed nationalism, anti-immigrant sentiments, conservative economics, and fundamentalism to dazzle the nation. Then in the mid 1920s, Pentecostal preacher Aimee Semple McPherson (1890–1944) garnered national attention from just outside Hollywood. She used her mastery of mass media, especially the new technology of radio, to preach Americanism, the virtues

of Prohibition, social activism, and antievolution. She spiced it all with a little sexuality and a lot of scandal. Sunday and McPherson believed that the United States had been a Protestant Christian nation, specially blessed by God, and that it needed to return to its religious roots.

Their fears about the decline of Protestant power in the United States seemed to be confirmed when New York governor Al Smith (1873–1944), a Catholic, won the Democratic nomination for the presidency in 1928. Religious activists from across the Protestant spectrum threw themselves explicitly into national partisan politics. For the first time, a Catholic had a legitimate shot at the highest office in the land. But coming at the tail end of a decade characterized by nativism and the reemergence of the Klan, he faced significant religious prejudice. Protestants alleged that Smith’s nomination represented a broad Catholic conspiracy to win control of the nation and to ultimately undermine the separation of church and state. Challenged by a strong opponent in the person of Herbert Hoover (1874–1964), and an inability to get much of the “solid” Democratic south excited about his campaign, Smith ultimately lost.

This did not, however, mean that Roman Catholics were politically weak. In the 1930s record numbers of immigrants—especially Catholics but also Jews—began voting in national elections. Most pulled the lever for the Democratic Party during Franklin Roosevelt’s (1882–1945) four campaigns for the presidency. The president rewarded Catholics for their loyalty with positions in his administration. Meanwhile, during the Depression, Father Charles Coughlin (1891–1979), the most famous Catholic priest of the first half of the twentieth century, took the nation by storm. Pastor of the Shrine of the Little Flower in the Detroit suburb of Royal Oak, Coughlin began preaching over the airwaves in 1926. In 1930, the Columbia Broadcasting System (CBS) started broadcasting his sermons nationwide. During the 1932 presidential campaign, he called for “Roosevelt or ruin” and brought his substantial audience of Catholics, as well as some Protestants, into the Roosevelt camp. Unfortunately for Roosevelt, the priest quickly soured on the president. In 1934 Coughlin founded the National Union for Social Justice, which emphasized workers’ rights, state ownership of certain industries, and economic reform. But by the end of the decade his criticism of economists, policymakers, and bankers turned into vile anti-Semitism. The church hierarchy eventually forced him off the air. Nevertheless, Smith and Coughlin demonstrate the growing influence of U.S. Catholics in national political life.

In contrast to Coughlin's boisterous, screeching radio sermons, a Catholic layperson, Dorothy Day (1897–1980), began quietly distributing copies of a new magazine in 1933. The *Catholic Worker* presented a radical vision of Catholic teaching regarding poverty, unemployment, and a host of other issues. The paper called for a return to the values of the Sermon on the Mount, including pacifism and identifying with the poor. Although Day did not represent the official church, she did become one of the most popular and well-known Catholics in the United States. Over the next few decades, her popularity grew to the extent that by the Vietnam War, she was regarded by younger generations of social activists as the "grand old lady of pacifism."

While McPherson and Coughlin were dominating the airwaves in the interwar era, religious leaders began increasingly turning their attention to film. In the 1920s, film had become one of the leading forms of entertainment in the United States. However, many Americans worried that the messages conveyed by Hollywood undermined supposed traditional U.S. values. While fundamentalists fumed about the movies and usually refused to attend, Catholics organized a ratings system to advise parishioners what to and not to see. Ultimately the studios themselves realized that if they did not practice self-censorship, religious activists might succeed in getting the government to begin censoring them. The studios hired Presbyterian layman Will Hays (1879–1954), who drew up a code for the studios. Although the code changed over time, in the 1930s it forbade negative portrayals of religion, as well as the portrayal of sexual promiscuity, violence, and coarse language. Throughout the rest of the century, religious activists of all traditions continued to influence the ways the studios represented issues of faith and morality.

The World War II Era

As the world once again moved closer to the brink of war in the late 1930s, religious leaders in the United States began reassessing the relevance of their faiths to the culture. Many liberal Protestants called for disarmament and worked for peace, fundamentalists felt sure that the Second Coming of Christ was imminent, and U.S. Jews grew increasingly anxious about growing anti-Semitism. Quietly, however, another group was bracing for trouble. A small Christian sect called Jehovah's Witnesses had been applying its faith in radical ways since the sect's founding in the late nineteenth century. Members believed that their citizenship in heaven negated their citizenship on earth and therefore

they did not participate in the political process. Furthermore, they did not pledge their allegiance to the U.S. flag and they refused to bear arms. Although taking such positions is controversial in any era, it was especially so during the patriotic frenzy of the late 1930s and early 1940s. Ultimately, the Witnesses' refusal to salute the flag most directly affected their children. Some public school districts required students to say the pledge each day, and when two young Witnesses in Pennsylvania refused, the school expelled them. The Witnesses challenged the school policy, and the case eventually made it to the Supreme Court. In *Minersville School District v. Gobitis* (1940), the Court ruled that First Amendment protections for religion did not supersede the state's interest in creating "national cohesion."

During the next few years, Jehovah's Witnesses experienced discrimination and sometimes brutal persecution for their lack of patriotism and their refusal to serve in combat. Then the Court decided to hear a similar flag salute case. Sensitized to minority rights by the tragic events occurring in Europe, this time the Court sided with the Witnesses. Justice Robert Jackson (1892–1954) argued, "If there is any fixed star in our constitutional constellation, it is that no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion or force citizens to confess by word or act their faith therein." Through these cases and dozens of others, the Jehovah's Witnesses probably did more than any other religious group to ensure that the rights of minority faiths were protected in the United States. The Witnesses demonstrated that practicing faith in the United States did not always require one to have faith in the United States.

World War II also transformed the thinking of Reinhold Niebuhr (1892–1971), the most influential liberal Protestant theologian of the mid-twentieth century. While most of his mainline Protestant colleagues spent the 1930s advocating international cooperation and de-militarization, Niebuhr began developing a position he labeled "Christian realism." He called on Christians to get their hands dirty in the real world of politics, even if doing so meant supporting "lesser" evils for the ultimate good. The utopian optimism of the Social Gospel, he believed, had failed in the face of totalitarianism and the growing power of the Nazis. When the liberal Protestant magazine *Christian Century* refused to abandon its pacifist position during the outbreak of war in Europe, Niebuhr organized an alternative periodical, *Christianity and Crisis*. It soon became the leading voice of "Christian realism" during World War II and throughout the Cold War,

demonstrating how the optimism of Protestant liberalism was fading in some circles.

The Cold War

The end of World War II brought a tenuous peace. Within just a few years, the United States was locked in a “cold” war with the Soviet Union, which looked more like a religious war than any other conflagration in the twentieth century. President Harry Truman (1884–1972) believed that the United States had a divine calling to oppose the Soviet Union and other U.S. leaders and policymakers felt sure that the USSR’s explicit atheism made the battle about more than competing economic systems. U.S. leaders drew on religion as a source of inspiration in their struggle because they believed that communists hoped to destroy religious faith throughout the world. In addition to saturating their speeches with biblical rhetoric, political leaders sought to unify Americans of all faiths in the struggle against communism. They sent money to ministers behind the Iron Curtain, they broadcast sermons into communist nations, and they called for worldwide days of prayer. Most important, political leaders also sought to unify the world’s Catholics, Protestants, Orthodox, and Jews together in the struggle. Their efforts worked to some extent, although when Truman and then Dwight D. Eisenhower (1890–1969) asked all Protestants—liberals and conservatives—to put aside their historic differences with Catholics for the sake of the crusade against communism, this effort proved unsuccessful. The state department eventually bypassed U.S. Protestant leaders in crafting an international religious coalition against communism.

In 1954, Eisenhower is said to have declared, “Our government makes no sense unless it is founded on a deeply felt religious faith—and I don’t care what it is.” By the mid-1950s, God-talk had saturated the culture. Social and political leaders drew on “civil religion” to frame the important issues of the decade, which developed out of Americans’ yearning to assign religious significance to their own nation in the context of the fight against communism. Civil religion encouraged Americans to see the United States like ancient Israel, as playing a central role in God’s unfolding plan of salvation for the world. Many believed that God had destined the United States to bring his message (economic, political, and religious) to the rest of the world. Such an ideology melded perfectly with the Cold War. This was further demonstrated by Congress’s addition of the phrase “under God” to the pledge of allegiance in 1954 (to distinguish it from the

“atheist” pledges of communist countries) and by Congress’s 1956 elevation of “in God we trust” to the national motto.

During the 1950s, attendance at the nation’s churches and synagogues skyrocketed, enrollment at seminaries exploded, and construction of new houses of worship boomed. Sociologist Will Herberg (1901–1977) famously published *Protestant, Catholic, Jew*, arguing that the United States was no longer a religiously monolithic nation, but a pluralistic country composed primarily of the three major faiths constituting his title. The postwar era also set the stage for the rise of the most influential minister of the twentieth century, Billy Graham.

Born in 1918 in North Carolina, Graham spent the late 1940s working as an evangelist for the evangelical parachurch ministry Youth for Christ. By the end of the decade he was holding revivals in the nation’s biggest cities. During the 1950s he perfected his folksy, down-home style and preached to some of the largest audiences ever assembled for religious meetings. His message was simple—all people are separated from God because of their sins but if they accept Jesus into their hearts he will forgive them and reconcile them to God, ensuring that they spend eternity in heaven. Behind this simple message, however, was an extremely sophisticated mass media empire. Graham used radio, television, film, magazines, and best-selling books to build an evangelical empire. Meanwhile, his strident anti-communism and his influence over millions of Americans in the hyper-religious Cold War context gave him entrée into the world of elite politics. Beginning with Truman, he advised every president up to and including Barack Obama. Although he claimed his work was nonpartisan, he nudged conservative Christians to the political right, helping establish the context from which the religious right would later emerge.

Americans’ increased attention to matters of faith in the postwar period expressed itself in new ways at the political level during the 1960 presidential campaign of Republican Richard Nixon (1913–1994) and Democrat and Catholic John F. Kennedy (1917–1963). Numerous influential Protestants made an issue of Kennedy’s faith. The candidate initially ignored critics who claimed that as president he would be little more than a tool of the Vatican. Eventually, however, he decided to take on the religion issue directly. “I believe,” Kennedy told a convention of Texas ministers, “in an America that is officially neither Catholic, Protestant nor Jewish” and “where no religious body seeks to impose its will directly or indirectly upon the general populace or the public acts of its officials and where religious liberty is so

indivisible that an act against one church is treated as an act against all." For Kennedy, religion was a private matter that should be put aside by leaders of a diverse nation. The speech was a success, and Kennedy ultimately won the election by a small margin.

The Cold War consensus that linked the United States with God began to unravel during the Vietnam War. Although many conservatives of all faith traditions supported U.S. policy, those on the left increasingly viewed the war as unjust. Dozens of ministers, rabbis, priests, and theologians organized against the draft and against the war itself. Perhaps the most well-known critics were Daniel (1921–) and Philip Berrigan (1923–2002). Ordained Catholic priests and teachers, the Berrigan brothers in the 1960s grew enamored of the peace movement. As the war developed, they put their pacifist beliefs into action. Their most famous protests included breaking into government offices and destroying draft cards with napalm; they also doused official government records with animal blood and red paint. Over the next few decades, they protested U.S. nuclear policy as well. Although many Americans felt nervous about U.S. efforts abroad, the Berrigan brothers effectively used their Catholic faith to critique U.S. arrogance.

Communism and the Cold War, however, were certainly not the primary preoccupation of all Americans in the 1950s. When Rosa Parks (1913–2005) refused to give up her seat on a bus in Montgomery, Alabama, for a white rider, the civil rights movement burst into the national consciousness. The movement had much deeper and older roots than Americans at the time realized. The struggles of black labor activists, the efforts of the Communist Party to organize poor Southern sharecroppers, A. Philip Randolph's (1889–1979) March on Washington movement, and many other events helped lay the foundation for the events that galvanized the movement in the 1950s. Nevertheless, once the movement shifted from the margins to the mainstream of U.S. culture, black ministers and churches took the lead. Like the prophets of old, civil rights organizers felt called to speak truth to power, and they were ready to lay down their lives for the cause. Despite years of turmoil and hardship, they felt sure that right would triumph over might and that God was on their side. Such sentiments inspired the work of Martin Luther King Jr. (1929–1968) and the thousands of foot soldiers in the cause. Religion and politics blended seamlessly as African Americans fought for justice.

Although most civil rights activists found strength in Protestant churches, others recognized that Christianity had

long been a tool of oppression in the hands of white racists. Among the most influential critics of U.S. Christianity was Malcolm X (1925–1965). Malcolm X matured in the Nation of Islam, a black nationalist movement in the United States that drew loosely from more traditional Muslim ideas. The Nation preached the Qur'an, black superiority, and African American self-sufficiency. It also leveled heavy critiques at white society and values. Such ideas resonated with thousands of African Americans, especially in the urban north. Malcolm X helped bring converts into Nation of Islam temples in Harlem, Detroit, Chicago, and across the country. His life demonstrated that civil rights and the Christian faith were never the same thing.

The African American rights movement inspired many other groups to challenge inequalities. Mexican American labor organizer César Chávez (1927–1993) blended his Catholic faith with his struggle to protect the rights of workers. Chávez and the United Farm Workers drew on symbols such as the Virgin of Guadalupe, the most popular Mexican saint, for inspiration in their fight for justice. In the 1960s Native Americans also began to reclaim their traditions and to practice their religion more openly. Their actions pushed Congress to pass the American Indian Religious Freedom Act in 1978, which extended First Amendment protections to Native Americans. They used the act to reclaim sacred sites and other cultural symbols and artifacts.

President Lyndon Johnson's (1908–1973) signing of the Immigration and Nationality Act in 1965 also had a significant impact on American religious life. Since 1924 immigration had been severely limited, and quotas favored white Europeans. But the 1965 act opened the borders to hundreds of thousands of people from Asia, the Middle East, and Africa. As a result, the Protestant-Catholic-Jew nation described in the 1950s became much more religiously diverse, as record numbers of Hindus, Buddhists, Muslims, and many others claimed constitutional protections for themselves.

Modern America and the Culture Wars

Like the civil rights movement, historians looking for the origins of the modern religious right and the culture wars it sparked find many roots. Among the early events that galvanized some fundamentalists and evangelicals, especially in the South, was the Internal Revenue Service's effort to take away the tax-exempt status of fundamentalist institution Bob Jones University. Various federal agencies worked in the late 1960s to enforce the provisions of the Civil Rights Act of 1964. In 1971, the Supreme Court ruled that institutions

The Cold War assumption that linked the United States with God began to unravel during the Vietnam War, when religious critics organized against both the draft and the war itself. The ordained Catholic priests and brothers Daniel and Philip Berrigan protested by breaking into government offices and destroying draft cards with napalm.

practicing segregation were by definition not charitable and therefore not tax exempt. The IRS then sought to apply this ruling to Bob Jones University, which had denied admission to African Americans until 1971 and in 1975 still prohibited interracial dating. Bob Jones challenged the IRS practice to no avail. That the IRS had the power through its tax codes to shape Christian university policies provoked a significant backlash. Fundamentalist and evangelical supporters of

southern segregation, as well as those who simply believed that the government should not be dictating policies to private religious institutions, prepared for battle. Large numbers of conservatives had long viewed the federal government with suspicion; now they had a specific reason to act.

A second set of issues that helped mobilize the religious right centered on changing conceptions of the family. Many in the country had invested heavily in the suburban Cold War model of the nuclear family with a breadwinning husband/father and a supportive homemaker wife/mother. They grew nervous when in the late 1960s and early 1970s the growing feminist movement challenged prevailing models of family. Then when Congress passed an Equal Rights Amendment (ERA) and sent it to the states for ratification in 1972, conservatives—many of them women—organized a powerful grassroots opposition. Linking their model of the family with God and country, leaders such as Catholic Phyllis Schlafly (1924–) turned the tide against the ERA. The amendment was never ratified.

Related to the ERA controversy was the Supreme Court's decision to legalize abortion in *Roe v. Wade* (1973). Throughout U.S. history, abortion had been a fairly common but also somewhat controversial practice. Many religious leaders in the pre-*Roe* era did not make a clear distinction between terminating a pregnancy and preventing one through other forms of birth control. Ministers who were anti-birth control were antiabortion; those who believed that contraception was appropriate often had few qualms about abortion when the procedure was performed before “quickening” (the time when a woman begins to feel her fetus move). But beginning in the late nineteenth century and continuing into the twentieth, doctors working through the American Medical Association (AMA) lobbied state governments to regulate the practice. Essentially, they felt that they (the doctors) should be the ones determining who had an abortion rather than midwives or the pregnant women themselves. During the 1950s and into the 1960s, however, the AMA reversed course and began to lobby Congress and the courts to loosen restrictions. The AMA found an important ally in the burgeoning feminist movement, which believed that women should be able to

determine for themselves if or when they would reproduce. The courts agreed.

Once the Supreme Court issued its decision in *Roe*, opinion in U.S. religious communities divided. Catholics who accepted the church's teaching on birth control felt troubled, whereas Protestants and Jews had mixed responses. Within a few years, however, the abortion controversy moved to the center of cultural debate helping to spark the so-called culture wars. Conservative Catholics, Protestants, Jews, and members of other faith traditions or no traditions at all began to rally around the issue of abortion, making it a litmus test for candidates seeking election to office. Some adopted the rhetoric of the antislavery abolitionists of the 1830s, and practiced civil disobedience in an effort to prevent abortions.

As debates about abortion, family, feminism, and the rights of Christian universities unfolded during the 1970s, Republican strategists sensed a growing opportunity. Although fundamentalists and evangelicals had been dabbling in politics for generations, they had not organized explicitly along partisan lines. That soon changed. Catholic Paul Weyrich (1942–2008), a Republican politico, approached popular fundamentalist minister Jerry Falwell (1933–2007) in 1979 about creating a new political organization to represent religious conservatives across the nation. Falwell loved the idea, and the modern religious right was born. Over the next few years, Falwell brought millions of conservative Catholics, Protestants, Jews, and Mormons together into the Moral Majority. It had its greatest impact, however, shortly after it was organized. Falwell and his followers took the nation by storm, helping Ronald Reagan (1911–2004) be elected. Many contemporary observers noted the irony of religious activists led by evangelicals pushing Jimmy Carter (1924–), the most evangelical leader the nation had ever had, out of the White House.

The primary spokespeople for the religious right, like Falwell, have usually been technologically savvy, well-known ministers. They have drawn on the strengths of various parachurch ministries and organizations, such as the National Association of Evangelicals, James Dobson's (1936–) Focus on the Family, and Schlafly's Eagle Forum for support. In contrast to the ministers who organized the civil rights movement around issues of race, economics, and social justice, the religious right has promoted a moralistic agenda, focusing on such issues as abortion, homosexuality, and sex education. Leaders succeeded in making discussions of faith a central part of political campaigns and a criterion for election.

A decade after the Moral Majority's founding, it imploded. But conservative activists were not ready to give up. Out of the ashes came a new political organization, the Christian Coalition. Organized by broadcaster Pat Robertson (1930–) and Republican activist Ralph Reed (1961–), Christian Coalition members focused less on national campaigns and more on mobilizing Americans at the grassroots level. They worked to win seats on school boards, city councils, and state legislatures, sure that if they began at the bottom of the political hierarchy they would slowly begin to have an influence at the national level. Reed promised, "We think the Lord is going to give us this nation back one precinct at a time, one neighborhood at a time, and one state at a time. We're not going to win it all at once with some kind of millennial rush at the White House." In many ways the election of George W. Bush (1946–) in 2000 was a testament to the strength of their strategy. After years of frustration, the religious right had a person who to some degree shared their values in the White House.

The complicated and contested relationships between religion and politics don't show any sign of ebbing in the twenty-first century. Barack Obama's (1961–) 2008 presidential campaign drew on multiple twentieth-century traditions. On the one hand, Obama played up his Christian faith and his commitment to the traditional faith, while the controversial sermons of his minister Jeremiah Wright (1941–) echoed the social justice themes of the civil rights movement. Early Republican contender Mitt Romney (1947–), a Mormon, turned Kennedy's religion speech on its head by arguing that he *should* be judged for his faith, asserting that religion would make him a better candidate than a less devout politician would be. Meanwhile, 2008 Republican vice-presidential candidate Sarah Palin (1964–) reinvigorated the religious right with her folksy speeches about family values and simple faith. In recent years, Republicans have masterfully linked faith and values to their campaigns, but Democrats have also grown more comfortable talking about religion. Whether this is good for the nation, or for the nation's religious communities, is hotly debated.

In 1835, Frenchman Alexis de Tocqueville (1805–1859) wrote about his impressions of the United States, which he viewed as one of the most religious nations in the world. He praised U.S. separation of church from state, warning that if religion "be mixed up with the bitter passions of the world, it may be constrained to defend allies whom its interests, and not the principle of love, have given to it; or to repel as antagonists men who are still attached to it, however opposed they may be to the powers with which it is allied. The

church,” he cautioned, “cannot share the temporal power of the state without being the object of a portion of that animosity which the latter excites.” Americans have never heeded this warning. Although the United States does not have an established national religion, religion and politics have always been closely entwined.

Polity

Polity, the form of authority and governance of a community or corporate body, derives from the same Greek term *politeia* that is the root of the English word *politics*. Just as the Greeks understood *politeia* both as the governing structures of the *polis*—city or town—and the process by which those in authority sought the common good of the community, so polity must be understood both as formal structure and as political practice by which a corporate body seeks to fulfill its purposes.

The term “polity” can be used to describe the governance of any collective group, and the fact that it is regularly used to describe the offices, governing bodies, and political processes of communities of faith in the United States is itself an indication of a uniquely American understanding of the place of religion in civil society. Religious freedom and the religious diversity that flourishes because of it is a norm originally embedded in the First Amendment to the Constitution of the United States, which advocates the “free exercise of religion” and prevents the public “establishment” of any one religion. Thus American religious groups must be constructed, not ascriptive or inherited, entities, and participation in them a voluntary act by believers. Of course, many participants join in a religious tradition for reasons profoundly shaped by family or cultural patterns. But in terms of polity, the voluntary principle determines the organizational expression of religion.

The Self-Constitution of American Religious Groups

Many American communities of faith trace their lineage to Europe (inclusive of Great Britain) and were founded in the United States by immigrants who brought with them the assumed polity and practice of their homelands. Yet unlike Europe, in the United States religious polity and practice could not simply be received from tradition, and membership not simply ascribed by reason of birth. With the exception of a few early colonial churches, no religious group was ever so closely identified with civil government as to enjoy state support. The effect was that whatever their tradition, communities of faith had to constitute themselves as independent bodies. Even within an organically unified tradition such as Roman Catholicism, the American church manifested a distinctly independent spirit.

American Protestant churches are self-constituted bodies. American Anglicans, for example, a branch of a communion

that understood itself in organic continuity with the apostolic church and extending its Catholic heritage of sacrament, have a published constitution establishing them as the Protestant Episcopal Church in the United States of America. The Methodists, offspring of a renewal movement within the Church of England whose founder John Wesley sent missionaries to the colonies, constituted themselves as a separate church in 1784, just three years after the end of the Revolutionary War. Likewise other traditions—Lutheran, Presbyterian, and many others—ensconced themselves as American entities by issuing constitutions, so many, in fact, that they came to be called “denominations,” literally, bodies “denominated” with a proper name as a distinct collective group.

The self-constitution of American Protestant churches is emblematic of their polities. Their constitutions are constructed on principles of democratic, representative government, shaped by the assumption of voluntarism that the properties and ministries through which the churches express and extend their missions must be supported solely through the donated time and money of members. The constitutions typically announce the church’s existence, provide its name, and describe the powers and duties of its governing bodies and offices together with the limits of their authority. From colonial days, Americans were suspicious of authority derived from European principles of monarchical polity that might introduce too much centralized or hierarchical power. The same leaders who advocated a new civil government based on human rights and power invested in “the people” were creating the polities of new American churches. Consequently, American churches from the beginning have been typified by strong lay participation in governance. Notably, by far the largest number of Protestant congregations in America are self-constituted as independent bodies, with constitutions and bylaws placing control of ministry, money, and property firmly in the hands of local lay authority.

These formative characteristics of polity—lay governance, local control, and a democratic form of decision making—have had abiding influence in Christian traditions such as Roman Catholicism and Orthodoxy as well. Although Catholic teaching in the organic canon law of the church places authority in the bishops and priests of the church to maintain continuity with the apostolic church, in fact American lay Catholics have exerted considerable power over local churches. The canon law principle of subsidiarity—that every decision should be made closest to the people affected by it—has been practiced nowhere more vigorously than in the United States. While the basic

Catholic organization by geographic parish has continued, nonetheless many Catholics attend the parish of their choosing and expect to have an influential voice in matters of church property and personnel.

Religious groups other than Christians—Jews, Muslims, Buddhists, Bahá’í, and many new religions—have followed suit with self-constituting principles as well, organizing themselves as independent corporate entities nationally, regionally, or locally. Synagogue associations provide model constitutions as well as management policies for local congregations; even Hindu temples—normally understood as places of devotion rather than as congregations—are incorporated under civil law with bylaws and committees to guide their work and manage their property. The voluntary principle means that each group, whatever its teachings and practices, understands itself as a constructed entity to which people choose to belong, with its members in a kind of covenant of participation and collective endeavor. It is not uncommon to hear leaders of any religious tradition in the United States referred to as “clergy” and their assemblies or gathering places as “churches” in their adaptation of the dominant and thoroughly American Protestant polity of congregations and denominations.

Five Primary Questions of Polity

Christian communions and denominations are arrayed along a spectrum of polities. Those sustaining organic forms continuous with the broad catholic church tradition in all times and places follow the guidance of canon law as it has been elaborated over the centuries (such as Roman Catholics and Anglicans). These churches locate significant authority over ecclesiastical matters in the priestly hierarchy, particularly an episcopacy that traces its origins in succession to Christ’s apostles. Other denominations establish connectional forms of governance by granting broad authority to denominational governing bodies such as conferences, presbyteries, and synods comprised of clergy and lay members from constituent local church congregations. These churches record their polity through books of order or discipline adopted and amended in general or national delegate assemblies (such as Presbyterians and United Methodists). Still other churches locate authority within the congregation or local community itself, adopting their own local constitutions and bylaws. These churches join in associations (if at all) mainly for the purpose of shared funding for education or missions (such as Baptists and Pentecostals). Of course, all American communions and denominations are an amalgam of ecclesial and

cultural traditions of governance, and varied elements of hierarchical, connectional, and congregational polities may appear in all.

Wherever they may fall on the spectrum from organic to connectional to congregational, the polity of religious groups must address four central questions that derive from their voluntary nature. That is, since each denomination or congregation is self-constituted and self-perpetuating, it must make clear both to active and prospective members its identity and practice.

What do we believe and practice? Polity documents such as constitutions or books of order normally state clearly the shared creed and common practices of the particular community of faith, as well as its affiliations with larger religious traditions. The confessions, creeds, articles of religion, mission statements, or other statements of purpose usually also specify the rites, rituals, and sacraments central to religious practice.

What are the requirements for membership in this church? Being self-constituted organizations, communities of faith must also state how one becomes and remains a member. Normally entry into membership is marked by the public taking of vows, a visible act of covenant. Congregations vary in what they then expect of persons who have become members. Most declare that regular, active participation in worship services is essential, and most admonish continued formation in the faith through study and prayer, exhorting members to greater commitment of time and money. Polity also provides for what has been known through Christian history as church discipline—that is, the sanctions for members who violate standards of belief and practice and the process for adjudicating their cases.

What are the offices and requirements of ministerial leadership? All congregations must face the question of who the next minister, rabbi, or other religious leader will be and how he or she will be certified as legitimate. In some religious traditions, the evident charisma or power of the Spirit, personally manifested, sufficiently designates persons for leadership whatever their other qualifications may be. In others, the professional standards typical of American institutions also shape ministry. Polity must provide in any case for discipline of clergy with sanctions for unbecoming behavior.

Polity defines the authority, powers, and duties of the offices of ministerial leadership. For centuries Christians have searched their scriptures for definitive word on the offices, producing an astonishing diversity of understandings. Although the terms bishop, elder, and deacon all appear in the New Testament, denominations and congregations use

them in manifold ways. For churches toward the Catholic end of the polity spectrum, elders (or priests) and deacons are clergy offices, with the bishop having oversight of the whole communion. For churches toward the Protestant independent end of the spectrum, elders and deacons are mainly offices of lay leadership, with the preaching and teaching elder set apart from them. In some independent churches the bishop is the presiding minister of the local congregation.

How do congregations govern their affairs and oversee their property? Connectional bodies generally mandate a certain basic form of organization for each congregation, while independent congregations are self-constituted and govern their own life. All normally follow the management necessities of any organization or association under civil law. Thus they have a church council, session, vestry, executive committee, or similar governing body with oversight of all matters and (in most polities) to which all other bodies are amenable; a committee to administer church finances; a committee to manage personnel matters with clergy leadership foremost among them; and a board of trustees to handle property and execute legal instruments. They also create nominating committees to assemble rosters to be elected by the chief governing body or the congregation as a whole. Parishes of organic communions such as Roman Catholicism may have active organizations for ministry and mission led by laity, while authority over administration of the mass and ownership of the buildings lies with the diocese and its bishop. In recent years bishops have exercised this authority to discontinue mass in designated parishes and to close and merge parishes, often over the protests of local lay participants.

Connectional bodies and associations for cooperative work also must address a fifth question: *How is our denomination or association organized and governed to advance its mission?* Constitutions name and delineate the powers and duties of all governing bodies beyond the local congregation. Denominations with longer histories in the United States have built up a large number of affiliated institutions—schools, community centers, hospitals—as well as agencies to oversee standards for ordination, educational materials, and support of work in other nations. Since funding for these institutions and agencies is set by denominational governing bodies but donated largely by congregations, polity mandates representative boards of directors and standards of transparency in matters of money and personnel.

The impulse toward innovation and renewal has always stirred across the American religious spectrum. Protestantism originated in forms of “protest” against established

ecclesiastical authority in Europe, with an accompanying passion to re-create the original or “primitive” polity of the first Christian churches. The drive to reconstitute and renew the church continues unabated as independent congregations and new associations and denominations proliferate. This infectious spirit has sparked the founding of many religious groups in the United States (such as Mormons, Christian Scientists, and Adventists), and religions new in either practice or place in America appear continually (such as Wicca, Zen Buddhism, and Scientology). Each must constitute itself to attract followers, legitimize leaders, make corporate decisions, raise and hold funds, and obtain property. Thus, polity promises to retain and even expand its role as religions work out their practices of authority and governance in a free society.

Popular Religion and Popular Culture

Trying to define *popular religion* recalls Justice Potter Stewart’s approach to a definition of pornography: “I know it when I see it.” Both words that make up the term are famously ambiguous, yet the term itself is, if ultimately indigestible, nevertheless of considerable intuitive use in trying to understand aspects of the U.S. religious experience that would otherwise fall through the proverbial cracks. Popular religion may be said to be “extra-ecclesiastical religion,” that is, religious activity that takes place outside of, on the fringes of, or in direct opposition to religion that is established—supported by the state—or otherwise institutionalized and accepted

within the dominant social order. Popular religion is often characterized by a preoccupation with the supernatural in everyday life and personal charisma as a sign of spiritual authority, and frequently exhibits “elective affinities” with populist politics and popular culture.

Folk Religion and Popular Religion

Folk religion is an imprecise and possibly somewhat dated term but, like *popular religion*, serves a certain heuristic purpose in highlighting religious activity that may be regarded as a type of, or at least a first cousin to, popular religion. Folk religion designates the sort of religious activity that arises in the interaction—asymmetrical with regard to power—between a colonizing people and those colonized by them. The result is frequently a synthesis, often flexible and responsive to rapidly changing circumstances, in which the colonized adapt traditional patterns of religious behavior to respond to the irrevocably changed circumstances of their lives. This process has been described by a variety of terms. *Syncretism*, once a common usage among ethnologists, has fallen into disfavor in some circles because of its alleged connotation of bastardization—that is, the implication that the new religious configuration resulting from intercultural contact and clash is somehow inferior to the “pure” religions from which the new hybrid form has emerged. *Creolization* and *hybridity* are now widely preferred as more neutral in describing a cultural process that is creative, widespread, and never-ending. (*Creole* is frequently used to describe the culture of New Orleans, characterized by the intermixing of European, native, and African elements, in cuisine and otherwise.)

In North America, creole or hybrid religions have arisen through a variety of cultural contacts that resulted from the African slave trade, as well as from European colonization and immigration. Among slaves in the antebellum South, the practice of the traditional religions of Africa that had been part of their native culture was completely disrupted by the experience of capture, crossing the Atlantic during the Middle Passage, then being dispersed upon arrival in the New World through sale and deliberate separation of those from the same cultural origins by their new owners. As these slaves became Christianized, often at the insistence of their masters, the religion that emerged among them was a hybrid of Christianity, remembered African patterns and practices, and new themes such as the longing for deliverance from oppression. Folk practices detached from more comprehensive religious configurations, such as rootwork and hoodoo, focused on this-worldly issues such as healing and escape

from the evil eye, and became diffused among white as well as black southerners. The distinctive music that emerged as a hallmark of southern evangelicalism was similarly a fusion of cultural elements that characterized both white and black practice alike. Vodun and Santería, as well as the “spiritual churches” of New Orleans, were similarly hybrids of African and Roman Catholic elements, reflecting that church’s dominance in Haiti, Cuba, and southern Louisiana, and later transplanted to newer areas of immigrant settlement such as Miami and New York City.

Immigration from Latin America, especially the borderlands of northern Mexico and the U.S. Southwest (originally all part of colonial New Spain), has been another fertile source of religious hybridity in what is now the United States. Although Roman Catholicism was imposed on the indigenous peoples of Mexico by its Spanish conquerors and colonizers, the failure of the Spanish to cultivate an indigenous clergy rendered the emergent *mestizo* (native-European mixed race) populace ambivalent about the church dominated by *gachupines* (those of European birth) and *criollos* (those of European ancestry born in the New World). The result was the proliferation of Catholic cathedrals, churches, and missions, and the simultaneous development of a folk Catholicism that freely and creatively mixed European and indigenous practices to form a hybrid sometimes tolerated and at other times persecuted by the established church powers. *Curanderos* and *curanderas*, for example, are folk-healers whose powers derive partly from a knowledge of herbal remedies and from their purported ability to harness supernatural forces to combat maladies brought about by the malicious manipulation of such forces. In some cases, such as the well-known shrine of El Santo Niño de Atocha at Chimayó in the Sangre de Cristo mountains of New Mexico, the “official” Catholic Church authenticates folk piety by maintaining a church to which many come for healing through prayer and the acquisition of the “holy dirt” on which the *santuario* is built. (The dirt is replenished daily by the staff.) However, the cult of *Santo Muerte*—“Saint Death”—the patron of drug dealers is firmly repudiated by church officials as well as law-enforcement personnel.

Another example of folk religion in the U.S. context is that practiced by Italian immigrants and their descendents in Manhattan’s Italian Harlem, memorably described by Robert Orsi in his *Madonna of 115th Street*. The roots of this practice lay in the small towns of the Mezzogiorno of southern Italy where, as in much of Latin America, official Catholicism, based far to the north in Rome, was subject to local

appropriation and modification. The cult of local patron saints, such as the Virgin of Mount Carmel, turned Catholic religious figures into symbols of local identity, celebrated annually in the village’s *fiesta* (cognate with the Spanish *fiesta*, a similar ritual occasion). In the context of New York City, the practices of these Italian immigrant country folk clashed with the official practices of the local church, dominated by Americanized Irish who looked down on the ways of the newcomers as vulgar and superstitious. The annual *fiesta* celebrated at Our Lady of Mount Carmel parish thus became an affair of multi-tiered meaning, celebrating the distinctive identity of the community through feasting on ethnic food, while engaging in ritual behavior, such as women being carried dragging their tongues along the floor of the church, that was frowned upon by the church hierarchy and interpreted by Orsi as a means of symbolically working through the emotional tensions that simmered within the community.

Similar examples can be easily adduced from other parts of North America, such as the shrine of the Oratory of St. Joseph in Montreal, whose chapel walls are laden with the crutches of those who claim to have been healed through making a pilgrimage to the site where Brother André Besette (1845–1937) became famous for his power to bring about cures. (His heart is still displayed there in a monstrosity venerated by the faithful.) What these various manifestations of folk religion share is a focus on the bringing to bear of supernatural power—often in conjunction with the use of earthly means such as herbal remedies—for healing, whether of physical ailments, emotional distress, financial or interpersonal problems, or maladies of supernatural origin such as witchcraft. Their relationship to “official” organized religion lies along a spectrum, from cautiously endorsed, to tacitly tolerated, to vehemently repudiated. Some systems, such as Vodun or Santería, are better viewed as distinctive religions that have arisen through the hybridization of two or more distinctive cultural systems thrown together through intercultural contact and developed within the margins of rapidly changing social situations.

Is *folk religion* a form of *popular religion*? Neither phrase has any “official” definition, so there is no definitive answer. On the one hand, folk religion is certainly religion that arises from “the people” rather than from duly constituted religious authorities. (Religious authority is certainly embodied by practitioners such as *curanderas* and Vodun priests, but is not formally institutionalized or accorded legitimacy by social elites.) On the other hand, it might be argued that the term *popular religion* may better be reserved to describe religious

activity in a modernized, literate society that enjoys an often positive, symbiotic relationship with the broader culture in which it arises, whereas folk religion is transmitted orally at the margins of a dominant religious culture that views it with considerable suspicion, at best.

Official versus Popular Religion: Establishment and Pluralism

The related phenomena of religious freedom and religious pluralism as a normative state are rather new in the context of the longer run of human history. During the European Middle Ages, religious activity other than that under papal aegis was regarded as heretical, illegal, and potentially treasonable. Practices that had survived from pre-Christian times continued to flourish, especially on the margins of society, but were frowned upon and periodically suppressed by religious authorities, and semi-organized movements such as the Albigensians (southern France, twelfth century) and, later, Anabaptists (Rhine Valley, sixteenth century) were subject to violent persecution by both civil and religious authorities. (Sociologists call such dissenting groups, which usually have rigorous membership standards, *sects*, as opposed to *churches*, which designate religious organizations that are inclusive, enjoy established status, and generally take a dim view of open dissent.)

After the Protestant Reformation, the principle of *cuius regio eius religio*—the religion of a nation is dictated by the nation's ruler—prevailed through much of Europe. Another name for this principle is *establishment*: the vesting of complete authority in one religious group by mandate of the civil government, thereby establishing that group as the official and, usually, only permissible religion in that political unit. In Britain, where the king or queen is even now the nominal head of the Church of England, new religious movements had a difficult time until dissenting groups, including Roman Catholics, began to receive civil rights during the eighteenth and nineteenth centuries.

Supernaturalism and Popular Religion

Many of the examples taken from the realm of folk religion point toward a distinguishing characteristic that folk and popular religion share, namely, an emphasis on what might be called *supernaturalism*. One paradigm for interpreting the past half-millennium is the notion that the rise of science and technology has proceeded apace since the Renaissance and has been accompanied by a corresponding decline in belief in magic and the supernatural. There seems to be a causal

linkage especially between this phenomenon and the emergence of Protestant Christianity, which began partly in Martin Luther's protest against what he saw as residues of superstition within the Catholic Church, particularly in how its teachings were interpreted by ordinary people.

The impact of this train of thought, even within the Protestant traditions, has been uneven. As historians David Hall and Jon Butler have demonstrated, even highly educated colonial leaders such as Cotton Mather believed in "special providences"—that is, direct divine interference in the course of earthly events in the colonial era and even into the nineteenth century. Elite theology, as practiced in "mainline" theological schools has, especially since the Enlightenment, moved away from any acknowledgement of the supernatural in everyday life. Although controversies continue to this day about the factuality of miracles attributed to Jesus in the Gospels—an issue that tore liberal Unitarians apart in the mid-nineteenth century—there has emerged a general consensus among mainline Protestants that the age of miracles ended with the apostles. Emphasis has instead been placed in such circles on applying the message of the Gospels to daily life through the cultivation of a focused spiritual life and a concern for right-doing toward others.

Among Roman Catholics, this picture is more complicated. Many contemporary Catholic thinkers, especially since Vatican II, have followed the general trend of Protestant thought in accepting the results of modern biblical criticism with regard to supernatural elements in the scripture, as well as toward a skeptical view of such elements in modern life. Papal leadership, however, has pushed that church in the opposite direction by, for example, John Paul II's canonization of an extraordinary number of new saints—that is, humans who led lives of heroic piety and to whose intervention miracles have been claimed to take place when sought by pious petitioners.

Supernaturalism can take a number of forms. One perennially popular theme is prophecy, not so much in the Hebrew tradition of warning God's chosen people of what will happen if they stray from the covenant, but rather in literal predictions of future events. Catholic fascination with apparitions of the Virgin Mary, particularly that said to have taken place to a group of children in Fatima, Portugal, in 1917, has some of this character, in this case as a chapter in the conflict between communism and Christianity. More widespread, however, has been an inclination toward prophecy based on the New Testament Book of Revelation in fundamentalist Protestant circles.

Probably the most widespread interest in the supernatural in modern times has been in the realm of religious healing. An elite theological perspective would most likely focus on viewing illness as an occasion for spiritual reflection and growth, in the hope that the personal strength thus acquired would promote physical healing as well. A supernaturalist approach would focus instead on the direct acquisition of supernatural power to bring about an instantaneous, miraculous cure that contravened the natural processes of disease. Both traditionalist Catholicism, with its emphasis on the working of such cures through prayer to saints, and evangelical Protestantism, especially its Pentecostal wing, with its notion of divine healing as a gift of the Holy Spirit, can be characterized as supernaturalist in this regard.

A preoccupation with the supernatural is a major theme of popular religion, but is not per se foreign to institutionalized religion. A main difference is in the issue of *control*. An institutionalized church such as the Roman Catholic is very careful, not to say bureaucratic, in its process of authenticating the miraculous and regulating control of access to its benefits. Popular religion, on the other hand, whether on the fringes of Catholicism or in the midst of the far less rationalized realm of evangelical Protestantism, is a domain in which individuals seek access to and power from the supernatural on a “freelance” basis, often seeking aid from uncertified practitioners, whether local rural *curanderas* or faith-healers with television programs.

Elite versus Popular Religion: Authority and Control

In a nation with an established church—“church” here generically meaning any religious organization—elites are almost certainly part of that society’s social makeup. The governing elite and the religious elite often work hand in glove although, as medieval history continually demonstrates, with ongoing tensions about issues of power. Similarly, in Puritan New England, the Congregationalist clergy constituted an elite by virtue of education (Cambridge or, later, Harvard), formal ordination, and the centrality that religion played in the colonists’ self-understanding. After religion had been disestablished in all of the states (Massachusetts being the last, in 1833), clergy still enjoyed elite status in many communities, particularly in those denominations (Congregational, Episcopal, Presbyterian) that insisted upon a learned clergy. Such denominations almost always favored a style of worship that was decorous—that is, formulaic, predictable, traditional, and not open to spontaneity. The control exercised in

worship mirrored the control of personal emotion that characterized social elites, as well as the control those elites exercised in society and attempted to impose on the “lower orders.” With the founding of the United States and the adoption of the First Amendment in 1791, a wholly unprecedented situation presented itself, one highly propitious for the emergence and flourishing of religious activity that did not enjoy governmental approbation. The colonial period had been characterized by considerable religious diversity, but establishment remained the dominant principle in most of the colonies—Puritan Congregationalism in much of New England, the Church of England in most of the South. The religious revivals of the 1740s known collectively as the Great Awakening, galvanized by the peripatetic evangelist George Whitefield (1714–1770), brought an early challenge to both formal and informal religious establishment by attacking it at its heart, namely, the deeply rooted idea that residents of a political unit were obliged by law and custom to attend the house of worship designated by the authorities as that unit’s official church. This might be called the “parochial principle,” that is, that the *parish*—an area and corresponding house of worship officially recognized as a fundamental unit of settlement—had a monopoly on the religious life of all those who lived within its boundaries. By attacking the legitimacy of clergy who did not meet his criterion of having experienced a “new birth”—an emotional experience of conversion—Whitefield encouraged his followers to forsake their parishes and attend worship wherever they might find a minister whose authority was based not on formal ordination or official recognition but rather on personal charisma. In doing so, Whitefield—one of the most charismatic figures in U.S. religious history—might well be regarded as the father of U.S. popular religion.

After independence, the reality of de jure pluralism—freedom of religious belief and practice guaranteed by fundamental law—legitimated the work of dissenters such as Whitefield and his numerous successors, and opened the new nation to what the historian Alice Felt Tyler once dubbed “Freedom’s Ferment.” Although informal social constraints continued to influence religious choice in many places, Euro-Americans nevertheless were formally free to practice whatever religion they chose from the panoply that had been imported from Europe, or to invent new ones, which many did. In the midst of both legal freedom and a corresponding pluralism, Americans were free to improvise in religious matters without regard for established authority, whether governmental or ecclesiastical. The result was often what might

be dubbed *popular religion*—religion that flourished without benefit of or hindrance from the “establishments of religion” that the First Amendment prohibited.

Popular Christianity was represented in the early republic particularly by the Baptist and Methodist movements, which generally attracted their followings primarily from the less educated and prosperous classes. Although John Wesley, the founder of Methodism, had been an Oxford graduate and an ordained Church of England priest, his U.S. disciples rapidly broke away from the control he habitually exercised on his movement and promoted an approach to religion sharply at odds with that of U.S. regional elites. The typical Methodist preacher on the U.S. frontier lacked much formal education, rode on horseback along an appointed circuit without any parish boundaries, and promoted a highly emotional style of worship that lacked the decorum of the churches favored by his social betters. Baptists, who lacked the tight Methodist organizational structure, often found leaders among uneducated farmers and artisans who felt called to preach. Although both of these movements eventually succumbed to what sociologist Max Weber dubbed the “routinization of charisma”—the tendency of new social movements to develop a bureaucratic means of self-perpetuation as the cost of longer-term survival—both in their earlier years were clearly “popular” movements in their appeal to nonelite followers through a highly emotional style of worship, a clergy that depended on personal charisma rather than on education, and a pragmatic, nontraditional approach to evangelization.

One of the major elements of popular religion is the distinctive nature of the way in which *charisma*—religious authority—is exercised. In churches that enjoy established or less formal elite status, clergy exercise their authority not so much by virtue of individual qualities but through the formal process of *ordination*, in which already recognized clergy confer the power they possess upon newcomers. This process is usually based on a combination of tradition—the idea that charisma can be formally transferred from generation to generation through an orderly, time-sanctioned process—and education, a formal curriculum based on traditional lore that the candidate is supposed to have mastered through tutelage by elders. Challengers to these presuppositions, who are often leaders of popular religious movements, frequently argue that these requirements are merely formal and external, and argue instead that charisma is exercised as a personal quality—in the U.S. context, demonstrably being “born again” and thus inwardly empowered through an infusion of divine grace to exercise spiritual authority. This challenge

might originally come from someone such as Whitefield—like his friend Wesley, an Oxford-educated Anglican clergyman—but often is emulated by grassroots preachers who lack these traditional markers of authority. Lay leadership—preaching and other activities ordinarily performed by formally ordained clergy now carried out by those lacking such ordination—thus becomes a marker of popular religiosity.

The history of U.S. evangelicalism is partly the story of this ongoing tension between “routinized charisma”—authority conferred by education, ordination, and office—and charisma as a unique personal gift that empowers religious leaders with no regard for formal qualifications. Charles G. Finney (1792–1875), the premier revival preacher of the antebellum era, had been trained as a lawyer, and wangled Presbyterian ordination on the basis of claims of personal charisma—a sense of divine calling backed up by extraordinary preaching ability—rather than formal training. Subsequent popular evangelists, such as Dwight L. Moody (1837–1899), Billy Sunday (1862–1935), and Aimee Semple McPherson (1890–1944), similarly rose to prominence in later decades through the exercise of personal qualities, including the ability to innovate without denominational constraints. Bible colleges began to arise by the 1920s as alternatives to traditional theological seminaries to equip would-be evangelists with basic biblical knowledge rather than German-infused modern theological training on the premise that the Bible was transparent to ordinary people and needed no scholarly gloss. By the later twentieth century, megachurch preachers similarly operated without benefit of either denominational support (and control) or formal theological education, but often came instead from backgrounds in business or communication. These preachers also have arisen from a variety of social backgrounds—Pat Robertson (1930–) from an elite family, Jerry Falwell (1933–2007) from hardscrabble origins—and their appeal is to a diverse, often middle-class constituency. Across the broad spectrum, however, the evangelical movement has presented a challenge to traditional notions of the clergy as a formally, traditionally educated elite who exercise power by virtue of denominational ordination and formal education.

Evangelicalism as Popular Religion

Thus far, many of our examples of popular religion in what is now the United States have been taken from the strain of Protestant Christianity known as *evangelicalism*. Randall Balmer has called evangelicalism *America’s folk religion*, using the latter term loosely but evocatively. One reason

that evangelicalism has been such a fertile seedbed for popular religiosity is that although it can take institutional form, it is not itself an institution but rather a broad climate of opinion within Protestantism that is protean in the forms it may assume. Many evangelicals can be found within the often liberal-leaning “mainline” Protestant denominations. Some stay put, even though they may feel themselves a minority. Others form caucuses to lobby against innovations, such as gay ordination, and sometimes coalesce, as have some Episcopalians in the early twenty-first century, to form new, schismatic organizations. Many new evangelical denominations arose in the early twentieth century as a result of the upsurge of the Holiness and Pentecostal movements, as well as the fundamentalist-modernist controversy that tore apart northern Baptists and Presbyterians.

The early phases of some of these movements, particularly among Pentecostals, could be described in Durkheimian terms as *effervescent*—that is, filled with a spirit of enthusiasm and spontaneity that worked against reliance on tradition and structures and stressed instead personal openness to the unpredictable workings of the Holy Spirit. Immediate experience of such supernatural gifts as speaking in tongues, prophesying, and healing through faith led to many following unaccredited but apparently Spirit-filled leaders in movements that rejected old social markers of division, such as race and gender. This was U.S. popular religion of a very intense form: unsanctioned, unbureaucratized, spontaneous, and supernaturally focused. This phase, which manifested itself with particular intensity at the Azusa Street revivals in Los Angeles in the early 1900s, did not last more than a decade or two, but eventually yielded to new denominational structures in which lines of race and gender reasserted themselves.

The subsequent development of U.S. evangelicalism has taken a number of forms but has been characterized by continual innovation. At one end, institutions such as the Fuller Theological Seminary in Pasadena and *Christianity Today* magazine are similar to their mainline counterparts in many ways, though remaining more theologically conservative. Denominations such as the Assemblies of God have developed national bureaucratic structures similar to those of the Protestant mainline as well. Some evangelical institutions, such as the ultra-conservative Dallas Theological Seminary, may be said to constitute part of a deeply entrenched counterculture that defines itself as being at war with mainline institutions. Weber’s “routinization of charisma” has certainly been at work in the evangelical world, especially in its fundamentalist wing that is deeply anchored

in the Calvinist-Reform tradition of emphasis on divine law and rationalist thought.

The possibility of innovation in U.S. evangelicalism is a direct function of the loosely defined tradition and movement rather than a single institution. A deep-rooted (and perhaps very American) bias within the movement toward religious individualism focuses on direct access of the individual to divine power that brings about freedom from sin as well as disease. Lacking a pope, a hierarchy, or an overarching bureaucracy, there is little to prevent new preachers, prophets, and healers from springing up and attracting a following, as long as they do not stray too far from broad lines of Bible-based orthodox belief. Conformity is enforced to a degree through institutions and media that shape public opinion, but these have no formal authority. Some institutions, such as the Southern Baptist Convention, do formally sever ties on occasion with congregations that stray from their teachings, but there is no lack of other Baptist organizations with which these congregations may affiliate, assuming that they want to affiliate with anyone.

One seeming paradox within evangelicalism is that although the movement emphasizes the centrality of individual conversion and the old Reformation axiom that individuals have to encounter and interpret scripture for themselves, the movement seems readily to generate charismatic leaders whose words are authoritative for their followers. Revivalists since Whitefield’s time have been preeminent among these leaders, whose rhetoric is based on the premise that individuals, institutions, and even nations have an inherent tendency to fall away from divine teaching and need periodic recommitment and reprimand. Evangelical denominations tend to follow congregational polity and lack influential hierarchies—although the Southern Baptists have tried to develop such an authority structure *de facto*—so revivalists and local ministers have often developed large local followings, which have been translated into national communities of influence through the mass media. Beginning in the 1970s, “televangelists” such as Falwell and Robertson, both with large local followings in their native Virginia, attempted to develop a nationally coordinated evangelical-based political network that became known as the “religious right,” but its influence began to decline with political and generational change in the early twenty-first century.

Local churches, denominations or quasi-denominations (megachurch-based franchise-like movements such as Saddleback and Vineyard), charismatic preachers and revivalists, television and radio programs, seminaries and Bible schools,

and political lobbying organizations are all ways through which evangelicalism has become a loosely defined yet distinctive culture that is national or even international in scope. This culture is produced and disseminated through other, very material means as well. “Christian” bookstores, for example, are independent operations that offer for sale a wide variety of books, videos, CDs, refrigerator magnets, and other pious artifacts that are intended to promote religious knowledge and to transform homes, offices, cars, and other spaces into sacralized zones (much as did similar Catholic enterprises in the pre-Vatican II era). “Christian Yellow Pages” were published with the intention of enabling evangelicals to do business primarily with co-religionists. As both Randall Balmer and Colleen McDannell have pointed out, Bibles, available in a vast variety of formats and targeted toward a spectrum of niche audiences, persist as an icon of evangelical identity, in form as well as in content.

A twenty-first-century manifestation of evangelical culture is the Creation Museum (2007), located near the Cincinnati airport in northern Kentucky. The brainchild of an Australian biology teacher, this technically sophisticated institution attempts to provide a verbal and material counter-narrative to the dominant scientific account of genetic evolution through natural selection, with its implicit challenges to the literal accuracy of the Genesis creation account. This museum—like the Bible colleges that were its spiritual forerunners—is a vivid example of the attempt by evangelicals to promote a worldview and create a community around it that provides an alternative to the dominant secular culture—a culture shaped by financial and intellectual elites that has allegedly extended its influence over “mainline” Christianity.

Evangelicalism, or at least many of its segments, certainly qualifies as a U.S. popular religion in its diffuseness, its lack of hierarchical control (the ambitions of Southern Baptist leaders to exert something very like it notwithstanding), its preoccupation with the access of individuals to divine power in unmediated form, its exaltation of personal charisma over educational or bureaucratic credentials among its leadership, and its resentment of mainstream credentialing institutions. Although evangelicalism’s roots can be traced to British Protestantism—it has always enjoyed considerable popularity in Britain and Canada—evangelicalism has become more pervasive and influential in the United States, where religion is much more widespread and competitive. Its individualism and its freedom from the trammels of tradition, it has been argued, have both conduced to its success in the United States and its profound influence on U.S. culture and society.

Populist Religion as Popular Religion

Populism is a deep current in U.S. political culture that has had profound implications for and affinities with U.S. popular religion. Although the term has been used in many ways, historian Michael Kazin has usefully defined it as an ideology that emerged from the U.S. “producer classes”—farmers, laborers, artisans—to highlight their moral virtue, especially in distinction from the “parasitic” upper and lower classes, which feed off the labor of others. Nineteenth-century populism, which culminated in the career of William Jennings Bryan (1860–1925), was closely associated with the evangelical Protestant ethos that was widespread especially in rural and small-town southern and midwestern United States, but was increasingly challenged by the forces of urbanization, industrialization, immigration (especially Roman Catholic and Jewish), and secularism. Bryan, who was the presidential candidate of both the Democratic and the People’s parties (populism’s short-lived distinctive political institution), gained national notoriety as a protagonist in the Scopes trial of 1925, but his broader career was founded on a commitment not so much to religious fundamentalism as to the virtue and rights of ordinary citizens, who were being victimized by capitalist and immigrant alike. Bryan’s stake in the Scopes trial was not simply based on hostility to evolution on religious grounds, but more profoundly on his sense that the curriculum of local schools should not be dictated by outside urban elites who were out of touch with the values of local communities.

This conception that wisdom resides in the common people rather than in experts resonates with many themes in popular religion, particularly of the evangelical sort. That political and religious populism converged in the Scopes trial is indicative of the impact that the fundamentalist-modernist controversy of the early twentieth century had on U.S. Protestant life, as well as the similarly profound cultural chasm that was thus revealed between the still largely agricultural south, where the movement to ban the teaching of evolution in public schools was popular, and the more urbanized and pluralistic north. An urban Catholic populism surfaced briefly in the career of Charles Coughlin (1891–1979), the “radio priest” of Royal Oak, Michigan, but Coughlin’s attacks on the popular Franklin Roosevelt and his overt anti-Semitism soon ended his once enormous popularity in the Depression-era United States. Similar right-wing Protestant voices such as Gerald L. K. Smith (1898–1976), a one-time Coughlin ally, were vocal but limited in appeal.

The emergence of the religious right as a serious player in U.S. politics in the 1970s was characterized by a new convergence of popular religion and political populism in the American scene. Many of the themes of the religious right had been anticipated by Alabama governor and presidential candidate George Wallace (1919–1998), whose rhetoric was pitched to white working-class Americans who felt that they had been victimized by the civil rights movement and its elite liberal backers. Wallace's attack on "pointy-headed intellectuals" was soon echoed by Richard Nixon, whose "southern strategy" helped propel him to the White House in 1968 and again in 1972. Lingering regional, social class, and racial resentments formed a major part of the cultural foundation for the religious right, whose most visible spokespeople were frequently southerners such as Falwell and Robertson, and whose movement, as Balmer has demonstrated, was sparked by the denial of tax-exempt status by the federal government to racially segregated Bob Jones University in South Carolina. The movement's disdain for the expertise of "establishment" scientists, theologians, and political theorists was expressed in a distinctively populist style of rhetoric, which implicitly appealed to the traditional evangelical notion of the "perspicuity of scripture"—that is, the idea that the meaning of the Bible is transparent and accessible to ordinary literate believers, who had no need of scholarly expertise to understand God's word.

As the subsequent emergence in the early twenty-first century of a new cadre of evangelicals committed to causes such as social justice and environmentalism and the decline of the political impact of the religious right have indicated, populism and evangelicalism are by no means synonymous. (Conversely, the religious right openly appealed to conservative Catholics and Jews, a significant number of whom embraced their cause.) Nevertheless, there has long existed what Max Weber called an "elective affinity" between the two movements, rooted in the sense of many evangelicals that theirs is a faith of and for ordinary folk, as well as a nativistic belief that the "real" United States is a nation elected by God for a special destiny, whose ability to fulfill that destiny has been placed in the hands of evangelical Protestants, the bearers of authentic faith and morality.

Harmonialism or Metaphysical Religion

If evangelicalism is the "yang" of U.S. popular religion, what historian Sydney Ahlstrom has called *harmonialism* is its "yin." (Religion scholar Catherine Albanese has more recently coined the term *metaphysical religion* to identify the

same spectrum of phenomena.) That scholars do not agree on exactly what name best suits this topic is emblematic of its diffuseness. Evangelicalism, to be sure, is institutionally decentered, but most evangelicals, as well as scholars of the movement, agree substantially on its defining characteristics, such as the centrality of the Bible, the need for a transformative personal experience of conversion, and the imperative to witness on behalf of the faith to others. Since practitioners of harmonial religion are even more averse to institutionalization and centralized authority than most evangelicals, definitions of the movement—which may be too diverse and diffuse even to be called a movement—are more difficult to pin down.

Harmonialism may be described as any of a wide variety of beliefs and practices—and occasional institutional embodiments of the same—that are based on the premise that human health and well-being can be attained through the attainment of true knowledge of the unseen forces that permeate the cosmos and subsequent personal alignment with those forces. The sources and manifestations of what has sometimes been called the "perennial philosophy" are many, and include Swedenborgianism, Freemasonry, popular occultism, a variety of nineteenth-century healing movements, mesmerism, New England transcendentalism, Theosophy, Rosicrucianism, Native American myth and ritual, and Vedanta, as well as other Asian religious traditions popularized in North America. Hall and Butler have demonstrated that harmonial beliefs and practices were widespread in colonial America and the early Republic, even among Puritan leaders.

Harmonial strains manifested themselves in a number of new religious movements in the nineteenth and early twentieth centuries. Joseph Smith (1805–1844), the founder and prophet of Mormonism, had been a practitioner of popular magic activity in his early years, and later incorporated much of the symbolism of Freemasonry into the iconography of the Latter-day Saints. Mary Baker Eddy (1821–1910) was strongly influenced by the teaching and practice of the itinerant healer Phineas P. Quimby (1802–1866), whose ideas about the influence of mental processes on the physical body also influenced many of the founders of the New Thought movement. Eddy went on to found the movement known as Christian Science, based on the notion that our physical bodies are ultimately illusory and that healing can be attained through a profound personal appropriation of the belief that mind is all that is ultimately real. Christian Science, which Eddy institutionalized and turned into a denomination, is atypical of harmonialism in its firm linkage to its founder and to a monopolistic institution. Despite their profound

differences and their claims to have discovered (mutually) exclusive truth, Smith and Eddy shared an autodidacticism—that is, they lacked extensive formal education and, from an outsider's viewpoint, appear to have devised complex religious systems through the eclectic appropriation of diverse elements from the popular religious cultures of their day, both Christian and harmonial.

The New Thought movement of the twentieth century was a primary bearer of metaphysical currents. It generally manifested itself in a diffuse and individualistic culture held together by a common inspirational literature generated by leaders such as Warren Felt Evans (1817–1889) and Emma Curtis Hopkins (1849–1925) and movements such as the Unity School of Christianity, headquartered in Kansas City, Missouri. Followers usually do not constitute any sort of formal community nor engage in common worship, and sometimes participate in other religious organizations. Movements such as Rosicrucianism and Theosophy were parallel vehicles for the dissemination of “esoteric” metaphysical knowledge that would enable its possessors to lead more spiritually and materially enriched existences.

Even more diffuse than New Thought has been the *New Age* movement, an omnium-gatherum term for a wide variety of beliefs, activities, phenomena, and organizations that is organizationally unfocused and whose practitioners are extremely individualistic and eclectic. Information is diffused through books, periodicals, and other publications—sometimes available through New Age bookstores—the Internet, word-of-mouth, various organizations of the like-minded, and astrologers and similar freelance consultants and authors who make careers of promoting New Age concerns. During the 1960s and early 1970s—the proverbial “Age of Aquarius” and the youthful counterculture—communes based on New Age principles such as “harmonic convergence” briefly flourished. It is easier to catalogue than to synthesize New Age beliefs and practices, which might include the “channeling” of early human spirits by present-day individuals, pilgrimages to sacred places associated with indigenous cultures such as Stonehenge in England or U.S. mountains deemed sacred by native peoples, alternative medicine, Buddhist or Hindu meditation practices, astrology, crystal healing, and any number of spiritual practices derived from a whole gamut of sources, ancient and modern.

The term *spirituality* itself, in its contemporary sense of eclectic personal beliefs detached from a traditional religious community, is a later-twentieth-century usage that reflects the New Age ethos accurately. (The sociologist Robert Bellah and

associates adopted the eponym “Sheilism,” coined by one of their interviewees, to describe this “spiritual not religious” sort of sensibility.) The notion that there is a spiritual dimension to everyday life apart from any formal religious formulations can also be found in Alcoholics Anonymous and other twelve-step programs. In addition, the term *neo-paganism* collectively refers to a number of organizations, beliefs, and practices that are distinctly harmonial in flavor and that overlap considerably with the New Age.

New Religious Movements

New religious movements (hereafter NRMs, in what has become standard academic usage) were in older days generally known as “cults,” an implicitly pejorative term designating religious groups that deviated seriously from mainstream practice through their espousal of new revelation or other teachings that departed significantly from trinitarian Christian orthodoxy. We have already mentioned Mormonism and Christian Science, two indigenous nineteenth-century U.S. movements that meet this definition. That century abounded in such movements, some of brief duration, but others, such as Seventh-day Adventism, the Jehovah's Witnesses, the still-but-barely-extant Shakers, and Native American Peyote religion, that have endured over several generations and significantly affected U.S. religious pluralism. In the 1960s and 1970s, a proliferation of “cults,” in the wake of that era's “counterculture,” alarmed a generation of middle-class parents who feared that their children would be “brainwashed” into exotic groups, often of Asian origin, and forever alienated from their families. The panic over the “Hare Krishnas,” “Moonies,” and similar groups eventually subsided as they faded from the national scene in the midst of scandals, legal difficulties, and, perhaps most fatally, loss of novelty in a changing cultural environment characterized by increasingly short attention spans by the general public.

Many NRMs can be viewed as manifestations of popular religion on several counts. As noted earlier, both Mormonism and Christian Science—together with any number of other NRMs—were founded by autodidacts—that is, self-taught prophetic figures whose claim to authority was based on an original insight into the ultimate nature of things rather than on formal training or ordination. Among Native Americans, shamanic figures such as Tenskwata (1775–1836) and Wovoka (c. 1856–1932) provided new prophetic leadership. The early adherents of these movements were presumably attracted by this charisma, which promised the ability to live either in what Victor Turner has called spontaneous

communitas—a community in which all members enjoy a primary relationship with one another, unfettered by traditional social distinctions—or access to divine power, usually immanent—that brings reassurance and healing. This immediacy of experience is often a key to the popularity of such newly founded religions and may erode over generations as charisma becomes routinized.

Popular Religion and Popular Culture

Although *popular culture* has no precise definition, it is usually understood as synonymous with *mass culture*, that is, cultural production that is easily replicated through modern technology—beginning with movable type printing in the later fifteenth century—and distributed through an infrastructure of long-distance transportation and mass marketing. Early religious popular culture coincided with the spread of Protestantism, which relied heavily on print technology and, later, on inexpensive graphics, such as chromolithography, introduced in the nineteenth century. The advent of film, radio, television, and the Internet in the twentieth century multiplied the possibility for the production of popular religious material exponentially.

The relationship between religious popular culture—books, videos, films, artifacts, Web sites—and organized religious groups is complicated. In the twentieth-century United States, Roman Catholics and evangelical and mainline Protestants have all railed against the baleful influence of, for example, lurid comic books and films. However, many of these same groups have been skillful in adapting these media for their own purposes. The vast popularity of Warner Sallman's painting "Head of Christ" (1941), Roman Catholic Bishop Fulton Sheen's television series *Life Is Worth Living* (1951–1957), and the "electronic church" of the 1980s televangelists are all ample testimonies to the power of mass media to mold religious sentiment through the provision of accessible graphic images.

The realm of film has been particularly susceptible to the conveyance of religious themes. Evangelicals, who seem to enjoy an elective affinity with the mass media, have created, as they have in other cultural realms, a system of production and distribution parallel to that of Hollywood, often featuring films with apocalyptic themes (for example, *The Omega Code* [1999], and *Left Behind* [2000], based on the best-selling series of sixteen novels by Tim LaHaye and Jerry Jenkins). The Roman Catholic Paulist order, which has historically focused on communication with the broader culture, has helped produce films with a more subtle Christian

message—for example, *The Spitfire Grill* (1996). Hollywood films, some of them enormously popular, have often presented biblical themes in a positive if uncritical light, especially Cecil B. DeMille's extravagant renderings of *The Ten Commandments* (1923, 1956) and William Wyler's *Ben Hur* (1959), and went through a phase in which Bing Crosby, Barry Fitzgerald, and Frank Sinatra appeared as winsome Catholic priests (for example, *Going My Way*, 1944). Jewish themes have also been frequent, including *Exodus* (1960), *The Pawnbroker* (1964), and *Goodbye, Columbus* (1969). More recently, Mormon-themed films have also begun to break into the national market, notably *Napoleon Dynamite* in 2004.

Conversely, commercial films since the decline of the motion picture production code in the 1950s have at times looked at religion in a skeptical or satiric manner (*Elmer Gantry* [1960], *Ghost Busters* [1984]) or with bizarre themes (*The Exorcist* [1973], *The Da Vinci Code* [2006]). (Television cartoon series such as *The Simpsons* and *South Park* have also taken potshots at religion.) Other films have drawn ambivalent response from evangelicals, in particular. The Anglican scholar and Christian apologist C. S. Lewis (1898–1963) has been greatly admired by many evangelicals, and a telling episode in his life story was recounted in the 1993 feature film *Shadowlands: The Lion, the Witch, and the Wardrobe* (2005), the first of a series of films based on his "Narnia" series, which contained elaborate Christian symbolism in the form of fantasy, was also well received by Christians across the theological spectrum. However, the enormous popularity of novelist J. K. Rowling's Harry Potter series and the films based on them (beginning with *Harry Potter and the Philosopher's Stone* in 2001) have frequently been criticized by evangelicals for their focus on witchcraft and the occult, even though the stories have been praised by others as carrying an essentially Christian message of the triumph of good over evil. Still another direction was taken by George Lucas's six-episode *Star Wars* series (1977–2005), in which the Jedi knights profess a rather New Age adaptation of Zen Buddhism ("use the force, Luke!").

Religion has also manifested itself in other ways in popular culture. During the 1930s and 1940s, for example, Yiddish radio programming was widespread, especially in the New York City area. More recently, the fascination with Jewish occultism in the form of Kabbalah—popularized by celebrities such as Madonna—has penetrated far beyond the Jewish community, some of whom may well be perplexed by the phenomenon. Similarly, Hinduism has entered the broader culture through yoga classes and transcendental

meditation, both of which can be taken up by Americans of any or no religious affiliation without apparent contradiction. Buddhism, especially in its Zen and Tibetan forms, has also attracted a non-Asian fan base, ranging from serious convert-practitioners to those who sympathize with the Dalai Lama's ethnic and political messages.

Reflections

The United States, with its ethos of religious liberty and heritage of cultural complexity, has over the centuries proven a markedly hospitable environment for the proliferation of new religious strategies and movements that have, at least in their early phases, existed at the margins and in the interstices of the dominant society. The nation's role at the cutting edge of technological development and capitalist production has also provided a fertile matrix for the creation of a popular culture, with which popular religion has enjoyed both an ongoing tension and an elective affinity. Popular religion has always been, and doubtless will continue to be, a major feature of U.S. religious life.

Popular Religion and Popular Culture: From the Colonial Era to the Civil War

Popular religion refers, most broadly, to the lived religious experience of all laity. It tends to emphasize the social rather than institutional and to focus on practice rather than theology. But beyond that stricture, popular religion encompasses a variety of groups and movements. Some historians employ the term in reference to the religious practice of groups that command broad, thus popular, appeal. Others limit the definition to religious activity as practiced by non-elites, whether social, ethnic, or gender minorities, or those with unique or heterodox theological positions. This entry adopts a broad definition of popular religion to consider all lay activity, but particularly focuses on practices outside church norms, and by groups considered outside elite or majority positions in U.S. life.

Colonial Popular Sentiment

The British founded most of their colonies on the principle of religious establishment—nine of the thirteen original colonies contained some support for a state church at the time of the American Revolution, and in Pennsylvania Quakers operated an informal establishment that eschewed coercion but kept de facto control over the government. Popular sentiment, however, often created a more vibrant religious life than what the state churches offered.

Established Puritan churches in New England operated on a decentralized congregational model and encouraged

individual Bible study and prayer that ultimately strained religious uniformity or central authority. Individual New Englanders seamlessly incorporated miraculous signs, miracles, and curses into their religious experience of the everyday world. Even elite Puritan leaders found such tendencies attractive: Alchemy, the merging of science and magic to uncover the hidden properties of the material world, fascinated many educated New Englanders.

Farther south, other challenges existed to established religion. The middle colonies were religiously pluralistic. A range of dissenting and pietist sects filled those colonies, supplemented by large numbers of nonreligious and indifferent subjects. Quakers and pacifistic Moravians shared a respect for individual spiritual authority and drew close to charismatic practitioners of spiritual and magical cures and signs. In the southern colonies, the established Anglican Church faced indifference among its parishioners and vitality from outside sects, not to mention various African beliefs among its not-yet acculturated slave population. Frustrated clergy had few allies, and many opponents.

In all cases, established religion and religious authority remained tenuous, subject to the approval of its congregants. The colonial world's religious pluralism and dissenting strength allowed a range of popular and folk beliefs. Popular prejudices, not elite manipulation, drove witch trials, culminating in the Salem tragedy of 1692. After Salem, rationalizing elite ministers and authorities refused to prosecute witches, but widespread belief in witchcraft remained. Colonists sometimes turned to cunning folk, individuals versed in magical and occult charms and remedies. Midwifery especially retained its magical heritage, as the province of women unlettered in rationalist medical texts. Midwives represented a strong base of alternative medicine in colonial America—indeed, often an alternative that a majority sought. Although astrology declined during the eighteenth century, U.S. almanacs retained symbols of magic and occult practice, ranging from signs of the zodiac to predict events, to depictions of the human anatomy that coincided with folk remedies. Southern farmers carved runes into their barns to bring abundant crops and ward off curses; western farmers adhered to a strict schedule in killing hogs and baptizing children to account for lunar phases.

Revivalists, Rationalists, and Anti-Catholicism

In the eighteenth century some clergy harnessed popular energies to promote religious revival. Itinerant revivalist George Whitefield operated outside the authority of local

churches. He authorized the printing of thousands of handbills and pamphlets, creating a popular religious community around new media—print publications—and new forms—outdoor revivals. Revivals provoked enthusiastic displays: Many converts cried, others barked, and a few rolled, thunderstruck, on the floor. These displays challenged the rational disputations heard in sermons within organized churches.

Although prominent revivalists such as Whitefield and Jonathan Edwards promoted strict discipline and attempted to channel revival energies into orthodox theology and regular church attendance, their followers were not as discriminating. Taking upon themselves the mantle of the Holy Spirit, illiterate farmers, women, and slaves took to the fields to preach. In a generally Protestant environment, many colonists strayed to listen, willing to be persuaded (even if, in numbers, few were).

Many anti-revival clergy attempted to harmonize Enlightenment rationalism with orthodox faith, or at least downplayed enthusiastic responses for more philosophical reflections. Some laity attempted their own syntheses, as when Thomas Jefferson's deism accepted Christ as moral teacher. Jefferson's Bible expunged all references to miracles but kept the teachings of Jesus. Many elites interested in Enlightenment thought joined the society of the Freemasons. Claiming ancient heritage yet promoting a rational deity, the Masons attracted large numbers of colonial elites. After the American Revolution, larger numbers of laity embraced the synthesis of Enlightenment and religion (or, alternatively, belief in magic and the occult) in what might be deemed metaphysical religion.

The generally Protestant heritage of the colonies tinged the political strivings in the era of the American Revolution. Although Enlightenment-influenced elites such as Jefferson and John Adams remained theologically heterodox, their political fortunes benefited from an anti-Roman Catholic, anti-establishment ethos, often millenarian, that came to be expressed in religio-political terms. Otherwise apathetic religiously, many colonists saw papal influence and creeping religious establishment in imperial actions. They mixed fears of bishops coming to the United States with demonstrations against the Stamp Act and saw in the Québec Act not a case of administrative reorganization, but the expansion of an unfree Roman Catholicism into their daily lives. For many colonists, political enemies of freedom coincided with religious enemies of truth, the Antichrists of the apocalypse.

Colonial Catholics and Jews

Despite popular anti-Catholicism, Roman Catholics in the United States charted a course independent of the church hierarchy in Rome. Prominent aristocratic Catholics had initially settled Maryland and provided the base of the church's early efforts. They often encountered opposition from ethnic varieties of Catholicism, ranging from Germans in Pennsylvania, to Highland Scots in backcountry New York and the Carolinas, to frontier French clergy, to Irish clergy in the larger cities. Catholic loyalties during the American Revolution varied tremendously. In general, two forms of popular Catholicism emerged. A rationalist and native-born elite strained at Rome's control and attempted to steer the church down a modified republican path with prominent lay involvement. In contrast, ethnic Catholics accepted church hierarchy, especially when wielded by their co-nationalists, but also more willingly experienced the mysteries, and mysticism, of the faith. Mass immigration in the new nation eventually allowed this latter group to dominate both church polity and religious experience.

The Jewish community in the British colonies remained small and was limited to four communities of any significant size: New York, Philadelphia, Newport (Rhode Island), and Charleston. Although Protestant Americans accepted a reflexive cultural anti-Semitism, U.S. Jews suffered little overt discrimination. But the size of their communities forced changes to popular Jewish practice. Elite Jews worked with and sometimes intermarried into elite gentile families. Sephardic Jews of Iberian heritage and Ashkenazi Jews from eastern Europe often disagreed about worship and control over resources, but their small size meant that they could little afford deep disagreements. When Ashkenazi newcomers from eastern Europe increased in number in the late colonial era, long-standing elite Sephardim and Ashkenazim allied to block demands from these lower-classed invaders. Although individual Jewish leaders bemoaned the lax religious practices of many of their co-religionists and feared increased intermarriage outside their faith, they had no effective way to discipline their members and often accepted the return of dissidents to bolster their small numbers.

Second Great Awakening

The disestablishment of colonial churches in the years following the revolution made all religious activity popular, in the sense that none received official state approval. All churches competed for members and thus had to articulate

popular appeals. Disestablishment unleashed a wave of religious energy that turned previously dissenting and popular churches into the majority. A series of revivals known as the Second Great Awakening were, unlike the first Awakening, explicitly populist.

Charismatic preachers often invoked the common sense of the common person to appeal to their audiences, ironically gaining authoritative positions among their followers. Revival ministers typically criticized older and less experimental churches. Calvinist theology was an especially effective bogeyman, symbolizing to Arminian revivalists the domination of an elite and educated clergy prone to abstractions. Revivalists offered instead a simple message of free-willed conversion. Denominations as different as Free Will Baptists, Methodists, Disciples, and Christians each adopted this strategy. Once drawn to revival churches, however, laity often submitted to the authority of a clergy whose popular appeals were combined with rigorous discipline.

Even so, individual revival experience never completely conformed to clerical teachings. Evangelical Protestants harnessed individual spiritual energy in their conversions and subsequent lives. Contrary to Enlightenment doctrine, evangelicals heard the voices of God and angels. They claimed that faith, with the Holy Spirit's aid, healed their degenerative conditions and diseases. Some saw visions of heaven, or of judgment. These displays strengthened revival churches and became the basis for new religious movements that claimed similar displays of word and vision, but attributed them to new authorities.

Slave Religious Experience

The Second Great Awakening made great inroads among the enslaved African American community of the South. Indeed, church membership for slaves grew proportionately higher than that for whites. Enslaved blacks often embraced the revivalism of the Methodists or Baptists, but combined it with the magical traditions of their homelands. Black worship retained African forms. The call and response format between preacher and congregation was prominent in black worship. The cadence of the sermon, often sung or chanted, was as important as the content of the words. In secret worship gatherings, blacks practiced the ring shout, a dance that required precise steps in counterclockwise motion and that employed joyful messages. Slave communities also used conjurers and magicians for folk healing remedies, and feared curses and witchcraft when sickness or bad luck struck.

The content of African Christianity also reflected differences with elite forms. Slave religion embraced messages that secretly challenged whites' social values. Blacks stressed the Old Testament, finding their own situation in the stories of God's chosen people, the Hebrews. Slaves championed Moses, a Jew who led his people out of slavery. Black religion was intensely moralistic, in part retained from Africa, where some polygynous societies and Islamic influence demanded rigid behavioral codes regarding sex and property. This moralism coincided well with the demands of evangelical Christianity. White masters who attended church with their slaves wholeheartedly approved of the demands for slaves to obey their masters. But while publicly acknowledging obedience, slaves also recognized the sin of slavery and fully expected their masters to be subject to divine punishment, and the fires of hell, for that sin. When Nat Turner led a slave rebellion in Southampton County, Virginia, in 1831, his men spared poor religious white families but killed all slaveholders, religious or not, believing Turner poured out God's judgment.

Music and Publishing

Revival denominations harnessed new media forms to gain in popularity. Hymnody exploded in the early Republic. Most U.S. religious folk texts originated in the early years of the new nation. Composers set them to popular love ballads or melodramatic tunes that previously narrated wars, sexual affairs, and murder. Many derived from folk melodies of the British Isles, where many revivalists had ancestral roots. This sacralization of formerly profane materials doubtless aided the intense emotionalism that accompanied conversion and subsequent church attendance.

Lyrical, the new hymns reflected a popular religion that dissolved theological categories that the clergy carefully guarded. The most successful hymns and hymnals articulated an intensely personal experience of both salvation and sanctification. Neither Calvinist nor Methodist in precise theological terms, individual believers worked out their salvations in terms of their individual experiences, finding more rigid theological categories—whether of perseverance of the saints or absolute perfectionism—to be of little use as they steadily plotted their lives in the mundane world.

Growing churches also exploited new technologies in printing. The invention of the steam press made mass production printing efficient and inexpensive. Wealthy laity channeled this development into evangelization efforts. Parachurch organizations such as the American Bible Society, established in 1816, strove to place Bibles in the hands of every U.S.

resident. The American Tract Society pursued more sectarian ends by publishing explicitly evangelical materials, but remained ostensibly nondenominational. Church publishing houses contributed to the growth of their respective denominations—the Methodist Book Concern became the largest publisher in the world by 1860, paralleling the rise of its parent denomination, which became the largest religious body in the United States in the first decades of the nineteenth century. Popular churches were publishing churches.

In a generally Protestant country, however, individuals chose their own religious reading materials. The Harper brothers of New York, devout Methodists, dominated the market for inexpensive reprints, a lucrative field in an era of hazy international copyright laws. Much of their catalogue consisted of religious and devotional material, ranging from highbrow copies of Seneca's *Morals* to Methodist youth catechisms and Episcopalian prayer books. Ministers such as Henry Ward Beecher moonlighted as advice manual writers and promoted an ethic of self-discipline to combat the decline of influence churches had over city-dwelling youth.

Among the Harpers' religious best sellers was the salacious material of the *Awful Disclosures of Maria Monk*, which the Harpers published under a pseudonym to avoid Catholic boycotts. Its best-selling status lay in the juxtaposition of sex, death, and religion, and its anti-Catholic imagery reached large numbers of nominal Protestants who otherwise had little connection to church. As in the revolutionary era, religious anti-Catholicism emerged with a political agenda. When Catholic immigration from Ireland and German states increased in the 1840s, anti-Catholicism emerged as a powerful political presence. This impulse culminated in the creation of the nativist and anti-Catholic American Party (or Know-Nothings), which swept elections in Massachusetts in the mid-1850s and ran a national presidential candidate in 1856. U.S. nativists linked anti-republican fears with anti-immigrant prejudices. Religion, politics, and ethnicity came together in popular experience.

Antebellum Catholics and Jews

U.S. Catholics countered this prejudice with their own reform efforts. Local laity and clergy bonded to educate Catholic youth, spearheading an ambitious parochial school movement at mid century. Religious women were a cornerstone of the effort, claiming a prominence in practice that did not match their official status. U.S. Catholics were often indifferent to evangelical reforms, seeing suffering as part of the human condition. But in contrast to evangelicals' abstract

millennial plans, they built orphanages and asylums and established lay confraternities devoted to aiding the poor within their communities.

The native-born Anglo Catholic elite, who stressed the rationality of the church, often achieved prominent places in U.S. society. They even gained notable converts, from Elizabeth Ann Seton to Orestes Brownson. But waves of Catholic immigrants from German states and Ireland, starting in the 1820s and exploding in the decades thereafter, overwhelmed this native Catholicism. Institutionally, the Catholic Church in the United States increasingly limited lay influence and embraced episcopal and papal forms of governance. Popular Catholicism paradoxically embraced hierarchy in the church.

The popular religious practice of immigrant Catholics cultivated a piety centered in individual experience. Whether Irish or German, ideally Catholics heard the Mass each Sunday and on feast days, and took Communion and confessed their sins at least once a year. The sacraments of baptism and confirmation marked important stages in the raising of youth and in the passage of time for families, and the catechism explained the significance of these events. Yet many immigrants imperfectly realized this ideal. Often coming from places where religious practice was dormant, many immigrants remained ignorant of church teachings or only selectively embraced the easiest requirements to maintain their faith.

Catholic leadership organized parishes ethnically, which strengthened immigrant ethnic identity but strained church authority. Irish Catholics often supported the church hierarchy, partly because the Irish dominated higher positions. But Irish parishioners celebrated wakes, ignoring priests who stressed that funerals be held in the church. Irish clergy who supported the temperance movement found mixed support among Irish laity and indifference among their German congregants, who generally rejected temperance entirely. Many German and Irish Catholics remained on the margins of the church, accepting nominal Catholicism in the community but spurning the larger church that nurtured it.

In contrast to Catholics, the anglicized Jewish community faced no large influx of immigrants until shortly before the Civil War. Consequently, popular Judaism in the United States tended to embrace Enlightenment rationality and republican politics. When the Charleston congregation Beth Elohim attempted to replace its democratic constitution with a European model of control by elders in 1820, elite Charleston Jews balked, forming the first branch of Reform Judaism in the United States. Promoting a religion based on

rationality, this movement explicitly drew parallels with the American Revolution, calling for Jews to free themselves from bigotry and despotism of the past and to purify religion to find its true essence. In the following decades most U.S. Jews moved in this rational direction, which Rabbi Isaac Mayer Wise codified beginning in the 1840s. Most Jewish immigrants before 1860 came from the German states, acculturated to U.S. Judaism, and embraced this rationalist faith. By the time of the Civil War most U.S. Jewish congregations appeared like elite Protestant congregations, with robed preachers, mixed-sex seating, and organs, choirs, and hymnals. The content of their worship was considerably more rational than that of most of their Christian neighbors, however. Not until the 1880s, with the arrival of eastern European Jews, did mysticism and strict ritual reenter U.S. Jewish practice.

Joseph Smith and Popular Mormonism

Many native-born Americans accepted neither revival piety nor the immigrants' faith. New religious movements emerged from the shadows of evangelicalism to promote populist religions different in tone and emphasis. Among the most successful was Joseph Smith, Jr., whose Church of Christ (established in Palmyra, New York, in 1830) grew to become the Church of Jesus Christ of Latter-day Saints, one of the largest religious bodies in the United States.

Smith's authority originally rested in popular religious assumptions. Claiming to have discovered golden plates of ancient origin, Smith used magical seerstones to translate them, resulting in the *Book of Mormon*. This Bible for the New World argued that Native Americans were part of a larger migration of Old World civilizations that had included among them the Lost Tribe of Israel. Smith's reliance on folk magic touched a cultural nerve among his followers. Indian burial mounds and artifacts took on sacred meaning, thanks to the *Book of Mormon*, and coincided with folk beliefs in the power of the natural landscape and the spirits that often inhabited it.

Smith's discovery of ancient wisdom paralleled the efforts of other religious movements. Indeed, some scholars have noted parallels between early Mormon ritual and Masonic ceremonies. But Smith had little interest in decentralized mysticism, instead preferring centralized control that modeled some evangelical revivalist denominations. Smith's church organized hierarchically, with all men ordained to the priesthood, but each subservient to a leader above them. A dizzying variety of church offices formed and re-formed in the group's

early years. At the top, the church prophet or president, Smith himself, was the final arbiter of heavenly voices. As a record of continual revelations sent from God to Joseph Smith, the *Doctrine and Covenants* became sacred scripture as important as the *Book of Mormon*. With Mormons, as with evangelicals, popular religion could be authoritative religion.

Antebellum Metaphysical Religion

Smith's religion borrowed from the colonial heritage of metaphysical religion. Metaphysical religions often claimed an ancient heritage, through Egyptian and Greek mystical writings, that rivaled the Protestant reliance on biblical texts. Metaphysicians sought to align the macrocosm of the universe with the microcosm of the individual. By rediscovering this ancient knowledge, practitioners could achieve harmony between the two worlds and bring healing to the individual. Although gaining few followers in the eighteenth century, Emanuel Swedenborg's teachings influenced numerous popular religious groups in the nineteenth century. His belief in the correspondence between the mineral, vegetable, animal, spiritual, and celestial orders of being in nature suggested that humans could access the powers of God. This doctrine of correspondences formed the cornerstone of many metaphysical undertakings. And Swedenborg's specific teachings on the possibility of communicating with the dead or on the delights of sex in the heavenly realms prefigured other popular religious movements in the century to come.

These metaphysical movements included attempts at physical healing, such as mesmerism or homeopathy, which used ideas of correspondence to tap spiritual forces. More philosophical and abstract, Ralph Waldo Emerson formulated a metaphysical philosophy in transcendentalism that attracted a cadre of poets, writers, and numerous interested listeners. Other metaphysically inclined followers embraced the prospect of utopian communal living at the Brook Farm or the Oneida Community.

Spiritualism also gained a following in the 1850s in the United States. Claiming scientific communication with the souls of the dead, Spiritualists often attracted the ire of Protestant ministers, but insisted that they offered a service that was compatible with, and even fulfilled, Christianity's basic tenets. Women constituted a majority of Spiritualist rappers, mediums who made contact with the deceased.

Elite Accommodation

Elite religious groups and clergy adapted to the antebellum explosion in popular religious preference. Elite churches in

general had to be mindful of presentation to persuade their adherents to stay. Some, such as the Episcopal Church, differentiated themselves with High Church forms and rituals. Episcopalians and other Protestant churches that adopted stained glass windows, Gothic arches, and robed choirs presented drama no less than did a Methodist revivalist, but to a different audience. In so doing they popularized religion for a different segment of society. Other elite groups, now marginalized, modified their theologies to more closely resemble popular teachings. Calvinist Presbyterians embraced revivalism's common sense theology to different ends. Some formally rationalized the tenets of Calvinism, sowing the seeds of modern fundamentalism. Others accepted a modified Arminian model of conversion, keeping Calvinist roots by insisting on universal moral laws and behavioral standards.

The Civil War reflected both the decentralization and passion of popular religion in the early United States. Soldiers, citizens, and ministers on both sides invoked God's favor. Freed blacks saw in Abraham Lincoln a new Moses. Julia Ward Howe sacralized civil religion by combining Christian and political themes in her "Battle Hymn of the Republic," a religion that Abraham Lincoln increasingly used in his later speeches. Civil War soldiers were intensely religious, as revivals broke out in Northern and Southern camps. Civil War Americans employed a variety of theologies and offered differing rationales for their beliefs. They paralleled the experience of many Americans in the previous two centuries, when popular religion increased and influenced the culture as a whole.

Popular Religion and Popular Culture: From the Civil War to the Mid-Twentieth Century

Popular culture of the post-Civil War era often represented what clergy and laity found most sinful about modern industrial life. But the faithful of many traditions also embraced its techniques and themes to convey beliefs and maintain communities. For some, this involved efforts to lure the wayward away from dangers posed by popular culture, but for others, modern communication forms helped strengthen the bonds of the remaining faithful.

Prominent U.S. Revivalists and Popular Culture

Protestant revivalism represented only one vein of religious engagement with popular culture, but aptly illustrates wider themes and genres this engagement involved. Four of the era's best-known revivalists can help to introduce more general connections between religion and popular culture from the Civil War to World War II.

Like that of his father Lyman Beecher and of revivalist Charles Grandison Finney, Lyman Beecher's fitful ally, the preaching of Henry Ward Beecher (1813–1887) offered an emotionally engaging style that invited individual worshippers to commit themselves to God, righteousness, and human perfectability through dedication both to Christian faith and to worldly self-improvements. The program of an emerging middle-class that challenged New England's Unitarian elite earlier in the century, these ideals had become the habits of

an institutionalized bourgeoisie that focused on sobriety, sexual morality, and domesticity by the time of Henry Ward Beecher's career during and after the Civil War. Beecher carried them to wide audiences through lyceum lectures that conveyed his intuitive approach to preaching. He preached a morality of the heart in accessible, emotionally resonant terms familiar to increasingly numerous readers of sentimental fiction. Beecher's manipulation of personal charisma made him vulnerable to the fascination with personal scandal that increasingly linked popular morality to popular culture. When his own intensely personal style led to accusations of adultery with one of his converts, Elizabeth Tilton, Beecher weathered the crisis by virtue of the popularity he had achieved, ironically, through this personal approach. Critics assailed this style as a "religion of Gush" that eviscerated God-fearing piety with sentimentality.

From the 1860s to 1890s, former shoe-salesman Dwight L. Moody (1837–1899) pioneered a modern revivalism characterized by innovative links to a variety of popular cultural forms. Theologically, he took revivalism toward twentieth-century fundamentalism through his premillennialist convictions and belief in biblical infallibility. He leavened these stern views with a sentimental kindness less focused on his own personality, as Beecher's had been, than on the love of God that he regarded as the most crucial experience of conversion. His musical partner in evangelism, Ira Sankey (1840–1908), popularized these messages in engaging hymns focusing on Christ's sacrificial love for sinners ("The Ninety and the Nine"), its kinship to a mother's persistent love for a straying child ("Where Is My Boy Tonight"), and occasionally more martial motifs predicting Christ's triumph. The package as a whole was successfully marketed by virtue of businesslike associations with leading titans of commerce such as John Wanamaker and Cyrus McCormick, and through showman-like devices advertising Moody's urban mass revivals, including "tickets" resembling those used at circus or theater performances and newspaper publicity carefully engineered by Moody's increasingly vast organization. Through such devices Moody drew mass audiences in many urban venues and, perhaps more lastingly, established para-church institutions such as his Bible institute and summer conferences that provided models for the more separatist fundamentalist evangelicalism to come.

In the early twentieth century, Billy Sunday (1862–1935) reinvigorated Beecher-like charisma, but in a vernacular that mixed respectable piety with more robust content once considered "lowbrow." A former baseball player, Sunday sported

a vigorous masculine style forged in the sports arena. This background both rendered sports more acceptable to revival-minded audiences and appealed to Protestants concerned that their religious observances were overly “feminized.” His packed performances focused on the dangers of drink and sexual debauchery, but did so through urban slang and gusto far removed from Moody’s kind dignity or Beecher’s ego-centric sentimentalism. Though Sunday borrowed sermon narratives from some of the same popular melodramatic scripts earlier revivalists used, he mixed them with dramatics associated with the questionable venues he warned against. As one follower put it: “His ethics may not suit some prudes / But, in his preaching, ‘Bill’ includes / The stuff that reaches plebes and dudes” (Bendroth, 2004, 262).

In addition to the “dudes,” Sunday’s evangelism fascinated female audiences. His “women only meetings” warned against popular cultural perils to feminine virtue such as scanty clothing and dancing. But like the popular cultural sphere from which he borrowed, his cross-gender appeal only superficially held to the moral “refinement” he exhorted women to uphold. It also attested to the growing popularity of a coarser vernacular once deemed the province of men but increasingly considered acceptable for women in public. Sunday borrowed liberally from this sphere in order, ultimately, to gain an audience for hellfire warnings against its excesses, paving the way for the more personable mass marketing of revivalism represented in the work of Aimee Semple McPherson (1890–1944).

Schooled by her Salvation Army–connected mother in street-corner evangelical theatricality, McPherson went on to embrace flamboyantly many of the technologies that became central to efforts to sustain U.S. evangelicalism amid what many of its followers found an unfriendly mid-century social context. Converted to Pentecostalism in the early twentieth century, McPherson used stagey sermons and radio broadcasts to maintain Pentecostalism’s ecumenical Holiness traditions in an age of increasingly separatist fundamentalist institutions. At her Angelus Temple in Los Angeles, California, the center of a wider Church of the Four-Square Gospel, McPherson used stagey props—such as a giant gorilla signifying the Darwinian teachings she fought against—to dramatize conservative Christianity to what she hoped would be a multid denominational audience. Such antics illuminated the appeal of “modern” media among conservative Protestants and among other seemingly “anti-modernist” movements, such as the Ku Klux Klan, which maintained an uneasy affiliation with her church. McPherson’s choice of Los Angeles as

an evangelical home because of its growing tourist appeal, along with her savvy ownership of one of the first religious radio stations (KFSG) provided models of the institution-building that would eventually produce far-flung networks of belief. But especially in the wake of her 1926 alleged kidnapping and abduction, which many believed covered up a clandestine tryst, McPherson was also troubled with scandals that were even more salaciously broadcast than Beecher’s excesses had been.

Basing their charismatic success on the power of the received Word, but harnessing that power to changing popular genres and modes of dissemination, Beecher, Moody, Sunday, and McPherson helped outline an arc of wider changes in the ways a variety of religious traditions in the United States engaged with popular culture.

Novels, Newspapers, and Religion

Beecher’s religion of the heart reflected a crucial symbiosis between print culture and religion. Though nineteenth-century Protestant clergy inveighed against worldly fantasies encouraged by novel reading, their era’s growing flood of sentimental fiction complicated this advice. Plying narrative techniques attractive to women who not only accepted but actively constructed their domestic duties as Christian moral teachers, sentimental writers both augmented the authority of their pastors and competed with it. Some critics of their work complain that it paved the way for neatly packaged sentiments that watered down more complex religious indictments of U.S. commerce. Like other media that provided new directions for religious messages, however, the sentimental novel provided access for new audiences and authors. Indeed, though the authors of sentimental fiction were overwhelmingly white, African American women, such as Amelia E. Johnson (1858–1922), the wife of the prominent Baptist minister Rev. Harvey Johnson, also authored novels celebrating feminine religious agency. Unlike white sentimental fictions, which tended to depict the home as a refuge from interracial public spaces, Amelia Johnson’s novels depicted scenes more akin to the burgeoning genre of urban realism and featured characters whose faith helped them weather the difficulties posed by harsh domestic employers. In an era of growing activism among African American women in churches, her narratives reflected an emerging taste for Christian practice outside the home and church among her female protagonists.

The popular cultural model of the True Woman, which focused Christian feminine identity on home and piety, was

not reserved for Protestant writers. By the mid- to late-nineteenth century, U.S. Catholics had their own growing ranks of “scribbling women” who devised an alternate vision of the ideal. Often serialized in *Ave Maria*, a magazine that offered a Catholic alternative to secular or Protestant family periodicals from 1865 to 1970, these Catholic women’s novels of the late-nineteenth century focused primarily on ways that Catholic women could create a distinctive Catholic True Womanhood based on domestic piety that glorified the church, and, occasionally, the activities of women religious or even professional women who found ways to enact humility, piety, and purity in the world. Though such novels occasionally featured working-class characters, particularly as domestic servants, they did not generally feature the concerns of working-class women. Nor did they address the concerns of an increasingly ethnically divided church but, rather, focused on the delineation of a peculiarly Catholic feminine piety counterpoised to Protestant models. Francis J. Finn, S.J. (1859–1928), a Jesuit educator convinced that young people needed attractive alternatives to pulp literature emphasizing romance, fantasy, and crime, developed a series of tales about Catholic boarding school life that emphasized Catholic values and their compatibility with U.S. identity.

Literature intended for Jews in the United States also expressed complicated relations between religion, identity, and popular culture. Both earlier German-Jewish immigrants and the eastern European Jews who arrived at the beginning of the twentieth century were familiar with the sensationalist “mysteries of the city” literature pioneered in France by Eugene Sue (1804–1857) but soon copied and translated by cheap, installment presses throughout Europe and North America. Yiddish writers inspired by the Jewish Enlightenment sought to use this genre’s tales of secrets, crimes, and romance to popularize ideals of rationalism and education but, according to critics, only furthered readers’ addiction to sensation and fantasy. The quarrel accompanied Yiddish writers to the United States, where they fell afoul of both traditionalist rabbis, who joined many Protestant and Catholic clerics in branding popular literature immoral, and secular, radical intelligentsia, who tried to provoke the masses to revolution using realist literary styles. However, the Yiddish press, the main venue for popular novels by the early twentieth century, also combined values of Jewish faith, Yiddish popular culture, and Jewish radicalism in an uneasy mix, most famously in *Die Forverts* (*The Jewish Daily Forward*). Its editor Abraham Cahan (1860–1951) was a

politically radical secularist who embraced realist literature in criticism and his novels, such as *The Rise of David Levinsky*, a work acclaimed by the “dean” of American realism, William Dean Howells. But for the purposes of selling newspapers popularizing his views, Cahan published serialized Yiddish stories. Combining romance with lessons in assimilation, these novels could stray beyond his own favorite acculturating, secularizing themes, as when his paper published Sholem Asch’s (1880–1957) historical *Af kiddish HaShem* (*The Sanctification of God’s Name*), which addressed issues of nationalism and spiritual leadership.

If Cahan and his newspaper staff found a course between orthodox religion and popular culture that led their readers in the direction of acculturation, splintering Protestant groups who looked to the Zionist ambitions of Asch and others as part of a new Christian dispensation produced writers who used the popular novel instead to protect their faithful from the dangers of the profane world. Such protection was the focus of several fundamentalist writers aiming at youthful audiences whom they tried to protect in the 1920s from the multiple dangers of popular entertainment, liberal theology, and evolutionary science. Crafting narratives that drew on popular literary genres posing manly heroes against the temptations and dangers of the city, fundamentalist novelists such as Elizabeth Knauss, Caroline Mason, and, most famously, Grace Livingston Hill (1865–1947) cast such temptations as the road to spiritual rootlessness and featured romances that centered more on the shared trials of loyalty to fundamentalist beliefs than on the attractions of the flesh or other fleeting worldly pleasures.

Moody’s successful mobilization of newspaper publicity represented a fresh direction in Protestant approaches to the daily and periodical press, but was only one direction that such innovation went. Often considering themselves in competition with newspapers, especially with the large Sunday editions that seemed to distract from churchgoing, Protestant ministers and writers divided over whether to try to use this resource to their own benefit or compete with alternate publications. As Moody discovered, papers eager for news of a crowd-drawing sensation helped build those crowds but also tended to focus more on the personalities of pastors than on the work of Christ. This dilemma had diverse variations. Socialist preacher Alexander Irvine (1863–1941) discovered in his pastorates and missions throughout the United States that the daily press won him wider congregations but also controversial notoriety that cost him jobs with the more politically conventional church bodies. In the 1920s Irvine

found a brief opportunity to turn the popular press to his own purposes when William Randolph Hearst's *New York Journal* published his column featuring autobiographical anecdotes, "Psalms of the Times," but his own effort to use this success to enter broader markets through a contract with the Vanderbilt family newspapers led instead to his abandonment by all the tabloids. He was not ready to embrace the more explicit marriage of triumphant Christianity and commercial advertising represented in adman Bruce Barton's famous 1926 book *The Man Nobody Knows*, depicting Christ as an expert publicist.

Beyond the commercial daily press, a number of immigrant, working-class, and religious papers provided alternate venues for popular religious expression. In the Yiddish press, despite its generally radical and assimilationist bent, Jewish religion provided an important idiom for communication with recent immigrants. For example, *Di Arbiter Tsaytung* ("The Daily Worker"), a socialist weekly Cahan edited in the 1890s, regularly featured a column under Cahan's pen name "Proletarishker magedi" (proletarian preacher) that took the Torah as a starting point for folksy socialist parables. Fellow *Forverts* writer Leon Gotlib also recommended respect for traditional Jewish parents in his "Bindl Brief" (A Bundle of Letters), which solicited and answered letters from second-generation immigrants negotiating between U.S. popular culture and parental culture. Though mid-nineteenth century Irish American newspapers had championed their readers' Catholic faith more unambiguously, by the 1870s this too was complicated: In the widely read *Irish World*, editor Patrick Ford (1835–1913) fought anti-Catholic bigotry but also castigated the Catholic church for economic elitism. In the broader union and radical press aimed at both immigrant and U.S.-born workers, including papers aimed at locals of the Knights of Labor or socialist papers such as *The Appeal to Reason*, Christianity was regularly read as a message of economic social justice, even for audiences who later connected with an increasingly conservative and unworldly fundamentalism.

Performances and Movies, Sacred and Profane

Throughout the late nineteenth and early twentieth centuries, popular religion engaged various forms of performance, whether musical, theatrical, or on screen. Though sometimes regarded as anathema to the sacred, performance was also intrinsic to religious experience, especially among groups whose language skills rendered the spoken, sung, or pictured Word more accessible than was the written. Hymnody, ritual,

and imagery tended to render hazy the lines between entertainment and worship that religious censors wanted to draw sharply.

As the popular reception of Sankey's hymns indicated during Moody's revivals, gospel hymns rendered the line between revival and recreation indistinct for many participants. Even fitfully observant Catholics such as Michael Campbell, a New Haven, Connecticut, factory worker, might be drawn to the revival tent's sentimental songs as he sampled local leisure opportunities. As revivalism turned to radio and a more defensive stance toward popular culture, evangelistic hymnody turned somewhat more martial in the early twentieth century, but partook no less of popular culture, drawing on both Christian and wartime themes to refresh religion.

As Robert Orsi has demonstrated regarding the public rituals celebrating the Madonna of Mount Carmel in Harlem, rituals surrounding locally meaningful saints provided powerful community meanings for new Italian immigrants of the late-nineteenth century. Disdained as an inferior by dominant white Protestants as well as by the dominant Irish American Catholic hierarchy, these immigrants invested local saints with the values and loyalties that gave their own lives dignity. These rituals also became the vehicles for new lines of demarcation between Italian Americans and other Catholic immigrants, such as Puerto Ricans, from whom they, in turn, wished to distinguish themselves.

A broad anti-Catholicism also limited U.S. stage productions of the Passion of Christ, a story famously enacted in other countries. Theatrical managers and Catholic parish groups tried unsuccessfully to dramatize this story for late-nineteenth-century U.S. audiences, only to be rebuffed by Protestant elites who objected to the dramatic depiction of Christ as both too Catholic and too sacrilegious, as well as by Jewish leaders concerned that the play would encourage anti-Semitism. But screen presentations of famous foreign dramatizations of the story, such as the Passion Play at Oberammergau, managed to combine the "educational" tone associated with stereopticon travel subjects and the distancing effects of photography. By the 1890s a cinematic version of this spectacle, filmed in the German town of Horitz, was successfully exhibited in the United States, accompanied by a lecturer who vouchsafed its educational credentials. A few years later the Eden Musee, a combination wax museum and popular theater, capitalized on this victory with a film of a formerly banned theatrical version of the play. It was eventually screened in respectable vaudeville houses and endorsed by ministers and the press.

The Passion Play was an entering wedge for many film aficionados, clergy, and audiences eager to mix film and faith. Some moving picture theater impresarios objected to the alacrity with which “high class” moving pictures such as those screened by Lyman Howe (a traveling film exhibiter who showed films of travel subjects and newsworthy events to middle-class audiences at the beginning of the twentieth century) were adopted by church audiences in buildings that did not have to follow the same codes as their theaters did. But others in the industry were eager to use the connection to improve cinema and spirituality. Many of these, such as Connecticut Congregationalist ministers Herbert Jump of New Britain and Alexander Irvine of New Haven, saw a role for slides and films within the church as a bridge to popular working-class audiences whose immigrant languages and familiarity with popular culture rendered the techniques of modern popular culture essential to any popular religious mission. Tellingly, both were rather rapidly dismissed by the staid, middle-class New England congregations that had hired them, only to find a broader range for their popular ministries in California. Irvine went on to make some of his own experiences as a missionary on New York’s bowery into religious films in the 1920s, carrying on a vision of the sanctity of working-class life that he shared with many labor-oriented filmmakers of the time.

Such experiments paved the way for a growing number of Hollywood costume dramas on biblical subjects in the 1920s, though many clergy and faithful continued to see these more salacious representations of biblical figures in some of the same censorious perspectives that gave rise to the Motion Picture Production Code that guided the industry’s self-censorship from the 1930s to the 1960s. But even these famous examples of the power of Catholic, Protestant, and Jewish ideas of “decency” over the freedom of popular culture derived as much from an appreciation of the cinema’s religious possibilities as from a rejection of its dangers. Indeed, Joseph I. Breen (c. 1890–1965), the head of the Production Code from the late 1930s until 1954, loved movies—so much so that he helped engineer 20th Century Fox’s filming of the 1926 Eucharistic Congress in Chicago, an event that U.S. Catholics hoped would demonstrate their legitimate place in U.S. and Catholic culture.

Radio, Religion, and Modernity

As soon as it became available in the 1920s, radio recommended itself as a mode of preaching and evangelism congenial to a number of religious communities. Among Protestants,

religious broadcasting expressed broader shifts. McPherson was just one of the many conservative evangelists to take her message to the air in this decade. This trend was initiated by Daniel Paul Rader (1878?–1938), who began his career as an evangelist with the Christian and Missionary Alliance, became pastor of the Moody Memorial Church in Chicago from 1914 to 1921, and founded the huge, popular Chicago Gospel Tabernacle. Invited by the mayor to air his folksy yet forceful preaching on Chicago’s municipal station in 1922, Rader and his radio audiences warmed quickly to each other. In 1925 he purchased the entire vacant block of Sunday time on Chicago station WHT and filled it with sermons, sacred music, mission news, and special features for children, teenagers, and single working women, among other groups. Eventually Rader bought Sunday time on a CBS-network affiliated station, WBBM, which expanded his geographic reach by connecting his message to CBS affiliates throughout the country. Many other fundamentalist preachers followed this model throughout the 1920s and 1930s. Raising money from listeners to buy broadcast time, radio evangelists (supplemented by institutions such as the Bible Institute of Los Angeles, or McPherson’s church, which owned its own stations) made the airwaves a crucial meeting place where fundamentalists could regroup at a time when mainline Protestants largely viewed radio as a troublesome competitor.

Most of these “old-time religion” shows used the same financing scheme employed by Father Charles Coughlin (1891–1979), the famous “radio priest” of Detroit. From his headquarters in the inauspicious suburb of Royal Oak, Michigan, a working-class stronghold of the KKK, Coughlin initiated a Catholic radio ministry in the mid-1920s that went national over CBS in 1930. Drawing on *Reseruationum*, the 1891 papal encyclical on capital and labor, Coughlin spoke frequently on the plight of exploited workers and initially supported President Franklin D. Roosevelt’s New Deal as “Christ’s Deal.” However, after 1934 Coughlin turned against the New Deal, and his broadcasts began to feature anti-Semitic attacks on a sinister financial elite, eventually turning to outright attacks on Jews and sympathy for Hitler. Embarrassed CBS stations dropped his show, new communications restrictions combined with new codes adopted by the National Association of Broadcasters to force him off the air, and eventually the Catholic hierarchy restricted him to parish preaching. His example of mixing a populist style with controversial political perspectives was seen as an object lesson for other successful religious broadcasters, such as the widely heard Rev. Walter Maier

(1893–1950) of the *Lutheran Hour*, to stick to religion and stay out of politics.

By the late 1930s new policies on religious airtime shifted the cultural controversies that had often divided U.S. Christians on questions of radio and religion—and popular culture more generally. New regulations limited paid programming and restricted religious broadcasting to predictable spokespersons. These regulations were motivated by Coughlin's excesses along with the disgruntlement of religious liberals who had long benefited from gratis airtime awarded to mainline Protestant, Catholic, and Jewish religious federations but had not enjoyed the audiences of a Rader, Coughlin, or Maier. By this point, however, more controversial religious programs produced by revivalists had created an indispensable market, and local stations continued to sell them time, allowing them to syndicate ad hoc national networks, or use the new Mutual Broadcasting System. By these means, the weekly *Old-Fashioned Revival Hour* put out by Charles E. Fuller (1887–1968) became the most popular religious radio program in the country, broadcast to 456 stations coast to coast and even more around the globe by the early 1940s. Through this success Fuller and others provided a springboard to the neo-evangelical movement of the postwar era, which redrew the politics of religious popular culture.

For seventy-five years before this watershed, various forms of popular culture had offered modes of communication to and engagement with important audiences within and outside the institutions that diverse religious traditions had built in the United States. Though many popular cultural forms featured content or venues inimical to the morals upheld in religious teachings, they also provided methods of exhortation and representation that lent themselves well to a variety of religious projects, from saving souls to harmonizing family relations among traditional immigrant parents and their less pious children, to maintaining the courage of those faithful to beliefs that felt at odds with “modern” civilization and teachings. Thus, although some voices within popular culture might ridicule religious leaders and their followers as pious prudes out of touch with up-to-date cultural fashions, many religious spokespeople found the methods of popular print, theater, and screen congenial to their purposes, and publishers, filmmakers, and broadcasters found religious tradition and spectacle important means of appealing to their audiences. As broadcast media rose to dominance among the vehicles for distribution of popular cultural fare, their growing audiences themselves became the battleground of

competing religious cultures, paving the way for religion to shape the culture wars of the later twentieth century.

Popular Religion and Popular Culture: Since the Mid-Twentieth Century

Popular religion and popular culture in the late twentieth and early twenty-first centuries can be understood by the way in which individuals and groups belonging to the mainstream religion engage their faith. Expressions of popular religion can often be at considerable variance from what is officially supposed to be deemed as sacred. In this respect, popular religion absorbs many attributes of human experience that might be looked down on by purveyors of traditional religion. Among various aspects of U.S. life, contemporary popular religion can be best identified through Hollywood films, pop music, popular literature, comic books, and the Internet.

Popular Religion and Hollywood Films

The evolution of Hollywood films involving religious themes has been rooted largely in the biblical epic. As a popular genre during the 1950s and 1960s, key examples of these epic religious films include *The Robe* (1953), *The Ten Commandments* (1956), *Ben-Hur* (1959), *King of Kings* (1961),

and *The Greatest Story Ever Told* (1965). These films usually had huge cinematic scale, massive production budgets, and box-office celebrities such as Richard Burton, Jean Simmons, Max Von Sydow, Charlton Heston, Deborah Kerr, and Yul Brynner.

In the late 1960s and early 1970s, there were numerous horror films with religious themes, most notably *Rosemary's Baby* (1968), *The Exorcist* (1973), and *The Omen* (1976). Coinciding with mounting anxieties in the U.S. about women's reproductive rights connected to debates about birth control pills and abortion rights, the notion that these movies literally demonized the entire concept of children and childbirth had a notable albeit subliminal impact on the consciousness of U.S. moviegoers. In *Rosemary's Baby*, a young, innocent Manhattan housewife is deceived by a coven of witches into giving birth to a child who is actually the son of Satan. The *Exorcist* was a horror film that dealt with a young girl's demonic possession and her wealthy mother's desperate attempts to rescue her daughter through an exorcism by two Catholic priests. Serving as the pinnacle of the "demon child" movies of the era, *The Omen* is the story of a wealthy diplomat's family unknowingly adopting a child who is actually the Antichrist foretold in the Book of Revelation. Representing an interesting blend of story elements from both *Rosemary's Baby* and *The Exorcist*, *The Omen* became the most commercially successful of them all, ultimately spawning several sequels as well as a remake in 2006. A great variety of Jesus movies have made their way to the silver screen. In 1961, MGM's release of *King of Kings* (a remake of Cecil B. DeMille's 1927 film of the same title) was the first attempt by a major film studio to produce a religious epic in which the story of Jesus' life and death was the focus. That movie was followed years later by other cinematic renditions of Jesus such as *The Greatest Story Ever Told* (1965), the musical *Jesus Christ Superstar* (1973), *The Last Temptation of Christ* (1988), *The Passion of the Christ* (2004), and recently, *The Color of the Cross* (2006). As an illustration, Martin Scorsese's *The Last Temptation of Christ* portrays the last days of Jesus Christ as he is tempted by Satan by glimpses of what life might have been like had Jesus not been crucified, including marrying and making love with Mary Magdalene. Based on Nikos Kazantzakis' 1960 novel of the same name, the movie's main point is that Jesus, although free from human sin, might have still been vulnerable to all manner of temptation that humans face, including doubt, fearful reluctance, lustful yearning, and regret. By confronting and ultimately conquering all of humanity's weaknesses, Jesus struggled to do God's will while

never surrendering to earthly temptations. Jesus finally rejects all temptations, and the film concludes with the Crucifixion. This film generated a considerable amount of controversy because of its subject matter.

