ISKCON temples exist in most major North American cities. Often they are buildings or churches that have been converted for the worship of Krishna. For some time, they were frequented by Indian immigrants who at first questioned temple priests who were not Indian offering *puja* to the deities, but who found in ISKCON temples the only place of Hindu worship available to them. Indian immigrants who frequent these temples are some of the largest contributors to the continued financial stability of the movement. The Los Angeles temple continues to be important, as is the magnificent temple constructed by Indian craftsmen in West Virginia. It is said to be the second most frequented tourist attraction in that state.

L

Latino American Religion: Catholics, Colonial Origins

At the very beginning of the Spanish colonial enterprise in the Americas, in the sixteenth century, the Spanish crown and the Roman Catholic Church entered into agreements that made Catholicism the exclusive non-native religion within the Spanish “new discoveries” and gave it state support. Before anyone realized they were dealing with vast continents rather than mere islands (the “West Indies”), the church gave the Spanish crown control over many aspects of church life: for example, approving the clergy sent to the Americas and nominating them to important church positions. During the following centuries, the powers of the state in this *Patronato Real* (royal patronage) over the life of the church were unilaterally increased by the Spanish government to include such things as approving the establishment or change of mission territories and censoring communications with the church in Rome.

Thus the expansion and maintenance of Spanish colonial Catholicism within what is now the mainland United States was never without political considerations, more precisely European colonial rivalries. For the missionaries, of course, the primary motivation was religious—that is, the salvation of the Native Americans who were considered doomed to damnation by the European missionaries. Such conversions were also a goal of the Spanish crown, and on occasion the deciding one, resulting in the decisions to continue the missionary efforts in Florida and New Mexico after disappointing beginnings.

The initial expeditions of Catholic Spaniards and their allies from the Caribbean and central New Spain (colonial Mexico) into what is now the United States took place in the first decades (1520s–1580s) of the Spanish conquest of the Americas. Advancing deep into the U.S. Southeast and Southwest, Spanish adventurers often took part in disreputable conduct, including onerous exactions, slaving, and rape. They were typically met sooner or later by Native American resistance, and zealous but imprudent missionaries who ventured or stayed among the Native Americans without military protection were invariably killed.

Permanent Hispanic Catholic foundations began with St. Augustine in Florida in 1565. This was followed by northern New Mexico in 1598, the El Paso district (then a part of New Mexico but now in Texas) in 1682, the Spanish province of Texas (the eastern half of today’s state) in 1716, southern Arizona (colonial northern Sonora) in 1732, the Texas Lower Rio Grande country (colonial Villas del Norte of northern Nuevo Santander) in 1749, and California (colonial Upper California) in 1769. Spain also briefly assumed control of French Louisiana between 1766 and 1803. Thus Hispanic Catholic districts were started at varying times over a period of two centuries in seven distinct Spanish colonial provinces stretching from the Atlantic to the Pacific, with most of the provinces at a great distance from each other.

From the beginning, Hispanic soldiers and civilians worked alongside and were closely connected with the missionary efforts to convert Native Americans. These Hispanic groups consisted of Spaniards and, increasingly, *mestizos* (mixture of Spaniards and natives), *mulatos* (mixture of

Spaniards and black Africans), and further combinations among these. The settlements of Hispanics were given a separate organization from the mission communities and usually had their own church buildings and religious services. Those living closer to a mission than to an Hispanic settlement would attend religious services at the mission.

Missions

Priests and brothers, called “religious” because they committed themselves for life to groups joined together by religious vows, were typically more available for and better structured to take on new fields of conversion efforts. The Franciscan friars, preceded initially and briefly by the Jesuits in Florida and Arizona, sought to convert Native Americans in Florida and the U.S. Southwest throughout the colonial period. In the provinces along the coastlines (Florida, Texas, Nuevo Santander in Mexico, California), the missions were initially begun to establish a Spanish presence in the face of colonizing threats by other European powers. In the provinces deep in the interior (New Mexico and Arizona), missions were more the result of steady northward expansion. On the whole and in each province, the missions did not succeed in permanently converting anywhere near the majority of Native Americans, due to the resistance to changes in Native culture and religion that the missionaries demanded as well to as the existence of intertribal hostilities. But there were Native Americans, and indeed sometimes the majority of entire groups, who became Catholics.

“No single model of cultural interaction can encompass the range of Indian-Spanish relations” (Hackel, p. 2). This statement, referring to California, applies also to the other provinces. Native interest was usually tied to Native Americans’ desire for Hispanic goods and their seeking of military alliances against their enemies. The friars typically but often unsuccessfully tried to block interaction between the missionized Native Americans and the local Hispanics, fearing negative influence by the latter. While this policy helped to preserve and protect Native communities, in practice those communities completely controlled by the friars were not treated as independent adults, thus hampering the full integrative process into Spanish civilization that the missionary effort had been charged with accomplishing.

Inevitably, Native Americans and Hispanics interacted outside the friars’ control. In earlier Florida and New Mexico, missionized Natives were obligated to provide labor squads (*repartimientos*) for the Hispanic officials, a practice continually protested by the missionaries. The friars in Texas,

who established subsistence-economy missions, successfully opposed the contracting of missionized Native Americans for labor by the civilians and the military, but in the surplus-economy California missions, the friars allowed such arrangements. Hispanic trade with Native Americans outside the missions was also a factor in promoting relations. Non-mission Native Americans became desired servants—captive or voluntarily—undesired “vagabonds,” and eventually lower-class residents in Hispanic communities, especially as the mission systems waned in strength. An important factor in driving Native Americans and Hispanics closer together in many cases was the mutual threat of strong pressure from hostile Native groups such as the Creek in Florida, the Apaches in Texas, New Mexico, and Arizona, and the Comanches in New Mexico and Texas.

The Hispanic presence unintentionally brought European diseases that decimated the Native population everywhere. The use of physical punishment in the missions, including flogging, was fairly prevalent. This seems to have been particularly so in California, due to the greater labor needs in those missions to meet their contracts for supplying the military garrisons. Native Americans upset by religious, economic, and cultural impositions resisted through noncooperation, withdrawal from the missions, or at times violent uprisings. Oftentimes Native nations were split internally in their allegiance, with some warning or protecting the missionaries during disturbances.

But where Hispanics succeeded in imposing themselves, an accommodation was eventually arranged, and in various places Native and Hispanic alliances and strong interaction developed. Where there were viable settlements of Native nations, such as the Timucua and Apalachee in inland Florida, the Pueblos in New Mexico and one of its El Paso branches (Ysleta del Sur), and the Caddo in East Texas, Native Americans retained significant control over their lands and societies. Missionaries established residences among or near them, and from that base visited outlying villages (*visitas*). The two missions in Arizona, with a mixture of semi-sedentary Pima and more migratory Papago (now jointly known as O’odham), experienced stronger missionary control at the mission center but much less in the outlying villages. Even at the mission centers, however, the O’odham controlled their own farming parcels; the missionaries managed only certain communal tracts of land that the people were obligated to work for them. Because of this traditional Native control and enduring possession, none of these missions was ever “secularized” in terms of land

ownership—that is, transferred from communal Indian property to private tracts parceled out by colonial authorities among Native Americans and then Hispanics.

It is precisely these missionized groups that retained some colonially recognized control over their lands and societies that endured as Native cultural units beyond the colonial period, with the major exception of the Timucua and Apalachee, who were killed, enslaved, or displaced by the English and their Creek allies in the first decade of the 1700s. All of these nations, due to their long-standing participation in the mission system, came to identify themselves as Native Catholic with significant Hispanic influence. The sole exception were the Caddo, who never responded in any significant way to the missionaries' religious overtures because they had the alternative of French traders close by in Louisiana.

Those nations who were more migratory, such as in coastal Florida, central and south Texas, and California, were encouraged to settle into missionary-controlled and often missionary-initiated villages (*congregaciones* or *reducciones*), so that they might be more easily "reduced" to "civilized" Christianity. This was the missionaries' preferred approach. But as Native numbers decreased because of epidemics and withdrawals from these missions, neophytes (candidates for conversion) had to be recruited from increasingly greater distances. When the Native population was in serious decline or flux in some mission districts, the missionary would accept that less-Christianized migratory Natives would reside in the missions only when it suited those Natives.

The recurring dynamics of disease and withdrawal among Native Americans eventually meant that Hispanics in increasing numbers were allowed into these mission "reductions" to keep the mission economies functioning. By the end of the colonial period, in 1821, the older, more established missions such as those at San Antonio (partially secularized in 1793–1794) and at Socorro in the El Paso district had more Hispanics than Native Americans among their congregations. Those Native Americans who chose to remain within the missions became Hispanicized Catholics and for the most part gradually melded into the lower ranks of the *mestizo* population. The same thing happened later with those few Native Americans who remained at the sites of the more recently founded California missions, after the missions were secularized during the Mexican period (1821–1846) and became Hispanic towns. The only California mission groups to endure as autonomous Native Catholic cultural units were those at the *asistencias* (inland ranch

villages with chapels) of Pala and Santa Ysabel, who, together with the Luiseños and Diegueños, other Mission Indians who took refuge with them, were mostly left to fend for themselves and eventually had some of their land recognized as "reservations" by the government.

In the last decades of the colonial period, the Franciscans were still founding new missions in California. They were also seeking approval to extend the mission frontier in Arizona, New Mexico, and Texas, where they found the transient Refugio mission in 1793. But the changing times were against them. Hostile Native attacks, decreasing numbers of Native residents, liberal ideologies, Spain's international wars, and the Mexican independence movements left the missions institutionally weaker, politically challenged, destitute of material support, and forced to make unpaid loans to the military and the government and with diminished local authority over their congregations. The California missions, however, still had the unique benefit of the Pious Fund, a very large trust fund established by the Jesuits to support the California missions and managed by the government after the Jesuits' expulsion from New Spain in 1767.

Hispanic Parishes and Military Chaplaincies

In Florida and the northern frontiers of New Spain (today's Texas, New Mexico, Arizona, and California), the religious missionaries whose primary purpose was to convert Native Americans initially shouldered the pastoral care of the Hispanic military and civilians everywhere except St. Augustine. Hispanics were typically served by diocesan or "secular" priests, so called because these priests did not take religious vows and belonged directly to a diocese (a church territory administered by a bishop). But these frontier provinces were at vast distances from the headquarters of any diocese, and the Hispanic newcomers were initially greatly outnumbered by the prospective Native American converts. Also, the relatively few Hispanics, struggling for survival on the frontier, usually could ill afford to take on their normal responsibility of financially supporting their own pastors and local church needs. Thus the religious missionaries, whose salaries were paid by the government for the task of converting the Native Americans, also provided care for the local Hispanics.

By exception, St. Augustine, perhaps due to its access by sea and its large military force of 150 to 250 men and their families, plus a number of civilians, regularly had two to four diocesan priests who served as pastors, military chaplains, hospital chaplains, teachers, and eventually even priest-sacristans. In sharp contrast, Santa Fe, founded forty-five years later in

1610, deep in the northern interior of New Spain, with no official military garrison but perhaps 750 Hispanics and converted Native Americans, by 1630 was pastored by the Franciscans who also tended to the Mexican Indian chapel of San Miguel and the nearby Native town of Tesuque. This same arrangement was maintained even after 1693, when a garrison of one hundred men was stationed in the New Mexico capital. All the Hispanic settlements and military garrisons in the rest of the northern frontier of New Spain, as well as San Luis (near today's Tallahassee) in seventeenth-century Florida, were provided religious care in this same way.

Another avenue for Hispanics to obtain priests supported by outside funds was to have a military chaplain who was salaried by the government. Franciscans supplied these chaplains at Pensacola and San Marcos de Apalachee in Florida, Santa Fe in New Mexico after 1779, Tucson in Arizona, and San Elizario in the El Paso district. It was these salaried chaplaincies that opened the door for secular clergy to begin serving on the northern frontiers. This happened first in San Antonio (1731), followed by La Bahía (later Goliad) in Texas (1776) and Pensacola (1794). A secular priest, partially subsidized by the bishop of Guadalajara, was sent as pastor to Laredo in 1760 in a mostly failed effort to assert his jurisdiction along the Lower Rio Grande of today's Texas. It was not until the 1790s that secular pastors without outside financing began to take over the stronger parishes of the Lower Rio Grande and New Mexico. The Franciscans in the three New Mexico towns had ceased to receive mission subsidies in 1768, and the same thing had occurred in the Lower Rio Grande towns in the 1780s.

During the 1763–1784 (1781 for Pensacola) hiatus of English control over Florida, almost all of the Hispanics left that province, in obedience to royal orders. During this time, Minorcans recruited by the English as indentured servants in Florida successfully appealed their oppressive treatment and migrated to St. Augustine, forming the core element of the reconstituted Hispanic Catholic community there upon the resumption of the Spanish regime. During the brief Spanish period (1766–1803) in Louisiana, that province was placed under the direction of the captain general of Cuba and the bishop at Havana, just as Florida and its secular clergy had been for a long time. In an effort to provide more Hispanic influence in Louisiana, beginning in the late 1770s around two thousand Canary Islanders and some other Spaniards were recruited as settlers. The Canary Islanders formed their stronger church communities at San Bernardo and Valenzuela, which became

Spanish ethnic enclaves in a French and increasingly Anglo-American society.

During this time, Spanish Capuchins and Recollects and Irish diocesan priests trained in Spain became the principal clergy in Louisiana, Pensacola, and St. Augustine. One reason that the Irish clergy were sent was the growing number of Anglo-Americans entering legally or illegally into these Spanish territories. The Spanish policy in the face of this noticeable increase was to tolerate the presence of Protestants for the sake of economic growth, as long as there was no public manifestation of their religion. In 1793 Spain had the pope establish the new Diocese of Louisiana and the Floridas, with its headquarters in New Orleans, to give closer direction to the challenging religious situation in those provinces.

There were slave and free Africans in Hispanic towns, especially in Florida, and in previously French Louisiana. A 1789 royal edict intended to improve the condition of slaves was only partially observed in Louisiana, where there was a contested clergy effort to allow slaves to marry and to prevent their working on Sundays and special religious feast days. Slaves were granted a limited right to sue their masters when laws were ignored, and they were given the right to purchase their freedom. While the number of slaves in Louisiana tripled during the Spanish regime, the number of free people of color mushroomed from 97 to 1,566, fully half the number of slaves. In Florida at this time, the visiting bishop issued edicts criticizing the general failure to instruct and baptize slaves.

It must be emphasized, in refutation of the standard literature, that none of these Hispanic towns from Florida to California were without clergy service during the entire Spanish colonial period. Most of them always had resident clergy, and in half a dozen places more than one priest. The four garrisons and three civilian towns of California did not have resident priests, but they were regularly pastored by the two Franciscans from the closest mission, at a distance of anywhere from just next door to nine miles (Los Angeles). The one area and time period in which there were Hispanic communities at considerable distances from the closest priest was in the new villages developing in post-1780 New Mexico, in its northern mountainous region. There the economizing reductions in the number of friars in the 1780s by the New Mexico governor to curry favor with the Spanish government prevented the Franciscans from adequately responding to this growth of Hispanic population. But these communities were visited periodically.

There was a checkered history of local vocations to the priesthood and vowed religious life during the Spanish

colonial period. New Orleans was the only place where there was a community of vowed religious women, the Ursulines, who had arrived to teach young women during the earlier French period. The Ursulines received some young Spanish women among their vowed members, but their convent was decidedly French in culture. Nevertheless, when the anti-church French Empire briefly resumed ownership of Louisiana in 1803 before selling it to the United States, a Spanish nun was the superior of the convent and one of the sixteen sisters out of twenty-seven who withdrew to Havana.

At St. Augustine during the 1600s at least sixteen local men were ordained to minor orders (the first steps toward the priesthood), and at least three of them, probably more, were ordained priests. Another two men from St. Augustine are known to have been ordained in the 1700s. In New Mexico the first local Hispano was ordained in the 1720s, but there were apparently no other seminarians from northern New Mexico until four left to pursue studies for the Durango Diocese around 1817. Between 1790 and 1805, eight or more young men from the Lower Rio Grande towns, three San Antonians, and one Californian were ordained. All of these priests except two Franciscans from Florida were ordained for their dioceses, and most returned to serve their own people.

Colonial Hispanic spirituality had a rich variety with some strong central themes. Among the Hispanics (and Catholic Natives) religious observances included, besides Mass and the sacraments, the community and family praying of the rosary, adoration of the Most Holy Sacrament (the safeguarded consecrated hosts believed to be the real presence of Jesus), including public processions on the feast day of Corpus Christi, prayers for the deceased, and the rituals of Holy Week that brought to a climax the season of Lent “with a replica of Christ’s tomb, processions, sermons, and explanations of those supreme mysteries” (Kessell, p. 70). Daily conversation was evangelized, one standard greeting being “Ave María purísima,” with a typical response of “sin pecado concebida” (conceived without sin). Another greeting common in New Mexico was “Buenos días le dé Dios” (God grant you a good day). In similar recognition of God’s providence guiding all, people would declare they were traveling someplace “si Dios quiere” (if God so wants) or would accomplish something “Dios mediante” (by God’s help).

Of course, not everyone at all times was pious, and some government officials in particular were noted for their

brazen impiety or anticlericalism. There was also recourse to practices, such as incantations and sorceries derived from Spanish, African, and Native sources, that were frowned upon by the church. The Inquisition had local agents in some provinces, whose function was to maintain vigilance over morality and religion. But in New Spain, and even more so on its northern frontier, the Inquisition was a much more limited institution than usually alleged.

A fairly typical notion of the religiosity of the late colonial period in northern New Spain is given by the two dozen booklets of novenas (nine successive days of special prayers) ordered by the Santa Barbara garrison in 1793 for each of ten devotions: Christ of Esquipulas (a Guatemalan-origin image of the crucified Christ), Our Lady of Sorrows (Mary sharing the trials and sufferings of her Son), Our Lady of Mount Carmel, Our Lady of Guadalupe, St. Joseph, the Souls of the Departed, St. Anthony, St. John Nepomuk, St. Raphael, and St. Rita. The locally supported religious trust funds (*obras pías*) of the Santa Fe parish in 1818 presented the same mixture of universally held devotions—Jesús Nazareno (Jesus standing bound and crowned with thorns) and his Holy Burial (the deceased Christ laid in an open casket), Our Lady of Solitude (Mary bereft of her Son), and the Souls of the Departed—and the local devotions to Our Lady of the Rosary (known as *la Conquistadora* after the reconquest of New Mexico) and Our Lady of the Light.

Rather than indicating morbidity or fatalism, the devotion to Christ in his Passion (persecution and death) placed one’s trust and hope in a savior who shared the trials and sufferings so common on the poor and dangerous frontier. Also exercising a primary role were the various devotions to Mary, the mother of Jesus, with those to Our Lady of Sorrows and Our Lady of the Conception (Mary conceived without sin) the earliest and most prominent. Devotion to Our Lady of Guadalupe came afterward and in most places remained secondary to the other Marian advocations until the 1770s or later. St. Joseph, the husband of Mary, was popular in the late colonial period, with a strong custom being to honor Mary and Joseph by giving these names, alone or in combination with others (José Antonio, for example), to one’s children. There were two pilgrimage sites that developed during this time: Nuestra Señora de la Leche y Buen Parto (Our Lady of Milk and Good Birth, for expectant mothers and infants) above St. Augustine and Our Lord of Esquipulas at Chimayó, New Mexico.

Colonial Legacy

By 1821, the few Hispanic Catholic communities of Florida and Louisiana were already isolated ethnic enclaves in an Anglo-Protestant-dominant United States, and the Native Catholics in Florida had been driven out or had disappeared as autonomous cultural units. But the institutions and faith traditions developed by the Hispanic Catholics helped to preserve their cultural identity and Catholic faith, as they lost the state support of their culture and religion. At the end of the Spanish colonial period, Hispanic Catholics still had their churches, their bilingual priests, and their devotional traditions. Spain had bequeathed to Louisiana its own diocesan governance, and the Catholic communities of St. Augustine and Pensacola would be two of the three bases for the establishment of the new Catholic Vicariate of Florida and Alabama in 1826. By that time the Minorcan community of St. Augustine would give birth to the future first Catholic bishops of San Antonio and Brownsville in Texas.

In the territories that became northern Mexico in 1821, the older missionary programs in Texas and Arizona were in serious decline, while the more recent one in California was just reaching its peak. Permanent Hispanic Catholic and Native Catholic communities and institutions stretched from the Gulf of Mexico to the Pacific Ocean in districts remote from one another. They too had their own clergy everywhere except the mountain villages and several of the Native pueblos of central and northern New Mexico. The vibrant and varied faith traditions of the Hispanic Catholics permeated every aspect of their society. In Texas the local vocations to the priesthood had apparently halted with the onset of the devastating decade of insurgency there, but in less tumultuous New Mexico a promising growth of vocations was just beginning.

During the Mexican insurgency period, outside funding ceased to arrive for the missionary clergy and became problematic for the military chaplains; in fact, military and government officials exacted loans from local church funds. Even though still the official religion, the Catholic Church on the northern Mexican frontier was entirely supported by its local congregations everywhere except California. In that province the Pious Fund was still in operation and would be the key economic justification for the creation of the California diocese two decades later. Finally, the future of the system of mutual privileges and responsibilities established between the state and the Church under Spain would prove to be a very contentious issue in independent Mexico.

Latino American Religion: Catholics, Nineteenth Century

As the United States expanded from the original thirteen colonies to span the North American continent during the first half of the nineteenth century, approximately 100,000 Spanish-speaking Catholics were incorporated into the

growing nation. In broad strokes, during this era Hispanic Catholicism encompassed three historical experiences: the period under the governments of Spain (up until 1821) and then Mexico (1821–1848); the U.S. takeover and Mexican residents' responses to it; and, during the final three decades of the 1800s, increased immigration, especially from Mexico, Cuba, and Puerto Rico.

The Southwest under Spain and Mexico

Though Louisiana was under Spanish control from 1766 to 1803 and Florida until 1821, during the early nineteenth century most Hispanic Catholics in what is now the United States resided in the Southwest. Mexico's war of independence from Spain (1810–1821) and frequent changes of national leadership in the newly formed Mexican Republic left Mexican Catholics in that region largely to fend for themselves in the isolated outposts on the far northern frontier. Many Spanish priests returned home after independence rather than serve under a Mexican government they saw as illegitimate. By the 1830s, all of the missions that Spanish subjects had founded among the native peoples in the Southwest were secularized—that is, transferred to civil authority. Conflict with Native Americans and the expansionist designs of the United States exacerbated the plight of Mexican Catholics. Enduring communities of faith revealed their tenaciousness in places like Nacogdoches, Texas, where Mexicans continued to hold Catholic worship services in private homes even after their priest was murdered and their church burnt to the ground, as Anglo-Americans wrested political control of the town. Parishes from Texas to California continued grassroots religious traditions, sometimes with resident priests and in other cases despite their unavailability.

As it had been for more than two centuries, New Mexico remained the northern territory most populated with Spanish-speaking Catholics and priests. While the number of Spanish Franciscan friars declined, the diocesan priests—those who worked in a specific regional territory under the authority of a bishop—increased, thanks to recruitment of local youth who traversed all the way to the diocesan seminary in the Mexican city of Durango for their training. Between 1823 and 1826, four New Mexicans completed their seminary formation and returned home to begin their ministries as priests. When the Mexican government lost its northern territories to the United States after the war between the two nations (1846–1848), in New Mexico some seventeen or eighteen diocesan priests, most of them

recruited locally, served the spiritual needs of New Mexico's parish communities.

U.S. Conquest

The conquest of northern Mexico began with the war between Texas and Mexico (1835–1836), which resulted in the establishment of an independent Texas Republic. Nine years later the United States annexed Texas and another war erupted in disputed territory along the Rio Grande near Brownsville, Texas. The war resulted in Mexico's loss of nearly half its territory: the present-day states of Texas, Nevada, California, Utah, as well as parts of New Mexico, Arizona, Colorado, and Wyoming. In 1848, the Treaty of Guadalupe Hidalgo brought an official end to this war and, in addition to establishing new borders between the two nations, purportedly guaranteed the citizenship, property, and religious rights of Mexican citizens who chose to remain in the conquered territories.

Military defeat merely initiated the process of U.S. conquest and expansion. As new territories changed hands through victory in battle and subsequent treaty negotiations, law enforcement personnel, judicial and political officials, occupying troops, and a growing Anglo-American populace imposed U.S. rule. Violence against Mexican Catholics at times reached epidemic proportions, but the judicial system afforded little if any protection for them despite their U.S. citizenship. Anglo-American newcomers further consolidated the conquest by asserting their dominion over political and economic life. When Texas became a state in 1845, for example, Mexican San Antonians lost control of the city council their ancestors had established and led for more than a century. They also lost most of their land holdings, often in biased legal proceedings and in some cases through outright criminal removal from their homes and property. Increasingly Mexicans became a working underclass. Demographic shifts facilitated the diminishment of their political and economic influence. Nowhere was this shift more dramatic than in California, where the Gold Rush altered the demographic profile almost overnight.

Religion after U.S. Takeover

Hispanic influence in religious life and public celebrations also dissipated in the half-century after the U.S. takeover of the Southwest. By 1890 in the formerly "Catholic" town of Los Angeles, there were seventy-eight religious organizations, including Congregationalists, Jews, Buddhists,

Baptists, Unitarians, and an African Methodist Episcopal congregation. In various locales, Anglo-Americans promoted the participation of Mexican-descent residents in the parades and ceremonies of newly organized U.S. holidays such as the Fourth of July.

Parishes and other elements of Catholic life were not immune to change during the turbulent period of transition. Dioceses were established at places like Galveston (1847), Santa Fe (1853), San Francisco (1853), Denver (1887), and Tucson (1897). European clergy served in many areas of the Southwest, with the French predominating in Texas, New Mexico, and Arizona and the Irish in California. During the second half of the nineteenth century, Catholic bishops' appointments in the region reflected this same pattern, with the exception of two Spaniards who served as bishops in California. Scores of religious sisters also crossed the Atlantic and began schools, hospitals, orphanages, and other apostolic work in the Southwest.

Frequently differences in culture and religious practice led newly arrived Catholic leaders to misunderstand and criticize their Mexican coreligionists. The most well-known conflict was between Father Antonio José Martínez, a popular leader among native-born New Mexican Catholics, and Frenchman Jean Baptiste Lamy, the first bishop (and later first archbishop) of Santa Fe. Upon his arrival in New Mexico, in 1851, Lamy encountered Catholic communities with long-standing traditions and the largest group of local clergy in any of the conquered territories. Within three years of his arrival, Bishop Lamy suspended several New Mexican priests, reinstated mandatory tithing, and decreed that heads of families who failed to tithe be denied the sacraments. Padre Martínez publicly protested Bishop Lamy's actions; the resulting controversy led to Martínez's eventual suspension and excommunication. The first resident bishop of Los Angeles, Thaddeus Amat, oversaw an 1862 synod meeting that forbade Mexican Catholic faith expressions like *los pastores* (a festive proclamation of the shepherds who worshiped the newborn infant Jesus), a prohibition promulgated because European and Anglo-American Catholics found Mexican public rituals too boisterous and indecorous. Amat and the synod fathers also decreed that public processions, funeral traditions, and religious feasts strictly adhere to the rubrics of the Roman ritual. Thus they banned long-standing local practices such as festive displays of devotion during public processions, interring corpses within church buildings, cannon salutes as a form of religious devotion, and the fiestas and entertainments that accompanied religious celebrations.

In other instances, foreign clergy acclaimed the religious practices of Spanish-speaking Catholics and even initiated new religious traditions that resonated with Hispanic faithful. Frenchman Jean Marie Odin, the first bishop of Texas, participated in Mexican religious feasts, such as local celebrations in honor of Our Lady of Guadalupe, and spoke enthusiastically of the religious zeal demonstrated in these celebrations. In Ysleta, Texas (near El Paso), the ministry of Italian Jesuits resonated so strongly with the local populace that the new clergy were able to inaugurate an annual feast day celebration in honor of Our Lady of Mount Carmel. Celebrated in a festive Mexican style with colorful decorations, elaborate church services, outdoor processions, a marching band, bonfires, and fireworks, this feast day drew an enthusiastic response from Mexican Catholics in the local parish and throughout the surrounding area.

A number of Protestants were utterly condemnatory in their assessment of Mexican Catholicism. After observing public devotion during the Mexican feast of Our Lady of Guadalupe in Monterey, California, Congregationalist minister Walter Colton mockingly quipped that Guadalupe probably knew or cared little about such religious exhibitions. Baptist minister Lewis Smith wrote from Santa Fe that, along with various other rituals, Mexicans reenacted the "farce" of Jesus' Crucifixion, a retort directed at a Way of the Cross procession Smith found too graphic for his sensibilities. Undoubtedly the most renowned of the attacks on Hispanic traditions was aimed at the brotherhoods of *Los Hermanos de Nuestro Padre Jesús Nazareno* (Brothers of Our Father Jesus the Nazarene), or *Penitentes*, in northern New Mexico and southern Colorado. Local residents frequently deemed outside observers of their rites "Penitente hunters" because of their intrusive presence and the sensationalistic reports they wrote about the brotherhoods' religious practices.

Mexican Resistance

Conquered Mexicans resisted the U.S. takeover in various ways. Some offered military resistance to the foreign invaders, such as Californians who defeated U.S. forces at battles in the Los Angeles area and at the hamlet of San Pasqual, before peaceably coming to terms with their more numerous and heavily armed foes. Violent resistance erupted in various locales even after the U.S. conquest. In the decades following the U.S. Civil War, guerrilla leaders such as Tiburcio Vásquez in California and Juan Cortina in Texas led retaliatory movements protesting the endemic violence and injustice their

people suffered at the hands of Anglo-Americans. Mexican residents also defended their rights in the political arena, as at the 1845 Texas Constitutional Convention when José Antonio Navarro was able to prevent passage of a law that restricted voting rights to Anglo-American residents.

Conflicts between Mexicans and Catholic leaders at times resulted in public controversy and even open resistance. When his religious superiors reassigned Father José González Rubio from Santa Barbara, California, to Zacatecas, Mexico, in 1856, some thousand parishioners and other supporters “kidnapped” the popular priest by blocking his entrance to the boat on which he was to depart. They then enlisted the support of Archbishop Joseph Alemany in San Francisco and remained firm in their resolve to keep their priest until his superiors changed his appointment and allowed him to stay. Similarly, in 1875 Bishop Dominic Manucy of Brownsville, Texas, rejected a request that twenty-two exiled Mexican sisters reside in the area and serve Mexican-descent Catholics. Local Spanish-speaking Catholics were incensed at Bishop Manucy’s decision, particularly since they offered to pay the living costs for the sisters. On the day the women religious were to board the train and depart from Brownsville, an angry crowd removed their train from its tracks and refused to let authorities replace it.

Even more conspicuously and consistently, local communities in conquered territories asserted their Mexican Catholic heritage in the public spaces of civic life through their long-standing rituals and devotions. From Texas to California, various communities continued to enthusiastically celebrate established local traditions such as pilgrimages, *los pastores*, Holy Week, Corpus Christi, and established patronal feast days such as that of the Mexican national patroness, Our Lady of Guadalupe. The persistence of religious traditions is particularly striking in light of Catholic and Protestant leaders’ attempts to ban, replace, and condemn them. In the face of such efforts, as well as military conquest and occupation, indiscriminate violence and lawlessness, political and economic displacement, rapid demographic change, the erosion of cultural dominance, and the appointment of Catholic leaders from foreign lands, Spanish-speaking Catholic feasts and devotions had a heightened significance. These religious traditions provided an ongoing means of public communal expression, affirmation, and resistance to Anglo-American and other newcomers who criticized or attempted to suppress Mexican-descent residents’ heritage. Undoubtedly fear and anger at their subjugation intensified religious fervor among many devotees.

Enduring Religious Traditions

The most renowned lay group that served as the protectors of treasured local traditions was the aforementioned Penitentes of northern New Mexico and southern Colorado. Penitente brotherhoods evolved in towns and villages well before the U.S. takeover of the area. Their most noticeable function was to commemorate Christ’s Passion and death, although they also provided community leadership and fostered social integration. Organized as separate local entities, Penitente brotherhoods had a leader named the *Hermano Mayor* (literally “older brother”) and a *morada* (literally “habitation”) or chapter house where they held meetings and religious devotions. Despite the sharp criticism they often received from outsiders, and Catholic Church officials’ attempts to suppress the brotherhoods and their ritual and devotional practices, especially flagellation and other penitential acts performed during Lent and Holy Week, the Penitentes continued providing leadership for prayer and social life in numerous local communities.

In more urban areas, activist Mexican laywomen and laymen continued traditional feast days and faith expressions in Catholic parishes such as Tucson’s San Agustín and San Antonio’s San Fernando. The annual series of celebrations for Tucson’s original patron saint, St. Augustine, lasted for an entire month. Similarly, in the decades following their political separation from Mexico, San Fernando parishioners organized public rituals and festivities for Our Lady of Guadalupe, Christmas, San Fernando, San Antonio, San Juan, San Pedro, and other feasts. Most conspicuous among these rites was the annual Guadalupe feast, which the parish community celebrated in the Mexican way of a colorful outdoor procession with flowers, candles, elaborate decorations adorning the Guadalupe image and their parish church, gun and cannon salutes, extended ringing of the church bells, and large crowds for services conducted in Spanish.

Newcomers such as Protestants, Anglo-Americans, and Catholic clergy participated in the rituals and devotions of Spanish-speaking Catholics. An 1861 Anglo-American visitor to Santa Barbara marveled that during the Holy Week services he attended, the predominantly Mexican-descent congregation was joined by Native American, North American, Irish, German, French, and Italian worshippers. He declared that only in California could such diverse groups be observed worshipping together. Both in Santa Barbara and in Tucson, Chinese immigrants attended Mexican Catholic celebrations. The presence of newcomers at these Hispanic celebrations illustrates Mexican Catholic attempts to prolong

local traditions and incorporate these newcomers into their expressions of religious and communal identity.

Religious Pluralism and Mexican Identity

Once other groups were sufficient in number to form their own congregations and social circles, their participation in Hispanic Catholic faith expressions frequently abated. With the emergence of religious pluralism and the organization of diverse public celebrations, particularly U.S. holidays such as the Fourth of July, the dominance of Mexican faith expressions and festivities ceased. As various scholars have pointed out in studies of ethnicity, in addition to elements of perceived group commonality such as language, customs, behavior patterns, religion, and political and economic interests, interaction with other groups also shapes ethnic identity. Such interaction enables a group to overcome what scholars of religion and ethnicity have called “pluralistic ignorance” and become aware of their own tradition as distinct from other traditions. This awareness is accentuated when prejudice, conflict, and an imbalance in the distribution of power characterizes the contact between groups. Thus while Mexican Catholic faith expressions and festivities were an identifying mark of towns and local communities in the years prior to the U.S. takeover, afterward they increasingly differentiated Hispanics from other groups that settled in the occupied territories. The rise of religious and cultural pluralism in conquered lands enhanced the perception that Mexican Catholic faith expressions were a distinguishing characteristic of their ethnicity and group identity.

Women frequently played key leadership roles in public worship and devotion. Young women served in processions as the immediate attendants for the image of Our Lady of Guadalupe, the principal ritual object in annual Guadalupe feast day celebrations. They occupied similar places of prominence in processions for feast days such as the Assumption and Corpus Christi. Even when male Penitentes provided significant leadership for communal worship, women played vital roles in local traditions such as the annual procession for the feast of St. John the Baptist. The contribution of women in preparing and enacting public religious traditions illuminates what Ana María Díaz-Stevens calls the “matriarchal core” of Latino Catholicism—that is, women’s exercise of autonomous authority in communal devotions despite the patriarchy of institutional Catholicism and Latin American societies. Mexican-descent women extended their domestic efforts to preserve familial heritage and devotion into a role of community leadership

that shaped Mexican Catholics’ public ritual expressions in the wider society. At the same time, however, these leadership roles reinforced the notion that piety was primarily the responsibility of women, did not significantly alter restrictions on women in other public functions, and symbolically linked the purity of young girls dressed in white with the icons such as the Virgin Mary, a communal accentuation of feminine chastity that lacked a corresponding association between young boys and Jesus.

A number of communities in the Southwest struggled for their very survival. In the process their observance of long-standing traditions often abated or even ceased. Nonetheless, as Bishop Henry Granjon of Tucson noted in 1902 during his first pastoral visit to Las Cruces, New Mexico, many Mexican-descent Catholics in the Southwest continued to practice their own customs and traditions even after the U.S. takeover of their lands. According to Bishop Granjon, in the Southwest these traditions served to “maintain the unity of the Mexican population and permit them to resist, to a certain extent, the invasions of the Anglo-Saxon race.” The leadership initiatives of Mexican Catholics enabled a number of local populations to adapt and continue their treasured expressions of faith, defend their sense of dignity, fortify their resistance to the effects of conquest, express their own ethnic legitimation, and endure as Mexican Catholic communities.

Hispanic Newcomers

Though an open border between the United States and Mexico allowed Mexican citizens to migrate even after the Treaty of Guadalupe Hidalgo, their numbers were relatively small until the last three decades of the nineteenth century, when gradually a larger group of immigrants and refugees began to arrive. After the U.S. Civil War ended in 1865, mining, agriculture, and railroad construction in the regions from Texas to California, and then in Mexico itself, linked the regions economically, creating migration flows of Mexican labor north. The Porfirio Díaz regime (1876–1911) in Mexico promoted economic growth linked to foreign interests, leading to prosperity for some but displacement and migration for others, who went to the United States looking for work. U.S. interests in Caribbean products, particularly sugar and tobacco, also encouraged the movement of Puerto Ricans and Cubans to the United States. Intermittent struggles for independence on both the islands of Puerto Rico and Cuba led some political activists into U.S. exile. These newcomers augmented the diversity of Hispanics in the United States.

For the most part, political exiles were skeptical if not outright antagonistic toward the Catholic Church and its leaders, who in their native lands consisted largely of Spaniards and others who supported Spanish rule. Cuban exiles were particularly prone to abandon Catholicism as they turned to other ideas, religions, and philosophies of life, including freemasonry, Protestantism, anarchism, and socialism. Only a relatively few Cubans in exile identified themselves as practicing Catholics, and a generally anticlerical attitude prevailed among expatriates such as José Martí (1853–1895), who from exile organized the revolt that eventually led to Cuban independence. Martí died in the struggle and was acclaimed as the father of his country.

Among Catholics, one of the earliest Cuban exiles and certainly the most famous was Father Félix Varela (1788–1853), who fled to New York in 1823 after the Spanish regime he opposed as a Cuban delegate to the Spanish Cortes (parliament) condemned him to death. In exile, Varela worked as a parish priest and eventually rose to the position of vicar general for the Diocese of New York. But even in the midst of a busy pastoral life among Irish and other New York Catholics, he continued to advocate for Cuban independence from Spain and the abolition of the slave trade, along with writing and thinking about politics, philosophy, and religion. He published an important exile newspaper, *El Habanero*, in which he promoted Cuban independence, and maintained active correspondence and intellectual exchange with his compatriots on the island. Although the Spanish government pardoned him in 1833, Varela refused to acknowledge that his support for constitutional rule represented criminal activity. He remained in exile and never returned to Cuba. Recognized as a precursor of Cuban pro-independence thought, Varela is often described by Cubans as “the one who first taught us to think.”

Ethnic Parishes

Some Cuban lay Catholics formed faith communities in exile, such as workers and their families in Key West, Florida. Cubans began arriving in Key West in significant numbers after October 10, 1868, when insurgents declared Cuban independence and launched a bloody war against Spanish colonialism on the island. Though Spain pacified the island by 1880, Cubans continued to leave their homeland for political reasons and to work in an emergent Cuban cigar industry in Key West, where a largely cigar worker community persisted in conspiring against Spain and helped launch the final independence war in 1895. Despite the alienation of

many Cubans from the Catholic Church, priests and the Sisters of the Holy Names of Jesus and Mary worked among them. Key West’s first Catholic church, Saint Mary Star of the Sea, was dedicated in 1852. The Sisters of the Holy Names arrived from Canada in 1868 and opened schools for girls and boys. By 1879 so many Cubans had arrived in Key West that church officials supported the establishment of a Cuban chapel, named after *Nuestra Señora de la Caridad del Cobre* (Our Lady of Charity of El Cobre), the most prominent Marian icon and devotional tradition in Cuban Catholicism. Church records reveal Cuban Catholic practices such as the *Caridad del Cobre* feast, other Spanish-language Marian devotions, Christmas pageants, and even a celebrated pastoral visit from the archbishop of Santiago, Cuba.

The establishment of a Cuban chapel in Key West illustrates the tendency of Spanish-speaking Catholics to prefer national or ethnic parishes. Like European Catholic immigrants to the United States, many Hispanics advocated for such parishes as a means to retain their language, cultural practices, sense of group identity, and Catholic faith. As early as 1871, Catholics in San Francisco proposed a national parish to serve the Spanish-speaking population in their growing city. Although most Spanish-speaking residents were of Mexican descent, representatives from the consulates of Chile, Peru, Nicaragua, Colombia, Bolivia, Costa Rica, and Spain were among the leaders in this effort, making it one of if not the first Pan-Hispanic Catholic initiative in the United States. These lay leaders contended that a national parish was necessary both for monolingual Spanish speakers and for bilingual Catholics, who longed to offer the prayers their mothers taught them in their native Spanish language. Four years later, in 1875 San Francisco archbishop Joseph Alemany established the national parish of Our Lady of Guadalupe.

In the Southwest, the proximity of their native land and its traditions enhanced Mexican Catholic efforts to retain their religious practices, language, and culture. Although he moved from his native Sonora to Tucson in 1882, for example, Federico José María Ronstadt returned home regularly to visit family members and celebrate religious feasts such as Christmas and Holy Week. Similarly, Catholic life, ministry, and devotion in borderlands cities such as El Paso–Juárez transcended the political border that “divided” Mexico and the United States.

Conclusion

Latino American Catholicism at the end of the nineteenth century encompassed a predominantly ethnic Mexican

contingent in the Southwest and a smaller but growing population of Cubans, Puerto Ricans, and other Hispanic groups. Though in raw numbers the Hispanic population had increased dramatically during the previous hundred years, relative to the accelerating population of the United States the Hispanic presence had diminished. From Key West to San Antonio to Tucson to San Francisco, both emergent and enduring communities of faith struggled in an often hostile environment. Yet their generally tenuous existence was the foundation on which Latino immigrants and refugees would build during the massive migrations of the twentieth century, beginning with the wave of northward immigration initiated at the outset of the Mexican Revolution in 1910.

Latino American Religion: Catholics, Twentieth Century

The U.S. acquisition of territories in Louisiana, Florida, Texas, New Mexico, Arizona, and California during the first half of the nineteenth century marked the beginning of a significant Hispanic Catholic presence in the United States,

a presence that accelerated considerably through mass immigration during the twentieth century. As with most immigrants in U.S. history, Latinos immigrated to escape difficult economic and political conditions in their places of origin caused by a debilitating colonial heritage and as a result of displacements provoked by European and U.S. capitalist expansion into the region. Latin American immigrants came to the United States from many different regions and countries at different historical moments, bringing diverse experiences and perspectives. In the late nineteenth century and first half of the twentieth century, Latinos arrived mostly from Mexico, Puerto Rico, and Cuba. After the 1950s, these groups continued to arrive, but immigrants from the Dominican Republic, Central America, and South America added their numbers to the mix of Latino communities. At the end of the twentieth century, Latinos numbered approximately 36 million and constituted about one-third of Catholics in the United States. Latino Americans introduced new and distinct cultures and identities to a U.S. Catholic Church traditionally dominated by Euro-Americans. These newcomers built local communities but also national and transnational Pan-Hispanic Catholic movements and identities.

Immigrants and Exiles

Like Europeans before them, Latino Catholics of varying ethnicities gathered together in communities throughout the country, congregating in parishes and worshiping according to their own traditions. Mexican immigration accelerated with the outbreak and spread of the extraordinarily violent Mexican Revolution in 1910. The anticlerical orientation of the revolution and its aftermath, the Cristero War in the late 1920s, forced hundreds of thousands of Catholics across the border to cities such as San Antonio and Los Angeles, where they influenced parish life. They settled among already established Mexican Americans, refreshing the Mexican traditions and culture of those communities, but also looked to the church to sanction new parishes. The church in Los Angeles, for example, founded twelve parishes for Mexicans during the 1920s, and some forty-four existed in southern California by the middle of the 1930s. Persecution against the Mexican Church also forced large numbers of clergy, including almost the entire church hierarchy, to leave Mexico. Most settled in the United States and worked among the rapidly growing Mexican communities in the Southwest.

Massive Mexican immigration began again after the 1930s, during which anti-Mexican sentiment led to deportations or voluntary return of thousands who faced unemployment

and hostility. With the outbreak of World War II, the nation's increased demand for labor in the United States led to a U.S. guest-worker agreement with the Mexican government known as the Bracero Program. During 1942–1964 some 5 million contracted temporary laborers worked in the United States, many of whom managed to remain. This established fresh migratory streams that encouraged many undocumented workers to cross into the United States after the 1960s, again infusing Mexican American parishes with Mexican culture and traditions.

Mexican immigration also moved beyond the Southwest in the 1920s to industrial cities such as St. Louis, Kansas City, Chicago, Gary, and Detroit, where Mexican immigrants established parish communities. Many Mexicans in Chicago, for example, originally settled among other ethnic groups, especially Italians, and worshiped in their parishes, but in time they created their own churches. In South Chicago, Our Lady of Guadalupe church became well established, and in subsequent years many other parishes included large Mexican congregations.

Hispanic migration to the Northeast, especially New York, which began in the nineteenth century and accelerated in the early twentieth, led to a significant Latino Catholic presence. In 1902 Hispanics worshiped at Our Lady of Guadalupe Parish on West 14th Street, and in 1912 Nuestra Señora de la Esperanza in Washington Heights attracted Spanish-speaking worshipers of many backgrounds. But in time Puerto Ricans came to constitute the largest migratory group to New York and the surrounding regions.

Puerto Rican immigration began in significant numbers after the U.S. occupation of the island in 1898 and the granting of citizenship to its population in 1917. Puerto Rico's subsistence farming and primarily agricultural economy increasingly became a sugar-based cash crop enterprise, concentrating land and displacing many who eventually left for the United States. Migratory pressures became even more dramatic after World War II, when policymakers introduced incentives to create a manufacturing base on the island known as Operation Bootstrap, producing a nascent middle class but also an urbanizing rural population that received few economic benefits and departed for the mainland. In the 1920s Puerto Ricans worshiped in two New York parishes established specifically for them, La Milagrosa and Santa Agonía, and twenty years later six churches served Puerto Ricans and other Spanish speakers almost exclusively. As Puerto Rican migration increased in the 1950s, more parishes became predominantly Puerto

Rican, including St. Rose of Lima church in Washington Heights, on Manhattan's upper west side.

Similar patterns occurred in south Florida with the dramatic increase in Hispanic immigration beginning in the late 1950s. Revolution in Cuba in late 1950s, initially supported by most Catholics, turned communist after 1959, initiating an exodus that resulted in more than a million Cubans arriving in the United States during the next thirty years. As the Cuban presence expanded in the 1960s and 1970s, Cubans congregated in at least thirteen Dade County parishes, including San Juan Bosco, St. Michaels, SS. Peter and Paul, Gesu, Corpus Christi, and St. Mary's Cathedral. Mexican and Puerto Ricans farm laborers also attended churches in south Florida rural areas beginning as early as the 1950s. Mexicans settled in Homestead, south of Miami, and attended the Sacred Heart Parish. Missions appeared to serve Hispanic migrants in Belle Glade, Pompano, Lake Wells, and Naranja, among other towns in Florida.

During the final third of the century, immigrants from places other than Mexico, Cuba, and Puerto Rico settled across the United States in the wake of national immigration reforms in 1965 that facilitated accelerated entry. Industrialization and urbanization enveloped Latin America generally in the postwar era, causing increases in birth rates and life expectancies, growing expectations for a better life, improved transportation and communication, and the creation of dynamic migratory streams to the United States. The regional ethnic distinctions observed earlier declined as Hispanics settled nationally. Dominicans migrated to New York and Florida, South American immigrants fleeing economic distress, including Colombians, Ecuadorians, Peruvians, Brazilians, Argentines, Chileans, and Venezuelans, went to Florida, New York, Chicago, Los Angeles, and many other cities.

The other major influx came from Central America. A socialist revolution in Nicaragua caused many to leave, and government-led repression, supported by the United States, against revolutionary groups in Guatemala, El Salvador, and Honduras caused hundreds of thousands more to flee the region seeking safety and work in Mexico, the United States, and Canada. In the 1970s and 1980s, former European immigrant parishes in the Chicago suburbs of Cicero, Berwyn, and Melrose Park became heavily Hispanic, and parishes in New York, often dominated by Puerto Ricans, made room for other Hispanic ethnicities. Latin American immigrants transformed many parishes in Dade County, Florida, from almost exclusively Cuban worshipers to diverse Latino congregations.

Latin Americans arriving in the United States included people fleeing poverty and unemployment and exiles who arrived with a heightened sense of political consciousness and a strong desire to return to their place of origin as agents of change and redemption. The differences between immigrants and exiles may sometimes be overemphasized, but some distinctions are useful for understanding Latino communities. Exiles more than immigrants maintained a strong focus on the homeland and, though most never returned home, they built communities reflecting a commitment of daily homage to their heritages and nationalities. They developed a somewhat different psychological frame than immigrants, since they were generally people who had coped in their homelands and never intended to leave until forced by political circumstances. Exile communities generally worked toward one day returning home to rebuild their societies according to Christian values and traditions. The most prominent exile communities included those fleeing the 1910 revolution in Mexico, the 1959 Castro revolution, and the Central American revolutions in the 1970s and 1980s. Mexican exiles, for example, arriving in San Antonio in the 1920s reinvigorated parish life at San Fernando Cathedral, and Cuban exiles nearly forty years later created an exilic Catholicism in many parishes in south Florida, particularly at San Juan Bosco, which was established originally as a mission church for exiles.

Identity and Integration

Latin American Catholic groups arriving in the United States brought with them cultures and traditions markedly different from those of Anglo-American Catholics but also distinct from each other. Characterized by *mestizaje*—that is, racial and cultural mixing among Europeans, Native Americans, and Africans over four centuries—Latin American Catholicism included traditions quite distinct from its North American counterpart. Catholicism arrived in Latin America from Spain and Portugal in the early sixteenth century, prior to the Protestant Reformation, and was distinctly medieval. Though certainly influenced subsequently by post-Reformation Catholicism defined by the Council of Trent (1545–1563), especially in the late eighteenth and nineteenth centuries, in many ways Latin American Catholics remained steeped in faith traditions expressed through devotions, processions, and pilgrimages characteristic of the earlier church. Furthermore, it represented a Catholicism influenced by African and Native American traditions that added to its distinctiveness.

During the twentieth century, the U.S. church, much influenced by post-Reformation Catholicism and English-speaking Irish American Catholic culture, viewed the growing Latino Catholic presence with considerable alarm and often acted in contradictory ways. Concerned about what was perceived as unorthodox religious devotion among Latinos, the church worked to assimilate them to American Catholic standards and practices but also discriminated, leaving them marginal in society. During the first half of the century, Hispanics faced aggressive Americanization policies emphasizing citizenship and language classes for the foreign born. The U.S. church also taught immigrant women U.S. standards of diet and hygiene and especially focused on influencing children to be “Americans,” emphasizing religious instruction consistent with U.S. Catholic norms. The church sponsored settlement houses, social service and charitable agencies, religious education programs and used parochial schools and national parishes with Spanish-speaking priests and religious to catechize immigrants.

The growth of churches and parishes demographically dominated by Latinos reflected continuing immigration and residential concentration, but also the tradition in the U.S. church of using national parishes as a strategy for organizing religious life among immigrants. Though successful in keeping ethnic communities connected to the church, in the twentieth century church officials became increasingly uncomfortable with national parishes, viewing them as divisive and a drag on assimilation. Most Anglo-American priests preferred to serve Hispanic faithful in integrated parishes, but parishioners defended national and language parishes even when the church no longer encouraged them. Often, Latinos simply congregated at particular churches in large numbers, creating de facto national or language churches. In either setting, however, Latinos did not easily dispose of deeply rooted traditions, and the U.S. clergy learned to tolerate their religious customs and practices while encouraging them to embrace American ways.

The continual arrival of immigrants throughout the century reinvigorated Latinos' ways of worship. Latino devotional traditions became permanent cultural expressions in communities throughout the United States. For many Latinos, the home, not the parish church, represented the principal devotional space, which often included altars, holy water, candles, rosaries, and religious medals. Public devotions included yard statues of religious figures, neighborhood processions and celebrations filled with music and

sacred significance. Latino Catholic immigrants were generally less committed to Sunday Mass than were U.S. Catholics, although as they integrated into new parishes attendance rates increased. Also, they tended not to be particularly close to the clergy, except among Mexicans in the 1920s and Cubans in the 1960s, who brought a robust cadre of priests fleeing revolution.

Hispanic immigrants and exiles preferred Spanish or at least bilingual Masses, and this remained a constant throughout the century. Much committed to Marian traditions, Latinos expressed their devotion to Mary in their homes and parishes. Mexicans retained a deep commitment to Our Lady of Guadalupe. Many parishes carried her name and churches usually had an image of *La Morenita* (an affectionate reference to the brown-skinned Virgin). When Cubans arrived in South Florida, they continued their devotion to Our Lady of Charity, the Cuban patroness, in the 1960s, quickly building *La Ermita* (hermitage), which became the most important devotional space for Cuban Catholics as well as a symbol of their anti-communist exile identity. In the 1970s, Dominican migration to New York was highlighted by the first public celebration of the feast of Our Lady of Altagracia, patroness of the Dominican Republic, at St. Patrick's Cathedral. Other Latinos created devotional spaces dedicated to their Marian patronesses.

Latinos also insisted on their own lay organizations and traditions. Among Mexican American women, the *Guadalupanas*, devoted to Our Lady of Guadalupe, became important lay organizations in Mexican communities across the country. Among Puerto Ricans, Catholic men formed the *Caballeros de San Juan* in the 1950s, aimed at evangelizing and attracting men to the church. The numerous councils had social, recreational, and self-help activities and encouraged the formation of women's auxiliary groups. Cubans established numerous lay organizations in south Florida, some transplanted directly from Cuba and others created to address the specific needs of a displaced people in a new environment, including *Agrupación Católica Universitaria* (Catholic University Group), *Movimiento Familiar Católica* (Catholic Family Movement), and numerous others.

One particularly important movement among Latinos was *Cursillos de Cristiandad* (Little Course in Christianity), founded in Mallorca, Spain, in 1949 but brought to the United States a decade later. Initially for men, the *cursillos* ignited Christian militancy among Latino Catholics at the grassroots by encouraging spiritual self-reflection and

conversion through religious retreats. Characterized by displays of emotion, songs, and sharing experiences, the *cursillos* spread throughout the Hispanic Catholic world and the United States, where it gained widespread acceptance among Mexican Americans, Puerto Ricans, and Cubans. Latinos flocked to retreats that not only promoted religious renewal but also provided a space to engage Catholicism within the context of their own language, ethnic, and cultural traditions.

Ethnicity and Rights

Latino Catholics became faithful members of the U.S. Catholic Church, but despite the rhetoric of the "melting pot" and the "Americanization" programs of the 1920s and 1930s designed to promote assimilation, Euro-Americans did not welcome Latinos on equal terms. Historically, Latinos defended themselves against Euro-American supremacist attitudes expressed racially and culturally, and more often than not Latinos found themselves marginalized and found little acceptance within the U.S. church for their traditions, language, and other worship practices. In struggling for their place, Latino Catholics faced ethnic and cultural discrimination and economic inequality and poverty, which mobilized them into political action in the 1960s and 1970s.

In formulating strategies for change, many Latino Catholics looked to Latin America for inspiration to improve their condition in the United States. Many Catholics committed to social justice embraced the tenets of liberation theology, a vision first formally articulated in the late 1960s that called on Latin Americans to take a forthright position against poverty and an unapologetic "option for the poor." While liberation theology was inspired by the Latin American socioeconomic context, many U.S. Latinos considered this thinking relevant to their reality as well and called for greater economic justice in the United States.

Though the liberationist class framework informed much Hispanic Catholic activism, it was not necessarily the paradigm that made most sense to U.S. Latinos. Their difficult experiences finding acceptance in the United States gave them a minority perspective that reinforced their ethnic consciousness. With the acceleration of Latin American immigration after the 1965 reforms, new Latino communities formed that affirmed traditional customs and identities, reengaging old ethnic communities with their cultures of origin, broadening their territorial reach across the country, and giving Latinos the possibility of maintaining an

ongoing ethnic world even after several generations in the United States.

Ethnic solidarity rather than emphasis on class distinctions within their communities offered Latinos the best possibilities for successful political action. Mexican American Catholic leaders in the 1960s especially hoped to unify their people by advancing a struggle based on cultural affirmation and pastoral emphasis. Culturally defined pastoral strategies challenged Hispanic marginalization, advanced evangelization, and at the same time confronted political, socioeconomic, and racial grievances. And in any case this cultural focus did not prevent Catholic activists from protesting poverty within their communities, particularly among migrant workers who received little pay and suffered abhorrent living conditions in the fields.

The civil rights movement swept away the grossest political barriers in the 1960s and 1970s, and Mexican American, Puerto Rican, Cuban, and other Latino Catholics worked to remedy the political, cultural, and social barriers they faced in society and in the church. While many progressive archbishops, bishops, clergy, and women religious advocated for their Latino constituencies throughout the twentieth century, within the context of the civil rights movement Latino Catholics themselves defined and led their struggles.

Politically active Mexican American religious founded *PADRES* (Priests Associated for Religious, Educational and Social Rights) in 1969 to promote greater Hispanic representation in the church hierarchy. A group with an explicitly transformative vision from its inception was *Católicos por la Raza* (Catholics for the Race). They identified themselves as Catholics committed to the lives of the poor, devoted to Our Lady of Guadalupe, and determined to fight racism. Puerto Rican youth organized *Noborí*, a Catholic group identified with Latin American liberation theology. *Las Hermanas* (The Sisters) organized women religious. Initially an association of Chicanas (Mexican women), *Las Hermanas* later welcomed other Latina religious and laywomen into their membership, forging a national network that challenged women to raise consciousness and work for change. Though politically more conservative and often suspicious of their generally more left-leaning Mexican and Puerto Rican colleagues that often idealized the Cuban revolution, Cubans also embraced ethnic and cultural activism in the church. They organized numerous lay movements that promoted their culture, language, and worship traditions. Ironically, as Latino Catholics struggled for rights and greater integration, they also

demanded pluralism in the church and respect for cultures and traditions that they fully intended to retain.

The Latino Church

The struggle for civil rights among the various Latino groups mostly developed independently of each other, and their willingness to work together was the exception rather than the rule. But this changed. A demographic mixing, which accelerated especially after World War II, led Hispanics of diverse backgrounds into closer proximity with each other in large urban centers such as New York, Chicago, south Florida, and Los Angeles. And their numbers grew dramatically. During the final thirty years of the twentieth century, the number of Latino Catholics increased by more than 18 million and accounted for 86 percent of the growth in the U.S. Catholic population. While Latino Catholics remained distinct in their identities and their customs, they recognized that they shared many of the same problems in U.S. society and took the initiative to create a national movement within the church. The crosscurrents of immigration, integration, and politics influenced Latino Catholics who, rather than seeking assimilation into a culturally Anglo-American church, sought space for their own forms of worship under the rubric of integration without assimilation. They demanded respect for their traditions, language, and religious practices, which the church cautiously accepted within a paradigm of the new pluralism of the 1960s and 1970s.

The first national effort to advance issues of Hispanic ministry in the U.S. church began in 1945 with the creation of the Bishops' Committee for the Spanish Speaking in San Antonio. In 1970, the U.S. Conference of Catholic Bishops moved this office to Washington, D.C., and then established the Secretariat for Hispanic Affairs. These offices coordinated initiatives to support Hispanic ministry in the United States, including National Encounters (*encuentros nacionales*) in 1972, 1977, 1985, and 2000 that brought together Hispanic Catholics from across the country. The meetings called for Latino unity and integration into the church based on equality and mutual respect and insisted on Hispanic leadership opportunities within all levels of the church.

Latinos also paid attention to the theological implications of a national Catholic movement that defined itself as Hispanic. In the 1980s, many at the universities explored what it meant to be a Latino Catholic, offering a theological and intellectual rationale for this Pan-Hispanic identity. The emergence of Latino theologians during the decade led to the foundation of the Academy of Catholic Hispanic Theologians

of the United States (ACHTUS). Leading Hispanic theologians argued that Latin American Catholics in the United States enjoyed much in common, including expressing their religion with a collective spirit and a deep interrelatedness between spiritual and temporal aspects of life.

Many Hispanic Catholics applauded the U.S. bishops' principled embrace of the pluralistic model inherent in the Latino Catholic vision of church, though others were dismayed by their often conservative implementation. The church, for example, supported the designation of Hispanic bishops, but certainly not in proportion to their numbers or even necessarily representative of the views of rank and file Latino Catholic leaders. And while Latino Catholic leaders continued to see the U.S. church as a critical institution for their people, many expressed disappointment at what they perceived as a diminished commitment to Hispanic ministry after 2000. The decline in commitment of the U.S. Council of Bishops to Hispanic ministry was symbolized in the 2007 disbanding of the Bishops' Committee for Hispanic Affairs and National Secretariat in favor of a new Secretariat of Cultural Diversity intended to include all minorities and promote church unity.

At the same time, the Vatican took note of the surging Hispanic population in the United States. Already strongly drawn to the Latin American church, developments in the U.S. church relating to Latino Catholics were not lost on Pope John Paul II. During his pastoral visit to the United States in 1987, the pope traveled, among other places, to Miami and San Antonio, where he met with Spanish-speaking congregations, acknowledging their importance in the U.S. church. A decade later the pope issued *Ecclesia in America*, which defined the American church as a transnational entity composed of North, Central, and South America, suggesting the importance he placed on the role of Latin Americans across the Western Hemisphere in the future of the church.

A New American Church

At the end of the twentieth century, Latino Catholics in the United States remained severely underrepresented within the power centers of the mainstream Anglo-American church, especially as priests and bishops, but at the grassroots Hispanics emerged as a core constituency of the U.S. Catholic Church. Latinos influenced the culture and identity of local churches and parishes just as Latinos conformed to Catholic culture in the United States, but the story is not over. The process of Latin American immigration continues unabated, cultural negotiations in the parishes remain in

play, and all indications are that time will produce a new and more invigorated U.S. church with strong Latino influence and links to Latin American Catholicism that will advance Pope John Paul II's vision of an American church in the broadest sense of the term.

Latino American Religion: Mainline Protestants

Latinos in mainline Protestant denominations consist of those persons of Hispanic and Latin American descent who joined denominations that trace their roots to the continental and English Reformation, including, but not limited to,

Methodists, Presbyterians, Lutherans, Episcopalians, Baptists, and Congregationalists. Although a few Protestants had engaged in evangelization among the Spanish-speaking in Texas during its period as a republic (1836–1845), the first Latino congregations emerged in the U.S. Southwest a few years after the Mexican-American War (1846–1848) through the efforts of a handful of Anglo-American Protestants. Likewise, although a handful of indigenous Protestant congregations already existed, mainline Protestantism did not enter Puerto Rico until the conclusion of the Spanish-American War in 1898. Mainline Protestantism was a concomitant phenomenon that accompanied the expansion of U.S. territories into those previously held by Spain and Mexico. Born from both a Puritan and evangelical missionary spirit, mainline Latino Protestantism reflected the beliefs and practices of that particular religious tradition as well as the cultural values and customs of the Anglo-American missionaries who introduced Protestantism into their communities.

The Term Hispanic Mainline Protestant

While one can properly talk about Latinos who are members of churches affiliated with mainline Protestant denominations, one can also differentiate mainline Latino Protestantism according to other categories, such as evangelical, liberal, fundamentalist, conservative, and Pentecostal/charismatic. Latino mainline Protestants share their roots in historic Protestantism, but they have a variety of spiritual and political identities. Hence, one can be a Latino mainline Protestant with a high educational status and liberal political views, while another Latino mainline Protestant can consider himself or herself a charismatic or evangelical and politically conservative. The majority of Latino/a mainline Protestants consider themselves born-again Christians, but there are others who do not identify with this religious category. In short, there are strands of religious beliefs and practices that cut across denominational affiliation.

Protestant Missions' Relationship with U.S. Expansion

Mainline Anglo-American Protestantism was a religious component of the political and economic extension of the United States into new territories. Protestantism accompanied U.S. military, political, and economic forces into territories previously held by Spain and later Mexico. As soon as Texas declared its independence from Mexico in 1836,

Protestant denominations sent missionaries into the nascent republic. Until then, Protestantism had been illegal in Texas under Mexican sovereignty. Likewise, Protestant denominational and independent mission boards sent missionaries into the Southwest following the U.S. annexation of Mexico's far northern territories in 1848. The missionaries had religious as well as political motives for their work. They certainly desired to save the souls of the Spanish-speaking inhabitants, but they also believed it imperative to Americanize the Mexicans now under U.S. sovereignty. Such Americanization would prevent a Catholic population from gaining control of territorial and state government and would annihilate the "otherness" of Mexican Americans. The overall goal was to mold a population that would resemble white, middle-class American Protestants.

Protestant accompaniment of U.S. political, territorial, and military advancement also occurred in Puerto Rico upon the victory of the Spanish-American War in 1898. Many of the denominations entered Puerto Rico only one year after the Treaty of Paris ceded the island from Spain to the United States. A comity agreement among several North American denominations (Christian & Missionary Alliance, Evangelical United Brethren, Presbyterian, Congregational, American Baptist, Methodist Episcopal, Evangelical Lutheran, and Disciples of Christ) occurred in 1898 immediately upon the U.S. annexation of territories held by Spain following the Spanish-American War. Through that agreement, Protestant mission agencies divided the island into several regions, each one dedicated to a particular denomination. For this reason, one's denominational affiliation was based upon the region of the island in which he or she resided. Southern Baptists, the Episcopal Church, and Pentecostals did not participate in these comity agreements. In addition to the Protestant denominations, North American mission societies, the American Mission Society, the American Bible Society, among others, also entered Puerto Rico. Because the U.S. president William McKinley installed the first governors on the island, the Protestant missionaries maintained a close relationship with the government on the island, often being influential in shaping policy.

Mexico and the Southwest

Presbyterians

Four Presbyterian missionaries—Sumner Bacon, William C. Blair, John McCullough, and Melinda Rankin—engaged in work among the Spanish-speaking throughout the

nineteenth century in Texas, but their work did not result in permanent congregations. The first organized congregation in Texas was in Brownsville in 1877. It was founded through the evangelistic work of Mexicans from the church in Matamoros, Mexico, part of the Presbytery of Tamaulipas, Mexico. This presbytery eventually founded other Spanish-speaking churches throughout the lower Rio Grande Valley in Texas. The second church founded in Texas was also the product of Mexican Presbyterians. José María Botello, an elder from the Presbyterian Church in Matamoros, founded a Spanish-speaking congregation in San Marcos, Texas, in 1887. By 1907, Presbyterians had established seventeen congregations, with nearly one thousand members. These congregations were organized in 1908 into the Texas-Mexican Presbytery in San Marcos, Texas. This separate Spanish-language presbytery gradually expanded during subsequent decades. Over time, faced with a lack of self-sustaining churches and indigenous pastors, in 1955 the presbytery was dissolved and merged with the existing presbyteries of Texas. Without an organized, semi-autonomous structure, Mexican American Presbyterianism in Texas gradually declined following the dissolution of the Texas-Mexican Presbytery.

While the southern branch of Presbyterianism focused on Texas, northern Presbyterianism in New Mexico focused its work on northern New Mexico and southern Colorado. Unable to succeed with evangelistic work, southern Presbyterians shifted to educational and social ministries. Twenty-four schools with forty-eight teachers existed by 1888. The schools, which provided the only means of education in many towns, were gradually eclipsed by public schools after the New Mexico territorial legislature established a territorial board of education in 1891. By 1920, eight Presbyterian schools remained in northern New Mexico and one in southern Colorado. The Spanish-speaking churches were closely tied to the schools, for the schools provided a conduit from the local community to their churches. Subsequent to their emphasis on education, Presbyterians shifted their focus to medical and social ministries. Beginning in 1914, Presbyterians opened their first of several clinics and hospitals. Facing pressures similar to those of the Texas-Mexican Presbytery, Mexican American Presbyterians saw a retrenchment of congregational development throughout the Southwest through the course of the twentieth century.

Methodists

Methodism among the Spanish-speaking began with missionaries sent to Texas following its independence from

Mexico, followed by missionaries entering Mexico and the U.S. Southwest in the latter part of the nineteenth century and the early twentieth century. Mexican and Mexican American Methodists formed their first conference in 1885, the Mexican Border Missionary Conference.

The Methodist Episcopal Church, the northern branch of Methodism, gained a foothold in New Mexico. The first foray into New Mexico by Methodists occurred in 1851, when the Methodist Episcopal Church's mission board sent Rev. E.G. Nicholson, Rev. Walter Hansen, and Benigno Cárdenas, a former priest from Mexico and New Mexico, to begin evangelistic work there. While their stay was brief, they left a dedicated layperson there, Ambrosio González, who maintained a small Methodist class in Peralta. New Mexico Methodism got its second start when Thomas and Emily Harwood arrived from Wisconsin in 1869. After their work there divided along languages, the Harwoods remained with the Spanish-speaking district. Thomas Harwood served as the superintendent of the New Mexican Mission from 1872 until his retirement in 1907. Methodism in New Mexico reached its apex upon Harwood's retirement. Devoid of a strong, charismatic leader, Spanish-speaking Methodism in New Mexico gradually declined.

The Methodist Episcopal Church, South, although having a few churches in New Mexico, focused its work in Texas, northern Mexico, and southern California. The first ordained Protestant Latino in the United States was Alejo Hernandez, a native of Mexico who was ordained by the bishop at the 1871 annual meeting of the West Texas Conference in Leesburg, Texas. Although a missionary had been appointed to the Spanish-speaking work in the Rio Grande Valley of Texas in 1859, the first organized effort began in 1872, when the Rev. Alexander Sutherland was appointed the superintendent of the Mexican Border Mission District of the West Texas Conference of the Methodist Episcopal Church, South, with six appointments on both sides of the Rio Grande. A second district emerged, eventually resulting in the Mexican Border Mission Conference, the first Spanish-speaking Methodist conference in 1885. The conference spanned both sides of the U.S.-Mexico border. Other districts and conferences emerged in Texas, New Mexico, Arizona, California, and northern Mexico. When three major branches of Methodism merged in 1939, the northern and southern branches of Hispanic Methodism in the Southwest merged, resulting in a Mexican-American conference in California and Arizona and another in Texas and New

Mexico. The latter conference, the Rio Grande Conference, continues to this day.

Southern Baptists

The first permanent work of Southern Baptists in Texas began with the establishment of a congregation in Laredo by John and Thomas Westrup in 1880 and 1881. Shortly after that, a Spanish-speaking church was organized in San Antonio. With twenty-four congregations in operation, messengers from these churches met in Brownsville, Texas, to organize the Mexican Baptist Convention of Texas in 1910. The autonomous convention continued to grow throughout the twentieth century. Caught up in the national trend toward integration, the convention merged with the Baptist General Convention of Texas in 1960. Unlike Presbyterians, Mexican American Baptists continued to increase in Texas following the merger of these two organizations. Unlike any other mainline denomination, the Baptist General Convention of Texas now maintains its own Hispanic-oriented university, Baptist University of the Americas. With its emphasis on evangelism, fewer educational requirements for pastors, and the ability to establish independent congregations, Mexican American Baptists had greater flexibility to create new congregations than other mainline denominations.

Missionary Influence of Hispanic Protestantism

Throughout much of its history, missionaries and denominational mission boards dominated the leadership of Latino mainline Protestantism. Even when Latinos established autonomous organizations, such as the Texas-Mexican Presbytery, the Rio Grande Conference, and the Mexican Baptist Convention of Texas, Anglo-American missionaries continued to serve as the leaders and decision makers of these organizations. This is one reason for the push toward autonomy by the Protestant churches in Mexico and to some extent in Puerto Rico. During the missionary period of mainline Latino Protestantism, which lasted into the 1960s in some cases, the decision making by denominational mission personnel regarding the establishment of congregations, the placement of personnel and pastors, the control and allocation of finances, and the boundaries of ecclesiastical jurisdictions was unilateral and excluded the participation of the ones affected by their decisions. While Latino leadership did emerge, it was not until the 1960s that Latinos were able to effectively assert

their leadership over their congregations, judicatories, and organizations.

The Mexican Revolution

The Mexican Revolution (1910–1920) had a significant impact on Latino mainline Protestantism. The consequence of the political turmoil and Mexican Protestant autonomy was the migration of Protestant missionaries in Mexico to the U.S. Southwest. Until that time, U.S. mission agencies had allocated more resources to their work in Mexico than to their work in the U.S. Southwest. With Mexico no longer a viable mission field, many of those Protestant missionaries who had operated in Mexico transferred their energies to the Mexican American population in the U.S. Southwest. There was plenty of mission work in the Southwest because a vast number of immigrants from Mexico entered the region during and following the Mexican Revolution. In fact, more persons migrated from Mexico than the existing population of Mexican Americans in the Southwest. This large number of new immigrants challenged Protestant churches, both national and local, to respond to the needs of these new arrivals.