Much like previous renditions of Jesus on film, the primary source material for Mel Gibson's *The Passion of the Christ* (2004) is largely derived from the passion narratives found in three of the synoptic Gospels (relying most heavily on the Gospel of John). Despite the claims that the film was a pure distillation of the biblical account untainted by Hollywood, the filmmakers took some creative liberties of incorporating dialogue (spoken entirely either in Aramaic, Latin, or Hebrew, with English subtitles) and imagery taken from both the Hebrew Bible and New Testament. While painstakingly re-creating traditional representations of the Passion prevalent in Western visual art, the film recounts the last twelve hours in the life of Jesus of Nazareth, particularly the arrest, trial, torture, and Crucifixion of Jesus, in extremely graphic detail. Despite criticism regarding the extreme violence, historical inaccuracy, and perceived anti-Semitic references, the considerable success of the studio's marketing campaign among Catholics and evangelical Christians helped the film set numerous box-office records simultaneously. By 2010, having earned roughly \$400 million, *The Passion of the Christ*, as it was cowritten, coproduced and directed by Gibson, proved to be an immensely profitable though controversial creative venture.

Although many religious films since the 1950s were typically based on Christian stories, other films have been based in other religious traditions. For instance, *The Message (Mohammed: The Messenger of God)* (1976) was based on Islamic history and stirred great controversy upon its release. The film depicts the moment when the prophet Mohammed receives the Word from Allah, during the seventh century CE, in the Middle East still dominated by polytheism. After this fateful event, Mohammed begins sending his messengers to proclaim the basic teachings and tenets of Islam throughout the Middle East. The film's production was complicated because, according to the teachings of the Qur'an, no likenesses can be shown of the prophet Mohammed and his extended family, nor can the image and voice of God ever be depicted in any medium. To overcome this challenge, the lead role of Mohammed was an absent protagonist, and the character of Mohammed's uncle served as a replacement for Mohammed, and alternately uttered lines and listened off-screen to a voice the audience never heard, to avoid depicting images of either Allah or Mohammed.

Filmmakers Joel Coen and Ethan Coen have wrestled with issues of Jewish film representations. Two of the Coen brothers' films, *Barton Fink* (1991) and *The Big Lebowski* (1998), are noteworthy for their diverse abundance of overtly, albeit offbeat, Jewish characters. Yet the Coen brothers also have been accused of depicting anti-Jewish ethnic stereotypes, such as Bernie the Shmatte, a cravenly duplicitous hustler, in their Depression-era gangster film, *Miller's Crossing* (1990). However, their film *A Serious Man* (2009) is a provocative and poignant portrayal of Jewish American experience during the 1960s culled from their own childhood memories of growing up in St. Louis Park, a suburban Jewish community south of Minneapolis, Minnesota. Drawing heavily from the cultural tradition of Ashkenazic Judaism, the film centers on the Job-like professional and private plights of Larry Gopnik, a physics professor undergoing a crisis of faith. Struggling to make sense of his ruined life, Gopnik desperately seeks metaphysical advice and spiritual guidance from three rabbis to become a person of substance. Ultimately the film grapples with theological issues pertaining to human suffering in ways that strive to reconcile the spiritual and the absurd.

Popular Religion and Popular Music

Since the mid-twentieth century, the lives and recordings in the music industry of several inspired practitioners helped energize U.S. society by defining a new outlook where the sacred and the secular can coexist within the mainstream. For example, Aretha Franklin was born in Memphis, Tennessee, as one of five children of Rev. C. L. Franklin, a legendary Baptist minister and renowned recording artist, and Barbara Siggers Franklin, a gospel singer and church pianist. During Aretha Franklin's childhood, the home was regularly visited by many of her father's famous friends, including Clara Ward, Sam Cooke, and Mahalia Jackson. In the presence of these gospel music legends, Franklin's talents both as a self-taught piano prodigy and a singer with an extraordinary vocal range became apparent by the time she entered her teens. Franklin stated in her autobiography that her early gospel singing was patterned after the great gospel singer Albertina Walker. Although early motherhood nearly derailed Franklin's musical career, she eventually decided to return to singing as a pop musician rather than as a gospel artist. When she signed a contract with Atlantic Records and began working with rhythm and blues (R&B) producer Jerry Wexler, she began to incorporate a gospel element into her evolving musical sound. By the end of the 1960s,

Franklin's designation as the reigning "Queen of Soul" was established. Although most of her albums were best sellers during this era, *Amazing Grace* (1972) eventually sold more than two million copies in the United States and has been hailed as "the best-selling gospel album of all time." Marking a return to her gospel roots, the songs on *Amazing Grace* were recorded live at New Temple Missionary Baptist Church in Los Angeles, California, alongside her father and gospel legend and family friend Rev. James Cleveland, with background vocals by the Southern California Community Choir, in January 1972.

In the late 1970s, Bob Dylan became a born-again Christian and released two albums of Christian gospel music: *Slow Train Coming* (1979) and *Saved* (1980). When working on *Slow Train Coming* with Wexler, Dylan started to evangelize to Wexler during the recording. Wexler replied, "Bob, you're dealing with a sixty-two-year old Jewish atheist. Let's just make an album." The album won Dylan a Grammy Award as best male vocalist for the song "Gotta Serve Somebody." When touring from fall 1979 through spring 1980, Dylan did not play his older, secular works. Realizing that there was considerable backlash to his embrace of Christianity by some of his fans and fellow musicians, Dylan frequently delivered declarations of his faith from the stage, though in later years he proclaimed an amalgam of beliefs.

Another iconic figure in the realm of popular music who underwent religious conversion was the country music singer Johnny Cash. Rediscovering his Christian faith in the early 1970s, Cash recalled taking an "altar call" at Rev. Jimmy Rodgers Snow's Evangel Temple, a small church in Nashville, Tennessee, because, unlike many larger churches, Cash said that the pastor and congregation treated him like just a regular parishioner rather than as a celebrity. Cash's friendship with Christian minister Billy Graham led to the production of *The Gospel Road*, a film about the life of Jesus that Cash both cowrote and narrated. The decade saw his religious conviction deepening, and he made many evangelical appearances on Billy Graham's crusades around the world. In 1986, Cash published his only novel, *Man in White*, a book about Saul's conversion into the Apostle Paul. In 1990, Cash also recorded *Johnny Cash Reads the Complete New Testament*. From the 1990s until his death in 2003, Cash collaborated with hip-hop/hard rock producer Rick Rubin on a series of six albums entitled *American Recordings*. On these albums, Cash performed his original compositions and renditions of contemporary alongside traditional sacred music in a format that was now being packaged and presented to a whole new generation of music lovers.

Best known for his albums *Live at Stubbs* (2005) and *Youth* (2006), Matisyahu is a U.S. Hasidic Jewish musician specializing in dancehall reggae. Matisyahu was born Matthew Paul Miller on June 30, 1979, in West Chester, Pennsylvania. His family eventually relocated to White Plains, New York, where he was raised as a Reconstructionist Jew, and he attended Hebrew school at Bet Am Shalom, a synagogue located in White Plains. At age sixteen, Matisyahu participated in a semester-long immersion program at the Alexander Muss High School in Hod Hasharon, Israel, that allowed him deeper exploration of his Jewish heritage. He eventually adopted an Orthodox Jewish lifestyle in 2001. Shortly after his embrace of Hasidism, Matisyahu began studying the Torah at Hadar Hatorah, a yeshiva for returnees to Judaism. From 2001 until 2007, Matisyahu was affiliated with the Chabad-Lubavitch Hasidic community in Crown Heights, Brooklyn, New York, while also pursuing his musical career. His religious life did pose some challenges for him professionally. For instance, in accordance with strict Hasidic practices, he would not perform in concert on Friday nights in observance of the Jewish Sabbath. Having originally attributed his seemingly divergent musical sensibilities to his ardent love of such eclectic influences as Phish, Bob Marley and the Wailers, God Street Wine, and Rabbi Shlomo Carlebach, Matisyahu expanded his musical palette beyond reggae, blending traditional Jewish themes with alternative rock, electronica, and hip-hop sounds.

A proliferation of musical genres represent a variety of religious backgrounds from Stryper (a Christian heavy metal band), to Creed (a Christian alternative/hard rock band), to the Kominas (a Punjabi *taqwacore*—Islamic hard-core punk rock—group), to A Tribe Called Quest (an African American hip-hop group predominantly composed of Sunni Muslim converts). In the 1980s, Stryper was a Christian heavy metal band from Orange County, California. The group derived its name *Stryper* from an allusion to the biblical image of the suffering servant described in Isaiah 53:5 of the Hebrew Bible. The band later explained the meaning of their name as an acronym for "Salvation Through Redemption, Yielding Peace, Encouragement, and Righteousness." During the latter half of the 1980s, Stryper enjoyed great mainstream success and the band briefly served as the vanguard for the mainstream popularization of Christian heavy metal music, even achieving a Grammy Award nomination. Stryper eventually broke up in 1992, which also marked the overall waning popularity of heavy metal as a musical genre.

In the late 1990s and early 2000s, Creed was a popular, multi-platinum selling U.S. alternative/post-grunge rock band from Tallahassee, Florida, often identified as a Christian rock band. Even though the band was never signed to a contemporary Christian music label, did not perform in Christian music venues, and never got any widespread regular play on Christian radio, their reputation among a more overtly religious fan base grew rapidly because several songs on Creed's first three albums echoed themes of Christian faith and spirituality. Many of the group's song titles—such as “Higher,” “My Sacrifice,” “What's This Life For,” “My Own Prison,” “With Arms Wide Open,” and “One Last Breath”—alluded to Christian theology although band members frequently refuted the Christian label.

Similar to the Christian rock movement, the Taqwacore movement is a recent development. The name of the Islamic punk music movement is based on a 2003 novel *The Taqwacore*, written by Michael Muhammad Knight, a white U.S. author who converted to Islam. Combining *Taqwa* (the Arabic term for piety) with the word “hard-core,” Knight created a phrase he used to describe a fictional music scene inhabited by a diverse array of Muslim youth whose lifestyles were devoted to a punk ethos and aesthetic. Eventually, Knight's book helped inspire an actual musical movement. As probably the best-known U.S. representatives of the Islamic punk music scene, the Kominas (which means “bastards” in Punjabi) are a pioneering Taqwacore punk band from the outskirts of Boston, Massachusetts. In their anthem, “Sharia Law in the USA,” the Muslim punk trio consisting of Basim Usmani, Shahjehan Khan, and Adam Briery demonstrate the members' ability to merge their Muslim heritage and their love of hard-core punk by reworking the first line of the classic song “Anarchy in the UK,” by the seminal punk band the Sex Pistols, to say: “I am an Islamist!/I am the Anti-Christ!” Another of the Kominas' most popular songs is entitled “Rumi Was a Homo,” a protest song about homophobia within the U.S. Muslim community. Written mainly by Usmani, the band's lyrics are clever, sometimes thought-provoking commentaries on racial profiling, foreign policy, and religious faith. The Kominas' critically acclaimed debut album, *Wild Nights in Guantanamo Bay*, was released in March 2008. As a fusion of punk, metal, and Bhangra folk music, the band uses the term “Bollywood Muslim punk” to describe its sound. The music and imagery typically draws from anticolonial movements, Moghul art, African American Islamic movements such as Moorish Science Temple and the Five Percenters (an offshoot of the Nation of Islam), as well

as Desi culture, Punjabi folklore, Sufi saints from Punjab, Hinduism, and Bollywood cinema.

Formed in the late 1980s, A Tribe Called Quest was an African American hip-hop group consisting of rapper/producer Q-Tip (Kamaal Ibn John Fareed, formerly Jonathan Davis), rapper Phife Dawg (Malik Taylor), and DJ/producer Ali Shaheed Muhammad that was influenced by Sunni Islam. They released five albums in ten years that merged their sophisticated musical tastes with street credibility in ways that allowed them to enjoy a recording career that was both critically acclaimed and commercially successful. By 1996, lead rapper Q-Tip underwent a deeply religious awakening and, upon spiritual guidance from his friend, Ali Shaheed Muhammad, soon converted to Islam. While on tour, Muhammad introduced Q-Tip to a young producer from Detroit named Jay Dee (also known as J Dilla). Immediately taking the newcomer under his wing, Q-Tip and the rest of Tribe agreed to form a production unit with Jay Dee. The group named its production company the Ummah (meaning “community,” “nation,” or “brotherhood” in Arabic) to acknowledge that many members of the outfit were devout Muslims. In addition to producing A Tribe Called Quest's final two studio albums, the Ummah also served as a music production collective that provided backing tracks for a wide array of R&B and hip-hop artists. Although the group officially disbanded in 1998 and Jay Dee died in 2006 of a blood disease, the band's innovative blend of hip-hop and jazz has left an imprint upon hip-hop music.

Popular Religion and Popular Literature

In 1995, Tim LaHaye and Jerry B. Jenkins' novel *Left Behind: A Novel of the Earth's Last Days* launched a best-selling fictional series of eighteen Christian-themed thrillers. The core premise of the novel was a fictionalized narrative form of a specifically apocalyptic reading of the Bible, particularly the Book of Revelation. The novel received largely favorable reactions from the late Jerry Falwell and other leading figures in the evangelical Christian community, who generally approved of how the authors represented the millennial and apocalyptic themes within Christian theology in worldly language that was also commercially viable. The interpretation of Revelation, as presented in the *Left Behind* series, also encourages a largely individualistic approach to eschatology and salvation and was criticized by some for eschewing any responsibility for performing good deeds or evangelizing. Regardless of such criticism, the overall sales for *Left Behind* series has surpassed sixty-five million copies and has also

inspired several movies, graphic novels, CDs, a video game and a *Left Behind* series for teenagers.

Similarly, author Dan Brown's best-selling novels also include historical themes and Christianity as recurring motifs and, as a result, have generated controversy. Brown's first novel, *Angels & Demons* (2000), is a best-selling mystery-thriller novel focused on fictional Harvard University symbologist Robert Langdon's quest to uncover the mysteries of the Illuminati and to unravel a plot to destroy Vatican City by detonating antimatter. The book portrays an historical conflict between the Illuminati and the Roman Catholic Church as a contest between science and religion. Brown's subsequent novel, *The Da Vinci Code* (2003), also examines church history, conspiracy theories of secret societies, religious symbolism, and classic architecture. Combining the detective, thriller, and conspiracy fiction genres, *The Da Vinci Code* provoked popular interest in speculation concerning the historic roots of Christianity. Despite being flatly denounced by many Christian denominations as a dishonest attack on the Roman Catholic Church rife with historical and scientific inaccuracies, *The Da Vinci Code* is a worldwide best seller that has sold more than eighty million copies and has been translated into forty-four languages.

Popular Religion and Comic Books

There are numerous examples of popular religion being used in comic books and graphic novels. For instance, the DC Vertigo Comic book series *Preacher* chronicled the fictional exploits of Jesse Custer, a small town pastor in Annville, Texas, who is experiencing an extraordinary crisis of faith. After Genesis, a creature described as the supernatural spawn of the inexplicable coupling between an angel and a demon, accidentally takes possession of him, Custer becomes a hybrid human-divine being imbued with the combined forces of divine goodness and devilish evil. Within the overarching narrative of the series, Custer's power makes him a potential threat to the primacy of God. Tragically, this results in a disaster that turns Custer's church to rubble and kills his entire congregation. The comic book illustrates Custer's paranormal adventures as he treks across the United States in a quest to find God for himself, both figuratively and literally. Following a trend within U.S. comic books during the 1960s and 1970s akin to the "Death of God" theological movement, *Preacher* alludes to a God that has abandoned creation and thus has left humanity to its own devices for better or worse. During its publication from 1995 to 2000, *Preacher* was a controversial comic book series praised by some and

reviled by others for its dark and frequently violent humor, as well as for its unabashed treatment of religious and supernatural themes.

Since the 1970s, several characters have accentuated various dimensions of spiritual practices prevalent throughout the African diaspora. A particularly notable example of an African American supernatural superhero is Brother Voodoo, who appeared in a variety of comic books published by Marvel Comics during the 1970s. Returning to his native Port-au-Prince, Haiti, after more than a decade of education and practice as a psychologist in the United States, Jericho Drumm assumes the alter ego of Brother Voodoo. He possesses numerous superhuman and mystical powers, such as easily entering into a trance-like state in which his skin becomes impervious to burning and other forms of pain, as well as being able to control flame and lower life forms. The comic book creators attribute these powers to the character's mastery of mystical rituals derived from the *loa*, the spirit-gods of Haitian Vodou. Brother Voodoo was later followed by other figures in the Marvel pantheon of characters such as the female Captain Marvel, whose alter ego, Monica Rambeau, hailed from the Creole religiosity of contemporary New Orleans, or the character of Storm (aka Ororo Monroe) from the X-Men series, whose backstory harkens to being an East African hailed as a demi-goddess because of her mutant ability to control the weather. Although these are not the first or only comic book characters of African descent to be introduced, these creations were attempts to merge issues of race and religion in interesting ways.

Moving into a considerably different vein, the central figure in DC Vertigo Comics series *Hellblazer* is a character named John Constantine, who pursues a mysterious life as a streetwise detective and frequently crosses the supernatural boundaries between heaven and hell to confront various dangers of an occult nature in the ordinary world. As a crass hedonistic cynic who is fond of smoking cigarettes and profanity, while arguably working for the greater good of humanity, Constantine usually triumphs through guile, deceit, and misdirection. He typically makes more enemies while resolving a particular conflict than the number of opponents he originally intends to defeat. Even though depicted as a duplicitous individual, Constantine is shown to be a well-connected person who is supremely adept at making friends and has a wide array of otherworldly contacts and nefarious allies at his disposal. Consequently, the overarching narrative reveals Constantine to be a compassionate and occasionally heroic figure struggling to overcome the

influence of heaven and hell on an otherwise unsuspecting humanity. In other words, the protagonist of *Hellblazer* serves as a fictional incarnation of the humanist antihero, a trickster of sorts. As such, this book represents a trend that has been quite popular among mainstream comic book creators and fans alike, wherein the mortal characters such as Constantine are imbued with an agnostic spiritual worldview beyond a sense of moral ambiguity as they unapologetically grapple with seemingly insurmountable hazards both mundane and arcane. Although there is no dearth of evidence of popular religion at work in comic books and graphic novels, there is presently a shortage of academic research and discussion on the matter.

Popular Religion and the Internet

One of the most exceptional transformations in the emergence of popular religion in the latter half of the twentieth century was the burgeoning presence of religion appearing on the Internet. Since the mid-1990s numerous churches, synagogues, mosques, and temples have gained a firm foothold within cyberspace. Numerous Web sites such as Streaming Faith.com and Beliefnet.com connect innumerable Christian communities nationally and internationally via the Internet, with the increasing ability to connect with other religious groups in a virtual fashion. With the inception and widespread use of the Internet in the 1990s, online Christian resources tended to dominate religious themed content. This was particularly important given the initial presumption that most Internet users hailed from North America or Western Europe, regions deemed predominantly Christian. This assumed dominance has shifted because of the increasing level of Internet access and literacy by populations in the developing nations of the global South, most notably in Asia, Africa, and Latin America. Even though it is unlikely that the world's religions will be fully and equally represented in cyberspace, the democratic impulse of the World Wide Web will cause the demographics to begin reflecting the religious diversity among a growing array of Internet users worldwide. Moreover, for those members of faith communities that are relatively small and geographically isolated from a traditional house of worship, the World Wide Web provides an alternate means of interaction and connection. By virtue of having Internet access, adherents of such faith traditions can receive updated information about their religion, obtain the latest spiritual resources, and communicate with other faithful believers. The variety of religious Web sites—such as Torah Net

(www.torah.net), Allaahuakbar Net (www.allaahuakbar.net), Gospel Communications Network (www.gospel.com), Gateways to Buddhism (www.dharmenet.org), and The Witches' Voice (www.witchvox.org)—are religiously oriented news and networking Web resources that serve as lively examples of popular religion.

Populism

Understanding the relationship of religion in America to Populism requires first understanding the two ways historians have used this term. The first use of the term, “Populism” in the uppercase, refers to the People's Party, the third-party movement that emerged at the state level in 1890, the national level in 1892, and last ran a presidential candidate in 1908. This uppercase Populism can refer specifically to the People's Party (or Populist Party) or to the precursory labor, third-party, or agricultural reform movements (especially the most important of these—the National Farmers' Alliance and Industrial Union or Farmers' Alliance) that forged the political party itself. In the second case, “populism” (lowercase) refers to an attitude, outlook, or rhetorical strategy that as Michael Kazin describes in *The Populist Persuasion*, conveys the conviction that “certain ordinary Americans” were “more virtuous or, at least, more significant than” elite

intellectuals, “‘bureaucrats,’ ‘fat cats,’ and ‘Big Men’” (p. 1). While Kazin and others stress the importance of this outlook in the nineteenth century, the term “populism” is also used to describe similar political movements in the twentieth century, including McCarthyism, Prohibition, non-Marxist labor unionism, and the Religious Right. We will first examine the relationship of religion in America to Populism (uppercase) and then afterwards to populism (lowercase).

Populism has connected to religion in American in at least four ways: (1) Protestant evangelicalism provided a structural and intellectual framework for Populism’s rise, dissemination, and strength; (2) Populism often had a tenuous relationship to Roman Catholicism and Judaism, prompting some historians, notably Richard Hofstadter, to claim the movement was anti-Catholic, anti-Semitic, or nativist; (3) Populism, especially in the West and Pacific Coast, was populated by a wide variety of nontraditional religious sectarians; and (4) in the aftermath of Populism, Protestantism, whether evangelical or more liberal, sustained pockets of socialism primarily in Oklahoma, Texas, California, and Illinois.

Rise and Fall of the People’s Party

The emergence of the People’s Party, first in Kansas in 1890 and then as a national party in 1892, marked the presumption among a number of reform groups that the Democratic and Republican Parties were deaf to the demands for economic and political reform that would benefit farmers and wage earners, together taken to be “the masses” or “the people.” These reform groups included the members of third parties such as the Greenback and Labor-Union Parties that had fought for currency reform and fair labor laws; labor unions—most importantly broad industrial unions such as the Knights of Labor and the United Mine Workers rather than trade unions; and more radical reformers ranging from the Single Taxers of Henry George to socialist-leaning groups such as Edward Bellamy’s Nationalist clubs. The most important impetus for Populism came, however, from farmers and specifically from the Farmers’ Alliance; for this reason, Populism remained an overwhelmingly rural movement.

The roots of the Farmers’ Alliance go back to attempts in Texas to form a secret society of farmers and ranchers that pushed for political and economic reform. By the mid-1880s, the Alliance spread across Texas, pushing antideflationary monetary reform (greenbacks and silver), antimonopolism, opposition to alien land ownership, labor reform, government control of transportation and communication, and opposition to protective tariffs and the federal banking

system. To push these specifically political reforms, the Alliance often worked with reform-minded members of the Democratic Party. In addition to these political aims, the Alliance also established local, state, and national marketing and supply cooperatives. By 1890, the Alliance spread throughout the Southeast, Plains, and Southwest, absorbing numerous smaller farmers’ organizations in the process and boasting a membership of more than two million. Although blacks had been excluded from membership in the Alliance since 1882, in 1886 African Americans established the Colored Farmers’ National Alliance and Co-operative Union that worked, often tenuously, with its white counterpart.

The primary social cause behind the Alliance’s rise was economic—farmers were suffering under crop lien in the South, mortgages in Kansas, and lack of control over markets. For its outlook, the movement drew on the Bible, classic economic liberalism, the producerism heralded by the Knights of Labor, and Jeffersonian equalitarian republicanism and agrarian idealism. Although the Alliance generally opposed federal intervention in the economy—believing that the political economy operated by divine or natural laws and was therefore best left untouched—it also believed that since a genuine republican government represented the people, government control of transportation and communication would wrest such enterprises from the grip of the “plutocrats” (a coalition of wealthy and corrupt government officials and robber barons) and place them back in the hands of the people. This meant that although Alliancefolk (and later the People’s Party) drew on traditional republican ideals of small government (fearing concentrations of power), free enterprise, and private property, they supported policies that had the effect of centralizing marketing and distribution structures and government intervention.

As it increasingly demanded national political reforms—the Alliance was an explicitly nonpartisan organization—by 1890 in the Midwest and 1892 in the South, Alliance influence in the two older parties faltered. In 1890, Kansas Alliance members, with other labor reformers, established a statewide People’s Party and won significant victories. In 1892 the national People’s Party emerged and ran James B. Weaver for president but met with little success except on state and local tickets, especially where it cooperated with one of the major parties. In 1894, the People’s Party, however, achieved solid state-level success, again, through cooperation or “fusion” with one of the other parties. Often in the South, in 1892 and through fusion agreements with the Republican Party, numerous blacks supported the People’s Party (where

they had not already been disfranchised). Although the vast majority of Populists supported white supremacist “reforms” such as segregation laws, they generally opposed restrictions on franchise (for practical or principled reasons) and sought African Americans’ votes.

In 1896, the national Democratic Party endorsed a number of Populist demands, including free silver, and nominated William Jennings Bryan, a Nebraskan who, though not a Populist, was a reformer in harmony with the People’s Party. The People’s Party then also nominated Bryan (with a different running mate), but Bryan lost to McKinley; and afterwards enthusiasm for the People’s Party waned as the economic forecast brightened, divisions within the party took their toll, and in the South a virulent Democratic counterattack of white supremacy and disfranchisement quashed the movement. In 1908, the party’s last year of existence, presidential candidate Tom Watson received only twenty-eight thousand votes.

Since as early as the 1890s, historians have attempted to understand what Populism meant. Progressive historians have cast the Populists as heroes of Jeffersonian democracy standing firm against the machinations of the robber barons and, at the same time, as proto-progressives in their push for increased government intervention. In the 1950s, Richard Hofstadter in *The Age of Reform* (1955) demonized the Populists as part of the “anti-intellectual” or “paranoid” style in American politics. For Hofstadter, Populists were worked up over their declining social status in a modernizing America and thus were anti-intellectual, backward-looking, localist reactionaries and nativists. Work on Populism since the 1970s has been influenced by Lawrence Goodwyn’s *Democratic Promise* (1976), which rendered Populism as a “movement culture” representing a cooperative outlook that opposed American individualism and the growing incorporation of late-nineteenth-century American capitalism. Most recently, Charles Postel has argued that all of these writers wrongly assume Populists were traditionalists longing for a long-past pastoral America. He argues to the contrary that Populists, too, were attempting to achieve a fair share of the fruits of modern, rationalized economic systems and progressive governmental intervention. Although certainly Populist policies pointed to the reforms of progressive presidents such as Theodore Roosevelt, Woodrow Wilson, and even Franklin Roosevelt, it is significant that both Theodore Roosevelt and Wilson despised the Populists, indicating that, though Populists’ policies were progressive, their frame of mind—their worldview and ethos—was decidedly different from

progressives such as Wilson. To understand this worldview that led Populists to see themselves as “progressive,” “agitators,” and “reformers,” but at the same time beholden to traditional American political and economic views, we must look to Populism’s religious dynamics.

Populism and Protestant Evangelicalism

How, then, did religion connect to Populism? First, and especially in the South, Protestant evangelicalism provided a structural and intellectual framework for Populism and in doing so both legitimated the movement among more conservative farmers and energized the movement with prophetic, even millennial, certainty and enthusiasm. Although certainly not all Populists were evangelicals, as a central discourse of meaning in America, evangelicalism deeply influenced Populism’s ethos and worldview. Populists were therefore traditionalist in outlook—most were theologically orthodox (even if of a liberal slant—especially in the Midwest), most adhered to the creeds of republicanism and classical economic liberalism, but at the same time most saw themselves as standing against similar forces that threatened not only these ideals but America itself. As restorationists, they boldly fought for reform, but reform meant recovering time-honored truths from which society was moving.

Protestant evangelicalism, briefly, is that branch of Protestantism that emerged in the eighteenth century from the antecedents of English Puritanism and Continental Pietism. Like other low-church Protestants, evangelicals uphold the primacy of scripture and wholly embrace the priesthood of all believers while generally promoting a low-church ecclesiology. What sets evangelicals apart from other Protestants is their insistence on the necessity of a singular, experiential conversion experience—or being “born again.”

In America, evangelicalism came to the fore in a series of “awakenings” in the eighteenth and nineteenth centuries, and it became the predominant form of Protestantism by the late nineteenth century. Along the way, it wholly embraced American political and economic ideals, particularly the verity of participatory democracy, the dangers of centralized authority (tyranny), the rule of law, and vigorous free market capitalism. Evangelicals’ theological, political, and economic ideals merged to the degree that they defended their voluntary ecclesiologies using republican political ideas and defended American political, economic, and social norms as “Christian.” American evangelicals believed by the late nineteenth century that America was God’s chosen nation that exemplified divine principles.

Significant for its relationship to the People's Party is that in terms of ethos, Protestant evangelicalism evinced both countercultural and conservative tendencies. On the countercultural side, again, evangelicals in the nineteenth century were liberal in their advocacy for economic freedom, the protection of basic human rights and liberties, freedom of conscience, and theological innovation; this side of evangelicalism empowered the more radical reforming tendencies in Populism. On the conservative side, Protestant evangelicals also believed that free minds arrived at the same conclusions—namely, the verity of democracy, capitalism, Christianity (usually of a particular variety), and so forth. Hence, while being champions of freedom in the broad sense, evangelicals were also inclined to enforce through church or state (if necessary) the truth to which free souls ought to ascend; this gave evangelicalism its conservative ethos. Furthermore, since it was entrenched in mainstream America, Populism—unlike socialism, communism, nationalism, or anarchism—retained a mainstream appeal. In this sense, as Robert McMath has argued, evangelicalism legitimated Populism.

In addition, evangelicals typically embraced anti-elitism. A knee-jerk reaction rather than an ideology, anti-elitism fueled both Populism and populism. As anti-elitists, evangelicals, drawing on the idea that God could guide anyone through common sense, trusted individuals to understand the Bible themselves without formal training and often favored bivocational ministers lacking formal education to urbane pastors with college degrees. Adopting many of the producerist ideals of the Jacksonian era (that farmers and laborers, as producers of wealth, were more virtuous than nonproducing lawyers, bankers, or “middlemen”), evangelicals typically viewed the “common man”—a product of the country—as superior to urban dandies.

As historians such as McMath, Creech, and others have pointed out, evangelicalism affected the emergence of the movement structurally and intellectually. In terms of structure, even though the Alliance drew on other voluntary societies as models, the movement from top to bottom maintained a structure based on the voluntary ecclesiology of evangelical churches. This is not surprising, since from sub-Alliance leaders to lecturers to those at the top of the organization, Protestant evangelicals, and ministers and lay leaders in particular (who had roughly the same status), were at the fore in organizing and maintaining the Alliance. As a result, Alliance organizers used churches, denominational networks, and the format of camp meetings to rally support.

With such structural affinity, on the intellectual side, it is not surprising that the Alliance regarded as sacred the democratic and economic ideals of American evangelical civil religion. As evangelicals, they merged theological, economic, and political ideas in such a way that again energized the movement with religious certainty and millennial enthusiasm. Indeed, many evangelicals in the late nineteenth century were afraid that forces hostile to Christianity and to America were mounting, variously identifying these forces as “corporatism,” “Romanism,” or “tyranny”—diabolical enemies that sought to snuff out religious, economic, and political liberty. On the religious side were denominational “papists” who wanted to professionalize the church; in the economic sphere were trusts, national banks, and “Wall Street,” which aimed to strip economic freedom from farmers and laborers through the manipulation of commodity and financial markets; and in the political realm were boss politicians, lobbyists, “town hall rings,” and “courthouse gangs,” who stifled political freedom by stealing votes and through inordinate influence on elected officials. To combat such threats, Populists entered the fray on all three fronts to reform America, sensing they were its final hope. Reform meant embodying—personally and as an organization—the eternal principles of American civil religion: that mixture of republican, classic economic, and theological ideals. This connection helps explain the Populist devotion to its “principles.”

Again, evangelical Populists drew especially on the more liberal components of evangelical thought: the republican and economic ideals associated by evangelicals, farmers, and laborers with “Jeffersonianism” and moral imperatives regarding the accumulation of wealth. Moreover, in the Midwest, Populists went further by adopting the Social Gospel ideas of George Herron, Richard Ely, Washington Gladden, and others, which suggested the church must redeem the entire social order from a corporate evil involving the captains of business and political leaders who threatened to rob farmers and laborers of political and economic freedom through “class legislation.” In the South, the theological liberalism of the Social Gospel was suspect, but Populists nevertheless embraced the same general tenets of “social Christianity,” which criticized the accumulation of wealth and embraced the general idea that Jesus favored the common folk.

Even though Populists drew on other intellectual sources, because these theological ideas bore with them eternal consequences both for God's chosen nation and for individuals, they propelled the movement forward. Seeing the trusts, the robber barons, and the leaders of the two old parties not just

as political combatants but as representations of Satan, as threats not just to the political voice of farmers and laborers but to the voice of God itself (“the voice of the people is the voice of God”), Populists thought of themselves as doing battle in an eschatological field. To lose meant not only economic hard times but political tyranny, economic slavery, and religious “Romanism”; in short, an end to America as God’s city on a hill.

Populism and Religious Tolerance

In addition to this most important connection between Protestant evangelicalism and Populism, religion also connected to Populism—actually and in the historiography—to anti-Catholicism, anti-Semitism, and, more generally, to nativism. In the historiography, Hofstadter understood Populism as an expression of the “paranoid style” and “anti-intellectual” tendencies among certain types of American reformers who hoped to impose their will on others. In this telling, Populists were one group in a long line of reformers going back to the anti-Catholic and nativist parties and rioters of the antebellum period, to the nativism of the turn of the century and 1920s, down to the McCarthyism of the period in which he was writing. In this telling, Populists were anti-Semitic, anti-Catholic nativists.

While there is a grain of truth in Hofstadter, historians, starting with Walter Nugent in *The Tolerant Populists* (1963), demonstrated that this was not the case. For while there were episodes of nativism, such as support for Chinese exclusion and antipathy towards Bohemians in Texas, throughout the South, Alliance leaders tried to attract European immigrants; in New Mexico, Mexicans joined the Alliance; and especially in the Midwest, the Alliance and People’s Party were populated with the full range of Willa Catheresque immigrants. As for anti-Catholicism, evangelical Populists did oppose Catholicism, not so much for theological reasons, but because papal initiative was seen as a threat to democracy; so, from time to time, “papists” received diatribes along with robber barons and congressional “hirelings” as forces of centralized tyranny threatening American democracy. But these tropes were never central to the movement; moreover, in the Midwest, Populists actively courted Roman Catholics. Finally, even though Populists generally denounced “shylocks” and “Rothschilds,” these denunciations had little to do with Jewish religious identity and more to do with stereotypes of wealth. Such diatribes, although crude, were, like anti-Catholicism, not central to the ethos of the movement. In short, Hofstadter overstated his case; as Nugent has

written, Populists were more tolerant certainly than Republicans and typically more so than Democrats.

Such tolerance is evident in the third way Populism connected to religion: the presence of religious nonconformists in the movement outside the South. Especially in the Midwest and West, but also in Texas, numerous religious nonconformists populated the highest ranks of the movement. Many prominent leaders were Swedenborgians, free thinkers, theosophists, Spiritualists, and assorted do-it-yourselfers. As Charles Postel points out, religious nonconformity did not necessarily affect the worldview of the movement but rather points to its liberal, progressive ethos. Such radical religious beliefs, although not cheered by the majority evangelicals in the movement, were nevertheless tolerated because of evangelicals’ commitments to freedom of conscience and this broad-minded ethos. Such tolerance also indicates how they embraced more radical characters such as socialist Eugene Debs, the followers of Edward Bellamy, or the members of Coxey’s Army. That both Clarence Darrow (a Populist stump speaker) and William Jennings Bryan (a Populist in spirit) were part of the same general movement marks the diversity such openness could contain.

After the People’s Party’s demise, most Populists left politics or allied themselves with one of the older parties. In California, Illinois, Oklahoma, and Texas, however, Populists provided grassroots support for the Socialist Party, which, under the charismatic Eugene Debs, peaked in strength during the first two decades of the twentieth century. As Jim Bisset has pointed out, socialists, especially in Oklahoma and Texas, drew on the more radical aforementioned Social Gospel to advocate Christian socialism.

Religion and Lowercase Populism

Moving on to lowercase “populism,” the term is itself controversial. In popular usage, it has come to be almost meaningless, as it is applied to any person or movement that is generally conservative in a grassroots way. The term is used, for example, in reference to the political savvy of Ronald Reagan, Rush Limbaugh’s appeal, or the paranoia of gun-toting survivalists.

In the academy, usage is more restricted to the definition offered by Kazin—a rhetorical strategy or pattern of thought (not a worldview, ethos, or ideology) expressing contempt for intellectual, political, or economic authorities or “experts” and celebrating the practical wisdom of “the people” or, later, “middle America.” Faced with economic disaster, the threat of communism, or moral decline,

populists have galvanized support by blaming urbane effete elites, “pointy-headed intellectuals,” nonproducers, or “fat cats” for these problems while calling on the toughness, moral fortitude, common sense, and piety of “the people” to right these wrongs. Even in the academy, however, use of the term is controversial, with many scholars arguing that the term is confusing and anachronistic, or that the phenomenon does not actually exist.

Assuming, however, that populism conveys an actual pattern of rhetoric in American life, how does religion connect to it? Influence would seem to go in a reciprocal fashion, so without trying to determine which caused which, there are at least three connections of Protestant evangelicalism and Catholicism to populism: the evangelical roots of populism as it emerged as a rhetorical style in the Jacksonian era and in the People’s Party, the Catholic appropriation of populism in the 1930s through the 1950s to fight for social justice and oppose communism, and finally populism’s use by the Religious Right from the late 1960s through the Reagan years and beyond.

As already mentioned, liberal evangelical ideals stressing the priesthood of all believers, freedom of conscience, low-church ecclesiology, and common sense, along with anti-elitism, merged with republican ideals in the early nineteenth century. Evangelical and republican ideals combined furthermore with producerist ideals in the Jacksonian era to produce the first uses of “populist” rhetoric—Jackson’s war against the Second Bank—but also to fuel crusades in the nineteenth century against trusts, robber barons, “czars,” “empires,” and “octopi” of various sorts, as well as against the use or distribution of alcohol in the late nineteenth and early twentieth centuries. Such language was also, as we have seen, central to the People’s Party. Although it might be tempting to find this rhetoric at work in nativism, the Ku Klux Klan, and other reactionary groups, this was not the case, for until the late 1940s, populist rhetoric was employed by people seeking progressive or liberal economic and social agendas. In other words, the language of populism was inclusive and broad, appealing to the “mass” of people regardless of creed or belief.

With the decline of evangelicalism as the central voice of public virtue in American civic discourse, and with the economic and political changes of the 1930s, populist rhetoric was appropriated most often in the 1920s through the 1950s by Roman Catholics, whether by the large Irish Catholic representation in non-Marxist labor groups like the Congress of Industrial Organizations (CIO), by priests and laity active

in assuaging poverty, or by a figure like Charles Coughlin. Drawing on the calls for social justice and warnings about Marxism in the papal encyclicals *Rerum Novarum* (1891) and *Quadregesimo Anno* (1931), Catholics attacked the twin enemies of corporate greed and communism (the new centralized evil) and warned against centralized assaults on Catholic teachings regarding divorce, birth control, and sexual deviance (especially in movies).

After World War II, populism itself went through a radical transformation. Before the war it always attached itself to broad, progressive, or liberal economic or social agendas (again, before the 1920s, the Prohibition movement should be seen in this light); but to crusade against the hardening communist threat of the Cold War era, conservatives ranging from intellectuals such as William F. Buckley Jr. to figures such as Joseph McCarthy appropriated the populist rhetoric, pitting a patriotic “middle America” against an intellectual, centralized, bureaucratic elite diseased with red fever. In this reworking, a conservative, patriotic “middle America” squared off against concentrations of powerful liberals in education, the media, and government.

While Buckley and McCarthy connected their Catholicism to their populism, Protestant evangelicals, resurging in the 1950s under the likes of Billy Graham, carried the banner of populism into the 1970s and 1980s, as they combined their fight against “atheistic” communism with concern about America’s moral decline. Although people ranging from Tom Hayden to George Wallace also appropriated populist rhetoric in the 1960s, Protestant evangelicals involved in the New Right or Religious Right emerged by the 1970s as the primary populist voice in America, as they increasingly blamed liberal intellectuals and government bureaucrats, teachers unions, the media, and other points of centralized authority for moral and political evils ranging from the ban against school prayer, to the teaching of evolution and sex education in schools, abortion, and the Equal Rights Amendment. Not since the Prohibition movement had populism attached to such an explicitly religious agenda that attracted not only Protestant evangelicals but conservative Catholics and Jews as well. Starting with President Richard Nixon and culminating in the string of Republican campaigns in the 1980s, 1990s, and 2000s, the Republican Party shed its “big business” image and adopted not only the agenda of the Religious Right but the populist style as well.

Positive Thinking

The core of positive thinking is the belief in the power of the mind over matter. Mistaken simply for optimism, positive thinking intuitively leans on monism and philosophical idealism to define how life rewards those with right thinking. Positive thinking is inherently synthetic, mixing the categories of religion, psychology, medicine, and self-help; its prophets are not typically systematizers or intellectuals but popularizers and doers.

Metaphysical Heritage

Positive thinking’s origins can be traced to the late nineteenth century, when confidence about the progress and potential perfectibility of the human race surged. Ideas about the power of the mind ripened in this climate, the fruit of at least a half century of metaphysical speculation. Ralph Waldo Emerson’s (1803–1882) philosophical idealism, Swedish mystic Emanuel Swedenborg’s (1688–1772) Neoplatonic theory of correspondence, and Theosophy’s quest for uniform spiritual laws seeded the ground. But it

took Phineas Parkhurst Quimby (1802–1866), inventor and healer, to bring ideas about mind power to fruition.

Quimby inspired a generation of positive thinkers—including Christian Science founder Mary Baker Eddy and New Thought author Warren Felt Evans—with his conclusions about the connection between thought and healing. Personal experience led Quimby part of the way. His attempt to cure his tuberculosis with a carriage ride went awry when his horse balked. He was forced to run beside the horse. The run offered some relief of his symptoms and signaled to Quimby that the mind could overcome disease. Quimby’s suspicions solidified as he shared his generation’s obsession with mesmerism, a hybrid of healing practices and metaphysical thought based on Franz Antoine Mesmer’s (1733–1815) discovery of hypnosis. As Quimby followed in Mesmer’s footsteps as a touring mesmerist and, later, successful physician, he stumbled into discoveries about the human subconscious, including the effectiveness of placebos and a “talking cure,” a forerunner of modern psychotherapy. Quimby eventually concluded that healing occurred because of mental and spiritual alignment. He speculated that the unconscious was divine, a nature shared with God. Thought, specifically positive thought, would soon become a major force in American religion.

Originating in the 1880s, New Thought, a cluster of thinkers and metaphysical ideas, emerged as the most powerful religious vehicle of positive thinking. Three aspects of New Thought became foundational. First, it assumed fundamental unity between God and humanity: humanity’s separation from the divine became a matter of degrees. In Christian terms, this would mean that “salvation” would not be an act imposed from on high but one of drawing out humanity’s potential. Second, New Thought taught that the world must be reimagined as thought, rather than substance. The spiritual world formed absolute reality, while the material world was the mind’s projection. Right standing with the divine focused on sacred alignment, a mystical interconnection that merited historian Sydney Ahlstrom’s famous label of “harmonial religion.” Third, New Thought argued that people shared in God’s power to create using thought. People shaped their own worlds by their thinking, just as God had created the world using thought. Positive thoughts yielded positive circumstances, as negative thoughts brought into being negative situations.

New Thought’s influence did not weigh heavily on American culture in its institutional form but endured because of its confluence with like-minded ideas. With Horatio Dresser writing for *Good Housekeeping*, Ralph Waldo

Trine for *Woman's Home Companion*, and New Thought themes enacted through popular plays, New Thought's sectarian differences softened into palatable generalities. Its broad appeal lay in its articulation and spiritualization of American self-perceptions. New Thought uncovered the hidden truth that Americans longed to hear—that divinity was lodged somewhere in their beings and that their secret powers demanded expression.

Between its inception and World War II, positive thinking emerged as the staple feature of an emerging genre of success literature—equal parts psychology, business, self-help, and metaphysics—which brought the positive thinking movement to wide audiences. In 1905, Orison Swett Marden's New Thought-inspired *Success Magazine* boasted a circulation of 300,000. Frank Haddock's *The Power of the Will* (1907) and William Walker Atkinson's many works, including *The Secret of Success* (1908) and *The Secret of Mental Magic* (1912), fed increasing interest in the power of the mind and its instrumental value. Through radio, print media, and his "Dale Carnegie Course," Dale Carnegie popularized the relationship between thought itself—accessible to everyone—and wealth acquisition with his best-selling *How to Win Friends and Influence People* (1936). Positive thinking crossed racial divides. Father Divine's (1877–1965) Peace Mission Movement and Sweet Daddy Grace's (1881–1960) United House of Prayer infused African American uplift movements with positive thinking.

Post–World War II Positive Thinking

Positive thinking abounded in the years following WWII as Americans' optimism rose with the country's burgeoning consumer culture. Norman Vincent Peale (1898–1993), Methodist minister and self-help writer, became the prophet of this generation. His early successes as a pastor in Brooklyn and Syracuse sealed his reputation as a cheery and anecdotal preacher with a knack for advertising and church growth. In the early 1950s, New Thought ideas began to figure prominently in his preaching. As his preaching drew larger audiences, Peale accepted a position at Marble Collegiate Church in New York City, a venerable Reformed Church in America pulpit, from which he would bring his message to a national audience.

The breadth of Peale's appeal lay in the fact that he was, at heart, a popularizer. Peale made countless appearances around the country and, from the early 1950s onward, preached weekly to audiences of 4,000 at Marble Collegiate Church. He reached out to television audiences with his syndicated television program, *What's Your Trouble*, which

he cohosted with his wife, Ruth. Radio listeners tuned in to his syndicated program called *The Art of Living*, which was broadcast for forty years. In 1945, he founded his own magazine, *Guideposts*, which gained 4 million readers over the next half century. At Peale's peak his published sermons garnered 150,000 readers and his syndicated newspaper column claimed an audience of 10 million.

Peale's message was timely in two ways. First, his use of psychological categories caught the rising tide of therapeutic culture in the United States. By the close of the 1930s the new science of the mind had found mainline Protestant acceptance. In 1934, Peale sought the assistance of Dr. Smiley Blanton, professor of psychiatry at Cornell University Medical School, to help him counsel his parishioners. By 1937 the two paired up to form the Marble Collegiate Church Clinic, a therapeutic center that integrated psychology and religion. Their clinical models for pastoral counseling joined the first waves of mainstream psychological services. By the end of the Second World War, Peale's psychological idioms and impulses blended into a culture already saturated with them.

Second, Peale's theological synthesis of upward mobility with religious buoyancy matched the postwar mood, making a man into a movement. His blend of Methodist evangelism, Dutch Reformed Calvinism, and a New Thought focus on mind power could be seen clearly in earlier works, *The Art of Living* (1937) and *You Can Win* (1938). But as Peale's writing progressed, New Thought themes took precedence. In 1952, Peale authored *The Power of Positive Thinking*, which became a *New York Times* best seller for a record-breaking three years, with a total of 1 million copies sold. In it he folded Christian and psychological categories into a New Thought prescription: God's power could be harnessed by "a spirit and method by which we can control and even determine" life's circumstances (vii). As Peale taught, any person could access God's own power through positive thinking, which directed spiritual energy toward the attainment of health, self-esteem, or business acumen, to name a few. Much like his New Thought predecessors, Peale promised formulas, patterns of right thought, and the release of power through effective words. But true to Peale's unique style, the book was not a systematic treatise of thought power, but traded precision for anecdotal evidence and warm reassurances. This articulation of middle-class aspirations, set on a pedestal by one of America's most popular mainstream preachers, blurred popular and elite religion. While Peale's teachings provoked heated opposition, his critics hated him all the more for having made self-interest theologically respectable.

When Peale's star faded, another rose to take its place. A young minister named Robert H. Schuller (1926–) took up the legacy of positive thinking, doggedly following Peale's example and theological focus. Ordained in the Reformed Church in America, Schuller, like Peale, exhibited an early flair for advertising and church growth. For example, when he could not find property for his church plant in Garden Grove, California, he rented a drive-in theater and preached to the fifty assembled cars while perched on the roof of the refreshment stand. The congregation grew steadily as Schuller's expansive vision won the day. His vastly expensive building project, a church of glass that housed a river, formed the auspicious beginnings of the Crystal Cathedral. His church ministry sprawled, with a school, a retirement home, a call center, and local outreach programs. Schuller also joined Peale at the top of the *New York Times* best-seller list with a reconfiguration of "positive thinking" into "possibility thinking." His books, which included *Move Ahead with Possibility Thinking* (1967), *Self-Esteem: The New Reformation* (1982), *Tough Times Never Last but Tough People Do* (1983), and *The Be Happy Attitudes* (1985) established him as the self-help guru of his generation.

Schuller's success as a televangelist outshone all his other efforts. His television program, *The Hour of Power*, repackaged the church's worship services for mass viewing, an idea that by 1983 had garnered 2.5 million viewers. The numbers swelled with the televangelism of the 1980s, rising to 3.5 million. Although the televangelism scandals of the late 1980s slowed viewership, Schuller's sunny message rode out the storm. His ministry continued to thrive well into the 1990s and the early years of the new millennium. In 2009 the Crystal Cathedral stumbled from financial hardships wrought by economic recession and the resignation of Schuller's son and ministerial successor, Robert A. Schuller. Regardless, Schuller's legacy lay in his theology of self-esteem, a belief that optimism, rather than talk of sin, restored Christians to wholeness and right standing before God.

Conclusion

Over the last century positive thinking has become inextricably entwined with American conceptions of the self. It constructed an image of the individual as autonomous, governed by will, and only as powerful as its mind. In 2007, Rhonda Byrne's breakaway hit *The Secret* became the latest articulation of the idealized American self. Endorsed by a host of successful inventors, authors, and metaphysical leaders, the book encouraged people to direct their thoughts

toward achieving their desires. Fans such as Oprah Winfrey, along with the ever-increasing ranks of those claiming to be "spiritual but not religious," found that *The Secret* ritualized two American sentiments: people rise to the level of their own ambition, and there's no such thing as luck.

Its influence on American Christianity, however, has been most pronounced. The prosperity movement, known alternatively as the word of faith or health and wealth gospel, garnered millions of American devotees with its articulation of Christian positive thinking. Such celebrities as Joel Osteen and Joyce Meyer promised Christians the power to claim financial and physical well-being through right thought and speech. Though planted in Pentecostalism, the prosperity movement attracted believers from diverse ethnic, denominational, racial, and economic backgrounds.

For generations of religious thinkers, positive thinking made the mind a spiritual playground. Common sense realism, the bread and butter of American evangelicalism, was replaced by religious knowledge that was elusive. Truth was ferreted out, not apparent, as it emerged from the mind's hidden recesses. It earned a lasting place in the New Age movement as popular American audiences eagerly sought to apply this secret knowledge to their advantage. Louise Hay's best seller *You Can Heal Your Life* (1984) and Deepak Chopra's *The Seven Spiritual Laws of Success* (1994) stood out. Indeed, its emphasis on practice was irrepressible. Truths were techniques, waiting to be applied. Indeed, as a therapeutic tool, positive thinking became a mainstay of popular psychology and "self-help." Whether through hypnotism, the use of placebos, or the power of suggestion, positive thinkers cultivated religious practices and techniques to subdue, focus, or activate the mind's hidden powers.

Postmodernism

The word *postmodernism* covers a multitude of sins; a malleable, chameleon-like term, it is invoked to name a number of different movements and phenomena. It is important to distinguish between postmodernism and postmodernity, both of which emerged in the 1960s. *Postmodernism* refers to a constellation of philosophical and theoretical movements, often associated with French thought, that are critical of philosophical tenets associated with modernism, movements in the nineteenth and twentieth centuries that consciously attempted to break away from former ways of thinking. *Postmodernity* is often used as shorthand for a constellation of cultural phenomena (such as technological and communication developments, globalization, and so forth) that represent what sociologist Anthony Giddens describes, more correctly, as “high modernity” or “late modernity.” To add to the confusion, theorist Frederic Jameson describes such cultural phenomena under the rubric of “postmodernism, or, the cultural logic of late capitalism.” In this respect, postmodernity does not indicate any radical rupture or break with modernity but perhaps an intensification of it. In this sense, postmodernity does not name anything particularly or radically new. Postmodernism is usually considered a philosophical critique of the foundations of modernity that produce such cultural phenomena.

Both postmodernism as a theoretical movement and postmodernity as a set of cultural phenomena are relevant to religion and the study of religion. On the one hand, the “postmodern turn” has had an impact on theorizing about religion, particularly sociological and philosophical accounts. On the other hand, many developments and shifts in lived religion are often seen as the evidence or outworking of a cultural shift in late modernity.

Postmodernity and Religious Phenomena

If modernity is associated with homogeneity, universality, sameness, and subjectivity, then postmodernity is considered to be loosely associated with alterity or “otherness,” singularity,

diversity, and difference. How, then, do such themes and emphases manifest themselves in the shape of lived religion in postmodern or late modern American culture? What might be signs of a postmodern turn in American religious life?

One aspect of postmodernity is thought to be increased cultural traffic and migration, along with other aspects of globalization; many read the increased religious diversity of the United States as itself a harbinger of postmodernity. The general fragmentation of cultural dominance of the Protestant mainline has been accompanied by both the growth of other religious traditions within the American context (including Buddhism and Islam), as well as the emergence of new religious movements. Many read this phenomenon of increased religious diversity as a factor of postmodernity—though, once again, it might be better described as an aspect of high or late modernity, and indeed an aspect of the cultural logic of late capitalism that encourages a marketplace of religious movements and ideas. In that respect, increased religious diversity is simply the logical working out of deeply modern aspects that are part of the fabric of the American ethos.

If modernity often privileged the center, postmodernity turns to the margin. If modernity privileged the majority, postmodernity emphasizes the minority. Thus, many suggest that the flourishing of “marginal” spiritualities is another indicator of postmodern American religion. Perhaps a paradigmatic example of this is the exponential growth of Pentecostal and charismatic Christianity, not only in the United States but also elsewhere in the world. Pentecostal spirituality represents its own “enacted” critique of a modern conception of the human persons, which emphasizes the rational and cognitive, with an emphasis on the affective and embodied. Thus British sociologist David Martin and Harvard theologian Harvey Cox have seen Pentecostalism as something of a quintessential postmodern spirituality (though Duke historian Grant Wacker cautions that Pentecostal pragmatism remains thoroughly modernist).

Finally, one might describe reconfigurations of established religions as another instance of postmodern religion. The “emerging church” phenomenon in American Christianity, for instance, self-identifies as a postmodern rendition of Christianity, eschewing traditional institutional forms in order to establish communities that are fluid and malleable, connected by virtual, Web-based networks.

Postmodernism and Sociology of Religion

While some religious phenomena might be associated with postmodernity (in other words, late modernity), the impact

of postmodernism is felt most significantly in theories and explanations of religion. Perhaps most important, the postmodern critique of modernist epistemologies (or theories of knowledge) targets the modernist conceit regarding secular science. At the heart of the modern ideal—the ideal that informed science as we know it—is a pretension to a neutral, unbiased, unprejudiced standpoint that would be described as “objective.” Knowledge is scientific just to the extent that it is neutral, unbiased, and therefore objective. This requires jettisoning presuppositions, beliefs, and commitments that would “taint” such pure rationality. While this model was quickly tethered to the natural sciences, the emerging social sciences advocated the same ideal—indeed, advocated it even more strenuously precisely because their objectivity seemed to be so easily questioned. And anxieties about objectivity seemed to be especially heightened when social scientists were describing or explaining religion. Because this modern paradigm viewed religious belief as a particularly potent corruptor of objectivity, scholars of religion sought to establish their objectivity all the more tenaciously.

Some say that a rejection of this model of objectivity is close to the heart of postmodernism. Such a critique emerged on many fronts, from different traditions. In Europe, German philosopher Martin Heidegger pointed out that our perception and observation of the world is always already informed by a “pre-understanding”—an ineluctable set of commitments that we bring to our experience and observation. This insight was extended and radicalized in the work of his student Hans Georg Gadamer, who criticized the “Enlightenment prejudice against prejudice.” French theorists such as Michel Foucault and Jacques Derrida, in a different way, emphasized the way that cultural location conditions or influences our knowledge and perception. Sociologists of knowledge such as Peter Winch, Peter Berger, and Thomas Luckmann noted that reality was not so much a pristine thing “out there,” neatly delivered by objective observation, but rather was a constitution of the world informed by background narratives and communities. Anthropologists such as Clifford Geertz articulated a hermeneutic anthropology that conceded and recognized the inescapable role of prior interpretive frameworks in how we describe and explain culture. And philosophers of science such as Thomas Kuhn pointed out—empirically and historically—how the pretheoretical commitments of scientists (what Kuhn called “paradigms”) shaped and influenced their purportedly neutral and objective description of the world.

The cumulative effect of this postmodern critique of objectivity called into question the working ideal of scientific knowledge as secular. Science, including social science, was taken to be secular just to the extent that it was neutral, unbiased, and objective. Thus religious studies and the sociology of religion, in asserting their objectivity, were also bent on asserting their secularity. But the postmodern critique of the objective conceit also constituted a critique of just such a notion of secularity. British theologian John Milbank, in his account of modern social theory, pointed out that the implications of the postmodern critique of modern epistemology, issuing in a “postfoundationalist” account of knowledge, should also entail a “postsecular” social science. On the one hand, this would include giving up on the “secularization thesis,” which construed religious belief and participation as somehow primitive and irrational (or, at least, inconsistent with modernity). Recent developments indicate that indeed, the secularization thesis is being abandoned as an explanatory paradigm in the sociology of religion. On the other hand, the implosion of the epistemology that undergirded the secular ideal requires sociologists and anthropologists to own up to their theoretical (and pretheoretical) commitments: that what has paraded as a neutral, secular account of religion own up to the fact that it operated on the basis of pretheoretical assumptions that are accepted on the basis of faith. In short, there is no secular account of religion.

Sociologist of religion Christian Smith demonstrates an astute understanding of this. In something of a methodological manifesto, Smith argues that the narrow, reductionist paradigms for explaining religion in the social sciences (economic models or evolutionary psychology, for example) are both insufficiently warranted and reductionistic, unable to account for the complexity of religious phenomena. Rather than explaining religion, they explain much of it away. In contrast, Smith shows that a thicker, more nuanced theoretical paradigm that honors humans as “moral, believing animals”—even “liturgical animals”—does a better job of accounting for the data. While Smith makes no claim to offering a postmodern theory, his project represents the end result of the postmodern critique of modern ideals of secularity and objectivity.

Postmodernism and Philosophy of Religion

Finally, postmodernism has had a significant impact in philosophy of religion and philosophical theology, stemming largely from the influence of French philosopher Jacques Derrida—particularly as mediated, in an American context,

in the work of Mark C. Taylor and John D. Caputo. Derrida's notion of "deconstruction" was taken to be a radicalization of the hermeneutical turn effected by Heidegger and Gadamer. If the hermeneutic tradition emphasized the role that presuppositions play in our perception and understanding of the world, deconstruction further emphasized that meaning could not be stabilized. Words and texts can be recontextualized and thus mean something quite different in different contexts—and such plurality of meaning is possible in any context. Thus, Derrida emphasized a play of meaning—the fact that meaning could not be controlled by authors (sometimes described as the structural "death of the author"). This not only has an impact on the interpretation of sacred texts, it also fuels a general suspicion about the perceived stability of institutions, generating a certain suspicion about traditional institutions, including religious hierarchies and denominational structures. In particular, Derrida suggested that particular determinations of religious practice—that is, identifiable, institutional religions—would be inherently violent and exclusionary *because of* their particularity. Thus, Derrida extolled a "messianicity" that would be distinct from any particular "messianism" (whether Christianity, Judaism, or Islam). He also described this messianicity as a "religion without religion" that was embodied in the universal call to justice but was compromised and even rendered unjust by particular determinations or configurations of the determinate religions.

The result is a significant aversion to institutional forms of religion, perhaps not unlike broader cultural interest in spirituality rather than the particularities of religious traditions and disciplines. Thus, the emerging church often looks to this deconstructive philosophy of religion as the theoretical framework needed to support their suspicion of institutional religion and authority. But again, such a stance could be seen as the ultimate flowering of modern concerns with autonomy. Thus, these movements may also be considered "late modern" rather than properly postmodern.

Other postmodern theologies, however, have been primarily interested in utilizing the resources of the postmodern critique, in order to point out how religious traditions and communities have unwittingly been influenced by modernist habits of thought that are antithetical to the heart of the tradition. The work of theologian John Milbank and the movement of "Radical Orthodoxy"—an Anglican postmodern movement—represents another stream of postmodern philosophy of religion that, in contrast to the deconstructive stream of philosophy of religion, takes on board the postmodern critique of modernity in order to

point out how religious traditions have become complicit with forms of life that are inconsistent with their confession. This is then a catalyst and occasion to return to the sources of the tradition. On this account, the postmodern is an occasion for creative reappropriation of the ancient sources of the tradition. In this way, postmodernism sets the stage for a renewal movement within the tradition.

Practical Theology

Practical theology is a term commonly used in Christian theology for a general way of doing theology concerned with the embodiment of religious belief in the day-to-day lives of individuals and communities. Its subject matter is

often described through generic words that suggest movement in time and space, such as *action*, *practice*, *praxis*, *experience*, *situation*, *event*, and *performance*. Its subject is also associated with action-oriented religious words, such as *formation*, *transformation*, *discipleship*, *witness*, *ministry*, and *public mission*. In its focus on concrete instances of religious life, its objective is both to understand and to influence religious wisdom or faith in action. Ultimately, practical theology is normatively and eschatologically oriented. That is, it not only describes how people live as people of faith in communities and society, but it also considers how they might do so more fully both in and beyond this life and world.

In its focus on the tangible and local, practical theology joins efforts in the United States to recover the sensate, material side of religion obscured by modern interest in the scientific and philosophical study of beliefs. Where historians and sociologists of religion have begun to examine *lived religion*, those who engage in practical theology investigate *lived theology*, extending interest in rituals and practices to questions about how theology or knowing and loving the divine takes shape in everyday life and how everyday life influences theology. Some practical theologians, particularly in Europe, limit practical theology to a discipline involving the empirical study of religion. But most people value its wider normative aims to enrich the life of faith for the sake of the world.

Catholics in general and many Protestants outside the United States use pastoral and practical theology interchangeably. This is less true for Protestants in the United States, where pastoral theology primarily refers to reflection on pastoral care and counseling. Pastoral and practical theology share historical roots but have diverged considerably. Figures such as Seward Hiltner (1909–1984) and Anton Boisen (1876–1965), often cited by Europeans as forerunners of modern practical theology, are seen by most scholars in the United States as dedicated to care and counseling. Although *pastoral* also refers to ministry in general, it is associated largely with the special activity of care and shepherding. The Protestant use of “practical theology” has more affinity with what some Catholics have called “contextual” or “local” theology.

Practical theology has also been contrasted with systematic or doctrinal theology, which traditionally centered on proclaimed beliefs. Although this contrast reinforces a problematic split between theory and practice, it does highlight a difference in emphasis. Practical theology as a discipline has a longer history of attention to faith in the midst of daily life. This difference has come under increasing pressure as practical theologians attend to theory, systematic theologians

attend to practice, and people in other disciplines and settings also seek to understand faith in action. Although such nuances in definition have evolved largely within Christianity, analogous interest in lived faith or practiced theology exists in other religions.

History and Context

Practical theology shares with biblical, historical, and doctrinal theology a common academic trajectory in the German Protestant university of the 1800s that fostered the development of theology as a *Wissenschaft* (science) and field of study increasingly removed from ecclesial and creedal interests. Christian theology in general has never been solely a matter of abstract truths. It has always included guidance for faithful living and attention to obtaining salvation. But with the dawning of the modern era, people such as the “father of liberal theology” Friedrich Schleiermacher (1768–1834) sought to justify theology as a scientific discipline deserving of a place within the modern university. In an effort to keep pace with the spirit of the age, theology in Europe and North America became increasingly focused on a descriptive history and philosophy of ideas, distancing itself from religious practice and seeking a systematic coherence and rigor on par with the sciences.

On U.S. soil, this view of theology as objective, critical, and academic rather than evangelistic, experiential, confessional, ecclesial, and practical became institutionalized in the late nineteenth- and early twentieth-century structures of graduate seminary education. Other traditions besides Protestantism and some religious denominations, such as Reform Judaism, have felt the impact of this development and have adopted similar educational divisions between practical and classical disciplines. Eastern Orthodoxy, Catholicism, and Anglicanism sustained greater appreciation for practice through rich liturgical traditions, development of mystical and spiritual theology, and convictions about worship as the heart of theology. Nonetheless, these traditions have struggled to find a place for practical theology. Ambivalence about practice has deeper roots in twelfth-century scholasticism, the Aristotelian model of theology as a theoretical science that attempted to reconcile Christianity with secular philosophy, and the development of cathedral universities. As the center of theological study shifted from households and small religious communities to large monasteries and then universities, debates over whether theology was a practical orientation to lived faith or a speculative contemplation of divinity aimed at knowledge for its own sake were decided largely in favor of the latter. In Catholicism, practical theology has sometimes been limited to

a pastoral and moral theology devoted to ministerial oversight and training priests for the office of confessor.

Since the middle of the twentieth century, however, several developments fostered a climate of unrest and a rebirth of national and international interest in enriched understandings. Key among the influences was the rapid growth in the social sciences, psychology in particular, and their usefulness in understanding experience. With the insights of psychology and case study methods, early pastoral theologians Boisen and Hiltner argued for the “living human document” as a subject of study comparable to written texts and for “operation-centered” theology as deserving a place alongside “logic-centered” theology. Theology emerges out of experience, and practical theology has content not derived solely from historical and philosophical theology. Correlation, understood as a fluid dialectic between human situation and religious message, emerged as an influential method in support of this claim and became a staple in the growth of practical theology. Critical social theory in Europe in the 1930s and, three decades later, Latin American liberation theology and related developments, such as black and feminist theology, demanded that theology begin with grassroots encounters, address the needs of the oppressed, and work for social change. During the last decades of the twentieth century, philosophy itself took a turn toward the practical among divergent intellectuals such as Jürgen Habermas, Alasdair MacIntyre, Pierre Bourdieu, and Michel de Certeau, giving scholars dependent on European continental philosophy the language and methods to validate practice as a worthy object of study.

Practical theology has attracted wide attention since the 1980s through fresh publications, renewed academic societies, new graduate programs, and interest in lived theology among those outside the academy. Its boundaries and horizons are being stretched further by developments in the study of practice, empirical methods, the analysis of power and social location, religious pluralism, and globalization. Practical theology is recognized, like cultural anthropology, “for the delicacy of its distinctions not the sweep of its abstractions,” to borrow Clifford Geertz’s words (1973, p. 25). But its definition quickly moves beyond thick description. Practical theology is ultimately a normative project guided by the desire to make a difference in the world.

Practical Theology in the Twenty-First Century

As a result of its history, the term *practical theology* gets used today in at least four different ways. It refers to (1) an activity of believers seeking to sustain a life of reflective

faith in the everyday, (2) a curricular area in theological education focused on ministerial practice, (3) an approach to theology used by religious leaders and by teachers and students across the curriculum, and (4) an academic discipline pursued by a smaller subset of scholars to sustain these first three enterprises.

An Activity of Believers

At its most basic level, practical theology is performed by those who thoughtfully seek to embody deep convictions about life and its ultimate meaning in the midst of ordinary and extraordinary circumstances. Few laypersons actually use the word *theology* to describe this activity. Professing Christians, for example, might talk about this more belief based or “confessional” practical theology as following Jesus or living out the gospel of love and justice. Professing Jews might say faith requires *tikkun olam*, repair of the world. Practical theologians in more secular contexts, such as Britain, have argued that this dialogical and largely Christian understanding of practical theology as reflective enactment of faith is useful to all people, Christian or not, who wish to connect beliefs and values to practice and life. It is particularly relevant in public service and educational institutions in which religious practices and convictions play a significant role.

A Curricular Area

Seminary deans, students, and graduates of programs in theological study usually have a more specific meaning in mind when they speak of practical theology. They use the term to refer to a distinct area of the curriculum aimed at enhancing religious life through congregational and public ministry. Practical theology is concerned with religious leadership broadly construed to include not only local congregations but also other forms of social service and public influence. Several subspecialties, such as pastoral care, homiletics, worship, mission, evangelism, leadership, and education, are conventionally grouped under the rubric of “ministerial practical theology.” Common commitments to teaching a practice for the sake of ministry unite these specialties. But in many cases, the claims and methods of practical theology as an academic discipline operate implicitly, and faculty may not recognize the broader practical theological assumptions that organize their teaching and research. Even when practical theology does constitute the larger domain within which faculty understand their work, academics are more likely to identify themselves by their specialty as scholars in homiletics or pastoral care, for example, than as practical theologians.

An Approach to Theology and Religious Faith

Since its re-emergence in the 1980s, practical theology designates more than the theology of the pastorate or the methods and objectives that unite the ministerial subdisciplines. Building on its three-century history in university and seminary education, scholars have expanded its meaning and mission. Practical theology seeks religious knowledge in the service of a larger *telos* (end or aim) of enriching the life of faith in the world. It is not only a branch of study but a way of doing theology attentive to lived faith. This definition, aimed at reorienting theological education toward its ultimate end, challenges conventional divisions between classical and practical disciplines, academy and congregation, and theory and practice. Despite the organizational and structural usefulness of such divisions, they have led to a misperception of theological education as either merely about acquiring technical pastoral skills (the clerical paradigm) or merely about acquiring cognitive knowledge of history and doctrine (the academic paradigm). In reality, all theology is practical at heart and practical theology, redefined more expansively, has the good of the larger whole in mind. It involves the study of faith toward the end of divine flourishing in human life and the world.

Questions of the usefulness of scripture, history, and doctrine arise here not in a narrow utilitarian sense but with this larger purpose in mind. This goal-oriented or teleological practical theology is an endeavor intentionally oriented toward particular goods and ends in which many different people—believers, clergy, and faculty across the curriculum—have some investment. In fact, all theological disciplines have or should have, as the influential twentieth-century Catholic theologian Karl Rahner argued, an element of practical theology contained within them. Some recent systematic and historical theologians with convictions about liberation or interest in studying theology through new means, such as ethnography, have understood the boundaries of their work as falling within this wider realm, if not the discipline, of practical theology. In turn, believers and religious leaders are also significant partners in a theology whose aim in the study of scripture, doctrine, and life is faithful practice. Their efforts to embody faith are not lower-level versions of a more sophisticated academic theology, simplified for the masses. Rather they possess a theological intelligence and imagination unique to the concrete demands of practice and they thereby contribute to the general construction of religious tradition and community. This definition obviously extends the boundaries of the term to include

faculty, religious leaders, and believers who may not consider themselves practical theologians and are not practical theologians in the strict sense of the term as a curricular area or discipline.

An Academic Discipline

Although relatively few people identify themselves foremost as practical theologians, a subset of people have undertaken the critical task of clarifying the divergent aims of practical theology. Scholars who call themselves practical theologians, often in addition to another primary disciplinary identity, are invested in sustaining the three other modes of practical theology. They see themselves as responsible for the maintenance and enrichment of practical theology as a multifaceted confessional, ministerial, teleological, and academic enterprise. Supported by new national and international guilds, such as the Association of Practical Theology and the International Academy of Practical Theology, these scholars understand the value of research and teaching in practical theology as a discipline and a field that contains these four aspects, even if they also recognize that the ultimate aim is not disciplinary knowledge for its own sake but the equipping of religious leaders and believers in fostering life abundant.

Toward this end, practical theologians assume a number of tasks. They explore the activity of believers through descriptive study and normative assessment of local theologies. They seek to discern common objectives among the ministerial subdisciplines and in the study of theology more generally. They study patterns of integration, formation, and transformation in theological education and vocational development. They seek methods by which students, faculty, and ministers might bridge practice and belief, such as ethnography, narrative theory, case study, or the hermeneutical circle of description, interpretation, and response. They develop theologies of discipleship, ministry, and faith, using secular sources, such as the social sciences and literature, in addition to scripture, history, and doctrine. In each instance, the development of theory aims to enhance the connective web of theological formation, bridging specific disciplines and ecclesial and educational institutions toward the aim of ministry and the life of faith.

Scholars in practical theology come from a number of areas, predominately pastoral theology and religious education in the United States, for example, or social and political theology and ethics in Britain. They often devote more attention to concrete topics (important to teleological practical theology) such as mental illness, children, poverty, and

social policy than to disciplinary issues in practical theology. However, their approach to these topics is guided by methods and objectives of the discipline.

Distinguishing these four separate but related uses is an important advance. Practical theology has expansive boundaries. The term gets used in many academic and plain sense ways as an activity in religious contexts, an overarching rubric for a collection of subdisciplines, a type of theology, and a discipline within the study of religion in North America. Its subject matter intentionally extends beyond a disciplinary department in the university and seminary to the broader *telos* of faith that guides religious communities. Its participants are equally wide-ranging. Nearly everyone in theological education and religious life has a role to play.

Pragmatism

The philosophical branch known as Pragmatism came into existence as a product of the minds of a core group of outstanding thinkers, among them Charles Sanders Peirce (1839–1914), William James (1842–1910), and Oliver Wendell Holmes (1841–1935). Pragmatism's founding brothers were primarily located, at least initially, in the northeastern United States. Despite the doctrine's definite beginnings in a particular time among a particular group, the tenets and

associated theories behind the philosophy are deeply embedded in the broader intellectual history of humanity. In nearly every ancient culture, the concern for practical application of concepts, which constitutes the single most uniting aspect of Pragmatism, has been present, if not central to, its theoretical discourse. Examples extend from the Hebrew tradition of wisdom literature, which distinguished between practical and abstract wisdom millennia ago, to the Eastern Taoist and Confucianist wisdom traditions that include both practical sayings for a better life and deeper metaphysical ponderings.

Adherents of Pragmatism, however, had never succinctly outlined or coherently organized its principles until the end of the nineteenth century, when the movement effectively articulated a set of tenets and core standards that were in some sense already in existence. Ultimately, the outcome of the Pragmatic movement in America would have significant effects on the shape of modern culture in general, and on religion in particular, both in the United States and around the world.

Philosophical Analysis

Goals of Pragmatism

At its core, Pragmatism is concerned with the practical outcome of theoretical concepts and beliefs and examines structures of thought primarily in terms of their influence on behavior and action. This denies the age-old dichotomy between mind and body that fueled the debate between Rationalists and Empiricists and instead seeks a middle road between these two polarized groups. Pragmatism allows for the subjective significance of thought, which theoretically satisfies the Rationalist's claims. At the same time, Pragmatism maintains that thought causes a practical difference and it measures the subjective significance of thought up to an objective standard, thereby logically satisfying the Empiricist's claims. Did this formulation conclude the debate between Rationalism and Empiricism? Hardly, but it did provide a uniquely alternative stance that sought to subvert the entire discussion by moving its frame of reference away from the abstract and toward the tangible.

Truth in Pragmatism

Quite possibly the most controversial of the tenets of Pragmatism is its conceptualization of truth. Pragmatism holds that truth is a value derived from the significance given to it by the person(s) judging the value. In contrast to philosophical systems that hold truth to be both objective and eternal, Pragmatism asserts that ideas are made true or

become true. Pragmatists understand truth to be the coalescence of ideas, not as an abstract value assigned to a static fact, but rather as a value taken as true. Pragmatism affirms that ideas are not absolute truths—it holds that the truth of an idea is relative to its present value—and therefore it allows for further deliberation over the significance of that truth value.

Simply put, Pragmatism wants to talk about truth, not Truth. Yet does this negate the possibility that Truth exists? No, but neither does it confirm it. Instead, Pragmatism moves the debate away from theoretical definitions of Truth in the absolute toward the practical question of, “If we assume X is true, then how does that affect Y?”

Conceptual Tools of Pragmatism

Because Pragmatism lacks any single defining dogmatic concept but instead is composed of many relational concepts, it can be difficult to define. Certain philosophical tools are central to the movement. These associated principles are not concretized, and many thinkers who would identify themselves as Pragmatists would not adhere to all of its tenets, which taken individually are inconclusive. Rather, they serve to provide a broad conceptual framework that exemplifies the Pragmatic movement in the United States.

Radical Empiricism

William James, the most influential founder of Pragmatism, considered his early philosophical arguments to fit into the category of Radical Empiricism. He maintained, however, that Radical Empiricism was neither necessary nor sufficient for Pragmatism (1907, ix). Radical Empiricism seeks to take the arguments of Classical Empiricism (the movement that gave total theoretical value to those concepts distinguishable through empirical verification) to its eventual, ultimate (radical) conclusions. More specifically, Radical Empiricism expands and extends the boundaries of what counts as empirical data in order to include subjective experience—that which is experienced by an individual or group of persons. This notion conflicts with the approach of Classical Empiricists who hold the idea that the value of subjective experience as empirical data leaves the door open to *any* experience whatsoever to qualify as empirical data. Furthermore, they argue that Pragmatism gives no standard of judgment to establish the validity of one experience or to rank it over another. In answer to this challenge, Pragmatism provided the needed standard of judgment—that is, the ability of any given experience, no matter how individual or subjective, to have real-world effects.

Pluralism

Another associated philosophical principle that helped define the Pragmatic movement in America is Pluralism. Drawing theoretical support from foundational thinkers such as John Locke (1632–1704) and Thomas Paine (1737–1809), this concept most fundamentally denies the application of *a priori* judgments to systems of belief. Whether a belief is part of a larger religious tradition or unique to an individual, Pluralists are unwilling to deny its validity until they have afforded its adherents the opportunity to express it. As with Radical Empiricism, Pluralism looks to Pragmatism to give it a standard of judgment with which to examine the validity of a given belief or theological system.

Consequentialism

A closely associated philosophical principle to pluralism is Consequentialism, which states that the consequences of an action form the basis for any moral evaluation of that action. Consequentialism considers thought and belief to be discernable only through action, and it contributes to the formulation of Pragmatism in its affirmation that the effects of thought and belief should be subject to moral judgment. Because Pragmatism maintains no claim to any particular moral hierarchy but rather is interested in providing a theoretical framework through which these sorts of claims can be made and judged, what exactly those morals *are* is entirely up to the conjecture of the individual.

Instrumentalism

Instrumentalism is the fundamental notion that ideas are not Platonic abstractions nor absolute truths. Rather, ideas are conceptual tools which have ascribed value that varies according to their ability to help persons understand and interact with the world. Through this view, ideas themselves lack any moral quality until they are applied by the individual; thus, concepts and beliefs are considered neutral until they are applied in a particular context by a particular subject. Instrumentalism, and therefore Pragmatism, claims that the context of a situation in which an individual or group acts on an idea determines that idea's value (for example, the act of cutting flesh is neutral until it is either applied by a thief to a victim or by a surgeon to a tumor). Thus, “true” ideas are tools that work; they are instrumental, but their usefulness as instruments is inescapably conditional. A concept that works well for some tasks, and therefore is true from a Pragmatic perspective, might not work well or be true for other tasks.

Fallibilism

Another important aspect of Pragmatism is its notion that any idea, no matter how seemingly correct, may in fact be false. This view effectively dislodges any notions toward absolutism, thereby allowing more open judgments that a more absolutist view would have quelled outright. Consequently, all ideas are constructions of human beings, and as such, are inherently fallible. However, Pragmatism would also remind us that we can assume the truth of beliefs that have been communally verified insofar as they are beneficial for us in our interactions with the world around us, so long as we remember that our belief is not authoritative for those who do not subscribe to it.

Religious Pragmatism's Rational Grounds for Belief in God

One of the great intellectual challenges to belief, Evidentialism, rose in the late eighteenth century. This perspective fundamentally questioned any belief or concept that did not provide rational evidence for its claim. Problems with this theory quickly became apparent as arguments over definitions for evidence and rationality proved inconclusive. Pragmatism challenged Evidentialism.

Pragmatism sought to reestablish a theoretical framework whereby belief in God, or a higher power, could be rationally postulated. At its most basic, Pragmatism achieved this by claiming the right to believe through communal subjectivism, which places the individual belief in a larger sphere of communal acceptance or denial. Therefore, religious constructs maintain their own systems of reason and logic, which provide a truth framework that allows individual adherents to test or validate their beliefs. Thus, a framework that judged belief in God to be rational would permit such a belief, while an atheistic system of thought would deem this belief to be irrational according to its own contrasting standards.

The first step for persons of conflicting belief patterns to enter into meaningful conversation with one another would be to allow for the reasonableness of one another's beliefs. Ultimately, Pragmatism allows for discussions of belief to occur between otherwise contrasting religious systems because it accepts and even encourages coherent disagreement.

Notable Adherents

Proto-Pragmatists

A number of thinkers have exemplified certain principles that later became foundational to the Pragmatic movement in

America, although these thinkers were active generally before Pragmatism became a distinct movement. Notable Proto-Pragmatists include Ralph Waldo Emerson (1803–1882), as well as Alexander Bain (1818–1904) of Scotland. Emerson, the intellectual founder of the movement that came to be known as transcendentalism, was known for his belief that it is not necessary for God to reveal truth directly, but rather that one could intuit truth from nature. This argument provided some of the necessary rational underpinnings for Pragmatism's notion of truth. Bain aided Pragmatism by claiming that the best method for evaluating belief is to examine the actions that it precipitates. Furthermore, he held that a primary role of the religious institution is in formulating and systematically educating people about higher moral ideals.

Classical Pragmatists

Classical Pragmatists had the greatest impact upon the foundations of Pragmatism and established the philosophical movement as a distinct entity. Charles Sanders Peirce coined the term "Pragmatism" sometime during the 1870s. Yet James became the most influential figure in the movement's creation, and scholars generally consider him to be the founder of Pragmatism. In his work entitled *Pragmatism* (1907), James outlined the primary tenets of the philosophical movement, provided examples of its application and practice, and brought the term to popular usage. The book was received by a highly polarized audience; some accepted his views wholeheartedly while others vigorously rejected them. This reaction caused James to publish another work, *The Meaning of Truth* (1909), a series of essays and lectures that more fully defined his use of the concept of truth, particularly in its Pragmatic application.

In particular for religion, James's seminal work, *The Varieties of Religious Experience* (1902), examined religious experience as a deeply embedded aspect of human nature, which served to provide an entirely new system for evaluation of religious expression by focusing on the experiences of individual adherents rather than on doctrinal and liturgical systems. At the very least, the methodological claims of the work have shaped the advanced study of religion, focusing on the practical outcome of religious faith and experience rather than dogmatic assertions. This was particularly true in America in the twentieth century, but it has only continued to grow in prominence in the twenty-first.

A generation after Peirce and James, two other thinkers helped carry the torch of Pragmatism into the twentieth century: Ferdinand C. S. Schiller (1864–1937) and John

Dewey (1859–1952). Schiller voiced the concerns of the growing Pragmatic movement for European audiences by arguing for a middle ground between abject materialism and absolute metaphysics. Dewey contributed to the cultural formation of the United States in a variety of ways, among them the continuation of James's discussion of religion in a more resolute manner, arguing in *A Common Faith* (1934) for a formulation of religion that maximized moral and experiential potential while accepting the reality of cultural relativity in its expression.

Neo-Pragmatists

Faced with the new concerns of a “new” world, the Pragmatists of the latter half of the twentieth century needed to address new problems unimagined by the previous generations of the movement. This era also represents a fracturing of the movement as its concepts began to influence many other fields and to intermingle with different philosophies, some new and some old. Due to the nature of Pragmatism and its lack of dogmatic declarations, the philosophy proved to be most unusual in its ability to infiltrate other seemingly competing schools of thought. The Neo-Pragmatists represented a much wider viewpoint than did the previous generation of Pragmatists, and they found themselves applying Pragmatism's principles to a more varied set of issues than ever before.

Because of the popularity of the movement, and its ability to influence thinkers from an infinitely broad spectrum of disciplines, it is not possible to provide an inclusive registry of such thinkers. A few of the most notable, especially those that have influenced religious philosophy, are mentioned.

Richard Rorty (1931–2007) is considered a postanalytical Neo-Pragmatist because he argued that many apparent dilemmas in philosophy are actually analytical language games. He argued that truth is a communal conceptualization, one which benefits the community by providing theoretical foundations upon which to work. From this starting point, he applied Pragmatism to liberal ideologies and used it methodically to dissolve moral arguments based upon a we/they dichotomy, which tends to validate the “we” at the expense of objectifying the “they.”

Jürgen Habermas (1929–) is a German philosopher and sociologist who applied the tenets and theories of Pragmatism to social theory and epistemology. His work, characterized by his training in sociology, tends to focus on the ability of the institution to establish theoretical frameworks for those participating in the institution. Regarding religion, the church

institution is afforded a status commensurate with the sociological context that it is in, and thus its status is a function of the church's positive social utility within a given culture.

Hilary Putnam (1926–) is an American philosopher who has been instrumental in the philosophical landscape of the United States during the latter half of the twentieth century, particularly in the 1960s. His critical method, which he applied even to his own theories, is a signature characteristic of his work. As a result, he sometimes has later taken a radically different stance from his initial response to an issue. For example, he formulated metaphysical realism only to later become one of its most prominent critics. In this sense, Putnam has proven to exemplify the Pragmatic idea of Fallibilism by wholeheartedly applying a principle, only to eventually denounce it upon more thorough inspection and, more importantly, application of the idea.

Neo-Classical Pragmatists

Although some Pragmatists of the latter half of the twentieth century took Pragmatism in new and often different directions, others maintained a more classical approach and believed, for varying reasons, that the older formulations of Pragmatism were still valid, even in the light of new and unforeseen challenges. Although the Neo-Classical Pragmatists did not deny outright the views of the Neo-Pragmatists, they were sometimes critical of the Neo-Pragmatists' use of Pragmatism in radically alternative ways. Instead of starting from an alternative philosophical basis and then applying Pragmatism to that foundation, the Neo-Classical Pragmatists believed it necessary to start from Pragmatism and then apply other disciplines to it. In this way, they remained distinct from the Neo-Pragmatists but were not ignorant of the challenges of the new epoch, and they are therefore referred to by scholars as Neo-Classical. As before, a few of the most notable are described below.

Sidney Hook (1902–1989) is the author of more than twenty works, many of which were devoted to the Pragmatist movement, yet Hook is most notable for exemplifying and living out the Pragmatist ideals. Although his intellectual development was influenced by the popular notions of Dewey and Schiller, his early adulthood was spent as an avid Communist, believing that philosophical principles must be carried out in the form of positive social change for all classes of person. Although he later split with the Communist party after it failed to achieve the results he desired, he remained an articulate activist in the United States the rest of his life. He was especially distinguished for his work with

the American Workers Party and the Congress for Cultural Freedom, and he was given the Presidential Medal of Freedom by Ronald Reagan. Through his life, Hook was able to exemplify Pragmatic ideals by applying theoretical principles directly to the social ills of modern society in the form of social activism.

Susan Haack (1945–) is most notable for her development of Foundherentism, which seeks a middle road between conflicting philosophies of Foundationalism and Coherentism. Foundationalists claim that certain beliefs are basic and all others are derived from these “foundations.” Coherentists claim that beliefs are valid according to how they mutually function, or cohere, with other held beliefs. Haack navigated the divide between the two competing philosophies through an analogy of a crossword puzzle, which requires both the foundations of the clues and the coherency of the solutions to fit into an organized and coherent structure. The clues (foundations) of the crossword remain static, but our answers must cohere with one another in order to function properly. Similarly, Foundherentism accepts the reality that foundational principles guide our thoughts and actions but also requires interpretation to assume any level of coherency with reality.

Objections and Impact

Objections

Although opponents have raised a variety of theoretical objections to Pragmatism, three of the most fundamental are examined.

The first, and most common, objection is that Pragmatism’s conceptualization of truth is merely disguised Utilitarianism, which reduces truth to an agreement on the utility of a concept and, in the end, has nothing to do with truth. While this is a powerful challenge to Pragmatism, it is also principally a semantic argument. Ultimately, the decision must be left up to individuals to decide whether the definition of truth offered by Pragmatism makes sense and works for them. Of course, even those who disagree with Pragmatism’s notion of truth must admit that beneath all of its intellectual claims, the fact remains that they disagree with it because it does not make sense to them, and thus, in an implicit way, still confirm it even by their choice to reject it.

Another common objection to Pragmatism is that it ultimately devolves into relativism. While this objection is powerful to some, absolutists have historically leveled it at nearly every philosophy or creed that denies absolutism. Essentially

the debate comes down to two key points of contention, namely, whether there is (a) objective truth, and, if so, whether (b) we can have any (absolute) claim to it. Pragmatism makes no claim to a but retorts that even if there is such a thing as objective truth, all claims upon it are contingent and never absolute.

Finally, a closely associated argument against Pragmatism is that it lacks any real standard of judgment and instead merely upholds an entirely subjective theoretical framework that is fundamentally devoid of any real moral claim. This critique can be countered by the notion that Pragmatism has never made a claim toward specific moral criteria; rather, it proposes a system of appropriating moral hierarchies. Thus, two Pragmatists may reach entirely opposite conclusions concerning a moral judgment, and this has been seen by proponents of the movement as a strength, not a weakness.

Impact

Despite the veracity of the polemical attacks waged by the many and varied opponents of Pragmatism, the movement has endured and continues to evolve in the twenty-first century. However, unlike other philosophical movements that are unified by some fundamental theoretical claim, Pragmatism has rarely inspired such zealous devotion. This is not to say that Pragmatism and its followers have a lesser belief in the discipline and its principles, but rather that quite often, Pragmatists do not identify themselves as such and do not consider Pragmatism as the defining characteristic of their intellectual and moral identity.

Yet rather than acting as a hindrance, its peculiar nature among philosophies has enabled Pragmatism to thrive. Unlike some other philosophies that demand a sort of absolute allegiance to a monistic and encompassing core concept from which the rest is built, Pragmatism is not nearly so exclusionary in its scope. Rather than provide the content of belief and practice, it provides a stable framework with which one can apprehend and adopt worldviews without significantly altering the theoretical framework into which it is conjoined. Because of this, leading Pragmatists, each of whom can admirably articulate regarding his or her adherence to Pragmatism, can, ultimately, represent a broad range of beliefs and theories.

This nonexclusionary characteristic of Pragmatism explains why such a philosophy would thrive in the United States. Since the country gained independence from England, the United States has been a place of refuge for innumerable nationalities and creeds and continues to be so even

into the twenty-first century. It should then be understandable why such a philosophy was not only born here but has been embedded in the intellectual undercurrent of the nation for more than a century.

The tenets of Pragmatism strike a deep chord in a nation known for its industrious nature, most clearly defined in the social belief that hard work and determination are fundamental to the fabric of good society. At times Pragmatic truth is looked down upon and labeled “common” by the elite, but the core ethos of the nation is structured around the notion that truth is what is built, what works, what leads us to moral action and better lives. This is one of the most powerful aspects of Pragmatism, that one need not even know its title for the ideology to make sense, to hold sway, and to significantly alter our lives.

It is precisely because Pragmatism is so deeply embedded in the lifeblood of the United States that religions have been forced to answer its challenge, namely, “What difference does any of this make?” As is evidenced by the seeming dissolution of the lives of faith for many in the new millennium, it is a challenge that has not been adequately answered for many persons. In the context of the twenty-first century, a church, regardless of its creed, must prove its worth, both intrinsically and extrinsically, to its adherents. It is telling that many of the “megachurches” of the new century have shed many of the trappings of the older, ritualized religions. How do they decide what to leave behind? It is by whether or not such practices make a tangible, positive difference in the lives of their adherents; this constitutes the core of Pragmatism.

Preaching

The history of preaching in America stretches back to the opening decades of the seventeenth century, when some colonists who had set their eyes toward New England heard a sermon even before they had arrived to establish a settlement. In 1630, John Winthrop issued a document known as “A Model of Christian Charity” before his ship *Arbella* left England for North America. Though it was a letter to the Church of England, it was actually homiletical in character—infused with Biblical imagery, fashioned with the conviction that the journey to New England was a continuation of the scriptural legacy of God’s people, marked by an affirmation that the colonists were “members of Christ,” filled with the conviction that their journey was blessed with a special providence of God, and summoned by a sense of mission that they were to create “a city upon a hill,” which the eyes of everyone in the world would see.

From this time, preaching has been a dynamic force, a dramatic feature, and a formative voice in American culture.

A Definition of Preaching in America

Religious practices in America developed rather randomly without a single, coherent, religious establishment. Though the roots and the reality of American religious life were largely the expressions of European Christianity, they were marked by diversities of doctrine and practice. Calvinists and Catholics, Moravians and Methodists, Baptists and Brethren, and more cast their image on the American religious landscape. Almost all of them embraced preaching as a primary type of religious performance and practice. But there was no unanimity about defining what constitutes preaching, let alone what constitutes good preaching.

As a result, preaching in America took on a variety of forms, and it acquired a variety of definitions. One classical way to define preaching, affirmed by John Wesley, was “to take a text and apply it.” A more nuanced way to define it, according to the Anglican historian of preaching O. C. Edwards, is that preaching applies a point of doctrine that is usually but not always drawn from a Biblical text. Still another, expressed in some Roman Catholic studies of homiletics, is that preaching is engaging in theological articulation and argument. But these are not the only approaches to religious oratory on the American scene. Preaching in America might be textually based in the scriptures. But it might be topically based in themes, doctrinally based in teachings, morally based in judgments, or contentiously

based in efforts to distinguish one's own religious community from all others.

Preaching has always been an oral/aural activity, primarily intended to be spoken and heard. Yet that has not limited the form to a particular manner or structure. Some preachers delivered their sermons in a style of speech intended for instruction of the included. Other preachers operated in a style of speech intended to motivate the uninitiated to join the included. Preachers in America might speak in steady patterns that deliver a linear logic. They might speak in freely associated patterns that weave nonlinear images. Some preachers might use forms of speech that are more akin to poetry than prose, more akin to the rhythms of music than to the rhetoric of argument. And some have used various forms of choreography along with spoken and sung words. Preachers in America have been known to dance, to hop, to whoop, to sit, to lie down, to stand still, to walk around, to use multiple visual images, to flash electronic images, to use no images at all except the ones they could create verbally, to use props such as sports equipment, and to wave a Bible as if it were a prop that they occasionally read.

The verbal content of preaching in America has taken many different forms. There are some preachers and congregations who place a high value on having carefully written in advance the manuscript of a sermon to be recited aloud. There are other preachers and congregations who place a high value on having written nothing in advance, relying upon the Holy Spirit to give the words that will be uttered extemporaneously. Some American religious traditions have used only authorized homilies that were produced by ecclesiastical authorities and then read by priests or practitioners in their communities. Some traditions expect that well-crafted, thoughtful addresses would be compiled regularly by their spiritual leaders in congregations and uniquely for those congregations. And still others insist the only kind of preaching worth hearing is that in which the proclaimed word is preached without notes, extemporaneously, in a manner that is passionate, emotional, driven by the divine mystery, and deliberately provocative.

This assortment of patterns can sometimes clearly show the prevailing commitments that define certain communities.

For example, in the nineteenth century, certain Jewish congregations left no doubt that they expected their rabbis to prepare and deliver learned sermons, which could teach and instruct, though not necessarily inspire. Moreover, some insisted on exercising quality control over the sermons and

required that a manuscript be prepared in advance and read by a committee of the congregation before it could be delivered on the Sabbath.

In a Pentecostal Christian church, anyone who attempted to deliver a sermon by reading from a prepared manuscript would be judged not to be filled with the Holy Spirit and, hence, not to be gifted for the work of preaching. In Protestant congregations that want learned preachers to deliver thoughtful sermons, a carefully prepared manuscript is expected. In liturgically driven churches, including Anglican and Lutheran to name two, the sermon is typically expected to be associated with one or more of the assigned texts in the lectionary. But even then, different standards will have to be met by the preachers. A Lutheran will more likely be held accountable for adherence to the text, accurate exegesis and exposition of the text, as well as direct application of the text. An Anglican will more likely be held accountable for the reasoned argument that draws out the meaning and application of a text. A Roman Catholic priest will be expected in his preaching to prepare and deliver a homily that fits into the liturgical cycle that connects to the continuing traditions of the church.

There is no single, operative definition of preaching to distinguish it from other forms of public, ecclesiastical discourse. Some have equated or aligned preaching with teaching. Others considered preaching to be akin to exhortation. Still others considered preaching to be a matter of moral guidance. America's *laissez-faire* approach to religious life allows a generous imprecision in the use of the term.

At various times through American history, the term "preaching" has been treated as a synonym for long and bombastic orations, for excessively moralistic lectures, for emotionally feverish incantations, for carefully reasoned speeches, for spontaneous remarks that invoke the name of God, for prophetic appeals that challenge the social order, for patriotic pleadings that blend church and state, for encouraging pep talks that summon individuals to self-actualization, for excoriating critiques that generate shame, for comforting talks that soothe personal hurts, for shameless pleadings to raise funds, for demands that listeners adhere to certain codes of conduct or face expulsion from the community of believers, for promises of heaven, and for damnations to hell. To impose a single definition on preaching in America is to miss the diversity, creativity, and inconsistency of the practice.

Complicating the matter is that there are two basic venues in which American preaching has occurred. One is parochial. The other is public.

Parochial Preaching

“Parochial preaching” is a phrase for referring to what happens homiletically within the structures of an ecclesial organization. This includes the homilies and sermons that are offered as part of worship experiences or liturgies. They may be delivered in congregations, local churches, parishes, or ecclesiastical assemblies such as synods, diocesan conventions, annual conferences, district meetings, and the like. Depending on the ecclesial tradition in which someone preaches, one may have absolute freedom to choose a topic, text, tirade, or theme on which to preach. Or one may be accountable to lectionary texts, which provide a governing rubric for preaching.

In any case, there are always constraints on preaching. Congregations accustomed to intellectual rigor in their preachers’ sermons will not tolerate superficial sentimentality for very long. And congregations that value simple, memorable sentiments will not have patience for intellectually demanding addresses from their preachers. And Roman Catholic parishes, under their supervision of bishops, value a close adherence to official church doctrine.

Cultural expectations matter, also. A Catholic homily, offered in the context of a Mass, has always been secondary to the sacramental rite, both in its liturgical importance and in the amount of time it is likely to consume. In eighteenth century New England, the European colonists and their descendants would assume that their Protestant preacher could deliver a thoughtful, well-structured sermon lasting an hour or more each Sunday. By the middle of the twentieth century, most typical middle-class, white, Protestant congregations—regardless of denomination or doctrine—would expect a preacher to conclude whatever is being said within twenty minutes or so. Well into the twenty-first century, many nonwhite ethnic constituencies still expect a long, thoughtful, emotional form of proclamation, and they would not consider it to be real preaching if it concludes in twenty minutes or so.

Form and length are not the only constraints that exist in various patterns among the preachers in America. Social constraints apply as well.

Those denominations and churches that follow an official calendar may specify the four Sundays before Christmas as the season of Advent and the two Sundays following Christmas as the season of Christmastide. But preachers all understand that they will have to deliver their Christmas messages before December twenty-fifth, because American society has decided that what constitutes the Christmas season are the

months leading up to the eve of Christmas. Similarly, the society has embraced such secular observances as Mother’s Day to the degree that any preacher who ignores that theme on the second Sunday of May will probably be judged harshly by the parish or parochial community for its absence.

The national calendar matters, too. Some preachers will be expected to deliver stirring affirmations of America’s freedom around the fourth of July. A preacher in an African American church setting will have to witness to the ministry of Martin Luther King, Jr., on the weekend in the middle of January that marks his birthday. But it will be acceptable for a preacher in some white churches to overlook Dr. King’s work on that same Sunday.

In local churches and congregations, in Catholic parishes and Protestant churches, and in denominational gatherings, theological, political, social, ideological, economic, and ethnic factors are among the many elements that shape parochial preaching.

Public Preaching

“Public preaching” has a different character. In part, that is because it occurs in different venues that may include campgrounds, theaters, gymnasias, basketball arenas, racetracks, parks, stadiums, lakeside retreats, and itinerant circuits, along with other settings. There is an extensive history of this public preaching in America. Early Methodist and Baptist preachers traveled in every direction toward which the expanding frontier moved, preaching in barns and forest clearings and along streams. George Whitefield (1714–1770), an Englishman who was the most widely known preacher in America in the eighteenth century, made several visits to the North American continent for itinerant preaching missions from New England to the southern colonies. Paul Quinn was an African American who preached in the nineteenth century from such sites as a boat in the middle of the Mississippi to slaves who gathered on the Missouri side of the river. Francis Asbury (1745–1816), who dominated American Methodism from the time of the revolutionary war until his death, was tirelessly on the move to preach and to administer the growing denomination. He often traveled with Harry Hosier (1750–1806), an illiterate but spellbinding black preacher who was not welcome in white circles. Phoebe Palmer (1807–1874) was not permitted by the Methodists to be ordained, nor was she authorized officially to preach, because of her gender. But she was one of the most widely heard and most widely traveled preachers of the nineteenth century, in campgrounds and other public settings for preaching.

In the middle of the nineteenth century, a particular type of preaching was perfected for these public venues and evangelical revivals. Developed by Charles G. Finney (1792–1875) as part of what he called “new measures,” this was a style of preaching that used reason and emotion to provoke listeners into the posture of making a decision to embrace faith. It was this kind of preaching that became a staple in public revivals.

Public preaching also was more ecumenical, long before that word was usable let alone fashionable. The phenomenon of Finney’s “new measures” traveled well beyond his own denomination and well beyond the Calvinist traditions of his own church. Indeed, he did not meet the educational criteria to be ordained by the Presbyterians, but he was ordained anyway because of his public achievements. Neither did Billy Sunday (1862–1935) meet the criteria to be ordained in his church, but his remarkable achievements in the evangelical revivals of the nineteenth and early twentieth centuries had influences that spanned multiple traditions.

Most prominent among the traveling evangelists, and probably the most widely heard preacher in human history, was Billy Graham (1918–). He had technical advantages that itinerants in earlier eras did not have. Airplanes could take him to many places in the United States and to far flung sections of the world. Rapid means of communication and sophisticated systems of organization brought immense crowds of people to hear him. Despite the huge numbers who listened to him and despite the countless numbers of those who responded to his invitation to come forward and accept Jesus as their personal savior, he focused his messages on individuals’ commitments to the Christian faith. He did not seek to engage social systems or systemic ills in society through his preaching.

The degree to which public preaching had an impact on public institutions and social reform is exceedingly difficult to quantify. Yet it is true that preaching which addressed itself to public issues raised the profile of issues that might have been less clearly noticed or might have gone unnoticed by the larger society altogether.

In the late nineteenth and early twentieth centuries, for example, the emergence of the Social Gospel movement through the preaching of such figures as Walter Rauschenbusch (1861–1918) and Washington Gladden (1836–1918) made poverty a systemic aspect of society that Christians had to address. In that same era, Russell Conwell (1843–1925) traveled the country delivering a message that was partly a social commentary, partly a sermon, partly a sop to be

satisfied with one’s own situation. His talk was called “Acres of Diamonds.” Delivered more than 6,000 times in all sorts of public places, it was essentially a summons to find the resources for a fulfilling life right where one is located.

Such public preaching turned many different kinds of people into preachers. William Jennings Bryan (1860–1925) was an incomparable orator, a member of Congress, a cabinet secretary, a frequent nominee for the presidency of the United States, an outspoken critic of the Darwinian principles concerning evolution, a Christian socialist, an advocate of social reform, and an irrepressible public speaker who said he would rather speak on religion than politics. That the two could be blended in one layperson’s public preaching did not seem unnatural.

This kind of public preaching was also demonstrated a half-century after Bryan was at his peak. When Dr. Martin Luther King Jr. stood on the steps of the Lincoln Memorial to address a crowd of roughly 300,000 persons, he delivered what has become known as his “I Have a Dream” speech. That title became attached to his address because of its closing portion. But the address in its full form offers a remarkable example of the character of public preaching that is intended to—and has the impact to—force the larger society to face major social and political, as well as spiritual and ethical, issues. In portions of his great speech, Dr. King was the public intellectual who thoughtfully framed major questions; he was the identifiably African American preacher in his phrases and cadences; and he was the social prophet who challenged the entire society to pursue its own vision of itself, in the process of which the entire nation would be transformed.

Public preaching in America could involve speaking with small clusters of people, or it could involve delivering orations to massive crowds of people. But it always involved a preacher speaking personally to some group, until the technology for preaching changed.

Until the early part of the twentieth century, public preaching was limited in its reach to the crowd that might assemble in a specific location to hear a person speak. Thomas Edison’s recording devices allowed the human voice to be captured, but there were not enough machines widely available for large numbers of persons to replay preachers’ voices. However, with the emergence of electronic media, public preaching that reached massive audiences became possible without the preacher being personally present.

The media became many. Radio, television, wire recorders, tape recorders, digital data recorders, and live streaming

on the Internet allowed the venues for public preaching to reach beyond boundaries of place and time.

Initially, much of the early radio preaching was considered simply to be an extension of a parochial preacher. Leading preachers with prominent pulpits in major media centers—notably, but not exclusively, New York—arranged time on the air and delivered revised versions of their parish sermons to listeners through local and network distributors. Some simply had their church services broadcast live.

The most successful forms of public preaching on the air, however, were those by people who mastered the new medium by discovering that radio is an intimate means for making contact and communicating with individuals. In aggregate numbers, a preacher could reach millions of listeners. But public preaching by means of radio was actually a conversation between a lone speaker and a lone listener. Radio was not simply an opportunity to increase the number of people whom public preaching could reach. It was a very different method for communication, reaching large numbers of people by talking to them one at a time.

It was also value neutral. Unconstrained by the contexts that affected parochial preaching, public preaching on the radio could allow individual listeners to paint in their own imaginations the persona of the preacher and the purpose of the preacher's message. Public preaching, then, could soothe an individual's hurts, sanction an individual's hopes, or stoke an individual's fears. It offered an opportunity for a renegade Roman Catholic priest named Father Charles Coughlin (1891–1979). Coughlin was an anti-Semite, a fascist, and an isolationist. But his radio audience in the 1930s was estimated to be as large as forty million Americans who heard him every week. Radio also offered an effective public preacher an opportunity to seek financial support from individuals for the radio ministry—without ever developing any accountability for what the preacher did with funds that were collected. Radio allowed public preaching to be both intimate and anonymous.

Television offered a completely different medium for public preaching. Although akin to radio in its electronic availability across vast distances, television is neither intimate nor anonymous. It reaches not the one but the many. Aside from a very few, very early practitioners of public preaching on television—such as the Roman Catholic Archbishop of New York, Fulton J. Sheen (1895–1979)—those who succeeded in taking their ministries to the small screen were the ones who understood the dimensions of a big production, commanding big budgets. The disembodied voice on radio

that spoke to an individual sitting in a room at home required no attention to appearance and modest amounts of money. The embodied scene on television required attention to details of appearance and consumed vast amounts of money. Unlike radio, television does not permit a viewer to create a picture from his or her own imagination. The public preacher on television has to create one. Public preaching had to learn to use facial makeup, false backgrounds, and finagled camera angles. Moreover, the content of the public preaching is affected by the medium. Television can only use what is visually appealing, so the content of sermons has to defer to the appearance on the screen.

For some decades in the twentieth century, one of the most successful entrepreneurs in television preaching was Robert Schuller (1926–), who moved into the public arena first as the proprietor of a drive-in movie theater and later at his Crystal Cathedral. To some, that building in Garden Grove, California, is actually a television stage more than a church structure. It gathers a Sunday morning congregation under its roof, but its primary use is to serve effectively as a setting for a television production.

Schuller's successors in the mastery of this medium include the next generation of public preachers, such as Joel Osteen (1963–). As a young man with an incomplete university education and no theological education, he was hired to run the television operations of his father's ministry. It soon became clear that beyond any technical skills for working behind the scenes, the younger Osteen was a telegenic communicator with an appealing smile and an easy manner who belonged in front of the camera. Buoyed by growing audience numbers and helped by some significant financial support, Osteen reportedly spent most of a hundred million dollars to buy and renovate an arena formerly used for professional basketball, turning it into a television studio with massive appeal.

One lingering question is whether this form of public preaching is actually more “public” than it is “preaching.” The content of public preaching has always been, by its very nature, a function of the public that it could reach. Whereas the content of parochial preaching is limited and constrained by its context—denominational, doctrinal, or cultural—the content of public preaching creates its own context. It can be Biblically prophetic or ideological hateful. It can be socially progressive or financially self-serving. It can seek to use public preaching as a means for social transformation or it can seek to use public preaching for no social purpose at all.

Emerging Issues in Preaching

In the ongoing and inconclusive effort to define preaching in America, one of the most enduring formulations was offered by Phillips Brooks (1835–1893), an Episcopal priest and bishop from Massachusetts. Brooks said that preaching was the proclamation of truth through personality. In his view, preaching is incarnational. There is no such thing as the pure content of the gospel. It is contained in human means of memory, and it is conveyed through human means of communication. The rich diversity of preaching in America illustrates the merits of Brooks's definition.

When Charles G. Finney devised his new measures for revival preaching, he drew upon a doctrinal point of view that permitted a sizable role for human agency in the pursuit of spiritual conversion. He implemented a variety of manipulative devices such as an “anxious bench” and a summons to take personal responsibility for personal salvation. It was an odd theological blend of Finney's own heritage of Calvinism with the historic approach of Arminianism. Early in the twentieth century, as a Pentecostal revival appeared, openness to and dependence upon the work of the Holy Spirit became more prominent in American preaching. And Pentecostal revivalists resisted the role of human agency or influence in religious conversions.

In the twenty-first century, other forms of preaching are emerging and will emerge. What appears to be the denouement of denominationalism will give rise to other forms of church life and, as a result, to other forms of parochial preaching. The increasingly rapid rise of new media will offer increased numbers of options for public preaching. The forces that drive the content of preaching in America will continue to evolve. But it may be that Phillips Brooks's definition will endure, even if the blend of truth and personality is repeatedly rebalanced.

Presbyterians: Colonial

North American Christianity, in all its variety, adapted distinct European ethnic and religious identities to the realities and needs of the New World. In the sixteenth century, Roman Catholic settlers and military expeditions spread out across North America, establishing military and commercial sites in alliance with or in opposition to indigenous peoples. These forces successfully repelled French Huguenot settlements in Florida, the Carolinas, and Virginia, but by the early seventeenth century, Dutch, French, and English Protestant settlers had returned to establish permanent colonies along the Atlantic coastline. The story of the arrival and growth of these varied Protestant colonial groups in the seventeenth century provided a compelling founding narrative for future generations, admittedly told from the perspective of the Protestant groups themselves, and for their consumption. It is important to note Roman Catholics preceded Protestants into the New World and competed with Protestants throughout the colonial period, and that Roman Catholic and Protestant engagement with indigenous peoples included alliances, evangelization, intermarriage, and enculturation. While Roman Catholic settlements were most often expressions/extensions of ecclesial and political authority, Protestant settlements in North America were often in uneasy relation to ecclesial and political power, or in outright dissent. North American settlements originated as joint-stock, proprietary, charter, or direct rule royal colonies, but all invoked and employed religious language, traditions, and practice.

Reformed Protestant theology provided the predominant values and vocabulary of religion in colonial North America. As a specific subgroup of the Reformation movements, Reformed Protestantism is commonly reduced to “Calvinism” but is better understood as a broader theological tradition compatible with Episcopal, Presbyterian, and

Congregationalist forms of church governance. Sixteenth-century Reformed Protestants who shaped this tradition included Ulrich Zwingli, Heinrich Bullinger, Martin Bucer, John Calvin, Caspar Olivianus, and Theodore Beza; English and Scots reformers John Knox and Thomas Cartwright; and William Ames, Richard Sibbes, and Thomas Goodwin of the richly varied Puritan movement. While serving national causes effectively, Reformed Protestants understood themselves as part of a transnational movement of renewal, seeking the reformation of self, congregation, and community through preaching within a rightly formed community, and providing structures and encouragements for the pursuit of a godly life. Some Reformed Protestant groups pursued intentional (covenanted) groups within congregations, while others, such as the Pilgrims, organized separatist congregations. After failed efforts along the Atlantic coastline, Anglicans in Jamestown, Virginia, Pilgrim separatists in Plymouth Colony, Massachusetts, and Puritan dissenters in Massachusetts Bay led the way among the English in the opening decades of the seventeenth century.

Early Congregations

Although the exact percentage of Presbyterians among the settlers of the New World is unknown, Cotton Mather (1663–1728) considered perhaps a fourth of the Puritans to be Presbyterian. Among the Pilgrims came Presbyterian Elder William Brewster (c. 1566–1644), and Presbyterian Puritans arrived aboard the *Talbot*, landing in Salem, Massachusetts, in 1629, joined in 1631 by Presbyterian John Eliot. In 1634 Presbyterian pastors John Noyes and Thomas Parker arrived in Newbury, Massachusetts, with other Presbyterians who joined with their Congregationalist brothers and sisters in New World settlements. New Englanders paid close attention to events in England, with some hoping for return to the home country. The leaders of the “New England Way” of Congregationalism, John Cotton, Thomas Hooker, and John Davenport, resisted Presbyterians in New England and declined to join the Westminster Assembly in the 1640s because they believed Presbyterian interests were in control of that assembly. The careful adaptation of the Westminster Confession by New England congregations in the Cambridge Platform (1648) and by English congregations in the Savoy Declaration (1658) illustrate basic theological agreement and basic polity disagreements among English-speaking Reformed groups. Congregationalists and Presbyterians found common cause as dissenters after the restoration of the English monarchy in 1660 and enacted

cooperative agreements such as the Heads of Agreement (1691) in England. In New England, the Saybrook Platform (1708) imitated some aspects of Presbyterian polity and indicated the degree to which Congregationalists were ready to work on joint efforts and to establish enduring associations. In the right circumstances, shared Reformed theology enticed Presbyterians, Congregationalists, and Anglicans to occasional cooperation in missions, education, and church planting in some areas, and also to cooperate in resistance to Baptist and Anabaptist groups. Presbyterians and Congregationalists invariably united (with Baptist support) in opposition to Anglican efforts to establish resident bishops for North America.

Colonial religious discourse engaged competing commitments and values within a predominantly Reformed worldview, negotiating differences among the wide diversity of national and ethnic origins, political experience and preference, religious experience norms, and comfort with creedal subscription. Majority religious discourse exhibited Reformed values: ever critical of superstition, idolatry, and ostentation; wary of unchecked power and imposed (mandatory) norms/standards; expecting extensive teaching and expository preaching from trained clergy; comfortable with Bible-based aesthetics, literature, and ethics; and expectant of experiencing God’s grace in the midst of an effortful and disciplined life. Reformed ecclesiology rejected Roman Catholic views of the integration of church and society but also rejected Anabaptist denials of any correlation of church and society. Reformed ecclesiology inevitably brought all broad social issues into the consideration of the church community. Colonial congregations reflected the struggle over difficult social issues. Even in separatist and sectarian expressions, Reformed Christian congregations engaged social questions since society was seen as the arena of God’s redemptive work, and the church, whatever its polity, was placed in the world for the purpose of reformation of society, not as a refuge or cloistered escape from society.

Disputes regarding the nature and forms of the church occupied the second and third generation of the Reformation traditions and help identify the traditions that flourished in the New World, as individuals and groups challenged the established parish system of New England Congregationalism, and the established parish system of Carolina Anglicanism. The emergence of denominations proved well suited to the context of the colonial era and early years of the Republic and the need for expressing the diversity of the various religious groups in the New World. Reformed theological

identity was faithfully expressed in Congregational, Presbyterian, and Episcopal forms, whether established or free, including many Baptist groups, individuals, and small sectarian communities. Colonial congregations organized themselves (whether cooperating or independent), disciplined themselves, and cultivated leadership attentive to the challenges of achieving and maintaining the right balance of doctrinal clarity, along with enacting biblical mandates and maintaining proper organization. For isolated communities, congregationalist polity was a necessity. For congregations near one another, cooperation was early and expected, so that forms of “presbyterianized congregationalism,” or “congregationalized presbyterianism” emerged among many congregations throughout New England in the seventeenth century. Some overtly Presbyterian forms emerged, since some early settlers were clearly Presbyterian in sentiment, formation, and conviction. Others responded flexibly by joining with the existing religious group in their area. Dutch Reformed Christians, French Calvinists (Huguenot), and English Puritan Presbyterians were among the first settlers, with English Independency (Congregationalism) predominating. Dutch Reformed colonists under Jonas Michaelius (1577–c. 1638) are credited with the first explicitly Presbyterian polity organized in 1628 in New Amsterdam (now New York City). Dutch (and later German Reformed) congregations were under the jurisdiction of the Classis of Amsterdam until the early 1790s. French Huguenots organized recognizably Presbyterian congregations in Carolina colonies in the 1680s, though the majority of these congregations conformed to Anglican establishment by the early eighteenth century.

Diversity is observable among Protestant North American religious groups from the first, with New England predominantly Congregationalist, the southern colonies predominantly Anglican and Roman Catholic, and the middle colonies a great mix. Though the Reformed tradition has set the terms for much of the discourse, other traditions were clearly beginning in the early eighteenth century. In Pennsylvania, for example, Mennonite, Moravian, and Lutheran pietists sought quiet places and avoided political involvement. Early Quakers were firebrands who sought to provoke New England by confrontation and public spectacle in the 1650s. In the next generations, no less faithful but somewhat calmer Quakers exercised political and social leadership in Pennsylvania.

Presbyterians organized congregations on Long Island by the 1640s and then expanded into New Jersey, to Newark (1667), Elizabeth (1668), Woodbridge (1680), and Fairfield

(1680), before crossing the Delaware River into Philadelphia (1692), with additional foundations in the Carolinas. While founded by Presbyterians, these early congregations resemble Congregationalist groups in the same era. Boston’s Benjamin Colman (1673–1747) obtained Presbyterian ordination when in England in 1699, in part because he knew Congregationalist pastors of Boston would not allow his ordination, especially in service to the innovations of Boston’s Brattle Street Church. With a Reformed ecclesiology that viewed congregations as mixed assemblies, neither as pure nor as sure as the gathered congregations of New England Congregationalism, Presbyterian congregations were comparatively easier to join, as they did not require the public narrative of conversion. Presbyterians were noted for earnest preparation for the sacrament of the Lord’s Supper and lengthy catechesis. The authority of local assemblies was lodged with the *presbyteroi* (presbyters or elders), including pastors. While Congregationalists considered cooperative agreements and arrangements to be ad hoc and intentionally temporary, Presbyterians considered the continuing work of a presbytery to be desirable and legitimate.

Francis Makemie and American Presbyterianism

By gathering ministers into a presbytery in 1706, Francis Makemie (c. 1658–1708) is rightly considered a founder of what became American Presbyterianism’s largest and most prominent denomination. Other Presbyterian and Reformed groups would join this denomination, and from it several groups split. Some Scots Seceder and Covenanter groups, clearly Presbyterian and Reformed, have continued with little regard or relation to this larger Presbyterian group. Makemie was born in County Donegal, Scotland. He was trained at the University of Glasgow and was licensed by the Presbytery of Laggan, Ulster, by 1682. After preaching in Ireland, Makemie began his commissioned work in 1683, for service as an evangelist or as a settled pastor in the British colonies, including Barbados. During the next twenty-five years, Makemie founded congregations, encouraged evangelists, and secured funds for preachers and exhorters, and he participated in several significant conflicts. His efforts to resist Anglican establishment motivated him to organize this first presbytery, in Philadelphia. It is uncertain whether elders were part of that first meeting, but by the second meeting, elders sent by local congregations joined the seven ministers in attendance. In 1706 Makemie and John Hampton were arrested in New York, charged by Governor Cornbury of preaching without license. Makemie successfully defended

his rights against the broad claims of Anglican authority, and the specific colony claims by Cornbury. Makemie claimed the same rights and protections for religious dissenters throughout the colonies as were enjoyed in Britain.

In 1716 the presbytery reorganized into a larger regional structure, establishing the synod of Philadelphia with four proposed presbyteries serving its twenty-five clergy members. Though one presbytery (Snow Hill) did not organize, the synod's three working presbyteries of Philadelphia, New Castle, and Long Island received new clergy members and organized new congregations. In these years, the respective role and functions of the synod and presbyteries were not defined by a constitution or a confessional standard. All agreed to resist Anglicans, sectarians, and anti-trinitarians, but the affirmations of American Presbyterians were quite diverse, a mixture of compromise and resistance in imitation of Presbyterians in England, Scotland, and Ireland. Significant differences are traceable along ethnic lines. American Presbyterians of Scots-Irish and Scottish origin tended to advocate closer adherence, or "strict subscription" to the Westminster confessional standards in accord with the Scottish example. American Presbyterians of English and of Puritan stock tended to imitate the antisubscriptionist views among the English Presbyterians. Still other American Presbyterians of Scots and Irish origin looked to the compromise of the 1720 "Pacific Articles" of the Irish Presbyterians, who sought subscription to standards while providing some room for disagreement over nonessential articles of faith. Additionally, the synod's slow and slight response to the scandalous behavior of minister Robert Cross offended some and prompted others to support minister George Gillespie in his request for a discussion of process and behavior norms for the synod members. Some pressed for subscription to Westminster, while others organized to resist such a requirement.

Jonathan Dickinson (1688–1747) offered a sermon before the synod in 1722 that pressed the antisubscriptionist case, arguing that Presbyterians must not follow the example of Roman Catholics and Anglicans in requiring subscription to an oath or creed beyond the scriptures. Dickinson noted creedal subscription solved the wrong problem, since anyone could sign a document while still living a scandalous life and believing a heterodox creed. By 1724 the Presbytery of New Castle required ministerial candidates to subscribe to Westminster, but synod minutes noted ministers had been accepted into presbyteries without even being asked about confessional standards. While in 1726 Puritan Mather in Boston proclaimed that all New England "adhered" to the

Westminster Confession, American Presbyterians' arguments over subscription were the same as had divided Presbyterians in Ireland, Scotland, and England in these years. In 1727 John Thompson pressed for full subscription to the Westminster standards. The synod's meeting in September 1729 appointed a committee whose work and subsequent Adopting Act effectively met the requirements and concerns of each group present. The Adopting Act contains the key components of American Presbyterian identity, specifying an adherence to the doctrinal standards of Westminster, distinguishing (without defining) between essentials and nonessentials, and requiring agreement on essentials of the faith. The Adopting Act also provided for examination and discernment to determine whether disagreements touched on essentials of the faith. Candidates for ordination or transfer membership would be examined by presbyteries, and while "God alone is the Lord of conscience," the synod or presbytery would examine and evaluate candidates to maintain standards of doctrine and behavior. The Adopting Act sought a way to combine several distinct commitments and perspectives. After those present discussed and resolved objections regarding the Westminster standards, the synod subscribed to the Westminster standards as authoritative

The Adopting Act and Presbyterian Identity

The Adopting Act of September 19, 1729, is rightly considered a significant expression of the central aspects of identity for this largest group in American Presbyterians. The act was more than a compromise among diverse groups that comprised the synod, since it accommodated competing values held among Presbyterians. Opposing interpretations of the Adopting Act continued the very contentions the act was designed to contain. Subsequent interpretations of the act, especially in the years surrounding the new school/old school divisions of the 1830s, served the distinct parties/perspectives within American Presbyterianism. Each extreme position could find its forebears in a partial reading of the events of that day. Those supporting a close adherence and subscription have focused on the afternoon session of that September meeting of the synod, with its wholesale adoption of the Westminster standards, while antisubscriptionists have focused on the morning session of that same meeting, with its generous provision of room for disagreement and objection through scruple. Both views are correct since both are found in the Adopting Act resulting from the full day of the synod meeting. Charles Hodge (1797–1878) well represented the old school interpretation of the Adopting Act,

while later the writings of Charles Briggs (1841–1913) represented a new school reading of the Adopting Act and the diversity of colonial Presbyterianism. In the colonial and early Republic periods, partisans continued in parsing the Adopting Act, and the center of this Presbyterian Church grew through evangelism, education, and church planting.

Subscription issues were sharpened during the 1730s, with subscriptionists gaining control through majority voting in the presbyteries. When Philadelphia minister Samuel Hemphill's plagiarism and heresy led to his suspension from the ministry in 1735, everyone seemed to have an opinion, including the meddling Benjamin Franklin (1706–1790). Though Hemphill had registered no scruples about the Westminster standards, the exposure of his plagiarism of Unitarian sermons strengthened the cause of the subscriptionists, who claimed a strict application of Westminster confessional orthodoxy would be a bulwark against heresy. By 1736 a subscriptionist interpretation of the Adopting Act carried the synod and helped precipitate the first schism among these Presbyterians. Between 1741 and 1758 the Old Side (subscriptionists) successfully excluded the New Side (antiprescriptionists). While the New Side and Old Side organized competing synods, the Great Awakening would change American Presbyterianism.

American Presbyterians were committed participants in the renewals and revivals of the Great Awakening, whether in support or opposition. American Presbyterians drew from their traditions in contributions of Ulster revivalism, Welsh itinerancy, Scots sacramental seasons, and English Puritan conversionism, led by preachers who attained almost celebrity status in colonial society. George Whitefield (1714–1770) (Anglican) and Jonathan Edwards (1703–1758) (Congregationalist/Presbyterian) were the most prominent preachers of the Awakening, preceded by Dutch Reformed preachers such as Theodore Frelinghuysen (1691–1747). Soon these preachers were joined by a new generation of robust and effective preacher/pastors trained in any of the dozens of “log college” or private academies, rather than in Scottish Colleges or Harvard, Yale, King's (Columbia), or the College of William and Mary. The most notable log college was founded by William Tennent (1673–1746) in Neshaminy, Pennsylvania. What later became the College of New Jersey, and then Princeton College, has roots in this rude log college.

The Great Awakening

The Great Awakening brought opportunities and crises to local congregations and changed the agenda and orientation

of American Presbyterianism. The New Side, those supportive of revival, flourished and expanded in new congregations and presbyteries, while those who opposed revival receded during the schism years of 1741–1758. The revival advanced in waves, though sometimes in excess and often with censoriousness. Gilbert Tennent's 1740 sermon, “The Dangers of an Unconverted Ministry,” left little middle ground and even encouraged all “who live under the Ministry of dead Men,” to “repair to the Living, where they may be edified.” When Dickinson's centrist group allied with the revivalists in 1745, the look and feel of American Presbyterianism would come to resemble the New Side in private piety and in public worship. By the mid-1740s, Tennent apologized for his intemperate language and pursued a more irenic course. The causes of the schism included conflicts over subscription and ministerial behavior, magnified by disputes over itinerancy and worship styles. Most Presbyterians accepted new forms of worship, often employing the affective hymnody of Isaac Watts (1674–1748), displacing the traditions of psalm singing. Other Presbyterian groups retreated into ethnic enclaves. Some Presbyterian groups were not impressed but rather were offended: the Scots Covenanter, or Reformed Presbyterian Church, organized in the mid-1740s in protest of the “almost boundless terms of Church Communion” sanctioned by the “pretended Presbyterian Ministers” who had composed the Adopting Act of 1729.

By the time of the reunion of the Old Side and New Side in 1758, most American Presbyterians had adopted the dynamism of the Great Awakening within a flexible but durable voluntary organization, structured loosely, and led by trained clergy and elders. The Presbyterians expanded rapidly, evangelizing and organizing Scots-Irish immigrants and others, especially in Virginia, the Carolinas, Tennessee, and Kentucky. The compromises necessary in the reunion of 1758 did not resolve the continuing disagreements among Presbyterians but contained and channeled these disagreements until, joined with new issues, the Presbyterians would split again in the middle of the nineteenth century.

The appointment of John Witherspoon (1723–1794) as president of Princeton University in 1768 brought important changes. While the theological emphases of Edwards remained influential in New England for an additional century, college-trained Presbyterians learned to follow the Scottish Enlightenment that Edwards had opposed. While Edwards was often invoked, he was rarely read by the new generation of Princeton graduates. Witherspoon led the way in his required lectures in moral philosophy. Students found

Witherspoon flexible in response to his new context, reversing himself on several fronts to fight New World foes. Witherspoon opposed the metaphysical idealism and conversionism of Edwards and directed his students and faculty in realist virtue ethics, naturalistic in its orientation and language, and no longer needful of the conversion experience that had provided what Edwards described as a “new sense.” Witherspoon embraced Scottish moral philosophy and encouraged his coreligionists to full participation in the great political struggle for independence. Indeed, Witherspoon was the only clergyman to sign the Declaration of Independence and served in the Continental Congress. James Madison (1751–1836) was trained under Witherspoon, and Madison’s federalist structure of the U.S. Constitution showed his Princeton training with its theological/political insights favoring separation of powers, representative deliberative assemblies, and expressed limits placed on individual offices.

Presbyterians and the Forming of America

Throughout the colonies, Presbyterian and Reformed Protestants participated broadly in escalating resistance to the power of the British Crown. Presbyterians in Pennsylvania found a surprising ally in Franklin, whose mid-1750s leadership of the “Quaker Party” in the Pennsylvania Assembly supported financial and military responses that challenged pacifism as state policy. The continuing migration of Scots and Scots-Irish (mostly Presbyterians) into Pennsylvania led to city/country conflicts but also led to armed conflict with indigenous peoples, whose alliances with the French sharpened divisions between Protestant and Roman Catholic traditions in the New World. By the mid-eighteenth century, Pennsylvania pacifists, Lutherans, and Anabaptists were governed by Anglicans and Presbyterians ready to take up arms. In the decades leading up to armed conflict, Presbyterians divided over issues of strategy and allegiance, but the majority of American Presbyterians found their independence compatible with Reformed theological politics and culture. While there are sterling examples of public agitation and contention regarding slavery, the majority of the emerging denomination was captive to majority culture social values and accepted compromise as the cost of unity.

By the 1770s the synod design had proven inadequate to the growing denomination. By the meeting of the first General Assembly of the Presbyterian Church (USA), in May 1789, a form of government had been crafted indebted to several sources. This delegate assembly borrowed much from Scottish practice, though in America the presbytery had

greater power than the national assembly. This denomination, the Presbyterian Church in the United States of America, comprised four synods, sixteen presbyteries, with a little more than four hundred congregations and one hundred seventy-seven ministers, and more than one hundred licensed ministers in training.

Reformed and Presbyterian governance had helped inform the federalism of the U.S. Constitution, while the consciousness of a new national identity was reflected in the denominations that emerged. Present at the creation of the new nation, the Presbyterian Church (USA) was similarly complicit in the ethical compromises of the new nation. Presbyterians exhibited the values of the majority culture of the new nation, yielding purity to maintain unity and peace across regional boundaries. American Presbyterians encouraged women (privately) and men (publicly) to evangelize westward and among immigrants, indigenous peoples, and the enslaved, but Presbyterians acquiesced to the slave power. Samuel Davies (1723–1761) had pioneered evangelizing among Virginia slaves in the 1740s and 1750s but was himself a slaveholder. David Rice, converted under Davies in Virginia, was an ardent opponent of slavery and led the cause in Kentucky from 1783. In 1787 the synod of New York and Philadelphia had called for the end of slavery, and the General Assembly of 1792 made a similar declaration, but most Presbyterians endorsed a gradualism that enabled the growth of the slave power. Benjamin Rush (1745–1813), prominent Presbyterian and patriot, cited antislavery as one element of his departure from the Presbyterians. Other Presbyterian and Reformed groups were more regional/sectional than national and engaged the slave issue in different ways. The descendants of Scots Seceders and Covenanters, German Reformed, and Huguenots troubled the conscience of the new nation in agitation for social reform.

Presbyterians were well suited to expand westward, first into Tennessee and Kentucky in competition with Methodists and Baptists, then into the Northwest Territories, in cooperation with Congregationalists in the Plan of Union of 1801. Presbyterians proved effective in the tasks of evangelization and institution building, cooperating within the denomination and with other Reformed groups (especially Congregationalists) in the western territories and states. Disagreements and splits were ahead, and though Baptist and Methodist growth would outstrip Presbyterian growth in the early national period, Presbyterians had provided a vital voice to the central values of identity, confidence, and anxieties that formed the new nation.

Presbyterians: Nineteenth Century

Traditionally Presbyterianism, a branch of Calvinism and the Reformed tradition, has emphasized two ideals: the sovereignty of God and the guiding authority of the Bible, which reveals the doctrine of grace mediated through Jesus Christ that is applicable to faith and life. To this end, preaching and an evolving church governing polity were the hallmarks of Presbyterianism in the new republic of the United States.

Through war and revival, through mission and divisive debate, the social, political, and scientific struggles of nineteenth-century America would test the meaning and application of this traditional view and would cause it to adapt to fit the ever-forming and reforming Presbyterian ideology and its identity in America.

Presbyterians, like most Americans of the nineteenth century, were profoundly influenced by four major and connected movements in American history: abolitionism, immigration, urbanization/industrialization (and related scientific advancements), and revivalism. Withstanding the waves of change that these influences brought, American Presbyterianism would emerge by the late nineteenth century having birthed several theologically related denominations well suited to serve its various Reformed constituencies. There were several waves of immigration from Scotland that brought with them established Presbyterian ideologies. At times they sought unification with other Reformed and Presbyterian Church denominations in the United States. At other times they found themselves politically, socially, or theologically estranged from members of their own theological family. In each of these times, divisive or unifying historical figures would emerge from these movements to attend to the Presbyterians' struggle for identity amid a backdrop of America's continued expansion and definition.

Presbyterian Polity and Mission

Presbyterian polity became a guiding principle for all of the church's struggles throughout the nineteenth century. Presbyterian polity values a representative form of government, similar to that which guided the founders of the United States of America. This polity grants power to a more broadly based constituency of both clergy and laity (the laypersons elected to serve in leadership positions are called "elders" and are ordained to that position). Key committees at all levels of governance are made up of one-half clergy and one-half elders. This "constitutional" model is essentially different from the Congregationalist model of local church autonomy in matters of theology and ordination, and the Episcopal model, which grants power to a hierarchical system of bishops and archbishops.

The Presbyterian political system evolved throughout the nineteenth century. It eventually took shape granting significant power to the local geographic area (such as a city), which included many Presbyterian churches, and is called a "presbytery." As the system evolved much later, several presbyteries would form the next level of governance, called a

“synod.” The semi-annual meeting of the entire body came to be known as the “General Assembly” and was constituted by the same ratio of elders and clergy elected by the presbyteries. Policy for the entire church, including ordination standards, was determined at the General Assembly, but the actual ordination to elected office took place for elders in the local church and for clergy at the presbytery level.

Presbyterians during the nineteenth century were involved in far more than issues of polity. American Presbyterianism vastly expanded its mission work and gave birth to scores of colleges and seminaries that served to reinforce its historical emphasis on education and on preaching. Presbyterians wanted to feed the spiritual needs of people as they explored and settled the frontier. Yet during all of this activity and expansion, like other denominations in America, Presbyterians struggled with questions surrounding the abolition of slavery. That struggle would take a toll on Presbyterian unity. Yet throughout the nineteenth century there would be other both divisive and unifying movements. These included debates over worship and revivals, Presbyterian orthodoxy, foreign and domestic missions, and the establishment of educational institutions.

A Plan of Union and the Second Great Awakening

The century began with a dream of cooperation with a fellow Reformed denomination. Although the attempt at collaboration resulted in a Plan of Union between the main body of the Presbyterians, called the Presbyterian Church U.S.A. (PCUSA), and the New England Congregationalists in 1801, it would dissolve by 1837 amid the tumult of abolitionism. There were many reasons that Presbyterians wanted to cooperate with other descendants of the Reformed tradition, such as the Congregationalists. The Presbyterians suffered from a shortage of clergy at the beginning of the century. The church’s most stable and well-known early seminary in the United States was not founded until 1812, when the Presbytery of Philadelphia established Princeton Theological Seminary. The establishment of this seminary represented an effort by Presbyterians to establish professional schools (similar to the disciplines of law and medicine) that would give specialized theological training beyond and after students completed a more generalized four-year undergraduate curriculum. The seminary split from the College of New Jersey (now Princeton University). Its establishment was not in order to withdraw from the secular life of the “modern” university but was rather an attempt to establish a professional school uniquely situated

to further a theological student’s education and provide ministers for the expanding American Presbyterian presence. Princeton’s first professor was Archibald Alexander (1772–1851), followed in 1813 by Samuel Miller (1769–1860) from New York’s Wall Street Presbyterian Church.

At the time of the first general meeting of the General Assembly, in 1789, there were 419 congregations bearing the name Presbyterian and only 111 clergy. By 1803 there were 511 congregations and only a few more clergy. With the Plan of Union, many colleges and seminaries would be open to training more clergy until more specifically Presbyterian seminaries could be established. As many people from New England were settling the wilderness of western New York and Ohio, the Plan helped to determine how the clergy of each denomination could serve in the other’s churches if necessary. Several historians have called the clergy who cooperated with the Plan of Union, such as Horace Bushnell (1802–1876), “Presbygationalists.” But as with many ecumenical projects, the Plan did not last.

The dissolving of the Plan was due to doctrinal disputes put forward in the “New Haven Theology” from Yale Divinity School promoted by Nathaniel W. Taylor (1786–1858), a close friend of Congregationalist-turned-Presbyterian Lyman Beecher (1775–1863). Taylor’s method for mass evangelism was later adopted by Charles Grandison Finney (1792–1875) in his revivals. Under Finney these new techniques for evangelism were called “new measures.” The disputes over New Haven Theology centered on the doctrine of original sin and the nature of Christ’s atonement. The long-standing Reformation and Presbyterian principle of predestination (that some are “elected” or predestined to salvation, and some are not) was also given very little attention by Taylor, Beecher, and Finney, much to the indignation of Princeton Seminary. Presbyterians influenced by Taylor and his students entered the debate through the Plan of Union. This led many, including Finney, Taylor, and their students, to begin to take sides questioning orthodox Calvinism and the tenets of the Westminster Confession of Faith (a statement dating to 1646 during the time of Calvinist rule in England) taught by the church.

New enthusiasms, including Finney’s new measures, captured the hearts and minds of many who began to settle the frontier. The Second Great Awakening would take hold of many Protestant denominations, including Presbyterians, through its essential communicative vehicle: the revival. Presbyterian minister Rev. James McGready (1757–1817) from North Carolina took leadership in the new movement by

leading revivals on the frontier. The first was at Cane Ridge, Kentucky. Beginning on August 6, 1801, thousands of worshipers gathered from southern Ohio, northern Tennessee, and all over Kentucky with their families, tents, wagons, and horses for what was billed as a large “sacramental communion event.” These events had occurred before, drawing ever-larger crowds, but never to this extent. Over the next few weeks, the population of the revival would top ten thousand by the most conservative estimates. The services conducted at Cane Ridge were led by ministers from several different Protestant denominations. The believers attending the revival reflected the same diversity.

Among Presbyterians throughout the nation, there was no unanimity of support for the revivals. Many Presbyterians felt that the revivals moved away from Calvinist orthodoxy; they dismissed the enthusiasms and extreme passions connected with the Gaspar River and Cane Ridge revivals as chaotic displays of emotion and not pious, humble, serious religious worship practice. The revival seemed to move away from the traditional emphasis on preaching by an educated clergy and toward the inspiration of the Holy Spirit given directly to the believer accompanied by an ecstatic experience. Some feared that the preaching of the Word had been replaced or at least subjugated by the personal encounter with the Spirit. So divided were members of the Synod of Kentucky that many members of the Cumberland Presbytery separated from the main body of the Presbyterian Church in 1810. In forming the Cumberland Presbyterian Church, still in existence in the twenty-first century, the founders of this new denomination especially contended with the Presbyterian Church’s insistence on seminary education begun following a college or university degree. Under this system it would take seven years or so to train clergy for the active ordained ministry. For the Cumberlands this seven-year period was far too long and the need for clergymen was too immediate on the frontier.

From the seed planted at Cane Ridge, the phenomenon of revivalism spread throughout America and would press the boundaries of religious authority. The revivals allowed for the free movement of the Holy Spirit to be authoritative for the individual believer. Yet the Presbyterian tradition stood for biblical authority, informed preaching, and an educated clergy. Where then was the authority vested in denominational leadership?

By this time, many Presbyterians were questioning the need for strong central denominational power. This was due in part to the influence of the revival. But it was also due to

the free expression and exploration of faith, or religious freedom, allowed for in the U.S. Constitution. The significance of the individual in the emerging American identity would play well into the hand of the increasing strength of the revival as a phenomenon in American religious history. This led Presbyterians under the influence of the revival movement to understand authority emanating in three ways: from the Bible, from personal interaction with the Holy Spirit, and from charismatic leadership. But trust in that new trinity of authority would continue to test denominationalism for the rest of the nineteenth century and well into the twentieth.

Revivals and Abolitionism

Charles Finney had been ordained by the Saint Lawrence Presbytery in New York State in July 1824. The next year the Erie Canal opened, and commerce exploded between western New York and New York City. Along with new access to agricultural markets, Finney and other revivalists had access to the burgeoning population of western New York. Cities along the canal included Rome, Auburn, Utica, and Rochester. All of these cities had growing Presbyterian populations that came under Finney’s influence. Because of the enthusiasm in the hearts of the newly converted in western New York (which many likened to a fire), and the sheer number of revivals that occurred during this time period, the area along the canal became known as the “burned over district.” Finney’s most significant writings on the subject were published as *Lectures on Revivals of Religion* in 1835.

Some of the families and individuals involved in the revival movement became the leading advocates for abolitionism. Congregationalist clergyman Lyman Beecher moved his family from Boston, Massachusetts, to Cincinnati, Ohio, in 1832 to become a Presbyterian and the founding president of Lane Theological Seminary and pastor of the Second Presbyterian Church in Cincinnati. Beecher had contended with some of what he felt were the extreme views of fellow abolitionist Charles Finney and desired to set a more moderating course for the Presbyterian Church in his new post. Lane had been established in 1830 as an outpost for the western territories, producing Presbyterian clergy for the frontier. Beecher would be president of Lane until 1850.

A debate was held at Lane in February 1834 that demonstrated the depth of the religious conflict with abolitionism and the institution of slavery. Professor Theodore Dwight Weld (1803–1895) emerged as the leader of the debate and led students of Lane to become abolitionists. Against the abolitionists, the trustees issued a policy effectively banning Lane’s

Antislavery Society by not allowing them to meet. This proved a provocative move, as many of the students had adopted Finney's revival methodology and abolitionist enthusiasms. The trustees thought such a society was divisive and distracted from the essential purpose of the institution, which was to study the scriptures and produce preachers for the American frontier. They also reprimanded Lane students for meeting with local black community members. Beecher, feeling pressure from the board of trustees, accepted the request of fifty-three students called the "Lane Rebels" for dismissal from the seminary. The rebels moved to Oberlin College in the same year. Oberlin was appealing to Weld and the Lane Rebels as it was about to install Beecher's adversary, Charles Finney, as their second president and first professor of theology. Weld remained a major architect of American abolitionism and would later coauthor the significant abolitionist volume *American Slavery As It Is: Testimony of a Thousand Witnesses* (1839) with his spouse Angelica and her sister Sarah Grimké. This book would notably influence Harriet Beecher Stowe in the development of her *Uncle Tom's Cabin* (1851).

The Beechers

In the story of a Presbyterian family's struggle to identify with their calling to evangelical ministry, to abolitionism, and to their Reformed theological roots, some see the larger struggle through which the largely Protestant religious nation was moving. How does a worshiper follow his religious calling faithfully and at the same time remain loyal to a denominational hierarchy of which he is suspicious? The struggle this produces helps to define what it is to be Presbyterian in the nineteenth century.

Abolitionist Henry Ward Beecher, ninth of twelve children born to Lyman Beecher, had enrolled at Lane during the 1830s and studied under his father and Calvin Stowe, who would later marry his sister Harriet. Henry eventually eschewed theology and the destructive divisions it brought about, as did much of his family, following the heresy trial of his father Lyman. The indictment on heresy of Lyman Beecher was both a catalyst and a microcosm of the larger issues of theological diversity that the Presbyterian Church faced in its emerging division between the "Old School" and "New School."

Lyman Beecher was brought to trial in 1835 by Joshua Wilson, pastor of the First Presbyterian Church of Cincinnati, and other Old Schoolers from that region. The accusation centered on Wilson's claim that Beecher taught a doctrine of original sin that was counter to orthodoxy and

of Christian perfection that was closer to Methodism than traditional Presbyterian theology. Beecher was in his professorial element and presented confident, sound theological arguments for his position. The Cincinnati Presbytery found him innocent. Undaunted, Wilson appealed to the next highest judicatory, the Synod in Dayton. The tone of this second trial was quite unsympathetic. Henry stood by his father during this difficult time, but his faith was shaken. The same held true for his elder brother Charles, who soon left Lane Seminary and moved to New Orleans. After this episode, Henry began to preach sermons more sympathetic of grace and personal faith, which was more akin to the theology of the revival. He rarely touched on abstract Calvinist themes (election, predestination, and the total depravity of humankind) for the rest of his career, and he certainly had no great love for denominationalism or for the larger Presbyterian Church in general. The church in Lawrenceburgh, Indiana, to which he was called was Presbyterian, but it soon became disaffected with the Old School's insistence that all new ordinands be allied with them or not ordained at all. The Lawrenceburgh church then decided to ordain Beecher without the consent of the denomination so controlled by the Old School. In 1838, instead of the presbytery, Henry's father, Lyman, presided at the ordination of his son Henry, aided by Calvin Stowe.

New School and Old School: Heresy and Division

The Old and New Schools were the names given to the factions that divided the main body of the Presbyterian Church (the PCUSA) in 1837 into two separate churches. These churches would not reunite again for quite some time. The Old School faction was conservative and suspicious of pietism in any form. It reasserted the seventeenth-century Westminster Confession of Faith. It renounced the enthusiasms brought on by Finney (who had left the Presbyterian Church in 1835) and the revivalists. It would ally itself with the orthodoxy of Princeton Seminary and its professors, who included the great Westminster defender Charles Hodge (1797–1878). Hodge had supported the institution of slavery during the 1830s, which endeared him to conservatives and raised the ire of the abolitionist New Schoolers.

In opposition, the New School was evangelical in orientation and had great support for the revival movement. The New School embraced a more personal form of pietism and the work of the Holy Spirit in personal conversion. They were decidedly abolitionist and found their theological home base at both the Presbyterian Auburn Theological

Seminary (founded in 1818 in Auburn, New York) and at the newly formed Union Theological Seminary (founded in 1836 in New York City). Union Seminary allied itself initially with the Presbyterian Church but quickly became a bastion of progressive religious thought and ecumenicism; it remains so in the twenty-first century. For the New School, the old Calvinist notions of the total and innate depravity of humankind (which relates to original sin) and unconditional election were never effective under the revival tent.

The Old School tried to force conformity to orthodox Calvinist views on the rest of the Presbyterian Church (USA) as early as the General Assembly of 1831. They had often been vocal opponents of the 1801 Plan of Union with the New England Congregationalists, believing it to cause theological leniency. Their concern was that the Congregationalists did not insist that its clergy formally subscribe to the Westminster standards. They also asserted that it lacked the rigor of Presbyterian polity, which distributed power more broadly, whereas the Congregationalists entrusted the local congregation with much more power, including ordination standards.

The results of the 1835 Albert Barnes (1798–1870) heresy trial indicated the depth of the division of the Presbyterian Church and eventually led to its formal split. Barnes was the Princeton-educated pastor of the First Presbyterian Church of Philadelphia. The charge was related to his 1835 book *Notes on Romans*, in which he denied the doctrine of original sin as well as the orthodox Calvinist notion of the atonement. The result of the first trial was that he was suspended from the ministry for one year. He appealed the decision to the General Assembly in 1836 and in a two-week trial, in which mostly New Schoolers were in attendance, he was acquitted. Angered by this acquittal, the Old School representatives formed a “Committee of Correspondence.”

This committee insisted on a separation of the Presbyterian Church from the Plan of Union that they felt had brought on this theological laxity. They brought this petition to the 1837 General Assembly. At that meeting, not only did the Old School representatives advocate for the abrogation of the Plan of Union, they were also able to amass the votes to declare that the synods organized under the Plan were illegal. The assembly eventually declared that due to their “New School sympathies,” the Synods of Genesee, Geneva, Utica, and Western Reserve were now independent of the Presbyterian Church.

Surprised by the virulence of the Old Schoolers, the New School representatives left the assembly and reconvened at

Auburn, New York, and resolved to remain Presbyterian. This meeting came to be referred to as the “Auburn Convention.” At the convention, the New Schoolers resolved that the actions to separate the synods from the rest of the Presbyterian Church were null and void. In the “Auburn Declaration” of 1837, New School representatives affirmed their commitment to the Presbyterian Church’s doctrine, worship, and government. At the 1838 General Assembly, which was held at the Seventh Presbyterian Church in Philadelphia, the New Schoolers sought recognition. The Old School moderator refused them recognition, and bedlam quickly arose. Over the shouts and pandemonium, the New School representatives voted and resolved that they were indeed a “Constitutional Assembly” and walked out to reconvene in another location in Philadelphia.

As the relationship was formally dissolving, both factions retained the name Presbyterian Church USA. Soon after this assembly sympathizers from the synods of Michigan and Eastern Tennessee declared their allegiance to the New School Presbyterians. Abolitionist Presbyterian churches from Illinois, Indiana, New Jersey, and Ohio in substantial numbers joined them. But the division was acrimonious and bitter, splitting congregations throughout the nation. The Old School/New School division even led abolitionist William Lloyd Garrison (1805–1879) to the affirmation that it portended the division of the nation. A similar division would occur among the Methodists and Baptists in the 1840s.

New Presbyterian Divisions and the Civil War

A number of Scottish Presbyterians had immigrated to the New World before the American Revolution and settled in places such as western Pennsylvania, the Carolinas, and New York. In Scotland many of these immigrants were known as “Covenanters and Seceders,” as they had historically reaffirmed covenants with the Scottish Presbyterian Church during times of persecution from the English. These Presbyterians, a separate branch, had not been a part of the Old School/New School debate. In America, many of these settlers were pious and were angered that there was no explicit declaration that Christ was the head of the new nation written in to any of the founding documents. Just before the Civil War, two of these groups, the General Synod of the Associate Reformed Church and the Synod of the Associate Presbyterian Church, in 1858 came together in Pittsburgh to establish a new church: the United Presbyterian Church of North America (UPCNA). This new denomination was committed to the Larger and Shorter Catechism

and the Westminster Confession of Faith. As the UPCNA, they also made a strong stand against secret oath societies and against slavery. They had been influenced by the religious fervor of 1857–1858 and by the increasingly powerful nativist movements, including the secretive Know-Nothing Party. They excluded anyone from Communion who did not claim the values of their new denomination. In a short period of time, they had more than 400 ministers, 600 congregations, and 55,000 members, and developed missions in Egypt and throughout the Middle East. Due primarily to the slavery question, the southern branch of these Presbyterians, called “The Associate Reformed Presbyterian Church in the South,” opted not to join the larger UPCNA.

In the North, the New School Presbyterians had formed to support both the revival and abolitionist movements. However there were many churches, mostly in the South, that supported the revivals but not the abolition of slavery. Therefore, in 1857 the southern branch seceded from the New School and formed the United Synod of the Presbyterian Church in the United States of America. The impending national division hit the Old School as well, and they would succumb to a similar fate. Just after the Confederate attack on Fort Sumter near Charleston, South Carolina, on April 12–13, 1861, the Old Schoolers adopted resolutions supporting the Union. But on December 4, delegates from forty-seven presbyteries in the South broke away from the Presbyterian Church USA and formed the Presbyterian Church in the Confederate States of America. These divisions would not be repaired for more than a century.

The Civil War took its toll on the church. As the nation divided, so had many Presbyterian churches into various Presbyterian denominations. Before the war, Abraham Lincoln (1809–1865) had attended a Presbyterian church in Springfield, Illinois. During the war he regularly attended (and rented a pew) at the New York Avenue Presbyterian Church, in Washington, D.C., but never formally joined any particular church.

Reunion and Reconstruction

Clear and focused enemies ironically had both a unifying and divisive effect on the various denominations of Presbyterians in America at this time. In 1864 the New and Old Schools in the South reunited. In 1865 the Presbyterian Church in the United States (PCUS) was organized in the South. A motivation for this unity was a loyalty oath to the Union that the northern Unionist churches had insisted upon. The Old School northern church insisted that the southern church

repent of their secessionist error. This angered churches, especially in the border states of Kentucky, Missouri, and Maryland. Churches withdrew from the PCUSA, Old School, and joined the new PCUS. By 1866 the PCUS had 65,588 members, 1,290 churches, and 829 ministers.

In the North, the divisions that created the Old School and New School, in light of the devastating effects of the war, seemed to necessitate a new perspective and a new covenant. The northern New School and Old School reunited in 1869 in Pittsburgh. They preserved the name, the Presbyterian Church in the United States of America, which both the Old and New Schools had retained after the 1838 division. Theologically these branches of the church reunited around the precept that the Bible was “the only infallible rule of faith and practice” and the Westminster Confession of Faith was a systematization of biblical principles. So as to maintain the new unity, they did not define those precepts further. The reunion occurred under the leadership of Henry Boynton Smith (1815–1877), Roosevelt Professor of Systematic Theology at Union Theological Seminary in New York. The reunited church had 446,561 members, 4,526 churches, and 4,238 ministers.

Even with all of the uniting of Presbyterian denominational families, race continued to be a factor in keeping blacks and whites separated. In 1874, the Cumberland Presbyterian Church (CPC) established the Colored Cumberland Presbyterian Church, which would later change its name to the Second Cumberland Presbyterian Church. In 1898, the PCUS established the Afro-American Presbyterian Church, which later became the Snedecor Memorial Synod, with four presbyteries. The northern branch, the PCUSA, established the Afro-American Presbyterian Council in 1894 led by Rev. Francis Grimké (1850–1937) of Washington, D.C., and Philadelphian Matthew Anderson. But the PCUSA established and maintained segregated synods for black Presbyterians called Atlantic, Blue Ridge, Canadian, and Catawbe until the southern PCUS and northern PCUSA did away with these racial and ethnic synods in the 1950s.

The ecumenical spirit that arose as a result of the end of the war brought Presbyterians together with other Reformed bodies throughout the nation and the world. Under the leadership of Swiss-born Philip Schaff (1819–1893), now a Presbyterian and a professor at Union Theological Seminary (New York), and Presbyterian minister Samuel I. Prime, the PCUSA met with and became a member of the newly formed Evangelical Alliance at its international meeting in New York in 1873. In 1876 the Presbyterian Church became

involved with another new international organization. The Alliance of the Reformed Churches throughout the World Holding the Presbyterian System was established with significant contributions by Schaff and James McCosh (1811–1894), president of the Presbyterian College of New Jersey. The southern PCUS also joined this ecumenical alliance. Healing continued that same year when federal troops finally left the South, bringing an end to a vastly difficult era in both church and nation.

Presbyterian Expansion in Missions and Education

Amid all the divisions, there were voices that affirmed the significance of the Presbyterian Church during those contentious times. Professor Philip Schaff at mid-century was a professor at Mercersburg Seminary in Pennsylvania; he wrote that the Presbyterian Church “is one of the most numerous, respectable, worthy, intelligent, and influential denominations, and has a particularly strong hold on the solid middle class” (1961, p. 118). Its hold was largely due to its influence at the founding of the United States and due to its historical emphasis on education. Schaff’s early education included studying the law and classical languages, including Latin and Greek, from which he could better understand and comment on the New Testament. The 2.3 million-member Presbyterian Church (USA) even in the twenty-first century continues to insist on reading fluency in both Hebrew and Greek as a requirement for ordination for all of its pastors.

One particular nineteenth-century Presbyterian seemed to embody this emphasis on education. Professor, college president, and Presbyterian minister William Holmes McGuffey (1800–1873) would influence not merely Presbyterians but all Americans with his grassroots efforts at literacy and conservative moral/spiritual education through his *McGuffey Readers*. These publications sold more than 120 million copies between 1836 and 1960. Through these books, especially in the early years of their publication, he tried to instill Calvinist values as they related to salvation, righteousness, and piety. Later the *Readers* became more secular and middle-class oriented and emphasized a civil religion and patriotism and less an endorsement of any particular religious denomination.

From the earliest part of the nineteenth century, pioneers set out to found colleges that reflected the Presbyterian Church in both name and values. By the end of the century, scores of colleges traced their foundational roots specifically to the Presbyterian Church. Some of the most significant colleges in the United States tie themselves historically to the

influence of the Presbyterians. Princeton University was established in the eighteenth century; most Presbyterian-related colleges and universities were established in the nineteenth. These include Davidson College (1837, North Carolina), The College of Wooster (1866, Ohio), Macalaster College (1874, Minnesota), Illinois College (1829, Illinois); women’s colleges such as Mary Baldwin College (1842, Virginia), and Agnes Scott College (1889, Georgia); and historically black colleges including Knoxville College (1875, Tennessee) and Barber-Scotia College for African American women (1867, North Carolina).

Establishing seminaries was also a priority of nineteenth-century Presbyterians. The first pre-dated Princeton Seminary by eighteen years. It was called Service Seminary and was established near Pittsburgh by the Associate Presbytery of Pennsylvania in 1794. The Reverend John Anderson was its first teacher of divinity and it opened with six students. Service Seminary moved to Ohio, where it became the Xenia Theological Seminary. It then moved to Missouri and eventually merged in 1825 with a seminary in Pittsburgh and became the Pittsburgh–Xenia Theological Seminary. Another seminary, called Western Seminary, had been established by the Presbyterian Church (USA) in Pittsburgh in 1827. After reconciliation with the other Northern Presbyterian Church denominations, it became the Pittsburgh Theological Seminary in 1959.

Other seminaries were established, demonstrating the Presbyterian Church’s desire to provide more educated ordained clergy for the nation’s increasing population. Union Theological Seminary in Virginia was founded in 1812. Columbia Theological Seminary in South Carolina was established in 1828 (now in Decatur, Georgia). Lane Theological Seminary is now a part of McCormick Theological Seminary. Van Vliet Seminary, established in 1852, became in 1864 the German Theological School of the Northwest. In 1870 the General Assembly accepted the seminary’s request to join the denomination and be recognized as a theological institution of the Presbyterian Church; it was renamed The University of Dubuque Theological Seminary in 1920.

Also receiving great attention by the Presbyterian Church were home and foreign missions throughout the century. In 1810 the American Board of Commissioners for Foreign Missions (ABCFM) had been established in Boston as an ecumenical board overseeing missions to Native Americans and to Africa, China, India, and the Middle East. This was a cooperative venture of the Congregationalists, the Dutch Reformed Church, and the Presbyterians. This ecumenical

project recognized the demand that many evangelically minded Americans felt during and after the Second Great Awakening. In its own denomination the Presbyterians had established in 1802 the Standing Committee of Missions, which worked with the Congregationalists. But after abrogation of the Plan of Union, the Presbyterians established the Board of Foreign Missions and went about its missionary purpose alone.

Great demands had been placed on these boards right after their founding due to the strength of the revival movement. But the missions' committees had other interests as well. They were interested in helping to create a presence in the vast American West, and for decades busily set about establishing churches in western New York, Ohio, Michigan, Illinois, and Indiana. In 1836 Marcus and Narcissa Whitman traveled on the Oregon Trail with Presbyterian Rev. Henry S. Spalding (1803–1874) and established churches and mission stations among the Cayuse Indians. The Whitmans, along with twelve others, were martyred on the trail, as they were believed to have brought a measles outbreak among the Indians. The Spaldings, however, continued their work among the new churches and the Native Americans for many years thereafter.

The larger the various Presbyterian Church denominations became, the more ideologically diverse were their constituencies. Enthusiastic Presbyterians could be found on different sides of contentious issues that developed through the nineteenth century. Resettlement of Native Americans was just one such contentious concern. Working with Congregationalists, Presbyterian missionaries, for example, contended with the State of Georgia over their appropriation of Cherokee lands after gold was discovered on Indian Territory in 1828. Attorney William Wirt, a Presbyterian, won the case for the Cherokee nation in front of the U.S. Supreme Court. But Presbyterian President Andrew Jackson refused to enforce the decision throughout the 1830s and forced the Cherokees, along with other earlier Native Americans, to move on a "Trail of Tears" to the Oklahoma Territory in 1838. Jailed "Presbygationalist" missionary Samuel Worcester, who had been arrested for defending the Cherokee people, was eventually freed from his Georgia prison and accompanied the Cherokee on the Trail of Tears.

Sue McBeth (1830–1893) and her sister Kate worked with the Nez Perce Indians in Idaho training ministers for work among native peoples, even though they themselves were not ordained. The PCUSA Board of Missions appointed physician and Native American Susan LaFlesche Picotte

(1865–1915) as its first American woman missionary. She completed her training at the Philadelphia Women's Medical College in 1889. Her father, Iron Eye, was chief of the Omaha people. She returned right after medical school to work with the Omaha in Nebraska and did so until her death.

In 1858, just before the Civil War, Sheldon Jackson (1834–1909) graduated from Princeton Seminary. Jackson enjoyed a career founding churches throughout the West and in Alaska. Jackson was a peripatetic, brilliant, and colorful personality. He indefatigably established churches in the Wyoming, Montana, Idaho, Utah, and Arizona territories. He founded the *Rocky Mountain Presbyterian* to report on his progress. Jackson worked very well with Alaskan native peoples trying to preserve native culture in light of white expansion in the territory. He eventually served as Alaska's first superintendent of public instruction. He was honored in Alaska by the founding of a college in 1878 for the Tlingit people that bore his name. It had been historically associated with the Presbyterian Church but closed due to financial troubles in 2008.

New Perspectives and Broader Horizons

This ecumenical orientation brought a cooperative spirit to the Presbyterian Church. With this spirit came new scholarship and ways of looking at scripture. This broadening perspective also brought a new appreciation for emerging scientific discoveries. Charles Augustus Briggs (1841–1913) became the first test case of an emerging perspective on scripture in the late nineteenth century. In 1874 Briggs became a professor at Union Theological Seminary in New York. He had been inspired by a trip to Germany in 1866 that moved him away from his biblical conservatism. He, like many scholars of his time and since, began to challenge the authorship and translations of the Bible. In response to the challenges of modern scholarship, faculty at Princeton Theological Seminary began to promote the idea of biblical inerrancy. Briggs believed this made an idol of the Bible and asserted that a critical method for biblical studies would reveal the divine message even more accurately and inspirationally. He carried on debates with his coeditors and colleagues at the Princeton Theological Seminary in the *Presbyterian Review* for nearly a decade. He also stated his views clearly in an address in 1891 at Union. A student of Briggs fed his "subversive" lecture materials to Briggs's enemies and soon he was brought up on heresy charges. This case was the subject of much acrimony in the Presbyterian Church as it encapsulated the larger conflict between traditional biblical concepts and modern

scholarship. The process took more than a year. While the New York Presbytery voted to acquit him, the General Assembly of the larger church on appeal found him guilty by a vote of 383 to 116 in 1893. After his suspension from ministry in the Presbyterian Church, Briggs found a home in the Episcopal Church, where he was eventually ordained a priest.

Throughout the nineteenth century, Presbyterians could be found on many sides of significant scholarly, social, and political issues. Besides advancements in biblical critical studies, the findings of nineteenth-century scientist and naturalist Charles Darwin were hotly debated in the United States, and the Presbyterians found themselves deeply involved. Darwin's *The Origin of Species* was published in 1859. His theories would be challenged by Charles Hodge of Princeton in his 1874 volume *What Is Darwinism?* in which he argued that Darwin's was a mere theory that contradicted the Book of Genesis, which had already significantly stood the test of time.

Seeking to understand the impact on the Christian faith of such scientific advancements, Columbia Theological Seminary established a faculty position in 1860 to study the phenomenon. It was called the Perkins Professorship of Natural Science in Connection with Revelation, and its first professor was scientist, theologian, and banker James Woodrow (1827–1907). His significant work in support of natural science was condemned by four General Assemblies of the Presbyterian Church. Woodrow would later have considerable influence over his nephew, president of Princeton University and of the United States Woodrow Wilson.

The nineteenth century would find Presbyterians on all sides of many debates. This is anecdotally demonstrated by Presbyterian and Democratic President Grover Cleveland's (1837–1908) two terms in office being interrupted by rival Presbyterian and Republican President Benjamin Harrison (1833–1901). But the impact of Presbyterians in the nineteenth century is without debate. Presbyterian industrialists including William Dodge of New York, Thomas Mellon of Pittsburgh, Cyrus McCormick of Chicago, Louis Severance of Cleveland, John Wanamaker of Philadelphia, Henry Flagler of Florida, and Robert Dollar of California left substantial legacies in the form of endowments for educational institutions. They also left vast corporations, the impacts of which are still felt in the twenty-first century. The nineteenth-century Presbyterian legacy would be a history of debate, division, and reunification; of missions both foreign and domestic; and of the establishment of educational institutions.

The events that shaped America in the nineteenth century moved Presbyterians to adapt their theology to

accommodate the different ideological constituencies that made up the various Presbyterian Church denominations. On the one hand, the desire to establish ideological or theological purity seemed to lead to many divisions. Behind these were attempts at adapting the Westminster Standards and its theology to an ever-expanding and diverse American landscape. This landscape was contending with slavery, revivalism, immigration, the frontier, and urbanization/industrialization. On the other hand, the desire to establish connection with fellow Reformed and Presbyterian believers in America amid the political and social tumult of the nineteenth century created occasional opportunities for unity. In all, much of the division and reunification were a result of the prevailing desire of the moment: the connectional nature of the Presbyterian Church through its polity; or the theological ties to the Calvinist and Reformed principles that had brought the Presbyterian Church from Geneva to Scotland, to Philadelphia, and then to the rest of the nation.

Presbyterians: Since the Nineteenth Century

Mainline Presbyterian denominations entered the twentieth century as powerful “quasi-established” institutions in the nation, despite the challenges of urbanization and disputes over the nature of biblical authority that arose after the Civil War. By the century’s end, Presbyterianism had undergone deep changes and suffered a severe decline in membership. Evidence of Presbyterians’ status could be found in the leadership they had in society—Andrew Carnegie, Andrew Mellon, Woodrow Wilson, Dwight Eisenhower, and John Foster Dulles were Presbyterians. Theological change and the social turmoil that arose after World War II led to denominational struggle, contributed to loss of membership, and made the denomination more pluralistic and inclusive than it had been in 1900. The story comes into sharpest focus by looking at the two largest Presbyterian denominations during the century, the Presbyterian Church U.S.A. (PCUSA) and the (southern) Presbyterian Church in the United States (PCUS).

Theological Issues

In the early twentieth-century PCUSA, debates over biblical authority and theology contributed to the rise among Protestants of fundamentalism, a commitment to uncompromised traditional theology. The General Assembly (GA) of 1910 approved a set of five essential doctrines that all Presbyterians had to affirm. The beliefs were the inerrancy of scripture, the virginal conception of Jesus, the death of Jesus as substitutionary atonement (that is, that in dying Jesus accepted the punishment of God for human sin collectively and individually), the bodily resurrection of Jesus, and the veracity of miracles in the Bible. The General Assemblies of 1916 and 1923 reaffirmed the five points.

The Modernists (those who would allow some modification of the faith in response to the changing world) responded. In 1922 the Baptist minister Harry Emerson Fosdick (1878–1969), serving as associate pastor in the First Presbyterian Church in New York City, preached a sermon

titled “Shall the Fundamentalists Win?” That led to Fosdick’s departure from the church following GA action against his modernist theology. A group of ministers then issued, in 1924, the Auburn Affirmation, in which they accepted the five essentials. However, they also declared that others might have a different understanding of the doctrines and suggested that the denomination allow some latitude in theological belief.

The key event in the PCUSA’s debate involved Princeton Theological Seminary, the citadel of fundamentalism in the denomination. By 1925 the leading proponent of traditionalism was J. Gresham Machen, but the faculty and members of the boards of directors and trustees had adherents in both camps. Machen’s treatise on the dispute was *Christianity and Liberalism* (1923), in which he argued that the two could not be reconciled; therefore, liberal or modernist Christianity could not exist. When a vote to approve Machen for the chair in apologetics passed the boards with a significant number of negative votes in 1926, the boards asked the GA to study conditions at the seminary. Machen’s appointment was suspended, and not until 1929 did the appointed GA committee make its recommendations about the seminary. The seminary structure was reorganized with Machen still not in the apologetics chair. In the meantime, another GA “Commission of Fifteen” studying the controversy in the PCUSA recommended the denomination adopt a measure of toleration in theology, effectively overturning the authority of the five points.

Thinking the Modernists had won, Machen and his followers left Princeton to found Westminster Theological Seminary in Philadelphia in 1929 and subsequently, in 1933, the Independent Board for Presbyterian Foreign Missions. The latter competed with the PCUSA’s mission board, which Machen believed was under the influence of modernism. Machen’s ordination was suspended in 1935, and the following year he founded the Orthodox Presbyterian Church. Those events, coupled with the famous Scopes Monkey Trial in 1925, marked the passing of fundamentalism and the triumph of a broader theological interpretation in the PCUSA.

As a more conservative southern denomination, the PCUS experienced less turmoil than the PCUSA over theological matters. By the 1930s a growing number of clergy publicly held a modified Calvinism that challenged some long-held doctrines. Walter Lingle and Kenneth Foreman of Davidson College denied the absolute inerrancy of scripture, and a few pastors such as Henry Edmonds in Birmingham,

Alabama, stirred controversy with their theology that did not conform to rigid Calvinism. Generally speaking, however, the PCUS maintained its traditional Calvinist theology until after World War II.

The Emergence of Social Ministries

Given the privileged status of many Presbyterians, concern for the problems attendant to the urbanization and industrialization of the nation came slowly to Presbyterianism as a whole. Andrew Carnegie's paean to unrestricted capitalism, "Wealth" (*North American Review*, 1889), was perhaps the most widely read essay on the relation of faith and economics. As the centers of cities became industrialized and tenement slums grew, middle- and upper-class Presbyterians moved to the suburbs, and often their churches moved with them. However, the Social Gospel began to make inroads with some Presbyterians as they responded to the needs of the city.

In 1903, at the instigation of Charles Stelzle, the PCUSA established its Workingmen's Department, which subsequently became the Department of Church and Labor. The department sought to promote ministries to the laboring poor. Churches created mission stations to offer education and worship to the poor. Some churches became "institutional" churches, offering a variety of classes and recreational activities for the betterment of those living nearby. Settlement houses were founded. The swelling numbers of immigrants prompted a movement of foreign-language ministries that attempted to provide religious aid to new residents of the cities (and, not coincidentally, make Presbyterians of Catholics). Some even began to favor collective bargaining for laborers.

The PCUSA borrowed, in 1910, the Social Creed of the recently founded Federal Council of Churches (FCC) for its own use. It emphasized the concept of Christian stewardship and the need for a just distribution of resources in society. The creed declared the need for fair wages and a fair work day and work week for laborers, as well as a safe working environment and a form of social security for people in their elder years. In short, the creed promoted the treatment of the laborer in a humane and just way.

The PCUS came more slowly to social ministry. Its approach to society was dominated by the doctrine of the spirituality of the church, which taught that the church should have no involvement in social or political matters but only evangelize individuals. Individual Christians, but not the church, could and should work to change the world. Even so,

the PCUS worked fervently for the greatest social cause of the day: Prohibition. It also sought to protect Sunday as a day of worship. In southern cities, mission Sunday schools and churches sprang up; one of the most successful was the John Little Mission in African American neighborhoods in Louisville, Kentucky. Eventually, two black churches were founded out of that work.

In the 1930s the spirituality of the church began to wane in the PCUS. Following the leadership of people like Ernest Trice Thompson at Union Seminary in Virginia, first the Synod of Virginia and then the PCUS created a Committee on Social and Moral Welfare. The first tentative steps toward racial justice in the PCUS took place through the work of this committee, but much remained to be done. In addition to matters of race, the denomination spoke to economic concerns such as child labor and sharecropping, and churches offered vocational training to the urban poor, fed people in the heart of the Depression, and addressed the question of war.

President Woodrow Wilson, son and nephew of prominent PCUS pastors, believed strongly in the horror of war and tried to keep the United States out of World War I. When he called for a declaration of war in 1917, however, he set the tone to make the war a righteous cause to "make the world safe for democracy." Presbyterians joined their fellow citizens in supporting the war wholeheartedly. James I. Vance said that the cross and flag must be kept together, since they worked for the same goals. Others were more cautious and warned of making Christianity a form of nationalism.

When the armistice was signed, Wilson's platform for peace, called the Fourteen Points, included the League of Nations. Presbyterians approved of the idea, and many joined in the call for the end of war that emerged in the 1920s and 1930s. General Assemblies of both the PCUSA and PCUS approved resolutions calling for the church never again to bless a war. Sentiments would shift with the rise of fascism in Europe and Japan's imperial ambitions in Asia.

One area of justice remained largely, although by no means completely, absent in Presbyterian social concern: racism. The end of World War II would bring that issue to the fore, and Presbyterians would join in the civil rights movement.

Mission and Early Ecumenical Involvements

Presbyterians participated fully in the late nineteenth-century drive in global missions. Both major denominations placed missionaries around the world and built growing

indigenous churches. Elements of cultural imperialism marked that work, but some denominations wanted to create independent churches that were self-governing, self-propagating, and self-supporting.

The milestone in mission thought prior to World War II was the report of the Laymen's Foreign Missions Inquiry, issued in the early 1930s. The report called for a radical rethinking of mission endeavors. Noting that modern Christianity relied less on the fear of hell to lead people to conversion and more on the enticing love of God, the report urged global mission work to eschew direct evangelization, with its inherent attitude of superiority, and witness through acts of service such as education and medical work. The goal was the acceptance of indigenous culture and people as equals. The exclusive claim of salvation in Jesus Christ should be replaced with openness to the truth claims of the world's religions. The report stirred no small debate within Presbyterianism, but following World War II the mission enterprise of Presbyterianism reflected the conclusions and suggestions of the inquiry.

Home mission work continued, although it changed emphases with the closing of the western frontier. The churches maintained work among First Nation and Hispanic peoples, especially educational work. In the growing cities a variety of mission endeavors were undertaken with immigrants and the laboring poor. Both the PCUSA and PCUS developed a focus on rural ministry, with the PCUS building a special emphasis on Appalachia. Vestiges of that work continue into the twenty-first century.

Presbyterians often sought to work with other denominations in ministry. The impetus for ecumenism, seen earlier in such bodies as the Evangelical Alliance, eventually resulted in the Federal Council of Churches in 1908. The goal of the FCC was not church union but cooperation in ministry and response to the needs of the nation's urban and industrial problems. It was from the FCC that the PCUSA borrowed its social creed. The PCUSA and PCUS both participated in the founding of the FCC. The PCUSA provided strong leadership for the FCC in the persons of Samuel McCrea Cavert, John Foster Dulles, and others. The PCUS, suspicious of the FCC because of its social ministry and the liberal theology of the northern denominations, maintained its membership intermittently over the years.

The ecumenical spirit did lead to reunion within the Presbyterian family. The PCUSA and Cumberland Presbyterian Church (CPC), which had separated from the PCUSA in 1810 over theological and institutional differences, began talks

aimed toward reunion early in the century. Changes to the Westminster Confession of Faith (a statement dating to the time of Calvinist rule in England), approved by the PCUSA in 1903, moderated some of the most stringent aspects of the doctrine of predestination, which had been one cause of the 1810 division. The CPC saw this as a movement toward its theological stance, and discussions for reunion opened in 1904. Two primary obstacles remained. The first was the perceived liberalism of the PCUSA by the CPC; the second was the pattern of segregated presbyteries and synods in the CPC, which many in the PCUSA did not want to accept (the CPC's strength was in the border states, especially Tennessee and Kentucky). The PCUSA had engaged in mission work in the South following the Civil War and had scattered African American congregations that were not segregated into their own presbyteries. Eventually the PCUSA accepted the possibility of segregation in its southern presbyteries, later seen as a tragic compromise, and the reunion came to fruition in 1906. A minority of the CPC, troubled by the theological latitude of the PCUSA, chose to maintain a separate existence and keep the name CPC.

Postwar Presbyterianism

The years following World War II were marked by the Cold War. The sharp division between the United States and the communist powers fostered a sense of good versus evil. The belief that the United States served the cause of righteousness in the world against the evil of imperialist communism generally found support among Presbyterians. The U.S. program of strong national defense, alliances such as the North Atlantic Treaty Organization (NATO), military intervention when required to stop communism, and the maintenance of a nuclear arsenal all were favored by Presbyterians. Even so, Presbyterians were not absolute or unthinking in their anti-communism. They realized that communism often took root in injustice and believed that military prowess provided only a secondary security to that of creating just economic and social structures in developing nations. The PCUS gave evidence to that awareness in its 1951 report "National Security and the Christian Message" and 1954's "The Christian Faith and Communism." Nonetheless, Presbyterians supported their nation.

Fear of communism led some to believe that the nation was in danger of subversion from within. The House Un-American Activities Committee held hearings to probe the extent of communist influence, people charged that members of the State Department who were soft on communism

had let China “fall” to the communists, and then the nation experienced the work of Senator Joseph McCarthy as he leveled charges of communist infiltration inside the government and the military. Presbyterians believed it was important to maintain diligence against communism but also spoke against the excesses of McCarthyism as violating the basic rights of citizens whose reputations were injured without evidence. When claims of communist affiliation rose against prominent church leaders, especially Methodist bishop G. Bromley Oxnam, the PCUSA General Council, led by Princeton Seminary president John Mackay, issued a pastoral letter to the denomination and released it to the press. The letter denounced the tactics of character assassination that too often accompanied the search for communists and upheld the importance of due process of the law if the United States were not to lower itself to the tactics of communism. The GA of 1954 voted its approval of the letter, which stood as a voice of reason in troubled times.

Religion in the United States experienced a widespread revival following the war. No doubt fed in part by the Cold War identification of the United States as a religious nation, people who had suffered through the deprivations of the Depression and the worst war in history filled the pews and coffers of churches and synagogues. The baby boom generation further added to the revival and membership growth, which reached its peak in the mid-1960s. Presbyterian churches followed the burgeoning populations to the suburbs, built new churches or added to existing ones, and saw budgets grow exponentially. Some analysts question the depth of the revival in retrospect, reflecting a national “faith in faith itself,” but it marked a notable phenomenon.

Theological and Later Ecumenical Developments

The theological changes that had begun prior to World War II expanded in the postwar period. The “neo-orthodox” renewal of classical Calvinist theological themes, found in the United States most prominently in the work of brothers H. Richard and Reinhold Niebuhr, provided a new excitement in theology. Emphasis on the sovereignty of God, the Bible as the Word of God (understood in terms of higher biblical criticism), and sin, coupled with a strong social conscience, resonated with Presbyterians. The school of thought became influential in Presbyterian seminaries and pulpits. Reemphasizing traditional Reformed doctrines, neo-orthodoxy was by no means fundamentalist or evangelical in its stance and allowed for the broader theological approaches that Presbyterians had begun to embrace in the 1930s. Even the

more traditional PCUS seminaries manifested latitude in Calvinist understanding.

One element of theological change in Presbyterianism was the growing professionalization of seminary faculty members. Professors had routinely, into the 1930s, been accomplished pastor-theologians called from prominent pulpits to teach in seminary and did not always possess earned doctorates. That had changed by the early 1950s, as accreditation agencies and the growing sophistication of each area of theological study required doctoral degrees, if faculty were to give students the best preparation for congregations steeped in the latest scientific and social scientific knowledge. The thought of professors increasingly reflected the influence of the academy alongside that of the church’s confessions.

Those church confessions underwent change. The Westminster Confession of Faith and the Westminster Larger and Shorter Catechism, written in seventeenth-century England, had provided the confessional basis for Presbyterians in the United States. Many desired a new statement of belief in contemporary English that reflected theological approaches from the modern era. Not surprisingly, some opposed that proposal, thinking that the Calvinism of Westminster should not be amended or moderated. Following the merger of the PCUSA and the United Presbyterian Church in North America (UPCNA) in 1958 to form the United Presbyterian Church in the U.S.A (UPCUSA), a committee was appointed to write a new confession for the denomination.

Approved by the church in 1967, the new statement bore the simple name “The Confession of 1967,” partly to symbolize the idea that statements of belief always bear the marks of the age and context in which they are written. Composed in the midst of national discord over the civil rights movement and the Vietnam War, “C ’67,” as it came to be called, took reconciliation as its central theme. Affirming first the reconciliation of the world to God in Christ Jesus, C ’67 called for the reconciliation of people to one another in response to God’s loving work. The confession bore a trinitarian form, although it began with the Christ as God’s reconciler, followed by the creating and sustaining work of God the Parent and Holy Spirit. There were those who did not like the treatment of some doctrines—for instance, C ’67 interpreted the work and death of Jesus not only as substitutionary atonement but also as ransom, reconciliation, and moral exemplar, reflecting the wide tradition of Christian thought on the subject.

The committee also provoked debate by proposing the UPCUSA adopt not just one confession, but a “book of confessions” to guide its theology. More traditionalist

Presbyterians held to the Westminster Confession, arguing that it contained the most faithful exposition of Christian belief. The committee, again thinking that confessions were limited by the context in which they were written and that each had unique emphases and value for the church, proposed a collection of confessions from throughout church history. The collection included the Apostles' Creed, the Nicene Creed, the Scots Confession, the Heidelberg Catechism, the Second Helvetic Confession, the Westminster Confession and Shorter Catechism, the Theological Declaration of Barmen, and C '67. Despite fervent opposition from traditionalists who found the committee's work too far afield of proper Calvinism, both the Book of Confessions and C '67 passed.

The PCUS engaged in a similar process in the 1970s. Albert Curry Winn chaired the committee appointed to write a new statement of faith for the denomination. This committee also proposed a book of confessions as the new doctrinal standard for the church to replace the Westminster Confession as the sole confessional basis for the church. The committee also presented "A Declaration of Faith" to the denomination. This statement was longer than C '67 but shared its presentation of Christian beliefs in terms that alienated traditionalists. The format of the declaration proved its most distinctive feature. It was written in a versified format designed for liturgical use. It could be read responsively or in unison and adapted easily for use within worship. Although both the book of confessions and Declaration of Faith were narrowly defeated in the PCUS, the declaration became popular and was widely used in the denomination.

Ecumenical involvement and church unions marked the postwar years. In 1951 the FCC reorganized as the National Council of Churches (NCC). Both the PCUSA and PCUS joined the new ecumenical group and participated fully in its ministries. More dramatically, in a 1960 sermon preached at the Episcopal Grace Cathedral in San Francisco, the stated clerk of the new UPCUSA, Eugene Carson Blake, called for a union of major denominations in the United States. This would mean the union of churches that had bishops and those that did not—a major stumbling block in union discussions. The sermon led to the formation of the Consultation on Church Union, which involved a number of denominations in theological and union talks. The organization, still in existence in a different form and name, has achieved deeper understanding between the Protestant participants since its inception.

Perhaps the most far-reaching event was the Roman Catholic Second Vatican Council, which met in Rome in

the 1960s. Vatican II, as it was called, brought great change to Catholicism but also opened the church to ecumenical discussions and cooperation with Protestants. In the United States, much of the suspicion that each group felt for the other was alleviated as people worked with each other across the division that reached back to the sixteenth century. One of the most interesting impacts of Protestant-Catholic interaction has been a liturgical renewal from which Presbyterians have benefitted. A fuller appreciation for the theology of worship (for example, the use of the common lectionary and a deeper sacramentalism) and the practice of spiritual disciplines by clergy and laity has enhanced Presbyterianism through this conversation.

The years following World War II brought two important unions to Presbyterianism and one key schism. People in the PCUSA, PCUS, and UPCNA harbored the hope of uniting the three denominations. (The UPCNA was a comparatively small denomination with strength in Pennsylvania, Ohio, and the remainder of the Midwest. It grew out of the dissenting church tradition of the Church of Scotland.) In the 1950s talks began in earnest among the three denominations. The 1954 PCUS General Assembly voted not to pursue the discussion any further; the perceived theological liberalism of the PCUSA and its involvement in social issues led many in the PCUS to reject any deeper cooperation with the PCUSA than already existed. The PCUSA and UPCNA continued their efforts, and in 1958 in Pittsburgh, Pennsylvania, the two churches came together to create the United Presbyterian Church, U.S.A. (UPCUSA).

The rejection of union talks by the PCUS demonstrated the ongoing strength of traditionalists in the denomination. Convinced that liberals increasingly held sway in the seminaries and pulpits of the PCUS, the Continuing Church Movement formed to counteract them and to hold the denomination within the bounds of orthodoxy. The traditionalists believed the PCUS had strayed from a proper understanding of the inerrant authority of the Bible, had grown lax in many theological tenets such as the divinity of Christ and the bodily resurrection, and had forsaken proper forms of church government. There was also deep distress regarding the church's growing involvement in social issues, which in the South meant, first and foremost, racism and the civil rights movement. When the PCUS voted to ordain women to lay church office, and then to preaching ministry, in defiance of what the Continuing Church people saw as the biblical prohibition of women's ordination, contentions rose even further.

To present their point of view, the traditionalists established the *Southern Presbyterian Journal* during World War II. Then, a series of important groups were founded in 1964: the Presbyterian Evangelistic Fellowship; Concerned Presbyterians; Presbyterian Churchmen United; and the Reformed Theological Institute, for the education of ministers apart from PCUS seminaries, all came into existence to make the traditionalists' case in the denomination. Skirmishes took place throughout the denomination as people of differing beliefs sought to neutralize the others. Finally, believing that they could not turn the PCUS from its false teaching and liberal leadership, many in the Continuing Church Movement met in Birmingham, Alabama, in 1973 to form a new denomination, the Presbyterian Church in America. A new Presbyterian denomination was born through yet another division of the church in the United States.

Ten years after the formation of the Presbyterian Church in America, the Civil War finally ended for the PCUS and UPCUSA. Although the PCUS had not joined the 1958 union, people had continued to work toward that goal. When the General Assemblies of both the UPCUSA and PCUS determined that presbyteries (regional bodies of the church) could have membership in both denominations, many presbyteries chose to do so, especially along the border between South and North where contact was closest. Then, in the 1970s, the decision was made that the denominations would hold their General Assemblies in the same city in alternate years. Misconceptions of each denomination regarding the other were overcome and, in 1983 in Atlanta, Georgia, the PCUS and UPCUSA cemented their reunion. The reunited denomination took the name Presbyterian Church (USA). It remains the largest Presbyterian body in the nation, with approximately 2.3 million members in 2009.

Confronting a Changing World

Presbyterians addressed questions of racism even before World War II, but the emergence of the civil rights movement accelerated their involvement. Following the Civil War, African American Presbyterians, reacting against discrimination in the PCUS, formed the Afro-American Presbyterian Church. The PCUS provided support for the struggling denomination. By 1915 that denomination disbanded and black Presbyterians were absorbed into the PCUS, forming into segregated presbyteries and the segregated Snedecor Synod in 1917. Attempts to overcome discrimination took place among women's groups and youth programs in the denomination, and in 1951 the Snedecor Synod was

abolished and African Americans were integrated into regular presbyteries. The PCUSA, which also had segregated presbyteries from its union with the CPC, disbanded them in the 1950s in favor of integration.

The onset of the civil rights movement made questions of race and racism more urgent. Many white people in the PCUS opposed the causes of integration and voting rights for black citizens, and there were white churches that barred African Americans from attending worship. On the other hand, some pastors spoke out for equal rights and were forced to leave their congregations. Members of the PCUS, both black and white, participated in the great marches for civil rights, and the general assemblies consistently expressed support for the civil rights movement. James McBride Dabbs, a layman, had a high profile from his North Carolina home in the struggle for integration, and Martin Luther King Jr. spoke at the denomination's Montreat Conference Center, the site for summer youth meetings, women's conferences, and many general assemblies. Denominational support for civil rights served as one cause of the later formation of the Presbyterian Church in America. There were some in the PCUSA/UPCUSA who disliked the push for civil rights, but generally speaking that denomination moved ahead of the PCUS in its support. Eugene Carson Blake was photographed marching alongside King.

Black Presbyterians organized caucuses to push for greater recognition in the denominations and for fuller representation in decision making. They promoted black theology, which looked anew at Christian doctrines from the African American experience of racism. In the UPCUSA, Gayraud Wilmore and J. Oscar McCloud were among African American leaders; in 1964 the minister Edler Hawkins became the first black moderator of the GA. Ten years later the PCUS followed suit when Lawrence Bottoms was elected moderator for that denomination. Change came slowly, and integrated local congregations were few, but the institutional weight of both denominations and the reunited PC(USA) had been thrown behind integration and ending discrimination in church and society.

Presbyterians also concerned themselves with a variety of foreign policy issues, the general result of which was to make them hesitant to approve U.S. military ventures overseas. Most Presbyterians approved of the use of atomic weapons to end the war with Japan in 1945. In the context of the Cold War, there was general silence in the face of the policy of Mutually Assured Destruction (MAD), which justified the proliferation of nuclear arms by the United States and Soviet

Union. People favored some form of international control of nuclear weapons, and Presbyterians joined others in calling for a ban on the atmospheric testing of nuclear arms. In the 1970s the push for limitations on nuclear weapons intensified, and both the UPCUSA and PCUS lent strong support not only to proposals to control the increase of nuclear arms, but their actual reduction. The eventual collapse of the Soviet Union eased tensions on the issue, but nuclear weapons continue to pose problems for global politics.

If the civil rights movement was the premier domestic issue dividing Presbyterians, the foremost global event was the Vietnam War. Few Presbyterians raised their voices against the war in the beginning; it seemed a clear case of the United States acting to stop the spread of communism. As the war continued, people increasingly argued that the conflict was a war of anticolonial national liberation into which the United States had interjected itself. Consequently, many Presbyterians contended that the nation had entered an immoral war and the church should be opposed. General assemblies of both the UPCUSA and PCUS took stands against the war. Leadership in the antiwar movement included Robert McAfee Brown of Stanford University; William Sloane Coffin, chaplain at Yale University; and Robert Bilheimer, director of the NCC's Department of International Affairs. In the PCUS, Albert Winn vigorously denounced the war in a speech to the 1972 GA. Presbyterians rejoiced at the peace treaty of 1973. Following the war, Presbyterians often criticized the government for its foreign policy in Latin America (especially Nicaragua and El Salvador) and the Middle East, especially during the Iraq War begun in 2003. No longer could the U.S. government expect automatic support from Presbyterians for its actions in global affairs.

The feminist movement of the second half of the twentieth century had a significant impact on Presbyterianism. Women had long played a central role in the work of the church, but discrimination kept them from filling positions of public leadership. PCUSA approved ordination for women as deacons in 1915 and then as elders (lay officers) in 1930. It was not until the 1950s that the PCUS approved ordination for women as deacons and elders. In 1956 the PCUSA removed the bar against women's ordination to the ministry, and that same year Margaret Towner became the first woman so ordained. In 1964 the PCUS took the same step, and the next year Rachel Henderlite was ordained in that denomination. The first women to serve as moderators of general assemblies were Lois Stair, an elder in the UPCUSA (1972), and Sarah Moseley, an elder in the PCUS (1978).

Achieving full right to ordination marked an important milestone for women. Other issues remained, however. The church's tradition of exclusively male language to refer to God and to the human family was challenged as women urged the church to enrich its vocabulary with more inclusive language. Feminist and womanist theologies reexamined the doctrines of Christianity from the perspective of women's experience of discrimination. Women also worked for representation on church boards and agencies. As with African Americans, full acceptance of women as church officers and pastors came slowly, but changes were made. By the turn of the twenty-first century, approximately 50 percent of students in Presbyterian seminaries were women.

Presbyterians also confronted myriad issues related to sexuality. The biggest debate centered on the question of homosexuality. In 1978 the UPCUSA General Assembly declared homosexuality a sin and denied ordination to any "practicing" (noncelibate) gay or lesbian. Observing that the Bible's statements regarding same-sex intercourse had nothing to do with homosexual orientation itself but spoke specifically only against the act itself, the denomination opened the door to ordination for homosexuals who remained celibate. Homosexuals and their supporters argued that same-sex attraction was a natural condition of their birth and, therefore, not a sin at all. They pushed to remove the ban on ordination. In 1997 the PC(USA) added an amendment to its constitution that said those seeking ordination in the denomination should "live either in fidelity within the covenant of marriage between a man and a woman, or chastity in singleness." Attempts to reverse the amendment and its application have failed, and the barrier to ordination for homosexuals living in relationships persisted into the twenty-first century.

Conclusion

Clearly, Presbyterianism underwent deep and broad-reaching change through the twentieth century. Those changes were accompanied by a shift in status and demographics. Between 1966 and 1988, the two denominations that formed the PC(USA) declined nearly a third in membership, a trend that continues into the twenty-first century. A number of factors may account for that decline. Some left the denomination because they believed it was too liberal. Some, especially baby boomers, simply found the church insufficiently relevant to their lives and drifted away. As aging members died, there were too few young people to replace them. As the church embraced theology through social action in the 1960s and

1970s, it failed to educate its members on the importance of the faith. With the decline in membership came a loss of social influence in the nation and government.

The church had grown in other ways. The rise in diversity through fuller participation of African American, women, Korean (a rapidly growing group of Presbyterians as a result of mission work there), and Hispanic Presbyterians brought new gifts and perspectives to the church. Liturgical renewal and the practice of spiritual disciplines revitalized the life of faith for many. The commitment of many local congregations to mission in their neighborhoods made a difference in the cities where they existed. Presbyterianism had changed over the course of the century, and it remains an important force in the religious landscape of the nation.

Progressivism

The term “progressivism” was first used in the late nineteenth century and nearly always referred to reform, change, innovation, or radicalism. Characterized by unprecedented economic, demographic, and social changes, for some the Progressive Era was a period of unbounded promise and limitless opportunities; for others, it was an era of ambivalence and uncertainty about the world emerging before them. Industrialization, urbanization, and immigration challenged the agrarian, rural, and Protestant culture that had shaped America since the seventeenth century. Progressives genuinely believed in their ability to improve the lives of all Americans by creating a more democratic, efficient, and just society, but they often disagreed about the specific methods and intended outcomes of their efforts. Some of the leading reformers were ministers and other religious leaders, who believed that their efforts would pave the way for the Second Coming of Christ and that churches would maintain their position as the guardians of society. Their reform measures, many of which began in the late nineteenth century, found expression in the early twentieth century, but these religious reformers ultimately lost their cultural authority as social scientists, politicians, and government bureaucrats came to dominate the reform movements. Intellectual changes, which also had their roots in the previous century, led to new ways of viewing the world and to sharp disagreements that resulted in denominational division and the formation of new religious movements. These changes left an indelible mark on the country, and, as some historians have argued, led to the emergence of modern America.

Industrialization—Urbanization—Immigration

The shift from an agricultural to an industrial society in many ways forced Americans to become less dependent on nature and more dependent on their fellow citizens, the whims of the market, and technological systems that were both physical and social. This shift also caused great concern for some people because they believed America was moving away from the familiar ethos of individualism, agrarianism, and Protestant evangelicalism toward a world of corporate dominance, ruthless robber barons, and godless factory workers.

Some Americans believed that the nation was losing its moral bearings while others believed that all of this progress and wealth was the result of God's favor—of being a city on a hill that would set an example for other nations to follow.

The changes brought by the Industrial Revolution resulted in two paradoxes. First, Americans became more transient and bound together by the telegraph and telephone wires and railroad lines that crisscrossed the country. People were able to move farther away from home without severing familiar social ties, but they also moved farther away from familiar social institutions, such as churches. Sometimes they abandoned those institutions and belief systems or integrated them into other systems; at other times their religious moorings provided stability and comfort in a changing world. Second, the greater productivity and increased consumer spending that accompanied the Industrial Revolution offered the prospect of a better life for native-born Americans and the millions of immigrants who were crossing the nation's borders. Most of the wealth and attendant power, however, were placed into the hands of a few financiers and captains of industry. By 1900, many politicians, social reformers, and religious leaders were calling for social, economic, and political reforms to correct some of the ills they saw in American society.

Most of these ills existed in the burgeoning American cities. In 1890, the U.S. Census noted that 22,106,000 people lived in urban areas—about 35 percent of the total population. Thirty years later, the 1920 census revealed that 54,158,000 people lived in cities, and, for the first time in American history, a majority of the population—51.2 percent—lived in urban areas. The growth rate of the urban population was nearly double that of the total population. As farming became more mechanized and it became harder for small farmers to make a living, rural Americans flocked to the cities for jobs. A huge influx of immigrants chasing the American Dream also contributed to the dramatic growth of the cities. The New Immigrants, as they were called, came mainly from Southern and Eastern Europe, and they brought with them languages and cultures that differed greatly from earlier European immigrants. Religion was often the glue that held immigrant enclaves together in their new environment, but they faced seemingly insurmountable obstacles that Progressive reformers addressed through political, social, and religious contexts.

American Catholicism

American Catholics in the early twentieth century embarked on new intellectual ventures and became involved with

Progressive reform efforts to promote social justice and political and economic reform. They espoused a theologically conservative but socially progressive tradition that influenced the church's response to continued settlement and development of Catholic immigrants in America. John A. Ryan was one of the most influential Catholics who contributed to progressive social reforms. He favored the use of state and federal legislation to promote economic equality in America, and he developed a system of political economy shaped by Roman Catholic theology. Progressive-Era Catholics also adopted the popular trend of organizing fraternal and professional societies, such as the American Federation of Catholic Societies (1901) and the National Catholic War Council (1917), which sought to address many of the social, professional, and political problems of the day and to lobby for Catholic interests in public life.

Some of the most pressing issues for Catholics included education, labor, and suffrage—especially as they applied to women. Catholics started summer schools, evening schools, and reading circles to promote female education. They also founded four-year colleges for women, including Notre Dame of Maryland and Trinity College in Washington, D.C. The Catholic Women's Association of Brooklyn was formed to provide vocational training to help young Catholic women become self-reliant and self-supporting, and in 1900 it became a University Extension Center for the state of New York. Despite their initial reluctance to support labor unions, Catholic women joined the Women's Trade Union League and an affiliate of the American Federation of Labor, and they were led by Catholic activists such as Mary B. O'Sullivan, who championed a woman's right to work. Many of these labor reform efforts also focused on women's suffrage. An early Catholic suffragist was Jane Campbell, who founded the Philadelphia County Woman Suffrage Association and served on the executive committee of the National American Woman Suffrage Association. As the Progressive Era came to a close in 1920, American Catholics had developed a sense of national unity and were confident that they could help shape American society in the twentieth century. In many ways, the Catholic Church emerged from the Progressive Era as a distinctly American church with its own domestic social agenda and a religious mission to the rest of the world.

American Judaism

The American Jewish population before the Civil War had its roots in Germany, but Eastern European—especially

Russian—Jews flooded into America between 1880 and 1920. These immigrants faced the same hardships that other immigrants faced, which led some Jewish leaders to embrace Progressive reform efforts. Reformer Hannah G. Solomon formed the National Council of Jewish Women (NCJW) in 1893, which promoted religion, philanthropy, and education. The organization initially had a strong emphasis on religious education for Jewish women, but it quickly came to focus on social reform for immigrant women and their families. Its leaders helped pioneer the settlement house movement, championed civil rights for women and children, and organized vocational, educational, and social programs for Jewish women and children. In the first decade of the twentieth century, the NCJW formed a port and dock department to help find housing and employment for new immigrants. It lobbied Congress to pass laws that addressed pressing social needs, such as low-income housing, child labor and welfare, public health, food and drug regulations, and civil rights, for Jewish immigrants. It also worked with the Red Cross to raise money for humanitarian efforts during World War I. The Young Men's and Young Women's Hebrew Associations and the Central Conference of American Rabbis also championed social reform and developed educational programs for Jewish immigrants.

Social Gospel

Despite growing diversity, American religious life in the United States during the Progressive Era was still predominantly white, Anglo-Saxon, and Protestant, but one can also find the roots of modern religious pluralism in this period. There were an estimated 26 million Protestant Americans in 1916, many of whom were Methodists, Presbyterians, Congregationalists, Episcopalians, or Disciples of Christ. Although other groups challenged the authority of these denominations, mainline Protestants entered the twentieth century with unbridled optimism about the future of their nation and their religion. They believed that their brand of Christianity was “right” and that their form of Protestantism should continue to hold sway in American culture. Throughout America's history, mainline Protestants had exerted tremendous influence on religion, business, government, and society. With all of the changes taking place at the turn of the century, they saw an opportunity—even a responsibility—to continue to expand their cultural influence.

The Progressive movement was rooted in the Social Gospel that gained notoriety in the late nineteenth century. Proponents of the Social Gospel rejected the emphasis that

Protestants had traditionally placed on individual salvation and personal responsibility, arguing instead that Christians needed to focus on solving the larger social problems caused by industrialization, immigration, and urbanization. They believed that churches, businesses, and the government should apply a Christian ethic to correcting those ills. They also believed that Christians and religious institutions should get involved with the political, economic, and social issues that had often fallen outside the purview of nineteenth-century evangelical churches. Baptist seminarian Walter Rauschenbusch (1861–1918) provided the theological foundation for the Social Gospel. His decade-long pastorate of a German-American church located in Hell's Kitchen—one of New York City's most impoverished neighborhoods—profoundly shaped his views about the relationship between Christians and modern industrial society. He saw firsthand the hardships these tenement-dwellers faced as a result of economic deprivation. Through books such as *Christianity and the Social Crisis* (1907), *Christianizing the Social Order* (1912), and *A Theology for the Social Gospel* (1917), he tied social justice to advancing the kingdom of God on earth. He argued that the disparity between the rich and the poor in America was the result of an unfair capitalist system and that Christians' lack of concern for the working classes correlated to a lack of social justice in the nation. He promoted programs and institutions that met both the physical and spiritual needs of urban residents, he supported the use of labor unions to achieve economic justice, and he was one of the leading spokesmen for social justice at the height of Progressivism's popularity.

Gender and Race

Women, who had been important leaders in reform movements throughout the nineteenth century, also promoted the Social Gospel and Progressive reform. Although she worked in the shadow of the famous reformer Jane Addams in Chicago, Mary McDowell became an influential leader in the settlement house movement during the Progressive Era. McDowell directed the University of Chicago Settlement located in Back of the Yards, the setting for Upton Sinclair's muckraking novel *The Jungle* (1906). She readily acknowledged the religious roots of her social activism, contending that her settlement house work brought meaning to her religious life. She worked to improve sanitation and health conditions in the area, she took the unpopular position of supporting a meatpackers' strike in 1904, and she supported politicians whom she believed shared her concerns for social

justice. As historian Susan Curtis noted, McDowell's religious values provided the basis for her support of progressivism in the early twentieth century. By her own admission, she sought to blend her political and religious views through her work in the Social Gospel movement.

Progressives also addressed race relations in the South. Unlike the urban Social Gospel movement that emerged in response to changing social and economic conditions, this stream of the movement was part of a continuous theme of religious reform in the nineteenth century. Voluntary associations, such as home missionary societies, formed in the 1800s to bring salvation to all Americans and to address a variety of social ills. By the end of the nineteenth century, lynching had become the primary issue that religious reformers faced in the South. As historian Ralph E. Luker noted, Progressives began to focus on the basic humanity of black people, arguing that their natural rights should be protected by the Constitution just like those of white people. Reformers organized the National Association for the Advancement of Colored People (NAACP) in 1909, which promoted African American civil rights throughout the twentieth century and beyond. Although these reformers maintained a wide array of positions on race relations, they all agreed that African Americans should be treated humanely and given the same basic civil rights that other American citizens enjoyed.

Liberal Protestantism

In addition to race and gender, Progressives continued to focus on the changing demographic makeup of the nation. In 1908, over two dozen denominations formed the Federal Council of Churches of Christ in America (FCC) to promote ecumenism among Protestant churches and to address the social and economic problems caused by immigration, industrialization, and urbanization. At their first meeting, Methodist minister Frank Mason North presented a report titled "The Church and Modern Industry," which called for churches across the nation to improve working conditions for the working-class poor. The FCC adopted these recommendations and codified them into the Social Creed of 1908. Member churches lobbied for workers' rights and FCC leaders became the contact points between the churches and government officials. The FCC also established the Social Service Commission to develop programs that would aid urban residents, to mediate disputes between workers and management, and to encourage workers to become active in their local churches. The FCC gained influence as the "normative" religious viewpoint and often

spoke on behalf of all American Protestants. These churches and religious leaders, however, were often more liberal than some of their coreligionists, and not all Americans agreed with the FCC's philosophy.

Many conservative Christians believed that the church should focus on individual salvation rather than on collective reform measures. The rural and urban poor often left mainline denominations to establish their own religious movements, sects, and denominations because they did not fit well socially or theologically into mainline Protestantism. Pentecostals, for example, seldom participated in the Progressives' social reform initiatives, choosing instead to focus on meeting the spiritual and physical needs of individuals. They assumed that *people* could improve, but they were not convinced that *society* could improve until the Second Coming of Christ. Despite their rejection of Progressivism, Pentecostals advanced some of the Progressives' social agenda by promoting racial and sexual equality and by providing for the physical needs of the poor and destitute souls that joined the Pentecostal ranks.

Fundamentalism

Progressivism must also be understood in the context of the debate between modernists and fundamentalists. Despite a long history of social concern among religious conservatives throughout the nineteenth century, fundamentalists staunchly opposed the "social Christianity" of Progressives and Social Gospelers between 1900 and 1920. Historian George Marsden argues that this "Great Reversal" occurred because, according to fundamentalists, the Social Gospel emphasized social action at the expense of an emphasis on personal salvation. Fundamentalists believed that good works and social action were a response to the regenerating work of God's grace in a Christian's life after he repented of his sins and became totally dependent on God for his salvation. Although proponents of the Social Gospel and Progressivism did not reject the importance of faith and personal beliefs, they implied that doctrine and faith were only evident through social action. Fundamentalists believed that faith was just as important—if not more so—than one's actions and that the two were inseparable.

As Progressivism gained acceptance in the first quarter of the twentieth century, the fundamentalists' attacks became more strident. They were afraid that their emphasis on personal salvation would be overshadowed by the pragmatism of social action. They also opposed the Social Gospel's emphasis on ushering in the kingdom of God on earth

through human progress, which contrasted sharply with their premillennialist view that society would only get worse before the Second Coming. Fundamentalists attacked these liberals on theological, political, and social grounds, and as Progressivism gained acceptance among Americans, the conservatives felt increasingly isolated. By the 1920s, the fundamentalists stopped trying to defend revivalism and social action altogether, and they placed themselves squarely in the conservatives' camp, directing their criticism toward the liberal proponents of the Social Gospel and the Progressive movement.

Conclusion

The Progressive Era was a period of growth, transformation, and reform, which witnessed the birth of modern America. The huge influx of new immigrants into the United States laid the foundation for a truly diverse and pluralistic religious culture in the twentieth century, and urbanization and industrialization set the stage for massive reform efforts that shaped the way religious groups, government, and businesses interacted with the American people. The intellectual changes forced many Americans to reevaluate their basic worldviews and their religious beliefs. The conflicts and divisions that occurred in the Progressive Era led to the establishment of new religious movements and the rise of new cultural authorities, and they helped shape the religious landscape for the rest of the century.

In *A Consuming Faith: The Social Gospel and Modern American Culture* (1991), Susan Curtis argues that the Social Gospel provided a bridge between the Protestant Victorianism of the nineteenth century and the secular consumer culture of the twentieth century, thereby easing the transition during the Progressive Era. Proponents of the Social Gospel were disturbed by the rapid changes taking place as a result of industrialization, urbanization, and immigration, and they became critics of the ethos that produced those changes. Furthermore, they supported the progressive reforms taking shape in modern political culture, and their ideology provided a religious and philosophical basis for those reforms. They sought not only to shore up the Christian foundations of American society but also to Christianize the rest of the world. They wanted government and business to respond to their calls for social justice and to provide the institutional resources needed to correct the vast array of social ills in the United States. These women and men thought that they—the religious leaders—would shape progressive reform in the twentieth century. By the end of World War I, however,

their ideal of a just and socially responsible society based on their interpretation of the Christian message had been replaced by a secular vision of Progressivism that strengthened the relationship between business and government and emphasized national security and prosperity. These reformers used the language and promotional tactics of the modern consumer culture to “sell” their ideas to the public and to government and business leaders. By the 1920s, the Social Gospel had been subsumed into the secular culture, and the religious leaders had surrendered much of their cultural authority to politicians and businessmen.

In the end, the Progressive movement did not produce any radical changes in the American system. The nation's political and economic systems remained essentially intact, and the basic structures of society were not radically altered to produce visionary changes. Progressivism did, however, produce pragmatic changes that resulted in modifications of the American governmental system, and these lasted for the remainder of the twentieth century. Government regulation to protect the public from corporate abuse, the seeds of the modern welfare state, and modern notions of public charity were firmly established during this period, due in large part to the efforts of women and men such as Mary McDowell, Walter Rauschenbusch, and Hannah G. Solomon. Whether or not it was the world they intended to create, Progressives introduced modern America to the rest of the world and laid the foundation for America's role in a global society.

Prohibition

In 1920, the Eighteenth Amendment to the Constitution went into effect, making the "manufacture, sale, or transportation of intoxicating liquors" in the United States illegal. That constitutional amendment capped a nearly century-long effort by a variety of groups and individuals to restrict or prohibit the use of alcohol in the country. This occurred as part of a religious drama in which reformers sought to mitigate what they perceived as the nation's moral decline and to instruct Americans on how they should live. Prohibition was not exclusively a religious movement, and it points to the sometimes complicated position of religious people in public life. First, it was a movement of religious people trying to harness the power of a secular government to achieve a desired moral end. As such, it brought into sharp focus the tension between a particular religious vision for the country and preserving individual civil liberties. Second, as the country grew and underwent economic and demographic changes, reformers' moral vision looked to some like social control of unruly immigrants and lower classes. But it would be a mistake solely to ascribe social and political explanations to what was, for its advocates, primarily a religious movement. Third, controlling alcohol and liquor use brought into sharp relief tensions between states' rights and federal authority.

Origins of Temperance Movement

Temperance ideology in America originated with Benjamin Rush in 1784. Rush drew a distinction between distilled spirits and fermented beverages. The former were dangerous, leading to poverty, crime, and disease, among other maladies. The latter were beneficial, even healthful. The problem Rush

confronted was not small. Indeed, alcohol consumption in the colonial era was scandalously high—it was considered safer and more nutritious than water. By 1820, Americans consumed an average of 4 gallons of alcohol per capita. Rush's efforts to restrict alcohol consumption amounted to attempts at moral suasion. That is, Rush attempted to use reason and moral argument to convince others that to stop drinking was the right thing to do. Moral suasion encouraged self-reliance and the individual's desire for self-improvement. A physician himself, Rush devoted much of his attention to convincing other physicians and ministers of the benefits of limiting strong drink.

According to historian Jack S. Blocker Jr., Rush's temperance campaign proved to be the beginning of a cycle of reform that would be repeated through the twentieth century. Failure of moral suasion led to calls for legal coercion. Parallel to this development was a change in beliefs about the effect of liquor on society. Originally, overindulgence was seen as an individual issue; a person's actions led to such evils as crime, poverty, and broken families. These individual sins were made worse by the spread of the market economy, which created exciting—and frightening—new opportunities for labor and entrepreneurs alike. Most significant, the market economy helped to remove drinking from family and community control. Rather than drinking at home or in a carefully controlled environment with employers, workers now drank in taverns, away from oversight of their social "betters." What originated as an individual sin, then, eventually became a social problem.

Antiliquor reform proved to be a cauldron of racial, ethnic, and class tensions, with religious activism often stoking the fire beneath. In response to the spread of the market economy, reform groups such as the American Temperance Society (ATS) were founded. Formed by evangelical Protestant clergymen in 1826, the ATS adjusted its message to push for total abstinence from liquor rather than moderation. Some historians have argued that this was social control: evangelical factory owners and merchants' attempts to use Christianity to exercise moral influence over the working class. After all, recent German and Irish immigrants filled up saloons and had little patience for arguments about the evils of strong drink. These Catholic newcomers seemed to ignore Protestant American mores and drank on Sunday. They were easy targets for reformers.

Other scholars, however, have demonstrated that Christian reformers' goals and influence were broader than simple social control. In fact, workers themselves willingly attended

revival meetings and took up the antiliquor cause. Formed in Baltimore, Maryland, in 1840, the Washington Temperance Society, for example, consisted of working-class former drunkards who shared their own struggles with alcohol and preached the virtues of self-control. And evangelical reformers took up other causes besides temperance, including protecting Sunday as the Christian Sabbath and abolishing slavery. Moral reform, then, demonstrated the continuing relevance of Protestant Christianity in the public sphere and Christianity's ability to adapt to modern circumstances.

Late Nineteenth Century: Cycle of Prohibition, Relaxation, and Political Organization

The turn from moral suasion to legal coercion demonstrated Protestant Christian reformers' ability to harness the power of modern interest group politics to achieve their vision for American society. In the face of what they believed was obvious and growing immorality, reformers realized that moral suasion would not be enough. Instead, they would need to use the power of government. Early efforts at legal coercion were state level. In 1851, Maine became the first state to ban liquor sales statewide. Within four years, twelve other states followed suit. It was no coincidence that these first attempts at legal coercion occurred at the same time as the political success of the nativist Know Nothing party, which made restricting liquor an integral part of its political agenda. Although the pattern would be repeated in the late nineteenth century, this reform cycle could not last. One side effect of the Civil War was the return of a drinking culture, and by the 1870s, most states had reversed their earlier prohibition.

The cycle began again in the 1870s. This time women's political activism and prohibition went hand in hand. Founded in Ohio in 1874, the Women's Christian Temperance Union (WCTU) ushered in the country's first national women's movement. For leader Frances Willard (1839–1898) and other WCTU reformers, antiliquor activism marked true social reform. As part of the Social Gospel movement, it represented their attempt to make society more Christian. If the market revolution and presence of German and Irish immigrants in the mid-nineteenth century had posed a problem, then the growth of industry and the expansion of European immigration after the Civil War were particularly troublesome for someone trying to establish the kingdom of God on Earth.

Nevertheless, the WCTU was extraordinarily successful, with politically minded women filling local chapters all over the country. From the 1870s until the early twentieth

century, state-level prohibition was most successful where women earned the right to vote. Despite its name, however, the WCTU had a broader agenda than just liquor. In addition to its antiliquor program, the WCTU also pressed for women's suffrage, equal pay for women, day care for children, and workers' safety.

In 1893, organizers from Ohio and Washington, D.C., formed the Anti-Saloon League (ASL). Led by men, the ASL focused on one issue, prohibition, and it blamed liquor for all moral and social problems. "[B]egun by Almighty God," the ASL enjoyed enormous political success, primarily because it fashioned successful lobbying efforts at the state level. Unlike its mid-nineteenth century temperance counterparts, the ASL avoided aligning with any one political party. "Omnipartisan" in its approach, the ASL studied voting records, identified sympathetic candidates, and then endorsed those men for public office. Drawing its energy and support from Protestant clergy and laity, the ASL was strongest in the South, West, and rural North. Between 1907 and 1915, ten southern states outlawed liquor, with most states outside the urban northeast quickly following suit.

Extending Temperance Laws to the Federal Level

By 1917, most states had some form of temperance law. Twenty-seven banned liquor statewide, and others gave local municipalities and counties the option of being wet or dry. Piecemeal, local efforts often ran into obstacles, however. The most bothersome was that state level prohibitions had no influence over interstate commerce. That was the constitutional domain of the federal government. Attempts to convince the federal government to use its authority over interstate commerce ran into protests rooted in state sovereignty and personal liberty. In 1890, Congress passed the Wilson Act, which made liquor shipped into one state from another subject to the receiving state's laws. The United States Supreme Court objected to the major provisions of the Wilson Act, thereby opening up opportunities for interstate liquor sellers to ship directly to individual customers in otherwise dry states. In 1911, Christian lobbyists in Washington, D.C., brought together a variety of temperance workers from across the nation. They proposed what became the Webb-Kenyon bill, which gave the federal government the authority to end the interstate shipment of alcohol.

Passage of the Webb-Kenyon Act revealed several shifts in federal policy and attitudes toward moral reform. First, considerations of states' rights and personal liberty diminished; the dangers of alcohol were real and, in order to maintain a

proper moral order and keep otherwise decent people from the temptations of sin, Congress must act. Second, Christian lobbyists represented a well-organized group of politically motivated Protestant laypeople. They successfully mobilized like-minded Christians and demonstrated their voting power to politicians. This was interest group politics that later observers of the Christian Coalition and Religious Right would recognize and appreciate. Third, the center of Christian religio-political power shifted from New England and the Mid-Atlantic States to the South and West.

With the assistance of southern congressmen and lobbyists, then, the ASL and the WCTU pressed for national prohibition. A changing national climate prepared the way. New individual Christian voices such as evangelist Billy Sunday and Democratic politician William Jennings Bryan joined efforts to convince Americans of the need for prohibition. Beyond those efforts at persuasion, ratification of the Sixteenth Amendment provided for an income tax, the revenue from which could replace the revenue generated from liquor taxes. More importantly, World War I made protecting American soldiers from vice especially important. What was more, resources that normally went for brewing needed to be diverted to the war cause, and brewers who dominated shipping interfered with the transport of necessary wartime materiel. Prohibition, then, became a patriotic necessity. The Eighteenth Amendment to the Constitution passed Congress in 1917. Ratification occurred in January 1919, and it took effect the following year.

The new amendment needed to be enforced, and “intoxicating liquors” needed to be defined. Sponsored by a Republican congressman from Minnesota, the Volstead Act was written under the influence of the ASL. The Act set a legal limit of 0.5 percent alcohol, but it allowed private use of alcohol in one’s home. Christian lobbyists had hoped to end all use—private and public—so this personal exemption did not go as far as the antiliquor lobby had hoped. Nevertheless, the Eighteenth Amendment and the Volstead Act promised a larger role for the federal government in enforcing moral regulations. Even with certain exemptions for religious use, this meant an expanded federal bureaucracy and the active presence of the government in people’s private lives.

Critical Assessment

Historians have disagreed over how to interpret Prohibition. Was it a failed social experiment or legitimate social reform? Initially, many progressive historians concluded that it was a failed experiment, a reactionary movement that gave rise to

organized crime and violations of civil liberties. Organized crime did flourish, and many ordinary Americans flouted the law. More recently, some historians have placed Prohibition into its larger reform context. It was the logical outcome of the nineteenth-century movement to properly anchor the country in the Christianity of its founders and to help to usher in a new millennium and the kingdom of God. At least through the early 1920s, alcohol use declined, and incidences of the diseases and social problems often associated with alcohol also went down. In this interpretation, Prohibition actually worked.

In the 1920s, groups such as the Association Against the Prohibition Amendment actively worked for repeal or at least modification of the Eighteenth Amendment. Little changed legally, however, until the onset of the Great Depression. In 1928, the “dry” Republican Herbert Hoover had defeated the “wet” Democrat Al Smith for President. But the Depression opened a door for Democrats, and the Twenty-First Amendment to the Constitution repealed the Eighteenth and returned the authority over controlling liquor to the states. One reform cycle ended, and a new one would begin.

Protestant Liberalism

Depending on the context, the word *liberal* can take on a variety of meanings. What is considered liberal in one

historical period may be conservative or radical in another time or place.

In religion, *liberalism* refers not to a political paradigm but to philosophical and religious positions with social, economic, and political implications. The use of “liberal” to distinguish different types of Protestants does not refer to denomination but to a spectrum of Protestant religious groups falling between conservative Protestantism and secular humanism. Unlike conservative Protestants, liberal Protestants display an interest in adapting Protestant thought and practice to modern challenges. Unlike secular humanists, liberal Protestants prefer to work within existing social, economic, and political structures.

European Roots

Protestant liberalism in America fully emerged in the nineteenth century. Its roots, however, began in Europe much earlier with several philosophical movements. First, Arminianism influenced American liberals. Based on the ideas of Reformation-era figure Jacob Arminius (1559/60–1609), Arminian theology rejected the Calvinist notion of predestination and stressed individualism and free will. Arminians believed that individuals played a role in obtaining their salvation. As many American Protestants moved toward liberalism, they used Arminianism to critique predominant Calvinist ideas. Second, the European Enlightenment set the stage for Protestant liberalism as philosophers such as John Locke (1632–1704) challenged the authority of Catholic and Protestant churches. Locke argued that humans received knowledge through their ability to reason rather than from God. Likewise, scholars such as Sir Isaac Newton (1642–1727) challenged dominant Christian conceptions of the universe by explaining nature through physical laws rather than revelation. Enlightenment scholars opened the door for new sources of authority by utilizing empirical evidence as a basis of truth. Enlightenment values of intellectual inquiry, religious toleration, and the use of reason and empiricism appeared in a third European movement that influenced liberalism in America.

Scottish Common Sense philosophy, the notion that God created all individuals with the ability to make proper moral judgments based on their senses, changed the way Protestants interpreted the Bible. Developed during the Scottish Renaissance of the mid-eighteenth century, Scottish Common Sense philosophy relied on both God and reason for discernment. Americans encountered these European movements through a transatlantic exchange of ideas. These European

movements shaped religion in America in a variety of ways, including through the establishment of institutionalized Protestant liberalism in America.

Early American Liberal Thought

Protestant liberalism began as a distinctive movement in America with the emergence of Unitarianism in the early nineteenth century. Unitarians distinguished themselves from other Protestant groups primarily through their denial of the Trinity, the notion that God exists in the three forms: Father, Son, and Holy Spirit. Preceding the Unitarians, Protestant Reformation figure Michael Servetus (1511–1553) had denied that the Trinity was a biblically sound doctrine. Servetus’s claim reemerged in the seventeenth century among a small group of English Christians who asserted the oneness, or “unitarian” character of God. Unitarian impulses had been brewing in America following the First Great Awakening in the early eighteenth century. Emergent Unitarians challenged the idea that God existed in trinitarian form and, using Arminian ideas, questioned the notion that all humanity was depraved through original sin. The most pivotal figure in nascent American Unitarianism was William Ellery Channing (1780–1842), who was the first person to outline an explicitly liberal Protestant theology.

Rooted in New England culture, Channing, like other religious liberals of his time, grew to distrust orthodox Calvinism and to display the hallmarks of liberal Protestantism. Channing departed from Calvinism by viewing God not as a wrathful being but an Arminian-inspired benevolent being who acted as a parental figure. He also thought that salvation depended on human free will rather than on God’s sovereignty and predestination. Channing considered the encouragement of ethical behavior to be the true purpose of Christianity. By emulating Jesus, Christians achieved holiness and virtue. Channing remained optimistic about humanity’s capacity for good because he thought that the likeness of God was present in every person. He was active in a variety of liberal causes, including abolition, women’s rights, temperance, pacifism, and abolition of capital punishment.

In 1819, Channing outlined the features of Unitarianism in particular and religious liberalism in general during an ordination sermon in Boston. First, Channing rejected the Trinity, challenging critics to find trinitarian references in scripture. Second, Channing stressed the fatherhood and benevolence of God. Channing described individuals’ relationships to God as loving, intimate parent-child relationships. Third, Channing asserted the humanity (rather than

divinity) of Jesus and the moral imperative of Christianity found in Jesus' example. Finally, Channing insisted on the need to use reason when reading the Bible. This shift in authority dramatically affected liberals' relationships to Christianity's sacred text. Liberal Protestants considered scripture divinely authoritative only when it could be corroborated through reason, conscience, or experience. Following Channing's lead, in 1825 liberal clergy members in Boston established the American Unitarian Association, the first formal liberal Protestant institution in America.

This adjustment to a liberal conception of Christianity challenged New England Protestant traditions that were based in Calvinism. Unitarians offered a dissenting voice. Theodore Parker (1810–1860) entered the Unitarian controversy when in 1841 he gave a sermon at Hawes Place Church of South Boston on “The Transient and Permanent in Christianity.” In his sermon, Parker revealed a firm commitment to a historical-critical method of studying Christian theology. Parker, influenced by German scholars like David Strauss (1808–1874), insisted that Jesus was a historical figure whom early Christians described as supernatural according to myths and not fact. Parker's views alienated him from Unitarians not only because he stressed the importance of viewing Jesus historically but also because he contended that the essence of Christianity did not rely on Jesus as a supernatural figure at all. The Civil War ended much of the debate between Parkerites and Unitarians. Following the war, however, Unitarians no longer considered Parker as controversial as they did prior to the war. Much like Protestant liberalism as a whole, Parker revised his theology to accommodate for changes to Christian truths uncovered through historical investigation.

By the 1830s, Unitarians had reached the mainstream in Boston. Harvard and its Divinity School came to fully represent and espouse Unitarian thought in America. The Unitarian community was shocked when one of its own offered a striking liberal critique. In his Divinity School Address at the 1838 graduation ceremony, Ralph Waldo Emerson (1803–1882) challenged the historicity of Jesus' miracles. Most Unitarians maintained that Jesus was a divine being who could perform miracles. Religious truth for Unitarians relied on Jesus as a supernatural figure. Emerson considered such a position contradictory to the Unitarian assertion of Jesus' humanity. Emerson turned away from the need for religious truth to be rooted in such supernatural acts as miracles. Emerson further insisted that supernatural beings were not necessary for revelation because humans could pursue and

find religious truth. Such convictions led Emerson to found a loosely knit intellectual and literary movement known as transcendentalism.

Transcendentalists avoided religious institutions and preferred informal fellowship through intellectual and literary pursuits. Emerson, like other transcendentalists, feared that miracles undermined the credibility of Christianity, especially in light of growing interest in science and empirical study. Miracles, for transcendentalists, were a false foundation for Christianity precisely because they could not be proven. Rather than counter orthodoxy with a progressive alternative such as Unitarianism, transcendentalists wanted to avoid these appeals altogether and use the human soul as the foundation of and starting point for Christianity. Their primary religious focus was on the immanence of God, the notion that God's presence pervaded all things. Transcendentalists believed that individuals could experience the divine anywhere, particularly in nature, because religious truth was immanent.

Consequently, transcendentalists encouraged individuals to pursue spiritual truth on their own. This pursuit affirmed both individual religious practice and the immanence of God. Henry David Thoreau (1817–1862), for example, purposefully isolated himself from civilization in order to find religious truth in nature. Through *Walden* (1854), readers could follow Thoreau on his journey and find inspiration for their own spiritual quests. In addition to Thoreau's asceticism, transcendentalists also practiced forms of communal living at places such as Brook Farm, founded by George and Sophie Ripley in 1844. Most notably, transcendentalism centered on the literary-minded Transcendental Club in Concord, Massachusetts, which included, among others, Emerson, Thoreau, and Margaret Fuller (1810–1850). This group created a literary journal, known as the *Dial*, that provided an outlet for their intellectual and spiritual pursuits. With Fuller as editor from 1840 to 1844, the *Dial* proved influential despite its small circulation. From nature walks to reading, transcendentalists expanded acceptable forms of religious practice for liberal Protestants.

Evangelical Liberals

While nineteenth-century Protestant liberalism developed its institutional and more radical ends among Unitarians and transcendentalists, liberalism also had a presence among evangelicals. These figures, collectively known as the “Princes of the Pulpit,” included Episcopalian Phillips Brooks (1835–1893) as well as Congregationalists Horace

Bushnell (1802–1876), Henry Ward Beecher (1813–1887), and Lyman Abbott (1835–1922). These ministers, like other liberals, rejected orthodox Calvinism and its strict adherence to the doctrine of original sin and determinism. Meanwhile they embraced biblical criticism, science, and scholarship. Despite changes, these ministers remained committed to the evangelical cause and its long-held principles, primarily a continued interest in mission work, the existence of sin, and the need for individual transformations. Their dual interest in evangelicalism and liberalism earned them the title “evangelical liberal.”

Horace Bushnell served as the epitome of evangelical liberalism. Bushnell shared the transcendentalists’ emphasis on the immanence of God and on the role of intuition as a way to connect to God. Bushnell also acknowledged that language was imprecise and fluid rather than static, like scientific facts. This challenged Protestants’ assumptions that theology could be expressed through formal creeds, doctrines, and statements of faith. Bushnell further distanced himself from other evangelicals by deemphasizing the need for an emotional conversion experience that resulted in a dramatic “new birth.” Instead Bushnell affirmed the liberal idea of continuity between the supernatural and the natural. In his most famous work, *A Discourse on Christian Nurture* (1847), Bushnell explained that individuals gradually developed their Christian character in their everyday lives. Firmly planting himself within liberalism, Bushnell insisted that “Christian nurture” took place in locations other than the church, such as at home, in school, and in public life. Bushnell served as a mediator between orthodox and radical views on science. Like all liberal Protestants, he considered science and religion to be complementary.

Henry Ward Beecher also served as a representative figure for evangelical liberals. As the pastor of Plymouth Congregational Church in Brooklyn, New York, from 1847 to 1887, Beecher asserted the need for Christians to “feel” God in their lives. Beecher discouraged his congregants from pursuing their intellectual impulses only. Abstract concepts were less important to Beecher than religious feeling. In the process, Beecher emphasized the immanence and benevolence of God by encouraging Protestants to view the Bible as an account of God’s interaction with humanity over time. Like other liberals, Beecher was optimistic about humanity’s ability to make the world a better place. He insisted that Jesus was best understood as an ethical and moral example whose life provided insight on how to conduct oneself. Beecher’s evangelical liberal message proved

popular as Americans experienced rapid change during the mid-nineteenth century. Beecher gained a wide following, including Abraham Lincoln, Walt Whitman, and Samuel Clemens (Mark Twain).

Slavery proved to be a wedge issue that gradually separated liberals from their conservative counterparts. Antislavery debates altered the basis of authority in Protestantism, pushing many Protestants toward liberalism. In order to maintain their stance against slavery, Protestants shifted the locus of authority from the infallibility of a sacred text to the reason and conscience of the individual believer. While conservative Protestants maintained that the Bible was a timeless text revealed by God, liberals increasingly viewed the Bible as a historical document shaped by the context in which it was written. As a result, liberals displayed a willingness to disregard or reinterpret scriptures that could not be confirmed through reason, experience, or empirical study. This shift set the stage for an intensified division after the Civil War. Liberal Protestants revised dogma in such a way that Protestantism could continually adapt to its context rather than remain rooted in static doctrines.

Liberalism Moves toward Maturity

Following the Civil War, American culture experienced rapid industrialization and urbanization. With the nation divided ideologically and in economic decline, Protestants experienced major changes. First, large denominations that divided over the issue of slavery widened the distance between their liberal and conservative ends. Second, voluntary organizations unaffiliated with particular churches proliferated in number and causes. Third, divisive doctrinal questions proliferated as Americans coped with rapid changes to economic, political, and social order. Fourth, denominations and churches altered their evangelism to cater to an urban rather than frontier audience. Many liberal Protestants became self-conscious of Christianity’s moral and intellectual progress.

A greater shift occurred within the nation’s leading seminaries and universities. American scholars followed trends among European intellectuals who dramatically departed from traditional approaches to Christian thought and history. For example, throughout the 1850s German Protestant theologian Albrecht Ritschl (1822–1889) concentrated on creating a systematic Christian theology that focused on individual sin and reforming society. Ritschl asserted that Christianity emphasized both redemption from sin and regeneration of society as necessary for the kingdom of God. A prolific writer, Ritschl systematized his ideas in *Instruction in the*

Christian Religion (1875). Adolf Von Harnack (1851–1930), Ritschl's student, extended his advisor's work by explaining the history of Christianity through a critical examination of historical texts. Liberals did not consider Christian ideas static but subject to social, political, and economic contexts. Historical circumstance, according to Harnack, played a pivotal role in explaining religion. One of Harnack's most influential works was *History of Dogma*, published in seven volumes in German from 1885 to 1890 and in English from 1894 to 1899. Harnack traced the history of Christian doctrines, such as the Trinity, to church councils of the fourth and fifth centuries. He concluded that Christian dogma increasingly adopted metaphysics and Greek influences over time. He also explained that Christianity possessed a fixed "essence" through Jesus. The Gospels, for Harnack, represented an unchanging and timeless quality within Christianity that did not require metaphysics, dogma, or even institutions.