The Chicano Movement

The legacy of missionary-led mainline Latino Protestantism continued even into the 1960s. However, the civil rights movement, followed by the Mexican American farm worker movements in the 1960s, brought about a change in consciousness of many Latino mainline Protestants. A cadre of Latino Protestant leaders called for an end of missionary-based structures and decisions regarding their organizations and judicatories. These Chicano and other activist Latino Protestants, determined to exercise their autonomy regarding decisions affecting their churches, found themselves in conflict with their denominational leaders and even local church leaders. After much consultation and negotiation, Chicano Protestants gained control of their judicatories. A counterpart of Chicano Protestants existed in other parts of the country, especially in the Northeast, southern Florida, and Puerto Rico. In several of the denominations, leaders in each of these regions organized into national denominational caucuses. They were not simply interested in the autonomy of their local judicatories; they proposed to change denominational policies that discriminated against them and denied them leadership positions in their denominations.

The Chicano movement also brought about a change in the identity of many Latino mainline Protestants. Previously, a sharp division existed between Latino Protestants and Catholics. While antagonism between the two groups continued, those who identified with the Chicano movement were able to cooperate under the rubric of justice and social change. In this sense, Chicano Protestants shifted their primary identity from that of denominational loyalty to one of cultural and political advocacy. The primary mission of the church, evangelism, was replaced with an emphasis on justice and social change. Likewise, there was also a shift in the differentiation between what was Roman Catholic and what was cultural. Latino mainline Protestants began to practice rituals that had previously been considered Roman Catholic, such as *Quinceañeras* ("sweet fifteens," coming of age ceremonies for fifteen-year-old girls), the imposition of ashes during Ash Wednesday service, and the ritual of *Las Posadas*, a reenactment of Joseph and Mary's entrance into Bethlehem. In the area of worship and ritual, many Hispanic Protestants adopted what was previously considered Roman Catholic, including the use of stoles, paraments (altar linens), candles, and processions.

Issues

Proselytism or Evangelism?

There is significant disagreement about the interpretation of the entrance of Latinos into mainline Protestantism. Apart from the Native American populations, the inhabitants of the U.S. Southwest were of Spanish and *mestizo* descent. Roman Catholicism was the official religion of Spain and its American territories, including the lands currently comprising the present-day U.S. Southwest. Protestant missionaries to these territories faced a Spanish-speaking population that was singularly Roman Catholic. With an inherent anti-Catholic disposition, Protestant missionaries understood their call to deliver Mexicans and Mexican Americans from the control of what they considered a corrupted and un-Christian tradition. With this attitude, the Protestant evangelization of the Spanish-speaking became a clash of Hispanic and Anglo-American cultures, as well as a religious competition for the loyalty of the Spanish-speaking peoples.

Reflecting the contest between Roman Catholicism and mainline Protestantism, there exist opposing interpretations of the evangelistic ministries by Protestant missionaries. Those critical of this work refer to it as proselytism, which is popularly called "sheep stealing." They argue that

by virtue of their baptisms in the Roman Catholic Church, the Mexican and Mexican American people were already Christian. The evangelistic work of Protestants refused to recognize the validity of their Christian faith. Those who prefer to interpret this work as evangelization argue that the Mexican and Mexican American people had little knowledge of Christianity because of the lack of Roman Catholic priests and churches. They argue that the faith of these groups was misguided and rooted in unnecessary accretions of beliefs and practices, such as the adoration of saints. Thus, the study of the history of Latino mainline Protestants needs to take into account the historic tension that has existed between Protestantism and Catholicism as well as between English/Anglo-American and Spanish civilizations. The student of this phenomenon should recognize that the use of the terms *evangelization* and *proselytism* connote particular evaluations of this historical tradition.

Protestantism and Pentecostalism

Some of the mainline Protestant denominations (Methodist, Presbyterian, Congregationalist, Baptist) established Spanish-speaking congregations before the emergence of Pentecostalism in the early 1900s. Nonetheless, Latino Pentecostalism gradually eclipsed the number of Latinos in mainline Protestantism. In New York City, a survey of Latino Protestants observed that Latino Pentecostal churches increased rapidly between 1937 and 1967, from 25 to 250 churches. Throughout the twentieth century, the number of Latino Pentecostal congregations outpaced mainline Protestant churches in the United States and Puerto Rico. One reason for the slower growth of Latino mainline Protestantism is the complex governance system of denominations. The polity of each mainline Protestant denomination did not take into account the context of Latino congregations. For example, the standards for ordination in the Presbyterian Church required a thorough education, including knowledge of Greek and Hebrew. Few Latinos in the Presbyterian Church, as well as in other denominations, had access to higher education until the 1950s and 1960s. Requirements for the establishment of congregations made the establishment of new congregations a more bureaucratic process. Because of the lower income levels of most Latinos, only a few of the Latino Protestant congregations were able to gain self-sustaining status. Meanwhile, Pentecostals as well as Baptists had less stringent educational requirements for ordained ministry and favored the establishment of independent congregations. Mainline Protestantism did not provide

the flexibility for ministry and congregational development that was present among Pentecostals.

In addition to structural and institutional differences, Pentecostal predominance among Protestants developed because of its ability to gain a level of acceptance not present among most mainline Protestants. Emerging from the farm worker camps and from the *barrios* of cities, Pentecostal pastors spoke a language that resonated with the struggles and aspirations of the various Latino communities. Pentecostals were unencumbered by the Anglo-American middle-class values that had accompanied mainline Protestant missions among the Spanish-speaking.

Recent Trends

A long-term challenge to the growth of Hispanic mainline Protestantism has been the dearth of effective indigenous pastoral leadership. In 2007, the Episcopal Church had fewer than fifteen Hispanics enrolled in masters-level degree programs designed for ordained ministry in the eleven Episcopal Church seminaries. Approximately 40 percent of the Hispanic parishes and missions of the Episcopal Church are staffed by Anglo-Americans. A report by the denominational office of the United Methodist Church's office of Hispanic/Latino ministry observed that one of the greatest challenges to the development of Hispanic United Methodist congregations has been the lack of effective Hispanic pastoral leadership. As a result of the dearth of U.S. Latino clergy, mainline Protestant denominations have relied heavily on clergy immigrating from Latin America. Frequently, immigrant Protestant clergy bring with them a concept and practice of ministry that does not fit with the context of U.S. Latino communities. They may focus almost exclusively on immigrant Latin American populations rather than on long-term Latino populations.

More recently, mainline Protestant denominations have awakened to the increasing number of Latinos throughout the country. The rapid increase in the Latino population, due to several years of high levels of immigration, primarily from Mexico, and due to higher birth rates, resulted in many neighborhoods shifting from Anglo-American or African American to primarily Latino in cities throughout the country, especially in Texas, California, and Florida. In the first decade of the twenty-first century, the rapid increase of immigrants from Latin America, especially Mexico, in several cities has made ministry among Hispanics a requirement in order to maintain congregations in the urban areas. In Dallas, the percentage of Latinos increased

from 8.9 percent in 1980 to 37.7 percent in 2006, eventually eclipsing non-Hispanic whites as the largest population group. In Los Angeles, the percentage of Hispanics grew to 44.6 percent in 2000, to become the largest population group in that region. Thus, many urban churches established during the first half of the twentieth century, when many new churches were built and filled with Anglo-American members, found their membership dwindling to a few dozen while the surrounding neighborhood became primarily Latino. A special form of ministry has occurred since the 1990s, called "transitional ministry," to help historically Anglo-American churches make the transition toward becoming multiethnic or Latino churches.

Institutions

A hallmark of Protestant missions in Latin America and among the Spanish-speaking in the United States and Puerto Rico has been the creation of institutions. Methodists, Baptists, and Presbyterians established schools, community centers, clinics, and kindergartens in the Southwest and Puerto Rico. The mainline Protestant denominations created an ecumenical seminary in Puerto Rico, called Seminario Evangélico, near San Juan. Continuing the penchant for institution building, the Reverend Justo L. González, a Cuban American United Methodist, probably the first Latino mainline Protestant to earn a Ph.D. in the study of religion (church history), led various efforts to found three important institutions benefitting Latino Christians. He authored a study on Latino theological education that resulted in the establishment of the Hispanic Summer Program (HSP) in 1989, a consortium of a few dozen educational institutions offering accredited masters-level courses for Latinos in theological education. He provided leadership for the foundation of a Latino ecumenical organization in 1991, the *Asociación para la Educación Teológica Hispana* (Association for Hispanic Theological Education), also known as AETH. In 1996, he became the first executive director of the newly formed Hispanic Theological Initiative (HTI), which fostered the increase of Latinos in doctoral studies in theological education and religious studies. While each of these institutions is ecumenical, Latino mainline Protestants have provided significant leadership and participation in these organizations.

Scholarship

A number of quantitative and qualitative national studies on Latino Christianity have been conducted since the

1980s that include consideration of Latino Protestantism. Among the most significant national studies are those conducted by Andrew Greeley, David Maldonado, Larry Hunt, Edwin Hernandez, Justo L. González, Anthony Stevens-Arroyo, and the Pew-sponsored study titled “Hispanic Churches in American Public Life” under the leadership of Virgilio Elizondo and Jesse Miranda and directed by Gastón Espinosa.

Latino American Religion: Pentecostals

To suggest, as many media observers have, that the growing number of Latinos who are Pentecostals is a recent phenomenon is historically inaccurate and does not allow for a full picture of the complexity of Latino religious life, especially with regard to issues of conversion, assimilation, and new religious identities within the larger framework of American Protestantism.

1906–1930s

In its short history of just over one hundred years, Latino Pentecostalism has gone through several periods of growth and decline. In the early years of the movement, roughly 1906 to the 1930s, the fervor of evangelism, fueled by an equally fervent belief in the imminent Second Coming of Jesus and an often overt anti-Catholic ideology, brought a steady stream of Latinos into Pentecostal churches. Within these first thirty years, there was a broad swath of geographic diversity as well as theological diversity that marked the movement. Churches sprang up all along the borderlands of the southwest United States, major urban areas of the Midwest and Northeast, and in areas such as the Central Valley of California, where, as part of its initial attraction, Pentecostal churches opened in places where Latinos worked; in central California, farm workers became part of the churches' first cohort of converts.

As the movement stabilized in growth, it also experienced many splits due to theological differences, and also due to the perception among several major Latino ministry leaders, that to stay under the auspices of white leadership in denominations such as the Assemblies of God would not ever lead to autonomous Latino leadership within those denominations. A major theological rupture began in white churches of the Assemblies of God, soon spread to the African American church, and eventually found its way to the small group of Latino Pentecostals who had converted in southern California on the heels of the Azusa Street revival in 1906. The split between the trinitarian Pentecostal groups, chiefly the Assemblies of God, and the Oneness (non-trinitarian) groups, occurred shortly after a revival held in southern California in 1913, where an alternative baptismal formula was preached as part of a new revelation, and soon thereafter Oneness adherents began to seek to rebaptize fellow Pentecostals in the name of Jesus only, eschewing

the traditional “Father, Son, and Holy Spirit” formula. Romanita Carbajal Valenzuela, converted in Los Angeles sometime shortly after the Azusa Street revival, became a Oneness adherent, and went back to her native Mexico to help found what today is the largest Pentecostal group in Mexico, the *Iglesia Apostólica de la Fe en Cristo Jesus* (the Apostolic Church of the Faith in Jesus Christ). The American branch of the church, the Apostolic Assembly, is still one of the strongest Latino-majority denominations in the United States, expanding from the traditional areas of strength in the southwest United States to newer bases of expanded immigrant growth in the Pacific Northwest, rural Midwest, and the rural southeast United States.

1940s-1980s

This steady stream of converts, to both Oneness and trinitarian varieties of Pentecostalism, continued to make modest gains from the 1940s to 1960s. These years marked the rise of the first English-dominant generation to be raised in Pentecostalism and, for churches brought with it, the challenges of retaining second-generation children in the movement, and assimilating into the dominant culture to keep their English-speaking children in church. The Jesus movement of the 1960s (an evangelical movement among young people with roots in California) began to reignite not only classical Pentecostal churches (Assemblies of God; Four-square; Church of God, Cleveland, Tennessee), but also to reignite a charismatic renewal in mainline churches as well. This diffuse movement introduced Pentecostal spirituality and evangelical fervor to people in a less dogmatic, more accessible way. It also meant that Latinos who found Pentecostalism through the Jesus movement were finding in their churches less a reinforcement of ethnic identity than an emphasis on obtaining and maintaining a vibrant charismatic religious identity that did not need to be tied to traditional Pentecostal denominations, did not seek to be dogmatic, and offered second- and third-generation Latino Pentecostals a way to be Pentecostal outside the confines of their parents’ churches.

As the Jesus movement faded in the late 1970s, Latino Pentecostalism began to find its own revitalization, much in the same way as it began, as a part of the religious expression of Spanish-speaking first-generation Latino immigrants from Mexico, Central and South America, and the Caribbean. The theological diversity, autonomous leadership, and tremendous spike in the growth of the movement all have occurred with this latest wave of adherents. It is this wave

that many media observers have taken note of; this latest surge, which began roughly in the early to mid-1980s, has received the bulk of attention by popular and academic observers alike.

Historical Origins: Key Figures

Francisco Olazábal (1886–1937) was a Mexican evangelist who became part of the Assemblies of God in the late 1910s. Olazábal soon became one of the most successful traveling, healing evangelists in the denomination. This success met with some trepidation among the Assemblies leaders, many of whom openly distrusted placing too much power in Olazábal’s hands. Of particular concern were a series of disputed events that occurred throughout 1923, when Olazábal sought to raise money for his fledgling ministries in south Texas as well as open a Bible school in the area. Assemblies leader J. Roswell Flower did not allow Olazábal to raise funds for the Bible school and instead placed former missionaries Henry C. Ball and Alice E. Luce in charge of the Mexican outreach in the borderlands, including the running of both the Texas and California Bible institutes. Olazábal and his followers soon left the denomination and formed their own group, the Council of Latin American Churches. Olazábal’s story is not out of the ordinary in Latino Pentecostal history; one of the consequences of outreach to the community has been attitudes of paternalism that, despite decades of autonomy, continue to be a cornerstone of Latino-white relations within Pentecostal churches.

Maria Atkinson, affectionately known as the mother of Mexican Pentecostalism, is another important figure within Latino Pentecostalism. Because she was a woman in leadership, and a Latina, Atkinson’s work for the Church of God (Cleveland, Tennessee), in Mexico and the borderlands, is significant for a number of reasons. First, her leadership demonstrates that gender issues intermixed with issues of ethnicity formed a double barrier to women’s rise on the leadership ladder. Blocked from leadership because of traditional readings of gender roles as well as an emphasis on assimilation (probably on Atkinson’s part), Atkinson never held an official leadership position, though she founded dozens of churches, trained pastors, and was singularly responsible for the presence of Latinos in the Church of God, Cleveland, Tennessee, from 1898 to 1940.

In today’s Latino Pentecostal churches, gender issues are as divisive as they have always been, particularly in denominations that do not accept any leadership role for women. The debate over assimilation versus acculturation also continues

into the early twenty-first century. What identity matters to Latino Pentecostals? Is it that they are Latino, or that they are Pentecostal? Do the historic attempts to Americanize Latino converts have any effects today? If so, is that such a bad thing given the hotly contested immigration debates?

Current Efforts

The demographic reality of the growth of the Latino community makes its growth in Pentecostal denominations quite understandable. A continuous immigration flow, changing patterns of settlement in older neighborhoods that are in transition from one ethnic group to the next, and a sustained effort through decades of outreach has resulted in a stabilized and steady presence of Latinos in nearly all quarters of American Pentecostalism. Because the movement is so diffuse, it is difficult to generalize about what these many outreach efforts have produced; they have produced everything from progressive Latino Pentecostal parachurch organizations, autonomous churches that vary from English-speaking, progressive emergent groups to traditional, conservative, and sectarian brands. Although Latinos make up significant numbers of members in the largest white denomination (Assemblies of God, roughly 15 percent), their rise to leadership positions during the twentieth century was arduous and filled with setbacks. This is not true of only the Assemblies; other white denominations such as the Foursquare denomination have not begun to move Latinos into leadership positions in nearly the numbers that are proportional to their numbers in the denomination. According to much of the outreach literature of the past two decades, the desire to diversify among many Pentecostal denominations has not derived from an enlightened view of Latinos but of the demographic reality of their becoming the largest minority group in the United States.

Strengths of Outreach Efforts

One of the key strengths of outreach historically and currently is to recognize that Latinos wanted to receive ministry in their own language and that they were separated from the mainstream of American society because of entrenched social class and economic issues. Pentecostals did and still do outreach anywhere that Latinos work and live. They did and still do outreach in Spanish and English, cognizant of cultural issues that make family ties central to the core of Latino communities. Pentecostals did and still do emphasize the supernatural nature of the Pentecostal message, particularly that divine healing is not an abstraction in ancient texts

but a reality anyone can access with sufficient faith. The ability to have Pentecostalism fill not just spiritual needs but practical needs within an alternative health care system seems to be a factor in the sustained presence of Pentecostalism in Latino religious life.

Weaknesses of Outreach Efforts

The most serious weakness in the outreach efforts to Latinos was the patronizing efforts to gain converts by appealing to rampant anti-Catholicism and using the “inferiority” of Latinos as a way to raise funds and support mission work, and thereby perpetuate for more than a hundred years racist attitudes about Latinos. The worst infractions of this kind occurred earlier in the twentieth century, but appealing to anti-Catholic sentiment has continued to be a part of some conversion efforts among Latinos. The early years of outreach in effect set up leadership systems that made Latinos dependent on better-educated and better-funded white supervisors to support their churches. Despite decades of trying to break free of this dependency, many Latino Pentecostals, especially those who are in first-generation immigrant churches in large majority white denominations, are often at the mercy of white superintendents for funding and often for things as essential as spaces to worship.

Another serious weakness is that historic and many contemporary Pentecostal ministry models conflated Christianity with Americanization, and while this conflation is certainly not exclusive to Pentecostalism (the Catholic Church had decades of the same model in ethnic communities), this conflation created a false idea in the minds of many Pentecostals that for one to be truly converted not only meant a change in spiritual ideas but also a change in attitudes. One often had to display a sufficient amount of national pride, along with a cessation of pride in one’s own ethnicity; in a more subtle way, conversion also required a change of political ideas that reflected a more “biblical” way of seeing things such as abortion and homosexuality.

Weaknesses within the Latino Pentecostal movement cannot all be blamed on classism or racism; often disparate Latino Pentecostal groups adopt strategies that promote sectarianism and cliquishness based largely on perceived theological threats but in reality are rooted in ethnic chauvinism and theological legalism. The schismatic nature of the Latino Pentecostal movement soon surpassed any desire for spiritual solidarity. This lack of cohesion still plagues Latino Pentecostalism in the early twenty-first century, as there seems to be no cohesive core to the movement but

hundreds of competing agendas, theological and otherwise, that often play themselves out as mere secular concerns about power and politics.

Latino Pentecostalism and the New Immigrants

New immigrants since the 1980s are providing Latino Pentecostalism with not only stable growth but also theologically innovative Pentecostalism that has veered away from the traditional centers of power in established denominations to dozens of independent neo-Pentecostal churches. Such churches do not have the historical baggage of assimilation, offer plenty of leadership opportunities, and support cultural markers that tie immigrants closely to their home countries. Latino immigrants gravitate to Pentecostal churches because they serve as places of spiritual and cultural solace amid the harsh realities of living in the United States.

The theological innovations found in these independent churches vary, but a quick glance will find traditional trinitarians, Oneness adherents, ultraconservative legalistic churches, prosperity gospel churches, neo-Calvinist Pentecostals, Pentecostals who have embraced some Mosaic laws, and many other variations. One reason for this phenomenon may be because there are no roots in any established denominations; therefore there are no set theological proscriptions to uphold. As such, adoption of the prosperity gospel, for example, is just as likely to occur because of ties to prosperity teachers or from varieties of media sources. The benefits of these independent Latino Pentecostal churches may be autonomy and self-governance, but such autonomy often means that churches and pastors forego stable sources of funding. Pastors in these independent churches often have little economic security, employ family or friends to help run the church, and run the church on a shoestring budget.

Latino Pentecostal Clergy

A study of Latino evangelical clergy (of which more than half identified as Pentecostal/charismatic) noted that compared to either white or black clergy, the average Latino clergy has little or no theological education. Latino clergy are often very much like the people they minister to, meaning that they are themselves working-class individuals. This makes outreach easier, since they are familiar with the demographics of their congregations. Most Latino Pentecostal clergy are men. Though a significant number of women do an enormous amount of church work, women often do not pastor, even though women are not prohibited from doing so among two of the larger denominations,

Assemblies of God and Foursquare. In other denominations, women clergy are strictly prohibited, but women comprise most of the congregation, do much of the work, and lead and teach through varied other means outside the pastorate.

Institutional Structures and Latino Pentecostals

What once began as a movement confined to a few select denominations has become a movement that can change overnight by the dropping of a church name, a change in theology, or, more rarely, a new revelation that church must be done differently. Like other evangelicalism, Latino Pentecostalism is seeing the end of denominational identity as critical to one's religious identity. There are many reasons that denominational ties have weakened; among Latino Pentecostals, generational change means that second-, third-, and even fourth-generation Latino Pentecostals may experience their faith differently than did their parents. Hence, later generations would like their church experience to be in English; they are not as legalistic as their parents; they want to see modernization come to the church in the form of gender equity; and they are more concerned with social justice issues than were previous generations. These Latino Pentecostals have more often than not separated from the denomination in which they were raised in lieu of a generic evangelical church or mainline church that appeals to their progressive theological and cultural outlooks. If they are seeking to retain any part of their Latino Pentecostal identity, they often do so privately and in parachurch organizations where their faith lives as Pentecostals are valued and their social issues addressed.

Another institutional structure that has been changing in an attempt to meet the growing demands of successive generations of Latino Pentecostals is the role of the Bible school or institute in the training of pastors. Bible schools have not historically, nor are they currently, capable of offering the kind of theological education students would find in the average seminary. The longevity of the Bible schools in the case of Latinos lies in the communal nature of many of these schools. Bible institutes are intimate, practical, affordable, and accessible. Though they do not have the resources to offer as many courses and they often do not hire faculty with postgraduate theological training, they do provide a crucial link between pastors and established seminaries.

Struggle for Justice

Part of the reason that social justice efforts did not affect Latino Pentecostal churches in the same ways they affected black churches is that Latinos largely adopted the eschatological

fervency of their white supervisors. Although there are countless examples of white Pentecostal clergy who were aware of the often degrading and dehumanizing conditions Latinos were forced to live in for most of the twentieth century, there are few examples of white Pentecostal leaders who had the theological tools to be able to carve out a social justice agenda. Such paralysis continues into the early twenty-first century, as many Latino Pentecostals have not been able to construct a vibrant social justice agenda, often subsuming that under the urgency of evangelism. Efforts to mobilize Latino Pentecostal leaders around particular issues such as immigration are often conducted at the leadership level, or at the level of highly educated theologians or clergy, who are not the majority of Latino Pentecostals. Additionally, by concentrating on single-issue politics such as immigration, many progressive Latino Pentecostals do themselves a disservice by taking their already limited political capital too far in one direction, to the detriment of a host of issues that never receive much discussion in Latino Pentecostal circles.

Critical Assessment and Projections for the Future

Like most religious movements, Latino Pentecostalism ebbs and flows. There are always peaks in membership, interest, and intensity; there are stabilizing periods; and there are downward turns. Like most movements, generalizations do not do it justice. However, it is likely that if the life of a Latino Pentecostal church begins in a storefront in a major urban area, or a rural one, the pastor began his ministry somewhere else. Possibly disaffected with an established denomination, he runs his storefront church with the help of his immediate family and a few friends. The church is small, as is its membership; over the life of that church, it may peak at about fifty members. This church will be Spanish-dominant and veer toward the conservative legalistic side; women will not preach and all members will adhere to a dress code and a heightened sense of piety that often is the topic of the sermons. There will also be a heightened sense of spiritual gifts. More than the average middle-class white Pentecostal church, this church will have a more experiential feel: more speaking in tongues, prophecy, music, dancing, falling out under the Holy Spirit. Because often ethnic churches view themselves as the last bulwark against the liberalizing tendencies of modernity, this storefront will erect a strict barrier against heterodox ideas. Yet despite the best attempts by the pastor and congregation, religious life is not static. The language, music, culture, and theology all will change—as soon as the next

generation realizes that they don't want to worship in Spanish, they don't like hymns, and they don't see a problem with women wearing pants and preaching. Thus the search continues for another church in which this new generation can find its own identity.

The future of Latino Pentecostalism will likely be post- and transdenominational: postdenominational because that is the only way theological innovations can take place outside the auspices of denominations that have a stake in protecting their own theological identities and do not allow theological differences; transdenominational because some worshipers want to participate theologically in more than one denomination—some want to be Calvinist and Pentecostal, some want to be liturgical and charismatic, and some are Catholic and Pentecostal. Because it is continually replenished by a steady stream of immigrants and new converts, Latino Pentecostalism grows and shows no real movement to stabilize into another ethnic church. Historically, subgroups within the larger movement of Latino Pentecostalism that have refused to change have not grown; for example, Olazábal's church and the Council of Latin American churches—which have been content with generational growth, or have sought to maintain a particular national identity—have not grown. For every storefront that opens up tomorrow, there will be a Spanish Foursquare or Assembly of God church that will close its doors.

For all its promise, the future of Latino Pentecostalism is bleak in at least one regard. Progressively minded Latino Pentecostals lament the lack of a cohesive social justice agenda. This omission has caused nearly a generation of leaders to leave the churches that introduced them to the faith, and it is this lack that continues to keep Latino Pentecostalism relegated to the margins of evangelical Christianity. Unless this lack of a core is remedied by a new generation of leaders who are willing to stay in their churches until change occurs, the exodus of Latino Pentecostals will continue.

Latino American Religion: Struggles for Justice

The term *struggles for justice* presumes that Latinos and Latinas in the United States of America suffer from injustice. An educated public in the early twenty-first century is likely to accept as fact the notion of historical injustice against Latinos and Latinas by comparing their experiences with those of African Americans or the historical patterns of discrimination against various European immigrants. In the first case, racism was at the core of the criticism; in the second, the focus was upon intolerance of ethnic, cultural, linguistic, and religious differences. In all cases, struggles for justice imply imperfections in U.S. policies and attendant social forces in America's history.

While Latinos and Latinas of faith have struggled against racism and ethnic discrimination, they present a historically different category of injustice. Before the thirteen English colonies became the United States of America in 1776, Spanish-speaking people had established cities and built churches in Texas, New Mexico, and California. The original European settlers from Spain often had married members of the Native American population to create a people of mixed race. With the annexation of Texas and of the Mexican territories in the nineteenth century, however, these ancestors of most of today's Latinos and Latinas were forced to comply with a new legal code. Some advantages came with the new form of government, but these were accompanied by backward steps such as restoring legal slavery, a nefarious practice that Mexico had previously abolished. Moreover, an influx of English-speakers from North America seeking land and fortune upset the existing social prominence enjoyed by Spanish-speaking residents, particularly in Texas and California. In 1898, Puerto Rico was conquered, which brought many of the same negative effects to the Puerto Ricans. In the case of Puerto Rico, however, there was no large in-migration of conquerors.

Simply put, the Latino presence in the United States was not the result of Hispanics traveling to America but rather of the U.S. military invading and annexing Latino homelands. Racial discrimination used against Mexicans and Puerto Ricans to subdue and rule the annexed lands had a different context from the African American struggles to abolish slavery or to end Jim Crow laws (laws enforcing segregation). Likewise, the arguments in favor of European immigrant assimilation do not neatly apply to Latinos and Latinas in conquered lands. While many argued that European immigrants should assimilate, the same did not apply to Latinos. Imitating the ways of the first settlers would have meant that the burden of adjustment was on the incoming English-speaking North Americans. This unique aspect of Latino history as one of the conquered peoples of America colors every struggle by Latinos and Latinas for justice.

Patterns of Religious Mobilization and Types of Organization

Churches have been cradle to some, but not to all, Latino struggles for justice in the twentieth century. Most faith-based efforts to achieve social justice take two approaches: (1) work through grassroots movements that create effective organizations; and (2) coalesce around issues large enough to engage existing organizations (including secular ones) in a common plan to remedy injustice.

People of faith can be characterized by their priorities toward the struggle for justice. Are the issues that motivate struggle for justice internal or external to the church? An example of the internal focus might be an after-school program that teaches young people about the Bible. The external effect would be a soup kitchen staffed by parish volunteers to feed the poor.

Differences of focus are further affected by the concept of authority in the social justice struggle. Some have a hierarchical view of religious leadership, in which the role of the faithful is to implement the policy decisions made by church leaders. If these persons are focused on internal church change, we call them "disciples." Examples are members of a parish or congregation who register to vote only when so instructed from the pulpit that voting is a means of advancing the church's mission to the world. Persons interested in social questions outside the church are "politicians," who typically seek church approval for a specific issue such as a law against gay marriage or in favor of immigration reform. Whether of left or right, this type relegates church struggle to top-down decision making.

The other types of religious participation in social issues perceive their role as participants who collaborate with each other and with secular organizations. Those who dedicate themselves to such struggles out of a concern for the church are called “pastoralists”; those whose target for change is secular society may be categorized as “liberationists.” These groups often collaborate on many issues but have different criteria for evaluating the struggle. Take, for instance, an effort to picket a factory to end discrimination in hiring practices. Liberationists would consider the picket to have failed unless the discrimination is ended. Pastoralists are likely to respond, “Well, the picket was a failure, but at least the church was present to them in their struggle—sharing, growing, failing, suffering, but always loving.” This difference is particularly noticeable in coalitions and alliances. Liberationists are not as reluctant as pastoralists to struggle for social justice as allies with secular organizations.

The Great Depression

Before the Great Depression of the 1930s, the most common form of Latino social justice organizations were various brotherhoods, more or less in the model of civic organizations that also attended to community needs such as places to hold meetings, dances, and fiestas. In Ibora City, the Cuban cigar factory set up in today’s Tampa, Florida, was a self-contained civic community. In New York, Puerto Ricans, Dominicans, and Cubans developed brotherhoods fashioned to meet the needs of urban migrants. The Knights of Labor and the Knights of Columbus also followed the brotherhood model. In Corpus Christi, Texas, the League of United Latin American Citizens (LULAC) held its first convention on May 18, 1929, joining together smaller local groups with names such as the Order of the Sons of America and the Knights of America. LULAC was not a religious organization, but it enlisted many religious persons in its campaigns for social justice. These brotherhoods fit into the liberationist group because they were focused on goals external to the churches and were based on cooperation among different groups and nationalities.

The most visible religious initiatives to address social justice issues in the period leading up to the New Deal of President Franklin Roosevelt had been the settlement houses. Hull House in Chicago, founded in 1889, was the first and perhaps most famous of these institutions, which focused upon self-help through education, particularly for women. Often church groups sponsored settlement houses in service to the social gospel, with the primary beneficiaries newly

arriving European immigrants, but some—like the Mexican Christian Institute (later the Inman Institute) in San Antonio, Texas—began with service to the Spanish-speaking. Casita María in Spanish Harlem (1934) used the settlement house concept for Catholic service to Puerto Ricans.

While there was a history of Latino struggles for justice before the Great Depression and the New Deal of the 1930s, today’s movements are best understood in light of events after the first third of the twentieth century. The Depression fractured the segregated isolation of Mexican Americans on the U.S. mainland and devastated the agricultural economy of the island of Puerto Rico. There were two basic effects of this fracturing of nineteenth-century patterns. First, the massive federal government interventions with social programs under the New Deal brought Latinos and Latinas into political networks. Existing labor movements with Latino and Latina workers were able to join with established majority groups such as the American Federation of Labor (AFL) and Congress of Industrial Organizations (CIO). Second, Latinos and Latinas began to move about the United States, migrating away from the Latino homelands.

This migration that followed in the wake of the New Deal was greatly intensified by World War II. These Latinos were not immigrants from a foreign land, but U.S. citizens by birth who had been segregated into Spanish-speaking communities. Often enlisted as a replacement workforce by factories that had lost their employees to the armed forces, these 1940s migrants expanded the existing *colonias* or Latino neighborhoods scattered throughout the United States.

Also secular, but with an appeal to religious identity, was the Puerto Rican Nationalist Party under Pedro Albizu Campos (1891–1965). The party platform breathed life into the revanchist (that is, restoration of a conquered group) drive for independence from the United States and added a cultural matrix that identified the island with Catholic tradition and an economic model based on papal encyclicals. Pedro Albizu Campos was imprisoned and the Nationalist Party, first in 1936 and later in 1950, was repressed by the U.S. government as communist. In the vacuum, the New Deal secularism of Luis Muñoz Marín (1898–1980) met many social justice needs while eschewing separation from the United States. The absence of a religious linkage for Muñoz’s political party would lead in the 1960 presidential election to a bitter confrontation with the Catholic bishops over state sponsorship for birth control programs.

Church support for the programs of the New Deal was highly visible, particularly from Catholics and mainline

Protestants committed to social justice. Moreover, Latino educators, writers, poets, and political thinkers contributed to the slow but convincing emergence of intellectuals. Some, such as Mexican American Carlos Eduardo Castaneda (1896–1958) and the Puerto Rican Isabel Gutiérrez de Arroyo (d. 1987), paid particular attention to religious factors in their scholarship.

Post-World War II

The general prosperity of the postwar years produced the Great Puerto Rican Migration (1946–1964) that transferred 40 percent of the island's population to the U.S. mainland, principally to New York City. For Mexican Americans in southern California, the era created a cultural identity problem. As descendants of the original settlers of cities such as Los Angeles, they were not Mexicans, but as lifelong urban dwellers, neither were they migrants from rural towns. This urban group celebrated its differences in distinctive clothing and a style of talk in Spanish called *Caló*. From this group emerged the *pachucos* or “Zoot-Suiters.” Characterized as urban juvenile delinquents or gang members by critics, the *pachucos* anticipated later self-help Latino militancy against discrimination. What Eleanor Roosevelt described as a “race riot” was sparked by the 1943 beatings of *pachucos* by U.S. Marines and sailors. The violence took place in a Los Angeles barrio called “Chavez Ravine.” Classified as a slum, its homes were later demolished to make way for a baseball stadium. The east coast version of these young and defiant Latinos was featured in the Broadway musical *West Side Story*, about a Romeo-and-Juliet-like encounter between Euro-Americans and Puerto Ricans.

The size and scope of the demographic changes in urban areas outside the Latino homelands launched the first important nationwide service effort from the Catholic Church. The Bishops' Committee for the Spanish-Speaking was created in 1945 as an interregional network of churches to provide services for the seasonal migratory farm workers as they left Texas and passed through the Midwest. A decade later, the Archdiocese of New York created a similar regional effort in the northeastern United States to coordinate Catholic programs for the Puerto Rican migrants. Because the Cuban exodus after the fall of the Batista dictatorship in 1959 brought to the United States not the rural poor but a relatively prosperous urban middle-class Cuban, it was the exception rather than the rule to the urban migration of Latinos. But the model perfected among Mexican Americans and Puerto Ricans for an apostolate of pastoral

outreach and organized social concern benefited these Cubans, who settled mostly in south Florida and parts of New Jersey. The early 1960s were characterized by Catholic Church involvement, along with similar commitments from mainstream Protestant churches, in addressing the material needs of Latinos on a scale not previously matched.

While Latinos and Latinas were not excluded from these kinds of faith-based social service providers, for the most part these agencies were run by non-Latinos. It was relatively novel for the Catholic Church, unlike Protestant and Pentecostal churches, to engage in a nationwide effort to place Latinos and Latinas in church leadership. The Catholic *cursillo* movement spread throughout Latino communities in the decade of the 1960s. Moreover, because only the laity were to hold official titles in the movement, by the 1970s the *cursillo* served to develop lay Latino leaders and bring them into national networks.

The Second Vatican Council, Civil Rights Movement, Immigration Reform, and the War on Poverty

The Second Vatican Council (1962–1965) of the Roman Catholic Church was of major consequence to all religious bodies, although of course its principal effect was on Catholicism. The council redefined the church's role in politics and the modern world, while introducing participatory democracy and greater transparency within the church. The council also required that the Mass be celebrated “in the language of the people” rather than in Latin. In 1965, the National Council of Catholic Bishops (NCCB) decided to allow Spanish to be substituted for Latin in parishes serving Latinos, making the United States a bilingual country for Catholicism, two years before the U.S. government voted in 1967 to create the first federally funded bilingual education program.

The changes in church outlook were enhanced by the cultural and political tides of the times. These converging forces would rapidly bring Latino struggles for social justice into sharp focus. Latinos gradually entered into the civil rights movement led by Martin Luther King Jr. that focused on the injustices committed against African Americans, making the argument that Latinos, too, suffered from racism. Senator Robert F. Kennedy of New York added to the 1964 Voting Rights Act a clause that required a bilingual ballot in electoral districts with high concentrations of Spanish-speaking peoples. Thus, race and language were put into the mix of social justice issues.

When President Lyndon B. Johnson launched the War on Poverty in 1964, the federal government began to direct funds into poor neighborhoods, but to receive these funds, organizations had to have local leadership. In Latino *barrios*, this meant Latino leaders. Moreover, just as the War on Poverty was gathering resources, existing racial quotas for immigration were abolished with new legislation in 1965. The Dominican Republic and the nations of Central America quickly joined Mexico as major societies in the Western Hemisphere that sent immigrants to the United States. Significantly, the wave of Latin American immigrants encountered Latino leaders who were not inclined to repeat the century-old doctrine of Americanization by the churches.

The struggle against Americanization had a long history in Puerto Rico, where the independence movement had continually opposed colonialism. The radical temper of the late 1960s also had its impact upon Mexican Americans in the United States, who revived nineteenth-century concepts of revanchism. Latino militants of the late 1960s not only opposed U.S. intervention in Vietnam but also embraced anti-imperialist heroes from Latin America. Puerto Ricans born and raised in New York and Mexican Americans who had never lived in Mexico claimed sovereign rights for their homelands. This premise helped popularize the term *Chicano* to refer to people of Mexican ancestry; Puerto Ricans wanted to show that they were neither Mexican nationals nor “hyphenated” Americans and were in fact *Niurican*, Puerto Ricans of stateside birth. Young people, particularly Latino university students, were attracted to militant organizations, such as the Brown Berets and the Young Lords, that advocated confrontation with the power structure. In the earliest stages, however, these groups did not have direct links to churches. In fact, the Young Lords began by occupying a Methodist church that was characterized as out of touch with the Latino community.

The recourse to militancy in a religious defense of rights had a Latin American intellectual counterpart in the theology of liberation. The connections between the Latin American phenomenon and its Latino counterparts was to be strengthened in later years, but already in 1967 the pieces were in place for a Latino social movement to arise. The most important spur to religious struggle for justice, however, was the cause of the farm workers led by César Chávez.

The Latino Religious Resurgence

The reforms of the Second Vatican Council, the theology of liberation, the War on Poverty, new immigration and civil

rights laws, a cohort of Latino university students, antiwar protests, bilingual education, national networks of public Latino leadership, the emergence of national Latino television networks—all were factors that interacted with the others. It is possible that if any one element had been lacking in the mix, the religious movement either would not have occurred or would have been less effective. These elements were present in an extraordinary mobilization of religious believers in a period that has been described as “The Latino Religious Resurgence.”

The signal event that marshaled the religious forces was support for the Mexican American farm workers’ strike—appropriately called *La Causa*—organized by labor leader César Chávez in Delano, California. Historians sometimes overlook this effort’s religious roots. Chávez was a different kind of labor leader because his ideological commitment to organizing was accompanied by a *curillista*’s understanding of Catholicism. His followers among the migrant farm workers were mobilized by both his labor organizing and a fervent evocation of his faith. The black eagle of the nascent farm workers’ association was accompanied by the banner of Our Lady of Guadalupe.

The picket lines at Delano were supported by a wide range of church people who saw Chávez as a man of faith: *Time* magazine profiled a Latino Martin Luther King Jr. in its article of July 4, 1969. Sensing that public opinion would prove a powerful ally against the growers, Chávez called upon the general U.S. public to boycott the table grapes produced in the Delano fields in support of the unionization of the workers. The National Council of Catholic Bishops, the World Council of Churches, and a host of other church organizations mobilized their members to join in solidarity with the farm workers. In Los Angeles, on the campus of Loyola Marymount University, the Chicano student group *Católicos por la Raza* (CPLR) was formed in the autumn of 1969 to press the church to support Chávez. In February 1970, two dozen Chicano priests from around the country decided to form an association in support of the farm workers. But the priest organizers recognized that larger issues of discrimination needed to be challenged. Changes in the Catholic Church were now on the agenda, including the naming of Mexican American priests as bishops, so that never again would the hierarchy make decisions without Mexican American input. The new group took the title *Padres Asociados para Derechos Religiosos, Educativos y Sociales*, with the acronym PADRES.

In 1971, *Las Hermanas*—the sisters—was formally organized for religious women. Different from PADRES, its male counterpart, *Las Hermanas* extended full membership to all Latinas, not just to Mexican Americans. Both of these organizations set goals that went well beyond the immediate task of supporting the farm workers. They sought a general reform of the church to make it more responsive to Latinos and Latinas on two fronts: commitment to issues of social justice and education in cultural and theological matters in order to sustain that commitment. They echoed the secular conviction that institutional aid to Latinos should be organized and led by other Latinos. According to the typology mentioned earlier, PADRES and *Las Hermanas* were pastoralists when they focused on change internal to the church and liberationists for secular society. Joining both goals widened the appeal of such organizations.

If the movement had consisted only of PADRES and *Las Hermanas*, the voice of Latinos would have been left outside church circles of power, waiting for an invitation to internal discussions. But these grassroots efforts found a highly visible office in Washington funded by the bishops. On the one hand, the movement organizers were able to gain an immediate hearing in the halls of power; on the other, the office had footsoldiers and grassroots supporters directly engaged in ministry.

This marriage of forces produced the *Encuentros*. These were church-sponsored congresses in which Latino and Latina delegates from parishes and dioceses came together to draft pastoral plans of action. The First National Encuentro was held in Washington in 1972, but dozens of local Encuentros were held at the same time. The participants appealed to the declarations of the Second Vatican Council for democratization of church leadership. By structuring the workshops so that each produced a set of resolutions and a working plan that was voted upon, the Encuentros blazed new ground for democracy within U.S. Catholicism—and not only for Latinos and Latinas. Lay leaders, especially women, were able to participate as equals with priests and sisters in the Encuentro deliberations.

The key to the movement was education. The Encuentros recommended empowerment, especially for lay leaders. Thus, a Latino whose ministry might have been characterized as a disciple would be educated to think more like a pastoralist or liberationist. At the same time, local parishes benefited from a more open climate that encouraged grassroots engagement in government programs. Moreover, many of these faith-based organizations

were strong enough to confront so-called community leaders who treated federal funding for social services as patronage for the old-fashioned political machine.

Protestants in the historic mainline denominations were able to embrace these goals, and the period was marked by its ecumenical spirit. Often, Latino Protestants and Latino Catholics found themselves closer to each other because of their Latino heritage than to their non-Latino co-religionists. While many secular counterparts such as *La Raza Unida Party*, MEChA (*Movimiento Estudiantil Chicano de Aztlán*), and the Young Lords floundered in the 1990s, Latino church movements have demonstrated more stamina.

Social Justice since the Resurgence

The election of Republican Ronald Reagan as president of the United States in 1980, close on the heels of the pontificate of the conservative Pope John Paul II, ended the Latino religious resurgence. Militancy waned as federal funds were withheld from community agencies; pastoralists were divided from liberationists as church officials narrowed the vision of mission to the world; and the generation of leadership grew grayer.

Still, the legacy of the resurgence endured and heard an echo in efforts of Protestant congregations working toward similar goals. Most Latino religious community organizations followed the model of matched pastoralist and liberationist ideology. Efforts were directed at empowerment of church leadership funded from government sources to address such local issues as housing, employment, and education. One of the more ecumenical efforts in Chicago hired a young college graduate named Barack Obama for the program and offered him lodging in a Catholic rectory.

Early in the first administration of George W. Bush, the Republican president launched a faith-based initiative. Federal funds for social services had been given to church organizations by administrations since Lyndon Johnson's War on Poverty, but restrictions that separated church and state were relaxed in 2001. The principal beneficiaries of this new program among Latinos were evangelicals and Pentecostals. Believers best characterized as disciples could now engage in social service delivery as part of church outreach, including recruiting new members and paying secular salaries to ministers who did double duty as agency directors. Not surprisingly, Washington's largesse to Latino evangelicals was followed by a large defection of Latino Protestant voters away from the Democratic Party and into the Republican Party, although Latino Catholics refused this route.

Sweeping immigration reform was passed by the House of Representatives in 2005 and proved to undo the Latino drift toward the Republican Party. Known as the “Sensenbrenner bill,” the legislation promised strongly punitive measures against undocumented persons among the Latino population. Among its most controversial sections was to criminalize the providing of social services to undocumented immigrants, even if these were offered by religious organizations in a spirit of ministry. Prominent religious leaders such as Cardinal Roger Mahoney of Los Angeles assumed a major role in orchestrating a series of public protests against the measure, which failed to pass in the Senate. Latino evangelicals, who had favored Republicans in previous elections, returned a majority of their votes to Democrats in the 2006 elections, a trend that carried over to the 2008 presidential election won by Barack Obama.

Within his first hundred days as president, Obama expanded the office coordinating federally funded social services through faith-based organizations to include neighborhood partnerships. The principal change was to funnel money through neighborhood coalitions rather than through individual congregations. The rejoining of the pastoralist and liberationist types might be anticipated.

The struggle for justice by Latino religious groups will likely result in the creation of groups that serve as alternatives to the delivery of social services through purely secular groups. Such agencies, even those yet to be created, will contribute to the Latino struggle for justice.

Latino/a Religious Practice

Latina and *Latino* are terms designating women and men of Latin American origin, especially those in the United States; people in Latin America proper, while recognizing themselves as *Latina* or *Latino*, are more likely to identify by their nation (Guatemala and Cuba, for example) and by region (particularly in Mexico). Religions throughout Latino communities are a mix of various native practices, indigenous to the region, and various forms of Iberian Catholicism (from Spain or Portugal), as well as African traditions brought over in the course of the slave trade. Religious formations face a complex of many different yet related elements, including doctrine, thought, or theology; material culture; imagery; and the ways that people actually live—practice, or in terms of acting out a religious agenda, *praxis*. Yet a Latino religious practice exists only in theory; it is contrived by cultural theorists who study and interpret faith expressions produced by people of Latin American origin.

The story of contemporary religion for Latinos across the U.S.–Latin American borders, the borderlands, begins with Spanish colonialism. In 1421 the *Mexica* or Aztec Mesoamerican capital, Tenochtitlan, fell to an army headed by invading Christians from the Iberian Peninsula; in 1533 the Inca Empire of South America lost its imperial capital, Cuzco, to the same fate. These victories heralded a new colonial order throughout what is now Latin America, from the Tijuana border, to the southern tip of Argentina, to the former Spanish colonial islands of Cuba, Puerto Rico, and the Dominican Republic. In the nineteenth century, Latin American colonies liberated themselves from Spanish rule

and became hybrid republics, torn among their indigenous, European, and African underpinnings. For the most part, Latin American statecraft came to manage the inevitable process of cultural blending and synthesis by recognizing and celebrating its creative potential and effects rather than condemning its perceived impurities.

Latino religious practice is a result of imperial Christian impulses and indigenous resistances, emergent in a repertoire of performances that continue to change form. This evolutionary phenomenon is in no way unique to Latinos; indeed, it happens in all human societies. Yet the historical and geographical contexts are dissimilar and contribute to a particular regional matrix of variations and local culture. Traditions develop that possess the aura of having always existed so that multitudes invest great meaning in them; the traditions become important enough to ground individuals' personal and national identities.

For the ancient Mexican Nahuatl speakers, the place of tradition was known as *nepantla*: the space in between worlds. Colonial Christians were bewildered by the wonders they encountered in fifteenth-century Mesoamerica. When one Indian wise man was asked why he continued practicing his religious traditions after having formally received Christian confirmation, his answer was prophetic. "Don't worry Father," he reassured, "we are still *nepantla*." The place of in-between, occupying the porous borders at once connecting and separating Maya from Aztec, Taino from African, indigenous from Spanish, Christian from pagan, and ultimately Latino American from the United States.

Latino Religious Poetics

There, in the realm of *nepantla*, the poetry of religion emerges in practice spoken in many tongues: religious poetics. The term *religious poetics* is used in the Greek, Aristotelian sense of poetry as performance, from the Greek *poesis*, doing or acting. This is true particularly for religious terms or for the religious context. The best known of the early recorded uses of the term appears in the canonized Christian scriptures, James 1:25 (ESV): "He will be blessed in his doing." Similarly, the Greek *poetes* signifies one who does something, or the maker of a poem. In sacred poetics, religious actors can manage the often harsh and potentially overwhelming conditions they confront (the battle for survival and more, dignity, love, freedom) by deploying the most powerful weapons in their arsenal: signs, myths, rituals, narratives, and

symbols. And empowered by their freshly perceived role in the cosmic drama, agents of social change appeal to, create, and reinvent religious institutions and their place in the lives of constituents. *Consejos* or *dichos* (proverbs or sayings) poetically narrate the world as part of a larger theology and system of ethics always under construction but always returning to the basic principles of "conscience," the good, and the virtuous. Religious practice in the borderlands and elsewhere is of course not singularly triumphant and comedic. It is often tragic.

When the promises of religion, as they are meted out by institutions and by "religious specialists," are insufficient to meet expectations and to quiet the fears, confusion, pain, and agonies of people on the margins of power, the meanings of religious symbols can be redirected, reinterpreted, or conjured anew to fill the gap between what ought to be and what is. Poetic, creative religious practice does not occur only at the boundaries of institutions, but within, parallel to, and sometimes in direct conflict with established traditions. In short, religion—broadly and personally defined—in addition to serving power as an ideological mechanism of social control, exploitation, and domination is also effectively deployed in attempts to destabilize those very same forces by people who have access to only the bare resources that constitute conventional power through the performance of a Latino religious poetics.

Focusing Latino religious practice involves contextualizing religiosity within a postcolonial condition of domination and exploitation. This endeavor requires asking, How do people survive and make meaning under conditions of discrimination, poverty, and deprivation? How do they negotiate racism, sexism, and general hatred? How do they resolve conflict? How do they love, and how do they die? What diseases do they get, and how do they heal them? How do they raise children? What salvation narratives appeal to their passions, dreads, and desires? What is borderland religion? How can it be represented, theorized about, and appreciated? In practice, Latino religions emerge in stories—poetic narratives when storytellers speak as cosmologists and prophets.

Even after colonization, colonized peoples across the American borderlands never entirely surrendered control of their bodies, memories, and sacred places; their control remained partially in the realm of the spiritual. Religions are shaped and reshaped in the struggle for political power. Classical nineteenth-century social theorist Émile Durkheim once correctly noted that human nature does not explain

religious phenomena; instead we must look to their social contexts for explanations.

Borderland Religions

Throughout Latin America, national identity narratives were long in the making and soon rolled easily off the lips of millions. Key among these was *mestizaje*. A term used mostly in Mexico and on the Latin American mainland, it translates into English as “miscegenation.” But in Latin America its usage goes beyond racial mixing to include cultural, linguistic, and religious mixtures. Regional variations include *Ladino* in Central America and *mulatto* in Cuba.

Mestizaje and its variations name the uncanny borrowings, impositions, overlaps, and inventions that characterize cultural formations and the continuing processes of improvisation and invented traditions. The establishment of the United States as sovereign nation and its expansion into and colonization of Mexico and the Caribbean added a new cultural patina, further complicating the already dense *mestizaje* layers. As a result, in contemporary Latino studies, the term *borderlands* has emerged as a descriptive and metaphorical category to fathom *mestizo* cultural artifacts, especially north of the U.S.–Latin American borders.

Contemporary religious expression among people of Latin American origin, Latinas and Latinos on both sides of the U.S.–Latin America border—the borderlands—is a product of many historical collisions and social collusions. The myths and realities of Spanish colonialism interfaced and merged tensely with the indigenous Americas. In the Caribbean and on the eastern coast of South America, this religious matrix combined with the myths and realities of African traditions brought to Latin American shores during the slave trade to produce radically innovative hybrid religions. Borderland religion owes its origins to at least three main sources of religious tradition and innovation: the indigenous Americans (chiefly Maya, Inca, and Aztec); a primitive form of Spanish Catholicism that ironically resembled the beliefs and expressions it sought to eradicate; and West African Yoruba rites and practices.

Mesoamerican indigenous thought at the time of conquest was largely analogical rather than dialectical. In other words, Indian sacred thought and practice is based on the principles of similarity and reciprocity. In this worldview, multiculturalism is likely to be celebrated for the connections that can be woven from resemblances in religious discourse and symbolism: symbols and myths are comprehensible in their likeness to others. Conversely, Christian

imperialists viewed their sacred teachings as structurally incompatible with other claims to that which they viewed as singular and absolute. Indigenous truth was subjected to a colonial regime that divided the world into a dialectics of holy and profane. This religious calculus produced a distinctly Christian mandate to either convert or exterminate the natives and their religions.

Still, however, indigenous traditions survived in processes of subterfuge, dissimulation, and outright defiance. The phrase “idols behind altars” has been used to capture the ways that the indigenous peoples of Latin America rejected the singularity of Christianity well after formal indoctrination was imposed. In Cuba and throughout the Caribbean, African slaves were imported en masse to fill the labor void left by the largely decimated indigenous Taino populations; many Indian survivors fled to mountainous island interiors that soon attracted escaping African slaves and thus became productive venues of religious experimentation—producing fresh Catholic–African hybrids, *Santería* chief among them.

In African diaspora religious formations, the crossroads marks the meeting place of the living and the dead, wherein spirits cross the border between life and death. Crossings symbolize action, movement, transformation: the “cross” is a verb. Pilgrims carry and enact the cross from South to North America, from the Third World to the First, from certain poverty to uncertain poverty, from the old to the new, refiguring multiple covenants of grace and hope. The cross bears several meanings but becomes most significant in Latino religious practice as both noun and verb. Migrants intersecting the northern border reenact a drama of religious transformation that is centuries old, at least: a life translation. Conversion, new life, transformation, a renewal of spirit are realized in the intersections created by the cross.

Latino immigrants typically follow the seasonal patterns of crops and other labor rhythms (the demand for construction workers is greater during the nonrainy months). And inasmuch as migrants touch and inform the lives of permanent residents in the spaces they inhabit, entire communities are affected by cycles of return: various communities and social collectives experience ebb and swell as a function of migration. For a community delimited by border crossing, fluidity, and movement, religion is experienced as flux and flow; the greatest religious movements occur at times of crisis.

When people come to the United States, they bring their religious traditions with them; when they come as temporary workers, they return to Mexico with the commodities

and cultural influences they accumulated while in exile, and both are disseminated in their homelands. Thus, the cultural rhythms of the United States pulsate into Mexican religious systems, and vice versa, in various means of transnational exchanges. Both nations are influenced by the transnational movement of peoples—bodies and souls—a cycle that takes place again and again.

The borderlands is a crossroads, functioning at once as symbol and reality for millions of Latinos who cross boundaries of many kinds when forging plausible and effective realities for themselves and their progeny. The cross as metaphor can be effectively used to connote Latino religious practice, insofar as borders isolating traditions from one another are diminished when practitioners draw from many spiritual resources in their struggles to survive the oppressive legacy of colonialism. The borderlands is also a place of great social, economic, and political barriers wherein great masses of people suffer extreme deprivation to benefit a small segment of society. As a result of marginalization, people rely on inherited as well as improvised faith actions in their practices of everyday life. Certainly the colonized make choices when drawing from pools of religious traditions to confront personal and public situations. But the marginalized were compelled to accept Christ, for the most part, a historical stroke that painted a rich Catholic veneer over spiritual expression layered thick with surplus indigenous legacy. Intensified Spanish vigilance drove Native religions further underground where they were disguised as variations on Christianity and systematized.

Religions of the Borderlands

Santería

Santería is perhaps the most identifiable discrete religious system to emerge from colonialism. Cuban elites cared little for the spiritual condition of their African slaves; the Catholic institution on the island commanded only cursory attention from modernist-leaning capitalists bent on earning earthly fortunes rather than eternal salvation. Yet the church was paid mind, and African idols were banned from public Cuban space in the nineteenth century in favor of Christian idols. As a result, African deities were assigned Christian images and narratives in a grand counter-hegemonic sleight of hand to bring into being what is now a postcolonial religious masquerade. In Santería practice, Christian iconography becomes a symbolic border connecting (while paradoxically dividing) Africa and Europe.

West African Yoruba religious thought and praxis divided the spiritual world into three distinct but connected realms, the highest occupied by a God who does not incarnate but from whom all positive energy, *ashe*, is generated. Some call him Olofi, and his avatar is typically (but not always) Jesus Christ. The second spiritual realm is dominated by the *orishas*, who are deities of nature. Chango, the African god of fire and thunder, for example, is associated with St. Barbara because of the overlap in their principal colors (red and gold) and with the elements of fire and thunder central to their respective mythologies. Ellegua, the trickster figure and messenger deity, is deemed to be El Santo Niño de Atocha, in another popular combination, because both of their mythologies involve travel and a childlike spirit. La Caridad de Cobre, patron saint of Cuba, has become the avatar of Oshun, the orisha of the sea. The third spiritual realm is commandeered by human ancestor spirits, called the *egun* by some. These ancestral spirits are typically singled out and honored on the Days of the Dead, November 1 and 2, continuing a tradition of reuniting the living and the dead that began in ancient Latin America.

In Santería practice, the body becomes the crossroads for the exchange between the living and the dead, as *egun* and *orisha* spirits possess the bodies of believers during the ceremony. Initiates into Santería are “crowned” by one of dozens of orishas who choose and compete for devotees. Once initiated, practitioners follow devotional patterns and ritual mitigation, offering gifts and erecting elaborate altars to their *muerto mayor*, or major spirit. Spirits are known for their distinctive tastes, but most enjoy rum and cigars. *Santeros*, priests and priestesses, belong to different and loosely affiliated traditions and congregations, each with doctrinal and practical idiosyncrasies. Religious specialists in Santería act as shamans, communicating with the spiritual world, healing bodies, remedying social illness, and divining destinies.

In its colonial history and religious function, Santería approximates other mediumship and healing practices throughout Latin America. Throughout the Americas, natives practiced the healing arts, mapping illness and healing onto the human body through religious and empirical experimentation. Rather than eradicating existing faith practices, Christianity provided another rich source of symbols and narratives for the Indians, and there was considerable if not ironic overlaps in beliefs between the various Native, African, and Christian faith practices. Colonialism and slavery occasioned religious creativity and produced hybrid sacred truths on both sides of the sword, all under the guise of orthodox Catholicism.

The triumphant moment of the revolution of Fidel Castro in Cuba in 1959 was fraught with the symbolism of Santería. Revolutionaries made their base camp in the town of Oriente—a haven for former slaves and a nucleus of indigenous religion on the island. Castro and his army took La Habana on January 1, which, on the Catholic calendar, signifies el Santo Niño de Athocha; for Santeros, it is the celebration for the Orisha avatar, Ellegua, the messenger and trickster. Rebels were adorned in Santería beads and warrior colors—red and black. When Fidel addressed the cheering throngs of supporters from a microphoned platform, doves landed on his shoulders. At that moment, Castro occupied prime sacred real estate—the borderlands between Christianity and Santería—for doves are sacred symbols in both traditions.

Curanderismo

Extant postcolonial systems of religious specialization, forms of shamanic practices, offer the most vivid illustrations of the crossings, innovations, and poetic and political impulses of borderland religions. Santería is remarkably similar to *curanderismo*, found more commonly on mainland Latin America; the term *curanderismo* comes from the Spanish verb *curar*, “to heal” or “to cure.” Across the borderlands, *curanderismo* signifies a wide variety of community-based curing traditions organized around charismatic and prophetic healers. In contemporary Latino communities, Santería and *curanderismo* are often practiced in tandem and become nearly indistinguishable. On the eastern coasts of Brazil and Venezuela, African-origin Santería is known as *candomble* and has adapted many elements of the more Aztec, Maya, and Inca artifacts found in *curanderismo*. (In the French Caribbean and its diaspora, the Africanized Catholicism is Vodou.)

People who practice *curanderismo* range from those who occasionally use herbs to matriarchs who administer spiritual cleansing to full-time healers whose rituals are shamanistic. Religious healers are both female and male: *curanderismo* seekers demonstrate no preference between genders; they go by reputation alone. *Curanderismo* is a collection of religiously based tactics, especially healing with herbs and teas, massage therapy, midwifery, card reading, and divination. Also common are more elaborate symbolic or spiritual “operations,” including unclogging arteries, healing cancer, and addressing other physical, social, and personal problems—including financial, legal, and personal or familial. The most common procedure is the spiritual cleansing, or *limpia*. A *limpia* releases negative energies while conjuring positive spirit through prayer, recitation, and a laying on of hands. Spiritual

healing ceremonies involving a laying on of hands are central both to *espiritualismo*, Mexican spiritualism, and to *evangelicos* or evangelical/Pentecostal—a Protestant movement growing throughout the borderlands.

The crux of *curanderismo* is formed in the religious milieu emergent in colonialism: it inscribes ancient Mexican rituals and idioms onto Catholic grammars and symbols. *Curanderismo* is an expression of religious poetics that emphasizes the body and restructures the order of the world through gifting, reciprocity, and exchange. In *curandero* practices, individual religious agents contest the borders of institutional religion and healing. Like Santería, *curanderismo* praxis crosses the boundary separating indigenous traditions from Catholicism through various movements, particularly a praxis-wavering across the Enlightenment boundary separating the logics of modern science and spirit.

Historically, *curanderismo* synthesizes pre-Tridentine Catholicism and Spanish-Moorish medicine, combined with ancient indigenous American medicine and religion. Spanish Renaissance ethnographers documented the presence of indigenous healers, wise medicine women and men who labored as religious specialists, arguing and debating truth with the colonial priest—a debate that still rages in the twenty-first century.

Like Christianity, *curanderismo* operates on a conceptual binary: between light and dark, good and evil, inside and outside, wet and dry, up and down, male and female, and especially between hot and cold. These forces are continually in dynamic tension, fluid and shifting in motion amorphously but also embodied in a pantheon of deities who are characterized by duality, fluidity, and complementarity. For example, the highest Aztec deity, Ometoatl, is at once male and female, embodying the duality and complementarity of gender. Cosmic dualities affect individual bodies. The difference between hot and cold, for example, is manifested in the body, and every individual is thought to have a hot or cold type that delimits the personality one has, the kinds of diseases to which one is prone, and the care one should take to achieve equilibrium. If predisposed toward cold, then balance, or equilibrium, is achieved by eating more hot foods. The body is at the center of perception and knowledge. Still, these beliefs sometimes obviate regular medical care.

Espiritualism and Espiritismo

Throughout Latin America *curanderismo* has been institutionalized into churches and denominations as distinctly Latino forms of spiritualism, or *espiritualismo*, and spiritism, or

espiritismo. The largest group in Mexico, the Espiritualistas Trinitarios Marianos, are dedicated to a hybrid shamanism resembling Catholicism. With the intercession of the spirits, they labor to cure their peers physically or by spiritual consultation. Generally, they manifest their gifts in local temples specifically dedicated for this purpose. *Espiritualismo* emphasizes the spiritual level of healing and mediumship. It is both popular medicine and a distinctly Latino religious protest or protestantism: a modernist impulse in Latino religious practice stubbornly tied to ancient traditions. *Espiritualismo* began as popular dissent against the limits of the Catholic Church; as such, it shares narratives and sensibilities with Catholicism and cohabits the same spaces.

Espiritistas (Mexican spiritists) share beliefs with *espiritualistas* regarding communication with spirits, clairvoyance, and divine healing. The two traditions developed simultaneously during the nineteenth century throughout Europe and the Americas. Distinctive to *espiritualismo*, however, are its prophetic regional founders. Conversely, *Espiritistas* trace their origins to the French medium and teacher Hippolyte Leon Denizard Rivail (1804–1869), who published under the name Allan Kardec. Though both are medium-based traditions organized into churches, the two movements differ in their teaching on reincarnation. Latino spiritualism differs also from American spiritualism in that the former is hierarchical and resembles the structure of the Catholic Church, whereas American spiritualism is congregational and based on the Protestant model of local control.

Curanderas posit a number of origins for imbalance or illness—the predicament of being physically displaced. Some attribute it to supernatural forces and others to more conventional causes; poor body maintenance, smoking, drinking, and eating excessively are said to bring about an imbalance in the body’s humoral system, for example. *Curanderas* consider themselves knowledgeable about anatomy and physiology and recognize that viruses and other biological infections can afflict the body. Therefore, *curanderas* also value conventional medicine and will refer patients to doctors. But relationships to doctors are problematic. Spiritual healing has thrived throughout current Latina/o communities as a result of the high cost of medical care and the difficulties that visiting a doctor presents for many Latinos, especially for undocumented workers in the United States. Like Santería, *curanderismo* holds that illnesses exist that doctors cannot cure.

Healing across the borderlands is enacted on three fundamental levels: physical or body, family, and community.

Curanderas have self-identified specialties. Common to all specialties and levels are the ritual tools for healing. Material cultural objects typical of *curanderismo* include eggs, garlic, candles, lemons, Christian symbols such as crosses and saints, and more standard medical fare such as cotton and rubbing alcohol. Herbs used for cleansing purposes and for treating all manner of diseases in hot- and cold-water teas are perhaps the most commonly prescribed cures. Eggs are thought to have absorbing or cleansing properties; they are believed to soak up negative energy from the human body and from the environment, as are garlic, cloves, and lemons. *Agua preparada*, or “prepared water”—prepared by prayer and blessing, either by a Catholic priest or another religious specialist—is central to ritual practice. Water, it is postulated, has curative properties and is especially powerful because it functions as the physical connection between the realms of the living and the dead. The symbolism of water is charged with formative properties in Mesoamerican discourse and also holds (re)generative forces for *curanderas* and *espiritualistas*. The broad traditional practices identifiable as *curanderismo* and Santería are but two of the many religious systems that were introduced by the multiple border crossings made during colonial expansion.

The “cult of saints” within Spanish colonial Catholicism coalesced with indigenous forms of faith through practice and symbolism. Santería demonstrates the synthesis of two broad pantheons of deities; in Cuba Oshun became Caridad de Cobre. Similarly, in Mexico, the conglomerate of mother deities was synthesized into the Virgin of Guadalupe, “Our Mother,” patron saint of Mexico. Devotion to images of Our Lady is common to every pueblo throughout Latin America. Latinos have adopted localized and hybrid images of Mary that have come to discursively construct, in a poetic and mythical fashion, postcolonial personal and national identities.

Guadalupe

According to the foundational myth of the *mestizo* Mexican people, on Saturday morning, December 9, 1531, a humble Aztec Indian, Cuauhtlatoatzin, known by his Christian name, Juan Diego, was visited by Mary, the Mother of God, at the hill called Tepeyac on the outskirts of Mexico City. Central to this story is that the Virgin Mary spoke to Juan Diego in his native tongue, Nahuatl, and manifested herself in the form of a brown-skinned Indian. In this encounter between the Virgin, ostensibly of Spanish/European origin, and the Mexican Indian, two competing conceptualizations of time, space, and

corporeality interfaced with each other and coalesced: a sacred human mix, or *mestizaje*. Henceforth, this meeting and its place have become central to the communities of Mexico and Mexican Americans, and indeed to the greater Latin Americas. On his visit to Mexico in 2002, Pope John Paul II declared December 12 a holy day in the Americas; on the same occasion he and President Vicente Fox both submitted to a *limpia* from a *curandera*.

The Virgin of Guadalupe is the primary symbol of Mexican Catholic identity. Guadalupe's current symbolic "capital" emerged in complex spatial, historical, and political processes. It wasn't until 1754 that the Vatican officially declared Guadalupe the patroness and protectress of New Spain, even though Mexicans had declared her their queen seventeen years earlier, after her agency was credited with saving Mexico City from a pandemic illness. The efficacy of Guadalupe was born from the pain of Mexican history with which she was inseminated: Guadalupe arose as the mother of Mexico precisely when Mexico needed a mother most, during the time of mass deaths among Mexico's native population. Guadalupe's myth and memory thrive in that interstitial *nepantla* space of associations and ruptures.

Tepeyac is three miles north of the center of Mexico City; originally it was not within city limits but on the borders, although today the capital has swelled to envelop the hilly ritual complex. There a shrine existed to Tonantzin, the Aztec mother goddess of sex and fertility. It was during the winter solstice in December that Indian pilgrims came to worship her shrine, offering gifts at her altar. By chance, the time of Guadalupe's apparition falls near the time of the original pilgrimage. Skeptics argue that this temporal coincidence is far too great, and that the event was likely a Spanish plot to manipulate the Indians into unwittingly performing Christian practices. The Guadalupe prototype continues to exist and is said to have been painted by the angel Gabriel upon the *tilma*, or cape of Juan Diego. The image bears many Native symbols. It hangs in the Guadalupe Basilica at Tepeyac, which millions of pilgrims visit each year. Indians continue to venerate her as Tonantzin.

In no small way, Guadalupe's prominence is indissolubly bound to the capital of Mexico, Mexico City, known to *mexicanos* simply as Mexico—as if it were the nation itself. Mexico is sacred in multiple (re)visions: the city of Aztec emperors and goddesses, the capital of the Mesoamerican world, the seat of the Spanish colonial empire, and the capital of the Mexican nation. Guadalupe draws from Mexico City, and Mexico is in turn supported by her vast following.

Guadalupe devotion is a borderland religious tradition, crossing, straddling, and blurring lines of religious demarcation. As such, it lends itself to the tactics and strategies of political struggles: fragments of her myth and image have been used in many political struggles on both sides of the border.

Because of her *mestiza* heritage, in 1810 Guadalupe was adopted by anticolonialist revolutionaries as a symbol of the *nepantla* racialized identity of Mexico. One hundred years later, anti-Catholic Mexican revolutionaries raised her image over their armed battalions. In the 1960s, she came to symbolize César Chávez's political struggles for social justice, *La Causa*. Today she is the template for vibrant and brilliant parodies of orthodox motherhood across Latina communities. Chicana feminists have painted her as a sex goddess of many varieties—reconnecting her to her Mesoamerican archetype, Tonantzin. In contemporary Chicana art, Guadalupe has been ingeniously reimaged and revisioned in support of many revolutionary social justice causes.

Our Lady of Caridad Del Cobre

The town of Santiago del Prado, now Cobre, is located on the southeastern shore of Cuba, forming a near-straight cross from the island nation's capital, La Habana (Havana), seat of colonial power. Founded in 1550 as a Spanish copper mine, Santiago del Prado employed African slaves and Taino Indians to perform the backbreaking mining. There, in 1608, two Taino brothers, Rodrigo and Juan de Hoyas, and a ten-year-old slave, Juan Moreno (John Black), were gathering salt off the coast when stormy weather struck, causing them to camp overnight. At daybreak they sailed into calm seas, where they saw a white bundle floating in the water. It was a small statue of the Virgin Mary, carrying the Christ child in her right arm and a gold cross in the other. She floated on a board bearing the inscription, *Yo soy la Virgen de la Caridad*, "I am the Virgin of Charity." Key to this poetic narrative is that the statue was entirely dry, despite having emerged from the ocean (the orisha, Oshun).

During colonial times, the church in El Cobre was dedicated to Santiago, St. James, the powerful patron of the Spanish conquest, so the statue of the Virgin was placed in a thatched hut instead of in the church. But on three successive nights, according to the story, the statue disappeared from the hut and was found on top of the hill above El Cobre. Nuestra Señora de la Caridad resided in several small shrines until 1630, when the copper mine was closed

Cuban women touch the glass case protecting a statue of the Virgin of Charity of Cobre, the island's Roman Catholic patron. The Virgin of Charity, *Nuestra Señora de la Caridad*, is depicted as mulatto, making her attractive across Cuba's multihued racial spectrum. She also has an appeal beyond pure Catholicism as the *Santería* deity Oshun, who is a maternal, sensual figure, and a mistress of love, femininity, and water.

and the slaves were released. It was in that revolutionary moment that she deposed Santiago and assumed her place above the high altar in the church, a triumphant emblem of the strength of the oppressed people over the Spanish conquerors.

Spanish slavery in Cuba did not cease officially until 1886, and Caridad is credited for her political prowess, especially inasmuch as she aided the slaves in their struggle for liberty. Her shrine quickly became a thriving site of pilgrimage for devotees of the goddess Oshun. Pilgrims cross many borders in their devotion to her; she represents, if even in the mind of believers, the *mestizaje* of African and Catholic faith now distinctly Cuban, but nonetheless a borderlands religion in practice.

In 1916, Pope Benedict XV visited the shrine of the Virgin of Charity and declared her the patron saint of Cuba.

El Cobre Basilica was built to house her in 1927. In 1998, Pope John Paul II crowned her statue during his historic visit to communist Cuba. In the 1950s, Ernest Hemingway gave the Virgin the Nobel Prize for Literature he won after writing *The Old Man and the Sea* in Havana. The mother of Fidel and Raul Castro left a small golden guerrilla fighter at the feet of the Virgin as her sons battled the government of dictator Fulgencio Batista.

Nuestra Señora de la Caridad continues to represent border crossing. Consider the common objects left in more recent times, including replicas of rafts, representing safe journeys to America, and photos of activists who have been imprisoned by Castro's government. Perhaps most impressive is the Marxist-atheist wall she crosses, separating church from state as many members of the Communist Party regularly offer gifts to her there.

Devotees also offer gifts in Miami, at her shrine on the shores of Biscayne Bay, on the border between the exilic Cuban community and their imagined spiritual homeland. In 1973 a conical shrine was erected there, *Ermita de la Caridad*, or “Hermitage of Our Lady of Charity,” where she connects and divides Catholicism from Santería, the diaspora from the homeland, and Cuban exilic religious practitioners from their Euro-American counterparts who barely know the hermitage exists.