In addition to these changes in higher education, comparative religion as a field of study also developed in the mid-nineteenth century. German scholar Max Müller (1823–1900) led the turn toward the "scientific" study of religion with *Introduction to the Science of Religion* (1873). Müller compared religions by studying philology, the structure and development of language and language families. Müller and others advocated learning about other religions by reading sacred texts, finding patterns or similarities among different religions, and striving for scientific objectivity in the assessment of religious beliefs. The realization of similarities among world religions affirmed and encouraged ecumenism and pluralism, two hallmarks of religious liberalism. Books such as Unitarian James Freeman Clarke's *Ten Great Religions: An Essay in Comparative Theology* (1871) appealed to many liberal Protestant clergy. Interest in comparative religion reached a popular level after the World's Parliament of Religions at the Columbian Exposition in Chicago in 1893. Representatives of major world religions assembled to demonstrate ecumenism and progress. As a result of comparative religious study, liberal Protestants no longer defended Christianity as an exclusive bearer of religious truth. The development of comparative religious study and historical-critical method in Europe expanded liberal thought on both sides of the Atlantic.

As a result of these European impulses, formerly orthodox institutions in America, such as Congregationalist Andover Theological Seminary, incorporated these methods into their curricula. While the movement may have begun in the

Northeast, Chicago quickly became the geographical and intellectual center for liberalism. As institutions shifted their curricula, the purpose of religious education shifted more generally. Education became an opportunity to instill proper Christian character into the minds and spirits of young people. Psychology and progressive worldviews became just as, if not more, important than religious doctrine. Liberal professors such as Charles A. Briggs (1841–1913) of Union Theological Seminary in New York City committed themselves to academic freedom, a concept pioneered at German universities. Academic freedom proponents explained that intellectuals must have the liberty to teach, study, and research without restriction by others in order to seek knowledge and truth. Briggs and others claimed academic freedom as justification for pursuing new forms of religious truth in biblical criticism, comparative religion, physical sciences, and social sciences.

Research universities and academic freedom shaped the way liberal religious groups engaged in public life. The field of social science emerged in the early twentieth century as an empirical study of formally "moral" topics such as economics, politics, and society. Scholars, especially liberal Protestants, brought their own philosophical worldviews to their scientific studies. For instance, economist Richard Ely (1854–1943) developed a critique of laissez-faire capitalism through ethical and empirical claims. Social science and theology merged explicitly with the academic study of Christian ethics. Harvard professor Francis Peabody pioneered this field with his book *Jesus Christ and the Social Question* (1900). University courses that addressed Christianity's approach to public issues such as poverty, capitalism, and unionization became commonplace as another form of Protestant liberalism, the Social Gospel movement, emerged. Liberal Protestants embraced education in all its forms because they considered knowledge to bolster inner spiritual authority and religious practice.

The Social Gospel applied Christianity to social issues in contemporary society. Proponents such as Washington Gladden (1836–1918) and Walter Rauschenbusch (1861–1918) built on the antebellum evangelical liberal foundation by applying the moral precepts found in Jesus' life to a broader array of social issues relating to industrialization, urbanization, and capitalism. Whereas the evangelical Princes of the Pulpit focused primarily on the individual and their inward transformation, Social Gospel leaders gave equal or greater weight to transforming society as a whole. As the pastor of the Second German Baptist Church of New York City,

Rauschenbusch immersed himself in social science research in order to make Protestantism relevant to the problems associated with the urban working class. Rauschenbusch emphasized the need for “social salvation” in addition to individual piety because he thought humanity experienced individual and social sins. *A Theology for the Social Gospel* (1917) and *Christianity and the Social Crisis* (1907) best captured Rauschenbusch’s liberal construction of sin, salvation, and Christian ethics. Rauschenbusch argued that Protestants should no longer neglect the social order but save the world from the sins created through class stratification. Christians, according to Rauschenbusch, had a duty to sacrifice for the sake of others. Consequently, Social Gospel activists engaged in civic action as an extension of individual religious practice. Protestant liberalism more broadly encouraged participation in the temporal world rather than as simply preparation for the afterlife. Christians, in the minds of many liberals, should be expected to perform good works for the sake of others. Eternity and salvation were less important than moral action, proper behavior, and social and political progress. This blurred the lines between sacred and secular behavior as liberals initiated public reforms through voluntarism, legislation, and professional careers.

Twentieth-Century Protestant Liberals

While Social Gospelers such as Rauschenbusch connected church life to public life, another liberal group focused primarily on individual religious experience. This portion of liberal Protestants moved away from a religion centered on revelation to a religion centering on religious experiences. Harvard philosopher and psychologist William James (1842–1910) paved the way for liberal Protestant mystical experiences in his *Varieties of Religious Experience* (1902). Through this work, James established a branch of philosophy known as Pragmatism. Pragmatists believed that truth was found not in the logic of an idea but in the degree to which individuals could use it in their everyday lives. Since religious experiences were not necessarily logical, James contended they could not be rendered empirically true or false.

Not all modernists remained as tolerant of other forms of religious thought and practice. For instance, Baptist minister Harry Emerson Fosdick drew battle lines between liberal Protestantism and conservative Protestantism during the interwar years. On May 21, 1922, Fosdick delivered the sermon “Shall the Fundamentalists Win?” while an interim pastor at First Presbyterian Church in New York City. By 1922, conservative Protestants had outlined their theology in the

Fundamentals, a twelve-volume exposition published from 1910 to 1915. This collection of essays rejected biblical criticism, evolution, and other aspects of liberalism while affirming traditional doctrines like biblical inerrancy, the notion that the Bible is free of errors. Fosdick portrayed self-designated fundamentalists as not only opposed to modernity but also on the brink of taking over American Protestantism. Liberals emerged from the 1920s as the apparent victors of a liberal-conservative culture war. The so-called Scopes Monkey Trial of 1925 left fundamentalists reluctant to remain in the public eye while liberals dominated the public sphere. Conservatives withdrew from mainline denominations and liberals filled pews, church rosters, and seminaries. Major centers of liberal thought included Union Theological Seminary in New York City, the University of Chicago Divinity School, and Boston University School of Theology. Protestant liberalism, by the 1930s, firmly established itself as the mainstream of Protestant thought. Composed of mostly white, middle-class Americans, liberal Protestants proved to be the religious standard against which “outsiders” would be compared.

Theological Critiques of Liberalism

The widespread disillusionment following World War I caused many Americans to challenge liberal assumptions about human nature and religion’s role in society. Prior to the war, liberalism fostered optimism about humanity’s capacity for ethical behavior and improving conditions in society. Liberals considered Christianity the mechanism through which individuals could improve their lives. Since Protestant liberalism based its identity on the goodness found in each individual, the hope of social progress, and a benevolent parental relationship with God, it no longer appeared realistic to many Protestants. Following World War I and especially following World War II, humanity appeared less likely to be altruistic and more likely to act in self-interest. Sin appeared to be a more accurate measurement for human behavior as Christians considered their role in a world evidently deprived.

Following World War I, liberalism’s sharpest critique came from a new movement within Protestantism called “neo-orthodoxy.” Neo-orthodox scholars returned to the works of Protestant Reformation figures, primarily Martin Luther and John Calvin, and the medieval-Christian figure Augustine of Hippo. In addition to these Christian figures, neo-orthodoxy relied on the work of Søren Kierkegaard (1813–55) and his emphasis on encounters with God. Kierkegaard’s major

works, such as *Fear and Trembling* (1843), were translated into English in the 1940s. Swiss theologian Karl Barth (1886–1968), however, spurred the neo-orthodox movement with the publication of *The Epistle to the Romans* (1918; translated into English 1932). Barth affirmed the Calvinist conceptions of human sin, the need for God’s revelation, and the certainty of judgment from God. Meanwhile he maintained the liberal rejection of predestination.

In America, the two most influential neo-orthodox thinkers were brothers Reinhold (1892–1971) and H. Richard Niebuhr (1894–1962), who expanded on Barth’s ideas. With *Moral Man and Immoral Society* (1932), Reinhold Niebuhr devastated the Social Gospel movement by asserting the inherent differences between the behavior of individuals and of social groups. He accentuated the lack of correlation between improving individuals’ moral lives and the morality of society as a whole. This distinction exposed the Social Gospel’s assumption that individual transformations could reform society and that improving social conditions could change individual character. H. Richard Niebuhr examined the Christian Church through sociological methods in *The Social Sources of Denominationalism* (1929). Niebuhr offered a dramatically different perspective of the Christian Church. He illustrated how Christianity was divided according to class, race, ethnicity, and region. The Niebuhrs’ critiques highlighted the perhaps naïve focus on social solidarity, equilibrium, and moral character found in liberal Protestantism. By contrast, the Niebuhrs emphasized “realistic” views of the world and of Christianity, in which responsibilities and conflicts prevail over individual moral character and social unity.

Neo-orthodox critiques reverberated with many Protestants after World War I and the Great Depression. The “War to End All Wars” left Americans pessimistic about human nature and the moral progress of humanity. Many returned their focus to original sin, depravity, and atonement. However, this did not necessarily correspond to a return to orthodox beliefs about predestination or biblical inerrancy. Neo-orthodox critiques may have proved fitting and consequently slowed liberal growth, yet liberalism pervaded American culture in the early twentieth century. Liberals’ emphasis on God’s immanence, individualized spiritual experience, ecumenism, and social reform proved to be mainstays of popular American ideas about religion despite neo-orthodox critiques.

The combination of critiques and uncertainty following World War II left many liberals questioning the need for religion at all. Despite these challenges, Protestant liberalism

persisted through mainline Protestant institutions. In the latter half of the twentieth century, the legacy of earlier forms of Protestant liberalism continued in social reform efforts, higher education institutions, and ecumenical organizations. In each era, from the nineteenth century to the twenty-first century, liberal Protestants can be recognized primarily through their willingness to adapt Christianity to the modern world and their subsequent insistence on the flexibility of Christianity to individuals and historical contexts.

Major Themes and Motifs

As a religious designation, “Protestant liberalism” connotes an overwhelming interest in adapting Protestant thought to modern scientific, philosophical, and political ideas. These adaptations occurred through an assortment of overlapping issues.

First, liberal Protestants shifted the locus of religious authority. Reason, empiricism, and conscience played a larger role in liberal Protestants’ confirmation of religious truth than the Bible or clergy members. Influenced by Enlightenment thought, German historicism, and science, liberals transferred religious authority from external sources to the inner world of the individual. Consequently, this shift dramatically altered liberal Protestants’ relationship to Christianity’s sacred text and encouraged new forms of religious practice. Transcendentalists, for instance, sought religious truth in nature and expressed those truths through literature. Similarly, twentieth-century modernists relied on physical and social sciences to confirm scientific and religious truth.

Second, liberal Protestants changed previous methods of interpreting biblical texts. As scholars such as David Strauss, Albrecht Ritschl, and Adolf Von Harnack encouraged historical and critical analysis of the Bible, liberals adapted the way they understood scripture. Rather than view the Bible as a timeless, coherent, and divinely revealed text, liberals considered the Bible as a set of texts written and compiled over time and subject to varying influences based on different authors, locations, and time periods. Liberal Protestants recognized the potential for errors, inconsistencies, and contradictions within scripture. Evangelical liberals, who cherished the Bible as a bearer of revelation, even applied reason, conscience, and historical methods to reading scripture.

Third, liberals reconsidered the nature of God. Protestant liberalism contended that God was immanent and a benevolent being. In contrast with Calvinist conceptions of God as a wrathful and distant sovereign, liberals considered God to be a compassionate parent-figure with whom one could

interact regularly. In addition, Protestant liberalism supported the notion that revelation continually unfolded throughout history. Since God was immanent, religion could be revealed in all of creation within one's current context and beyond. With roots in German historicism, liberals recognized that religion itself belonged to a historical context. More important, religious truth could be revealed and applied in ways that were relevant to each context.

Fourth, Protestant liberalism altered the purpose of religion. Religion centered on ethics and morals for liberal Protestants. According to most liberals, Christianity should improve society by bolstering ethical standards and improving social conditions. Formal creeds and doctrinal debate received less attention as liberals concentrated on religious experience and social action. Liberals considered Christianity the mechanism through which individuals could improve themselves and society. Social Gospel proponents in particular and liberals in general cultivated an optimism about humanity's capacity for good. In addition to such evangelical liberals as Henry Ward Beecher or Walter Rauschenbusch, the spectrum of liberal Protestants turned to the figure of Jesus as a moral example to imitate.

Fifth, Protestant liberalism overwhelmingly supported religious tolerance, pluralism, and ecumenism. New information about other religions through the field of comparative religion and events like the World's Parliament of Religions affirmed the similarities between the Bible and other sacred texts. Liberals such as William James, for instance, began to acknowledge the legitimacy of all forms of religious practice. Broad interpretations of sacred texts, avoiding doctrinal debate, and optimism about humanity contributed to a proliferation of ecumenical organizations. In this respect, religious liberalism fostered a commitment to religious toleration and pluralism.

Contributions to Religious and Public Life

Protestant liberalism influenced as much as it was influenced by a variety of social, cultural, political, and religious movements. Liberals not only injected religious innovation into American Protestantism but also stimulated cultural development. Protestant liberalism heavily influenced and was influenced by literature and philosophy. For instance, transcendentalists transformed their relationship to texts and to nature through reading and their literary club. In addition, liberals such as Harriet Beecher Stowe transformed the way Americans related to one another through empathetic relationships with the fictional characters in *Uncle Tom's Cabin*

(1852). This trajectory continued as liberal Protestants in the late nineteenth century and early twentieth centuries wrote novels aimed at inspiring social reform. Congregationalist minister Charles M. Sheldon's most famous Social Gospel work, *In His Steps: What Would Jesus Do* (1897), gained best-seller status in the early twentieth century and continues to be read in the twenty-first. In many ways, inspirational writing like that of Stowe and Sheldon confirms Protestant liberalism's hold on American culture in the nineteenth century and beyond.

In the late nineteenth century, Protestant liberalism fused with reform and progressive politics, creating a host of voluntary reform organizations. Liberal Protestants were at the forefront of controversial issues, including women's rights, racial equality, labor reform, prison reform, public education, public health issues, and expanding municipal, state, and federal responsibilities to citizens. In their support of these issues, liberal Protestants revolutionized the professional fields of nursing, counseling, and social work, among many others. These reforms often led to an overlapping consensus with socialism and progressivism.

Protestant liberalism drastically changed higher education in the United States. Following the Civil War, there was an increased interest in both Charles Darwin's theory of evolution and German biblical criticism. Seminaries, churches, and individuals devoted time, money, and scholarship to understanding the roles of and relationship between religion and science. Not only did liberalism alter the core beliefs of the nation's most renowned universities, including Harvard, Yale, and Princeton, but it also radically changed the core curriculum in seminaries like Harvard Divinity School, Andover Theological Seminary, and Rochester Theological Seminary. At the same time, the force of liberal Protestantism created the reputation of other seminaries such as the University of Chicago Divinity School, Union Theological Seminary, and Boston University. The role of biblical criticism and science in these changes cannot be overstated in either of these cases.

From the nineteenth century to the present, liberal Protestants remained committed to ecumenism. First, liberal Protestants stood at the forefront of interdenominational cooperation. As a result of the Social Gospel, liberal-leaning denominations around the United States joined the Federal Council of Churches of Christ in America, beginning in 1908. Ecumenism reached the global level in 1910 when delegates from various Protestant missionary organizations met in Edinburgh, Scotland, for the World

Missionary Conference. Mainline denominations in America participated strongly in these efforts. This participation continued when the World Council of Churches formed in 1948. In addition to interdenominational action, mainline denominations attempted to reconcile intradenominational divisions. Methodists in 1939 and Presbyterians in 1983 reunited the factions that had been created as a result of slavery debates. Finally, liberal Protestants participated in ecumenism to advocate for specific causes such as pacifism and human rights. Protestant liberalism's strong association with ecumenical organizations reflects their interest in minimizing theological battles, maximizing shared religious truth, and participating in humanitarian efforts.

Critical Assessment

Because of Protestant liberalism's multivalent character, scholars often concentrate on certain figures or particular time periods rather than write about liberalism as a whole. When viewing the trajectory of liberal Protestants' history, it is important to keep their protean character in mind. Liberals vacillated among "religious," "secular," and "progressive" influences over time.

Liberal Protestants sought to enhance their spiritual life through innovation and adaptation. Dissatisfied with orthodoxy generally, liberals shifted the locus of religious practice from a pulpit located inside a church to the people located outside of it. Rather than adopting any formal creeds, liberal Protestantism, especially in the nineteenth century, encompassed a set of characteristics, interests, and principles. Even though changes to Christian thought and practice occurred, liberals understood their role as improving, perfecting, or refining Protestantism. For instance, liberals did not think they were undermining Christianity when they emphasized the need for biblical criticism; instead, liberals considered biblical criticism as a method of advancing Christianity because it reaffirmed progressive revelation. While liberal Protestants accommodated to modern American life, they did so willingly and unapologetically in an effort to enhance individuals' spiritual experiences. Authenticity and sincerity based on commitments to Christianity were at the heart of liberal turns.

Just as liberal Protestants adapted religion to their context, so too has the definition of "liberal Protestant" adapted to changes in context. Assumptions about the term itself influence how theological boundaries are drawn, as much as the creation of boundaries affected the groups themselves. While many liberal ideas became mainstream in

the twentieth century, liberalism moved further left in thought and practice. The adoption of liberal Protestant ideas, causes, and reforms into the mainstream makes it difficult to correlate a decline in adherents to a decline in Protestant liberalism as a whole. Liberalism did not disappear because its impulses of reflection and revision remained. Institutional forms may have diminished but the ideas and moods underlying organized forms of liberal Protestantism remain, if not prevail, in American culture in the early twenty-first century.

Psychology of Religion

The psychology of religion is a subset of the social sciences that studies the interaction between religion and people. More specifically, it explores the patterns of meaning individuals create in their interactions with religion. Some psychologists of religion explore the social networks that exist among believers, while others seek to understand how thought or cognition affects personal religious experience. Other subsets of psychology of religion seek to explain religious experience in the context of psychiatry. The psychology of religion focuses on people and their interactions with belief, religious practice, and an alternative reality that religion provides them.

These explorations of religion are conducted in a number of ways. Some psychologists of religion use surveys to collect data and generate statistical models in description and prediction of religious behavior. Others use naturalistic observation to understand religious behavior. Others use interview strategies to generate theories about personal expressions of faith and belief. While religion warrants study, psychology of religion has not been limited to the study of religion alone; the term *spirituality* has become a descriptive term as well an individual experience.

In more recent research on religious expression, spirituality has become synonymous with individual faith outside the bounds of religious and institutional dogma. In this case, spirituality is meaningful and confirmatory through one's own experience. While those individuals who self-identify as spiritual may loosely affiliate with a religious tradition, they are not totally bound to the theology, values, beliefs, and rules of that tradition. The field of psychology of religion has existed for more than one hundred years, but research on spirituality is a much newer conversation.

William James and the Origins of the Psychology of Religion

William James (1842–1910), a prolific psychologist and philosopher, provided contextual evidence between institutional and individual religion by focusing solely on the dynamics that constitute personal belief. In the Gifford Lectures on the natural sciences delivered at the University of Edinburgh in 1901 and 1902, James provided a template for religiosity as personal experience. Through a variety of themes that would later be published as the *Varieties of Religious Experience* (1902), James examined the context of individual religiosity. James noted that a variety of personal experiences, complex in their very nature, link the individual to religion.

Within the lectures, James presented the classification of “religious geniuses,” or those who find their belief confirmed in their experience and have the ability to share it with others. James was interested in the connection between the self and God, when God is considered the ultimate reality. James was intrigued by the transition some individuals underwent when moving from one set of beliefs to another. He argued that there is a much deeper reality beyond that of the sensory world that some seek to explore. James recommended that society should welcome a range of individual beliefs, as they provide depth to human experience. For example, mystical experience resonates with some people, and its integrity should be respected. James concluded the *Varieties* by noting the powerful nature of religious experience and the challenges faced by those who choose to study it.

James advanced several themes related to the study of religion. First, study of religion is valuable outside of its theological or social contexts. James viewed the individual experience as valuable, seeking to show that some religious institutional beginnings were asserted through religious genius and socially deviant behavior. James cites George Fox, the seventeenth-century founder of Quakerism, who by his own account found himself behaving erratically when he felt God working through him. These experiences, while closely knit to psychological abnormality, are in and of themselves real and legitimate for those who experience them and are therefore worthy of study. In James's lectures, the early formation of the field of psychology of religion takes shape.

Alternative Understandings

Unlike James, Sigmund Freud (1856–1939) saw the study of religion as part of the study of the unconscious. Freud, an atheist himself, held that belief in the existence of God was

simply a superstition used by the weak minded to provide security for unseen troubles. Religion was an illusion. Religious ritual was an expression of neurotic practice with ancient origins and reinforced through tradition. More specifically, Freud insisted that God is an illusionary substitute for the missing father figure in one's life. Religion simply provides a coping mechanism to help individuals deal with the unfriendly world around them. Freud grew in recognition throughout the United States following a series of lectures he gave in 1909 at Clark University in Worcester, Massachusetts, regarding psychoanalysis; through promotion by Freud's nephew Edward Bernays (1891–1995)—considered to be the father of public relations—Freud's theories grew more popular following World War I and led many psychoanalysts in America to treat religious belief as a form of neuroses.

Carl Jung (1875–1961), a colleague of Freud and travel companion to Clark University, moved in yet another direction. Jung was drawn to religious symbols and believed that connections between beliefs and a similarity among cultural symbols across traditions did not result from socially neurotic behavior. Rather, they were a product of the social unconscious. These were confirmed in what Jung called “similar archetypes” that represented aspects of the psyche. These archetypes or mythic figures were indicative of a kind of shared unconscious, what Jung designated the “collective unconscious” within humanity. Jung recognized that the commonality of symbol and archetype could point to something greater than this world. Jung also tied personality theory, dream analysis, and psychotherapy to the field of psychology of religion. While many found the eccentric nature of Jung's ideas fascinating, others had difficulty applying his principles to clinical or scientific practice. As a result of the disconnect between Jung's theory and practice, Jungian psychoanalysts and theorists in America were divided as to the future of Jungian psychology. With research psychology gaining momentum as an accepted science, Jung's mystical and existential theories lost favor within research psychology. Academic schools used his discourse to inform other academic discussions such as in religious studies and anthropology. There is little empirical research in psychology of religion from the perspective of Jung.

One attempt to use the methods of empirical science and yet appreciate religious claims came in the work of Gordon Allport (1897–1967). Allport was a man of empirical science and theory but was also deeply religious. His main focus was people as religious individuals who internalized religion in different ways. Allport believed that individuals possessed

traits that were denotative of how individuals interact with their environment. Allport theorized that some used religion for “mature” means, which included the acceptance of inconsistencies in theology and acceptance of others regardless of differences. Allport believed that “immature” individuals used religion for self-serving purposes, such as gaining social status or controlling others against their will. His research in this area related in many ways to his work discussing intrinsic (inward motivation) versus extrinsic (immature) religiosity as a predictor of prejudice.

Faith Development Theory and Transformation

James Fowler (1940–), a developmental psychologist and theologian, has offered a more operationally defined developmental theory about how individuals progress through stages of faith. This model is broken into stages, and benchmarks indicate how faith changes over an individual's life span. Based on qualitative semi-structured interviews with a variety of research participants ranging in age and background, Fowler was able to delineate six stages of faith development.

Stage 1, or Intuitive-Projective faith, develops when an individual is between the ages of three and seven, a time when the egocentric child has difficulty distinguishing between imagination and reality. Adults reinforce social rules to promote culturally acceptable behavior. Fowler identifies stage 2 as Mythic Literal faith, wherein children identify through a sense of belonging within their communities and families. They see relationships among stories, beliefs, and observances in their life that are reinforced within their communities. Stage 3 is Synthetic-Conventional faith, in which individuals extend their networks above and beyond their families to include larger social circles that become more complex and diverse. Religion provides an orientation to the variety of networks among which the individual shifts. In stage 4, Individuative-Reflective faith, individuals seek to position their identities within their own egos. The individual recognizes differences between the self and the worldview as compared to others. Stage 4 individuals have the ability to critically reflect on themselves and explore the inner conflicts of the persona they have in adulthood. In stage 5, Conjunctive Faith, individuals begin to connect with their inner selves. They begin to value the larger implications of symbolism. Few persons attain stage 6, or Universalizing Faith. Only religious sages, those who recognize all humanity as a community without discrimination, experience universalizing faith. Among them, Fowler claims, are persons such as Mother Teresa and Gandhi.

Fowler's formulation is controversial, as some find the stages too longitudinal, functioning as a graduated development model that does not allow for regression to a previous stage. Those who might be considered religious fundamentalists may appear developmentally limited. For example, a fundamentalist may have characteristics of stage 3 or early stage 4 but clearly be able to function within society. These criticisms have caused some in the social scientific community to seek alternative theories in human progression related to faith, but many within theological circles still find Fowler's work useful.

The Status of the Psychology of Religion

As an academic discipline, the psychology of religion has many manifestations. There are a variety of schools within psychology of religion, such as cognitive (the focus on the function of mind), psychoanalytic (exploration of the unconscious), and social-psychology (exploration of social networks as they relate to the individual). Some researchers focus on theory to provide an explanation for religious phenomena. Some psychologists of religion use research methodologies such as survey research, experimentation, naturalistic observation, interviews, textual studies, and ethnography. To define psychology of religion as a single discipline is difficult, as it intersects with other disciplines such as sociology, anthropology, religious studies, and theology. What is clear is that unlike other academic disciplines, the psychology of religion centers on the individual in its exploration of experientially based religious phenomena. It is a small academic field with a variety of connections and networks. It remains a discipline that seeks methodologies to adequately and accurately bring together science and religion.

Puritans

Puritanism was a broad-based religious movement in sixteenth- and seventeenth-century England that achieved its one great institutional success when immigrants transplanted it to New England. The role of the movement in the religious and political history of Scotland, although not described in this entry, was substantial. From its beginnings in mid-sixteenth-century England, the movement aspired to align the Church of England with the principles and practices of the Reformed (Calvinist) tradition. This ambition gave the movement a political edge, for no English monarch would agree to such a program. In New England, however, the political leadership and most lay people were generally sympathetic. Always internally divided between moderates and radicals, the English phase of the movement developed serious divisions in the 1640s and 1650s during the period of Civil War and Commonwealth (1642–1659), ironically the one moment when control of the Church seemed within reach. In the 1660s, and extending into the eighteenth century, serious disagreements also arose among the New England colonists about church membership and toleration.

Initially the name "puritan" was one of several words—"precisionist" was another—applied to the movement by its critics, who borrowed the term from a group that emerged in the early centuries of Christianity, the Novations or Donatists, who used a Greek word for themselves that in English meant "the pure." Early on, but especially in the 1620s and 1630s, polemicists also gave it the meaning of seditious, as though anyone deemed a Puritan wanted to overthrow the authority of king and bishops. In stage plays, ballads, and popular satires, the Puritan was someone overly moralistic and a kill-joy, a stereotype that persists to this day.

The people on the other end of this invective liked to call themselves "the godly" or similar names. By the early seventeenth century, however, some people appropriated the word despite its adverse connotations. Another word in play in the seventeenth century was "Nonconformist," which denoted someone who refused out of conscience to observe

all the rules of the Church. As the British historian Patrick Collinson has pointed out, this invective occludes the moderate or mainstream aspects of the movement in pre-1640 England. A generous definition of the kind Collinson has advocated makes room for bishops in the Church and a segment of the landed aristocracy, both of whom shared the hope of reforming an institution that to them seemed ineffective and far too Catholic.

The English Reformation

That the Church of England was something of a muddle was due to the nature of the English Reformation. At first, as Lutheranism was gaining ground in Europe, Henry VIII, who ruled between 1509 and 1547, acted to protect Catholicism. Only after Pope Clement VII refused to grant Henry a divorce from Catherine of Aragon did the King secure from Parliament a declaration that he, not the Pope, was the supreme head of the Church of England. This measure, although momentous in its consequences, had little immediate effect on doctrine, church structure, and liturgical practice. Gradually, however, a party in favor of reforming these emerged within civil government and the hierarchy of the Church. When Henry was succeeded in 1547 by his young son Edward VI, the reformers came into power and the pace of change accelerated. Thomas Cranmer, named Archbishop of Canterbury in 1532, initiated a rewriting of worship that became the Book of Common Prayer (1549); a revised edition (1552) sharply curtailed the elements of liturgy carried over from Catholicism.

Reform under Elizabeth I

Reform was checked and Catholicism restored when Mary Tudor came to the throne in 1553. Cranmer died at the stake in 1556, but dozens of other clergy escaped to the Continent. When they returned after Mary's death and the crowning of Elizabeth I in 1558, they returned to a Protestant church and a Protestant ruler, though Elizabeth proved to be a moderate like her father. What mattered most to her was securing the stability of her government, a goal more easily accomplished if she refrained from crushing all expressions of difference or disagreement, including the English who persisted in their Catholicism. Yet the reforming wing of the Church would not give up. From their point of view, most of the clergy in the Church were barely able to function, with ineffective preaching their greatest weakness. The Church was weakened, too, by allowing priests to live elsewhere than in their

parishes (nonresidency). Much remained to be done, as well, in eliminating the "relics" of Catholicism.

Some but not all of the reformers regarded the Reformed churches on the Continent as models for what the Church of England should become. Five aspects of the Reformed tradition were appealing: (1) a determination to impose higher standards for lay people's participation in the sacraments of baptism and the Lord's Supper; (2) a similar determination to use the processes of church discipline, especially excommunication, for purifying the church of the morally and theologically corrupt, including clergy; (3) rules requiring clerical residency; (4) assertion of the authority of the church to act independently of the civil state (magistrates, monarch) in policing itself and in declaring proper doctrine; and (5) the assumption that the scripture or the Word was the final authority on matters of church polity. Other aspects of the Reformed tradition were also widely admired, like the insistence that parishes or congregations "elect" their own ministers and the assertion that all ministers were of equal rank—for example, no Episcopal hierarchy, or at best an office of bishop defined by function. The progress of the Reformation in Scotland was exciting to some English reformers as indicating what could be accomplished, although English Puritans shied away from *iure divino* Presbyterianism as affirmed by some Scottish theologians.

Puritan Objections to the Church of England

The English reformers grounded their critique of the Church on an interpretation of Christian history. All sixteenth-century Protestants affirmed the authority of the "Word" against Roman Catholicism's insistence on tradition (history) and the Papacy. So, too, Protestants criticized Catholicism for introducing "human inventions" not sanctioned by the Word. From this perspective, the purpose of the Reformation was to clear away those inventions and reclaim the authentic Christianity of the gospels and apostolic letters. The reforming party in England, and especially its more radical members, insisted that the scripture, when properly interpreted, had the force of law for how the church should be organized. The goal was thus to restore what they termed the "primitive" (meaning prime or first) perfection of the church and to eliminate all "inventions" or innovations, most of which had arisen within Catholicism.

The political stalemate, with monarch, most bishops, and many others determined to thwart any radical change, provoked a small number of reformers to turn "Separatist" and leave the Church. The first such acts of "separation" date

from the mid-1560s. At the beginning of the 1580s, Separatism acquired its first printed manifestos via the pen of Robert Browne, a minister in the Church who in 1580 and 1581 formed an independent congregation in the city of Norwich. “Brownism” quickly became another polemical epithet, even though Browne made his peace with the Church in the late 1580s. The yeast of Separatism continued to ferment as others took the daring step of declaring the Church unlawful and of organizing congregations on the basis of a covenant, a practice the Separatists seem to have originated.

Radicals and Moderates

Earlier, in 1572, radicals who did not go the way of Separatism had issued a far-reaching manifesto, “Admonition to Parliament.” The two young men who wrote it, John Field and Thomas Wilcox, insisted that in order to have “right religion,” one must have “right ministry” to God and a “right movement” of his church. Field and Wilcox turned their invective against the prayer book (“picked out of that popishe dunghill, the Masse booke”), the bishops of the Church, the indiscriminate baptizing of children without regard to the parents’ qualifications, and the absence of effective local discipline to exclude the immoral. “Admonition to Parliament” accomplished nothing in the 1570s except to anger moderates in the Church, but its agenda would be revived in the 1630s in New England and during the period of Civil War and Commonwealth in England.

Radicalism spurred moderates and conservatives to assert themselves. The first major crackdown on dissidence and nonconformity occurred in the 1580s when a nascent “Presbyterian” movement was suppressed and its leaders imprisoned or exiled. Another phase of repression followed in the early 1590s when Elizabeth sanctioned the execution of three Separatists and, for their own safety, others fled to the Netherlands. But as radicalism waned, other versions of reform persisted. The Mildmay family founded Emmanuel College, Cambridge, in 1584, expressly for the purpose of training a preaching ministry for the Church, and for many years Emmanuel would turn out ministers dedicated to transforming the social and religious practice of lay people. Ministers of this kind found models for themselves in manuals such as Richard Bernard’s *The Faithful Shepherd* (1607) and a genre that emerged in the early seventeenth century, spiritual biographies of exemplary leaders. It is noteworthy that some thirty-five persons connected with the college participated in the immigration to New England. In the

southeastern counties of Suffolk and Essex, aristocratic families and town corporations sympathetic to reform used their privileges to appoint ministers committed to the “practical divinity” to church livings or, increasingly, to lectureships that spared these men from having to perform the Eucharist and other ceremonies. Thomas Hooker, who crossed the Atlantic in 1633, held this kind of post, as did Thomas Shepard before he was forced to give it up.

The Practical Divinity

From the mid-sixteenth century onward, reformers in the Church had few complaints about how doctrine was articulated by the Church of England, for the Thirty-Nine Articles (1563) affirmed the fundamental Reformed principle that election to salvation did not depend on personal faith but was solely God’s doing. In 1618–1619, an official English delegation to the Synod of Dort agreed with the decision to condemn “Arminian” deviations from high Calvinism. Broadly speaking, therefore, the English church was aligned with the international Reformed tradition, though some in the Church preferred the sublapsarian understanding of election (in other words, decisions about who to save were made *after* the fall of Adam, not at the moment of creation).

Where the reformers broke new ground was in their analysis of the “actual” process of becoming a Christian, a process associated with the Pauline insistence that believers become a “new creature” (2 Corinthians 5:17). In the 1590s, William Perkins, a lecturer at Cambridge, was publishing treatises and tracts on how to undergo this transformation; for him as for other like-minded ministers, a form of experience centered on the inward “heart,” as its valence was reversed from sinful pride and self-conceit to humility, repentance, and faith. The practical divinity resembled a road map indicating a sequence of stages that led from “a true sight of sin” (to quote Thomas Hooker) and sorrowing “compunction” or repentance (to quote Thomas Shepard) to hearing the gospel promise of salvation and rejoicing in oneness with Christ. Using another set of terms, it began with the “effectual call” or “vocation” (the gospel message, directed at sinners who inwardly heard that call), followed by “justification” and “sanctification,” the lifelong process, enabled by grace, of resisting sin and practicing righteousness. Less poetically, sanctification was associated with the “duties” spelled out in divine law, duties that only a true believer could heartily perform.

Preaching in this mode was evangelical in proposing that Christ came to save everyone who responded in faith,

affective in defining true religion as a matter of the “heart,” rational in declaring that the entire process depended on a knowledge of divine truth, and moralistic (or as radicals within the movement would complain, legalistic) in emphasizing the importance of observing certain rules. The books in which the spiritual brotherhood articulated a demanding process of self-scrutiny and devotional routines sold astonishingly well in early seventeenth-century England, especially Arthur Dent’s *The Plain Mans Pathway to Salvation* (1601 and many more printings thereafter). Sermon by sermon, book by book, a way of being religious or, better, of imagining what it was like to be saved, took hold among a broad swath of English people.

It is questionable whether the Puritan movement produced a distinctive political philosophy. Criticism of James I and Charles I for exaggerating the powers of the monarchy had widespread support in parliaments of the 1620s. When people we identify as Puritans extolled the family as the primary unit of a good society, a “little commonwealth,” as it were, they were repeating a classical commonplace. On the other hand, protecting the Sunday Sabbath by insisting that no one work or engage in popular sports mattered much more to Puritans than to their opponents. In this as in other ways, the movement turned away from a traditional popular culture and its forms of sociability. Where town governments were controlled by the godly, efforts were sometimes made to overcome “idleness,” to enhance the possibilities for education, and to improve the condition of the poor. As a matter of degree not kind, the godly may have been more vigorous in enforcing the rules against vagrancy, street fights, and excessive drinking. Certainly they relished sermons that warned of God’s judgments on such people and delighted in “wonder” stories of this kind. On some of these matters there was a broad consensus at the local level. Yet the movement may have been foremost in promoting a “reformation of manners” or social discipline that gradually permeated the middling ranks of English society. A program of this kind presumed that the civil magistrate (ideally, a Christian prince) would collaborate with the church in implementing a fully Christianized society that approximated the kingdom of God. Whenever anyone in England or New England used the term “theocracy,” they were referring to this ideal of a Christian society unified in its allegiance to Christ. The frustrations experienced by the movement, frustrations also widely felt within the Reformed tradition as it contended with recalcitrant regimes in Europe, encouraged Separatists and others to imagine an alternative scenario in which a

suffering people shed the authority of the civil state and acted on their own to achieve the kingdom.

English Tensions and the Founding of Massachusetts

By the mid-1620s, fresh tensions were emerging between “godly” Protestantism and affairs of state. One source of tension was foreign policy: was the English government doing enough to defend Protestants on the Continent as the Thirty Years War got underway? Another was anti-Catholicism, the meat and drink of popular politics at this time for domestic reasons—local Catholics continuing to practice their form of Christianity, albeit in their homes, not in churches—and the resurgence of Catholicism overseas. Plenty of anti-Catholic laws were on the books, though they were never uniformly enforced. The fact that Charles I had married a French Catholic who maintained her own chapel was one of several circumstances prompting paranoia about a possible Catholic takeover. The most important of these circumstances was the emergence of an “Arminian” party within the Church, a party increasingly favored by Charles I, who appointed one of its members, William Laud, Archbishop of Canterbury in 1633. No Catholic, Laud was nonetheless intent on renewing aspects of liturgy and church architecture that Puritans had always opposed. By the late 1620s, two versions of “conspiracy” were circulating in England, one of these the doing of royalists and Churchmen who viewed the Puritan movement as subversive of monarchy, the other the doing of gentry and Parliamentarians, some of them sympathetic to Puritanism, who assumed that Laudians were colluding with Charles I to replace the customary “liberties” of the English people with unchecked royal authority.

As these opinions were hardening, a handful of London merchants joined forces with gentry and aristocrats long noted for their Puritan sympathies to form a joint-stock company for the purpose of establishing a colony in New England. In early 1629, after naming itself the Company of the Massachusetts Bay in New England, the group was granted a charter by the Crown. That summer a member of the gentry in Suffolk, John Winthrop, accepted the office of governor on the condition of immigrating to Massachusetts himself. The following year (1630), some nine hundred persons crossed the Atlantic, and although in the next year or two others were discouraged from coming by reports that reached England of the many difficulties, the number of immigrants began to climb by the middle of the decade,

partly in response to an ever more active campaign to eliminate nonconformity in the Church.

Pilgrims and Others

A tiny number of settlements already existed as of 1628, when the forerunner of the Massachusetts Bay Company set out its first party, which founded the town of Salem. The most significant of these was the community of “Separatists” at Plymouth, where in 1620 the men, women, and children who sailed on the *Mayflower* decided to settle. The name “pilgrims” was applied to these people in the nineteenth century as though they were different from “Puritans.” The only real difference was that the Plymouth community had experienced two unusual circumstances: first in England when in 1606 some of them had withdrawn from the state church and formed a Separatist congregation; and second by fleeing to the Netherlands, where these people eventually settled in the city of Leiden. Deciding after much debate that they could preserve their group identity only by immigrating to somewhere along the Atlantic coast, the pilgrims overcame immense hardship during their early years in New England and, by the mid-1630s, were founding other towns in the vicinity of their initial settlement. But Plymouth Colony would never have the wealth or population of Massachusetts to the north.

Once the ships that sailed in 1630 reached the New England shore, the people they carried dispersed themselves into several communities. Winthrop started out elsewhere but quickly decided to live in Boston, which became the seat of government. By decade’s end, as many as 20,000 people had joined him. Unlike the colonization of Virginia that began in 1607, most of these people came as families; most were also from the southeastern counties of England. When Winthrop and other members of the Massachusetts Bay Company were deciding to take the bold step of immigrating, they drew up a list of “Reasons to be Considered for Justifying the . . . Intended Plantation in New England.” In it they reflected on how “All other Churches of Europe are brought to desolation” (an allusion to the early successes of Catholic powers in the Thirty Years War) and interpreted such adverse providences as a sign that God was angry at the English for refusing to reform. Predicting that England might be next to experience a “general calamity,” the organizers entertained the possibility that the new colony would become a “refuge” for the people God “means to save.” Neither in this statement of reasons nor in any other contemporary document did Winthrop and his fellow organizers assume that the end of

time was fast approaching: judgment yes, but judgment on an erring people pledged in covenant with God was a theme taken straight from the Old Testament. Secular factors also figured in the decision to immigrate, like the ever rising cost of living in England.

By the close of the 1630s, five different political communities had come into being in New England. The oldest of these was Plymouth. The largest in population and economic resources was Massachusetts Bay, which extended its authority to the few settlements in present-day Maine and New Hampshire. Religious dissidents from Massachusetts had moved southward and created four towns that joined together informally as the colony of Rhode Island (chartered by the Crown in 1663). Connecticut and New Haven colonies (1636, 1639) were created by immigrants, some of whom came directly from England and others from Massachusetts.

Creating the Congregational Way

The immediate advantage of crossing the Atlantic was that the colonists removed themselves from the direct authority of the Church of England and the Crown. The colonists used their newfound freedom to jettison bishops, the Book of Common Prayer, and virtually every other feature of the Church of England. The “Congregational Way,” their name for the new polity they created, reorganized ministry into a collective of equals (pastor and teacher, and the lay offices of elder and deacon), in keeping with the example of most Reformed churches in Europe. Other features were more unusual: (1) Each local congregation was equal in authority to all other congregations; none were supervised by a higher body, as in Presbyterianism; (2) church members (the men only) elected ministers to office and (3) participated in all other decisions about church discipline; (4) membership in each congregation was voluntary or “gathered,” not inclusive as in parishes in the Church of England and for that matter, most Reformed churches; and (5) in most Massachusetts and New Haven congregations, but less certainly so in Plymouth and Connecticut, people who wanted to become members were expected to describe publicly the “work of grace” they had experienced.

The Congregational Way was a daring experiment in transferring authority to the local congregation and, within those congregations, to the laity. It was even more daring in making church membership voluntary and setting the bar for admission so high. Why did the ministers, civil leaders, and most lay people prefer these features when it was just

as authentically Puritan to favor a Presbyterian structure? No thoroughly convincing answer exists to this question. At the time, critics reasoned from the similarities between the Congregational Way and Separatist practice that prominent leaders such as John Cotton had quietly turned Separatist in their sympathies. Denying this charge, Cotton and several of his fellow clergy cited the influence on them of a small group of radical Puritans who in the early seventeenth century had described something very similar to the Congregational Way. A longer historical view would suggest that elements of “voluntary religion” had been practiced at the local level in England for many years. Some combination of local experience and book and Bible-driven principles, together with the strong sense of urgency about reform that Winthrop had articulated in 1630, may bring us close to an explanation. Given the long-lasting tension between reform as a collaborative project of church and state and reform as something undertaken by the godly, another advantage of the new polity was how this tension was eased within the highly decentralized structure of the Congregational Way.

Putting this polity into practice in a dozen or more towns was no simple matter. A few ministers preferred something different, as did some lay people. The greater challenge was to bring as many of the immigrants as possible under the authority and influence of the church. In the late 1630s and early 1640s, this seems to have happened with ease in most towns. A substantial majority (approximately seventy percent) of adults in Dedham, Massachusetts, entered into membership, a level that seems to have been reached in the majority of congregations. Once a congregation was up and running, women seem to have joined earlier, and in slightly greater numbers, than men. English critics were wrong, therefore, in declaring that half or more of the adults were left out. One mitigating circumstance was the willingness of congregations and ministers to rely on evidence of moral constancy and, in cases where the evidence for a “work of grace” or inward transformation was unclear or incomplete, to rely on the “judgment of charity.” This phrase was written into the chapters on church membership in the first official description of the Congregational Way, *A Platfome of Church Discipline Gathered out of the Word of God*, finalized by a synod that met in Cambridge off and on between 1646 and 1648 (for this reason, the document is commonly known as the Cambridge Platform), printed in 1649 in Massachusetts and again in London, and endorsed in a general way by the Massachusetts General Court. For the rest of the century and on

into the eighteenth, the Cambridge Platform remained something of an official document.

Church and State

One of the challenges facing the designers of the Platform was to specify the relationship between the authority of congregations and the authority of the civil state. In doing so, the ministers drew on the “two-kingdom” theory Calvin had articulated in the mid-sixteenth century as a means of freeing churches from the authority of the civil state. According to this theory, churches exercised “spiritual” powers and the civil state, the powers of the “sword” over the “outward” man. As spelled out in the Massachusetts “Body of Liberties” (1641), in practice this theory prevented any minister from holding elective office in civil society and the civil state from dictating doctrine, discipline, membership, or a congregation’s choice of minister. Although the two-kingdom theory differentiated church from state, it also called for them to cooperate in protecting the visible kingdom of Christ against blasphemers and heretics and in sustaining the moral laws laid down in the Ten Commandments and elsewhere. Moreover, the magistrates were charged with serving as “nursing fathers” of the church, making sure ministers were adequately paid and good order preserved. This line of reasoning was spelled out in responses to Roger Williams and in chapter 17 of the Cambridge Platform, “Of the Civil Magistrates’ Power in Matters Ecclesiastical.” Situations of debate and uncertainty persisted, however, especially around the calling of “synods” (collective meetings of the clergy that quickly emerged as a necessary counterweight to local autonomy) and how the ministers should be paid. A strong preference for “voluntary” support gave way by the end of the 1630s to state-mandated support in most communities.

Liberty of Conscience and Roger Williams

Many of the immigrants came to New England to gain “liberty of conscience,” meaning the chance to be religious according to the will of God. Nowhere did any of the founders of Massachusetts imagine liberty of conscience as permitting everyone to go his or her own way. Among their midst, however, was the young minister Roger Williams (c. 1604–1683), who quickly became a thorn in the side of the authorities, religious and civil, by questioning the claims to Native American lands and arguing for a much stricter separation from the Church of England. By the mid-1630s, he was also beginning to argue that the civil magistrates

should stop imposing uniformity of belief. He did so having reasoned that the Old Testament kings should not be invoked as models for the Christian magistrate. More daringly, he asserted that all of Christianity was in a state of apostasy, a “wilderness” condition that deprived magistrates and ministers of the authority to assert what was true and right. The only way out of this situation was a new dispensation from the living Christ. Summing up Williams’s rapid evolution, the more orthodox John Cotton recalled how Williams first refused association with other colonists as a sign of his rigid Separatism and then gradually withdrew from his ministerial duties and even fellowship with other church members. But to Cotton, the most obvious sign of Williams’s presumed apostasy came when Williams denied the validity of his baptism and was rebaptized. When Williams fled Massachusetts in January 1636 and founded the town of Providence in the future Rhode Island, the magistrates who wanted to punish him had mainly his views on land and church communion in mind. In the mid-1640s, Williams made his way to England, where he published the first major critique of state-imposed uniformity, *The Bloudy Tenent of Persecution for Cause of Conscience* (1644). As he demonstrated three decades later in disputing the theology of Quaker missionaries, Williams was contentiously Puritan on some points. Baptists continued to remember him as one of their own and as an advocate for liberty of conscience, but it was not until the nineteenth century that he gained a wider reputation in American culture.

Political Crisis in England

In point of fact, few colonists were punished for their religious views in the early years, and Presbyterians in their midst were allowed to do their own thing at the local level. But new and unexpected circumstances provoked a stronger response. To tell this story we must return to England, where the religious and political situation had changed rapidly beginning in 1641. When Charles I attempted to impose Episcopacy on the Church of Scotland, the unpopularity of his orders enabled the radical wing of that Church to call for rebellion. War ensued, a war the English forces lost, at which point a penniless king had to summon a Parliament for the first time since 1629. What became known as the “Long” Parliament (from sitting so many years) seized this moment to pass a law requiring it to meet at least every three years. It also impeached the King’s chief minister (executed in 1641) and ordered the imprisoning of Archbishop Laud (executed in 1645). By 1642, Parliament was asserting its power to raise

money and mobilize troops without the King’s consent. Midyear, Charles I issued what amounted to a declaration of war on Parliament. The civil war that ensued, though initially inconclusive, ended in 1645 with the defeat of the King. Four years later, in January 1649, he was executed and England became a commonwealth presided over for much of the 1650s by Oliver Cromwell (1599–1658).

Of most pertinence to the history of Puritanism, this period of Civil War and Commonwealth saw the convening of the Westminster Assembly and the emergence of an unanticipated freedom for people to reimagine what it meant to be a Protestant. In 1643, Parliament authorized an “assembly of divines” to prepare a plan for refashioning the Church of England. Like the Parliament that called it into being, the Assembly was dominated by Presbyterians who wanted a form of church government that imposed the higher authority of presbytery and synod on each local congregation. Much more conservative or mainstream than Congregationalists, Presbyterians also wanted to preserve the inclusive parish structure of the Church of England, and in their theory of local governance they tilted the balance of authority toward the ministry. The presence of a significant delegation of Scottish ministers in the Assembly helps to explain these preferences.

Religious Radicalism

But the pace of change outran the deliberations of the Assembly. Censorship of the printing press collapsed in the early 1640s and, for the first time, anyone with something to say could publish or preach his ideas. As lay men and women did so, long-suppressed viewpoints and daring ideas began to circulate, some doctrinal, others social or political: anti-clericalism (as in criticism of state-enforced taxes to support the ministry and assertions that unlearned men and women could preach), Holy Spirit-centered affirmations of the Spirit as readily available and immediately empowering, a tendency branded as “Antinomianism”; rejections of original sin and its corollary, that Christians must defer to “the law”; and assertions of absolute liberty of conscience against any policy of state-enforced uniformity. This astonishing confusion fractured the Puritan movement for good, alienating Presbyterians from English Congregationalists and both of them from groups such as Baptists and Quakers, the latter a group that emerged for the first time in the 1650s. When Quaker missionaries reached New England, they were hastily sent elsewhere. Four who persisted on returning were executed in Boston in 1659 to 1660. Baptists, who

labored under a misleading association with sixteenth-century European Anabaptists, were fined and occasionally whipped. But in Providence, a Baptist church was set up in 1640 and another, the doing of English immigrants, on the southern edge of Plymouth in 1663. Not until 1665, however, was such a congregation founded in Charlestown, Massachusetts. Intermittently harassed by the government, it benefited from the policy of limited toleration enacted after 1691. All told, however, Baptists and Quakers attracted less than three percent of the colonists by the close of the century.

Theological Doctrine among the Colonists

In matters of theological doctrine, the clergy had no intention of being original or innovative. Valuing continuity with the Reformed tradition, the Cambridge synod of 1646 to 1648 voted to acknowledge the Westminster Confession (1646) as authoritative, an action repeated by another synod in 1680 and a third in Connecticut in 1708. Broadly speaking, the colonial clergy relied on the language of covenants, the first of “works” between God and Adam, the second of “grace” made necessary by the fall and embodied in the gospel offer of free grace. This language was fully compatible with the classic Protestant argument for the priority of grace and the inability of humans to respond. But as the historian W. G. B. Stoever has shown, the framework of covenant was complemented by the principle that God accommodated himself to humankind in the order of salvation, doing so through the ministry and sacraments as means of grace and thereby making room for “second causes” and an element of human response or initiative. From the perspective of human striving for repentance and faith, the covenant of grace was “conditional,” though from the perspective of divine sovereignty it was “absolute,” that is, everything accomplished by divine initiative. Without fuss or strain, everyday preaching for the next several decades focused on the imperative to repent and acknowledge one’s worthlessness in the sight of God, to accept in faith the “promise” of free grace, to practice moral righteousness not for the purpose of earning grace but in obedience to the divine will, and to seek assurance of salvation—for many, an elusive goal. As people were told again and again, to live as a visible saint in this religious culture was to live as a “pilgrim,” someone “in but not of” the world.

Thomas Hooker (1586–1647) had proved himself a master of this mode of preaching during his English years. Hooker’s *The Poor Doubting Christian Drawn to Christ* (1636) would become a steady seller in England, reprinted many

times over during the seventeenth century. Thomas Shepard (1605–1649) was not far behind in the sales of his London-printed sermons. Both men were physicians of the soul in the sense of exploring the fuller reaches of experience and in advising readers on the difference between hypocrisy, that is, going through the motions, and the real thing, which for them as for their predecessors in the spiritual brotherhood had to engage the “heart.”

“Calvinism” in New England

Can the dominant theology in New England be described as Calvinist—that is, in continuity with the teachings of the sixteenth-century theologian John Calvin and his principal allies and successors in the Reformed tradition? Unfortunately, this question can easily distort how the preaching of the ministers in New England is understood. From any historical perspective, the colonists were emphatically loyal to the Reformed tradition as it was consolidated in various creedal statements of the late sixteenth and seventeenth centuries, in particular the five canons of the Synod of Dort and the provisions of the Westminster Confession. But the colonists were not contending against Roman Catholicism as was Calvin. For them, the everyday questions that mattered were those that arose within the “practical divinity”: what the experience of “new birth” is like, how assurance of salvation is gained, how inward zeal and repentance can be renewed. In some respects, the answers they gave to these questions varied from Calvin’s, as in their emphasis on “preparatory” stages along the way to grace.

It is unfair to suggest, however, that the colonists were weakening divine sovereignty, just as it is unfair to reduce Calvinism to the doctrine of predestination—that out of his own good will for humankind God “elected” (chose) some persons to be saved and others to be condemned to eternal punishment. Direct references to Calvin’s writings were infrequent in sermons by the colonists, who relied instead on handbooks of theology, such as William Ames’s *Marrow of Sacred Divinity* (1622 in Latin; 1642 in English). Thematically, the Calvinism of the New England ministers was voiced especially in their rejection of Christian perfectionism (as long as we remain in this world we are tainted with sin), in their emphasis on aligning moral action in the world with God’s law and providence. Puritan preaching was, first and foremost, “practical” in laying out what one should do to become a person of faith and righteousness. In keeping with this emphasis, the ministers specified devotional practices that all Christians should employ: prayer, fasting, the repeating of

sermons in the home, the routine reading of pious books and especially the Bible.

The Antinomian Controversy

Unexpectedly, the ministers who had reached New England by the mid-1630s were confronted with the question of what was orthodox preaching and what was not. The “Antinomian Controversy” of 1636 to 1637 concerned a key aspect of the practical divinity: how best to help “weak” Christians overcome their self-doubt and gain assurance of salvation. The role of the Holy Spirit was also disputed, as was the situating of faith in the order of salvation: was it “active” or “passive”? In the back and forth between the ministers in late 1636 and early 1637, John Cotton (1585–1652), one of the ministers in Boston, suggested that allowing weak Christians to rely on their “sanctification” might replace grace with works, an implication the other ministers denied. Cotton argued for an “immediate witness” of the Holy Spirit and the passivity of faith. Most of his colleagues argued otherwise, that faith was an “active” instrument.

Meanwhile, a woman member of Boston church, Anne Hutchinson (c. 1591–1643), was suggesting that most of the ministers were “legal” (or emphasizing works) in their preaching. Hutchinson, the daughter of a minister in the Church of England and wife of a well-to-do merchant in Boston, extolled the Holy Spirit and urged those around her to spurn sanctification as evidence of justification, declaring it a “sandy foundation.” Advice of this kind may have mirrored Cotton’s preaching. The other ministers did not take kindly to being criticized. When more daring opinions began to circulate among lay people about grace, works, and faith, his colleagues persuaded Cotton to renounce Hutchinson and her followers, a rupture she facilitated by claiming to have received counsel and insights directly from God. A church trial in March 1638 ended with her being excommunicated from the Boston congregation. Hutchinson and her family moved to Rhode Island and, a few years later, to the area of present-day Rye, New York, where she was killed by Indians in 1643. Free grace and Spirit-centered “Antinomianism” had already emerged within the Puritan movement in early seventeenth-century England and had its advocates during the period of Civil War and Commonwealth. But in orthodox New England, it virtually disappeared after 1637. Hutchinson was remembered as a martyr by the early Quakers, who in some respects she prefigured, and gradually became a heroine to feminists in the nineteenth and twentieth centuries, in large part because she

exploited contradictions in the scripture and Puritan culture to assert a more public role for women.

Social Practice and the Civil Courts

The founders of the several orthodox colonies had social or civil objectives in mind as well as those relating to worship, piety, and church order. The stereotype of the Puritan as joyless crusader against the pleasures of everyday life must be set aside if we are to understand social policy and social behavior. The colonists relished their beer and hard cider, wore colorful clothes, and sometimes danced at weddings. It fell to the civil courts to enforce rules about behavior, although churches (as in the example of Anne Hutchinson) could also discipline their members. The law codes enacted in each of the orthodox colonies were remarkably modern in abandoning the harsh penalties for matters such as theft (a capital crime in England, if the value exceeded a certain amount) and in simplifying legal procedures.

The scripture was of minor importance, drawn upon mainly as the Massachusetts government was enumerating a short list of offenses (adultery, disobedience to parents, and so on) for which death was the penalty. In point of fact, this sentence was infrequently imposed, and for some offenses, never. Within this culture women were acknowledged for their distinctive role in transmitting religion to the next generation. Ministers celebrated this role and its exemplars in funeral sermons. In keeping with European social practice and with the instructions of St. Paul, however, women were unable to speak in churches or any public setting. Only during the turmoil of Civil War England did some women become public preachers, a possibility sustained for a while within Quakerism.

Apart from resolving creditor-debtor relations and handling the estates of the deceased, the principal business of the civil courts arose from the same problems that all English towns and villages in the seventeenth century were facing: premarital sex and drunkenness. Sex outside of marriage was troublesome because it could result in illegitimate children, whose needs had to be met by the town. Compared with England, however, out-of-wedlock births were few, in large measure because the unmarried men and women who were exposed and shamed for having their intimacy exposed by the woman’s pregnancy usually married. For several decades, the civil courts employed a process that was less adversarial (no lawyers were allowed to practice) than cultural and religious. Those who fell afoul of the law and/or communal customs were asked to confess and repent their misdeeds, as

many did, a step that became the threshold to reconciliation with the wider community. Far from being cruel or unusually disciplining, the courts pursued the twin goals of righteousness and social peace.

A handful of the first-generation immigrants hoped to attain “godly rule” by aligning the structure and practices of civil government with divine law and entrusting political power (office holding, the right to vote) only to those men who were church members. Others, including John Winthrop, backed off from using divine law as the guide for statecraft. Only in New Haven Colony was godly rule briefly implemented, and only in Massachusetts and New Haven was the franchise (being able to vote) connected with church membership, a rule that was relatively generous, given the extent of church membership in the early decades. One other social policy had roots in the Puritan movement, an emphasis on every person becoming literate. Laws requiring that every person learn to read were enacted in Massachusetts beginning in the 1640s, and in other colonies as well. The burden of making children literate was placed on the family and local schools, which children attended at an early age and sometimes only for a year or so. The next level up, the grammar schools where boys learned Latin, were too expensive for more than a few towns to maintain. Only after 1690 did a more fully effective system of local schools finally come into being. The capstone of this dispersed and imperfect network of schools was Harvard College, which admitted its first class in 1638. Presided over by graduates of the English universities until late in the seventeenth century, Harvard had a traditional curriculum. In the same town (Cambridge) where Harvard was installed, a printing press was set up in 1639. Not until the 1660s, when a second printer and press arrived, were much other than almanacs, catechisms, and government-related texts actually published.

Puritans out of Power

In New England as in England and Scotland, the forces of change were constantly modifying the particularities of Puritanism. Some of those forces were extrinsic to Puritanism, others intrinsic. In 1630s England, the policies of Charles I and William Laud had pushed the immigrants in a more radical direction; in 1640s and 1650s England, the shattering of consensus and the emergence of so many sectarian groups had the opposite effect of encouraging a conservative reaction in both old and New England, a reaction visible in efforts by the ministers to reclaim some of the authority of their “office.” After the monarchy was restored in 1660 and

English Puritans were thrown out of power, the colonists had to relinquish their hope that the “Congregational Way” would someday be adopted in their former homeland. Other adjustments followed, most acutely when Massachusetts became a royal colony in the aftermath of the revocation of its original charter in 1685. For a few years (until early 1689), all the New England colonies were joined together in a broader framework of royal governance, the Dominion of New England. Well before this time, the colony of Connecticut had secured a charter (1662) that empowered it to incorporate New Haven, and in 1691 the new charter granted to Massachusetts brought Plymouth into its fold.

Baptism, the Lord’s Supper, and Church Membership

The more painful change, and certainly the most contested, was forced upon the colonists by the rules of the Congregational Way. According to those rules, every adult who became a church member was entitled to have his or her children baptized. Thus a large group of church members came into being. The framers of the Congregational Way assumed that once most of these people became adults, they would advance to “full” membership in their local congregations by offering a relation of the work of grace. Nothing of this kind happened; some did, but many others did not. As these “adult children” of the church had children of their own, the question inevitably arose of whether their children were church members. Although the Cambridge Platform (chapter 12, paragraph 7) seemed to say no, the pressure on ministers and lay people to say yes was palpable. In 1657, the Connecticut General Assembly forwarded a list of questions to a group of clergy, with this issue at its core. A meeting of ministers that year sanctioned the practice of extending baptism to the next generation even if no parent was in full membership, and in 1662, a larger group reiterated this recommendation, insisting in the same breath that the Lord’s Supper remain restricted to full members. Underlying the debate about expanding the possibilities for baptism was a theological conundrum, the significance of the sacrament as a means of grace. Denying that it was truly efficacious (the Catholic position), the ministers in New England nonetheless stressed its benefits on the basis of Genesis 17:7 and the concept of an “external” covenant that incorporated all who were baptized.

Broadening the scope of baptism became immensely difficult in congregations where older members cherished the hard-won purity they had gained by immigrating to New

England. Suddenly, towns such as Hartford had to make room for two congregations, one favorable, the other opposed. In 1669, an important group of lay men and women withdrew from Boston's First Church, which was opposed to the new practice, to found Third or Old South Church, which was favorable to the practice. In town after town, meanwhile, the process of selecting a new minister became entangled with an often bitter politics of church membership. By the end of the century, much of this noise had died down and ministers in some towns were practicing a policy of near-inclusive baptism. So meaningful was infant baptism that parents brought newborn children to the church within a week or ten days of birth. Baptism and, for that matter, an event known as "renewal of covenant," became associated with family formation and, in particular, the importance of mothers in transmitting religious values and commitments to children.

The Lord's Supper was another matter. The ratio of "full" members who participated in this sacrament and members admitted only on the basis of baptism began to expand. One contemporary witness estimated the ratio as 4:1 in favor of the merely baptized. By the early eighteenth century, statements abounded that lay people were too frightened by the high demands of the sacrament to participate. Efforts to overcome this "scrupulosity" (as some historians have termed it) included the minister Solomon Stoddard's attempt in Northampton, Massachusetts, to sever the connections between the sacrament and church membership, a step his congregation hesitated to adopt and that few other churches emulated. Others, like the Boston-based minister Cotton Mather, tried to reverse popular anxiety by insisting that staying away had worse consequences than participating.

Declension and the Coming of Royal Government

As these policies suggest, the religious and political institutions inaugurated in the 1630s were coming under considerable pressure by the 1660s. The ministers had a name for these pressures and their consequences: "declension," or decline, and in sermon after sermon they pointed to adverse "providences" (fires, droughts, war, people sleeping through sermons, the slackening of participation in the Lord's Supper, but especially social conflict, as in disputes within towns about the distribution of land) as evidence that God was beginning to rebuke the colonists. A special synod that met in 1679 and 1680 drew up a list of collective sins and laid out a list of remedies, but the Massachusetts civil government, itself divided into factions, was wary of taking strong steps to

enforce moral legislation. The theme of declension also animated writers such as the minister-poet Michael Wigglesworth and Mary Rowlandson. In *The Day of Doom* (1662), Wigglesworth dramatized the day of judgment when Christ returns to earth and separates the worthy, who are heaven-bound, from hypocrites and evildoers. The poem sold extremely well, as did Rowlandson's narrative (1682) of the suffering she endured as a captive of local Native Americans during King Philip's War, an experience she framed as a God-designed "affliction" to reawaken her piety.

After royal government was overthrown in 1689, an event made possible by the Glorious Revolution in England that removed James II from power, Massachusetts acquired a new charter (1691) that combined local representation in a General Court with a Crown-appointed governor. The consequences of the new charter included a policy of limited toleration under which towns continued to levy taxes to pay their Congregational ministers, but Baptists and Anglicans (who founded King's Chapel, Boston, in the 1680s) were given limited rights and a shift to property as the basis for the franchise. The structural changes were fewer in Connecticut and Rhode Island, neither of which ever had royal governors, but in every colony, the civil courts gradually turned away from moral righteousness and reconciliation as their goals and resorted to fines and similar penalties.

Witch-Hunting

Another striking shift was the abrupt cessation of witch-hunting, a ritual process the colonists brought with them from Europe, where it was widely practiced in both Catholic and Protestant regions. The premise of witch-hunting was that the devil or his surrogates was ever active in the world—indeed, that a titanic struggle between good and evil framed human existence, a struggle made dramatically visible in the event known as "diabolical possession," when the devil took control of a person's body. In folklore more than in ministerial thinking, the devil asked the tempted to sign a compact that committed them to being his servants. Thereafter, such people gained the power to cause havoc in others' lives, which some delighted in doing.

Exposing the servants of Satan was the purpose of a witch hunt, with execution as the ultimate punishment in keeping with Exodus 22:18: "Thou shalt not suffer a witch to live." In each of the orthodox colonies, the government enacted a law to this effect by the 1640s. But witch-hunting was never this simple. Few if any of the colonists accused of being witches (some eighty percent of them women) had ever

thought of themselves as such. Instead, accusations of witchcraft fed on social and psychological anxieties about adverse events. Why did someone's sheep sicken and his or her child die unexpectedly? Instead of resorting to a theology of God's providence, some of the colonists preferred to explain such events as acts of malice on the part of local people who had allied themselves with Satan. Sometimes, the women singled out as witches were contentious figures in a village or lacked the protection that a husband could provide. Others were known as healers, a role sufficiently ambiguous to make them vulnerable to accusations of doing harm. Before 1692, some fifteen persons had been executed as witches, though many others were not found guilty and still others who were accused won suits for defamation. Only in the vicinity of Salem, Massachusetts, in 1692, did accusations flow freely—abetted by the phenomenon of “confessing witches” who named others—and executions spike. Almost immediately, it was realized that innocent people had died, and the outcome of a smaller witch hunt in Fairfield, Connecticut, from 1692 to 1693, was the government's decision to release a woman who had been convicted by a jury. Thereafter, no one in New England was executed for being a witch, though popular lore persisted for much longer.

Theology at the Beginning of the Eighteenth Century

In preaching, theology, and education, change was also occurring, though the continuities were many well past 1700. Protestant scholasticism found its major spokesman among the colonists in the person of Samuel Willard (1640–1708), minister of Third Church, Boston, and the author of the only systematic explication of doctrine to be published in early New England, *A Compleat Body of Divinity* (Boston, 1726), a collection of lecture sermons explicating the Westminster Catechism. In Willard's thinking, Aristotelian rationalism meshed with Reformed doctrine in ways that would have been familiar to Reformed academics on the European continent. Willard's anthropology, with its insistence on free will (God had so arranged things that persuasion—the preaching of his instrument, the ministry—was the sole means of moving humans to act), and reason as an innate faculty, was in no sense innovative. Nor did he break fresh ground with his treatment of the covenant of grace as a matter of mutual obligation freely entered into by God and humankind. This was not a covert doctrine of works righteousness, for Willard insisted that divine action made it possible for someone to fulfill the conditions of the covenant.

The advent of the “new science” associated with William Haley and Isaac Newton did little to disrupt the ministers' thinking—Puritanism was never anti-intellectual—though it put a serious crimp in the lore of portents and wonders once phenomena such as comets were recognized as entirely natural in their causes. Of more importance was a general disenchantment with biblical prophecy and Holy Spirit centered raptures, a disenchantment made explicit in England by figures such as John Locke. Gradually, a group of ministers and lay intellectuals less keen on the Congregational Way and, as they said of themselves, more “Catholick” in sympathies (in other words, less enamored of the practical divinity), took charge of Harvard College and some town churches in the vicinity of Boston. Cotton Mather (1663–1728) was an exception to this tendency. Publishing far more than any other minister of his day (or since), Mather incorporated the new science and the Continental currents of religious awakening known as Pietism into an emphasis—utterly traditional from one perspective—on distinctive forms of “experience” as markers of authentic Christianity. By doing so, and by encouraging a younger generation of ministers to pursue the same themes, Mather became a bridge to the freshening currents of fervor known as the Great Awakening.

Writing and Literature

From the moment the Puritan movement arose in England, it favored particular aesthetics of writing, music, and church architecture that became known as the “plain style.” The model for writing was the simple speech of Jesus, who, it was asserted, spoke so that everyone could understand him. In point of fact, the Oxbridge-trained members of the spiritual brotherhood were humanists as well as Puritans and used various literary devices. But they stood apart from Court culture and its favored genres such as masques and epics. The genres most practiced within the Puritan world were histories of God's action in the world, spiritual biographies, sermons on the new birth and sanctification, and elegies honoring the saints or verse describing the spiritual warfare between body and soul. The Hebrew psalms were deeply influential, as was John Foxe's 1565 *Acts and Monuments* (better known as *The Book of Martyrs*), with its apocalyptic framework of saints ever at war with the forces of the Antichrist. Loyal to the plain style, New England writers also helped create the genre of captivity narrative, famously so with Rowlandson's *The Sovereignty & Goodness of God*.

Read closely, texts such as hers reveal ongoing tensions within the lived world of seventeenth-century Puritanism, for Rowlandson was at one and the same time exceedingly devout and remarkably casual in her religious observance. Any reckoning with lay practice must take account of intermittencies (as in holding children back from being baptized, as well as hurrying them to receive the rite) that no portrait based solely on formal doctrine can capture.

Missions to the Native Americans

Bringing Christianity to the Native Americans was a stated purpose of the Massachusetts Bay Company, flaunted in a seal designed in London that showed a Native American uttering the “Macedonian plea”: “come over and help us” (Acts 16:9). Beginning with Virginia, assertions that evangelizing local people was a core purpose of colony-founding was boilerplate in the charters or other authorizing documents of English colonies before and after the founding of Massachusetts. Boilerplate or no, the colonists were quickly criticized for doing nothing of this kind until two men began to make a difference: John Eliot in Massachusetts and Thomas Mayhew on the island of Martha’s Vineyard. Eliot’s endeavors, which began in 1646 and were promptly publicized in a series of London-printed pamphlets, led to the founding in 1649 of a charitable corporation, the Society for the Propagation of the Gospel in New England, commonly known as the New England Company. In ten years’ time, the Company raised some £16,500, funding that enabled Eliot to embark on a translation of the Bible into Algonquian, printed in Cambridge in 1663.

The missionary enterprise existed amid debate on who the Indians were. Lacking the anthropological and archeological evidence on which modern theories are based, the colonists and their European contemporaries started from the assumption that all peoples in the New World were children of Adam and therefore as fully human as the colonizers. But the Native Americans were different in being “degenerated”—most specifically in knowing nothing of Christianity—and in how they lived, or as the colonists put it succinctly, their “Barbarism.” As for who they were in relation to Adam, some of the colonists, including, for a while, John Eliot, speculated that they were a branch of the Ten Lost Tribes who somehow found their way to America. Others proposed that they were an Asian people, probably the “Tartars or Scythians.” From another vantage, the Native Americans were seen as servants of the devil, drawn to the outer regions of the earth (in effect, regions of

darkness) to serve him. This scenario helps to explain the references to Indians as devil-worshippers and their shamans as witches.

John Eliot as Missionary and Translator

Until the mid-1640s, any efforts to bring Christianity to the Native Americans took second place to what might be termed foreign policy—that is, ensuring that Native American tribes or communities yielded land to the colonists and acknowledged the superior authority of their governments. Some Native American groups did so reluctantly, if at all, but the colonists responded to the resistance of the Pequot in coastal Connecticut by mounting a series of assaults—later known as the Pequot War—in 1636 and 1637 that destroyed the group’s power over trade and intertribal relations in southern New England. No such conflict arose with the groups that inhabited the coast and immediate interior of Massachusetts/Plymouth, mainly because a series of epidemics in 1616–1618 and 1633 had reduced the Native American population by as much as four fifths.

In 1646, John Eliot preached in the local dialect of Algonquian to an audience of Indians gathered in what is present-day Newton, Massachusetts. Eliot continued these efforts and, in 1652, attempted to form the first Native church out of a handful of converts who described their new ways of being religious to a skeptical audience of lay people and ministers. Not until 1659 were eight Indians actually admitted to a church, Eliot’s own in Roxbury, Massachusetts, but the following year an independent congregation was set up in Natick, where, with the support of the government, Eliot had secured a land grant on which to create a “praying town,” where Indians could farm and otherwise behave like Europeans. By 1674, fourteen such towns had come into being, most of them quite modest in size. Separately, Thomas Mayhew was converting some of the Indians on Martha’s Vineyard to Christianity. More effectively there than on the mainland, native teachers took over the task of conversion and church building.

Some tribal groups rejected the missionaries, among them the largest group in southeastern New England, the Narragansett. As grievances with the English accumulated after 1660, a threshold was crossed in 1675 and, for the first time in the history of New England, a collation of tribes rose up against the colonists in what became known as King Philip’s War (1675–1676). By its end, most of the praying towns had been shut down and the Native population severely diminished. Eliot persevered amidst difficult conditions, but several

decades would pass before there was any substantial renewing of efforts to convert the Native peoples to Christianity.

Conclusion

The religious motifs of the Puritan movement became an important source of eighteenth- and nineteenth-century evangelicalism, in particular the emphasis on an inward experience of grace and on moral righteousness. Even as some of the strictures of high Calvinism waned, the thaumaturgy of contending against sin and experiencing the power of the Holy Spirit persisted. Another element of continuity between Puritanism and evangelicalism was the recurrent hope that an entire society would subordinate itself to the will of God and accept the moral rules spelled out in the scripture.

Quakers: Through the Nineteenth Century

Like many other American faiths, Quakerism rose in the British Isles and came to North America with missionaries and immigrants. In 1700, Quakers were perhaps the third largest religious denomination in what would later become the United States. Since that time, they have steadily declined as a proportion of the U.S. population, but they have had an influence out of proportion to their numbers.

Beginnings

Quakerism emerged from the English Revolution of the 1640s and 1650s. Civil war between King and Parliament, with supporters of the established Anglican Church on the side of the former and Puritans aligned with the latter, led to a religious upheaval as old religious and social controls broke down. Many new religious groups appeared, among them a group that originally called themselves Children of the Light, or Friends of the Light, nicknamed “Quakers” by their enemies, and ultimately the Society of Friends.

At the heart of this movement was a young man from Leicestershire County, England, named George Fox (1624–1691). Fox grew up in a family with strong Puritan sympathies and was troubled by the competing and irreconcilable claims of the religious groups around him. At age nineteen, he embarked on a spiritual pilgrimage, traveling around southern England, seeking out both ministers and laypeople with reputations for godliness. But as Fox said in his journal (*A Journal or Historical Account of the Life, Travels, Sufferings, Christian*

Experiences, and Labours of Love in the Work of the Ministry of that Ancient Eminent and Faithful Servant of Jesus Christ, George Fox, published 1694), none “spoke to my condition.” So he went north, and on the moors of Yorkshire and Lancashire he had a series of experiences in which he was convinced that God had spoken directly to him. He called them “openings”; today we would understand them as revelations. They began when Fox heard a voice say, “There is one, even Christ Jesus, that can speak to thy condition.”

These “openings” led Fox to several conclusions. Perhaps most central to his ministry was his experience of the Light of Christ. He wrote in his journal that “every man was enlightened by the divine light of Christ, and I saw it shine through all, and they that believed in it came out of condemnation and came to the light of life, and became the children of it, but they that hated it, and did not believe in it, were condemned by it.” Fox and other early Friends concluded that all people had within them a certain measure of the Light of Christ, even if they lived in places where no one had ever heard of Jesus or Christianity. This Light would lead them to see their sinful condition, their need of salvation. But if they failed to heed it, then they ultimately would be damned.

Logically following from Fox’s experience was the possibility of immediate revelation: God could and did speak to human beings directly, without priestly intermediaries. This led to charges that Quakers discarded the Bible. Friends denied such accusations, but they were clear that the authority of the Bible lay in the fact that it was inspired by the Holy Spirit. That same spirit, they argued, was still speaking to people. The error of other Protestants was to exalt the written letter of the Bible above the spirit that had given it.

Flowing from these conclusions were equally radical ones about worship and ministry. For Fox and his early followers, worship lay in providing a setting in which the Holy Spirit could move unimpeded by preset rituals and arrangements. Thus Friends gathered and waited in silence, confident that if God had a message for them at that place and time, he would inspire someone to speak. And that inspiration might come to anyone. Fox argued vociferously that godly power, not academic training, made ministers. Women as well as men might experience this power. Thus, women would play leading roles as Quaker ministers and preachers. On the other hand, silence was the exception rather than the norm in early Quaker worship. Preachers, both male and female, were central to the movement's rapid growth.

One of Fox's most radical challenges to religious orthodoxy lay in his advocacy of the possibility of human holiness or perfection. In his journal, he wrote of an experience that occurred in 1648 when he was "come up in spirit through the flaming sword into the paradise of God. . . . I knew nothing but pureness, and innocency, and righteousness, being renewed up into the image of God by Christ Jesus, so that I was come up into the state of Adam which he was in before he fell." This was at odds with the belief of contemporaries that original sin made such a complete spiritual rebirth impossible. Fox responded, however, that such teachings amounted to a denial of the power of God to cleanse believers from all sin.

Finally, Fox and early Friends embraced a number of peculiarities, based on their understanding of the Bible. Committed to the spiritual equality of all, and suspicious of anything that might puff up sinful vanity, they refused to use the titles and honorifics, such as "mister" or "my lady" or "your honor" that were the marks of deference and politeness in status-conscious seventeenth-century England. Closely connected was a commitment to simplicity, what Friends later came to speak of as "plainness," a repudiation of elaborate forms of dress. They insisted that all sacraments were spiritual and inward, thus repudiating water baptism and physical communion. They also eschewed anything pagan in origin, even the traditional names of the days of the week, which honored pagan deities. Thus Sunday became for Friends "First Day." More gradual in development was Quaker pacifism, what Friends came to refer to as the "Peace Testimony." Fox repudiated all forms of physical violence from the beginning of his ministry, but other Friends served in the army in the 1650s, and some Friends continued to bear arms into the 1670s.

Friends attracted thousands of followers in England in the 1650s—it was unquestionably the fastest-growing religious movement in the country. Yet the radical departure of Friends from many traditional beliefs, and some eccentric practices, such as interrupting the worship of other groups, made them controversial. The very name "Quaker" was originally an insulting label, referring to the popular belief that Friends physically shook and "quaked" in their worship. As early as 1653, Puritan ministers were warning against what they saw as Quaker blasphemy, and in 1656, Quaker leader James Nayler was convicted by Parliament on just such a charge. With the restoration of the monarchy in 1660, new laws criminalized religious dissent. Until the passage of the Act of Toleration in 1689, Friends faced periods of persecution that brought fines and imprisonment that sometimes resulted in death.

To North America

The first Quaker to arrive in what is now the United States was Elizabeth Harris, who visited Maryland and Virginia in 1655 or 1656. By 1660, small Quaker congregations had formed in both colonies, and in the 1670s, some Virginia Friends moved into North Carolina.

Two Quaker women, Ann Austin and Mary Fisher, also arrived in Massachusetts in 1656. Puritan officials quickly apprehended and banished them. Yet over the next four years, dozens more English Friends would come, invariably facing imprisonment, whipping, and banishment. Finally, in 1659 and 1660, Massachusetts authorities took the final step and hanged four Quakers, including a woman, Mary Dyer, for returning after having been banished. A royal edict halted hangings in 1661, but Friends still faced persecution in most of New England. The exception was Rhode Island, which was committed to religious toleration and where Friends flourished. Quakers also found followers among English colonists on Long Island. Dutch governor Peter Stuyvesant tried to halt the growth of the sect, bringing a formal protest, the Flushing Remonstrance, in 1657, from Quakers and sympathizers. It was a pioneering statement of religious liberty. After New York became an English colony in 1664, the number of Friends on Long Island and around New York City grew.

The Delaware Valley became the great Quaker center of North America. In 1675, a group of well-to-do English Friends purchased the proprietorship of West Jersey, the western portion of what is now New Jersey, with the idea of making it a refuge for persecuted Friends. Several

hundred settled there. More ambitious was Pennsylvania, the project of William Penn (1644–1718). The son of an admiral, Penn moved at the highest levels of English society and politics. Nevertheless, he converted to Quakerism in 1667 and quickly emerged as a leading minister, author, and polemicist. Penn struck a deal with King Charles II, forgiving a substantial debt in return for the grant of land of what would become Pennsylvania, named for Penn's admiral-father. As proprietor of the colony, Penn theoretically could have been an absolute ruler, and in many ways did envision himself as a benevolent autocrat. But his framework of government for the colony was the most liberal in colonial America. It offered complete religious liberty (although office holding was restricted to Christians) and did not establish any church, a break with the practice in England and most of the other colonies. The legal code was enlightened, and Penn took pains to try to establish good relations with the Lenni Lenape or Delaware Indians and other neighboring tribes. As a result, Europeans and Native Americans would remain at peace in Pennsylvania for seventy-five years. The colony's capital, Philadelphia, "city of brotherly love," was groundbreaking for its regular street plan and provision of green spaces.

By the end of the seventeenth century, Quakers were well established in North America. They had followed the organizational model of English Friends in establishing monthly, quarterly, and yearly meetings for church business. The Monthly Meeting, usually made up of more than one congregation or meeting, as Friends referred to them, was the basic unit, receiving and disowning members, recording births and deaths, and solemnizing marriages. Quarterly Meetings, consisting of two or more Monthly Meetings, handled broader matters. The Yearly Meeting was the highest authority. By 1698, six existed in North America: New England or Rhode Island; New York; Philadelphia, which embraced Friends in the Delaware Valley; Maryland (later called Baltimore); Virginia; and North Carolina.

The Eighteenth Century

Historians usually refer to the eighteenth century as the quietist period of Quaker history. Previously aggressive evangelists, by 1700, Friends had become more passive and inward looking. Increasingly, Friends saw themselves as a "peculiar people," called by God to exemplify certain beliefs and practices in the world, rather than actively seeking to convert others to the Quaker faith. Central was the gradual adoption of the practice of birthright membership. Children born to

Quaker parents automatically became members at birth, and no further affirmation was required at any point in a Quaker life. As long as one followed the rules, one remained a Friend without any further confirmation.

One of the central features of quietism was an intense desire always to be obedient to the will of God and a consequent dread of doing anything that was contrary to it. Eighteenth-century Quaker writings are filled with statements of desire to be completely passive in the hands of the Lord, to fear anything that smacked of "creaturely activity" that was in human desire rather than according to the divine will.

This tendency was strengthened by a reform movement that began among American Friends in the 1740s and 1750s. It found its leaders in Philadelphia Yearly Meeting, the largest in North America, in Friends such as John Churchman, Anthony Benezet, Daniel Stanton, John and James Pemberton, and John Woolman. They argued that material prosperity and participation in politics had led many Friends to compromise Quaker peculiarities. They saw the solution in a new commitment to plainness and peculiarity: withdrawing from politics, eschewing fancy dress and furnishings. They especially advocated more consistent and thorough enforcement of the Discipline, the set of rules and regulations on proper conduct that was supposed to shape the life of every Friend.

This reformation, as some historians label it, had a paradoxical impact on Friends. On one hand, it led Friends to emphasize greater separation from the world. A good example is the Quaker response to the crisis on the Pennsylvania frontier in 1756. Friends had dominated the Pennsylvania legislature since the founding of the colony. With the outbreak of the Seven Years' War, settlers came under Indian attacks. In order not to violate the Peace Testimony, a number of Quaker legislators simply resigned their seats, allowing non-Quakers to take control and respond militarily. Similarly, more aggressive enforcement of the Discipline meant the disownment of thousands of Friends, usually young members, between 1750 and 1800, most often for marrying non-Quakers.

On the other hand, this half-century also saw Friends make determined efforts to have an impact on the larger world. One example is in Indian relations. While giving up governmental power, Friends responded to Indian war in the 1750s by forming the Friendly Association for Regaining and Preserving Peace with Indians by Pacific Measures. Its negotiations did persuade the Delaware Indians to stop their attacks. Following the lead of English Friends, American Quakers took up the

cause of mentally ill people. The Pennsylvania Hospital, the first hospital designed to treat mental illness, opened in 1751.

Of most lasting consequence was growing Quaker opposition to human slavery. Quakers in North America and the Caribbean had owned slaves since the 1650s. One historian has concluded that Quakers in the Delaware Valley in the eighteenth century were more likely than their non-Quaker neighbors to hold slaves, and Quaker merchants in New England and Philadelphia were active in the slave trade. A few Friends had raised questions. As early as 1688, some Friends in Germantown, Pennsylvania, had written a memorial to Philadelphia Yearly Meeting denouncing slavery. More forceful was Benjamin Lay, who, in 1737, wrote and published a pamphlet with the provocative title *All Slave-Keepers Apostates* and kidnapped Quaker children so that their parents would understand how slave parents felt. Lay, and a few other Quaker writers, however, had little impact.

The Quaker reformers after 1750 saw slavery differently, as one of the evils God was calling them to purge from the society. Most influential were John Woolman (1720–1772) of New Jersey and Anthony Benezet (1713–1784) of Philadelphia. Woolman's *Some Considerations on the Keeping of Negroes* (1754) and a series of pamphlets by Benezet argued forcefully that slavery and Christianity were irreconcilable. The influence of both went beyond Quakers, heightening other antislavery intellectual trends. Among Friends, their impact was profound. Between 1772 and 1784, all of the Yearly Meetings in the world ruled that members could no longer be slaveholders. Friends who owned slaves were given the choice of liberating them or losing their membership. Some Friends chose the latter. Friends also became active in safeguarding the rights of former slaves and attempting to increase antislavery attitudes among non-Quakers. One of the first heated debates in the new United States Congress in 1790 involved Quaker antislavery petitions.

The Great Migration

The American Revolution was a difficult time for Friends. Many, perhaps most, had loyalist sympathies, and Yearly Meetings exhorted their members to refrain from bearing arms or taking oaths to newly established governments. Patriots accordingly regarded Friends with deep suspicion. In Newport and Philadelphia, a small group of supporters of independence split away to form a body that called itself Free Quakers. Betsy Ross was probably its best-known member.

After the American Revolution, Quakers joined in the general American westward movement. By 1730, as

population grew in the Delaware Valley, many Friends looked elsewhere for land. Some moved across the Susquehanna River. Other Friends looked south. By 1775, thousands of Friends with roots in Pennsylvania and New Jersey were living in the North Carolina Piedmont, in what would remain an important Quaker center. Some moved farther south, into South Carolina and Georgia.

When new lands opened west of the Appalachian Mountains, Friends generally avoided settling in slave territories. No Quaker communities formed in Kentucky, Alabama, or Mississippi, and by 1820, almost no Friends were left in South Carolina and Georgia. So many Friends left Virginia that in 1843 that Yearly Meeting was laid down or dissolved. Quakerism survived in North Carolina, but almost half of the Monthly Meetings there had been laid down by 1850.

The destinations for Friends moving west between 1800 and 1830 were Ohio and Indiana. Large groups of Quakers from the Delaware Valley and Virginia settled in eastern Ohio, so many that in 1813 a new Yearly Meeting, Ohio, was formed. Hundreds of Friends from the Carolinas, Virginia, and Georgia settled in southwestern Ohio before 1810. In 1806, they began moving west into the Indiana Territory. After the War of 1812, they spread into other parts of the new state, and in 1821, Indiana Yearly Meeting was established. By 1850, almost as many Friends lived within a fifty-mile radius of Richmond, Indiana, as within fifty miles of Philadelphia. By the 1830s, Friends were crossing the Mississippi River into Iowa, which became a major Quaker center by 1860. After 1860, large numbers of Friends moved farther west into Kansas, Nebraska, Oregon, and California, founding five new Yearly Meetings. While Quaker migration was almost always by individual families, Friends usually clustered together. In Ohio, for example, in 1850, most of the Quaker population was concentrated in just seven counties.

The Era of Separation

American Friends began the nineteenth century a united people who had experienced only minor schisms. A century later, however, they would be divided into three major groups, reflecting differences still present in American Quakerism.

The first, and most serious, of these splits was the Hicksite Separation of 1827–1828. At its center was Elias Hicks (1748–1830), a Long Island Quaker minister. Hicks saw himself continuing the reforming tradition of eighteenth-century Friends. In his view, wealth and ties to non-Quaker evangelicals, especially in reform and humanitarian groups,

had corrupted Quakerism. Hicks especially objected to the emphasis that many Friends placed on the authority of the Bible and salvation through faith in the blood of Christ as shed on the cross. Although Hicks revered the Bible, he felt that dwelling on its authority derogated the importance of direct revelation and the guidance of the Inward Light. Hicks, in common with other nineteenth-century Protestant liberals, adamantly rejected the idea that God would have required the death of his innocent son as a ransom for sin. In Hicks's Christology, Jesus was not born the Christ, but he became the Christ because he was the only human being who ever lived who was perfectly obedient to the Divine Will. Those who sympathized with Hicks became known as Hicksite Friends.

Other Friends, however, saw Hicks not as a reformer or advocate of traditional Quakerism but as a Unitarian or even an infidel. They perceived Hicks's views on the authority of the Bible and his Christology as verging on blasphemy. Hicks, who was not a systematic theologian, contributed to the controversy with sometimes-unguarded comments, such as a statement to a Long Island neighbor that he thought that Jesus was probably the son of Joseph, rather than of divine birth. Those who objected to Hicks's ministry became known as Orthodox Friends. Historians have identified other factors in the growing differences. Robert W. Doherty found that in Philadelphia Yearly Meeting, Orthodox Friends were more prosperous, apparently those who were successfully adjusting to the emerging market economy. Questions of power were also involved. Orthodox Friends included a disproportionate number of Friends who held positions of authority.

By 1822, Hicks had become the center of controversy. He traveled extensively among Friends and was a frequent visitor to Philadelphia. Orthodox elders there tried to silence him by sending complaints to Hicks's home meeting, by meeting privately to admonish him, and by issuing public condemnations of some of his statements. The result was growing polarization. Hicksites responded angrily, and by 1827, both sides were in a pamphlet war. The issue came to a head at the sessions of Philadelphia Yearly Meeting in April 1827. The Hicksites attempted, and failed, to replace the clerk, or presiding officer, with a Hicks supporter. The Hicksites withdrew to hold what they called a "reorganized yearly meeting," apparently in the hope that a temporary separation would calm the tensions. Most members of Philadelphia Yearly Meeting sided with the Hicksites.

The Philadelphia separation forced other Yearly Meetings to take sides, deciding which group would be recognized as

the legitimate one. This decision produced separations in New York, Baltimore, Ohio, and Indiana Yearly Meetings. Hicksites were a majority in the first two, close to half in Ohio, but less than 20 percent in Indiana Yearly Meeting. Three other Yearly Meetings—New England, Virginia, and North Carolina—remained almost wholly Orthodox. The Orthodox also claimed legitimacy from the decision of the oldest Yearly Meeting, London, to recognize them. In all, Hicksites constituted about 40 percent of all American Friends.

After the Separation of 1827–1828: The Hicksites

Contention did not cease after 1830, as both groups experienced new divisions. Hicksites were a diverse group, ranging from ultraconservatives who feared what they saw as Orthodox innovation to incipient liberals who felt spiritual kinship with Unitarians and religious radicals. Almost immediately, when some Hicksites in Wilmington, Delaware, voiced sympathy for the religious skeptic Robert Owen and his communitarian reforms, they found themselves the target of attack and ultimately disowned. Even more divisive was the Hicksite response to the rise of abolition and other radical reforms in the 1830s.

When the movement for the immediate abolition of slavery rose in the 1820s and 1830s, it found significant Quaker support. About a third of those who attended the organizational meeting of the American Anti-Slavery Society in Philadelphia in December 1833 were Hicksite Friends. The Philadelphia Hicksite minister, Lucretia (Coffin) Mott (1793–1880), was the only woman who addressed the delegates. And as abolition gave rise to other reform movements, such as women's rights and nonresistance—repudiation of all coercive forms of government—some Hicksites were sympathetic. More conservative Hicksites, however, became increasingly critical. They saw in such reform activism a repetition of the dangerous ties to evangelical reformers in other denominations that had helped precipitate the Orthodox attack on Elias Hicks in the 1820s. Such Friends warned that joining with non-Quakers, even in good causes, risked the loss of the peculiarity and distinctiveness that were vital to true Quakerism. One Friend preached that they must dwell alone as the Israel of God. Another fear was that abolitionists and reformers, instead of awaiting divine guidance, acted according to their own will and wisdom, which was contrary to the will of God. A Long Island Quaker woman said that by being forever patient, they would do more for slaves than if they were to speak volumes about the cause.

These differences brought another round of separations. New York Hicksites provided impetus when they disowned three leading abolitionist Friends, which outraged sympathizers as far west as Indiana. By 1852, separations had taken place in all of the Hicksite Yearly Meetings except Baltimore. The reformers formed what they called Congregational, or later, Progressive Yearly Meetings of Friends. In some places, such as Philadelphia Yearly Meeting, the radicals were a minority. In others, such as upstate New York, eastern Ohio, and Michigan, their departure left but a shell of Hicksite Quakerism. Their vision was radical. They abolished most leadership positions and opened their meetings for worship to any who wished to participate, no matter what their religious beliefs. They stopped enforcing the Discipline and retained only the loosest conception of membership. They also took advanced positions on political and social issues, sending memorials to state legislatures and Congress to end slavery, repeal segregation laws, and abolish the military academies. Perhaps of most lasting consequence was their commitment to legal equality for women. Of the five women who issued the call for the first women's rights convention in United States history, at Seneca Falls, New York, in July 1848, four had ties with Congregational Friends. Congregational Friends were leaders in the movement for the next generation. Susan B. Anthony (1820–1906), who identified with Congregational Friends in New York before returning to the Hicksites, was a central figure in the movement from 1860 until her death.

Most of the Congregational/Progressive Yearly Meetings proved short-lived. Some sympathizers, like Lucretia Mott, kept their membership in the older Hicksite Yearly Meetings. After 1850, many others were drawn toward Spiritualism; two Congregational Friends from Rochester, New York, Isaac and Amy (Kirby) Post, were central to the early Spiritualist movement. By 1880, the Progressive Friends movement had lost its force.

Nevertheless, despite the loss of many of the most radical members, Hicksite Friends, after 1860, moved steadily toward identification with Unitarians and other liberal Protestants. They tolerated members who questioned the divinity of Christ and the historicity of much of the Bible. By 1880, Hicksites were debating whether it was acceptable to refer to Jesus as “Our Lord and Savior.” While they retained many Quaker distinctives, such as worship on the basis of silence, by 1900, most had given up the traditional Quaker plain dress and plain language of “thee” and “thou.” Their numbers west of the Appalachians had dwindled. In 1900, half of the

roughly 22,000 Hicksites in the United States were in Philadelphia Yearly Meeting, and in every Yearly Meeting their numbers were fewer than in 1828. Yet they had found a confident identity as religious liberals and social reformers.

After the Separation of 1827–1828: The Orthodox

The experience of Orthodox Friends after 1830 was even more complex than that of the Hicksites. By the 1840s, they were also involved in bitter controversies concerning their relationships with other denominations and the larger world. By 1860, two more divisions had appeared: Gurneyites and Wilburites.

At the heart of these controversies was the ministry of a gifted English Friend, Joseph John Gurney (1788–1847). Wealthy and charismatic, Gurney was a gifted preacher who had studied in Oxford, although as a dissenter he could not take a university degree. His sister, Elizabeth Fry, was one of the world's best-known prison reformers, and Gurney was active in educational, antislavery, and other reform groups. By 1830, he was the most influential minister among British Friends.

Gurney was also a prolific writer, and he sought to recast Quakerism in important ways. He argued that Friends should be more open to ties with other evangelical Christians in advancing good causes, that they should emphasize commonalities rather than differences. He also at least implied that earlier Quaker writers had erred on certain theological points. He argued that the Inward Light was inferior to the light that Christians could find in the Bible—comparing the two, he said, was like comparing moonlight with the noonday sun. Gurney also argued that justification, or acceptance by God, salvation, was separate from sanctification, the achievement of holiness. The former came first, instantaneously, through faith in the efficacy of the blood of Christ. Sanctification was a second, gradual experience. Gurney affirmed Quaker peculiarities such as unprogrammed worship, the ministry of women, plainness, and pacifism, but he asserted that they should not separate Friends from other believers.

In 1837, Gurney began a three-year visit to the United States. In most respects, it was a triumph. He visited most Orthodox Quaker communities and tried to reach out to Hicksites, although with the avowed aim of making them see their errors. President Martin Van Buren received Gurney, and many non-Quakers acclaimed him. But many Orthodox Friends, especially in New England, Philadelphia, and Ohio Yearly Meetings, found Gurney's doctrines troubling. They

found their leader, and martyr, in a Rhode Island minister, John Wilbur (1774–1856). Wilbur had first encountered Gurney on a visit to England a decade earlier, and when Gurney arrived in the United States, Wilbur felt compelled to warn Friends against his doctrines. Wilbur saw Gurney's views of holiness and relations with other denominations as threatening Quaker distinctiveness. But most New England Friends embraced Gurney, and their response to Wilbur was to disown him. Wilbur's supporters responded by separating from the larger New England Yearly Meeting in 1845.

As in 1827, separation meant that other Yearly Meetings had to decide which was the legitimate New England Yearly Meeting. Most sided with the larger Gurneyite group, but in Ohio and Philadelphia, where Wilbur's sympathizers probably were the majority, a new separation threatened. Ohio split in 1854, and Philadelphia avoided separation only by cutting off official contact with all Yearly Meetings, thus avoiding the necessity of recognizing either group. It would remain divided between a Wilburite majority and an articulate Gurneyite minority for the rest of the century.

Friends and the Civil War

The Quaker historian Rufus Jones speculated that every adult male Friend in the North in 1860 voted for Abraham Lincoln. This is an exaggeration, but not by much. Friends North and South were firmly opposed to the extension of slavery. When war did break out in 1861, Friends faced a dilemma. Those in the South were confronted with suspicious neighbors and conscription laws that drafted Friends into the Confederate army. Many fled north to avoid such service. Yearly Meetings in the North urged Friends to uphold the Peace Testimony, but observers agreed that thousands of young Friends went into the Union army. Many Monthly Meetings tacitly endorsed their decision by not taking disciplinary action against them.

More in keeping with traditional Quakerism was the work of Friends among the freed people in the South. Hundreds of Friends worked in refugee camps and established schools and orphanages. Some of these institutions survived until the twentieth century, like Southland College in Arkansas, the first black college west of the Mississippi River.

Gurneyite Friends, 1860–1900

By 1860, Gurneyites were the majority of American Quakers, and they were beginning to experience a renewal movement. A new generation of ministers and elders was coming into leadership positions, such as Charles and Rhoda

Coffin in Indiana Yearly Meeting, Eli and Sybil Jones in New England, Nereus Mendenhall in North Carolina, and Francis T. King in Baltimore. Inspired by Gurney, they advocated a Quakerism that was evangelical in doctrine and open to ties with other Christians, yet it retained Quaker distinctives such as the ministry of women, pacifism, and silent worship.

Education was central to the vision of these Friends. Quakers had founded boarding schools and academies since the late eighteenth century, but these Friends oversaw the opening of the first Quaker colleges, Haverford, outside Philadelphia, in 1856, and Earlham, in Richmond, Indiana, in 1859. (Swarthmore, founded in 1864 near Philadelphia, was the lone Hicksite college.) By 1900, Gurneyites had opened at least eight other colleges or institutions that would become colleges.

Gurneyites also advocated reform of the Discipline, relaxing or abolishing rules that they considered outdated. Their chief target was the rule against marriage outside of meeting. By 1870, most of the Gurneyite Yearly Meetings allowed members who married non-Quakers to retain their membership with a simple request.

The Civil War, however, created a crisis of confidence, as Gurneyites watched many of their younger members enlist in the Union army, raising questions about how well they understood Quaker faith. The response of Indiana Yearly Meeting, by 1860 the largest in the world, was to hold general meetings. These brought together leading ministers and elders in a Quaker neighborhood for several days of preaching and teaching. They proved so successful that other Yearly Meetings adopted them—even Hicksite Yearly Meetings created a variant that they called “circular meetings.”

In the 1870s, however, the general meetings took an unexpected direction. Here is a description from David B. Updegraff, an influential minister from Mount Pleasant, Ohio:

Many could not see that the blessing of God rested upon an attempt to convey to perishing sinners “accurate *information*” about our “distinctive *tenets*.” I was one of that number and joined with others in imploring that the “the dead” might be left to “bury the dead,” and that we might unite in preaching the gospel and getting converts to *Jesus*. In the providence of God such counsel prevailed, and then it was that our General Meetings became “Revival Meetings.”

Updegraff, along with ministers like John Henry Douglas, Luke Woodard, and Esther Frame in Indiana Yearly Meeting,

and likeminded Friends in all of the other Gurneyite Yearly Meetings except Baltimore, created a revival movement.

What these revivalists shared was a commitment to the interdenominational, second-experience Holiness movement that made a powerful impression on American Protestantism between 1850 and 1900. Believers argued that all Christians should undergo two separate, instantaneous experiences, both based on faith in the efficacy of the blood of Christ: first, conversion, or justification, being saved; and second, sanctification, or holiness, in which believers, through the baptism of the Holy Ghost, were redeemed from all inclination to sin. They used this message to revolutionize Quaker worship. Scenes not different from the revival meetings of other Protestants became common: singing, the use of mourner's benches, and outbreaks of extreme emotionalism. The revivalists regarded most traditional Quaker peculiarities as, at best, distractions from real faith, and at worst, "dead works."

By 1890, the revolution was almost complete. Most Gurneyite Friends, about three quarters of all American Friends, gave up nearly everything that had traditionally distinguished them. The plain dress and plain language were confined to the elderly. Singing and musical instruments were introduced into meetinghouses. Meetings called and hired pastors, who came to dominate worship and perform marriages. In many places, the local congregation became a "Friends Church."

Such radical change inevitably produced reaction. More conservative Friends in Indiana, western New York, Iowa, Kansas, and North Carolina Yearly Meetings separated and eventually joined the older Wilburite groups. A more moderate group of leaders, many with ties to the Quaker colleges, did not separate, but they remained within the larger Gurneyite bodies to try to moderate the revival. They were leaders in the conference in Richmond, Indiana, in 1887, that produced the declaration of faith that many Friends regard as normative. By 1895, some Gurneyites, most notably Rufus Jones (1863–1948) of Philadelphia, were becoming interested in Protestant modernism, melding it with an interest in Quaker history and tradition to lay a new foundation for liberal Quakerism in the twentieth century. This, in turn, would produce conflicts over modernism and fundamentalism similar to those in other Protestant denominations.

Conclusion

By 1900, American Friends had divided into three main streams. Hicksite Friends, now almost uniformly liberal in doctrine, would unite their Yearly Meetings by forming

Friends General Conference in 1900. Wilburites, now known as Conservative Friends, were tied together through traveling ministers and official correspondence. The largest body, Gurneyites, after a series of quinquennial conferences, would form the Five Years Meeting of Friends (now Friends United Meeting) under a Uniform Discipline in 1902.

Quakers: Since the Nineteenth Century

As Friends in America entered the twentieth century, the world, including the Quaker one, was vastly different from even the mid-nineteenth century. Quakers in 1850, while already divided into Orthodox/Gurneyite, Wilburite, and Hicksite camps, still shared common distinctives: plain dress, plain speech, silent “unprogrammed” worship, no “hireling” ministry, a sectarian form of polity, and a variety of “hedged” that helped guard against assimilation into “the world.”

The impact of modern scientific and critical thought, mass communication, improved transportation, and increased urbanization contributed to the development of Quakerisms that looked more and more like the cultures formerly shunned. Post-Civil War revivals among Gurneyite Friends led to an increasingly Protestant form of worship and rapid loss of outward distinctives. Modernism, scientific advances, and the German “higher” biblical criticism contributed to a more liberal Quakerism among some Orthodox Friends and many Hicksites. Other Friends sought a “Middle Way” between a Quakerism nearly indistinguishable from dogmatic revivalism or dogmatic modernism and one that was an irrelevant museum piece of outmoded forms.

Denominational Structures Coalesce amidst Fundamentalist/Modernist Debate

A conference held by the more mainstream Christian Gurneyite Friends at Richmond, Indiana, in 1887, led eventually to the establishment in 1902 of Five Years Meeting of Friends (FYM) and a denominational structure. FYM continued to hold gatherings for the constituent Yearly Meetings every five years until meeting every three years by the mid-twentieth century and changing its name in 1965 to Friends United Meeting (FUM).

Hicksite Friends, more suspicious of authority and more focused on the Inward Light, had been holding their own conferences since the 1860s on various topics of mutual interest, culminating in 1900 in a General Conference held at Chautauqua, New York. From this emerged Friends General Conference (FGC), an organization with less of a denominational structure than FYM but with a general secretary and standing committees. Biennial gatherings were held until 1962 and annually after that.

Preceding the formation of FGC, an important conference held in 1895 in Manchester, England, brought Friends

from both sides of the Atlantic together to consider ways of assuring Quakerism’s continued relevance in the light of advances in science, the study of religion, and psychology. Key to the planning and outcomes of the Manchester Conference was American Friend Rufus Jones (1863–1948), raised in the Gurneyite tradition in Maine but exposed to a broader world through Quaker education and later work at Harvard. Jones embraced a mystical view of Quakerism and collaborated with other Friends in producing a multivolume series on the history of Quakers that made mysticism more central in interpreting Quakerism.

Modernism was embraced by the Manchester Conference and popularized by such Friends in America as Jones; especially in the East and in many of the Quaker colleges, both Orthodox and Hicksite Friends accepted modern science and the new scholarship regarding the Bible. FGC, especially, gradually assumed a more and more modernist culture.

Meanwhile, other Friends, especially in the various Orthodox branches in the South and Midwest—and in the communities to which Friends had spread in the Great Plains, Pacific Northwest, and Southern California—were assimilating into evangelical and fundamentalist Protestantism. Life on the frontier, in closer proximity to other denominations, and farther away from “institutional” Quakerism back East, contributed to this blending. Some Friends felt that even the FYM was too liberal; a few Yearly Meetings abandoned FYM, finding common cause with a broader evangelical Christian community. Beginning in 1947, these and other Yearly Meetings that had developed as Quakers moved west began meeting as an Association of Evangelical Friends, forming in 1963–1965, the Evangelical Friends Alliance—later Evangelical Friends International (EFI).

The other major grouping of Friends to emerge from the schisms of the nineteenth century, Wilburite/Conservative Friends, developed no overarching organizational structure and sought to “conserve” both the outward trappings of Quaker culture and the inward focus on the Light of Christ. Becoming generally known as Conservative Friends, Yearly Meetings survived through the twentieth century in Ohio, Iowa, and North Carolina. As FGC and other unprogrammed Friends moved into these areas, they joined Conservative meetings, often transforming the meetings into ones more in line with FGC thinking.

One additional grouping of Friends that bears mentioning developed out of the controversies of the revivalist period. Iowa Friends Joel (1825–1914) and Hannah (1830–1909) Bean, Gurneyite in sympathies but opposed to some

of the excesses of revivalism, moved to California in 1882 rather than continue in controversy. The debates followed them, however, resulting in their new community of Friends forming the College Park Association of Friends as an independent body. Today, “Beanite” Friends on the West Coast are not affiliated with any of the major branches of Friends, but, nearly uniformly, they have adopted traditions consistent with those of FGC Friends.

Suspicion of the contagion of modernism in some of the Orthodox/Gurneyite institutions led to attempts to “purge” faculty of heterodoxy in the early part of the twentieth century as the modernist/fundamentalist debates impacted the Society of Friends. At Earlham College in Indiana, for example, Elbert Russell (1871–1951) resigned his faculty position in the Bible Department in 1915 after several stormy years during which his modernist views came under attack and his vision for Earlham as a beacon for a nonfundamentalist, non-isolated Quakerism was rebuffed. Various theological pressures and other opportunities led Earlham religion faculty Clarence Pickett (1884–1964) and Alexander Purdy (1890–1976) to leave as well around this time. Eventually, Russell became dean of the Duke Divinity School; Pickett became the executive secretary of the American Friends Service Committee; Purdy became a noted professor at Hartford Theological Seminary.

Meanwhile, at Haverford College near Philadelphia, Henry Cadbury (1883–1974) was dropped from the faculty for his conscientious objection during World War I; despite the historic Quaker Peace Testimony, some of the College leadership feared the impact of his controversial views when even prominent Hicksites in Philadelphia had publicly supported the war. Like his colleagues at Earlham, Cadbury did not see his career end. He went on to Harvard as a biblical scholar and was on the committee that produced the Revised Standard Version of the Bible.

Formation of Organizations for Service and Study

While Friends in the twentieth century coalesced into FUM, FGC, EFI, Conservative, and independent branches, major organizations and institutions were formed that helped give traditional Quaker concerns an outlet and, in some cases, provide channels for cooperation among the branches.

American Friends Service Committee

The American Friends Service Committee (AFSC) was founded in 1917 to provide alternative service for Quaker conscientious objectors (COs) during World War I, units

going to help with rebuilding efforts in war-ravaged Europe. Following the war, the AFSC supervised a feeding program in Germany that saved more than a million children from starvation, a staple of which program was chocolate soup—cocoa provisions being readily obtainable from the Quaker chocolate companies of Fry, Cadbury, and Rowntree in England.

The AFSC continued to follow a motto of “trying what love will do” in responding to human need around the world—and attempting through social justice work to “remove the occasions for war and violence.” Programs were instituted to address unemployment among coal miners during the 1930s, Jews and others seeking refuge from Hitler’s Germany were helped to emigrate, and another massive feeding program was instituted at the close of World War II. In 1947, along with the British Friends Service Council, AFSC accepted the Nobel Peace Prize on behalf of Friends everywhere for their humanitarian work.

Controversy has sometimes dogged AFSC. The AFSC’s work in support of organized labor, opposition to war, involvement with civil rights, and support for liberation movements around the world has led to accusations of communism and anti-Americanism by opponents. Work against the Vietnam War in the 1960s brought in a new wave of AFSC staff who were less connected with traditional Quaker culture than to the counterculture of the time, and the organization grew more and more irrelevant to evangelical branches of Friends. Affirmative action programs for gay and lesbian staff in the 1970s further alienated many Friends, as did the AFSC’s controversial book, *Search for Peace in the Middle East*, among other constituencies.

Friends Disaster Service

The Friends Disaster Service (FDS) began in 1973 in response to tornadoes in the Midwest and now has branches in several FUM and EFI Yearly Meetings. The AFSC began to be viewed negatively by many evangelical Friends for liberal approaches to social and political issues, as FDS and other evangelical relief organizations are often the channel for their social concern.

FDS has had its own share of controversy. The organization reflected a nearly exclusive evangelical bent from the beginning and refused any connection with the more liberal AFSC. Following Hurricane Andrew in South Florida in 1992, FDS rebuffed overtures from AFSC for cooperative work. After Hurricane Katrina in 2005, the AFSC made funds available for any Friends doing relief work in the

devastated region, and FDS informed branch programs such as the North Carolina FDS that they would be dropped from membership if they accepted AFSC money. The controversy led to a change in the national leadership of FDS, however, and to some units of FDS quietly accepting the AFSC funds.

Other Organizations: Friends World Committee for Consultation and Colleges

The Friends World Committee for Consultation (FWCC) was formed in 1937 as a consultative body, connecting Friends with each other and encouraging intervisitation and support for common Quaker concerns. The Friends Committee on National Legislation (FCNL) was organized in 1943 as a Quaker lobby in Washington, D.C., determining legislative priorities for each Congress through a Quaker process of gathering unity around issues reflecting traditional Quaker testimonies. FCNL, FWCC, and AFSC have cooperated in opening the Quaker United Nations (UN) Office in New York, where diplomats from various UN delegations can meet informally “off the record” to forge better understanding of each other.

Pendle Hill, a Quaker center for study and contemplation, was formed in Wallingford, Pennsylvania, in 1930, and Quakerism’s first seminary, the Earlham School of Religion, was established in 1960 in Richmond, Indiana. Since then, evangelical Quaker groups have formed the George Fox Evangelical Seminary (Oregon), the Houston Graduate School of Theology (Texas), Friends Center at Azusa-Pacific (California), and the Carolina Evangelical Divinity School (North Carolina). Quakers in education formed the Friends Council on Education (FCE) and the Friends Association for Higher Education to provide support for those serving in the nearly one hundred Quaker elementary and secondary schools and fifteen Quaker-founded colleges, as well as those Quaker educators serving in other settings.

Assimilation of Quakers into Mainstream Culture

Friends across the spectrum gradually entered the mainstream of American culture in the twentieth century. Two Quaker presidents, Herbert Hoover (1874–1964) and Richard Nixon (1913–1994), were elected, and many other Friends served in the Senate, the House of Representatives, and state legislatures. Abandoning traditional opposition to the arts and popular media, Friends produced many notable artists (Maxfield Parrish [1870–1966] and James Turrell [1943–]), novelists (Jessamyn West [1902–1984] and Philip Gulley [1961–]), musicians (Bonnie Raitt [1949–] and Dave

Matthews [1967–]), TV and movie actors (Bradley Whitford [1959–] and James Dean [1931–1955]), and media personalities (Scott Simon [1952–] and Drew Pearson [1897–1969]). Quakers also continued to make significant contributions in the sciences; the colleges of Friends rate highly in the number of graduates who go on to receive PhDs in science, and in 1993, Joseph Taylor (1941–) received the Nobel Prize in physics for his work on binary pulsars. Rufus Jones, Thomas Kelly (1893–1941), D. Elton Trueblood (1900–1994), Richard Foster (1942–), Elise Boulding (1920–), Douglas Steere (1901–1995), and other Quaker writers provided popular expression for Quaker principles. Bayard Rustin (1912–1987) was a major figure in the civil rights movement. Emily Greene Balch (1867–1961) was a cofounder of the Women’s International League for Peace and Freedom.

The degree to which Quakers assimilated during the twentieth century is evident in the area of the traditional Quaker peace testimony. Some historians estimate that nearly 75 percent of military-age Quakers served in some capacity with the military during the century, this being especially true during World War II and even the Vietnam War. With the Gulf War of 1991 and the attacks of September 11, 2001, a new wave of patriotism, including flag displays in worship rooms and veteran celebrations, was evident in many congregations of evangelical/pastoral Friends.

Persisting Divisions among Friends

While many Yearly Meetings that had divided in the schisms of the nineteenth century reunited in the 1940s, 1950s, and 1960s (New England, Philadelphia, Baltimore, New York, Canadian/Genesee), separations continued over theological differences. Individual meetings and churches left Yearly Meetings over issues of homosexuality, New Age spirituality, support for the AFSC, and other issues raised in the “culture wars” of the late twentieth and early twenty-first centuries. Some became independent Friends congregations or community churches; others joined with Yearly Meetings more in line with their thinking. Southwest Yearly Meeting of Friends Church (the former California Yearly Meeting) left FUM in 1993 and eventually joined EFI. Lively debates in New England, Baltimore, New York, and Southeastern Yearly Meetings continued about their dual affiliation with FUM and FGC, as some in those Yearly Meetings perceived FUM negatively, owing to a personnel policy discriminating against homosexuals and continued reaffirmation of the Richmond Declaration of Faith, seen in those circles as creedal and fundamentalist.

The periodicals that have served Friends in the twentieth century provide a glimpse of the divisions in Quaker faith and practice. *Friends Journal*, an independent monthly, reflected the culture of the more liberal end of the American Quaker spectrum. *Quaker Life* was a bimonthly magazine reflecting the policies of Friends United Meeting. *The Evangelical Friend*, which served the community of evangelical Quakers, ceased publication in the 1990s. Journals such as *Quaker Religious Thought*, *Quaker Theology*, and *Quaker History* transcended particular branches of Friends and provided space for the expression of differing views of Quaker theology and history. Chuck Fager's (1942–) muckraking *A Friendly Letter* informed Friends in the 1970s and 1980s of Quaker controversies, a task taken over by numerous blogs and Quaker Web sites in the Internet age.

Friends General Conference

At the beginning of the twenty-first century, Friends in America remained a divided community, declining in number (in the low thirty thousands in each of FUM, FGC, and EFI; fewer than two thousand among Conservatives) and assimilated into either evangelical Protestant or liberal religious cultures. Sometimes bitter debates over theological and social issues continue to divide Friends at the various levels of the Society.

Among FGC Friends, battles over homosexuality, the acceptance of “New Age” spiritualities, and feminist critiques of language and decision making are largely past, with a general acceptance of same gender commitments, non-Christian Quakers, and feminist concerns. In their place have come debates over the appropriation of other spiritual traditions such as Native American sweat lodges; direction and emphases within the AFSC; embedded racism, sexism, ageism, and heterosexism; and concern over the loss of biblical and Christian literacy among liberal Friends. Workshops at FGC's annual summer gathering typically address many of these issues, as do articles in *Friends Journal*. Philadelphia Yearly Meeting's Quaker Studies Program and School of the Spirit, FGC's Quaker Quest program, and offerings of Pendle Hill—have made a significant contribution since the 1980s in addressing the need some have perceived for more awareness of the Bible, Christian theology, and Quaker history.

Evangelical Friends International

Evangelical Friends International, a loosely-knit community of historically evangelical Friends, provides few organized programs in comparison with FGC, but its constituent Yearly

Meetings and affiliated organizations support active missionary work in Alaska, Central and South America, Africa, and Asia. Vital peace work through evangelical Friends' response to the genocide in Rwanda in the 1990s has emerged under the leadership of David Niyonzima (1959–), a Rwandan Friends pastor and graduate of the George Fox Evangelical Seminary in Oregon, and Lon Fendall (1941–), a professor at George Fox University in Newberg, Oregon. Outreach to Bolivia has led to a burgeoning of evangelical Quaker schools among the Aymara population. Barclay Press, a publishing house resulting from the 2001 merger of George Fox Press of EFI and Barclay Press of Northwest Yearly Meeting (formerly Oregon Yearly Meeting), produces a daily devotional, *Fruit of the Vine*, and publishes books by evangelical authors.

Among EFI Yearly Meetings there is a basic consensus around issues of orthodox Christianity, but varying stances are taken regarding the normative Quaker testimonies of peace, simplicity, integrity, and equality. Many EFI members support military service and display strong patriotic sympathies, while the New Call to Peacemaking movement arose in the 1970s out of a concern by evangelical pastor Norval Hadley (1928–) for reclaiming the biblical emphasis on peacemaking. Support for the Quaker initiative of Right Sharing of World Resources and for the voluntary simplicity movement is not uncommon among EFI Friends, but the National Friends Insurance Trust, a Ponzi scheme discredited in 1998, was organized by noted evangelical Friends in the Northwest. While there are female pastoral ministers in EFI, there is also some opposition to women's authority over men. Homosexuality is commonly regarded as a sin; Where Grace Abounds (WGA) is a ministry to transform gays, founded in Colorado by evangelical Friends “. . . to inspire all people to know and personally appropriate God's plan for their sexuality and relationships” (from the WGA mission statement).

Friends United Meeting

Friends United Meeting, historically the “Middle Path” of American Quakerism, has experienced the most Quaker turbulence in the latter part of the twentieth century and into the twenty-first. The largest and most active body of Friends at mid-twentieth century, its membership began a drastic decline in the 1960s that has not abated. Yearly Meetings such as Indiana and Western in the Midwest enjoyed memberships around fifteen thousand before the slide and now are hovering around four thousand. Iowa and Wilmington Yearly Meetings are far below even that. North

Carolina Yearly Meeting dropped below ten thousand for the first time in nearly half a century in the early 2000s. New York and Canadian “united” Yearly Meetings (both FGC and FUM) have also declined, while New England, Baltimore, and Southeastern Yearly Meetings, also united Yearly Meetings, have stabilized or grown slightly—but each of these is primarily FGC in outlook.

Factors in the near disastrous decline in FUM are many, with changing demographics and theological controversy primary. The agricultural economy in the Midwest, the seat of FUM strength, changed dramatically in the 1970s, with large-scale farming replacing the small, general family farms that guaranteed a steady flow of members into Quaker meetings. Debates over the Vietnam War, homosexuality, New Age spirituality, and perceived heterodoxy further eroded the vitality of Yearly Meetings in the 1970s and 1980s, with most unprogrammed meetings leaving Western and Indiana during that time—joining FGC-affiliated associations instead.

Controversy over accepting gay ministers, tolerating universalist theologies, and allowing the outward sacraments of baptism and communion have also led to individuals’ and meetings’ leaving Yearly Meetings on both ends of the theological spectrum. A general trend in FUM’s pastoral meetings and churches to copy the patterns of mainstream Protestant culture and worship led to a loss of distinctives and an erosion of loyalty to the Quaker way. Discussions about “realigning” Quakerism in the United States into two basic groupings—evangelical and liberal—emanated from FUM leadership in the early 1990s, further alienating many.

By 2009, the once-bustling Central Offices of Friends United Meeting in Richmond, Indiana, had been reduced to a skeletal staff, elimination of many of its services, and a focus primarily on supporting the remaining overseas missions in Belize, Africa, Jamaica, and Palestine. The United Yearly Meetings continued to discern whether they could financially support FUM, given its reaffirmation of the Richmond Declaration of Faith and its personnel policy—or even remain affiliated with the organization. Other constituent Yearly Meetings, also faced with declining membership and revenues, reduced their financial support of FUM.

Beanite and Conservative Friends

Beanite and Conservative Friends make up a very small slice of the Quaker pie in the United States but have fostered important institutions. Scattergood Friends School in Iowa and Carolina Friends School in North Carolina are connected in various ways with Iowa Conservative and North

Carolina Conservative Yearly Meetings. Olney Friends School in Barnesville, Ohio, became independent of Ohio (Conservative) Yearly Meeting in the 1990s and is under the care of an alumni board. Ben Lomond Quaker Center and the John Woolman Semester are active programs of Pacific Yearly Meeting (Beanite Friends) in California. Still unprogrammed and reflective of an attempt to retain some measure of Quaker distinctives, these Yearly Meetings are small, with Pacific and North Carolina showing the most recent vitality.

Education: Friends Colleges and Schools

Other institutions founded by Friends continue to make vital contributions, but fewer and fewer Quakers lead or teach at their colleges and schools. In the Philadelphia area, Bryn Mawr and Swarthmore Colleges have not considered themselves to be Quaker colleges since early in the twentieth century. Haverford College has sought to retain an active Quaker presence, with some measure of success. Of the scores of Friends elementary and secondary schools in the Northeast, the joke is often made that they are where “Episcopal faculty teach Jewish children how to be Quakers.” While all Friends schools that are members of the FCE have weekly meetings for worship, have at least one-third Quakers on their governing boards, and address the normative Quaker testimonies in their curricula, Quaker enrollment in these northeastern schools often hovers around 5 percent or less, and it is increasingly difficult to find Quakers who will lead the schools or serve as members of boards.

Meanwhile, there has been steady growth in the number of Friends schools outside the Northeast, with FCE providing important support to these new institutions. Some have developed in response to more recently diagnosed developmental issues such as dyslexia and attention deficit disorder. Others have opened as alternatives to declining quality in public schools, racial segregation, or religious and social attitudes. In North Carolina, for example, five new Quaker schools have opened since the 1960s, during which time the membership of Friends in the state was gradually declining. These schools, typically under the sponsorship of a local meeting or located among healthy Quaker populations, have had, in contrast to the northeastern schools, better luck in finding Quaker staff and students.

There is more of a mixed record among the historically Quaker-founded colleges and universities outside the Northeast. Those within the confines of EFI—Malone, Friends University, Barclay College, and George Fox—have retained a strong Christian focus while Quaker distinctives and

enrollment have not been maintained as consistently. The pattern is even more diverse among those colleges traditionally affiliated with FUM: Wilmington (Ohio), Earlham, William Penn, Guilford, and Whittier. Whittier has become a secular liberal arts college with only a historical tie to Friends. Wilmington and William Penn have become regional colleges with small Quaker enrollments but with Wilmington attempting through a Quaker cultural center and a Quaker Leaders Program to maintain a Quaker flavor. Earlham and Guilford have continued to enroll a critical mass of Quaker students along with a significant number of Quakers in their faculties. Earlham maintains a Quaker school of religion and the Newlin Center for Quaker Thought. Guilford hosts a Friends Center and a Quaker Leadership Scholars Program that has influenced similar programs at other colleges and secondary schools.

Conclusion

Overall, the picture of North American Quakerism in the early twenty-first century is not rosy. Membership has declined precipitously since 1900; economic and demographic forces have buffeted once-mighty institutions such as FUM and AFSC; Quaker distinctives in all the branches have eroded such that one public Friend has quipped that “Friends are a bit like tofu; they have some substance to them, but they tend to pick up their flavor from whatever they’re stewing in at the time!”

But there are positive signs, too. Summer camp programs of both liberal and evangelical Yearly Meetings are active and crowded; Quaker schools continue to be a primary source of “convinced” Friends. Some meetings and churches continue to attract attenders who value Quaker social witness and theological emphases; nearly 80 percent of contemporary Friends are “convinced” rather than born into Quaker families. New styles of reaching out to those who might be attracted to Friends are being developed among both evangelical and liberal Friends. Many young adult Friends are using the new technology of the Internet to reach out across traditional divides to form “virtual” communities and periodically gather at conferences that explore their differences and seek to forge a “new Quakerism” dubbed by some as “Convergent”—combining elements of the Conservative tradition and the postmodern “Emergent” Christian movement.

Qur'an

The Qur'an is the primary sacred text for Muslims. According to Muslim sources, the word *Qur'an* comes from the Arabic root *q-r-'*, meaning “to read [out loud]” or “to recite.” When the term “Qur'an” is translated into English, therefore, it is rendered as “the Recitation.” This fact says something important about this sacred text, namely, that it is first and foremost a text to be recited out loud, not one to be read silently to one's self. Rather than a book to be read from cover to cover, then, the Qur'an should be thought of as a collection of oral recitations that serve as sacred verses that observant Muslims typically recite out loud in the course of their daily ritual prayers and other ceremonies.

Qur'anic Origins: Revelation

Muslim tradition teaches that the Qur'an is a collection of oral Arabic recitations that are nothing less than the uncreated speech of God, transmitted by the angel Gabriel to the Prophet Muhammad (ca. 570–632). These revelations began when Muhammad was around the age of forty. In a cave near the Arabian town of Mecca, the angel commanded Muhammad to “recite!” (*iqra*), and what he was taught to recite were passages from the Qur'an. From this moment in the year 610 until the end of his life, Muhammad continued to receive periodic revelations and thus was called to serve as a messenger and prophet of God (“Allah” is Arabic for “God” or “the God”). In this fashion, he followed the line of figures

familiar from the Jewish and Christian traditions whom Muslims also revere, and whom they consider to be prophets: figures such as Adam, Abraham, Moses, and Jesus. The Qur'an is thought to be the continuation and culmination of the scriptures sent to earlier prophets, the revelation that perfects and places a final seal on God's words to humanity. Muslims respect the Hebrew Bible and New Testament as earlier examples of God's revelations to his prophets, but many Muslims contend that these earlier revelations were distorted over time by the human beings who recorded and transmitted them. For that reason, they tend to regard the Qur'an as the best and most complete revelation, the one to which all of humanity has been called.

Muhammad's first revelations were in and around the town of Mecca, as mentioned earlier, and according to Muslim tradition the Prophet's audience was composed mainly of idol-worshipping polytheists who did not believe in the concepts of resurrection or final judgment. During the thirteen years of what come to be known as the "Meccan period," the Qur'anic revelations repeatedly touch upon the themes of the oneness of God; the coming judgment; the folly of greed, cruelty, and ingratitude; and the importance of remembering and giving thanks to God who created and continues to sustain all things. Muslim historical sources portray the Meccan period as one of intense persecution, during which the small, fledgling Muslim community endured both economic boycott and physical abuse at the hands of the largely hostile Meccan populace.

Faced with growing hardships and physical threats in Mecca, in 622 the Muslim community moved from Mecca to the oasis town of Yathrib, some 350 kilometers (210 miles) to the north. This move came to be known as the "emigration" (*hijra*), and the year came to be marked as year 1 of the Muslim calendar. Muhammad arrived in that new location as the head of the entire town, the one called upon to arbitrate between the disputes that divided the various factions in Yathrib, which included feuding Arab tribes as well as some Jews. With Muhammad as the leader of this diverse community, the town henceforth became known as "the city of the Prophet" (*Madinat al-Nabi*), or "Medina" for short. In the "Medinan period" of the Qur'anic revelation, the recitations came to address not only the themes raised in the Meccan period but also the running and maintenance of a just religious government and society. Although the Qur'an is not itself a book of laws, a small but significant number of Medinan verses made statements that would later be interpreted as having a bearing on Islamic law, such as the proper

punishment for crimes, or the proper performance of religious obligations. This Medinan period spanned the years between the emigration to Medina in 622 and the year traditionally associated with Muhammad's death, 632. With Muhammad's death came the end of all new direct revelations from God to the Muslim community, as well as the completion of the series of recitations that eventually were assembled in a written codex.

The Qur'an and Other Muslim Texts

Next to the Qur'an, Muhammad's example or *sunna* came to serve for most Muslims as a second major source of authoritative Muslim teachings. After the death of Muhammad and his companions, the prophet's *sunna* came to be transmitted through the reports of his words and deeds, known as the *hadith* reports. *Hadith* reports deal with a variety of topics ranging from the proper performance of the pilgrimage to Mecca, to the correct process for drawing up business contracts, to the method one should use to clean one's teeth after a meal. Some *hadith* reports comment on the meaning of verses in the Qur'an, and others discuss stories or rules that have no parallel in the Qur'an.

From the formative period of Islamic history to the present, Muslims have seen the need to interpret the text of the Qur'an, both to properly understand its meaning and to apply its teachings to the changing contexts in which Muslims live. The genre of Qur'an commentary and exegesis (*tafsir*) became a rich and complex literature beginning in the ninth century, and some of its major works extend for dozens of volumes in their contemporary editions. One way modern Muslim religious scholars prove their competence is by writing their own commentary on the Qur'an, so the text is continuously being interpreted and reinterpreted.

Qur'anic Origins: Compilation

According to Muslim historians, the text of the Qur'an was preserved and collected by Muhammad's early companions. The Qur'an was memorized orally during the Prophet's lifetime, and scraps of oral recitations were also recorded in a written fashion on materials such as palm leaves, camel bones, and parchment. Written Arabic script at this time, and for at least a century or two following the time of the Prophet, was a "*scripta defectiva*" with no short vowels indicated and no diacritic dots to distinguish certain groups of consonants (such as *b*, *t*, *th*, *n*, and *y*). This situation was not seen as a major issue for believing Muslims, however, since in the early period this oral text was said to have been memorized by many of

Muhammad's companions, and thus the written version served merely as a mnemonic device. That is, although the text of the Qur'an was written in such a way that would be ambiguous and unclear to someone outside the tradition, if one already knew how the Qur'an was supposed to sound orally, then the "bare-bones" form of the written text would be sufficient as a visual prompt to aid the memory of a literate person as he recited from it. Variations in the way the text was recited in the decades after the Prophet's death, however, together with the deaths of some of the early companions who had preserved the oral text of the Qur'an, led to the effort some two decades later under the Caliph Uthman to assemble and codify an authoritative standard written text of the Qur'an. Even though a limited number of variant readings were tolerated, the unified "Uthmani Codex" ensured that the basic contour of the Qur'an, its division into 114 chapters or *suras* together with its foundational *scripta defectiva*, became remarkably consistent throughout the expanding Muslim empire. Some Western scholars of the Qur'an have called into question this traditional account of the collection of the Qur'an in the time of Uthman, contending that the process of formulating a unified codex likely took decades if not centuries longer to complete. Nevertheless, even such "revisionist" scholars agree that the written Qur'an as we have it today was likely assembled without major editing on the part of subsequent transmitters.

Organization and Contents of the Qur'an

The written text of the Qur'an contains 114 *suras* that vary in length from a few short hymnic verses to several hundred long and complex verses. The written text is not organized chronologically. That is, one cannot "read" the Qur'an from start to finish, expecting to find the Meccan revelations at the beginning and the Medinan revelations at the end. With the exception of the opening chapter or *Fatiha*, which is a *sura* of 7 verses that is recited by Muslims more than any other because of its invocation in each stage of ritual prayer, the written text of the Qur'an is organized not so much by chronology but by descending chapter length. The longest *sura* of the Qur'an is its second chapter (286 verses), a Medinan *sura* that came to be known as "The Cow" because of a reference (beginning around Q 2:67) to the sacrificial heifer offered by the Israelites. Stories about Moses, the prophet who is mentioned more times by name in the Qur'an than any other, appear scattered throughout the text of the Qur'an, not just in *sura* 2. For instance, descriptions of God's revelation to Moses on Mount Sinai do not appear in

sura 2, but appear rather in both *sura* 7:142–143 and *sura* 20:9–14. Much of *sura* 2 is highly technical and full of rules and regulations, verses thought to be among the latest passages to be revealed to Muhammad. The next longest *sura* is the third chapter (200 verses), known as "The Family of Imran" after the references in this chapter to stories about John the Baptist and Jesus. As with Moses, references to Jesus are scattered throughout the Qur'an, and they appear prominently in a shorter *sura* named after Jesus' mother, Mary (*sura* 19, 98 verses). The Qur'an describes Jesus as "messiah," as God's "word," and as a prophet capable of miracles. But the Qur'an emphatically rejects the idea that Jesus was God's son—which would go against the Qur'an's doctrine of God's oneness—and insists that he was merely a man who was able to perform miracles "by God's leave." Such theological issues are touched upon in the longer Medinan *suras*, but it would be wrong to imagine that they play a central role in these chapters. The Qur'an returns time and again to emphasize how the stories of earlier prophets illustrate the importance of repentance and submission to God's command, and of the participation in the righteous community that God and his prophet Muhammad inaugurate in Medina.

The comparatively brief *suras* appearing near the end of the written text of the Qur'an (for example, *suras* 81 to 114, ranging from a few to a few dozen verses) are those chapters often said to have been the earliest to be revealed. These Meccan revelations contain a series of allusions to things in the heaven and earth that serve as signs that human beings should ponder. The Meccan *suras* contain hymnic evocations of the day of judgment, when all human beings will be brought to account for even their smallest actions on earth (for example, see Q 99, "The Earthquake"). The results of judgment are variously described through a series of metaphors alluding to the torment of hellfire or the comforts of paradise. The Meccan passages do not solely dwell on the events of the last days, however. They also insist on the paramount importance of generosity and caring for the dispossessed in this world, and for remembering God's generosity toward humanity. Thus, the Meccan passages, and indeed the later Medinan passages as well, describe the giving of regular charity (*zakat*) and performing ritual prayer (*salat*) as being enjoined on the faithful as ways to put such beliefs into righteous action.

Except for the story of Joseph appearing in the *sura* named "Joseph" (*sura* 12, thought to be Meccan and containing many parallels to the Genesis story of Joseph), the Qur'an does not give entire stories or biographies of any biblical or postbiblical figure in a single narrative section. Muhammad's

name appears only a few times in the Qur'an, and explicit references to historical events in Muhammad's life are rare. Unlike much of the Hebrew Bible or New Testament, therefore, the Qur'an cannot be approached as a chronological book. A good concordance, index, or secondary study organized by theme needs to be consulted for those who wish to trace a particular figure or idea as it develops across the Qur'anic text. Rather than a linear text, the Qur'an could be profitably compared to a "metatext," jumping from one topic to the next as it suits the particular moral or point being discussed in any given section. The way that the written text of the Qur'an is organized, beginning with the longest chapters and proceeding to the shortest chapters, responds to the needs of a religious community and its practical concerns with oral recitation rather than the narrative expectations of many contemporary readers.

The Qur'an should be heard in its original Arabic to be authentically transmitted and fully appreciated. Only one in five Muslims in the world today is a native speaker of Arabic, but most Muslims learn to say at least a few phrases of the Qur'an in Arabic so that they may recite these phrases during ritual prayers. For non-Muslims who do not know Arabic, this oral dimension of the sacred text can be heard when the Arabic Qur'an is recited (live or from a recording), but appreciating its meaning and significance becomes much more difficult. There now are resources that can help make the oral text more accessible to non-Arabic speakers. Those with access to the Internet can make use of Web sites that combine Arabic transliteration, English translation, and recitation. Another great resource for an appreciation of the oral dimension of the Qur'an is the work by Michael Sells entitled *Approaching the Qur'an*, a book that translates a series of short chapters or *suras* thought to be some of the earliest in the collection. In addition, some studies include audiovisual presentations, helping students get a glimpse of the beauty, richness, and subtlety of the Qur'an in oral Arabic recitation.

Study of the Qur'an in America

The Qur'an has been a part of the American religious landscape for as long as Muslims have been living in America. It does not have the public presence in the United States the way that it does in some Muslim-majority countries, where the Qur'an can be heard projected from neighborhood loudspeakers, especially during important religious festivals. Nevertheless, the Qur'an can be heard throughout the United States. Passages from the Qur'an resound anywhere Muslims observe their ritual prayers, and recordings play in homes,

offices, cars, and headsets. As for the text in its written form, popular translations of the Qur'an into English include those by Abdullah Yusuf Ali, A. J. Arberry, Ahmed Ali, and Muhammad Asad. Since traditional Muslims insist that any translation is inherently an interpretation of the text, and most non-Muslim scholars agree that crucial interpretive choices are inevitably made in every translation, when studying the text in English it is best to compare multiple translations.

The study of the Qur'an in the United States since the 9/11 attacks has taken place in a charged political environment. When Sells's *Approaching the Qur'an* was assigned as summer reading for incoming first-year students at the University of North Carolina at Chapel Hill in 2002, a conservative organization based in Virginia filed a lawsuit in protest. In his preface, Sells describes the nationwide controversy that ensued. The controversy speaks volumes about how throughout much of the West, Islamophobia informs contemporary popular discourse about the Qur'an. A series of newspaper articles, magazine articles, and films since 9/11 continue to perpetuate the view that the Qur'an inherently promotes violence, ignoring the contexts in which Muslims have interpreted and continue to interpret the text of the Qur'an in diverse ways. Claims about the Qur'an and its allegedly essential meaning made by both supporters and detractors need to be understood in their particular historical, cultural, and political contexts.

A number of resources have become available in recent years to those interested in the academic study of the Qur'an. Those seeking the perspectives of insiders whose views are informed by Western scholarship might do well to begin with Farid Esack's *The Qur'an: A User's Guide* or Ingrid Mattson's *The Story of the Qur'an: Its History and Place in Muslim Life*. Bruce Lawrence's *The Qur'an: A Biography* offers a good survey of how the text has affected the lives of diverse Muslims at different moments in history. Michael Cook's *The Koran: A Very Short Introduction* presents an essay from the perspective of a skeptic, and its short chapter on "Doubts and Puzzles" offers a concise introduction to issues confronting critical scholars. In addition, collections of scholarly essays such as the *Blackwell Companion to the Qur'an* and the *Cambridge Companion to the Qur'an* provide valuable resources for those who are interested in the state of early twenty-first-century academic study of the Qur'an in the West.

R

Race and Racism

Race is the idea that the world is made up of distinct groups of people who are distinguished by innate physical differences that are socially significant. Racism is the use of race to create hierarchical relationships that enables one group to dominate others. The persistence of racial ideology and the practice of religion form two of the most enduring themes in American history. From colonial encounters with Native Americans, through the rise of African slavery, Emancipation, the civil rights movement, and modern religious pluralism, religion and race have had a long and intertwined history. Although religion was not the cause of either race or racism, religion, and especially Christianity, has played a central role in the emergence, perpetuation, and criticism of the idea of race and the expression of racism in the United States. Likewise, race and racism have shaped American religious institutions from their colonial foundations into the present.

Racial Ideology

Race is an idea, not a biological reality. As an idea, race claims people can be sorted into distinct and exclusive groups that are marked by unalterable, physical characteristics that are a result of ancestry and genetics (ethnicity, in contrast, describes characteristics attributed to culture rather than biology). Race and racism suggest biology is destiny by linking behavior and ability to racial identity. But ideas are not reality. Neither assumptions about distinct biological groupings nor efforts to correlate genetics to behaviors, characteristics, or aptitudes have withstood scientific investigation. Variations in human appearance are gradual rather than discrete and are better

explained by geography than the innate characteristics implied in the idea of race. Moreover, studies reveal that nearly all genetic diversity occurs within a particular local community and not between populations that racial ideology would identify as different. Nor is there a correlation between genetic makeup or physical traits and differences in ability or behavior. Race, therefore, is not the difference itself, but rather a theory of difference that takes actual distinctions in appearance (skin color, hair, facial features, and so forth) and grants those differences a significance and explanatory power they do not hold.

Racism is the expression and manifestation of racial ideas. In racism the idea of race has real consequences, even though it is not a biological reality. Race has never been just a theory of difference; it has always been an assertion of inequality. Intrinsic to the classifications of race are rankings, which assign to each group a value relative to other groups. Racism makes a person's and a group's economic, social, legal, political, and even human rights a function of the racial categories to which the dominant group assigns them. Racial ideology likewise insists that the resulting inequality between racial categories is natural, inherited, and unalterable. Religiously informed racism suggests such differences are divinely ordained. The idea of race and the practice of racism is the expression of power of one group over another to advance political, economic, social—or even religious—ends.

Race is therefore a socially constructed category whose meaning is an ever-changing product of contingent historical circumstances rather than an immutable expression of biology. A brief comparison of racial classifications both beyond and within the United States reveals the culturally constructed

character of racial classification. The American racial binary of black and white was unique. Brazilians, for example, developed multiple racial categories and accepted mixing between them. Even in the United States, well into the middle of the nineteenth century, southern Louisiana and other communities across the coast of the Gulf of Mexico acknowledged Creoles of color, whose Caribbean heritage included both European and African ancestry, as a racial category distinct from both black and white. Another distinctive American racial idea is the “one-drop rule,” which means a single drop of African blood makes a person black rather than white. As a result, in the United States a white woman can give birth to a black child, but a black woman cannot give birth to a white child. The absurdities compounded during the age of segregation when states quantified black identity by a variety of formulas. Alabama retained the language of one drop, while Virginia quantified the necessary African ancestry at one-sixteenth and Florida at one-eighth. As a consequence, a person could change his or her race simply by crossing state lines.

Despite the prevailing black-white paradigm, at times American racial discourse has moved beyond the categories of black and white to identify other racial groups as well. Asian and Native American are among the most common additional racial categories. In addition, at various times Irish, Italians, and Poles have been categorized as groups racially distinct from whites, only highlighting the ways that the idea of race, including whiteness, is a shifting and culturally constructed category. Federal census forms are another example. With each decennial census the racial categories change, which is hardly an argument for race as a biologically determined and unalterable identity. Nonetheless, popular discourse in the United States has remained focused on the black-white binary such that additional racial divisions can still typically be categorized as either white or nonwhite, even as the definition of whiteness has changed over time. What has remained constant is the role of religion as an important, though not exclusive, force in the construction, and to a lesser extent, deconstruction, of the idea of race and the practice of racism.

Religion and the Formation of Race in Colonial America

Race is a modern idea. The concept of race emerged from the confluence of numerous developments, including the age of exploration and colonization, the Protestant Reformation, the Enlightenment, and the emergence of African slavery. The earliest European contacts with people of different continents

did not invoke any system of uniform or universal racial categories. In the seventeenth and eighteenth centuries, however, the scientific and Enlightenment propensity for classification led to the creation of a widely accepted division of the world's population into four peoples, derived from the four regions of inhabitation: Europe, Africa, Asia, and the Americas. The peoples of each continent were soon identified by skin color: white, black, yellow, and red. Religion joined such descriptions to confirm and explain the emerging racial ideology.

As Europeans began settling in the New World, religion was one of the primary ways that Europeans classified others: people were different first and foremost because they did not belong to the same religion. Over and against Christians were Jews, Turks, and pagans or heathens, which was everybody else. To early American colonists, Africans and Native Americans were different and inferior because they were heathens, not because of physical or inherited differences. Before long, however, came the link between heathen religion and blackness, so that the inferiority of religion became evidence of the permanent inferiority of black skin.

Similar processes of racialization characterized encounters with Native Americans. American settlers interpreted their initial encounters with native peoples primarily through the lens of religious differences rather than comparisons of physical appearance. These religious differences, such as the racial comparisons that would replace them, were inherently hierarchical. Colonists and missionaries assumed that Native Americans would quickly convert to Christianity. When Europeans encountered native resistance to conversion, they engaged in a process of racialization that transformed the root of native inferiority from religious beliefs to innate and inherited physical characteristics. Native behaviors became linked to bodies, not belief, so that skin color more than religious practice became the definition of savagery. Race obliterated all other considerations of native peoples and their internal differences to become the sole basis for classification and for asserting natives' irreversible and unredeemable inferiority.

Particularly for people of African descent, the rise of slavery formed another important context for the developing idea of race. Although slavery had existed throughout human history, American slavery was the first racially based system, and even that did not happen immediately. At first, the largest number of slaves were Irish, who planters considered less civilized than their African workers. There were even black landowners and slaveholders in seventeenth-century America, revealing a fluidity in assumptions about race and status.

Plantation owners came to rely solely on African slaves because Native Americans were susceptible to imported diseases and had a propensity to escape. Irish slaves and English indentured servants proved similarly unreliable. Planters also grew concerned that a mixed slave community fostered class-based alliances that stretched across racial categories, most evident in Bacon's Rebellion (1676), when an alliance of black and white laborers nearly toppled the elite in Jamestown, Virginia. Soon after, colonial legislatures defined slavery as a hereditary status based solely on African ancestry, consolidating the association of whiteness with freedom and slavery with blackness.

The turn to religious justifications for race-based slavery was logical, since the slave trade emerged in the wake of the Protestant Reformation that shaped American colonial worldviews. Still, the scriptural conclusions American colonists reached were not as obvious as subsequent generations assumed them to be. They were correct in noting frequent biblical references to slavery, none of which condemned the institution, but they ignored the fact that biblical slavery was not racially based and that slave status was neither perpetual nor inherited. Nor were the racial categories of black and white familiar divisions in the Bible. But in the prevailing providential view, colonists and religious authorities argued that since African slavery existed, God must have a reason for it. Thus, a powerful reinterpretation took place, especially around the story of the curse of Canaan in Genesis 9:18–27. Canaan was the grandson of Noah and the son of Ham, who saw his father Noah in a state of naked drunkenness. For this, Canaan was consigned to serve his father's brothers. Slave owners insisted on a racial gloss that made Ham and Canaan progenitors of the African race, thereby justifying the enslavement of people of African descent as the fulfillment of God's commands.

By the end of the seventeenth century the ideas of race, religion, and slavery had coalesced into a set of triads that defined one's status. Whiteness was essential to Christianity and freedom over and against blackness, which was linked to heathenness and slavery. Race had become a category that joined ancestry, religion, and status into one. It was a seemingly fixed and providentially appointed status by which American colonists ordered their new civilization. In an age in which Enlightenment ideals of equality would soon burst forth, religion and race cooperated to explain why freedom and equality did not, in fact, extend to everyone. But the legs on which that construction stood were never as secure as white Americans hoped.

The links securing freedom to one set of religious and racial categories and slavery to another set crumbled when slaves began converting to Christianity. Christianity was no longer the exclusive domain of white Europeans, bringing into question the ideology that linked Christianity with whiteness and freedom. Although the earliest American colonists had made Christianity and slavery compatible, by the eighteenth century they also needed to make slavery compatible with Christian captives. They had to abandon the links that connected Christianity to both whiteness and freedom. Colonial legislatures complied, passing laws ensuring that slavery was rooted in a fixed and inherited racial category rather than any current or future religious identity. While whiteness still implied both Christianity and freedom, the inverse did not hold true. For black slaves, conversion to Christianity did not make one free, nor entitle one to the privileges of whiteness. The freedom of Christianity, as both preachers and plantation owners proclaimed, was a heavenly reward. It was not a change in earthly status. The religious differences that originally justified enslaving Africans had become irrelevant to one's status. With this step, slavery had become fully racialized.

With slavery firmly rooted in racial rather than religious categories, religion became all the more important in reinforcing and justifying American slavery. Eighteenth-century slave owners, many of whom had themselves experienced Christian conversion in the revivals known as the first Great Awakening (c. 1730–1750), came to embrace missionary arguments that slave conversions were not only possible, but would also make for better slaves. Plantation owners often forced their slaves to attend church, whether or not the slaves themselves were Christian. In church, slaves saw and heard about a divinely ordained social order. Forced to sit in the back or in the balcony, slaves witnessed a progression of free whites, from laborers to landowners, who paraded into the sanctuary and were seated in front of them according to rank. Sermons reiterated the hierarchy as divinely sanctioned. Ministers called upon each group to remain faithful to the station in life for which God had created them, since rebellion against one's status was rebellion against God. The Anglican catechism, for instance, included language in which people seeking confirmation promised to do their duty to the station in life to which God had called them. Preachers similarly pointed to New Testament passages calling on slaves to obey their masters, an obedience that would be rewarded in heaven.

Church leaders and slave owners attempted to foster not only obedience but also gratefulness among slaves. They

argued slavery was a positive good, for it lifted African heathens out of the depths of ignorance and sin and into the civilizing and salvific realm of Christianity. Such arguments, which intensified and multiplied in the nineteenth century, fit slavery into a Christian worldview, even as they insisted on an inherent African inferiority. But by the end of the eighteenth century few slaves were convinced and hardly any had converted to Christianity.

Religion and Race in Antebellum America

The period between the American Revolution and the Civil War marked the first widespread conversion of African Americans, and to a lesser degree Native Americans, to Christianity. The evangelical revivals in the first decades of the nineteenth century, known as the Second Great Awakening, fueled much of this growth. Especially in Methodist and Baptist circles, the early years of the awakening spread a message of Christian equality that transcended racial lines, though most churches soon retreated from this radical claim to assuage the concerns of white southerners. Nonetheless, the growing population of nonwhite Christians further complicated the complex relationship between religion and race in the United States. As Christianity expanded across racial lines it did very little to erase those boundaries, often reinforcing the foundations for racially rooted religious divisions that would persist long after slavery. While whites saw in religion the explanation for fixed notions of both race and freedom, victims of racism recognized that race was what separated the ideal from the reality in American religion no less than in politics.

One consequence of the expanding African American Christian population, among both slaves in the South and free blacks in the North, was a growing critique of the prevailing white assumptions about the relationship between religion and race. The Bible proved far bigger than the few verses white preachers and slave owners invoked to defend slavery. Black abolitionists emphasized the egalitarian and liberating claims of Christianity, from the God who created all people in God's image and who liberated his people enslaved in Egypt, to the Christ who redeemed all people and in whom, the Apostle Paul argued, "there is neither slave nor free" (Galatians 3:28). In the South, slave preachers emphasized narratives of Exodus and deliverance. Recognizing the themes of liberation, equality, and concern for the marginal that pervaded the Old Testament and New Testament alike, slaves sang of God's leading the Israelites out of slavery in Egypt, knowing that the promises of liberation

were for them as well. Slave owners missed the subversive this-worldly message of the slave spirituals, believing instead they had converted their chattel to a belief limited to other-worldly rewards.

Separate religious institutions were another way that racially marginalized peoples challenged white efforts to subordinate them. The independent black denominations begun by free persons in the North were a lasting innovation of the antebellum period. Frustrated with their treatment in predominantly white congregations, African Americans withdrew and created their own churches and denominations, embracing and affirming their African heritage even as they understood themselves to be a truer expression of Christian universality than the white congregations they abandoned. The African Methodist Episcopal Church began in 1787 in Philadelphia, Pennsylvania, when Richard Allen (1760–1831), a free black Methodist preacher, along with several of his colleagues, was forcibly removed during services in the church to which they belonged. The white ushers refused even to wait until the prayer was finished, as Allen and his colleagues requested. The black members withdrew and founded a separate church that was the beginning of the African Methodist Episcopal denomination (incorporated in 1816), of which Allen would become the first bishop. Elsewhere, free blacks made similar moves to practice Christianity free from the racism of white Christians, resulting in the formation of the African Methodist Episcopal Zion denomination in New York City in 1821, as well as numerous independent Baptist congregations. These racially separate denominations experienced explosive growth in the South following Emancipation.

Whereas African Americans increasingly found in Christianity an affirmation of their African identity and human equality, Native Americans often looked outside Christianity altogether in their resistance to the racism of white Christian settlers. Some missionaries to natives balanced cultural respect for with their evangelizing aims, and some, especially among the Cherokee, became strong advocates of native rights against federal imperialism. For the most part, however, white Christianity and white encroachment on native lands and native rights went hand in hand. The same system of racial ordering that rationalized enslaving Africans led to a racially informed notion of Manifest Destiny to spread America's Christian-inflected civilization across the continent that resulted in the reservation system to clear natives from the land. While some native peoples did accommodate varying degrees of Christianity, it never became an effective framework for native

resistance as it did for African Americans. Instead, dismayed by Christians claiming racial and cultural superiority, natives often turned to their own customs. Native prophetic traditions fostered religious, cultural, and occasionally even armed resistance to the expanding American nation and its Christian but not always benevolent empire.

Alongside these Native American and African American constructions of the relationship between religion and race, religion remained central to white efforts to ensure clear racial lines, especially those protecting whiteness and the privileges that racism granted. In works such as Baptist Thornton Stringfellow's "A Brief Examination of Scripture Testimony on the Institution of Slavery" (1841) and Presbyterian George D. Armstrong's *The Christian Defense of Slavery* (1857), proslavery theologians developed elaborate biblical defenses of slavery that emphasized the absence of any biblical condemnation of slavery. The "spirituality of the church" was another proslavery argument, most notably articulated by Presbyterian James Henly Thornwell (1812–1862). This doctrine held that slavery was a social concern that was the purview of the state. In contrast, churches should avoid social issues and concern themselves only with questions of individual salvation. Many of these defenses, such as the Bible they invoked, avoided explicit references to race. But since American slavery was based solely on race, religious defenses of slavery were de facto defenses of the reality of racial differences. Because slave owners often embraced and even advocated Christianity for their slaves, racial ideology emphasized the differences that persisted between black and white despite a common religion. One of those differences turned out to be religious, as attributes such as simplistic and emotional preceded descriptions of slave Christianity. Slavery's defenders likewise denigrated African American character more generally, suggesting the necessity of white paternalism and implicating all people of African status, whether or not they were enslaved. The racism was not consistent, sometimes depicting Africans as docile and childlike in need of protection and other times, in themes that would be further developed after Emancipation, casting them as savage, subhuman beasts in need of control. Either way, slavery and Christianity together provided the necessary protection and restraint to maintain the racial constructions upon which such assumptions rested.

Religion and Race in the Age of Emancipation

The end of slavery severed the correlations that linked whiteness with freedom and blackness with bondage. But

Emancipation did not mark the end of race. Of the colonial triads that linked whiteness, Christianity, and freedom on one side and blackness, heathenness and slavery on the other, only race remained as a marker of difference among black and white citizens. As a result, the idea of race became even more significant as the basis for asserting hierarchy and justifying inequality. Religion remained an important voice in these ongoing constructions and deconstructions of race in the age of freedom, just as it had been in the age of slavery.

In the absence of slavery, white Americans constructed a system of racial segregation to maintain a racial hierarchy. The racial project was a national undertaking, not just a southern one. By the turn of the twentieth century the segregation practices known as Jim Crow were formalized in laws mandating racial separation in nearly every public space. White churches and denominations rarely objected since most practiced segregation within their own institutions. Southern Methodists, for example, created the Colored Methodist Episcopal Church in 1870 as a new separate denomination for their black members. In the few churches where black and white members worshipped together, whether Protestant or Catholic, white members nearly always maintained separate and inferior seats for black worshippers. Racial separation became the norm as Protestant denominations that had divided over slavery pursued reconciliation. In religion as in every other dimension of national life, unity trumped equality as northerners proved far more willing to join with formerly rebellious whites southerners than consistently loyal black citizens. Whether it was leading revivalists such as Dwight Moody (1837–1899) and Sam Jones (1847–1906) capitulating to demands for segregated congregations, or Frances Willard (1839–1898) accepting segregation within the Woman's Christian Temperance Union (founded 1874), religious organizations both reinforced and contributed to the patterns of racial segregation that prevailed by the early twentieth century.

The most horrific expressions of racism at the turn of the twentieth century were not church acts, though religious sentiments were never far below the surface. Thousands of black men were lynched, all in the name of protecting the purity of white women from the supposed wanton sexuality of black men. Sexual anxieties and antimiscegenation rhetoric stood at the core of postbellum racism. Lynching was an extra-legal way to enforce and to teach the lessons of sexual anxiety that white supremacy fostered. Although not explicitly religious functions, lynchings were public spectacles that occurred primarily in the highly religious culture of the

South. Proponents of such vigilante justice linked the religious and sexual purity of white women and posited black men as a threat to both. Many whites understood lynching, brutal as it was, as a defense of the purity of the Christian home. The events themselves were evocative of religious rituals, interpreted as acts of purification, and it was not unusual for clergy or religious leaders to offer invocations. Although black citizens knew that white men raping black women were the most common form of miscegenation and sexual assault, these transgressions remained unacknowledged and unpunished in the white communities so obsessed with purity.

The fascination with racial purity and separation fostered the emergence of scientific racism. These inconsistent pseudoscientific theories to prove the biological basis of race and to challenge the common humanity of black and white had a complicated relationship with religion. One strain adapted theories of evolution and natural selection as evidence for white racial superiority and the need to avoid race mixing to ensure the survival of the fittest. While some whites invoked this idea to depict African Americans as dangerous creatures who threatened to upset the natural order, others considered natural selection reassuring evidence of the impending extinction of nonwhites. Another popular theory to justify separation was polygenesis, which posited that each race was the product of a distinct act of creation rather than the more traditional interpretation of Genesis in which all humans descended from a single, first man. Polygenesis relied on a range of pseudoscientific claims such as phrenology to prove Africans were a different and subhuman creation. Polygenesis did not fit with the biblical account of creation without some creative biblical exegesis, which white supremacists in search of a theory were happy to provide. Some suggested that Africans were among the animals over whom God gave dominion to Adam, while others returned to the curse of Ham to argue the flood was judgment for racial mixing and the descendants of Ham bore the consequences of such mixing. Regardless of the theory, the theological consequence was a foregone conclusion: those whom God had created as unequal should be treated as such. Though directed primarily at African Americans, the arguments were adapted to categorize Native Americans who were being gathered onto reservations or Asian immigrants who were beginning to arrive in the American West.

Black Americans rejected these racial assertions, even as they continued to embrace religion. But the ways they used religion to challenge the racism of racial ideology was hardly monolithic. The integrationist perspective emphasized

religion as the key to overcoming racial segregation and moving toward both religious and political equality in the United States. Within Methodism, for example, some joined the predominantly white Northern Methodist denomination rather than one of the independent African Methodist traditions. Like those who remained in other predominantly white denominations despite ongoing racial discrimination, these Methodists insisted that only racially inclusive denominations reflected the ideals of Christian unity. Christian integrationists also emphasized the practical example that religious institutions set, warning that racial separation in the religious realm would fuel white supremacist arguments for segregation in every other dimension of life. But these black church members found few white supporters, and most racially mixed denominations capitulated to national pressures to segregate their institutions along racial lines.

Many African American Christians favored a nationalist approach, which advocated separate institutions as the best way to achieve racial equality. The ranks of independent black Baptist and Methodist churches in the South swelled in the decades after Emancipation, not because former slaves were kicked out of white churches but because they believed their new churches more fully expressed the truths of Christianity. In separate black churches African Americans could freely celebrate a God who delivered the slaves from captivity and worship a God whose justice was tempered by grace in this world no less than in the next. Independent black churches affirmed rather than degraded African identity, privileging biblical narratives of God liberating the captive and punishing the captors. At the same time black churches were cultivating distinctive black religious voices, they were also centers for education and political development not otherwise available in a segregated society. The goal was not racial separation, but rather evidence of equality that would, by force of example, overturn white arguments about racial inferiority and the need for segregation.

Still other African Americans turned toward innovative combinations of religion and race that provided a spiritual escape from the nation's racial hierarchy. Marcus Garvey (1887–1940) founded the Universal Negro Improvement Association (UNIA) in Jamaica in 1914, and after moving it to New York in 1918 it became the largest black movement in American history. The UNIA fostered race pride and solidarity by reconceiving Christian doctrine and iconography through an African lens, depicting both God and Jesus as black and emphasizing biblical passages that suggested the special place of Africa in divine providence. Others looked

beyond Christianity altogether to embrace new constructs that fused religious and racial identity. Several forms of black Judaism emerged between 1895 and 1920, claiming that Africans descended from the original tribes of Israel that God led out of slavery in Egypt. This provided a new racial and religious identity that neither depended upon nor was derived from white Christianity. By locating Africans among God's original chosen people, black Judaism rejected white claims to be a new chosen people whose religion and race had placed them uniquely in God's favor. Instead, it consigned white Christians to an inferior and apostate religion. Black Muslims, such as the Moorish Science Temple (founded 1913) and, most famously, the Nation of Islam, which began in Detroit in the 1930s, similarly posited a new racial and religious identity. Negroes became Africans whose true religion was Islam, which placed them altogether outside white Christian biblical narratives. In their formative decades, these new religions often inverted rather than rejected racial hierarchies, offering black Americans a way to escape the racism of white Christianity.

From Civil Rights to Twenty-First-Century Pluralism

The civil rights movement generally stands as the high point of how racial communities have leveraged religion for social and political transformation. But the movement that resulted from this fusion of religion and race was neither inevitable nor universally supported within African American communities and churches. The relationship between religion and race was hardly monolithic. Beginning with W. E. B. Du Bois (1868–1963), many black historians and sociologists expressed doubt that black churches could bring about the necessary social and political transformation to end segregation and racism. Some were critical of all religious institutions while others argued for churches constituted from a different social or theological basis. Nonetheless, all agreed black churches were the central and unrivaled institution in African American life. Even churches and denominations themselves were divided on whether they should engage social and political issues. Martin Luther King Jr.'s National Baptist Convention was reluctant to become involved in the civil rights movement, leading King and others to break away and form a new denomination.

The civil rights movement is therefore all the more remarkable given the complex and conflicted constructions of religion and race from which it emerged. A variety of impulses, including legal and political advocacy, grassroots

organizing, and new conceptions of federal and judicial authority, all played important roles in the movement. But regardless of the explanation and interpretation, the religious ideas and experiences nurtured in over a century of black church life were critical to the success of the movement. White supremacist arguments of black inferiority rooted in biblical and theological claims had not disappeared. But three centuries of religiously constructed racism increasingly paled in the face of arguments for Christian unity and political liberty that were rooted in the sacred texts of the faith and the nation. Unprecedented numbers of white religious leaders, Protestant, Catholic, and Jewish, also lent their support. The result was a unique moment in the construction of religion and race in the United States: the voices of a racially subjected people arguing for religious and civil equality became the nation's dominant perspective.

The civil rights movement highlighted the constructed and changing character of religion and race in America by challenging the ideas of race and racism with the same religion that had helped create them in the first place. Those who brought about the change, whether leaders such as the Baptist clergyman King or the tens of thousands of church members whose names remain largely unknown, drew on deep traditions of theology and practice in black churches. From the first slave preachers onward, themes of liberation had been central to black preaching. Biblical stories of providential deliverance from slavery to freedom had sustained hope that America might be transformed from Egypt to the promised land. While promises of heavenly reward were always part of the church tradition, an equally important strand had stressed this-worldly salvation. God's presence was literal and real, sustaining and encouraging an active though often subtle resistance to racism that finally erupted in full force during the civil rights movement. Religious practices such as praying and singing hymns were crucial to building solidarity and sustaining a nonviolent approach. Churches provided logistical support including meeting space, sleeping accommodations for visitors, and an incalculable number of meals to sustain protestors. From church pews came the troops that enabled more famous leaders to go forth and who amplified the resonances of the leaders' soaring religious rhetoric that called millions to take up the cause. In all this work, the women who had always been the backbone of black churches played an indispensable role.

Despite the achievements of the civil rights movement, the complex relationship between religion and race did not

subside in its wake. Some considered religion, especially Christianity, to have completed its usefulness. Besides the continuing popularity of the Nation of Islam, many black leaders rejected religion altogether as part of a racist legacy, turning instead to race-conscious secular movements such as Black Power and the Black Panthers (1966). Even within Christianity, many worked within an increasingly nationalist framework, especially given the apparent unwillingness of many white Christians to work toward widespread integration within religious institutions. Theologian James Cone exemplified the contours of the new black theology in works such as *Black Theology and Black Power* (1969) and *A Black Theology of Liberation* (1970), which drew on the traditions of liberation long central to black religious thought and emphasized the blackness (nonwhiteness) of Jesus and even God. Christianity, Cone claimed, spoke directly to the experience of being black in a society in which racism prevailed. Native Americans made similar moves that both affirmed racial identities and used religion to subvert white characterizations of them. Paralleling Cone's claim that God is black, native scholar Vine Deloria published *God Is Red* (1973), which called native peoples away from the Christianity whites had used to "civilize" them and back to the tribal practices that affirmed traditional native spirituality and worldviews. Yet not even native categories were free from white colonization. In the late 1970s, a burgeoning New Age movement exemplified the constantly changing relationships between religion and race as it appropriated native sacred practices and transformed them from examples of degradation to the evidence of spiritual enlightenment.

The entanglements of race and religion have transformed, though hardly vanished, in the decades since the civil rights movement. The most explicitly racist uses of religion persist primarily at the margins, in small fringe Christian identity groups that invoke religious defenses of white supremacy. Nonetheless, throughout American society, religion remains a basis of both creating and maintaining the categories of difference and otherness that are at the heart of racialization. The 1965 Immigration and Nationality Act opened the doors to immigrants from around the world and has created a religious diversity that continues to expand. As has been the case throughout the history of religion and race in America, the resulting impulses have been mixed and at times even contradictory. On the one hand, the growing religious diversity has vastly expanded notions of American religious freedom as more people invoke their first amendment right of religious expression. On the other hand, that freedom has

not come without resistance from the still Christian and white majority who, through latent assumptions or active agitation, often insist on assimilation to the majority Christian perspective as a prerequisite to full participation in American society. Many immigrant communities have faced resistance to their religious practices. This opposition often invokes racialist stereotypes that root assumptions about character and behavior in ancestry and that degrade non-Christian religions as inferior or less worthy of protection on the American religious landscape.

The identities that Americans have long constructed as racial remain especially visible within religious congregations, despite substantial improvements in most every other dimension of American society. While this is certainly true for the religious and ethnic diversity that has characterized the recent decades of immigration, it also remains visible along the traditional black-white color line that has marked the American landscape since the first Europeans and Africans arrived in the early seventeenth century. The ideologies linking racial hierarchies to religious justification have faded, but the religious divisions that racism produced persist into the present. Religious organizations reveal far more racial homogeneity than diversity, whether it is intentional or not. Even the 2008 election of the nation's first African American president, Barack Obama, was marked by controversy, misunderstandings, and accusations not only about race but also the role that religion might play in both perpetuating and erasing racial lines in America. The particular constructions that the interaction of religion and race produces are ever changing, but the complex and complicated relationship between them shows no signs of subsiding.

Radio

Radio, as the nation's first and most long-lived electronic medium has been an important force in American popular religion as a missionary tool and a source of devotional material for people of faith throughout much of the twentieth century. In addition, some religious groups built institutional strength by founding organizations to advocate for religious broadcasting, first on radio and later on television and digital media. Religious radio has contributed significantly to major developments in the radio industry, including early broadcasting, the rise of network and format radio, radio regulation, and the proliferation of niche radio channels on AM, FM, satellite, and the Internet by the early twenty-first century.

The first words transmitted electronically—Samuel Morse's 1837 telegraphed question, "what hath God wrought?"—may be considered the first religious broadcast. The first radio transmission of the human voice was also a religious broadcast of sorts, on Christmas Eve 1906, sent out by the Canadian inventor Reginald Fessenden (1866–1932) from a transmitter in Brant Rock, Massachusetts. Fessenden's concert included religious readings and a violin rendition of the Christmas carol "O Holy Night." The first church to broadcast its weekly Sunday services regularly was Calvary Episcopal Church in Pittsburgh, which arranged for special remote hookup to one of the earliest radio stations, KDKA, in January 1922. From the days of experimentation in the 1920s with scattered audiences of crystal-set enthusiasts, religious

radio was present even from the medium's earliest beginnings. Radio and religious broadcasting were born together.

Early Religious Radio

Churches and religious organizations such as Bible schools were among the first applicants for broadcasting licenses in the mid-1920s. Some forward-looking revivalists set up all-religion stations, including the Pentecostal leader Aimee Semple McPherson in Los Angeles (KFSG, 1924) and Paul Maier of the Lutheran Church–Missouri Synod (KFUO, 1924). Others, such as Paul Rader in Chicago, purchased the Sunday airtime of existing stations. Rader's programming on WHT from 1925 to 1927 featured fourteen hours of preaching, sacred music, messages for children and shut-ins, and even a call-in request show for hymns. From 1927 to 1930, Rader's Chicago Gospel Tabernacle produced a once-a-week station named WJBT ("Where Jesus Blesses Thousands") that shared a transmitter and studio with the Chicago CBS affiliate station WBBM. Still others took advantage of public service time slots or purchased time on commercial stations for programs that quickly became long-running staples of the American airwaves, including R. R. Brown's "Radio Chapel Service" from Omaha, Nebraska, starting in 1923; Donald Gray Barnhouse's "Bible Study Hour" from Philadelphia, Pennsylvania, beginning in 1928; and the Mormon Tabernacle Choir program "Music and the Spoken Word" from Salt Lake City, Utah, starting in 1929.

While there were those who worried that sending church services into the ether violated the dignity of religious occasions, and others who objected to using what some people considered the "devil's province" of the airwaves, in fact religious objections to the use of radio technology were surprisingly few. As soon as the popularity of radio began to grow in the mid-1920s, religious groups almost universally acknowledged that the radio was another useful forum for spreading their messages, and that it was in fact particularly well suited to religious programming. This was because speech and song characterized so many kinds of religious services, and also because radio broadcast the speaker's words directly into American homes, conveying emotion that printed material could not. By 1924, a church or religious organization held one out of every fourteen licenses; just a year later there were seventy-one religious stations in the United States, which represented more than 10 percent of the stations broadcasting in 1925.

Radio broadcasting and station licensing were initially under the regulatory control of the Department of

Commerce. One of the early decisions by Herbert Hoover (1874–1964), the secretary of commerce from 1921 to 1928, confined all religious and public-service stations to a single radio wavelength of 360 meters (83.3 kilocycles). In 1927 the Radio Act created a Federal Radio Commission (FRC)—which later would be folded into the Federal Communications Commission (FCC). The new commission opened up additional wavelengths for religious broadcasting stations, but only if they could demonstrate a commitment to the new legislative standard to operate in the “public interest, convenience and necessity.”

The rise of radio broadcasting coincided with the struggle within American Protestantism for control of certain denominations, between modernists and fundamentalists, and this ongoing controversy raised the stakes on religious broadcasting. When the National Broadcasting Company (NBC) was organized by the Radio Corporation of America (RCA) as the first radio network in 1927, its executives chose not to sell airtime for religion and instead awarded public service time slots (also called “sustaining time”) to representatives of the three major faith groups in the United States at that time—Catholic, Jewish, and Protestant.

The National Council of Catholic Men developed the “Catholic Hour” broadcast for NBC; from 1930 to 1952 its principal speaker was Bishop Fulton J. Sheen (1895–1979), who later successfully hosted the popular 1950s television program “Life is Worth Living.” NBC also had little trouble identifying a Jewish group for its religious radio slot: the New York Board of Rabbis produced “Message of Israel” for NBC from 1934 to 1956, hosted by Rabbi Jonah B. Wise (1881–1959).

When it came to Protestants, who were riven over the modernist/fundamentalist controversy, NBC selected the Federal Council of Churches to receive its sustaining time. The Federal Council represented twenty-five mainline Protestant denominations, tending toward the doctrinally liberal end of the spectrum. New religious movements of the early twentieth century, such as Pentecostalism, were not in fellowship with the Federal Council in those years, and thus were not privy to NBC sustaining time. The Federal Council’s radio offering, the “National Radio Pulpit,” sought to deliver nonsectarian Christian messages and served as a forum for some of the modernist movement’s most notable preachers, including Harry Emerson Fosdick, S. Parkes Cadman, and Ralph W. Sockman, all from New York City. Similarly, the Columbia Broadcasting System (CBS) produced its nondenominational weekly radio sermon starting in 1931,

“The CBS Church of the Air,” emphasizing general Christian doctrines. Thus when it came to American Protestantism, which was notably contentious during the 1920s, the emerging radio networks chose to downplay controversy and instead favored programming that promoted the idea of religion in general, such as a 1928 broadcast by President Calvin Coolidge (1872–1933) vaguely referencing religion as the foundation of national life.

Network policies prohibited paid-time religious programming, which many fundamentalists and other religious conservatives viewed as patently discriminatory and damaging to their version of the Christian witness. Added to NBC’s exclusive dealings with the Federal Council for all Protestant programming, the shuffling of stations and frequencies under the new federal regulation had the net effect of limiting the access of fundamentalists and other “controversial” speakers to nationally heard airtime on network radio.

Coughlin and the “Radio Church”

Yet determined religious broadcasters developed inventive strategies to broadcast their messages. Father Charles Coughlin (1891–1979), of Royal Oaks, Michigan, for example, created a popular radio program that even developed into a political party, the National Union for Social Justice. Coughlin, a Catholic priest, began with a radio program for children in 1926 from his parish, then formed the Radio League of the Little Flower to support his paid-time broadcasting as his weekly program became more popular and was soon picked up by more stations. Coughlin was even briefly a paid-time broadcaster on CBS until 1930.

Coughlin set up what was essentially his own network by buying simultaneous time on dozens of stations. He pioneered the use of prerecorded transcription disks, which were mailed to independent stations in advance so that his program could be heard at the same time across a wide geographic region. For the first half of the 1930s, Coughlin was one of the most-heard voices on American radio, with an estimated weekly audience of ten million listeners. Coughlin’s distinctive rhetorical style, which critics called “vituperative” and admirers called “passionate,” together with his increasingly right-leaning political views, made him a formidable media opponent to President Franklin D. Roosevelt (1882–1945) in the 1930s.

Coughlin’s radio demagoguery was a particular target of the 1939 National Association of Broadcasters Code of Ethics, which stated that religious broadcasts should “promote spiritual harmony and understanding of mankind” and not

“convey attacks” on racial or religious groups. He was finally forced to withdraw from broadcasting during World War II. While some have called Coughlin the rock on which the radio church was built, it may be more accurate to think of Coughlin as the rock on which the radio church was very nearly shipwrecked. By the late 1930s, all radio networks had begun to associate religious broadcasting with controversy and to consider it less of a “public interest” to be fostered than a danger to be contained and bounded.

Religious broadcasters after Coughlin had to consider public opinion and good taste, or risk being marginalized or blacklisted. Yet as they learned to make paid-time radio ministry profitable, many religious conservatives blended commercial strategies with uncompromising Protestant doctrine, thus shaping the media landscape of both radio evangelism and televangelism. One radio network founded in 1934, the Mutual Broadcasting System, found religious radio to be a reliable source of profits; by 1943, 25 percent of Mutual’s airtime was bought by religious broadcasters. One of Mutual’s most successful programs was the “Old Fashioned Revival Hour,” hosted by Charles and Grace Fuller in Southern California from 1936 until his death in 1968. Fuller was highly influential as a broadcaster; his on-air formula of a nostalgic gospel quartet, solid fundamentalist (“old-time gospel”) preaching, and a chatty segment of excerpts from listener letters proved irresistible to millions of Americans. Fuller is also notable as one of the key founders of the National Association of Evangelicals in 1942 and a religious broadcasting trade association, the National Religious Broadcasters (NRB), in 1944, as well as the founder of the Fuller Theological Seminary in Pasadena, California.

Religious Broadcasting Advocacy Organizations

In 1941 the FCC’s “Mayflower Decision” had prohibited editorializing by all radio broadcasters. Although difficult to enforce (and, indeed, largely ignored during World War II when broadcast journalists openly aired their opinions), the policy nevertheless stated that broadcasters should not be

Father Charles Coughlin effectively created his own radio network by purchasing simultaneous time on dozens of stations and mailing prerecorded transcription disks in advance so that his program could be heard at the same time across a wide geographic region. Coughlin had a weekly estimated audience of ten million listeners in the early 1930s. He stopped broadcasting during World War II after his pro-fascist political views came under fire.

“advocates,” which potentially affected anyone using radio airwaves for proselytizing and evangelism. Religious broadcasters formed the NRB partly in response to the Mayflower decision. The NRB has been a key religious broadcasting advocacy group and has been very successful in securing commercial radio airtime for conservative Christians and setting financial accountability standards for paid-time broadcasters who must fund-raise to stay on the air. Other religious radio broadcasters also consolidated radio efforts during the 1940s. The Federal Council of Churches brought mainline Protestant media production under the roof of the Protestant Radio Commission. In 1946 the interfaith Religious Radio Association was formed under the auspices of the Institute for Education by Radio, with representatives from mainline Protestantism, Roman Catholicism, and American Judaism. By the mid-1940s, religious radio was a \$200 million dollar per year industry, and it got a further boost when the young revivalist Billy Graham (1918–) used radio as an important part of his ministry starting with “Hour of Decision” on ABC radio in 1950. The long-running Jewish program “Eternal Light” got its start in 1947, featuring high-quality radio drama based on Jewish history and ethics.

Religious radio benefited from a generalized revival of religion in the 1950s, despite the introduction of broadcast television and of televangelism. Religious broadcasting obtained a foothold on the emerging technology of FM radio and continued to be a steady source of income for low-powered daytime AM stations. Postwar religious broadcasters also used shortwave radio facilities that had been developed during World War II as propaganda stations. President Dwight D. Eisenhower's secretary of state, John Foster Dulles (1888–1959), approved of these international religious radio broadcasts to Europe and Asia as a cold war tool against international communism.

Religious Radio as Controversial Speech

During the 1950s, American denominations continued to disagree over whether paid-time religious broadcasting was appropriate. Those in the National Council of Churches (NCC), the successor to the Federal Council of Churches, believed that churches should offer free programming and that stations should provide sustaining time for them. Those who had been historically shut out from sustaining time usually included evangelical, fundamentalist, and other doctrinally conservative organizations; such groups had embraced paid programming as an important mode of Christian witness to the modern world.

Yet it was still important for radio stations to demonstrate their commitment to public service broadcasting for FCC license renewal. Free time given to religious broadcasting could be counted toward a station's public service time until 1960. In that year, the FCC relaxed its policy to permit radio and television stations to also count paid-time religious broadcasting as public service time. Program-length fundraising was still prohibited (until the 1980s) under the new policy. Furthermore, religious programs were now declared to be exempt from the FCC's Fairness Doctrine, which had permitted groups on opposite sides of controversial issues equal access to airtime for their views, and which had been a gray area for religious broadcasters up until that time.

In fact, the Fairness Doctrine policy had been successfully used in the mid-1940s by atheist Robert Scott to challenge the religious programming of three San Francisco-area stations. When the stations refused to sell him airtime, Scott claimed that the stations had violated the Fairness Doctrine by not allowing him to present both sides of the controversial issue of the existence of God. Scott was eventually granted some airtime for his views. The Fairness Doctrine was not widely used to challenge religious programming, although it

remained a threat in the minds of many religious broadcasters until the 1960 ruling.

Religious broadcasting drove other notable policy changes in the radio industry. Historically, the FCC had been loath to become involved in religious squabbles, or to appear to restrict religious freedom on the air. But the regulatory agency stepped in on certain occasions; for example, in 1964 conservative preacher Billy James Hargis (1925–2004) railed against the book *Goldwater—Extremist on the Right*, which criticized presidential candidate Barry Goldwater. Hargis called the book's author, Fred S. Cook, an atheistic communist sympathizer. Cook demanded equal time for rebuttal from Hargis's station, WGCB in Red Lion, Pennsylvania. The station at first offered to sell Cook equal time, whereupon the FCC ruled that WGCB had to provide Cook airtime for free. The FCC's decision was upheld by the Supreme Court, and the *Red Lion* case further emphasized that religious broadcasting could be treated as political speech (and, in fact, by the mid-1960s was often indistinguishable from it).

Some religious broadcasters circumvented FCC oversight by using international shortwave stations or the high-wattage "border blaster" stations just south of the U.S.–Mexico border (among them XEG, XERF, and XELO located in Monterrey and Baja, Mexico). From the 1920s until the early 1980s, border radio featured highly entrepreneurial religious broadcasters such as J. Harold Smith, A. A. Allen, "Cowboy Evangelist" Dallas Turner, Brother J. C. Bishop, and Frederick "Reverend Ike" Eikerenkoetter II, the self-proclaimed "Divine Sweetheart of the Universe" who hawked blessed prayer cloths on XERF in the 1970s.

Toward Corporate Radio

Beginning in the 1980s, the FCC altered the rules governing broadcast station ownership. This permitted the rise of large corporations owning many stations in the same markets. The move toward corporate consolidation occurred in religious broadcasting also; in 2004 the fifth-largest owner of U.S. radio stations was the American Family Association, owner of the Christian radio group American Family Radio. When the FCC permitted religious groups to hold licenses as noncommercial broadcasters, American Family relicensed some of its stations as noncommercial and also built new ones. Its strategy was adopted by other religious organizations looking for ways to expand on the FM and the AM radio dials in the late 1980s and early 1990s. Salem Communications is another of the largest players in the religious radio industry, with a

Christian station in twenty-three of the nation's top twenty-five radio markets in 2007.

In the 1980s and 1990s, there was a strong surge in religious publishing, music, and the Internet, offering new and profitable ways to bring religious messages (typically, but not exclusively, evangelical Christian) to popular audiences. Numbers of radio stations grew in formats such as gospel, Christian rhythm and blues, contemporary Christian music (CCM), and megachurch praise and worship music. The ratings service Arbitron defines the "religious" category of radio programming as including not only religious talk shows (such as inspirational, magazine-format, and Bible study) but also stations with contemporary Christian music (CCM) and gospel music formats. Taken as a whole, the religious segment of the radio market in the first decade of the twenty-first century is on par with country music broadcasting in listener popularity, and very close behind news/talk format stations.

Religious radio continues to be a growing market. The number of radio stations in America has been increasing each year (even while corporate consolidation reduces the number of station owners annually). Nearly all Americans use radio regularly if not daily in their homes and offices or while driving in their cars, and audiences remain large. Between 2000 and 2005, the number of stations in the United States increased by 4 percent to more than 13,000, while in the same years the percentage of religious-format radio stations grew 14 percent. A Barna Group study reported in 2005 that 46 percent of all U.S. adults listened to a Christian radio broadcast monthly, a number that included 28 percent of the non-Christians in their survey. Audiences for religious radio have grown 38 percent since 1998.

By 2010 James Dobson's daily advice program, "Focus on the Family," had become the highest-rated national religious program, with an audience of perhaps 1.5 million listeners on more than 3,000 stations in the United States. However, international audiences have been just as important to many religious broadcasters: in 2010 "Focus on the Family" was broadcast in 160 countries, with an estimated listening audience worldwide of 200 million, according to Dobson's organization. Other big-time Protestant radio broadcasters in the early twenty-first century included Charles Swindoll, Charles Stanley, and Beverly LaHaye. Radio has remained a safe place for conservative Christian viewpoints. "When conservatives talk about [liberal] media bias, they are not talking about radio. It is a conservative bastion," concluded a 2007 conference session of the MIT Communications Forum on evangelicals and the media.

Radio broadcasting is no longer limited to AM and FM radio antenna stations. Low-powered FM, Internet, high-definition digital, and satellite radio offer new opportunities for niche narrowcasters to develop a media presence for religious groups seldom heard on the FM and AM radio dials. The growth of non-Christian religious media voices (Radio Islam, Dharma Radio, Jewish World Radio, and Bhajan Kiirtan, to name just a few) and the global reach of digital and satellite broadcasting illustrate America's vibrant religious pluralism and its diversifying media universe in the twenty-first century, providing ample opportunities for further study of religious radio and its audiences.

Interpretive Theories

The earliest religious broadcasters were thrilled with the mathematical possibilities of reaching vast audiences far larger than could be assembled to hear a traditional evangelist. Many believed that radio was an essential missionary tool for reaching the unchurched. The first studies of religious radio in the 1930s and 1940s noted that listeners often crossed denominational boundaries in their listening habits. Yet for the most part, religious broadcasting provided emotional and spiritual reinforcement for believers, who proved to be the most reliable contributors to paid radio ministries. Sociologists and statisticians who studied early religious radio feared that unscrupulous or hatemongering radio demagogues could dupe a credulous audience or victimize listeners with pleas for donations. These media scholars were concerned with ideology, cultural authority, and power (frequently mentioning, for example, the panic that ensued after the 1938 Mercury Theater "War of the Worlds" broadcast as a cautionary tale about the potential for radio to lead the public astray).

Often an undercurrent of disdain ran through such early studies for the lower-class, less-educated, and female listeners who made up religious radio's largest audience. Religious radio is a highly gendered cultural space—the great majority of its listeners are and have been female, yet few women found themselves on the other side of the microphone. Religious radio has been seen as part of "lowbrow" culture and along with soap operas and romance novels was often dismissed or overlooked as unworthy of serious academic study—or was assumed to be on its way out, given the prevailing academic theories about the supposedly inevitable secularization of modern culture.

That began to change after the 1980s, when televangelism's impact on American culture made the study of religious broadcasting more urgent, and the rise of the religious right

cast doubt on secularization theories. Media scholars often refer back to the influential ideas of Marshall McLuhan (1911–1980), who noted that media broadcasting radically reoriented the way that people perceive and make meaning, including religious meaning. When media and cultural historians applied audience-reception theories and ideas about postmodern identity construction to the study of religious broadcasting, they often found that listeners do not simply “receive” religious messages by radio, they “negotiate” meanings and craft “mediated selves” in ways that defy simple explanation. Many religious fundamentalists, for example, resist and oppose modernism, yet seem utterly at ease in using modern mass media in sophisticated ways.

Contemporary scholars of religious broadcasting, many influenced by cultural studies and historians of “lived religion,” note that the media age has conditioned the practice and meaning of religion in modern times, and that it makes little sense to try to separate “media” and “religion” into separate realms. Media’s ubiquity and pervasiveness have created a modern commercialized mass culture in which religious broadcasters participate but in which they also offer countercultural messages that seek to transcend the material and the mundane. Mediated religious messages offer meaning and narrative structure for believers and potential believers, as well as construct cultural boundaries between believers and “the world.” Scholars continue to debate whether the practice of religious media consumption is deliberative and rational, or playful and fluid. They also debate the degree to which media destabilizes fixed linguistic truths, and the role of religion in the process of fixing, or reassigning, meaning through religious discourse. Radio remains an important part of the ever-widening media landscape in which religious messages can be communicated, reinterpreted, and experienced in the modern world.

Reformed Denominational Family

The Reformed wing of the Protestant Reformation yielded two main branches. The first branch, Presbyterianism, together with Congregationalism, the English-speaking expressions of Reformed Protestantism, have dominated the heirs of John Calvin in the United States thanks to language, the success of English colonial developments in North America, and Britain’s emergence as an empire—and all despite American independence during the last half of the eighteenth century. The other branch of denominational Calvinism, the Reformed churches—reformed being synonymous with presbyterian—designated the Calvinist churches on the European continent. Although Reformed Protestants, on the heels of French or Dutch colonial ambitions, came to North America before Presbyterians, Britain’s success as a colonial power ensured that the United States would be friendlier toward English-speaking churches than toward other European expressions. The Presbyterian churches of the United States would then be the Calvinist representatives in the American Protestant mainstream, and the so-called ethnic Reformed communions would have to

adapt to that Anglo-American mainstream. Presbyterians did not develop formal church structures until the first presbytery was founded in Philadelphia in 1706.

Presbyterians had a later start than the Dutch Reformed churches, which were part of the ecclesiastical establishment in the colony of New Holland (New York and New Jersey). In fact, after the Presbyterian churches, the Dutch Reformed would be the second-most influential branch of Calvinism in the United States because of their age and location. The first Dutch Reformed congregation was established in 1628 in New York City, and the surrounding areas of New York along the Hudson River and northern New Jersey towns were the centers of Dutch Calvinist strength throughout the colonial period. These churches remained generally uniform in their Dutch identity and piety, even after the English gained control of New York. Part of the explanation for this uniformity was a dependence on the mother church in the Old World. Unlike American Presbyterianism, which emerged in 1706 with no formal ties or dependence on the Church of Scotland, the Dutch Reformed would not gain independence from the Netherlands Reformed Church until 1792 with the founding of the Reformed Church in America.

Because British Presbyterianism and Dutch Reformed were the oldest and most influential Reformed bodies in the British colonies, other Reformed groups migrating to North America would have to reckon with the oldest Reformed Protestants. Like other immigrants, these “ethnic” Reformed churches would endeavor to retain their own ways and traditions. But also like other immigrants, their experience of assimilation would involve adjusting to the cultural and religious institutions that preceded them. What made this adjustment particularly tricky, especially after the formation of the United States, was a triangulated process of accommodation between not simply the host culture (of largely English laws, customs, and language) but also a voluntary pattern of church life markedly different from the state-church system that prevailed in Europe. The new cultural, political, and religious environments would often make the ethnic Reformed churches dependent on the older Presbyterian and Dutch churches for leadership and encouragement.

The Huguenots and Colonial Migration before English Hegemony

The Huguenots, or French Reformed, were actually the first Reformed expression to arrive in the New World. Among the

most vigorous and oldest of Reformed churches outside Switzerland, the French Reformed grew rapidly between 1540 and 1560 despite political opposition. John Calvin and Theodore Beza offered pastoral and theological advice to French church leaders. Because of efforts to stamp out the Protestant churches in France between 1562 and 1598, the Huguenots went into exile—but slowly at first. The Edict of Nantes (1598) granted Protestants civil liberties in France, but over the course of the seventeenth century French officials gradually took these freedoms away, prompting many Huguenots to migrate to places such as Prussia, the Netherlands, Switzerland, the British Isles, and North America. With the revocation of the Edict of Nantes in 1685, some 20 percent of the two million Huguenots left France in search of another home.

As early as 1562 during one of the first relocations by the French Reformed, Jean de Ribault led a group of thirty families to settle in Port Royal (near present-day Beaufort, South Carolina). After Ribault was pressed to return to France to assist the Protestant cause, the New World colony dissolved. Two years later another French Reformed migration, led by René de Laudonnière, arrived in the same locale, where it founded Fort Caroline. But within a year Spanish colonists had destroyed the Huguenot colony. Only thirty survived to return to France.

After these colonizing efforts the French Reformed migrated to North America mainly as families or in small groups. Many were drawn to South Carolina, but large numbers also settled through the rest of the British colonies. They typically assimilated quickly and found church homes among the Presbyterians, Dutch Reformed, and Anglican parishes. Their assimilation into colonial British society and other Protestant communions continues to baffle historians, but undoubtedly the rivalry throughout the eighteenth century between England and France in the New World, as well as the association in many British Protestants’ minds of France with Roman Catholicism—Québec being the French Catholics’ own “city on a hill”—encouraged the Huguenots to hold onto their ethnic identity loosely. Although by 1706 the Huguenots in America had become Anglican, one congregation in Charleston, South Carolina, continued the French Reformed heritage, and even into the early twenty-first century it maintained an eighteenth-century French liturgy.

The German Reformed and Reckoning with British Protestantism

The German Reformed churches took root in Nassau, Bremen, and Hesse, but the city of Heidelberg in the

Palatinate was the center of this branch of Reformed Protestantism. Unlike the Huguenots, the German Reformed found a sympathetic and successful political patron, Frederick III, who made possible the establishment of Reformed churches among Germans. He hired two young Reformed theologians, Zacharias Ursinus and Casper Olevianus, for his university in Heidelberg, and they set down the Heidelberg Catechism, which would become the creedal standard for the German Reformed in America (and the catechism of the Dutch Reformed). After Frederick's death in 1576 his successor, Ludwig VI, expelled the Reformed pastors and professors in his territory and replaced them with Lutherans. But seven years later Ludwig's brother, Johann Casimir, restored the Reformed churches in Heidelberg, where they would remain until the Thirty Years' War.

Arrival in the British Colonies

The German Reformed began to migrate to the British colonies in North America in the seventeenth century, and that migration peaked in the mid-eighteenth century. The reasons ranged from economic to political, with the obvious implications for faith and practice in a state-church system. Although they could be found in other colonies, the German Reformed clustered in the middle colonies such as Maryland and Pennsylvania, where the policies of religious toleration made room for most Protestants. Religious freedom did not, however, include religious leadership. Initially the German Reformed depended on lay leaders for pastoral oversight. John Philip Boehm, a schoolmaster in Maryland, almost single-handedly organized the first German Reformed congregations. When he began to administer the sacraments, some objected to his nonordained status. The German Reformed then appealed to the Dutch Reformed churches to ordain Boehm, a request that received a favorable response and prompted Dutch ministers in New York in 1729 to ordain the German Reformed leader.

This cordial relationship between the Dutch and the Germans received additional encouragement through the determination of the Dutch Reformed churches to provide oversight to the German Reformed. At the time, the Dutch Reformed churches in North America were still part of the Classis of Amsterdam, which also gave the churches in the Netherlands authority over the New World German Reformed. As part of this relationship, in 1746 the Dutch sent an energetic Swiss-born and Netherlands-trained pastor, Michael Schlatter, to assist the German Reformed in Pennsylvania. Within a year he had toured all the churches,

distributed Bibles and literature, determined the procedures for membership, and organized several congregations. By 1747 Schlatter had organized the first German Reformed coetus (convention), which consisted of four pastors. Schlatter's own charge in Germantown, Pennsylvania, was the center of German Reformed church life.

Schlatter would remain in North America until 1751, when he returned to Europe. From his homeland he recruited and sent additional pastors to work among the German Reformed in the British colonies. Even so, these churches continued to lack adequate pastoral oversight and lost some of the pastors they did call to pietistic Protestant groups such as the Moravians and the United Brethren. The German Reformed tried to hold out for Reformed teaching and church polity against the broad-church movements of British and American revivalism sweeping the colonial scene during the first Great Awakening. By 1793 the German Reformed were strong enough to form their own synod and adopt a constitution, thereby establishing independence from the Dutch Reformed. But the lack of pastors and transient nature of colonial church life meant that the German Reformed communion lacked institutional, theological, and liturgical coherence. At the beginning of the nineteenth century it was a dispersed group of congregations and pastors often bound more by language than the norms of Reformed Protestantism. Linguistic ties explain the German Reformed's cooperation with Lutherans in 1787 to establish Franklin College (later Franklin and Marshall College) in Lancaster, Pennsylvania.

German Reformed Synod and Mercersburg Theology

Even so, over the course of the first half of the nineteenth century the German Reformed began to formalize and institutionalize as a separate expression of Reformed Protestantism. In 1819 the synod organized regional classes to oversee the growth of the church in the Northwest Territory. One of these, the Classis of Ohio, evolved into a second synod that would oversee the training and ordination of ministers in the West. In 1825 the German Reformed also established in Carlisle, Pennsylvania, their first seminary to help with the training of pastors. But anti-seminary sentiments within the church revealed again the lack of cohesion within the communion at large. Some German Reformed followed the lead of John Winebrenner in Harrisburg, who established his own school and trained pastors in tune with the "new measures" of Charles Finney and the Second Great

Awakening. Others formed a separate body, the Free Synod, to harness ministers trained by L. F. Herman but who were unacceptable to the German Reformed Synod. Despite these fissiparous tendencies among the German Reformed, the denomination persisted with the building blocks of a distinct communion. In 1827, for example, the German Reformed started a denominational magazine, *The Weekly Messenger*, which became a source of information, devotional inspiration, and even denominational identity.

The call of two gifted, prolific, and also controversial professors to the German Reformed seminary, which had moved in 1835 from the original site in Carlisle to Mercersburg, Pennsylvania, added to the growing stability of the church, whether intentionally by creating a consensus among those trained at the seminary or unintentionally by giving unity to those who opposed the seminary and the teaching of its faculty. In 1840 John Williamson Nevin assumed the primary responsibilities for instruction and administration at the seminary. Four years later the seminary's trustees approved the call of Philip Schaff from Germany to assist Nevin at Mercersburg. Together, the Mercersburg theologians offered an interpretation of Reformed Protestantism that was distinct from both the revivalism of the mainstream evangelical world and the low-church orientation of mainstream Calvinists in the Presbyterian and Congregationalist churches. Along the way, they attempted to establish a churchly, sacramental, and ecumenical version of Protestantism that was deeply informed by theological and philosophical developments in nineteenth-century Germany.

For the better part of two decades the Mercersburg theology sustained controversy among the German Reformed. But critics railed from the seminary's geographical flanks, both in Philadelphia among the oldest congregations and in Ohio. The chief criticism was that Mercersburg represented a Romanizing tendency that blurred the difference between Protestantism and Roman Catholicism. But Schaff and particularly Nevin were attempting to recognize another difference—one between an older churchly Protestantism and its modern-day successor, which freed the converted individual believer for a life of striving more or less independent of the church and its sacramental ministry. These differences became especially apparent during the 1850s and 1860s while the German Reformed were attempting to create a common liturgy. Not even the celebration of the tercentenary of the Heidelberg Catechism or the formation in 1863 of a general synod designed to unite the regional synods of Pennsylvania and Ohio could quell the controversy. Not until the General

Synod of 1878 established a peace commission did antagonisms begin to subside. In 1881 the commission's recommendations received hearty approval, and the German Reformed Church entered a period of institutional unity and common purpose that this wing of Reformed Protestantism had seldom experienced in North America.

The Reformed Church in the United States

The advent of internal consensus was propitious for the German Reformed, who over the course of the nineteenth century had adopted the formal name the Reformed Church in the United States (RCUS). The dominant trend after the Civil War among American Protestant denominations of British descent was toward interdenominational cooperation and ecumenism. The culmination of this development was the founding in 1908 of the Federal Council of Churches, the first major institutional endeavor to give shape to a growing sense of the need for American Protestants to cooperate both for the sake of Christian unity and to preserve a Christian society in the United States. The liturgical sensibility of the Mercersburg Theology, combined with the influence of Philip Schaff, who moved later in his career to New York City to teach at Union Seminary, at the time a Presbyterian institution, well positioned the RCUS to participate in the wider ecumenical world of American Protestantism. Not only did the German Reformed send delegates to the Federal Council from the beginning of the ecumenical endeavor, but the denomination also sought to align with like-minded denominations by establishing organic ties.

In 1934 the RCUS merged with the Evangelical Synod of North America to become the Evangelical and Reformed Church. The Evangelical Synod was another denomination of German heritage, transplanted to America in 1840, that embodied in the New World the merger of Lutheran and Reformed churches in Prussia. The synod was famous among American Protestants for nurturing the Niebuhr brothers, Reinhold and H. Richard. The assimilation of the German Reformed heritage to the ways of American Protestantism became complete in 1957 when the United Church of Christ, the denomination of New England's Congregationalist tradition, absorbed the Evangelical and Reformed Church. Ironically, the German Reformed, the tradition that had sustained the most vigorous critique of Puritanism and its revivalist descendants through Nevin's arguments, was now part of the very Protestant tradition it had critiqued thanks to the overriding sense of Protestant

cooperation supporting the American way of life during the Cold War.

Part of the RCUS, however, decided not to enter the American Protestant mainstream. In 1911 the RCUS had organized a new jurisdiction in the Dakotas and Iowa called the Eureka Classis. This development was part of an effort to retain within the denomination conservative congregations who were not entirely satisfied with the theological trends among the German Reformed. The congregations that belonged to the Eureka Classis had drawn heavily on the theology of Hermann F. Kohlbruegge, a Dutch Reformed theologian in the Netherlands who had stressed divine sovereignty and downplayed the human element in salvation. By the 1930s the conservatism of Eureka had not subsided. It refused to join the RCUS in merging with the Evangelical Synod of North America, and four years later, in 1938, Eureka asserted its right to be the legitimate successor to the RCUS and to retain the name. In 1939 the Eureka Classis renounced all efforts by their former church members to discipline their independence. Since then, this part of the old German Reformed church has kept the name, RCUS, though "Eureka Classis" has often been added to avoid confusion.

Although those who refused to enter the Evangelical and Reformed Church did so as part of the conservative reaction (sometimes called fundamentalism) against liberal theology in American Protestantism, the persistence of groups such as the RCUS also revealed tensions within the Protestant ecumenical project. Nevin, for example, had asserted a high view of the church and its sacramental ministry that allowed him to see affinities among Reformed Protestantism, Lutheranism, and even Roman Catholicism. And yet the outlook of most of the Anglo-American denominations that cooperated within the American ecumenical circles was not high-church; it was decidedly pragmatic and provided one of the chief motives for the social reform and political activism known as the Social Gospel. For those Protestants who wanted to take seriously either the sacredness of the Christian ministry or the integrity of particular Christian traditions, the American Protestant ecumenical project left much to be desired.

The Hungarian Reformed and Twentieth-Century Protestantism

The Reformation in Hungary is part of the story of the birth of Protestantism that is rarely known, but reveals the breadth and diversity of the influence of Reformed Protestantism. The rise of the Reformed churches in

Hungary followed the pattern elsewhere in Europe—a combination of new ideas and literature to explain them, gifted pastors, and political intrigue. After the initial success during the 1540s and 1550s, political circumstances contributed to the persecution and exile of the Hungarian Reformed. Those who remained in the country did so as a remnant and subject to various forms of repression—sometimes facing prison and being sold into slavery. Only in the eighteenth century with the spread of Enlightenment ideals did a policy of toleration arise that permitted the Hungarian Reformed to assume a legitimate presence.

Religious toleration did not mean, however, that Protestants in Hungary faced no other obstacles. Although Hungarians did not migrate to North America during the colonial or early national eras, they did come to the United States in significant numbers between 1850 and 1920 because of the political disruptions that affected all parts of Europe, from democratic revolutions to world war. During this wave of migration the first Hungarian Reformed churches were planted in America. Until the early twentieth century the Hungarian Reformed presence was local and sporadic. In 1890 the congregations established in Pittsburgh and Cleveland initially sought the assistance and supervision of the German Reformed (RCUS). But other congregations of Hungarian Reformed descent affiliated with the mainline Presbyterian Church in the U.S.A. (PCUSA). In 1904 many of the Hungarian Reformed congregations in America established a separate identity from both the Presbyterians and the German Reformed by forming an American classis under the supervision of the Hungarian Reformed Church in the Old World. But World War I upended this relationship and prompted the Hungarian Reformed in America to relinquish ties to Hungary and seek a partnership with an American church. The PCUSA drew the most sustained attention, but efforts to work out an association failed because of the Hungarians' desire to retain their ethnic Reformed identity.

The upshot of these efforts to establish a Hungarian Reformed church in America led to the Tiffin Agreement of 1921. This plan brought the eastern and western classes of the Hungarian Reformed Church into the RCUS as separate jurisdictions within existing German Reformed synods. The Tiffin Agreement also gave the Hungarian Reformed the rights, privileges, and sanctions of the RCUS, while allowing property to remain in possession of the existing Hungarian congregations and allowing the Hungarian Reformed churches to retain their native tongue in worship

and education. Meanwhile, the RCUS generously assumed responsibility for ministerial salaries that were in arrears at the time of the agreement. The hope was that over time the Hungarians would assimilate to America and to the RCUS, thereby giving up their language and Old World attachments. Although this plan gave the Hungarian Reformed a home and an American Protestant patron, it also was the source of frustration on both sides. For example, the board of home missions of the RCUS, which continued to support some of the Hungarian Reformed congregations financially, increasingly found the commitment to be a burden, especially during the Great Depression. Assimilation to the German Reformed patterns and ethos also was not as thoroughgoing as the designers of the Tiffin Agreement had hoped.

By the time of the 1934 merger that created the Evangelical and Reformed Church, the Hungarian churches within the RCUS had requested the formation of a nongeographical synod to preserve Hungarian language, customs, and church heritage. After five years of negotiation, in 1939 the Magyar Synod of the Evangelical and Reformed Church came into existence. Over the next twenty years the Hungarian presence in the Evangelical and Reformed Church considered other denominational options to achieve an entirely Hungarian church. But these efforts failed, and the Hungarian Reformed were still part of the Evangelical and Reformed Church in 1957 when it became part of the United Church of Christ (UCC). Polity differences between Reformed and Congregationalists led to the creation of the Calvin Synod as an acting nongeographically defined (formerly Hungarian Reformed) conference within the UCC.

The desire to preserve Hungarian identity and church practices also was evident outside of the Hungarian Reformed congregations that became part of the RCUS. As many as six congregations refused to sign the Tiffin Agreement of 1921, and by 1924 these churches had formed the Free Magyar Reformed Church in America. Endre Sebestyan, pastor of the church in Duquesne, Pennsylvania, was the leader of this effort to preserve a separate Hungarian Reformed denomination in America. This denomination's congregations extended from New Jersey and New York to western Pennsylvania and Ohio. In 1958 the church dropped the word *Free* from its name and adopted the cause of uniting all Hungarian Reformed into a separate denomination. This effort failed to attract those Hungarians who had first joined the RCUS and remained to merge with the United Church of Christ. But the aim of preserving a separate Hungarian Reformed Church did not.

Conclusion

The experience of the French, German, and Hungarian Reformed in the United States illustrates one of the central ironies of American Protestantism. As propitious as religious freedom was for a variety of Protestant traditions in a nation dedicated to political liberty, maintaining a particular religious expression proved to be remarkably difficult without the patronage of the state. Unless an Old World Protestant tradition possessed a significant number of adherents or its leaders decided to huddle in a particular locale, the size of the United States, the influence of English customs and norms, and the ability to affiliate with another church (or no church at all) meant that immigrants from one tradition could easily wind up in another communion. The effort to perpetuate one of the European Reformed churches in a manner that resembled its Old World order and practice was therefore extremely difficult. Consequently, the Reformed churches, as distinct from either the Anglo-American Presbyterians or the Dutch-American Reformed, would have to reckon with both the norms of American civil society and invariably the assistance of one of the older American Presbyterian or Reformed communions. The lesson learned was that although religious freedom in the United States promised the possibility of Protestant diversity that encompassed the vitality of older European churches, the American experiment was capable of sustaining only those Presbyterian and Reformed communions that possessed the resources to cope with the demands of a voluntary church.

Religion, Regulation of

The United States prides itself in separating church and state. This basic principle is intended, at least in part, to free religious institutions from government regulation, but the nation nevertheless regulates religion in many different ways, even though regulation runs counter to Americans' abiding penchant for freedom.

Separating church and state was a noble experiment in the founding era and remains so today. The experiment was undertaken in the hope that America would escape the religious wars that had characterized the Christian West since the emperor Theodosius made Christianity the Roman Empire's official religion in 380 CE. The American idea that all human beings are entitled to religious liberty was a by-product of the founders' belief in human dignity. For most of history, political orders had tended to be monarchical, even totalitarian, believing a common religion to be the foundation of a stable society. Enforcement of religious uniformity became commonplace, but it often led to religious intolerance, persecution, inquisitions, and religious wars. The founders sought to alter the course of history by ushering in a new era of religious freedom. Moreover, the American experiment with achieving religious freedom by separating church and state was intended to end the scrupulous regulation of religion that had seemed to suffocate religion everywhere. If America was to be anything, it was to be free in the sense of granting its people unregulated religious belief and activity.

That said, the goal of fully realizing this noble aim of unregulated religion has proven to be elusive. Even though the United States enjoys an unprecedented amount of religious freedom, it has learned through experience that some degree of regulation is not only prudent but also necessary. Indeed, for several reasons the regulation of religion in America is on the rise. First, the phenomenal growth of religious diversity has led to increased regulation. In 1800 fewer than forty identifiable religious groups were in America. By contrast, by the beginning of the twenty-first century more than fifteen hundred identifiable religious groups were claiming to possess the truth on religious matters. If the constitutionally mandated framework of religious freedom can make any claim whatsoever, it is that it gave official sanction to a phenomenal growth in religious diversity. Even Benjamin Franklin, who at the Constitutional Convention remarked, "Finally, we're going to turn religion loose," could never have anticipated the growth of religion in so many directions.

A second reason for the growth of the regulation of religion is the growth of America as a liberal state. As the population expands, the government finds it increasingly necessary to regulate various sectors of American society, including business organizations, banking institutions, the health care industry, energy companies, nonprofit organizations, and many more. In turn, as government interests envelop more and more areas of life, it is inevitable that religious institutions experience increased regulation. As New Religious Movements (NRMs) scholar Jim Richardson has noted, the tendency toward expansion of the liberal state is exacerbated by the willingness of many religious groups to accept state benefits, thereby subjecting themselves to invasive monitoring by the state.

A third reason for the increased regulation of religion is the felt need of government to protect its citizens from dangerous, unwarranted, or abusive practices. Religious belief affects marriage practice, illness and disease, child care, education, taxation, dietary practices, sexual practices, worship activities, political beliefs, and a host of other sectors of life. Because government has a duty to protect its citizens from practices that threaten life and health, controversial religious practices are subjected to greater scrutiny.

Finally, religion is being increasingly regulated because of the shifting role and expressions, and perhaps even the decline, of religion in America. Although the United States remains the most religious of the Western industrialized nations, the forces of secularization and modernization are

taking a toll on the nation's religious foundations. In such a climate, religion loses respect, and many people are inclined to develop critical, even hostile, attitudes toward religious people and institutions. As religion becomes less sacrosanct and less a part of the nation's superstructure, many government officials are more willing to control, monitor, and regulate religion.

The Reality of Regulation

Is increased regulation of religion healthy for society and for those religious interests that are affected? The U.S. Constitution protects the free exercise of religion, but unlimited unregulated religious belief and practice are impossible. It is not feasible, for example, for the state to protect child sacrifice and body immolation in the name of religion, and the Supreme Court so held in *Reynolds v. United States* (1878). It is a matter of drawing a line between those practices that will remain free and those that must be controlled or proscribed. In 1970 in *Walz v. Tax Commission*, the Supreme Court noted that the relationship between religion and government must be one of "benevolent neutrality." In other words, the U.S. government, though secular in purpose, cannot be hostile to religion, but must be generally sympathetic to religious faith. Determination of the precise parameters of government regulation of religion has not been easy. Therefore, this task has usually been left to the courts.

Judicial Regulation of Religious Practice

Religious practice was first regulated by the U.S. Supreme Court in the 1878 case of *Reynolds v. United States*. In the face of the Grant administration's efforts to stamp out Mormon polygamy, the Court considered the argument of George Reynolds, a personal secretary to Mormon leader Brigham Young, that his practice of polygamy was a religious duty sanctioned by the Bible. Reynolds argued further that polygamy was supportive of mainstream American values and did not threaten the nation's social fabric. The Court held that the government could use the federal anti-bigamy statute at issue to punish criminal activity regardless of religious belief. In essence, then, the Court held that although religious *beliefs* are not subject to government regulation, religious *practices* that impair the public interest are not constitutionally protected.

Other religious practices have been proscribed under the same kind of protected belief-unprotected action dichotomy. For example, an Oklahoma court convicted a spiritualist fortune-teller in 1922 for her commercial activities, even

though she believed in God and claimed to be merely practicing her religion. Likewise, an air force officer's right to wear a yarmulke (Jewish ritual head covering) while on duty was proscribed in *Goldman v. Weinberger* (1986), although Congress subsequently passed legislation to permit the practice. In *United States v. Bauer* (1966), Rastafarians challenged convictions for conspiracy to manufacture and distribute marijuana, arguing that such activity was a central tenet of their religious faith. The Ninth Circuit affirmed the convictions, holding that "the religious freedom of the defendants was not invaded" because "nothing . . . suggests that Rastafarianism would require this conduct." Again, the defendants' beliefs were protected, but their activities were not.

In *Sherbert v. Verner* (1963) the Supreme Court, held that South Carolina's denial of unemployment benefits to Sherbert, who had lost her job because of her refusal to work on Saturday, her day of worship, was an unconstitutional restriction on her free exercise rights. This case is notable for broadening free exercise claims (beyond the obscure belief-action test) and establishing the precedent that a state must show a *compelling state interest* to justify infringing on religious rights, and that its method of enforcement of that interest must be the *least restrictive means* available. But then in 1990 Supreme Court jurisprudence underwent a major shift. In *Employment Division v. Smith* the Court abandoned the *compelling state interest test* for a rule of *neutral applicability*. In doing so, it upheld a law prohibiting the granting of unemployment benefits to employees fired for drug use, even when associated with religious worship, because the legislature had intended to apply the statute neutrally to all citizens, religious or not. Many were critical of the *Smith* decision because it seemed to require one to choose between following the law or following one's deeply held religious convictions. Congress responded by reinstating the *compelling state interest test* in the Religious Freedom Restoration Act in 1993, but that act was later found unconstitutional in *Boerne v. Flores* (1997), thereby leaving in place the *neutral applicability test*.

Challenges to religious exemptions from labor laws have resulted in several cases that have defined the relationship between labor laws and religion. In *National Labor Relations Board v. Catholic Bishop of Chicago* (1979) the Court ruled that a religious school was not subject to the National Labor Relations Act. In 1972 Congress amended Section 702 of the Civil Rights Act of 1964 to allow religious organizations to discriminate in employment on the basis of religion. Subsequent decisions in *Southwestern Baptist Theological Seminary v. Equal Employment Opportunity Commission* (1980) and

Alamo Foundation v. Secretary of Labor (1985) determined that religious exemptions from labor laws do not apply to non-ministerial employees or employees engaged in commercial employment. In *Church of Latter-Day Saints v. Amos* (1987) the Court upheld the dismissal of a non-Mormon employee working in a Mormon-owned gym. The employee argued that his faith was irrelevant to his service as a building engineer, but the Court held that the gym could discriminate on religious grounds.

Do tax exemptions for churches represent an unconstitutional establishment of religion? In *Walz v. Tax Commission* (1970) the Supreme Court upheld New York City's policy of allowing property tax exemptions for churches, finding that the policy was not an unlawful establishment of religion because it applied broadly to charitable institutions. Nevertheless, tax policy has occasionally clashed with religious liberty claims. In *Murdock v. Pennsylvania*, decided in 1943, the Court held that states could not condition the distribution of religious literature on the payment of a licensing fee. In *Bob Jones University v. United States* (1983) the Court upheld an Internal Revenue Service (IRS) policy disallowing tax exemptions for any religious organization that practiced racial discrimination. And then in *Jimmy Swaggart Ministries v. Board of Equalization of California* (1990) the Court ruled that requiring religious organizations to collect sales tax on the sale of religious literature did not violate free exercise because the tax was of *general applicability* and only an incidental burden on religion.

Disputes between competing Christian sects or congregations were at issue in *Watson v. Jones* (1872), and the Court declared that the federal government has no power to intervene. Justice Samuel F. Miller, writing for the Court, stated emphatically, "The law knows no heresy, and is committed to the support of no dogma, the establishment of no sect." Subsequent cases, however, qualified this rule by holding that courts can intervene if religious doctrine is not involved and the dispute can be settled by the application of neutral principles of law.

Government-supported religious traditions have given rise to numerous legal challenges. In *Marsh v. Chambers* (1983) the Court approved state funding of legislative chaplains on the basis of a long-established American tradition. In *Lynch v. Donnelly* (1984) the Court allowed a city to sponsor a nativity scene, accompanied by secular symbols of Christmas. Patently religious symbols, however, standing alone or not muted by secular symbols, have been held to violate the establishment clause of the Constitution, such as in *Allegheny*

v. Pittsburgh ACLU (1989), in which a stand-alone Christian crèche scene was prohibited.

Regulation of Serpent Handling

Serpent handling has also come under government regulation in many parts of America. Those who favor this practice are in a relatively small number of fundamentalist Pentecostal churches in the southeastern United States. Practitioners usually cite the Bible's Gospel of Mark to justify the practice: "And these signs shall follow them that believe: In my name shall they cast out devils; they shall speak with new tongues. They shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover" (Mark 16:17–18). Those who practice serpent handling typically believe in a strict and literal interpretation of the Bible. And many of the leaders of practicing churches have been bitten numerous times. George Hensley, by many accounts the founder of modern serpent handling, died from a snakebite in 1955. In 1998 serpent-handling evangelist John Wayne "Punkin" Brown died after being bitten by a rattlesnake in rural Alabama, as did his wife three years earlier in Kentucky. Another serpent-handling pastor died in 2006 at a church in Kentucky.

In the 1940s six southern states—Kentucky, Georgia, Tennessee, Virginia, North Carolina, and Alabama—banned snake handling. Lawmakers justified the legislation on the theory that the First Amendment right to the free exercise of religion was superseded by the state's right to legislate in the interest of the general welfare and public safety. Because juries in Georgia were reluctant to convict snake handlers, its law was repealed in 1968. The practice also remains legal in the state of West Virginia. Despite these prohibitions, law enforcement officials typically ignore snake-handling activity until someone dies. Astonishingly, thousands of snake-handling believers have survived the bites of deadly snakes at church ceremonies. Indeed, fewer than one hundred deaths have been recorded in U.S. history. The deaths that have occurred have usually been ascribed to lack of faith on the part of the person who died. Snake handling in the United States, while always controversial, remains an active but mostly ignored practice because of the nation's historic commitment to religious freedom.

Regulation of Education

The regulation of religion frequently arises in the context of education. In *West Virginia State Board of Education v. Barnette* (1943) the Supreme Court upheld the right of Jehovah's

Witnesses to abstain from a flag pledge, and it warned against the use of governmental means to coerce religious and ideological unanimity. In *Wisconsin v. Yoder*, decided in 1972, the high court upheld the right of an Amish family to withdraw their child from school after the eighth grade to avoid worldly influences. In *Widmar v. Vincent* (1981) the Court ruled that a public university could not bar religious groups from meeting in buildings where the school allowed nonreligious groups to meet. And in *Rosenberger v. University of Virginia* (1995) the justices determined that a public university could not withhold funding from a Christian-oriented student newspaper when the school also funded similar religious publications.

In 1968 the Supreme Court considered how it might regulate the funding of religious education. In *Board of Education v. Allen*, the Court ruled that the loan of secular texts to private religious schools did not establish religion. More direct aid to private religious schools was first rejected in 1971, in *Lemon v. Kurtzman*, in which it was held that state funding of secular instruction in private religious schools was an unconstitutional establishment of religion. In 1973 in *Committee for Public Education and Religious Liberty v. Nyquist*, the Court struck down, as unconstitutionally advancing religion, New York's program that provided grants to religious schools that served low-income families, tuition reimbursement to low-income parents with children in nonpublic schools, and tax deductions to middle-income parents with children in nonpublic schools. In *Mueller v. Allen* (1983) the Court upheld Minnesota's policy of providing a tax deduction to parents with children attending any school, private or public. In *Tilton v. Richardson* (1971) the justices allowed funding under Title I of the Higher Education and Facilities Act of 1963 for financing buildings on the campuses of church-related colleges and universities, but only if the buildings were used for nonreligious purposes.

Several disputes over religious exercises in public education have ended up in federal courts. In *McCollum v. Board of Education* (1948) the Court ruled that public schools could not allow religious instruction during the school day, even though participation was voluntary and the instruction was given by local religious leaders who were not paid from public funds. The ruling in *Zorach v. Clauson* (1952), however, clarified the limits of *McCollum*, holding that public schools could release students early to attend religious instruction off-campus. In a controversial ruling in 1962, *Engel v. Vitale*, the high court held that student recitation of a government-written prayer was unconstitutional, noting that a showing of

compulsion to participate in a practice was not required to reach an establishment prohibition. The Court's ruling in *Abington v. Schempp* (1963) prohibited both the daily recitation of the Lord's Prayer and the reading of ten Bible verses, allowing, however, the study of religious documents in an academic, nondevotional manner as literature or comparative religious history. In 1984 Congress approved the Equal Access Act, requiring that schools that provided a *limited open forum* in which student organizations could meet also allow student-initiated and student-led religious organizations to meet. The Supreme Court upheld the Equal Access Act in *Board of Education of the Westside Community Schools v. Mergens* (1990).

Regulation of Churches and Other Houses of Worship

Churches and other religious organizations operate in the United States with a great deal of autonomy. Unlike in many countries across the world, churches, temples, mosques, synagogues, and other houses of worship need not register with any government agency to have the right to operate, nor are they required to file regular reports detailing their operations. As religious bodies, they need not pay income or property taxes, and they need not apply for certification to obtain their tax-exempt status. They are required, however, to obey laws prohibiting fraud, theft, child abuse, negligence, and the like, just as other persons and entities are required to do. They even have the right to be full participants in the political process, a fundamental right that was affirmed by the Supreme Court in *Walz v. Tax Commission* (1970): "Adherents of particular faiths and individual churches frequently take strong positions on public issues, including, as this case reveals in several briefs amici, vigorous advocacy of legal and constitutional positions. Of course, churches as much as secular bodies and private citizens have that right."

Nevertheless, the right of religious bodies to engage in the political process as tax-exempt organizations has some basic qualifications. Exemption for organizations (including religious organizations) under Internal Revenue Code Section 501(c)(3) is conditioned upon the following four factors: (1) the organization is organized and operated "exclusively" for nonprofit purposes; (2) no net earnings inure to the benefit of private parties; (3) no "substantial" part of the organization's activities are devoted to attempts to influence legislation; and (4) "participation" or "intervention" in political campaigns on behalf of candidates is prohibited. Failure to meet any of these requirements may result in the loss of an organization's tax exemption.

Although the first two of these requirements are frequently invoked by the Internal Revenue Service to deny an organization's exemption, they are not generally considered to be controversial as matters of federal tax policy. It is the last two requirements, commonly called the "lobbying" clause (enacted in 1934) and the "electioneering" clause (enacted in 1954), that limit the political activity of churches and other religious organizations. The lobbying clause is problematic. Although there is little clarity as to when an organization has jeopardized its tax exemption by engaging in "substantial" lobbying, the acceptable percentage of an organization's total expenditures spent on lobbying seems to fall somewhere between 5 percent and 20 percent. The electioneering clause, although it clearly means that religious organizations cannot endorse specific candidates, is vague and uncertain about when an organization has otherwise "participated" or "intervened" in a political campaign, an event that also triggers the loss of an organization's tax exemption. It is significant that the restriction on electioneering is absolute. Whereas some lobbying is permitted, no electioneering is permitted. The electioneering clause is, therefore, more sweeping and poses a greater risk to churches and other religious organizations.

Christian Echoes National Ministry, Inc. v. United States (1973) remains the principal litigated case in which a religious organization lost its tax-exempt status for engaging in political activity. Christian Echoes was the corporate structure for the radio, television, and publishing ministry of Oklahoma fundamentalist preacher Billy James Hargis. The stated mission of the organization was "a battle against communism, socialism and political liberalism, all of which are considered enemies of the Christian faith." Its activities included appeals to its listeners and readers to write their members of Congress to stop federal aid to education, socialized medicine, and public housing; withdraw from the United Nations; and abolish the federal income tax. In 1964 the Internal Revenue Service revoked the tax exemption of Christian Echoes alleging that (1) a "substantial" part of its activities consisted of producing propaganda, or otherwise attempting to influence legislation; and (2) it participated or intervened in political campaigns in behalf of candidates for public office. The federal circuit court held that the organization had in fact engaged in substantial and ongoing activities to influence legislation and that it had intervened in political campaigns. The Supreme Court declined to review the circuit court's ruling.

A total exclusion of entanglement between government and religion is impossible in the modern world. Under a

policy of granting tax exemptions to churches and other houses of worship, some oversight to determine entitlement to the exemption is required. For example, in *United States v. Dykema* (1981) the IRS sought to obtain certain records to determine the tax-exempt status of a church and the personal tax liability of its pastor. The pastor challenged the right of the government to examine *any* of the church's records. On appeal to the Seventh Circuit Court, it held that as an essential aspect of the government's duty to determine whether the church was entitled to a tax exemption, the government could freely examine minutes, memoranda, church bulletins, programs, publications, and financial books and records. The ruling does not seem unreasonable. If churches and other houses of worship are to be entitled to a tax exemption, the government should be entitled to reasonable access to their records to determine compliance with the requirements of exemption.

Congress's policy alternative to granting tax exemptions to churches is to tax churches. As the Supreme Court so clearly observed in *Walz*, however, eliminating tax exemptions (in *Walz* property tax exemptions were at issue) would only tend to expand the degree of involvement by government in religion "by giving rise to tax valuation of church property, tax liens, tax foreclosures, and the direct confrontations and conflicts that follow in the train of those legal processes." Because church-state separation is one of the aims of the Constitution, taxation of churches and other religious organizations seems illogical.

Clergy Malpractice

An area of increasing concern to clergy is the rise in the number of lawsuits filed by people who are dissatisfied with counseling received from clergy. Does the state have the right to mandate that counselors be licensed as counselors, as is required of secular counselors, or are clergy exempt under the First Amendment? *Nally v. Grace Community Church of the Valley* (1988) was among the first cases to allege "clergy malpractice." After a church counselee committed suicide, his parents alleged that the church counselors were incompetent and that their counsel contributed to their son's death. After numerous lengthy court battles, the case was finally dismissed on religious freedom grounds.

The Sanctuary Movement

Close monitoring of religious organizations is relatively rare in the United States. However, one event in the 1980s

seemed to defy this tradition. “Operation Sojourner” was the name given to surveillance efforts developed in the 1980s by the federal government to deal with the Sanctuary Movement, a religiously inspired effort among churchgoers in the southwestern United States, especially Arizona, to help refugees from political violence in Central America. Two undercover government agents, posing as devoted Christians interested in the movement, attended worship services in two Tucson churches. They also tape recorded conversations with churchgoers, tracked down the automobile license numbers of those they believed were involved in harboring refugees, and linked certain churchgoers with the refugees they were assisting. The government subsequently indicted sixteen church leaders and members on several felony charges, including smuggling, transporting, and harboring undocumented refugees. Several of those indicted were convicted, the court holding that there was no infringement of religious beliefs or moral dictates that outweighed the government’s compelling interest in enforcing criminal laws.

Regulation of Nonconventional Religions

The growing tendency of the government to monitor certain religious groups was clearly a consequence of the Jonestown, Guyana, mass murder-suicide event in November 1978. More than nine hundred members of Jim Jones’s Peoples’ Temple voluntarily poisoned themselves to fulfill a group suicide compact. In response to considerable political pressure, in 1979 the U.S. Congress conducted a special hearing on religious “cults.” Later, many states conducted similar hearings, and in New York a bill was introduced, though never enacted into law, to amend the state’s penal code to make “promoting a pseudo-religious cult” a felony. The United States has learned that periodic episodes like Jonestown are perhaps a major part of the price that it pays for religious freedom. To give to people the right to search out religious truths and to live in accordance with the conclusions they reach is to also give them the right to make mistakes—even serious ones that imperil other people’s lives. The price of freedom, as Supreme Court justice Robert H. Jackson put it in *United States v. Ballard* (1944), is that “we must put up with, and even pay for, a good deal of rubbish.”

A similar tragedy involved the Branch Davidians, whose compound outside of Waco, Texas, was raided by Alcohol, Tobacco, and Firearms (ATF) forces in 1993. About 150 members of this fundamentalist Christian group, many of whose members had earlier ties to the Seventh-day Adventist Church, were living at the Waco compound. The group had

been under surveillance for several months before the raid, a fact known to the Davidians. Texas officials had been investigating the Davidians following complaints of child abuse, the marriage of underage girls to the group’s leader, David Koresh, and the stockpiling of illegal weapons. But evidence of these crimes was difficult to gather, which led federal officials to open an investigation. In a sixty-day siege initiated by at least one hundred armed ATF officers, some eighty-three Branch Davidians, including children, and at least four ATF officials, lost their lives. Local, state, and federal law enforcement officials were later criticized for waiting so long to take actions against the Waco Branch Davidians. Although some of this criticism was appropriate, these officials, acting in deference to the nation’s long-standing tradition of religious liberty, had attempted for years to be as accommodating as possible to a group whose lives they knew to be, above all else, centered around religious values.

More familiar religious groups such as the Christian Scientists have been subjected to numerous claims of child abuse, the result of spiritual healing beliefs and practices that usually call for the refusal of medical attention for sick children. Many children have died, followed by state charges of murder and manslaughter. Jehovah’s Witnesses, who believe the Bible proscribes blood transfusions, have also faced similar charges when blood transfusions were denied to their children and the result was death. Some states, in deference to religious freedom, have enacted statutes to protect parents from prosecution if their children die from lack of professional medical care, but these enactments typically do not lessen the public outrage when a defenseless child dies. When believing adults choose to refuse conventional medical attention, the courts have been inclined to protect such choices in the name of religious freedom.

The Bush Office of Faith-Based and Community Initiatives

One of President George W. Bush’s (2001–2009) most controversial initiatives was his plan to provide government money for churches and other houses of worship that offer social services for needy Americans. Early in his administration the president said he knew religion could change lives because it had changed his. He thus wanted to harness the forces of faith to meet the social needs of others.

President Bush’s first step was to issue an executive order—thereby skirting congressional approval—to establish the Office of Faith-Based and Community Initiatives to coordinate the program. By executive order he also established

faith-based and community offices at eleven federal agencies. The president's plan earmarked between \$8 billion and \$10 billion to be spent on faith-based initiatives during his first year in office. Apparently, that much money was never spent in any single year of the Bush administration, but the more than 1,300 grants made to faith-based charities during the Bush years averaged more than \$2 billion a year—unprecedented government spending on religion in a nation that traditionally had avoided funding religious institutions in order to keep them free of government control.

Critics of the Bush plan often noted the way it was touted as a plan to end discrimination against religion generally and various religious groups specifically. Indeed, when the Bush plan was first announced in 2000, well-known evangelical leaders such as Jerry Falwell and Pat Robertson voiced objections to the plan because it threatened “Christian America” by raising the possibility that groups such as Scientology, the Unification Church, and Wicca might receive government money. But this concern never materialized, because, according to one study in November 2006 reported by the *Boston Globe*, 98.3 percent of all Bush administration grants to faith-based agencies from the Office of Faith-Based and Community Initiatives were awarded to Christian groups. The practice of excluding non-Christian groups was later confirmed by a former staffer in the office. David Kuo, in *Tempting Faith: An Inside Story of Political Seduction*, asserted that applications for federal faith-based funds were often rejected by reviewers solely because they came from non-Christian applicants.