Evangélicos

Enumerations of borderland religions are vexed inasmuch as they rely on static and singular identity categories; *mestizaje*, multiplicity, and movement are better suited to defining the realities of Latino religious practice. With this caveat, data produced on Latino communities in recent years map interesting trends, especially the increase of Pentecostal, born-again, fundamentalist conversion, known in the vernacular simply as *evangélicos*. But the data are contradictory. Recent studies have shown conflicting patterns, with increasing secularization as well as a healthy presence of *evangélicos*; according to some studies this group is growing. Generally Catholics account for nearly 70 percent of the 40 million or so Latinos in the United States. Protestants account for some 20 to 25 percent of Latinos, and of this group *evangélicos* are said to constitute 80 percent.

Of all the Protestant traditions, the evangélicos are closest to the native and postcolonial traditions of the Americas. The narrative of dejection and the drama of becoming born again, so central to *los evangélicos*, is strikingly akin to the discourses of Guadalupe devotion and pilgrimage, or, after being healed, to those of *curanderismo* or *espiritualismo*. As followers of a borderland religion, *los evangélicos* practice spirit possession, religious healing, religious gifting and play, cultural affirmation, as well as communication with sacred and ancestral spirits. *Los evangélicos* cross practical, spiritual, religious, and erotic boundaries that have been articulated so completely within the postcolonial religious matrix that it is difficult to distinguish precise origins.

The body is at the center of each of these religious practices. Believers experience their own bodies, other worshippers' bodies, and indeed the communal body and the city in new and powerful ways, which give them will, determination, and the perceived ability to negotiate the precarious social terrain of the borderlands. The religious machinations of *evangélicos* reproduce modes of empowerment just as they reproduce mechanisms of domination. In devotional

Catholicism, *curanderismo*, *espiritualismo*, and Santería, *evangélico* practice sometimes facilitates tragedy and suffering, enabling people to passively (or prayerfully) accept, or even become agents of, their own oppression and more.

Manuel Gamio's famous study of Mexican immigrants to the United States, conducted during 1926–1927, addressed religious dimensions of immigration, especially the phenomenon of Protestant–*evangélico* conversion. His wry observations are instructive for religions of current Latino migrations to the United States. In Mexico, he claims, there are two religious types: secular humanists and religious enthusiasts. This latter he divides into the following categories: pre-Columbian religions, the Catholic mixed religion (combined with indigenous traditions), the Catholic religion, and the Protestant religion. This latter, he claims, is practiced mostly by the middle classes in Mexico, of both white and mixed ancestry. According to Gamio, the religious Mexican migrating north across the border takes on one of three identities: a normal, nonfanatic Catholic; indifferent or an unbeliever; or a Protestant. *Evangélico*–Pentecostal conversion makes this Protestant option more attractive because of its consistency with other postcolonial religious systems.

Conclusion: Still Nepantla

Latino religious practice arises through a poetics of religion. Religious praxis responds to the crisis of everyday life from a place of *nepantla*, a space in between and across worlds now described as the borderlands. Colonists fought a religious war of attrition when crossing the Americas. Eventually, natives relented to the colonial discourses. However, conversions were half-hearted at best; natives clung to their original ways in practices of subterfuge and subversion of the colonial order. What emerged was a process of poesis, of religious making, as the philosophy of *nepantla* teaches, wherein the product is secondary to the act. In other words, *nepantla* is the state where the process—the cross, that is—the practice is the goal rather than an external end result discernable from a distance. To fathom the praxis, the action itself, is to understand and appreciate borderland religions.

Latter-day Saints

The Church of Jesus Christ of Latter-day Saints (the LDS Church) has its origins in the great revivals of America's early nineteenth century, but it has long since outgrown its roots. Today, half of its thirteen million members, often known as Mormons, live outside the United States, and Spanish is its majority language. Its signature canon, the Book of Mormon, which is available in 107 languages, is carried around the world by more than fifty thousand missionaries. In 2008 it was the second-fastest growing church in the United States, though it constituted only 1.4 percent of the population. Headquartered in Salt Lake City, Utah,

with followers making up 70 percent of the state's population, the LDS Church is a dominant force in the region's cultural, economic, and political life.

The church's continuing growth in the face of increasingly fluid Protestant denominational attachments has made it a more prominent actor on the national stage in the early years of the twenty-first century. Its several charitable agencies have quietly dispensed more than a billion dollars in cash and material assistance in 165 countries. The ready response to disasters, as well as community service initiatives, by volunteers from the church's 28,000 congregations has also improved its otherwise clannish reputation. Increasingly it is known for its 4,500 publicly accessible Family History Centers and its rich online databases that constitute the largest and most popular source of genealogical information in the world.

Notwithstanding these efforts to show themselves to be responsible and responsive citizens of the world, the Latter-day Saints have not entirely outgrown suspicions, original to the early nineteenth century, that they are a threat to the American way of life. The church's nontraditional Christian beliefs and expansive proselytizing programs, which make no distinction between Christian and non-Christian audiences, have aggravated some of their coreligionists, especially evangelical Protestants. In the first half of the church's life these fears were expressed in charges of sexual licentiousness, theocracy, and antimarket economic communalism. Most recently, discomfort with Mormonism tends to be expressed in terms of its traditional sexual scruples, conservative politics, and economic success. Nearly two hundred years of anxiety about and antagonism toward the LDS Church have given it a distinctive role in American religious life. In particular, Mormonism has been one of the quintessential outsiders against which mainstream religious America has defined itself.

Joseph Smith's Life and Death

The LDS Church originated in upstate New York in the 1830s, a time when many seekers were rejecting sectarian religion and its competitive revivalism. Among them were several who claimed authority for their decisions through recourse to the Bible and in visions, even theophany, as did Mormonism's founder Joseph Smith (1805–1844). Like many of his contemporaries, Smith was unable to choose among the competing truth claims made by the several evangelical Protestant revivalists of his day. In the spring of 1820, encouraged by the Bible's invitation to pray for

discernment, Smith experienced what is commonly called “the first vision”: an appearance of God the Father and God the Son, as separate personages, warning him off all existing sects. Only fourteen at the time, Smith apparently considered this a private experience, related only to his personal salvation. Three years later, however, he had a second vision in which an angel directed him to recover and translate an ancient record written on “golden plates” and hidden in a nearby hill. This experience catalyzed the production of new scripture in 1830 and constituted the basis for Smith’s public ministry. Called the Book of Mormon, the new scripture was offered as evidence that Smith was a modern Moses: writer of divinely revealed history, mouthpiece for God, and restorer of God’s law and covenant.

Smith’s scripture resembled the Bible in style and structure. A nearly six-hundred-page historical narrative, written by multiple prophetic recorders, the Book of Mormon told the story of an early civilization in the Americas that anticipated the birth of Christ and was taught by him after his resurrection. The Book of Mormon did more than read like a Bible, however. It claimed to restore many “plain and precious” parts lost to the Bible, as a result of uninspired or corrupt handlers over the ages. Many of Smith’s contemporaries were dedicated to restoring primitive Christianity through a close reading of the Bible. Smith, however, was unique in his claim to restore the Bible itself, and not by scholarly but revelatory means. The Book of Mormon embodied Smith’s broader contention that revelation through prophets was not limited to the Old World and had not ceased with the canonization of the Bible; it was universal and ongoing, even modern. This dramatic message spurred dramatic responses both for and against the religion that grew up around the book, its prophet-translator, and the church he founded. To Smith’s followers the Book of Mormon added value to the Bible by clarifying and confirming its truths. To everyone else, it was a blasphemous and fraudulent attack on the Bible.

In April 1830, within three weeks of publishing the Book of Mormon, Smith formally organized his small group of twenty followers into a church. Missionaries were sent out searching for readers in the environs of upstate New York. Within eight months, 280 had joined the new religion; over the next two years that number grew more than tenfold. As the numbers of Smith’s followers increased, so also did hostility toward their church. The ideological antagonism that coined the pejorative term *Mormonites* and later the *Mormons* rationalized violence toward the new church and soon

caused its removal from New York to the Ohio frontier. The church’s doctrine of gathering all the faithful to a single place to create a holy society further aggravated their neighbors’ fears of being dominated politically and economically.

The cycle of new revelation, renewed hostility, and flight was repeated in the church’s subsequent relocations further westward, ending fifteen years later in the Rocky Mountains. With each remove, Smith built relatively sophisticated towns as sites of gathering for large numbers of proselytes. Soon after arriving in Ohio, Smith directed that a second site of gathering be established in Independence, Missouri. It was intended to be the crowning achievement of his movement: a temple-centered Zion, comprising a sanctified people prepared to meet Christ at his Second Coming. The influx, however, of a large and socially exclusive, antislavery population to an already volatile American frontier threatened the political and economic status quo and attracted increasingly violent attacks.

For several years the Latter-day Saints and their neighbors fought in unsaintly fashion, the Mormons losing ground on nearly every occasion. The final blow came in 1838, when Missouri’s governor directed the state militia to assist the efforts of local mobs to expel the Mormons by any means necessary. During that fall and the winter of 1839, the governor drove approximately ten thousand of his citizens out of the state. National reaction was mixed. Outside observers were moved by the stories of carnage, privation, and terror and were shocked by the trampling of rights in their new republic. But only Quincy, Illinois, offered the victims shelter.

The refugees fled east to Illinois, where they began again to build their Zion, this time on the banks of the Mississippi River. Called Nauvoo, a neologism signifying beauty and respite, it was Smith’s last and most complete effort to create a social order expressive of his theological vision. The temple at the town’s center was an enormous structure for its time and place. It held 3,500 people in its main hall and rose 165 feet on the skyline. The temple’s primary purpose, however, was not to be a meeting place but to be a locus for creating salvific kinships through marital and adoptive “sealings” among the faithful. These sealings promised not only the continuance of familial connections after death but also the inculcation of the divine nature through grace and covenant. Deemed illicit and polygamous by critics, including several leading members of the church, Latter-day Saint “plural marriages” soon became a major flash point that eventually drove the Latter-day Saints from Nauvoo.

Sexual scandal was not the sole cause, however, of the church's troubles. Nauvoo's charter granted judicial and military authority that not only frustrated the church's enemies but also made its neighbors nervous. As before, the church's growth and geographic cohesion aggravated these concerns. Large numbers of converts made Nauvoo the rival of Chicago in size, and the relative sophistication of its citizenry gave it significant economic and political influence. In addition, old enemies from Missouri still harassed the church's leadership, bringing charges of treason, among other crimes. Harder to measure, but no less a problem, was the effect of Mormonism's doctrinal differences with America's dominant Protestant culture, which believed democracy itself depended on a Bible-reading citizenry free of religious "superstition." Mormons—with their prophet, literal priesthood of all believers, and new scripture—seemed a potent threat to the Republic. Finally, the Latter-day Saints' communitarian social structure mixed the religious and the temporal, raising fears not merely of a religious establishment but of a theocracy or a church-controlled civil government. In combination, these factors proved catastrophic. In 1844, while in state custody for destroying an antagonistic local press, Joseph Smith and his brother Hyrum were killed by a mob. For the next eighteen months, as the Latter-day Saints worked to finish their temple, mob attacks increased in number and force. Finally, in February 1846, the Mormons were forced to begin their exodus from Nauvoo. Eventually they would settle in the Great Basin on the western side of the Rocky Mountains, but not before schism and death would reduce their numbers considerably.

From Brigham Young to the Politics of Plural Marriages

Struggles over succession led to the creation of a number of breakaway groups, such as the Strangites and the Cutlerites, as well as sects led by church luminaries. Comprising relatively few adherents and scattered across the Midwest, the majority disbanded or became obscure outposts on America's religious landscape. These failures prompted a coalition of the scattered faithful around Smith's eldest son, Joseph Smith III, in 1860, and creation of the Reorganized Church of Jesus Christ of Latter-day Saints. By far the greatest numbers of Smith's believers followed Brigham Young (1801–1877) west in 1846. Along with large numbers of converts from Europe, they pioneered settlements throughout the Rocky Mountain region from Edmonton, Canada, to colonial Juárez in Mexico and as far west as San Bernardino.

From their haven behind the mountains, the Latter-day Saints would agitate the rest of America for the remainder of the century, not least because they took advantage of their independence to openly practice plural marriage but also because they aroused the familiar fears of the church's political and economic power. Hearing rumors of Mormon rebellion in the West, the U.S. Army was dispatched in 1857 to subdue the "Mormon Kingdom." The confrontation, called the "Utah War," caused much trauma and expense but little change. The greatest trauma was the brutal execution of emigrants traveling via wagon train by war-inflamed Mormon settlers at Mountain Meadows. Although Brigham Young was deposed as Utah's governor, the Mormons continued to build their kingdom of God in the West under his direction during the Civil War. When the Civil War ended in 1865, and slavery was outlawed, the United States turned its attention back to what was considered the nation's "twin relic of barbarism": Mormon polygamy.

The Latter-day Saints believed that their plural marriages, as practiced by consenting adults and as an expression of religious conscience, were as moral and legal as the rest of America's monogamous ones. Church approval was required before plural marriage could be undertaken. The parties were required to demonstrate the spiritual maturity to live in harmony and the economic capacity to support the family. This was an ideal sometimes not realized, but divorces were granted liberally when the unions failed. No one was required to practice polygamy. Historians estimate that only 20–25 percent did. Seldom did more than two women marry one man, Brigham Young's twenty-seven wives being a notorious exception. The primary purpose of plural marriage appears to have been the birthing of children and the care of those unsupported by families, specifically immigrants and widows. Studies have shown that polygamous women did not have more children than did their monogamous contemporaries. Although it was commonly assumed that LDS women were oppressed by the practice of plural marriage, they vigorously defended their marriages and in some respects appear to have been more autonomous than many of their contemporaries. They owned property and income-generating businesses; obtained professional licenses, such as medical degrees; and presided over church programs. Utah was the first state to enfranchise women and to elect a woman to public office.

The liberty in—much less the fidelity of—Latter-day Saint plural marriages was lost on the rest of America, however. The national reform movements took particular

interest in stopping the church's marital practices and found increasing support within the Utah Territory. Completion of the transcontinental railroad and consequent growth of mining and mercantile interests had attracted non-Mormons to Utah. The first Protestants came to the Utah Territory either as representatives of the federal government who were appointed to dismantle the Mormon kingdom or as missionaries for the eastern reform establishment who were commissioned to convert Mormons away from Mormonism. The antagonism members of each denomination felt for the other, based on experiences in the East, was aggravated by the fact that the postbellum antipolygamy campaign was supported by allegations and evidence provided by Protestants who lived among the Latter-day Saints in the West.

Utah's Protestant ministers were extremely popular on the eastern lecture circuit for their dramatic presentations on the evils of Mormonism. Indeed, the major source of funding for their fledgling congregations came from the ministers' efforts to convince national mission boards and eastern Protestants that Mormon barbarism was a threat to the nation. Their efforts contributed to a national press that made the Latter-day Saints universal objects of ridicule and scorn. Burlesque treatments in plays and romantic novels made the Mormon man a symbol of unrestrained and predatory sexuality, the Mormon woman a dupe and sexual toy in a Rocky Mountain harem, and Mormon children the abused and deformed offspring of monstrous parents. This history of intolerance is a cultural memory that subtly colors the relation of Latter-day Saints to America's mainstream even today. Arguably, the LDS Church's twentieth-century display of middle-class values, emphasis on law-abiding love for country, and even its pride in achievement within the larger culture reflect an ongoing rebuttal to its nineteenth-century experience with Protestant America.

The nineteenth-century Protestant campaign did more than hurt feelings, however. It had very real political consequences for the LDS Church and its members. Beginning with the Morrill Act of 1862, which equated plural marriage with bigamy, cultural norms were coupled with federal legislative might to impose criminal penalties on individual Latter-day Saints and political sanctions on the Utah Territory. The U.S. Congress eventually enacted three additional antipolygamy statutes that successively placed Utah's territorial courts under federal jurisdiction, imposed civil penalties such as disenfranchisement, and simplified proof for polygamy convictions. The courts ultimately dissolved the corporate status of the LDS Church, in 1887, and confiscated

its property. Eventually, more than a thousand Latter-day Saints were sentenced to federal penitentiaries. Since these men constituted the local leadership of Latter-day Saint communities, and since the chief leaders of the church, who had yet to be arraigned, were in hiding, the church was under tremendous organizational strain. In addition, heavy fines for those convicted, the loss of family support previously provided by those in prison, and confiscation of church property by federal agents impoverished the church and its members. State lawmakers, too, joined federal ones to impose additional burdens on the Latter-day Saints. In 1884 any Idaho citizen affiliated with a group that believed in polygamy was stripped of the right to vote, to hold public office, and to serve on juries.

Beginning in 1890, after a series of Supreme Court decisions upholding the constitutionality of these various statutory regulations and penalties, the church began to end the practice of plural marriage. The process would take twenty years and lengthy negotiations over the seating of Reed Smoot, a high-ranking Latter-day Saint official, in the U.S. Senate. But in the first decade of the twentieth century, the church's president, Joseph F. Smith, nephew and namesake of the first prophet, announced that the practice of plural marriage was to cease, and the church began to enforce the new policy through excommunication of dissidents. These excommunicates formed the core of fundamentalist sectarian groups that perpetuated forms of polygamy, such as the group at Yearning for Zion Ranch, in Texas, that was raided by state authorities in 2008. Also as a result of the Senate's four-year investigative hearing on Senator Smoot, the church was able to demonstrate that it was not anti-democratic and that it was not monopolistic in its economic activities. These developments gave the church a measure of social acceptance by, and peaceful coexistence with, their fellow Americans. Apostle Smoot's representation of and intervention on behalf of the church during his thirty-year senatorial career enabled it to thrive domestically and, in the first half of the twentieth century, to follow the America flag abroad. The church spent the second half of the century growing beyond its North American borders.

Beliefs and Practices

The Latter-day Saints do not engage in traditional theological reasoning, nor does scholastic theology carry any doctrinal authority for them. This is due in large part to their view that philosophical disputes corrupted early Christianity, as well as their inheritance from Joseph Smith

of a large canonical corpus, and their belief in the revelatory power of their contemporary prophet. Those within the church who write about doctrinal matters tend to do so as commentaries on LDS scripture or in the form of homilies published by the church's press.

Four books make up the church's canon and are considered equally authoritative: the Bible, the Book of Mormon, the Pearl of Great Price, and the Doctrine and Covenants. The church prefers the King James Version of the Bible. As indicated earlier, Mormons believe that the Book of Mormon is a thousand-year historical narrative of a family's flight from Jerusalem in the sixth century BCE and establishment of a civilization in the Western Hemisphere where, later, the resurrected Christ appeared. The Pearl of Great Price comprises Smith's other revelatory translations. It includes the Book of Abraham, an account of Abraham's covenant with God, and the Book of Moses, Smith's reworking of the Genesis narrative. The most discursive of Smith's canonical works—The Book of Doctrine and Covenants—consists of revelations directed to the contemporary church. Smith's theology was expressed largely through these texts that expanded upon the Bible, which he deemed true “as far as it is translated correctly.” Not surprisingly then, in what is called the “Inspired Version” or the “Joseph Smith Translation,” Smith rewrote significant portions of the Bible by adding events and dialogue to create a variation on the traditional Judeo-Christian salvation history.

The Latter-day Saints worship a godhead composed of three separate divine personages: God the Father, his Son Jesus Christ, and the Holy Ghost. Thus, the Latter-day Saints do not accept conciliar Christianity's trinitarian understanding of God. This view, combined with the church's doctrine of “eternal progression,” a belief that humans have divine potential, has led some to argue that it is not Christian. Yet the LDS Church shares with traditional Christianity the doctrine of the sovereignty of the Father and the divinity of Christ as God's only begotten, born in the flesh, whose sacrificial atonement and Resurrection provided the sole means of overcoming human sin and death. Equally central to LDS beliefs are the traditional Christian doctrines of repentance, faith in Christ, baptism, and the gift of the Holy Ghost. The church observes the primary events of the Christian calendar: Easter and Christmas. Latter-day Saints are, however, deeply committed to their sectarian identity as distinct from traditional Christianity. Thus, they commemorate definitive moments in their own history, especially the first generation's exodus from Illinois and heroic crossing of the American continent.

As indicated previously, among the Church's distinctive doctrines is the belief in modern revelation. While endorsing the traditional biblical revelation of God through Jesus Christ, the Latter-day Saints believe also that God has spoken and continues to speak through prophets called to lead the church. The chief example of this is, of course, Joseph Smith's prophetic activity. In addition, however, the Latter-day Saints believe that God continues to speak through those called today to direct their church. The church's president is also its prophet. Individual members are expected to seek divine revelation on matters of individual concern, especially with respect to their personal salvation and church responsibilities.

In terms of ethical and social practices, the Latter-day Saints subscribe to the classic values associated with New Testament Christianity: love of God and love of neighbor broadly defined. The church's doctrine of human agency and its experience of being the subject of religious violence make the church supportive of religious freedom. Moreover, being seen as a good citizen in any of its host countries is highly valued by the LDS Church, and it welcomes opportunities to cooperate with other religions for the benefit of society at large. Nevertheless, believing itself to be uniquely authorized by God, the church does not participate in doctrinally motivated ecumenical movements.

In addition to its emphasis on moral integrity, the church places a high value on sexual chastity, including abstinence prior to and fidelity within marriage. The church's sacramental view of marriage and the family situates it on the conservative side of many controversial questions, especially those related to sex and gender. The church discourages delay of childbearing, mothers working outside the home, and divorce. It proscribes abortion except in certain extreme circumstances related to the health of the mother, rape, or incest. In the 1970s the church opposed ratification of the Equal Rights Amendment and disciplined members who publicly criticized its position. Currently the church is a leader in the political resistance to same-sex marriage. Although the church is careful not to take a position on the origins of homosexuality in nature or human choice, homosexual practice is regarded as sin.

Latter-day Saints dress in the fashion of their respective cultures, adapting it only to observe certain standards related to modesty. Temple-going church members wear an undergarment that symbolizes, not unlike a clerical collar, their formal dedication to serving God. The church continues to observe a dietary code believed to have been divinely

revealed to Smith in 1833 that forbids the consumption of alcohol, tea, coffee, and tobacco and advocates healthy eating habits as a foundation to spiritual, not just physical strength.

All members are expected to tithe 10 percent of their income. Offerings are made to the poor in conjunction with a fast on the first Sunday of each month. The measure of the offering is left to the member, but it is suggested that it be no less than the generous equivalent of two meals. Other offerings are secondary and relate to the church's humanitarian, welfare, missionary, and building programs. No fees are charged for participation in church activities. All tithes and offerings are forwarded to church headquarters and redistributed to cover the costs of church units throughout the world. The construction and maintenance of all chapels and temples, as well as all other church expenses, local and international, are paid from the general funds of the church as a whole.

Formal Latter-day Saint worship occurs in both chapels and temples. Chapels are the site of regular Sunday worship services and are architecturally most distinctive for the absence of the cross, a nineteenth-century commonplace in America, which has been theologized to express Latter-day Saint emphasis on the Resurrection. More distinctive are the nearly 150 temples built throughout the world. After dedication, these are closed to all but active members of the church. Highly symbolic in design, temples portray Latter-day Saint cosmology and its theology of the immediacy of the divine.

The LDS Church is extremely unitary and hierarchical in its operation. It functions under the direction of a lifetime-appointed three-man presidency and quorum of twelve apostles. Latter-day Saint congregations are organized geographically and are denominated "wards." Several wards make up a "stake." Several stakes constitute an "area," the aggregation of which covers the world. Each unit is presided over by a lay president serving a limited tenure. The church employs no professionally trained ministry: laity perform all church functions. This is possible because all male members of the LDS Church, if found worthy and at least twelve years old, are ordained to priestly authority for the purpose of administering church ordinances. As described in detail in the next section, these ordinances are the blessing and naming of infants at birth; baptism by immersion for those eight years and older; confirmation for the gift of the Holy Ghost; the sacrament of the Lord's Supper; ordination; marriage; healing through the anointing with consecrated oil and by the laying on of hands; and the dedication of graves for the

burial of the dead. The church has been accused of propounding racist views over the years, and during the era of Brigham Young, males of African descent were excluded from the church's lay priesthood. Beginning in 1978, these exclusions were removed and church offices were integrated.

The status of women within the LDS Church is ambiguous at best. Although women are not formally ordained, the lay nature of Latter-day Saint organization means that they perform virtually all aspects of traditional Protestant ministry, except explicitly sacramental acts such as baptizing or blessing the sacrament of the Lord's Supper. Women give sermons; organize and preside over a wide range of official church gatherings, as well as routinely offer prayers of invocation and benediction; teach doctrinal classes; minister to the sick; prepare the dead for burial; and serve proselytizing missions. In the temple, they officiate in ordinances. Nevertheless, there are a number of aspects of church leadership and sacramental practice in which they explicitly cannot participate. These include serving in the policymaking offices of the church and performing any ordinances outside the temple. While women historically did perform ordinances of healing and blessing, especially in connection with childbirth and local church stewardship, they were discouraged from doing so in the early twentieth century, as the church entered the mainstream of American culture.

Worship and Ritual

The LDS Church's mix of prophetic and priestly forms, coupled with a belief in open canon and the necessity of sacraments, has created a complex ritual practice that orders both communal and personal life. In addition to the ordinances listed above, a number of other liturgies structure Latter-day Saint worship in chapels, homes, and temples. Sunday services are held in chapels and, while in the Protestant model of sermons and classes, are focused on the administration of Communion. On Monday nights the home is the site of family worship designed to teach gospel principles and strengthen family relations through wholesome activities. Daily prayer and scripture reading, both as practiced by individuals and as families, is strongly encouraged. On any day but Sunday members who receive the necessary authorization based on worthiness attend temple to perform ordinances, such as baptism, for those who did not receive such ordinances while alive and are believed to be able to choose the Christian gospel after death and before resurrection. In addition, the temple is the preferred site of Latter-day Saint

marriages, since only in the temple may a couple be joined for eternity. Those who choose to be married in Latter-day Saint chapels are considered joined until death.

The commemoration of the Lord's Supper is the definitive liturgical action of Latter-day Saint public worship each Sunday, and for it the word *sacrament* is reserved. All other rituals are called ordinances. Hence, in Latter-day Saint usage, the Sunday meeting, which all members are required to attend, is the "sacrament meeting" where they partake of "the sacrament." In the order of Sunday services, the sacrament is followed by two to three sermons or "talks" given by previously invited members of the congregation, who are expected to base their remarks on scripture. This Sunday service consists of set components, with only minor variations from week to week, even on such traditional holy days as Christmas and Easter. The meeting, which is opened and closed with prayer and hymn, centers on the performance of the sacrament of the Lord's Supper and the presentation of sermons by members of the congregation. The prayers spoken during the blessing of the sacrament are scripturally prescribed and are unique for their being read verbatim from the text. First recorded in the Book of Mormon, these prayers are virtually identical to the prayers used today. The only change is the substitution, also in 1830, of "water" for "wine" to reflect concern for impurities. The sacrament obliges its partakers to "witness . . . that they are willing to take upon them the name of [Christ], and always remember him, and keep his commandments . . . that they may always have his Spirit to be with them." The sacrament is not a memorial, but rather expresses the hope of immediate physical communion, figured by the ritual communion, with Christ.

The Latter-day Saints designate their homes "the fundamental unit of the Church." This reflects their understanding that all the sacramental powers at work in the congregation are also present in the family. Indeed, many of the sacraments are performed by family members, even when conducted in congregational settings. This is especially true of blessing infants and baptizing and confirming children. In addition, anointing the sick and blessing those in need of guidance and comfort are performed routinely in the home. Doctrinal instruction is considered the responsibility of the parents and has been formalized by the incorporation of a specific liturgy to be conducted by all church families. Called "Family Home Evening," the program is to be conducted each Monday night and include prayer, hymn singing, and both catechetical and social activities that strengthen family bonds and church devotion. To ensure that

those without priesthood authority in their homes have access to all ordinances, each member of the congregation is assigned male "home teachers" who are to visit regularly to provide such aid and instruction as is desired. Women visit other women as "visiting teachers" to provide assistance of a nonsacramental nature.

For Latter-day Saints, the temple represents a means of being "endued" (King James Version) or "clothed with power from on high" (Revised Standard Version, Luke 24:49). Thus, the temple ritual is called the "endowment." Because the church does not publish its temple liturgy, even for members, the only authoritative description of the endowment is contained in *The Encyclopedia of Mormonism* (1992), published by Macmillan with the church's cooperation and defining four aspects of the rite. First, the candidate is ritually washed, anointed, and dressed in white clothing. Second, he or she receives a series of "lectures and representations," including "a recital of the most prominent events of the Creation, a figurative depiction of the advent of Adam and Eve and of every man and every woman, the entry of Adam and Eve into the Garden of Eden, the consequent expulsion from the garden, their condition in the world, and their receiving of the Plan of Salvation leading to the return to the presence of God." Third, the candidate makes covenants which are considered to be "the unfolding or culmination of" the baptismal covenant. Finally, the ritual cultivates "a sense of divine presence" for the purpose of receiving revelation necessary to return to God.

In addition, Latter-day Saints go to their temples to be married. This ceremony is called a "sealing" and makes of the couple and their progeny an "eternal family." This is understood in two senses. Most obviously, it means that by death they do not part. Second, it places the members of the family in a salvific relationship: giving them power to bless each other's lives, even assisting in each other's salvation. Thus, "eternal marriage," as it is called in the church, partakes of the same elements as the scripturally familiar "eternal life." All temple ordinances, as well as those performed in the church, such as baptism and confirmation, are performed in the temple on behalf of the deceased also. The church's genealogical resources enable members to identify ancestors who have died without benefit of saving ordinances in order that these ordinances may be performed by proxy in the temple. In sum, the temple hosts those ordinances that are designed to sanctify individuals and make their extended family relationships eternal.

The worship practices of the Latter-day Saints—in homes, churches, and temples—provide order for them

within a sacred cosmology and give meaning to their daily lives. Their complex liturgy of word and sacrament molds them into forms of Christian discipleship and covenant-based tribal bonds that extend to those who came before and are yet to come.

Related Churches

The Church of Jesus Christ of Latter-day Saints is the largest and best known of the churches that trace their origins to Joseph Smith, but it is not the only one. After Smith's murder in 1844, his followers splintered in several directions. Contesting claimants to its presidency led small groups to Wisconsin and Texas. Individuals, too, scattered under pressure from mobs that raided Nauvoo and its environs. Many of the scattered gathered in 1860 into what became the Reorganized Church of Jesus Christ of Latter-day Saints, recently renamed the Community of Christ. Today, with approximately 200,000 members and headquartered in Independence, Missouri, the Community of Christ has evolved doctrinally and ecclesiastically in a manner that has allowed its rapprochement with mainstream American Protestantism, but caused schism with a third of its membership who wished to retain a restorationist orientation. The Utah-based Church of Jesus Christ of Latter-day Saints has maintained the nineteenth-century church's original name and Smith's broad prophetic claims. The remaining religious groups who look to Smith for their origins are typically small, tribe-like organizations located primarily in isolated parts of the western United States. The best known among them are generally called fundamentalist Mormons and are identifiable by their continuing practice of polygamy. These groups arose in reaction against the Church of Jesus Christ of Latter-day Saints' abandonment of plural marriage in the early twentieth century and in many cases were founded by excommunicates. Each group looks upon the other as apostate and anathema. Regardless of these deep divisions, the various churches that make up the Latter-day Saint movement share the conviction that Smith was a modern prophet, though the definition of this role may range from a mild acknowledgement of his religious genius to a strong conviction that he was a Moses-like lawgiver and mediator of heavenly power.

Liberation Theology

The birth and growth of liberation theologies, especially in the developing world and amid U.S. minorities, is one of the most remarkable theological developments of the twentieth century. The many expressions of liberation theology presume that the purpose of belief is to free (liberate) persons from whatever forces keep them from reaching their full human potential. Consequently, these theologies challenge Eurocentric, patriarchal, de-historicized assumptions about developing or constructing a theology. They highlight the importance of social location and a preferential option for the oppressed and marginalized. In general these voices emerge from the underside of society, critically engaging the historical Christian tradition and contemporary understandings of theological sources, norms, and loci.

The theological reflection on liberation centers on the experience of oppression as framed by each particular voice. Liberation theologians take the religious faith and life

context of marginalized peoples as the starting point and content of their theological reflection. They are critical of mainstream theology's failure to address questions of justice and refusal to take seriously the faith life of marginalized peoples globally. Liberation theologians question the authenticity of any theology that does not emphasize the oppressed. Liberation in this context means liberation from oppression, whether it is racism, sexism, classism, or ethnic prejudice. Liberation theologians are well aware that liberation from oppression will never be fully realized until the eschaton, or end of the world, for this event is ultimately and exclusively the work of God. Liberation theologians, however, demand that Christians actively work toward liberation in the here and now, even while recognizing that the kingdom of God will never be fully realized in the present.

The emphasis on oppression, which often is expressed through interdisciplinary research on critical theory, sociology, ethnography, and literature, also leads to one of the strongest critiques of liberation theologies, namely that one finds little theology within their work. Critiques in this vein argue that the emphasis on the context in which one reflects theologically often eclipses constructive theological writing. Another strong critique of these voices is their emphasis on humanity's participation in the construction of the kingdom of God. Liberation theologians are accused of reducing salvation history to human history.

Latin American Liberation Theology

Perhaps the best-known expression of liberation theology globally is found in Latin America. Latin American liberation theology, born in the late 1960s, argues that the poor must be the center of theological reflection. This theology functions on three levels: the popular, the pastoral, and the academic. The first two inform and give life to the third. Thus, the spirituality and political praxis of grassroots Christian communities informs theoretical theological reflection. Grounded in the belief that economic and social justice must be at the center of the mission of the church, this Latin American theological movement has created a radical new ecclesial reality that centers on grassroots Christian communities and an innovative vision of the theological task.

Feminist Theology

In North America, paralleling the irruptions in developing countries, were the voices of women and U.S. minorities. In contrast to other U.S. liberation theologies, such as black and Hispanic, feminist theology developed as the struggle

of an oppressed majority. The invisibility of women within religious institutions fueled the outrage and fervor behind this movement. Feminist theologians rallied against Christianity's complicity in historical and contemporary manifestations of sexism, arguing that any hierarchical and oppressive understanding of humanity based on gender, sexual identity, race, and class was contrary to the Christian message. The 1968 publication of Mary Daly's *The Church and the Second Sex* marks the birth of this movement in the United States. Many consider Daly, Elizabeth Schüssler Fiorenza, and Rosemary Radford Ruether to be the "foremothers" of feminist theology. In their work, one finds a hesitancy to give Christian tradition, scripture, and theology any sort of normative status due to its male-centered foundation. Therefore, women's experiences and struggles for liberation often become the central commitment and norm in their scholarship. Fundamental to these theologians' work is recovering women's intellectual histories and the implications of this task. By making gender a primary analytic category, feminist theologians seek to highlight the ideologies operating in historical and current understandings of Christian tradition.

A Christian theological writing or movement is deemed revelatory if it promotes the full humanity of women in contrast to a sexist construction or practice. For Schüssler Fiorenza this concept is described in terms of women-church. Within her theology, the radical nature of feminist theology is in its accountability: to women in churches and not to the church. Because the church has historically been an institution that denies the full humanity of women, feminist theology does not answer to it. Instead, feminist theology is accountable to women who have remained committed to Christianity in spite of their marginalization. Ruether argues that the Christian tradition must be weighed against the critical principle of feminist theology, the promotion of the full humanity of women, to determine whether or not a given doctrine, practice, or belief promotes the full humanity of women. Whatever denies women's full humanity is not redemptive; what promotes it is "holy." Daly is now a post-Christian thinker who finds the Christian tradition as a whole irredeemable from patriarchy. More recent feminist theology has become more theoretical in focus, and this turn to theory is found in the work of Serene Jones, Mary McClintock Fulkerson, Rebecca Chopp, and Katherine Tanner.

Black Liberation Theology

Feminist theologians are not alone in uncovering an alternative understanding of Christian history and theology. Black

liberation and black feminist or womanist theologians have made historical recovery central to their theological task and a principal resource for constructing contemporary theologies. Black liberation theology emerged in the mid-1960s as an explosive theological movement in the United States. Nurtured by church leaders and academic theologians, black liberation theology claims that the Christian God is a God of liberation and love. Black theologians promoted a message of self-love for African Americans, as children of God born in the image of God. Included in this message is the denouncement of racism, which defies God's will for humanity and stands in contrast to the kingdom of God. The 1969 publication of James H. Cone's *Black Theology and Black Power* marked the birth of the academic branch of this movement. Foundational to the study of religion in black theology is slave religion, also known as the invisible institution. A liberationist interpretation of the Bible also plays a central role in black theology. In addition to black experience and identity, perhaps no other concept within black theology carries such force as the notion of the black church, which encompasses the plurality of black churches and denominations in the United States.

Cone is considered the academic father of black theology, and his extensive corpus looks at both historical and contemporary sources of black religious experience. From his work on Malcolm X to his work on the spirituals, the retrieval of black experience as central to liberationist theological discourse has been a hallmark of his scholarship. Dwight Hopkins is another influential voice in this field. His work on slave narratives and figures in African American folklore demonstrate the centrality of historical African American religious experience as a primary source for black theology. Critical voices also have emerged in the newer generation of black scholars. Victor Anderson has waged a sharp critique of what he describes as "ontological blackness," an understanding of the essence of black identity and experience he argues is operating in black theological discourse.

Womanist Theology

Womanist theology emerged in the mid-1980s as a black feminist theological movement that both draws from and critiques black and North American feminist theologies. Womanists highlight the shortcomings of early black theologians regarding discussions of gender in their work, and they critique feminists for the racism prevalent throughout white feminist scholarship and social justice movements. Womanist theologians use a multidimensional analysis of

race, class, and gender as their hermeneutical lens for the theological task. They rely heavily on literature and other forms of African American women's cultural production as primary sources for the scholarship.

Novelist, essayist, and activist Alice Walker opens her 1983 collection of essays, *In Search of Our Mothers' Gardens*, with a definition of a womanist. Among other things, a womanist is a "black feminist." Womanist theologians have appropriated this definition of womanist within theological discourse to name themselves and their focus on the intersection of racism, classism, and sexism as it touches the lives of black women. Walker's 1982 novel, *The Color Purple*, also plays a fundamental role in womanist theology. In addition, the voices of Delores S. Williams, Stephanie Mitchem, and Katie Cannon are central to womanist theology. Questions of ethics and survival, community, and everyday life are fundamental to their work.

Latino and Latina Feminist Theologies

Latino/a theologies place the faith and struggles of everyday Latino/as as the starting point and center of their theological reflection. Latino/a theologians combine a strong commitment to social justice while simultaneously taking the cultural contours of Latino/a faith expressions into serious consideration. Although Latino theologians do not claim a liberationist voice in their collective work, the corpus of Latino/a theology clearly stands in conversation with and participates in the legacy of liberation theologies globally. Central themes in Latino/a theology include *mestizaje/mulatez* (cultural hybridity of Spanish, African, and indigenous), popular religion, and *lo cotidiano* (daily life as a fundamental starting point of theological reflection). Similarly, Asian American theologies reflect the influence of liberation theologies globally, but also take seriously questions of culture and interreligious dialogue.

Within Latino/a theology the writings of Virgilio Elizondo are foundational. Elizondo's work on *mestizaje*, Our Lady of Guadalupe, and the border are the starting point of U.S. Latino/a theological reflection. Orlando O. Espín has highlighted the centrality of popular religion for understanding Latino/a faith and spirituality. His more recent works look at the fundamental role of popular or local religion in light of the broader Christian tradition. Roberto S. Goizueta has made a groundbreaking contribution in his writings on the unity of the aesthetic and the ethical within Latino/a theology. With Alejandro García-Rivera, Peter Casarella, and Michelle A. Gonzalez, Goizueta has established theological

aesthetics as a fundamental dimension of contemporary Latino/a theology.

Latina feminist theology is a liberation theology with a multilayered hermeneutic and analysis of the reality of U.S. Latinas. As a liberation theology, Latina feminist theology understands its scholarship as reflection on the divine emerging from the context of a marginalized people. Its theological influences and sources can be traced to the emergence of three philosophical developments in the latter half of the twentieth century: Latin American liberation theology, feminist theology, and U.S. Latino/a theology. The sources of Latina feminist theology are not reduced to these three, but it is from these theologies that Latina feminist theologians derive their analysis of the economic, patriarchal, and ethnocentric structures and constructs that oppress Latinas. The voices of Jeanette Rodríguez and María Pilar Aquino are major contributors to this discourse. *Mujerista* theology is a Latina feminist theology, primarily articulated in the work of Ada María Isasi-Díaz, who uses an ethnographic methodology to maintain grassroots Latinas as the central subjects and authors of *mujerista* theology.

The Future of Liberation Theology

In the early 1990s eulogies on the death of liberation theologies abounded. Such notices were premature. Liberation theology may be associated with a particular moment in the late twentieth century, but the theologians who were the fathers and mothers of liberationist movements in the academy remain vital contributors to the theological academy. In other words, although liberation theology as an umbrella term for a group of theologians with a particular set of socio-political commitments now refers to a historical (albeit recent history) theological movement, the authors of the movement remain contemporary vital voices. In addition, many of the concerns liberation theologians raised about the human condition—overwhelming poverty, racism, sexism, and ethnic prejudice—are still relevant and pressing. It may be too soon to determine liberation theology's future, but it is clear that the movement may not be exiled to the past as irrelevant.

Literature

Literature (from the Latin *littera*, or "letter") encompasses the creative written works of a culture, including fiction, short stories, poetry, and drama; it can also include essays, memoirs, and other works of nonfiction. In a religious context literature also embraces sermons and other homiletical works that are published in print after being spoken aloud to an audience. American literature (which generally incorporates those literary works published in what is now the United States from colonial times to the present) has often wrestled with deeply religious themes of divine inscrutability, human nature, identity formation, and the just society. Questions of morality, freedom, and individual responsibility have tended to animate American literature. Although scholars and writers sometimes make distinctions between "literary" works and popular or "genre" works (for example, romance, science fiction, or thrillers), for historical and social purposes it is imperative to consider popular literature alongside its more prestigious and highbrow counterpart.

Historical Overview

Although oral stories and dramas were in circulation among Native Americans long before European colonization, the absence of written language among most Native Americans meant that these orally transmitted works have been largely lost to history. Some of those stories were drawn or

painted on cave walls or expressed through sculpture and pottery, but most were not recorded. After European colonization began in the sixteenth century, some European missionaries—including French and Spanish Jesuits—began writing down the folktales, epics, ballads, and oral literature of various indigenous American peoples. While these texts are obviously of great value, it is important to remember that they are mediated, since they were solicited and documented by missionaries who hoped to convert the people to Roman Catholicism. In general, however, Native American stories speak to the divine origin and sacred nature of the earth, the infusion of animals with spiritual wisdom, and the importance of visionary experiences.

Religious Literature in Colonial America

The late sixteenth and early seventeenth centuries are regarded as one of Europe's finest literary ages. In England playwright William Shakespeare wrote and produced dramas and comedies that are still standards of the English language; in Spain, Miguel de Cervantes fashioned the unforgettable character of Don Quixote and set the bar for the modern creative novel; and in France various playwrights excelled at comedy, tragedy, satire, and chivalric romance. Moreover, the invention and dissemination of the printing press ensured that these works could be enjoyed not just by a noble elite but by an emerging middle class as well. However, the literary explosions enjoyed in Europe by powerful nations such as England, Spain, and France—which, along with the Netherlands, were the most significant competitors vying for a foothold in the New World—did not necessarily translate to America. For the first two centuries after Columbus set foot on a Caribbean island, America's fledgling literary tradition produced a few memoirs, many letters home, and some noteworthy sermons, but almost no poetry, drama, or fiction.

There are several practical reasons for this long period of relative silence. First of all, the American colonies were in a perpetual state of unrest. War with the French, and with various Native American tribes, left colonists in the sixteenth and seventeenth centuries little time for literary activities such as writing or reading for pleasure. Even in times of relative peace, the incessant demands of building a society and making a living from the earth rendered literary pursuits a luxury the colonists could ill afford. Also, some of the early colonists were illiterate men (and, in the English colonies, women), who decided to emigrate precisely because they had so few opportunities for education and

advancement at home. Only one of the original *Mayflower* emigrants had gone to college, for example. These early colonists did not comprise a sufficient reading audience for the production of a homegrown American literature. Although the Puritans valued the written word enough to bring over a printing press from England as early as 1638, it took at least another generation for reading to become part of mainstream culture. Books were such a precious resource that in estate inventories of the era books were often listed individually by title; they were valuable enough that each one might be part of the family will.

As the seventeenth century drew to a close, more colonists could read but what books did exist were overtly religious in nature, such as sermon collections or providential accounts of the colony's founding. In fact, the colonists' strict religious faith was another reason for their dry spell of literary creativity. For the English Pilgrims and Puritans, the French and Spanish Catholics, and even the Dutch Calvinists, the decision to make a home in the Americas was motivated as much by a desire to purify the Christian faith and to promulgate a particular version of it as it was by a drive to conquer and profit from a new land. Among the English Puritans who gained hold of New England in the 1630s and retained that tight grip until well after the Revolution, literature was seen as a sybaritic diversion at best and the devil's own distraction at worst. While the English colonists made rapid gains in literacy in seventeenth-century America, this did not necessarily translate into the production of plays, poems, or novels. In fact, live theater was banned in Puritan strongholds until nearly the nineteenth century, so that no less a literary pacesetter than Mercy Otis Warren in the late eighteenth century wrote her own plays without having seen a single theatrical production and without hoping that her creations would ever be brought to the stage. Anglican Virginia and Catholic Maryland were the only two of the original thirteen colonies where live theater was never banned by law.

In French and Spanish Catholic areas such as California and the Upper Midwest, while no bans existed to oppose novels or live theater, literature and performance were not a priority. Jesuit, Franciscan, and Dominican friars did write copious reports of life in the New World to their superiors, some of which were collected in book form and published to satisfy a reading audience of curious Europeans. Some Spanish missionaries did write or translate *autos*, religious and morality plays, which could be performed at festivals and on Sunday afternoons for a curious public. By putting

these theatricals into various native languages and employing indigenous actors, the missionaries hoped to use drama as one more means to impart the gospel to Native Americans in language they could understand.

Along the East Coast, what the English colonists had in abundance were sermons. From John Winthrop's iconic sermon "A Model of Christian Charity," delivered during or after his 1630 voyage from England, through the colonial period, Puritans wrestled with the importance of their holy experiment, feeling the eyes of the world on their attempt to carve out a pure Christian society. Their sermons reflect their concerns with a retreat from the corruption of the world, much like the chosen people of Israel had eschewed their heathen neighbors in the Bible's Old Testament. In their unadorned meetinghouses they preached a plain gospel, frowning on the rhetorical flourishes and embellishments of Anglicans and Catholics.

These plain sermons happened not only on Sunday but also during the week at lectures, prayer meetings, or fast and feast days. The quotidian interweaving of the Puritan sermon with the everyday life of the New England colonists paved the way for sermons to also become significant additions to culture in their written form: in colonial New England, published sermons outnumbered other print publications (newspapers, almanacs, pamphlets, and so forth) by a ratio of four to one. And because so many of these sermons castigated New Englanders for their perceived lapses, often calling upon the biblical prophet Jeremiah, they sparked a new American literary tradition: the jeremiad. Jeremiads helped the colonists make sense of challenging circumstances (for example, Indian attacks and bouts of small pox) as God's judgment for their sins.

In other forms of seventeenth-century American literature, God's sovereignty was also paramount. The poetry of Anne Bradstreet, for example, emphasized a Christian's patience in enduring suffering. In "Upon the Burning of Our House July 1666," Bradstreet interpreted the disturbing event of a family fire as God's will. "I blest his grace that gave and took," she wrote. One of her contemporaries expressed the same sentiments in the literary form of the Indian captivity narrative. When Mary White Rowlandson was captured by Narragansett and Wampanoag Indians during King Philip's War in 1675, she endured great tragedy and witnessed the deaths of several friends and family members. Upon her release she wrote *The Sovereignty and Goodness of God: Being a Narrative of the Captivity and Restoration of Mrs. Mary Rowlandson* to inform her peers about what had

happened to her and, more importantly, to emphasize God's power and holiness even amid suffering.

In the eighteenth century, American literature fell under the sway of Enlightenment rationalism. Although Enlightenment ideals were perhaps best expressed in the essays of the era, sermons were not immune but sought to reconcile a biblical Christian faith with new discoveries in science, medicine, and philosophy. Simultaneously, however, a new pietism arose that emphasized the role of the heart in conversion and the necessity of inward transformation alongside or perhaps even in the place of enlightened intellectualism. Revivalist literature described people's conversion experiences and issued a direct invitation to readers to turn to God before it was too late. Pamphlets by the SPCK (the Society for Promoting Christian Knowledge) found a ready audience among colonists eager to learn more about baptism, Communion, and daily prayer.

The eighteenth century saw the importation of the novel and even the creation of a few American novels alongside the ones that were popular in Europe. Chief among the imports were the novels of Samuel Richardson, especially *Pamela* and *Clarissa*, epistolary tales of two young women's struggles to hold on to their virtue. These novels were widely read in America, with (mostly female) fans exhorting their moral Christian character whenever novel reading was decried as an unsuitable or unprofitable amusement. Decades later these themes were echoed in America's first indigenous novel, *The Power of Sympathy*—a title that would prove prophetic for the sway of fiction for decades to come. Published in 1789, William Hill Brown's story of seduction and incest tugged at the heartstrings of American readers, employing "sympathy" to address matters of pressing social concern.

Many of the novels of this period were satirical about religion or highly rational in nature, reflecting the late eighteenth century's preoccupations with rationality, empirical proof, and natural explanations of alleged supernatural phenomena. Charles Brockden Brown's brilliant 1798 novel *Wieland*, for example, suggests the deep dangers of religious fanaticism and the superiority of scientific accounts over claims to visionary experience.

The Nineteenth Century "Age of the Printing Press"

The nineteenth century challenged many of the established ways of thinking about religion, as the detached logic of Brockden Brown gave way to literature that was increasingly romantic, unapologetically supernatural, and fixated

on liberal ideas of God's love. The Romantic movement sweeping Europe appealed to emerging American ideals of personal freedom and boundless possibility. Moreover, the liberal religion of the nineteenth century was the perfect mate of the novel form, which shared liberal thinkers' preference for example over dogma and human experience over doctrinal propositions. Sentiment, not creed, became the watchword of the age.

Changes in the publishing and printing industries greatly facilitated the dissemination of these ideas to a growing reading public. In just the decade between 1800 and 1810 the number of newspapers in America nearly doubled, to 375; by 1835 there were 1,200. Printing offices—which moonlighted as publishing houses in an age of unenforced copyright laws and widespread literary piracy—sprouted up as well, printing books with inexpensive bindings and serializing popular stories for a growing audience of middle-class readers. Between 1825 and 1850 membership at America's subscription libraries tripled, and authors exploited a growing lecture circuit as a viable means to sell their books near and far.

The nineteenth century also saw the segmentation of the reading audience into niches and target markets. For example, children's literature developed throughout the century and reached its full flowering in the late Victorian age. While Horatio Alger's dime novels encouraged his audience of mostly boys to espouse the American ideals of hard work and up-from-the-bootstraps entrepreneurial success, the *Elsie Dinsmore* novels instructed girls about such values as virtue, friendship, and helpfulness to parents. Even the McGuffey Reader, the quintessential nineteenth-century schoolbook that used uplifting stories and Bible tales to teach school subjects, found its way into a vast number of American lives; between 1836 and 1890, 107 million copies of the reader were distributed to schools across the nation. Never before had American literature seen so much content directed toward children and youth, from illustrated Bible picture books to novels to magazines such as *The Youth's Companion*. Over and over again such literature stressed children's innate goodness and eventual reunion with God in heaven. (To put this in historical context, the best-selling children's literature in early New England was Michael Wigglesworth's 1662 rhyming verse, *The Day of Doom*. Even that could be better described as doggerel for grown-ups rather than poetry specifically aimed at children, in keeping with the Puritan idea of children as miniature adults. Whatever its audience, the message of *The Day of Doom* was clear: people were born

sinners and needed to repent or face a heinous eternity.) In the nineteenth century, as childhood became romanticized as a sacred time, writers celebrated children as having a natural spiritual closeness to God. Children were thought to be innocent in their souls, which did not mean they did not need guidance—hence the development of a thriving moral literature for their instruction.

Not surprisingly, many of the authors of the new literature for children were women. The Victorian ideal of women as the divinely ordained nurturers of children had the unexpected side effect of opening literary careers to women who wrote books for children. But women also entered the fray in all kinds of literary endeavors, writing poetry for the many new denominational and religious periodicals, contributing short stories to the missionary magazines, and, especially, writing novels. The novels of the age, whose content was shaped by women writers and the tastes of women readers, celebrated virtue, exhorted readers to greater moral goodness, and eschewed theology for the practical morality of lived religion. For example, Catherine Sedgwick began writing novels because she was tired of male ministers splitting minute theological hairs rather than improving practical morality and helping the causes of the day. Fiction enabled Sedgwick to publicly defy Calvinist orthodoxy on the one hand and skepticism on the other, giving her a broad, highly visible platform when the pulpit was closed to her. In novels such as *A New England Tale* and *Redwood*, Sedgwick affirmed the fundamental goodness—even the angelically divine nature—of humanity, confidently striking a blow to the Calvinist depravity doctrines of her childhood.

Women writers rejoiced that they could make a living with their pens in an age when they could not do much more than teach school. Although she was an exceptional case, the Southern religious novelist Augusta Evans Wilson earned \$100,000 in eight years from her books and serializations. Not everyone was thrilled with the rise of the woman novelist in America, however. Nathaniel Hawthorne, whose own sales were respectable but not stellar, fumed that the nation was “wholly given over to a damned mob of scribbling women,” and that it was impossible for a serious literary novelist to succeed “while the public taste is occupied with their trash.”

Secularization and Religious Resurgence in the Twentieth Century to the Present

The trends toward increasing commercialization and a nationalized reading audience continued in the twentieth

century. The term *best seller* emerged in the early twentieth century as the business of publishing became ever more sophisticated and sales were tracked in a more standardized manner. International authors breathed a sigh of relief at the passage of the International Copyright Law of 1891, which effectively closed the loophole that had allowed American publishers to pirate the works of such non-American authors as Dickens while reporting no sales revenue and paying no author royalties. (The passage was equally good news for American authors, whose works were no longer deemed too expensive in comparison with their pirated and inexpensive foreign counterparts.) Meanwhile, the reading public continued to expand in number—there were, for example, 9.5 million public school students in 1878 and 15 million just twenty years later—as well as in maturity of literary taste.

Americans in the twentieth century did not want just sentimental fiction but realism. Romanticism and unchecked optimism gave way to the muckraking novels of the Industrial Age and the disillusioned creations of the “lost generation” of writers after World War I. (Not surprisingly, this shift also marked the decline of the great age of poetry that had consumed much of the nineteenth century.) Many of the novels penned by realist writers dealt with dark issues such as war, the human propensity for evil, and nihilism.

Some of these books also took up the cry in the fight for social justice. Although novels of social protest had long been a hallmark of American fiction, the twentieth-century social protest novels had a different flavor than their predecessors. If the archetypal social protest novel of the nineteenth century was Harriet Beecher Stowe’s 1852 *Uncle Tom’s Cabin*, which fused a folksy piety with moral outrage, its twentieth-century counterpart was more likely something like Theodore Dreiser’s *Sister Carrie* (1900), which did not depict good triumphing at story’s end. Both types of novel had the effect of raising social awareness, but the twentieth-century version did so with an ironic sense of the likely futility of it all.

Literature persevered, even thrived, despite the advent of other forms of entertainment in the twentieth century. By 1924 about a hundred million people were going to the movies each week; by 1930 at least 40 percent of American families had one radio; and by the 1950s increasing numbers of Americans had home televisions. Despite naysayers’ many prophecies about the certain death of the book, publishing continued and some segments, including religious publishing, enjoyed double-digit increases even at the end of

the twentieth century, when the publishing industry as a whole suffered setbacks.

Religious Themes in American Literature

Over the course of several hundred years, the development of an “American” literature has resulted in certain recognizable traits. It is instructive to explore not only what religious themes are routinely present in American literature but also which ones are conspicuously absent: namely, a myth of origins, an established tradition of meditation and contemplation, and a genre of martyrdom narratives and persecution tales. The first omission reflects America’s melting pot of metanarratives—apart from Native American groups, who had their own traditions of origins, most Americans imported religious traditions from their homelands. The third (the dearth of martyrdom literature) demonstrates the nation’s commitment to avoiding the religious wars that had so divided England, France, Spain, and other colonial powers. Although there were notable exceptions (for instance, the violent persecution of Quakers in Massachusetts and other colonies), by the late eighteenth century, the period when American literature was just taking off, religious persecution occurred in local or regional outbursts but not pervasively enough to create a widespread literary genre along the lines of Europe’s *Foxe’s Book of Martyrs*. Indeed, some American writers looked to European examples for their own stories of religious persecution: in American poet T. S. Eliot’s 1935 play *Murder in the Cathedral*, he used the twelfth-century martyrdom of English saint Thomas Becket to illustrate the great theme of loyalty to God taking precedence over allegiance to the powers of this world.

The second lacuna, the lack of a strong contemplative literature, is more complicated to explain. From its beginnings, American religious literature emphasized activism over meditation and lacked the mystical and contemplative counterweights found in its mostly European antecedents. Even what is arguably America’s most celebrated meditative work, Henry David Thoreau’s *Walden*, was written by a New Englander who was just as renowned for his political activism opposing slavery, excessive taxes, and the Mexican-American war as he ever was for spiritual guidance. Catholic literature in America—from the early letters of Jesuit missionaries, which stressed conversions and building projects, to twentieth-century-writer Dorothy Day’s beautiful memoir *The Long Loneliness*, which defended the primacy of justice for the poor—has been

distinctively vigorous and of this world. Later American spirituality writers such as Thomas Merton continued this tradition of merging contemplation with an activism that was very much of this world, with Merton agitating against the Vietnam War, racism, and the atomic bomb. In America there is virtually no tradition of contemplation existing without corresponding action, at least among the most well-known writers.

It is difficult to pinpoint the reason for this. In parts of Europe, particularly in France, deeply serious nonfiction is such an ingrained part of the adult reading experience that a weighty philosopher such as Michel Foucault can become a best-selling author and household name. America has no equivalent to this; our philosophers remain firmly within the ivory tower of the academy, with little demand for their services from general readers. Moreover, our religious writers typically maintain a firm focus on this world; although mysticism and contemplation are regular undercurrents in American literature, they have not become mainstream. For example, although the Dalai Lama, the spiritual leader of Tibet, has published widely in the United States, his esoteric and contemplative works have found far smaller audiences than those for his self-help best sellers *The Art of Happiness* and *The Art of Happiness at Work*.

Below we discuss seven of the most prominent and enduring themes of American literature, focusing attention on some of the most significant works from the seventeenth century to the present.

Biblical Witness

American literature is replete with biblical allegories and allusions, as writers have endlessly mined the book that English poet William Blake once called “the great code of art.” In large part, the deep reliance on the Bible in American literature reflects the nation’s Protestant heritage: for Protestants, belief in both the foundational importance of scripture and the do-it-yourself ethos of individual interpretation resulted in a flowering of fiction, poetry, essays, and of course sermons with biblical themes. Literature was a vehicle for grappling with the great issues raised in the Bible, including both secular topics (nationhood, heritage, and justice) and overtly religious ones (salvation, piety, and divine intervention in human affairs). In quintessential American novels such as *The Scarlet Letter* (1850) and *Moby Dick* (1851)—in which, among other things, a sermon recalls the repentance as well as the maritime adventures of

the biblical character Jonah—allusions to biblical characters and settings are commonplace.

Beginning in the 1830s a new genre of “biblical fiction” became popular, including novelizations of the Bible and imagined dialogues with its various characters. Although very little of this explicitly biblical rumination would be considered great literature, some of it was tremendously popular, especially Lew Wallace’s 1880 best seller *Ben-Hur*. It was subtitled *A Tale of the Christ*, though the novel is as much about the action-packed world of the Roman military as it is about Jesus. Religious teaching is implicit but gives way primarily to entertainment, an important precursor for the more secular fiction of the twentieth century.

Although such novels as *Ben-Hur* attempted to conjure up explicit connections to biblical figures and settings, more often American writers simply dug into the great themes of the Bible for inspiration. This is particularly evident in the recurring literary themes of exodus and the search for the promised land in American history. The Puritans, for example, saw themselves as a remnant of Israel fleeing into the wilderness to escape the corruption and profanity of the world. Their literature reflects a preoccupation with casting themselves into the leading role of various biblical narratives and with imposing an ancient story onto the new land they sought to inhabit.

The fascination with the biblical theme of exodus is reflected in a simultaneous preoccupation with that of exile, another important aspect of the biblical story. As the American novelist John Updike observed in *A Month of Sundays* (1975), despite the human drive for and commitment to the promised land, “the wilderness is always there, pre-existent and enduring.” In other words, themes of national salvation and exodus always exist in tension with ones of wilderness and exile in both the Bible and American literature. This is an especially prominent touchstone in twentieth-century literature, as in William S. Faulkner’s *Absalom! Absalom!* (1937). In this masterpiece of Southern fiction, modern characters recapitulate the rupture and alienation that existed between the biblical King David and his sons. Fittingly, Faulkner’s twentieth-century literary interpretation of the Bible picked up not on an easy triumphalism, as in *Ben-Hur*, but in its murky examples of family estrangement and exile.

American Identity

Throughout its centuries of history, American literature has effectively grappled with what it means to be “American”:

Is it an ethnic identity? A religious one? Or is “American” to be always preceded by an additional identity—for example, African American, German American, or Jewish American? In the earliest examples of American-identified literature in the late eighteenth century, essayists, homileticians, and playwrights all began speaking of a shared American destiny that was distinct from the fate of the older European powers. Moreover, they found in America a unique religious hope and even ascribed to it a divinely appointed place in world history. From John Winthrop’s “city upon a hill” speech in 1630, Americans have perceived, rightly or no, the eyes of the world on them. Some American literature has self-consciously attempted to demonstrate the superiority of democracy as a way of life. Much of that writing is propagandistic and forgettable; more interesting is the literature that uses such democratic confidence to hold a mirror up to America and challenge it to live up to its own ideals.

Several African American writers have beautifully expressed the tension between feeling pride in America and feeling anger at America’s lack of pride in them. One of the earliest writers to expose that tension was Frederick Douglass, who escaped from his slave master (with the ironic name of “Mr. Freeman”) in 1838 to begin a career as a famed abolitionist writer and orator. His 1845 autobiography, *Narrative of the Life of Frederick Douglass, an American Slave*, expressed optimism about his newfound freedom and the abolitionists he met. Later writings, however, are tempered by dismay at the apparently glacial pace of abolition and frustration with President Lincoln’s seeming halfhearted commitment to the cause of emancipation.

In twentieth-century African American literature, the legacy of slavery again emerges as a dominant theme. During the Harlem Renaissance, a flowering of African American culture in the 1920s and 1930s, writers reached back to Africa for inspiration and guidance in understanding their lives as Americans. Zora Neale Hurston’s novel *Their Eyes Were Watching God* (1937), which explores one woman’s life and self-knowledge through the lens of her marriages to three very different men, exposed the interracial and intraracial prejudice of the early twentieth century while also exploring the African American characters’ abiding religious faith and fear of judgment. The book was not universally well received by black writers. One of its harshest critics, Richard Wright, went on to write the autobiographical works *Black Boy* (1945) and *American Hunger* (published posthumously in 1975), which detailed the racism he had experienced, his loneliness as an African American writer,

and his eventual decision to embrace communism as the only viable solution to America’s racial ills. A generation later, novelist and Nobel Prize winner Toni Morrison explored the legacy of slavery in *Beloved* (1987) and the murkier tale *A Mercy* (2008), which exposed the ways slavery destroyed every character who came in contact with it, not only slaves but also their masters.

Jewish literature has also wrestled with the questions of American identity in sometimes profound and poignant ways. In the nineteenth century, Jewish writers, many of them women, wrote fiction and poems that portrayed Jews as patriots and authentic Americans, while also depicting them as outsiders who fought to maintain their beliefs and cultural heritage against the threat of assimilation. Emma Lazarus, who penned the poem whose words “give me your tired, your poor” have become inextricably associated with the Statue of Liberty, called America the “Mother of Exiles” in that same poem. To Lazarus, and to other Jewish writers, America stood as a beacon to the “wretched refuse” of other nations, where Jews were persecuted and unwanted. However, Lazarus was sensible of the precariousness of her own and others’ situations as Jews in a land that did not fully accept them as equals. “Even in America, presumably the refuge of the oppressed, public opinion has not yet reached that point where it absolves the race from the sin of the individual,” she wrote in an impassioned 1883 essay (“The Jewish Problem,” appearing in the February issue of *The Century*).

Contemporary Jewish literature follows many of the same tropes, uncovering this unease anew for a fresh generation still grappling with the Jewish presence in America. In his acclaimed 2004 novel *The Plot Against America*, Pulitzer Prize-winning author Philip Roth explores the reversal of fortune of a middle-class Jewish family in New Jersey in the 1940s. By changing one element of factual history—positing that the anti-Semitic aviator Charles Lindbergh, and not Franklin D. Roosevelt, was elected president of the United States in 1940—Roth conjectures an America that is at once far-fetched and eerily plausible. In Roth’s counterfactual historical novel, Lindbergh’s candidacy and election unleash all of the latent anti-Semitism of the American people, and the nation embarks on a Nazi-esque persecution of the Jews. In one early sequence, the patriarch of the family takes his wife and children to Washington, D.C., to tour the nation’s capital and instill a sense of American history in the boys. What they experience, however, is an abhorrent series of insults from fellow tourists and hotel staff, causing the father to reflect that Lindbergh’s presidency is a dream for other

Americans but a nightmare for the Jews. With disturbing accuracy, Roth highlights the instability and insecurity of being Jewish in America.

Those themes are also addressed in *Landsman*, Peter Charles Melman's 2007 novel about a Jewish street thug who fights for the Confederacy in the Civil War. In the story, protagonist Elias Abrams leaves the gang-ridden life of crime he had fallen into in New Orleans to wage war on the Union. The title is at least a double entendre: a landsman is 1) a person who works on the land, 2) a Jew who comes from the same European district or town as oneself. Throughout the book, Melman muses on questions of Jewish identity by playing the rebel status of a Confederate soldier against the outsider status of Jewish Americans. Throughout, the second definition becomes gradually less important than the first. Elias is a "landsman" in the traditional Jewish sense but also in the very American sense of the homesteading movement: he is staking a claim on the American land and intentionally making it his home.

In a very different kind of novel, *The Yiddish Policemen's Union* (2007), Michael Chabon takes Melman's theme of Jewish outlander status and merges it with Roth's genre of the counterfactual or alternative history. Like Roth's *The Plot Against America*, *The Yiddish Policemen's Union* changes a single fact from mid-twentieth-century history and imagines how that slight change might have caused history to turn out very differently for the Jews. In this case the changed fact is the site of the Jewish homeland: in Chabon's novel, Jews settled in Alaska, not Israel, in the 1940s. The main character—named Landsman, significantly—inhabits an insular society where Yiddish is regularly spoken, messianic expectations are very real, and intra-Jewish conflict is well established and dangerous. Jews in the rest of North America call their Alaskan compatriots "the Frozen Chosen," and the entire novel raises important questions of Jewish and American identity. How much of anyone's ethnic and religious identity is mutable? How much is tied to the places where we live?

Conversion

It is perhaps not surprising that America—a nation legendarily built on the vision of self-made individuals who eschewed birthright for merit and favored personal achievement over inherited legacy—should produce a thriving literature of conversion. Conversion, from the Latin *convertere*, or "to turn around," is about lives transformed, about individuals taking their destiny into their own hands and

choosing the direction of their future. For American Christians a nominal or inherited faith, often including an infant baptism that they had not chosen for themselves, was simply not enough: they needed to forge their own futures by making religion their own. And from the beginning of American history, some of those individuals chose to record their conversion experiences.

Much of the focus on conversion narratives in America has been on the Baptist and Methodist accounts from the early nineteenth century, when itinerant preachers traversed the young republic and called sinners to repentance in public revivals. Certainly, these evangelical Protestants placed conversion on a new pedestal as an essential ingredient in "true" religion: for them faith needed to be warmhearted as well as rational. However, it is important to remember that the explosion of conversion narratives in the early nineteenth century, hastened both by the revivals of the Second Great Awakening and the burgeoning newspaper and magazine industry that disseminated conversion accounts, stood firmly within an older tradition of well-orchestrated religious transformation. In the eighteenth century, pockets of the American colonies enjoyed revivals and dramatic conversions. Although the reach of the first Great Awakening in the 1730s and 1740s was hardly national, it had a profound effect in New England and the mid-Atlantic regions. After theologian Jonathan Edwards witnessed a revival in his Northampton congregation in the 1730s, he wrote about it in *A Faithful Narrative of the Surprising Work of God*, which was published in the colonies and in England. Edwards's account influenced evangelists George Whitefield and John Wesley, who in turn encouraged waves of revivalism before and after the American Revolution.

The usual trope of a conversion narrative emphasizes—and sometimes exaggerates—the sinfulness of one's life before repentance. In a narrative tradition stretching back to Augustine's *Confessions*, memoirists and novelists highlight the profound change of heart that occurs when God enters their lives and scourges sin. In his 1953 roman-à-clef *Go Tell It on the Mountain*, for example, James Baldwin draws on his own experiences of being converted in an African American storefront church at the age of fourteen. The novel emphasizes the physical and immediate effects of conversion, with the protagonist dancing wildly in ecstasy in the midst of the congregation. *Go Tell It on the Mountain* takes spiritual concerns out of the head and into the body, as African American worshipers are struck down in the Spirit and express their bliss through fierce celebration.

Most conversion literature in American literature is less corporeal but just as visceral, including Malcolm X's famous *Autobiography*, which chronicles his unexpected transformation from street hustler and petty thief to sectarian black nationalist and finally to peace-talking Sunni Muslim leader. The initial conversion of Malcolm X, which occurred in prison, was influenced by a combination of intellectual and social factors. Family members who had already become members of the Nation of Islam visited him in prison, sent him literature to read, and put him in touch with movement leader Elijah Muhammad. Malcolm X proved to be an electrifying acolyte of his new religion, using his pre-Nation past as a foil for the righteous life he embraced in the Nation of Islam.

The starkness of this contrast between the convert's old life, which is held up as a model of sin and estrangement, and the new life of purpose, fellowship, and holiness is nowhere more apparent than in the writings of Trappist monk Thomas Merton. Merton recounts in his best-selling autobiography *The Seven Storey Mountain* (1948) that in his schoolboy and university days, a kind of world-weary jadedness merged with an intellectual restlessness to create a deep but undiagnosed longing in his soul. Merton's memoir focuses not so much on the exterior and obvious sins—the days of sloth and drinking, the young woman he got pregnant—as on the deep-seated nihilism that infected his soul like a cancer. After his discovery of the monastic life, everything changed, and it is a testimony to Merton's intuitive skills as a writer that he was able to communicate his joy at the austerity and strict discipline of monastery life. The book sold over 100,000 copies in its first year, a startling result for an unknown thirty-one-year-old monk, and has sold several million more since then. Merton's conversion story paved the way for other spiritual memoirs in the mid-twentieth century, most famously his fellow Catholic Dorothy Day, whose autobiography, *The Long Loneliness* (1952), followed Merton's in its basic cadences. Day's story tells of a profligate urban life (drinking, various affairs, an abortion) followed by a profound and wholly unanticipated conversion to Catholicism. Although her Catholicism was not monastic in the manner of Merton, it had an asceticism all its own, as Day devoted her postconversion life to a vigorous activism on behalf of the poor.

Social Reform and Social Protest

Dorothy Day's memoir called on not only the conversion trope in American literature but also another theme just as enduring: a pressing concern with moral responsibility, on

both an individual and societal level. In American literature this concern has expressed itself most memorably in the pages of fiction. The novel of social reform began gaining ground in the early nineteenth century, found a voice with the abolition novels of the 1850s, and reached its zenith after the Civil War. These stories were "prophetic" in the biblical sense of that word: their authors sought to speak truth to power and thus to change the world around them. Lofty religion met practical morality in their pages, which called people to repentance and action, often on timely, specific issues of the day.

Harriet Beecher Stowe's novel *Uncle Tom's Cabin* (1852) is probably the best-known example of American social protest literature. Today it is read in high school and college classrooms as an abolitionist manifesto, and it certainly was that for readers in the 1850s. But nineteenth-century readers also understood the story as a deeply Christian statement about the power of love to reform society, as evinced by the character of the gentle slave Tom, who feels compassion for his wicked master despite the man's repeated abuses. Stowe—the wife, daughter, and sister of renowned Protestant ministers and educators—consciously depicted Tom as a Christ figure, a literal suffering servant whose determination to turn the other cheek was intended as an example to all readers. These themes are also underscored in the character of the precociously pious child Eva, whose deep Christian faith is a witness to everyone around her, even as she succumbs to an appropriately valiant nineteenth-century death. Through Tom and Eva, Stowe wanted to show Christian nobility in the face of unimaginable sorrow and pain.