Eventually, Bush's faith-based initiative spread to a host of state and local government agencies. By the end of the Bush term at least thirty-five governors and seventy mayors, both Democratic and Republican, had established programs modeled after the federal program. However, Congress had yet to pass legislation sanctioning or in any way adopting the Bush plan. Meanwhile, the Bush administration allowed faith-based groups to discriminate in their hiring practices, thereby violating the law that prohibited recipients of government money to discriminate on the basis of religion.

The Bush plan to embrace faith-based agencies in the network of government funding engendered considerable discussion, both positive and negative. Although many people were helped by the plan, it raised many questions. Would evasion of the principles of church-state separation come back to haunt the nation? Were there actually good reasons to deny government funding to faith-based groups? Would the Bush plan weaken the structure of the American

democratic order? These questions would be the subject of debate long after George W. Bush left the White House.

Conclusion

The United States, which has undertaken a bold experiment with the separation of church and state, has a broad tradition of autonomy for religious persons and institutions. But government regulation and monitoring of religion are on the rise, and it is not hard to anticipate an ever-growing pervasiveness of government in the religious life of Americans. Future generations of Americans will have to make difficult judgments about how much regulation of religion is good for the nation.

Religious Prejudice

Religious prejudice is the belief that an individual's religion is superior to the religions of others; this belief frequently combines with the conviction that adherents of "inferior" religions constitute a threat. Enacted as speech or behavioral patterns, religious prejudice is manifest in legal codes, organizational policies, the management of social networks, legislative agendas, the enforcement of manners, and in other ways, including some Americans' attitudes toward non-Americans. In many cases it has led to violence. Broadly and profoundly in evidence throughout American religious history, religious prejudice has decreased, but not ceased, as a national dysfunction since the mid-twentieth century.

The Roots of American Religious Prejudice

The immediate roots of American religious prejudices are in the religious cultures of early modern Europe. Prejudice against Jews and Muslims was already deeply ingrained in Europeans by the early sixteenth century, and the consolidation of power in Rome during the Middle Ages had resulted in rhetorical and military campaigns against a great many religious movements that strayed from orthodoxy. Always present in the currents of European history, religious prejudice during the Reformation became ever more blatant with a burgeoning print culture, the urgent refashioning of politics, and the alteration of public worship and increasingly affected the everyday relations of one town with another. Europeans read religious affiliation as if it were a code for strong character, trustworthiness, integrity, loyalty, and a number of other desirable traits—or, conversely, as an indicator of corruption, impurity, and collaboration with evil. Religious prejudice among the English, on the eve of the colonization of North America, was threaded through all thinking about self and community. It was as much a part of the English experience of the world as the air one breathed.

The English Protestants who established colonies in New England and the Chesapeake Bay area carried to North America a habit of conceptually joining politics to religion. The men and women who built the towns of New England were fleeing harsh treatment in England for their religious views and took North America to be a refuge provided them by God for the advancement of a purified ("Puritan") Christianity. They also brought with them their own prejudices, especially against Catholics. English Catholics long had been the targets of abuse by Protestant writers in England, who identified Roman political interest with Catholic religious

practice. Anti-Catholic political screeds and sermons cast Catholics as deceitful, conspiratorial, treasonous, and morally crippled. Puritans moreover extended the range of such rhetoric by relating it to other Protestant organizations. The Church of England, in the eyes of Puritans, had lost its religious bearings and succumbed to the temptations of power, trading righteousness and uprightness for political machinations, abuse of authority, and poisonous collaborations with the secular aristocracy. Other groups, such as the Quakers, were considered dangerous not only for their drift from traditions of preaching and liturgy but for their boldness in spreading their own vision of religious community. Puritans, who were intensely purity-conscious and diligently guarded the boundaries of their communities of "elect" members (those who had experienced a conversion), resisted the efforts of non-Puritan groups to establish their own footholds in New England. For Puritans, religious impurity and political corruption were intertwined. Religious difference was also political difference. Accordingly, Puritans made the protection of religious homogeneity a high priority and brutally punished heterodoxy.

In the Virginia plantation areas, where settlement occurred largely to advance the exploration of natural resources and the development of commercial enterprises, there was less anxiety about communal purity. Nevertheless, anti-Catholic feelings were strong, obedience to Anglican authority was expected, and enforcement of laws regarding moral behavior (Sabbath rest, no blaspheming) was a priority of leaders such as Deputy Governor and Marshall Thomas Dale (1611–1616). Enacted in 1611, the "Lawes Divine, Morall, and Martial," otherwise known as "Dale's Code," was grounded in a presumption of the intertwining of religion with other aspects of life. As was the case in New England, religious prejudice emerged not only in cases of religious difference but in instances where political, commercial, and community behaviors deviated from the normative, as encoded in local statutes or expressed in local custom.

Religious Prejudice and Native Americans

Religious prejudice in its initial and most profound forms occurred in European encounters with Native Americans. Europeans engaged Indians first and foremost as non-Christians, often referring to them as "heathens." Spanish explorers strode onto beaches in the Americas together with Catholic clergy and planted there a flag and a cross. The religions of Native Americans were not recognized as such: Europeans literally did not see religion in the ideas and

practices of Indians. The political domination of Indians unfolded accordingly, on the presumption that a religionless people were uncivilized, and that the progress of global Christianity and the civilizing gift of disseminated Spanish culture should proceed apace. The papal bull *Inter Caetera* (1493) advocated a concerted Catholic campaign to depose the cultures of indigenes and to impose Christianity. It pressed on explorers, missionaries, and colonists a view that Indian rites and ideas were simply a part of a barbarian way of life that suffered as well for its ignorance, inhumanness, and overall immorality. It made religious conversion of indigenes a Christian responsibility coequal with the overthrow of all other aspects of the corrupt, profane, and inferior ways of Indian life. The application of such a view took many forms and was carried forward in the wake of numerous other official pronouncements from both religious leaders and secular authorities. One such pronouncement was the *Requerimiento* of 1510, a document that illustrated the far-reaching religious prejudice of Europeans. Read to Indians in a language they did not understand, it demanded that they accept the authority of the Pope, and promised them that they would be enslaved and punished if they did not. The French proceeded similarly in relations with Native Americans. Their religious prejudices were interwoven with contempt for Indian social behaviors, and they sought both the religious conversion of Indians and the wholesale reform of Indian cultures.

Like the Spanish and French, the English linked Native American religious inferiority to a broader cultural decrepitude among Indians. With westward expansion across the continent, EuroAmerican religious prejudice remained a critical aspect of encounter with Indians, and it was rarely dissociated from other elements of Indian cultures. Typically, Indian religious “superstitions” were blamed for keeping Indians culturally backward. In 1882, when Richard Henry Pratt, a military officer who articulated the position that the Indian must be made Christian in order to take up a place in American society, addressed an audience in Carlisle, Pennsylvania, he urged his audience to “[k]ill the Indian in him, and save the man.” It was Pratt’s widely shared belief that only by fully alienating Indians from their tribal “superstitions,” and immersing them in a Christian educational and social environment through forced acculturation, could they be transformed from savage to civilized.

Official Prejudice

Religious prejudice was embedded in early American legal culture through language employed in colonial charters and

local statutes. Codification was not merely a manifestation of religious prejudice. It set the tone for subsequent American thinking about religious difference. Official prejudice, set down in legal documents, was culturally powerful enough to shape attitudes about religious difference that continued well after ratification of the First Amendment guarantee of religious freedom. In the 1640s the Virginia Colony and the Massachusetts Bay Colony enacted laws excluding Catholic settlers. The colonial charter of Georgia (1732) officially withheld religious freedom from Catholics. “Dale’s Code” in colonial Virginia stipulated that the public pronouncement of religious ideas contrary to Anglican theology be punishable by death. Catholics in Maryland, having lost control of their colony to Protestants, suffered religious prejudice under statutes that forbade them from holding office, voting, or worshipping publicly. The end of the colonial period and the establishment of the United States of America saw no diminishment of religious prejudice, which remains evident to this day in states’ legal codes. The state constitution of New York (1770) prohibited clergy from holding civil or military office, and it did so seemingly in the interest of religious freedom. The constitution’s framers argued that priests and ministers historically had been leaders in fomenting prejudice, and so were to be denied positions of power from which they might incite further mischief. Generations later, the state constitutions of Arkansas, North Carolina, South Carolina, Maryland, Mississippi, Texas, and Tennessee still prohibited persons who did not believe in God from holding public offices and from participating in some other public activities (in spite of a 1961 federal ruling declaring such statutes unconstitutional). The Arkansas constitution of 1874 stated (in its 2008 form), “atheists [are] disqualified from holding office or testifying as witness,” while in North Carolina “any person who shall deny the being of Almighty God” is prohibited from holding public office. A bill to repeal the prohibition in Arkansas died in House committee on May 1, 2009. Such laws, which emerged originally as official prejudice, stood as a reference for public opinion over many generations, supporting the continuation of religious prejudice, and not only in cases of believers versus nonbelievers. Christian monotheism, as the basis for all forms of official prejudice in the United States, remained for many the only acceptable religion for Americans.

Organized Prejudice

Religious prejudice, reinforced by law, developed a wide range of organizational forms in the United States. The most visible of these was the Ku Klux Klan, an organization that

was reestablished in the early twentieth century after having floundered in the original form it took just after the Civil War. Best known for terrorizing African Americans, the Klan was primarily a religious movement with strong racial and ethnic dimensions, and at its height in the 1920s numbered as many as four million members. Its membership believed that Protestantism was threatened by the religious diversity, political liberalism, and growing secularity of the early twentieth century. Klan prejudice against non-Protestants led to campaigns against Catholics, Jews, and others in many states. It intimidated opponents and modeled religious prejudice as the defense of religion (a common theme in the history of religious prejudice) through its dramatic public performances, costumery, and publications.

Another organization, the American Protective Association (APA), was founded in Iowa in 1887, and although it was short-lived, it vividly represented the degree to which religious prejudice—in this case against Roman Catholics—animated the worldviews of Americans. It advocated the removal of Catholics from public office and from teaching positions in public schools. At its height it claimed 2.5 million members who were expected to pledge their allegiance to the organization by swearing to “wage continuous warfare” against the “ignorance and fanaticism” of the Catholic Church and to “place the political positions of this government in the hands of Protestants, to the entire exclusion of the Roman Catholic church.” The APA, as a nativist organization (that is, opposed to immigration) was a continuation of movements such as the American Republican Party of the 1840s and the secretive Know-Nothing movement (whose members supposedly responded “I know nothing” when asked about their political activities) that won victories in the 1855 elections.

Religious prejudice deeply informed these movements of the American past, and many others like them. The present, too, has seen the power of organizations fashioned on prejudice. For example, religious prejudice posed a serious challenge to the 1960 presidential candidacy of the Catholic John F. Kennedy. More recently it contributed to the defeat of the Mormon Mitt Romney as a Republican party candidate for president in 2008.

Religious Prejudice as an Incentive to Violence

Religious prejudice sometimes remains confined to words. Words, however, can inspire. Religious prejudice, especially when stated in stark terms, for example, condemnation of a religion as “satanic” or “evil,” can be a powerful incentive to

violence, prompting attacks on groups that are perceived as threats. In America it has fueled centuries of religious violence. Newspaper stories, speeches, books, sermons, and other means of disseminating religious prejudice likewise serve to foment religious violence. Such public airing of prejudice has preceded most instances of violent confrontation between religious groups, as in the burning of the Charlestown convent in Massachusetts in 1834; the murder of Mormon leader Joseph Smith in Nauvoo, Illinois, in 1844; the widespread violence against Jehovah’s Witnesses in the 1940s; and arson and vandalism perpetrated against Jewish and Muslim houses of worship today. Fanned by the rhetoric of extremist groups, religious prejudice is not merely an abstracted dislike for other religions (or the non-religious). In many cases, it is violence in the making.

Religious Prejudice via Community Legal Action

Community initiatives to translate religious prejudice into legal action are another way in which the destructive potential of prejudice is realized. While religious prejudice only sporadically leads to violence, it finds expression in officially sanctioned activities aimed at undercutting the authority or power of religious groups. In addition to such instruments as colonial charters and state constitutions, local ordinances and codes have reflected religious prejudice within particular communities.

Criminal investigations of groups such as the Amish (who do not send their children to secondary school), Mennonites, and Jehovah’s Witnesses that have taken place since the nineteenth century are manifestations of religious prejudice. A recent example of the explicit connection between religious prejudice and community legal action occurred in Hialeah, Florida, with the passage of a law regarding the treatment of animals. In the late 1980s officials enacted a prohibition of animal sacrifice that, while not announcing itself as an anti-Santería ordinance, clearly was conceived as such. Santería, an Afro-Caribbean blend of Catholic, Yoruba, and Native American traditions, counts animal sacrifice as an important component of religious practice. Considered by its detractors to be a “demonic” religion built on devilish curses and spells, the Santería Church of Lukumi Babalu Aye threatened its critics because it represented a radically different religious view of the world. The church resisted the ordinance and was successful in court in 1993. Anxieties about animal sacrifice in Santería surfaced again in Euless, Texas, in 2007, when a Santería priest defended his right to sacrifice goats in religious services in opposition to a town law prohibiting it.

Unofficial Prejudice

Religious prejudice, sometimes visible in official actions, is most commonly manifest informally and unofficially, informing a great many unspoken codes regarding organizational and community belonging, and guiding decisions about such issues as suitable marriage partners and trustworthy employees. Religious prejudice flourished below the surface of the kind of exclusion that was apparent in the “Catholics Need Not Apply” line added to job advertisements or displayed in store windows well into the twentieth century, or in the signs posted at the Baltimore Country Club as late as the 1970s that read: “No Dogs, No Coloreds, No Jews.” Religious prejudice was translated into codes of exclusion largely through “gentlemen’s agreements” that brought together persons of similar backgrounds in the interest of limiting outsiders’ access to country clubs, social clubs, community organizations, lines of work, executive suites, neighborhoods, and other collectives. Religious prejudice, in the end, is often only barely visible, but its effects can be profound.

Fear and Paranoia

Fear is an emotion commonly associated with religious prejudice. Persons and groups fear that which they cannot understand or do not wish to understand. The refusal of persons to directly and openly engage the religious ideas of those who are different from them contributes substantially to the misreading of others’ intentions and increases the likelihood that suspicion and fear will structure the relationship. Religious prejudice, which develops through ignorance and suspicion, is a symptom of a dysfunctional attachment between persons or groups. It is an attachment because at least one party cannot ignore the other and feels compelled to remain engaged with it. It is dysfunctional because at least one of the parties wishes that the other did not exist. Religious prejudice is at the same time a platform on which can be built a highly elaborate emotional program geared to respond instinctively and uncritically to perceived religious difference. Within this complex framework of ideas and feelings, religious prejudice typically coalesces as an amalgam of theories about the inferiority of one’s opponents, the threat they pose, and the means necessary to oppose them. In American religious history the coalescence of religious prejudice has taken place with particular regard to paranoia about one’s opponents.

Historians long have noted the centrality of paranoia to American politics, class interactions, ethnic and racial relations, and religious affairs. There has been, as historian Richard Hofstadter once wrote, a “paranoid style” to American efforts to

come to terms with difference. That paranoia has taken a variety of forms and led to rhetoric inflamed by fearfulness alongside actions guided by an impulse to limit or eliminate groups perceived as dangerous. Campaigns against religious opponents often have developed as projects aimed at countering the imagined “subversive” activities of those opponents. Religious prejudice typically has taken the form of accusations that a certain group or groups refuse to accept dominant cultural standards of behavior, that they espouse principles antithetical to American democracy, that they organize their family life and social networks in unacceptable ways, that they do not accept the fair trade rules of the marketplace, and that they cloak their activities in such secrecy that they must be engaged in some form or another of subversive planning or action. The perception of secrecy, of covert agendas, has been especially important, and is linked to the paranoid style evident in accusers.

After about 1830 Protestant religious prejudice was displayed most dramatically in paranoia about Catholics and Mormons. Protestants specifically feared that Catholics could embrace neither democracy nor the principle of separation of church and state, and they viewed Catholics as foot soldiers in a Roman campaign to subvert the Constitution and as the shock troops who would prepare the continent for a Roman Catholic theocratic government. Protestants and Catholics both believed that the Latter-day Saints were duped by founder Joseph Smith into believing a preposterous story about the history of North America, and the tight-knit and separatist social world of Mormons struck its critics as a refusal to participate in the broader world of an American democracy grounded in the practice of Republican virtue. The emergence of plural marriage among Mormons in the years before the murder of Joseph Smith was proof, for Mormonism’s opponents, that it was a false religion, a fake that had drawn in the gullible and, having established centers of power, was bent on subverting not only the political order but the family order of the nation. Where Mormons and Catholics, Jehovah’s Witnesses and Shakers, Hmong and Muslims were viewed as secretive, subversive, and militant, their critics viewed themselves as opposites—as open, law-abiding, peaceful, generous, and collaborative. Religious prejudice, which has manifested in American history largely as fear of groups perceived as subversive, constructs the critic as well as the criticized.

Religious prejudice frequently has been joined with other kinds of prejudice, especially racial or ethnic prejudice. Prejudice against Jews is a case in point. Race and religion also

have been linked in prejudice against African American churches. Churches in black communities traditionally have been places of affirmation and organization and so have long been targeted by racists as sites of corruption, ignorance, conspiracy, and betrayal of a certain national vision. Prejudice against African American churches often has denigrated the training and authority of black clergy, the style of worship of black congregations—which in some instances can be highly emotional and consequently mocked stereotypically as religious “heat without light”—and the theological substrata as simplistic and misleading. Demonstrations of religious prejudice against African American religious groups accordingly have taken a wide range of forms, from attempted jokes about black spirituality to the burning of black churches.

Prejudice among Religions

Alongside secular organizations, churches themselves have displayed and encouraged religious prejudice throughout American history. Colonial ministers condemned the religious worldviews of Native Americans. Protestant sermons in the nineteenth century demonized Catholics, Mormons, Jews, Muslims, and practitioners of Asian religions. Catholics joined Protestants in complaining about Mormons and Jews, while Mormons voiced their own prejudices. In the mid-twentieth century the ecumenical movement softened much of the criticism that churches had leveled against each other, but religious prejudice remained alive in certain pockets of the ecclesiastical world, particularly among conservative Protestant churches. The celebrity Southern Baptist minister Billy Graham voiced a strong prejudice against Jews in recorded conversations with President Richard Nixon in 1972. When the Southern Baptist Convention (SBC) took a hard turn to the right in the 1980s, many within that organization took the opportunity to speak publicly, and more loudly, about their distrust of other religious groups. Those comments reached a peak in the aftermath of the terrorist attack of September 11, 2001, when SBC leaders condemned Islam in strikingly confrontational terms. The Rev. Jerry Vines, a former president of the SBC, in an address to the conference, described Mohammed as a “demon-possessed pedophile.”

While Protestant denominations in America historically have had much in common, they have never collectively constituted an unbroken front of opposition to other religions, nor have they always agreed with each other. For much of the nation’s history, Protestantism existed as a kind of informal established religion, meaning that it was culturally dominant and positioned to shape morals, manners, and

ideas in profound ways. Protestants nevertheless sometimes disagreed—as was the case in early modern Europe when Lutherans, Calvinists, and Radical reformers found plenty to criticize in each others’ religions. Such criticisms were more than just theological debates. They reached beyond differences about doctrines of salvation or the Trinity, or opinion about the arrangement of rituals in religious services. Protestant remarks about other Protestant groups were often prejudicial. Methodists, Shakers, Quakers, Holiness groups, Jehovah’s Witnesses, Seventh-day Adventists, and others experienced strong prejudice from Protestants, alongside the prejudice of Catholics, Mormons, Jews, and from other religious groups.

The New Religious Movements (NRMs) of the twentieth century brought religious innovations that many Americans perceived as threatening. Prejudice against groups such as the Moonies (Unification Church), Hare Krishnas, Children of God, Branch Davidians, and the Fundamentalist Church of Jesus Christ of Latter-day Saints developed in concert with fears that such groups were attracting younger persons (especially those of college age) to seemingly casual events and then drawing them in by degrees until they were “brainwashed.” Children raised in such religions likewise were thought to be victims of brainwashing. Religious prejudice in these cases often arose where families feared the recruitment of children or siblings rather than worried that such groups might undermine democracy or other dearly held American traditions. In fact, this focus on children became a key aspect in the formation of religious prejudice over the next thirty years. Once it coalesced in cases involving Moonies, Hare Krishnas, Children of God, and similar groups, it was abstracted and made an issue in the observation of other NRMs. At Waco, Texas, in 1993 government authorities initially reported that they were investigating a firearms cache at the group’s compound. The central issue in the conflict between law enforcement agencies and the Branch Davidians, however, soon shifted to the rumored abuse of children. The same issue emerged in government intervention in the communal life of fundamentalist Mormons in Eldorado, Texas, in 2008. Prejudice in both cases was a mixture of several concerns, including skepticism about the doctrines espoused by the groups. But what provoked authorities to action was their claimed commitment to the principle of protection of children.

Asian religions have drawn a large share of religious prejudice since Chinese and Japanese settlement in the United States in the nineteenth century. As was the case with Jews,

some of that prejudice emerged in connection with ethnic and racial attitudes. Religious difference supplied an equally important base, however. Religious Americans are overwhelmingly monotheistic and Christian, and live their lives according to habits of thought about morality, character, virtue, community, and ultimacy that are framed largely in Christian terms. The religions of Asian immigrants were neither monotheistic nor were their religious practices—the periodic and everyday rituals of devotion, from prayer and diet to work and learning—obviously analogous to Christian forms. Incapable of or unwilling to make sense of Buddhist, Confucian, and Zen religious ideas and rituals, Americans drew their conclusions about the religions of Asian immigrants by evaluating behavior, and they judged that behavior—shaped by millennia of Chinese and Japanese civilizations—immoral. In this case, then, religious prejudice had less to do with a sense of the inferiority of the religious doctrines and rituals of, for example, Buddhism, and more to do with what Americans called “character.” When a mob destroyed a Chinese mining hamlet in Rock Springs, Wyoming, in 1885, leaving twenty-eight dead and hundreds homeless, they were translating into action a prejudice that Chinese were “heathen” and “immoral,” and incapable of assimilation as a result. In short, religious prejudice against Asian Americans practicing Asian religions in the nineteenth and twentieth centuries included elements previously visible in attitudes towards Jews and Native Americans, namely, racial inferiority, the perception of inability to assimilate, and, as in the case of Native Americans, a religious system that was inscrutable.

More recently, prejudice against groups like Laotian Hmong has been infused with frustration in the belief of some that such groups are not only unwilling to assimilate but are exploiting the constitutional guarantee of religious freedom in the interests of imposing their own religious beliefs upon society. The case of Muslim convert Sultaana Freeman is another example of recent prejudice against one seen as imposing her own beliefs upon society. Freeman sued the state of Florida in 2002 for revoking her driver’s license on the ground that she appeared veiled in her license photo. In her defense she claimed that her religion required her to remain veiled even for an official identification photo.

Prejudice towards nonbelievers and towards behaviors considered antithetical to religion has existed since colonial times. It took the form originally of enforcement of legal provisions regarding Sabbath-breaking (including failure to attend services), blaspheming, and other offenses. A seventeenth-century statute in Virginia was aimed against

“horrid and atheistical principles.” Pennsylvania, a colony founded on a platform of religious freedom (as it was then conceptualized), likewise legislated against unbelief. Colonists convicted of religious offenses were placed in stocks, whipped, fined, tortured, and imprisoned. Massachusetts executed Quakers for blasphemy and punished many other persons for behaviors that seemed unreligious. In the period 1780–1815 the rising tide of criticism of religion, coupled with the Enlightenment notion that humans could know the world through reason, apart from revelation, led to concerns that America was being taken over by “infidels.” Vigorous preaching and community campaigns against nonbelief followed. An evangelical Protestant publishing initiative, which has remained strong since, sounded the alarm against nonbelievers. The durability and success of that campaign in presenting unbelief as a danger to the nation is reflected in the fact that no American president has identified as an unbeliever, and in the early twenty-first century candidates for public office hasten to present themselves as religious persons.

Conclusion

Americans have policed religion in North America for centuries. Religious prejudice, however, often overflows national boundaries. The same kinds of fears that informed the prejudice of Americans against Catholics, Mormons, Jews, Quakers, and others also has informed American views of religion as it exists in other parts of the world. That process is most visible in twenty-first century American views of Islam. In the immediate wake of the September 11, 2001, terrorist attack, American views of Islam improved slightly, but in the years since then a highly energetic and decidedly negative rhetoric regarding Islam has emerged. The persons who create, as well as those who seek out, such prejudicial portrayals of Islam do so in an international political context in which Islam is intertwined with the nation’s wartime enemies. The right-wing campaign to paint President Barack Obama as a secret Muslim, however, illustrates how the cultivation of religious prejudice against those outside of the national borders can easily be redirected to domestic targets. It also demonstrates how religious prejudice is often connected to other kinds of prejudices, including racial prejudice.

There have been many attempts in American history to combat religious prejudice. Even among the earliest settlers, who carried with them into their encounters with Native Americans a host of preconceptions about the inferiority of all religions to Christianity, there were moments of

appreciation and a willingness to see other religions positively. English missionaries at times wrote about the deep spirituality of Indians, and many observers commented on the emotional depth of Native American piety as demonstrated in rituals or expressed in indigenous religious narratives. The religious diversity of the nation, which was obvious in late colonial America and grew more profound with immigration in the nineteenth and twentieth centuries, has been both a cause for some to cultivate prejudice and a prompt to others to work against it. The efforts of Catholics and Jews to defend themselves against religious attack forced their critics to become more accommodating, and the more active role of the courts in enforcing religious freedom in the twentieth century likewise led to disincentives for religious prejudice. Organizations such as Human Rights First, the Harry Frank Guggenheim Foundation, and the Southern Poverty Law Center, among others, have been active in fighting religious prejudice.

Religious Prejudice: Anti-Cult

As new religious movements (NRMs) form, they often evoke resistance and criticism. Even the designation “new,” applied to a religious movement, can be seen as a mark of

resistance. Many “new” religious movements see themselves as continuations and inheritors of long-standing traditions and therefore reject the idea that they teach something hitherto unknown. Indeed, for thousands of years the accusation of innovation was one of the most powerful criticisms that could be laid upon a so-called tradition. The older a tradition was, the more trustworthy were its claims, so the thinking went. Only in the modern period did novelty take on a positive valuation.

Even within an American historical context that, in terms of documented religious prejudice, lies within the modern era, resistance to religious movements largely pursued this critique of innovation. Catholics accused Protestants of rebellion against a line of apostolic succession stretching back to Christ himself, while Protestants accused Catholics of departing from the original sources of the Christian tradition as found in the scriptures. As a form of religious prejudice, then, the anti-cult movement (ACM) stands as a particularly remarkable phenomenon, for accusations of innovation and deviation from theological rectitude had little to do with its motivation. Rather, for the ACM certain movements were threatening in their very being as “religious,” in the way they infused their adherents with an overwhelming sense of purpose and mission that caused spectacular and radical changes in behavior, belief, and overall lifestyle. In other words, if previous manifestations of religious prejudice questioned the *kind* of religiosity that informed a particular movement, the ACM questioned the *degree*. Regardless of the tenets of belief or the rituals performed, it was the perceived intensity, fervor, and scope of the religiosity—its immoderate character—that inspired the ACM to its particular form of prejudice and resistance.

Resistance to the degree rather than the kind of religiosity marks the particularly secular nature of the ACM. In contrast to the (largely evangelical Protestant) countercult movement that treated NRMs as heresies, the ACM objected to the purported absolutism of NRMs that effectively denied the separation of the spheres of family, economy, religion, and others. The ACM accused these groups of a totalitarian worldview, one in which no part of an adherent's being could be free from religious regulation. The adherent's family members (the core membership of the ACM) perceived the subsuming of career plans, family relationships, and personal finances to a religious worldview as “brainwashing,” borrowing a term from anticommunist mythology stemming from the apparent conversions of American prisoners-of-war in North Korea.

From the perspective of the ACM, NRMs denied the entire way of thinking that underlies the modern secular order, an order that, in its separation of spheres, guarantees freedom. It is thus fitting that the decline of the ACM can be linked to the secularization of the movements it opposed. Over time many of the movements targeted by the ACM diversified their social structures and allowed for a variety of living arrangements, accommodation to various career paths, and the development of more or less free-standing economic enterprises to support their organizations. In short, as these movements moderated their engagement with the outside world, the rationale and motivation for resistance from the ACM declined proportionately.

History: 1960s–1970s

The beginnings of the North American ACM can be traced to the spiritual ferment of the 1960s that saw the rise of NRMs such as The Children of God, the Unification Church (“Moonies”), and the Hare Krishnas, among others. As these groups attracted converts and turned them toward radically new lifestyles—a process that often included a severing of ties to the social worlds in which they had been raised—aggrieved family members sought to retrieve their “lost” children and siblings. These family members formed organizations such as the Parents Committee to Free Our Sons and Daughters from the Children of God Organization (FREECOG, established 1972) for the purposes of mutual support, information sharing, strategizing, and public advocacy. While initially these organizations targeted the specific NRMs to which their members’ children and siblings belonged, as time passed they coalesced into umbrella groups bound together by a common ideology. Organizations such as the Citizen’s Freedom Foundation (CFF, established 1974) promoted the view that a number of different NRMs constituted a single type of religion, a “cult,” that was particularly dangerous to the workings of a free society. Cults, the CFF and other organizations proclaimed, used techniques of mind control, or brainwashing, in order to attract and retain converts who would, under the unfettered workings of their own reason and will, pursue a lifestyle independent of these groups.

The claim of brainwashing gave the ACM a rationale for pursuing legal and political sanctions against the NRMs it targeted. The ACM achieved some success, particularly at the local level, in gaining support for its efforts to restrict the activities of NRMs and to extract adherents from them. On the grounds of mental incapacity, courts sometimes granted parents a temporary conservatorship over their children

within NRMs and thereby justified their forcible extraction and detention. Whether with the aid of the law or acting simply through unsanctioned and private initiative, family members who detained adherents would then subject them to “deprogramming,” the ACM’s counter-tactic to brainwashing. Under conditions of strict confinement, extracted adherents would endure sessions of intense and prolonged pressure, including argument, appeal, harangue and castigation, to convince them that they had been manipulated and deceived into joining the NRM. These sessions were sometimes successful and produced apostates who then militated against the NRMs to which they had belonged.

History: 1980s–Twenty-first Century

Moving into the 1980s the ACM achieved a relatively stable and nationwide organizational presence with the formation of the American Family Foundation (AFF, established 1979) and the Cult Awareness Network (CAN, established 1986). These organizations achieved their greatest success in controlling the terms of public debate about NRMs, particularly in the promotion of the cult/brainwashing ideology within the media. But while they were successful in guiding public discourse, the ACM never achieved the degree of political and legal backing it sought, even after the mass murder/suicides at Jonestown, Guyana, in 1979. This was a major disappointment to the ACM and a decisive signal of the limitations to its ambitions. Furthermore, a legal consensus had developed that deprogramming was undeserving of support, and conservatorships had been overturned and supporting legislation stymied on the grounds of constitutionally protected religious freedom. Indeed, these constitutional guarantees ultimately led to the downfall of one of the ACM’s most prominent organizations. CAN’s refusal to grant membership and allow conference attendance to a number of Scientologists, as well as CAN’s role in providing referrals for the now legally suspect services provided by professional but uncredentialed “deprogrammers,” led to a slew of lawsuits that forced the organization into bankruptcy in 1996.

By the beginning of the twenty-first century the ACM was pursuing a more moderate path. While political and legal roadblocks played an important role in this transformation, changes in the targeted NRMs were also influential. After the “boom” years of the 1960s, these NRMs experienced a variety of difficulties in maintaining their memberships and organizational cohesion. Indeed, most of these movements have historically suffered from high rates of voluntary defection. As, over time, more and more of the people who had joined these

NRMs left them of their own free will, the ideology that bound the ACM together, and that drove what legal and political leverage it had, was undercut. If the NRMs retained their adherents through psychological coercion, how could one explain why so many of their members had left on their own terms (that is, without the aid of deprogramming)?

Furthermore, the changing nature of NRM involvement affected the resistance of the ACM. The stereotypical cult lifestyle—living in a commune cut off from the outside world—was in decline. Those who identified with the Hare Krishnas, for example, might marry a nonmember, live in a separate home, and wear conventional western clothing all while remaining vegetarian, worshipping Krishna, and attending the organization's festivals and events. Rather than relying on donations and speaking exclusively to current or potential members, the Unification Church invested in conventional commercial enterprises and outlets of mainstream public opinion such as the *Washington Times*. As different modes of NRM involvement and activity arose, specifically, as these organizations moderated their engagement with their own members and with society at large, the ACM moderated its resistance accordingly. Rather than engaging in deprogramming, the ACM has moved toward voluntary "exit counseling." And rather than pushing for legal sanctions, the ACM now tends to focus on raising awareness of the potential dangers of NRM involvement.

Critical Assessment

Evaluating the claims of the ACM requires an engagement with two central concepts: "cult" and "brainwashing." Central to most definitions of "cult" is a picture of a small group living communally, bound together by strict obedience to a charismatic leader, and active and aggressive in recruiting new members. The religious ideology of a cult can take virtually any form, and for the ACM such ideology is of little consequence in itself. The key issue is authority and the level of commitment demanded by the movement. Submission to such authority in all areas of life, so the argument implies, leads to the potential acceptance of sexual deviance, willingness to commit violence, gullibility to fall prey to fraud, and so forth.

A further and vital element of the ACM's definition of a cult is the use of brainwashing to attract and retain members. Through a variety of methods that could include sensory deprivation, sensory overload, undernourishment, sleep deprivation, repetitive exercises, emotional manipulation, cults are said to systematically break down the individual will

of their members and replace it with a collective will stemming from the movement's leader or ideology. Convinced that their truest identity rests outside of their individual selves, adherents purportedly lose the freedom and ability to make independent decisions.

These concepts suffer from two central problems. One is applicability. Almost any definition broad enough to encompass all the groups targeted by the ACM also applies to groups that are not targeted. For example, the marines and monasteries also aim to break down individual will and create a sense of collective identity and use intense indoctrination processes of rigorous and repetitive disciplines to do so. Conversely, narrower definitions fail to capture the diverse nature of the groups targeted by the ACM. The Branch Davidians may have lived communally and placed authority in a charismatic leader, but the Church of Scientology, also a target of the ACM, allows its members to live in their own homes and pursue independent career paths. The ACM's inability to create a definition that conforms to the myriad of groups that attract its attention has led scholars to propose that the definition of "cult" is similar to that of "weed"—the term may simply designate a religious group that is socially unpopular.

A second difficulty posed by these concepts concerns the definition of "freedom." Secular conceptions of freedom grounded in self-critical rationality may not be compatible with religious conceptions of freedom that involve the recognition of a fundamental and collective being that governs all aspects of life. From the perspective of the latter, the dissolution of a separate and self-grounding individuality may be necessary for spiritual liberation. The question of whether NRM adherents embrace their commitments willingly therefore depends largely on how one defines "freedom" itself.

Religious Press

America has had a religious press and a press deeply interested in religion for nearly as long as it has had English-speaking settlements. In 1939, the U.S. Postal Service issued a three cent stamp to mark the 300-year anniversary of printing in Colonial America. The Stephen Daye Press looked a little like an Old World stocks with an opening for the head and hands of primitive printers who pushed the powers of the press too far. Charles I (1600–1649), king of England, Scotland, and Ireland, had, in fact, used the powers of the Star Chamber, a secret high court, to terrorize and maim oppositional printers. The Rev. Joseph Glover, a dissenting rector from Surrey, resigned his pulpit after eight years, and with his own savings and £49 contributed by seven donors, purchased a font of type and hired on June 7, 1638, Stephen Daye (1594–1668), a 44-year-old locksmith, to accompany him to Massachusetts Bay. Glover and Daye, their families, and Daye's printing press, boarded the *John of London*. All arrived safely, except for Glover, his press later reported, who "fell sick of a fever and dyed" on the way. Glover's widow, Elizabeth, married Henry Dunster, the first president of Harvard, and the "Cambridge Press" was the first offspring of that union, publishing a Freeman's Oath, a Bay Psalm Book, a New England almanac, a platform on church discipline, an Indian Bible, and a New England catechism, advertised as "spiritual milk for Boston babes in either England."

The Colonial Period

Colonial newspapers reflected the spiritual sensibilities of their readers with Puritan papers portraying a teleological

view of the news. Shipwreck, sickness, crop failure, and Indian attacks were all seen as God's sovereign judgment on God's people. Benjamin Harris (1647–1726), who published the colonies' first newspaper, *Publick Occurrences, Both Forreign and Domestick*, in Boston on September 25, 1690, said he did not want people to forget memorable occurrences of Divine Providence, as they were likely to do. Reporting in John Campbell's (1653–1728) *Boston News-Letter* in July 1704 indicated a fire that was successfully put out was a sign of "God's good and signal Providence."

By August 1721, the population of Massachusetts Bay was diverse enough that competing opinions of what God might mean appeared in the press. James Franklin (1697–1735), a member of Boston's Hell-Fire Club, was sponsored by Anglicans in establishing the *New-England Courant*, which argued that Puritan authorities were making a mistake in inoculating the population during a smallpox epidemic that claimed nine hundred of the settlement's ten thousand citizens. Franklin was arrested for "printing without authority." His younger brother Benjamin (1706–1790), who had labored as his typesetter, made his escape to Philadelphia, where Quakers were more tolerant of opposing opinions. His *Pennsylvania Gazette*, which was first published on October 2, 1729, became the pattern for colonial papers that followed. Religious interpretation was muted, reflecting the increasing heterogeneity of colonial communities. Franklin gave front page play to George Whitefield's (1714–1770) open air preaching and throngs who attended. News of the Great Awakening stimulated the intercolonial syndication of shared information. Some publishers, however, were not so smitten by the great exhorter. Thomas Fleet (1685–1758) of the *Boston Evening Post* was an Anglican opponent of the civic excitement. Fleet charged in 1740 that those who stayed away from Whitefield's wildly popular work should not be regarded as hostile to religion, although he also believed that a sense of good order would return to Boston after Whitefield departed.

The Revolutionary Period

For more than a century and a half, English settlers in America had considered themselves loyal British subjects. On the eve of revolution, however, dissident Protestantism and Enlightenment rationalism, communicated in the colonial press, set the stage for separation. The Stamp Act of 1765 was advertised as a means to recover the crown's cost of prosecuting the French and Indian War that established British dominance in the Ohio and Mississippi River valleys. The tax

was also intended to muzzle colonial printers who challenged Parliament's right to levy the tax. Those printers relied on the writings of John Milton (1608–1674), Matthew Tindal (1657–1733), John Locke (1632–1704), John Trenchard (1662–1723), and Thomas Gordon (1692–1750) in arguing that men had the God-given right to liberty and freedom, natural rights that could not be usurped by any king or court. Tindal's reprinted work argued that any restraint on the press was in conflict with the Protestant religion and threatened the liberties of the nation. In "Two Treatises of Government," Locke reasoned that men have the right to a perfect freedom that no monarch can annul. "Cato's Letters," first printed in the *London Journal*, were reprinted by Franklin's *Pennsylvania Gazette* and widely circulated in the decade that led up to the Revolution. Trenchard and Gordon wrote 144 essays over three years, making the case that humankind is entitled to general liberty because it is a gift from God, and that arbitrary government is incompatible with true religion.

On the eve of the Revolution, it was the analysis of John Adams that American public opinion was divided in thirds—one-third favored the Revolution, one-third opposed it—and each had a press designed to rally an undecided middle third. The Protestant roots of radical republicanism proved a justification for revolution for some. Patriot publisher John Holt (1721–1784), on January 5, 1775, called his paper, the *New York Journal*, sacred. What if freedom of conscience, however, persuaded printers to oppose the fighting? A mob hanged James Rivington (1724–1802) in effigy for taking that point of view. Rivington published an engraving of the scene in the March 18, 1775, edition of his *New York Gazetteer*, claiming he would not be intimidated and defending the God-given right to be a free printer.

The first great historian of the American press, Isaiah Thomas (1749–1831), patriot publisher of the *Massachusetts Spy*, saw the spiritual certainty of many revolutionaries sustaining them during six years of difficult fighting. On June 28, 1776, Thomas called the confrontation with Great Britain a struggle in support of Americans' rights and freedom. The language of evangelicalism was so well-established that even a writer with an allergy to Protestantism, like Thomas Paine (1737–1809), used its vocabulary to rally the troops: "These are the times that try men's souls," began Paine's "American Crisis," read to America's beleaguered soldiers in December 1776 by order of General George Washington (1732–1799). "Tyranny, like hell, is not so easily conquered. . . . Heaven knows how to put a proper price upon its goods; and it would

be strange indeed if so celestial an article as FREEDOM should not be so highly rated" (Conway 1894–1896, 170).

The Early Republican Period

The United States eventually won its independence and after the Northwest Ordinance, the government began administering 260,000 square miles of land west of Pennsylvania and north of the Ohio River. The religious press accompanied some of the first white settlers to the region. Presbyterian pastor John Andrews first issued his eight-page *Weekly Recorder* from Chillicothe, Ohio, on July 5, 1814, under the masthead "Righteousness exalteth a Nation, but sin is a reproach to any people." Andrews devoted his efforts to theology, literature, and matters of interest to the American people. That included support for the Chillicothe Association and its efforts to remind local citizens that they were bound by social responsibility and the law of God to be of service to their community.

Andrews was quick to communicate his happiness at signs of God's grace: "the value and duty of rejoicing" at every sign of "divine grace." (February 8, 1815). This sentiment stirred the missionary zeal of the American Bible and Tract Societies, launched between 1816 and 1825. They saw the quickening pace of Western settlement as an opportunity to redeem the day by placing religious instruction in the hands of every American. Elias Boudinot (1740–1821), Jedidiah Morse (1761–1826), and other former Federalists urged more than one hundred local societies to pool their resources to perfect stereotype printing. It used a papier-mâché or plaster mold that was cheaper, faster, and more durable than hand presses that used movable type. Partly financed through the generosity of evangelical businessman Arthur Tappan (1786–1865), the Tract Society had, by 1829, organized into 713 branches, annually producing eighty-eight million pages of tracts. The Bible Society had 645 branches in the same year that it distributed more than half a million Bibles annually, with a commitment to continue at that pace until every family in the new nation was reached. The press they developed would be embraced by sacred and secular interests alike.

Nathaniel Willis (1755–1831) had made his money as a political partisan, like a lot of other editors during the early republican period. By the spring of 1808, however, he became so distressed that he could not work. Recently released from a prison in Portland, Maine, for failing to pay a fine of \$2,000 for libeling a political opponent, the twenty-eight-year-old Willis converted to Christianity in a revival led by Congregational preacher Edward Payson (1783–1827). Increasingly

disenchanted with party politics, he finally decided that he could no longer serve two masters. So he sold the *Eastern Argus* for \$4,000, and together with Sidney Morse (1794–1871), brother to the man who developed the telegraph, launched, on January 3, 1816, one of the first religious newspapers in the nation. The creation of a “civil society” was the purpose of every “Christian patriot,” the *Boston Recorder* announced in its inaugural edition. Willis searched for spiritual significance in all events deemed important by the American public. A missionary’s report on a Syrian earthquake was characteristic of the paper’s coverage. Benjamin Barker reported that “Christians, Jews, and Turks were imploring the Almighty’s mercy in their respective tongues, who a minute before did not perhaps acknowledge him” (*Boston Recorder*, March 29, 1822).

The nondenominational *Recorder* built a nationwide readership during Willis’s twenty-eight years of leadership. Boston’s Baptists launched *Christian Watchman* under the leadership of Deacon James Loring in 1819. In 1848, it merged with *Christian Reflector*, begun in Worcester, and soon secured a circulation of 21,000. The *New York Observer*, begun by Sidney and Richard Morse (1796–1868) in 1823, saw a circulation of 60,000 on the eve of the Civil War, becoming the country’s most widely read Protestant newspaper. “In no part of the world does the newspaper produce so extensive an influence as in our own country,” Sidney Morse wrote on May 17, 1823. That was why he hoped to shape public opinion against what he perceived as the growing threats of Catholicism, revivalism, and the Southern slave economy. The *Independent*, begun in 1851 by Congregationalists, eventually became a leading voice against slavery under the stewardship of Henry Ward Beecher, popular minister of Brooklyn’s Plymouth Church.

The Abolitionist Press

Abolitionism never became a majority opinion in the North but it did reflect the certainty of abolitionist editors that slavery was sinful because it denied the basic God-given dignity of man. Methodist laymen in New England launched *Zion’s Herald* in 1823, promising it would be outspoken. Initially neutral on slavery, the paper rallied public opinion to support William Lloyd Garrison (1805–1879) after the abolitionist editor was attacked by a Boston mob in 1835. On March 18, 1857, it admitted astonishment at the U.S. Supreme Court ruling in the Dred Scott case denying a slave his freedom, calling the decision wicked. A range of religious periodicals found common cause in opposing slavery. David

Reed (1790–1870), son of a Congregational clergyman, began the *Christian Register* on April 20, 1821, hoping to lead people to Unitarianism. The American Unitarian Association took over the publication four years later, making its case against trinitarianism from the writings of William Ellery Channing (1780–1842), Henry Ware, Jr. (1794–1843), and Andrews Norton (1786–1853). Reed joined other abolitionist editors in 1833 by forming the Anti-Slavery Society. The organization grew in five years to 1,350 chapters and more than 250,000 members. Garrison, who had founded *The Liberator* in 1831, was a leader in the movement. So were Frederick Douglass (1818–1895), editor of *The North Star*; Theodore Dwight Weld (1803–1895), editor of *The Emancipator*; James G. Birney (1792–1857), publisher of *The Philanthropist*; and Samuel Cornish (1795–1858) and John Russwurm (1799–1851), cofounders of *Freedom’s Journal*, the nation’s first African American newspaper.

Cornish was the African American pastor of New York City’s Demeter Street Presbyterian Church. In his paper’s first edition on March 16, 1827, he echoed *The Weekly Recorder* masthead by declaring “righteousness exalteth a nation” while arguing the scourge of slavery was a repudiation of what the nation said it stood for. The paper’s purpose was to educate free blacks on the promise of democracy and to speak out against inequality and injustice. Garrison launched the *Liberator* on January 1, 1831, in the certainty that slavery was sin and he had an obligation to proclaim God’s truth. Birney had freed his slaves and become an abolitionist editor after attending a revival led by Charles Finney (1792–1875). A mob stormed the Cincinnati office of *The Philanthropist*, destroyed his press, and threatened his life. Finally, on the evening of November 7, 1837, a Congregational minister named Elijah Lovejoy (1802–1837) was shot and killed in Alton, Illinois, for protecting his antislavery press. He was the first white man killed in the North for his views on slavery and would become a martyr for the cause.

The Missionary Press

Not only African Americans but Native Americans were targets of spiritually minded editors. Gallegina Watie, a Cherokee who was educated in missionary schools, took the name Elias Boudinot (1802–1839) from the man who paid for his education. In February 1828, Boudinot founded and edited in New Echota (now Calhoun, Georgia) *The Cherokee Phoenix, and Indians’ Advocate*, the first Indian newspaper in the nation. The bilingual tribal paper aimed at documenting the manners and customs of the Cherokees and their

progress in education and religion. Boudinot wrote that it was in the self-interest of Cherokees to embrace Christianity. He translated the New Testament and a book of sacred hymns into Sequoyah and was assassinated in 1839 at the height of the crisis over the removal of the Cherokee Nation to Oklahoma. In 1870, the slain leader's son, William Penn Boudinot, became editor of the *Cherokee Advocate*.

Baptists established the *Shawnee Sun* or *Siwinowe Kesibwi* in Shawnee Mission, Kansas, on February 24, 1835. Missionary Jotham Meeker (1804–1855) developed a Shawnee writing system and published a four-page, two-column monthly. It appears to have been the first newspaper published entirely in a Native American language. One copy was sent to the Baptist Board of Foreign Missions in Boston. Christian activists in Massachusetts launched in 1838 the Oregon Provisional Emigration Society, soon expanding their work through societies in six states. Their thirty-two-page monthly, *The Oregonian, and Indian's Advocate*, described as its object the elevation of the Indian Race and as its means a Christian settlement in Oregon, a territory that was west of the Rockies, north of California, and south of the 49th Parallel. Other territorial papers targeting the Indian were published during this period. Jonathon Edwards Dwight, an educated Choctaw, and white minister John P. Kingsbury (1821–1867) started the bilingual *Choctaw Intelligencer* in 1850. *The Indian's Friend*, first published in Philadelphia in 1888, expressed a widely held missionary sentiment that providing religious instruction to the Indians would greatly aid civilization itself.

The 1870s initiated a particularly rich period of foreign missions. Alexander Wylie (1815–1887) of the London Missionary Society had published the *Shanghai Serial* as early as 1857. By 1867, thirty-one missionary societies, mostly from the United States and Britain, were operating in China. Dr. Young John Allen (1836–1907), an American Methodist missionary, developed *Young Allen's Globe Magazine*. Early publications focused on Bible lessons, sermons, and inspirational stories of transformed lives. Subsequent periodicals expanded their pages to draw in Chinese intellectuals. Characteristic was the *Globe's* September 5, 1871, edition, which promised information related to geography, history, civilization, politics, religion, science, art, industry, and so on. The *Globe's* weekly circulation soon doubled to 1,800.

In 1878, American Presbyterian missionary John Farnham established the Religious Tract Society, based in Shanghai. Farnham's monthly, *The Child's Paper* (*Xiaohai Yuehao*), reached a circulation of 3,500. By 1887, Allen, joined by

Alexander Williamson (1824–1904), Timothy Richard (1845–1919), and W. A. P. Martin (1827–1916), established the Society for the Diffusion of Christian and General Knowledge in Shanghai. At least 3,700 Christian missionaries were active in China by 1907. They were contributing to fifty-seven Protestant periodicals in the country by 1921. There were four times as many periodicals produced by 1933. Much of the coordination of these efforts was done by the nonsectarian China Inland Mission. By the end of the nineteenth century, the American missionary press had extended its sphere of influence to Japan, India, Burma, and throughout the Mediterranean from Malta to the Levant.

The Gilded Age and Progressive Period

When Dwight L. Moody (1837–1899) died on the eve of the twentieth century, it was noted that no one had spoken to more people in the nineteenth century than had Moody. It was estimated that “God’s layman for the Gilded Age” had preached to 100 million on both sides of the Atlantic over four decades and reduced the population of hell by more than a million souls in doing so. As head of Chicago’s Young Men’s Christian Association, he annually published 200,000 copies of *Everybody’s Paper*, focusing on religious news often missed by the secular press. As president of the organization, he annually oversaw the production of five million pages of tracts and papers, including *Heavenly Tidings* and the *Watchman*. During the Civil War, as a member of the U.S. Christian Commission, he helped distribute 1.5 million Bibles to Union soldiers in addition to 1.3 million hymnals and 40 million pages of tracts.

On the eve of America’s centennial celebration, he told a group of ministers that the press helped create a spirit of excitement. He urged a robust religious press to generate keen excitement about evangelizing the nation and world for Christianity. With his brother-in-law Fleming Hewitt Revell (1849–1931) he launched a massive book and pamphlet publishing business and a colportage library that distributed 1.5 million Christian pocketbooks across two decades. *Zion’s Herald* raved in January 1877 that Moody had shown the power of the press to help secure the success of God’s work. The *Congregationalist* in the same month similarly noted the practical and symbolic significance of Moody’s efforts. The Baptist *Standard* was less enthusiastic. In September 1876, it warned that Moody’s mere instrumentality wouldn’t bring revival, unless it was blessed by God. The *Catholic World* wrote in December 1875 that every trace of revival would disappear when Moody did. Moody lived on, however, through

the mass media he helped to create. More than a century after his death, *Moody Monthly* continued to instruct readers on the good news of the gospel.

Many Progressive Era writers and publishers fought for reform in mass circulation magazines guided by deeply held religious convictions. Samuel Sidney McClure (1857–1949), inspired by the possibilities of devotional life he learned at Knox College, launched *McClure's Magazine* in May 1894 by focusing on Moody and the difference one man can make. Within a year, circulation reached 300,000. McClure writer Ida Tarbell (1857–1944), who had served as a preceptress at an Ohio seminary, exposed the corrupt business practices of Standard Oil, leading to a court-ordered breakup of the nation's largest trust. Another McClure writer, Ray Stannard Baker (1870–1946), had been trained to expose vice through the reform work of British evangelist and journalist William T. Stead (1849–1912). Baker exposed the torture of Southern chain gangs as well as the venality of New York City's biggest slum landlord, Trinity Church. Lincoln Steffens (1866–1936), also a McClure writer, advocated the "Golden Rule" in his exposure of municipal graft. Edwin Markham (1852–1940) at *Scribner's*, Will Irwin (1873–1948) at *Collier's*, Samuel Hopkins Adams (1871–1958) at *Ladies' Home Journal*, and dozens of other muckraking writers in newspapers and magazines large and small, national and local, worked to end child labor and win woman suffrage, preached temperance, advocated environmental policies, secured the safety of American food and medicine, and led a whole host of meaningful reforms that sprang from their determination to remoralize public life by holding government responsible for the welfare of its citizens.

The Jewish Press

Solomon Henry Jackson published the New World's first Jewish newspaper, *The Jew*, from New York in March 1823, in an effort to counter the work of the American Society for Meliorating the Condition of the Jew, and its house publication, *Israel's Advocate*. It was followed by Rabbi Isaac Leeser's (1806–1868) *The Occident and American Jewish Advocate*, beginning life in 1843 when the Jewish population had grown to forty thousand in a nation of nine million. Leeser's efforts by 1859 helped create the Board of Delegates of American Israelites, representing the nation's twenty-nine synagogues in thirteen cities. Robert Lyon, editor of New York City's *Asmonean*, helped organize the Hebrew Benevolent Society. *The Israelite* in Cincinnati, launched by Reform leader Isaac Meyer Wise (1819–1900), and the

Weekly Gleaner in San Francisco reflected the growing diversity of Jewish readers.

Between 1880 and 1925, 2.5 million Jews arrived in the United States from Eastern Europe, bringing their hopes and aspirations to what many described as a "promised land" free from the deprivations and pogroms they had suffered from Odessa and Warsaw to Kiev and Istanbul. They would remake America through literature and the arts, and they would create a Yiddish-language press that combined German vernacular with a bit of Hebrew, Slavic, and a touch of American thrown in. The most famous of these newspapers and the most useful was the *Jewish Daily Forward* (*Forverts*).

Abraham Cahan (1860–1951) advised his readers to send their children to college in his first edition as publisher of the *Jewish Daily Forward* on March 16, 1902, but he warned of the danger of disloyalty to the family. For fifty years, Cahan dispensed wisdom and fatherly advice through his "bintel briefs" to a nationwide readership that soared to more than a quarter million. The Yiddish-language daily was a major socializer of the more than one million Jews who settled on New York City's Lower East Side in the three decades leading to World War I, a period that saw seventeen million immigrants settle in the United States. The *Forward* facilitated the often uncomfortable adjustment to urban living for Jewish immigrants, while seeking to strengthen the community's political, cultural, and religious institutions. When a fire at the Triangle factory killed 146 garment workers on March 25, 1911, the paper posted a picture of Becky Kessler, a nineteen-year-old who perished in the flames a week before her wedding. The edition captured the mourning throughout New York's Jewish Quarter.

In the aftermath of the Holocaust, America's Jewish press was riveted on the fate of the Jewish remnant in Europe who had survived Hitler's ovens. Two years after the fighting was finished, 800,000 displaced Jews still had no home to return to. By the spring of 1947, more than one hundred Jewish periodicals were showing solidarity with the Jewish state movement. This was not by accident. The American Zionist Emergency Council, led by Cleveland Rabbi Abba Hillel Silver (1893–1963), culminated years of agitation through an "Action for Palestine" week involving publicity and protest in fifty-seven cities across America, demanding the Truman administration support the creation of a homeland for the Jewish remnant left in displaced person camps throughout Europe. Aply aided by the Jewish Telegraph Agency, which had been launched by Boris Smolar (1897–1986) in 1917, Nathan Ziprin's Seven Arts Feature Service, begun in 1922,

and J. L. Teller's (1912–1972) Palcor News Service, which had served the Jewish English language press since 1932, Zionists organized many of the nation's 4,500 Jewish congregations, network radio commentators and newspaper columnists, and the National Conference of Christians and Jews to support a United Nations–brokered partition of Palestine into separate Arab and Jewish states. “The United States has the power to command,” Boston's *Jewish Advocate* argued, but “she hesitates to do so.” A year's worth of intense lobbying would lead to the creation of the state of Israel on May 14, 1948. “Two thousand years of statelessness ends!” proclaimed *The American Hebrew*. “Greetings to you!” cried the *B'nai Brith Messenger* of Los Angeles. The “dream of a people,” the *Kansas City Jewish Chronicle* reported, had at last been realized.

The Catholic Press

Father Gabriel Richard (1767–1832), a Catholic missionary, began publishing *The Michigan Essay, or Impartial Observer*, a civic and spiritual sentinel, in frontier Detroit in 1809. This early epistle appeared sixteen years before the Erie Canal opened the Great Lakes to shipping and twenty-eight years before Michigan became a state. Charleston launched its Catholic newspaper in 1822. On November 30 of that year, Philadelphia's first Catholic newspaper appeared, *The Catholic Herald and Weekly Register*. New York City's Catholics brought out *Truth Teller*, beginning on April 2, 1825. *The Pilot*, the official newspaper of Boston's archdiocese, first saw light in 1829 under the name *The Jesuit, or Catholic Sentinel*. Its purpose, described on January 2, 1836, was to articulate Catholic Church doctrine so that it can be explained and defended. During the colonial period, there were fewer than thirty thousand Catholics living in America. By the time of the Louisiana Purchase, there were fewer than fifty thousand. The number, however, was ten times that by 1830. Industrialization and urbanization pushed the Catholic population in the United States to 3.5 million by 1870 and more than twice that a decade later. Anti-immigrant nativists and Know-Nothings favored a curb on immigration based on their fear that the nation was becoming too Catholic. The Catholic press, in its many voices, was quick to take up that challenge.

In the first hundred years of its existence, the Catholic press in the United States grew to include 550 periodicals—a combination of dailies, weeklies, and monthlies. Two thirds of these were printed in English, 51 in German, 24 in French, and 24 in Polish. Early leading papers included Cincinnati's *Catholic Telegraph*, first appearing in 1831; *The Shepherd of the*

Valley, started in St. Louis in 1832; Louisville's *Catholic Advocate*, initiated in 1835; *The Catholic Mirror*, begun in Baltimore in 1849; the *New Orleans Morning Star*, started in 1867; and Chicago's *New World* in 1892. By 1911, the Catholic Press Association was formed to nationally syndicate news and opinion of interest to the nation's expanding Catholic readership.

Early Catholic magazines included Baltimore's *Metropolitan, or Catholic Monthly Magazine*, first appearing in January 1830. *The Religious Cabinet* was a popular monthly edited by Rev. Charles I. White (1807–1878) and Rev. James Dolan, starting in January 1842. *Catholic World* has been published by Isaac Thomas Hecker (1819–1888) and successive Paulist Fathers since 1865. American Jesuits began publishing *America* in New York City in 1909, advertising itself as the magazine for “thinking Catholics.” It has focused on political and cultural life in America, eventually disagreeing with church teaching on priestly celibacy, homosexual rights, and the role of women in the church. Lay Catholics launched *Commonweal* in 1924 as a nondogmatic review of religion, politics, and culture. Edward Rice (1918–2001), Robert Lax (1915–2000), and Thomas Merton (1915–1968), friends since their days at Columbia University, founded *Jubilee* magazine in 1953 in an effort to provide a forum for addressing issues confronting the Church. Perhaps no one in the history of the Catholic press addressed those issues more boldly than Dorothy Day.

On May Day 1933, Dorothy Day (1897–1980), a thirty-five-year-old unwed mother who had recently converted to Catholicism, could be seen in New York City's Union Square hawking the first issue of the eight-page, one penny *Catholic Worker*. By the end of the year, the circulation for the paper that had first been produced in Day's kitchen, soared to 100,000. By then, the Depression-era paper had become a movement, offering soup kitchens and shelters to the down and out. Three years later, thirty-three Catholic Worker homes were operating. On the eve of World War II, circulation stood at 190,000. The paper's pacifism, however, led many Catholic bishops to ban it. Three quarters of its readership was lost. Day remained adamant that the paper's manifesto was the Sermon on the Mount. Day lived to see the day when those same bishops would praise her peace advocacy and commitment to social justice for the despised and poor, comparing her to Gandhi and King. Day edited the *Catholic Worker* for forty-seven years.

By 1960, the combined circulation of the Catholic press—its 130 newspapers and 370 magazines—had risen to 27 million. In the twenty-first century, Hispanics would

enlarge America's Catholic population to 65 million of the nation's 300 million citizens, creating a Spanish-language press aimed at strengthening the spiritual and secular interests of increasingly diverse communities. Many of the nation's Catholics were served by a Catholic Press Association and its six hundred member organizations that sought to understand and represent the diversity of communities.

Protestant Periodicals

Mary Baker Eddy (1821–1910) was eighty-six when Joseph Pulitzer's (1847–1911) *New York World* in 1907 claimed only "hysterical women and weak-minded men" took Christian Science seriously. On November 25, 1908, Eddy wrote the lead editorial in the first issue of the *Christian Science Monitor*, affirming the paper's purpose to bless mankind and not harm anyone. One hundred years later, the newspaper she started had won the Pulitzer Prize seven times for journalistic excellence.

Christian Century first appeared in 1884 as a Disciples of Christ denominational magazine in Des Moines, Iowa. *The Christian Oracle* was moved to Chicago in 1900 and was rechristened rather optimistically by Rev. George A. Campbell, who insisted the twentieth century be made a Christian century. Under Charles Clayton Morrison's (1874–1966) editorial leadership, the magazine became a leading voice for liberal Christianity, articulating a vision of a Social Gospel that applied Christian ethics to social problems through the writing of Washington Gladden (1836–1918), Walter Rauschenbusch (1861–1918), and Jane Addams (1860–1935).

Reinhold Niebuhr (1892–1971), a highly regarded professor at Union Theological Seminary, was alarmed by what he considered liberal Christianity's inability to counter the dark forces of fascism. Supported by Henry Sloane Coffin (1877–1954), Henry Luce (1898–1967), Paul Tillich (1886–1965), Francis Pickens Miller (1895–1978), and John Foster Dulles (1888–1959), he made the Christian case against Hitler through the pages of *Christianity and Crisis*, commenced on the eve of U.S. entrance into World War II. Ceasing publication in 1993 when its thirteen thousand readers were not enough to cover costs, critics claimed it hadn't outgrown the predictable protests of the 1960s. After the war, Niebuhr and other Christian "realists" developed the case for "just wars," largely supporting the American military buildup during the Cold War and the theoretical use of nuclear weapons to deter the forcible spread of communism.

Christianity Today, begun by evangelist Billy Graham (1918–) in 1956, was another Christian counterpoint to

Christian Century. Under the editorial leadership of Carl F. H. Henry (1913–2003) and Kenneth Kantzer (1917–2002), the magazine won a circulation of 150,000 by being evangelical in its theology and progressive in matters of social policy. It developed a wide readership in the nation's growing evangelical communities. *Sojourners* magazine, originally titled *The Post-American* when it premiered in 1971, saw a biblical call to social justice as transcending purely parochial politics. Jim Wallis (1948–), the magazine's founder, has emphasized evangelical obligations to protect the planet and care for its poor. In July 1983, Dr. James Dobson (1936–) brought out the first issue of *Focus on the Family* magazine, a publication that supplemented Dobson's popular daily radio broadcast. It soared to a circulation of more than one million in five years with its emphasis on the permanence of marriage, the value of children, and the sanctity of human life. *First Things*, a monthly journal of religion, culture, and public life, first appeared in 1990, the child of founding editor Richard John Neuhaus (1936–2009), a Lutheran pastor who became a Catholic priest, after being mentored by Rabbi Abraham Joshua Heschel (1907–1972). The publication's mission statement aimed at a "religiously informed public philosophy for the ordering of society." Neuhaus promoted ecumenical dialog but not at the loss of his strong stand against abortion and for the dignity of the individual. He became an advisor to President George W. Bush (1946–) on faith-based policy initiatives and stem cell research.

Old-Time Religion and Online Religion

In the analog days, old-time religion was good enough for many Americans. They went to the church and sang the hymns of their parents and their parents' parents. In the digital days of the twenty-first century, all this has changed. Pew researchers found that barely one in ten churches had gone online in 1998, while nearly half had four years later. In the decade that followed, a cottage industry of companies emerged to help churches go digital. And not only churches, but the "Emergent Church" found the Web a perfect place to push its postmodern egalitarian ecclesiology. Its members often met and worshipped virtually.

A wide range of religions could also be found amping up their Web presence. Hare Krishna has its own site, along with an expanding Hindu series of sites that include commentaries on Vedic Sanskrit hymns and the laws of Manu. Islamic followers can download daily prayers or get an Imam to answer a question or issue a fatwa. Ummah.com's chat room organizes Muslims worldwide. The Haredi

or Ultra-Orthodox Jew has found his way to the Web. The J-blog unites the Jewish blogging community. The Church of Scientology site encourages users to take a personality test. *Killing the Buddha* is an online literary magazine about religion. Interfaith coalitions are forged through Odyssey Networks and its various online offspring. Religion News Service rolled out a Religion News Blog to facilitate conversation on religion and ethics.

Hyperreal religion became, by the first decade of the twenty-first century, a way to presumably experience spirituality at a distance, down to White Metal Music and biblically based video games for kids. God.com sought to help visitors to make sense of their lives. Adherents.com aggregated information on nearly five thousand faith groups. Beliefnet became a multifaith belief community owned by Rupert Murdoch's News Corporation, offering interactive boards designed to promote interfaith dialog. Its "Soulmatch" sought to bring together men and women of like-minded faith.

Americans have long taken their faith very seriously, and the religious press has been an indispensable part of that inquiry. We may not have the faith of our fathers, but we have faith. More than nine in ten Americans believed in the existence of God a decade into the twenty-first century, roughly the same number as those professing faith in the first decade of the twentieth. What has changed is that Americans are less sure of their faith. The digital landscape surrounds Americans with a wide range of virtual choices, as the press has since the settlement's beginning. Throughout this time, the religious press has encouraged a devotional life dedicated to a higher purpose than mere existence.

Religious Right

The religious right in the United States is a social movement among theological conservatives who advocate moral reform through political action. It emerged in the 1970s and became a powerful force affecting elections, party politics, public rhetoric, legislation, policies, and practices at all levels of government and society. It draws adherents from a wide range of religious backgrounds, including Catholics, Mormons, and Jews, but its base as an organized movement and mobilized constituency is overwhelmingly composed of white evangelical Protestants.

In the 1980s a parallel religious right movement emerged in Canada, but it was, and remains, relatively weak, in part because evangelicals compose less than a tenth of the population of Canada, while they are about a quarter of the U.S. population. Organizations in Canada that mobilized religiously conservative support for traditional gender roles, marriage, and family and against abortion and same-sex marriage are predominantly Catholic. They include REAL Women of Canada, Campaign Life Coalition, and LifeCanada. The most

visible venue of Protestant political activism, the Christian Heritage Party of Canada (CHP), fields political candidates and advocates policies based on biblical ethics. A CHP candidate has never been elected a member of parliament, and the majority of Canadians continue to support laws guaranteeing reproductive rights and legalizing same-sex marriage despite efforts to persuade them otherwise.

The religious right is sometimes called the Christian Right in both the United States and Canada. In the United States, not all evangelical Protestants identify with the religious right. Over time its evangelical critics have increased in number and visibility, as have its other critics, both religious and secular. As of 2009 the religious right remained a significant political and social force in the United States, especially within the Republican Party and during national elections, and on the local and state level in certain parts of the country. Overall, however, its power and influence as a movement appear to be waning. While its legislative gains and policy effects fell short of movement goals, the religious right has sufficiently institutionalized itself to endure for some time as a lobby on behalf of socially and morally conservative reform. It also permanently altered the definition of America as a secular nation.

For much of American history public activism among Protestants, including theological conservatives, was normative, so understanding the emergence of the religious right requires an account of how it came to be seen as problematic as well as an account of its immediate historical antecedents.

Historical Background

In nineteenth-century America theologically conservative Protestants were not a distinct subset of Protestants, nor were there clear denominational lines between evangelicals and other kinds of Protestants. The colonial division between established and dissenting churches receded after 1800; most Protestants were theologically conservative and considered the Bible authoritative, and many partook of the revivalistic ethos that characterized the nineteenth century. Protestants in general appealed to the doctrine of the separation of church and state to restrict Catholic participation in politics, but not their own.

As individuals, ministers, churches, denominations, and interdenominational organizations, Protestants engaged in a wide range of social and political reform activities during the nineteenth century. Northern Protestants fought for the abolition of slavery and women's rights, and everywhere they engaged in countless public battles on state and local levels

over temperance and Prohibition, Sunday laws, lotteries, gambling, prostitution, blasphemy, dueling, freemasonry, religious and public education, and immigration. Protestants generally saw themselves as model citizens, as free, independent, and morally upright individuals with a mandate to reform American society in God's image.

Significant divisions among Protestants regarding public activism gradually emerged during this period, first over slavery and later over the issue of biblical hermeneutics. Before the Civil War, southern preachers who defended slavery developed a polemic against the activist preaching of abolitionist preachers, most of whom were northern. After the Civil War, a different network of mostly northern preachers took it upon themselves to defend the literal truth of the Bible against modernist interpretations. Their literalistic interpretation of Revelations, called dispensationalism, increasingly led them to urge their church people to withdraw from efforts to reform "the world." The disagreements over slavery became so acute that major denominations split in the decades before the Civil War; in the 1920s and 1930s the denominations split and splintered anew over the infallibility of the Bible. The splits institutionalized the slowly growing sense of division among American Protestants, a sense that there were two Protestant camps on the issue of the church's public role: one, a generally progressive camp in favor of it; the other, a generally conservative camp that viewed social concerns of any kind with suspicion or disdain. Most Protestants did not identify strongly with one camp or the other, but those who did dominated public discussions whenever religious concerns were raised.

Before the emergence of the religious right, the last major campaign by those Protestants in retreat from public life was an effort to prohibit the teaching of evolution in public schools in a number of states during the 1920s. The campaign, which they saw as a defense of the truth of the Bible, culminated in the Scopes trial, which challenged the law against teaching evolution in Tennessee in 1925. John T. Scopes, a high school biology teacher, was convicted and fined for teaching evolution, but the trial—the first trial to be broadcast live nationally over radio—was a spectacular public relations debacle for the defenders of the infallibility of the Bible, who were by then known as fundamentalists. In its wake, fundamentalist factions formed their own networks and denominations and developed a powerful "separatist" polemic against worldly engagement of any kind, including politics and social reform. From 1925 to 1975 Pentecostals and many Bible-believing

Protestants who were more moderate regarding the issue of biblical infallibility became de facto allies of the fundamentalists in that they too largely abstained from the kind of public activism that had routinely characterized Protestantism during the nineteenth century.

Other Protestants, including those open to, or at least not actively hostile to, modern biblical hermeneutics, carried on and rearticulated the nineteenth-century tradition of Protestant political and social activism, most notably as “the Social gospel.” These Protestant activists, most of them northerners, were particularly concerned about the social problems created by industrialization and urbanization and joined with others—Catholics, Jews, and the Progressive movement—to address them. They promoted unionization, better working conditions, public health measures, access to schooling for the poor, and low-cost housing. They also opposed racial segregation, established settlement houses, and inspired many community-based organizations and charities such as the YMCA and the Salvation Army. Such efforts waned after 1930, but the power of Social Gospel ideas waxed as they were folded into the civil religion of the federal government by successive administrations between the 1930s and the 1960s, so much so that one scholar dubbed the period “the Social Gospel at high tide.”

The Social Gospel may have been a source of inspiration for some of the reform efforts between the 1930s and the 1960s, but many Americans experienced the period as one of increasing secularization, not Protestant activism. The prominent liberal theologian Harvey Cox argued in 1965 that secularization, which he defined as the decline in the public power of religious institutions, meant that the church needed to learn to speak of God in secular ways and to shift its focus from its own institutions and rituals to the social concerns of “the secular city.” Academics and journalists wrote about secularization in similar terms, as if it were a natural by-product of modernity. Religious communities that survived would be those that accommodated. Those that did not accommodate, that held firm instead to traditional notions of piety and belief, would wither away or be marginalized and were certainly unfit for public life.

Antecedents: 1948 to 1979

In retrospect it is clear that conservative Protestantism, far from withering away, gathered strength in the decades following the Scopes trial. Fundamentalist, Pentecostal, and other conservative Protestants developed a powerful infrastructure of local, regional, and national institutions and networks that sustained and elaborated the world in their

terms. Nor were they completely inert politically. The religious right did not emerge as a self-conscious, organized, national movement until the late 1970s, but especially in the decades after World War II, a great deal of groundwork was laid and experience accumulated that eventually coalesced into the national movement.

Before World War II fundamentalist Protestants engaged in scattered local public battles “to constrain evils” such as gambling, liquor, and pornography. A few preachers, most notably Gerald B. Winrod (1900–1957) and Gerald L. K. Smith (1898–1976), earned national reputations as politically active, anti-Semitic, pro-Nazi demagogues. After World War II another raft of politically outspoken fundamentalist leaders emerged, including Carl McIntire (1906–2002), Fred Schwarz (1913–2009), and Billy James Hargis (1925–2004). Reaching large audiences via crusades, radio, and the written word, they preached against communism abroad and at home, and they updated, intensified, and expanded a Bible-based critique of liberalism. At the same time, in the late 1940s and early 1950s, moderate fundamentalists crafted a more accommodating public presence and voice in the form of institutions like the National Association of Evangelicals, the magazine *Christianity Today*, and the Fellowship Foundation, which started the National Prayer Breakfast in 1953. The crusade evangelist Billy Graham came to stand for this more world-accommodating presence as he befriended presidents and resisted racial segregation and his fundamentalist brethren’s hyper-separatism, even as he also preached against communism, immorality, and unbelief. To mark their difference, these fundamentalists began to call themselves “evangelicals.”

In addition, conservative Protestants mobilized against the liberal social movements of the 1950s, 1960s, and early 1970s when they struck close to home. Prominent fundamentalist preachers spoke out against civil rights and the desegregation of local schools, and many of the Christian day schools and colleges started during the 1960s were intended to be alternative schools for whites only. These efforts led to skirmishes with the government at various levels into the 1970s and 1980s as regulations barring racial discrimination proliferated and impinged upon the densely textured and sheltered social worlds conservative Protestants had crafted for themselves and their children.

Conservative Protestants’ sense of being under siege escalated as the modern women’s movement unfolded, the anti-war movement built up, homosexuals organized to gain respect and rights, and many countercultural fashions, attitudes, and practices mainstreamed. In 1972 conservative

activist Phyllis Schlafly (1924–) formed the national grassroots organization Eagle Forum to turn back the nearly successful effort in the 1970s to pass the Equal Rights Amendment (ERA), which would have prohibited discrimination based on sex. With roots in the anticommunist activism of the 1960s and still active today, Eagle Forum was a forerunner of religious right organizations founded by mostly male preachers a few years later and was particularly successful in allying conservative Catholics and Protestants. The first religiously motivated campaign against gay rights was also organized by a woman, Anita Bryant, in Dade County, Florida, in 1977, and she went on to lead campaigns to repeal ordinances barring discrimination based on sexual orientation in cities, counties, and states around the country. Conservative Protestants did not organize a coherent campaign in support of the Vietnam War, but during the late 1960s and into the 1970s their revivals and rallies took on an increasingly patriotic aspect. The fundamentalist Baptist preacher who would eventually lead the Moral Majority, Jerry Falwell (1933–2007), got his start as a political preacher leading “I Love America” and “America, You’re Too Young to Die” rallies festooned in red, white, and blue all over the country in the mid-1970s.

Another front was the public school textbook and curriculum reform movements of the 1960s and 1970s. Texas grassroots activists Mel and Norma Gabler campaigned so effectively against textbooks that they perceived to be anti-Christian, anti-family, and anti-American that many publishers sent them drafts of textbooks for review before they were published. Conservative Protestants helped to organize local campaigns to resist new curricula in history, biology, the social sciences, and health, some of them attracting considerable national attention. Two anticommunist organizations that formed in the 1950s, the John Birch Society and the Reverend Billy James Hargis’s Christian Crusade, helped to organize a fight against the sex education curriculum in Anaheim, California, in 1968, which allied conservative Catholics and Protestants against liberal educators and the “sexual revolution.” In 1974 the wife of a fundamentalist preacher in Kanawha County, West Virginia, charged that the literature textbooks selected by the Board of Education for elementary school students were “filthy, disgusting trash, unpatriotic and unduly favoring blacks.” With the help of the Gablers, the conservative Heritage Foundation, the John Birch Society, and other organizations, she and other outraged parents organized a year-long campaign of widely publicized, sometimes violent, religiously motivated protests

and boycotts that led most county schools to revert to textbooks used in the 1940s. New science curricula and textbooks created in the wake of the Soviet Union’s launching of the first satellite, *Sputnik*, in 1957 placed evolution at the center of biology education, and they sparked protests, legal battles, and, beginning in Tennessee in 1973, campaigns to require the teaching of creation science. In the early 1970s the National Science Foundation (NSF)–funded effort to reform the teaching of social studies in the fifth and sixth grades, “Man: A Course of Study,” drew escalating protests from religious conservatives, culminating in Arizona Republican representative John B. Conlan’s denunciation of the program before Congress and an end to NSF funding of public school curricular reform.

U. S. Supreme Court decisions, certain federal government regulations, and presidential elections were also venues for growing activism among conservative Protestants during the 1960s and 1970s. In 1962 the Supreme Court banned prayer in public schools and then banned devotional Bible reading in 1963. Well-known conservative Protestant and Catholic leaders denounced the Court rulings, and Carl McIntire, among others, organized prayer rallies, petition drives, and letter-writing campaigns in support of efforts to restore prayer and Bible reading in the schools. The Supreme Court decision in 1973 that decriminalized abortion led conservative Catholics to form in that year the National Right to Life Committee, which lobbied, litigated, and spoke out against abortion rights, but most evangelicals, including their leaders, were not politicized about abortion until Francis Schaeffer, his son Franky, and C. Everett Koop toured in churches around the country in 1979–1980 promoting their film and book, *Whatever Happened to the Human Race?*

“Government intervention” during the 1960s and 1970s, in particular regulations by the Federal Communications Commission restricting religious broadcasting and threats by the Justice Department and Internal Revenue Service to revoke the tax-exempt status of Christian day schools and colleges, motivated fundamentalist preachers to ally and act politically in unprecedented ways. Some conservative Protestant preachers and leaders who still harbored anti-Catholic sentiments were politicized when John F. Kennedy became the first Catholic president in 1960. Others, along with many of their church people, became involved in the campaign to elect Barry Goldwater in 1964, and they were further energized by the steady shift of southern states into the Republican Party. When Richard Nixon ran for president in 1968, and again in 1972, increasingly open but still

informal support of evangelicals for the Republican Party led a number of religious and political leaders to begin talking about formalizing that alliance. The 1976 presidential campaign of Jimmy Carter, a born-again Christian Democrat, temporarily distracted these schemes at the same time it raised high the profile of evangelicals nationally.

These and many other such campaigns and politicizing experiences between the 1950s and the late 1970s were the crucibles in which diverse kinds of theologically conservative Protestants forged a sense of themselves as cultural and political allies, not only with each other, but also with other like-minded religious and secular conservatives.

Movement Years: Organizations and Leaders

Most observers date the origin of the religious right to the formation of the Moral Majority in 1979. The Moral Majority assumed the position of—and was anointed by the media as—the vanguard organization that politically mobilized conservative Christians. However, in the years immediately preceding and following its formation a growing network of conservative Christian leaders established over a dozen other national organizations that were aimed more and less explicitly at intervening in the political process. Together they generated the religious right as a self-conscious, organized national movement.

Phyllis Schlafly formed Stop ERA (renamed Eagle Forum) in 1972. The evangelist Bill Bright and Representative John B. Conlan created The Christian Embassy in 1974, and they ran a series of workshops to politicize evangelical leaders in 1974–1975. Other important conservative Christian political organizations formed during the late 1970s and early 1980s included the Christian School Action (renamed National Christian Action Coalition), the American Family Association, Christian Voice, the Religious Roundtable, Concerned Women of America, One Nation Under God, Inc., the Freedom Council, the Family Research Council, the Council for National Policy, and the American Coalition for Traditional Values.

During the mid- and late 1970s a number of the leaders of these organizations, namely, Bright, the evangelist James Robison, and lay Christian activists Ed McAteer, Robert Billings, and Robert Grant, explicitly worked on mobilizing the electoral potential of religious conservatives on a national scale. These leaders were joined by a number of other conservative activists in this effort, most notably Howard Phillips, Paul Weyrich, Richard Viguerie, Morton Blackwell, and Terry Dolan. After several organizational

false starts, McAteer, Billings, Phillips, and Weyrich met with Jerry Falwell in 1979 to discuss the leadership of a new national effort to mobilize religious conservatives as political actors. Falwell was already moving towards more political engagement, as were his fellow Baptist pastors Robison, Tim LaHaye, Charles Stanley, and James Kennedy. Behind the scenes, Billy Graham was urging his brethren in the same direction; more openly, so was the theologian Francis Schaeffer. Formation of the Moral Majority as a pastor-led and religiously motivated political organization was thus not considered a big step at the time. The reaction to its formation, on the other hand, was huge. The organization, in part through its audacious name, announced a sea change in the American political scene to conservatives and liberals alike.

Falwell said the Moral Majority was “pro-life, pro-family, pro-moral, and pro-American.” More specifically, it and its kindred organizations opposed homosexuality and gay rights, abortion and other reproductive rights, pornography, sex outside of marriage, the ERA, women’s liberation, new legal rights for children, government regulation of private schools and religious broadcasting, sex education, evolution, secular humanism, and postwar legal reforms guaranteeing the separation of church and state. They organized conferences, workshops, rallies, demonstrations; published and broadcast their messages far and wide; registered voters and got them out to vote; lobbied elected officials at all levels; filed court cases; and participated in party politics. They also expanded and fashioned alternatives to what they opposed, such as crisis pregnancy centers, “save-a-baby” homes for unwed mothers, ex-gay ministries, Christian schools, and creation science curricula.

While the political advocacy organizations were crucial to the mobilization of the religious right, the movement relied on a wide-ranging network of other organizations to produce its effects: on churches, ministries, denominations, pastoral networks, schools, colleges, universities, legal organizations, foundations, think tanks, authors, publishers, and media organizations. The growing network of Christian colleges and universities was especially important as it trained and prepared a whole generation of conservative religious activists who would enter politics and the professions determined to defend and promote their moral values. Most of this infrastructure, like the political organizations, was in the hands of conservative white Protestants, at first, predominantly fundamentalists, with growing support from more moderate evangelicals. More Charismatic and Pentecostal

Protestants were drawn in as Pat Robertson became increasingly visible as a religious right leader during the course of the 1980s. The Moral Majority claimed to have sizable numbers of Catholics, Mormons, and Jews among its members—that is, on its mailing list—but the growing political convergence of diverse religious conservatives after the 1980s was more rhetorical than organizational. That is, it took the form of shared political and moral rhetoric, and it is this rhetoric, as well as the actions infused with it, that generated the effect of a generic religious right.

In its peak years during the 1980s and 1990s there were tens of thousands of religious right activists, or people actively mobilizing others on behalf of religious right agendas. Millions of Americans were adherents of the movement, people who broadly identified with the religious right and its causes. And during national elections many more millions of Americans were influenced to vote on behalf of particular issues or candidates, at least in part, by the religious right.

Movement Years: Campaigns and Activities

A great deal of religious right activism took place at the local and state level. Partisans of the movement ran for school boards, local government offices, and state legislatures. They lobbied local and state school boards regarding curricula, textbooks, and school policies. They gained power and control of many local and state Republican Party organizations and campaigned in local and state elections. Town councils and courts argued over religious displays on public property. State legislatures debated constitutional amendments and laws liberalizing and restricting abortion and gay rights and were lobbied on a long list of issues. There were numberless jeremiads, speeches, rallies, petitions, public debates, protests, and direct actions.

Most of the efforts of religious right organizations, however, focused on the federal government and national elections. The campaigns and agendas of national religious right organizations reshaped public life at the local and state level, especially with respect to the Republican Party, but most of their efforts focused on the federal government and national elections. One early example was Jimmy Carter's White House Conference on the Family in the summer of 1980. That gathering provided religiously conservative women from all over the country the opportunity to unite and mobilize around virtually all the issues on the pro-family agenda. Their mobilization started in 1978 as they worked to become state delegates. Connie Marshner, a conservative

lobbyist who monitored federal family policies, took the lead in mobilizing members of Eagle Forum, Concerned Women of America, the League of Catholic Women, and Right to Life. At the regional and national conferences, pro-family delegates lobbied for conservative, and against liberal and moderate, resolutions on the ERA, reproductive rights, pornography, gay rights, sex education, and the meaning of "family" itself. The resolutions gathered in the final report only marginally reflected their positions, but their resounding presence and voice during the regional and national conferences established pro-family women as a serious political force bent on turning back the gains of feminists, gay rights activists, and the social liberals allied with them.

The other major national platform for the religious right early on was the 1980 election of Ronald Reagan as president. Reagan's statements on abortion and the family had earned the support of some conservative Protestant leaders already, and he won others over in a private meeting in the summer of 1979 when he referred to "what Jesus Christ did for me at Calvary." The religious right was not instrumental in his winning the nomination at the Republican Party Convention in July 1980, but its views helped push the GOP platform to the right. In August Reagan ignited religious right leaders behind him when he told the National Affairs Briefing organized by the Religious Roundtable that he knew that "you can't endorse me, but I want you to know that I endorse you." religious right leaders and their organizations could not actively campaign for him, but they did as much as they could indirectly, and they registered voters—millions of new voters, they claimed—and motivated them to go to the polls and vote for pro-family candidates. Reagan won by a solid margin, and Republicans won a majority in the Senate for the first time since 1954. Reagan probably would have won the presidency without the support of the religious right, but no one had any doubt that it had contributed substantially to his victory.

While the religious right continued to influence public debate, it accomplished relatively little of its legislative agenda during the Reagan years. Bills on abortion, school prayer, tuition tax credits, and "family protection" were eventually proposed, sometimes with President Reagan's initial support, but none of them became law. Religious conservatives were disillusioned by Reagan's appointment of Sandra Day O'Connor to the Supreme Court, given her support for the ERA and abortion rights. The religious right's vision of changing America from the center was further deflated when Dr. C. Everett Koop, Reagan's surgeon general and an

evangelical spokesman with strong pro-life credentials, agreed not to use his post to campaign against abortion and later, in response to the AIDS crisis, recommended the use of condoms by people having sex outside marriage and sex education for children.

Many of the national organizations formed around 1980, including the Moral Majority, Christian Voice, Freedom Council, Religious Roundtable, and the American Coalition of Traditional Values, were dissolved or dormant by the end of 1987. Attention and leadership shifted from the fundamentalist to the charismatic wing of the movement as Pat Robertson gradually emerged as a potential Republican candidate for president in 1988. His stated goal when he founded the Freedom Council in 1981 was to train activists in the 175,000 political precincts in the country. That organization, already producing effects in local and state elections, became Americans for Robertson in 1986–1988 when he ran in the presidential primaries. In 1989 Robertson morphed his network of activists and chapters once again when he created the Christian Coalition and appointed conservative activist Ralph Reed to lead it. The Christian Coalition became the national flagship organization of the religious right during the 1990s. Robertson and Reed's aim was to produce a powerful grassroots organization—not a mailing list of donors and pastors—that could win elections, have an impact at every level of government, and gain lasting power in the Republican Party.

The power and effectiveness of the Christian Coalition grew steadily during the 1990s and then began to wane after the departure of Reed in 1997. Titular leadership of the national movement gradually shifted to James Dobson. Dobson's radio and publishing ministry, Focus on the Family, and national political lobby, Family Research Council, which was run by Gary Bauer and, later, Tony Perkins, became more confrontational during the 1990s, particularly on the issue of gay rights. Two very different organizations, Randall Terry's Operation Rescue, which organized sometimes violent mass protests at abortion clinics, and Bill McCartney's Promise Keepers, which organized peaceful mass rallies of men on behalf of Christian family values, were also important and nationally prominent vehicles of religious right activism and rhetoric during the 1990s.

In 2000 and 2004 white religious conservatives campaigned vigorously in many states for George W. Bush. His electoral victories have been attributed to the support of conservative evangelicals, who voted overwhelmingly for Bush in both elections. During Bush's tenure as president, his language

was often inflected with religious right values, as were his policies and appointments. Among gains registered by his religiously conservative supporters were Bush's appointments to the Supreme Court, federal judgeships, and a wide array of administrative posts; his domestic and international faith-based initiatives; his resistance to scientific expertise and environmental goals; his views and policies toward the Middle East and Islam; the erosion of reproductive and sexual rights and the promotion of traditional marriage and family policies; and several hundred special protections and exemptions for religious groups provided by Congress.

At the same time that the religious right reached its zenith of political influence in the United States, splits among white evangelicals over its activist stance became evident. Some of the original leaders withdrew from or disavowed political activism. No sooner was Bush reelected than new evangelical leaders began to emerge, such as Gregory Boyd, Joel Hunter, Richard Cizik, and Brian McLaren, who actively demurred from partisan politics or wanted to redirect evangelical activism away from "single issue politics" and towards environmental and social justice issues. The latter found themselves sometimes in alliance with older politically moderate and liberal evangelical leaders, such as Jim Wallis, Ronald Sider, and Tony Campolo, and sometimes at odds with Republicans and the Republican Party.

Surveys show that younger evangelicals are disaffected from both the religious right and party politics. Outsiders have subjected the religious right to many critiques since its inception, but during the Bush years their number and influence grew markedly. Even the Democratic Party began making inroads among evangelical voters in 2006 and 2008 in some local and state elections.

Observers of the American religious right declared its demise prematurely on several occasions in the 1980s and 1990s. It may also now be premature to declare the movement over, as have some observers in the wake of Barack Obama's election as president. The national movement's influence over public opinion is in check for the time being, but it will surely continue to have force in elections and ballot initiatives and to affect governmental actions at all levels. Perhaps it is safe to say that, by 2010, the religious right had become, or was becoming, more of an enduring public lobby than a vibrant social movement.

Interpretations and Assessment

Most participants in the religious right explain the movement in terms of the motivations of the individuals who

were mobilized. So do many of the movement's opponents and its observers. They say that religious conservatives mobilized because they felt their values, lifestyles, and worldviews were in danger as a result of social, cultural, and political trends and reforms between the 1950s and 1970s. They became politically active in order to resist those trends and reforms and to bring about new ones that would reflect their values. There are many variations on this elementary way of accounting for the movement, especially in the literatures produced by critics and scholars.

Some observers emphasize the century-long history of conflict between modern/liberal and fundamentalist/conservative Protestants; the role of strong church growth among conservative Protestant, alongside the decline of liberal, and some moderate, churches and denominations; or the waning importance of denominations and the increasing salience of parachurch organizations in defining difference among Protestants. Other observers argue that American society and culture have long been structured by two opposing worldviews, conservative and liberal, and that they broke out in open and protracted "culture wars" during the last half of the twentieth century.

While some see the religious right as a grassroots upwelling of anxiety, fear, anger, or resentment, others emphasize the role of church leaders as persuaders or manipulators and focus on rhetoric and preaching, the role of media technology and the televangelical empires, authoritarian social and personality structures, or particular theologies or ideologies such as biblical literalism, dispensationalism, Christian nationalism, and theocracy. The role of theocracy theologies, such as reconstructionism and dominionism, which call for a Christian state, were particularly prominent themes in the popular critiques of the religious right that proliferated during the presidency of George W. Bush.

Public opinion polls that place people in religious or political/religious categories and assess their voting and opinion patterns abounded during the religious right movement. While some polls were quite sophisticated and pollsters generally modest in their interpretive claims, their journalistic distillations, especially on issues such as abortion and homosexuality, helped foster the popular impression that America was in the grip of a culture war and that voting behavior and opinions on social issues were a simple reflex of religious identity.

Some scholars have concluded that government regulation that impinged on what preachers and grassroots activists

perceived to be strictly religious domains motivated them to become politically active. Other observers see the religious right as a side effect of a broader takeover by conservatives of the Republican Party and the ongoing efforts by the GOP to mobilize evangelicals as an electoral base.

Interpretations such as these have been criticized for dividing all Protestants and the American public into two opposing camps, a mistaken view that contributes to the conflict rather than interprets it. Prevailing interpretations of the American religious right are also remarkably insular and fail to examine the movement in the context of parallel movements in other countries or in relation to broader changes in the political economy and geopolitics. Intellectual grappling with the religious right has succeeded in debilitating a dominant academic paradigm, "the secularization thesis," that equated secularity with modernity and progress. In the long run it may also lead to more scholarly work on American religion in global perspective and contribute to more sophisticated theoretical work on religion, secularity, and the relation of both to other social, cultural, political, and economic practices.

The central accomplishment of the religious right during its movement years was its mobilization of religious conservatives into a relatively coherent and effective political constituency. This was a signal achievement, given five decades of political withdrawal on the part of the majority faction, conservative Protestants, and a much longer history of no contact or hostilities between theologically conservative Protestants and Catholics and Jews. Religious right activists and organizations helped to elect conservatives at all levels of government; to slow or stop a wide array of liberal and moderate reform efforts in government, society, and culture; and to bring about conservative reforms in government policies and programs, the judiciary, education, the economy, foreign policy, political language, and popular culture. The religious right was a, if not the, major force in the political and rhetorical conflicts between conservatives and liberals that dominated much of public life in the United States for three decades. The religious right helped to realign national party politics and generate Republican majorities in many state governments and congressional sessions, and in five presidential elections. Finally, the religious right broke a web of mostly informal restrictions on religious speech in the public arena, in some ways lowered "the wall" of separation between church and state, and broke the spell of America as a strictly "secular nation." At the same time, in spite of all its rhetorical and practical efforts, the

religious right failed to make America into its image of a “Christian nation.”

Religious Studies

Religious Studies is a shorthand term for the academic study of religions (ASR), most often in autonomous departments in secular colleges or universities. ASR has three core characteristics: it addresses a range of traditions (especially so-called world religions) using multiple disciplinary approaches (typically including some attention to sacred texts and exposure to sociology or anthropology); it is distinguished from indoctrination into any single tradition or training for roles such as priest, rabbi, or missionary; and its current institutional form—organized in the American Academy of Religion (AAR)—is relatively young, having crystallized and established its key institutions in the 1960s.

These characteristics are more like a framework for debate than a foundation for consensus. Those in ASR disagree about its boundaries and priorities, including whether it is a discipline of its own (and if it is, who polices its boundaries) as opposed to a cross-disciplinary field (and if it is, whether it has the coherence required to thrive). They debate how to balance general concepts of religion and comprehensive coverage with grounded particularity and priority-setting. They disagree about the value of claiming objectivity (given that a commitment to any scholarly priorities presupposes a hierarchy of values), how radically to purge Christian agendas, and how much to discourage students from using ASR as a vehicle to explore issues of personal meaning and commitment, insofar as this is consistent with ASR’s standards of evidence. Finally, they propose diverse genealogies—which of ASR’s precursors should be disregarded, acknowledged primarily as dead ends, or built upon for the future.

When exploring how ASR came into being and functions in the early twenty-first century, it’s important to bear in mind that most ASR scholars focus on subjects and modes of analysis that lead them to float between ASR and at least one other discipline (notwithstanding those who consider ASR a self-sufficient discipline within which they can plant both feet). Particular attention is paid here to the way in which the study of religion in U.S. history relates to ASR.

What Does Religious Studies Study?

It is not self-evident what constitutes a “range of traditions” studied in a “multidisciplinary” way. In practice ASR’s subject matter centers on the dominant teachings, rituals, and institutions of so-called world religions—a group that usually starts with Judaism, Christianity, Islam, Hinduism, and Buddhism before expanding in diverse ways depending on who makes

the list. Expansions might include Chinese and Japanese religions, what used to be called “primitive” or non-literate traditions from outside Europe and Asia (and contemporary forms of these traditions), Sikhs and Zoroastrians, Santería and similar traditions, relatively young religions such as Mormonism and Christian Science, and sometimes abstractions such as “the religion of consumerism” or nationalism.

How does one devise a satisfying account of the “dominant teachings, rituals, and institutions” of even one major tradition? It is difficult to convey the differences within U.S. Protestantism alone over an entire semester—to say nothing of condensing two millennia of global Christianity into a unit in a survey course. Yet ASR often aspires not merely to do so, but to mount as well comparisons between capsule accounts of “Christianity” and other religions. Especially in the nineteenth century, ASR scholars ranked religions within comprehensive evolutionary schemes, usually culminating in liberal Protestantism or traditions with overlapping themes such as Vedānta philosophy within Hinduism. Although most people in ASR repudiate this approach today, traces of it still linger in the underlying logic in survey texts and in background assumptions about what counts as exemplary behavior in global religious dialogues.

In his 1973 book *Interpretation of Cultures*, anthropologist Clifford Geertz made the point that “nothing has done more . . . to discredit cultural analysis than the construction of impeccable depictions of formal order in whose actual existence nobody can quite believe” (p. 18). For all of ASR’s commendable efforts to expand the knowledge of global religions with accurate information, the field has often risked this danger. Do scholars demonstrate minimal competence or disreputable arrogance if they teach about trends in the evolution of human civilization? ASR is unsure. Nevertheless, the trend in ASR, as in anthropology and many other fields, has been to turn from sweeping evolutionary models and abstract taxonomies towards grounded and focused analysis of particular cases—whether using the ethnographic methods stressed by Geertz, other kinds of anthropology that place greater stress on conflict and hybridity, or other modes of analysis.

Diverse Disciplinary Frameworks

The distinction between studying religions as abstract capsules of tradition within evolutionary taxonomies as opposed to thick descriptions of particular groups is only the tip of an iceberg of complexities. ASR unpacks multiple layers of religious experience—psychological, philosophical, ritual, mythic, sociological, ethical, institutional, historical, relations

to the economic and/or ecological modes of production, relations to modes of communication, and so on. This is its major procedural safeguard against treating its subjects in monolithic or excessively abstract ways.

Bradley Herling, in his 2007 book *Beginner’s Guide to Religious Studies*, offered a representative list of theories used to tackle this problem. The book, which began as a Web site of the American Academy of Religion, presents in a single chapter two anthropologists (Geertz and the theorist of ritual, Victor Turner), two psychologists (William James and Rudolf Otto, both with interests in mystical or numinous experience), and two sociologists (Emile Durkheim and Max Weber, who explore how religion relates to social identity and cohesion). Another chapter slices the same pie in a different way: on a continuum between debunkers versus scholars who are critically appreciative of insiders. Sigmund Freud and Karl Marx speak for the debunkers, presenting religious claims as illusory projections rooted in the unconscious and/or material mode of production. At the other pole, theologian Paul Tillich defines religion as “ultimate concern” and Wilfred Cantwell Smith stresses the importance of individual faith. Between these poles lie Carl Jung (a psychologist impressed by the collective and constructive aspects of the unconscious), Ninian Smart (a comparative philosopher known for his analyses of multiple religious dimensions), and Mircea Eliade (an eclectic scholar who pursued cross-cultural comparisons of religious themes, especially “heirophanies,” or manifestations of sacred presences).

Herling also noted emerging interests such as gender and sexuality, war and peace, fundamentalisms, globalization, ecology, race and ethnicity, emerging media, and science. These extend both ASR’s subjects and analytical lenses—for example, they call attention to how each of the theorists listed above is a white male.

Seeking a Workable Umbrella Category

Does ASR have the minimal common language it needs for coherence? The simple fact that many religions appeal to gods, revelations, ancestors, and mysterious presences—phenomena that are often unverifiable through Enlightenment methods—raises complications by itself. Suppose we define “religious data” as ideas and rituals appealing to supernatural presences. Clearly such appeals exist and have consequences in the world; clearly there have been attempts to defend such appeals philosophically. Still, can we study this “scientifically”?

Also, is this definition adequate? Is it inclusive enough to be a neutral frame for comparing at least all “world religions,”

including, for example, atheistic forms of Buddhism and possibly even U.S. nationalism? ASR stresses how ideas and practices directed toward gods are only two dimensions of religious life, and not always the most significant dimensions when we get down to cases. But how can we be sure when we do get down to cases that we are dealing with “religious” ones? Depending on background definitions, ASR may define religion so broadly—for example, as anything that a culture values deeply—that it becomes difficult to find anyone who is less religious than anyone else. Conversely, scholars may define it so narrowly (in an effort to find useful definitions for focused study) that huge territories of what ordinary people call religion (or could fruitfully approach as religious but do not) become invisible within their scholarly frames. Beyond this is a major complication: many languages and societies have no native category corresponding to the term “religion” as it is commonly understood in the United States.

Thus there is ample room for slippage between scholars who define “religious data” in incommensurate ways and scholars who propose to tidy up and police the definitions. The closest thing to consensus is the idea that scholars must use the term “religion” self-consciously, as a second-order definition stipulated by them to organize specific ranges of data for scholarly purposes. There are no self-evident data of “religion” sitting there waiting to be analyzed—or rather there are data of so many kinds, perceptible (or not) under various definitions, that trying to analyze them all guarantees paralysis. Sometimes ASR’s debates about method proceed at off-putting levels of abstraction. Still, we must not underestimate their importance as a language in which to clarify what diverse scholars hope to accomplish and how they relate to each other. Methodological debates are like a train station at the center of a network connecting different parts of the field; being able to navigate around this network is as important as the ability to choose the appropriate track—the one that leads to where the traveler wishes to go.

No one in ASR undertakes to navigate all of the tracks—the point is that the field depends upon interlocking shunts that together cover all of the network, and more. To be effective, ASR scholars must constantly converse. There is a presumption in the field that most people will give reasonable attention to at least two or three layers of at least one or two subjects, with some awareness of how these foci fit within the larger picture.

Mushrooms on a Fallen Tree

As noted above ASR crystallized in the 1960s and 1970s. Sometimes ASR chroniclers speak as if the field was created

almost *ex nihilo*, catalyzed by a U.S. Supreme Court decision dealing with Bible readings in public schools. In 1963, in *Abington v. Schempp*, the Court declared it unconstitutional to teach any single religion (in the sense of indoctrination) but commendable to teach *about* religions. In this creation narrative the Court’s ruling spurred the formation of ASR’s paradigmatic departments in public universities that had had little or no previous religion curricula. These departments quickly displaced and marginalized programs in older church colleges and divinity schools or served as the model for their internal transformation. In this telling ASR is like a mushroom rapidly growing on the trunk of a great fallen tree—or, at least, the sudden flourishing of a plant that has long struggled in the shadow of a now-diminished tree.

But what of this tree, fallen on hard times? Suppose it is not dying at all but in fact its roots are now sending up new offshoots. What is a gardener to do? Prune them? *Abington v. Schempp* seemed to imply that many college Bible courses were of dubious constitutionality. In fact—and not coincidentally—such courses changed overnight into courses *about* the Bible (however much this represented change). The American Academy of Religion came into being in 1963 when the National Association of Bible Instructors (NABI), a more pedagogically minded cousin of the Society of Biblical Literature (which held joint meetings with the AAR until 2008), changed its name. The *Journal of Bible and Religion* was renamed *Journal of the American Academy of Religion* in 1966.

NABI is just one example of the kinds of organizations dominating the discourse on religion—a discourse that was overwhelmingly Protestant and frequently normative—in universities prior to the 1960s. Many schools had Bible chairs that allowed clergy to teach classes for credit. While clergy were rarely on faculty, they retained staunch connections to the universities in a multifaceted network centered on campus ministries and pre-seminary training.

Many scholars have stressed the decline of this network. Often they write in a nostalgic voice, mingled with a touch of defiance in a nod to existing pockets of resistance. Their story begins from the baseline of broad Protestant influence and charts the undoing of this influence through secularization, beginning with the rise of research universities in the late 1800s and increasing with the growth of public education after World War II. It cannot be overstated how thoroughly theology pervaded earlier curricula, which centered on broad liberal knowledge and classics. Prior to the rise of research universities, religious groups founded most U.S. colleges. Often these schools originated as seminaries. Their

presidents were typically clergy, and they featured a capstone class on moral philosophy that was conceived as an integrative matrix of the curriculum. Mandatory chapel was common well into the twentieth century. Measuring from such a baseline, change towards the specialization of knowledge, the rise of science, the stress on professionalism, and the reduced centrality of Protestant values is readily apparent.

Partially overlapping with the nostalgic narrative, but less critical towards secularism and more oriented toward constructive overlaps with ASR, are scholars who chart the internal responses to these changes by established divinity schools. After 1960 divinity schools picked up competition from ASR programs, which were sometimes units in the same universities. The older institutions continued to wield influence, however, either on their own terms or as part of ASR. Indeed, one track within the University of Chicago Divinity School emerged as a flagship ASR program. In this spin, there is no dead tree rotting, but rather an aging tree with both broken limbs and new offshoots all within a garden that is being redesigned. Most people today take the new garden for granted, cultivating their own roots and fruits.

Building a New House on Wider Foundations

While ASR genealogies are prone to trumpet new growth even as they dig up and burn older roots, they too trace histories reaching back to 1960. Imagine a broad-minded dreamer in a musty cabin—a dreamer who envisions a house built on a much wider and far stronger foundation. As the cabin slowly rots around him, our dreamer prepares—and then, in the 1960s, when intellectual opportunity spurred mushrooming growth, the cabin is swallowed whole within a larger structure. The dreamer within, using what had been a marginal subset of theological education, will now set the rules in a new, much bigger, much stronger house.

The dreamer of this story is in fact the Oxford-based scholar of Hindu scriptures, Friedrich Max Müller, who popularized a slogan often repeated in ASR: “He who knows one, knows none.” Max Müller worried that prior to the nineteenth century, the study of religion in Europe and the United States focused almost entirely on Christianity. Although scholars did acknowledge Islam and Judaism, they did not study either carefully, sympathetically, or even accurately. And as for all other religions, they were lumped together into a catchall category dubbed “paganism,” with partial exceptions made for Greek and Roman mythology and the natural religion of “noble savages.” Knowledge of

so-called pagans, in fact, was often little more than ignorance and fantasy projected onto a blank screen.

The career of Max Müller highlighted the importance of language skills for the effective study and translation of ancient Asian religious texts previously unknown to Westerners. The study of ancient texts was integral to the emerging proto-ASR: scholars assumed that canonical texts unlocked the traditions’ core meanings, making study of contemporary practice unnecessary. In spite of his depth of knowledge of Hinduism, Max Müller never visited India. His career illustrates the centrality of British colonialism (and by extension other Western colonialisms) in explaining how such texts became available in the West, why Westerners suddenly cared about them, and how their study was financed—explanations that remain relevant today in an era of corporate globalization.

In the late 1800s Max Müller and kindred philologists (including many who were transforming biblical studies) built a loose alliance with the pioneers of sociology and anthropology of religion, with whom they shared the same evolutionary mindset. These scholars distinguished their work from narrow theological study and unreliable missionary reports. They saw themselves, in the words of Eric Sharpe (1975), not only as scholars of “a Science which compares the origin, structure, and characteristics” of world religions, but also as judges of “their relative superiority and inferiority when regarded as types” (xxi). As such approaches came under attack, there occurred a shift towards the somewhat more focused and less normative “phenomenology” of scholars such as Eliade—what became known as the “history of religions” even though it was often quite abstract and ahistorical compared to work by historians. This approach was roughly equivalent to what Europeans more often called “comparative religion,” with the word “history” signaling its breadth of interests and distinction from self-consciously theological study.

This cohort remained fairly marginal amid those treating religion in U.S. universities, especially during the middle third of the twentieth century. But by the 1960s a variety of factors had converged to force change. This was an era of expansion in higher education, fueled by the GI Bill, the baby boom, and economic prosperity. A pluralist approach to U.S. religion was gaining momentum: the mainstream expanded to become “Protestant/Catholic/Jewish”; Cold War propaganda stressed religious freedom; and a combination of evangelical growth, the civil rights movement, Asian immigration (a factor ASR overwhelmingly stresses),

and a huge influx of Latino/a immigrants combined to de-center liberal Protestants. In this context ASR built a coalition between old-style philologists, social scientists who chafed under their fields' relative inattention to religion, and components of the liberal Protestant curriculum. Together they staked a claim to a solid share of resources.

Concerns about Pre-Columbian America and Questions of Value

Everyone involved with ASR wants to criticize and then move beyond one or another aspect of the past: anti-pluralist Christian propaganda, unpersuasive generalizations, intersections with colonialism, racist forms of evolutionary theory, and so on. However, there is limited consensus about which parts to purge and which to revise and upgrade.

For those with a special interest in studying American religions within ASR, one particular concern—consider it either an alarming deficit or an unmatched opportunity for an aspiring Americanist—is ASR's frequent neglect and distortion of pre-Columbian America, especially the largest and most literate traditions of Meso-America. Often these traditions are absent in surveys, and departments give such specialization low priority when hiring faculty. When they are treated, they often are not considered “world” traditions at all, but rather lumped in with small-scale (“less evolved”) societies and non-literate traditions. Moreover, ASR treatments of living Native religions—both Meso-American and North American—downplay blends with Christianity, such as Mayan popular Catholicism. Native religions are commonly represented as either noble but extinct aspects of non-literate cultures or as minor footnotes within studies of Christianity. On the brighter side, compared to kindred disciplines ASR is in a strong position to rethink the place of Meso-America within its larger vision.

A second concern is ASR's enduring polemics between theology and science. Beyond two basic points that both sides have long presupposed—that ASR rejects indoctrination and that it attempts an analytical standpoint that is “outside” any one tradition—the discourse is notably stale, and perhaps best ignored in the hope that it will go away. This is true not least because many of ASR's scholars who beat the drums most loudly against “theology” consider it a point of pride not to read contemporary academic theologians (or, more precisely, to define “theology” in a way that declares the most interesting theologians irrelevant). Meanwhile their polemics against norms lead to paralysis when discussing their own priorities.

Nevertheless, as long as ASR includes Christianity in its curriculum, treats ethics as a dimension of religion, or wishes to discuss its values and priorities openly—why it is better to study ASR or one of its subfields over anything else—questions about normative issues are unlikely to disappear. There seems to be little choice other than to tackle them, despite their historical baggage.

ASR's Priorities and Studying American Religions

A further concern is how ASR's drive toward balance, both among a range of global traditions and between ancient and contemporary issues, impacts the study of American religions. In 1965 a seven-person ASR faculty would likely have approximated the chapters in *Religion*, Paul Ramsey's famous study of the field: Old Testament, Christian Origins, History of Christianity, Ethics, Theology, Philosophy of Religion, and Comparative Religion. Today the same department might include two scholars from among Hebrew Scripture, Early Christianity, or the Ancient Near East; two from among Religious Thought, Ethics, or History of Western Religions (including specialists on the United States); plus three from all other areas, including Islam, religions of South and East Asia, and religions of the Southern Hemisphere. Large departments have room to maneuver; smaller ones might find it necessary to shrink this scenario to just one professor each for Bible, Western Religion, and everything else.

What will happen as those original seven faculty members gradually retire? Along with external pressure to economize and downsize, there would likely be internal pressure to rebalance. How can Western Religions command four of seven positions, while forcing choices like Africa versus China or Hinduism versus Islam? One argument that might make sense is that such a balance would be appropriate for a department in the contemporary United States that teaches predominantly Christian students. However, within ASR's dominant logic, it is easier to imagine that this department would be left with a single scholar charged with “covering” all Western religion since the Roman Empire and all American religions. Related pressures apply to course offerings in ASR majors. Even in a large department with ample courses, a curriculum is likely to require a methods course, balance between ancient and modern studies, and broad coverage of global traditions. How much time is left, then, to concentrate on the wide range of American material?

The prospects for focusing on U.S. religion are not necessarily brighter in History or American Studies. History is often narrower in disciplinary range; American Studies is

often more diffuse. Both tend to be standoffish toward religion and weak on global issues. In a small department a single professor again might be the sole specialist in U.S. religions. Nevertheless, she or he is less likely to be the only scholar offering courses on the United States, and a U.S. history survey would almost certainly be a prerequisite to such coursework. While ASR scholars who specialize in the United States (all of it!) may be viewed by their ASR colleagues as fairly narrow in their scope, historians would likely perceive them as dangerously so. And while an undergraduate ASR major concentrating on U.S. materials might hit a ceiling after just three or four courses (and likely rouse suspicions of excessive focus on Christianity in the process), a history major might consider four courses the bare minimum upon which to build his or her degree. In American Studies four courses would not even constitute a minor. Thus it may be difficult for ASR to make good on its claim to be a framework for studying U.S. materials in reasonable depth in an interdisciplinary manner—at least at the undergraduate level or outside of a double major.

There are pros and cons all around. ASR pairs well as a double major with a number of other fields. Its treatments of U.S. religious diversity and the religious dimensions of global issues are often ahead of the curve compared to other disciplines, its methodological discussions often richer. Still, students and scholars in ASR may be disadvantaged when it comes to basing their subjects within a broader context.

The Promise of ASR

ASR is impressive when judged both by its efforts to promote accurate knowledge of global religions and by its development of a strong genealogy derived from its component parts. As a framework for studying American religions—and by extension other topics—ASR has great potential. Its range of subjects and analytical approaches can complement each other in an appealing combination of structure and flexibility.

Nevertheless, some aspects of ASR are more helpful than others. ASR's threefold legacy—stressing foundational texts, building claims to legitimacy in its drive towards comprehensive coverage, and its de-centering of Christianity—compels students of American religions to sometimes maneuver within uncomfortable limits. How ASR responds to these issues will strongly impact the quality of its future contributions to the field. Much hinges on the specific priorities and modes of analysis from department to department and scholar to scholar.

Religious Thought

Religious thought encompasses many forms of reflection on ultimate reality and humans' relationship to it. It is expressed in theological treatises as well as in popular discourse including songs, sermons, and novels. It is shaped not only by trained theologians but also by clergy, untrained laity, and those outside organized religion. Among America's many religious traditions, the importance of intellectual discourse varies widely. In some, such as Reformed Christianity, theology is of central importance. In others, including Judaism and Native American religions, practice is more important than intellectual reflection, and ideas are often conveyed through stories.

Although religious thought encompasses myriad issues, three topics stand out. The first concerns the proper relationship between humans and ultimate reality. In Christianity, this is the question of salvation: What must humans do to

attain fellowship with God? What is Jesus' role in this salvation? Although some other religions are less concerned with life after death, they address analogous questions about the goal of human life.

The second topic concerns the ordering of society. For American Christianity, this is best understood in terms of two categories. First, what is the church? How are individuals related to it? What is its proper relationship to government and social institutions? Second, how can the reign of God be made more present on earth? Other religions consider similar issues. Jews, for example, reflect on the nature of the Jewish people, the covenant community. All religions reflect on ethical issues and the place of their community amid America's religious diversity.

The third major topic concerns the authority of scripture and religious tradition. Reason, scientific discoveries, historical research, and the experience of individuals in America have all challenged traditional ideas. At its simplest this created divisions between conservatives who defended traditional ideas and liberals who revised them. On closer inspection, however, the situation is considerably more complex. Reason, science, and history were used both to defend and to revise tradition.

The history of religious thought is shaped by America's many religious traditions and their various reflections on these topics as they encountered one another and major cultural, religious, and intellectual movements including evangelicalism, the Enlightenment, romanticism, modernism, and postmodernism. The extent to which beliefs changed over time varied among traditions. The focus here is on major movements and trends in religious thought throughout American history. Other entries provide details on traditions and movements mentioned here.