This is not to say that the story didn't show a fighting spirit in striking the century's most devastating blow against slavery: in its first year of publication, it sold several hundred thousand copies, an amazing feat for the era and particularly unexpected considering that the novel had already been serialized in the penny press. (To put this in perspective, after the warehouse of Herman Melville's publisher burned down in 1853, there were only sixty salable copies in the world of the author's 1851 masterpiece *Moby Dick*. However, sales were so abysmal that those sixty copies lasted until the novel was reprinted in 1863. It did not require a third printing until 1892.) Many of the earliest editions of *Uncle Tom's Cabin* contained a foreword by a Congregationalist minister who was an abolitionist activist, further demonstrating the novel's fusing of Christian ideals with the language of social protest.

Other social and religious causes furthered the tradition of social protest fiction in the nineteenth century. In the

1830s a full 12 percent of the fiction published in America addressed the issue of temperance, using stories to demonstrate how alcohol destroyed lives and families and to advance the cause of its banishment from society. Many of those stories were serialized in the penny press or available for free in tract form. (Even Walt Whitman wrote a temperance novel in 1842, joking later in life that he had penned *Franklin Evans* purely for the money and with the aid of copious shots of port.) The 1870s and 1880s gave rise to the genre of the antipolygamy novel, depicting the moral outrage that many writers felt toward Utah Territory, where polygamy was openly practiced by a large segment of the Mormon people. Some antipolygamy novels were obviously fiction, but others presented themselves as memoir, with authors sometimes claiming to know “escaped” plural wives or even to have been such poor creatures themselves.

In blurring this line between fact and fiction, the antipolygamy novel drew on more than half a century of tradition that had been established in the anti-Catholic novel, in which imprisoned innocent females, corrupt males, and sexual predators were all familiar stock characters. The genre of anti-Catholic fiction had found a willing audience during the mid-nineteenth century, when Protestants were alarmed by a rapid influx of Catholic Europeans. Anxiety about the creation of a Catholic majority in America made readers eager to believe the prurient Gothic fantasies of a novel such as *The Awful Disclosures of Maria Monk* (1836), which purported to be a memoir of a young woman’s salacious escapades as a nun.

Novels also called attention to the plight of the nation’s poor. At the end of the nineteenth century, the novels of the Social Gospel movement sought to educate the American public during the high-flying Gilded Age that poverty was appalling and should be eradicated. Some of these novels imagined what Jesus would make of America in that day, giving rise to such titles as *If Christ Came to Chicago* (1894) and *If Jesus Came to Boston* (1895). Among dozens of Social Gospel novels of that era, the most popular was minister Charles Sheldon’s story *In His Steps: “What Would Jesus Do?”* (1896), which the author estimated sold nearly eight million copies in America and a further twelve million abroad. Although that figure is contested—accuracy in this case is difficult to ascertain because the lack of a proper copyright meant that there were multiple pirated editions, none of which paid the author a royalty—it was certainly one of the most popular books in American history. It remains in print more than a century after its first appearance

and has generated unlikely merchandising efforts, from WJJD (What Would Jesus Do) bracelets to bumper stickers.

The Glory of Nature

Much of the social protest literature of the nineteenth and twentieth centuries focused on problems that were perceived as urban—poverty, immigration, temperance, and the like. (It is quite debatable whether the popular perception that these were primarily urban issues was actually true, but such was the general image.) It is not surprising, then, that this same time period saw the corresponding rise of a literature that emphasized the beauty and simplicity of rural America. In essays, novels, and especially in the growth of the “Western” story, American writers idealized the rustic countryside, whether it be the family farm or the beckoning frontier.

Not unexpectedly, the rise of the romanticized “rural” novel perfectly coincided with the industrialization and urbanization of America. Just as Americans toiling in factories began longing for the allegedly simpler ways of life their parents and grandparents had enjoyed, a spate of country novels arose in the early twentieth century to remind them of a world where folks helped one another build log cabins and make jam. Novels such as *David Harum* (1898) and *Rebecca of Sunnybrook Farm* (1903) idealized a recent but seemingly mislaid American past, built on neighborliness and a shared folk religion. It was bolstered by a renewed national attitude about the salubrious effects of being out-of-doors, made famous by the many photographs of President Theodore Roosevelt shooting game or riding horses. For men, in fact, a subgenre of frontiersman fiction began to flourish in the early decades of the twentieth century, adding to the Westerns and cowboy tales that had been popular in the nineteenth. These often featured the religious conversion of one or another rough-hewn frontier character—or, even better, the salvation of a city slicker who came under the influence of one of those “real” men of God on the American plains.

If the growth of rural fiction suggested that Americans were eager for stories stressing the freedom and integrity found down on the farm, the early twentieth century also saw great interest in fiction about urban decay. Upton Sinclair’s novel *The Jungle* (1906) was a shocking exposé of the Chicago meatpacking industry. Edith Wharton’s subtly critical *The Age of Innocence* (1920) and F. Scott Fitzgerald’s even more ascetic Jazz Age story *This Side of Paradise* (1920) were novels that in one way or another critiqued the urban sophisticate.

Real religion, as depicted in the literature of the day, was to be found not in America's thriving cities but in its forgotten byways. In the mid-nineteenth century Henry David Thoreau left the confusion of town life for a cabin on Walden Pond, finding spiritual purity in a life of relative isolation and independence. His enduring 1854 classic *Walden* is replete with criticisms of urbanization, from the train whistle that daily interrupted his thoughts to the tendency of individuals to clump themselves together in towns (though Thoreau managed to make his way into Concord several times a week to chat with residents and hear the news). Infused with the ideals of American transcendentalism, which emphasized the superiority of life in nature, *Walden* spoke to a generation that was suspicious of industrialization and anxious about the rapid disappearance of country life.

A century later Thomas Merton, as we have seen, catalyzed a generation of spiritual seekers with *The Seven Storey Mountain* (1948). And while the book is rightly considered to be conversion literature, a compelling case can be made for its equally important place in the literature extolling rural America. Merton writes disparagingly of the deadening effects of his life in such cities as New York, Paris, and London. True peace and vitality occurred only at Gethsemani, the monastery in Kentucky's backwoods where Merton labored on the land while he tussled with the Spirit. His writing is permeated with a celebration of the natural world, which is perhaps not surprising from an author who, even before his conversion to Christianity, wrote a master's thesis on poet William Blake's religious symbolism and joy in nature.

It is not only Christian literature that found more meaning in pastoral settings than urban ones. In Jack Kerouac's *The Dharma Bums* (1958), Buddhism is as much a love affair with mountains and trees as it is rooted in any recognizable Buddhist tradition. The novel juxtaposes a city life of jazz clubs and drinking against the characters' far more meaningful escapes from the city to hike in the woods, climb mountains, and find themselves.

The trope of true religion existing best in the country continues to flourish in what is called contemporary Christian fiction, a thriving segment of evangelical publishing. These novels have been criticized for their familiar plots of urban characters who journey to a small village, often one where they grew up or which they visited as children, to contend with some past issue or family legacy, such as an inheritance. The fact that the same plot is recycled

repeatedly has not impeded sales; in fact, readers seem to flock toward popular literature that values old-fashioned community, closeness to the land, and the moral superiority of small-town life. Novelist Beverly Lewis has created a cottage industry of novels set in Amish communities such as Lancaster County, Pennsylvania. Most readers of these books are not Amish but find something comforting in literature that has a modern setting but a bucolic, nostalgic sensibility. Beverly Lewis's novels had sold a combined total of ten million copies by 2008, with fewer than a quarter million Amish in the world. Other popular novelists, including Jan Karon and Philip Gulley, also have capitalized on an American nostalgia for small towns.

Death and the Afterlife

In addition to wrestling with religious issues that are very much of this world—social protest, rural romanticism, and so on—American writers have also tackled the enduring themes of the world to come. It has been noted that ideas about death lie at the core of all the world's religious traditions. Preparing for death, understanding it, coping with its reality when it strikes those we love—these themes have underscored many a great poem, drama, or novel.

American writers' understandings of death and the afterlife have often mirrored larger cultural and theological currents. The nineteenth century witnessed a profound turning toward a more liberal theology that emphasized God's love and goodness over earlier themes of judgment. Whereas hell had been a prominent and enduring theme in much of eighteenth-century American literature (perhaps best exemplified by Jonathan Edwards's classic 1741 sermon "Sinners in the Hands of an Angry God"), heaven emerged as a favorite topic of nineteenth-century popular literature. Earlier American writers had refrained from detailed or lively speculation about heaven (reserving that level of specificity for their Dante-esque sermonical tours of hell), but nineteenth-century writers turned the tables, offering readers appealing glimpses of heavenly life. Some novels, such as Elizabeth Stuart Phelps's *The Gates Ajar*, depicted heaven with the cultured domesticity of a Victorian sanctuary: children, pets, and friends convene on front porches and in parlors, and residents of the Chautauqua-like heavenly community can witness a composer conducting one of his own masterpieces in concert or converse with a biblical figure about a particularly thorny passage of scripture. Such musings were especially welcome when *The Gates Ajar* was published, in 1868, to a nation still reeling from the deaths

of the Civil War. (The author herself lost a fiancé at Antietam.) The novel sold 100,000 copies within the first few years after publication and spawned several sequels, one of which posited that hell was merely separation from friends and family. Other novelists weighed in to create a thriving subgenre of domestic heaven novels, describing the afterlife as a picturesque, perfected earth. The popularity of these books became so great that one of Mark Twain's fictional characters quipped that their vision of heaven was so home-like as to be deadly dull. Twain also criticized Phelps's heaven as being for the white middle class only, calling it "a mean little ten-cent heaven about the size of Rhode Island."

Along with the new stress on heaven, American writers began incorporating more angels into their literature, adding these heavenly intermediaries as friendly reminders of God's care and intervention in human life. Harriet Beecher Stowe famously remarked in 1859 that a century before, theologian Jonathan Edwards had knocked out all the rungs in the ladder between heaven and earth, making it impossible for people to understand heaven. Stowe's fiction, including *The Minister's Wooing* (serialized in 1858 and 1859), wittily derided the theological failings of her ancestors' Calvinism. Stowe and other nineteenth-century writers aimed to restore angels and intermediaries to the equation, leveling the playing field so that people could better understand what they needed to do to gain a blissful eternity. Although it is not an American novella, *A Christmas Carol's* wild popularity in the United States indicates that Dickens's 1843 story struck a chord with American readers who were eager to hear that heavenly intermediaries could be sent to help wayward people rediscover the path of righteousness.

More modern literature has also employed angels as heavenly intermediaries, but in a more ambiguous, less overt way. In Catholic writer Flannery O'Connor's classic 1965 story "Revelation," Mrs. Turpin, a self-righteous, racist, and arrogant woman, is brought down to size by a rude and possibly unstable girl in a doctor's waiting room. When the girl becomes murderous and physically attacks Mrs. Turpin, calling her an old warthog from hell, everyone dismisses her words and actions as those of a lunatic and epileptic—except Mrs. Turpin, who becomes livid as she interprets the message as coming directly from God. The epileptic girl (with the highly significant name "Mary Grace") is, in Mrs. Turpin's understanding, a divine messenger—the biblical meaning of the word *angel*. However, O'Connor's angel is not the sweet, caring intermediary of nineteenth-century literature, inspiring the earth-bound to greater acts of

charity. This angel is a brimstone harbinger of repentance for the self-satisfied, offering the titular "revelation" that even the unreflective Mrs. Turpin cannot ignore: her presumed virtues are in fact deep shortcomings. The final sequence, which O'Connor added later to the stark original ending, has Mrs. Turpin receiving a vision of herself and others like her marching off last in a parade to heaven, behind all of the people she once rejected as beneath her.

Apocalypticism

In keeping with a focus on death, heaven, and the afterlife, American literature has consistently demonstrated an abiding concern with the end of days. The most famous example of apocalyptic literature is undoubtedly the *Left Behind* series, which sold more than 63 million copies in the late twentieth and the early twenty-first century, including sixteen adult novels, a children's series, dramatic audio versions, devotional books, and a few spin-offs. The series' success astonished even its publisher, Tyndale House, which had initially planned a robust 75,000-copy print run for the 1995 debut novel cowritten by evangelical powerhouse Tim LaHaye and novelist Jerry Jenkins. Readers thrilled to the series, which opened with a dramatic depiction of the Rapture, a calamitous event many evangelicals expect will usher in the final days: Jesus will return to carry home the faithful, and the rest of humanity must soldier on for seven painful years during the time of Tribulation.

In the novels a motley crew of those "left behind" after the Rapture band together, discover Christian truth, and oppose a charismatic world leader who has arisen to unite the human race in a desperate age. Calling themselves the Tribulation Force, these new Christians courageously do battle with a very slick and corporate Antichrist, alone recognizing the signs of the times that have been prophesied in scripture. They fight to survive massive earthquakes, deadly plagues, and persecution by the increasingly repressive government. Although academics and literary critics ridiculed the books' biblical literalism, racial stereotyping, conspiracy theories, and fire-and-brimstone theology, many readers responded to the characters' certainty that in the end evangelical Christians would decisively win the war against evil. At one point, *Left Behind* books simultaneously claimed four spots on the *New York Times* best-seller list—and this despite the fact that the *Times* list did not factor in Christian bookstores' sales of the series.

Although their unprecedented commercial success made it appear as though the *Left Behind* books came out of

nowhere, they in fact stood firmly in an American tradition of apocalyptic literature that was embraced by a popular audience. American prophecy literature has existed since before the United States became a nation and has tended to spike during times of national crisis: the Revolutionary and Civil wars, the Great Depression, the atomic age, and the aftermath of 9/11. Picking up with the idea that “wars and rumors of wars” would be one characteristic of the last days, Christian writers (primarily evangelicals) sought to place unsettling current events within the expected warp and woof of biblical foretelling. As a way of making sense of disturbing or unprecedented experiences, prophecy writing has the advantage of taking what is new (economic changes or political fissures) and re-ordering experience according to what is very old. To this end, what is emphasized about biblical prophecies has changed according to the times: in the 1950s, for example, Americans who were anxious about atomic capabilities made connections to prophecy about the earth being destroyed by fire; in the 1990s the Left Behind books pointed to the dangers of political and economic globalization and one-world government.

Although there are innumerable examples, two major apocalyptic works deserve special mention. In 1909, Cyrus Scofield, a ne'er-do-well lawyer who converted to Christianity and became a leading Bible lecturer, published the Scofield Reference Bible, which became the leading work of “dispensational” premillennialist theology. In essence this view taught that God had divided history neatly into seven distinct dispensations, or epochs, and that the whole of biblical history could be understood in the light of those seven eras. Scofield's work on the biblical Book of Revelation was tremendously influential for many of the prophecy writers who followed him. Scofield's original Bible was almost Talmudic in format, with the biblical text in the center and the author's commentary—much of it eschatological—in the margins. Sales exceeded 5 million copies for the 1909 and 1917 editions, while the 1967 revision sold an additional 2.5 million copies.

One of the authors most indebted to Scofield was Hal Lindsey, whose 1969 nonfiction title *The Late Great Planet Earth* (cowritten by Carole C. Carlson) was one of the best-selling books of the 1970s. By 1990 the book had sold a total of 28 million copies. Lindsey captured Americans' imaginations with his bold assertion that the generation alive during the 1948 creation of the state of Israel would personally see the return of Christ. He also capitalized on current events by tying the prophecies of Ezekiel, Daniel,

and Revelation to the fledgling attempts at European unification, the Six-Day War of 1967, or goings-on in the much-feared Soviet Union.

Although the end has not yet come, and the vast majority of these books' prophetic utterances never came to pass, the genre of apocalyptic literature remains a thriving industry in America today. Americans will no doubt continue to be fascinated by eschatological speculation so long as time as we know it continues. Like other themes in American literature, including the promotion of justice and the attempt to understand death and the afterlife, apocalypticism speaks to readers' deepest anxieties and hopes for a better future.

Literature: African American

Through all phases of its history, religion—as worship, context, idea, trope, symbol, influence, value, and inspiration—has abounded in African American literature. Since the first Africans arrived on the shores of the New World, the imaginative impulse to envision and create has shaped the development of African American religious life; and the expression of religious doctrines and creeds has provided source material, formal techniques, symbolic language, and thematic orientation for African American literature. The relationship between religion and literature began in anonymity, with the “unknown bards” of the spirituals who had to “steal away to Jesus.” And it continues in the highly public and idiosyncratic personalities of hip-hop poets who know that “Jesus walks” with them. Examples are more easily identified and the religious idiom more traditional up to the Harlem Renaissance of the 1920s, when artists and intellectuals explored in new ways the historical experiences of black America and contemporary experiences of black life. Although religious elements become more diffuse and diverse, they were present nonetheless.

Religious Imagination

In *Beloved* (1987), a novel steeped in biblical and folk religious traditions, Toni Morrison sets forth the unique relationship between religion and literature in African American culture when the character Baby Suggs intones that “the only grace they could have was the grace they could imagine.” The exercise of imagination has been vital to the articulation of religious faith in African American

culture. Likewise, religious experience and observance have influenced all forms of African American literary production. Telling stories, whether oral or written, was never seen as an exclusive or proprietary talent reserved for an elite class but as an indispensable skill for all to apply in identity formation and culture building.

Both African American religion and literature have reflected how things are and illuminated how they could be. The religious dimensions of African American cultural output are usually interpreted in one of two ways: from the point of view of a religious doctrine or practice to which one applies a literary methodology or by beginning with a literary text of any genre to which one applies a methodology derived from religious studies. In both cases religion and literature have reflected cultural patterns that highlighted tensions, affirmed traditions, and innovated strategies through which African Americans survived and endured and also thrived and created.

The “double consciousness,” articulated by W. E. B. Du Bois in *The Souls of Black Folk* (1903) as a defining characteristic of African American identity also aptly illustrates the relationship between religion and literature in African American culture: a sustained tension of existential orientations that leads to an ongoing conversation about black life in both the creative and spiritual realms of existence. Indeed, Du Bois’s cultural analysis exhibits in its literary expression a sustained indexing of black culture to black religion. Articulating the ambition to merge the double self into a “truer and better self,” Du Bois names the effort a “spiritual striving,” and references such an arrival as occurring in the “kingdom of culture,” an obvious allusion to Christian scripture. *The Souls of Black Folk* even concludes with a prayer, an invocation to “O God the Reader,” that there will be an “awakening”—a classic Christian allusion to conversion—on the part of individuals and culture where African Americans will be “judged by souls, not skin,” a sentiment echoed some sixty years later by Martin Luther King Jr.

Christianity

Christian practices and beliefs have provided the dominant paradigm for the relationship between African American religion and literature but their influence is paradoxical. Christianity has played a tremendous role in the lives and artistic production of African Americans while the perversions of Christianity—first evident in slavery and ongoing in racism—have been indelibly stamped on the consciousness of African American writers. The literature, therefore,

contains evidence of the uplifting and transformative power of religion in the lives of its characters, as in *Incidents in the Life of a Slave Girl* (1861) when Harriet Jacobs expresses her gratitude upon receiving her freedom: “God raised me up a friend among strangers. Friend, the word is sacred.” The literature also contains evidence of religion’s absence and failure in their lives. Representative of the betrayal of religious hope are lines found in Countee Cullen’s poem “Gods” (1925), which, in addition to disappointment in Christianity, expresses nostalgia for African spirituality: “God’s alabaster turrets gleam / Too high for me to win / Unless He turns His face and lets / Me bring my own gods in.”

The Bible

From slave narratives to fiction, from spirituals to rap songs, from political manifestos to sermons, meaning has been expressed scripturally. In the hands of black exegetes, be they theologians, writers, or the folk, the Bible (Hebrew and Christian) has served a variety of functions, primarily as a key to interpreting meaning. The Bible is responsible for inspiring and informing literary expression but also for presenting problems for those steeped in proclamation and interpretation. As set forth in the Gospel of John, the Bible functions in African American culture as *word*—embodied divinity—animated by the engagement of literary and religious forms. In literary texts and oral traditions of storytelling, as ancient history and as present reality, African American writers have often answered questions about the present by citing biblical examples and images. The way the spiritual “Go Down, Moses” adapts the Exodus story for relevance to slavery is one compelling example. Likewise, African American theologians, particularly in the formation of liberation theologies in the 1970s, turned to literary sources to illustrate the tenets of those theological investigations and practices, as did Delores Williams in *Sisters in the Wilderness* (1993).

An ability to read the Bible for themselves and thereby “keep the white folks from meddling” in their interpretation of scriptures was the motivation cited in many slave and spiritual narratives for acquiring the skills of literacy. For example, in her visionary writings collected as *Gifts of Power* (1830–1864), Shaker minister Rebecca Jackson credits a divine miracle for her acquisition of the ability to read. Yet from the first encounters with the Bible, African Americans have recognized the ways in which biblical principles and narratives have been manipulated to serve two contradictory functions: to sustain systemic racism but also to promote

liberating activity. Henry Highland Garnet’s “Address to the Slaves of the United States” (1865) or Maria Stewart’s “Address Delivered at the African Masonic Hall” (1833), among other abolitionist texts, represent a dominant theme in early black writing, neatly summarized by Douglass in *Narrative of the Life of Frederick Douglass* (1845) when he proclaims that between “the Christianity of this land and the Christianity of Christ there is the widest possible difference.” Sometimes the perversion of Christianity is attributed to southern slaveholders and complacent northern whites, but African American authors also challenged their own people for their passivity in ignoring their claim to full humanity as set forth in scripture, as in Galatians 4:7—“So you are no longer a slave but a child, and if a child then also an heir, through God” (NRSV).

Biblical Tropes

African American literary and religious traditions have borrowed freely from each other; as a result they share characteristics that convey both textual and spiritual principles. Several tropes associated with biblical hermeneutics can be applied to African American literature. Among them is conjuring, the summoning of spirits by invocation or incantation, which has long been associated with folk spiritual practices in southern black communities. Since Zora Neale Hurston’s portrayal of the protagonist in *Moses, Man of the Mountain* (1939), conjuring has been linked to divine power as revealed in the Bible. Hurston depicts Moses as a Hoodoo medicine man who possesses “power-compelling words” derived from the Bible, “the greatest conjure book of all.” The theologian Theophus Smith, in *Conjuring Culture* (1994), argues that conjure is imaginative power exercised to transform the condition of black lives and that the Bible is central to this activity.

Furthermore, the ways in which African American writers, such as Hurston, freely adapted the most sacred text of Western culture, illustrates a foundational aesthetic characteristic of African American culture. The technique of sampling, or borrowing, from the Bible derives from the ways in which African Americans approached the sacred text as a magical formulary or ritual prescription for reenvisioning and transforming history and culture. This eclectic application of the Bible was practiced first by the authors of the spirituals but was cast in comic tones by folklorists who established an aesthetic form and a theological hermeneutic for future collaborations between literature and religion.

Conjure, in other words, is both a theological and an aesthetic metaphor for cultural and ideological transformation. Derived from the synchronization of retained African and acquired Christian practices, conjure—as an act and as a trope—empowers African Americans denied customary access to forms of power and invigorates sympathetic magic with the power to make things happen. As Hurston saw Hoodoo practiced in New Orleans, it was an intrinsic part of African American religion because it offered a means by which blacks could exert control over their interior lives. As a result, at the root of conjure is the African principle that does not distinguish between the sacred and the profane, thereby establishing from their origins a natural reciprocity between religion and literature in African American cultural production.

Speaking in tongues is a biblical image derived from the event of Pentecost, when Christ sent the Holy Spirit to humanity, eliciting a cacophony of languages being uttered as evidence of spirit possession. As a literary device and theological principle, speaking in tongues refers to the intricate interplay of self and other, known and unknown, familiar and unfamiliar speech that characterizes African American writing. A form of double discourse, speaking in tongues is a spiritual, aesthetic, and practical expression. It engages language or words only known to the divine and the faithful; it adapts history and present reality to convey the language of possibility; and it empowers the speaker and hearers who understand the coded dialogue while simultaneously protecting them from the intrusion of the dominant culture.

Speaking in tongues aptly sets forth the complexity and diversity of African American religious and imaginative lives. Speaking in tongues as *heteroglossia* (languages that speak to a wider world and common culture) affirms the common and universal principles of equality, liberation, and justice so prominent in black literature and theology. Speaking in languages known only to God (*glossolalia*) sustains the secret and ecstatic experience of blacks that requires interpretation for others outside the experience. Furthermore, glossolalia gives evidence of what is different and diverse in American culture, both the generative distinctions that promote multicultural independence and the destructive distinctions that separate and exclude one from full engagement with a pluralistic society. All these distinctions are endowed with divine authority when the trope of speaking in tongues is applied.

One of many examples of the principle of speaking in tongues can be seen in spirituals that were designed to communicate on more than one level. Songs such as “Steal

Away” may have served as a means to convene secret resistance meetings, while “Deep River, My Home Is over Jordan” may imply a wish to cross over to Africa or the North. Included as a form of speaking in tongues is *signifying*, articulated by the theologian Charles Long in *Significations* (1986) as the most widely accepted interpretation of the religious practice of indirect verbal play. Henry Louis Gates’s adaptation of the trope of the *talking book* in *The Signifying Monkey* (1988), which examines the ancient poetry and myths found in African and Pan-American culture, represents an influential approach to speaking in tongues as a form of intertextual transmission and revision of various biblical and African-derived spiritual beliefs.

The jeremiad, or prophetic denunciation of present conduct and the forewarning of eventual trouble, characterizes much of biblical history set forth in the Hebrew Bible, where, along with other prophets, Jeremiah predicts the coming downfall of the Kingdom of Judah because its rulers have broken the covenant with the Lord. Prophecy highlighting the relationship between humanity and divinity is later iterated by the gospel writer’s portrayal of Jesus as Christ. The books of the prophets and the words of Jesus serve as models for literary works in which the author bitterly laments the state of society and its morals in a serious tone of sustained invective with a corresponding prophecy of society’s imminent downfall.

Although not limited to African American literary production, the form of a jeremiad and the power of its biblical precedent endowed such liberation struggles as abolitionism and the civil rights movement with a divine sanction. As with other biblically derived tropes, the spirituals record the first jeremiads when they ask, “Were You There When They Crucified My Lord?” In prose David Walker’s *Appeal to the Colored Citizens of the World, and Very Expressly, to Those of the United States* (1848) reminds people that “God rules in the armies of heaven and among the inhabitants of the earth, having his ears continually open to the cries, tears, and groans of his oppressed people.” Later the Pan-African writings of Marcus Garvey, as in his “Appeal to the Conscience of the Black Race to See Itself” (1923), urged a return to Africa because “the evil of internal division is wrecking our existence as a people, and if we do not seriously and quickly move in the direction of a readjustment it simply means that our doom becomes imminently conclusive.” The jeremiad is memorably extended by James Baldwin in essays collected in *The Fire Next Time* (1963) that constitute a moral manifesto whose extraordinary power resides in Baldwin’s evangelical

eloquence about systemic racism. Further, Baldwin links the “salvation” of America and “another country” without such racism to African Americans’ ability to educate white minds and hearts into a new maturity and decency. The modern jeremiad reaches its climax, perhaps, in the speeches and sermons of Martin Luther King, as in a collection of his essays that includes “Letter from Birmingham Jail” (1963), when he challenges even those who profess to support the civil rights movement to understand why African Americans “can’t wait.”

Slave Narratives

Spirituals and slave narratives are the two original genres of African American literary production that first engaged biblical tropes and introduced aesthetic innovation. As such, they serve as models for subsequent literary production, which can, in most cases, be traced back to the influence of one or both genres. Slave narratives and especially spirituals have transcended their particular context and now symbolically represent a direct challenge to forms of racial oppression with a corresponding universal hope of liberation from oppression, key tenets of black theology throughout the history of African American experience.

Authors of slave narratives engaged Christian discourse as personal affirmations of faith but also as a rhetorical device to persuade other Christians to enact their religious principles in service to the abolitionist cause. In some cases, as with the *Narrative of the Life of Frederick Douglass*, rites of passage in Christian life are linked with stages of liberation from slavery by way of the attainment of literacy. His baptism is when he is taught by his mistress the rudiments of language; conversion is when he tests and improves his knowledge by way of public engagement; his confirmation occurs after reading antislavery tracts when he realizes he no longer could be a slave; and his ordination takes effect when he accepts a public career as orator and a call to preach for human rights. Similarly the *Narrative of Sojourner Truth* (1850), while constructed by an amanuensis, represents Truth’s rhetorical performances in public settings when she applied a strategy to combine biblical allusions with her own personal experience to convince people of the true meaning of scripture. Furthermore, like Julia Foote in *A Brand Plucked from the Fire* (1879) or the memoirs of other free black women such as Zilpha Elaw (1846) or Jarena Lee (1836) and other authors of spiritual and slave narratives, Sojourner Truth claims, “I talk to God and God talks to me,” to validate her arguments and claim the authority to preach.

Slave narratives also represented the first articulations of the jeremiad but often with a twist, for rather than a pessimistic conclusion, they often ended in triumph after a successful escape, as when Henry Brown boxed and shipped himself to freedom. Furthermore, they were among the first instances of a social critique of Christianity, thereby giving permission for later challenges to the religion as practiced by the dominant culture and as it disables the aspirations of African Americans. Richard Wright’s autobiography, *Black Boy* (1945), and James Baldwin’s novel *Go Tell It on the Mountain* (1953) illustrate this influence. By contrast, Margaret Walker’s *Jubilee* (1966) and other neo-slave narratives resoundingly affirm the spiritual legacy of the slave narrative tradition as a liberating guide—although not without irony, as seen in Toni Morrison’s *Beloved* (1987).

Finally, slave narratives have served as important documents that preserve folkways derived from African religious practices, thereby affirming the intentional survival of ancestral influences. For example, Frederick Douglass describes an instance of sympathetic magic when he was instructed by an elder to carry a root for protection from an overseer. Harriet Jacobs also cites the use of charms and fetishes among slaves and records details of a Methodist shout and Johnkannaus festival, both of which provide striking similarities to spirit possession in dances and other performances of African religious rituals. In the autobiography *The Interesting Narrative of the Life of Olaudah Equiano* (1789), the writer provides considerable detail about his Ibo culture to demonstrate its equality with European forms of civilization, making analogies to the Bible to explain the spiritual dignity of African beliefs in ancestor reverence, a sacred cosmos, dreams, and other practices.

Spirituals

In 1927 James Weldon Johnson paid tribute to the “Black and Unknown Bards” who “sang a race from wood and stone to Christ”: the creators of spirituals; the form Johnson illustrates in images is the first instance of an ongoing pattern in African American literary production and spiritual development that extends, elaborates, and refines basic principles of creation and truth. Principally associated with African American church congregations of the antebellum South and the earlier, more informal, and sometimes clandestine gatherings of enslaved people, spirituals were created as a result of a process of mutual influence and reciprocal borrowing—the same spiritual and aesthetic principle applied to conjuring—from evangelical sermons and hymns, biblical stories, traditional African

chants and praise songs, and the combined experiences of enslaved people in the South.

Features of the spirituals that can be found in later literary production include a demonstration of the ways in which a simple lyric can serve several functions. In the spirituals enslaved people critically analyzed their conditions, fashioned a creative theological response, indicted their oppressors without overtly denigrating them, reasserted the influence of an African sensibility, and empowered themselves by exercising a form of resistance that would endure longer than the conditions to which they were subject. The theology of spirituals was based not in doctrine but on ethics, instructing enslaved people not what to believe but how to act.

In creation as well as performance spirituals exhibited the essential characteristics of spontaneity, variety, and communal interchange. The form of the spirituals was flexible and improvisational, thereby able to fit an individual slave's experience into the consciousness of group, creating at once an intensely personal and vividly communal experience, a hallmark of African American writing that often was expected to uplift the race, as in Booker T. Washington's *Up from Slavery* (1901). Call and response characterizes this dynamic relationship between the individual and the community. As practiced in spirituals, call and response embodies the foundational spiritual principle behind their performance, denoting the dual requirement of what is necessary for completion. When spirituals were sung by enslaved people, they amplified their desire for liberation and created conditions of sacred space and time in a ritual act, wherein the biblical stories of which they sang were transformed and the history of the ancient past became the history of the present.

Synthesizing sacred and secular meaning, the spirituals drew images from the Bible to interpret their own experience, measuring it against a wider system of theological and historical meaning. Later African American writing adapted biblical themes, performance techniques, and images derived from spirituals to create an ongoing theological aesthetic whereby the Bible and the spirituals became the glossolalia for informed readers. For example, Martin R. Delany's *Blake* (1859), J. Saunders Redding's *No Day of Triumph* (1942), and John O. Killen's *Youngblood* (1954) incorporate spirituals to structure their plots and advance their themes. The most revered novel in the African American canon, Ralph Ellison's *Invisible Man* (1952), employs the spirituals and folk forms they engendered as influences on the characters, plot, and figurative language. While Toni Morrison freely adapts biblical stories and images in her fiction, in *Song of Solomon*

(1978), as in Paule Marshall's *Praisesong for the Widow* (1983), striking moments of call and response are incorporated into the denouement of their plots. Margaret Walker's poems collected in *For My People* (1952) also engage a biblical idiom.

Along with slave narratives and spirituals, other pre-Civil War African American literary texts easily accommodate religious themes and complement authors' diverse subjects in many rhetorical forms: addresses and speeches, orations, sermons, petitions and pamphlets, letters, confessionals, and other autobiographies. Whether the *Poems on Various Subjects, Religious and Moral* of Phyllis Wheatley (1773), the letters of Benjamin Banneker to Thomas Jefferson (1791), the sermons of Absalom Jones (1746–1818), or the speeches of Maria Stewart (1803–1879), all these literary pioneers pondered, explained, exhorted and demonstrated that their sisters and brothers should seek edification—intellectual, moral, spiritual, and practical—in order to improve in all spheres of human development and to uplift the race.

Gospel and Blues

The spirituals also shaped the development of the sacred lyrics known as gospel. Thomas A. Dorsey (1899–1993), composer of such standards as “There Will Be Peace in the Valley,” is considered by many the father of gospel music. As a young man he accompanied some of the most famous blues singers of all time, such as Bessie Smith (1894–1937). He also promoted the career of Charles A. Tindley (1851–1933), composer of “We’ll Understand It Better By and By.” In his essay “Rock, Church, Rock,” poet and novelist Arna Bontemps (1902–1973) observed how traditionalists in the black church considered the blending of the sacred and the secular as “the devil’s music” and initially shunned gospel music. But because the aesthetic and spiritual impulse behind the composition of gospel music was authentic and characteristic of black creation, the form survived and continued to thrive in the works of James Cleveland (1931–1991) and others, providing further demonstration of the eclectic arrangement of language in African American literary forms.

Spirituals also had a direct influence on blues lyrics. Described by James Cone as a secular spiritual—even when Robert Johnson (1911–1938) is lamenting a “hellhound on [his] trail” or W. C. Handy (1873–1958), the father of the blues, wrote about them in “Beale Street Blues”—blues forms served a functional role. They were created and performed in a ritualistic way to affirm the essential worth of black humanity. And in the case of Johnson and

his mysterious death at the crossroads, a background myth supports the religious elements. In *Stomping the Blues* (1976), Albert Murray makes a case for the ways in which the blues, in composition and performance, complemented existing religious forms of worship but contributed an additional element that more completely described the reality of black life. While one would still get up for church on Sunday morning and face the tedium of work on Monday, on Saturday night juke joints replaced churches and the blues substituted for hymns. It is the aspect of affirmation that connects blues theologically with spirituals: to preserve black humanity through ritual and drama and to transform—if only temporarily—existence. James Cone's *The Spiritual and the Blues* (1972) articulates the ways in which theological principles are iterated in secular forms of black cultural production. As he states, the blues are not *about* but *are* the essence of the black experience. As such the blues have become an idiomatic element in African American cultural production that combines art and life, the symbolic with the real, matter with spirit. The blues are an artistic response to the chaos of life that, although temporary and not directed toward salvation or an eternal reward, helps one cope and find meaning in an otherwise overwhelming set of circumstances. Furthermore, because “you’ve got to pay your dues to play the blues,” accompanying any invocation of the blues is a stamp of authenticity, a proclamation that what is being preached is true. Since disbelieving northerners challenged the veracity of slaves’ accounts of their experience, authenticity (or “keeping it real,” in modern parlance) has been an ongoing value in black cultural production.

Folklore

Although the institutional black church grew in visibility and influence, coincident to this development were the ways in which religious feelings and perspectives were expressed in black communities as a folk tradition. This is where the African, Christian, and other elements combined and where much of the retained religious feeling and lore resided. Following emancipation, communities dispersed and the church ceased to have such an all-encompassing function. Furthermore, African Americans could finally speak in realistic terms of their desire for more secular goals such as material success, integration, or migration north for new opportunities.

Since the beginnings of their literary production, African Americans have saved religious traditions and spiritual folkways and applied them for aesthetic pleasure. The

early appearance of Africanisms notwithstanding, nontraditional forms of black religious life begin to appear in the literary canon when Zora Neale Hurston (1891–1960) and others introduce an appreciation of the oral tradition sustained in folklore. Hurston bears the distinction of being among the first to preserve the spiritual expressions of black life that appear in more secular forms such as work songs and folktales. As gathered in *Mules and Men* (1928), *Tell My Horse* (1937), and *The Sanctified Church*, a collection of essays from the 1920s and 1930s, folklore and customs illustrate how religious ideas and practices endured and emerged from the experience of slavery. Principles of black folklore assigned by Hurston include the spiritual dimensions of identity formation and community building. Stories told by the folk in a signifying and competitive performance were often adaptations of biblical stories or original stories peopled with biblical figures. And because God “never finds fault with or censures the Negro,” God is portrayed in human terms that relate to their own experience, and “the apostles walked and talked like section hands.”

Additionally, the principle of applying to life and storytelling “the will to adorn,” as observed by Hurston, dignifies the creative and spiritual impulse in whatever form it takes and links the aesthetic and theological in a harmonious act of cultural production. James Weldon Johnson, who with his brother, J. Rosamond, is credited with saving and introducing to the public many of the spirituals, also wrote one of the most memorable sequences of African American poetry that illustrates the power of folkways to preserve traditions, build community, and sustain hope. *God’s Trombones: Seven Negro Sermons in Verse* (1927) elevates the African American sermon to the level of lyric poetry while at the same time, in “The Creation,” painting a picture of life’s origins and the maker God as unmistakably black. A similar effect is achieved by Langston Hughes in *Tambourines to Glory* (1949).

By the creation of heroes with extraordinary and often mystical abilities but who resemble ordinary people, such as High John the Conqueror, folktales underscore the collaborative quality of creation—between artist, community, and Creator—revealed in earlier aesthetic forms that also project a sense of religion that does not crush the individual but encourages originality. Also consistent with the past, storytelling sessions were public ritual performances that alluded to biblical incidents and folktales to project moral lessons that show virtue rewarded or greed punished, consistent with conventional Christian doctrine.

While folktales exhibited the characteristics of call and response and improvisation, they were also a ritual response to reality. In one creation story related by Hurston, “How Black People Became Black,” the condition of black skin that leads to discrimination is explained by exploiting stereotypes of presumed African American laziness and greed, thereby using humor to soothe lingering hurts and to diminish facts of life that could otherwise be overwhelming. Related to the use of humor is the introduction of a trickster figure, derived from West African tales such as that of “Anansi, the Spider” and reconfigured in black folklore as the devil or, most memorably, as Brer Rabbit. As with conjure, the trickster provides an example of spiritual power that is available to people often cut off from traditional forms of power. Through wits and craft one can change one’s reality or heal the indignities of life in a racist culture. Finally, as set forth in many African religious systems and aesthetic forms, where the goal of life is balance and harmony, African American folklore adopts religious doctrines that are at once realistic and hopeful: “God don’t like ugly and he ain’t stuck on pretty”; “God may not come when you want him but he’s right on time.”

The ongoing influence of folk beliefs and practices can be seen in twentieth-century fiction. Hoodoo and other forms of sympathetic magic and spirit possession, as well as African-derived religious practices such as Rastafarianism, Santería, and Vodun, appear in a variety of works, including *Mumbo Jumbo* (1972) by Ishmael Reed, *Damballah* (1981) by John Edgar Wideman, *Sassafras and Cypress and Indigo* (1982) by Ntozake Shange, *Mama Day* (1988) by Gloria Naylor, *Dessa Rose* (1986) by Shirley Anne Williams, and *Temple of My Familiar* (1989) by Alice Walker. References to folk spiritual practices and beliefs, however, can be found as early as 1936, in *Black Thunder* by Arna Bontemps, and in Ann Petry’s novel *The Street* (1946). Yet it was Alice Walker’s epistolary novel *The Color Purple* (1982) that had a singularly compelling impact on the perception and expression of a black theology rooted in folk forms. It later influenced the theology of *womanists* such as Emilie Townes and Katie Cannon, who adopted for their female-centric liberation theology the term coined by Walker and creatively embodied in the novel.

The Harlem Renaissance and the Black Arts Movement

The way in which Hurston drew attention to the African American cultural tradition as providing a means for survival and forms of creativity also underscores how religious

attitudes and values are conditioned by culture and, in turn, sustain culture. Ever evolving value systems and ethical practices that emerge from folk traditions challenged accommodationism and materialism and reinforced the self-affirming, ethnocentric qualities of black religion and spiritual identity. Hurston, however, represented more than a southern folk revival. By proximity and patronage she is linked to Harlem, the site of a great cultural movement that emerged in the 1920s. The Harlem Renaissance was the first organized attempt to initiate a cultural movement after slavery, and it is associated with some of the legendary figures of African American literature, including Richard Wright and Langston Hughes. Part of the cultural revival involved the development of new religious belief systems that performed a function similar to folklore and that both inspired and brought forth a creative output. For example, the movement led by Father Divine is cited as the source for Ras the Destroyer in Ralph Ellison’s *Invisible Man*. The Nation of Islam is prominent in the works of Amiri Baraka (1934–), and Sonia Sanchez (1934–), and, of course, Malcolm X, or el-Hajj Malik el-Shabazz (1925–1965).

The Black Arts movement of the late 1960s promoted the repudiation of European bases for aesthetics, including Judeo-Christian forms, which Larry Neal (1937–1981), a poet and leading theorist of the movement, viewed as old spirituality. African American writing and, indeed, life were in need of new spirituality specific to the black experience, which frequently sees the world from the perspective of the oppressed. Often associated with the Black Power political movement, in many respects this cultural movement was a spiritual antecedent of liberation theology, which rooted divine power in black power. Less esoteric and more mainstream was the quest for ancestors highlighted by Alex Haley’s *Roots* (1976), which inspired a phenomenon of recovery of the past, both spiritually and historically, on the part of individuals and families.

Conclusion

Hurston’s novel *Their Eyes Were Watching God* (1937) may be the defining literary text in illustrating the unique relationship between religion and literature in African American culture. The novel is not conventionally religious in any sense, and its protagonist, Janie, is far from conventional or pious. But throughout the story of her search for love and identity, both qualities are linked to a spiritual source that goes back to the origins of African American religiosity. She awakens to spiritual possibility through an appreciation of God’s creation; later that joy will be tempered with

humility when she faces the dangerous aspects of natural power. But through her intimate identification with divinity through nature, or her beloved Tea Cake, whom she describes as having “the keys to the Kingdom,” Janie envisions a kingdom of God that in its simplicity and sincerity embodies the truth of the beatitudes: that the last shall be first, that the spiritual has more value than the material, and that what is blessed is not always found in a sanctified setting. Most important, perhaps, for a traditionally marginalized community is the sense of accountability expected by the people from their God. While God’s eyes may always be on the people and God’s intervention in human affairs may be possible, the people’s eyes are watching God. This secular presentation of a scenario of black life affirms the sacred grounding and the African origins of cultural production by African Americans. It defines the relationship between the individual and society and delineates the differences between civic and private responsibilities. It elevates the originality of the individual but only in the context of a community of kin. And it shows how that which serves a practical function—for example, the everyday use of a quilt—can also be a source of creative delight, spiritual edification, and an occasion to affirm the sacred origins of African Americans.

If Hurston’s novel serves as the creative symbol of the relationship between African American religion and literature, the work of Nathan A. Scott Jr. (1925–2006) represents the theoretical tradition of theological interpretation of the sacred literary output. More than any other African American of his generation, Scott—an ordained Episcopal priest with a PhD in literature—lived and wrote on the boundary between religion and literature: between the sacred and the secular, ancient and modern, theology and culture, and the church and the academy. He wrote eloquently about the religious dimensions of African American literature when, in 1979, he contributed the essay “Black Literature” to *The Harvard Guide to Contemporary American Writing*. In it he credits African American writers with a sacred purpose, to move their “own people toward a deeper understanding of themselves.” He also encourages them, as rhetoricians, to be “agent[s] of self-discovery for the nation at large,” to assent to the belief that it is “within the power of a disciplined language to alter consciousness and thus redeem the human reality.” As a sacred act literary production that upholds the relationship between religion and literature in African American culture is both ontological and teleological: it demonstrates a way of life and a reason to live.

Literature: Colonial

The bookends defining literary periods are negotiable. Many believe that the colonial period in American literature begins with the founding of Jamestown in 1607 and extends beyond Thomas Jefferson’s (1743–1826) explosive Declaration of Independence in 1776, when American political identity shifted outside the purview of British control, even though that identity remained in flux.

Colonial writings are multihued and include the oral traditions of native peoples, sermons and theological treatises, secular memoirs and spiritual autobiographies, lyric poems and captivity narratives, political pamphlets

and chronicles of the struggles and successes of the colonies. Many pieces are deeply introspective. Early colonial literature reveals hearts infused with the Puritan Calvinist vigilance for determining evidence of God's election to salvation, the ambiguous realities of being "in the world, but not of it," and the desire to identify America with ancient Israel, as God's chosen nation. These themes pulsate in American literature in some form well into the nineteenth century, but later colonial literature, influenced by the intellectual surges of the European Enlightenment, emphasized the rationalist and deist impulses reflected in the philosophy of John Locke and the mechanistic universe of Sir Isaac Newton.

Conformity and Community

William Bradford (1590–1657) begins his chronicle *Of Plymouth Plantation, 1620–1647* by reflecting on Satan's desire throughout history to persecute the faithful saints of the Christian church. Bradford's Calvinism emerges as a crisis theology, as the faithful persevere against a tide of enemies, both within the community and outside of it.

Just as biblical prophets document the struggles of ancient Israel, so Bradford chronicles the pattern of apostasy and belief in the new community. *Of Plymouth Plantation* moves steadily from an account of hope to one of despair and admonition. Where Jeremiah and Isaiah write about the captivity of Israel following the Babylonian invasion, Bradford writes about a captive Plymouth that has turned away from its first love. The elegiac tone culminates in the 1642 chapter "Wickedness Breaks Forth." Bradford struggles to comprehend how the godly community, now well into its second generation since coming to America, has degenerated into scandal, drunkenness, sodomy, and buggery. Bradford names one offender, Thomas Granger, who after being discovered in a compromising situation, confessed to buggery with "a mare, a cow, two goats, five sheep, two calves, and a turkey." In compliance with the law against bestiality in Leviticus 20, Granger was executed. Bradford begins to rationalize the presence of such horrific actions within the godly community: where God sows good seed, there will also be tares; while the godly are busy with industry, their servants are engaged in wickedness; while Moses dealt with a "mixed multitude" who fled from Egypt, so must Bradford. To trump this spiritual failure, the following chapter celebrates the first generation's Reverend Elder William Brewster, who exemplified devotion and service to God. The obituary culminates in Bradford's reflecting on the shared

tribulations of the first generation that drove them to rely on God. *Of Plymouth Plantation* ends abruptly in 1647; there are no entries for 1648, but in the manuscript two blank leaves are inserted, followed by a listing of the original members of the *Mayflower* who founded Plymouth Plantation. These names perhaps serve in Bradford's mind as a "saving remnant," both a despairing reminder of human promise and frailty and as an encouragement to the next generation to seek God's Providence.

Governor John Winthrop (1588–1649) of Massachusetts Bay Colony also sought to find signs of God's favor upon the colony's endeavors, struggled to enforce conformity, and worked to stamp out heterodoxy. An early entry in his *Journal* (July 5, 1632) relates an incident in which several colonists witnessed a battle for survival between a mouse and a snake, in which the mouse killed the snake. One Boston pastor interpreted it as an allegory of the victory of God's meek saints over the great serpent himself. For the years 1636–1638, his *Journal* records the community's increasingly troubling confrontations with Anne Hutchinson (1591–1643), whom many viewed as a serpent in the mouse's nest. When Hutchinson was brought before the General Court in Boston in 1637, a split in the Bay Colony was already evident. On one side were those who advocated Puritan covenant theology in which one's spiritual works served as the fruits and signs of election. On the other were a growing number of New Englanders such as Anne Hutchinson who subscribed to the notion of "free grace" and the authority of the spirit. These "antinomians" held that personal revelation and the inner workings of the spirit, not works performed under the law, signaled one's salvation. Hutchinson's friend and ally, the contentious Roger Williams (1603–1683), often credited with founding the first Baptist church in America, wrote several minor poems that questioned the ease with which the "visible" saint could be discerned. In one poem Williams admonishes his fellow puritans, "Boast not proud *E[n]glish*, of thy birth and blood, / Thy brother *Indian* is by birth as Good," which is to argue a shared natural condition deserving wrath "Till Grace *his* soule and *thine* in Christ restore" (1–2, 6). Williams then asserts a possibility that would have scandalized many Bay Puritans: "Make sure thy second birth, else thou shalt see, / Heaven ope to *Indians* wild, but shut to thee" (7–8). Banished from Massachusetts Bay in 1635, Williams secured a charter for the colony of Rhode Island in 1644. His crackling *Bloudy Tenent of Persecution* (1644) is an imaginary dialogue between Truth and Peace that argues for toleration and the liberty of

conscience. Like the obstinate Williams, Hutchinson was excommunicated and banished in March 1638, and Winthrop comments that it only renewed her energies.

Encounters with Natives and Witches

Hutchinson and Williams presented a threat to doctrinal unity, but Indians threatened communal survival. Mary White Rowlandson (c. 1635–c. 1678) records her eleven-week captivity among the Narragansett Indians that dramatically confirms the workings of divine grace in a blend between spiritual autobiography, travelogue, and narrative of cultural assimilation. She begins her account with the sudden attack in February 1676; within hours, her house had been set on fire, and several neighbors and members of her extended family had been killed: “Thus, were we butchered by those merciless heathen, standing amazed, with the blood running down to our heels.” In the narrative’s Third Remove, Rowlandson comments that several days of travel to the Indian camp reminded her of how derelict she had been “of God’s holy time, how many Sabbaths I had lost and misspent and how evilly I had walked in God’s sight.” God had every right to punish her, cast her from his presence, or kill her, she admits, but though he “wounded me with one hand, so He healed me with the other.” Her ordeal provided time for the introspective self-examination fueling seventeenth-century Puritan culture. Even though she witnesses the dire straits of the Indians themselves, she notes how God’s strange Providence preserves and provides for them, and ultimately strengthens them “to be a scourge to His people.”

Throughout, Rowlandson interweaves verses from the Bible as a way of maintaining identity and making sense of her various trials. Like many Puritans, she read the Bible experientially, as readers identify with characters or situations. In her own exile, she echoes the lament of Israel in Babylon in Psalm 137; she is the aged Israel of Genesis 42:36 wailing for Benjamin; she is the prodigal of Luke 15 returning to her father in repentance; she is Job who has lost everything and does not understand the cause; she is the Hebrew slave fleeing the captivity of Pharaoh in Exodus 14:13; and, finally, she is the one whom God loves, for her affliction is evidence of God’s favor, as the writer of Hebrews 12:6 confirms.

Rowlandson graphically articulates the widespread fear of Native Americans that colonists felt. There are moments of identification with her captors, but these are fleeting, and the reader is left with her overall impression of their

savagery and the lingering external threat posed to the community. The Puritan minister Cotton Mather (1663–1728) collected miscellaneous captivity narratives and anecdotes in his massive *Magnalia Christi Americana; or, the Ecclesiastical History of New England* (1702) to demonstrate God’s preservation of his people in the new wilderness. Other narratives, such as Quentin Stockwell’s more secular *Relation of his Captivity* (1677), were preserved, edited, and heavily annotated with a Puritan focus by the elder Increase Mather (1639–1723) in *An Essay for the Recording of Illustrious Providences* (1684).

By the end of the century another insidious enemy arose just as the communal pressures of conformity, orthodoxy, and stability reached critical mass. Increase and Cotton Mather grappled with what was then perceived as the most sinister internal threat at Massachusetts Bay: witchcraft. The hysteria in Salem in 1691–1693 is not easily accounted for, but the witch trials made clear that even if there were no *de facto* witches at Salem, there was a rhetorical need for them as a catalyst for reanimating spiritual devotion and strengthening communal ties. The paranoia in Massachusetts began as several young women fell into unexplainable “fits”; when physical causes could not be ascertained, metaphysical causes were suspected. Several young girls from the colony and a West Indian slave named Tituba confessed to midnight dealings in the forest with the devil, whom many described as resembling a “black man” or an “Indian.” By 1693 some 150 citizens had been jailed; 29 of these were convicted on capital charges; 19 persons were hanged, and 1 was pressed to death. George Burroughs, once a minister in Salem, was charged as the ringleader and was executed; no one, it seems, could be trusted.

Cotton Mather’s *Wonders of the Invisible World* (1692), his chronicle of five of the trials, reasons that the presence of witches bears testimony that the devil grew “exceedingly disturbed” by the righteous workings of the colony. Despite his confidence in the colony’s providential favor, the younger Mather fears that because an “army of devils is horribly broke in upon the place which is the center . . . the first-born of our English settlements,” their sinister designs would spread uncontrollably to neighboring communities, and eventually would amount to “no less than a sort of dissolution upon the world.” Mather’s heightened language to describe the affliction of the colony also resonates with anticipation of Christ’s imminent return as a new century approaches, a millenarianism that his father, Increase, had preached to an earlier generation in *The Mystery of Israel’s*

Salvation (1667). Such an apocalyptic vision is also described in Michael Wigglesworth's (1631–1705) long poem *The Day of Doom* (1662), which sold 1,800 copies in the first year and became standard fare for New England school children learning their catechism and the doctrinal lessons of the *Bay Psalm Book* (1640) and the *New-England Primer* (1685).

Evidence for charging someone with practicing witchcraft was sketchy. At Salem that evidence included strange behavior or apparent healing powers, the unexplained appearance of “spectral” forms of the accused in odd or multiple places, the presence of a witch’s “teat” on the accused that was believed to be used to suckle a familiar or personal demon, and, remarkably, outright confessions of guilt. Of the latter, Mather states that twenty confessed to signing their names in the devil’s book. But outright confession was the quickest way to be exonerated and perhaps the strongest evidence of true conversion. No doubt a few villagers took opportunity to bring up old quarrels with their neighbors as evidence against the accused. Increase Mather and several other Boston ministers were vocal in their caution and opposition to the witch trials.

Conversion and Spiritual Autobiography

The colonies’ financial, communal, and spiritual successes and failures are reflected more minutely in personal conversion narratives, or spiritual autobiographies. The genre emerges in connection with church membership. If the church minister and elders determined an individual’s grace experience to be genuine, they then extended full church membership. Many scholars have identified a pattern of linear “movements” in the genre of spiritual autobiography: knowledge of sinfulness, a time of preparation (often including physical illness), spiritual conviction and faith, doubt and despair, and, finally, true assurance. Gradually, the spiritual vicissitudes of autobiography in the seventeenth century gave way to more secular concerns in the eighteenth century, as in the *Diary* of Samuel Sewall (1652–1730) and the *Autobiography* of Benjamin Franklin (1706–1790).

Winthrop’s own *Christian Experience* (1637) fits the linear mold of spiritual autobiography. Spiritual autobiographies such as Winthrop’s consistently speak of the old/new life of the individual, typologically identified with Paul’s distinction between Adam as the “old man” and Christ as the “new man” (Romans 5–6; Colossians 3). A season of physical sickness functions for Winthrop as an external signifier of internal spiritual sickness; the crucible of pain awakens the

possibility of death, and with it, the anxieties of separation from God. The conviction of his sin leads Winthrop to a new life of devotion, but one characterized by outward legalism that subsequently leads him back to despair. On the verge of publically proclaiming himself a hypocrite, he experiences the spiritual epiphany of complete wretchedness, a primary tenet of Calvinism. After suffering doubt and defeat, Winthrop bloomed into the assurance of God’s mercy and love.

Similar patterns emerge in the spiritual autobiography of Jonathan Edwards (1703–1758), the dominant figure of New England’s “Great Awakening.” This cultural movement was a Calvinist spiritual revival in the middle decades of the eighteenth century. Edwards relates its varieties and imaginative trajectories in a lengthy letter to the Reverend Benjamin Colman of Boston, titled “A Faithful Narrative of the Surprising Work of God” (1735). Although Edwards was determined to show the ways in which “the light breaks through the cloud, and doubting and darkness soon vanish away,” he did not always possess such confidence, as he acknowledges in his *Personal Narrative* of conversion, written in 1739 and published posthumously in 1765. Edwards narrates that as a boy he was deeply struck with religious affections and duties, but, as the years passed, he became increasingly infused with doubt as those passions faded. At Yale he fell sick, and the experience caused him to make seeking for salvation “the main business of my life.” In January 1722 Edwards formalized his conversion by committing to paper his vows to God. Some of these vows emerge in his list of seventy holy *Resolutions* (composed 1723–1724) for daily living. The rest of Edwards’s *Narrative* relates his discovery of God’s holiness and the depths of his own wickedness. The character that emerges from its pages is of a mind restlessly turning over profound questions, of a life desperate in its love for God, and of a heart suffused with great movements of passion in a century given to the rationalist program.

Edwards was no enthusiast, however, and one need only read his works on philosophical theology, such as his *Treatise Concerning Religious Affections* (1746), or his painstaking *Careful and Strict Enquiry into the Modern Prevailing Notions of that Freedom of Will* (1754), to see that he is firmly rooted in the Enlightenment. But his extant sermons demonstrate his keen ability to tap into the dynamic emotional lives of his parishioners to guide them to conversion. His most famous sermon, *Sinners in the Hands of an Angry God* (July 8, 1741), is an attempt to shock congregants out of their spiritual

complacency. One must not view this sermon as wholly representative of Edwards's preaching or writing, but as the rhetorical instrument that hammers into his congregants' hearts the assertion that God's will and pleasure defy human attempts at understanding his plans for salvation. Influenced by the natural discoveries made by the Royal Society, Edwards infuses the sermon with vivid images drawn from nature: sinners are compared to chaff spinning in the whirlwind of God's wrath, spiders dangling over a fire, prey that are about to be devoured by the serpent, and reeds or branches breaking by the flood—all with a view to impressing a sense of spiritual urgency.

For Elizabeth Ashbridge (1713–1755), conversion from the Church of England to Quakerism unleashed the mockery and wrath of her husband. Ashbridge's *Some Account of the Fore-Part of the Life of Elizabeth Ashbridge . . . Wrote by Herself* (published in 1774) is a fascinating glimpse into the multivalent social attitudes toward religion and its various communities in colonial New England. Ashbridge recounts coming into Pennsylvania to visit relatives, all of whom were Quakers. Many, both dissenters and Anglicans, saw the Quakers as a dangerous fringe group—antinomians run amok, who disregarded civil and ecclesial authorities, extended preaching privileges to women, and exalted the whimsical moving of the spirit (called the Inner Light) more than the scriptures. Ashbridge confesses her prejudice against the sect, preferring the hated “papists” to the Quakers, and expresses her “mortification” on learning that her relations followed the sect's teachings.

But throughout the *Account*, Ashbridge describes herself as having the heart of a spiritual seeker. After one service when she falls asleep and nearly falls down, she vows never to reenter the meetinghouse. Later, however, she hears the preaching of William Hammans. He convinces her that the sacraments and rituals of the Church of England are empty now that Christ is come in full righteousness to live in the believer. She converts and sends for her husband without telling him of her news; before he arrives, however, he learns about her new faith. Thereafter, she suffers ridicule, beatings, and separation from her husband, and patiently endures censure from her former Anglican minister. Even after her husband's death, she does not retaliate in the *Account*, declaring that although “he was so bad, I never thought him the worst of men,” and blesses God for giving her the strength to persevere as a wife and a widow. Ashbridge's quiet submission to her cruel husband can be understood within the patriarchal social structures that were oppressive to many eighteenth-century women. Alternately,

however, one might read her narrative against the grain and say that her converting to Quakerism and submitting to the mysterious Inner Light gave her an authority that these power structures feared. Because she was exalted by God, Ashbridge found her debasement by humans paradoxically empowered her, rendering her radically available to be used by the Holy Spirit.

The *Journal* of another Quaker, John Woolman (1720–1772), also demonstrates an awareness of larger social concerns while still remaining a narrative about conversion. As a young man, Woolman earned his living as a tailor and later became an itinerant preacher for abolition. Unlike many Puritan accounts, Woolman's *Journal* is less occupied with determining evidence of salvation and more concerned with documenting his eventual giving over to the radical authority of the Inner Light. Key to understanding this submission is Woolman's emerging awareness of the moral and social evils multiplied through the institution of slavery. Initially, Woolman makes small changes in his tailoring business. Even though the expensively dyed garments were the principle sources of his profits, he became convinced that selling them committed a violence against the free man and the slave alike, who must burden themselves on behalf of someone else's vanity. Woolman's skill in drawing up legal documents also contributed to the cause of abolition, as he refused to draft the wills of fellow Friends who desired their slaves to be transferred as property.

A prominent African voice opposing the slave trade was that of Olaudah Equiano (1745–1797). *The Interesting Narrative of the Life of Olaudah Equiano* (1789) provides the template for many later slave narratives and autobiographies and chronicles his terrifying experiences during the Middle Passage and his life as a slave. During the transatlantic voyage, he marvels at the “magic” of the operations of the sailing ship, as well as the cruelty of his white captors, whom he thought were evil spirits set on devouring him. When he arrives in Virginia, he describes his debilitating sense of alienation. Without a common culture or language among them, slaves were more easily controlled, were more focused workers, and were more dependent subjects. Without common language, genuine community was nearly impossible. Equiano narrates his desire to wash off his blackness in order to be like a young white playmate. In another episode, he relates his growing paranoia when the eyes in a portrait appear to follow him whenever he enters the room.

The thrust of his narrative, as he describes in a prefatory letter to the British Parliament, was to make state dignitaries

aware of the horrors of the slave trade. One of the ways that Equiano establishes his credentials, and his humanity in the eyes of white culture, is through the rhetoric of conversion and the guidance of Providence throughout his life. Providence protects him from death after he plunges from the upper deck of a ship; Providence guides him when he is educated by a kind master; Providence provides money and circumstance in his securing his freedom; Providence heals him during a prolonged illness and saves him from a shipwreck. White slave culture consistently denied that Africans had souls or asserted that they were too brutish to understand Christianity's doctrines. Not only does Equiano present himself as an African with a soul, but he is an African with a soul predestined for salvation, and an African with a divinely inspired mission to ban the slave trade. Equiano's autobiography becomes more than a conversion narrative; like Woolman's account, Equiano's narrative blurs into the literature of social protest and political reform.

Spiritual Struggle and Devotional Verse

Like spiritual autobiography, colonial American devotional verse contained all the dramatic elements of temptation and doubt, introspection, spiritual failure, and grace assurance. America's first great poet, Anne Bradstreet (1612–1672), travelled with Winthrop's party aboard the flagship *Arbella* to Massachusetts Bay. Before disembarking, she heard Winthrop preach *A Model of Christian Charity* (1630), wherein America is envisioned as the "city upon a hill." Bradstreet was self-conscious about her writing, as she confesses in the *Prologue* to her book of poems *The Tenth Muse Lately Sprung Up in America* (1650). In "The Author to Her Book," she meekly calls her book the "ill-form'd offspring of my feeble brain" and the "rambling brat" that is "unfit for light" (1, 8–9). The revised but posthumous second edition of *The Tenth Muse*, retitled *Several Poems* (1678), contains the poems that form the core of her poetic reputation. "As Weary Pilgrim, Now at Rest" dwells on natural images that are emblematic of human suffering; storms, stony paths, a blazing sun, and briars and thorns no longer afflict the pilgrim who has gone to his death. As a fellow traveler who is vexed by sorrow, pain, and a "Clay house mouldring away" (19–22), Bradstreet looks toward her own resurrection when Christ returns. In "The Flesh and the Spirit," flesh and spirit are described as two sisters who contend for prominence. Spirit winningly trumps, "My garments are not silk nor gold, / Nor such like trash which Earth doth hold, / But Royal Robes I shall have on, /

More glorious than the glist'ring Sun" (79–82). These poems seem straightforward declarations of the poet's resolve toward the life to come.

A similar resignation exists in the poems commemorating the deaths of her grandchildren, Elizabeth (d. 1665) and Simon (d. 1669). "In memory of my dear grand-child Elizabeth" questions why the poet should "bewail thy fate" because Elizabeth is now "settled in an Everlasting state" (5, 7). Death is part of the natural order, and God possesses the solitary hand "that guides nature and fate" (14). Yet the reader confronts the repeated "Farewel" in the first three lines that address the "dear babe," "sweet babe," and "fair flower" who has departed. Elizabeth was "my hearts too much content" and the "pleasure of mine eye" (1–2), and a tone of grief pervades for the earthly pleasures of a presence no longer to be enjoyed. In her poem commemorating the death of Simon, Bradstreet writes that even though Elizabeth, Simon, and their sister Anne have all been "Cropt by the Almighty's hand; yet is he good," for when Christ returns he will "make up all our losses" (4, 9). But the poem continues, "Let's say he's merciful as well as just" (8), an ambiguous statement that belies the poet's struggle to come to terms with God's goodness. Furthermore, both of these poems are emblems of Bradstreet's conviction that this world is worth remembering and preserving. Bradstreet's poems demonstrate an investment in the world even as she eschews it. Similar spiritual ambiguity can be found in "To My Dear and Loving Husband," "A Letter to Her Husband, Absent upon Publick Employment," and "Upon the burning of our House, July 10th, 1666."

America's other major poet of the seventeenth century was Edward Taylor (1642–1729). His sizable personal library contained a single volume of poetry: Bradstreet's 1678 *Several Poems*. Despite his prodigious body of work, the only poetry published in his lifetime were a few stanzas from "Upon Wedlock, & Death of Children," a moving elegy written to memorialize the infant deaths of five of his eight children by his first wife, Elizabeth Fitch. Taylor's other occasional verses include love poems, paraphrases of the Psalms, and meditations on the natural world. "Upon a Spider Catching a Fly" is an allegorical poem that likens a spider's web to hell's "stratagem" (37), which are woven as "Cords" and "nets" to "tangle Adams race" (33–34, 36). Taylor pleads that God's grace would be the instrument to "breake the Cord" (43). In "Huswifery" Taylor prays that he would be made into God's "Spinning Wheele compleate" (1), with the wheel's various mechanic components and the

thread likened to Taylor's emotions, soul, understanding, and will transformed by the spirit and the Word. "The Ebb and Flow" is a meditation on his lackluster devotion, wherein he expresses his anxiety that his devotional fire is nothing more than "a mocking Ignis Fatuus" (14), a false fire. Yet this doubt is transformed into a favorable sign of election, for when his "ashes" are blown away, "thy fire doth glow" (18). *God's Determinations Touching His Elect . . .* (c. 1680) contains thirty-five sequential poems that follow the arc of creation, fall, and redemption in the epic struggle for a person's soul. In "The Souls Groan to Christ for Succor," Taylor confesses the justice of his condemnation, only to be answered in the next poem, "Christ's Reply," with addresses of "my Hony," "My Little Darling," "my Dove," and "my Love" (1–4). This conversational structure governs this entire series of poems. These are public poems, but Taylor's poetic reputation firmly resides in his private *Preparatory Meditations*, poems on the Lord's Supper written over the course of forty-three years, which suggests that Taylor approached the composition of these poems as a spiritual exercise. In *Meditation 1.1*, which sets the tone for all the poems that follow, Taylor marvels at the Incarnation—the event wherein God demonstrates his "Matchless Love! Filling Heaven to the brim!" and "Overflowing Hell" (7, 9). Yet in the last six lines, God's abundant love is unrequited by Taylor's "Lifeless Sparke," "Fireless Flame," and "Chilly Love, and Cold" (15–16). Like so many of the *Meditations*, this poem ends with Taylor's desire for God's complete mastery over an unfaithful desire through grace.

Deity and Enlightened Revolution

Devotional literature faded by the mid-eighteenth century as colonial authors consistently invoke the God of deism: not the personal God of the Puritans, but a God who is the great clockmaker of the universe. This distant God creates by design, governs justly and benevolently through universal moral laws and observable natural laws, and is most discernible through rationality rather than through private revelation or the rites of the church.

Note this deist impulse in Jefferson's phrasing in the *Declaration of Independence*: "We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." Truth is not privately "revealed," but is communal and discoverable through observation. By "equal" Jefferson means that the Creator has endowed all humanity with

their highest capacity: to behold moral truth and to exercise virtue. These two ideals are upheld late in Jefferson's life when he compiled his *Life and Morals of Jesus of Nazareth* (c. 1817), a gospel that Jefferson wove together from Jesus' teachings. All that survives of this document is his listing of the biblical texts to be included. True to the Enlightenment, he avoids the miracles, including the Virgin Birth and the Resurrection; moreover, he elides nearly all the gospel of John, which portrays the most theologically confrontational Jesus of the four gospels. Instead, Jefferson's gospel records the life and parabolic teachings of a historical—though mortal—man.

Deist sympathies are more explicit in the *Letters to an American Farmer* of James Hector St. John de Crèvecoeur (1735–1813), written during the 1770s and published in 1782. In these twelve letters, Crèvecoeur speculates on what it means to be "American," praises self-interest, reflects on political and moral dilemmas, and confesses divided loyalties between Britain and the colonies. Unlike the pressures to conform and the compulsory tithes in the Church of England, organized religion in America demands only a heart full of gratitude to the Creator, as he describes in Letter III. In Letter XII, he fantasizes about fleeing the contradictions of the Revolution to live with the Indians. Unlike the earlier savage portraits of the Native Americans, Crèvecoeur's farmer is generous and emphasizes his holding the values that deism celebrates: Indians seemingly have no laws, but understand justice; they have no temples or priests, nor religious doctrine, but display reverence for the Creation and the Supreme Being. Should he retreat to their community, the farmer would continue to instruct his family in religion, but would only teach the Decalogue—God's commandments given to Moses that have universal application. While the Puritans of the previous century had consistently looked to the biblical past, Crèvecoeur's farmer persona looks to the future.

Benjamin Franklin (1706–1790) shared Crèvecoeur's optimism. Unlike the Puritans, Franklin comprehended his life according to the operations of reason, the industriousness of the self, and the personal "errata" that interfere, as he describes it in the *Autobiography*. Franklin wrote the *Autobiography* as letters to his son at different times in his life (1771, 1784, and 1788), and he implicitly offers himself up for imitation—a self-made American man, the youngest son of a youngest son. As a young man Franklin read the skeptical works of the third Earl of Shaftesbury (1671–1713) and Anthony Collins (1676–1729), which led him to become a "real Doubter in many Points of our Religious Doctrine"

(18). He subsequently published several treatises on deism: *A Dissertation on Liberty and Necessity, Pleasure and Pain* (1725), *Articles of Belief and Acts of Religion* (1728), and *On the Providence of God in the Government of the World* (1730). His *Articles of Belief* is an alternate liturgy that Franklin states he practiced alone instead of attending religious services. While agreeing that Sunday services were important, he found that preachers were engaged in polemics or the explication of dogma, rather than encouraging human beings to be better human beings.

Like Jonathan Edwards, Franklin also wrote a list of resolutions, from which he derived a “bold and arduous Project of arriving at moral Perfection.” Edwards would have been scandalized at such a goal, and Franklin sought to practice thirteen secular virtues. While Edwards’s resolutions were for “Christ’s sake,” as he states in his preface, Franklin’s resolutions were for their own sake, as Franklin sought to become master of himself and shaper of his public persona. While Edwards confesses he is unable “to do anything without God’s help,” Franklin reasons that success is measured by the rational replacement of one habit with another. Throughout, Franklin makes himself the butt of jokes, and his attempt at moral perfection is no exception. Discouraged by his frequent failures, he relates a parable: A man came to the blacksmith wanting the whole of his axe to gleam as brightly as the edge. The smith tells the man to turn the wheels of the grinder. The man soon becomes fatigued and concludes (like Franklin), “I think I like a speckled Ax best.” Franklin reasons that a man of moral perfection would be the object of scorn and envy. A man who conducts business with the world ought to be benevolent but not perfect, so as to “keep his Friends in Countenance.” In Franklin’s world, the secular virtues celebrated by deism were second to utility.

The tenets of deism had rhetorical utility as well. As the Revolution unfolded, Thomas Paine (1737–1809) appealed to the deist God, the universal moral law, and the optimism in human rationality to justify the colonial break from Britain. In Part III of *Common Sense* (1776), he argues that America has long “made large sacrifices to superstition,” principal among them that Great Britain is a benevolent protector. For Paine, Britain’s insistence on being the “mother country” amounts to a “low papistical design” to enslave thinking minds. Reconciliation with Britain is not plausible, argues Paine, who quotes John Milton’s Satan in *Paradise Lost*: “For never can true reconcilment grow/ Where wounds of deadly hate have pierc’d so deep” (IV, 98–99). Britain’s repeated violations of justice strike a

chord against the “unextinguishable feelings for good and wise purposes” that the “Almighty hath implanted in us.” America’s cause is therefore a universal human cause: the fight against tyranny. In “The Crisis, No. 1” (December 23, 1776), Paine argues that God will not subject his people to destruction and tyranny if they have exhausted every means of avoiding war, nor has God “relinquished the government of the world, and given us up to the care of devils.” As Paine describes it, the colonies’ struggle is universal; the resulting order accompanying the final break will reflect the larger divine government of the universe.

One of the clearest articulations of deist philosophy is Paine’s treatise *The Age of Reason* (the first part published in 1794). The aim of the document is to separate rationally the superstitions and false theologies that have corrupted religion from the pure belief in one God, the duties owed to one’s neighbor, and the moral principles that lead to a liberated mind. Paine ardently asserts that “[m]y own mind is my own church.” The state too often wields religion as an “engine of power” that “serves the purpose of despotism.” If something is to be believed, argues Paine, it must be universally acceptable through rational “proof and evidence.” Like Jefferson, Paine agrees that Jesus was an extraordinary man whose teachings are surpassed by none, but to believe in his divinity, the Virgin birth, or his Resurrection transgresses that empiricist rule. What can be universally trusted, however, is the theology to be found in the “scripture called the Creation,” which no person can alter or deny. The book of nature transcends culture and language and is independent of the whims of a single mind. In nature a person can discern the attributes of the Creator: intelligence, generosity, wisdom, immutability, and goodness. Christianity distorts this vision of the Creator and offers a God who acts “like a passionate man, that killed his son, when he could not revenge himself any other way.” For Paine, this is not a God worthy of praise. His rejection of Christian doctrine is offered upon the altar of universal reason and moral truth, and he ends the treatise hopeful that the free exchange of ideas in matters of religion and government will “powerfully prevail.”

Had they met, William Bradford and Thomas Paine may have viewed one another with contempt. They did, however, share the same convictions that America is destined to be the guarantor of the liberty of conscience and that it is chosen by God as a nation of exceptional people. Bradford’s Puritan imagination and Paine’s myth of American exceptionalism are deeply ingrained, as the subsequent

generations in American literature grapple with their legacy.

Literature: Contemporary

At least two characteristics mark the post–World War II era in American literature. First, the threat of nuclear annihilation sparked by the dropping of atomic bombs in 1945 on two Japanese cities gave rise to uncertainty—if not outright anxiety—about the existence of metaphysical truths. This existential dread caused some writers to strengthen their belief in a divinity and others to qualify, question, or reject such belief. Second, the postwar era witnessed a broadening of the literary spectrum to include a greater number of nonwhite, non-Christian, and female perspectives. These two characteristics exhibit the extent to which the

collective American literary imagination has departed from its seventeenth-century Puritan origins.

The Christian Search for Meaning in Postwar America

Roman Catholicism: Robert Lowell and Flannery O'Connor

The gulf between America's Puritan origins and postwar angst is exemplified by the poet Robert Lowell (1917–1977). A descendant of famous Massachusetts Puritans (as well as poets James Russell Lowell and Amy Lowell), Lowell rejected his patrician Protestant upbringing and converted to Catholicism at age twenty-three. His disillusionment with Protestant theology in general and Puritanism in particular is captured in the poem “Jonathan Edwards in Western Massachusetts,” which declares outright that “Edwards's great millstone and rock / of hope has crumbled” (1–2). Lowell's poetry shows a deep brooding about Americans' spiritual moorings in an age of consumerism, conformity, and psychological isolation. In his confessional poem “Memories of West Street and Lepke,” Lowell juxtaposes his pacifist Catholicism with the spiritual numbness of the “tranquillized” 1950s. The embodiment of the new era is the lobotomized assassin Czar Lepke, who lives his life of incarceration “in sheepish calm” (49). Yet just as Lowell had abandoned Protestantism at an earlier moment in his life, he later became similarly disenchanting with Catholicism. In his poem “Beyond the Alps,” Lowell looks skeptically at the Vatican's decision to make Mary's heavenly assumption official dogma, asking, “Who believed this?” (23). The skepticism turns even darker as the poem invokes Mussolini, who sparked the same type of mass enthusiasm that dogmatizing Mary's assumption had. The poem leaves readers to wonder what, if anything, in the postwar world separates religious fervor from Mussolini's mob mentality.

Lowell's contemporary, Flannery O'Connor (1925–1964), retained her belief in Catholicism, though her two novels and thirty-two short stories are not without the ironies that characterize so much of postwar literature. At the heart of O'Connor's fiction is an ardent belief in the need for salvation, or if not for salvation, at least the spiritual revelations that can allow the free-willed individual the chance for grace. In so many of her stories, violence is a prerequisite for any change of heart. Her famous 1955 short story “A Good Man is Hard to Find” depicts an elderly woman, known simply as “the grandmother,” who converts

from petty selfishness to compassion—even showing love for the Misfit, who systematically kills members of her family. Echoing Dostoevsky's Grand Inquisitor, the Misfit justifies his murderous actions by explaining that because there is no way of knowing whether Christ is really divine, he does not feel limited by Christian threats of damnation. Although the story never proves the Misfit wrong on this point, the grief-stricken grandmother gestures toward the Christ-like love the Misfit eschews. In fact, her own need to touch him is what prompts him to shoot her just as she calls out, "Why you're one of my babies. You're one of my own children!"

An extended meditation on achieving grace through violence is found in O'Connor's 1952 novel *Wise Blood*. If the carnage of World War and the ensuing threat of nuclear annihilation are largely responsible for the existentialist turn in American literature, then Hazel Motes, the novel's protagonist, is in many respects the voice of his generation. Before leaving for the war, Hazel had every intention of becoming a preacher, just like his grandfather before him; but the war helped him to realize that he has no soul. Ironically, then, by determining that he does not have a soul, Hazel searches for salvation from damnation by simply not believing in damnation. His faith in no faith is tested by a number of charlatan preachers, and by the end of the novel, he has embraced the self-abnegation and mortification typical of martyred saints, even binding himself with barbed wire and walking with broken glass in his shoes. As with "A Good Man Is Hard to Find," *Wise Blood* suggests that both revelation and salvation are offered through suffering, and despite Hazel's earlier efforts, his grandfather's lesson would still ring true: "Jesus would have him in the end!"

White Protestantism: John Updike and Margaret Atwood

The white Protestant investigation of faith in postwar literature has perhaps its greatest articulation in the novels of John Updike (1932–2009), whose Rabbit series of four novels and one novella—*Rabbit Run* (1960), *Rabbit Redux* (1971), *Rabbit Is Rich* (1981), *Rabbit at Rest* (1990), and *Rabbit Remembered* (2001)—portrays an America that struggles to live up to the sober-minded ethics of faith, responsibility, and hard work. At the center of this cycle of novels is Harry "Rabbit" Angstrom, who, as his last name suggests, is full of angst over getting older and no longer being able to indulge in the kinds of sensual pursuits otherwise afforded

to younger unmarried men. Through Harry, these novels investigate American Protestantism's preoccupation with the middle—the middle class and personal moderation in particular. Harry's lack of self-restraint throughout the cycle reveals the Protestant middle's darker underside: mediocrity. After the death of both his parents, Harry realizes that his past fame as a high school athlete from a mid-sized Pennsylvania city is virtually meaningless. He is, in the broader view, simply mediocre. Religious cures for mediocrity appear impotent in Rabbit's world. Neither the serious-minded Lutheran pastor Kruppenbach nor the easy-going Episcopal priest Eccles can offer a spiritual remedy for the adultery, immaturity, and irresponsibility that results from Rabbit's disgust for mediocrity. Harry seems more concerned with lustful thoughts about Eccles's beautiful wife than reconciling himself to his unfulfilling role as Janice's husband or Nelson's father. Spirituality is as much on the run as Rabbit himself.

The spiritual disillusionment found in postwar society, coupled with memories of the totalitarian regimes that sprang up in the western world in the first half of the twentieth century, has its most distilled voice in the fiction of Margaret Atwood (1939–). Although a Canadian citizen, Atwood attended graduate school at both Radcliffe College and Harvard University; and her most famous novel, *The Handmaid's Tale* (1985), uses the United States as the setting for a futuristic authoritarian society based on oppressive fundamentalist Christian doctrine. The tale is told in retrospect from the perspective of Offred, who in her lifetime witnesses the fall of the United States (including the deaths of the president and members of Congress) and takeover by the fundamentalist Sons of Jacob, who then set up the Republic of Gilead. Having abolished the Constitution, the new government sets itself up according to Old Testament law; women are given marginal status and African Americans are labeled the Children of Ham and relegated to "homelands" in the area of the former Dakotas. Offred had received a college education before America's dissolution, but in the new regime she is prohibited from reading—or even speaking—and is forced to become a reproductive concubine for Commander Fred (hence her name "of Fred"). Written in part as a response to both increasing tensions in American-Soviet relations and U.S. political parties' overt courting of religious voters, Atwood's dystopian novel addresses what the melding of church and state could hold for women and ethnic/racial minorities. While speaking in terms of "traditional values," the men

who control the Republic of Gilead are exposed as brutal, self-serving, and irrational.

African American Writers: James Baldwin and Ralph Ellison

The postwar era proved an explosive time for African American authors, whose writings are often framed within the larger historical context of the civil rights movement of the 1950s and 1960s and its aftermath. The African American Christian experience recorded by these writers is punctuated by concerns not only of racial equality, but also gender and class equality. James Baldwin (1924–1987), one of the most prominent writers of the period, embraced these themes in his semiautobiographical novel *Go Tell It on the Mountain* (1953). This first novel presents a complex vision of the black church, as a place of both communal solidarity and of deep hypocrisy. This hypocrisy is most evident in Reverend Gabriel Grimes, the stepfather of the main character, John. Despite his prominent position in the church, Gabriel is a womanizer and abusive to his family. John's acceptance of Christ provides a sense of closure for the novel, but even that closure is qualified with the threat that Elizabeth, Gabriel's wife, may learn of her husband's dark past. Baldwin takes an equally complex view of the black church in his 1964 play *Blues for Mister Charlie*, based loosely on the murder of fifteen-year old Emmitt Till in 1955, in rural Mississippi. The play centers on Reverend Meridian Henry, who advocates passive resistance to racial oppression in the wake of his son's murder at the hands of a white man. The outraged black community finds an ally in Parnell, the white newspaperman assigned to cover the murder and ensuing trial. The play offers qualified hope that blacks and whites can reach across their segregated religious communities to find an end to racial hatred. When Parnell asks if he can join in the protest march at the end of the play, Juanita, a member of Henry's congregation, replies, "Well, we can walk in the same direction, Parnell." Juanita's response suggests that even well-intentioned whites cannot truly comprehend the black American experience. The play asks what can provide the best antidote for racism. Will Martin Luther King Jr.'s New Testament injunction to "love they neighbor" prevail, or does Christ-like forgiveness prove ill-equipped in the face of such persistent problems? When is it time—and in fact justified—to raise the sword?

These spiritual questions find amplification in the works of Baldwin's contemporary Ralph Ellison (1913–1994). Unlike Baldwin, who for a short time early in life was a

preacher, Ellison kept Christianity at arm's length. His worldview and his understanding of American history and culture, however, were deeply set within a Christian framework, as is evident in his literary essays and in his two novels, *The Invisible Man* (1952) and *Juneteenth* (1999). Ellison believed that slavery and racism constituted America's original sin: "Thus the new edenic political scene incorporated a flaw . . . [that] embodied a serpent-like malignancy that would tempt government and individual alike to a constantly-recurring fall from democratic innocence . . . racism took on the force of an original American sin." The drama of the Fall and its repercussions play themselves out in *The Invisible Man* through the unnamed main character, whose literal descent underground by the novel's end carries with it a knowledge of the good and evil that populate the collective American consciousness. Along the way, the novel presents readers with a number of fallen creatures, among them the trickster-preacher Rinehart, whose resemblance to the narrator suggests among other things the relative interchangeability of black individuality in the eyes of the larger society.

The center of *Juneteenth*, Ellison's unfinished, posthumously published novel, is A.Z. Hickman, an African American preacher. Charged with caring for Bliss, the son of a white woman partially responsible for the death of his brother, Hickman sees himself as a latter-day Job scrambling for answers before an inscrutable God. Paralleling O'Connor's necessity for suffering in the quest for illumination and salvation, Hickman concludes that "[God is] going to beat us till we almost melt and then He's going to plunge us into ice-cold water He means for us to be a new kind of human." Bliss eventually rejects his "father," and later in life he uses the pulpit rhetoric he had learned as a child for crass political advancement. Still, the aging Hickman persists in loving "the boy whom the man had been," and the novel gives a glimmer of hope that Christ-like love is still the most resilient remedy for an American psyche corrupted by the original sin of racial oppression.

Popular Fiction: *Left Behind* and *The Da Vinci Code*

Christianity and related aspects of spirituality have been the subject of popular fiction as much as they have been the subject of literary fiction. Novels about the "end of days" detailed in the book of Revelation have taken on a life of their own since World War II, especially since the advent of various social liberation movements (for women, gays, and ethnic minorities) in the late 1960s. So-called

“dispensational fiction” by Hal Lindsey (1929–), Larry Burkett (1939–2003), and Frank Peretti (1951–) has also come in response to a general sense of meaninglessness or nihilism that pervaded much of postwar American literature. Life’s meaninglessness and the constant deferral of truth are the central themes of the postmodern novels of Thomas Pynchon (1937–), Don DeLillo (1936–), and John Barth (1930–). Clearly, the most successful writers of dispensational fiction, in terms of both readership and financial profit, are Tim LaHaye (1926–) and Jerry Jenkins (1949–), the authors of the *Left Behind* series. The series began with one novel, *Left Behind*, published in 1995, and then grew to a trilogy with the addition of *Tribulation Force* (1996) and *Nicolae* (1997). The series has since grown into double digits. The novels concern a group of characters whose life choices rendered them unsuitable for the Rapture. The Rapture signals the start of the seven-year Tribulation in which Satan’s minion Antichrist, in the form of the Romanian media mogul, Nicolae Carpathia, attempts to seize control of the world through a reorganized version of the United Nations. Having learned the errors of their ways, the members of the Tribulation Force spend the seven years before Christ’s arrival to thwart Carpathia’s efforts at world domination. By the early years of the twenty-first century, the sales of the series had exceeded \$50 million. The success of these novels has been attributed not only to the demographic increase of middle-class, suburban evangelicals in the United States, but also to the novels’ ability to provide guidance and identity to an evangelical readership that regards itself as simultaneously participants in and victims of modernity. The protagonists who make up the core of the Tribulation Force must use their advanced technological savvy to defeat Carpathia, who himself is a master of modern communications systems. Moreover, unlike previous dispensationalist novelists whose fiction typically offers no hope for those characters who have been left behind after the Rapture, LaHaye and Jenkins suggest that the seven-year period before Christ’s arrival can provide a reprieve to those who have the insight and courage to renounce their previous sinful ways.

But if a postmodern novel such as Pynchon’s *The Crying of Lot 49*, replete with moral relativism and a preoccupation with conspiracy theories, would cause concern among evangelical readers looking for metaphysical certainty, it would find kindred spirits in the novels of Dan Brown (1964–), *Angels and Demons* (2000) and *The Da Vinci Code* (2003). The latter has become one of the best selling novels

of all time, selling 60.5 million copies in its first three years of publication. Unlike the *Left Behind* series, *The Da Vinci Code* cultivates its readers’ suspicion about the reliability of traditional Christian narratives. The novel revolves around two characters, Robert Langdon and Sophie Neveu, who learn that Jesus Christ married Mary Magdalene (challenging the legend that she was a prostitute), and that at the time of Christ’s Crucifixion, the pregnant Mary escaped to a Jewish settlement in Gaul (present-day France) where she gave birth to Christ’s daughter, Sarah. The Holy Grail is therefore not the cup Christ used during the Last Supper to metaphorically share his blood with the disciples, but rather the very body of Mary, which is the receptacle of her husband’s seed and which keeps Christ’s bloodline alive. Sophie, the novel ultimately reveals, is the descendant of that line. Both the novel and its 2006 film adaptation had to be defended against accusations of heresy and anti-Catholicism. The simultaneous success of *The Da Vinci Code* and the novels comprising the *Left Behind* series, as diametrically opposed as they are in their treatment of metaphysical truth and biblical narrative, reveals Christianity’s durability as a fertile ground for the literary imagination.

Jewish American Writing in the Wake of the Holocaust

The Jewish experience in postwar America has been chronicled by a number of famous writers, among them Philip Roth (1933–), Bernard Malamud (1914–1986), Joseph Heller (1923–1999), Isaac Bashevis Singer (1902–1991), Cynthia Ozick (1928–), Irena Klepfisz (1941–), and Wendy Wasserstein (1950–2006). The literary record of the experience, although diverse, frequently returns to a number of themes, including coming to terms with the Holocaust (even if the authors or their characters did not experience it firsthand) and reconciling one’s Jewish identity with one’s American identity.

Philip Roth

Philip Roth in particular takes up these themes in his many works. In *The Anatomy Lesson* (1985), the narrative explains how Mrs. Zuckerman’s brain tumor prevents her from remembering or writing her own name, but it does not prevent her from writing the word “Holocaust,” even though “before that morning she’d never spoken that word aloud.” For postwar Jewish American writers such as Roth (or his fictional alter ego Nathan Zuckerman), one need not be involved in the Holocaust for it to be a part of one’s

consciousness. At other times in Roth's fiction, the Holocaust or the prewar immigration experience can provide a strong point of juxtaposition for American Jews living a life of material comfort. The juxtaposition is made clear in Roth's early novella *Good-bye Columbus* (1959), which depicts Neil Klugman's summer romance with the spoiled, acquisitive Jewish suburbanite Brenda Patimkin. Drawn in by Brenda's beauty and by her family's parvenu wealth, Neil periodically suffers a conflict of conscience, especially after being reminded of the difficult immigration experiences his family members of an earlier generation experienced. For that group, Jewishness is bound up in this diasporic struggle, but for the Patimkins, Jewishness becomes synonymous in Neil's mind with crass, yet seductive, materialism. *The Plot Against America* (2004) sets up a "what-if" scenario in which Charles Lindbergh beats Franklin Roosevelt in the 1940 presidential election and quickly signs a nonaggression pact with Hitler. The novel forces its Jewish characters—one of whom is young Phil Roth, another fictional alter ego of the author—to find and retain those parts of an American identity that do not conflict with their Jewish identity.

Cynthia Ozick

While Roth's characters often show significant ambivalence in holding tight to traditional Jewish culture and spirituality, the characters of novelist and short story writer Cynthia Ozick find a more affirmative and instructive vision for a Jewish American identity. Ozick explains her vision for a Jewish American literary voice in her essay "Toward a New Yiddish," found in the collection *Art and Ardor* (1983). This literature, she declares, should be "centrally Jewish in its concerns," yet not reductive or overtly moralizing. The essay also enjoins like-minded authors to write in New Yiddish—a cross between English and Yiddish—so that they may "pour not merely the Jewish sensibility, but the Jewish vision, into the vision of English." In terms of themes, Ozick's fiction frequently takes up the persistent tension among Hellenism, Christianity, and Hebraism in the life of American Jews. Her first novel, *Trust* (1966), depicts an unnamed female protagonist whose mother's three husbands embody each of these traditions. Hebraism, represented in Enoch Vand, ultimately holds the most rhetorical and moral sway in the novel. Through his research into the Holocaust, Vand is able to achieve a sense of historical imminence with the event and with his fellow Jews that many characters in Roth's fiction fail to achieve. Vand is able to carry out many

of the prescriptions that Ozick later made in "Toward a New Yiddish." Her short story "Envy; or Yiddish in America" (1989) is thematically similar to *Trust*, portraying the poet-protagonist Edelshtein, whose concern over the loss of Yiddish language and literature in American Jewish life prompts him to seek out a translator. The story is not without its ironies, however; Edelshtein may criticize those such as Roth and Saul Bellow for ignoring or rejecting Yiddish, but his search for a suitable translator constantly reminds the reader of his own shortcomings and inconsistencies.

Wendy Wasserstein

Wendy Wasserstein, one of the leading Jewish women's voices in theater, was born to a wealthy Jewish father and a Jewish mother from Poland. Wasserstein is known for humorous dramas that explore the lives of the educated upper-middle class. Unlike many of the characters in Ozick's fiction, however, the Jewish characters in Wasserstein's plays are typically more secular, and they often progress by seeking some form of accommodation with the larger non-Jewish, patriarchal world around them. As is evident in *Isn't It Romantic* (1983) and *The Sisters Rosensweig* (1992), Wasserstein's female characters in particular must find these accommodations even within their own families. Janie Blumberg, the main character of *Isn't It Romantic*, is not only concerned with "having to pay the telephone bill, be[ing] nice to the super, find[ing] meaningful work, fall[ing] in love, [and] get[ting] hurt," but also she feels the old familial pull to be the dutiful daughter. At her mother's prodding, she dates a wealthy Jewish doctor, even though he belittles her. In these dramas, burgeoning Jewish womanhood typically confronts the specter of motherhood, be it in the form of the main characters' own mothers or in the main characters' attempt to become mothers themselves. In many of Wasserstein's plays, the main female characters find their mature identities by reconciling their previous idealism and commitment to progressive politics (much of it sparked by the women's liberation movement of the 1960s and 1970s) with the realities of adulthood. Heidi Holland, the protagonist of Wasserstein's Pulitzer Prize and Tony Award-winning play, *The Heidi Chronicles* (1988), laments the lack of female solidarity she had experienced at Mount Holyoke, saying, "I thought the point was that we were all in this together." By the end of the play, Heidi (whose religious background is ambiguous) finds peace by adopting a daughter, which is simultaneously a break with patriarchal patterns and a reaffirmation of motherhood.

Beyond the Judeo-Christian Tradition

The writing of the postwar period contains the deepest exploration of religion outside of the Judeo-Christian tradition. The tension between Native American and European-American cultures, the conflict over religion and religious rituals, and the role of religious belief are among the themes embodied in the literature of what has been called the Native American Renaissance.

Native American Renaissance

Leslie Marmon Silko (1948–) M. Scott Momaday (1934–), James Welch (1940–2003), and Louise Erdrich (1954–) are among the guiding forces behind the Native American Renaissance. Silko, of European, Mexican, and Native American (Laguna Pueblo) descent, addresses the inevitable confrontations between Native American and Euro-American cultures in her novels. Her earliest and still most famous novel is *Ceremony* (1977), which depicts Tayo's return home to the Laguna reservation from the Philippines, where he survived the Bataan death march during World War II. Tayo's homecoming is less than heroic, however. His constant vomiting and urination show how deeply traumatized he is by the loss of his cousin Rocky on the death march. Moreover, Tayo returns home to his aunt, who raised him but who also resents him for surviving while her own son perished. Moreover, Auntie's conversion to Catholicism provides a continual source of agitation for Tayo as he seeks relief from his emotional and physical traumas. Help first comes in the form of the medicine man Ku'oosh, but it is not complete until Navajo healer Betonie provides a ceremony that allows Tayo to understand the interconnectedness of people—white and native alike. Attesting to the scarring effects of the Second World War, Tayo envisions the nearby Trinity site, where the U.S. government tested the first atomic bomb, and he realizes that the menace of nuclear annihilation must be resisted through the power of stories and religious ritual. By placing the main narrative alongside sections detailing various Laguna myths, the novel gives readers the chance to see Tayo's struggle through a completely non-Anglo, non-Christian perspective. Still, *Ceremony* does not insist on the primacy of any single religious tradition to make Tayo whole. Tayo himself is of mixed blood, as is the healer Betonie. Although the novel looks disapprovingly at Auntie's embarrassment about her life before her conversion to Catholicism, it makes the case that stories and rituals must adapt to the changes and diversity found in human societies.

Like Silko, feminist essayist and poet Gloria Anzaldúa (1942–2004) looked toward the Southwest for a source of spiritual and aesthetic cultivation. Having first coedited the groundbreaking anthology *This Bridge Called My Back: Writings by Radical Women of Color* (1980) with Cherri Moraga, Anzaldúa then published *Borderlands/La Frontera: The New Mestiza* (1987), a text written in both English and Spanish that is simultaneously a personal manifesto, a religious treatise, a regional history, and a book of poetry. The Mexico-United States border is the main geographical focus of the text, but Anzaldúa explains in the preface that “[t]he psychological borderlands, the sexual borderlands and the spiritual borderlands are not particular to the Southwest. In fact, the Borderlands are physically present wherever two or more cultures edge each other, where people of different races occupy the same territory.” The book then addresses the ways in which the line separating the United States from Mexico has been the source of hatred, violence, and spiritual isolation. Rather than understanding identity as a fixed and rigid set of markers, Anzaldúa argues, it should be regarded as fluid and open to outside influences. The thrust of this exploration of physical and emotional borderlands is facilitated by references to the *Coatlicue*, an ancient Aztec goddess who “depicts the contradictory. In her figure, all the symbols important to the religion and philosophy of the Aztecs are integrated. Like Medusa, the Gorgon, she is a symbol of the fusion of opposites: the eagle and the serpent, heaven and the underworld, life and death, mobility and immobility, beauty and horror.” Religions indigenous to the borderlands are also prominently featured in the book's poetry. “La curandera” tells the story in verse of a woman who returns from death and is taught by mystical serpents how to cultivate certain plants to become a healer. In one of the closing poems of the book, “To live in the Borderlands means you,” Anzaldúa explains, “To survive the Borderlands / you must live *sin fronteras* [without borders] / be a crossroads.” Personal identity, as the example of the goddess *Coatlicue* makes plain, is a kinetic mixture of opposing forces.

African American Literature: Beyond Christianity

Two African American women writers, Toni Morrison (1931–) and Alice Walker (1944–), rose to prominence in the early 1970s. Walker's fiction in particular depicts the Judeo-Christian tradition as a point from which her African American characters—especially her female characters—depart in their explorations of myth, history, and self. Unlike Lowell or Updike, Walker does not see spirituality

as a dead force in the world; rather, she sees it in need of recovery or reconceptualization. Such an undertaking, however, will involve a religious vision that expands beyond the white male–authorized versions of Christianity found throughout western history. Her most famous fictional attempt at reconceptualization is in *The Color Purple* (1982). The novel is told through a series of letters, most of them from the main character, Celie, to the Judeo-Christian God. In these letters, Celie confides in God her most intimate secrets—particularly her rape by her stepfather and her developing love for another woman, the blues singer Shug Avery. As her relationship with Shug grows and as she finds a stack of concealed letters from her sister Nettie in Africa, Celie rejects the Judeo-Christian notion of God in favor of a more inclusive, less male-centered deity. At one point Shug admonishes Celie for not recognizing God's presence in a field of beautiful purple flowers; in response Celie adopts a new understanding of divinity that in many ways resembles the pantheistic God found in Ralph Waldo Emerson's transcendentalism. Walker's 1989 *The Temple of My Familiar* furthers these expansive notions of divinity. The story is often told from the perspective of Lissie, an African-based deity who over the ages has manifested itself as both male and female (and at other times even in nonhuman form). A record of Lissie's experiences is recovered by the academic Suwelo and his ex-wife Fanny (Celie's granddaughter). From these records they both learn a new type of inner and interpersonal harmony. Fanny in particular pushes past conventional notions of Christianity, seeing her newfound ability to masturbate as a triumph over the male-centered creeds that insist on self-abnegation and the marginalization of women.

The Beats and Buddhism

Allen Ginsberg (1926–1997) is another writer who moved beyond the Judeo-Christian tradition for personal growth and artistic inspiration. Born to Jewish parents in Newark, New Jersey (also the birthplace of Philip Roth and the setting for many of his novels), Ginsberg incorporated many Jewish themes and motifs in his poetry; but after his conversion to Buddhism in 1971, he then drew on Buddhist philosophy to drive his poetics. Early in his career, Ginsberg became known as a member of the Beats, a group of writers that included William S. Burroughs, Jack Kerouac, and Gregory Corso. Although the work of these individuals is varied and wide-ranging, they frequently address what they view as a conformist, postwar America that has become tired, or “beat.” The name can equally apply to the writers'

experiments with rhythmic poetry and prose (based largely on jazz and bop). The Beat movement was equally concerned about spirituality, for as Kerouac once remarked, “beat” stood for “beatific.”

Such concern with spirituality is found throughout Ginsberg's poetry of the period, most prominently the long poems *Howl* (1956) and *Kaddish* (1961). In *Howl* the poet appears as a latter-day Jeremiah, decrying the spiritual and imaginative degeneration he sees around him and foreseeing his country's further capitulation to a mechanistic, soulless mindset. Typical of prophetic poetry, sight is a major vehicle for the poem's development. *Howl* begins: “I saw the best minds of my generation destroyed by madness, starving hysterical naked, / dragging themselves through the negro streets at dawn looking for an angry fix, / angelheaded hipsters burning for the ancient heavenly connection to the starry dynamo in the machinery of night” (1–4). These references to men groping for, but ultimately losing their hold on, a spiritual vision carries through to the poem's later section, which is addressed to Moloch, an ancient Phoenician deity to whom, appropriately enough, the young were sacrificed. In *Howl*, however, Moloch has its modern analogue in industrialized civilization. The Jewish tradition is even more evident in Ginsberg's later long poem *Kaddish*, an elegy resembling a traditional Jewish *Kaddish* (or prayer of mourning) written for his mother. The poem begins, “Strange now to think of you,” and continues as if the poem provides a means by which Ginsberg can reacquaint himself with his dead mother, whose institutionalization and lobotomy he authorized. In the final section of the poem, the poet envisions his mother's gravesite, where “crows shriek in the white sun.” The poem ends on a brooding note with the recitation, “Lord, Lord, Lord,” which struggles to lift above the shrieks of the crows.

After becoming the pupil of Chögyam Trungpa Rinpoche, a renowned Tibetan Buddhist, in 1971, Ginsberg made the conversion to Vajrayana-style Buddhism. Jokingly referring to himself from then on as “the Buddhist Jew,” he incorporated Buddhist themes and philosophies into his poetry. The poem “Plutonian Ode” (1978) is an example. In it, the poet addresses the looming specter of mass human annihilation and proposes Buddhist principles of introspection and meditation as the means of thwarting such a threat: “Take this wheel of syllables in hand, these vowels and consonants to breath's end / take this inhalation of black poison to your heart, breathe out this blessing from your breast on our creation” (60–61). Ginsberg's devotion to Buddhism also changed his view of the world. He felt that he no longer had

“a negative fix on the ‘fall of America,’ ” as is evident in a poem such as *Howl*. Rather, the “fatal karmic flaws” he saw in the country he also saw in himself; such an epiphany had prompted him to find “some basis for reconstruction of a humanly useful society, based mainly on a less attached, less apocalyptic view.”

Nation of Islam

Islam has one of its most famous and most vocal postwar representatives in the controversial poet Amiri Baraka (b. 1934 as Everett LeRoi Jones). Baraka’s literary career has been marked by a number of philosophical, political, and religious upheavals. After graduating from Howard University and serving in the military in the mid-1950s, Jones moved to New York, where he fell under the influence of the Beat movement. By the 1960s he had committed to black nationalism, and as a part of this commitment, he converted to Islam, rejected his birth name (considering it to be his “slave name”), and was reborn spiritually and politically as Amiri Baraka (meaning “Blessed Prince”). Although Baraka had committed to Marxist socialism by 1974, his poetry from the late 1960s and early 1970s reveals the extent to which his black nationalism was infused with his Islamic faith. In “A Poem for Black Hearts” (1969), Baraka eulogizes the slain black Muslim leader Malcolm X, lamenting, “For Great Malcolm a prince of the earth, let nothing in us rest / until we avenge ourselves for his death, stupid animals / that killed him, let us never breathe a pure breath if / we fail, and white men call us faggots till the end of / the earth” (23–27). For Baraka, Malcolm X’s philosophy of militant separatism was the right course of action for blacks looking to distinguish themselves politically from both whites and from a complacent black bourgeoisie. In other poems, such as “It’s Nation Time” (1970), Baraka invokes Allah as the source of not only his poetic inspiration, but also as the source of the nascent black nation on American soil. Using the same inflammatory style found in “A Poem for Black Hearts,” Baraka exhorts: “niggers come out, brothers are we / with you and your sons your daughters are ours / and we are the same, all the blackness from one black allah / when the word is clear you’ll be with us / come out niggers come out” (75–79). Yet as the poem “When We’ll Worship Jesus” (1975) suggests, Baraka’s turn toward socialism left him questioning Islam and black cultural nationalism. At first explaining, “We’ll worship Jesus / when jesus do / Some-thin” (1–3), he then warns, “[Jesus] and his boy allah / too, need to be checked / out!” (48–50). Neither Christianity’s directive to “turn the other cheek” nor an Islamic jihad

based on black solidarity can get at the root of race antagonisms, because at the base of such antagonisms, as scientific Marxism contends, lies the looming specter of economic exploitation.

Conclusion

As the literature of the post–World War II period shows, neither the existentialism sparked by the threat of nuclear annihilation nor social and political upheaval signaled the end of the Judeo-Christian tradition. At the same time, this tradition changed to meet an evolving nation—a nation whose literature found a more diverse spectrum of religious representation than it had ever before witnessed.

Literature: Early Republic and the “American Renaissance”

The development of American religion and the emergence of an American literary tradition are often viewed as two distinct features of the American landscape. And yet American religion and American literature were interdependent, often mutually enforcing, phenomena in the early days of the United States. The two had much to say to each other and may be enriched when considered together. Religion depends on narrative and poetic form for its expression as much as literature has its origins in religious belief, crisis, and dissent.

Colonial Origins of a National Literature

In the colonial and early national period, conventional clergymen attacked the novel and fiction as deleterious to religious meaning. From their perspective, storytelling violated the truth value of religious doctrine. Puritan theology eschewed embellishment in the interest of preserving doctrinal purity. Prominent Puritan leaders such as Cotton Mather and George Whitefield declared in the mid-eighteenth century that the secularizing forces of plays, romances, and imaginative writing would preclude entrance into heaven. Even after the American Revolution in the last part of the century, this view remained largely unchanged among Calvinist ministers. Timothy Dwight, for example, asserted that there was an impassable gulf between the Bible and novels or poetry.

Poetry

Discrimination against narrative form was particularly acute when the author or subject matter challenged the social order. The African American poet Phyllis Wheatley came under unusually virulent attack for her religious verse. Wheatley was the author of such poems as “On the Death of the Rev. Mr. George Whitefield” (1770) and “On Being Brought from Africa to America” (1773). In the first, Wheatley contemplates the spiritual power of a religious leader, and in the second she explores the possibilities and perils of religious conversion. Although Wheatley declares that “’Twas mercy brought me from my *Pagan* land” and “taught my benighted soul to understand/ That there’s a God, that there’s a *Saviour* too,” she cautions American religious leaders who “view our sable race with scornful eye” that “*Christians, Negroes, black as Cain, / May be refin’d, and join th’ angelic train*” (*The Oxford Anthology of*

American Literature, p. 529). Challenging the racism of Christian leaders even as she endorses the superiority of Christian belief, Wheatley both upholds and abhors religious piety. Such poetry outraged not only religious but political leaders. Thomas Jefferson asserts in *Notes on the State of Virginia* (1787) that “religion may have produced a Phyllis Wheatley; but it could not produce a poet.”

More than a hundred years earlier Anne Bradstreet had encountered similar vitriol from religious leaders for poems like “The Flesh and the Spirit,” “To My Dear and Loving Husband,” and “Upon the Burning of Our House, July 10th, 1666.” Bradstreet, the first English-speaking North American poet, found herself critiqued for transgressing gender roles as well as religious precepts. Her later poetry addressed the spiritual struggles of a Christian confronting doubt and skepticism, and therefore challenged rather than enforced religious determinism, but religious leaders were outraged at her earlier writing because it challenged a spiritual order in which godly love preceded and overpowered earthly or carnal love. Bradstreet’s self-avowed struggle between the flesh and the spirit as well as her intense love for her husband, family, and home upset a hierarchical order in which God ruled supreme over human bonds and an individual’s most important relationship was with the divine rather than with a mortal being.

Captivity Narratives

Captivity narratives, which offered writers an opportunity to describe life on the frontier as a religious trial, became popular reading for early American Christians. *A Narrative of the Captivity and Restoration of Mrs. Mary Rowlandson* (1676) was by far the most popular of this genre. In this firsthand account of an Indian attack on the frontier village of Lancaster, Massachusetts, Mary Rowlandson describes the Indians as instruments of Satan who have come to test her faith. Using scripture passages, she likens her removal to an Indian community and her subsequent enforced relocations to biblical stories of migration and captivity. She describes her ordeal as a faith journey in which her initial understanding of herself as a pious believer is transformed and challenged before being reaffirmed. Because captivity narratives like Rowlandson’s showed the triumph of the godly over harsh wilderness and pagan evil, they were more acceptable fare than purely imaginative writing.

And yet we see imaginative elements clearly at work in Rowlandson’s seemingly literal transposition of biblical narrative onto captivity story. The narrative is organized not by

chapters but by “removes.” The trajectory of events goes from attack to the first remove all the way to the twentieth remove. During her enforced flight through the wilderness, Rowlandson experiences the loss of a child, enslavement, extreme hunger, pain, and despair. These extremities are not alleviated easily once she escapes and is returned to home, family, and church community. Looking back on her trial, she admires the wonderful power of God to allow her to see the vanity of worldly concern and material comfort. She insists that we must rely solely on God and our whole dependence must be on him.

In this way, Rowlandson’s narrative works, unlike Bradstreet’s, to reinforce the unquestioned and unquestioning primacy of the individual’s relation to God. Furthermore, unlike Wheatley’s writing, Rowlandson’s narrative seems to assume that God’s disciples on earth are above critique—transparent and disinterested purveyors of his divine will. And yet her narrative ends not only with an affirmation of Christian principles but with the acknowledgement that the captivity has also produced an uneasy wakefulness and distrust of her surroundings that belie her assertions that she puts all her faith in God’s goodness. God’s power is great in that he carries her through many trials and returns her to safety in order to teach her a faith lesson, but this knowledge does not give her absolute peace and faith. It also breeds a nocturnal watchfulness: Rowlandson says that she remembers a time when she slept peacefully, but after her restoration she remains awake when all are asleep, dwelling upon things past.

Puritan Sermons

Despite the fact that Puritan theology often dismissed literary expression as biblically inauthentic and therefore secularizing, some of the most famous Puritan sermons explicitly rely upon literary devices like metaphor, simile, metonymy, and imagery to powerfully move their listeners. John Winthrop’s “A Model of Christian Charity” (1630), for example, challenges Puritan voyagers to understand themselves to be undertaking a world-changing experiment in religious freedom and to imagine this new society they were preparing to build as “a city upon a hill” that would draw the eyes of all people throughout the world. On the one hand, Winthrop depends upon the extensive use of imagery and simile to help his listeners visualize their future to be like a new city, the likes of which the world has never before seen. But he also invokes literary expression to warn them of the high risk of their undertaking, when he declares that should they fail in their endeavor they will be made a “story and a by-word

through the world.” This story will have great power to unleash the mouths of enemies who will spread stories that will shame God’s servants and draw curses rather than prayers for the Puritan project. Winthrop’s sermon became a template that would guide the first generation of Puritan settlers in the making of a civic society based upon principles of human affiliation and collaboration. He delivered his sermon while aboard the *Arbella*, en route from England to the Massachusetts Bay Colony, and listeners included Anne Bradstreet, who, as we have seen, turned to literary expression as spiritual outlet and alternative. Winthrop’s sermon continues to be read as a founding piece of American literature as well as a founding document of American religion, and is consistently featured in anthologies of American literature.

During the colonial period, subsequent ministers did sometimes strategically rely on literary devices to challenge the spiritual comfort of their parishioners—often to great effect. The most powerful example of this technique can be found in Jonathan Edwards’s “Sinners in the Hands of an Angry God” (1741). In this classic “fire and brimstone” sermon, Edwards effected religious conversion or “awakening” in congregants by describing the precariousness of human life and redemption through extended simile and the rich use of metaphor. Edwards paints a terrifying picture story in which an angry God holds sinners over a pit of hell, burning with glowing flames that represent the wrath of God. Confronted with hell’s wide gaping mouth, the sinner has no defense against this final moment of reckoning—nothing except the power and unearned mercy of a justly angry divine presence. The sinner is held by God “like a spider or some loathsome insect over the fire,” dangling precariously and subject to the vicissitudes of an all-powerful and wrathful divine will. Human will is no more than a spider’s web trying to stop a falling rock the weight of which reflects the magnitude of human evil. Edwards’s sermon, like Winthrop’s, was powerful. Both ministers painted different visions of divine providence, but they transformed Americans’ spiritual realities with their dramatic and highly effective imagery.

Religion and Literature in the Nineteenth-Century

These diverse literary engagements with religiosity—whether in the form of poetry, fiction, nonfiction prose, or even the sermon, as we have observed—suggest a growing need of Americans to think seriously about the place of religious practice in their lives. Between 1785 and 1850 a growing number of ministers and congregations became dissatisfied with traditional theology and what they found to

be impenetrable, esoteric theological debate. Many ministers, in this time of liberalization and secularization, turned to narrative and the novel to overcome religious opponents and to advance a simple code of morality and pious feeling. Indeed the rise of religious tolerance throughout the nineteenth century was accompanied by the tendency to communicate religious lessons with narrative and stories rather than with sermonizing. Edwards’s and Winthrop’s impulse to turn to literary tools to awaken the interest and engage the moral conscience of congregants, in other words, became more developed and widespread as theological debate became increasingly dry and disconnected from the moral conundrums that Americans faced in daily life. By late in the nineteenth century this trend had become so marked that Mark Twain would assert, in 1871 (in *The Galaxy*), that the Jesus story was disseminated to the American public through “the despised novel . . . and NOT from the drowsy pulpit!” Although literary expression was anathema to most seventeenth-century and much of eighteenth-century theology, literature in the nineteenth century was religion’s most powerful vehicle.

Why did American congregations turn away from the pulpit and to the novel for spiritual and religious guidance? And more particularly why and how did Americans come to see the novel as diverting and the pulpit as “drowsy”? First, many churchgoers found that conventional religious literature and sermons focused on orthodox dogma to the exclusion of all else. Ministers’ entrenched resistance to casting moral lesson in the garb of lived experience caused resistance and incomprehension among congregations. As one church member, Caroline Thayer, put it, “the light, unthinking mind, that would revolt at a moral lesson from the pulpit will seize, with avidity, the instruction offered under the similitude ‘of a story’” (in *The Gamesters; or, Ruins of Innocence*, p. iv-v). In order to meet their parishioners’ increasing need to understand theological truth in relevant, everyday experience, popular ministers such as William Ware, E. P. Roe, and Charles Sheldon became popular novelists, promulgating their religious messages. Ministers less successful at sermonizing likewise experimented with novel writing to try to generate interest in their religious views.

Domestic Literature and Women Writers

Ministers were not the only or even the primary literary agents of religiosity in the antebellum United States. Popular author Catherine Sedgwick, declaring herself frustrated by “the splitting of . . . theological hairs” and “utterly useless

polemical preaching,” turned to the novel to explore important religious and spiritual themes (in *Life and Letters of Catherine Maria Sedgwick*, p. 59). Not only did Sedgwick become an avid novel reader, but she wrote numerous fictions that carried important religious messages to readers. She began *A New England Tale* (1822) during a period of intense spiritual indecision. She disliked Calvinism’s rigidity but was disappointed in Unitarianism, which she found cold and overly rational. Begun as a Unitarian tract, *A New England Tale* quickly became a novel about the follies of orthodoxy and the power of celestial imagery. Jane Elton, the novel’s heroine, is an angel of goodness who confronts and conquers those characters who uphold the evils of Calvinist dogma. The novel does not include lengthy disquisitions on religious doctrine but rather encourages readers to identify and sympathize with Jane because of her goodness.

Like *A New England Tale*, Sedgwick’s most popular novel, *Hope Leslie* (1827), features female protagonists who take on angelic qualities in order to redeem their communities. Hope Leslie and Magawisca, the Native American protagonist, save a Puritan community that is compromised from within and from without. By setting her novel in Puritan times, Sedgwick put her critique of contemporary religious practice at a historical remove from readers, but the message of the novel had great currency for its antebellum readers: Spiritual redemption and religious faith are achieved by recognizing the potential divinity (rather than dwelling on the essential sinfulness) of each human being, no matter how different. Magawisca is a spiritual exemplar whose self-sacrifice inspires Hope, but Hope, as her name suggests, personifies a virtue from which her stern Puritan town leaders eventually learn. Not only does Hope teach the Puritan community spiritual principles of liberality, free thinking, and inclusiveness, but she has the power to root out the social threat of Roman Catholicism. At one point mistaken for the Virgin Mary by a Catholic laborer, Hope successfully uncovers a plot intended to establish Catholicism as the one true religion in the infant colonies. The novel’s message is clear: Spiritual vitality and democracy are jeopardized by dogma.

Harriet Beecher Stowe and Catharine Beecher’s immensely popular domestic handbook *The American Woman’s Home* (1872) would develop this theme of religious patriotism by equating the principles of Christianity with the principles of democracy. Enjoying the same kind of popularity that Martha Stewart does today, Beecher and Stowe imagined the middle-class bourgeois home as a

blueprint for a civilized world, and at the center of this home were religious principles, albeit ones that tacitly worked against as much as in concert with Puritan models of Christianity. The middle-class world of the antebellum era normalized not only a class identity but a religious identity, thereby ensuring that a particular strand of Protestant Christianity became a symbol of middle-class values. Indeed, white Protestants within the emerging middle class attempted to convert the entire nation and eventually the entire world to the truths of Protestant Christianity, and they used narrative and the novel to achieve their ends. *The American Woman's Home* was literally a guide to help American housewives create a successful home through teaching domestic and religious principles.

But it is in Harriet Beecher Stowe's earlier writings that she makes her most profound contributions to American literature and religion. When asked about the authorship of her internationally famous *Uncle Tom's Cabin* (1852), Stowe replied that she did not write it—God wrote it. In the book that, as Abraham Lincoln declared, started the Civil War, Stowe features religious feeling as the cornerstone of her antislavery argument. “Feeling right” is more important than legal arguments that uphold slavery. Fictionalized religious leaders who condone slavery are lambasted in Stowe's novel, as they are in slave narratives by such writers as Harriet Jacobs and Frederick Douglass. But most important, the promise of spiritual salvation and redemption guide characters and readers alike toward the promised land of freedom. Uncle Tom is a Christ figure who agrees to sacrifice himself for the greater good of his family, the other slaves, and the Shelby family who own him. His gradual descent into the hell of slavery culminates in his final, and fatal, confrontation with his third and most demonic slave owner, Simon Legree. Legree tries to force Uncle Tom to take up the whip against the other slaves. When Tom refuses, he is beaten to death. But it is not only Tom's refusal to comply with his owner's demands that incites Legree. As Stowe writes, Legree “understood full well that it was GOD who was standing between him and his victim and he blasphemed him” (in *Uncle Tom's Cabin; or, Life among the Lowly*, p. 558).” Legree's violence toward Tom is violence toward God, and Tom's spiritual reliance on Jesus sustains him as he too becomes a martyr.

Many Americans described the reading of *Uncle Tom's Cabin* as a spiritual awakening—an awakening that transformed them from being passive bystanders in the anti- and proslavery debates to becoming active participants in the

abolitionist movement and finally into taking their stands as courageous soldiers on the battlefield. Many Union soldiers carried copies of *Uncle Tom's Cabin* in uniform pockets over their hearts because they believed that it had talismanic power to protect them during battle.

Conversely, popular southern proslavery novels such as Caroline Lee Hentz's *The Planter's Northern Bride* (1854) and Augusta J. Evans's *Beulah* (1859) served the same spiritual purpose for Confederate soldiers. In such novels bourgeois northern women with preconceived notions about the evils of slavery move to the South only to learn that benign slave owners protect and guide their slaves in spiritual principles. Converting the heathen to the one true faith, slave owners function as de facto missionaries and ministers for their easily misguided charges. *Uncle Tom's Cabin* recognizes southern slave owners' capacity to model Christian principles to the needs of slaves and acknowledges the limitations of northern Calvinism in the project of assimilating African slaves into Protestant Christianity. Miss Ophelia, for example, is a northern spinster whose Calvinist worldview is insufficient to instruct the unruly child slave Topsy in Christian values. It takes the example of the truly spiritual, angelic child little Eva to exert moral suasion successfully such that Topsy wants to be good—to be just like Eva. When Eva's goodness and angelic nature confront the evils of slavery they “sink into her soul” and prove to be too much for her, causing her to languish and finally to die. Eva's death crystallizes Topsy's desire for moral goodness and leads Miss Ophelia to recognize that her religious principles have not enabled her to overcome her unchristian prejudice against slaves. Unruly black slave and rigid Calvinist spinster form a Christian bond, recognizing the power of love to overcome prejudice.

In her lesser-known novels, Stowe returns to these themes of the Christianizing influence of middle-class true womanhood. *The Minister's Wooing* (1859), for example, features a young girl through whom Stowe attempts to work through the torments of New England Calvinism. Mary functions as a Protestant Madonna in the novel, bringing James, a middle-aged minister as well as Mary's true love, a renewed spirituality and religious passion. This bundling of amorous passion and religious passion is a pervasive feature of much woman-authored sentimental fiction in the antebellum era. Maria Cummins's novel *The Lamplighter* (1854) was second in sales only to *Uncle Tom's Cabin* during the 1850s, and its popularity was due in large part to the story of religious awakening at its center. Gerty Flint, the young, indigent heroine of the story, is a street urchin, abandoned

by her parents and evicted by a wicked caretaker when she tries to nurture a stray cat. She is informally adopted by a local lamplighter, Trueman Flint, whose childlike religious faith, once coupled with the benevolent religious ministrations of a local gentlewoman, gradually transform the unruly and violent child. When the lamplighter brings her a Samuel—a figurine of a child praying—Gerty begins to learn in earnest about God, prayer, and the redemptive power of love. Much like Uncle Tom, Trueman Flint has a seemingly infinite capacity for love of others, which is required to transform the young delinquent into an icon of true womanhood. Gerty must go through many tests of her faith, but she learns the lesson of Christianity and is rewarded by novel’s end. Not only does her father reappear, but she marries her one true love, has her fortune restored, and finds herself surrounded by loved ones as she creates a happy home of her own.

A variety of novels during the antebellum era would treat this theme of religious education through domestication. Indeed, the ties that bound middle-class domesticity with religious integrity were so profound that many began to criticize the ministry for becoming feminized. Once theologically rigorous and male dominated, American Protestantism was in danger, according to some social critics, of becoming overrun by women religious zealots who used novel writing as a kind of pulpit from which to preach.

The American Renaissance: Hawthorne and the Transcendentalists

It was to this group of women writers that Nathaniel Hawthorne was referring when he railed against the “damned mob of scribbling women” overrunning the U.S. literary scene. This now notorious comment has been interpreted by scholars as a sign of Hawthorne’s discomfort with literary competition from the ladies, but it also reflects his more particular discomfort with the competing religious visions distinguishing his less popular dark romances from best-selling woman-authored domestic fiction.

Nathaniel Hawthorne’s Fiction

In his writing, Hawthorne returns to the Puritan religious culture of his forebears rather than to the antebellum visions of benevolent, infinitely redemptive and theologically indeterminate domesticity with which his female contemporaries were concerned. In his novel *The Scarlet Letter* (1850), as well as in short stories such as “The Minister’s Black Veil” (1836) and “Young Goodman Brown” (1835), Hawthorne

explores the Puritan origins of nineteenth-century American life, and he considers the influence of this legacy on his contemporaries who are facing unprecedented challenges to national unity. The scarlet *A* for which Hawthorne’s novel is named is a symbol of the adulterous affair in which the novel’s heroine, Hester Prynne, is involved. Although the Puritan community does not learn what is going on until late in the story, readers soon discover that the Reverend Arthur Dimmesdale, the most prominent religious leader of the community, is the father of Hester’s illegitimate child. Dimmesdale is complicit not only in the affair but in the punishment meted out to Hester by religious leaders once the affair becomes apparent, in the person of Hester’s daughter, Pearl. The scarlet *A* that Hester must wear as punishment brands her as an adulterer, but it also symbolizes the hypocrisy and weak-mindedness of religious precepts that target one sinner but leave another at large.

What happens when the unpunished sinner continues to be responsible for the spiritual well-being of a community? This is one of the questions that *The Scarlet Letter* asks. Scholars have long acknowledged Hawthorne’s interest in Puritan religiosity and the damage that hypocritical and self-interested holiness does to innocent victims. Hawthorne’s own family history was traceable to Puritan settlers, and his critique of the Puritan practices upon which the United States was built reflects a sense of personal gain at the cost of human pain and suffering. In *The House of the Seven Gables* (1851), Hawthorne explores how religious leaders’ acquisition of a homestead through unfair manipulation of religious law continues to poison the happiness and opportunity of future generations of a family who must live in the shadow of this destructive religious legacy. In *The Scarlet Letter* Dimmesdale internalizes his culpability—too weak to wear a scarlet *A* on his ministerial vest, he literally stitches one on his breast. Branded on his skin, the scarlet *A* is the cross that Dimmesdale carries undetected through his daily religious duties. Is his own self-inflicted punishment greater or lesser than Hester’s? Is it fair or right to punish two individuals for loving one another? Is it ethical to scapegoat one individual—demanding that she carry the burden of another’s sin? These are the questions that *The Scarlet Letter* asks its readers to consider.

Because it is set in Puritan times, Hawthorne’s novel at first glance can appear to be unconcerned with the questions Americans were wrestling with at midcentury. Is it right to enslave one race of people and justify the institution of slavery as a necessary part of liberal democratic ideals? How can a

nation based on the concepts of liberty and freedom for all strip these rights from certain sectors of the national community? How can a religion be used to justify enslavement? These were the questions Americans were asking with increasing frequency as Hawthorne was writing. But these are also questions that Hawthorne explores through critique of the Puritan mores upon which the nation was founded. According to some readers the scarlet *A* may stand not only for “adultery” but also for “abolition.” Nineteenth-century abolitionists’ challenge to an established order that refuses freedom to some community members is not unlike the Puritans’ challenge to a national order that refused them freedom of worship. And the corruptness and weak-mindedness of Puritan leaders such as Dimmesdale is similar, Hawthorne seems to be saying, to American leaders’ hesitancy to speak out against the social injustice of slavery. In such an interpretation of Hawthorne’s writing, the religious history of the United States is integral to envisioning the future of the country. The nation’s Puritan roots are not irrelevant to contemporary political debate—far from it. The corrupt legacy of some religious practice is what the nation must contend with, and the fight to free slaves becomes nothing less than a fight to save the religious integrity of the country.

The Transcendentalists

Novels thus became a rich medium for commentary, critique, and contestation of religious precept. American transcendentalist writers, as with their novel-writing peers, found much to criticize in religious tradition. Originally a protest against the doctrine of the Unitarian Church as it was taught at Harvard Divinity School, the American transcendentalism espoused by such writers as Henry David Thoreau, Ralph Waldo Emerson, Sophia Peabody, and Margaret Fuller argued that an ideal spiritual state transcended physical, doctrinal, and empirical precepts and was achieved through individuals’ intuition rather than their conformity to the laws of religious institutions. Writing primarily in nonfiction prose, American transcendentalists sought to reclaim the authenticity and honesty of human interaction and spiritual being that they perceived to have been compromised by religious and intellectual institutions.

Views of Islam and Roman Catholicism

In Hawthorne’s writing we begin to see how American literature not only engages but also dissents from American religious practice. Herman Melville’s literary career is a case in point.

Melville’s Literary and Religious Explorations

When we think of Melville’s mariner stories we may not think of religious commentary, and yet Melville’s interest in religious practice and social welfare spanned his entire literary career. From the time he was a teenager in 1839 through the later poetry preceding his death in 1891, Melville engaged with—and sought alternatives to—the Protestant culture of the mid-nineteenth-century United States. In particular, as Timothy Marr has illustrated, Melville utilized Islamicist rhetoric as a literary resource. In so doing, Melville was taking part not only in his own thought experiment in religious practice but in a larger, sustained exploration among American literary figures of Islamicism. While Hawthorne, as Luther Luedtke has shown, embedded Orientalist notions in his fiction, Melville developed a more transgressive literary vision of Islamicist practice. The famous opening line of *Moby-Dick* (1851), “Call me Ishmael,” announces Melville’s interest in the figure more widely known in the nineteenth century as the Abrahamic ancestor of the Arabs, but it is in his late long poem *Clarel: A Poem and Pilgrimage to the Holy Land* (1876) that we see the most developed Muslims in American literature. Through fictional figures that represented his poetic Islamicism, Melville expressed his continued search for contentment and spiritual fulfillment in what he found to be an increasingly materialistic American culture. Melville visited Palestine in 1856, and over the following twenty years used literature as a way of exploring questions of faith, doubt, and God. Yet it is in his twenty-thousand-line poem that we get his most complex theological commentary. The poem is nothing less than a quest for religious clarity and a poetic wish to believe. It asks why humans suffer and die, why God remains hidden and silent, and why spiritual comfort and certainty are so difficult to achieve.

Other American Writers and Islam

Why might Melville turn to Islam to ask these religious questions in his poetry and prose? Not only did Islam offer Melville an alternative spiritual model in an increasingly secular American culture, but it had long offered American writers a means of commenting on and critiquing American religion. Islam is the only religion other than Judaism and Christianity commonly invoked by American writers, in large part because its precepts are not dissimilar to the three major strands of American liberalism—Arianism, Unitarianism, and Arminianism. American writers used an Orientalized motif for representing religious ideas that challenged the tenets of New England orthodoxy—the reward of

virtue; perfectibility; toleration; and the universal benevolence of God. These ideas were still unpopular with late-eighteenth-century Calvinist thinkers, and so fiction with invented Middle Eastern settings allowed American liberals to challenge Calvinist precepts while avoiding strict theological debate. Popular novels such as Royall Tyler’s *The Algerine Captive* (1797) featured American sailors who are taken prisoner by Turks or Algerians and so have the opportunity to report on unfamiliar religious practices. Conversely, novels like Peter Markoe’s *The Algerine Spy in Pennsylvania* (1787) and Samuel L. Knapp’s *Ali Bey* (1818) feature visitors to America who write home about doctrinal controversies in ways that implicitly weigh in on religious piety and make pleas for religious toleration.

Anti-Catholic Writing

While Islam continued to offer writers rich opportunities to rethink prevailing tenets of American Protestantism, Roman Catholicism offered them equally important opportunities to advocate for Protestant Christianity as the one national religion. Anti-Catholic writing abounded throughout the late eighteenth and nineteenth centuries. The villain of Sedgwick’s *Hope Leslie*, for example, is an Italian Catholic who infiltrates an American Protestant community with the secret goal of setting up a Vatican in the New World. In his popular tract *A Plea for the West* (1835), prominent Presbyterian minister Lyman Beecher spread anti-Catholic sentiment by suggesting that the pope planned to take over the American West as an outpost of a Catholic empire. Anti-Catholicism or nativism flourished in the 1830s and 1840s because devastating potato famines in Ireland brought unprecedented numbers of Irish Catholics to the United States and because the United States acquired vast territories from Mexico (through the Treaty of Guadalupe Hidalgo in 1848) that transformed a large number of Mexican (predominantly Catholic citizens) into U.S. citizens. Anonymously written sensational accounts of convent life fueled anti-Catholic sentiments. Maria Monk’s *Aufful Disclosures of the Hotel Dieu* (1836) created such a public outcry that the convent in question was searched by civic leaders to determine whether the “firsthand” accounts of rape, infanticide, and torture were truthful. Southern and border fiction such as Augusta J. Evans’s *Inez: A Tale of the Alamo* (1855) likewise represented priests as propagating sinister plots to seduce young girls and the nation away from Protestant ideals. Catholic characters represented pervasive threats to religious integrity throughout much American literature.

If Islam offered authors alternatives and opportunities to challenge Protestant hegemony, Catholicism became a rich tool for upholding and encouraging it. With novels such as Nathaniel Hawthorne’s *The Marble Faun* (1860), literary commentary on Catholicism moved beyond the geographic borders of the United States to Italy, where the Vatican and Italian Catholicism become rich subjects of literary contemplation of the American nation’s religious traditions and exclusions. Hawthorne’s interest in Italian Catholicism reflects many nineteenth-century American writers’ association of Catholicism with the splendid corruption of an Old World Spanish and Italian past. Henry Longfellow’s *Evangeline: A Tale of Acadie* (1847), for example, was one of the most widely read narrative poems in the nineteenth-century United States. It sold tens of thousands of copies, was translated into many languages, and subsequently generated spin-offs and even movies. As scholars have observed, part of its popularity results from its rewriting of Catholicism as Protestant romance.

Native American and African American Traditions

As we have seen, American evangelicalism and its democratizing, charismatic, and separatist energies were not simply important touchstones for much American literature; rather there was a mutually interdependent dynamism at work between American literary and religious pursuits that made the two integrally connected and, arguably, inseparable. African American and Native American communities, like their Anglo-American counterparts, developed effective literary strategies for engaging, contesting, and channeling American evangelical zeal. As early as 1774 Native Americans such as Samson Occom, a member of the Mohegan nation, wrote hymn texts (published as *A Choice Collection of Hymns and Spiritual Songs*) that strategically adapted Christian theologies to separatist movements. Occom was a friend of Phyllis Wheatley, and he and Joseph Johnson, a Native American colleague, developed literary strategies not unlike Wheatley’s to stimulate an intertribal Christian community in Brotherton, New York. Occom and Johnson were the only Native Americans who wrote and published their literary works in the eighteenth century, and these literary works simultaneously engaged existing religious communities and were a key to the development of alternatives to American evangelicalism.

In 1790 African American evangelist and author John Marrant published his *Journal*, in which he described his three-year mission to the people of Birchtown, Nova Scotia, the largest all-black settlement in North America. In his *Journal* Marrant described a covenant theology that reflected

and was practiced by this particular community. When we think about African American writing in the pre-Civil War period, we tend to think about the famous slave narratives of writers such as Harriet Jacobs, Frederick Douglass, Sojourner Truth, and Hannah Crafts. Key to these narratives is a critique of ministers who use scripture to uphold the institution of slave owning and of religious communities that condone human injustice. In Douglass's narrative, slave songs as well as religious practices and beliefs deriving from voodoo become powerful gateways to slave resistance. However, writers such as Marrant, Absalom Jones, and Richard Allen used literature to describe new religious communities to others even as they used their firsthand involvement with these communities as the occasion to credential themselves as writers. Jones and Allen, who founded the African Methodist Episcopal Church, wrote *A Narrative of the Proceedings of the Black People, During the Late Awful Calamity in Philadelphia* (1794) to tell the story of their community's involvement in a yellow fever epidemic and their endurance as a spiritual community in the face of disaster.

Conclusion

The interconnections between religious practice and literary expression intensified as the Civil War neared. Not only did the question of slavery generate writing that turned to religious precept for guidance, but religious figures increasingly relied on literary form, popular narrative techniques, and poetic techniques to affirm their congregants' pro- or anti-slavery leanings. Abraham Lincoln, in 1858, while running for the U.S. Senate, paraphrased Jesus when he asserted that "a house divided against itself cannot stand," and this metaphor held true for the house of God as well as for the nation's domestic policy. The Civil War (1861–1865) produced a crisis of faith as well as a crisis of literary expression among Americans, and the interconnections between faith and writing would dramatically change form in the postbellum period. However, the bonds between literary and religious imagination were forged during the period of the early Republic and the first half of the nineteenth century, when both literary form and religious life were instrumental in developing a new nation—a nation that emerged from Puritan ideals and that imagined separation between church and state. American literature was key to this development, connecting people to their preachers, challenging spiritual smugness, and conceptualizing ethical responsibility in a changing national landscape. Religious and literary innovators formed a loose but lasting collaboration that continues to shape how Americans read, listen, and pray.

Literature: From the Civil War to World War I

American religious life underwent a dramatic change in the mid-nineteenth century as the nation fought a bitter civil war. Religious beliefs had helped to generate social justification for the conflict. The idea that slavery was

morally wrong gained widespread support through churches, and Union soldiers often described their reasons for fighting as stemming from religious conviction and a strong sense of right and wrong. As the war persisted, however, the horrific carnage and its toll on the people challenged religious institutions, faith networks, and spiritual communities in unprecedented ways. The sheer number of dead and severely wounded fractured communities. If religious conviction had helped to spur support for the war, religious conviction was sorely challenged by the war's effect on individuals, families, and local communities, as well as on the national family. American writers grappled with the spiritual challenges posed by the war in various ways.

Civil War Responses

American writing not only faced its most difficult subject yet, but also confronted an audience who brought new needs to the reading of literature. The writing career of Elizabeth Stuart Phelps (1844–1911) illustrates the postbellum literary milieu particularly well. Born in 1844, Phelps, whose father was a pastor and then a faculty member in a theological seminary, grew up in a Calvinist religious tradition. From childhood, she was surrounded by sickness and loss—her mother died when Phelps was young, and her father suffered a breakdown—but it was the war that tested Phelps's faith and her writing most severely. Although she had written children's stories before the war, she attained fame with her postwar literary efforts. In *The Gates Ajar* (1868) she undertook to imagine life after death for readers suffering intense grief, loss, and spiritual crisis. The title refers to the gates of heaven, and the book explores daily life after death inside the pearly gates. Like her readers, Phelps wanted to imagine an afterlife that was not disconnected from earthly concern, but rather a natural extension of it. Instead of a heaven on earth, *The Gates Ajar* provides readers with an earthly heaven. Selling more than 100,000 copies in the United States and England, this novel was translated into French, Italian, and German. The only nineteenth-century novel to outsell *The Gates Ajar* was *Uncle Tom's Cabin*.

As Mary Louise Kete has argued, the three novels that Phelps wrote in the Gates series—the other two are *Beyond the Gates* (1883) and *The Gates Between* (1887)—helped readers contend with personal loss by joining a community of grieving readers. Realizing that they were not completely abandoned by departed loved ones and that others were suffering similar feelings of bereavement, readers of Phelps's Gates series took part in a collective mourning process.

Novels were crucial to this healing community; rather than isolating individual readers within the pages of a book, Phelps's novels helped readers join a group constituted through shared suffering. Key to the success of Phelps's fiction was her vision of salvation. Rather than providing readers with an abstract concept of life after death, Phelps sketched a picture of heaven that shared familiar attributes with life on earth and reassured grievors that the dead remained connected to the families they left behind and thereby retained a vital link to earthly life. In the 1890s and 1891 Phelps and her husband co-wrote two Biblical romances, but the Gates series remained the most popular of her fiction, precisely because of its delineation of the afterlife.

Emerson and Whitman

As Phelps's writing makes clear, Americans were in search of answers to spiritual dilemmas, and they brought renewed energy and urgency to this search in the postbellum period. We can see the development of this phenomenon by considering the work of Ralph Waldo Emerson (1803–1882) and Walt Whitman (1819–1892). Emerson's contribution to American religious thought occurred before the war, but it formed a cornerstone of the vision of American spirituality that Whitman perfected in the second half of the century. In 1832 Emerson preached a sermon on the Lord's Supper to the Second Church of Boston congregation. In it he argued that the individual needs no mediator between himself and God, nor does the individual need church, priest, or doctrine. Rather, the individual finds spirituality by turning to the self as the center of understanding. God was within human beings and nature and simultaneously extended beyond them to include the whole universe. Emerson's transcendentalism asserted that individuals achieved unity by perceiving the soul to be at one with the cosmos. In poetry and essays, as well as in sermons, Emerson was an outspoken advocate of individual freedom as opposed to an endorser of the authority of religion. In his first book, *Nature* (1836), Emerson asks why we should not have (1) a poetry of insight rather than of tradition and (2) a religion of revelation rather than of historical precedent. He contends that the individual is both nothing and everything—that the currents of a universal being flow through individuals that make them part of a divine as well as an earthly, finite cosmos. In "The Divinity School Address," which Emerson delivered to the graduating class of Harvard's Divinity School, he attacks the supernatural basis of Christianity, challenging Americans to worship without a mediator

between themselves and the divine and to receive truth immediately from God rather than through translation.

Emerson saw Whitman as the poet who would embody the truth he was evoking. Whitman produced six editions of *Leaves of Grass* between 1855 and 1892, constantly revising and perfecting his long poem. The text represents his life-long literary project of representing American democratic ideals in poetic form. In Whitman's *Leaves of Grass*, Emerson and many other Americans found a religion of the common man—a religion that celebrated every aspect of the self and that contained all elements of humanity. Whitman drew from America's religious background to create a poetry that would unify a nation fractured by the war. Yet this was a poetry that warned readers to beware of churches and priests and that asserted that sublime ecstasies of the soul cannot occur within the constraints of organized religion. In Whitman's estimation, even more than in Emerson's, churches were what stood in the way of real religion in the United States. God is everywhere if we could but know it, and the most sacred temple is not built with bricks and mortar, but is human flesh and the human body. Whitman's celebration of physical humanity—of the body's sensations, sexual urges, and drives—made Emerson uncomfortable. Conversely, Emerson's disinterest in a socially oriented transcendentalism and in the social ramifications of religious autonomy and free-thinking concerned Whitman. Whitman most fully and ambitiously drew upon and revised the American tradition of religious free thinking. In the process, he became one of America's most prophetic poets and most poetic prophets.

Whitman is read in literature classes, and selections from his *Leaves of Grass* can be found in every American literature anthology. As a result, it is easy to forget that his contemporaries and followers also widely recognized him to be a prophet as much as a poet. Emerson's "The Poet" calls for a distinctly American verse that represents a distinctly American religiosity in which nothing is sacred but the integrity of the individual's mind. In Whitman Americans found such a poet, but they also found a spiritual leader—a successor to Jesus and the Buddha as much as a successor to Wordsworth, as Michael Robertson points out. One admirer suggested that future Americans would celebrate the birth of Whitman just as they currently celebrated the birth of Christ. Another described *Leaves of Grass* as providing a religion to live by and to die by. Another described it as the most religious book he had ever read. Whitman understood his writing to be propounding a radically democratic theology and to have a primarily religious purpose. He rejected the idea that there

were sharp distinctions between religion and literature or religion and science. In his cosmic consciousness, distinctions between priest and poet were nonexistent, and therefore he was as much prophet as poet.

Mark Twain

American psychologist William James classified Emerson and Whitman's type of religious optimism as a religion of healthy mindedness, because both writers tend to conceive of good as the essential and universal aspect of human beings. Both writers accept the world and life as it is because they believe both are permeated with the spirit of God. The challenge for Americans is to find this reality, not to believe in its lack of existence. Not all American writers were so optimistic about American spirituality. Mark Twain (1835–1910) is one such example. Born Samuel Clemens, Twain was a life-long humorist, writer, and social critic, and religion was an important touchstone and theme in all of these forms. His writing career spanned the second half of the nineteenth century, and he is best known for *The Adventures of Tom Sawyer* (1876) and *The Adventures of Huckleberry Finn* (1884), which has been called the great American novel. But Twain wrote many novels, as well as satires and verse. In all of them religion and belief play major roles. In *Huckleberry Finn* the friendship between a white youth and a black man (Huck and Jim) provides an image of American democracy at its best. Central to that relationship is the tense relationship of race and religion. Huck rejects the churchgoing of adult members of his community, choosing to join Jim, a runaway slave. But he cannot outrun the question of racism. Faced with the conundrum of revealing Jim's whereabouts to his owner or rejecting his culture's church-sanctioned understanding of Jim as property, Huck declares that he will risk going to hell before he will betray Jim. By pitting religious teaching against the common humanity of his characters, Twain is pointing out the limitations of organized religion and its complicity in upholding America's "peculiar institution."

Throughout his writing, Twain criticizes the logical inconsistencies in American religious thought. His best-known quips often skewer religion. Twain made readers laugh at religious truth. In *A Connecticut Yankee in King Arthur's Court* (1889), he asserts that the power of training and education can bring a body up to believe just about anything. He later claims that he is sure that in matters concerning religion a man's power to reason is not above a monkey's, and that religion consists of things that the average man thinks he believes and wishes he was certain of.

He tells readers to go to heaven for the climate and hell for the company. This satirical irreverence earned him a healthy readership who found in his humor astute social commentary.

Much of Twain's literary material came from his own religious training and the cultural milieu of his time. He was raised in the Presbyterian church, which formally split over slavery—a fact that troubled Twain throughout his life. Subsequently critical of the power of belief, Twain became interested in the power of unbelief to emancipate. In other words, his writing explored the power of a humorous critique of organized religion to transform people's attitudes toward church-sanctioned social injustices. Such a literary project led him use prayer as a literary medium of social critique, when he writes, "O Lord our God, help us to tear their soldiers to bloody shreds with our shells; help us to cover their smiling fields with the pale forms of their patriot dead" (*The War Prayer*, 1904). In his final work, Twain goes the furthest in his commentary on religion. In his unpublished *The Chronicle of Young Satan*, the devil is a sympathetic figure—the scapegoat of a Christianity unwilling to look at its commitment to injustice and oppression. Twain devoted his literary career to exploring and exposing the duplicities hidden within organized religion in America. At the core of this literary critique was American racism.

African American Writers: Sutton Griggs and Charles Chesnutt

Twain was not the only American writer to comment on race and religion. In the career of African American minister and novelist Sutton Griggs (1872–1933), we can find a powerful complement to Twain's literary vision. While Twain used literary forms to criticize the church, Griggs preached and wrote about the racial injustices of post-Reconstruction America. We can see how his religious training and literary ambition worked together by considering his nonfiction and fiction writing. Born in Chatfield, Texas, Griggs was the son of the Reverend Allen Griggs, a preacher who also established the first black newspaper in Texas. Father and son were both instrumental to the genesis of the American Baptist Theological Seminary, and Sutton Griggs was a preacher throughout his life. He was also a novelist and author of numerous nonfiction pamphlets. As Wilson Jeremiah Moses has observed, with the possible exception of W. E. B. Du Bois, Griggs was the only black novelist of his period who deliberately undertook the writing of novels as part of a plan to create a national African American literature. His religious

training was essential to this literary project. Griggs believed that the art of making literature was fundamental to the successful progress of the African American people, and he undertook novel writing as a way of elevating the race. Griggs wrote more than a dozen novels and many nonfiction prose pieces, which he printed and disseminated on his own. Believing that the African American community needed its own press and circulation system, Griggs was author, publisher, and marketing department for African American literature in the late nineteenth century. His experience as a preacher was essential to his understanding of a distinctly African American literary tradition. Griggs was used to addressing a congregation of believers, and he approached literature with the same assumptions in mind. Early novels such as *Imperium in Imperio* (1899) and *Overshadowed* (1901) use the rhetorical strategies of the sermonic tradition to persuade readers of the importance of African American liberation. His novels often feature a preacher protagonist, but they also include long monologues of oratory in which characters persuade listeners (and readers) of the importance of African American equality. In *Imperium in Imperio*, the male protagonist is a Christ-like figure who is lynched but rises from the dead, escapes, and forms an African American community based on the principles of liberty, equality, and fraternity. Worthy individuals enter this hidden community through a reverse ascension into the brotherhood—a literal life after death and entry into a heaven of racial equality.