Colonial Theology

American religious thought began with Native Americans. Native American thought in the colonial era was by no means monolithic, but typically it did not emphasize a sharp distinction between the natural and supernatural worlds. North American Indians expressed their religious ideas not in exhortations or sermons but in sacred stories. These emphasized the interaction between humans, nature, and spiritual beings. Their telling of sacred stories continued to develop as they responded to the new world Europeans had brought them. In the nineteenth century, the experience of colonization gave rise to several revitalization movements that emphasized a common identity.

Some viewed them as a return to a newly presented account of traditional ways. Others such as the Ghost Dance in the late nineteenth century incorporated images and ideas from Anglo-American culture and religion in presenting a future in which American Indians were free from the afflictions of colonialism.

Africans also brought to America religious reflection expressed in narrative. Many believed in a high god who had created all things, along with many secondary deities or spirits more intimately involved with daily lives of humans. Despite the brutality of slavery, distinctively African religious ideas survived and were incorporated into forms of Christianity. They also developed into a number of religions shaped by the colonial experience that blended African and Roman Catholic practices to form distinctive African American religions, including Cuban Santería and Haitian vodun.

Early American Christian thought was shaped to some degree by the encounter with Native Americans and the challenges of transplanting European civilization, but it was primarily shaped by the legacy of the reformations of the sixteenth century. In the Catholic decrees of the Council of Trent (1545–1563), the Lutheran Formula of Concord (1577), and the Calvinist Westminster Confession (1648), the various traditions systematically presented their teachings. This emphasis on confessional boundaries discouraged innovation in religious thought. The emphasis was on the catechesis of church members and missions to non-Christians. Among Catholics the most significant development was the critique of the enslavement of Native Americans presented by Bartolomé de las Casas (1484–1566) in *The Only Way* (1537) and other works based on his experience in the Caribbean and Mexico.

Among Protestants, the most significant thought took place in Puritan New England. This highly educated community immigrated to establish churches and civil government that conformed to their understanding of biblical principles. Like others in the Reformed tradition, they taught that God's sovereign grace determined who would be saved. This teaching minimized the role of humans in salvation. Some pastor-theologians including Thomas Shepard (1604–1649) worried that this would become a license for sin and instructed people to prepare for salvation using the means of grace. Others, including John Cotton (1584–1652), believed this emphasis on preparation undercut the doctrine of free grace. Anne Hutchinson (1591–1643), a member of Cotton's Boston congregation, sided with him and became a

major voice in this debate. Tried for challenging the authority of clergy in 1637, she insisted that God revealed to her who was elect. For this claim, along with teaching gatherings of men and women, she was banished from the Massachusetts Bay Colony.

Hutchinson's claim of inner spiritual illumination was similar to the doctrine of "inner light" advanced a little over a decade later by George Fox (1624–1691) and the Society of Friends, or Quakers. Beginning in England, Quakers quickly spread to America, where they were persecuted in Massachusetts but found refuge in Pennsylvania, established by Quaker William Penn (1644–1718). The conflict between personal experience and external authority became an enduring theme.

Puritans also divided over their doctrine of the church. The majority sought to combine congregational church government with a civil government that enforced religious teachings. Roger Williams (1603–1683) rejected this awkward combination, insisting that churches could only baptize professing believers, not infants, and that the civil government did not have the right to enforce religious obligations. Williams founded Rhode Island on this principle of religious freedom. He also started America's first Baptist church. His *Bloudy Tenent of Persecution* (1644) resulted from his decade-long debate with John Cotton.

Puritan thought was shaped by the Bible, reason, and a lively interest in miraculous "wonders." All three were displayed in the writings of Cotton Mather (1663–1728), a Boston clergyman who served as president of Harvard College. His *Magnalia Christi Americana* (1702) followed biblical examples in its attempt to trace the hand of God in the history of New England. In *The Christian Philosopher* (1721), he sought to demonstrate the harmony between science and religion. He also made one of the first American contributions to ethics in *Bonifacius* (1710). Other New England theologians in the early eighteenth century, such as Boston pastor Benjamin Colman (1673–1747), moderated their Calvinism through an increased emphasis on theology based on reason, logic, and observation of the natural world.

Among early American voices critical of Calvinism, Samuel Johnson (1696–1772) was most prominent. Persuaded by his reading of the need for apostolic ordination, he journeyed to England, where he was ordained an Anglican priest in 1723. In his subsequent career in Connecticut, he defended an Arminian view of salvation, that is, one that emphasized humans' role in achieving salvation. He also insisted on an ecclesiology that saw the church as a

hierarchical society founded upon apostolic order, inaugurating a high church tradition in American theology.

The Enlightenment and Evangelicalism

In the eighteenth century, two movements emphasizing the authority of human experience began to shape religious thought. Evangelicalism emphasized the importance of an inner experience of God's grace. The Enlightenment emphasized reasonable reflection on humans' experience of history, the natural world, and human nature. Appeals to reason and to religious experience shaped rival movements, but just as important were the many movements that united them. Indeed, while liberals and conservatives were often divided over the authority of revelation and religious experience, they were often united in their appeal to reason. Particularly widespread was the philosophy of common sense realism. From the late eighteenth century to the 1840s almost all Americans accepted its tenets, including the method of logical induction from observed facts associated with Francis Bacon (1561–1626), the propositional character of revelation, the ability of humans to observe the world as it is, to reason accurately from these observations, and that a common moral sense was shared by all. In sum, an ordinary person provided with evidence will conclude the truth. This was often allied with a republican theory of government that taught that the best government was representative and that its virtue rested on the virtue of the people.

Foremost among the early critics of evangelicals' emphasis on inward experience was Boston clergyman Charles Chauncy (1705–1787). In *Seasonable Thoughts on the State of Religion in New England* (1743), he denounced evangelicals' belief in an immediate experience of the Spirit testifying to their salvation. He charged that it threatened to destroy society by depreciating the importance of virtuous behavior. This concern for virtue shaped liberal Congregationalism. Its theologians embraced an Arminian view of salvation, and their rational reading of scripture led them to reject the doctrine of the Trinity. William Ellery Channing (1780–1842) provided these Unitarians' major theological statement in an 1819 sermon: God's primary trait was fatherly love. Jesus was an exemplary figure whose role was not to satisfy God's wrath but to turn humans toward God. Universalism, a liberal Christian movement popular among the lower classes, came to articulate many of the same positions.

Reason led other Americans beyond Christianity. Deists affirmed only propositions about God as creator and the

rewards for a moral life that could be derived from reason and nature. Some, like President Thomas Jefferson (1743–1826), while arguing privately for a purified theology, valued the Bible and churches as teachers of morals. Others, such as Thomas Paine (1737–1809), author of *Age of Reason* (1794), and Elihu Palmer (1764–1806), an itinerant lecturer, openly ridiculed the Bible.

Just as reason led some beyond the Bible, so did inner experience. After a religious experience in 1774, Elias Hicks (1748–1830) became an itinerant preacher of the Quaker doctrine of inner light. Arguing that true religion was internal, he criticized evangelical Quakers who affirmed the authority of scripture. His teaching produced long-lasting divisions among American Friends.

Most who appealed to inner experience did not move beyond traditional teachings. Among evangelical theologians, none was more significant than Jonathan Edwards (1703–1758) of Northampton, Massachusetts. By speaking of three sources of religious knowledge—reason; the Bible; and an affective sense of God’s sovereignty and glory, or “excellency”—Edwards reconciled Calvinism, evangelicalism, and rationalism. In *A Treatise concerning Religious Affections* (1746), he maintained that a sense of God’s excellency was necessary for salvation but reassured critics that the chief sign of authentic affection was a holy life. Edwards’s evangelicalism led him to restrict both the Lord’s Supper and baptism of children to those who had an experience of saving faith. Many others went a step further and rejected infant baptism, swelling Baptist ranks.

Edwards’s *Freedom of the Will* (1754) was particularly important for later theology. He argued that humans had the natural ability to do what they chose, thus teaching that the will was free. Yet he also taught that the will was corrupted by sin and therefore morally unwilling to repent without God’s grace. This enabled revivalists to maintain their Calvinism while preaching that humans were responsible for their lack of repentance.

Methodists, followers of the English cleric John Wesley (1703–1791), offered an alternative evangelical theology. They affirmed that prevenient, or enabling, grace was given to all, making it possible for everyone to accept justifying grace. They also taught that the work of salvation was completed by sanctification, wherein they were freed from the power of sin over their willful actions and thus made perfect in love. Early Methodists, such as Bishop Francis Asbury (1745–1816), developed their theology through sermons and hymns. Later, Methodist theology received more systematic

treatment by Daniel D. Whedon (1808–1885), who in 1856 became editor of the *Methodist Quarterly Review*.

Methodists’ and Baptists’ emphasis on religions experience made them particularly attractive for African Americans. Drawing on their own traditions of spiritual life, white evangelical theology, and a lively engagement with biblical story, African Americans fashioned a liberating theology expressed in song and sermon. By the nineteenth century, several theologians with formal education, including New England Congregationalist Lemuel Haynes (1753–1833) and African Methodist Episcopal bishop Daniel Alexander Payne (1811–1893), provided more systematic theologies.

Partially in response to Methodism and to Enlightenment sensibilities, Edwards’s many successors, including Samuel Hopkins (1721–1803) and Nathaniel W. Taylor (1786–1858), made various adjustments to his theology, creating several rival schools of theology. New York revivalist Charles G. Finney (1792–1875) gave the fullest play of any to human freedom and to reason. He affirmed humans’ full moral ability to repent and accept the gospel. Most distinctively the Oberlin theology, so called because he became president of Oberlin College in 1835, taught perfectionism. Finney taught that everyone had the natural ability to be perfect. Unlike Wesleyans, he did not describe perfection as work of grace. The Oberlin perfectionist teachings influenced social reform movements by catalyzing “ultraist” positions, such as abolition as opposed to mere antislavery and total abstinence as opposed to temperance. It would also catalyze a number of later holiness movements such as the “higher Christian life” promoted by Presbyterian William E. Broadman (1810–1868).

Phoebe Palmer (1807–1874) of New York City reshaped the Wesleyan doctrine of holiness in a related fashion. In *The Way of Holiness* (1843), she maintained that an act of surrender to God and faith in the Bible’s promises were sufficient for sanctification. Christians did not need to search their inner experience for confirmation; nor did they need to wait to see evidence of their sanctification in their lives.

Christians’ embrace of reason was demonstrated in many works in a long-standing evidentialist tradition that presented rational evidence to confirm the truth and uniqueness of biblical revelation. Important works included *The Reasonableness of Christianity* (1732) by evangelical Presbyterian Jonathan Dickinson (1688–1747) and *Principles of Natural and Revealed Religion* (1815) by Samuel Stanhope Smith (1751–1819) of Princeton. *Evidences for the Genuineness of the Gospels* (1837) by Unitarian Harvard professor Andrews Norton

(1786–1853) demonstrated that the authorship of such works was not limited to evangelicals.

Millennialism, a focus on the consummation of history in the return of Christ, was frequently an important theme in evangelical theology. Some, including Baptist preacher William Miller (1782–1849), sought to rationally schematize the apocalyptic books of Daniel and Revelation to determine the year of Christ's return. Miller initially determined Christ would return around 1843. When his expectations were not fulfilled, he abandoned eschatological prediction. Others, however, including Ellen Gould White (1827–1915), offered alternative interpretations, developing an Adventist tradition of theology. Similar eschatological calculations in the late nineteenth century by Charles Taze Russell (1852–1916) and subsequent reinterpretations yielded Jehovah's Witnesses' distinctive theology.

Rational readings of scripture also shaped the Restorationist tradition that sought to achieve Christian unity by restoring the true church. Alexander Campbell (1788–1866) of western Pennsylvania became its most prominent theologian. Rejecting the complexities of his native Calvinism, he taught that the Bible was a simple book and that the New Testament provided the constitution for the church. Because his reading of scripture yielded a number of distinctive teachings such as a weekly Lord's Supper and baptism upon profession of faith for remission of sins, his emphasis on primitivism conflicted with his goal of Christian unity, a tension that eventually divided the movement.

Of all of the common sense theologies, perhaps none was more important for later developments than the conservative Calvinist tradition developed at Princeton Theological Seminary. Its major statement, Charles Hodge's *Systematic Theology*, was published near the end of his career in 1871–1873. Hodge (1797–1878) presented a thoroughly Baconian approach to theology, defining the Bible as "a book of facts" and theology as the systemization of these facts and inductions based upon them. The Princeton theology provided an important source for twentieth-century fundamentalism.

Southern Calvinists such as James Henley Thornwell (1812–1862) shared many of Hodge's teachings but also taught that the church was a supernatural institution that had to insulate itself from the state. This doctrine of the spirituality of the church emerged in opposition to antislavery and became a staple of southern Christianity.

Roman Catholic leaders in the early United States also embraced Enlightenment rationalism. Much of their writing was apologetic, making the case for Catholicism in the

American republic. Bishops John Carroll (1735–1815) and John England (1786–1842) taught that an individual should be persuaded of his or her beliefs by rational conviction. They also argued that the church should function in a way that was suitable to the republican government of the nation and argued for a larger role for the laity in the church.

Romanticism

In the 1830s, varieties of Romanticism began to reshape religious thought. Romantic thinkers frequently had a historical orientation. They were aware that all things were organically connected and developed through time. Often they sought to maintain continuity with this developing tradition, not to transcend it through reform. The organic theme also manifested in an emphasis on the continuity between humans and the divine, sometimes through pantheistic mysticism and other times through the Christian doctrine of the incarnation. Romantic theologians also emphasized the authority of emotion and subjective experience over logical reason. Appealing to subjective experience, many emphasized the authority of the individual, but others, focusing on organic connection, appealed to the bonds of community.

Perhaps the most famous school of romantic religious thought was transcendentalism. In his *Divinity School Address* (1838), Ralph Waldo Emerson (1803–1882) advised that the proof of religious truth could not be received through biblical evidence or logic but must proceed from a firsthand intuition. Appropriating many sources, including Hindu and Buddhist texts, Emerson abandoned Christianity's personal God. He advised his audience not to worship Jesus but to seek to be like him through communion with nature and following intuition. While Emerson had left his Unitarian pulpit in 1832, Theodore Parker (1810–1860) remained a preacher in Boston. In his 1841 "Discourse of the Transient and the Permanent in Christianity," he argued that almost all the forms and doctrines of historical Christianity had proved transient. The permanent essence of Christianity was simply the experience of the love of God and neighbor. For Emerson, Parker, and other transcendentalists, religious truth was beyond all form. The transcendentalist movement's emphasis on the testimony of the inner spirit also enabled women such as Margaret Fuller (1810–1850) to become leaders in American religious thought.

While romanticism led transcendentalists beyond Unitarianism, it saved Horace Bushnell (1802–1876) from becoming one. In *Christian Nurture* (1847, 1861), Bushnell, a

Congregationalist in Hartford, Connecticut, reflected an organic emphasis in arguing that children could and should be nurtured in the home to be Christians instead of being dramatically converted in a revival. In his "Preliminary Dissertation on Language" (1848), he argued that the function of religious language was not to present propositions but to motivate and empower. This understanding of language enabled him to remain a trinitarian despite his rational doubts about the doctrine. It also undergirded his essay on "Christian Comprehensiveness" (1848), which maintained that theologians should recognize the partial truths articulated in opposing theologies and synthesize them. These ideas made Bushnell the founder of liberal Protestant theology in America.

Like Bushnell, John Williamson Nevin (1803–1886) in *The Anxious Bench* (1843) provided a critique of revivalism, but whereas Bushnell emphasized nurture within the family, Nevin focused on the church. Philip Schaff (1819–1893) joined Nevin on the faculty of the German Reformed seminary at Mercersburg the following year. His *The Principle of Protestantism* (1845) argued that Protestantism had become too rationalist and sectarian; it needed to be corrected by Catholicism's historic foundations. Nevin's *The Mystical Presence* (1846) further developed the theme by appealing to John Calvin in arguing for a high theology of Christ's presence in the Lord's Supper. Nevin also presented the church as the continuation of God's incarnation in Christ. Nevin and Schaff's Mercersburg theology resonated with some, but generated much opposition. Nevin retired from theological debate, and Schaff moved to Union Theological Seminary in New York, where he would found the study of church history in the United States and become a major proponent of ecumenism.

Among Lutherans and Episcopalians, critiques of evangelicalism and rationalism held more sway. When Samuel S. Schmucker (1799–1873) proposed altering historical Lutheran confessions to advance Protestant unity in 1855, Charles P. Krauth (1823–1883) led a substantial counter-movement. He presented the Reformation not as a radical movement but as a dialectic between conservatism and progressivism. He also stressed Lutheranism's continuity with Catholicism. Many Episcopalians also articulated an identity between Protestantism and Roman Catholicism. Their denomination was defined not by theological confession but instead by a common liturgy and polity. The Anglo-Catholic or Tractarian movement that took root in America in the 1840s articulated a Catholic theology and ritual. While this did not dominate the denomination, it spread the romantic

themes of sacramental reality and historical continuity more widely within the denomination. Novelist Harriet Beecher Stowe (1811–1896) was among the many whose romanticism led them from Calvinism to the Episcopal Church. In *The Minister's Wooing* (1859) and other works, she presented an incarnational theology that emphasized the importance of aesthetic aids to the religious life.

Among Roman Catholics, romanticism shaped the historically oriented apologetics offered by bishops John Hughes (1797–1864) and Martin John Spalding (1810–1872) in the 1840s. It also shaped the career of Orestes Brownson (1803–1876) and Isaac Hecker (1819–1888), Protestants whose journey in romantic thought led them from transcendentalism to Roman Catholicism. For Brownson, the theme of life by communion became central. He came to regard the Catholic Church as the continuation of the incarnation of Christ and thus the means by which one entered into communion with Jesus' mediatorial life.

The distinctive theology that developed from Joseph Smith (1805–1844), the Mormon prophet, resonated with many movements, including the romantic emphasis on the church and organic continuity. Smith's first revelation in 1820 informed him that the true church would be restored through him. In the Book of Mormon (published 1830), many found clear teachings on disputed questions including baptism and salvation. Smith's subsequent revelations led the Church of Jesus Christ of Latter-day Saints to restore not only New Testament practices but also Old Testament institutions such as the priesthood. The romantic emphasis on the continuity between God and humans also resonated with Smith's teachings about the postmortem progress of humans to greater degrees of glory.

Harmonialism or Metaphysical Religion

Romantic emphasis on the correspondence of the visible and invisible worlds shaped various forms of harmonialism or metaphysical religion. Among the many influenced by the eighteenth-century mystic Emmanuel Swedenborg (1688–1772) was Andrew Jackson Davis (1826–1910), a leading proponent of spiritualism and author of *The Principles of Nature* (1847). Spiritualists contacted the dead and other spirits in séances, but more fundamentally, they affirmed that the phenomenal world was a manifestation of a unified spiritual reality in which individuals could achieve a more advanced state.

Theosophy articulated similar themes. Led by Helena Petrovna Blavatsky (1831–1891), author of *Isis Unveiled*

(1877), this movement drew on the teachings of many religions to affirm that each person is a part of God and that through wisdom and various disciplines, he or she can progress through multiple rebirths to perfection. Many Americans first encountered Hindu, Buddhist, and Daoist thought through theosophy, but its influence faded as these religions became more widely known.

Mary Baker Eddy (1821–1910) expressed harmonial ideas in what she termed Christian Science. In *Science and Health with Key to the Scriptures*, first published in 1875 and revised until 1906, she taught that the essence of Christ's teachings was that only mind really existed and that physical ailments could be healed through a proper state of faith and mind. Similar ideas, known as New Thought, shaped other movements, including Divine Science, Jewish Science, and the Unity School of Christianity. Begun in 1886 by Charles (1854–1948) and Myrtle Filmore (1845–1931), Unity affirmed that many different religious traditions taught that meditation and affirmative prayer developed receptivity of divine mind, or Christ consciousness, leading to health, peace, and union with Christ.

New Thought's emphasis on positive thinking was reconciled with mainstream Protestantism through the work of Norman Vincent Peale (1898–1993), especially *Power of Positive Thinking* (1952). This tradition was carried into the twenty-first century by Robert H. Schuller (1926–) and other popular television preachers. Peale's and Schuller's transformation of New Thought lacked an articulated metaphysics and an emphasis on physical healing. Instead it presented a pragmatic argument that positive thinking yielded worldly success, harmonious relationships, and peace of mind.

Modernism

In the mid-nineteenth century, developments in science and historical consciousness reshaped religious thought. Because they often ended in stalemate, with both sides making historical arguments about ancient slavery, debates over slavery demonstrated to many the inadequacy of applying a Baconian hermeneutic to scripture. Some evangelicals argued that some parts of the New Testament, such as those presenting a law of universal love, were more authoritative than others. Others stated that progressive revelation caused Christians to know that the Bible now condemned as sin what formerly it had not. This development of historical consciousness was further enhanced as German techniques of criticism revealed the history of the biblical text itself. Geological discoveries and the theory of evolution raised

further challenges to conventional religious thought and encouraged modernist perspectives.

The modernist religious thought that developed in the late nineteenth century was shaped by three themes: the accommodation of religious thought to modern culture, the conviction that God is immanent in and revealed through human culture, and the conviction that human culture is developing toward the Kingdom of God. These three characteristics were shared both by theologians who retained traditional beliefs such as Congregationalist theologian Theodore Thornton Munger (1830–1910), author of *The Freedom of Faith* (1883), and those whose abandonment of traditional beliefs put them on the margin of Christianity and Judaism, such as philosopher John Dewey (1859–1952).

In the *Pittsburgh Platform* (1885), drafted by Kaufmann Kohler (1843–1926), Reform Judaism adopted a concise statement of modernism. It affirmed the indwelling of God in humans and the continual spiritual and ethical progress of humanity toward the messianic age. For Kohler, the ethical monotheism of the Hebrew prophets was the heart of Judaism. Belief in biblical miracles and observance of ritual law was no longer meaningful and should be abandoned. Conservative Jews, led after 1902 by Solomon Schechter (1847–1915), found the abandonment of traditional law too radical and formed a rival movement. Informed by romanticism, they accepted the reality and necessity of historical adaptation but, like high-church Christian theologians, insisted continuity in practice was important to retain and that the authority to interpret scripture rested with the Jewish people as a whole.

Protestant modernism can be understood as consisting of four major schools. The most influential stemmed from German theologian Albrecht Ritschl (1822–1889). Many Americans studied with Ritschlians in Germany, including Presbyterian William Adams Brown (1865–1943), author of the popular textbook *Christian Theology in Outline* (1906). In Ritschlian thought, the essence of Christianity was ethical values. The school emphasized historical research into the person of Jesus and the values of his early followers. The central message of Christianity was the building up of society toward the Kingdom of God through sacrificial love. This theology strongly resonated with the activist character of American evangelicalism and was closely allied with movements for social reform, known as the Social Gospel. Walter Rauschenbusch (1861–1918), a Baptist historian and theologian, gave the Social Gospel its most important theological treatment, presenting the Kingdom of God as the central

theme in Jesus' preaching in *Christianity and the Social Crisis* (1907) and offering a social interpretation of Christian theology in *A Theology of the Social Gospel* (1917).

Others sought to supplement this emphasis on values with attention to religious experience and the spiritual life. In *Social Law in the Spiritual World* (1904) and other works, Quaker theologian Rufus Jones (1863–1948) emphasized the importance of mystical experience, the cultivation of the indwelling presence of God through prayer and meditation. Jones's popular works helped foster a renewed emphasis on worship and the spiritual and devotional life in many liberal Protestant churches and was echoed by others, including Congregationalist Willard Sperry (1882–1954) and Baptist Harry Emerson Fosdick (1878–1969).

A third variety of modernism was the personalism articulated by the Methodist faculty at Boston University. Borden Parker Browne (1847–1910), a philosopher, combined elements of the Methodist tradition with idealism, neo-Kantianism, biblical criticism, and romanticism to fashion a metaphysic that conceived of personality as ultimate. True and full personhood was found in God, revealed in Christ. Human fulfillment came from partaking of and realizing the potential of personhood made possible through Christ. Browne's tradition was continued by others at Boston including Albert Knudson (1873–1953), author of *The Doctrine of God* (1930) and *The Doctrine of Redemption* (1933). Knudson argued that only personality is ultimately real; all being is rooted in the activity of God, the divine personality. The core characteristic of human personality was freedom, which brought with it the potential for both virtue and sin. The most famous theologian in this tradition was Baptist civil rights leader Martin Luther King Jr. (1929–1968).

Protestant modernism's fourth stream sought to make theology an empirical science. Less influential in churches than the others, it extended beyond them to affect many prominent intellectuals. The radical empiricism and pragmatism of Harvard psychologist and philosopher William James (1842–1910) undergirded the approach. Radical empiricism rejected idealism, insisting that ideas be grounded in human experience. This included not only the senses but internal experiences, such as those James examined in *Varieties of Religious Experience* (1902). Pragmatism maintained that the meaning of ideas was determined by their practical consequences.

Although D. C. Macintosh (1877–1948) of Yale crafted an empirical theology that adhered closely to traditional evangelical doctrine, the effort to make theology an empirical

science usually departed farther from traditional Christian claims. This approach flourished among theologians at the University of Chicago. At the beginning of the twentieth century, their dominant method was sociohistorical. Rather than investing traditional Christian terminology with new meaning, Shailer Mathews (1863–1941) in *Faith of Modernism* (1924), for example, sought to express Christian affirmations in terms compatible with evolutionary theory, sociological analysis, and historical approaches to the Bible. Henry Nelson Weiman (1884–1975) went further in *Religious Experience and the Scientific Method* (1926) and later works in locating theological beliefs within a naturalistic view of reality and a scientific method. A similar approach stood beyond philosopher John Dewey's *A Common Faith* (1934), though Dewey departed from Christian theology in arguing that what was called God was the sum of social and natural forces advancing a unifying moral ideal.

Mordecai Kaplan (1881–1983) of Jewish Theological Seminary advanced a theology that partially paralleled Dewey's in his *Judaism as a Civilization* (1934). Kaplan, however, rejected naturalism and humanism as terms for his religious thought, speaking instead of transnaturalism. He also gave much more attention to the role of traditional texts and rituals but insisted that these should be understood in terms of how they functioned, not in terms of any unchanging meaning. Many of Kaplan's ideas, including his definition of Judaism as a civilization, not merely a nationality or a religion, had extensive influence throughout Judaism.

Americanism in Roman Catholic theology also reflected the modernist impulse. In a practical and nonsystematic way, Americanists, such as Bishop John Ireland (1838–1918), accepted an optimistic evolutionary view of history and affirmed the immanence of God in human culture. They also shared with Protestant modernists an interest in ecumenism and economic problems. Because God was at work both in the world and in the church, they taught that the church could not separate itself too much from society and affirmed American democracy as a product of the progress of Christian civilization. Conservatives such as Bishop Michael Corrigan (1839–1900) of New York criticized Americanists for being minimalistic in theology and chauvinistic in their view of culture and nation. Responding to a French edition of a biography of Isaac Hecker, Pope Leo XIII issued the encyclical *Testem Benevolentiae* in 1899 condemning propositions he associated with Americanism. Some Catholics espoused a more thoroughgoing modernism, embracing a historical critical approach to scripture and a teleological approach to

history that found the meaning of religious events in their results, not their origins. In 1907, the encyclical *Pascendi Dominici Gregis* condemned modernism, suppressing these tendencies in Catholic thought for several decades.

Fundamentalism

Protestant opposition to modernism consolidated in the 1910s as demonstrated by *The Fundamentals* (1911–1912), a widely distributed twelve-volume collection of essays. Central to fundamentalism was a commonsense hermeneutic. Many fundamentalists denounced evolutionary biology as a false science because it was theoretical, not based on induction from observed facts. Fundamentalists' conflict with modernists was most acute in denominations where both were numerous and where theology held a central place, such as northern Baptists and northern Presbyterians in the 1920s. Here fundamentalists insisted on four tenets that affirmed supernaturalism and were commonly denied by modernists. Two, the inerrancy of scripture and the miracles of Christ, including his birth and resurrection, stemmed directly from the propositional approach to scripture. The other two, Christ's substitutionary atonement and premillennial return, rejected the optimistic view of human nature inherent in modernists' focus on divine immanence. Many fundamentalists' premillennialism took the form of dispensationalism, which was expressed in Congregationalist C. I. Scofield's 1909 reference Bible. Among dispensationalism's central teachings was that true Christians would experience "the Rapture" and be suddenly removed from the earth before the onset of a period of tribulation that would precede Christ's return. This view was further popularized at the end of the century in the *Left Behind* novels by Tim LaHaye (1926–) and Jerry Jenkins (1949–).

Fundamentalists lost their battle for control of major denominations because conservatives who held similar views were unwilling to purge modernists from the denominations. They continued, however, to be a powerful force in small denominations and through nondenominational ministries. In the 1940s a number of fundamentalist leaders led a reconsideration of the movement's theology and its engagement with the wider culture. They shed the fundamentalist label, simply calling themselves evangelicals. Carl Henry's *The Uneasy Conscience of Modern Fundamentalism* (1947) made him the major theologian of the movement. Henry (1913–2003) critiqued both fundamentalists and liberals for their anti-intellectualism and insisted that scripture was propositional, verbally inspired, and inerrant. He developed a

strongly rationalistic theology on this basis in the seven volumes of *God, Revelation, and Authority* (1976–1984).

Articulating a workable doctrine of biblical inerrancy was a major concern of evangelical theologians. Henry insisted on a strong doctrine of inerrancy: that scripture was without error and that it provided propositional truth. Others such as Bernard Ramm (1916–1992) and Donald Bloesch (1928–) argued that the facts of scripture required modifications to this claim. They either redefined inerrancy or embraced terms such as "infallibility," distinguishing between the letter of scripture and the truths that it intended to teach.

While theologians rooted in the broad Reformed tradition held commanding positions in the most visible institutions of evangelical academic theology, they by no means represented all evangelicals. Large numbers were shaped by Wesleyan theologies that placed more emphasis on the experience of the Holy Spirit and on the practice of holiness through personal behavior and social reform. Since the beginning of the twentieth century, a steadily growing number were Pentecostals or Charismatics who emphasized the importance of gifts of the Holy Spirit, including speaking in tongues and healing. These gifts generated a number of theological controversies among both liberal and conservative Protestants.

Neo-Orthodoxy and Tradition

The movement best known as neo-orthodoxy offered an internal criticism of liberal Protestantism. Also termed "Christian realism" or "dialectical theology," it was defined by its criticism of liberalism's focus upon the immanence of God, high estimation of human morality, and faith in historical progress. Without affirming biblical inerrancy, neo-orthodoxy placed a new emphasis upon the Bible, the transcendence of God, the nature of the church, and theology *per se* (as opposed to yielding religious authority to social sciences).

The brothers Reinhold (1892–1971) and H. Richard Niebuhr (1894–1962) and the German émigré Paul Tillich (1886–1965) led the movement in the United States. *Moral Man and Immoral Society* (1932) was Reinhold's manifesto, *Nature and Destiny of Man* (1941–1943) his most systematic statement. Niebuhr's estimation of the human condition was that even the best human endeavors were limited by their historical situation and therefore by self-interest. Because of this pervasive lack of perfection, he associated his position with Augustine's doctrine of original sin. Similarly, Richard's works, including *The Meaning of Revelation* (1941) and *Christ*

and Culture (1951), contrasted the absoluteness of God with the culturally conditioned character of all theology. In various works including *Systematic Theology* (1951–1963), Tillich advanced a method of correlation where the message of the Bible was placed in conversation with elements of depth in human culture; theology emerged from this dialectical process. While neo-orthodox theologians saw the Bible as conveying religious truth in poetic language, they emphasized the importance of the study of scripture and historic Christian theology. They strongly supported the growing ecumenical movement and the view that progress in church unity would come not from ignoring historic disputes but by learning from contrasting views.

Mid-twentieth-century Jewish theology also reflected a reaffirmation of God's transcendence and the importance of tradition. Reform Jewish theologian Samuel S. Cohon (1888–1959) argued that all religion stemmed from the experience of the holy but that this was expressed in forms and symbols distinctive to each religion. As the primary author of the *Columbus Platform* (1937), Cohon led the reaffirmation of tradition in Reform Judaism. Theologian Will Herberg (1901–1977) self-consciously echoed Reinhold Niebuhr's themes. With Abraham Joshua Heschel (1907–1972) and Orthodox leader Joseph B. Soloveitchik (1903–1993), he began his theology with questions about the meaning of human life and Jewish existence. Writing primarily after World War II, these existentialists acknowledged the selfishness and disorder that characterized human life and focused on humans' relationship with God. Like neo-orthodox theologians, they drew on the resources of their own religious tradition including scripture, Hasidic wisdom, and Jewish law.

In Catholic theology, Neo-Thomism and the *nouvelle théologie* shared neo-orthodoxy's orientation toward tradition. Unlike neo-orthodoxy, however, the retrieval of the thought of Thomas Aquinas (1225–1274) was optimistic about human nature. It provided a distinctly Catholic intellectual tradition as Catholics became increasingly assimilated into American society. Some of its most significant developments came in social thought, including John Ryan's (1892–1945) arguments in *A Living Wage* (1906) and John Courtney Murray's (1904–1967) ideas expressed in the Second Vatican Council's affirmation of religious liberty in 1965. While Neo-Thomists tended to emphasize unchanging principles, the *nouvelle théologie* focused on *ressourcement*, research in historical theology, particularly on the early church, that yielded principles that were then adapted to current historical situations.

Strongest in Europe, this theology's primary manifestation in the United States was the liturgical movement begun in the 1920s under Benedictine Virgil Michel (1890–1938), but the *nouvelle théologie* paved the way for many of the changes in Catholicism that stemmed from Vatican II.

Postmodern Diversity

While the meaning of its documents is debated, the Second Vatican Council (1962–1965) substantially redirected Catholic thought and with it other traditions as well, especially regarding the church, worship, and scripture. It opened Catholic theology to engagement with science, historical research, culture, and other religious communities. Catholics, Protestants, and Orthodox began to do theology together. Important advances in ecumenical theology included *Baptism, Eucharist and Ministry* (1982) and the *Joint Decree on the Doctrine of Justification* (1999). In American religious thought, Catholics soon exercised a leading role in ecclesiology, liturgy, and ethics.

The council also articulated a new posture toward other religions, especially Judaism, stating that Jews should not be viewed as rejected by God. As the Holocaust became a major subject of reflection in the 1970s, many Christians have sought to articulate a theology that eliminates the teaching that Christianity superseded Judaism, affirming instead God's eternal covenant with Jews. For its part, Jewish thought has generated a wide spectrum of responses to the Holocaust ranging from Richard Rubenstein's (1924–) affirmation that God died at Auschwitz to Emil Fackenheim's (1916–2003) contrary affirmation that God is still present in human history. Perhaps the most prominent reaction has been an increased emphasis on Hebrew language and traditional practices in worship.

Globalization, and the change of immigration laws in 1965, has also led to a larger place for Asian religions in America. Buddhism has had the broadest impact, in part because of the focus on meditation and absence of theological claims in many of its interpretations. Many Jewish and Christian thinkers have sought to integrate Buddhist ideas into their own thought, including perhaps most famously the Trappist monk Thomas Merton (1915–1968). Many Buddhist writers have developed large audiences, including, in the mid-twentieth century, Japanese layman D. T. Suzuki (1870–1966) and, in more recent years, the fourteenth Dalai Lama (1935–) and Thich Nhat Hanh (1926–), a Vietnamese Zen monk. Hindu and Daoist thought have also had popular resonance in America. In addition to their traditional

expressions, Asian thought has influenced many varieties of New Age religion that emphasize the importance of a personal quest for authentic religious experience; healing; and a holistic, often monistic approach to understanding human existence.

Earlier in the twentieth century, the Noble Drew Ali (1886–1929) and Elijah Muhammad (1897–1975) offered heterodox forms of Islam that spoke to African Americans' experience of poverty and discrimination in the urban North. They drew on various esoteric traditions as well as the history of Islam in presenting a redemptive black nationalism. Since the 1979 Iranian revolution, the prominent role of Islam in international affairs has made the nature of Islam and its relationship to American democracy a major subject of debate among both Muslims and non-Muslims.

Since the 1960s, awareness that all religious ideas are historically conditioned frequently has been wed to an awareness of how ideas are used to oppress. This is the basis of a variety of liberation theologies that emphasize the importance of the unique perspectives of oppressed or marginal groups and of crafting theologies that empower them. These have predecessors in American history such as Elizabeth Cady Stanton's (1815–1902) *Women's Bible* (1895) and Henry McNeal Turner's (1834–1915) 1898 claim that "God is a Negro," but amid America's increasing diversity and the civil rights movement, such theologies became especially prominent. In *Black Theology and Black Power* (1969), James Cone (1938–) drew largely on white neo-orthodox theologians to make the case for a theology that would empower African Americans. In later books, such as *The Spiritual and the Blues* (1972), he turned to the African American community as a source for his theology, an approach that has been followed by many others. Since the 1970s, North American theology has been substantially shaped by Latin American liberation theology and has attended to many different cultural perspectives ranging from Celtic to Native American to Asian.

Several of the leading voices in feminist theology came from the Roman Catholic tradition, including Mary Daly (1928–), who moved beyond the Christian tradition, and Rosemary Radford Ruether (1936–), author of *Sexism and God-Talk* (1984), who stayed within it. Feminist theology identified patriarchy as a principal problem with previous theological reflection. It insisted that male images for God entailed a hierarchical oppression of women and that female language for God yielded a more authentic, empowering, and egalitarian view of the relationship between the human and the divine. By the 1980s, the feminist critique of

religious language was reflected in the use of inclusive language in many hymnals, liturgies, and Bible translations. Female African American theologians such as Jacquelyn Grant (1948–) found the need to claim their own distinct voice in religious thought, separating themselves from white feminists, advancing instead what they called Womanist theology. Women from other ethnic backgrounds have followed the Womanist example, yielding *mujerista* theology and Asian women's liberation theology, among others.

Because of their emphasis on the particular context of theological reflection, all these forms of theology may be considered postmodern. A similar emphasis on the contextual character of language also shapes postliberal theology. It stems from the work of Yale professors Hans Frei (1922–1988), author of *The Eclipse of Biblical Narrative* (1974), and George Lindbeck (1923–), author of *The Nature of Doctrine* (1984). Shaped in part by cultural anthropology, the movement emphasizes the role of narrative in conveying theological truth and the importance of culture in providing the context for theological expression. Some evangelical theologians such as Gabriel Fackre (1926–) have welcomed the postliberal approach as a means past liberal and evangelical debates over the nature of biblical revelation. An implication of this theology as developed by ethicists such as Stanley Hauerwas (1940–) is that religious thought must be grounded in a particular community that is defined by practices. This led Hauerwas to the polemical claim that Christian theologians cannot formulate ethics for a secular society, as for example the Niebuhrs did. The postliberal approach has been extended into Jewish theology in the work of Peter Ochs (1950–).

A postmodern historical consciousness also informs other approaches. David Tracy (1939–), a Catholic theologian at the University of Chicago, was among those who emphasize that the task of the theologian was to engage in "critical correlation" between the classic texts of the Christian tradition and the ordinary experience of the secular world. His theology attended to the importance of hermeneutics, arguing that a text could have multiple meanings and that theologians must be prepared to live with plurality and ambiguity. Another postmodern development in theology is represented by the work of Canadian Catholic Charles Taylor (1931–), who has described his project as deconstructionist a/theology that acknowledges the inability of theology rooted in philosophy to describe God and instead follows Tillich in turning to the diverse experiences of God in culture as means to describe God.

At the beginning of the twenty-first century, many evangelical theologians argued for a postconservative evangelical theology, one open to revising theology to more accurately express biblical teachings in the postmodern intellectual world. Among the leaders in this effort were theologians Stanley Grenz (1950–2005) and Clark Pinnock (1937–) and popular preacher and author Brian McLaren (1956–). Pinnock broke with the Reformed approach that dominated much of evangelical theology and embraced a more Arminian theology and the “open view of God,” which argued that the Bible did not support the classic view of God’s omniscience. Instead the exact shape of the future was open, shaped by the interaction of God and humans.

One of the most influential forms of liberal Protestant theology had reached a similar conclusion decades earlier. Process theology was developed in the mid-twentieth century by Charles Hartshorne (1897–2000) of the University of Chicago from the process philosophy of Alfred North Whitehead (1861–1947). Understanding the fundamental metaphysical reality as becoming, rather than being, Hartshorne argued against classical theism that God was the prime example not of being but of becoming. Accordingly he rejected the classical doctrine of omniscience, maintaining instead that at any given time God knows all actualities and potentialities, but also that humans participate in shaping the future. God sets the conditions for finite existence and freedom and accepts the results of that freedom. In the 1960s, John Cobb (1925–) became the most influential process theologian. He engaged with a wide variety of contemporary issues, particularly ecology. Here he emphasized that God, humans, and all entities are interconnected and criticized a narrow focus on the human condition, instead of on the whole environment, as narcissistic anthropomorphism.

As the frequency of the prefix *post-* in the description of contemporary religious thought suggests, many new developments defined themselves in part in opposition to the various religious responses to the rationalism of the Enlightenment. A new era in religious thought began in the 1960s. In this era, however, practically every tradition and school of thought present in American history has maintained its voice. In the twenty-first century, this diversity will probably only increase as ecology, sexuality, various postmodern philosophies, and the interchange between religions play an increasingly important role in religious thought.

Religious Thought: African American

African American religious thought pertains not only to what scholars have written about black religion but also the phenomenon of black religion itself. Therefore it can be thought of as situated at three different sites: (1) the actuality or phenomenon of African American religion, (2) African American cultural expressions that contain religious signification, and (3) the reflection upon these aforementioned sites by black scholars. The first site is amenable to a history of religions approach and refers to African Americans engaging in whatever activity draws upon their relation to the divine to resist dehumanization. The second site is amenable to the disciplines of black literature and African American art and refers to all the art, poetry, literature, music, and dance genres African Americans improvised and created to articulate the meaning they gleaned from the oppressive quality of their lives. The third site is amenable to the work of black theologians and refers to, among other things, both descriptions and interpretations of the African American religious history and texts. J. Deotis Roberts advocated for black theologians to operate at all three sites in *Black Theology in Dialogue* (1987); and recently Matthew V. Johnson, in *The Tragic Vision of African American Religion* (2010), observed that black theologians often confuse prescription or description of the black religious experience in their writings. Howard Thurman is one of the best examples of writings that model a way of allowing interpretation to arise organically from one's description of religious experience (*Jesus and the Disinherited*, 1949; and *The Negro Spiritual Speaks of Life and Death*, 1947). African American religious thought is presently framed by Charles H. Long at one end of the spectrum and James Cone at the other, with Womanist scholarship somewhere in between the two. One problem in African American religious thought is that of appropriately connecting description and interpretation with prescription, which Long and Cone respectively represent.

Conceptual Overview

Charles H. Long, the author of *Significations: Signs, Symbols and Images in the Interpretation of Religion*, is a religious historian

who regards "religion" chiefly as a mode of orientation for people and societies. Long insists upon raising the question of the fundamental relationship between what we term "thought" and what we term "religious." For Long, African American religious thought entails not only historical description but hermeneutics wherein we must be conscious of "the problem of the constitution of the subject in the process of knowing." Under what conditions can "the interpreting subject . . . be pushed back to a level of consciousness commensurate with the forms that the subject wishes to understand" (p. 54). Unless we interrogate our topic at this fundamental level, we will lack clarity regarding the way we should approach our topic. This is particularly the case when religious thought is qualified by the term "African American." Due to his emphasis on human "exchange" as a part of religion, he also posits the temporal and geographical space of the Atlantic world as context of African American religious thought along with W. E. B. Du Bois, *Suppression of the Atlantic Slave Trade* (1896); and Eric Williams, *Capitalism and Slavery* (1944). African American religious thought arose in a situation wherein black bodies were thinking as they were being thought about. This thinking while being thought about was not mere cognition but one component of the religious experience blacks were undergoing during their journey and subsequent arrival to the Americas. The shock of Africans' enslavement evoked and necessitated new understandings of their relationship to one another, the gods, their newly encountered captors, and the space of their captivity (Olaudah Equiano, *Interesting Narrative of the Life of Olaudah Equiano*, 1813).

Africans and their religion were simultaneously configured within the framework of European and Euro-Americans' self-understanding that derived, among other things, from travel narratives, missionary accounts, and such new disciplines as anthropology and the history of religions (Noel, 2009). All this contributed to the "primitive" conception of peoples of African descent and underscores the epistemological issue Long raises of how African American religious thought can be made accessible to description and analysis when it remains "opaque" due to how it has been constituted in modernity. What Long means by "opaque" is that the categories of European Enlightenment reasoning have been unable to penetrate the veil of black religious experience to elucidate it according to the meaning it had for African Americans. Long therefore cautions black religious scholars against uncritically employing the categories of European Enlightenment discourse to describe themselves without realizing how they are already negatively signified in

those categories and the disciplines from which they arise. This in no way precludes the use of white sources in the study of black religion but pertains to the manner of their appropriation. African American religion and its thought can be understood as functioning to assert a black humanity that white categorizations attempt to negate.

The Nineteenth Century as the Temporal Site of American Religious Thought

Nineteenth-century African American texts are essential in the documentation of African American religion and its thought. In the Negro spirituals, slave narratives, abolitionist speeches, and sermons we can see two things operating simultaneously: one is a perception and voluntary participation in a transcendent reality, and the other is a perception and involuntary participation in the social reality of white oppression. We can see this in Nat Turner's Confession, wherein his visionary experiences led him inevitably to lead a slave rebellion. We can see this also operating, for example, in the Negro spiritual where the slaves sang, "O freedom over me, and before I'll be a slave I'll be buried in my grave and go home to my Lord and be free." This is not a doctrinal statement but an expression and invocation of the transcendent reality the slaves experienced as providing them the wherewithal to endure and resist the harsh realities of their bondage.

Religion functions to provide a people or society with a sense of orientation, and African American religious thought provides this for African Americans who, through the mechanisms of the slave trade, were completely disoriented upon their arrival in the Americas. Euro-Americans were also orienting themselves in the Americas through religion, but the form it took was one that equated Christianity with whiteness and legitimated the conquest of America's indigenous peoples and the enslavement of Africans. Hence, the Africans brought to the Americas had to discern in the religious discourse and symbols of their oppressors something that would help them resist dehumanization and, at minimum, survive (Albert Raboteau, *Slave Religion*, 1978). Various types of psychic response to their oppression gave rise to patterns of improvisation to meet the challenges of the present by drawing upon collective community resources from the past with an orientation toward an imagined future. In "Black Theology," Matthew V. Johnson analyzes black religious consciousness through the lens of "trauma" and the "tragic."

Their religious thought was excreted like perspiration—from their enslaved bodies and operated sometimes in terms

of admonition, sometimes as hope, and sometimes as the palpable sense of being sustained by unknown and unseen forces. This pertains to the "mystical" dimension of African American thought represented in figures like Sojourner Truth, Harriett Tubman, Rebecca Jackson, and Howard Thurman among others. American Americans' experience of the divine assisted in their orienting themselves in the new and unknown spatial and temporal realm of their captivity. In one slave narrative, an escaped slave wrote his former master from Canada and explained to him that his escape was instigated when "a kind but unseen spirit whispered to me to take up my pallet and walk." The depth of biblical theological insight in this indirect interpretation of Jesus' curing of the paralytic either in John's Gospel or the Synoptic Gospels is quite astounding and demonstrates an epistemological mode that is simultaneously mystical, theological, and political. It was an insight that oriented that slave toward freedom and inspired him to board the Underground Railroad.

Black existence was challenged to produce thought that did not conform to their enslavement and helped them overcome that condition; therefore, thought itself under the conditions of slavery was a form of resistance. The theologian Paul Tillich has argued in his *History of Christian Thought* (1968) that reason is instigated rather than opposed by mystical or religious experience. Thus, the slave's apprehension of the divine operated as a critique of the religious pretensions of their oppressors and social reality they, in most instances, could not escape. This is expressed in lyrics of the spiritual, "everybody talking about heaven ain't going there." Critical thinking is more implicit in the spirituals that use coded language to cloak the multiple meanings of their symbolism. But in the speeches and sermons of free blacks, the critical function of African American religious thought is much more explicit. Just to cite a few examples: David C. Walker's *Appeal* (1829), Frederick Douglass's "July Fourth Address" (1852), and Henry Highland Garnet's "Address to the Slaves of the United States of America" (1843) make a scathing analysis and attack on the hypocrisy of white American Protestantism and what Robert Bellah would later term as American "civil religion." Hence, although some texts exemplifying African American religious thought are devoid of social/political references, they still must be situated in a social/political context for their interpretation. Other texts almost devoid of explicit religious references can still be regarded as informed by African American religious sensibilities and aspirations.

Scholars have debated whether the black church and its thinking are conservative or progressive; tools of white oppression or instruments of black liberation. In many instances this simple dichotomization obfuscates the “religious” nature of the black church and its thought through the superimposition of political criteria upon data whose symbolism, as stated, is complex and multilayered. In *Black Religion and Black Radicalism* (1972), Gayraud Wilmore pointed out that the black church is simultaneously the most conservative and the most revolutionary institution in the African American community. Wilmore characterized the period after Reconstruction as one when the black church underwent “de-radicalization.” The general acceptance of this characterization has caused black religious scholars not to give sufficient attention to the period after slavery and through World War II. Thus, we witness much scholarship being confined to the mining of nineteenth-century texts for exemplars of agency and religious experience that can serve the needs of African Americans.

Some earlier historical/sociological and anthropological treatments of black religion are represented in Du Bois’s *Souls of Black Folk* and *The Negro Church* (both 1903). Later came Benjamin E. Mays and Joseph Nicholson’s *The Negro Church* (1933) and Carter G. Woodson’s *The History of the Negro Church* (1921); *Negro Orators and Their Orations* (1925); *The Mind of the Negro as Revealed in His Letters during the Crisis* (1927); *The Africa Background Outlined: Or Handbook for the Study of the Negro* (1939), which anticipates Herskovits’s work; and *The Works of Francis J. Grimke* (1942). These works are indispensable in the study of African American religious thought. Woodson’s works model a methodology that includes the study of black religious institutions, the sermons preached during the worship experience, and speeches delivered on nonreligious occasions that reveal the aspirations or hope of black people. Through the studies of these early scholars, African American religion appears as a phenomenon that encompasses the gamut of cultural elements from African traditional religion, African American folk religion, and the intellectual elements of political protest. Accounting for and determining the amount of weight to assign the above varied elements has been the main preoccupation of contemporary black religious scholars.

Black Theology

During the late 1960s, the black church was confronted with the challenge of reorienting itself in the face of black militancy and growing dissatisfaction, primarily among northern

and urban blacks, with the perceived pacifist and gradualist stance of Martin Luther King’s integrationist movement. The black consciousness movement had no consciously articulated program but drew upon nationalist and separatist themes that questioned the civil rights movement’s agenda of assimilation. James Cone’s work represents the Black Power impulse within the discipline of theology. His *Black Religion and Black Power* (1969) and *A Black Theology of Liberation* (1970) addressed the issue of whether African American Christians could legitimately embrace the Black Power movement without violating their Christian principles. It also addressed the criticism coming from some quarters in the black community that Christianity was “the white man’s religion” and a tool used in the colonization of black consciousness. For Cone, Jesus was black, and God’s Spirit was present in the black liberation struggle because God always identifies with and sides with the oppressed. Cone wrote in *A Black Theology of Liberation*, “The black theologian must reject any conception of God which stifles black self-determination by picturing God as a God of all peoples. Either God is identified with the oppressed to the point that their experience becomes God’s experience, or God is a God of racism. . . . The blackness of God means that God has made the oppressed condition God’s own condition” (pp. 63–64). In that work, Cone also clarified the method of black theology as one that used black history, culture, religious experience, as well as scripture and the Christian tradition as its sources. Cone did not, however, privilege any of these sources, and we see second-generation black theologians struggling to negotiate between the black experience and Christian scripture and tradition or between the method bequeathed by Schleiermacher and that of Karl Barth.

According to William R. Jones in *Is God a White Racist: A Preamble to Black Theology* (1998), Cone’s formulation placed black people in the unenviable position of having to be oppressed to be guaranteed God’s favor. Gayraud Wilmore addressed the issue of Christianity being detrimental to black liberation in his *Black Religion and Black Radicalism* (1972), which drew upon historical sources to document the role black religion played in the black liberation struggle from slavery to the present. In Wilmore’s text, Nat Turner, Denmark Vesey, and Gabriel Prosser were exemplary figures in African American Christianity before it became de-radicalized after Reconstruction. In a later edition of the same book, Wilmore included a chapter on traditional African religions to establish greater continuity between Africa and African American religion. The strength of Wilmore’s text is

that it provided a sense of historical continuity between the Black Power movement and the black church. The weakness of Wilmore's text is that its periodization of African American Christianity into a radical period during slavery and a nonradical period after slavery is historically incorrect and overly simplistic. Furthermore, it does not account for the role that religion played among the vast majority of blacks who did not rebel. However, notwithstanding this criticism, Wilmore's enduring legacy to African American religious scholarship was his turning black religious scholars' attention to the importance of grounding and verifying their insights and conclusions in historical sources.

Cone's enduring contribution to second- and third-generation black theology scholars was his enumeration of a methodology that made explicit the inclusion of black history, culture, and religious experience as legitimate sources for theological reflection and raising the issue of race to the forefront as the primary sin requiring an ethical and theological response from the church. All theologies not addressing the issue of race were dismissed by Cone as inherently racist and "white." In his *Liberation and Reconciliation: A Black Theology* (1971), *A Black Political Theology* (1975), and *Black Theology in Dialogue* (1987), J. Deotis Roberts emphasized the principle of reconciliation and adopted a much less strident stance than Cone's. However, there is much more to Roberts's opposition to Cone than this difference. Roberts saw the need for scholars of black theology to employ multidisciplinary approaches—particularly, phenomenology—to their discipline in order to not be trapped within the narrowness of Cone's method and construction. Roberts also makes room for black interreligious dialogue through an inclusive Christology that presumed God's presence in all creation and cultures. In so doing he was providing a bridge between the Christology of African Americans and the spiritualities of traditional African religions. Roberts criticizes Cone's theology for lacking a phenomenological component and Long's thought for lacking a prescriptive dimension. Therefore, a reappraisal of Roberts's work is definitely called for. In *The Identity Crisis in Black Theology* (1975), Cecil Cone made the observation that James Cone's black theology was in danger of not being able to articulate the "religious" nature of the black experience due to its privileging of the political over everything else. Cornel West admonished black theology for its lack of class analysis and advocated real change by combining black prophetic Christianity with Marxist social analysis to address the macro structural and class issues ignored by Cone's and others' race analysis. What

is exciting in West's writings is the way he brilliantly relates the black intellectual tradition to the broader tradition of Western intellectual history and the problem of modernity (as in *Prophecy and Deliverance*, 1988). Womanist theology critiqued black theology for not including an analysis of sexism in its critique. Black theology was in its own way experiencing the split between "cultural nationalists" and "revolutionary nationalists" that was occurring in the black studies departments of certain universities and between "integrationist" and "black separatist" thinking and strategies in the black community, and it continues in the twenty-first century to oscillate back and forth between these positions.

In *Practical Theology for Black Churches: Bridging Black Theology and African American Folk Religion* (2002), Dale P. Andrews pointed out that black theology has very little application to the pastoral issues confronting most black pastors, which require more from the pastor than attributing all the community's ills to white racism. What do we do when we are not rebelling or protesting in relation to problems that are invulnerable to these interventions? For example, Archie Smith Jr.'s *Navigating the Deep River: Spirituality in African American Families* (1997) draws upon metaphors from the spirituals and other resources from African American culture to model a mode of pastoral care and counseling that treats individuals and families without ignoring the oppressive structures that exacerbate and cause psychic dysfunction. It posits a therapeutic modality that draws upon the root metaphors of African American consciousness instead of imposing external and alienating categories from the psychotherapeutic profession. It is interesting that the title of Vincent Harding's book—*There Is a River: The Black Struggle for Freedom in America* (1981)—is similar. Harding uses the metaphor of "river" as a way to hold together the disparate elements of African American history both individual and collective, which allows the reader to discern African American religious thought as something connected to numerous events experienced uniquely as an African American "stream of consciousness" (to borrow from William James). Harding achieved the difficult task of rendering African American religious thought not as an abstraction but as a mode of African American reflection upon its own "temporality." This entailed entering deeply into the structure of African American historical experience so as to overcome the subject-object split constituting its opacity.

The above criticisms of black theology have caused its second generation to look more closely at slave narratives, Negro spirituals, and other aspects of African American

culture. For example, Dwight N. Hopkins and George C. L. Cummings edited *Cut Loose Your Stammering Tongue: Black Theology in the Slave Narratives* (1991), which grew out of conversations among the Black Theology Forum that met at the Graduate Theological Union in Berkeley, California, of which Will Coleman and James Noel were participants. Hopkins subsequently wrote *Shoes to Fit Our Feet: Sources for a Constructive Black Theology* (1993). Will Coleman broke ground in applying hermeneutics and literary theory to black speech in *Tribal Talk: Hermeneutics and African/American Ways of "Telling the Story"* (1999). Coleman demonstrated a method for accessing African American religious thought's depths by focusing on the seeming ordinariness of black speech—"reading between the lines," so to speak. This might be what Long would term the "signification of silence," which refers to the shared meanings that are a part of community's awareness that it does not articulate in speech but operates, nevertheless, as a reservoir and resource to be drawn upon for corporate survival. This notion also has implications for Womanist thought, which will be discussed later.

In his Introduction to *Conversations with God*, James Melvin Washington discussed the dangers and pitfalls of making black speech intelligible to the public. He harbored grave misgivings about compiling a collection of black prayers because he knew how embarrassing they would be to some readers. Moreover, Washington was opposed to those who, in observing certain expressions of black religion, would "subject African American's genuine spiritual struggles to ridicule, dismissing them as superstitious and escapist, or reducing them to various doctrinaire theories of group frustration" (p. xxiii). This comment should operate as a caution to those who deprecate the difficulty involved in interpreting African American religious texts and also those who deprecate their content for not conforming to the conventions of Enlightenment rationality. In *Why Lord? The Problem of Suffering and Evil in Black Theology* (1995), Anthony Pinn critiques Cone's position on the redemptive nature of black suffering as reinforcing black oppression. He advocates black humanism as more appropriate to the problem of black suffering. It "involves an increase in humanity's importance which makes impossible the location of a space for God" (p. 42).

African American Biblical Scholarship

Another exciting development in African American religious thought is occurring within the discipline of biblical studies, wherein a significant number of African American scholars have earned their doctorate degrees and begun to publish

exegetical works and biblical commentaries from an African American perspective. Because these scholars have been so prolific, space does not allow for my mentioning all the major figures in this field, and thus I must confine my discussion primarily to texts that represent collaborative efforts. Cain Hope Felder was the trailblazer in this regard with the publication of his *Troubling Biblical Waters: Race, Class & Family* (1989). He then edited *Stony the Road We Trod: African American Biblical Interpretation* (1991). One of the purposes of the first text was to refute the notion that black Africans had no relation to the Bible prior to the modern period. We should note that at the time of this writing, Gay L. Byron is engaged in groundbreaking research on Ethiopic biblical commentaries heretofore ignored by the biblical establishment. Another of the purposes of *Troubling Biblical Waters* was recovery and uplift. Felder pointed out that although African Americans have a rich tradition of biblical interpretation as evidenced in spirituals, slave narratives, and the authentic black preaching tradition, that tradition is now in danger of being eclipsed by black imitations of white evangelicals. Although Felder is critical of certain abuses of biblical interpretation in the black church, he affirms that "what is less known or acknowledged is the apparent correlation between aspects of the Black Church's experience and biblical usage and those of first-century Christians" (p. 80). In this acknowledgement, we can observe the tension among African American biblical scholars between, on one hand, their recognition of the genius of black folk religion and its preaching/biblical interpretation, which is closer to "orality" underlying the biblical text; and, on the other hand, the need to correct or upgrade that tradition with historical-critical exegetical methods. Whereas the former is particularistic, the latter is universalistic and is related to the debate among African American biblical scholars about whether the primary audience of their scholarship should be the black church or the academy or both. Allan Dwight Callahan deserves special mention due to the impact his groundbreaking *The Embassy of Onesimus: The Letter of Paul to Philemon* (1997) has had on all subsequent Philemon scholarship in the academy.

In *Stony the Road*, a host of African American biblical scholars addressed a wide range of practical, hermeneutical, and methodological issues, as in the chapters by Thomas Hoyt Jr., "Interpreting Biblical Scholarship for the Black Church"; William H. Meyers, "The Hermeneutical Dilemma of the African American Biblical Student"; Vincent L. Wimbury, "The Bible and African Americans: An Outline of an Interpretative Journey"; and Clarice J. Martin,

“The Haustafeln (Household Codes) in African American Biblical Interpretation: ‘Free Slaves’ and ‘Subordinate Women.’” Vincent Wimbush, who has moved away from the kind of historical-critical methodology valorized in theological institutions to head the Signifying Scriptures Institute at Claremont Graduate School, edited *Theorizing Scriptures: New Critical Orientations to a Cultural Phenomenon (Signifying (on) Scriptures)* (2008). The name of the institute Wimbush heads is inspired directly from Long’s *Significations*. On the other end of the spectrum are African American biblical scholars who have made a commitment to write for black pastors and laypersons. *True to Our Native Land: An African American New Testament Commentary* (2008), edited by Brian Blount, represents one such effort. In this text, different African American biblical scholars have written commentaries on each book in the New Testament and also introduction articles on things like “Slavery in the Early Church,” by Mitzi Smith. Other African American women contributors were Gay L. Byron, “James”; Stephanie Buchanan Crowder, “Luke”; Raquel St. Clair, “Womanist Biblical Interpretation”; and Monya A. Stubbs, “Philippians.” Raquel St. Clair’s *Call and Consequences: A Womanist Reading of Mark* (2008) is a scholarly work that is accessible to pastors and laypersons and will certainly become indispensable for Markan studies. Renita Weems’s *Just a Sister Away* (2005) represents a text that is accessible and widely read by laypeople as well as pastors. Demetrius K. Williams is an African American male whose book, *An End to This Strife: The Politics of Gender in African American Churches* (2004), lends full support to the Womanist agenda of inclusion.

Womanist Religious Thought

From the above, we can see that Womanist thought is not confined just to those doing theology. It can inform the perspective of any discipline: biblical studies, theology, ethics, pastoral psychology, spirituality, and so forth. Like their black theology counterparts, Womanist scholars draw upon sources from slave narratives, spirituals, the blues, black poetry, and literature to pursue their project. The uniqueness to this approach is that these sources are interpreted from the perspective of African American women for the purpose of their liberation and that of the black community. It should also be said, however, that not all African American women designate themselves as Womanist. Cheryl Sanders, for example, does not describe herself as a Womanist because Alice Walker’s definition of the term lacks Christian distinctiveness. The term “Womanist” stems from Alice Walker’s

novel *In Search of Our Mother’s Gardens* (1983). Some of the key figures doing Womanist theology are Katie Cannon, Emilie Townes, Jacqueline Grant, Delores Williams, Cheryl Townsend Gilkes, Kelly Brown Douglas, Renita Weems, Shawn Copeland, Clarice Martin, Francis Wood, Karen Baker-Fletcher, Jamie Phelps, Marcia Riggs, Cheryl Kirk-Duggan, and Linda Thomas, to name a few. It was instigated by African American women scholars’ frustration at being marginalized in both feminist theology and black theology due respectively to racism and sexism. White women have tended to universalize their experience to represent those of all women and have often shown little knowledge or interest in the perspectives and experiences of women of color. African American men doing black theology have written as if the concerns of black men automatically addressed those of black women. “Womanist” became the term that distinguished their project from both white females and black males. Only black women could interpret the neglected data of black women’s experience. In *White Women’s Christ, Black Women’s Jesus* (1989), Jacquelyn Grant defines Womanist theology, among other things, as involving black women reading and interpreting the Bible from their own experience. In *Sisters in the Wilderness* (1993), Dolores Williams did likewise. Much diversity exists within this common understanding. In *Power in the Blood? The Cross in the African American Religious Experience* (1998), Joanne Terrill describes how traditional Christian images function as potent and efficacious symbols of healing and transformation for black women and men. The epistemological and hermeneutical problems of doing any theology are addressed by Linda Thomas, who sees Womanist theology as the assertion of a unique epistemological modality entailing black women’s experience. Echoing Patricia Hill Collins’s *Black Feminist Thought: Knowledge, Consciousness and the Politics of Empowerment* (2000), Thomas raised the question of how knowledge is organized and by whom. In “Womanist Theology” she wrote, “Inclusive construction of knowledge denotes exploring sources that culturally may be vastly different from our own epistemological points of departure.” She advocates that Womanist scholars do “fieldwork” and include interviews of black women in different situations among their sources. There is a sense of meaning and mode of healing that occurs in numerous situations where black women gather without black males or white females being present. Although African American women enjoy a mode of knowing distinct from white women and African American males, the problematic of Womanist scholarship is—as in the case of black

theology—how it can be appropriately expressed through the conventions of scholarly discourse.

New Epistemologies

Barbara A. Holmes's work—*Race and the Cosmos* (2002), *Joy Unspeakable: Contemplative Practices of the Black Church* (2004), and *Liberation and the Cosmos: Conversations with the Elders* (2008)—represents one of several new epistemological orientations in African American religious thought. The epistemological issue Thomas raised in the above quote underscores the importance of the scholarship being done—mostly by black women—on non-Christian religions of the African diaspora that require not only an explication of different beliefs and ritual practices but possible different modes for apprehending the divine in its relationship with both humans and nature. Thomas is an anthropologist by discipline and is the author of *Under the Canopy: Ritual Process and Spiritual Resilience in South Africa* (1999). Such work promises huge dividends in helping black religious scholars working in other areas reappraise such things as healing, trance, revelation, spirit possession, and the whole concept of religion as exchange, to name just a few items. Zora Neal Hurston anticipated this project with her investigation of the trance phenomenon in *Tell My Horse: Voodoo and Life in Jamaica and Haiti* (1938). Pioneering work on dance and ritual was undertaken by Katherine Dunham in *Journey to Accompany* (1946), *The Dances of Haiti* (1947), and *Island Possessed* (1969). Other scholars building upon this foundation include Ericka Bourguignon (*Trance Dance*, 1968; and *Possession*, 1976), Sheila Walker (*Ceremonial Spirit Possession in Africa and Afro-America: Forms, Meanings and Functional Significance for Individual and Social Groups*, 1972), Karen McCarthy Brown (*Mama Lola: A Vodou Priestess in Brooklyn*, 1991), George Brandon (*Santeria from Africa to the New World; The Dead Sell Memories*, 1993), Joseph Murphy (*Working the Spirit: Ceremonies of the African Diaspora*, 1994), Rachael Harding (*A Refuge in Thunder: Candomble and Alternative Spaces of Blackness*, 2000), Jacob Olupona (*African Spirituality: Forms, Meanings, and Expressions*, 2000), Yvonne Chireau (*Black Magic: Religion and the African American Conjuring Tradition*, 2003), Dianne Stewart (*Three Eyes for the Journey: African Dimensions of the Jamaican Religious Experience*, 2004), Tracy Hucks (*Approaching the African God; History Textuality, and the Re-Ownership of Africa in the African American Yoruba Movement*, 2005), Jualynne Dodson (*Sacred Spaces: Religious Traditions in Oriente Cuba*, 2005), and Judy Rosenthal (*Possession, Ecstasy, & Law in Ewe Voodoo*, 1998).

Because many black religious scholars were trained as theologians, they suffer from the same limitation as their white counterparts in not being able to account for nature in their religious reflection as something that is revelatory and in which humans also participate through modes of interaction that are outside the Enlightenment scheme. The works of the scholars mentioned in this section are opening up new avenues for African American religious thought and putting it into a more global conversation that is not just ecumenical but also interreligious.

Conclusion

W. E. B. Du Bois's notion of "double-consciousness" is clearly evident in African American religious scholars' struggle to determine African American religious thought's site, audience, and proper mode of expression. Hopefully African American religious thought will help to overcome what Carter G. Woodson termed *The Mis-Education of the Negro* (1933) and the anti-intellectualism described by E. Franklin Frazier in *Black Bourgeoisie* (1997). The connection between the interpretative and constructive work of black theologians and the descriptive work of historians and sociologists will continue to be debated. African American religious scholars will also debate the connection between their writing and what most black religious folks actually think.

Religious Thought: Feminist

Feminist thought can broadly be defined as any thinking about the way in which a woman is situated in regard to her environment. This includes examination of what constitutes female/feminine identity, roles, thought, sexuality, behavior, and psychology with regard to theoretical, political, social,

and personal experience. Many definitions of feminist thought include examining inequalities as they exist between men and women and, more recently, along lines of class, race, and social orientation as they exist among women.

Though broken into various schools and genres, particularly in the wake of third wave feminism following the political, suffrage-based efforts associated with the first wave and the more unified sentiments of the second wave's sexual revolution, feminist thought in its entirety emerges forcefully in the domain of American religious life, largely because women in America have functioned in the religious sphere. The term *wave* has been incorporated into feminist vocabulary to define the historic phases of the feminist movement. Deemed as the appropriate descriptor of these phases, *wave* digresses from the traditional linear, often patriarchal means of approaching history and demonstrates the way in which these movements take a cumulative shift from one another, building on characteristics of the prior phase.

Thus the structure of feminist thought is intended to embody the spirit of its content, as feminine/female ways of knowing are sometimes articulated as circular, weblike, or concentric waves, distinct from what is generally recognized as the archetypal male/masculine way of knowing/thinking, as represented by patterns of linear progression or even a more phallogocentric model of rising action, climax, and denouement. The notion of the wave is often invoked as a means of speaking to the embodied and particularly fluid experiences of women, such as menstruation and childbirth. The metaphor of the wave as a measuring device of feminist thought is a key political symbol whose meaning and use were and are intentionally crafted to help deploy a feminist grammar through a central image. The importance of this foundational visual tool is critical to understanding how feminist thought reclaims rhetorical space and language with which to express its content in religious life.

Although early American feminist thought has been traced well before the suffragist movement of the late nineteenth century, it was this movement (1848–1920) that was seen as the pinnacle for first wave feminism and began the nationally recognized movement of women into the political and economic front. Building on this movement was second wave feminism, which emerged in the 1960s. While first wave feminism is characterized by its *de jure* approach to advocating for women's rights to citizenship and space in the political arena, the second wave of feminism is known to have seen more of a *de facto* approach, addressing both official and unofficial inequalities. Second wave feminists revised

the way in which women approached the political world with the hallmark phrase “the personal is the political.” Brandishing this phrase brought about an investigation of the ways in which the domestic, quieted lives of women should be examined and reinvented legally and socially. This wave mixed with the Vietnam War protests and the strides of the civil rights movement sweeping America, each of these bringing about a call to examine feminism as related to black women and the emergence of womanism, as critiques of feminism as a white woman’s operation took root.

By the last two decades of the twentieth century, these criticisms were melding into third wave feminism, which has seen a more amorphous pattern than first and second wave feminism, adopting an ethos of inclusion and diversity as integral to the definition of feminism. Third wave feminism has in many ways reacted against the “hardened feminist” ideals that are stereotypical of second wave feminism and has come to embrace several varieties of feminisms. Questions of female sexuality have taken the forefront in third wave feminist discussions, particularly as queer rights have become a feminist platform. The occupations of sex workers have been embraced by some third wave feminists as viable professions for females; simultaneously, conservative feminism has arisen, critiquing the second wave push for women to enter the workforce. Conservative feminism argues for the importance of family and home life for women and feminists. Additionally, out of third wave feminism, and particularly building on womanism, mestiza and postcolonial feminism have taken hold in the fluidity of this third wave, whose crest became distinct from the second wave generations especially during the last two decades of the twentieth century.

Finally, in the early years of the twenty-first century, the third wave of feminism began to meld loosely into postfeminism, a term generally adopted by people who identify with parts, or all, of the feminist movement but reject the term *feminist* as a viable label. Additionally, and perhaps of more interest in this context, some thinkers have identified the emergence of a nascent fourth wave both coinciding with and articulating distinct forms of thought from third wave feminism. Fourth wave feminism, whose birth is generally associated with the national trend following the events of September 11, 2001, of reexamining the role of religion and spirituality in both the personal and political lives of Americans, continues to evolve and gain momentum on the approach of the second decade of the twenty-first century. In keeping with the wave metaphor of feminist thought, it seems that the full swell of the fourth wave’s crest has yet to

be seen, just as its true impact and influence have yet to be felt and examined by American culture at large and feminist thinkers alike. Whereas previous periods of feminist thought, particularly during the second wave, saw calls for the wholesale rejection and abandonment of any religious traditions and ways of life at all based on or sympathetic toward patriarchal histories and practices, fourth wave thought recognizes the complex range of meanings available to women through religion, both old and new. Indeed, some analysts have argued that the only way that American women will be able to combine their religious experience/expression with their experiences as women is to abandon any allegiance to traditions associated with Christianity (whether Protestant, Roman Catholic, or Eastern Orthodox) and Judaism and to identify with a religious group or style that does not have a history on American soil for oppressing women. This fourth wave certainly acknowledges the detriments religion has caused to women historically, but it also understands that it is dismissive and reductive to ignore the spiritual/religious impulse that may be a significant part of women’s personhood and to condemn the vast majority of historically patriarchal religious traditions in which generations of women have participated and found great value and voice.

The interactions of each of these movements with various strands of religious thought shape, meld, and define types of religious feminisms, as well as challenge and, in some cases, reinforce religious doctrine. Religious thought has fallen in stride with each of these social movements, complicating and facilitating the emergence of a religious feminist thought, concurrent with shifting roles for women within the religious field. As the first and second wave of feminism saw the emergence of women into the public sphere, so some American denominations have seen women shift from their roles as leaders among small church groups to ordained clergy of denominations. Backlash from each of these feminist movements has also not left religious fields untouched as women in various religious communities may struggle for recognition in their congregations or even adopt more conservative roles in order to avoid the progressive strides of women’s leadership. Just as feminism has carved new and various roles for women in society, so women and men must negotiate the position of women and the feminine/divine within religious traditions.

From Early Feminist Religious Thought to First Wave Feminism

Although “feminism” as a political and social label was not formally adopted until the large-scale mobilization of the

women's liberation movement of the 1960s and 1970s, its predecessors and foremothers began paving the way for later, more galvanized efforts even during the colonial period. Because religious settings were one of women's few public arenas before industrialization and the women's rights movement in the late nineteenth century, most of what could be known as "feminist religious thought" in the time before a more codified women's movement can be found in the halls of churches, charity work, and mission work. A major divide between the domestic and public spheres, as well as social, economic, and religious pressure for women to remain within the domestic sphere, led women to find social and political expression primarily in religious settings.

During the seventeenth century, when the Puritan Good Wife served as the dominant social and religious model for women, figures such as Anne Hutchinson (1591–1643) frequently upset the traditional gender roles and politics, often through public expressions of religious devotion rather than committed displays and articulations of gender injustice. In the Puritan colony of Massachusetts Bay, Hutchinson, daughter of an Anglican minister, began holding weekly religious meetings in her home to study the Bible and discuss the Sunday sermons at length. What began as a small meeting of women soon morphed into a coeducational teaching opportunity for Hutchinson, who felt she was gifted by God to distinguish between true and false preachers and to expound on the sermon messages of her Puritan community. Community and church members became deeply embroiled over dissenting opinions about her actions, although the disagreements often regarded political and social arguments as much as theological differences.

The controversy extended over a lengthy period of time in which Hutchinson was often publicly summoned and criticized for her behavior and beliefs. She based her work on the centrality of experience in belief, which is how she justified her calling to teach in her home, as well as the more universal test of faith through conversion. The people who sided with Hutchinson articulated their views based more on faith and experience, while she charged the opposing members of the Bay community with focusing on works and legalistic regulations as expressions of faith. Because she based her arguments in scripture, it was difficult for her opponents to argue with her outside of her sowing dissension and surpassing her authority and roles as a woman.

The charges leveled at her took on an increasingly civil tone because although her detractors did not agree with her theologically, they found it difficult to articulate such

differences without also criticizing the scriptures as the source of her own arguments. Anne and the Hutchinson family were eventually banished from the Bay community and relocated to Rhode Island. As Susan Hill Lindley notes in *"You have Stept out of your Place,"* "Anne Hutchinson was not condemned solely because she was a woman, but her gender made her actions even more offensive, and the Puritan leadership drew far-reaching conclusions from the incident about women and their place" (p. 5). Hutchinson never identified herself as working explicitly or solely for women's rights, although she certainly raised this issue within her Puritan community. She probably would not have identified as a feminist in the modern sense, but she did pursue her theological arguments from a distinctly female perspective, and for this reason it is important to consider her impact on the development of feminist thought in America from within the colonial context.

The Great Awakening, with roots in the second quarter of the eighteenth century, saw a new generation of women's religious leadership amid the spirit of fervor and revival that brought colonial America to a new era of religious life. Most commonly associated with the itinerant and revolutionary preaching career of George Whitefield (1714–1770), the Great Awakening engendered a climate of religious zeal and emotional frenzy, one that quickly outgrew the traditional limits of ecclesiastical hierarchies and dogmatic orthodoxy. The spiritual emphasis of this period was on the personal religious experiences of individuals that served to define their socioreligious identities, which frequently ran counter to patterns of social and religious organization. The conversion of one's heart and inner transformation of the soul, rather than one's ecclesiastical affiliation, was paramount during the Great Awakening; human elements such as feelings and emotions were given priority over more legalistic religious considerations regarding a person's church membership. For these reasons women especially were able to push the boundaries of public participation and leadership in worship services and to establish a new tradition of religious witness.

Sarah Osborn (1714–1796) of Newport, Rhode Island, embodied well the energy and vitality of the Great Awakening and serves as a primary example of women's religious leadership of the time. Having largely rejected the sweeping Enlightenment emphasis on human reason and will, Osborn was a Calvinist who led a young women's religious society that met at her home for over fifty years. This Female Society provided women with a space and community for mutual

support and spiritual development and influenced the greater developments of her church's growth and response to the revivals of the Great Awakening. When the 1760s brought yet another wave of religious revivals to Osborn's community and region, she began teaching a group of African Americans during weekly Sunday meetings, although she was consistently careful not to lead male-only groups or appear more generally to assume leadership positions traditionally occupied by men. Not only did her meetings afford some African Americans the opportunity for more formal religious instruction and spiritual development than they may have had otherwise, but Osborn also fulfilled a role and needs from within her community to which no male leaders were attending. When met with criticism over her public leadership, she offered precisely this argument in her defense. Osborn and her Female Society also proved their worth to the Newport community when they helped facilitate the calling of Samuel Hopkins, protégé to the renowned Jonathan Edwards, to the pastorate of her congregation, the First Church of Newport.

A female religious leader of a succeeding generation, Frances Willard (1839–1898) made comparable strides in founding the Woman's Christian Temperance Union (WCTU) in 1873, using her religious standing as a platform for political and social reform. Founded in Evanston, Illinois, the WCTU was established as part of the prohibition movement. As the movement grew, WCTU members also focused on suffrage and the WCTU organized woman suffrage leaders, allowing women to become involved in American politics. Willard even went so far as to lobby for the "Home Protection" ballot, which claimed that women's moral superiority to men should afford these "citizen-mothers" a vote over their male counterparts. In a time period in which suffragists were viewed as radicals, the WCTU gave women a more accepted place for political expression and organization.

Despite these various feminist voices recognized in early religious traditions, feminist religious criticism did not gain popularity until the nineteenth century, with Elizabeth Cady Stanton's *The Women's Bible*. This scriptural commentary, a landmark publication in feminist biblical criticism (first published in 1895), focused on passages of the Christian Bible that were most harmful to women's social positions and realigned these texts to serve feminist interests. Stanton (1815–1902), for example, "interpreted the first creation story in Genesis, where God creates human beings in 'his' own image, male and female, as an indication that God was 'himself' both male and female" (*The Woman's Bible*). Drawing

from the strategies of her female predecessors, Stanton also utilized her religious position to advocate various social and political convictions.

Stanton is first and foremost a well-known forerunner of the American women's movement in the late nineteenth century and early twentieth century. One of her most notable female colleagues was Lucretia Coffin Mott (1793–1880), an American Quaker minister who is credited as one of the first American feminists. Mott and Stanton met at the International Anti-Slavery Convention in London and then organized the seminal Women's Rights Convention at Seneca Falls, New York, in 1848. The religious views of each of these women, including Mott's Quaker antislavery and anti-war doctrine and Stanton's challenge of conventional Christianity, influenced the tenor of the feminist movement in terms of political values and social platforms, platforms that carry into the second wave of the American feminist movement.

The Rise of Second and Third Wave Feminism

As second wave feminism has been marked by the phrase "the personal is the political," one can trace the ways in which personal religion becomes a matter of political discourse for feminist thinkers. Prominent feminist thinkers and activists of the second wave, such as Betty Friedan (1921–2006), Coretta Scott King (1927–2006), and Gloria Steinem (1934–), challenged the power structures of both society and religion and how political and religious leaders addressed the issues women confronted in their daily lives. While first wave feminism saw the Eighteenth Amendment grant women the right to vote, the second wave of feminism saw various legal actions, including *Roe v. Wade* and Title IX, but second wave feminism also saw a rise of spreading feminist ideals into the homes of America. Consciousness-raising groups became popular conduits of feminist thought during the second wave of the feminist movement. Reflective of earlier house church groups, consciousness-raising groups included gatherings of women discussing their personal lives and examining ways in which their lives behind closed doors, amid the privacy of family life, could be recast in light of emerging feminist values.

The sentiment of these consciousness-raising groups brought about a new consciousness as to the role of the feminine in conceptions of the divine. Although Elizabeth Cady Stanton had composed *The Woman's Bible* and raised questions as to the interactions of women with the divine,

the second wave of feminism saw thinkers such as Rosemary Radford Ruether (1936–), Mary Daly (1928–), and Elizabeth Schussler Fiorenza (1938–) raise issues of the identity of the divine as feminine. In seminal texts such as Daly's *God the Father: Towards a Philosophy of Women's Liberation* and Schussler Fiorenza's *In Memory of Her*, which reread the Bible and other religious texts, these women proposed alternative interpretations of traditional texts to look for the "lost" voices and presences of women; moreover, they questioned the nature of the divine and recataloged God, not as Father or as male, but rather as a genderless entity or, in some cases, as a feminine or androgynous entity. These scholars found support in various ancient spiritual traditions, some of which focus on the "goddess" or the divine as unsexed, as well as in other traditions that recognize a female divine.

In a similar vein, the second wave of feminism also encountered significant activism around the issue of inclusive language. Liturgical tools were modified in an effort to include women as equal congregant members, and androcentric language, such as *mankind*, has been altered to a more inclusive form, such as *humanity*. Several feminist scholars and thinkers have drawn on ancient goddess traditions to validate a linguistic shift toward inclusive language of the female within the divine. Some works, for example, Cynthia Eller's *The Myth of a Patriarchal Prehistory: Why an Invented Past Will Not Give Women a Future* (2000), argue that feminist scholars have belatedly placed a feminist reading on ancient, patriarchal traditions. Various other lines of thought and traditions, including Wicca, with the worship of the Triple Goddess, have been drawn on in feminist discussions as a means to validate the importance of the feminine to the divine. The duotheistic nature of Wicca in revering a complementary Goddess and God, similar to the Taoist philosophy of the yin and yang, allows for an example of the way in which the divine can be envisioned, and spoken of, as both masculine and feminine, or, in some cases, as feminine.

This idea of the female divine has extended into revisionist histories within the third wave with the exploration of various extracanonical biblical texts, including the "Gnostic gospels" and the Apocryphal Acts of the Apostles, analyzed by notable scholars such as Elaine Pagels (1943–) and Karen King (1954–). The gospel of Mary of Magdala has taken hold in pop culture as well as in academia. This gospel, as presented in the volume from Karen King and in other media, indicates a close relationship between Jesus and Mary Magdalene, as his "most-loved" disciple, and, in some cases, indicating a marital relationship between Jesus and Mary

Magdalene. While not formally adopted as sacred texts or revered on a similar level as canonical texts, these works do provide credence to some feminist claims by providing perspective to the historical and spiritual importance of women within a religious context. Women are now able to relate to sacred texts, such as the gospels, by understanding a historical context for women during the life of Jesus. Despite the widespread rejection of these texts by orthodox Christianity, these revisionist histories and scholarship seeking the presence of women in religious history have spread into other religious traditions.

Emergent Strands of Feminist Thought in the Second and Third Waves

As the second and third waves of feminism saw a greater awareness of class, race, and sexual orientation, there has been room for the establishment of various strands of feminist thought within American political, social, and religious life. These strands developed in both a reactionary and conciliatory capacity to mainstream American feminism. Various economic political and social factors, including the civil rights movement, globalization, and changes in mass media, have facilitated the timely emergence of these different types of feminist thought and, in turn, shaped the feminist movement itself.

Womanist Theology

Perhaps the first and loudest critique of mainstream American feminism, as a white woman's enterprise, arose from the civil rights movement and the emergence of black women into the political front. The term *womanism* came from the Pulitzer Prize-winning Alice Walker, author of *In Search of Our Mothers' Gardens: Womanist Prose* (1983). Although Walker coined the term in relation to the experience of black women, several other nonwhite theorists identify with *womanist*.

Womanist theology reflects on the position of black women in relation to the divine, much in the same way that other second wave feminists, including Mary Daly, reflect on the experience of women relating to a masculine deity. Notable figure Delores Williams writes about the way in which black women, beginning with slavery in the United States, related to the image of the suffering Christ. She claims that the way in which black women relate to this figure can both constrain and enable them in terms of becoming empowered individuals. While on one hand the women relate directly to the divine, on the other the women are

identifying with a suffering figure and so more willingly bear social injustice for the sake of family and other people.

American Muslim Feminist Thought

Muslim women's movements—generally aligned with post-colonial feminism, beginning with scholars such as Leila Ahmed (1940–), author of *Women and Gender in Islam* (1992)—set a trajectory of Muslim feminist thought, and have seen similar rereadings of the Qur'an and consideration of the place of women within Islam. Such scholars as Fatima Mernissi (1940–) have offered various interpretations of the Qur'an, Shari'a, and various hadith, with particular focus on issues such as child marriage, spousal relationships, and the meaning of the *hijab* in a feminist context. Several Muslim American feminist scholars have begun writing memoirs about their experiences as Muslim American women and finding their identity within American society. They have particularly begun to explore the position of Muslim women within America following the September 11, 2001, attacks on the World Trade Center and the Pentagon, as a renewed interest in Muslim Americans emerged. In 2005 in the United States, Imam Amina Wadud (1952–) became one of the first Muslim women to publicly lead prayer at the Episcopal Cathedral of St. John the Divine in New York City. She also delivered a Friday *khutbah* (sermon) in 1994 in Virginia, an action that has been largely unheard of for Muslim women to perform. These actions represent the complicated interface between the traditional roles of women in society and in religious communities and the emerging roles and access women have gained in America in the past century.

Third Wave Reclamation and Historical Revisionism

Catholic Feminist Thought

Alongside several mainstream Protestant denominations, the Catholic Church has been challenged with the question of female ordination. Owing to a traditionally male-dominated clerical hierarchy, various parties, including feminist theologians, clergy, and laypeople, have called the issue of female ordination into question before the papacy. In recent decades one of the initial statements against female ordination was issued in 1975 by Pope Paul VI (1897–1978), who expressed concern that the Church of England was considering ordaining women. He argued that women could not be ordained on the basis that Christ chose his apostles from among men. This argument of the nonadmissibility of female ordination

based on biblical standards has withheld in the dominant Catholic decision on the ordination of women. A number of priests, including Swiss priest Hans Küng (1928–), American priests Charles Curran (1934–) and Matthew Fox (1940–), and Sri Lankan priest Tissa Balasuriya (1924–), have argued against the papal stance of the Catholic Church and women.

In addition to these male advocates for female ordination, the Catholic Church has seen a large number of feminist scholars emerging from within the tradition. These scholars generally tend to sharply examine the male-dominant papal structure, the noninclusive language, and the more conservative politics of the Catholic Church, including its stance on gay marriage and family planning. Feminist theologians, among them Mary Daly, Elizabeth Schussler Fiorenza, Rosemary Radford Ruether (1936–), and Margaret Farley (1936–), have called into question the dominant idea of a male deity. Daly's *Beyond God the Father: Toward a Philosophy of Women's Liberation* (1973) and Elizabeth Schussler Fiorenza's *In Memory of Her* (1984) examine the way in which envisioning the divine as female, or genderless, can be empowering to women and spark a new line of thought within the Catholic Church. Schussler Fiorenza has proposed the term *kyriarchy* in her *But She Said: Feminist Practices of Biblical Interpretation* (1993) to indicate the complex pyramid structure of hierarchy feeding from the structure of the Catholic Church into daily lives of practitioners.

The debates surrounding the Catholic stance on women within the church and domestic life have led to an increase in the common phenomena of women opting to remain within the Catholic Church and of those opting to leave the Catholic Church. Some Catholic women, as well as other women of more conservative traditions, choose not to leave their religious backgrounds or traditions but rather to work from within these traditions to attempt to spark reform.

American Jewish Feminist Thought

As evidence of a more third and fourth wave feminist approach to religion, and specifically Judaism, the editors of *In Our Own Voices* included a piece of writing from American rabbi Elyse Goldstein entitled "Taking Back the Waters: A Feminist Re-appropriation of Mikva," in which she seeks to reclaim a practice once oppressively imposed on women as a joyful celebration of her Jewish womanhood. Goldstein considers *mikvah*, the ritual bath in which women fulfill the purification requirement expected of them following menstruation, one of the most challenging traditions for Jewish feminists to respond to, both as scholars and faith

practitioners. Goldstein herself offers a feminist reinterpretation of this ritual that is intended to remove or replace the elements many Jewish women find degrading.

Goldstein cites Leviticus 25 as prohibiting a woman who is menstruating from touching her husband or his possessions for seven days. Moreover, this prohibition is extended such that the woman's husband is strongly discouraged from sitting in the same places where she herself has rested. She discusses at length the far-reaching implications of this passage for Jewish women, including some local examples of women being severely limited from participating in religious rituals during menses. Some of Goldstein's most poignant and powerful statements, however, come when she exhorts fellow Jewish women to reclaim the ritual of *mikvah*.

Even though *mikvah* did not traditionally belong to women but was instead imposed on them, Goldstein asserts that Jewish women have a sort of divine right, and even responsibility, to reclaim the practice for their own. These women and others like them, she argues, have so little to their name in their own traditions that it would do no good for them to branch outside of a tradition that at least affords them a sense of purpose and identity in their lives. As she suggests, reclaiming the tradition of *mikvah* allows Jewish women to rewrite their history and even to create a new rhetorical, historical space for themselves. If they were to abandon their tradition entirely, they would have neither history nor heritage to reclaim and would have to begin from scratch and abdicate a religious legacy that undeniably played such an intimate role in their lives. Goldstein speaks of rebirth and new wisdom as concepts concerning *mikvah* that symbolize Jewish women's rebirth and new identity as both Jews and *as women*. Stripping the power of men from *mikvah* and reappropriating the practice allows Jewish women to pull the pendulum of power, confidence, autonomy, and identity back in their favor. Searching elsewhere for such validation would at best leave them somewhere in the middle, neither lost nor found in a non-Jewish/Christian tradition that would inevitably offer its own challenges to them as adherents.

Although such practices as *mikvah* are often not inherently oppressive but rather are utilized and manipulated by those adhering to oppressive religious and social ideologies, women such as Goldstein can urge reclamation and even revolutionize their traditionally oppressive religions by using that which they serve as the foundation for progression. In other words, though practices such as *mikvah* are not demeaning themselves and therefore do not necessarily need

to be abolished completely and abandoned, but rather the systems of thought behind such practices, Goldstein and those like her can effectively redefine *mikvah*, not as a tool for oppression and control but as a tool for women's expression and freedom.

Evangelical Feminism

Along with third and fourth wave feminist thought, the emergence of evangelical feminism as a particularly Christian form of feminist thought continues to expand its presence in evangelical communities today. As with many major third and fourth wave thinkers, articulation of critical theologies and ideologies emphasizes a more radical break with traditional religious/Christian thought. Such revisions of everything from basic religious grammars to major theological concepts about gender and the divine are intended to be as such, but they often leave little room for feminist thought to be developed under the auspices of traditional religion and traditional gender roles. In this way evangelical feminism encompasses efforts to identify with evangelical Christianity in such a way that the foundational theologies and doctrines are respected while the social constructions and organizations of evangelical culture are subject to critical inquiry.

Evangelical feminists nevertheless maintain an often tenuous relationship with the dominant evangelical culture, with large numbers of evangelical Christians rejecting any such revisionist thought simply because of its nominal and political association with historical feminism. Many evangelicals, however, are more willing to engage such feminist thought, with the frequent result of a polarization between two major theological views of women's roles and participation in the church: complementarianism and egalitarianism. Complementarianism holds to a more traditional, gendered division of the family unit and church body in which men are thought to be the natural and divinely ordained heads of households and of churches, whereas women are to graciously submit themselves to the authority and headship of their husbands and especially male church leaders. The abuse of such a power dynamic, both domestic and ecclesiastical, is a subject taken up more seriously and publicly by evangelicals today, although there exists a range of opinions on why and how this complementarian relationship fails or is subverted by both Christian men and women. Complementarians frequently declare that men and women are equal in personhood but different in role and function. Thus the office of head pastor, especially, and frequently the supporting clerical offices are limited to men as qualified by scripture.

Egalitarianism more often pronounces that men and women are equally suited to fulfill leadership roles and that both should submit to each other in a more mutual, equitable exchange of roles and purpose in both family and church, such as division of household labor, appointing both male and women clergy and laypeople, and equitable leadership roles among men and women.

The Evangelical & Ecumenical Women's Caucus (EEWC) was established as a branch of a group first known as the Evangelicals for Social Action (ESA). Founded in 1973, the ESA caucused annually with a specific list of concerns, including racism, sexism, peace, and simpler lifestyles. Out of this group the EEWC developed as a social and religious motivator among evangelical and other Christian traditions to combat church sexism, including noninclusive language, ordination rights, and inequitable family structure dynamics.

The EEWC was originally the Evangelical Women's Caucus (EWC), which first met in Washington D.C., in 1975 with an attendance of more than 360 women from the United States and Canada. In 1990 the name was changed to Evangelical & Ecumenical Women's Caucus in order to reflect the increasingly more inclusive nature of the organization. The EEWC produces the newsletter *Christian Feminist Today*, which has included contributions from Letha Dawson Scanzoni (1935–), an independent scholar and author who specializes in gay marriage and the Christian church, and Anne Eggebroten (1948–), an author and feminist scholar who focuses on pro-choice politics within the Christian church.

Conclusion: Postfeminism and Religious Thought

Although the work of Judith Butler (1956–) has little if any direct relationship with religion in America, her presence in feminist thought is central to current feminist discourse and certainly has much potential when applied to feminist religious thought. Butler's work on performativity and gender has become the critical lens through which to reexamine the traditional structures of power, agency, and gender identity and politics. Although her dense prose and complex style often invoke the criticism of the very feminists and other thinkers to whom she writes, her pivotal work *Gender Trouble* has revolutionized how sociologists and feminists think about the construction of identity and gender roles. An introductory paraphrase of one of her major premises is that there is no a priori gender identity behind social and personal expressions of gender; rather, gender is performatively by the very expressions that are often claimed to be the secondary results of a natural, preexisting gender identity.

This theory of performativity is one espoused by many postmodern social scientists, and not just feminist thinkers, to explain how people are culturally conditioned to internalize and then "perform" characteristics, such as gender or age, by behaving in ways deemed socially acceptable for a given gender, age range, or other social grouping. It is intended in part to counter theories suggesting that human beings behave in certain ways due exclusively or primarily to the natural predispositions that are allegedly "hard-wired" in people and, therefore, are naturally exhibited as the common behaviors of different social groupings. Similarly, this theory is also intended to challenge the notion that human beings are born with a predetermined condition or characteristic, such as sexual orientation or gender, which then naturally promotes or produces certain behaviors ascribed to that condition or characteristic; rather, performativity theory argues that there is not necessarily a causal condition behind gender or sexual orientation but that cultural conditioning prescribes conventional behaviors that are then linked to designated social groupings and taught, internalized, and reproduced over generations and time so that conditions such as gender and sexuality are quite literally the products of social performance.

To performance theorists it is this culturally demanded performance that creates certain identities and conditions, rather than a preexisting identity or condition that naturally results in the secondary performance of its defining behaviors. In examining gender dynamics and politics in religion and in feminist critiques and approaches to religion in America, Butler's theoretical framework is incredibly helpful in destabilizing and exploring the gender roles and norms often taken for granted in centuries-old religious traditions and often framed in terms of divine ordinance based in discourses frequently revealed to be patriarchal and androcentric and therefore inherently conducive to structuring religious and social organizations in which men and masculine ways of knowing and being are favored or valued more highly and in which women are secondary and subordinate.

The path of American religious feminist thought has begun with the emergence of female voices within the religious sector of Puritanism and traced its way through British colonialism to the mid-nineteenth century, with women taking up causes of prohibition and abolitionism and emerging as suffragist leaders at the turn of the nineteenth century. This time period features women using religious venues to promote not only religious ideals but also political and social platforms. The first wave feminists saw a birth of their

political rights from these efforts, and religious thought began curving toward more of a voiced critique of the female position within major religious discourse. Second and third wave feminism, born of this first wave, continue with the expansion of women on the political front and an exploration of religious thought. The civil rights movement allowed for a critique of first wave feminism as a white woman's enterprise and began a string of new feminisms that venture away from traditional feminism.

As the definition of *feminism* becomes more amorphous and capacious, so more room for postfeminism and critiques within feminism is available. Feminist thought has grown to include self-reflexive critiques to understand antifeminist voices as having an equal stake as a valid school of thought. Within this emphasis on diversity, religious thought among women has followed a similar vein, beginning with strict adherence to Puritan gender ideals and moving to a more pluralistic approach in which even taken-for-granted categories and frameworks, such as women, are reexamined and recast in a framework of reclamation and reconciliation. Owing to these dual imperatives, there has been an exponential outpouring of feminisms, many of which overlap and articulate distinctive subjectivities, such as feminist theories within various religious communities, for example, the Roman Catholic Church and New Age Spiritualists, as well as within ethnic and racial communities, such as the Native Americans and Asian Americans. This list is by no means all-encompassing, as the spirit of third wave feminism seeks to be ever inclusive.

The interaction of religious tradition and feminist thought is one that is always evolving and changes in accordance with the political and social climate of each respective time period. Their evolution is not mutually exclusive or inclusive but rather comes about in a dynamic, dialectical pattern.

Religious Thought: Gay Theology

The concept of “gay theology” is an elusive one, representing what may yet prove a short-lived phenomenon that emerged during the last decade of the twentieth century and then lost its clarity to an ever-broadening range of religious studies projects undertaken by openly gay men during the early twenty-first century. Importantly, the term “gay” refers exclusively to gay men, although occasionally “gay people” and “queer” appear in the literature, intending to include both gay men and lesbians. Lesbian writers have long argued that, due to popular misconceptions in the media and elsewhere, such well-intentioned, seemingly inclusive terms actually make lesbians invisible. Moreover, numerous differences in the separate gay and lesbian subcultures have produced significantly different cultural products—including theology—resulting in the need to consider gay theology and lesbian theology as distinct bodies of work. That said, the brief history and evolution of so-called gay theology—or, more broadly, religious studies shaped by an openly gay male perspective—may best be examined through a review of the extant literature and its writers and their themes, discussed herein and detailed in the ensuing bibliography.

Gay theology, or, specifically, *unapologetic gay liberation* theology, emerged during the late 1980s in reaction to the welcome but nonetheless apologetic tone of earlier, gay-affirming pastoral theology and biblical studies. Previously, some writers (for example, John Fortunato, John McNeill) crafted pastorally therapeutic, in-house apologia to reassure those gay men (and lesbians) who were experiencing institutional rejection that they had a rightful place within the Christian tradition and its churches and to encourage them in their pursuits of greater inclusivity and ordination. Other writers (George Edwards, Robin Scroggs) crafted exegetical apologia to insist to those same institutions that excluding gay men (and lesbians) from the full life of the church—including ordination—had no sound biblical basis. Emerging gay theologians insisted, instead, that such apologetic work constituted dead ends—avenues unlikely to convince entrenched boards of ministry or homophobic denominations and congregations—alternatively contending that gay men must assume the appropriateness of their own situated knowledge and authority to speak as resources for theology. Among the most distinctive features of the resulting work was placing personal experience (or confessional theology)

and often detailed gay male sexuality front and center in theological discourse.

Methodological Beginnings

As early as 1989, when the first systematic theology written from a gay male perspective appeared, gay theologians drew upon (and ultimately combined) three existing methodological perspectives: post-Holocaust explorations of the problem of suffering (theodicy) to respond to the tragedy of HIV/AIDS within the gay male community nationwide, Latin American liberation theology to empower gay men toward greater self-acceptance and activism within their own lives and communities, and feminist theology to reclaim and affirm gender and sexuality within an immanently erotic and bodily theology. Here, gay theology relied heavily upon the groundwork of others—especially feminist theologians—and found itself squarely within the evolution of American religious studies, as evidenced by the growing proliferation of ongoing program units within the American Academy of Religion (AAR) (parenthetical dates indicate first AAR appearance): Just as feminist theologians and women’s studies within religion first nurtured a specifically lesbian-feminist approach to theology and ethics (1986), so did lesbians nurture their gay male colleagues (1988), who in turn nurtured men’s studies in religion (1990).

This evolving intellectual lineage situated gay theology within the ever enlarging commitment of Christian theology and the academic study of religion to attend to gender and sexuality as proper theological issues, locations, or perspectives. As such, gay theology extended feminist efforts to establish the erotic as foundational for relational justice and to resacramentalize the body and sexuality. Initially, gay theology set out to celebrate difference and diversity across *all* lines of separation (gender, sexual orientation, race) and ultimately to embrace nonhuman lives as well (ecotheology), while also addressing antigay/antilesbian violence and HIV/AIDS. A few clearly identified profeminist gay theologians even joined men’s studies scholars in exploring the social construction of gender and the implications of male embodiment—of phallocentrism and entitlement—for religion and culture.

Early Publications and Problems

The evolution of openly gay male religious studies publications further reflected this development. Whereas those earlier apologetic writers all found mainstream publishers for their work, the emerging unapologetic gay male writers were

initially not so fortunate and were compelled to rely upon marginal or “*sub rosa*” presses, the loose network of gay/lesbian bookstores, and word of mouth to advance their work. Even the groundbreaking systematic theology of 1989 was published by such a small press after two years of mainstream rejection—in spite of consistently affirmative outside reviewer appraisals (see Clark, *A Place to Start*). To compensate for this dearth of mainstream publishing opportunities and to ensure a wider audience than just AAR attendees—especially among gay men themselves—the gay men’s program unit of the AAR undertook publication of their own best work in a seven-volume “Gay Men’s Issues in Religious Studies” book series, also published outside the mainstream religious studies presses. The series, published from 1990 to 1996 and now out of print, included developing gay theology, ethics, and religious studies from the annual meetings of 1988 to 1995.

This bleak publication situation changed briefly during the mid-1990s when a small cluster of gay theological writers achieved mainstream publication; 1993 proved an especially noteworthy year for their work (Clark, *Beyond Our Ghettos*; Comstock, *Gay Theology without Apology*; Goss, *Jesus Acted Up*), whose themes respectively included gay ecotheology, biblical theology, and Christology. Around the turn of the century, another three volumes that built upon these previous successes also achieved mainstream publication (chronologically: Spencer, *Gay and Gaia*; Clark, *Defying the Darkness*; Goss, *Queering Christ*), again respectively treating gay ecotheology, theodicy and sexual ethics, and Christology. Although the United Church of Christ and its academic publishing arm, Pilgrim Press, afforded gay theologians the greatest number of opportunities (including all but one of these six texts), by early in the new century, economic pressures affecting all book publishing, along with the continuing evolution and broadening of openly gay men’s work in religious studies, would alter this scenario.

Identity Confusion and Divergence

Throughout the 1990s, gay theology never developed any clear, monolithic identity. Reflecting both in-house diversity and in-house disagreements, gay men’s work in the academy soon branched out from theology per se into a more divergent range of projects undertaken with fewer efforts to reach any larger audience beyond the AAR. Whereas lesbians nurtured gay men’s early efforts, for example, the gender divide continued to haunt their few collaborative endeavors, and no joint “gay and lesbian” theology ever developed. Ultimately, lesbian-feminist theologians remained strongly connected to

feminism, while gay men pursued their own paths. Nor did gay male scholars themselves achieve any consensus. Although some remained deeply invested in feminism, latent gay misogyny led others to antithetical positions. The most visible debate appeared across several issues of the *Journal of Men’s Studies* as one side (represented by J. Michael Clark) insisted on the value of long-term, monogamous relationships for gay men—including access to same-sex marriage—while the other side (represented by Ronald E. Long) just as adamantly insisted that monogamous pairings are oppressive and that gay identity somehow hinges on multipartnered, even anonymous sexuality. Shortly thereafter, the developing political and cultural debate outside the academy surrounding same-sex marriage demanded the attention of a couple of gay theologians who, to differing degrees, supported both gay male couples and same-sex marriage (Clark, *Doing the Work of Love*; Ellison, *Same-Sex Marriage?*).

Further defying monolithic definition, gay men’s work in religious studies began to address a wider variety of issues, ranging from environmental ethics to comparative religions and beyond. Gay men also attempted to bring theological analysis to sometimes unexpected areas, examining such diverse phenomena as the “ex-gay” movement and gay men in Islam and other world religions; Internet erotica, sexual voyeurism, and body piercing; and southern evangelicalism and transvestism, among others. Ironically, on the rare occasion that a book did appear in any of these areas, it was once again brought out by a publisher not typically associated with mainstream religious studies publishing (for example, Long, *Men, Homosexuality, and the Gods*).

Future Prospects

For some two decades gay theology and religious studies have remained marginalized, shaped by harsh academic realities and limited publishing opportunities. In an article for the journal *Theology and Sexuality*, Bjorn Krondorfer bemoaned the fact that even within the academic study of religion and theology, nongay scholars (especially male scholars) have given little, if any, attention to the work of their gay male colleagues—due in no small part to continuing homophobia both within and without academia. Such intentional avoidance of gay theology by nongay scholars further suggests that progay-oriented religious studies materials are probably seldom included in college or seminary classrooms led by nongay faculty members (although no data are yet available to confirm this suspicion). Since unapologetically gay-affirming work does not have (nor does it necessarily desire) denominational or other

institutional endorsements, it is also virtually impossible to assess the degree to which, if at all, gay theology and religious studies shape the lives of gay men *outside* academia and/or the churches. As a result, such gay-affirming work risks remaining that of only a small group of gay male academics preaching to a very small choir.

Meanwhile, promising graduate students and junior faculty often still find it necessary to avoid speaking from their own gay perspectives because of continuing exclusionary practices among search and tenure and promotion committees. Very few self-identified, openly gay theologians or religious studies scholars who focus on gay issues in their primary research and publications have full-time or tenured positions. At the same time, publishers continue to wrestle with the small market for gay academic work. Beginning with that single 1989 small press volume, gay theologians did briefly break through publishers' fears in the 1990s with the several significant texts described here; however, by century's end, unapologetically gay theology had again taken a back seat to texts that safely focused on either the churches or the scriptures, including gay-affirming biblical commentaries, the most recent and most thorough of which—bringing a gay perspective to every single text in the canon—appeared as late as 2006 (*The Queer Bible Commentary*). Importantly, this more recent work is no longer apologetic, instead describing the positive contributions of gay men and lesbians to the churches or providing openly gay readings of the biblical texts.

In spite of continuing exclusion—whether from ordination or academic security—gay men engaged in religious studies, theology, and ethics will not go back in the closet. New voices are even now emerging to de-center the earlier leaders in the field noted herein. If these newer voices can access a larger audience both within and without the academy in the new century, gay theology and religious studies promise to remain multivocal and multifaceted; to continue to defy easy, monolithic definition; and to continue to push the boundaries of privilege—ecologically, economically, sexually, and racially. In short, gay theology will continue to embody one of its own most important values—nurturing and celebrating diversity—in both embodied sexual life and theological endeavor.

Religious Thought: Jewish

A relatively new phenomenon, Jewish religious thought in America encompasses a wide variety of strategies for grappling with a dilemma: how to lay the theoretical groundwork for complete acceptance of Jews and Judaism in the United States without eroding Judaism's enduring relevance as a distinct tradition worthy of preservation. Constructing such a harmonious synthesis between Americanism and Judaism demanded innovative approaches to reconciling competing claims of tradition and modernity, particularism and patriotism, and peoplehood and religious creed. Several streams of Jewish thought emerged from theoretical efforts to negotiate these competing tensions. All portrayed themselves as the most authentic interpretation of Judaism's central theological narrative: God's covenant with the Jewish people, the revelation of the Torah at Mount Sinai, and the promise of future

redemption. However, divergent understandings of this shared account, and its implications for American Jews, resulted in conflicting expectations regarding the specifics of Jewish belief and practice.

Intellectual and Historical Context

American Jewish religious thought developed against the backdrop of two dominant historical forces—one sociopolitical and one intellectual. The corporate status of Jewish communal life, which characterized most of European Jewry until the nineteenth century, never existed in North America. Jewish immigrants found themselves in a country that welcomed them as full citizens (with some early restrictions on Jews serving as elected officials), provided unprecedented opportunities for acculturation, and viewed religious association as completely voluntary. The state would not be willing, and rabbinic authorities not able, to enforce Jewish belief and practice. Moreover, the process of Americanization promoted grassroots interest in changing Jewish law and customs to reflect local norms and socioeconomic pressures.

At the same time, modern currents emphasizing reason, progress, and critical historical study introduced a new set of intellectual challenges that further eroded the theological, hermeneutic, and legal pillars of premodern Judaism. The twofold challenge of freedom of religion and Enlightenment assumptions ensured a tension between forces of tradition and modernity that characterizes American Jewish thought. However, the dearth of trained religious leaders in the United States deferred widespread, theoretical engagement with competing claims of tradition and modernity until the middle of the nineteenth century. Then three dominant paths emerged that would serve as the ideological basis for the Reform, Conservative, and Orthodox movements, respectively: ethical monotheism, positive historical Judaism, and traditionalist rehabilitation of Jewish law. Additional streams of thought—including neo-Hasidism, feminism, and post-Holocaust thought—developed during the twentieth century and transcended specific movement ideologies.

Ethical Monotheism and Positive Historical Judaism

The first major ideological school to emerge during the second half of the nineteenth century, led by figures such as Rabbi Kaufman Kohler (1843–1926) and others associated with what would become the Reform movement, attempted to neutralize the tension between Judaism and modernity by equating the two concepts. Judaism, they argued (largely

influenced by the architects of German reform thought), is a religion of reason based on the belief in ethical monotheism. The essential meaning of God's covenant and revelation can be found in the principles of humanity and righteousness outlined by the prophets in the Hebrew Bible. Moreover, they concluded that the Jewish legal tradition, specifically the ritual observances and restrictions mandated by the rabbinic interpretation of the Torah, is merely historical with no binding authority.

Underscoring Judaism's mission as the spread of universal ethical ideals, rather than observance of ritual commandments, created an ideological justification for supporting religious reforms and cultural integration. In addition, biblical criticism and historical scholarship were more compatible with reading scripture as a record of the revelation of reason, rather than as a historical fact or record of divine commandments. Yet calibrating Jewish belief and practice to maximize Judaism's symbiotic relationship with the ideals of American democracy raised a key question: what distinguishes Jews and Judaism from other religious groups? The answer: Judaism was unique precisely because of its universal mission. The enduring power of this logic is evident today in the prevalence of the term "*tikkun olam*" (repairing the world) in American Jewish life. Originally a phrase linked with early modern mystical theology, this term has been adapted to emphasize Judaism's particular value of addressing pressing global concerns for social justice.

An alternate approach to reconciling tradition and modernity crystallized as a response to ethical monotheism's dismissal of Jewish law. Figures associated with the Conservative movement, such as historian Solomon Schechter (1847–1915), theorized a framework called positive historical Judaism. Unlike ethical monotheism, the positive historical approach affirmed the divinely inspired nature of rabbinic interpretation of the Hebrew Bible and Jewish law's obligatory status. Yet historical scholarship demonstrated that Jewish law was not immutable because its development reflected a human process of interpretation. Thus, the most legitimate way of preserving the continuity of the rabbinic tradition was to leave room for some degree of latitude to recognize contemporary realities in adjudicating Jewish law. Even if this scholarly assessment of the development of rabbinic thought was accurate, a key difference between the premodern process and the tools developed by the positive historical school remained unresolved: Proponents of the former viewed themselves as recipients of an oral tradition that could be directly traced to the Sinaitic revelation, whereas proponents

of the latter consciously acknowledged the process of historical change.

Neotraditionalism and the Rehabilitation of Revelation

The rationale behind both Judaism as a religion of reason and positive historical Judaism affirmed the validity (and in fact necessity) of applying modern assumptions to interpreting traditional sources and adjusting Jewish practice accordingly. A neotraditionalist stream in American Jewish thought upheld the immutability of Jewish law in the face of intellectual challenges. The main nineteenth-century advocate of the return to traditional beliefs and practices based on God's commandments was Bible translator and publisher Isaac Leeser (1806–1868). In the twentieth century, Rabbi Joseph Soloveitchik (1903–1993) stands out as one of the most sophisticated and influential defenders of Jewish law. Soloveitchik praised the role of Jewish law in creating a blueprint for religious life and clearly accepted the incompatibility of the world of modernity and faith.

Leeser and Soloveitchik exhorted readers to live their lives according to the Jewish law and acknowledged a fundamental clash between revelation and reason. Yet their thought demonstrates the central role that acculturation and Americanization played in the conceptualization of traditionalist streams of thought. For instance, Leeser advocated for changes in Jewish worship that would render Judaism more similar to Protestant worship, and Soloveitchik built his theory of Jewish law in dialogue with Western philosophical thought, specifically, Kantian epistemology. More recent trends in neotraditionalism, fueled partially by a tremendous growth in Orthodox and ultra-Orthodox communities in the United States, have shifted away from the emphasis on openness and dialogue with modernity that characterized prewar Orthodoxy. Thinkers committed to the unchanging nature of Jewish law grounded in an uninterrupted line of divinely revealed and flawless precedent claim continuity with Jewish tradition. Yet this very belief—that revelation and tradition resist outside forces—itself reflects a rupture with historical conventions. The rejection of modernity is as much an innovation of modern Jewish thought as streams openly dedicated to the evolution of Jewish belief and practice.

Twentieth-Century Trends

A greater appreciation for the limits of reason and science sparked a more mystical approach in Jewish thought

following the Second World War. Activist and teacher Abraham Joshua Heschel (1907–1972) had a significant role in popularizing a neo-Hasidic tradition in American Jewish thought. In books such as *God in Search of Man* (1976), Heschel poetically exhorted his readers to recognize the ineffable that existed beyond the realm of empirical knowledge. Jewish law, which Heschel referred to as “deeds of wonder,” had the potential to reorient American Jews’ spiritual lives, thereby revealing God’s presence in the world. By focusing on describing the religious experience, Heschel (following the phenomenological school of modern philosophy) found a way to affirm God’s ongoing relationship with man without making truth claims about the content of revelation that might conflict with scientific or historical scholarship. The legacy of Heschel’s rehabilitation of Hasidism in American Jewish life continues in the writings of more recent American Jewish thinkers, such as Rabbi Arthur Green and Zalman Schachter-Shalomi.