In his nonfiction prose Griggs uses his position of religious prominence to garner the attention of readers. *The Race Question in a New Light* (1909), *Wisdom's Call* (1910), and *Beyond the End* (1911) draw on the oratorical tradition and the preaching style he developed while pastor of the First Baptist Church and the Tabernacle Baptist Church. Griggs's literary career has recently become the subject of scholarly attention. Prominent African American Studies scholar Cornel West has identified Griggs as one of the most important public intellectuals of his generation, and his first novel, *Imperium in Imperio*, as the first major political novel written by an African American. Key to the quality and quantity of Griggs's work is his religious training, which informs the plot, characters, and narrative style of his writing.

While Twain critiqued the hypocrisy of organized religion's racism in his writing, Griggs used his religious training and position to begin to shape a distinctly African American literary tradition. A contemporary of Griggs's, African American writer Charles Chesnutt (1858–1932) also featured religious belief in his stories. Born to free black

southerners, Chesnutt grew up after emancipation and began his literary career in the late nineteenth century. Unlike Griggs, Chesnutt used the white-controlled publishing industry to disseminate his literary message. Indeed, he was the first African American writer of fiction to make effective use of it. In short stories that he published from 1899 to 1905, Chesnutt commented on different religious training and belief systems separating whites from blacks in the South. In “Po’ Sandy” the African American protagonist, Uncle Julius, tells his white listeners the story of Sandy and his wife, Tenie. Manipulating their history of slavery, Uncle Julius describes how conjuring transformed Tenie into a tree, so she could stay close to her love instead of being sold away. This story of conjure depicts slave belief systems, but it also is strategically used by Uncle Julius to persuade his listeners to give him the lumber from the tree to build a new African American church. By putting the religious traditions of slaves into the service of contemporary African American religious aspirations, Uncle Julius manages to secure a new building for his congregation. It is concern that the slaves’ ghosts haunt the tree that convinces his white listeners to offer the tree as building material for the church, rather than to use it as lumber for a new kitchen. When asked if Sandy’s ghost would disturb worship, Uncle Julius replies that ghosts never disrupt church services, but if the spirit should stray into the meeting by mistake, the preaching would do it good. Uncle Julius is the storyteller throughout Chesnutt’s collection of short stories, *Conjure Tales: Stories of the Color Line*. These stories consistently show both the importance of conjure as a belief system for blacks during slave times and the value of that belief system for free blacks, like Julius, who must negotiate as free people with whites. Conjure becomes not only a way for slaves to sustain their spiritual wholeness and community belief system under slavery, but also a way for free slaves to succeed in a socioeconomic world to which they have not historically had access.

Feminist Writing: Charlotte Perkins Gilman

This impulse to turn to religion as a way to think through social injustice is not unique to African American writing, but is also evident in much feminist literary practice in the late nineteenth and early twentieth century in the United States. Charlotte Perkins Gilman (1860–1935) is a prime example of the intersections of religion, feminism, and literature. Although we tend to think of religion and feminism as opposing forces in American culture, the interconnections run wide and deep. Rejection of religious authority and

religious and moral struggle are connected with Gilman’s struggle against submissiveness, dependency, and the suppression of self so endemic in Victorian understandings of American femininity. Being passionless and pious were the desired attributes of bourgeois angels of the house. But this gender-specific understanding of religious belief ran counter to full human development, according to Gilman and other feminists. Much like other cultural practices aimed at subordinating women, mainstream American religion worked to marginalize, stunt, and disempower women. Some thinkers decried the feminization of religion in the antebellum period, but Gilman and others argued conversely that religion helped to make male dominance a natural and unquestioned part of life. The price for women was not spiritual growth but spiritual death. In *His Religion and Hers: A Study of the Faith of Our Fathers and the Work of Our Mothers* (1923), Gilman documents the gender bias built into faith practice in America. The American woman’s true duty as a member of the nation is, according to Gilman, to bring into being a religious practice that liberates all citizens, regardless of sex or race, and that does not enslave any of its believers or distinguish between them based on color, gender, or social station. Gilman believes that women congregants are uniquely equipped to achieve this utopian religious community. Because of women’s maternal role, they have the experience of nurture and development necessary to this important task. When we think of Gilman, we tend to think of her famous short story, “The Yellow Wallpaper,” in which the first-person narrator goes slowly mad after giving birth to her first child. A powerful feminist critique of American medicine as well as American gender norms, “The Yellow Wallpaper” was thought to induce madness in women readers and was therefore banned for a number of years. The story was based on Gilman’s own experience of motherhood, and she subsequently abandoned her family to become a writer.

Gilman’s literary vision of an egalitarian religious community is utopian. Much like Whitman, she imagines a world in which Americans pursue spiritual growth unencumbered by religious dogma and institutional history. For Whitman, spiritual authenticity is inherent in every individual and can be found in nature—everywhere. For Gilman, the realization of spiritual equality occurs in an imagined, utopian land called *Herland* (1915). Gilman’s novel imagines a community of women who have survived a natural disaster and have subsequently built a society of, for, and by women. There are no men in this world, nor have any of the women had any

interaction with men. Inducing pregnancy through a remarkable force of will, this female-only world marries religion to life such that the two are indistinguishable from each other. In the world of Herland, religion has no name, no domain apart from the nation, no rituals or holy days; rather, the inhabitants' daily life is an ongoing celebration of a clear, established connection between God and woman. The inhabitants of Herland do not practice religion or subscribe to a particular religion—they collectively *are* a religion. In this way, they embody an Emersonian and Whitmanesque spirituality unachievable in late nineteenth-century American society, but not unimaginable in the literary imagination of American writers like Gilman.

Science, Religion, and Literature

As Gilman's work illustrates, late nineteenth-century literature was reinventing and retooling not only literary techniques but also the very founding assumptions of religion to meet the needs of an age that was increasingly secular, scientific, and pragmatic. Like many Americans, postbellum writers were shaken by Charles Darwin's scientific concepts of human evolution, natural selection, and survival of the fittest. Darwin's *On the Origin of the Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life* (1859) and *Descent of Man* (1870) created shock waves in American religious communities when they arrived in the United States, and they called into question organizing principles of religious concepts such as divine selection, the creation of heaven and earth, and salvation, among many others. Was it possible that human beings were descended from apes and not made in the image of God? Was it possible that the Earth had not been made in seven days but over the course of a much longer period? Finally, was it possible that "salvation" was less a matter of personal redemption and absolution of sin and more a matter of evolutionary principles that naturally selected certain traits as more useful than others? These questions rocked religious communities and created crises of faith among American believers. In the wake of the Civil War, Americans had questioned a God who could allow such human suffering and loss, but with scientific "proof" that discounted many religious precepts, Americans found themselves forced to confront an entirely new and unprecedented set of challenges to their faith.

American writers responded in a myriad of innovative ways in their literary works. Sentimental literature of the antebellum era had emphasized religious growth and

spiritual awakening as integral to social transformation and success. Writers such as Louisa May Alcott (1832–1888) had written extremely popular novels such as *Little Women* (1868) that relied on sentimentality and religious growth as a major feature of characters' development. Reading *Pilgrim's Progress* gives shape and texture to the five March girls' lives as they develop into women, and they learn important lessons in right and wrong through daily challenges. Alcott's novel was very successful, and she quickly followed it with *Little Men* (1871). In this sequel the March sisters are grown, with homes of their own. Jo March has started a school for indigent boys called Plumfield. The school aims to turn at risk boys into upstanding members of society, but the boys must first conquer their sinful natures. Sin in *Little Men* is imagined in Darwinian terms, and the seven deadly sins become evolutionary challenges that individual boys must overcome through internalizing adaptation techniques. Rather than being likened to religious pilgrims, the boys are repeatedly equated with animals—colts, owls, squirrels—and like these animals in the natural world, they must adapt to their surroundings or become extinct. Through extensive literary metaphor Alcott explores what it means for human beings to be incrementally rather than essentially different from animals. She provides examples of nature untamed when she describes one of the boys' pets—a crab—eating its offspring. In the world of Plumfield, human beings must evolve beyond these savage, animalistic origins and natures if they want to succeed in life.

American writers' interest in the religious significance of scientific discovery and innovation was not limited to evolutionary theory, but included new scientific fields of study such as psychology. Psychology emerged as a distinctive discipline in the 1890s, largely through the pioneering work of William James (1842–1910), brother of the famous American writer, Henry James. William James explored the depth and complexity of the human mind and developed a distinctive school of American psychological thought. In his monumental *Principles of Psychology* (1890), James did more than any other individual to establish psychology as a formal scientific discipline. What is the place of religion in this new scientific field? How does psychology think about spirituality? How does writing represent these complex questions accurately? These are questions that James explored in his many writings and lectures while at Harvard University. Scientific and literary innovation dovetailed when James coined the term "stream of consciousness" to describe the mind's connection to the world. This psychological term was taken up by

modernist writers and became one of the defining traits of modernist literary technique. American modernist writers such as William Faulkner used a stream of consciousness narrative strategy in which subject and verb do not necessarily agree, sentences are interrupted, and characters interrupt each other as a way of capturing the nonlinear, ungrammatical, and spontaneous nature of human thought.

In *The Will to Believe* (1897) and *The Varieties of Religious Experience* (1902), James addresses the role of religion in the modern man's mental composition. There is a danger, according to James, in believing too little or too much. James used psychological methods to explore and arguably to justify religious belief. For James the question was not if God existed but rather what human benefits are derived from believing in God. In other words, God's "existence" is proved by what belief in God brings to a person's life. Religion and belief are important elements of psychological study precisely because they produce significant psychological outcomes for believers or dissenters. In fact, psychologists should study intense, even pathological, religious mentalities because they highlight mental processes. For this reason, James pursued the study of religious innovation and genius rather than the study of religious institutions or church history. Additionally, he was interested in mystical experience—mesmerism, spiritualism, and mediums. In 1909 James published his first-hand experiences with a medium in the journal *Science* and in the *Proceedings of the Society for Psychical Research*. Connection to the spiritual world as well as religious belief, in James's writings, became the subject of scientific inquiry.

Literary Legacies

William James's nonfiction writing on religion and science, however, was atypical in the late nineteenth and early twentieth-century United States. New literary genres of American realism and American naturalism adopted the scientific method and sought to depict American life "as it was," without spiritual window dressing and with an emphasis on natural competition in the marketplace. The very absence of religious subject matter or spiritual development in this writing gives us the clearest indicator of the rising secularism and disillusionment with religious institutions that characterized the turn of the twentieth century. Theodore Dreiser (1871–1945) is a clear example. The heroine of his novel, *Sister Carrie* (1900), succeeds, not because she has come to believe in God or has a spiritual awakening, but because she has managed to secure economic autonomy and

affluence for herself through manipulating the law of the market to her advantage. Her solitary rocking in a rocking chair at novel's end signals the emptiness of her success, and the narrator declares that she will know neither contentment nor serenity. Instead, she is left dreaming of a happiness that she cannot feel. Edith Wharton (1862–1937) and Henry James also describe intensely secular worlds of social climbing and modern sexual mores. Influenced by Sigmund Freud's early twentieth-century theories of psychosexual development, these writers and others turn to sexuality as a primary source of narrative energy and complexity. The deep interest in religion and spirituality of nineteenth-century writers became by the early twentieth century an interest in the psychodynamics of desire, longing, and secular imagination. Emerson's objections to the eroticism of Whitman's *Leaves of Grass* might indeed strike writers such as Wharton as quaint. In her *House of Mirth* (1905), the church is a place to seal profitable social contracts (like the marriage contract) and to appear for social advantage. Not substantively different from the theater, the church is no longer clearly distinguishable from secular forums for entertainment and distraction.

It is precisely this narrative focus away from spiritual and religious themes throughout much of the twentieth century that has tended to encourage readers of American literature to see religion and literature as distinctive fields of thought. Yet as we have seen, American literature and religion have had much to say to each other from the early national period onward; indeed, the two are profoundly interconnected. Once we see the longer history of this relationship, we can understand the popularity of contemporary novels that treat religious topics, such as Dan Brown's *The Da Vinci Code* (2004). A controversial detective novel about the Catholic church and the history of Christianity, Brown's novel was a worldwide best seller and translated into forty-four languages. But it also has occasioned much conversation and controversy in churches across America. Writing and American religious thought have a long history—a history of ever more importance in America today.

Liturgical Arts

The arts of painting, stained glass, sculpture, and metal work have been vital elements of liturgical spaces since Americans started building places of worship in the New World. Whether “high” (characterized by elaborate ritual) or “low” (emphasizing the word), worship has reflected more than theology. Because religion is ineluctably associated not only with moral but also with cultural behavior, confessional beliefs have expressed both status and economic power. Religion is also associated with fidelity to tradition, so that stylistic influences have frequently been of long duration and often, but not always, independent of concomitant styles in secular society.

Conspicuous Display in Colonial America

The first experiences in the New England colonies were informed by a belief that life is a pilgrimage through a transient world. William Bradford's words at the founding of Plymouth, Massachusetts, rejected attention to “outward objects.” The word was dominant, and in this culture of remarkable literacy, Bibles, primers, catechisms, and even printed sermons gained importance. The “plain style” encouraged Communion tables to be indistinguishable from good-quality domestic products, so in the First Parish Church of York, Maine, a simple wooden tankard was used

as the Communion cup. Unadorned pewter basins were impressed for the ceremony of baptism, deliberately distinct from the traditional Roman Catholic baptismal font. The pewter basin brought from England for the First Church in Hingham, Massachusetts, however, was silver-plated, a harbinger of the trend in prominent congregations in Virginia, Philadelphia, or Boston, to make use of donated silver from prestigious makers. Within the stark white simplicity of the “churches on the green” that had become icons of American Protestantism by the time of the Revolution, such objects had become markers of late colonial status and influence. Most frequently donated were Communion cups and baptismal basins, but candlesticks and other such objects also appeared. As church architecture followed an aesthetic modeled on private homes and other secular structures, the style of the plate mirrored that of domestic uses. John Hull (1624–1683), who learned his trade in London, was probably Boston's first silversmith. Hull, his partner Robert Sanderson, their apprentice Jeremiah Dummer, and others produced Communion service for the New England area, as well as commemorative plate.

A typical example is the plate associated with Christ Church Congregational in Cambridge, Massachusetts, now on loan to the Museum of Fine Arts, Boston. Of the four tankards, two are a pair made by John Coney of Boston and inscribed “The Gift of Mr. William Wilcocks to the Church of Christ in Cambridge N.E. / Anno Dom 1654.” Tankards and drinking cups were favored because their forms distanced them from the chalices of the Roman Catholic church, repudiated during the English Reformation. By using vessels associated with the values of social gatherings, fellowship and equality were emphasized over the values of ritual. Private individuals often melted their coin to provide material for a silver service, which achieved the goal of keeping one's liquidity and displaying it, too. These practices paralleled the manner in which precious materials functioned as elements of ready capital for pre-modern institutions. Colonial silver was also the mark of aesthetic savoir-faire, exemplifying the transmission of style from the center (such as London) to the periphery (the colonies). Silver was the first expression in art or architecture to mirror progressive trends, as seen in Paul Revere's shift from rococo forms to the neoclassical before 1790.

The Taste for Sentiment, Embellishment, and Image

The Romantic movement that began to develop in Britain in the later eighteenth century gave rise to a taste for the

Middle Ages and its religious and artistic expression that displaced or at least competed with the classical, not only in architecture but in the collecting of works of art. These tendencies fed into what became the Anglican ecclesiological movement of midcentury toward more elaborate ritual and greater visual display in worship. This transformation of taste affected the United States, at first modestly, as revealed by the 1836 *Essay on Gothic Architecture* by John Henry Hopkins, Episcopal bishop of Vermont. Hopkins was a firm supporter of stained glass to modulate light in order to produce an atmosphere conducive to prayer, as opposed to the clear glass favored in the era of neoclassical taste and Enlightenment values exhibited in colonial Anglican churches. He argued against High Church trappings in his essay *The Law of Ritualism* of 1866, but acknowledged an inevitable increase in liturgical embellishment, noting that the age was one of “excitement” and that a color-filled and welcoming environment appealed to natural tastes and feelings. Given the limited technical and financial resources of Americans, he suggested that transparencies painted on linen or muslin in the Gothic style could be fixed inside church windows. Hopkins’s own church of St. Paul in Burlington had such stained glass substitutes until true stained glass was installed during a renovation campaign in 1851.

Even when early architects used leaded glass, it was most commonly quarry glazing, small sections of glass in a lattice pattern, a style very popular in fourteenth- and fifteenth-century English country churches and Tudor secular buildings. Not simply expedience, but a general Protestant iconoclastic tendency to distrust imagery appears to have encouraged these choices in the first half of the century. Hopkins’s *Essay* argued that it was “lawful” to represent events from scripture through pictures and statues, as memory aids. He concluded, however, that the danger of superstition and idolatry had been so great in the history of Christianity that on the whole he would recommend only symbolic images and scriptural passages.

Under the direction of Benjamin Webb, John Mason Neale, and Alexander Beresford-Hope, England’s ecclesiological movement gained influence. Its journal, *The Ecclesiologist* (1841–1868), and its progeny, *New York Ecclesiologist* (1848–1853), were major vehicles for High Church ideals. The Episcopal Church of St. James the Less in Philadelphia, constructed between 1846 and 1850, was modeled on St. Michael’s, Long Stanton, Cambridgeshire, dating about 1230. Plans were provided by the Cambridge Camden Society, the original promulgator of ecclesiological values.

St. James’s pulpit, lectern, rail between nave and chancel, and window sash were imported from England. The builders were deeply committed to the use of natural materials, requiring finely cut stone, well-seasoned oak, and the avoidance of plaster and paint. The windows above the high altar were fabricated in 1849 by the renowned Parisian studio of Alfred Gérente. The tall narrow lancets of the chancel showing a Tree of Jesse are similar to the windows at Jesus College, Cambridge, for which the English gothicist Augustus Welby Pugin (1812–1852) had designed the glass in an early thirteenth-century style in which the appearance of three dimensions is scrupulously avoided.

In contrast is Minard Lafever’s Episcopal church of the Holy Trinity, Brooklyn, built between 1843 and 1847, which was also influenced by the ecclesiologist movement. The stained glass, the first major commission on American soil, was designed and fabricated by William Jay and John Bolton. The fifty large windows show a remarkable harmony of color and figure, modeled in form and iconography after the early sixteenth-century three-dimensional Renaissance style in King’s College, Cambridge, that the designers had known from their youth.

Nineteenth-Century Developments and European/English Influence

As the nineteenth century progressed, American studios, such as that of Henry Sharp of New York, were frequent choices for architects, most notably Richard Upjohn (1802–1878), for Gothic Revival style decor. Sharp’s fourteen double-lancet windows using a simple quarry design for Upjohn’s Bowdoin College chapel, Maine, in 1850, are still extant. Sharp produced an important series of windows for St. Paul’s Episcopal Church, Newburyport, Massachusetts, about 1863, and for the Church of the Good Shepherd, Hartford, Connecticut, in 1868, commissioned by Elizabeth Colt, widow of Samuel Colt of firearms fame.

Silver service remained important for religious use. Gorham Company, founded in 1831 by silversmith Jabez Gorham of Providence, Rhode Island, developed an ecclesiastical division, producing not only service items for liturgical use, but plaques and other commemorative elements for installation or for temporary use. At mid-century, the dominant style was the Gothic, and many of the works, including chalices, crucifixes, and thuribles or censers (for burning incense), reflect Pugin’s influence.

As economic and social aspiration progressed, however, more and more foreign ecclesiastical designers came into

favor. St. James the Less subsequently commissioned James Powell and Sons, Whitefriars, and a number of other prominent London firms for its glass. H. H. Richardson's neo-Romanesque masterpiece Trinity Church, Boston, exemplifies many trends related to church construction in the 1870s in a sophisticated urban setting among a Protestant elite. Although Episcopal, it was a "broad church" in inclination, prioritizing preaching and downplaying the chancel area where ritual was performed. Phillips Brooks (1835–1893), Trinity's rector, attracted major figures in the Boston area, such as Harvard graduate Martin Brimmer (1829–1896), founding director of that city's Museum of Fine Arts. When the first windows were commissioned and installed in 1877–1878, it was obvious to the patrons that no American studio could compete in quality with studios from France and England. Trinity's designers selected the London studios of Clayton and Bell, Cottier and Company, Henry Holiday of Powell and Sons, Burlison and Grylls, and William Morris and Company, as well as the Parisian studio of Eugène Oudinot. The first American windows were designed by the eminent muralist, John La Farge (1835–1910), whose decorative scheme turned Trinity into a masterfully integrated ensemble of the various arts.

Opalescent Stained Glass: Renaissance Revival

The taste for opalescent stained glass in the 1880s and 1890s corresponded to a taste for greater opulence in both domestic and public spaces. Luxuriant colors and textures, achieved by the use of inlays and veneers of marble and wood, wallpaper, stenciled painting, and leaded windows all combined for an unusually rich effect often described under the rubric of the American Renaissance. La Farge's ecclesiastical innovations were furthered by Louis Comfort Tiffany (1848–1933). La Farge had combined selected stained glass in a variety of tones with a new material, an opalescent type of commercial glass previously used mainly as a porcelain substitute in toiletries such as brushes and mirrors. The process became the hallmark of American studios. At the height of his studios' popularity, Tiffany oversaw a huge enterprise and willingly worked with other artists and designers. He also frankly acknowledged his adaptation of well-known paintings as the basis for stained glass designs, such as his *Seven Gifts of the Holy Spirit* after Sandro Botticelli's fifteenth-century painting, *Virgin and Child Attended by Seven Angels*, and *Christ Leaving the Praetorium*, after the popular nineteenth-century print by Gustave Doré. The studio's most characteristic figural work, however, was indebted to

Frederick Wilson (1858–1932), an Englishman who came to New York in the 1890s and stayed for more than thirty years. The ethereal faces of Wilson's angels characterize thousands of windows. The near-universal acceptance the new windows achieved is attested to by the frequent example of "low" denominations scheduling renovations. Arlington Street Church, built by Unitarians in Boston in 1861, adopted a full sequence of complex opalescent windows on the Beatitudes designed by Wilson, begun in 1898 and extending over thirty years. In Charleston, South Carolina, the historic, and image-free, Episcopal church of St. Michael's, built in 1761, was renovated at the turn of the century to include a chancel and figural opalescent windows designed by Tiffany Studios.

Nonsectarianism: Stanford University Memorial Chapel

Another significant enterprise in the liturgical arts in this era was J. and R. Lamb Studios. Founded in 1857 by English-born Joseph Lamb and his brother Richard, it was the first American firm to specialize in all facets of ecclesiastical design. At mid-century, Lamb Studios worked in the dominant Gothic style, concentrating on wood, stone, and textiles in the medieval revival styles. By the 1890s its dominant style was opalescent, and later, the twentieth-century Gothic Revival.

One of J. and R. Lamb's major commissions included the more than sixty windows installed between 1899 and 1903 for the Memorial Chapel of Stanford University, Stanford, California. Jane Stanford (1828–1905), the project's patron, planned the designs modeled on time-honored paintings of the life of Christ. To explore the Stanford University Memorial Chapel is to understand the pervasive Christian, albeit nonsectarian, aspect of America's common culture. Stanford conceived of a university chapel as a memorial to her husband, Leland Stanford, who had died in 1893. Following their joint theology, she constructed the church as an homage to the moral principles of religion, resting, in her words, upon "the simple religion of Jesus Christ and His beautiful life."

The windows reflect nineteenth-century collections of religious images that were standard elements of Sunday school instruction and framed prints, and included among the subjects were the flight into Egypt by Bernhard Plockhorst, and similar biblical scenes by popular artists such as Doré, John Heinrich Hofmann, William Holman Hunt, Bartolome Esteban Murillo, Sibyl C. Parker, and Axel Hjalmar Ender. The Reverend Frederic Farrar's *Story of a*

Beautiful Life Illustrated (1900) may have provided many of the sources of imagery to Lamb and Jane Stanford. Sources also include companies such as Perry Pictures of Boston. Founded in 1897, Perry distributed low-priced half-tone reproductions of works of art, targeting its distribution to the average citizen. It also published monthly the *Perry Magazine*, promoting the use of such images.

New Subject Matter: The Individual, Family, and Nature

Stanford's chapel is an example of what we now term as religion's "private sphere": family life and personal morality. Imagery emphasizing the family life of Christ and the infancy of the Virgin, although developed to an extent during the seventeenth century, came to dominate popular imagery. What was popular in widely circulated books with religious themes—a major expression of Protestantism in graphic form—also dominated imagery in liturgical spaces. Invariably, churches contained some rendition of the marriage at Cana with details of the youthful couple, worried host, solicitous mother, and Christ's gesture of kindness. Charity was a common theme, including the parable of the good Samaritan, and of female agency: Dorcas, Mary and Martha, or Naomi and Ruth (brilliantly depicted by John La Farge in Vassar College's chapel). The parable of the wise and foolish virgins (frequently truncated to the scene of the wise virgins welcoming the bridegroom) and that of the sower and reaper enabled buildings to glisten with figural imagery. The Sermon on the Mount and representations of the Beatitudes were also popular.

Images of Christ as child, youth, healer, and compassionate leader were particularly successful in striking a receptive note. Heinrich Hofmann (German, 1824–1911) created renditions of episodes of the life of Christ that became staples of reproduced images in American religious instruction. So understandable were they that the full image, sections, or even the isolated portrait could be used. As nondoctrinal images, their sense of reality allowed Protestants and Roman Catholics to accept Hofmann's work. The painting of *The Boy Jesus Amidst the Doctors of the Temple* was used by Roman Catholic Holy Name Societies and organizers of Protestant prayer rallies alike. Hofmann's image of *Christ in the Garden of Gethsemane* became the standard rendition of the subject rendered in innumerable wall paintings and windows.

Landscape alone, or with a biblical inscription, also became a new devotional subject. The appreciation of Renaissance art coinciding with the academic taste of the

nineteenth century supported this development. Brimmer suggested that Millet's landscapes with laboring peasants could be termed religious images, as redolent with meaning as the depiction of angels by Botticelli. Landscape, exemplified by the huge production of Tiffany Studios windows in this genre, meshed with the American religious direction towards broad views, where God's immanence was seen to be inherent in the natural beauty of the land, and therefore visible to all, regardless of denomination.

The image of Christ generally followed northern European precedents, specifically the photographic realism of the type painted by Warner Sallman (1892–1968) that was to be challenged in the mid-twentieth century under more keenly felt ethnic and racial marginalization. At the turn of the century, however, realistic imagery was generally associated with progressive thinking, as an effort to bring Christ into the everyday world. D. W. Griffith's *Intolerance* was produced in 1916 as the filmmaker's protest against the slaughter on the battlefields of World War I. In showing the scenes in Nazareth and Jerusalem, such as Christ sitting down to eat with sinners, Griffith cites the authority of French painter J. James Tissot. Although present-day interest associates him with the Impressionist movement, Tissot was known for his illustrations of Hebrew and Christian scripture in *The Life of Our Savior Jesus*, in three volumes published by Werner Company, 1899–1900, and *The Old Testament*, published by M. de Brunoff in 1904. Tissot's influence reflects the context of the nineteenth-century's canon of great works of art, communicated through photograph, engraving, and literary description.

Catholic imagery reflecting recently augmented devotionism, is attested to by statues, wall paintings, and stained glass, as well as holy picture cards. Devotion to the Sacred Heart of Jesus, a means of emphasizing for the faithful Christ's compassion for humanity, continued a tradition from medieval times. Margaret Mary Alacoque's (1647–1670) description of her vision provided the devotion with its codified form. In 1856 Pius IX made the feast of the Immaculate Conception and its special liturgy on the Friday following the octave of the feast of Corpus Christi a universal feast. In 1870 Pius IX instituted the feast of St. Joseph as Patron of the Universal Church, lending official recognition to the great surge of interest. Joseph already had become a popular image as the patron of a happy death because he was believed to have died in the presence of Jesus and Mary. Although absent from scripture, the scene became a popular Catholic "icon" in the mid-nineteenth century, for it depicts Joseph dying attended not only by his

loved ones, but in the presence of God himself. Pius VII in 1814 authorized an act of consecration to St. Joseph.

Continental Stylistic Influences and Roman Catholics

As Catholics began to acquire more economic and political power, they also began to differentiate their buildings from those of Protestants. European companies in Paris around the area of the church of St. Sulpice exported small goods,

including medals, statues, and works on paper, especially certificates of first Communion, Confirmation, and marriage. Carl Benziger and Sons, later known as Benzinger Brothers, of Switzerland, opened a branch in Cincinnati as early as 1838 and expanded elsewhere in the United States. The favored vendors of stained glass were the Catholic studios of Franz Mayer, Franz Zettler, Gustav van Treeck, of Munich, and the Tyrolese Glass Painting Establishment (TGA) of Innsbruck, Austria. The studios prolonged the German Nazarene painting style of the 1840s and 1850s, melding Catholic religious sentiment with a Raphaellesque air of idealism and sweetness. The glowing colors, Renaissance figural types, and smoothly polished surfaces achieved by the Nazarene movement in oil were eminently suited to glass. Probably the most influential commission was for the nineteen windows for Our Lady of Help in the new suburb of Au outside Munich. All the costs for the windows were borne by King Ludwig of Bavaria. Two folio publications, one of black and white and later another of chromolithograph plates, made the windows of Au accessible to a broad European audience. Similarly, Ludwig's donation of all the windows in the south transept of Cologne Cathedral proclaimed the style as the preferred Catholic expression.

The Cathedral of the Holy Cross (1866–1875) in Boston is a striking example of Nazarene influence, as its windows were probably executed by a Munich or Rhenish studio under contract to the Morgan Brothers of New York. Significantly, when the cathedral was glazed, the vestry of Trinity Church, Boston, was keenly aware of the denominational association of these works. In 1875 Trinity's window committee characterized two styles, the English glass, of which the committee approved, and that in the "Bavarian" style, a definition that appears to have included most of the continental Catholic expressions, which was not acceptable. Stained glass installations in American Catholic churches, many of them now falling victim to church closings in major urban centers, numbered in the thousands. The diocese of Hartford, Connecticut, which then included Rhode Island, was often supplied with stained glass from the TGA firm of Innsbruck. Some of TGA's most sophisticated windows, such as *Abraham and the Three Angels*, appear in Providence's Cathedral of Saints Peter and Paul.

The Arts and Crafts Movement and the Twentieth-Century Gothic Revival

By the turn of the twentieth century a renewed interest in craftsmanship and a dislike for routine, machine production

supported the growth of the Arts and Crafts movement. Here, however, there also emerged an interest in past precedents, especially the art of the later Middle Ages. Charles Eamer Kempe (1837–1907) of London had established a thriving studio responsible for many commissions in the United States, such as the great Jesse Tree of the Church of the Advent, Boston (Episcopal, 1897), and the windows of several chapels of the Cathedral Church of St. John the Divine in New York (Episcopal, 1916 and 1918). Kempe's style evoked fifteenth-century glazing and panel-painting traditions, exemplified by the creed window from Hampton Court, now in the Museum of Fine Arts, Boston. Figures in vibrant color, set against white glass backgrounds, are framed by architectural canopies also framed by deeply saturated colored glass. Englishman Christopher Whall, who was a profound influence on American art, emulated late medieval juxtapositions of large amounts of uncolored glass with segments of color and silver-stain yellows.

Under the aegis of architects such as Ralph Adams Cram (1863–1942), however, the United States experienced a twentieth-century revival of historicism, even as the country saw the beginning of early modernism under designers such as Frank Lloyd Wright. Cram, however, like Wright, was interested in the entire configuration of the buildings, from woodwork to textiles, to windows and wall paintings. One of the favored woodcarvers was Johannes Kirchmayer (1860–1930), born in Oberammergau, Bavaria. Working in Boston in the 1880s, he was a founding member of the Boston Society of Arts and Crafts, with his work featured in an 1887 exhibition. After 1898, in the employ of Irving and Casson, a Boston woodcarving company, he produced many installations, notably the woodwork for the Church of the Advent in Boston's Beacon Hill. Advent, designed by John H. Sturgis in emulation of ecclesiologist English architecture such as All Saints, Margaret Street, London, was a center of Anglo-Catholic (or High Church) Episcopalianism. Cram himself designed a monstrance for the rite of the Benediction of the Blessed Sacrament at Advent, to which Kirchmayer modeled the complex figural design of eloquent supporting angels.

Cram's sometime partner, Bertram Grosvenor Goodhue (1869–1924), was instrumental in the interior design of many of the churches on which they collaborated, including St. Thomas Episcopal (1911–1913) on Manhattan's Fifth Avenue. Goodhue worked closely with artists in a variety of media, particularly the sculptor Lee Lawrie (1877–1963), who was responsible not only for the stunning Art

St. Peter, wood, Church of the Blessed Sacrament, Walpole, Massachusetts, about 1914. *John Kirchmayer, Boston, Massachusetts.*

Deco-style reredos in St. Thomas but also for the Atlas statue outside nearby Rockefeller Center. Goodhue was also responsible for the Byzantine-style mosaic work on the interior of St. Bartholomew's (Episcopal, 1917–1930) a few blocks away on Park Avenue, and his firm continued after his death to design remarkable artistic assemblages such as the interior of Christ Church Cranbrook (Episcopal; Bloomfield Hills, Michigan, 1925–1928).

Cram characterized opalescent windows as inappropriate for a spiritual atmosphere and gave explicit directions to studios to avoid them. His disdain for opalescent glass

appears associated with its ubiquity. His efforts began the twentieth-century polarization that generally relegated American stained glass to mere church decoration, a situation that lasted until the 1960s when stained glass became again linked to contemporary work in the fine arts. Cram was also explicit in his criticism of Munich style windows. Writing for the journal *Stained Glass* in 1931, he stated that they were “too terrible to contemplate” and argued that it had become a question of how to get rid of them without impiety. Cram called for replacement windows of the same subject “but made by real artists.”

Like Pugin, Cram was a writer, organizer, and scholar, and one of the founding members of the Medieval Academy of America. It is therefore not surprising that his taste in glass paralleled his overall program of reviving the arts, crafts, thought, religion, and social organization of the Middle Ages. Given the importance of the architect in the selection of stained glass studio, American studios quickly adopted the medieval style, until it became almost universal. Italian-born Nicola D’Ascenzo (1871–1954) of Philadelphia worked in a variety of styles but is best remembered for windows inspired by the Middle Ages, such as those in the Cathedral of St. John the Divine, New York City. Cram patronized another Philadelphia studio, William Willet (founded 1898), that was responsible for the *Seven Liberal Arts* window, 1913, as well as for Proctor Hall and its windows and the windows for the Chapel at Princeton University. Cram explicitly advised Willet to model the Proctor Hall windows after those of the clerestory of Chartres Cathedral. Coming to the United States in 1914 at Cram’s behest, English-born Clement Heaton was a versatile artist who had designed Art Nouveau work around 1905. In the United States, he produced French-inspired Gothic Revival, as seen in the west rose window of the Catholic Church of the Blessed Sacrament in New York, as well as English style in the Episcopal church of St. Philip, Charleston, South Carolina.

Boston saw the rise of large and influential studios working in a Gothic Revival style, such as those of Wilbur Herbert Burnham, and Reynolds, Francis, and Rohnstock, both with significant windows in the National Cathedral, Washington, D.C., as well as George C. Ball, Earl Edward Sanborn, Harry Wright Goodhue, and Margaret Redmond, with work in Trinity Church, Boston. Charles J. Connick (1875–1945), however, was the movement’s chief polemicist and directed what was possibly its most prolific studio. His window, *The Holy Grail*, for Proctor Hall, Princeton University, in an Arts and Crafts mode inspired by Whall, is

consonant with Cram’s program of restructuring medieval religious media to refer to modern goals of education. By the late 1920s, as demonstrated by Connick’s *Pilgrim’s Progress* window in the Princeton Chapel, and through the 1950s seen in the commissions for St. Patrick’s Roman Catholic Cathedral, New York City, the studio drew inspiration from the twelfth-century Romanesque style typified by Le Mans cathedral and the thirteenth-century Gothic style exemplified by the windows in Sainte-Chapelle, Paris.

Carefully crafted windows that closely emulated medieval precedents were possible because the American Gothic Revival studios, like their European predecessors, could rely on publications by restorers of stained glass. Many restorers published books with lavish reproductions and tracings or other detailed restoration drawings. N.H.J. Westlake’s *A History of Design in Painted Glass*, for example, was an essential reference for American studios. Translations of Eugène Viollet-le-Duc’s section on stained glass from his *Dictionnaire* (1854–1868) were also available. Indeed, many of the illustrations that Connick used for his own work, *Adventures in Light and Color*, 1937, were borrowed from the books of Westlake and Viollet-le-Duc. Like the works of Westlake and Viollet-le-Duc, Hugh Arnold and Lawrence Saint’s *Stained Glass of the Middle Ages in England and France* (London, 1913) was cherished by glass studios for its clear overview of what had become the canon of great medieval windows: Le Mans, Poitiers, Canterbury, Chartres, York, through Rouen and Fairford (Gloucestershire) of the fifteenth century.

Modernist Directions

Architecture in the 1940s began to evolve to reflect an ahistorical direction along with a new sense of integration felt by many church organizations. Congregations wanted their churches to be relevant to a modern life-style and to look like it; they were often eager to show—as in the colonies of the eighteenth century—a sense of progressive, contemporary style. In addition, modernist art professed a spiritual agenda—a search for universals, basic forms that would strike deep chords in a broad spectrum of viewers. Artists made a moral commitment to transcend cultural barriers, welcoming interior designers as colleagues, and promoting work in color field, abstract expressionism, and minimalism.

Lutherans were among the most progressive, both in pursuing ecumenical ties and in formulating principles for interior design and worship service stressing “honesty in materials.” Christ Church Lutheran, in Minneapolis, was

designed by the renowned Finnish architect Eliel Saarinen in 1949. The exquisite simplicity of a building comprising minimalist forms focusing attention on proportional harmony and the materials of brick, stone, wood, and metal is reflected in the furnishings of altar, cross, and candelabra. Other Lutheran churches supported progressive stained glass design such as that by Mark Gulrud for Resurrection Lutheran Church, Tucson, Arizona, where the abstract, translucent form of the risen Christ interacts with the beauty of the landscape seen through the window.

The formal graphics pioneered in Germany in the 1950s reverberated in the United Kingdom and the United States. In postwar Germany, concerted efforts to rebuild and rededicate churches increased opportunities for artists working with glass. One artist who visited Germany after World War II was Robert Sowers. His book, *The Lost Art* (1954), was particularly important in bringing developments from France and Great Britain to the attention of the American public. Ludwig Schaffrath, the most influential personality of the German Modernist movement, credits him as the first American to discover the new German glass.

Museum installations have gravitated to the spiritual, inspired by the seminal work of Wassily Kandinsky, *On the Spiritual in Art*, of 1910, in which the Bauhaus artist emphasized abstraction as transcendental. The sheer size of a color field painting could create a “field” that could exert a physical force on the spectator. One of the purest examples is the Rothko Chapel, part of the Menil collection in Houston, Texas. Opened in 1971, the chapel was conceived with three elements in mind: an octagonal brick church, Marc Rothko’s paintings, and Barnett Newman’s *Broken Obelisk* set in a reflecting pool facing the chapel. The obelisk was later dedicated to the memory of Martin Luther King Jr. The chapel is uncompromising as a sacred space, stressing meditation. Rigorously rejecting representation, the paintings’ meanings are developed by the spatial presence of deep color set within subtly varied rectangles. The chapel operates in a manner similar to installations of glass where the light, with or without recognizable image, permeates an interior.

Many places that had traditionally downplayed artistic expression shifted to embrace modernist work. Reformed Judaism beginning in the 1950s supported considerable attention to innovative architecture and interior design. Consonant with the tradition of avoiding imagery of the divine, Judaism was receptive to the abstract spirituality of modernist form. Jacob Agam, the pioneering Israeli artist in optic and kinetic art, produced windows and interior furnishings for New

York’s Hebrew-Union College Synagogue. Other artists transferred trends in more painterly expression of window design, exemplified by Ellen Mandelbaum’s Adath Jeshurun Synagogue in Minnetonka, Minnesota. The windows, each one larger than the one before, represent the minyan (ten worshippers needed for prayer).

Whereas modern architecture advocated a single “international” or “nonstyle” style, the postmodern architecture that began in the 1980s was far more varied in expression and accepting of a wider variety of shapes and materials. Contemporary architecture is often deliberately eclectic. In window design, David Wilson’s (1941–) many collaborations with architects on large-scale works for both public and private buildings create patterns of structured light that bathe the interior space. A carefully selected gamut of glass carries out his graphic systems. Wilson has also incorporated dichroic glass into many compositions, as well as mouth-blown antique French and German glass and beveled glass. His mingling of geometric abstraction and image is exemplified in his award-winning 1992 Reorganized Church of Latter-day Saints, Temple and World Headquarters in Independence, Missouri. Motifs of wheat represent the bread of life, and Wilson juxtaposes transparent glass in green rectangles set against the opaque segments. As light plays off the window, certain areas appear to glow from within while others scintillate.

Liturgical Revival

Concomitant with general trends in the arts, a new call to energize worship produced an American liturgical revival. Variations in twentieth-century interior design reflected the growing diversity in views on the importance of ritual. As the practice of the reception of Communion in the forms of both consecrated bread and wine became more widespread, especially for Roman Catholics, a “Low Church” approach was favored, stressing equality in an effort to mesh liturgical experience with everyday experience. This direction encouraged simpler forms. For some congregations simple glass chalices were favored for the distribution of the sacrament.

Two buildings, both associated with the Benedictines, stand as exemplars of these trends. St. John’s Abbey in Collegeville, Minnesota (1953–1961) exemplifies the strength of that order’s commitment to renewal of ritual, song, and the visual arts. The architect, Marcel Breuer (1902–1981), a colleague of Walter Gropius and professor at Harvard’s school of design, was equally distinguished for his design of furniture.

The façade is filled with a huge honeycombed window of colored glass designed by Bronislaw Bak (1922–1981), a professor of art at Saint John’s University. The abstract canopy hovering over the altar echoes the geometric modules of the window. Portsmouth Abbey Church and Monastery in Rhode Island, consecrated in 1959, is the work of Pietro Belluschi (1899–1994) and sculptor Richard Lippold (1915–2002), whose creations appear in prominent American collections such as the Metropolitan Museum and the Museum of Modern Art. Lippold’s hallmark style is seen in the multiple lines of thin, gleaming wire radiating from the cross suspended above the altar in a gesture that speaks both to the theological meaning and the aesthetics of animating space.

One of the new techniques of wall treatment for these churches was a sculptural installation called *dalle-de-verre*. Chunks of glass are imbedded in a concrete or epoxy matrix, producing a wall of prismatic forms. Artists such as Robert Pinart and Jean-Jacques Duval emigrated from France and introduced the technique, but French commissions on American soil were also substantial. Gabriel Loire, head of a large French studio in the village of Levres, two kilometers from Chartres, was particularly influential. Loire’s seminal work for America was his First Presbyterian Church, Stamford, Connecticut (1956–1957), where great concrete ribs arch upwards within a fish-like structure.

Current Trends

Proponents of modernism so emphasized the integration of God and God’s community with contemporary life in ritual and form that for some the secular and sacred became indistinguishable. On a pastoral level, the promulgations of Vatican II (1961–1965) affected building design in ways associated with modernist stylistic ideals, but with hierarchical decisions often at odds with the central message of inclusion. In many circumstances liturgical designers were called to renovate extant buildings, imposing a formulaic program that excluded ornament and mandated natural materials that could convey intrinsic aesthetic and spiritual meaning. In some instances the spaces were enhanced, but in others this program of renewal resulted in the destruction of historic fabric and the juxtaposition of incongruous elements. In opposition, the importance of the “transcendent,” so clearly a part of the eclectic revivals of the preceding century, has resurfaced among self-proclaimed “traditional” architects, liturgical designers, and a significant element of the public.

Lived Religion

Lived religion denotes an approach to the study of religion that foregrounds practice: “lived” in the sense of the performed or enacted.

Lived religion thus directs us to religion as experienced. In attending closely to practice and experience, this approach makes room for the personal and private in the midst of (or as alternatives to) the bureaucratic and the institutional. More tellingly, this approach requires historians to rethink the utility of large-scale constructions—such as “mainstream,” “liberalism,” “evangelicalism,” and “secularization”

that have little resonance among ordinary people and rarely coincide with the complexities of everyday practice or experience. Nor does the concept support overly rigid assertions of identity or tradition. To seek lived religion is to find it in unexpected places: habits of dieting, bathrooms and hospital beds, street festivals, the “gospel blues,” and cyberspace. Religion becomes highly mobile, constantly transgressing, ever taking risks.

To proceed in terms of lived religion is also to acknowledge the ambiguities that pervade all forms of practice. In *Lived Religion in America: Toward a History of Practice*, it is argued that practice “encompasses the tensions, the ongoing struggle of definition, which are constituted within every religious tradition and that are always present in how people choose to act” (p. xi). The implications of this argument are strongly antihierarchal: such tensions or ambiguities are felt as much among ordinary people as among religious professionals and leaders; and it is the modes of practice among such people, modes of practice that cannot be understood in linear or tightly bounded ways, that are central to any history of lived religion. At its best, this approach encourages us to be explicit about the politics of practice, most specifically the limited effectiveness of any efforts to control or prescribe what people do. Always, it presumes the mutual interpenetration of the religious and the social.

Sources of the Concept

That the concept has gained a wide currency has much to do with its roots in major tendencies of the 1960s and 1970s, in particular the recovery of ritual, the tentative beginnings of an interest in “experience,” the new alertness to the agency of ordinary people, and the articulation of “popular religion.” A fuller genealogy would encompass the work of European and American sociologists of religion in the first half of the twentieth century, an influence supplemented (or supplanted) after 1960 by cultural and social anthropology. Another reason for the currency of the concept at the beginning of the twenty-first century is the widely shared recognition that people who think of themselves as religious no longer depend as much on institutions (churches, synagogues, seminaries, and the like) as they did some fifty years ago. Everywhere, institutions fade into the background, an observation widely shared among sociologists of religion in contemporary America. Such a perspective proceeds from the assumption that individuals in the United States (and in other countries or regions touched by modernity) make their own way through the

world, creatively incorporating elements of the old and the new into patterns of behavior that are satisfying to them. Lived religion can thus be regarded as an artifact of its times in four respects: mirroring the severely weakened authority of institutions, the influence on historians of approaches to culture and society that emphasize the resourcefulness of laypeople and the vitality of outsiders, a skepticism about social science-style generalizations, and a determination to pass beyond the confusions that beset the term “popular religion” (who, after all, are the people?).

The Lived as Multitudes of Possibilities

It appears that students of contemporary religion locate the “lived” in the choices being made by individuals, not by institutions. “In contrast to religion-as-preached . . . each individual’s religion-as-lived is *constituted* by . . . often-mundane practices for remembering, sharing, and creatively assembling their most vital religious narratives.” So declares the anthropologist Meredith McGuire in “Embodied Practices: Negotiation and Resistance” (p. 187). Each of the key words in this sentence deserves close attention, if only to illuminate the freight they carry. To emphasize the creative is to extol our agency as humans; we are free to move around within a highly diverse world of signs and meanings. To speak of “assembling” is to assume that people mix and match without much regard for consistency—or to accept as “consistent” the ease with which someone moves about among a plethora of signs, meanings, and practices. (Pushed to an extreme, religion *becomes that very plethora of possibilities*.) McGuire has described a woman in modern America who behaves in this very manner, appropriating five different theologies of healing in the course of her daily life. A much articulated translation of this point of view occurs when, in everyday speech as well as in the discourse of scholars, the term “spirituality” is put in play. In a letter published in the July 2008 issue of *O The Oprah Magazine*, a Californian writes, “I hope spirituality, which doesn’t seek to control or conquer, becomes the primary guiding force all our lives instead of fundamentalism.”

There is, however, more to lived religion than this emphasis on assembling and seeking; if the concept is to flourish, it must attend as well to what happens within institutions. The remainder of this essay is organized around five topics: (1) institutions and the practices they define, promote, and regulate; (2) the ever-apparent, yet ever puzzling, intermittencies in how laypeople behave and the analytical questions prompted by these intermittencies;

(3) the relationship between “experience” and the lived; and (4) the possibilities for understanding what people do as something else than narrowly instrumental or functionalist.

Institutions and Lived Religion

The necessary place of institutions in any adequate understanding of lived religion begins with the recognition that some religious practices are collective and recurrent, their periodicity dictated by the great life passages, by calendars that differentiate sacred from ordinary time, and by key events in the making of civil dynasties or nation-states. Because religious institutions are both site and source of a great many of these events, the history of lived religion is inescapably associated with how those institutions have defined and regulated what constitutes the religious. How they did so is always historically contingent, for definitions of good religion change over time. Beginning with the twin reformations in sixteenth-century Europe, major movements have recurrently insisted that “tradition” was corrupt or inadequate. The reorienting of everyday religious life within the Lutheran version of the Protestant Reformation called for parents to begin taking the Eucharist in both forms and to do so much more frequently than had been expected under Catholicism. The “Ave Maria” that many had been accustomed to praying fell into disuse, as did most of the holy days and festivals of the late medieval calendar. No longer were saints’ days or similar celebrations marked by the parading of relics. The Reformed wing of Protestantism made other changes, and the Catholic Counter-Reformation weighed in with fresh demands for participation.

Practice in Motion: The Nineteenth and Twentieth Centuries

In the nineteenth century, some Christians and Jews in the West were coming under the influence of another version of reform, the “liberal” understanding of religion that emphasized the freedom of the individual over the authority of creed, clergy, and institution. By the middle of that century, re-Christianization or, as some historians have argued, a “devotional revolution” swept across many parts of Catholic Europe. On the Protestant side, the rapid rise of evangelicalism brought about a fresh emphasis on self-discipline, as manifested in movements to curtail the use of alcohol and to reinvigorate the Christian Sunday. Another great rupture in Catholic practice occurred in the 1960s with Vatican II. In these postwar years, and especially after the sixties, new

versions of cultural and religious liberalism were beginning to curtail or change the rules (some of them very old, others dating from disciplinary movements of the nineteenth century) that tied sex to marriage.

These moments of large-scale change forcefully remind us of the capacity of institutions to shape social practice. Usually, the leaders of these institutions or movements have articulated a theological framework that guides their decision making about worship, liturgy, and the moral life. Within the Church of God in Christ (COGIC), founded in the United States in 1895, the theological motif of “sanctification” underlies a cluster of practices that those in this community regard as signifying deliverance from sin by the Holy Spirit: in a word, sanctified living. Such practices include fasting, abstinence from alcohol, and, for women, “modest” forms of dress. When the leaders of COGIC absorbed aspects of Pentecostalism shortly after the turn of the century, speaking in tongues became another sign of sanctification. The American Seventh-day Adventists who brought their message to Kenya in the twentieth century were similarly concerned with practice as evidence of deeper changes. Requiring local people to abandon long-established ways of living, Adventists insisted that their converts renounce polygamy, alcohol, and animal sacrifice, and, in turning toward a new way of life, begin to practice Western forms of thrift, self-discipline, and prosperity. Adventist women dressed their children differently, sang hymns while working in the fields or households, and in many other ways set themselves apart from Catholics and those who continued to observe “traditional” African religion.

From Belief to Formation

These two examples of institution-driven practice may seem to emphasize “belief” as the motor that drives what people do. Yet in any analysis of lived religion, we should probably refuse to dichotomize belief and behavior. What has often mattered within Christianity and Judaism is not “belief” on its own but belief made visible in behavior. A term that, for some historians of religion, works to unite belief and behavior is “formation” in the sense of a church-initiated experience of learning to accept and act out certain modes of behavior. Used in this way, formation elides the emotional (affective) and the cognitive, body and mind. The descriptions that come down to us of Protestant revivals in colonial America make these conjunctions visible in the performative aspect of these events. Usually it is the evangelist/speaker

who is at the center of these accounts, but in Jonathan Edwards's *Faithful Narrative of Surprising Conversions* (1738), the focus is on the young people of his Northampton congregation. Edwards attributed the "surprising conversions" of so many in the town to the sermons he preached on the doctrine of justification by faith alone. But the *Faithful Narrative* also makes it clear that the abrupt "awakening" of a young woman set off waves of similar behavior as others learned to perform religion in a stylized but seemingly spontaneous manner. As nurtured and shaped within religious institutions, practice flows from processes of learning (or transmission) too complex to be driven solely by belief.

The Religious and the Social

Within the framework of lived religion, attending to institutions requires us to explore the intertwining of the religious and the social in local communities. As historians of Christianity in the late middle ages have demonstrated, the late medieval village in England depended for its solidarity or social peace on practices such as confession and penance that enabled neighbors to reconcile with one another. Adopting a Durkheimian perspective upon a New England town (Newburyport, Massachusetts, in the 1930s), the American sociologist W. Lloyd Warner emphasized the congruities between symbolic forms and social values. According to Warner's analysis, the rituals associated with Memorial Day in "Yankee City" foregrounded cooperation instead of competition and conflict; on this occasion, the townspeople overcame their differences and acted out a unity embodied in the symbolism of that holiday. The chapter on the "domus" in Robert Orsi's *The Madonna of 115th Street* is a tour de force description of a strongly enforced family system within Italian American culture. For the sociologist Gabriel Le Bras, the Catholic parish in nineteenth-century rural France was a place where the social and the religious converged. In such communities, time, space, and social networks were bound up with the ringing of the church bells, processions and cemeteries, baptism, death, and a calendar charged with feast days and other ceremonies. Even in modern America the Catholic parish can serve as a site of deeply felt rules and boundaries. And for some historians, ethnicity and race play a kindred role as self-enclosing markers that elide the social and the religious.

Regularities of Practice: The Usefulness of Quantitative Data

The regularities of institutional and community-based practice make it possible to employ quantitative data in

describing how people have behaved. We owe some of this data to churches or other religious institutions that want to know how closely behavior and obligation are aligned. To cite an obvious example, rates of participation in the sacraments have long been regarded as significant within Roman Catholicism. When Le Bras set out to study "practice" within French Catholicism, he turned to parish registers for the information that enabled him to determine how often people came to the mass or (in nineteenth-century France) chose civil marriage over one that was fully Catholic and sacramental. Incidental evidence that some people in early New England were bringing children to be baptized within a week or so of birth prompted a much fuller study that paired vital statistics and church records to demonstrate the breadth of this pattern in early-eighteenth-century Essex County, Massachusetts. Quantitative studies of church attendance and other aspects of participation in nineteenth- and twentieth-century Europe have abetted the questioning of secularization as a unidirectional process (in, say, cities or among the working class) but have also demonstrated its presence in surging rates of divorce and changing uses of time. Another benefit of quantitative studies has been to demonstrate the "feminization" of Western Christianity. Be it in early-twentieth-century France or seventeenth-century New England, women participated more often than men in devotions and were much more likely to become church members. Yet another benefit has been to differentiate regional patterns of behavior, a question of special interest to sociologists and historians of religion in France and, at the beginning of the twenty-first century, the United States.

To learn from this kind of work that large groups of people behave in the same way is to be reminded that lived religion must indeed acknowledge regularities and the institutions within which these regularities occur. Because sociologists tend to take this for granted, there is much to be learned from them about how quantitative data can enlighten our understanding of practice and the changes it undergoes. At the same time, narratives of practice can easily be distracted by data sets that employ misleading categories or rely on self-reported behavior—for example, the widely cited figures on church attendance in contemporary America, which greatly exaggerate how much of their Sundays people really devote to religion.

But the more important point about churches and similar institutions is that they are never monolithic. Nor can the historian of lived religion ignore the capacity of institutions to incorporate the improvisational and the divergent. The

parish priests in East Harlem may not have welcomed every aspect of the feast of the Madonna as Orsi describes that event, but they allowed it to unfold. More tellingly, the lay-centered charismatic movement that arose within Roman Catholicism in the 1970s, though in certain ways profoundly individualistic, was sanctioned by a cardinal and gradually folded into the church. Here as in general, a perspective that emphasizes practice requires us to resist easy dichotomies.

Acknowledging Intermittencies and Inconsistencies

Quantitative data is important for another reason: its capacity to demonstrate difference. Alongside the evocations of community that imply or assert consensus and uniformity, we must place a very different picture of diversities of practice; alongside accounts of institutions as capable of regulating behavior, we must place stories of resistance and indifference. To his great credit, Le Bras allowed the data he amassed from parish registers to override his fervent Catholicism, data showing that in early-twentieth-century France, the active practitioners were but a minority in most parishes. Some did conform, for every parish contained a group of people, most of them women, who constantly participated in confession and mass and turned out for every pilgrimage. Then there were the persons who showed up mainly for Easter services or the occasional saints' days, and some who simply turned their backs on the church. Ever curious about local practice, during a stint of military duty in 1938 Le Bras asked a local priest to describe his congregation. The priest responded that preach though he did to the crowd that turned up for Easter service on the importance of returning regularly for the mass, he had not persuaded a single person to do so.

That local people did not walk in lockstep is a lesson powerfully visible in a second body of work: the studies of popular religion (mainly by historians) that have occurred in such abundance since the 1970s. This work has repeatedly exposed the limited reach of the Protestant Reformation in sixteenth-century Germany or, for that matter, the eighteenth. In general, studies of popular religion have made us wary of assuming that what institutions or leaders wanted was how laypeople behaved. As well, these studies demonstrate the presence of the unauthorized or the unexpected in everyday religious life. All this was greatly to the good, especially when historians of popular religion began to take seriously a host of beliefs and practices that fell outside the boundaries of a regulating institution. Yet the question remained, what constituted the "popular"? Within one tradition of analysis, the popular was construed as an alternative

to orthodox or official religion, with assumptions about the "folk" lurking in the background. Within another, the popular was construed as the bottom layer of a hierarchical array of modes of culture, with social class as the key determinant. These two perspectives have largely given way to an understanding of the popular as a set of practices and motifs that, far from being specific to a particular social group or emerging from the folk, are widely reproduced and appropriated. Moreover, the emphasis now falls on the interchange between high and low, the official and the popular.

Explaining Change

Explaining these multiple and overlapping forms of practice in a given society is ever more challenging now that the interpretations so common a generation ago have been questioned. Foremost among those interpretations of behavior was the argument that "secularization" or "modernity" was eroding traditional patterns of practice in modern Europe and America. Le Bras took such a process and its close kin, industrialization, for granted. Secularization still deserves a place in our arsenal of possibilities despite the powerful criticism in recent years of this model of change. "Class" has also fallen out of favor, though before World War II sociologists of religion in the United States found it a useful tool for understanding differences in behavior. For historians of Catholicism and Judaism in the United States, immigration and the disruptions that preceded and followed it continue to be regarded as consequential for religious practice, and with immigration becoming a global phenomenon, this perspective is likely to flourish, as are such factors as a "free market" in religion, the "consumer revolution," and the much-evoked factor of "pluralism."

The most persuasive alternative to class may be gender. The recovery of the religious history of women and the foregrounding of gender as a key factor in how people have behaved has made visible the distinctive behavior of women, notably (as the French data covering several centuries of Catholicism indicates) a rate of participation in the sacraments that far exceeded the rate of participation by men. Why it is that women have been more active than men may have much to do with the roles made available to them within religious institutions, Catholic and Protestant. For example, in "Religion and Popular Culture in Modern Europe," Caroline Ford has suggested that women's orders in nineteenth-century France flourished because "the religious life provided opportunities and avenues of social mobility that were unavailable anywhere else" (p. 172). In other

settings, their being active seems related to childbirth and the responsibilities of motherhood. Women found St. Jude (a devotion that originated in the United States in the 1930s) a figure they could carry with them into hospitals at a time of transition from home births to hospital maternity wards.

A Golden Age?

Perhaps the most difficult challenge in our pursuit of an institutionally located lived religion is to hold together in a single narrative the elements of persistence and regulation with diverse rhythms of participation. One possibility is to posit a transition from the one to the other, as though modernity is synonymous with deregulation. Narratives of this kind are useful, but it was Le Bras who repeatedly insisted that there was never a “golden age” when everyone in France conformed to the rules and expectations of the church. A better model may lie in those studies of popular religion that refuse to isolate it from prescriptive or institutional practice. In such a model, the differences that emerge retain a connection with shared values. Indeed, any differences in practice (or confusion about what should be happening) may indicate that everyone is wrestling with master symbols and motifs, each of them charged with several possibilities for meaning. How this perspective can be of benefit for lived religion is demonstrated in Orsi’s description of responses to the “dark-skinned other” (Puerto Ricans, Haitians) who began to turn up at the festa on 115th Street. Here, the master symbol is race (darkness) and how a marker at once so explicit and uncertain affected practice. Similarly, anyone who attempts to understand baptismal practice in seventeenth-century New England eventually recognizes that the tensions and differences surrounding this practice have a great deal to do with the very different meanings invested in the sacrament: lots of saving grace at one extreme, no grace at the other.

Understanding Experience or the “Vital”

Is the “lived” necessarily “vital,” as though it can be contrasted with a realm of experience that is inert or lifeless? The history of Christianity in the West teems with situations when reformers have sought to reawaken the truly vital or “sincere.” Historians are susceptible to the same impulse, especially at a moment when institutionally based religion can seem inert or ineffectual. But can we make such a distinction? The longer Le Bras pondered his data and how it spoke to the situation of the Catholic Church in France, the more he found himself drawn to a question to which his

data gave a blurry, confusing answer. Wherein lay the “vitality” of religious practice, he wondered, and what techniques would enable him to measure this aspect of religion? As any historian of radical Protestantism in the West (the early Quakers, the Moravians, the early Methodists, the early generations of “Puritans”) should know, these movements were obsessed with the same question and built it into their institutional practice: limiting church membership and/or access to the sacraments to people deemed truly “vital” and demanding that anyone who prayed and preached do so spontaneously, on the grounds that “set” prayers were inadequate. Within these movements, countless sermons and hundreds of books limned the differences between the “real” or “sincere” Christian and the hypocrite or “formalist.” Nor were such efforts limited to the radical fringe. Seeking to purify and reinvigorate traditional practices, Martin Luther declared that repetitive prayer was “not real prayer.” Only those that arose from the “heart” were genuine.

The example of these reformers, none of whom had the success (at least longer-term success) that they thought they would, should give us pause, if only because we are aware of the problems, at once theological and social, that eventually defeated such distinction-making. When we extol the creativity of individuals in modern society, are we on any firmer ground in estimating what is “vital,” or are we caught up in an illusion fostered within Christian primitivism that somewhere, somehow, people are more immediately connected with the divine and more fully embodied in their spirituality? Has a normative understanding of “good” religion burrowed its way into our category despite the emphasis on imaginative play and multiple possibilities?

The distance from “vital” religion to an emphasis on religion as experience (or, as is increasingly said, to “lived experience”) is short. Good things can happen if we follow this road, for the category of experience alerts us to all sorts of materials that older versions of church history excluded as too unusual or extreme. Lived religion does us all a service if it circumvents any such process of exclusion and embraces the fullest possible rendering of the religious. Where it may do less good service is if it distracts us from recognizing the elements of “story” that attach themselves to narratives of experience. Such narratives are constructed out of sources (for example, long-enduring stories of martyrdom) that can easily be identified.

Which is to say, experience is always mediated. Looked at closely, these mediations involve strong rules that regulate not only practice but how “the real” is construed. There may

be something that counts as “raw” experience, but for the historian of lived religion it seems prudent to assume that “the vital” or the real can occur as much within the frameworks of institutional regulation as without. Nineteenth- and twentieth-century Protestant liberalism is a good case in point, a mode of spirituality that professedly cast off the rules of the past in favor of creative appropriation. Yet in retrospect those appropriations can be seen as patterned, even normative.

The Utilities of Practice

What, then, do practices accomplish? No general answer may be possible, but a tendency in studies of lived religion and kindred categories such as ritual is clear, to hedge or complicate any single outcome or meaning, much less a functionalism of the kind that informed W. Lloyd Warner’s interpretation of “Yankee City.” Once again it is worth noting how, in studies of popular religion, historians have moved away from claims that this or that practice had specific social or cultural consequences—for example, that “carnival” functioned as a form of resistance or that witch hunting accomplished its professed goal of cleansing a community of outsiders. Too many players, too many meanings, too many unintended consequences get in the way of such one-to-one connections. The same is surely true of the practices encompassed within lived religion. The women who participate in the cult of St. Jude are, from one vantage point, becoming empowered by associating themselves with the power of the saint in contexts that are extrainstitutional. From another, however, they experience the repositioning of gender norms. Pondering the “prosperity gospel” as it is preached by TV evangelists, Marla Frederick is struck by the incongruities between the message and the situation of the African American women in a North Carolina county who watch them. Ostensibly, the message is that God will elevate you into the ranks of the middle class or higher, a message embodied in the lavish dress and lifestyle of some these evangelists, who repeatedly narrate their own life stories of being lifted out of brokenness and poverty into affluence and power. For most of the women Frederick studies, however, this message is more fable than fact: few if any of them will experience the passage from rags to riches made visible to them on television. Yet they find it absorbing, perhaps because it offers them “hope” that the conditions they endure may not be permanent. Or is it that the story into which they write themselves encourages a sense of moral order?

Understanding Healing

Histories of faith-centered healing have to face this problem head-on: what indeed is “healed” in such settings? As with the witnessing to change in the prosperity gospel, testimonies abound of transformation from physical sickness to physical health. Miracles may happen; and in the realm of the merely human, distress can certainly give way to ease. It may be that healing is also about a story into which people insert themselves, a story (to cite one narrative framework) of God’s love for those who suffered; or (to cite another) of hopefulness, as though a reorienting of self and spirit can alter the material or the physical. Healing may also become moments of letting go when long-contained emotions of anger, sorrow, and love are publicly expressed. Or, as Carol Greenhouse has suggested in her study of the “intimate lives” of ordinary people, religion may encourage a rhetoric of “acceptance” and, in doing so, offer relief from anxieties about conflict.

For sure, the framework for understanding the work being done must acknowledge the ambiguities and intermittences that surround all forms of practice. The only possible answer to the question, What did baptism mean to the people of early New England? is that it entailed a cluster of discordant possibilities—for example, that baptism was a means of grace but also something entirely “external” to the workings of the Spirit. The only possible answer to the question, What does the devotion to St. Jude do for the women who become devotees? is that it works both to empower and constrain them, as Orsi has argued in *Thank You St. Jude*.

Can Lived Religion Make Room for Discrepancies of Power?

In their indifference to the official and the hierarchical, studies of the lived run the risk of ignoring the forms of power that are strongly present within the field of religion. These studies lie downwind of the discovery of “popular religion” with its emphasis on the agency of ordinary people, and they are easily tempted by a narrative that contemporary informants sometimes articulate of newfound freedom (or, to evoke William James, a narrative of experience as never reaching closure), as in the example previously quoted of the woman who extols “spirituality” as the opposite of “fundamentalism.” The concept can also tempt us to reject the long-standing assumption that values shape behavior—values meaning those that are publicly

articulated by religious organizations. But as Orsi has rightly insisted, we must not lose sight of power in our fascination with the intimate, the local, and the everyday. It may be that the most significant challenge going forward is whether studies of lived religion can develop a grammar that connects the more public or corporate forms of power with the workings of the personal and the private.

Lutheran Churches

Lutherans first arrived in North America during European colonization. Lutherans in Canada and the United States organized themselves into congregations and extra-local bodies on the basis of ethnicity, piety, theological positions, and occasionally geographic location. In the early 2000s, Lutherans supported a handful of large denominations, more small ones, and numerous free-standing institutions and organizations such as colleges and social service agencies. In contrast, during the heaviest period of European immigration in the late 1800s, there were more than sixty synods and churches. Throughout the twentieth century, as mergers and the establishment of new bodies reconfigured the institutional shape of American Lutheranism, the churches’ internal life was affected by shifting patterns of immigration, the ecumenical movement, response to general cultural trends, and some members’ movement into the social mainstream. These

churches share commitment to the authority of the Bible, the ecumenical creeds, and the theology of the sixteenth-century reformers; however, they are distinguished from one another, in part, by disagreements about the nature of biblical authority and the ongoing significance of the Lutheran Confessions for the life of believers and the church.

At the beginning of the twenty-first century, nearly two dozen Lutheran churches had a combined membership exceeding 8 million. The largest two, both located in the United States, accounted for more than 90 percent of the total. The Evangelical Lutheran Church in America (ELCA) had more than 60 percent. It reported a 2006 membership of 4.7 million in nearly 10,500 congregations. The Lutheran Church—Missouri Synod (LC-MS) accounted for more 30 percent. It reported about 2.5 million members in 6,155 congregations. The Wisconsin Evangelical Lutheran Synod (WELS), also in the United States, was third largest with nearly 400,000 members in 1,276 congregations. The addition of the two largest Canadian bodies accounted for nearly 98 percent of all North American Lutherans. The Evangelical Lutheran Church in Canada (ELCIC) had 182,000 members in 620 congregations. The Lutheran Church—Canada (LC-C) had 72,000 members in 324 congregations. (Most recent membership figures are reported on denominational Internet pages.) The remaining bodies ranged from about 250,000 members to less than 500, some with less than ten congregations.

Whether founded in recent doctrinal disputes or old groups with common ethnic roots, the smallest groups generally professed a conservative interpretation of Lutheran tradition, emphasizing biblical authority and commitment to evangelism. The ELCA and the ELCIC, each the largest Lutheran denomination in its nation, were regarded as more liberal with respect to the biblical and confessional tradition, more demographically and culturally diverse, and engaged in wider ecumenical cooperation. The dual transition—from many to fewer churches and development of larger denominations with internal variety and greater affinity with the surrounding culture—suggests a primary plot line in the history of North American Lutheranism.

Defining Lutheran

Evangelical, confessional, and Lutheran: these descriptions point to the movement's origin in the sixteenth-century, magisterial Reformation and to ongoing debates about its defining characteristics. Some Lutherans dispute the appropriateness of the term "church," asserting that a "reform

movement within the church catholic" cannot be contained by denominational institutions and labels. One wing of late-twentieth-century Lutheranism described itself as evangelical and catholic while other members found more in common with Episcopalians, Presbyterians, and Methodists with whom the ELCA engaged in dialogue. The simplest definition of Lutheran is a formal one. Lutheran churches trace their origin to Martin Luther (1483–1546) and their doctrine and practice are rooted in his reforms. By analogy, individual Lutherans either belong to such a church or their theology and piety are rooted in the Reformers. This allows that some members of Lutheran congregations do not subscribe to all the church affirms and that some nonmembers profess a Lutheran form of Christianity.

In historical context the term "evangelical" highlighted the Reformers' emphasis on the gospel of Jesus Christ, proclaimed by the New Testament evangelists and found throughout the entire Bible. Thus the Lutheran claim to be evangelical links the church to Jesus while asserting that the Bible is the Word of God and plays a central, authoritative role in these churches. The term also distinguished evangelical Lutheran Protestants from reformed Calvinist Protestants, with whom they had much but not everything in common. In the United States, where most of mainstream Protestantism has Calvinist roots, "evangelical" came to denote a stream of Christianity marked by emphasis on personal conversion, antimodernism including biblical inerrancy, and social conservatism. Some Lutherans' affinity with American evangelicalism should not lead to including all Lutherans within its tent. Lutherans affirm the importance of each believer's recognition that God's gifts are "for me," but they downplay individual conversion especially when it seems to depend on personal decision rather than God's action. Furthermore, the basis of biblical authority is a matter of debate among Lutherans, many of whom, along with Luther, regard the book as the cradle where the Christ child is found.

At the generative heart of Luther's reform was his freeing experience of God's gracious love for him even when he knew himself as a captive to sin. This good news, received through the Bible, propelled his efforts to bring the church into conformity with the gospel. Following him, Lutheran Reformers proclaimed the gospel, refined their teaching, and renewed the church through changes in worship, governance, education, and programs of social service. Luther's principal theological insight was articulated in the slogan, "Grace alone; faith alone; scripture alone," and developed in carefully crafted statements of Lutheran doctrinal positions,

both those they held in common with other Christians and those that set them apart. These Confessions, including the Augsburg Confession (1530) and Luther's *Large Catechism* (1529) and *Small Catechism* (1529), were collected into the *Book of Concord* (1580), along with the ecumenical creeds.

The designation "confessional" refers generally to the ongoing centrality of theology in the Lutheran tradition and specifically to the Confession's normative function. Potential competition between the Confessions and biblical authority is addressed by grounding confessional authority in and limiting it to conformity with the Word of God. Unlike nineteenth-century American Restorationists who claimed no creed but the Bible, Lutherans read the Bible in dynamic interaction with historic creeds, Confessions, and liturgy, always expecting a new word of grace for their own day. Indeed the Bible's authority is in its capacity to convey the Word of God that is also incarnate in Jesus and proclaimed through preaching and the sacraments. If a tradition can be understood as an ongoing argument about the matters its adherents hold most dear, then Lutherans are aptly described as those who argue about such matters in conversation with the Confessions.

The Augsburg Confession informs Lutheran understanding of the church. Article 7 defines the church as "the assembly of saints, in which the Gospel is taught purely and the Sacraments are administered rightly." This succinct statement highlights the constitutive significance of preaching and the sacraments (baptism and the Lord's Supper). Lutheran theologians affirm this definition and debate about proper criteria for evaluating pure teaching and right administration of the sacraments in sermons and Sunday worship as well as in other arenas, including all modes of teaching, loving behavior toward neighbors, and proper conduct of rituals. Differing judgments in these matters prevented North American Lutherans from recognizing one another, much less others, as authentically Christian and limited fellowship and cooperative work. Some bodies set stringent standards of agreement prior to common activity, with the highest requirements for shared worship and lesser standards for cooperation in external work such as relief services. Women's ordination provides a vivid illustration. The 1970 decision by the Lutheran Church in America (LCA) and the American Lutheran Church (ALC) to ordain women increased their distance from the LC-MS. As the LC-MS retreated from fellowship discussions, the ALC was more inclined to increased cooperation with the LCA, and the possibility of the LC-MS entering into a merger diminished.

Institutional exclusivism based in doctrinal purity and right practice suggests that the church is a voluntary association constituted by like-minded members who chose to gather themselves. Lutherans' voluntary gathering has often been prompted by shared ethnicity intertwined with common belief. However, Lutheran teaching asserts that God calls and gathers the church through word and sacrament. Day-to-day American Lutheran churches may operate according to the first view; nonetheless, the second view undermines the assumption that human beings are the arbiters of right teaching and right administration. God is the agent and divine grace is both the first and the final word.

Observers identify other distinguishing Lutheran characteristics. H. Richard Niebuhr categorized Lutherans as an immigrant church. Popular expectation of affinity between Lutheran and ethnic identity is a legacy of this origin, often from countries where a state church linked national and religious identity. Into the early 1900s, some congregations conducted worship in languages other than English. In the early 2000s, European holiday customs and other expressions of their founders' ethnicity continue in some congregations; nonetheless, North American Lutherans are as likely to worship in Spanish or Mandarin as in Swedish or German. Lutheran foreignness was also reinforced by worship practices, which varied from formal, high liturgy to quite simple, but appeared to onlookers as more Catholic than Protestant, particularly prior to the ecumenical liturgical reform movement. Liturgical worship, congregational singing, and the reputation of college choirs informed Lutherans' reputation as fine musicians. Pietist concern for personal morality and orthodox concern for right belief contributed to the perception that Lutherans stood outside the mainstream of American religious life, preoccupied with internal disputes more than with matters of general cultural concern. Involvement in charitable and social service programs rather than political issues fostered the stereotype of Lutheran quietism. Only after the mid-twentieth century did scholars categorize some Lutherans in the Protestant mainstream.

Since its beginnings, North American Lutheranism contained vast cultural variety along with a wide spectrum of doctrinal positions, styles of piety, and liturgical practices. Each difference contributed to formation of congregations and to their joining together in denominations with supporting institutions. Efforts to transcend these differences in organizational unity began before the American Revolution, occupied much of the twentieth century, and reached their closest fulfillment in the formation of the ECLA and

ELCIC. The fewer, larger bodies contain the religious variety that once generated many churches, as well as a rich array of cultures resultant both from expansion beyond old ethnic communities and from the arrival of Lutherans from Eastern Europe, Asia, Africa, and Latin America. Following the world wars, North American Lutherans assumed increased responsibilities and leadership in their communion worldwide. The ELCA and ELCIC are members of the Lutheran World Federation, the World Council of Churches, and the National Council of Churches and Canadian Council of Churches. Along with Lutherans from other nations they pioneered bilateral ecumenical dialogue. The LC-MS is the largest of the two dozen members of the International Lutheran Conference.

Three, Three-part Schemes

This double movement—to organize churches on the basis of similarity and then to bring them into cooperation or unity—required much discussion, involved myriad personalities, and sometimes turned on subtle distinctions. Three scholars provide schemes helpful for following these developments. Sydney Ahlstrom, historian of American religion, identified three impulses present within Lutheranism across time, place, and culture: the scholastic, the pietistic, and the critical. Each impulse may be expressed by an individual, group, or church, but usually the three co-exist and interact in varying proportions. The scholastic is concerned with objective truth, for ensuring that teaching is pure and that the sacraments are administered rightly. The pietistic attends to more subjective matters of personal reception and appropriation of the gospel in believers' lives. The critic holds the others in fertile conversation with each other and their context. The first two have affinities with historic movements known as Lutheran Orthodoxy and Pietism; however, Ahlstrom suggests that each movement contains all three impulses. His scheme highlights similarities between groups within Lutheranism even when adherents disagree about what they hold in common.

Speaking to Germans in 1854, Philip Schaff (1819–1893), a Swiss immigrant and Reformed theologian, offered a snapshot of the main American Lutheran groups as they clarified their positions and took institutional form. Schaff pointed to “multifarious differences of opinion and schools . . . representing almost all those of the mother church, besides specifically American tendencies.” Within this thicket he discerned three types: New Lutherans, Old

Lutherans, and Moderate or Melancthonian Lutherans. The New Lutherans, who are also known as Platformists or American Lutherans, were led by native-born Americans, some generations from immigration. This group was influenced by friendly contact with other Protestants, particularly Methodists and those descended from Puritanism. In all settings their primary language was English. Their adherence to the Confessions involved radical revisions. In 1820 they formed the General Synod. The Old Lutherans, many of whom were German immigrants informed by European revival of Confessional consciousness, often continued to use German, and insisted on strict adherence to all of the Confessions as the requisite of fellowship. The Synods of Missouri and of Buffalo, both of this type and leaning toward Ahlstrom's scholastic impulse, were divided in their understanding of the pastoral office. Among the Moderates, Schaff included the Synods of Pennsylvania and of Ohio. This group contained descendents of colonial Lutherans and recent immigrants. In adapting to the New World, some adopted English while others continued using the language of their homeland. Consistent with their Pietist leanings, these Lutherans emphasized the Augsburg Confession and Luther's *Small Catechism* rather than the entire *Book of Concord*. Although the names of players and groups change, this trifold scheme remained useful for sorting Lutheran denominations until the mid-1900s when the New and Moderate Lutherans amalgamated in merged bodies.

Historical theologian Jaroslav Pelikan contrasted the development of American Lutheranism with its European mother church. In Europe the ferment and creative energies of the Reformation was followed by Lutheran Orthodoxy, whose proponents refined and preserved the Reformers' theological insight by careful systemization and institution building. The Orthodoxy proponents contributed a more developed articulation of Lutheran teachings that responded to the intellectual currents of the day. Orthodoxy was strongest in the century after 1580 when normative statements of Lutheran teaching were gathered into the *Book of Concord*. Pietism emerged, in part, in reaction to Orthodoxy's tendency toward formalism, dispute, and spiritual dryness. Pietists strove to awaken right believing Lutherans into an experience of faith, expressed in right feeling and right action. Personal morality, social service, and evangelism were expected from all believers. Pelikan suggested that in the New World these phases occurred in reverse order. Colonial Lutherans were formed by Pietism and received leadership from its center in Halle, Germany.

Schaff's Lutheran neighbors were wrestling with Orthodox concerns. Perhaps in the past seventy-five years, North American Lutherans have entered a phase more akin to the dynamism of the Reformation.

Shifting Alignments

As they found their place in the North American religious landscape, Lutherans adapted to religious freedom, the absence of government support, and the need to attract and retain members; they developed leadership and established schools, colleges, and charitable institutions; and they learned to articulate a shared identity beyond ethnic and theological differences. Their history divides roughly into three periods marked by centenaries of Luther's Ninety-five Theses posted in 1517. During the first two centuries, 1617–1817, the churches were *planted*, often haphazardly. In the next century, 1817–1917, Lutheran churches *gathered* members, gathered together in synods, and *sorted* themselves into cooperative associations. After 1917, churches *merged* into new denominations, *moved* into the mainstream, and engaged more fully with the surrounding culture.

Planting

The Lutheran church first appeared in the New World in 1619 when a Danish Lutheran conducted worship in Hudson Bay. Lutheran presence (first recorded in the 1630s) in New Amsterdam was more enduring and influential. Atypically Lutherans from the Netherlands belonged to a minority church, tolerated but not supported by the civil government. Contrary to that prior experience, Lutherans in New Amsterdam were required to be in public conformity with the Reformed church, and their requests for a Lutheran pastor were long denied. Because preaching and the sacraments could be performed only by a pastor, this was a major hardship. The shortage of well-prepared, authorized pastors continued as long as North American Lutherans depended on European sources. Only when the English took over the colony in 1664 did the Lutherans, from several nations, receive adequate pastoral leadership and organize a congregation stretching from Manhattan to Albany. Their constitution, following a Dutch model and influenced by Reformed practice, allowed lay involvement in governance and was well suited to their minority status and the ongoing shortage of pastoral leadership; this constitution provided the pattern for congregations throughout America.

More typically Lutherans in New Sweden (now Delaware Valley) and the Danish Virgin Islands came from established churches. Initially those churches and local civil authorities were responsible for their country folks' spiritual well-being; however, the colonists' religious needs were neglected for years at a time. The congregation in St. Thomas (now U.S. Virgin Islands) was the second in the Western Hemisphere. When the Danish islands were sold to the United States in 1917, the majority of its Lutherans were African. In New Sweden, John Campanius (1601–1683) translated Luther's *Small Catechism* into Lenni-Lenape, a Native American language, in the 1640s. Although they gave up the colony in 1655, Swedes continued intermittent religious support until after the Revolution. Periods of fine pastoral leadership alternated with long vacancies in which lay people improvised worship, made do with unauthorized and sometimes unfit clergy, or attended other churches. Increasingly they used English as their daily language and intermarried with non-Swedes. By the 1840s, unable to sustain themselves, all colonial Swedish Lutheran congregations had transferred to the Episcopal Church.

The territorial principle that established Lutheran churches in Sweden and Denmark authorized expulsion of Lutherans from Salzburg (now Austria) by their Roman Catholic ruler in 1731. The exiles' religious motivation was rare among Lutherans, who usually were immigrants looking for greater opportunities rather than refugees from religious or political oppression. In route to Georgia, the exiles were aided by German Lutherans and the English Society for the Propagation of Christian Knowledge. In their tightly knit community, the secular and religious were nearly coincident and property was held in common. After initially rejecting slavery, within two decades they adopted it and included slaves in their congregations. By the Revolution the colony was declining. The Salzburgers were unable to maintain an established church, even on a small scale, neither were they able to sustain other countercultural efforts: rejection of private property and slavery.

Germans, concentrated in Pennsylvania but spread from Georgia to Nova Scotia, were more successful in planting Lutheran churches. They began to arrive in the thousands early in the eighteenth century, first from the Palatine (now southwestern Germany) and then other regions. Many were redemptioners, indentured servants until they paid the debt for their passage. German religious variety spanned the spectrum of European Christianity; in this period, the vast majority of immigrants were Lutheran or Reformed. With

no German church responsible for them, Germans in English colonies fended for themselves, relying on untutored lay leaders or on the ministry of other churches, and were vulnerable to self-appointed pretenders to the pastoral office. In numerous Pennsylvania settlements Lutherans and Reformed members cooperated in union congregations. The few Lutheran pastors traveled from community to community preaching, baptizing, celebrating the Lord's Supper, and adjudicating conflicts. The 1703 ordination of Justus Falckner (1672–1723), a German educated at the University of Halle (now located in Germany) by Swedish pastors in Philadelphia, was a notable episode of cooperation among pastors whose infrequent contacts could be contentious. The divergence between orthodox clergy such as William C. Berkenmeyer (1686–1751) and pastors sympathetic to Pietism was one source of conflict.

The patriarch of American Lutheranism, Henry Melchior Muhlenberg (1711–1787), arrived from Halle in 1742 to serve three Pennsylvania congregations. Committed to planting the church, not just congregations, Muhlenberg led colonial Lutherans toward a common church body and responsibility for its life. The Ministerium of Pennsylvania was formed in 1748 at a meeting coinciding with the dedication of a church building and an ordination. The Ministerium was composed of clerical members with laity invited to report. Its work involved examination and ordination of pastors, oversight of congregations and schools, and provision of an order for worship. Despite minimal confessional standards, the Ministerium was grounded in theology rather than shared German heritage. Nonetheless, many Swedish clergy and those more inclined to an Orthodox position remained outside, and the Ministerium failed to unite Lutherans in a single body. Geographic expansion led to organization of regional bodies: for example, the Ministerium of New York (1792), the North Carolina Synod (1803), and the Ohio Conference, 1818, later Synod). Before long, differences of theology and ideology led to establishment of alternative bodies.

Gathering and Sorting

Lutheran response to the American Revolution was mixed. Loyalists moved to Ontario, which was still under the British Crown, and established a second Canadian concentration of Lutherans. Others were active supporters of the Revolution. Subsequent, native-born generations lacked personal experience of Europe, had wider encounters with other

Americans, and were fluent in English. In 1807 the New York Ministerium adopted English as its official language. Renewed immigration from Germany and Scandinavia in the 1800s widened the churches' theological range and increased their ethnic variety. These developments and encounter with "specifically American tendencies" were the basis of new denominations sorted into Schaff's three types.

A fifth-generation American, David Henkel (1795–1831), along with his father and brothers, spearheaded formation of the Tennessee Synod (1820) in opposition to the North Carolina Synod's lax confessional standards and in protest against the proposed connective General Synod's undue claim to authority. The family's press produced both German and English materials, including the first English version of the complete *Book of Concord* (1851). In upstate New York, the Franckean Synod (1837), named for Pietist August Hermann Francke (1663–1727), marked the edge of New Lutheranism. Although they honored the Augsburg Confession when it concurred with the Bible, the Franckean did not require a declaration of agreement from members. Slaveholders were excluded from membership; strict Sabbath observance was expected; revivalist methods were condoned; and sacraments were accorded a diminished role. The moderate Pittsburgh Synod (1845) and William A. Passavant (1821–1894) established charitable and educational institutions, including coeducational Thiel College, and addressed the needs of new immigrants moving into U.S. territories in the Midwest and parts of Canada.

Samuel Simon Schmucker (1799–1873) pressed his co-religionists toward institutional maturity, responsibility for training leaders, and clear expression of their beliefs in conversation with other Christians. Schmucker founded both Gettysburg Seminary (1826) and a college to prepare students for entry. He cooperated with other Protestants in the Evangelical Alliance and supported their moral standards. Schmucker's attention to the particularity of Lutheran teachings contrasted with the relative indifference of the pre-Revolutionary churches, but his criticism of the Confessions (for example, rejecting baptismal regeneration and affirming "Puritan" Sabbath practice) showed his affinity with nineteenth-century, mainstream Protestantism and brought him into conflict with Moderate and Old Lutherans. In the 1820s, he proposed drawing regional synods into a single body. Opposition focused on the plan's minimal confessional stance and its centralized oversight of liturgical forms and ministry. As with the Ministerium of Pennsylvania, the General Synod (1820) failed to unite all Lutherans.

Instead it and Schmucker's Definite Synodical Platform (1851), which offered an American Recension of the Augsburg Confession, stimulated significant controversy that clarified the fault lines within American Lutheranism.

Nineteenth-century immigrants brought the customs and language of their homelands along with their particular strains of Lutheranism and adapted following patterns forged by earlier arrivers. Canadians formed connections with ethnically and theologically similar Lutherans in the United States rather than establishing independent churches. Newcomers' native languages separated them from each other, from Americanized "Muhlenberg" Lutherans, and from other Christians. The influx of arrivals into New York prompted that synod to reinstitute German. Initial cooperation among Scandinavians usually gave way to separate churches. Many moved to U.S. territories in the Midwest where they formed congregations with women's organizations and youth groups; gathered local churches into synods; established colleges and seminaries to prepare pastors; and developed ministries to care for their members and spread the gospel in foreign lands. Most were sympathetic to the Old Lutheran or Moderate groups.

Germans participated on several sides of debates about Lutheran union. Their rejection of projects to unite Lutheran and Reformed churches prompted the founders of the Buffalo Synod (1845) and the LC-MS to leave Germany. Led by C. F. W. Walther (1811–1887), the Saxons established the LC-MS characterized by confessional conservatism, commitment to congregational autonomy, and strong educational programs that began with parochial schools and included teachers' colleges as well as seminaries. Following a series of theological consultations, the LC-MS joined similarly conservative synods including the Wisconsin Synod (1850) and the Norwegian Synod (1853) to form the Synodical Conference (1872), on the basis of strict adherence to all the Confessions and with the expectation of uniformity of practice. In the 1870s and 1880s, the predestination (or election) controversy divided the Synodical Conference into those stressing the absoluteness of God's gracious action—the Missourians—and those asserting the importance of believers' faith—including the Anti-Missourian Brotherhood within the Norwegian Synod.

Other Germans joined previously established synods and allied themselves with the moderate General Council (1867). Like other nineteenth-century Lutherans, the General Council struggled to remain faithful to their theological heritage while adapting to America. Its approach was more

theologically flexible than the Synodical Conference, but more Confessional than the General Synod. A federation, it required subscription to the Augsburg Confession of 1530 but not the whole *Book of Concord* and allowed member churches autonomy in their internal life. Charles Porterfield Krauth's (1823–1883) *Fundamental Principles of Faith and Church Polity* outlined its theological position. Continued debate and varying practice about chiliasm (millennialism), altar and pulpit fellowship, and membership in secret societies—the Four Points—pushed conservative churches to organize the Synodical Conference.

The Swedish Augustana Synod (1860) joined the General Council although some of its practices were more restrictive. Swedish Methodist, Baptist, and Evangelical Free churches gave Swedes alternative religious communities where they found a shared ethnic culture, but Augustana Lutherans were remarkably cohesive. Controversy over the atonement prompted formation of the Swedish Mission Covenant (1878). Within Augustana, Pietism melded with a strong sense of the church. Frequently Augustana stood between other churches, sometimes moving toward the liberal group and others reaching toward the conservative. Thus it offers a useful window into nineteenth- and twentieth-century controversies and projects.

The variety of religious groups within the Church of Norway spawned several American churches distinguished by stress upon the objective claims of the gospel or upon subjective reception of it; by use of the Church of Norway's liturgical forms or of simpler patterns; by inclination toward centralized organization or toward congregational autonomy and democratic polity; and by concern for clerical position or willingness to allow lay leaders. The Pietist Eilsen's Synod (1846), named for an early lay preacher, rejected formal worship, admitted lay preaching, and expected members to display a reformed, moral life. The Norwegian Synod resembled the state church in teaching, formality, and university trained pastors. Its early association with LC-MS was disrupted by disagreements over slavery and the predestination controversy. Despite a reputation for contentiousness, Norwegians led the way toward unification while preserving internal variety. In 1890 the United Norwegian Lutheran Church in America (the United Church) merged the Anti-Missourian group and two groups from the center of the spectrum; then, in 1917 the United Church, the Norwegian Synod, and Hauge's Synod (1876) formed the Norwegian Lutheran Church of America (later the Evangelical Lutheran Church [ELC]).

Other Scandinavians tended to ally themselves with larger groups until they reached a critical mass for organizing separately. The Danes sorted themselves according to imported groups: the so-called Happy Danes, influenced by Nikolai F. S. Grundtvig (1783–1872) in the Danish Evangelical Lutheran Church in America (1878, the Danish Church), and the Sad or Holy Danes, influenced by the Inner Mission Movement in the United Danish Evangelical Lutheran Church (1896, later the UELC). As the groups' nicknames suggest, the Danish church adopted Grundtvig's affirming stance toward folk culture while the UELC had stricter expectations for holy behavior. Despite common ethnicity, the two remained separated until the late 1900s. Finns organized the Suomi Synod (1890) and several smaller bodies. Icelanders, concentrated in Canada, formed the Icelandic Evangelical Lutheran Synod of America (1885). Slovaks divided themselves between the LC-MS and the Slovak Zion Synod (1919).

Merger and Movement

By 1917 North American Lutherans were on a path toward greater cooperation and institutional unification and into the mainstream of American religious life. The world wars encouraged intersynodical cooperation and expanded contacts. Informal anti-German sentiments and legal measures hastened transition to English. The Commission for Soldiers' and Sailors' Welfare (CSSW) and the Lutheran Service Board in Canada brought churches into cooperation with each other and national government. Following World War II, resettlement of European refugees laid the groundwork for Lutheran Immigration and Refugee Services, and similar responses to Asians, Africans, and Latin Americans. In mid-century the national churches launched vigorous missions to gather mobile Lutherans into new congregations and to reach out to potential members. By the late twentieth century, Lutheran Social Services and similar agencies were among the largest in the United States offering health care, adoption services, and housing for the elderly. Although supported by Lutherans, these independent agencies offered their services without regard to religious or ethnic affiliations. Similarly a network of colleges maintained lively relationships with Lutheran heritage while serving religiously and culturally diverse student bodies.

Following the Norwegian unions, two phases of organic union reconfigured North American Lutheranism in the twentieth century. Following several decades of

collaborations, including the Common Service (1887), the United Lutheran Church in America (ULCA, 1918) reunited the oldest groups: the General Synod, the General Council (except Augustana), and the United Synod, South. Later the Slovak Zion Synod joined as a nongeographical unit. The National Lutheran Council (1918) built on the CSSW's experience and expanded the scope of common activities. Its distinction between external activities that did not require complete agreement of doctrine and internal activities, such as shared worship, that did, were inadequate for the more conservative bodies. These formed the American Lutheran Conference (1930), where fuller theological agreement allowed collaboration in ministries such as student work. Also in 1930, the American Lutheran Church (ALC) united several synods with German roots. Debate about how to express commitment to the Reformation principle of biblical authority failed to resolve the issues.

Negotiations toward further cooperation and institutional unity continued alongside common projects, increased leadership in world Lutheranism, and Americanization. The *Service Book and Hymnal* (1958) provided common worship patterns, eased movement between congregations, and anticipated the second set of mergers. The American Lutheran Church (1960) brought together the ELC, the ALC, and the UELC, bodies generally associated with Norwegian, German, and Danish ethnicity, although those designations were dropped in mid-century. Having withdrawn from the United Church, the Lutheran Free Church (1897) joined the ALC in 1963. The Lutheran Church in America (1963) also mingled ethnic communities when it joined Augustana (Swedish), Suomi (Finnish), AELC (Danish), and the ULCA (German and Slovak). Old ethnic designations obscured the reality in congregations that included African Americans, Eastern Europeans, Americans generations from immigration, and members of other ethnic groups. The vast majority of Lutherans belonged to the LCA, the ALC, or the LC-MS. The LC-MS was the more doctrinally conservative. The ALC was regarded as in the middle ground between the LC-MS and the LCA; however, a wide range of theological views and religious styles was present in both newer churches. After 1966 the Lutheran Council in the United States of America (LCUSA) was the primary vehicle for interchurch cooperation. The Canadian Lutheran Council (1952) facilitated cooperation among the Canadian units of various churches, excluding the LC-MS. The Evangelical Lutheran Church of Canada (1967), the first autonomous body, separated from the ALC.

The momentum of the 1960s encouraged optimism about bringing all American Lutherans into a single church; however, steps forward were matched by steps away. The three-way partnership to develop a new hymnal yielded two similar books. LC-MS struggled with internal controversies over biblical interpretation, confessional integrity, and responsiveness to cultural trends. Following a major rift at Concordia Seminary and nearly a decade of widespread acrimony, in 1976 the moderate minority constituted the Association of Evangelical Lutheran Churches (AELC) and pledged itself to promoting Lutheran unity. In 1980 the ALC, AELC, and LCA agreed to the widely participatory process that formed the ELCA (1988). The ELCIC (1986) united a similar set of Canadian churches. The LC-C (1988) was formed by Canadian congregations affiliated with the LC-MS.

At the turn of the century, new initiatives in worship and Bible reading, increased female leadership, expanded attention to multiculturalism, ecumenical fellowship agreements, and a new focus on social and political matters occupied Lutherans. The ELCA entered into full communion with the Episcopal Church, the Moravian Church, the Presbyterian Church USA, the Reformed Church in America, and the United Church of Christ, and continued formal dialogue with Disciples, Methodists, Orthodox, and Roman Catholics. These enterprises generated both enthusiasm and dissent. Social teaching statements (for example, on the economy, the environment, and sexuality) intended to foster moral deliberation also stimulated controversy. Most ELCA response was organized as loyal opposition. Those congregations and individuals dedicated to “an evangelical, confessional Lutheran future” and opposed to theologically indifferent ecumenism and liberal social practices gathered in WordAlone, a grassroots network. Extraordinary Lutheran Ministries drew on “Lutheran confessional history, liturgy, and practice” in support for ordination of sexual-minority pastors. Like other mainline churches, the ELCA faced declining membership and falling churchwide revenues. Efforts to discipline a pastor who took part in a post-9/11 interfaith prayer service brought the LC-MS to brief national attention. Continued confessional orthodoxy, traditional defense of biblical authority, and frequently conservative social positions within the LC-MS tended to increase distance from the ELCA, although collaborations were possible through organizations such as the Lutheran Educational Conference of North America and local projects.

Lutheran Tradition and Heritage

The lineage of the seven and a half million Lutherans in the United States and Canada and their coreligionists around the globe today can be traced to the spiritual insight of a sixteenth-century Augustinian monk teaching Bible at a newly founded university in Wittenberg, a provincial German town. Both Martin Luther (1483–1546) and his spiritual descendents point to the objective reality of divine love and gracious forgiveness apart from human sin, efforts, or accomplishment as the heart of the gospel that is revealed in the person of Jesus, the living Word of God to whom the Bible bears witness. Martin Luther's assertion that he had no intention of starting a new church looms large in the mythos of his biography, and Lutherans' claim that their confession of faith adds nothing to the gospel is a constant in their collective self-identity. Nonetheless, Brother Martin's questions about medieval Roman Catholic practice launched a movement that traces its origins through Augustine and Paul to Jesus and that now extends into churches on every inhabited continent. Sometimes in Latin and sometimes translated into the vernacular, the reformers' motto, "Grace Alone, Faith Alone, Scripture Alone," identifies the stable fulcrum upon which Lutherans balance the rich variety of their devotional practices and ministries and the dynamics of their doctrinal debates.

God's grace is central for Lutherans in every time and place, and yet in each context the message must be translated into the local language, and the faith's actions must be responsive to local culture and circumstances. A beloved and well-known Lutheran hymn begins, "Now thank we all our God, with hearts and hands and voices." When many singers join in the hymn, expressing their gratitude in multiple parts and in various languages, the polyphony of the tradition rings in the ears; the tradition also encompasses an array of pieties and a varied repertoire of activities serving members and their neighbors. Linked by personal relationships, by institutional history and connections, and by shared theological and spiritual heritage, these churches and their members vary in their languages, nationalities, and cultures; in their piety and polity; in the degree of their veneration for

Luther; and in the authority they grant to the Confessions, formal statements of belief written in the sixteenth century.

So too Lutherans are linked to other Christians by belief, practice, and relationships. The patterns of similarity and difference vary by time and place. Often Lutherans are found between two contrasting or even contesting options. In the United States, for example, Lutheran worship has sometimes appeared more akin to Roman Catholic liturgy than to Protestant services prior to the twentieth-century liturgical reform movement. Disagreements that divided Protestants in the earliest generations or that mattered intensely on the American frontier lost power in mid-twentieth-century suburbs. Formal ecumenical dialogues have produced statements of agreement and facilitated cooperation with Roman Catholics, Episcopalians, Methodists, Reformed churches, and other Christians. However, even as Lutherans around the world have become more ecumenically minded, they retain their traditional focus upon God's gracious love, upon the authority of God's word, and upon faithful living.

The Founder and Foundations (Sixteenth Century)

"We are all beggars." Widely regarded as Martin Luther's final words, this sentence describes his life and his life's work. As much as his teaching, Martin Luther's life story remains potent among Lutherans as a model for Christian living. This promising son of a miner was studying law when a thunderstorm prompted him to join a monastery, where his sense of his own unworthiness plunged him into a spiritual struggle, a sort of begging for assurance of his salvation. The penitential practices available only intensified Luther's agony. Obedient to his superior's direction, he began teaching Bible at the new university in Wittenberg. The power of God's grace came to him through his study of scripture. Having received the gift of faith, he was compelled to speak to other beggars of God's freely given love. In 1517 Professor Luther challenged the theological basis for sale of indulgences that were purported to grant release from punishment prior to entry into heaven; his posting of the ninety-five theses or topics for debate marks the beginning of the evangelical Protestant movement sometimes called by his name.

A quarter century after Columbus's journey west, European sacred and secular institutions were closely aligned. Luther's proclamation of Christian freedom in academic debates, treatises, sermons, letters, and biblical commentaries disturbed religious and political authorities alike, prompted

reconstitution of churches, and contributed to reorganization of public life. After taking his stand with the gospel and scripture at the imperial Diet of Worms (1520), Luther was excommunicated as a heretic by Pope Leo X (1475–1521) and rendered subject to execution by Emperor Charles V's (1500–1558) forces. His protector, Frederick the Wise (1463–1525), sheltered him at the Wartburg Castle, a mighty fortress not unlike the image of God evoked by the first line of Luther's most famous hymn. There Luther labored on his translation of the Bible into the vernacular language; his German Bible made its message available to the many who did not understand Latin and contributed to the development of German as a literary language.

Luther, his colleague Philip Melancthon (1497–1560), and their contemporaries operated in a time of intense debate and rapid innovation. They expected that when they preached the word of God it would generate right belief and right living in their hearers; nonetheless, as the movement grew, conflicts raged among temporal authorities and theologians. By signing the Augsburg Confession, written by Melancthon, Lutheran princes and representatives of free cities defended their belief as truly Christian at an Imperial Diet in 1530. Although the official audience was the emperor, the document was read in German and before an open window so that those assembled below could hear its declaration that justification comes from God for Christ's sake, not by human "strength, merits, or works."

Reformers, united in rejecting much of medieval Roman Catholicism, nonetheless disagreed about such issues as Christ's presence in the sacraments, the role of faith in baptism, and alliances with earthly governments. At the Marburg Colloquy, a meeting at the Marburg castle in 1529, the so-called magisterial reformers agreed on nearly every point, but Luther was unable to convince Huldrych Zwingli (1484–1531) of Christ's real presence in, with, and under the elements of the Lord's Supper. Lutherans continued to baptize infants, stressing God's action in salvation rather than a Christian's own faith; Anabaptists required a declaration of belief prior to baptism and demanded a holy life from those within their communities. Radical reformers, such as Thomas Müntzer (c. 1488–1525) and the theocratic community at Münster, strove to bring in God's reign on earth while Luther understood God's governance through both hidden, spiritual means and imperfect human ones. More moderate reformers maintained that Christian communities could continue to cooperate with temporal authorities and did so in Wittenberg, Geneva, and elsewhere. John Calvin

(1509–1564) and his followers, like his spiritual descendents in the United States, were more confident that they could discern and establish God's intentions in their communities than was Luther, who dismissed the peasants' claim that political freedom should follow from Christian freedom.

If they rejected the possibility of establishing a heavenly kingdom in Germany, Luther and his followers offered their fellow beggars what they had. They aspired to reform the church, to bring the freedom of the gospel to every child, and to ensure that the town's hungry people were fed. Visitations to parishes revealed that none of this would happen quickly or without effort. Evangelical pastors were trained and sent out to preach the gospel. The order of worship was revised, adding German hymns and inviting the congregation into more active participation. The people received both bread and wine when they communed. The sermon was given a more prominent place, but without removing the "sermons in pictures" displayed in windows and paintings.

New church ordinances, such as the Leisnig Order of 1523, also established mechanisms that made local communities responsible for the welfare of their members, as they assumed the charitable work formerly carried out by monasteries. At Luther's urging and with Melancthon's leadership, schools were founded. Girls as well as boys were taught to read the Bible and the Catechism and prepared to serve God and neighbor in their daily activities. Luther married Katherine von Bora in 1524, and their household in the former Augustinian priory became a model for both the Protestant parsonage and the Christian home as a school for faith.

Despite his observation that "a true Christian is a rare bird," Luther's voluminous writing, frequent preaching, and regular teaching were above all practical, intended to articulate the gospel and to foster faithful living, a daily dying to sin and rising in grace. That a person can be totally free and totally obligated—the seeming contradiction succinctly stated in his 1520 treatise *The Freedom of a Christian*—rests on Luther's core contention that it is God's grace that releases sinners from captivity to the necessity, or possibility, of gaining divine favor and then turns them toward their neighbors to act in love.

This dual movement into grace and toward the neighbor pulses through the life of a Christian, giving comfort and stimulating action. It is a central theme of the Lutheran tradition. It is the deep logic of Luther's Small Catechism, whose brief exposition of the Commandments, the Apostles' Creed, the Lord's Prayer, and the Sacraments has been the

foundation for most Lutherans' earliest theological training even when little else of Luther's writings are known.

In the twenty-first century, Americans, Lutheran or not, have access to much more. The Luther Renaissance of the early twentieth century generated scholarly reassessment of Luther less determined by ecclesiastical partisanship than in previous centuries. Controversial charges that Luther was a source of Hitler's anti-Semitic program prompted careful, critical attention to his polemics against Jews who rejected the gospel in his time and in response to his other opponents. More recently, Finnish scholars have highlighted the mystical aspects of Luther's theology. Publication of the fifty-five-volume American Edition of Luther's Works beginning in the 1950s made much more of his work available to a wide, English-speaking audience.

Lutheran Emphases and Eras (Late Sixteenth to Nineteenth Centuries)

The dialectical concern for correct teaching and proper action that Luther balanced on the singular truth of God's grace given through faith and revealed in the living word continued into the following generations. Sometimes the emphasis tilted toward doctrine, sometimes toward behavior. A person or group shifting in one direction usually provoked someone else to counterbalance in the other. The dynamic tension that holds these two concerns together appears again and again in the Lutheran tradition. For example, it raises an objection equally to absolutism in theology or perfectionism in piety. It informs Lutherans' double recognition that God can and does work through earthly governments and that no government's agenda or actions coincide perfectly with God's intentions. Even noble human enterprises are shot through with motives that are at best mixed and often self-serving. The individual Christian is totally free and completely constrained.

In *Christ and Culture*, his classic study of Western Christian stances toward culture, H. Richard Niebuhr placed Luther in the ideal type he characterized as paradox. The Christian lives in the midst of perpetual struggle, between the fulfillment of Christ's promises and the present reality of earthly life. Some call this disposition toward dialectic a preference for "creative tension." If the tent within which Lutherans dwell is to stand, the tension between the poles is vital. Much of Lutheran history since the mid-sixteenth century is a story of emphasis shifting toward one perimeter pole or another and then being pulled back to balance on the center pole of God's love. While an era, a movement, or

a person may be typified by one emphasis or another, usually all are present in varying degrees.

Political disputes within the so-called Holy Roman Empire and dangers from without, notably the threat of the Ottomans who laid siege to Vienna in 1529, heightened the significance of right belief. Carrying forward the centuries-old pattern set by Constantine, the first Holy Roman Emperor, military alliances required common religious confession. Theologians drafted statements of religious teaching and belief that served as the basis of alliances such as the Protestant Smalkald League. Christian armies arrayed against Muslim soldiers, Swedish Protestants battled German Catholics: the armed conflicts of the sixteenth and seventeenth centuries suggested that God takes sides and that one army knows better than the others what is God's intention for the world.

Although Luther wrote vehemently against both Muslim Turks and European Roman Catholics, in his more measured work he maintained that good and evil are mingled in human governments, even as they are in individual Christians who remain simultaneously redeemed by God and yet sinners. The Peace of Augsburg (1555) and then the Peace of Westphalia (1648) established the principle that the ruler's religion would determine the religion of the ruled (*Cuius regio, eius religio*). This provided a basis for reduced conflict between rulers without resolving the questions about the mode of God's activity in temporal, earthly governments.

Theological battles, fought with words, produced books. For Lutherans the Bible, the written word of God, stands in first place, followed by the Book of Concord, an authoritative collection of public statements of belief published in 1580. These documents, also known as the Confessions, stake out Lutherans' place within Christianity, assert their distinctive common teachings, and provide criteria for evaluating their disputes with one another. Inclusion of the three ecumenical creeds—the Apostles', Nicene, and Athanasian—places Lutheran teaching firmly within the mainstream of Western Christianity. The remaining confessions are three written by Luther, three by Melancthon, and the Formula of Concord.

Of these the Augsburg Confession and Luther's Small Catechism are most widely known and highly regarded. Luther's brief explanations of the chief parts of Christian life and faith have been the core of basic theological instruction through time and around the world. The Augsburg Confession defined Lutheran teaching on key matters—including

justification and the theological basis required for Christian cooperation—and distinguished those teachings from other sixteenth-century positions Lutherans judged false. The Augsburg Confession functions within the Lutheran tradition analogously to the U.S. Constitution. Even as Lutheran churches are united by their profession of allegiance to it, they debate about how the Augsburg Confession is best interpreted in particular circumstances and the degree to which it is binding.

After the first generation of reformers died and the Reformation was institutionalized, a series of controversies erupted within the Lutheran movement. Some, the Gnesio-Lutherans (that is, the genuine Lutherans), leaned more toward Luther's theology, while others, the Philippists, leaned toward Philip Melancthon, particularly concerning such issues as proper understanding of the role of works. The group of German theologians who composed the Formula of Concord (1577) aimed to establish agreement, or at least harmony, among their coreligionists. Disputes continued, nonetheless, as Lutherans endeavored to articulate their faith and live faithfully.

During the period from the publication of the Book of Concord into the mid-eighteenth century, the so-called Orthodox Lutheran theologians used philosophical tools to refine, systematize, and secure the insights of the sixteenth century. They countered Jesuit efforts to win Protestants back to Catholicism and mounted arguments in support of the reliability of the Bible and its authority. Emphasis upon right teaching is often at the expense of the religion of the heart; so too Orthodox Lutheran scholasticism is typically described as arid and lacking spiritual warmth. The gruesome experiences of the Thirty Years War (1618–1648) made the potentially horrific consequences of zealous religious dispute vivid to theologians as well as ordinary believers and opened them to other aspects of faith.

In the later decades of the era, Orthodox Lutherans such as Johann Gerhard (1582–1637) produced devotional literature and hymnody as well as polemics. The soul's longing for God, the comfort and joy that come with divine mercy, and gratitude for Jesus' loving sacrifice: worshippers from the seventeenth century into the twenty-first are given words for all of these in hymns by Paul Gerhardt (1607–1676). The career of Johann Sebastian Bach (1685–1750) overlapped with both orthodoxy and pietism. The most well-known and influential Lutheran musician, his chorales and organ compositions are widely regarded as a high point in

Lutheran cultural production. Their polyphony is a sonic expression of the traditions' patterned variety.

The Pietist movement, the apparent counterbalance to Orthodoxy, revived concern for faithful living without surrendering the core Lutheran emphasis on divine grace. Although the movement began in the late seventeenth century, its origins can be traced to Johann Arndt's (1555–1621) devotional writings, of which the most enduring is *True Christianity* (1605). In response to the reformers' focus upon Christ's work on behalf of sinners, Arndt encouraged those united with Christ to live out their faith. Three quarters of a century later, Philip Jakob Spener (1635–1705) wrote *Pia Desideria* or "Heartfelt Desire for God-Pleasing Reform" as a preface to Arndt's book. Spener outlined a program for church reform and personal devotion in the midst of doctrinal controversy and spiritual dryness.

Pietists expected that Christians would experience an awakening to their own sinfulness followed by an intense awareness of God's gracious forgiveness that would generate lives characterized by personal holiness and action for others. Religion of the heart moved the hands to work for the neighbor. Mandatory catechetical instruction, domestic devotional reading, and small prayer and Bible study groups (*collegia pietatis*) all encouraged the believer in this process of renewal. Educational, publishing, medical, and charitable institutions established in Halle by Spener's younger contemporary August Hermann Francke (1663–1728) gave Pietism its institutional form. Francke, who also taught at the University of Halle, is frequently regarded as the founder of Pietism.

From the center in Halle the movement spread to Scandinavia, where it enjoyed royal patronage, with immigrants to North America, and with missionaries around the world. A second wave of Pietism swept Scandinavia beginning in the late eighteenth century, energizing the peasant class to take responsibility for its own religious life as well as promoting a high moral standard. The implicit potential for social unrest and political subversion provoked state church authorities to enforce previously enacted Conventicle Acts restricting unofficial religious gatherings. Norwegian Hans Neilson Hauge (1771–1824) was imprisoned for several years for his unauthorized preaching.

Lutheran Pietism had much in common with the evangelical movement that included the Great Awakening in colonial North America and emerging Methodism, but it was restrained by Lutheranism's commitment to infant baptism, its nonperfectionism, and the recurring assertion of its

Confessional teachings. If Orthodoxy leaned toward over-emphasis upon doctrine, Pietism was inclined to the dour self-scrutiny, hypermorality, and judgmentalism portrayed in “Babette’s Feast,” a short story by Isak Dinesen. In this story and in the film based upon it, the daughters of a Pietist leader do good works in their community and also shelter Babette, a French refugee. The extravagant meal Babette provides for the sister’s devout guests breaks through their pious austerity, awakening a sense of wonder and gratitude. This outcome hints at a more tender aspect of Pietism that is evident in hymns including those by Lina Sandell (1832–1903), whose *Children of the Heavenly Father* portrays God’s nourishing, protective care for his children with the image of a nestling.

A third, critical strand of Lutheranism was evident in the eighteenth and nineteenth centuries both in the universities and in congregational life. Coincident with the Enlightenment, Lutherans again turned toward the philosophical and were influenced by rationalism. Efforts to safeguard revealed truth from human criticism contributed to development of new methods of biblical interpretation and historical study by scholars such as Johann Salomo Semler (1725–1791) and Ferdinand Christian Baur (1792–1860). Higher criticism attempted to distinguish the enduring, inspired word of God from culture-bound, ephemeral aspects of the Bible. This goal is captured by Rudolf Bultmann’s (1884–1976) phrase, “demythologizing the Bible.” Reduction of religion to morality impoverished worship life: the Lord’s Supper was celebrated infrequently; the liturgy was diminished; sermons were long and didactic.

Both the second wave of Pietism and the neo-Confessionalism in the nineteenth century were to some degree reactions to this rationalism. The three hundredth anniversary of Luther’s ninety-five theses provided the formal occasion for reuniting Lutheran and Calvinist streams of Protestantism in the Prussian Union in 1817. Opposition to such “unionism” heightened Lutheran attention to the distinctive teachings of the Confessions, notably among the German immigrants who formed the Lutheran Church–Missouri Synod. Historian Jaroslav Pelikan (1923–2006) insightfully observed that Lutherans first moved from the ferment of the Reformation to scholastic orthodoxy to Pietism. Then in North America they reversed the order: having begun as Pietists, they moved in the nineteenth century into neo-Confessionalism, and perhaps after the Reformation’s quadricentennial regained something of the movement’s initial effervescence. The momentum of the

twentieth century was toward deeper engagement with American culture, greater openness to non-Lutherans, and more productive relations between Lutherans.

Geographic Spread

In the early twenty-first century Lutherans worldwide are linked in two associations. The Lutheran World Federation (LWF), headquartered in Geneva, includes 140 churches in 79 countries with more than 68.5 million members. The International Lutheran Council (ILC), headquartered in St. Louis, Missouri, is an association of 34 churches. All Lutheran churches grant some degree of authority to the Confessions, with the Augsburg Confession as the usual minimum. Members of the ILC adhere to a stricter standard than required by the LWF.

From its Germanic origins, coinciding with the European age of discovery, the Lutheran form of Christianity was carried around the world by reformers, missionaries, and immigrants. It has been planted in monarchies and democracies, as one of many churches, and among many religions. Wherever Lutherans have founded churches they have, on the one hand, nurtured their theological and cultural inheritance from Luther and their other forbears, and, on the other, struggled to follow Luther’s example of translating the gospel message of Christian freedom into the realities of that place and time. Increasingly they have confronted circumstances where the alliance of church and civil authorities that Luther took for granted does not obtain, and thus they have wrestled with how best to engage in cultural and political concerns.

News of the Reformation stirring in Wittenberg traveled quickly to Scandinavia with students who returned to their homes in Sweden and Denmark. As in the Christianization of the region, royal initiative was a key factor in the evangelical reforms that spread from Sweden to Finland and from Denmark to Norway and Iceland. Without the religious abuses and political dynamics in force in Germany, the Scandinavian Reformation was gradual and less dramatic. Bible translation and education were central. Worship was adapted in line with Lutheran practice. Among the Confessions, only the Augsburg Confession and Catechisms were granted authority and widely used. Revised polity severed allegiances to Rome; episcopal ordination, however, was maintained in Sweden without polemic. The only vigorous opposition to reform, in Iceland, was short-lived.

In contrast to the situation in German lands where one area’s ruler and residents were Roman Catholic, another

Calvinist, another Anabaptist, and yet another Lutheran, in Scandinavia the institutional alignment of the single church and civil government forged a strong affinity between each distinct national identity and the shared religious culture: being Norwegian, Icelandic, Danish, Swedish, or Finnish almost inevitably also entailed being Lutheran. Post-Reformation clergy were civil servants as much as spiritual leaders. Compulsory catechetical instruction was the foundation for widespread literacy. Pietism spread throughout the region, activating faith that had been taken for granted, stimulating moral reform and missionary endeavors, and fostering peasants' political consciousness. In Sweden, Pietists formed non-Lutheran congregations, not allied with the government, and thereby encouraged the free church movement.

The influence of two nineteenth-century Danes continues: Søren Kierkegaard (1813–1855) and N. F. S. Grundtvig (1783–1872). Kierkegaard's philosophical work is studied around the world and beyond Lutheran circles. Grundtvig is known for his advocacy of the folk-school, for his hymns, and for his assertion that one is first a human being, then a Christian. A similar notion seems prevalent in contemporary Scandinavia, where extensive government welfare systems have replaced the churches' charitable role, and individual participation in church life is often minimal. Legal ties between civil government and the Lutheran churches loosened in the late twentieth century; nonetheless, Lutheranism remains the ambient religious tradition in the Nordic countries even as the presence of non-Lutheran and non-Christian traditions expands.

Orthodox Lutheran interpretation of the territorial principle made rulers responsible only for the religion of those they ruled and thus restrained any impulse to missionary enterprises until the early eighteenth century. Danish King Frederick IV was stimulated by Pietism to sponsor a mission in the small Danish colony of Tranquebar, on the southeastern coast of India. Upon their arrival in 1706, Germans Bartholomew Ziegenbalg (1682–1719) and his colleague developed principles of operation based on their training in Halle that would characterize subsequent Lutheran missions. Schools were established. The Bible and Catechism were translated into the vernacular language. The missionaries set themselves to learning the local language and culture in order to preach the gospel, bring their hearers to Christianity, and train Indian leaders for the church. Ziegenbalg composed a Tamil grammar, wrote extensively on Indian religions, and collected artifacts for the Cabinet of

Curiosities at the Halle Orphanage school. His successors' cooperation with English missionary societies demonstrated the affinities between Pietist Lutherans and the larger evangelical movement. In contrast to the ongoing significance of the Danish Royal Mission, the prior work sponsored by the Swedish king among the Lenape Indians in New Sweden (now Delaware), begun by Johan Campanius (1601–1683) in the 1640s, had little enduring effect.

Once begun, Lutheran missions expanded into many fields. Early on, Lutherans' presence was particularly strong in India, China, New Guinea, and southern Africa. The independent, flamboyant, and entrepreneurial German Karl Gutzlaff (1803–1851) was an untiring promoter of Chinese missions. Support for these ventures came from societies established specifically for the purpose, from church bodies, and from auxiliaries such as women's missionary federations associated with churches in the United States. This rather unsystematic organization resulted in establishment of multiple Lutheran churches in a single area, each associated with a different mission and manifesting its sponsor's characteristics as well as its own cultural patterns. The outbreak of war early in the twentieth century prompted increased cooperation between the missions and promoted the churches' autonomy. When internment of German nationals left their missions "orphaned," other European and American missionaries assumed their work.

Also in the early twentieth century, local leaders took greater responsibility for their churches. The Lutheran Church of China (LCC), for example, was formed in 1920, bringing together churches founded by five missionary groups. Throughout its thirty-year existence, the LCC worked toward increased autonomy while cultivating relationships with other Lutherans through membership in the Lutheran World Federation (LWF), founded in 1947. The legacy of the LCC continues in Hong Kong, Taiwan, Malaysia, and Singapore. Other Lutheran churches have begun as missions have grown in numbers, autonomy, and world leadership in recent decades. As the twenty-first century turned, the general secretary of the LWF was Ishmael Noko, a pastor in the Evangelical Lutheran Church in Zimbabwe. In 2009 the Ethiopian Evangelical Church Mekane Yesus celebrated its fiftieth anniversary as a church and 110 years of Lutheran presence with membership of about five million, surpassing the Evangelical Lutheran Church in America (ELCA), the largest Lutheran body in North America.

From the mid-seventeenth century, colonists and immigrants carried the Lutheran tradition with them into new

circumstances, particularly in the Western Hemisphere and Australia. In nations such as Australia, Brazil, and Canada, as well as the United States, Lutherans found themselves a minority without government support and often reliant upon erratic assistance from the church in their “old country” for clerical leadership and other resources. These diaspora situations allowed formation of churches defined by language and national origin as well as Confessional stance and styles of piety and necessitated development of means for self-support and self-government distinct from old European patterns. The many Lutheran church bodies in nineteenth-century North America reflected the variety of their members’ ethnicity; in contrast, the Lutheran churches in Argentina, Brazil, and Australia were predominantly German-speaking.

As typical in missionary settings, these transplanted Lutherans founded schools and the full range of charitable institutions, initially directed to care for their own members. Each church learned to raise its own financial resources and established seminaries to train its own pastoral leaders. Continued use of a foreign language and preoccupation with Confessional issues and institutional concerns contributed to isolation, inhibited outreach, and discouraged productive interaction across denominational lines. By the mid-twentieth century, emphasis shifted away from maintaining old cultural practices and defending Confessional identity toward ecumenical openness and outreach beyond the descendents of immigrants; members of the ILC, however, retain a stricter standard of theological agreement as the basis of cooperation. Particularly in the United States and Canada, the arrival of Lutherans from Africa, Asia, and South and Central America has further expanded the ethnic mix.

International Lutheran cooperation developed in parallel with worldwide ecumenism. Nobel Peace Prize laureate (1930) Archbishop Nathan Söderblom (1866–1931) was a vigorous advocate for greater unity among Christians, in addition to his scholarly interests in comparative religions. His leadership in the Life and Work movement contributed to the eventual formation of the World Council of Churches. Following the 1925 Life and Work Conference in Stockholm, Lutherans formed the Lutheran World Council as a vehicle of cooperation, but its goals were delayed by World War II; after the war, they pursued those objectives through its successor, the Lutheran World Federation (LWF).

The first assembly of the LWF, held in Lund, Sweden, in 1947, brought together delegates from churches whose nations had been armed enemies not long before. They

determined not to be divided by war, but rather to work together for the unity of the church. LWF now describes itself as a communion of churches in the Lutheran tradition. Among its members is Huria Kristen Batak Protestant, HKBP, of Indonesia; although the HKBP does not subscribe to the Augsburg Confession, the LWF accepted its 1951 Batak Confession as the basis of membership in the federation. The federation’s 1977 assembly in Dar es Salaam, Tanzania, declared that racial separation within the churches of South Africa, in accord with apartheid, compromised the gospel and constituted a “*status confessionis*” that required public, unequivocal opposition by Lutheran churches.

North American Lutheranism

If comic stereotypes and nostalgic recollections told the whole story, all North American Lutherans would live in rural enclaves, gossiping about their neighbors’ morality in foreign-accented English, eating hot dishes and Jell-O salads at church-basement potlucks, and singing in angelic, four-part harmonies. Lutheranism was introduced to this continent by Northern European immigrants, but by the twenty-first century most Lutheran churches and many of their members have entered the religious and cultural mainstream. The number of extralocal church bodies (synods, churches, or denominations) has been reduced by merger into larger national churches that encompass the entire range of emphases described above. In a countertrend, asserting their greater faithfulness to the Bible and Lutheran teaching, a number of smaller bodies have organized.

North American Lutherans live in suburbs and cities as well as small towns across the continent, with concentrations in the upper Midwest and Pennsylvania. The vast majority of members continue to be Euro-Americans. Official policies encourage outreach beyond the descendents of nineteenth-century immigrants to the whole range of Americans, regardless of their ethnicity, race, or language. Some congregations also declare a welcome to people of all sexual orientations and gender identities. Sunday morning worship, including Eucharist, may be conducted in English or Spanish or Mandarin and might include African drums or Taize chants, along with pipe organs and chorales. Concern for neighbors is directed toward social well-being. Lutherans occupy most positions on the political spectrum; although there is no identifiable block of Lutheran voters, more tend to vote Republican than Democratic. Along with theologians, Internet lists of “famous” Lutherans include movie stars, country singers, athletes, elected officials, and a travel

guru, although the basis upon which the identification is made may be debatable in some cases.

The ethnic and Confessional boundaries that once defined American Lutheranism and its subgroups have grown blurred and more permeable in recent decades, as is common in the postdenominational era. This is not to say, however, that Lutherans are indistinguishable from other North American Christians. Approximately two-thirds of North American Lutherans belong to the Evangelical Lutheran Church in America (ELCA) and the Evangelical Lutheran Church in Canada (ELCIC); the remaining third belong to more strictly Confessional churches, including the Lutheran Church–Missouri Synod (LCMS). Key theological commitments and practical emphases remain central: God’s gracious love, the word of God, and active faith. Historian Mark Noll identified three Lutheran characteristics as potentially valuable contributions to the American religious arena: a rich sense of history, a moderating approach to involvement in political activities, and theological emphases that include stress upon the objective nature of salvation and human nature as marred by original sin as a state of being. He also highlighted Lutherans’ understanding that the church is constituted by God’s action through the preaching of the gospel and the administration of the sacraments and thus prior to human response, as a corrective to a common American view that equates the church with other purposive, voluntary associations of like-minded members.

Vigorous debates over styles of worship suggest that preaching and the sacraments continue to be essential to Lutheran religious life. Other observers highlight the ecology of Lutheran institutions that encompass congregations and denominations along with social service agencies, health care facilities, all level of schools, and a variety of special purpose organizations. Many of these carry out social ministries that are a primary means of Lutheran public engagement. Late-twentieth-century institutional mergers and ecumenical agreements brought competing Lutheran views into clear relief: high or low liturgy, functional and other notions of ordination, prescriptive or deliberative approaches to social and moral issues, congregational or centralized polity.

Congregational life, nonetheless, remained most Lutherans’ primary involvement with the tradition. Since the mid-twentieth century, educational materials and liturgical practice emphasized baptism as the beginning of a way of life rooted in God’s grace. Growing numbers of congregations moved to weekly Eucharist and reduced the age of first Communion to elementary school or even infancy.

Churchwide innovations and local initiatives yielded wide variation in the details of worship and musical repertoire, but the basic structure usually remained. Lay members assumed greater responsibility for leading worship, even as the liturgical pattern of exchange between leaders and congregation continued. Sermons were based upon a three-year cycle of biblical readings shared with other churches. Biblical passages and themes were woven through the liturgy and hymns. Each new worship resource gave congregations access to a wider selection of hymns from around the world, while retaining favorites from previous centuries. Typically the congregation was dismissed at the end of worship with the words, “Go in peace. Serve the Lord,” to which they responded, “Thanks be to God.”

Serving the Lord took place in and through the congregation, through the larger church in the national and global community, and through each member’s vocation. Luther broadened the notion of Christian vocation from its medieval Catholic use for a calling to specialized religious life to the obligations all Christians have to be “little Christs” to their neighbors. Their motive for service flows from their baptismal identity. They turn toward their neighbors, not to please God or impress one another, but in grateful response to having received God’s loving embrace. This entails the whole of life, in all of what German theologian Dietrich Bonhoeffer (1906–1945) termed one’s “places of responsibility.” While the public office of word and sacrament is vital to the church, all honorable offices—friend and citizen, parent and professor, spouse and artist—are valuable to the community and pleasing to God. Lutheran support for education, like Luther’s own, rests upon the necessity of preparing students to assume responsibilities that provide all manner of daily bread—actual food and whatever else is needed for earthly life. The practice of service takes many forms, from providing cake to a funeral lunch, to farming or operating a restaurant, to advocating for just food policy. In doing so, the individual Lutheran joins with others—other Christians as well as non-Christians—in response to God’s beloved world. The scope of vocation was well illustrated by the work of two brothers, Pastor Arthur Simon, who founded the advocacy group Bread for the World, and Senator Paul Simon of Illinois.

Like Luther, his spiritual descendents reject the medieval Catholic notion of a treasury of merit and are suspicious of good works. Although they operate hospitals and provide life insurance, make quilts and sing in choirs, lobby for just laws and vote, Lutherans do not anticipate establishing God’s

reign on earth by their efforts any more than they expect to work their way to personal perfection and salvation. Nonetheless, their works of love, understood as participation in God's sustaining care for the world, increase the resources for social well-being within their communities. Although no causal relationship can be proven, it is notable that areas of the nation sociologists identify as richest in these resources, or social capital, generally also have a large Lutheran population.

Decades ago, following the example set by the Pietists at Halle, Lutherans in North America established orphanages, homes for the elderly, and hospitals. At their founding, these institutions were usually intended to serve Lutherans. The commitment to care remains the same today, but now services are offered to all people whatever their religion or ethnicity. During World War I, the need to care for members in the military prompted several Lutheran churches to launch cooperative work, even when some groups' concern for purity of doctrine prohibited shared worship. Similar cooperation continues throughout the United States among the supporters of Lutheran Social Services, autonomous agencies offering assistance in areas such as adoptions, family and financial counseling, services to the elderly, and aid to persons with disabilities. Since 1997 more than three hundred Lutheran-affiliated health and human services agencies have been linked through Lutheran Services in America (LSA). The institutions and agencies of LSA provide care to approximately one of every fifty Americans each year. Official church response to domestic crises such as natural disasters and the 9/11 attacks in 2001 is coordinated through Lutheran Disaster Relief. Professional staff members draw upon the energy, experience, and efforts of thousands of volunteers recruited through congregations. Analogous work is carried out around the world by Lutheran World Relief, supported by church members' donations of time, money, and material resources such as school supplies, layettes, and locally crafted quilts.

Immigration from Scandinavia and Germany was still a vivid memory in many Lutheran congregations when World War II produced thousands of refugees and displaced persons needing a place to settle. The National Lutheran Council's efforts on behalf of these European coreligionists activated a pan-Lutheran network of individuals, congregations, and social service agencies across the United States and became the foundation for Lutheran Immigration and Refugee Services (LIRS). By the mid-twentieth century, new political crises around the world expanded the scope of LIRS's work

beyond helping Lutherans to assisting persons of other religions, from Southeast Asia, Africa, and the Middle East, in their resettlement and adjustment to the United States. Lutheran sponsorship contributed, for example, to the large number of Somalis and Hmong who settled in Minneapolis and St. Paul. Individual and congregational involvement in resettlement fostered Lutherans' personal engagement with global and national political issues. That LIRS's involvement in advocacy for just immigration laws and policies grows out of direct service is a typically Lutheran pattern, moving from engagement with the particular realities of life to concern for general principles and policies.

From the movement's beginnings in a university and its early involvement in establishing schools for children, Lutheranism has been deeply committed to education for both members and leaders. In the United States, Lutheran educational ministry has expanded to include providing high-quality education to nonmembers as well as to their own children. The nineteenth-century German immigrants were committed to parochial schools that nurtured both religious and ethnic identity. Teachers were granted high status and a quasi-clerical role. When nativists opposed German language usage in schools and supported the Bennett Law (Wisconsin, 1890), Lutherans joined with German Catholics in protest. Young boys identified as potential pastors were sent to boarding schools to begin early training in languages and preparation for seminary. In contrast, Scandinavians, after some debate, tended to support the public schools and to provide religious education in special summer sessions. Early in the twenty-first century, LCMS congregations operate more than one thousand local schools. Particularly in urban districts, where they offered attractive alternatives to public schools, these drew students from outside the congregations.

Approximately three dozen colleges and universities are affiliated with Lutheran churches, with Gettysburg College, founded in 1832, as the oldest. The relationship between these schools and their churches varies from legal ownership to overlapping constituencies and shared history. At the time that most were founded in the nineteenth century, they were closely tied to a specific church. For instance, each of the two Danish Lutheran churches had its own college: Dana College for the so-called "Holy Danes" and Grand View College for the "Happy Danes." Ten schools associated with LCMS now are linked into the Concordia University system. After several rounds of church mergers and Lutherans' movement out of ethnic enclaves into the cultural mainstream, the student

body, faculty, and staff of these schools are also more culturally diverse, and the proportion of non-Lutherans often exceeds half. Lutheran colleges and universities offer their students programs that combine, in varying proportions, liberal arts curriculum with preparation for occupations. Several, such as St. Olaf College, are well known for their exceptionally strong music programs and choirs. In the ecology of American higher education, Lutheran institutions are located between the Council for Christian Colleges and Universities, such as Wheaton College (in Illinois), on one side; and, on the other, formerly church-related schools with little memory of their Christian founders. In keeping with their theological roots, they claim freedom to study all topics using the best of human resources and the obligation to use what is learned for the benefit of the world.

Lutherans have been more prone to theological, doctrinal debate and concern for personal, moral life than to political debate or social activism. Insistence that God's grace is not dependent upon human actions has sometimes produced unwillingness to engage in any work that might tempt the worker to self-righteousness or opposition to any church teaching that might be construed as works-righteousness. Pietists in particular are accused of quietism. Nonetheless, by the final third of the twentieth century Lutheran church bodies became increasingly engaged with American social issues and issued a continuing series of statements on topics such as the economy, education, immigration, and racism. Intended to guide members' deliberation rather than as declarations of official doctrine, some statements raised barely a whisper of response, while others generated vigorous debate and prompted dissent. ELCA efforts to produce a statement on sexuality, begun in the 1990s, were particularly controversial. Following a multiple-year process of study and consultation, and after fifty days of prayer in preparation, in August 2009 the assembly adopted a statement that included openness to committed, same-sex relationships and made provisions to allow persons in such relationship to serve as pastors.

As they lifted the walls of their tents to join their neighbors in social service, invited greater cultural diversity in their membership, and took steps toward institutional unity, in the mid-twentieth century Lutherans became vigorous participants in ecumenical conversation and cooperation, in formal theological dialogues and in local, community projects, both internationally and in North America. Joint Thanksgiving services, sponsorship of food-shelves, pastors' study groups, and shared space were typical examples of

grassroots ecumenical activity. Coordination of Lutheran participation in official bilateral dialogue through the Lutheran Council in the United States of America (LCUSA) and the LWF fostered inter-Lutheran conversation in tandem with ecumenical discussion. However, differing approaches to cooperation endured among Lutherans, as evidenced by the fact that only the ELCA is a member of the National Council of Churches.

Each round of bilateral dialogue focused upon topics carefully selected to address historical points of disagreement. Dialogue partners span the spectrum of Christian churches from Orthodox, to Roman Catholic, to mainstream and conservative Protestant. In addition to published reports, these dialogues moved Lutherans toward renewed appreciation for other Christians and opened the way for new expressions of shared identity and mission. Significantly, the 1999 Joint Declaration on Justification, agreed upon by the Vatican and the LWF, was celebrated in Augsburg, Germany, where, four and a half centuries earlier, the emperor rejected the Lutheran reformers' central confession and claim to be true Christians. By 2009 the ELCA and six churches (Presbyterian Church USA, Reformed Church in America, and United Church of Christ in 1997; Episcopal Church and Moravian Church in 1999; and United Methodist Church in 2009) were in full communion: mutual recognition of baptisms, welcome of one another's members at Communion, exchange of clergy, and mutual lifting of any condemnations that existed between them.

Debates prior to agreements with the Episcopal Church and Reformed churches exposed differing positions on matters of polity, ordination, and theology within the ELCA. Some objected that the centrality of justification and the gospel was compromised by an agreement to bring ordination practices in line with episcopal polity requiring participation by a bishop. The disparate polity of previous church bodies and the regional variety of Lutheran experience across the nation intertwined with theological disagreement. Generally, but not unanimously, Lutherans who were a smaller minority in their region were more likely to support greater cooperation with the Episcopal Church, and those from bodies with a congregational polity were not. After the proposal was defeated by the ELCA churchwide assembly in 1997, it was revised and passed two years later as "Called to Common Mission." Opponents to the agreement formed Word Alone Network, a grassroots organization active within the ELCA to promote reform and renewal in conformity with the authority of the Bible.

Alongside the trend toward institutional consolidation and increased external engagement that characterized much of twentieth-century American Lutheranism, there was a counterforce calling for greater attention to the Bible and to the Confessions, for less ecumenical cooperation, and for adherence to conventional social mores. Some congregations declined to join new church bodies formed by mergers throughout the century. When conflict erupted in the 1970s, it split the LCMS; the moderate “exiles” became part of the ELCA, with whom LCMS members are advised not to pray. Following the ELCA’s adoption of a liberal social statement on sexuality in 2009, leaders of Lutheran CORE (Coalition for Renewal), Word Alone, and other opponents began seriously considering alternative organizations, including a non-geographic synod. These developments challenge the stability of the large-tent Lutheran tradition, raising institutional and theological questions about the basis and form of Lutheran unity. Although Lutherans have never achieved unification in a single organization, they have depended upon one another to provide the counterweight that brings all parties back to the center of God’s loving grace. Just how that will happen in the twenty-first century remains to be seen.

M

Mainline Protestants

The term “Mainline Protestantism” refers to an influential segment of American Protestantism, including seven denominations (or denominational clusters) that have exercised major influence in American religious life since early in the nation’s history. With some variation, they share a similar social and economic status, theological orientation, and sense of responsibility for American culture. Mainline Protestant denominations include American Baptist Churches in the U.S.A., Christian Church (Disciples of Christ), Episcopal Church, Evangelical Lutheran Church in America, Presbyterian Church (U.S.A.), United Church of Christ, and United Methodist Church. But defining Mainline Protestantism precisely is complex. Several of these denominations are mergers of predecessor denominations. Others, such as the Reformed Church in America, could be included along with Presbyterians as part of a broader Reformed cluster. On the other hand, virtually all of them have sister denominations that consider themselves more evangelical than mainline, such as the Presbyterian Church in America. Finally, a number of historically African American denominations, such as the African Methodist Episcopal Church, are related to but independent of their Mainline Protestant counterparts.

Generally middle and upper class, mainly white, well educated, moderate to liberal theologically, and influential in business and politics, Mainline Protestantism functioned almost like an informal religious establishment from the early nineteenth century until at least the last third of the twentieth century. That is no longer the case in the twenty-first century. But even though these denominations now

occupy merely one portion of the American religious spectrum, they remain influential beyond their numbers.

Early History of Mainline Protestant Denominations

With the exception of the Christian Church (Disciples of Christ), all of these denominations trace their histories to the Protestant Reformation in Europe and date their history in the United States to the colonial period, which was dominated religiously by Congregationalists, Presbyterians, and Anglicans. Virtually all of the denominations, however, have subsequently experienced major organizational change, including merger, schism, and denominational name change.

The United Church of Christ, for example, emerged from the Congregational churches of colonial New England. In England, Congregationalists had dissented from the established Church of England, some criticizing it from within while others separated from it. Both Non-Separatists (in Massachusetts Bay) and Separatists (mainly in Plymouth) came to New England in the early seventeenth century, creating in Massachusetts a Congregationalist establishment. Congregationalists remained strong in New England throughout the colonial period, despite the fact that some who preferred a somewhat more hierarchical form of church governance became Presbyterians.

Presbyterians traced their history back through the complex English Reformation of the sixteenth and seventeenth centuries to John Calvin’s Geneva. Although present in New England and other colonies, Presbyterians were strongest in the middle colonies, organizing the first American presbytery in Philadelphia in 1706. In 1801, Congregationalists and Presbyterians agreed to coordinate their mission

efforts on the midwestern frontier. But due partly to their insistence on an educated clergy, neither group succeeded in the frontier revivals as did Methodists, Baptists, and Disciples. Nonetheless, Congregationalists flourished mainly in New England, while Presbyterians were found throughout the United States.

Anglican establishments existed in several colonies, including New York, Virginia, Maryland, Georgia, and North and South Carolina. But since most of their clergy remained loyal to England, Anglican fortunes declined during the Revolutionary War, and only after the war did the church welcome its first resident bishop. The Protestant Episcopal Church in the United States of America organized officially in 1789 and eventually regained influence in several areas where it had been strong, especially Virginia and New York City. But, gaining little from the frontier revivals of the early nineteenth century, its growth elsewhere remained slow.

Baptists in the North dissented from those early Congregationalist and Anglican establishments in the interest of religious freedom and congregational autonomy, most prominently in Rhode Island but later in Massachusetts, Connecticut, and elsewhere in New England. By the late eighteenth century, Baptist growth centered on the South and frontier areas further west, especially during the Second Great Awakening and beyond. In 1845, Baptists divided into Northern and Southern branches over the issue of slavery, and subsequent growth was far more rapid among the Southern Baptists. The Northern Baptists (currently American Baptist Churches in the U.S.A.) suffered particularly from the fundamentalist/modernist controversy in the early twentieth century.

American Methodism developed from the evangelistic efforts, mainly in England, of Anglican preacher and theologian John Wesley. But his followers also enjoyed success in the colonies, and the Methodist Church was organized in the United States at the so-called "Christmas Conference" in 1784. Methodism thrived on the frontier, thanks largely to the organizational innovation of the circuit rider—a preacher (usually, but not always, ordained and often with little formal theological education) assigned to preach and serve throughout a broad geographic region rather than settling in one location. This strategy was remarkably well adapted to frontier conditions, and rapid growth made the Methodists the largest denomination in the United States by 1844.

The Christian Church (Disciples of Christ) emerged in 1832 out of the Stone-Campbell Movement on the American frontier. Like the Methodists and Baptists, the

Disciples benefited greatly from the revivalism of the early nineteenth century. Although several of its major leaders had been either Presbyterians or Baptists, the movement advocated a simple, nonhierarchical church structure based entirely on the New Testament. Ironically, although it tried to avoid denominationalism altogether, the Stone-Campbell Movement gave rise to several denominations, including the mainline Christian Church (Disciples of Christ).

Although a few Lutheran congregations existed in the colonial period, major Lutheran growth was fueled by post-Revolutionary immigration, especially in the nineteenth century. Since immigration continued for several decades, the immigrant influence on Lutheranism remained strong, resulting, for example, in the persistence of German or Scandinavian languages in many Lutheran churches until the early twentieth century. In fact, the major Lutheran denominations in the early twentieth century, including the American Lutheran Church and the Lutheran Church in America, reflected to some extent the continuing influence of particular ethnic groups until the formation of the Evangelical Lutheran Church in America in 1988. Long before that date, however, both denominations were an integral part of Mainline Protestantism. But a number of other Lutheran denominations, most notably the Missouri and Wisconsin Synods, remained firmly within the evangelical part of the Protestant spectrum. It should be noted that despite the contribution of immigration to Lutheran growth, the major benefits of immigration went to the Roman Catholic Church, which, by 1850, had become the largest single religious group in the United States. But it would be more than a century before Catholics exercised a comparable clout in business, politics, and culture as their Mainline Protestant contemporaries.

Mainline Protestantism: A Collective Story

If each of the Mainline Protestant denominations has its own individual history, they also share a collective one. By the 1830s, they constituted a dominant Protestant culture that functioned much like an unofficial religious establishment. Distinctions among these denominations certainly existed, reflecting ethnic, regional, social class, theological, and institutional differences. Taking theology as an example, Lutherans, Methodists, Baptists, and Presbyterians maintained their own theological distinctives. Presbyterians and Methodists differed significantly, for example, on the role of free will in the moral life, and Episcopalians and Lutherans differed from both of them on the proper nature of Christian worship. But despite

these differences, they shared a broad theological consensus that included a high view of biblical authority, a trinitarian theology, a philosophical orientation based on Scottish Common Sense philosophy, an emphasis on warm personal religious experience, and a sense of responsibility for the shape of the broader culture. Their members supported numerous voluntary associations that addressed a number of social problems, from slavery to alcohol abuse, a collective reform effort known as the Benevolent Empire. In fact, more united these denominations than divided them.

The one great exception to this consensus was slavery, and the mid-nineteenth century saw three major Mainline Protestant groups split over the issue: Baptists, Methodists, and Presbyterians. Although details varied slightly, each divided into Northern and Southern branches. The Methodist division lasted until 1939 and the Presbyterian until 1983. The Baptist split endures in the early twenty-first century.

In referring to “denomination” in the nineteenth century, some care should be taken. Prior to the Civil War, denominational identities were forming, but the elaborate bureaucratic structures that came to characterize Mainline Protestant denominations had not yet taken shape. Denominations tended to be decentralized coalitions of congregations held together by a common history and theological tradition. But simultaneously with corporate developments in the business world in the last third of the nineteenth century, denominational structures became more centralized and complex. The Mainline Protestant denominations thus entered the twentieth century in a form that would be more or less recognizable today and in a position of relative strength and influence in the culture.

That strength, however, was seriously tested early in the twentieth century by the so-called fundamentalist/modernist controversy. By the late nineteenth century, three major challenges to Protestant tradition had emerged. First, urbanization and the immigration that fueled it brought millions of new residents into the United States, many of whom were Catholic or Jewish, thus challenging the Mainline Protestant predominance rather than reinforcing it. Second, the scientific challenge represented by Charles Darwin and evolution presented Protestants an alternative way of looking at the world. Third, awareness of biblical criticism, which had largely developed in Europe, spread in the United States, challenging traditional ways of reading the book that constituted the preeminent source of Protestant authority.