Debates about feminism and the role of women in Judaism created one of the most significant flashpoints of late twentieth-century American Jewish thought. According to Jewish law, women are not equally obligated with men to perform commandments and therefore are not qualified for a variety of roles, including leading prayer services and counting in a prayer quorum. As a result of these historical restrictions, Jewish women did not serve as rabbis and had distinct responsibilities in Jewish communal life. The spread of the feminist movement in America sparked rich innovations in American Jewish thought dedicated to addressing claims for gender equality. Feminist thinkers challenged religious ideologies from across the spectrum of American Jewish thought, from theologian Judith Plaskow’s call in *Standing Again at Sinai: Judaism from a Feminist Perspective* (1990) to thoroughly reassess the tradition to reflect women’s experiences, to Orthodox writer Blu Greenberg’s demands for concessions within the parameters of the distinct gender roles proscribed by Jewish law in books such as *On Women and Judaism: A View from Tradition* (1981).

The Holocaust presented another set of pressing issues for postwar American Jewish thought: how to believe in God, and the covenant, after the genocide of millions of Jews. Rabbi Richard Rubenstein articulated his loss of faith in a personal God after Auschwitz in his 1966 book *After Auschwitz: Radical Theology and Contemporary Judaism*. Philosopher Emil Fackenheim outlined a different response in *To Mend the World: Foundations of Post-Holocaust Jewish Thought* (1982), which claimed that God’s presence during the

Holocaust revealed an additional commandment—Jews must remain committed to survival to prevent granting Hitler a posthumous victory.

Zionism and Jewish Peoplehood

Jewish nationalism, in general, and Zionism, in particular, did not thrive in American Jewish thought (especially in comparison to the centrality of these political movements in the European context). Indeed, many American Jewish thinkers in the early decades of the twentieth century actively opposed Zionism and explicitly rejected ethno-national components of Jewish identity. These political expressions of Jewish collectivity and national solidarity threatened the establishment of an American-Jewish synthesis by potentially fueling questions about Jewish patriotism and dual national loyalties. Defining Judaism as a religion, on the other hand, paved the way for aligning Judaism with an American discourse of difference built on a framework of religious diversity.

Nevertheless, the Americanization of Zionism and variations of Jewish nationalism constitute important intellectual dimensions of American Jewish thought. Louis Brandeis (1856–1941), a famous lawyer and American Zionist leader, reconciled Jewish settlement in Palestine with Americanism by (1) distinguishing Jews' connection to the homeland with a desire to leave the United States and (2) emphasizing Zionism's commitment to American ideals of progress and democracy. A number of other early twentieth-century American Jewish thinkers influenced by European Zionism, most notably Rabbi Mordecai Kaplan (1881–1983), adopted Jewish nationalism's sensitivity to the ethno-national components of Judaism as a basis for expanding the definition of American Judaism. Kaplan's notion of Judaism as a "religious civilization" echoed expressions of Jewish nationalism by focusing on social organizations, customs, language, literature, connection to a homeland, and art as the primary expressions of Judaism. Yet unlike dominant currents of political Zionism, Kaplan believed that these bonds could exist in a diaspora context. Indeed, the ability to live simultaneously in two civilizations (American and Jewish) modeled what it meant to be an American and prefigured notions of America as a nation of multiple ethnicities and cultures. Kaplan's sociological conception of Judaism as an evolving tradition, along with his rejection of a supernatural God, created the intellectual groundwork for the Reconstructionist movement, the most recent and smallest denomination in American Jewish life.

Jewish thought in the twenty-first century has already begun to recalibrate the equilibrium between Judaism and

Americanism in response to new social and intellectual trends, including the dominance of multiculturalism, the increasingly permeable boundaries between minority groups, the decline of movement affiliation, and the resurgence of interest in traditional sources and practices among liberal Jews. These processes promise to nourish the ongoing creation of novel expressions of American Jewish thought.

Religious Thought: Latino/a

Often considered the younger sibling of Latin American liberation theology, Latino/a theology has reached a historical moment where its identity and direction are at a crossroads. As a theology that remains critically engaged and informed by the struggles, commitments, and concerns of the Hispanic population, Latino/a theology offers an essential contribution to both the contemporary theological academy and worldwide Christian churches. This contribution is rooted in the methodological starting point and commitment of Hispanic theologians. From its inception, Latino/a theology has sought to speak both *for* and *from* the history, spirituality, and contemporary situation of Latino/a communities. In the past decade, there has been a surge of scholarship by Hispanics, offering various distinct contributions to Latino/a theology. The more recent work in the areas of aesthetics, epistemology and metaphysics, rooted in the liberation paradigm, both challenges and expands the scope and method of Latino/a theology. Today, Latino/as struggle to articulate a theology that incorporates the insights of their

sociocultural location as they confront and connect with a larger theological conversation.

Development

Various factors have shaped the growth and development of Latino/a theology. Both the climate of a post-Vatican II Roman Catholic Church and the theological milieu of the larger academy have been contributing factors. There are various key historical events that directly influenced Latino/a theology. The 1971 formation of the Mexican American Cultural Center, along with the first meeting of the clerical organization Padres (literally translated “priests”) in 1969 and Las Hermanas (an organization of women both lay and religious) in 1971, was a significant factor in the role of Latino/as in church life. Also of importance is the *Encuentro* movement, a Roman Catholic pastoral plan for ministry amongst Latino/as. These pastoral events directly fed into the academic discipline of Latino/a theology. Another event that occurred in the 1970s was the 1975 Theology in the Americas meeting in Detroit, Michigan. There, Latino/as met with Latin American, African, African American, Native American, and white Anglo North American theologians and scholars. At this conference Latino/as were asked to reflect theologically on their concrete situations in the United States. This also served to open a dialogue between different marginalized communities.

In 1980 the journal *Apuntes (Notes)* was founded, the first theological journal to focus on Latino/a theology. The late eighties saw the formation of the Academy of Catholic Hispanic Theologians in the United States; its first annual meeting took place in 1989. As noted by Jesuit scholar Allan Figueroa Deck, 1992 was a significant year for academic Latino/a theology, for during that year three major edited volumes were published. The following year a second journal devoted to Latino/a theology was founded, the *Journal of Hispanic/Latino Theology*. The establishment of journals and professional organizations dedicated to Latino/a theology cemented the academic presence of this theological discourse.

Foundations and Sources

The developments noted above, both pastoral and academic, contributed to the birth and growth of Latino/a theology. Coupled with the theological climate of the late sixties and early seventies, the ground was fertile for Latino/a theologians. Like all theologies that are grouped or labeled under a heading, Latino/a theologians share various foundational

insights. However, there are also vast differences in the approaches, norms, and sources of the individual thinkers. In other words, in speaking of Latino/a theology it is necessary to be mindful of the plurality of theological voices within this broader category. Nonetheless, there are several principles and sources common to a significant number of Latino/a theologians.

In an excellent introductory essay to the theological approach of Latino/a theology, María Pilar Aquino (2002) lists three fundamental principles and three sources and loci that frame the methodological coherence of Latino/a theology. The three principles refer to the manner in which Latino/a theologians approach knowledge and interpretation and must be understood jointly to create the methodological coherence of Latino/a theology. The first principle focuses on the faith of the people, primarily through the study of popular Catholicism; the second highlights an option for the poor and oppressed; the third emphasizes a liberating praxis (or action). The first of these principles is perhaps the most distinctive in that it has typically offered Latino/a theologians groundbreaking approaches to popular religion, daily life, and culture. The other two principles reflect the legacy and influence of Latin American liberation theology on its northern neighbors.

Fundamental Terms: Sociocultural Context, Mestizaje/Mulatez

There are five key terms fundamental to understanding the nature and scope of Latino/a theology. They are (1) sociocultural context, (2) *mestizaje/mulatez*, (3) popular religion, (4) *lo cotidiano*, and (5) praxis. While these five themes do not cover the entirety and diversity of Latino/a theological reflection, they do represent central features of Latino/a theology.

Central to Latino/a theology is the prominence of context and culture. This emphasis manifests itself on two levels. First, a fundamental starting point in Latino/a theology is the elaboration of the context and history of Latino/a peoples. A significant portion of monographs and essays by Latino/a theologians begin with a section or chapter naming the sociocultural situation of historical and contemporary Latino/a peoples. Because the Latino/a cultural and contextual realities depicted have been historically marginalized and silenced, their rendering is a subversive act of empowerment. Second, Hispanic theology’s emphasis on context and culture undergirds the claim that not only is Latino/a theology a contextual theology but *all* theologies are contextually based.

Logically, then, any theology that claims to be above its social location is simply a dominative discourse.

Today's scholar of Latino/a theology is fully acquainted with *mestizaje* as a theological category emerging from Virgilio Elizondo's prophetic vision and perseverance as a scholar. What are *mestizaje* and *mulatez*? In its simplest definition, *mestizaje* refers to the biological and cultural mixing of indigenous and Spanish peoples that took place as a result of the conquest of the Americas; *mulatez* refers to a similar process amongst Spanish and Africans. However, the significance of these concepts in Latino/a theology is much more complex than this simple descriptive dimension implies. The terms *mestizaje* and *mulatez* also identify the Latino/a worldview, which is one of a hybrid people who emerged from the violent and unequal encounter of various social groups. This hybridity not only describes who Latino/as are, but also names their epistemic horizon.

Mujerista theologian Ada María Isasi-Díaz understands *mestizaje* as a foundation for Latino/a ways of viewing the world. *Mujerista* theology is a feminist Latina voice that places poor, grassroots Latinas at the center of theological reflection. This racial and cultural mixture—this sense of people living between two worlds—reflects the context from which Hispanic theology emerges. Hybridity not only marks Latino/a race, culture, and religion, it is also the hallmark of the Latino/a worldview. *Mestizaje* and *mulatez* portray the Latino/a context; these terms also reflect the epistemological standpoint from which Latino/as view their world. In addition, Isasi-Díaz sees *mestizaje* and *mulatez* as ethical options for Latino/as. In other words, in embracing *mestizaje* and *mulatez*, Latino/a theologians are claiming solidarity with people of color globally.

Fundamental Terms: Popular Religion, lo cotidiano, and Praxis

Latino/a scholarship on popular religion contributes to the broader theological academy. Popular religion is difficult to define; in fact, it is more often *described* by theologians. Latino/a scholars use the term to designate local, contextual, and everyday religious practices that are not in tension with institutionalized religion but that function outside of it. Popular religion does not just refer to religious practices, but also to an accompanying worldview. The emphasis on popular religion within Latino/a theology is linked to its commitment to elaborate the faith of Latino/a peoples. Popular religion is a privileged locus and a source of theological reflection. For Latino/a theologians, these lived religious

practices are the primary access point to the everyday faith of Latino/a peoples. Popular religion is integral to the Hispanic experience; its practices are a way of maintaining Latino/a identity. Popular religious practices include processions, dramatic reenactments, devotion to Mary and the saints, and maintenance of home altars, among others.

The term *lo cotidiano* refers to everyday life. To emphasize *lo cotidiano* in theological reflection is to mark it as a locus where God's grace and love is experienced and responded to by Latino/as. The inclusion of *lo cotidiano* in theological discourse contests the more usual, dichotomous understanding of public and private spheres, an understanding that typically seeks to segregate *lo cotidiano* and thereby mark it as irrelevant. In Latino/a theology daily life is noted both as an analytic category and a point of departure. Liberation cannot solely be limited to the public, societal sphere, but must instead incorporate an understanding of the interrelation between the public and private. An emphasis on the everyday and its connection to the structural is Latino/a theology's way of undermining the dualism of public and private. This emphasis on daily life is intimately linked to the significance of popular religion.

Finally, praxis, or the emphasis on action, is rooted in part on the influence of Latin American liberation theology upon Latino/a theologians. Isasi-Díaz's *mujerista* theology emerged from an ethical context that emphasized the praxiological dimension of the theological task. In *mujerista* theology praxis is defined as reflective, liberative action. *Mujerista* theology does not separate action and reflection, for it holds theology to be liberative action in itself. In other words, action and reflection are inseparable moments. *Mujerista* theology is not reduced to academic, intellectual exercise. Theology is not merely written and spoken, it is acted out. Critical of Western philosophy's understanding of the human as individualistic, Roberto S. Goizueta has questioned the reduction of praxis solely to the realm of ethical action and social justice. Instead, Goizueta offers an understanding of praxis as an aesthetic. The emphasis on the aesthetic, however, should not result in the sacrifice of the ethical and political. All action is mediated by the political and the economic. Only when human action is valued as an end in itself can authentic liberation take place.

Recent Developments: Theological Aesthetics and a Turn from Sociology

Five recent developments within Latino/a theology are essential to its future direction. These areas represent expansions

within the field and are loci for building on Latino/a theology's relationship with the broader academy. They are (1) theological aesthetics, (2) a turn from sociology, (3) bridges with European theology, (4) conversation with other U.S. minority theologies, and (5) inter-cultural theology.

Theological aesthetics is a growing area in contemporary theology. Though not a theological "school" per se, scholars working in the field of theological aesthetics add to the conversation a theological concern for beauty. An emphasis on the aesthetic is grounded in the belief that within the realm of symbol, imagination, emotion, and art can be found a privileged expression of the encounter with the divine and its articulation. Within Latino/a theology, the increasing importance of aesthetics is found in the works of Alejandro García-Rivera, Roberto S. Goizueta, Michelle A. Gonzalez, and Peter Casarella. These theologians have transformed the methodology of Latino/a theology and broadened its dialogue. Combining Hans Urs von Balthasar, North American philosophy, and semiotics, García-Rivera understands the True, the Good, and the Beautiful in terms of communities. Charles Sanders Peirce and Josiah Royce provide the philosophical framework for this task. The aesthetic principle that emerges from this interweaving of voices is the lifting of the lowly, a subversive aesthetic norm with ethical implications. García-Rivera's publications on a theology of art further his aesthetics and expand his sources to include the visual arts.

From its inception, the work of Latino/a theologians has embraced a heavy sociological emphasis. Without downplaying the significance of this methodological feature, the more recent move beyond sociology represents an exciting new direction for Latino/a theologians. Increasingly, Latino/a theologians are opening up dialogues with scholars in the disciplines of philosophy, literature, and critical theory. The increasingly interdisciplinary nature of Latino/a theology is a welcome development that will serve to advance and expand Hispanic theological projects.

Recent Developments: Conversations with European, Minority, Intercultural Theology

Explicit conversation between the scholars of Latino/a theology and those of European theologies is a new development in theological discourse. The desire to name and concretize the marginalized contributions of Latino/as led earlier writers to focus primarily on Latino/a and Latin American resources. Though a necessary and very important step, it nevertheless had the effect of marginalizing Latino/a theological discourse. The theologies of Goizueta and

García-Rivera are examples of efforts to engage non-Latino/a North American and European resources. This broadening of sources is a natural and significant development—natural, as many Latino/a scholars were trained in North American and European institutions, and significant because it creates avenues for Latino/a theologians to engage and be engaged by non-Latino/a voices. Of special note is the recent study by Miguel Díaz exploring the theological anthropologies of Latino/a theologians and Karl Rahner.

Increased collaboration between Latino/a theologians, African American theologians, and Asian American theologians is a notable development as well. Recent work by Anthony Pinn and Benjamin Valentín highlights the mutual benefits to be gained when conversation between African American and Latino/a scholars of religion occurs. However, further work is needed. Latino/a theologians must directly engage the writings and concerns of other U.S. minorities in order to explore the complexity of the U.S. context for people of color. In addition, Latino/a theologians must explore the dimension of privilege that operates within our own communities, with special attention to race. In framing *mestizaje/mulatez* as a choice, for example, Isasi-Díaz highlights the necessity for Latino/a theologians to examine how some benefit from white privilege here in the United States.

A final recent development is found in the work of María Pilar Aquino and Orlando Espín in the area of inter-cultural theology. Building on the work of Cuban-born philosopher Raul Fornet-Betancourt, Aquino and Espín explore a philosophical foundation for the articulation of Latino/a theology that takes culture and context seriously. Their work strives to find the categories to describe current Latino/a theological projects while informing future trajectories. Espín's work, with its emphasis on the development of tradition, engages a long-established theological locus through an inter-cultural lens.

The Ambiguity of Latino/a Identity

Latino/a theology, although fairly new to the broader theological arena, has in a brief time established itself as a fundamental voice within the theological academy. More important, Hispanics and Latin Americans represent the future of Christianity in the Americas, and any theology or church that does not take their contributions to the academic and pastoral realms seriously is remiss. The question of identity has been and will remain a central concern for Latino/a theologians. Providing a more nuanced understanding of *Latinidad* (Latino/a identity) will be a vital point both

of debate and discussion in future Latino/a theological projects. Since its inception Latino/a theology has identified Latino/as, and consequently Latin Americans, as *mestizo* and *mulato* peoples. This mixture of Spanish, African, and indigenous cultures has been a clear marker of Latino/a racial, ethnic, and cultural identity. Anthropologically, *mestizaje/mulatez* functions to name the ambiguity and in-betweenness of Latino/a identity. Latino/a theology, at least within theological and religious studies, presents a notion of Latino/a identity where the indigenous, African, and Spanish are not oppositional but coexist as constitutive of Latino/a identity. This is seen directly in the sources of Latina theologians. Whether it is Jeanette Rodríguez's use of *flor y canto* as a starting point for her Latina feminist theology or Ana María Pineda drawing from Nahuatl oral tradition and aesthetics for her theological voice, Latina theologians do not reduce Latino/a identity to non-indigenous, non-African, and exclusively Western.

Latino/a scholars use the cultural and religious production of indigenous and African peoples as sources for theological reflection while simultaneously maintaining a dominant paradigm within the construction of Latino/a identity and religiosity. They do so without acknowledging the function of power within academic appropriation of non-Christian and non-European sources. This is seen most sharply in the Christian starting point of Latino/a theologies and the ways in which non-Christian sources and cultures are appropriated into the theological discourse. Latino/a theologians approach Latino/a religion from a Christian foundation, adding the flavors of African and indigenous America as they see fit. This is also evident in the uncritical and ad hoc manner in which Latino/a theologians appropriate indigenous and African cultures. These sources are central in Latino/a theology only in the manner in which they affirm and expand Christian categories. Latino/a theologians must take care in their use of these sources and the methodology that accompanies inclusion of non-Christian sources.

Canonization of the Dominant, Neglect of the Subaltern

Linked to identity is the notion of *mestizaje* and *mulatez* as a manner of diluting indigenous and African histories and cultures, as well as a neglect of the function of power within Latino/a identity-making, where the Spanish is always dominant. Justo González (1990) coined the phrase "reading the Bible in Spanish." This term became canonized into the rhetoric and ideology of Latino/a theologians. However,

what about reading the Bible in Yoruba, or in Kaqchikel? By affirming the Spanish as their starting point, Latino/a theologians are affirming a *criollo* (Spaniards that are American-born) legacy, knowingly or otherwise, that negates the true subalterns of Latin American culture and society. Latino/a theologians have become too comfortable with this hybridity and have not striven to address the function of power within mixed identity construction. There is a growing body of literature in Latin America as well as the United States on this precise theme. The image of *mestizaje* and *mulatez* is not as rosy as Latino/a theologians depict. There are in fact massive tensions between white, black, *mulato*, *mestizo*, and indigenous Latin American and Latino/a peoples, both historical and contemporary. To be a Latino/a in the United States is not a monolithic experience, and it is often race and culture that dictate experience.

Latino/a theologians place the context and culture of Latino/a peoples at the center and as the starting point of their theologies. Whether it is an emphasis on *lo cotidiano*, *mestizaje*, or popular religion, the particular contours of Latino/a religious expressions are the core of Latino/a theological writings. Latino/a theologians frame the prominence of their particularity in light of the contextual nature of all theological expressions. In their retrieval of Latino/a culture and context, Latino/a theologians have recovered a vital dimension of historical and contemporary Christian religious expressions. In this process, Latino/a theologians have constructed a Latino/a religious identity. Whether it is Our Lady of Guadalupe, *mestizaje*, or the Conquest of the Americas, there are certain key themes that have become "canonized" in the corpus of Latino/a theology as fundamental dimensions of Latino/a religiosity and history. Whether intentionally or not, this has resulted in a construction of Latino/a identity that foregrounds particular elements of Latino/a culture and history at the expense of the fullness and diversity of Latino/a peoples. Most notably, the presence of African peoples and their participation in Latino/a history and identity have been downplayed. Latino/a theologians write about Mexico, Guadalupe, *mestizaje*, and the Southwest. The black Latino/a experience is strikingly insignificant within the narrative and construction of Latino/a historical identity. This has led to a depiction of Latino/a history, religious experience, and culture that privileges certain elements and erases others.

Whether in the symbols of religiosity recovered by Latino/a theology, or the history constructed by Latino/a theologians, or the categories used to describe Latino/a

identity, hermeneutics, and epistemology, normative preference is given to Mexican and Mexican American experience. Latino/a theologians of all backgrounds, not just those of Mexican American heritage, perpetuate this preference. In many ways this is understandable, given that Mexican Americans constitute the majority of Latino/a peoples in the United States. However, as “minority” peoples Latino/as have struggled to make their voices and stories heard within the dominant discourse. It is therefore all the more important that within their own theologies Latino/as not allow the majority to rule and thereby erase the complexity of Latino/a identity.

The Future of Latino/a Theology

Latino/a theologians are becoming much more precise in their elaboration of identity. They cannot, however, afford to erase and marginalize portions of the Latino/a population in favor of a more generalized description of Latino/a identity. To do so is to do violence to those communities that are ignored and forgotten. This emphasis on particularity within community is both theological and ethical. Latino/a theologians must embrace a principle of unity amidst diversity as a central theological feature. There are also ethical dimensions to the construction of identity. The inheritors of a rich legacy of Latin American liberation theology, these dimensions are well known to Latino/a theologians. Writing history is a moral (as well as political, social, and economic) act that must be placed in an ethical framework. The ethics of Latino/a identity must be placed at the forefront. While it is important to maintain the coalitions that exist between different Latino/a groups, it is equally important not to subsume certain sectors of the Latino/a population at the expense of others.

Latino/a theology will face various challenges as it continues to grow and expand. One such challenge is its ecclesio-centric nature, that is, the tendency of Latino/a theology to remain wedded to ecclesial concerns. While attention to the Church, exemplified by Latino/a theologians' contention that the pastoral and academic are intimately united, is fundamental, exclusive attention to the Church limits Latino/a theology's nature and scope. Indeed, this attention to the pastoral is a hallmark of Latino/a theology. Benjamín Valentín has put forth an excellent critique (2002) precisely on this point, calling on Latino/a theologians to become more attuned as public intellectuals. Latino/a theology would also benefit from an increased interest in inter-disciplinary work, particularly work with those scholars publishing in the fields

of Religious Studies. Finally, while the question of identity is fundamental, albeit still unresolved, Latino/a theology scholars must ensure that the theological discourse does not become reduced to identity politics.

Religious Thought: Lesbian Theology

Lesbian theology is a growing field of inquiry based on the experience and insights of women loving women in a variety of religious traditions. It began in Christianity and Judaism and now includes Muslim, Hindu, and Buddhist resources as well as those from native groups. Bisexual women also contribute to the literature and practice with their work, reflecting a slightly different but overlapping perspective. Lesbian theology arose from both feminist/Womanist work in religion and from gay theology. It is a way to bring lesbian

women's experiences of the divine as well as of human community into the larger theological conversation.

History: Christianity

Lesbian work in religion is a combination of theoretical work and practical or pastoral work. Feminist theologies emerged in the middle of the twentieth century as scholars realized that most theological work was done by, and therefore reflected the experiences of, men. Women began to correct the record by expressing their own theological insights from the margins, such as Mary Daly's (1928–2010) transformative idea of moving “beyond God the Father.”

Likewise, gay theology was born of the fact that most male theologians were heterosexual, with same-sex experience missing from the data of theological reflection. So gay men began to correct the record and amass a new body of theological thinking that included their particular experiences. For instance, Jesuit priest John McNeill (1925–) took a pioneering look at the Christian churches and homosexuals; and Protestant pastor Troy Perry (1940–) responded to homophobia by creating the Universal Fellowship of Metropolitan Community Churches (MCC), now a thriving denomination of mostly lesbian, gay, bisexual, and transgender people. Lesbian theology arose from the realization that lesbian experience was invisible in both feminist and gay theologies and needed to be articulated on its own terms.

Sally Miller Gearhart (1931–) wrote the first contemporary Christian lesbian theological reflection in 1972, “A Lesbian Looks at God the Father.” She made explicit reference to women loving women and the ways in which that experience conditioned one's view of the holy. Her work was considered so challenging that it could not be published in a Protestant denominational women's newsletter. She later collaborated with William Johnson, the first openly gay man to be ordained by the United Church of Christ, on a book that laid out the contours of same-sex love in a religious setting.

Carter Heyward (1945–), an Episcopal priest, authored a number of books and articles articulating Christian theology in the Anglican tradition in light of the experience of lesbian

Reverend Jane Spahr, left, and Reverend Annie Steinberg-Behrmann, center, sing in support of same-sex marriages outside the California State Supreme Court building on May 26, 2009. Spahr's call in 1991 to pastor the Downtown Presbyterian Church in Rochester, New York, was overridden by the regional church body because of her lesbian sexual identity. In response, she founded the nonprofit organization That All May Freely Serve, which focuses on issues of sexuality and religion. The California Supreme Court later ruled in favor of upholding Proposition 8, the same-sex marriage ban approved by voters in November 2008.

women in the 1980s. She wove explicit connections between women loving women and issues of racism, class exploitation, and colonialism. She and many other early lesbian feminist writers were quick to see how the dynamics of oppression and privilege were present and interwoven into each instance.

Virginia Ramey Mollenkott (1932–) did similar work from an evangelical perspective, raising eyebrows in the Plymouth Brethren tradition by claiming that lesbian love was consistent with biblical teaching. She and Letha Scanzoni explored biblical texts on neighbors, arguing that in Christian scripture there is no injunction against women loving women or men loving men, only the exhortation to love all neighbors.

Mary E. Hunt (1951–) wrote early Catholic treatments of lesbian experience through the lens of friendship. Her model of “fierce tenderness” made no distinctions between same-sex or opposite-sex love. Several collections of essays by Catholic lesbians, including some by lesbian nuns, revealed the many ways that lesbian women make peace with their sexuality even in a religious tradition that considers same-sex love “intrinsically morally disordered.”

Bernadette Brooten (1951–) studied lesbian women in the early Christian period. She concluded that they

challenged the status quo not so much by the sex involved as by their attempts to subvert the top-down power model that was normative in male-male and male-female relationships in early Christianity. Living out a love relationship of equals is a novel notion in cultures where men dominated women and some men dominated other men.

Groups of Christian lesbians began to emerge in the 1980s. The Conference of Catholic Lesbians arose out of the first gathering of Catholic lesbians (1982), who realized how many such women exist and how great their needs are in a church that rejects them. The group developed chapters around the country, a newsletter, and later a Web site to keep members connected. CLOUT (Christian Lesbians Out Together; 1990) was started by Protestant women, both ordained and lay. Both groups sponsor conferences, act as support communities, and provide a public profile for lesbian women of Christian faith whose lives and issues are still often subsumed under those of gay men. Many lesbian women are ignored or vilified by those in their own denominations, so such cross-denominational support is welcome.

Lesbian women have been ordained in many Protestant churches. Some were open about their sexuality. For example, the Reverend Ellen Barrett was the first Episcopal priest to be ordained as an out lesbian in 1977. Others, like the Reverend Jeanne Audrey Powers of the United Methodist Church, came out publicly later in life, sometimes risking their licenses and/or livelihoods. Lesbian theologians are common, as are lesbian nuns. The women of the MCC, including the first woman moderator, the Reverend Nancy Wilson, enjoy unqualified support for their ministry.

History: Other Religions

Jewish scholars showed the way beyond the seeming incompatibility of same-sex love and Judaism. Rabbi Rebecca Alpert (1950–) introduced lesbian rabbis to the larger religious world, chronicling their stories and struggles. Theologian Judith Plaskow (1947–) tackled theological and ethical concerns within Judaism, emphasizing the need to rethink foundational issues including authority and community in addition to looking critically at sexual customs and mores. Her pioneering work on sexual ethics is a model of reasoned analytic thought that incorporates homosexuality with a range of Jewish justice concerns.

Lesbian women's leadership in synagogues and rabbinical schools is found among Reform and Reconstructionist Jews. Even Orthodox feminists grapple with what was previously unimagined, namely, women bonding with other women in

deep, long-lasting relationships that form the foundation for families. In a tradition that emphasizes procreation as a way to build up a community decimated by oppression, many Jewish lesbians have children. These practices challenge Jewish communities to be inclusive. Some congregations are made up primarily of lesbian, gay, bisexual, and transgender persons, such as Congregation Beth Simchat Torah in New York City, led in the early twenty-first century by out lesbian Rabbi Sharon Kleinbaum.

Muslim lesbians have had a harder time. Medieval Islamic texts include discussion of "*tribadism*" (female-female sexual expression). Islamic law, on the other hand, refers mainly to the regulation of female-male and male-male behavior, leaving aside any discussion of women's passions for one another. Contemporary Muslim lesbians live and write under great scrutiny. Some have received death threats, and others have been expelled from their families of origin.

As Buddhism comes into deeper conversation with Western culture, women's empowerment and lesbian life are new parts of the path. Sandy Boucher (1936–) expressed the many facets of the encounter in her writings. A lesbian Buddhist sangha (an association or community) in Berkeley, California, is one example of that tradition lived out. The major challenge is to make a case for sexual expression, in particular sexual expression between two women with no necessary reproductive consequence, in a tradition that urges adherents to leave aside the things of the body for things of the spirit.

Hindu women have recently begun their own conversations. They explore whether and how they are part of the so-called "third sex" of Vedic literature. Attempted marriages between Hindu women have raised deep questions for their communities about the nature of family life and the legitimacy of such partnerships. The conversation is still nascent in Hinduism, but the courage of Hindu lesbians in embracing their love and their faith promises new insights.

Native American lesbians, sometimes called "two-spirit women," struggle to find their place in their tribes. Some have engaged in dance and sweat lodge practices typically reserved for men, causing consternation among more traditional members. Others have formed family units that have raised questions among their peers. Confusion over and even manipulation of gender categories by nonnative people has made the struggles for identity and belonging very difficult for native lesbian women.

Bisexual women, those who are sexually and emotionally attracted to both women and men, began their own spiritual

explorations. They could not relate to a lot of the lesbian religious thought because their experiences were not as clearly delineated. Loving both men *and* women opened them to unique spiritual insights. Few resources exist, but Deborah Kolodny (1960–) edited an anthology that includes writings from a wide range of bisexual women’s experiences. Like lesbians, religious bisexual women have come under scrutiny for departing from the heterosexual norm and making claims about their unique perspectives on the holy.

Issues, Controversy, and Future Scope

The issues raised by religious lesbians challenge a number of common assumptions. What constitutes a healthy, good, natural, holy human relationship is made new when heterosexism, or the normative character of opposite sex bonding, is overcome. This has not been easy work, but lesbian women have attempted it through struggles about membership, ordination, ministry, and marriage in their respective traditions. Sexual ethics are changing, and same-sex love is increasingly seen as acceptable despite virulent opposition in some groups. Lesbians adopting children has raised religious concerns about the shape and future of families. New theological looks at body, the performance of gender, and the challenge of transgender people to any essential notions of sex or gender are all on the lesbian religious agenda for future work.

Major controversies have arisen when lesbian women have claimed their places in religious traditions, both as members and as religious leaders. One example is the case of the Reverend Jane Spahr (1942–), who became the center of controversy when she was called (1991) to pastor the Downtown Presbyterian Church in Rochester, New York. Her call was overridden (1992) by the regional church body because of her lesbian sexual identity. In response, she founded the non-profit organization (1993) That All May Freely Serve, an educational and advocacy group that works on issues of sexuality and religion. She later came under attack for allegedly officiating at same-sex marriages, only to be found innocent (2008) according to Presbyterian law when the national church had to admit that she did not conduct marriages but services of blessing for same-sex partners.

Lesbians have long been a part of religious groups and presumably will be for the foreseeable future. What is changing is the degree to which their presence is increasingly tolerated, even celebrated in some instances. Scholarship continues to emerge that shows both the historical importance of religious lesbians and the contemporary impact of being out. It points toward a day when sexual orientation

will fade in importance. In the meantime, the contribution of lesbian women to theology and community life in many traditions expands religious parameters.

Religious Thought: Mujerista

Mujerista theology is an explanation of Latinas’ religious understandings and practices. Based on St. Anselm of Canterbury’s dictum that theology is “faith seeking understanding” (*fides quaerens intellectum*), it challenges other theologies to recognize that all theological enterprise is not about God but about what different human beings think about God. The publication in 1988 of *Hispanic Women: Prophetic Voice in the Church*, coauthored by Ada María Isasi-Díaz and Yolanda Tarango, was the first publication in the United States

focused on the religious thought of Latinas—women from Latin American and Caribbean background living in the United States. *Mujerista* theology is based on these religious understandings and practices, particularly those of grassroot Latinas, mostly poor and working-class women. The religious understandings and practices of Latinas sustain them and encourage them in their daily struggles, as members of an oppressed group living in the United States that is exploited, suffers systemic violence, is discriminated against, and is powerless. Religion is a positive force for Latinas as they struggle for the right to speak with their own voice and to point out the particularity and significance of their own understandings—religious and otherwise.

Mujerista theology considers itself different from other theologies only in that it has as its source and highlights Latinas' religious understandings and practices. *Mujerista* theology insists on the subjectivity of all theology and on the importance of recognizing that all theology is human-talk and has to be, therefore, open-ended. *Mujerista* theology has a three-fold goal: to contribute to the development of Latinas' moral agency by providing them with opportunities to contemplate and discuss their religious beliefs and their meaning in one's daily life. Second, *mujerista* theology seeks to provide Latinas with opportunities to be self-defining subjects instead of objects of theology. Third, it works to enable them to become conscious of and to struggle against internalized oppressions and to work to transform oppressive societal structures. To do this, *mujerista* theology uses an ethnographic method to enable the voices of grassroot Latinas to emerge and be heard, and it uses them as the basis for its elaborations. *Mujerista* theology is an attempt to bring to the attention of the intellectual world and the churches voices usually not heard, if heard not recognized, and if recognized not considered important.

Lo Cotidiano—Daily Life as Source of Religious Thought

Central to *mujerista* religious thought is Latinas' daily experience, *lo cotidiano*, the horizon of daily life—of Latinas' common, ordinary lives. *Lo cotidiano* is the space or main arena of Latinas' struggles, the place and time where they come to understand reality and to deal with it. *Lo cotidiano* is enmeshed in the materiality of life, materiality that Latinas consider part of God's creation, which God embraces in a most unique way in becoming incarnate in Jesus.

The epistemological consideration that knowledge emerges from experience is behind *mujerista* theology's insistence on Latinas' religious experiences as its source. Claiming

this source is also based on the epistemological and hermeneutical privilege of the poor and oppressed espoused by liberation theologies. As women of a marginalized community, as women in the Latino patriarchal culture embedded in a likewise patriarchal U.S. dominant culture, Latinas are indeed oppressed and often saddled not only with their own survival but also with the survival of the children and the elderly. Latinas are part of the oppressed of the world with whom God walks in a special way, not because they are morally better but because, from their marginalized position, they can see a radically different future society from which no one is to be excluded.

The Kingdom or Family of God

An important element of Latina culture is that of family. This has led to a reevaluation of the concept "kingdom of God." *Mujerista* theology speaks of the "kin-dom" of God, of *la familia de Dios* (the family of God). The image of "kingdom" has little relevance in the twenty-first century and in the lives of Latinas and it is a sexist and elitist understanding. *Mujerista* theology claims as more relevant for Latinas to speak about the "kin-dom" of God, God's kin, from which no one is excluded, in which relations are mutual, and in which priority is given to the most vulnerable and the neediest. In *mujerista* theology, the family of God is a historical reality; the kin-dom of God is part of this world's reality, and Latinas struggle to make it tangible in their personal lives and in their communities. This perspective, while not claiming that human beings accomplish their own salvation, affirms that, as God's creatures, everyone is responsible for establishing justice and peace as realities in this world. In *mujerista* theology, the resolve regarding the centrality of the struggle for justice does not negate the need for faith in God or human dependence on God's grace.

Sin and Justice

Sin, in *mujerista* theology, is always understood to be social sin, that is, as having social connotations. For Latinas, sin involves not caring for their families and their communities as well as not being responsible to family and community. Sin involves opposing, postponing, or not facilitating the inclusion of all in the family of God, where all are loved and where everyone's rights and responsibilities are recognized. Sin for Latinas is linked to prejudice and to the practices and institutions that do not recognize each and every one as a moral subject capable of contributing to the good of the community. In *mujerista* theology,

sin is the antiliberation force that sustains the well-being and privileges of some at the expense of the majority of the people in the world.

Another central theological theme in *mujerista* theology is that of justice, which is understood as a process of inclusion that emphasizes solidarity and reconciliation. *Mujerista* theology understands justice as a constitutive element of the Gospel message, best explained in Matthew 25:31–46, where God is identified with the poor and the marginalized. The process of justice starts with Latinas' present experience of injustice—an experience of divisions and strife. Justice is, therefore, a reconciliatory praxis that promotes and seeks to facilitate just relationships—personal and social—that affirm the concrete reality of all as embodied beings with the capacity to be self-defining, essentially relational, involved in social, political, economic and cultural contexts made operative by systems and institutions. Just relationships insist on the right of all persons to develop and flourish, affirming their individuality while recognizing their sociality, acknowledging the need for mutuality and accountability.

Jesus Christ and Liberation in Mujerista Thought

Based on the perspective of *lo cotidiano*, the kin-dom of God, social sin, and justice, *mujerista* theology elaborates a Christology—an understanding of Christ—rooted in ethics. Beliefs about Christ have to contribute effectively to bringing justice and peace to the world. For Latinas, Christ is real and present, walking with them, accompanying them in their daily struggles. Christology in *mujerista* theology is not about a Christ who was, but one who is, and one who is engaged in historical reality—open to change. This emphasizes the traditional belief that Christians are *alter Christus*, another Christ. Christ today has to do not only with Jesus of Nazareth but also with Oscar Romero of El Salvador (Roman Catholic bishop of El Salvador, murdered in 1980 because of his commitment to the poor), with Mamá Leo and Juan Lugo of Puerto Rico and New York City (Leoncía Rosado, known as Mamá Leo, was a Pentecostal Puerto Rican leader who came to New York City in 1935, birthed the Damascus Christian Churches, and ministered to drug addicts; Lugo is called the Pentecostal apostle to Puerto Rico. He worked in New York City starting in the 1930s.), Cesar Chavez and Dolores Huerta of California (Roman Catholic farm workers, labor leaders, and civil right activists, practitioners of nonviolence, and cofounders of United Farm Workers), and with the multitude of Latinas and Latinos who relentlessly struggle for liberation day after day.

Mujerista theology clearly links salvation for Latinas to historical liberation—the flourishing of life. This is why liberation for Latinas is not about equality within oppressive structures but about struggling to change such structures and why their well-being is tied to the liberation of other oppressed and marginalized people the world over.

Mujerista theology interprets Latinas' religious thought using the triple lens of culture, liberation, and *mujerista* thought. As a marginalized culture, Latino/a culture in the United States has not been allowed to make significant contributions to what is normative. *Mujerista* theology works to bring to the fore the religious perspectives of Latina culture, which include not only Christian elements but also understandings and practices emerging from African religions brought to Latin America and the Caribbean by African slaves, and from different Amerindian cultures suppressed but not completely eradicated by the Spanish conquistadores. The emphasis on praxis and experience, the focus on economic poverty, and the linking of salvation to liberation are concepts that emerged in the 1960s in Latin American liberation theology. *Mujerista* analysis and understandings, which focus on the oppression of women, provide the third lens for the elaboration of Latina religious thought. *Mujerista* theology has been elaborated in conversation with womanist, Asian American, Native American, Asian, and African women-centered theologies, and Euro-American feminist theology.

Mujerista theology elaborates the religious thought of Latinas' conscious that religion is something alive, that all theology is contextual, and that new challenges are always emerging from the historical reality of Latina communities. *Mujerista* theology is an integral part of Latino/a U.S. theology. It considers all women-centered theologies—Latin American ecofeminist theology, U.S.-based womanist theology, Euro-American feminist theology, and others—conversation partners. *Mujerista* theology is included in many of the feminist theology courses taught in the United States and abroad. It is often also studied in courses that deal with liberation theologies.

Religious Thought: Reformed Protestant

Reformed Protestant religious thought has been a distinctive and important dimension of North American religious thought. It has been present since the early days of colonization in New England. It became prominent during the period of the American Revolution as a form of Christian faith accepted by a number of prominent leaders and thousands of people. It settled into being an influential force in the development of the American nation both religiously and in the social and cultural ethos. Although it continues to be vigorous in its theological expressions in the early twenty-first century, it does not have the national prominence it once had as an identifiable force in mainstream churches and American life as a whole. While it is still possible to trace important contemporary attitudes to Reformed Protestant roots, Reformed thought as a whole is not so much a major voice but more of a “background music” in American culture today.

Reformed Emphases

Reformed religious thought, or Reformed theology, emerged in sixteenth-century Europe as an alternative stream to the initial stream of the Protestant Reformation, the Lutheran, as well as to a third, the Anabaptist.

Zwingli

Reformed thought in its earliest stage is associated with the Zurich reformer Huldrych Zwingli (1484–1531). His series of sermons, begun on January 1, 1519, on the Gospel of Matthew, began the Zurich Reformation and pointed the way to the centrality of biblical exposition and preaching as hallmarks of Reformed thought. Zwingli introduced a basic

simplicity to worship that continued through the centuries—certainly with modifications—as features of a Reformed approach to understanding who God is and what God desires of the people of God. Zwingli’s removal of the vestiges of Roman Catholicism from Zurich churches, including stained-glass windows, pictures, statues, and organs, produced a stark simplicity in worship for the purpose of focusing attention on God’s lordship and sovereignty, with no “distractions” from an encounter with the Word of God read in scripture and proclaimed through preaching.

Zwingli also had strong views of God’s sovereignty in salvation, leading to an emphasis and development on the doctrines of election and predestination, which had been characteristic of Augustine in the early church period. In its simplest form, election meant that God had predestined the salvation of certain people (the “elect”), before the “foundation of the world” (Ephesians 1:4). Salvation is an action of God’s pure grace and is not in any way dependent on the works or righteousness or activities of humans. Zwingli did not speculate on the ultimate fate of those not included in God’s election. Later Reformed thinkers did. So Zwingli was not a “double predestinarian,” in proposing two “decrees” of God: one for salvation and the other for damnation. Who and how many people will be saved is unknown and a matter left totally up to God to decide.

God’s Word is proclaimed in the midst of the church, the people of God assembled for worship. In preaching, based on the Holy Scriptures, the living Word of God is proclaimed and heard. The Holy Spirit enables this “hearing” and application of the preached Word to the lives of those who hear.

Zwingli acknowledged two sacraments that he believed were biblical: Baptism and the Lord’s Supper. Baptism was a sign of membership in the church. In sixteenth-century Zurich, this meant membership in both the civil community and the church, a coterminus view of church and state. The theological issue of excommunication was also a civil matter, under the jurisdiction of the magistracy, as well as a “church matter.”

Zwingli’s view of the Lord’s Supper was to have long-lasting effects on Reformed thought. He spoke of a “spiritual eating” of Jesus Christ in the Lord’s Supper, which featured the elements of bread and wine. But Zwingli denied there was a physical presence of Jesus Christ in the Supper. The Supper was to be a joyful celebration, a remembering of who Jesus Christ is and what he has done. It is a memorial to Christ, a symbolic expression of Christ’s offering of himself for the work of salvation. Zwingli’s view is sometimes called

“memorialism.” The “presence” of Christ is the presence of Christ’s Spirit in uniting the church into one body.

This view ran counter to Luther’s understanding of a real presence of Jesus Christ in the Lord’s Supper. The Lutheran tradition developed a view known as “consubstantiation” in which the presence of Jesus Christ is related to the elements in the Supper, as around, with, and under the elements—such as how heat is found in relation to a poker that is thrust into the fire. Luther’s view differed from Roman Catholic “transubstantiation” in which the church taught that with the words of institution, intoned by the priest in the Mass, the substance of the elements in the Eucharist “became” the body and blood of Jesus Christ. Both the Roman Catholics and Luther affirmed a “real presence” of Christ in the Eucharist or Lord’s Supper, a view Zwingli denied. Zwingli’s basic interpretation of the phrase “This is my body” was: “This *means* my body” or “This *represents* my body.” The phrase is to be interpreted symbolically (as when Jesus said, “I am the true vine”; John 15:1). As a humanist, Zwingli recognized the rhetorical use of such representative language.

Calvin

Zwingli’s theology helped set directions for a theological trajectory that differed from Luther’s. The main architect of Reformed theological thought, however, was John Calvin (1509–1564), whose position in Geneva over a number of years gave him the opportunity to develop theological understandings that became formative for centuries of Reformed theology.

Calvin was trained as a humanist and, through a “sudden conversion” (with no details given), became attracted to the evangelical reform movement. His major theological work, the *Institutes of the Christian Religion* (1536–1560 in various Latin and French editions), presented a more systematic approach to Christian faith than Luther had done and a wider consideration and reflection on theological topics than Zwingli had provided.

Calvin was an international figure. His writings, which ranged from commentaries on nearly every biblical book, to letters, polemical tracts, sermons, theological treatises, and finally the *Institutes*, spread his ideas and influence throughout Europe in his lifetime and even further in the centuries after his death.

As a theologian, Calvin was most indebted to Augustine. This was particularly so in regard to the issues of election and predestination. Calvin’s view was developed in a pastoral context, as he himself served as a pastor for decades in

Geneva. Why is it that some people respond to the Gospel of Jesus Christ with faith and others do not? Why do some people participate in the visible church, as the “communion of saints,” and others do not?

For Calvin, the answer did not rest on any inherent virtue or goodness in a person or in that person’s intelligence, wealth, or any other outward feature. Salvation or election was entirely the work of God.

This conviction rested on Calvin’s (and Augustine’s) view of human sinfulness (depravity). Calvin believed the Bible taught that humans are totally captive to the power of sin—that humans are “turned in upon themselves,” seeking to live according to their own desires, instead of according to God’s will for their lives. Sin breaks the relationship of trust and love God intends to have with God’s creatures. This sin affects all areas of human life and existence. This means the human mind (intellect), will, and emotions are all affected by the power of sin to the degree that humans are sinful by nature. This is what the Christian church historically called “original sin.” “All have sinned and fall short of the glory of God” (Romans 3:23); and the result of this sin is that humans are cut off from God, leading ultimately to death (Romans 6:23). Given their sinful natures, humans have no ability or desire on their own to turn away from the love of themselves to love God. They have no “freedom of the will” in these matters, no human power to break the power of sin in their lives. They have no power to change or get rid of their sinful human nature.

So if any change is to be made, it must come from the power of God. Calvin believed the scriptures taught that God chose or “elected” persons to come to salvation or a new relationship with God. God, through the Holy Spirit, gives the gift of faith in Jesus Christ to the elect. The result is that they are justified in God’s sight (justification) on the basis of the work of Christ, have their sin forgiven, and are given a new nature by the work of the Holy Spirit (regeneration). They are reconciled to God and are called into the body of Christ, the church.

The visible church, for Calvin, was the outward body or institution with which people become affiliated. There are some in the visible church who do not genuinely have the gift of faith in Jesus Christ. For whatever reasons, they choose to join the church, even though they do not truly love God or believe in Jesus Christ as their lord and savior. But the visible church is not the same as the “invisible church.” This is the company of the elect—those whom God has chosen to receive the gift of salvation. Their identity is known only

to God. The invisible church is the “communion of saints” (Apostles’ Creed) and extends from the beginning of time until the end of the world.

For Calvin, election or predestination—which means God’s choosing of what the ultimate destiny of persons is: heaven or hell—is the work of God carried out by God’s initiative in the world. The Holy Spirit is the agent or one who gives the gift of faith, as an expression of God’s pure grace and pure mercy. No person has the “right” to be saved—sin has made that impossible. That God saves any person is a cause for wonder and praise. But sinful persons themselves do not “want” to be saved, because of their sin. Thus, when salvation does occur, in Calvin’s view, it is purely and totally the work of God.

Although election and predestination are the terms most often associated with Calvin, they are only one dimension of the many aspects of his theological views. Calvin had a robust doctrine of creation, which stresses God’s sovereignty as the lord of all who brought all things into existence. Calvin believed in divine providence whereby God preserves the creation, cooperates with persons in carrying out the divine will, and guides and directs the world’s history as well as the lives of individuals toward the final reign of God and establishment of God’s kingdom. These doctrines point to the supreme freedom of God to act in accord with God’s own will in creation, providence, and salvation.

Calvin based these viewpoints on his reading of scripture, which he regarded as the Word of God. God inspired biblical writers to convey the divine message God intended to communicate to humanity. Calvin used his humanist training in the service of biblical interpretation and recognized this divine message came through the human biblical writers and was God’s way of communication. God used the “human” to convey the “divine.”

A further example of this derives from Calvin’s belief that the church exists where the Word of God is preached and the sacraments are rightly administered. These two aspects are central for Calvin and for later Reformed thought. Preaching for Calvin, as for Zwingli, was a primary means by which the Gospel of Jesus Christ is expressed. The sacraments, likewise, were used by God to be signs and seals of God’s grace in the lives of believers.

Both Calvin and Zwingli believed in infant baptism, a view rejected by the Anabaptists. But they did not agree on the issue of the presence of Jesus Christ in the Lord’s Supper. Calvin was closer to Luther than to Zwingli in affirming that Jesus Christ is “spiritually present” in the Lord’s Supper. But

Calvin did not tie this spiritual presence to the elements in the Supper, the bread and the wine. Calvin believed the Supper conveyed grace to those who received it in faith. The “benefits” (“virtues”) of Christ’s work of salvation are received by those who eat and drink in the Lord’s Supper by faith. So the Supper does not simply “represent” Christ (Zwingli); the Supper also “presents” Christ by truly conveying his presence and the power of his work to those who eat and drink in faith, by the power of the Holy Spirit. Sometimes Calvin’s view is called “virtualism,” to indicate Christ’s virtues or benefits are conveyed. The differences between Zwingli and Calvin were to have long-lasting effects in Reformed thought as it developed.

After Calvin

Calvin’s theological views spread throughout Europe, into England and Scotland and to the New World. The clearest development and codification of Calvin’s thought occurred at the Synod of Dort, held in the Netherlands in 1618 and 1619. Here the Reformed—called also “Calvinists”—pronounced their views in light of the critiques of the Arminians, followers of James Arminius (1560–1609), who rejected Calvin’s views on a number of points, including election and predestination.

The Canons of the Synod of Dort were a seventeenth-century expression of the development of Calvin’s thought, crystallized in the famous “Five Points of Calvinism.” These five points were acrostically rendered in English as TULIP. They were as follows:

Total Depravity. Human sinfulness pervades all dimensions of life and all parts of the human person, leaving humanity totally “dead” in sin, unable—and not desiring—to establish a relationship of trust and love with God. This sin leads to eternal death.

Unconditional Election. God chooses whom God will save and who will be eternally lost (damned) by God’s eternal decree. This is God’s free decision and does not depend on human merit or worthiness. Salvation is purely by God’s grace; damnation is a matter of God’s justice.

Limited Atonement. The death of Jesus Christ is the means sufficient to bring salvation to God’s elect. Christ’s death has the power to save all people; but since all people are not saved (according to scripture), it has efficacy only for the elect whom God has chosen.

Irresistible Grace. God’s election by grace will be carried out in the lives of the elect without fail. It is not able to be “resisted.” The Holy Spirit regenerates or gives a new heart,

mind, and will to the elect so that in salvation, their will is now freed to serve and love God.

Perseverance of the Saints. Once the elect receive the gift of faith, God also grants the grace of perseverance, which means they will continue in their faith throughout life. The Holy Spirit enables this perseverance, not the person by his or her own power or abilities. The salvation of the elect is secure in God's grace and by God's power.

By the time of Dort, the Reformed tradition also had a number of important confessional documents that expressed the emerging Reformed theology. These included the Scots Confession (1560), the Belgic Confessions (1561), the Heidelberg Catechism (1563), and the Second Helvetic Confession (1566). These, along with the later Westminster Standards (Confession; Larger and Shorter Catechism; 1647), expressed the faith of Reformed churches as supplements to the work of other Reformed theologians such as Martin Bucer (1491–1551), Heinrich Bullinger (1504–1575), and John Knox (1514–1572).

American Expressions

Protestant Reformed thought came to the New World through a variety of groups of immigrants. New England Puritans, both Presbyterians and Congregationalists, were Reformed. Some Baptist groups were Reformed in outlook, as were some Episcopalians. The theological emphases of the European traditions were adopted and amplified through the North American experience.

Main Currents of Reformed Thought

The American Puritan tradition, while emphasizing the main points of Dort along with other teachings of Calvin and the Reformed, was particularly instrumental in developing the theological concept of the covenant.

Covenant Theology

The theology of the covenant takes up the biblical theme of God entering into relationships with individuals (such as, Abraham; David) or the nation of Israel (at Sinai). Continental theologians such as Johannes Cocceius (1603–1669) developed “Covenant theology” (Latin: *foedus*, from which also comes “federal theology”), which wanted to avoid the speculative language of God's “eternal decrees” (Westminster Confession) to describe God's relating to humanity and replace it by “covenant,” interpreting God's dealings with humans and the creation in a dynamic form.

New England Reformed theologians saw God's church as the elect and also the new land as an opportunity to have a whole people live in a covenant relationship with God in a way analogous to God and the people of Israel in the Old Testament. The covenant theology of Reformed thought was extended to the present day as New England preachers preached the need for righteousness, repentance, and holiness so the “people of God” would walk worthily of the God who had now established a new covenant with the people who were called to live in a “holy commonwealth” and be “lights in the world” to the Christian Gospel—“visible saints.” Ultimately, the hope was to establish the “elect nation,” to be a “city upon a hill” (as stated by John Winthrop, 1588–1649) and live out the responsibilities God imposed on the covenant people who receive God's blessings.

Sin and salvation were continually important in Reformed Protestant religious thought. One example is the Great Awakening, which was begun by the Calvinist George Whitefield (1714–1770) and featured various church splits over practices of evangelicalism and revivalism.

Edwards

No American Reformed figure embodied the issues involved in sin and salvation more than Jonathan Edwards (1703–1758), pastor in Northampton, Massachusetts. Edwards was encouraged by the intense conversions of many persons, seeing them as a potential sign of the coming of the millennium and reign of Christ on earth. Yet Edwards was also disheartened by what he saw as the consequences of the revivals, which were often anticlericalism, unregulated preaching, separation from established churches, and behavior that was irrational and not in his view a true expression of the mind and beauty of God.

These experiences led Edwards to reflect deeply on Christian conversion in the penetrating work *A Treatise concerning Religious Affections* (1746). Here he described ways of discerning the true work of God's grace from selfish works, or the works of Satan. Edwards cautiously supported the revivals.

But Edwards's great theological thought is also found in his analysis in *Freedom of the Will* (1754), where he argued the will was determined in its inclinations either by the power of “sin”—which is the human condition of all persons—or by “grace”—which occurs through “conversion” by the divine and supernatural power of God's Holy Spirit. In *The Great Christian Doctrine of Original Sin Defended* (1758), Edwards supported the traditional Christian and Calvinist doctrine of original sin that taught that the natural actions of humans to

sin arise from the “constitutional unity” of the human race in Adam.

New England Theology

In the background of all this for Edwards were seventeenth- and eighteenth-century controversies over “preparationism.” Can humans, who are sinners, “prepare” themselves for salvation? This raised the theological issue of what role humans play in conversion. In light of the Great Awakening, later followers of Edwards, Joseph Bellamy (1719–1790) and Samuel Hopkins (1721–1803), adjusted their Reformed thinking to accommodate Awakening emphases. They fashioned the “New England theology” or “new divinity,” which sought to reconcile traditional Reformed views of election, predestination, and human depravity with evangelism and moral reform. This emerged into giving the human will an active volitional role in “conversion,” a place it did not have in traditional Reformed thought.

New Haven Theology

The issue persisted later with the revivals of Charles G. Finney (1792–1875), a Presbyterian pastor who emphasized human ability to respond to God’s grace and to “cast out sin.” Sin could be replaced with holiness, a concept totally rejected by traditional Reformed thought. Similarly, Nathaniel W. Taylor (1786–1858), a Connecticut Congregational theologian at Yale, abandoned traditional Reformed emphases on original sin and regeneration, teaching that humans became sinful with their first moral act and that regeneration is within human powers to effect (in conjunction with God’s Spirit). A number of Congregationalists and some Presbyterians accepted Taylor’s “New Haven theology.”

Old Princeton Theology

The most dominant bastion of Reformed thought in the nineteenth century was at Princeton Theological Seminary. Princeton’s main theologians from its founding in 1812 were Archibald Alexander (1772–1851), Charles Hodge (1797–1878), Archibald Alexander Hodge (1823–1886), and Benjamin B. Warfield (1851–1921). They maintained the Calvinism of Dort and seventeenth-century scholastic Calvinists in light of all controversies. Until the publication of Charles Hodge’s three-volume *Systematic Theology* (1872), the theology textbook used at Princeton Seminary was the *Institutes*—not of John Calvin, but of Francis Turretin (1623–1687), a Reformed scholastic theologian whose meticulous theology represented the most technical form of Calvinism.

This fact about the use of Turretin’s work highlights an important feature of the Old Princeton theology, its view of scripture. The theologians of the tradition emphasized scripture as the inspired Word of God. As attacks on the credibility of the Bible grew throughout the nineteenth-century, A. A. Hodge and B. B. Warfield published a famous article on inspiration (1881) in which they argued that scripture’s inspiration also entailed its inerrancy, that the Bible could not err on all things it taught, whether in theology or ethics, history or the natural world. Scripture is inerrant in its original “autographs”; and to disprove this, one would have to establish that the error existed in the Bible’s original (lost) *autographa*. The Old Princeton view was that inerrancy was absolutely crucial to Christian faith because it provided the only solid foundation on which to ground the truth of biblical revelation.

In this, the Old Princeton position was developing the view of Turretin, who in the seventeenth century predicated the authority of the Bible on the claim that the biblical text was verbally inerrant. The assumption of Old Princeton was that Turretin’s position was that of the Westminster Confession and Calvin, a claim denied by Union Seminary (New York) professor Charles Augustus Briggs (1841–1913) and by British evangelicals such as Thomas M. Lindsay (1843–1914) and James Orr (1844–1913). The Old Princeton inerrancy view became the theory of the Bible adopted by American fundamentalists in the fundamentalist/modernist controversy, even though fundamentalists could not adopt the strict Calvinism of Old Princeton on matters such as election and predestination.

Mercersburg Theology

Equally committed to Reformed theology in less “scholastic” forms were two theologians who taught at the Theological Seminary at Mercersburg, Pennsylvania (now Lancaster Theological Seminary): John W. Nevin (1803–1886), a Presbyterian and student of Charles Hodge; and the great Philip Schaff (1819–1893), the Swiss church historian. The Mercersburg theology emerged in part as a reaction to revivalism, though some of its themes can also be found in the theology of Horace Bushnell (1802–1876). Nevin and Schaff stressed the centrality of Christ and his presence in the Lord’s Supper as well as the catholic creedal affirmations of the early church in broader terms than counterparts at Princeton. In this way, they sought to reintroduce the strong views of Calvin on the importance of the Supper and to see the sacraments as forms of the Word

of God to accompany preaching in the context of Reformed worship. This anticipated twentieth-century emphases in liturgical renewal.

Neo-Orthodoxy

The development of nineteenth-century liberal theology is connected to Friedrich D. E. Schleiermacher (1768–1834) and Albrecht Ritschl (1822–1889). It became dominant in America at the beginning of the twentieth century along with the rise of the Social Gospel movement.

In Europe, the developing theology of Karl Barth (1886–1968) and the movement known as neo-orthodoxy countered liberal thought in a return and reinterpretation of the themes of the Protestant Reformation and of the Reformed tradition. Barth's theology gained notice after World War I, which (in the view of Barth and others in the neo-orthodoxy movement) represented the shallowness of liberal theology's concept of human nature and societal "progress." Barth emphasized the transcendence of God and human sinfulness, which has led to the great gulf between God and humanity. This distance and this sin can be overcome only by Jesus Christ, who is "fully God and fully human." Barth's reinterpretation of the Reformed doctrine of election to say Jesus Christ is the elect and the rejected "man" gave a new perspective on Reformed thought and became a leading feature of his theology. Later, Barth's views of the sacraments became closer to Zwingli's than to Calvin's, a marked change from his earlier views.

Neo-orthodoxy became prominent in America after World War II. During the 1940s and 1950s, mainline denominations saw in it an alternative both to liberalism and fundamentalism. By focusing the locus of God's revelation in Jesus Christ, neo-orthodoxy offered a fresh way of hearing the Christian gospel through the witness of God's Word in the witness of Scripture.

Barth's early comrade in the rejection of liberal theology was H. Emil Brunner (1889–1966), with whom he later split and violently disagreed over the issue of "natural theology." Barth's thirteen-volume *Church Dogmatics* was a collection of huge tomes, translated slowly into English. Brunner wrote smaller books, so he initially became better known than Barth in the United States. Among the early advocates of neo-orthodoxy in North America were Walter Lowrie, H. Richard Niebuhr, Wilhelm Pauck, Edwin Lewis, and Elmer Homrighausen. These scholars did not necessarily follow Barth's theological method. But they resonated with Barth's critique of liberalism and its theological assumptions.

Reinhold Niebuhr (1892–1971) of Union Theological Seminary in New York City was also a significant critic of liberal theology and, in his *Moral Man and Immoral Society* (1932), was an early voice who stressed the neo-orthodox (and Reformed) view of the radical sinfulness of humanity while also seeing the unrealistic optimism of Protestant liberalism.

Neo-orthodoxy was a major movement in American theology until the 1960s, when social and cultural forces moved theology into a series of issue-oriented approaches. Princeton Theological Seminary was a leading center of neo-orthodox thought during the post-World War II period, under President John A. Mackay (1889–1983). In 1929, in the wake of the fundamentalist-modernist controversy, Princeton Seminary was reorganized, and devout adherents to the Old Princeton Calvinism left to form Westminster Theological Seminary, near Philadelphia, which has continued to promote this form of Reformed thought. But the largest Presbyterian denomination in the post-World War II era was highly influenced by neo-orthodoxy, with many of its emphases being found in the Confession of 1967, one of the eleven confessional statements that now form the doctrinal standards of the Presbyterian Church (USA). The Confession sees God's reconciliation of the world in Jesus Christ as the central Gospel message, echoing Barth's emphases in the fourth volume of his *Church Dogmatics*.

Reformed Thought in the Early Twenty-First Century

Reformed theological thought has continued to develop. It has done so through scholars who do historical and theological work, churches in the Reformed tradition that continue to draw on the Reformed heritage, and theological seminaries where Reformed thought is taught.

Early-twenty-first-century Reformed historians who have continued to mine the past for historical insights and provide resources for contemporary scholars and students include Elsie Anne McKee (Princeton Theological Seminary), Lyle D. Bierma and Richard A. Muller (Calvin Theological Seminary), and Brian A. Gerrish (University of Chicago).

Reformed theologians who have contributed to the development of Reformed thought from their different perspectives include I. John Hesselink (Western Theological Seminary); Jack B. Rogers (Fuller Theological Seminary); Daniel L. Migliore, Bruce L. McCormack, and George Hunsinger (Princeton Theological Seminary); Amy Plantinga

Pauw (Louisville Presbyterian Theological Seminary); and Serene Jones (Union Theological Seminary, New York).

Theological institutions such as Westminster Theological Seminary and Reformed Theological Seminary are committed to continuing Reformed thought, particularly as it was understood and expressed in the Old Princeton tradition. Other institutions in the Reformed tradition, such as Western Theological Seminary (Reformed Church in America), Calvin Theological Seminary (Christian Reformed Church), and the seminaries of the Presbyterian Church (USA), present varied approaches to Reformed thought ranging through a spectrum of Reformed perspectives.

Religious Thought: Roman Catholic

The study of American Catholicism has both benefited from and contributed to important advances in cultural and social history over the past decades. Yet scholars have often marginalized Catholic religious thought—understood as formal and informal reflection upon the nature of Christian revelation, divine grace, and human response to both in relationship with the church and the larger world—within an American intellectual history dominated by Protestantism. A recent

flourishing of scholarship has nonetheless revealed the important interactions of Catholic thought with American social and cultural history. American ideals of democracy, individualism, capitalism, and religious freedom have significantly influenced American Catholics' understanding of their faith and the place of the Roman Church in the modern world. At the same time, Catholics have set distinct communal, sacramental, and hierarchical visions of society, the church, and the political order against these ideals, rendering them, at varying moments, as insiders and outsiders in the American experiment. An understanding of the major figures, ideas, and theological and philosophical divisions reflecting and shaping the larger Catholic experience in America offers a crucial perspective on the development of religion in nineteenth- and twentieth-century America.

Enlightenment Catholicism

Historians' designation of early nineteenth-century "Republican" or "Enlightenment" Catholicism reveals two interrelated questions facing Catholics in the early republic. The first concerned the form and function of a hierarchical church with historical ties to European monarchism in a society founded on religious liberty, church-state separation, and democracy. The second addressed the influence of Enlightenment rationalism on Catholic understandings of the self in relation to church, society, and the divine. Both questions shaped the development of American Catholic thought well into the twentieth century. But the identification of this early Enlightenment "moment" suggests a unique departure from the anti-Protestant apologetic of the post-Reformation period. Speaking for a minority community in a diverse religious climate, the first bishop of the United States, John Carroll (1735–1815), and later Bishop John England of Charleston (1786–1842), adopted an Enlightenment anthropology and political philosophy responsive to the rationalism and voluntarism of early American religion. Arguing for a contractual vision of limited government and church, both endorsed church-state separation and exhorted the faithful to participate in American political life without distinguishing themselves "from their other brethren of the commonwealth." Against Protestant skeptics, England located the roots of republicanism in Catholic thought dating back to Thomas Aquinas. Catholics, both men insisted, were free to develop and live within any political system that upheld the natural laws governing humanity. As a public theology, Enlightenment Catholicism established common ground with the common sense realism of early American Protestants.

For both, rational inquiry could attain to the truth of God's revelation without contradiction. Inductive investigation into historical sources, Carroll and England further insisted, would invariably bring the individual to the church as the divinely ordained custodian of that law.

For Carroll and England, the American experiment in religious freedom and democracy offered fertile ground for Catholic institutional reform. Eager to promote the faith among a diverse population, they encouraged lay leadership over the temporal affairs of local parish parishes. Yet facing tensions between laity and clergy and between Catholics and non-Catholics, the later careers of both men saw a retreat from Enlightenment ideals. As bishop, Carroll reaffirmed the limits of popular sovereignty and underscored the primacy of church teaching over individual reason and "private judgment" as a path to truth. England chided Protestant claims to "common sense" and "universal reason." The Enlightenment faith in human perfectibility failed to grasp "the immensity of him who alone is perfection." By the 1830s, New York bishop John Hughes (1797–1864) would exhort Catholics to uphold the teaching authority of the church over a cold rationalism "not competent to decide anything." Along with Bishop Martin John Spalding (1810–1872) of Louisville and later Baltimore, Hughes represented a new apologetic that drew upon the church's historic roots to construct a defiantly Catholic identity within the Protestant nation.

Nineteenth-Century Polemics of Tradition

If Carroll and England had touted the possibilities of American society, the church of Hughes and Spalding cast a critical eye that reflected the rising social and cultural tensions of the era. The massive influx of Catholic immigrants by the 1840s sparked waves of nativist discrimination and placed new demands upon the clergy. To preserve and develop the faith among the Catholic masses, Hughes abandoned the democratic experiments of Republican Catholicism for centralized hierarchical structure. Against American Protestant claims to intellectual and moral progress, Hughes pointed to the historic wisdom of the ancient faith. His understanding of history, shaped by the doctrine of the incarnation, placed the Catholic Church at the center of Western achievement. The church became the living and visible vessel of God's "word" through which divine grace directed the renewal of society. If Protestants abandoned the ancient wisdom and mysteries of the church, Catholic discipline preserved the unity and integrity of Christian revelation.

Hughes and Spalding brought a larger nineteenth-century Catholic revival to American shores. Prompted by the rise of liberal nationalism and anticlericalism in Europe, the ultramontanist movement reasserted the central authority of the pope over the church and sought to bring Catholic ritual and devotion throughout the world into conformity with Rome. The movement gained traction in the papacy of Pius IX, whose 1864 "Syllabus of Errors" and the First Vatican Council's declaration of papal infallibility (1870) offered a platform for church-state unity and papal sovereignty against the anarchic forces of revolutionary Europe. Clergymen forged in the anticlerical fires of the continent joined a new generation of Irish clerics in bringing a devotional revolution to American shores. In reasserting the hierarchical authority of the church as the indispensable guide for humanity, they sought to curb an excess of spiritual and moral individualism and emphasize a communal understanding of Christian living, suffering, and redemption.

Mid-nineteenth-century Catholic visions of human freedom challenged major currents in secular and Protestant thought. Although philosophers from John Stuart Mill to Ralph Waldo Emerson idealized the autonomous self as the goal of modern liberal society, ultramontanist anthropology refused to distinguish the self from the larger community: one composed of interwoven hierarchies of families, parishes, and the larger church. Such "organicism" affirmed the place and dignity of the individual who expressed freedom as obligation to the community in accordance with the moral law. The subordination of individual rights to a larger communal identity also reinforced a distinct understanding of human suffering. Moving away from a Calvinist notion of inevitable and sacrificial suffering, many Protestants took a more worldly view of suffering as a marker of human failing that demanded positive social reform. They decried a Catholic piety fixed on the suffering Christ and the penitential nature of physical hardship.

Orestes Brownson

The tensions between Catholic communalism and individual autonomy, human limitation, and social progress were central concerns of the century's most prominent Catholic intellectual, Orestes Brownson (1803–1876). In the years following his 1844 conversion, Brownson embraced Catholic authority against the romantic individualism of an age that "sympathizes with every rebel." But his defense of the faith also challenged ultramontanist perspectives. Brownson rejected Henry David Thoreau's image of Catholicism as a "degrading

intellectual bondage” by upholding a sacramental vision of grace and nature. As the “reconciler of all opposites,” he argued, “Catholicity” did not deny the commitment of individuals or societies to advance science and language or develop new schemes for social and political reform. To the contrary, by infusing human action with supernatural grace, Catholic sacrament and authority affirmed human freedom and obligation to achieve true moral and social progress.

Among such obligations for Brownson was the cause of abolitionism. The convert’s antislavery views distinguished him from many churchmen who read the anti-Catholicism and social radicalism of abolitionists as an extension of liberal anticlericalism besieging Catholic Europe. The revolutionary climate hardened a Catholic ultramontanist anthropology that subordinated individual freedom to the larger social order. Viewing the plantation system as simply one among several social hierarchies to which humans were inevitably bound, American ultramontanists could reinforce the pro-slavery ranks of immigrant Catholics by justifying slavery as a necessary evil. In taking a classical approach to slavery as an inherited institution, the leading moral theologian and later archbishop of Baltimore Francis Kenrick (1797–1863) reflected the dominant trends of Catholic confessional practice in the mid-nineteenth century. Kenrick offered a narrow measure of sin that isolated the individual from larger political, economic, and social structures shaping human action. Within the slave system, he argued, slaveholders could act justly or unjustly. Kenrick’s failure to address the intrinsic evils of slavery itself reflected Catholic perspectives not only on the primacy of social order over personal liberty but also on the nature of human suffering.

Brownson’s belief that spiritual, scholarly, and artistic endeavors must seek connection and meaning within—rather than escape from—society not only put him at odds with Catholic perspectives on slavery but also with Ralph Waldo Emerson’s ideal of absolute freedom. Brownson rejected Emersonian individualism as an imprisonment of the self that, in its quest for fulfillment, too often lapsed into a crass materialism plaguing American society. Yet Brownson never fully abandoned his sensitivity to the “inner light” within man. Such Protestant language irritated ultramontanists fixed on maintaining Catholic discipline as the true path to salvation. Efforts to tune the personal experience of grace with the rhythms of Catholic sacramental life nonetheless resonated among Catholics seeking a more active engagement with the intellectual and cultural currents of the age. Fellow convert Isaac Hecker (1819–1888), founder of

the order of Paulist Fathers, argued that the workings of the Holy Spirit connected the individual’s subjective experience with the objective truths found in Catholicism. Articulating a romantic and providential view of American society, he believed that the Holy Spirit would eventually lead the nation and the world back to the one true church.

“Americanism” and Ultramontanism

Several clergymen adopted Hecker’s providential view of American society. James Cardinal Gibbons (1834–1921) of Baltimore championed American constitutionalism as a model of church–state cooperation for the advancement of human welfare. Archbishop John Ireland (1838–1918) of St. Paul and other “Americanist” and modernist voices challenged the church to forge new paths in political, social, and scientific thought. In the process, they echoed his larger call to look beyond the church walls for evidence of God’s grace. In their “immanentist” understanding of the sacred, God spoke through human experience. The historical process raised new questions to which church teaching must respond in innovative ways. Adopting this position in varying degrees, Gibbons and Ireland called Catholics out of their intellectual and cultural ghetto. Only in acquiring the modern world’s knowledge, research, and scientific tools could the church “Christianize its aspirations, and guide its forward march.” John Lancaster Spalding (1840–1916) campaigned for a modern Catholic research university that nurtured intellectual engagement with modern science and social thought. Both Spalding and John Zahm, C.S.C. (1851–1921) agreed that intellectual life would fortify, not contradict, Catholic truth against materialism and relativism. Zahm, a Holy Cross priest and scientist at the University of Notre Dame, argued that any examination of evolutionary theories would demonstrate Catholic perspectives on the ultimate unity and purpose of the universe.

But the church’s censuring of Zahm and suppression of his controversial *Evolution and Dogma* (1895) signaled a larger shift away from Catholic rapprochement with the modern world. Conservatives protested Americanist reverence for modern political and intellectual systems. Archbishop Michael Corrigan (1839–1902) of New York, Bernard McQuaid (1823–1909) of Rochester, and a number of German and Jesuit clergy advanced the religious and cultural protectionism of Hughes, infusing a more systematic rejection of modern political and social thought found in the papal mandates of Pius IX and Leo XIII. Against the immanentism of liberal theologians, conservatives defended

an ahistorical and extrinsic view of Christian revelation that remained independent of subjective human experience. Against evolutionary and developmentalist theories of revelation and history, they argued, the church safeguarded the “deposit of faith” set down by Christ and the apostles. Preserving the right relationship between God and humanity, only the external authority of the church made revelation available to human souls.

Social and political upheavals at the end of the nineteenth century in Europe hardened critical divisions within the church and placed Americanists in the crosshairs of Rome’s larger war on modernism. Facing political crises throughout the continent, the Vatican pitted the ideal “thesis” of church-state unity against the American “hypothesis” of separation. The church’s 1899 rejection of “Americanism” followed by its 1907 condemnation of modernism halted clerical forays into modern political and scientific thought, inaugurating a half-century-long restriction on Catholic theology and biblical studies. Scorning modern skepticism, irrationalism, and historical criticism, Catholic intellectuals were to turn to the method of St. Thomas Aquinas. Neo-Scholasticism’s focus upon the certainty of truth, the unity of faith and reason, and a universal law ordering nature and human society placed Catholics out of touch with mainstream intellectual currents. Embracing the scientific and experimental spirit of the age, pragmatists John Dewey, Oliver Wendell Holmes, and William James among others eschewed abstract principles as a universal guide for legal and social systems. Societies, they argued, must discover their values as they functioned and changed in the world.

Social Thought

Yet as liberals interrogated the social abuses of the industrial age, their conclusions struck similar chords with Catholic social reformers who likewise condemned laissez-faire capitalism. Leo XIII’s “On the Condition of Labor” (1891) grounded the church’s critique of economic injustice in the natural law. Invoking the natural and fundamental rights of all individuals, including the right to property and a just wage consistent with human dignity, the encyclical placed the church firmly on the side of the working classes and inaugurated a larger Catholic social tradition that significantly shaped American social thought through the twentieth century. In the United States, the Jesuit John Ryan (1869–1945) bridged Catholic social criticism and mainstream progressivism. Calling for a living wage “consistent with the dignity of a human being” and state regulation of

working hours for women and children Ryan demanded that Catholic moralists turn abstract ethical principles into positive social reform. His effort to bring questions of economic justice into the realm of Catholic moral theology gained admiration from Social Gospel reformers, particularly Richard T. Ely (1854–1943). Ryan articulated his views on social solidarity and cooperation most dramatically in the 1919 “Bishop’s Program for Social Reconstruction.” Calling for mutual cooperation between labor, industry, and commerce, the statement helped frame the reformist vision of the early New Deal era.

American Catholic social theology drew from several strands of European thought, including the nineteenth- and twentieth-century revival of the “mythic Middle Ages.” Although modern medievalism informed a variety of Catholic apologetics and literary works, the organic unity of the medieval feudal systems preserved in the “perfect society” of Catholic ecclesiology and liturgical structure offered an antidote to the destructive individualism of American culture. In practice, medievalism loosely framed Catholic efforts to develop traditional labor guilds and other forms of social and economic organization. The principle of “subsidiarity” argued for the primacy of local community groups over the state as the agent of social change. For Catholic Worker founder Dorothy Day (1897–1980) and liturgical reformer Virgil Michel (1890–1938), Catholic sacramentalism and communalism buttressed human society against the social alienation at the core of modern injustice and conflict. Day’s Christian personalism and distributism challenged the dehumanizing forces of both laissez-faire capitalism and the larger welfare state. Michel sought to reassert the church’s “essential nature” as a spiritual and communal society. As the central expression of human solidarity and unity with the divine, the Catholic liturgy charged the laity with a desire to meet the world’s economic and social needs.

Advancing “Catholic Civilization”

The most pervasive aspect of twentieth-century Catholic medievalism was, of course, the Neo-Scholastic revival. Although its roots lay in mid-nineteenth-century Europe, it did not take hold in American Catholic colleges until the 1920s, when a flourishing of associations established it as the foundational system for Catholic intellectual life. On one level, Neo-Scholasticism reflected the survival of “common sense” that Protestants seemed to relinquish by the 1920s. While Dwight L. Moody and Christian fundamentalists abandoned the “wrecked vessel” of the world and modernists

cast about in a sea of relativism and skepticism, Catholics upheld the unity of faith and reason and looked comfortably, if unimaginatively, upon the world. Yet for all of its quaint appeals to “common sense,” twentieth-century Neo-Scholasticism sprouted a complex array of social, intellectual, and cultural movements. European critics Christopher Dawson and G. K. Chesterton, philosophers Etienne Gilson and Jacques Maritain, as well as novelists Graham Greene and Evelyn Waugh all became part of a larger “renaissance” of Catholic civilization that reflected upon modern problems through a return “to the sources.” Maritain exhorted the faithful to seek evidences of good and truth “immanent in new temporal forms” without being swayed by “current fashions of thought which would cause us to lose our grasp of the eternal principles.”

The revival promoted a new self-understanding among American Catholics who sought to bring a distinctive Catholic social and moral perspective into society. In unprecedented ways, the laity, as part of the Catholic Action movement, participated in the church’s apostolic work as part of the “mystical body of Christ” in the world. By the 1950s, with the institution at its peak of growth, Catholics enjoyed new recognition in popular and political culture. Southerners Flannery O’Connor (1925–1964) and convert Allen Tate (1899–1979) demonstrated the reach of a literary revival shaping twentieth-century American literature. For O’Connor, Catholic orthodoxy, a belief in the absolute value and order of existence, liberated the writer to be who she or he truly is: “an observer, first, last, and always” who resists the relativist tendency to “create dogma” of personal perspective. The most provocative literary contributions brought a Catholic “sacramental” imagination that found sacred presence and order in even the most profane or grotesque. Thomas Merton’s (1915–1968) memoir of spiritual and intellectual conversion, inspired by his understanding of the Thomistic synthesis of human reason and divine order, reached audiences across confessional boundaries. Despite the author’s own intentions, the *Seven Storey Mountain* (1948) became for many a manual of spiritual self-help that spoke to the alienation of the postwar age.

A “New Theology” through a “Return to the Sources”

Just as Catholics in general enjoyed new recognition in popular and political culture, this new self-understanding also prompted self-criticism among many Catholic intellectuals. By the 1950s, John Tracy Ellis (1905–1992), Walter Ong

(1912–2003), Thomas McAvoy (1895–1900), Gustave Weigel (1906–1964), and Thomas F. O’Dea (1915–1974) joined a chorus of non-Catholics in denouncing the church’s self-isolation from the main currents of scientific and social thought. As non-Catholic universities forged new paths in scientific and cultural theory, they lamented, Catholic education insisted upon “contemplation and not research” in the mind’s path to God. Catholic scholars urged a new engagement with modern thought grounded in a fresh application of Catholic sources. French theologian Henri de Lubac (1896–1991) sought to rescue the mystical traditions of the early church from Enlightenment rationalism. Three Jesuits, the German Karl Rahner (1904–1984), the Canadian Bernard Lonergan (1904–1984), and the American John Courtney Murray (1904–1967), all joined the international effort to return church thinking “to the sources” even as it looked outward for new ways of reshaping the social order.

The “new theology” resembled mid-twentieth-century Protestant neo-orthodoxy in its efforts to blend social reform and religious revival through a return to traditional Christianity. However, John Courtney Murray’s emphasis upon the natural law roots of American political institutions cast a more optimistic light upon society than his counterpart Reinhold Niebuhr (1892–1971). Similar to Niebuhr, Murray refused to relegate religious authority to the private sphere of individual conscience. He developed a public theology that reached across confessional boundaries and challenged the economic and political violations of a natural and unifying social order. Yet Niebuhr’s emphasis upon human sinfulness and ignorance at the root of modern injustice contrasted sharply with Murray’s belief in the natural inclination of human institutions toward a fulfillment of that order. In this way, Murray had more in common with mainstream American liberals at midcentury who invoked a singular “American creed” as a natural solvent to racial and class tensions underlying midcentury society.

Vatican II

Murray and the *Nouvelle Theologie* significantly shaped the dramatic transformations of the Second Vatican Council (1962–1965). The council’s defining “Pastoral Constitution on the Church in the Modern World,” *Gaudium et Spes* (1965), broke from the separatism of the past and renewed an immanentist understanding of God present in historical forces and different cultures. Catholics could look to the world for sources and signs of Christian renewal. The document affirmed the freedom of scientific inquiry and

identified the church with the social, political, and economic struggles of people throughout the world. Murray's advancement of the American model of church and state produced important statements on religious freedom in seeking God without coercion. While affirming the importance of Catholic teaching and authority in the modern world, the council also drew lay leadership into pastoral and intellectual life and renewed the place of scripture as a source of revelation in dialogue with tradition. Jesuit theologian Avery Dulles (1918–2008) noted the council's destruction of the singular "perfect society" of the church unified institutionally by ultramontanist and philosophically by the Thomistic synthesis. In its place, postconciliar religious thought drew upon a "tradition of Catholic pluralism" that brought a variety of social and cultural perspectives into dialogue with Catholic teaching.

American efforts to implement the council drew sharp divisions within the church that reflected the larger social and political upheavals by the 1960s. Identification of the church with the poor and marginalized generated new theological voices that drew upon global social struggles in putting new questions to biblical revelation. Black and Latino liberation theologies sought evidences of divine grace and teaching in the experiences of poverty and social struggle. Feminist perspectives seen in the writings of Mary Daly and Elizabeth Johnson among others challenged the "hierarchical dualism" of Western theology that lay at the root of ecological and social crises. At the same time, although encouraged by a new theological and intellectual freedom, progressives lamented their failure to reform male-dominated ecclesiastical structures. They likewise failed to replace the traditional "act-centered" moral theology that focused confessional practice upon personal sin with what sociologist Paul Furfey termed an "actor-centered" approach that interrogated the character, attitudes, and habits of people in relation to the larger social injustices. After the 1968 issuing of *Humanae Vitae*, maintaining the ban on artificial birth control, theologian Charles Curran of the Catholic University of America denounced the church's retrenchment into natural law perspectives that placed abstract principle over experience. The encyclical provoked an unprecedented break of the majority of Catholics with the religious authority of the church.

Such transformations have inflamed conservatives, who attack the culture of dissent rising within the church under the guise of "pluralism." For many conservatives, the abandonment of Aristotelian and Thomistic unity of the church lay at the root of the current crises of authority facing the

church and widening the chasm between "liberal" and "conservative" elements. The historian James Hitchcock, like many who protested the church's dramatic changes, did not reject the letter of Vatican II but, rather, the liberal abuses of its "spirit" in their reckless accommodation to modernity. Others, ranging from the late journalist William F. Buckley and convert Richard John Neuhaus to Michael Novak and George Weigel, have formed a nucleus of conservative leadership. Grounded in natural law teaching, they have taken up the mantle of Americanism in charting a new political role for the church in opposition to abortion and in other socially conservative issues. Since the 1960s, theological conflicts have created intra-Catholic rifts that reflect the larger so-called "culture war" in America. Questions over the church's proper social and political voice have divided Catholics along political lines once unthinkable in the immigrant period. But whether or not liberals and conservatives agree on the priorities of Catholic moral authority, the faithful nonetheless accept Gibbons's "Americanist" premise that Catholicism not only belongs in the religiously and culturally plural United States but also finds its most authentic social and political expression there.

Religious Thought: Womanist

A relatively recent development in theological education and religious studies, womanist religious thought highlights the empowering assertion of black women's ways of knowing that which facilitates the linking of divine justice to social

justice and thereby interrogating religious and social phenomena at the dawn of the twenty-first century. Originating in the writings of black female religious scholars who adopted Pulitzer Prize-winning African American novelist Alice Walker's (1944-) term "womanist," this discourse is rooted in a four-fold academic paradigm for demystifying and dismantling race, class, and gender oppression.

Definition of Key Concepts

Firmly rooted within the traditions of African American women, womanist approaches to religion and society incorporate four tenets that represent the virtues and values of the African American community and examine the ways in which these tenets relate to the unique role and moral wisdom of black women within this community. Distilled from Walker's original definition of the term, the tenets of womanist religious thought are (1) radical subjectivity, (2) traditional communalism, (3) redemptive self-love, and (4) critical engagement. These core concepts serve as the foundation for the theoretical orientation, methodological approaches, and practical application of womanist religious thought.

Radical subjectivity is a process wherein the identity development and consciousness of black women foster an ability to understand and claim personal agency, influence life choices, and incite resistance to marginality. It incorporates the lived experiences of black women and the act of naming and claiming a personal voice and the validating of worldviews.

Traditional communalism is an affirmation of the loving connections and relational bonds (familial, maternal, platonic, religious, sexual, and spiritual) formed by black women. It celebrates the ability of black women to create, nurture, protect, sustain, and liberate communities through acts of inclusivity, mutuality, reciprocity, and self-care.

Redemptive self-love is the assertion of the humanity, customs, and aesthetic value of black women in contradistinction to the commonly held stereotypes of the dominant society. The admiration and celebration of the distinctive and identifiable aesthetic and beauty of black women, embodiment and culture, is essential.

Critical engagement is the prioritizing of black women's wisdom that stems from totalistic experience with the forces of interlocking systems of oppression and the strategic options devised to undermine them. It is founded on the unequivocal belief that black women hold the standard and normative measure for the liberation of oppressed peoples from social injustices.

Historical, Cultural, and Intellectual Parameters

Responding to the overall failure of feminist and black liberation theologies to address the lived experiences of black women, womanist thought developed as a new way of understanding the world through the framework of an academic discourse that privileges African American women's moral wisdom and experience. Due to the "tripartite oppression" of black women on the basis of race, gender, and class—alternately referred to by womanists as "triple jeopardy"—womanist thought considers the experience of black women to be a source of critical insight into the struggles of marginalized individuals and communities. Womanist thought gives priority to the everyday realities of black women, thereby challenging the racist, sexist, and classist mentalities that dominate social, political, and religious systems. Through an ethical principle of praxis (theory linked with action) that combines thinking, being, and doing, womanism seeks to illuminate truth from the cultural and ideological frameworks that perpetuate the marginalization of black women.

During the nineteenth and twentieth centuries, proto-feminist women's movements (suffragists and clubwomen, for example) challenged many of the traditional patriarchal social and religious structures that privileged men and oppressed women. The challenge of these proto-feminist movements would eventually lead to increased inclusion of women in social, religious, and academic discourses; however, this marginal inclusion was by no means equal. Alongside the establishment of the academic field of Women's Studies, the decades of the 1960s and 1970s also ushered in the field of black Studies (now often referred to as African American/Africana Studies), which included black liberation theology and the challenges it presented to racist structures in both society and the academy.

Although black women were essential proponents in the grassroots development of both the feminist and black freedom movements since their inception, they were largely overlooked during the development of the social, political, and religious agendas within the black community as a whole and within its academic discourses in particular. Ironically, as the development of these two areas of discourse increased exposure to and validity of the perspectives of blacks and women, both fields of study concurrently ignored and alienated black women. On the one hand, feminist studies and feminist approaches to religion tended to ignore the racial and class elements of their gendered critiques while, on

the other hand, black studies—and black liberation theologies in particular—tended to ignore the sexist components of their ideologies. In both its scholarship and politics, feminism reflected the bourgeois principles and sensibilities of white upper- and middle-class women. As a result, it was largely irrelevant to or unconcerned with the wisdom or plight of black women. At the same time, black studies largely ignored black women in light of the predominant assumption that racial progress would occur primarily by means of the empowerment of black men and the masculinization of black thought.

By the 1970s black women began to recognize the need to develop ideological modes of empowerment for themselves that took into account the racist elements of feminism and the sexist elements of black studies. This led to the emergence of black feminism. With the writings of Angela Davis (1944–), bell hooks (1952–), the Combahee River Collective (a black, lesbian, feminist group meeting from 1974 to 1980), and, later, Patricia Hill Collins (1948–), black feminism appeared on the academic scene as an ever-present corrective and counterpoint to the identity politics implicit within the fields of black studies and women's studies. The canon of work that emerged was diligent in its strident critique of the omission of the legacy of black women's work and worth in the struggles for the civil and human rights of all women and people of color.

The black feminist standpoint, however, continued to be regarded by the leading scholars of both fields as peripheral or anecdotal to their larger agendas. In the words of black feminist Gloria Hull, "all the blacks were men and all the women were white." This was particularly the experience of black women within theological education and religious studies, who were invisible to the general field and regarded as inferior or irrelevant by much of black and feminist theological discourse. This problem prompted black female theologians and religious scholars to search for an emerging consciousness capable of initiating a new academic discourse and ideology based upon a theological perspective of race and gender that was inclusive of *all* blacks as well as *all* women and that would foster a movement of self-determination and empowerment for black women within the church, academy, and society at large.

With the introduction of the term "womanist" in her seminal text, *In Search of Our Mothers' Gardens* (1983), Walker's singular enterprise of creative self-naming served as the preferred moniker for a particular cadre of black graduate students who were to become the pioneers of womanist

approaches to the study of religion within the religion academy. In her 1985 essay "The Emergence of black Feminist Consciousness" Katie Cannon (1950–) transformed Walker's confessional term "womanist" into an academic movement situated within theological discourse—"womanism"—which she described as a consciousness or interpretive principle inherent to black women that provides the motivation to challenge oppressive structures while holding on to life regardless of constant oppression. Soon thereafter, Cannon, Jacquelyn Grant (1948–), Delores Williams (1943–), and others produced numerous essays and books, all designed to shape the inchoate concept into a formidable field. By naming the various systems of oppression that affected black women, these path-breaking womanist scholars initiated new modes of critical analysis that incorporated their own experiences of religiosity, womanhood, consciousness, racial pride, and community development. As a result of their efforts, womanist scholars such as Emilie Townes (1955–), Kelly Brown Douglas (1957–), and Renita Weems (1954–), among many others, began to break the centuries-old strongholds of racism and sexism and to create new opportunities of exploration for black women within the church, academy, and society.

Outlining Contemporary Relevance: Its Application to Theory, Policy, and Debate

Womanist scholars utilize both the theoretical and theological reflections of black women to change the manner in which knowledge is constructed and utilized for the purpose of social transformation. As such, womanism is based upon the conviction that the wisdom and insights of black women stand to benefit all of society, as opposed to only black women or the black community.

A leading voice in the womanist movement, Williams demonstrated in her 1987 essay "Womanist Theology: Black Women's Voices" how womanist thought is well on its way to defining the categories and methods needed to develop along lines consistent with a thoroughgoing liberation theological discourse. According to Williams, womanist theological methodology presently needs to be informed by at least four elements: (1) a multidialogical (incorporating numerous perspectives at once) intent, (2) a liturgical intent, (3) a didactic intent, and (4) a commitment to both reason *and* the validity of female imagery and metaphorical language in the construction of theological statements.

Multidialogical intent allows womanist theologians to advocate in praxis and discourse with a wide array of

sociopolitical, cultural, and religious communities focused on the survival and empowerment of the oppressed. *Liturgical intent* within womanist theology ensures that the fruit of womanist labor will be a relevant reflection of the action, thought, and worship of the black religious traditions. *Didactic intent* in the womanist theological perspective asserts a pedagogical dimension to theology. Finally, *theological language and imagery* generated by womanist theology reflect the amalgam of black women's history, culture, moral wisdom, and religious experience that is instrumental to transforming academy, church, and society. Following Williams's schema, the womanist theological project is indicative of its intentionality: black women asserting themselves in the fullness of their historical reality, with social conditions and religious experience as the core of their theological interpretation.

The distillation of black women's wisdom and experience from a historical narrative and academic record that has both ignored and excluded black women is the ongoing challenge and major objective of the womanist project. Traditionally, the academy has not considered the perspective of black women worthy of documentation or consideration. As such, one of the primary tasks of womanist scholarship is to search black women's literature—poetry, songs, fiction, and prose—for the silenced voices and perspectives of black women. For example, in order both to access and assess black women's experience, womanist scholars frequently appeal to the literary tradition of African American women authors. This often includes sociological and historiographical research and documentation of the oral traditions of black women in their communities (“mother wit”) that has been passed on from generation to generation by matriarchal leaders. Womanist scholarship is two-fold in its agenda. First, through attention to interdisciplinary approaches, it aims to deconstruct and dismantle the narrative histories and oppressive structures of racism, sexism, and classism that have exploited black women for centuries. Womanists seek to expose the untold histories of black women that include their physical, sexual, psychological, and economic exploitation. Second, it includes a constructive and empowering element that aims to create new realities and modes of understanding self and community that fully incorporate the perspectives of black women.

Within the religious and theological disciplines, womanism takes full account of scholarship and practices that tend to ignore and compartmentalize race, gender, sexuality, and class oppression. Womanist thought critiques the dominant

philosophical, theological, and canonical assumptions of Christianity that enable social oppression and limit human agency. Womanist research methodologies often incorporate critical engagement of biblical passages of scripture that have been used to oppress women—and black women in particular. This reinvestigation of scripture often includes a re-interpretation from the perspective of black women that provides new and variant insights from the normative interpretations. As such, womanist theology challenges the Christian tradition and its complicity in the perpetuation of oppression.

Most recent developments in womanism further portray the discourse as an epistemology that more effectively addresses the exigencies and interests of black women. Working alongside other marginalized discourses, such as *mujerista* thought and developing country feminisms, womanism has broadened its scope by constructing new, more inclusive and thoroughgoing understandings of liberation theology. Emerging fields of study within womanism include theology, biblical studies, ethics, and sociology of religion. Womanist thought now contributes to the larger academy by introducing new approaches and methodologies for the understanding of black religious life, women's liberation, and scholarly activism. Expanding the range of its scholarly thought and vision in this manner ultimately will enable womanism to avoid becoming a periphery discourse and allow it to function as a viable source of knowledge, insight, and understanding for all peoples suffering from multiple forms of oppression.

Revivalism: Nineteenth Century

The evangelical surge that swept through North America and Britain in the middle of the eighteenth century not only gave life to groups such as the Methodists but also made the phenomenon of the revival a vital component of American religious culture. If that Great Awakening, as it is popularly known, finally ebbed in part because of the increasing political strain leading to the American Revolution, the conviction that there would be times when folk would exhibit intense interest in things of the soul did not disappear. By the opening of the nineteenth century, another evangelical wave moved through the new republic, leaving its mark from the southern and western frontiers of Kentucky and Tennessee to the emerging urban areas of New York and other northern cities. In many ways, these expressions of nineteenth-century revivalism, while bearing the marks of their time and place, have continued to shape both the evangelical style within American Protestantism and the tradition of revivalism into the twenty-first century.

The Great Revival

As early as 1797, religious stirrings came to several New England towns and villages, particularly in Connecticut and New Hampshire, and by 1801, religious revival swept through Yale College, where the grandson of Awakening scion Jonathan Edwards (1703–1758), Timothy Dwight (1752–1817), was president. Periodic revivals at Yale over the next two decades, with corresponding efforts to improve the moral life of both students and the larger society, have led interpreters to mark this endeavor as the beginning of the “second” Great Awakening. Revival interest, as in the eighteenth century Awakening, was by no means confined to New England. Around the same time these revival activities invigorated New England religious life, a different sort of revival phenomenon was taking shape in what was then the western frontier region of the South. The frontier camp meeting that emerged in that area was destined to have extraordinary impact on American religious life. However, the evangelical upsurge in the early nineteenth century differed from the Great Awakening of the previous century in at least two ways. There was no “grand itinerant” like George Whitefield (1714–1770), whose ministry gave an overarching common identity to the earlier awakening, and the later revivals moved rather quickly, even if sometimes unwittingly, to jettison the Calvinistic theological foundation that had undergirded the preaching of folks like Whitefield and Edwards.

When and where the first frontier camp meeting occurred cannot be identified with certainty. But by 1799–1800, there were religious meetings along the Gasper River in Kentucky, and in 1801, a major camp meeting occurred at Cane Ridge, just a few miles from present-day Lexington. The New England revivals, as their predecessors, took place in churches, space already identified as religious. Those on the frontier did not. With population widely dispersed and towns still rather distant from one other, most of the Euro-American population living west of the Appalachian Mountains did not have access to church buildings or regular, scheduled religious activities overseen by clergy. So some energetic preachers began to announce religious gatherings held in the summer, after crops were planted but well before harvest time, at places where folk could come from miles around, stay for perhaps up to two weeks or more, hear vibrant preaching, receive spiritual nurture, mix and mingle with others, sometimes conduct business, and perhaps have an intense experience of conversion. With trees cleared and crude preaching stands erected, forest areas became sacred space for the time of the camp meeting, and those attending stood on holy ground.

Rather quickly, the camp meeting became a staple of frontier religious life. It crossed denominational lines, for preachers from a variety of groups and theological persuasions would attend, often exhorting simultaneously from different stands. Sometimes they engaged in theological debates, providing additional entertainment for those attending. At least as early as the Cane Ridge camp meeting, a special area near the preaching stand was set apart for those seized by spiritual fervor and the wrenching soul searching that might result in conversion. Preachers sometimes called for those seeking spiritual peace to enter the pen, as this area was called. Emotional expression also ran high. What analysts of religion call ecstatic experiences were frequent. A spiritual force, presumably the Holy Spirit, would seize control of the body of one undergoing conversion with the result that some would thrash around as if having a seizure or perhaps utter strange sounds. Camp meeting revivalist Peter Cartwright (1785–1872) provided classic descriptions of such phenomena in his autobiography, calling them the jerking exercise and the barking exercise. So powerful were some of these occurrences that occasionally tree saplings would not be removed when space was cleared for preaching so that women could hold onto them when in the throes of spiritual ecstasy and not risk immodest exposure.

The conversion experience, whether or not dramatic and emotional, became a rite of passage, marking the transition of

those converted from a life without eternal meaning to one where one's future destiny was assured. Over the decades, it became almost a matter of course that at some point, one would undergo such an experience and claim an identity with the community of faith. At the same time, given the rigors and sometimes the rawness of frontier life, conversion was also a civilizing process. It marked the newly converted not only as a Christian but as one who abandoned behavior regarded as uncouth or even untrustworthy by those knit by bonds of faith. As both rite of passage and civilizing process, camp meeting conversion helped create a sense of community among those who shared a similar experience, a tie often hard to come by on the frontier given the distances that separated families.

The camp meetings had other important dimensions. Many were biracial, although often Euro-Americans and African Americans gathered in different parts of the revival site. At least for the first few decades of the nineteenth century, the southern slave culture had not taken firm root in the frontier areas where camp meetings initially flourished. The frontier revivals also had a sacramental character, with many ending the week or two of exuberant preaching and socializing with the celebration of the Lord's Supper. The shared sacrament became another symbol of how the exigencies of frontier life could allow the faithful to transcend denominational boundaries and affirm a common identity. Related to both of these dimensions was the way in which the camp meeting stirred an interest in restoring the style of what some thought was authentic New Testament Christianity. Some early camp meeting leaders, such as Barton W. Stone (1772–1844), whose work led to the Cane Ridge revival, thought that they were witnessing afresh the church of the apostolic age with its ecstatic character confirmed in the New Testament story of Pentecost that also spoke of the muting of ethnic divisions and the unity that prevailed among believers.

As a form of both worship and entertainment, the camp meeting had an impact on the musical heritage of American Protestantism. Some of the older, familiar hymns lost their staid quality and simple meter when sung informally in the context of the camp meeting, sometimes after preaching had ended for the day. Syncopation gave the emerging gospel song a livelier quality, as did the addition of a familiar refrain. All could join in a lively refrain even if they did not know all the words to every stanza. The frontier revival helped join lively music to evangelistic efforts, just as it foreshadowed later events by taking ordinary space and transforming it into

sacred space (as, for example, when twentieth-century evangelist Billy Graham would preach nightly in sports arenas or other secular venues, temporarily altering them into holy ground). It also introduced techniques that became staples of later revivals. Calling those undergoing conversion to specially earmarked areas of the campground led to the emotion-laden altar call, with those making a religious decision symbolically leaving behind a former identity as they moved into liminal space around the altar or preaching stand.

Although the camp meeting emerged first on the southern and western frontier, it was by no means confined to that region. In one sense, the camp meeting also stands as the precursor of the later religious summer camp. But the strategies associated with it also proved adaptable, for by the 1830s, the methods of the camp meeting were transforming revivalism even in the developing urban areas of the industrializing north.

New Measures Revivalism

The impact of the camp meeting on revivalism elsewhere in North America became particularly obvious in the revivals associated with Charles Grandison Finney (1792–1875). A law clerk when he had a stunning ecstatic experience of the divine presence in his life in 1821, Finney adapted techniques of the camp meeting for his revivals in emerging factory towns and cities, many in the central New York areas, that were growing rapidly with the coming of the Erie Canal. In the days of Edwards and Whitefield, revivals tended to occur within local congregations during regular worship times, often led by their pastors, and extended over several months. Finney took the camp meeting notion of two weeks or so of daily meetings and developed what he called the protracted meeting. Sometimes he held his preaching services in structures erected for the occasion, bypassing regularly scheduled services in already existing congregations. Finney transformed the pen area of the camp meeting into the anxious bench, calling on men and women by name to come forward and seek conversion. His wife organized prayer meetings in homes where women gathered to pray for the success of the revival. More radical for the time was allowing women to pray in public, usually when in the throes of conversion or ministering to another woman who was anxious for her soul. In Finney's hands, these adaptations and others became known as "new measures" that could guarantee the success of a revival. When he drafted a handbook that others could use in planning and executing revivals, Finney insisted that revivals were not surprising works of divine

intervention that Edwards and those of his ilk had imagined, but simply the right use of the right means by ordinary men and women.

Even before the end of the 1820s, Finney's brand of revivalism garnered controversy. Lyman Beecher (1775–1863), then a Latter-day Calvinist pastor in New England, was among those who attempted to stop Finney from launching a revival campaign in Boston. Like critics of the eighteenth-century revival, Beecher saw new measures revivalism as disruptive of orderly ministry and an indirect challenge to the ability of clergy to carry out their pastoral duties. But there was more at stake. Ordained as a Presbyterian in 1824, Finney admitted he had little understanding of the Westminster Confession that summarized the Calvinist doctrine informing Presbyterian belief; later he became associated with the Congregationalists, another group with Calvinist roots, while serving as a professor and then president at Ohio's Oberlin College and as pastor of First Church there. Beecher also had ties to both Presbyterians and Congregationalists, but he struggled more to retain some of the Calvinist heritage. At stake especially was the role of human will in the conversion process. Calvinists such as Edwards and Whitefield in the eighteenth century used the language of conversion, but they believed that God predestined the elect to salvation; for them, conversion was akin to a recognition of the work of grace in their lives. Others in the eighteenth century, most notably Church of England priest and Methodist founder John Wesley (1703–1791), jettisoned that idea. They saw conversion as a conscious move of the human will to accept God's offer of salvation. But if one could accept salvation, one could also reject it. The choice was not predestined or predetermined. Finney and new measures revivalism, despite ties to Calvinistic denominations, effectively demolished the Calvinist hold on the understanding of the conversion process in American Protestantism.

Regardless, the fruits of conversion came in changed behavior. Historians still debate the extent to which new measures revivalism buttressed efforts at social transformation and moral reform in the larger culture, particularly in fueling the antislavery movement. Those committed to promoting this expanding evangelical revivalism supported agencies such as the American Bible Society and American Tract Society, both of which sought to enhance the religious presence in newly settled areas of the United States. Finney was intimately involved in the founding of Oberlin College, the nation's first coeducational and multiracial institution, yet neither he nor other Oberlin leaders espoused equal rights

for women or full equality for African Americans, though most thought the slave system of the day morally reprehensible. The complicated ties between revivalism and social reform reflect the individualistic nature of the conversion experience. Women and men had to decide as individuals whether to accept the gift of salvation. Highlighting individual experience in conversion, those propelled nineteenth-century revivalists to see social issues through an individualized prism. Regenerate men and women would in turn create a regenerate society—but one at a time.

Other religious currents became intertwined with antebellum revivalism. Several of them represented different strands of perfectionism. Early Methodists, for example, had talked about entire sanctification or the sense that growth in faith could ultimately mean one had become holy, that one's will had become perfectly joined with God's will. That idea had receded somewhat before gaining fresh life in the nineteenth century, thanks largely to two laywomen who were sisters—Phoebe Palmer (1807–1874) and Sarah Lankford (1806–1896), who later married Phoebe's widowed husband. The two organized what became known as the Tuesday Afternoon Meetings for the Promotion of Holiness, persuaded that through earnest prayer, Bible study, and devotion they could pursue the “second blessing” of sanctification in an experience as intense as conversion (the first blessing). Phoebe especially became a noted revivalist in her own right, speaking at camp meetings, revivals, and gatherings on both sides of the Atlantic. The expansiveness of revivalism in nineteenth-century Protestantism offered opportunities for other women to become itinerant evangelists as well. Although social custom of the time generally excluded women from the ranks of ordained ministry and serving as pastors, scores of women traveled around the country and abroad proclaiming the evangelical message of conversion and sanctification.

Finney and some of his Oberlin associates, particularly Asa Mahan (1799–1889), also talked about Christian perfection, but from a different vantage point even though they, like Palmer, Lankford, and other Methodist perfectionists, based their thinking on an evangelical revivalistic theology. A Methodist style of sanctification, like conversion, tended to center on individual personal experience. Oberlin perfectionism layered onto that how one became engaged with the moral dimensions of social issues. Yet a third had roots in the utopian and eschatological thinking of John Humphrey Noyes (1811–1886), one-time divinity student at Yale. Noyes concluded that the promised Second Coming of Christ had

occurred in 70 CE, with the result that contemporary believers were called here and now to live as if they were already in the heavenly realm where perfection and sinlessness prevailed. Noyes gathered his followers into a utopian community in Oneida, New York, in an area where Finney had once conducted revival meetings.

Much of the enthusiasm generated by antebellum evangelical revivalism had ties to upstate, central New York—so much so that the area became known as the “burned-over district,” in recognition that there the fires of revival burned brightly and more steadily than elsewhere. Many religious seekers besides the young Finney and then later John Humphrey Noyes found themselves captivated by the religious excitement of the region. Echoing some of the restorationist impulses of earlier frontier camp meetings, Joseph Smith (1805–1844) had his visions that led to the emergence of the Latter-day Saints or Mormons while living near Palmyra, New York, in the heart of the “burned-over district.” The sisters Margaret or Maggie (1836–1893) and Kate (1838–1892) Fox claimed extrasensory experiences that led many to see them as mediums who could communicate with the spirits of the dead. Their first such endeavors came while they lived in Hydesville, New York, in the “burned-over district.” William Miller (1782–1849) gained a wide following as an Adventist preacher whose biblical interpretation claimed to pinpoint when Christ would return to earth; Miller was also a farmer for many years in the “burned-over district” in Low Hampton, New York.

Antebellum revivalism did not necessarily cause any of these other phenomena. But from the frontier camp meeting to Miller’s speculations, they all suggest that a contagious excitement produced by revivalism fed into many other religious and cultural currents. Some of that excitement came from the rapid growth of the new nation, with its energetic appreciation of republican democracy. Some came from the social dislocation felt by folk as they left behind what was familiar and moved to frontier regions in search of a better life. Some had to do with the exploding myth of individualism that characterized much of the popular self-understanding of what was new and different about the American people. Regardless, antebellum revivalism stamped American Protestantism with an evangelical style, made intense personal experience the standard mode of entry into the life of faith for millions of Protestant Americans, and enabled those denominations that exploited revivals to grow at an astounding rate. Methodists especially benefitted from the atmosphere where revivalism was dominant.

Even as sectional conflict mounted, fresh revival currents were appearing. Most well-known is a movement that peaked in 1857 and 1858 and that attracted primarily businessmen in northern cities. This revival took a different form from the preaching campaigns of Finney or the frontier camp meetings. Starting in New York City, businessmen from a variety of different denominational backgrounds gathered in designated churches at noontime for a period of prayer. Individuals might request prayer for themselves or for other men; in many cases, women attended, and although they would not pray audibly, they might recount situations regarding husbands or sons who they believed needed prayer and divine guidance. The movement spread quickly and drew thousands of men into its orbit. This spiritual renewal dovetailed with a major economic crisis. In 1857, the United States experienced a significant economic depression. Most severely affected were business enterprises that had flourished over the preceding quarter to half a century, many of them centered in northern urban areas. If life on the western frontier had seemed so harsh that the frontier camp meeting provided social and psychological relief along with religious nurture, so, too, the businessmen’s awakening of 1857–1858 offered respite for those who found their well-being jeopardized by the economic depression or who perhaps had left the relative security of agrarian pursuits for greater gain in new industries but now were suddenly unemployed. Seeking divine intervention was for many preferable to despair and defeat. When spiritual—and sometimes financial—renewal came, men would also offer prayers of thanksgiving at these noontime meetings, as would wives and mothers who testified to ways they believed God had intervened to provide employment for a husband or son or had empowered them to abandon profligate ways that always loomed as threats in the nation’s cities, especially for men with time on their hands.

Like the evangelical interest in sanctification and perfection, the noontime prayer meetings ebbed as the nation drew closer to Civil War. Yet even after military hostilities erupted in April 1861, revivalism did not disappear as a major component of American Protestant life. For a time, though, the focus of revivalism shifted from the churches and the frontier camp meeting, from prayer meetings and urban preaching campaigns. The new focus centered on the men who were serving in the Confederate army and the federal forces. Among the leaders from both North and South were men whose spirituality received nurture from the evangelical Protestantism that looked to revivals as ways both to bring new converts into the fold and to revitalize the commitment

of the faithful. Among Confederates, for example, both Robert E. Lee (1807–1870) and Thomas “Stonewall” Jackson (1824–1863) were men of deep evangelical faith who promoted revivals among their troops during the war; from a different vantage, Episcopal bishop Leonidas K. Polk (1806–64) integrated faith with military engagement while serving as a Confederate general. For the Union, none was more eloquent than Abraham Lincoln (1809–1865) in pointing out the moral ambiguities of the war, but also in urging in the military and civilians alike to look to a providential God for strength. At different times, under the guidance of military chaplains, revivals broke out amidst the battles among soldiers both Northern and Southern, stoking the fires of evangelical fervor even as churches and society experienced unsettled times.

A New Urban Revivalism

The Civil War ended in 1865, but national division in the United States did not. As both North and South sought to recover—a process that took much longer for the South, thanks to formal Reconstruction—evangelically inclined Protestants again adapted revivalism for a new age and new social setting. The preeminent northern revivalist of the later nineteenth century was Dwight L. Moody (1837–1899), a Massachusetts native who wound up as a shoe salesman in Chicago just before the Civil War. During the war years, Moody worked for the Christian Commission that oversaw evangelical ministry among the Union forces, and in 1865, he became an officer and fundraiser for the Chicago YMCA and also the Chicago Sunday School Union. At that time, the YMCA had as one of its main aims providing morally sound housing and programs for young unmarried men, many originally from rural areas, who flocked to urban areas to seek jobs in the growing factories and businesses there. Soon, however, Moody’s gift for preaching transformed him into an itinerant evangelist. He gained international renown after a preaching excursion to Britain (1873–1875) garnered much publicity because of the large number of conversions reported.

Although Moody returned to Britain on two other occasions, he devoted much of the rest of his life to leading urban evangelistic campaigns in the United States. Never formally trained in theology or ordained by any denomination, Moody cemented the place of revivals in late nineteenth-century urban America. He also assured that revivalism would not be tied to any single denomination. Moody’s ministry thus fed into a growing interest in ecumenical endeavors, enterprises that were not denomination-specific

but promoted interests shared by many Protestant bodies. His influence, though, ran deeper. Song had been integral to the frontier camp meetings. Moody took music one step further by adding Ira D. Sankey (1840–1908) to his staff as a full-time music director. The tie between an exuberant style of gospel music and revivalism associated with Moody and Sankey endures into the twenty-first century. There was nothing Calvinistic in Moody’s message; he energetically proclaimed that salvation was open to all who of their own free will accepted God’s gracious offer of redemption. Moody aggressively sought to reach men, perhaps because women outnumbered men among Protestant church members by at least a two-to-one margin, but also because he believed that the Christian message had too long been seen as unmasculine and faith as appropriate only for women. At the same time, Moody’s message shied away from emotional excess. In this way, he also sought to make Christianity more “muscular,” for Moody found some of the approach of what was dubbed *muscular Christianity* particularly attractive.

As Finney before him, Moody had a passion for social issues, but he tended to see them in individualistic terms. That is, he believed that conversion would rescue individuals from the clutches of a society where evil prevailed; social transformation would come only as these rescued individuals impressed their behavior on the world around them. In a sense, then, Moody’s brand of revivalism saved folk both from personal sin and from an evil world. The motif that conversion could rescue the faltering from the immorality rampant in society informed other agencies such as the Salvation Army, which grew rapidly in the United States after 1880. Other city missions, such as Chicago’s famed Pacific Garden Mission that Moody supported, likewise fused a commitment to revival-style conversion with individual moral reform.

Also like Finney, Moody set up institutions to perpetuate his vision. In his native Massachusetts, he founded schools for both young women and young men that combined standard education with nurture in evangelical Protestant belief and practice. In time, these schools became centers for summer conferences that drew hundreds of younger persons into careers in foreign missions and in ministry to students on the nation’s college and university campuses. They also promoted some of the Bible conferences that planted the ideas of pre-millennial dispensationalism in American Protestantism. This particular theological approach, emerging from a conviction that a literal reading of the scripture revealed different stages or dispensations in God’s dealing with humanity leading up

to the expected Second Coming of Christ, became central to fundamentalism as it developed in the early twentieth century. Then in 1889, Moody organized the Bible Institute for Home and Foreign Missions (later known as the Moody Bible Institute). This school had as its primary aim the advanced training of lay workers who would not only serve in Christian work around the globe but also provide professional staff for local churches in North America. Many who organized and directed Sunday schools and other religious education ventures in larger urban churches received training at Moody's school. Premillennial dispensationalist thinking also took hold at the school; another way that fundamentalism infiltrated northern urban Protestant congregations was through graduates of the institute who served on their staffs. Also, in the early twentieth century, the Moody Bible Institute established one of the first radio stations devoted to religious broadcasting, using this new communications medium as a tool to spread the evangelical message.