These three challenges stimulated a resistance movement among some Protestants who suspected modern science and

rejected historical criticism in favor of a literal reading of the Bible. In addition, largely rooted in small towns and rural areas (although not exclusively so), they were somewhat suspicious of both immigrants and the cities that housed them. This religious resistance movement came to be known as fundamentalism. Fundamentalists were not all alike. If many were simple and uneducated, others were well-educated seminary professors and influential political and business leaders. Convinced that the fate of Christian orthodoxy was at stake, the fundamentalists attempted to root out what they saw as heretical trends in their own denominations. Fierce intradenominational battles resulted early in the twentieth century, especially among the Presbyterians and Northern Baptists, spilling over more widely into the culture as in the famous Scopes trial in Dayton, Tennessee. But in virtually all cases, by the 1930s, the fundamentalists lost the fight and withdrew into other denominations more to their liking.

Despite the fundamentalist/modernist controversy, the Mainline Protestant denominations did relatively well in the first half of the 1920s. Many deplored what they regarded as a decline in moral standards during the “Jazz Age,” and there were, in fact, reasons for concern. The increasing popularity of the automobile, for example, enabled persons to drive to such competing attractions as sporting events and movies, instead of Sunday evening services. On the other hand, financial contributions to churches remained fairly strong, and Mainline Protestant congregations undertook numerous church building projects that had been delayed by World War I.

But both financial support and building programs came to an abrupt halt with the advent of the Great Depression. In fact, historian Robert Handy identifies 1925 as the beginning of a “religious depression,” characterized by sharp drops in such signs of institutional vitality as giving to missions and volunteering for mission service. Church attendance flagged, and giving to churches declined dramatically. As a result, both congregations and denominations suffered, first in the Depression and then during the Second World War.

But they survived both depression and war, and some consider the late 1940s through the early 1960s as the high-water mark of mainline Protestant influence in the United States in the twentieth century. Membership in most of these denominations peaked by 1965, and they remained influential in politics and business. The religious affiliation of Supreme Court members, for example, suggests this Mainline Protestant influence. In 1966, the nine members of the Court included three Presbyterians, two Episcopalians,

one Catholic, one Jew, one Baptist, and one “Protestant.” By contrast, the Court membership in 2008 included five Catholics, two Jews, one Episcopalian, and one “Protestant.”

But the fortunes of virtually all these denominations have ebbed considerably since 1965, and the theme of Mainline Protestant “decline” has dominated scholarly discussion of them since at least the 1970s and 1980s. Although denominational experiences vary, sharp membership decline has characterized virtually all of them. For example, the Episcopal, Presbyterian, and United Church of Christ denominations, so overwhelmingly influential in the colonial era, had a combined membership of 7,605,517 in 1950. That figure increased to 9,774,778 in 1965. But it then declined to 7,884,334 in 1980 and to 6,892,699 in 1990 (only 91 percent of the 1950 membership despite rapid population growth in the meantime).

Financial giving to religious causes, which declined steadily from the mid-1930s through World War II, recovered somewhat after the war. But though significant in absolute terms, giving as a percentage of income declined again after 1961. At the same time, congregations began to keep more of their funds for local causes, thus providing less support for their denominational bodies. Consequently, one denomination after another found it necessary to restructure organizationally and relocate to less expensive locations. Those developments, in turn, caused many to wonder just what the role of denominations should be in the twentieth century and whether they would survive very far into the twenty-first.

It was also during the period from 1965 to 2005 that most Mainline Protestant denominations experienced controversy over social justice issues, from civil rights in the 1960s to various issues of sexuality in the late twentieth and early twenty-first centuries. During these controversies, some congregations even left Mainline Protestant denominations, and various “renewal movements” developed among others who remained within them. Even among evangelical denominations, which continued to grow, the growth rate declined as the accepted role of religion in American life became less certain and more contested.

History of the Term

But if each of the Mainline Protestant denominations has a long history, the term “Mainline Protestant” has a much shorter one. These denominations came to be known as “mainline” only in the mid-twentieth century. By 1958, sociologist E. Digby Baltzell used the term “mainline”

(which originally referred to a commuter rail line linking Philadelphia and its suburbs) to refer to a social and economic elite—the so-called WASP (white, Anglo-Saxon Protestant) establishment. Sociologists have regularly used the term ever since.

But although American religious historians were somewhat slower to adopt it, the term eventually provided a way of linking contemporary Protestant history to the colonial history of the Congregationalists, Presbyterians, and Anglicans and to the nineteenth-century Benevolent Empire. During those earlier periods the seven denominational traditions had, in fact, exercised considerable influence in American public life, religious and otherwise. By adopting the term “mainline,” scholars of American religious life were suggesting that these denominations dominated American religious life, much as their secular counterparts dominated business and politics. But by the time the term became common, that influence was clearly on the wane, and the word “decline” frequently accompanied “Mainline Protestantism” in the scholarly literature.

In addition, several historians began to criticize the extent to which their colleagues described American religious history from a Mainline Protestant perspective, with its focus on white, male Protestants from the Northeast. They advocated instead new ways of telling the story from other points of view, including those of women, racial/ethnic minorities, and other religious groups.

By the 1980s some observers began to substitute “mainstream” for “mainline,” seeking, perhaps, to soften the elitist connotations of “mainline.” That attempt failed, however, as nonmainliners judged “mainstream” to be small improvement. In some ways it was worse. “Mainline,” although admittedly elite in its origins, did not necessarily connote numerical predominance, as “mainstream” seemed to. For their part, some nonmainliners employed a different railroad metaphor, using “old line” or “side line” to describe the Protestant group from which they were excluded, but those terms are perhaps more pejorative than the term they seek to supplant. In sum, the term “Mainline Protestantism,” though imprecise and contested, remains a useful way of referring to an influential and enduring strand within the large tradition of Protestantism and the still larger landscape of religious life in the United States.

Characteristics of Mainline Protestantism Today

Although no list is definitive, the core characteristics of Mainline Protestantism include at least the following:

(1) middle- and upper-class socioeconomic status; (2) white, European ancestry; (3) a dedication to education for both lay and clergy; (4) a commitment to ecumenical cooperation with other groups alongside a relatively low level of denominational commitment; (5) a tradition of involvement with social issues, from the civil rights movement to antiwar efforts to the women's movement; (6) a sense of custodial responsibility for society; (7) centralized denominational structures; and (8) liberal or neo-orthodox theological tendencies.

Although there are exceptions, Mainline Protestants tend to be middle and upper class in terms of their income, educational level, and social status. They long have been heavily represented in the leadership of business, politics, and higher education. Originally of Northern European ancestry, and despite their official advocacy of racial inclusion, these denominations remain overwhelmingly white. The Presbyterian Church (U.S.A.), for example, is almost 92 percent white. The major exception is the American Baptist Churches, U.S.A., which includes a substantial number of African American congregations, many of them jointly affiliated with a historically African American denomination as well.

Not only do Mainstream Protestants tend to value education for themselves, but they also value an educated clergy. Indeed, an educated clergy always characterized United Church of Christ, Presbyterians, Lutherans, and Anglicans and has come to characterize Methodists, Baptists, and Disciples as well. In fact, one of the major contributions of Mainline Protestant denominations to American society has been their role in founding colleges and universities as well as theological seminaries. Related to education is their general acceptance of scholarly biblical translations, biblical criticism, and the contributions of science.

The ecumenical movement of the twentieth century, embodied in the Federal Council of Churches (1908) and the successor National Council of the Churches of Christ in the U.S.A. (1950), was largely a creation of Mainline Protestantism. So also was the spirit of denominational cooperation on which it built. In some ways, ecumenism reflected the genius of American denominationalism. The very term "denomination" implies that "Presbyterian," for example, designates or denominates only one group of Christians among others; it does not suggest that "Presbyterian" is the only true church. Denomination thus implies diversity, toleration, and ecumenism. To some extent, it implies as well a relatively low level of denominational loyalty, reflected perhaps in the ease with which persons switch from one mainline denomination to another.

Although controversy sometimes results, the denominations of Mainline Protestantism have often been involved in campaigns for social justice. This tradition dates back at least to the Benevolent Empire of the 1830s and the abolition movement it included. More recently, Mainline Protestantism supported the Social Gospel of the late nineteenth and early twentieth centuries; the civil rights movement of the 1950s and 1960s; the antiwar movement of the 1960s and 1970s; and the women's movement of the 1970s, 1980s, and 1990s.

This social engagement suggests the Mainline Protestant sense of custodial responsibility for society. This characteristic reflects a fundamental aspect of established churches in the Reformation in Europe as well as several colonies in the New World. But even after the constitutional disestablishment of religion, Mainline Protestants retained a sense of engagement with the world and obligation for the common good, and for a time in American history, they assumed an almost unexamined custodial role in the culture. To a considerable extent, they felt entitled to speak for the common good, even after their dominance of American religious life had passed. Thus, Mainline Protestantism has had a distinctive relationship to the culture, although that relationship has changed over time.

As noted above, the denominations of Mainline Protestantism adopted centralized, bureaucratic structures from the business world in the late nineteenth and early twentieth centuries. Those structures, which worked rather well in the mid-twentieth century for both business and religion, have become increasingly dysfunctional in the twenty-first century, and the denominations' organizational future remains controversial.

Finally, although it would be incorrect to say that Mainline Protestants share a theological consensus, their moderate to liberal theological identity has certainly been shaped to a considerable extent by liberal and neo-orthodox theologies. On one hand, there are important theological differences between Mainline Protestants. On the other hand, by and large, they once mattered more than they do now, and most Mainline Protestants share to some extent a theological legacy shaped by the liberal theology of the late nineteenth and early twentieth centuries (including the Social Gospel) and the neo-orthodox theology of the mid-twentieth century. Although neo-orthodoxy was in some sense a reaction against extreme forms of liberal theology, both have influenced Mainline Protestantism. From liberal theology, Mainline Protestants continue to value science and education, endorse the historical-critical approach to the Bible, and

emphasize the centrality of ethics in religion. From neo-orthodoxy, Mainline Protestants continue to value the Bible (even if interpreted with contemporary scholarly methods), the church (even when critical of it), and the doctrinal tradition of Reformation Protestantism (even if adapted to a new day). These theological commitments, more pronounced among denominational “elites” than among the rank-and-file members, continue to distinguish Mainline Protestantism from more evangelical denominations.

The historical influence of Mainline Protestantism in the United States is clear, but its current health and future prospects are less certain. Although it faces many challenges in the twenty-first century, three in particular stand out: (1) decline in membership and cultural influence, (2) the religious substance or spiritual vitality of the Mainline Protestant tradition, and (3) the role of Mainline Protestantism in a religiously plural world.

Mainline Protestant Decline

Much scholarly work on Mainline Protestantism in the past three decades has focused on documenting and attempting to account for institutional decline, in terms of both membership and cultural influence. Since 1965 virtually all Mainline Protestant denominations have experienced membership losses, even at a time when both the nation’s population and the membership of many evangelical denominations continued to grow. For example, between 1965 and 1990, United Church of Christ membership declined 23 percent, while the Assemblies of God membership increased 227 percent. In fact, the roots of this decline actually began in the early 1950s as the Mainline Protestant growth rate began to decrease. By 1965, Mainline Protestantism was losing members quickly, despite rapid growth in the population at large.

Sociologists have identified with some certainty several geographic and demographic factors that account for much of this membership decline. They note, for example, that whereas mainline denominational strength lay in the Northeast and Midwest, population growth in the late twentieth century centered in the South and West where evangelical Protestants dominated. Second, as noted above, Mainline Protestants are relatively affluent and well educated. But sociologists have established, for reasons that are not altogether clear, that as wealth and educational levels increase, religious affiliation tends to decrease. Third, since Mainline Protestants tend to have lower birthrates, they are older as a group than other parts of the population and have a higher

death rate. With a lower birthrate and a higher death rate, membership loss is difficult to avoid. Fourth, religious groups can grow by producing their own members, with high birth and retention rates, or by converting outsiders. However, alongside their low birthrate, Mainline Protestants failed to retain their young and demonstrated little enthusiasm for evangelism.

In addition to these geographic and demographic factors, Mainline Protestantism suffered from the broader suspicion of institutions (from universities to political parties) and the growing emphasis on individualism that began to shape American popular culture in the 1960s. Whereas religious affiliation with the denomination of one’s parents was expected and unexamined in the 1950s, by the late 1960s, that was no longer the case. Individual autonomy and individual choice operated in religion as elsewhere in American life.

Between 2006 and 2008, Mainline Protestant membership continued to decline, but at a slower rate for most of the denominations. At the same time, the rate of membership growth slowed among several conservative denominations. Alongside these membership patterns, it should be noted that poll numbers show a marked increase in the percentage of persons who tell pollsters that they have no religious affiliation. Religious nonaffiliation, that is, is an increasingly acceptable option in American society.

Equally serious as Mainline Protestant membership loss has been a parallel loss in broader cultural influence. Until the mid-twentieth century, Mainline Protestants were heavily represented among the ranks of political, business, and educational leaders and dominated religion coverage in the mass media. For example, theologian Reinhold Niebuhr, who addressed a broad reading public, including prominent political leaders, appeared on the cover of *Time* magazine in March 1948. By contrast, other Christian groups, especially evangelicals and Roman Catholics, have dominated media discussions of religion in recent decades.

Clearly, Mainline Protestants no longer occupy their prominent place in the culture. Despite that fact, they remain considerably more influential than their declining numbers would suggest. But their precise public role is still being negotiated, especially in relation to the growing religious pluralism of the United States.

Mainline Protestantism and Religious Vitality

Given the reality of declining membership and cultural influence, some wonder whether Mainline Protestant

denominations will survive. In fact, given their long tradition in the United States, they are unlikely to disappear despite the challenges they face. But what conditions are necessary in order for them to survive and even thrive? Alternatively, how should these denominations and their leaders respond to their changing fortunes to remain both institutionally strong and religiously authentic?

As with any social movement, Mainline Protestantism faces the challenge of recruiting and retaining group members, providing them with sufficient reasons to join and to stay. In the case of a political movement, for example, such reasons might include the movement's ability to identify benefits sought by the members, its ability to influence other political actors to achieve those benefits, and so forth. As a religious movement, Mainline Protestantism must provide sufficient religious grounds for the recruitment and retention of group members. That is, to survive and fulfill its religious mission, Mainline Protestantism must recover its spiritual vitality.

At least three major developments are required if Mainline Protestantism is to recover its religious vitality: a renewal of Mainline Protestant worship, a retrieval of spiritual practices, and a renewed attention to youth. In fact, movements in all three directions are evident in the early twenty-first century, although it is too early to know how successful they will be.

First, Mainline Protestants are paying new attention to the importance of vital worship, the constitutive activity of Christian community. For some Mainline Protestants, this means the adoption of contemporary worship models, including the use of new worship music and a less formal worship style. In other places, it might mean the retrieval of classic Protestant worship practices adapted for a new day. But there is widespread agreement among scholars of Mainline Protestantism that a renewal of Protestant worship is essential if Mainline Protestantism is to become once again a vital religious movement.

Second, Mainline Protestant religious vitality depends on a retrieval of certain traditional spiritual practices. In contrast to the apparent emotional and spiritual vitality of some other Protestant groups, such as Pentecostals, Mainline Protestants have often been described as rational, reserved, and lacking in spiritual vitality. In response, there has been a growing movement to retrieve a number of spiritual practices from the earlier tradition of the Christian church, such as Sabbath keeping, hospitality, spiritual direction, monastic retreats, meditation, and pilgrimage. Some of these, such as

Sabbath keeping, were long central to Mainline Protestantism, had fallen into disuse, but are now being recovered and retooled for the new conditions of the twenty-first century. Others, such as spiritual direction and monastic retreats, are more typical of Roman Catholic and Eastern Orthodox denominations but are being adapted for contemporary Protestant use.

A third condition necessary for vitality is a renewed attention to youth. As noted above, although religious groups can grow by converting outsiders or by having more children and keeping them in the faith, Mainline Protestants have not been particularly successful at either task. Although little can be done about their declining birthrate, Mainline Protestant leaders know that they must redouble their efforts to retain the younger members they have, including renewed attention to campus ministries. It is too early to know how well those efforts will succeed, but it is essential that they do so.

Mainline Protestantism in a Pluralist World

The issue of religious vitality, of course, most appropriately concerns Mainline Protestants and their leaders. But Mainline Protestantism's survival as a viable religious movement has broader public significance as well, given its historical importance and contemporary influence. Assuming that Mainline Protestant denominations survive in some form, they continue to face several major challenges with broad implications for American public life. Among them are (1) discerning the appropriate role for Mainline Protestantism in American public life, including its role in social justice advocacy; (2) broadening membership beyond Mainline Protestantism's traditional white base; and (3) coming to terms with the increasing religious pluralism of the United States.

Unlike in many other Western industrialized countries, religion in the United States retains an exceptionally important public role. As noted above, Mainline Protestant denominations once played a prominent role on the public stage. But in recent years, a resurgent evangelicalism has relegated Mainline Protestantism to the periphery of that stage, leaving open the question of what appropriate public role it should fill. Indeed, this issue is part of the much larger question concerning the appropriate public role of any religious group in a religiously pluralistic society.

Traditionally, Mainline Protestant denominations have taken an active public role on behalf of a number of social justice issues. Protestant involvement in the civil rights

movement of the 1960s is a case in point, and Mainline Protestants have been among the leading religious advocates on behalf of environmental issues. Both issues illustrate a link between Mainline Protestant social activism and religious motivations. Protestant involvement in the environmental movement, for example, brings together concerns over the consequences of global warming with a notion of the world as God's creation. But on some other contemporary issues, including questions of sexuality and social welfare, a Protestant consensus is less clear. Given the long Mainline Protestant attention to (and custodianship for) the broader social order, however, it is inconceivable that Mainline Protestants can simply withdraw from taking any role whatsoever in public life. But what that role will be in the years ahead is an open question.

A second major challenge facing Mainline Protestantism in a pluralist world is how to broaden its membership beyond its traditional racial/ethnic base in a country characterized by rapidly increasing diversity. Although all of these denominations proclaim their racial inclusiveness, their actual progress in diversifying their membership has been modest. Clearly more must be done if Mainline Protestantism is to thrive in the twenty-first century.

A third challenge, related to the above, is the necessity of coming to terms with the increasing religious pluralism of the United States. In some sense, Mainline Protestantism has been facing this challenge since the immigration of large numbers of Eastern European Jews to the cities of the East Coast in the late nineteenth century. Prior to that time, most immigrants had been either Protestant or Catholic Christians. In the twenty-first century the challenge may be even more complex, given the large numbers of immigrants from non-European settings and non-Christian religious traditions. But complex though it may be, meeting this challenge is a nonnegotiable task for Mainline Protestantism.

Conclusion

Despite the challenges it faces in the twenty-first century, Mainline Protestantism remains an integral part of the nation's religious history and an important part of its current religious landscape. Consequently it is likely to retain a significant, if reduced, religious presence in the future, the exact shape and extent of which remains to be seen.

Marriage and Family

In North America families have traditionally been the site in private life for the practice and transmission of religious beliefs. Native American oral sources typically presented the harmony of the sexes as the foundation of tribal integrity, and the Judeo-Christian Bible of European settlers symbolically sanctioned familial relationships in images of Adam and Eve, Abraham and his household, and Jesus' divine paternity. Both ideals called upon parents to sustain community by teaching their children inherited values.

Nevertheless, individualism and freedom challenged pious descent beginning in the colonial period. Protestantism in the British colonies, especially in evangelical groups emphasizing a conversion experience, introduced a wedge between individual salvation and family devotion. The religious heterogeneity of Europeans who spread and intermingled across the continent prevented a simple match between public dogma and household beliefs. Love of liberty ambiguously produced a zest for religious self-expression and restraint of faith in civic life, epitomized by the First Amendment of the U.S. Constitution. By 1800 the family as a conservative religious institution felt the pressures of personal autonomy and state secularism alike.

The home did not disappear from the American religious landscape, however; rather, it became a place of private dialogue and a subject of public debate. Widespread religious tolerance of self-defined spirituality and interfaith marriage since the 1960s has been accompanied by growing social acceptance of unconventional families such as unmarried and same-sex couples. The same ethos of freedom that encourages

these liberal choices sustains a countervailing conservatism. Parents in rising immigrant communities of Hispanic Catholics, Muslims, Hindus, and Buddhists precariously balance family traditionalism and economic aspiration. Their children reenact intergenerational religious conflicts long familiar among immigrants. In moral debate, relaxed family standards have provoked strenuous criticism. Defense of the traditional family, defined by its advocates to mean heterosexual marriage, sexual restraint, and opposition to abortion, unites religious conservatives across denominational lines. Through all, the family remains the essential backdrop of personal religious exploration and cultural negotiation because of its historical role as a social foundation for faith.

Patriarchy and Selfhood

In contrast to Catholic missions to the indigenous populations of French Canada and the Mississippi Valley before 1700, the Protestant colonial migration was largely composed of families. The English Puritans who settled New England after 1630 were especially devoted to biblical principles and sharply felt the tension in the Reformed tradition between loyalties to family and self-reflection. The Fifth Commandment of the Hebrew Bible to honor parents justified all Puritan social authority, casting the commonwealth in familial terms. At home, it was the duty of fathers to enforce moral order in households consisting of wives, children, apprentices, and servants.

At the same time the Puritans' Calvinist theology of election and ecclesiology of the gathered church set personal salvation in delicate balance with social hierarchy. Only the minority who experienced grace might join a church, and when some children of the first settlers did not hear God's call, families were religiously divided. This demographic and spiritual crisis precipitated the Half-Way Covenant of 1662, sanctioning baptism for infants of unconverted parents among the founders' descendants. The step was predictable in a group committed to both an individual saving experience and family obligation. The combination of self-scrutiny and civic-mindedness found in the classic diary kept for a half century after 1674 by Samuel Sewall—Boston merchant, father, judge, and church member—typified the Puritans' divided allegiance to private spirituality and kinship.

Individualism increasingly dominated religious thinking in the eighteenth-century British colonies. Enlightenment philosophy, celebrating the agency of the unimpeded man, inspired the First Amendment's guarantee in 1791 of religious "free exercise" for each citizen. Benjamin Franklin's

Autobiography, published posthumously the same year, described his program of moral self-improvement. A descendant of the Puritans, Franklin recounted his flight as a young man from Boston to more tolerant Philadelphia but insisted that responsible independence still required ethical restraint. The crowds up and down the Atlantic coast that experienced conversion during the revivals of the Great Awakening, beginning in the 1730s, believed, unlike Franklin, that redemption was an unmerited gift. Their dramatic public transformations were as separate from family nurture, however, as was Franklin's character building.

Frontier life nevertheless afforded many families unprecedented self-determination. Institutionally, a religious frontier in North America was anywhere beyond established religious authority. The absence of rabbis and traditional Jewish lay councils (*kehilot*) on the eighteenth-century American continent meant that the Jewish families clustered in port cities managed religious affairs ranging from circumcision (*brit milah*) to burial. Catholic families that moved west across the Appalachians after the Revolution depended on occasional visits from itinerant priests for the sacraments, otherwise practicing on their own. Accidents of migration that curtailed communal regulation or clerical oversight indirectly enhanced domestic religion.

Redemptive Motherhood and Domestic Alternatives

Rapid social and intellectual change in the United States after 1800 added new influences to disturb family religious cohesion. The expansion of cities and commerce and the development of technology and science favored cosmopolitanism and critical thinking. Especially among urban elites, men drifted toward religious skepticism, well-placed Protestants became Catholic converts, and interfaith marriages were more common. As many as half the Jews in antebellum New Orleans, a thriving port, married Christians. In the spirit of Romantic philosophy, Transcendentalist Ralph Waldo Emerson urged the individual to turn inward to heed private intuition in his Divinity School address delivered at Harvard in 1838.

Spiritual freedom, although gaining in practice, was still the intellectual cause of a small minority only. The nation's Protestant majority responded to choice and openness by reaffirming conservative family piety. The mother, not the father now distracted by worldly business, was to be the home's spiritual head. Advice literature written largely by and for women, such as Catharine Beecher's *Treatise on Domestic Economy* (1841), pictured female moral leadership as

a patriotic duty. In the realm of theology, Horace Bushnell, a Hartford Congregationalist minister, issued *Christian Nurture* (1847) to critique the sudden individual conversions witnessed decade after decade after 1800 in the revivals of the Second Great Awakening. Christian training should instead be administered gradually in the patient spirit natural to women.

Although a Bible displayed on the parlor table became the icon of the nineteenth-century middle-class home, praise of matriarchy was a sign that the new domesticity did not restore the traditional family. The doctrine of female moral superiority countered the age-old belief in Eve's frailty and facilitated women's entry into voluntary associations devoted to pious and benevolent causes ranging from missions to antislavery. The Woman's Christian Temperance Union, founded in 1874, became the largest American temperance organization and largest women's organization of the era. The public activity of mothers formed a new bridge between society and households.

The attachment of mainstream Protestants to the mother-led home was matched by experimentation with domestic relationships by religious dissenters. Familial language, striking notes of intimacy and memory, strangely aided the proliferation of new movements. Shakerism, brought to America from England in 1774 by "Mother" Ann Lee, renounced monogamous marriage and sexual activity in favor of the communal family. The Oneida Community, a later holistic reform venture, practiced "complex marriage" to bind members by physical as well as spiritual love. After publication of the *Book of Mormon* in 1830, Joseph Smith secretly introduced patriarchal polygamy as leader of the Church of Jesus Christ of Latter-day Saints, a practice remaining normative among Mormons until Utah statehood in 1890. Southern planters, though not religious leaders per se, claimed moral authority by comparing themselves to the patriarchs of the Hebrew Bible who once ruled over extended households of kin and servants.

At a time when the sanctity of the nuclear family was nearly an American orthodoxy, the dissenters' exploration of alternative forms of kinship as part of their spiritual quests was as natural as it was controversial. Reverence for family across the culture, however, coexisted uneasily with the rich opportunities for private religious inquiry of a literate market democracy.

Self-Styled Spirituality and the Fundamentalist Family

By the late twentieth century, both self-directed faith and strict family morals were making headlines, and it often

seemed that these choices represented separate paths. To an extent it is true that religious liberals and conservatives engage in a culture war. Selfhood and domestic traditionalism may both be part of a single life cycle or family history, however. Modern freedom has accentuated polarization, but no simple fragmentation of the Puritans' dual expectation of pious family governance and private spiritual experience has occurred.

Although the matriarchal ideal of nineteenth-century Protestants declined after 1900, the establishment of a triple melting pot in the 1950s that included Catholics and Jews, particularly visible in American suburbs, revitalized family religion. The sheer diversity of ethnic faiths and families brought to America by millions of European immigrants between the Civil War and World War I diminished the hegemony of Protestants. An internal Protestant rift between modernists and fundamentalists at the same time blocked transmission of coherent family teachings. Will Herberg heralded the triumph of a new religious sociology in his landmark study, *Protestant-Catholic-Jew* (1955). The immigrants' drive for assimilation led to the submergence of myriad differences of custom in broader religious identities. The multiethnic suburban church or synagogue of the postwar years symbolized the change, and member families, the descendants of immigrants, were more egalitarian than patriarchal in temper.

Weekly rituals of family worship nevertheless masked evidence of individual self-assertion. From World War II on, the homogenization of denominations and ethnicities in wide faith communities encouraged institutional switching and interfaith marriage. In a heralded sociological study in 1944, Ruby Jo Kennedy documented rising rates of interethnic marriage within each of the three dominant religious groups. By 1954 Episcopal bishop James A. Pike called attention to the willingness of couples to cross religious lines as well, when he described "mixed marriage [as] one of the most common phenomena of our time" in *If You Marry Outside Your Faith*. Such families faced adjustment and compromise despite their growing numbers. Some religious organizations responded to the sharp increase in interfaith marriages with confusing policies that complicated a family's affiliation. In 1973, for the first time in its history, the professional body of Reform rabbis (Central Conference of American Rabbis) officially opposed the participation of its members in mixed-faith weddings. The resolution remained in force in 1983 when the same group agreed to recognize the children of non-Jewish mothers who received a Jewish

education. How welcome interfaith families were in these congregations was unclear, and households had to assess the costs of public practice at the same time that they coped privately with diverse customs and beliefs.

Despite these difficulties, religious mobility and particularly intermarriage across denominational, ethnic, and more recently national boundaries continued unabated. One-quarter of Americans questioned for the 2008 "U.S. Religious Landscape Survey" conducted by the Pew Foundation had left their childhood faith, and in four of ten marriages, the partners were of different religions. Clearly, a drive for self-expression in religious matters affects families and organizations alike. Habits of personal choice spilled over from established institutions to more unconventional practices beginning in the 1960s. Many Americans cultivated spiritual insight using the meditative techniques of Asian and Native American religions or new belief systems such as Scientology. Often a seeker's path could be eclectic and idiosyncratic, making the individual, not the family, the decisive religious agent.

Fervent defense of the nuclear family as a religious cornerstone in the late twentieth century was equally rooted in Cold War domesticity, however. Liberal and conservative impulses contended within the Catholic Church of the 1960s when the encyclical *Humanae Vitae* (1968), issued by Pope Paul VI, quickly followed unprecedented endorsements of lay rights and ecumenism by the Second Vatican Council (1962–1965). The papal letter's immediate purpose was to censure artificial birth control, but it also explicitly sanctioned sexual activity only in marriage and parental obedience to the natural rhythms of conception as manifestations of God's will. The image of the devout family soon formed a bridge between conservative Catholics and Protestants who championed "family values." James Dobson of the Church of the Nazarene began the advocacy group Focus on the Family in 1977, and Baptist Jerry Falwell dramatically injected private morality into American politics when he founded the Moral Majority in 1980 as a Christian electoral voice. The ensuing success of a "pro-life" agenda of opposition to abortion, stem cell research, and gay marriage rests on Americans' deep historical attachment to heterosexual monogamy as natural and godly.

Advocacy of pious domesticity coincides with the popularity of living in religiously regulated households. Strict morals, female modesty, and a family-centered outlook are practiced not only by conservative white Christians but also African American Christians, Black Muslims, Sunni and Shiite Muslims, and Orthodox Jews. Individuals from liberal

or secular backgrounds sometimes choose family traditionalism. *Ba'alai teshuvah*, “masters of return” to Jewish orthodoxy, are an example of such new conservatives. They suggest the curious modern fusion of self-determination and family moral order.

The Household as a Religious Place

Beyond these historical trends, the religious lives of American families may be considered from several additional perspectives: physical space, life-cycle events, minority experiences, and cultural symbols.

From the early days of colonial settlement, the household was a religious site. Protestant fathers led daily prayers, Catholic mothers said devotions at a *prie-dieu* (kneeling bench) in a bedroom corner, and Jewish householders visually declared their observance by affixing a *mezuzah* to the doorpost. Even in communities that emphasize public rites or restrict the use of pious symbols, the home has served as a location for religious expression. One step removed from religious authorities, domestic privacy encourages family variations in customs. The proliferation of religious information in print and electronic media offers resources to personalize household practice.

Although a strict stance against idolatry made devotional books the sole material aids to worship in early Protestant homes, mainstream denominations grew more relaxed about tangible symbols by the middle of the nineteenth century. Gothic designs recalling medieval churches became a popular architectural style for houses, and inspirational pictures such as Warner Sallman's *Head of Christ* (1941) adorned interior walls. Catholics and Jews, less opposed in principle to religious art, displayed a crucifix or welcomed the Sabbath with a crafted Kiddush cup, as the case might be.

Families almost instinctively modified traditional ways. The last remnant of one character's Jewish practice in *Other Things Being Equal* (1892), a novel by Jewish writer Emma Wolf, was to light a private *yahrzeit* candle on each anniversary of a parent's death. Other Jews added Christmas decorations and gifts to their own annual holidays, reported *The Occident*, a Jewish magazine, in 1866. Decisions about household milieu could alternatively reinforce religious rigor instead of dilute it. In recent times some Orthodox Jewish parents declined to own television sets and carefully selected their children's books. Christian home-schooling likewise seeks a homogenous childhood environment. Whether a family makes its physical space religiously eclectic or uniform, material goods contribute to a spiritual effect.

As ceremonial settings, homes are most often the principal site of worship in groups where religious authority is widely shared. In Amish sects, where there are no churches or professional clergy, responsibility for hosting Sunday services rotates among households, symbolizing the intersection of family and communal order. The egalitarian tone of this custom coexists with social hierarchy and moral discipline. Age, gender, and spiritual gifts precisely determine the status of an Amish individual, and neighborly visiting for the purpose of worship reinforces conformity among believers who disapprove generally of individuality and innovation. Many Jewish rituals are held at home, with or without a rabbi. They range from the circumcision of a son or the naming of a daughter to the formal week of mourning (*shiva*), including nightly prayer services, after a death. When occasional life-cycle ceremonies persist in families that no longer regularly attend synagogue, they signal selective loyalty to tradition. Both Amish and Jewish home observances, despite their differences, confirm that the social practice of religion is not confined to public institutions and occurs importantly in domestic locations.

Sex and Death in Family Life Cycles

Perhaps every religion offers guidance for life transitions, and these teachings reflect assumptions about family behavior. Americans inherit a deep ambivalence about the natural processes of procreation and disease. The Book of Genesis begins by celebrating fecundity and yet associates original sin with shame of nakedness. Redemption in Christian theology depends on Jesus' ignominious death. Conception and dying, life events typically experienced in families, elicit a mixed religious response in Western culture of respect for nature and a wish to control it. Medical advances since the 1950s have reinforced attention to the body and related moral issues that families face.

Age-old reliance on heterosexual marriage as the means of religious transmission has inevitably produced resistance to any disruption of the union of family, fertility, and faith. Nineteenth-century clergy widely censured interfaith marriage, but more recently, liberal and conservative religious opinion has divided over birth control pills, reproductive technologies, and open homosexuality. Especially in combination, these options potentially remove conception from the traditional family, identified by its advocates as the sole natural arrangement. The Worldwide Anglican Communion has been especially polarized following the failed compromise on homosexuality in the Lambeth Resolution of 1998.

Although North America has been a center of moderation, where many congregants respect gay rights as essential to freedom and spiritual development, dissonant American Episcopalians have formally allied themselves with conservative branches of the Communion in Africa, Asia, and Latin America.

In daily practice, visible personal tokens of sexual restraint have become commonplace in the same religious groups that favor large families. Many American Muslim women cover their hair with a *hijab* beginning in adolescence as part of a rejection of sexual display. At the same time Muslims, along with Mormons, are the communities where parents raise the largest numbers of children, according to the 2008 Pew study. Female modesty in general accompanies family traditionalism. Orthodox Jewish women often cover themselves with wigs, long sleeves, and skirts below the knee, and some fundamentalist Christian women emphasize gender distinctions by not cutting their hair. Ironically, belief in female modesty makes these women easily recognized symbols of doctrinal positions in a heterogeneous public environment.

Religious conservatives who seek to honor nature through childbearing nevertheless depart sharply from inherited views of disease and suffering. Nineteenth-century Seventh-day Adventists and Christian Scientists were early voices rejecting the inevitability of illness as the fruit of sin and the consequent duty of patiently bearing pain. Twentieth-century Pentecostalism vastly popularized faith healing as the spiritual privilege of modern believers seen to be living at the millennial end of history. In all these communities, the expectation of bodily health restored through prayer challenged old-fashioned resignation at physical decline.

By the year 2000 prayers for healing had become a standard part of mainstream American worship. Prayer is the keystone of a pious counterscience so widely heralded that some medical practitioners welcome supplemental spiritual therapies. When death comes, fervent praise at the prospect of resurrection takes over from hopes for bodily cure. Among Pentecostals especially, faith-based answers to human frailty oddly share the optimism of medical science. For most Americans, death, like birth, remains a family event given meaning by religion.

Minority Families and Religious Institutions

Despite commonalities, American religious experiences have long included a range of choices. On one level Protestantism and patriarchy represent the main stems of American religious and family customs, but dissent and

diversity are so central to historic practice that pluralism might be considered normative instead. Real confusion about who are insiders and outsiders where all religions are legally equal makes identifying marginal situations complex. Protestants facing mounting spiritual competition have reported for the past half-century that they feel like a minority, although they remain the largest American religious bloc. Hispanic Catholics, often recent immigrants and their families, today support their church, just as Catholics of established ethnicities tend to be leaving it. The numerical importance of Latinos, however, does not match their ecclesiastical power. If minority status is defined as social or religious marginality, or both, it is at least clear that family dynamics at cultural borders have a bearing on religious activity.

Not surprisingly, families in racial and ethnic communities are often distinctive from mainstream models, although each type of household is also in flux. As a young social scientist in the 1960s, Daniel Patrick Moynihan described black families as pathological due to high rates of unwed pregnancy, divorce, and female leadership. He acknowledged white complicity by tracing the pattern to slavery, but still passed judgment by defining difference as deviance. African Americans remain, according to the 2008 Pew survey, the most likely of any racial or ethnic group to join religious institutions, particularly flourishing historically black denominations such as the National Baptist Convention, African Methodist Episcopal Church, and the Pentecostal Church of God in Christ. Active women's groups have distinguished black Protestant bodies since Reconstruction, and despite the limitations of Moynihan's logic, strong family and church roles for black women may be related. To call these female leaders "church mothers," as is customary, casts their work in the familial terms so widely used in organized religions.

In immigrant families, assimilation as a multigenerational process intersects with religious observance. Sociologist Marcus Lee Hansen observed in the 1930s that the Old World ways rejected by the children of immigrants later intrigued the third generation searching for roots. Whether Hansen's theory is correct in its details, it highlights religious outcomes of generational tensions. Modern-day coordination of ritual and secular calendars at the Srivaisnava Hindu temple outside Pittsburgh, which aimed to facilitate attendance by working South Asian American families, may be criticized in the future by more rigorous descendants. Although many Muslim teenagers now chafe at parental

control of courtship, others ask to leave public high schools for Muslim academies offering classes segregated by gender. Household dialogues in such cases influence religious communities.

Some combinations of domestic and spiritual choices instead set families and religious institutions at odds. The Catholic Church declines to offer the sacrament of marriage to divorced individuals. Self-identified atheists are disproportionately young single men. The absence of a clear connection between their ideas and demographic status does not lessen their social distance from family-oriented congregations. Gay and lesbian couples must shop around for an institutional home in religious groups internally divided over homosexuality. Reform and Reconstructionist are the only Jewish branches that officially sanction same-sex commitment ceremonies and in that sense welcome gay families. These instances of alienation suggest how much public religious practice in America remains rooted socially in the conventional family.

Families as American Religious Symbols

Images of family give expression to religious commitments in America because domestic life so powerfully shapes belief. The variety of symbols, however, attests to diversity and change in households and values. Puritans who modeled their commonwealth on Abraham's covenant endorsed patriarchy. Harriet Beecher Stowe's great evangelical and domestic novel, *Uncle Tom's Cabin* (1852), portrayed her society's moral dilemma of bondage and freedom as the disruption and repair of the household. Catholics who for decades have honored the Madonna in annual street processions acknowledge the debt that communal identity owes to motherhood. School prayer remains an emotional issue because it suggests lone children at the mercy of a secular state.

Individualism and the legal separation of religion and government, in tandem with the social pluralism nurtured by immigration, impel recurrent transformations of families and their faiths. As long as public dialogues about American religious identity continue, the private beliefs and practices of families will figure importantly, though less visibly, as potent determinants of religious experience.

Masculinity

Masculinity became a major topic in American religion in the nineteenth century with Muscular Christianity and other movements that centered on men in religious life and was rekindled in the twentieth century in response to second-wave feminist critiques of gender. Muscular Christianity emerged with Charles Kingsley and Thomas Hughes in Victorian England and had its thematic origins in eighteenth-century notions that emphasized physical education as tantamount to moral education. A key promoter was Dr. Thomas Arnold, headmaster of the Rugby School of Warwickshire from 1828 to 1842. The movement arrived in America in the mid- to late nineteenth century and was championed by such figures as Dwight L. Moody. Its ideas gave rise to the formation of the Young Men's Christian Association (YMCA), a British movement that established its first American branch in Boston in 1851, and echo in twentieth-century groups like Athletes in Action, a men's organization founded in 1966 that uses sports and the public platform that many athletes have to promote Christianity.

The emphasis on masculinity and religion in some twentieth-century movements can also be seen in groups that focus primarily on the place of men in the social order. Responding, in part, to critiques of men and masculinity by second-wave feminists, groups such as the GodMen and Promise Keepers make masculinity and men's roles central, as did the Million Man March, sponsored by Louis Farrakhan's Nation of Islam on October 16, 1995. Some suggest that 850,000 to well over a million African American men met in Washington, D.C., to affirm an agenda to establish (or reestablish) men as the heads of households, protectors of women, and spiritual leaders in families and communities. Promise Keepers, GodMen, Man in the Mirror, and other predominantly white evangelical Christian organizations have similar goals; and the Promise Keepers' "Stand in the Gap" gathering of 1997, arguably influenced by the Million Man March, claims to have assembled more than one million Christian men in Washington, D.C.

Masculinity: What It Is, What It Is Not

Popular conceptions understand masculinity as something that is pre-given and fixed at birth. In other words, it is what heterosexual men "are" or are "supposed to be." Such views understand masculinity as correlated to the presence of the penis. The correlation of the social construction of masculinity with biological organs assumes heterosexuality as normative and as the privileged orientation among sexualities in general. Heterosexuality, generally, may be seen as the belief (or practice) that sexual relationships occur appropriately only between consenting-aged men and women, and in many American religious groups, these sexual relationships are further regulated by the idea that they occur in legal and religious terms within heterosexual marriage. This position views gender and sexuality as "ordered" by God and fixed in "creation." Masculinity is seen as the ideal of what a "man" (one born with a penis) is supposed to be in terms of his social activity, labor, sexuality, household position, and religious authority. Any departure from this ideal is seen as a corruption of creation, as immoral, and by some as psychologically and physiologically deviant. Such perspectives conflate the sexual and biological appearance of "maleness" (as indicated by the penis) with the issue of gender or masculinity, which is socially constructed.

Likewise, some also associate masculinity with a limited set of personal characteristics: physical strength, assertiveness and aggressiveness, competitiveness, emotional distance, and rationality. These factors, for some, are essential to masculinity

and contribute to an ideology of masculinity that believes that these features ensure that men continue to be the leaders over women, in homes, businesses, politics, education, and religion. Furthermore, the ideology of masculinity serves to buttress the activities and social position of the dominant group (men and white men, in particular) and to reproduce that position of dominance in subsequent generations. Ideologies like this allow the process of "gender," in this case masculinity, to be stabilized socially and to appear as "natural" and fixed rather than a process that occurs over time in response to social, psychological, and cultural processes.

Some religious ideals argue from analogy and suggest that the body indicates that men are to be aggressive (masculine) and women passive (feminine). They contend that the presence of a phallus protruding from male bodies and entering a woman's sexual orifice (vagina) indicates a creative design making men assertive, the movers and shakers, active, and so on. On the other hand, women's bodies, some argue, indicate the opposite creative intentionality, that is, that they are the passive recipients of male desire and activity, and that this dynamic can and ought to be extended to social and even power relations in society where men dominate. The argument often includes rejection of same-sex physical relationships on the grounds that the divine intention with respect to appropriate sexual relationships can be clearly discerned rationally by reflecting on how male and female bodies correspond with one another in the biological reproductive process.

Assumptions such as these are not devoid of theological and religious justification. That is to say, such constructions of gender, of masculinity and femininity receive endorsement in notions of personhood, theological anthropology, and constructions of God or divinity that express something about what it means to be male and female. Such constructions and images not only say something "universal" about what it means to be male and female, but in many instances they also produce violent images that endorse and reify structural and social violence. All of this roots masculinity in social, economic, cultural, and theological constructions. The suppositions behind them are not erected in a vacuum. They are ideas that have age-old histories. In the area of constructive theology, feminist and Womanist theologies have given sustained attention to the signs, rituals, images, and theological constructions that cause women across cultures and social boundaries to ask such powerful questions as whether a male God can save women. Womanist theologians add to the challenge by raising issues of race.

Scholars such as Judith Butler, R. W. Connell, John Beynon, and others generally use the term “masculinities” to account for the many ways in which it is understood and performed. For the most part, social scientists and theorists reject a notion of masculinity as something that is innate or fixed but rather view it as socially and culturally constructed. Along these lines, experts understand masculinity as a variety of behaviors, beliefs, and practices that are culturally specific and change over time. What is more complicated is that “masculinity” is not bound to heterosexuals or to men. Hence, masculinity is a social reality that upholds and maintains the production of gender, which ultimately is used to stabilize and uphold what we call sexuality as such. These complications point to the reality that the construction of masculinity is not separated from issues of race and sexuality in particular. In this sense, women, as Freud has pointed out, can possess and sometimes exhibit and express traits that have been seen or understood as “masculine,” as do some gay men and transgendered persons, for instance. On the other hand, some men can assume traits that society considers “feminine” and yet be heterosexual. Constructions of masculinity and its practices are complex, and although these terms are used to characterize and define gender, one should also keep in mind that the very use of the word “masculinity” for descriptive purposes is automatically a limitation of the very complex notion of gender. That is to say, with any talk of masculinity or femininity, there are always bodies or expressions that do not fit neatly into such categories.

To this end, the dominant type of masculinity in America is what Connell calls “hegemonic” masculinity, which has already been alluded to above. This is the notion of masculinity that is deployed not only to legitimate the patriarchal rule of men over women but also of white men over men of color and men who are not heterosexual in their orientation. This form of masculinity often characterizes men of European lineage who are middle class, heterosexual, and culturally Christian. Again, for many, this type of social arrangement in which (white) men are seen as the legitimate cultural patriarchs is established by appeal to religion and religious doctrines. Nonhegemonic masculinities are those that account the standards of behavior for Native Americans, African Americans, Asian Americans, Jewish (and “non-Christian”) men; gay men; and working-class men. At the same time, while the internal dynamics of hegemonic masculinity may serve to rank men into various class, “racial,” and physical statuses, it continues to function,

despite changing social and racial dynamics in America, because of its external distinction between “men” and women that gives *all* men power and benefits because of their maleness. In other words, all men benefit from being men regardless of their class, race, religion, or sexual orientation.

The Problem of Masculinity in American Religion

Masculinity in American religion is a problematic response to many developments and practices in the social dynamics of American society. Perhaps the most significant of these in America is the notion of “race.” Seen by some as biologically determined, race and racism have been the source of many of the struggles to define what it means to be a man. Understood in popular terms as hierarchical and dominating, some white men such as those in Promise Keepers and GodMen, who have historically enjoyed the privileges and power that come with that station in life, may see such privilege as being in jeopardy. This is due to the perspective that white masculinity is being threatened by men of color, who are gaining power positions that were traditionally held by white men and helped to define white hegemonic masculinity as the dominant form in the country. For some, the election of Barack Obama to the presidency in 2008 may be a symbol of the threat to the white male ideal. Clearly, this will be read by many as not simply shifting social arrangements but as religious, given that historically white male domination was seen as given by God and fixed as a permanent social arrangement. The nostalgic desire for some to maintain this ideal social order will result in aggressive activities and discourses that seek to “correct” these changes and to revert to the “original” notion of the divine election of white male rule.

But the issue of racism in American religion has also impacted those men who have been excluded historically from benefitting from the privileges of white patriarchy. This can be seen in many African American religious groups, such as black churches and the many Nation of Islam groups (there are multiple splinter groups), for instance. Founded by Master W. D. Fard Muhammad in Detroit, Michigan, in 1930, the Nation of Islam has had many famous members including Malcolm X and former heavyweight boxing champion Muhammad Ali. Led by Minister Louis Farrakhan from the latter part of the twentieth century to the early twenty-first, the “Nation” has maintained historically that white supremacy has kept “the Black man” from his rightful position on the planet. So the organization often frames

racism in terms of the denial of “manhood.” This was also a theme of the civil rights movement of the late 1950s and the 1960s. Racism is, thus, viewed as something that has emasculated African American men.

One response has been overexaggerated performances of masculinity, taking the form of discourses that advocate that black men be leaders and “heads” of black households, as well as protectors of African American women from the desires of white men, and defenders of feminine “virtues” such as chastity and domesticity. The Nation of Islam, for instance, has an auxiliary called the Fruit of Islam or “F.O.I.” The F.O.I. can be seen escorting Minister Farrakhan into an arena when he makes public appearances or performing security searches on those who attend Nation of Islam activities. Under Elijah Muhammad, Farrakhan’s predecessor in the religious group, they were used more extensively to supervise women in the religious organization, who were not permitted to walk home alone, for example. Many of these practices are intended to restore “respectability” to black men that was believed to have been taken away by white men through the practices of slavery, raping of black women, lynching, and social exclusion.

Although one could argue that white evangelical Christian groups such as GodMen and Promise Keepers have also reacted to the issue of changing racial and power dynamics in America (ostensibly “antiracism” is a foundation for being godly men in Promise Keepers), the more obvious issue that has influenced them is the feminist movement. Based in Denver, Colorado, Promise Keepers was founded by Bill McCartney, who at the time was the head coach of the football team at the University of Colorado at Boulder. The mission of the group is to “unite and ignite men to become warriors who will change their world through living out the Seven Promises” (www.promisekeepers.org/about/), and in this sense, they locate their vision to transform men “worldwide.” The group is made up of evangelical Christians, who emphasize men taking their natural and divinely ordered leadership roles in society and in their homes. Another evangelical Christian organization, the GodMen, state that their ultimate desire is to encourage men to lead lives that are committed to daily acts of courage. The group seeks to guide men into new ways of being masculine that are modeled by Jesus. According to the primary founder, Brad Stine, Jesus was more masculine than he is often depicted and as such provides a manlier symbol for Christian men, who would be more attracted to a tougher version of the religion rather than the feminized one in mainstream America.

Given that these religious groups see the hierarchical and gendered social order as God-given, any movement of women that advocates egalitarianism in society and church could be seen as a threat to male power. Again, what these groups believe they are protecting is God’s established order, which authorizes and requires men to be the heads of households, the “priests” of their families, and leaders in business and civic affairs. These groups represent larger trends in American religion that seek to reorder the family and reestablish the divine role of men in religious and social matters. Often this desire is in conflict with feminist groups. No doubt, the issue of abortion is an important issue for many feminist organizations like the National Organization for Women, and what gets framed as a woman’s right to choose what is appropriate action for her body by feminists sometimes is seen as a religious issue by many men who oppose the practice. It follows, then, that feminism is often seen as a threat to masculinity and to the family as a religious institution and the cornerstone of the American civilization.

But some scholars such as Howard Eilberg-Schwartz and Stephen C. Finley argue that the problem facing men and masculinity in much of American religions is the issue of a gendered God who is understood as male—as “father.” This is an issue in the various forms of Christianity, Judaism, Islam, and beyond. What is problematic is how to construct a masculine identity in light of a view that God is male, and not only that, but the ultimate and all-powerful male, to whom other men have to submit, and who is the object of male adoration and affection. This homoerotic circumstance that Eilberg-Schwartz simply understands as the love of a male worshipper for a male God is perhaps the most pervasive and yet least acknowledged problem for men in many American religious circles. Important questions arise in the face of such a circumstance, according to Eilberg-Schwartz and Finley. Namely, how is a man to understand his own masculinity when he is the subordinate partner in a symbolic relationship with an all-powerful male God? How can one maintain a sense of masculinity in religious contexts when worshipping God means submitting to God and being symbolically entered by this male divinity? How is a man to conceive of his gender in a religious system that recognizes appropriate intimate relationships as functioning between a man and a woman only when the relationship with God as male constitutes a symbolic same-sex relationship?

These and many other perplexing problems are the subjects of intriguing studies on men, masculinity, and the

divine in American religion. Finley suggests, for example, that the reason GodMen desire to put emphasis on the aggressive activities of Jesus, such as the story of his turning over the tables of the money changers in the temple in the New Testament, is because in the face of a dominant God, men's sense of masculinity is fragile and insecure, especially given that they are the subordinate partners in the relationship. That is, they are feeling emasculated in the face of a perfect, beautiful, and dominant God, with whom they are not equals. For instance, the GodMen suggest that masculinity is an issue for many Christian men because only the meek and "weak" perspective of Jesus is presented in sermons and artistic representations. Jesus, they argue, was actually aggressive and "manly."

The implication is that hypermasculinity and an emphasis on aggression including the desire to rule over women and others is a reaction to or overcompensation for feeling emasculated in religious circumstances. Some theorists like Eilberg-Schwartz argue that the same dynamics are at work in Judaism, where Yahweh is imagined as male, and in Islam, where the interdictions against depicting Allah and anthropomorphizing God are an attempt to veil the problems that may arise in the face of such homoerotic circumstances. In short, the desire not to depict God artistically is in reality an attempt to avoid depicting God as male. One of the potential problems with emphasizing the "aggressiveness" of Jesus and with the ideology of men taking their place as the heads of households, however, is that it could result in the marginalization of women. Moreover, such an emphasis implies that masculinity means being aggressive and even violent. At the least, such religious responses to the problems of masculinity suggest that God ordains such relationships that are predicated on notions of hierarchy and domination and require that women play subordinate and domesticated social roles.

The Nation of Islam had a similar issue with God historically. Only, in its case, God was not symbolic or transcendent as in the case of Judaism, Christianity, and other forms of Islam—God was actual and fleshly. For Elijah Muhammad, the leader of the Nation of Islam until his death in 1975, God was Master W. D. Fard Muhammad, a *man* of unknown ethnic and national origins. God was immediate and present with Muhammad and the early religious group. Comparable dynamics of God as immediate and male can be found in another prominent American religion—that of the Church of Jesus Christ of Latter-day Saints, also known as the Mormons. In 1830, the founder, Joseph Smith, reported having a revelation that claimed to restore true and authentic

Christianity to its original state as it was practiced by the biblical apostles and early Christians. According to Smith, this revelation was given to him directly by God the Father and Jesus (always depicted as white, with blond hair and blue eyes), who apparently appeared to him bodily. As the two quintessential American religions, the Nation of Islam and the Church of Jesus Christ of Latter-day Saints have both rugged and masculine notions of manhood and corresponding roles for women that relegate their primary function to the household and to child rearing. In the case of the Mormons, part of this emphasis on masculinity and male privilege can be seen in the doctrines of plural marriage, in which males in good standing with the church can have multiple wives. Much more can be said about masculinity in American religion that is of interest.

Masculinities in American Religion

Many have reflected on masculinity and American religion and some of the issues that are posed by social conditions and images of the divine. Björn Krondorfer argues, for example, and Mary Stewart Van Leeuwen contends similarly, that part of the problem in Protestant Christianity is that religion moved from the public domain, in which men held significant positions of prestige, to a more privatized and individualized orientation. The church was an important arena in which masculinity could be constructed and exercised respectably. As an expression of modernity, Krondorfer suggests, "phallic power" or male vigor and activity was dislocated from the church and was situated in secular institutions such as the military and political and economic positions. The more such secular institutions gained respectability, the more popular they became, and the less meaningful religious establishments became as symbols of male power. Men progressively sought meaning and masculine authority and affirmation in nonreligious public institutions. Accordingly, religion was increasingly seen as both a private and feminine affair. Finally, the privatization of religion, some conclude, may help to explain why men feel impoverished "spiritually" or why many feel an absence of masculine meaning in religion even though they continue to enjoy power and prestige in society. The social spaces that men leave in the religious realm may have created opportunities for women in religious denominations. Even so, in part because both religion and men's bodies are seen as private, white religious traditions that discuss gender and sexuality have offered few opportunities for healthy and honest conversation about male sexuality.

Men's "spiritual" movements like Promise Keepers, God-Men, and others have tried to fill these voids by providing safe religious spaces in which men could address masculinity, sexuality, and ostensibly racism. Such movements are called "mythopoetic"—a term that arose in Robert Bly's *Iron John: A Book about Men*—and are characterized by attempts to engage a sense of alienation from religion and meaning that so many men report feeling. As a "new" form of male religiosity, these predominately white groups appeal to the "wounded man" or this alienated being, although some argue that little work is done with respect to their wounding of other groups of people. Rather, some see them as efforts to consolidate male power and to redeploy it in religious language and symbolism and, as Krondorfer puts it in *Men's Bodies, Men's Gods*, a "male-revisionist agenda" (p. 13). While diverse, what binds the mythopoetic movement together is a strong sentimentalism and nostalgia for male-centered religious mythologies that reestablish men as the objects and centers of divine activity and intention. Such myths are often accepted uncritically. Finally, mythopoetic movements such as Promise Keepers, GodMen, and Man in the Mirror hold feminism largely responsible for the emasculation of men, given that women are viewed as being out of place in the divine order that understands men as leaders in significant matters and institutions.

Furthermore, some scholars, including Krondorfer, argue that patriarchy is based in or on God's "body," since God is seen as male. But as stated earlier, this perspective also creates some problems for some men who feel feminized in the face of such a male God. Images of God and of Jesus, then, become important for the maintenance of certain forms of hegemony that support white male domination. This may help to explain why such depictions of the divine, even for African Americans, are typically white. At the same time, the uncomfortable anatomical details are often excluded from such images, especially those of Jesus, who is generally depicted with feminine features and tearful emotions that are seen as feminine. Furthermore, Jesus is often scantily clad with a cloth concealing his genitals or in a long white flowing gown. On the other hand, according to Robin Hawley Gorsline in "Facing the Body on the Cross," some gay men (and he includes himself) experience Jesus as lover, not in the symbolic but as a real embodied man. The images of Jesus as presented above, Gorsline suggests, allow men to enter into relationship with Jesus as lover, whose image, bare chest, nude body, and poses are similar to other sexually arousing visual images. Many men have to negotiate the

homoerotic implications of images of Jesus' and God's body to justify locating the authority for sexism, heterosexism, and racism in a (generally white) male gendered body.

Finally, some of the religious groups discussed in this essay are millenarian and apocalyptic in essence, including the LDS church, the Nation of Islam, and the mythopoetic movements. They view manhood and masculinity as experiencing a crisis due to forces working against them. Whether one is speaking of the rise of women, people of color, or competing religious traditions, the desired and expected end result of such a crisis is that God will reestablish the rightful role of men in the face of such calamity and chaos and reorder the world so that it reflects God's intention for men to rule or rather for particular men to dominate. Such a world is viewed in terms of a utopian reality, a golden age of masculinity that existed prior to feminist or Womanist movements, gay rights, and civil rights. Such perspectives presuppose a theology that posits God as completely knowable and whose intentions and activity are clearly discerned.

Responses to the Problems of Masculinity

There have been numerous responses to the problems of masculinity in American religion, most notably in the theological discourses of Womanist and white feminist theology as well as more recent collaborations between these theological constructions and queer theory and theology. In the mid-1980s and early 1990s black women in the theological academy, such as Jacquelyn Grant, Katie G. Cannon, Delores Williams, and others, began not only to challenge the racist assumptions of white feminists and their universalization of "women's experience" but to bring forth a stringent critique of the patriarchy of black (male) liberation theology. Caught between the crossroads of triple oppression (race, class, gender), constructive proposals challenged the inherent male centeredness of black religious thought, which was concerned most often with challenging white racism rather than its own sexism and classism.

While white feminists, such as Mary Daly, concerned themselves more with the issues of a "male" God, African American women did not limit their analysis to the "maleness" of God but considered other forms of oppression. This speaks to the contention made earlier that the construction of "masculinity" cannot be isolated without considering the ways in which its constitution is complicit in other areas of oppression such as race and class. One of the more helpful insights that the Womanists offered to their African American male theological counterparts is

the recognition of the importance of engaging numerous forms of oppression in their theological discourses, not simply racism.

Queer Theory: Gender as Performance

Although feminists and Womanists have taken the issue of patriarchy and masculinity seriously in their theological analyses, perhaps the most radical critiques come from the arena of queer theory. The work of queer theorists such as Judith Butler has made such discussions even more complicated. Butler has argued that gender is no more than a performance. In other words, the social system dictates ways of being male and female in the world, and people act in accordance with these norms and expectations. Moreover, she asserts that what we think of as a “natural” gendering of bodies is nothing more than an enactment that is used to maintain the coherence and stability of what religions generally view as normal gender and sexuality. In this sense, gender is real and yet not real. It is real to the extent that it is given power in the religious systems. On the other hand, gender is only real to the extent that it is performed. What Butler is attempting to say is that unlike religious perspectives that one is born male or female with certain inherent duties, rights, and destinies, one *becomes* male or female through the performance or enactment of expectations and religious discourses on what males and females *should be*. This repetition of performance ensures that male and female roles will be continued for generations. For Butler, gender is nothing more than a social convention that is used to maintain and uphold the “differences” between what is called “masculine” and “feminine.” While many are uncomfortable with the notion of gender as an illusion constructed through language and performance, what makes Butler’s theory useful is that this process is not fully determinative. Rather, it is open-ended. That is to say, if gender is a performance, then this allows spaces for performances of alternatives that have the ability to displace dominant masculine and feminine models. In other words, while performances of gender function to stabilize gender, they can also help to destabilize and undo gender. Butler’s theory of gender and sex are increasingly being incorporated into studies of religion and theology. Her progressive and subversive ideas serve as a response to masculinity in general.

Reconstructing Masculinity

One problem in responding to the issue of masculinity is that for many people, identity is wrapped up in one’s ability

to differentiate oneself among others, utilizing social markers such as gender. Although it would be unfair to suggest that what we call gender should be completely dismissed, given that the notion of gender norms are deeply embedded in religious ideology, perhaps a more appropriate way to address such an issue is in the theoretical realm of accepting difference. That is to say, there is no “right” or “wrong” way for one to be male; rather, maleness and masculinity come in a variety of forms and are acted out in many different ways. As a means of addressing these issues, religious groups may begin to confront the traditional ways they have understood and practiced “family values,” “what it means to be a man,” “doing a man’s duty,” “heading the household,” and similar notions of social and domestic norms. These metaphors are often invoked in religious circles under the banner of responsibility, self-help, godliness, and righteousness because they invariably communicate something from religious perspectives about what it means to be a man and to perform one’s masculinity.

Of course, men have responded in a number of ways. In the late nineteenth and early twentieth centuries, groups of middle-class, white, heterosexual men came together in movements loosely termed freethought. Nineteenth-century freethought was a collective of enclaves and congregations of atheists that championed masculinity, freedom of thought, and an alternative to “superstition” and tyranny, which it suggested Christianity could not offer because such ideas were deployed through biblical laws and religious teachings. Unlike many churches that are predominantly female, men constituted 70 to 80 percent of these movements. Freethought contended that the only way to attain authentic manhood was to reject Christianity, which it viewed as emasculating and feminized, and embrace a rational and atheistic worldview and lifestyle.

Some religious men in movements such as GodMen, Promise Keepers, and Man in the Mirror counter that Christianity is warlike and that the way to overcome the problems posed by movements such as those mentioned above is to emphasize the “militant” and “masculine” aspects of the religion that have far too long been ignored in favor of political correctness. Such was the response of the Men and Religion Forward Movement of 1911–1912, which was founded in Silver Bay, New York, to promote Christian living for men and boys. It was perhaps the first Christian movement to target its mission outreach specifically to men. Another was the mythopoetic movement of the later twentieth and early twenty-first centuries that is related

thematically and programmatically to such early groups. They use religious language and sentiments to “re-create” the mythic utopia of an ordered world in which particular men dominate. This domination, they believe, they are entitled to and required to enact since God, who is male, is the great dominator to whom all are subject.

Another response to the problems of masculinity in American religion has come from academic groups, such as the Men’s Studies in Religion Group of the American Academy of Religion started in 1990. Such groups challenge the assumptions that issues with men are generically “human” rather than specifically “male.” They seek to understand and dislodge notions of maleness as universally human and to see men and men’s issues as particularities. The Men’s Studies in Religion Group is making important contributions to understanding the relationship between religion and masculinity and their interplay. Masculinity in American religion will continue to be a dynamic and interesting field of study for new generations of scholars.

Material Culture, Approaches

The study of material culture involves looking at that historical evidence which is composed of any kind of artifact or object. It includes not just art but furniture, landscapes, buildings, books, devotional objects, and any other sort of thing.

With an understanding that almost anything can constitute material culture, objects are evidence. With material culture as evidence, scholars engage the object and describe it. Ethnographic methods are often used in this encounter with the object to record the environment, the location of the object (in a home, church, or the like), or to describe the building or built landscape under analysis. After the encounter with the object, it is necessary to uncover the history of the object by finding out whether it was mass-produced or handmade, how it was put together or built, if there were

particular craftspeople, the time period in which it was created, the purpose of the object, for what ritual setting it was used, and so forth. This interrogation allows an understanding of what the object was used for, who used it, and why it had value.

Material Culture Studies

The analysis of material culture is the study of artifacts, landscapes, and architecture. It involves not just using objects as examples for historical arguments but understanding the form, distribution, and function of objects as well as charting how the character of objects and environments changes. All people use objects. We wear clothes and jewelry, own furniture, drive cars, decorate homes, read books, take photographs, eat, and so forth. We live in a world of things. Material culturists have pointed out that by examining things we can gain a glimpse of beliefs and culture in different time periods. By examining these objects, scholars can uncover these belief patterns. Historians, however, have been primarily trained in the use of texts, and thus, objects have not long been considered legitimate historical evidence. American religious historians are beginning to embrace object analysis, but many narratives still rely upon textual analysis. Textual analysis tends to privilege certain elite groups, which in American religious history is particularly white, male Protestants. For Colleen McDannell, a leading proponent of material culture in religious studies, material studies are deeply related to the impetus for social history. Material studies seek the ordinary. Object study could counteract the elitism present in written sources because only a small group of Americans left such sources behind, but many Americans have relied upon religious objects in worship and devotion. McDannell noted that the more common an object the greater the cultural meanings, because the more common the object the more likely that it was used by a diversity of people.

Additionally, material culturists pointed out that words and texts are not the only ways to experience the world; rather, people also engage with the materiality of the world. We speak and read, but we also touch, smell, taste, and feel. Leigh Schmidt argued that the focus on verbalization has caused American religious historians to ignore the other methods in which religious people communicate with one another. Schmidt further reflected that American religious historians know quite a bit about what people heard and read, but they have paid less attention to what people saw or wore. Schmidt believed that without knowing the full religious experience (hearing, seeing, wearing, and feeling), one

misses the rich, religious culture of Americans. Verbalization was only a part of the religious experience because religion was embodied and practiced, too.

Material Culture and Religious Studies

The use of material culture for religious studies provides another genre of historical evidence, which allows historians to see what objects religious peoples used to live their lives. Religious historians can look beyond doctrinal assertions of the separation between the sacred and the profane and see how religious people uphold and bend the doctrinal distinctions of their faith traditions in their everyday lives. Material culture as source is most useful for the study of religious groups that have not left behind written texts, but it also furthers historical analysis of those that left behind written documents as well because it allows scholars to move beyond verbalization to what people saw and touched in their religious lives. For religious historians, material culture demonstrates the porous boundaries between the sacred and the profane.

The study of material culture and religion includes three categories of evidence: architecture, landscapes, and artifacts. Architecture includes churches, temples, synagogues, and other structures in which religious people worship. These buildings are often created to reflect community values. Thus, a Unitarian church surrounded by trees and gardens, made primarily of combinations of stone and wood, designed to reflect simple lines and angles, might reflect the congregation's eco-friendly stance as well as its desire for faith in tune not only with God but nature, God's creation. Landscapes include any sort of sacred space, from forests to monuments to mounds to athletic stadiums. Colleen McDannell explores the rural cemetery movement, particularly Laurel Hill Cemetery, to show how Victorians wanted to concretize their immortality in the construction of monuments and marked graves. Edward T. Linenthal's work on monuments and museums demonstrates how space becomes sacred for Americans and the importance of memorials to demarcate sacred space on American soil. Artifacts include rosaries, candles, garments, pictures, furniture, tapestries, T-shirts, hats, medals, and so forth. Artifacts can present the religious lives of individuals as well as their affiliations to religious communities. Christian T-shirts, Bible covers, rosaries, and fish car decals all suggest how one identifies with one's religious community as well as how one chooses to express faith visually and materially. Moreover, with artifacts, we can see how religious peoples live their religion.

Scholars of religious studies already have familiarity with systems of belief, and thus, they might approach material culture beginning with the beliefs about the objects and then analyze their use. Religious traditions imbue objects with meaning but also how individuals negotiate the meaning of objects. Moreover, some objects are not necessarily an official part of a tradition but might augment particular ideas. For example, Christian retailing and products provide ways for Christians to proclaim their faith and to proselytize. Thus, Christian T-shirts augment the belief of some Christians of the importance of being evangelical, proclaiming their faith. Again, religious scholars would have to examine the theological structures of the groups they study, but the use of objects might not necessarily fit with doctrinal or institutional values. This dissonance is useful for scholars of religion. Another crucial part of this analysis would examine how religious objects and their meanings change over time or maintain similar meanings.

After considering the object and the belief system, scholars move beyond the religious purpose of the object to analyses of other functions of the object. For instance, Leigh Schmidt demonstrated that clothes were not just forms of adornment in early America but communicated social standing, religious affiliation, and piety, as well as functioned as a vehicle for dissent. Material culture requires analysis of both the physical and the ideological. The interpretation of material culture is important because material studies usually focus upon the everyday objects, which are often not written about because they are taken for granted by historical agents. This study of everyday lives of religious people shows how religious stuff fostered and negotiated religious belief. Religious stuff matters. The stuff of religion provides a body of evidence, which can provide understandings of how religion is lived every day. Material culture is just one way to approach the religious past, and by far it is not the only way. Analysis of objects further develops our study of religion by exploring the sensual world of religion and by fleshing out how religious lives are lived. Material culture as evidence provides a venue to examine the lives of believers and allows a fuller picture of groups and movements. Material culture studies enable a richer description of religious worlds.

Material Culture in American Religious History and Life

From 1995 to 2001, the Material History of American Religion project sought to understand how American

religious history was more than just about ideas or institutions but also about objects and behaviors. The scholars involved argued that American religion was not merely defined by texts or words but rather practices that involved bodies and objects. American religious historians of material culture hoped to illuminate those underrepresented aspects of the lives of religious Americans and underrepresented groups within the American religious experience. These scholars believed that material culture provided a way to construct the religious past, which would allow new voices to populate religious histories. The analyses of religious objects allowed for an arena to understand how religion was practiced in day-to-day life. To explore the world of religious things allows scholars to fill in the gaps of previous narratives of American religious history by inserting people and practices that might be overlooked in histories that center on religious ideas and institutions. Those who create texts have often defined American religious history in sermons, letters, book, poems, memoirs, diaries, and newspapers, among others. Those who did not create texts and those who could not read texts are often overshadowed in narratives. Material culture approaches offer a profound challenge to histories of the American religious past by suggesting that the things of religion provide glimpses into the religious lives of Americans at least as significantly as textual and institutional analyses. Members of the Material History of American Religion project published on topics ranging from diet and the body in American religion to the documentation of religion in government photography to the history of money in Protestant denominations to the urban religion of the Salvation Army.

This concern with religious practice has led to an increased awareness of how people used things in their religious lives. Studies of popular religion (and later lived religion) noted how religious peoples did not just absorb the words and doctrines of their religious systems; rather, they combined religion with folklore, magic, and the mundane. David Hall argued that Puritans used horseshoes as well as books in their religious praxis. To examine the material culture of the Puritans complicated the vision of them solely as a textual people and demonstrated the blending of elite and popular religion. Robert Orsi explored the objects used in Catholic devotionism from wax body parts to candles to rosaries that helped foster the devotional world of Italian Catholic women. The use of devotional artifacts helped create the Catholic world of Italian immigrants, and these objects communicated particular devotions to this Madonna

and demonstrated how the laity used novelty in their worship beyond the bounds of tradition. These early examinations of lived practice pointed to the use of religious objects in the lives of the laity. These American religious historians emphasized the lives of the laity to see how religious ideas were embodied and re-created. The study of religious practice moved American religious history from the pulpit to the pews and included laity as well as ministers, women and children, men, African Americans, Asian Americans, and Native Americans as well as whites, Catholics, and Protestants. This study shifts the American religious story from churches to homes and from public spaces to private.

Colleen McDannell: The Sacred and the Profane

The interest in material culture in American religious history emerged from the emphasis on religious practice as well as a desire to see how religion in everyday practice was different from institutional and doctrinal dictates. Colleen McDannell, a foremost American religious historian of material culture, argued that the material dimension of American Christianity had been overlooked because of biases present in the methods of religious studies and in the assumptions of American religious historians. First, she noted that religions are not about passive learning but rather are actively practiced through seeing, doing, and touching. Practicing religion embodies religious beliefs, values, and norms; and novelty also appears in practice. Adherents to religious systems do not simply embrace all of the system but also mold religious systems to fit in with their lives. Second, the material dimension of religion was unexplored. McDannell argued that scholars of religion such as Emile Durkheim, Max Weber, and Mircea Eliade describe religion as a bifurcation of sacred and profane. The separation was antagonistic. The material was associated with the profane, and the spiritual, of course, signaled the divine.

Moreover, Christianity separated the world between divinity, the disembodied, and humanity, the embodied. This Christian separation of the sacred and profane applied to understandings of all religions. American religious history, in particular, was bound to a Protestant ethos, from the Reformed tradition, which emphasized this separation, as opposed to the Catholic understanding of the continuous blending of sacred and profane. This Protestant bias has regulated belief as constitutive of faith and informed the work of American religious history. McDannell called this the “Puritan model,” which has operated as a common historiographical frame and masked the heterogeneity of

American religious practice. Within this model, Christian practice is separated from the profane. That separation obscured Christian uses of objects. Rather than see the Christian use of objects as religious, historians as well as sociologists have pointed to the secularization of Christianity. What McDannell argued instead was that American religious practice involved a constant mingling of the sacred and the profane. Sally Promey has pointed to similar problems for the study of the visual culture, a subset of material culture, of American religions. Promey demonstrated that the emphasis on the Puritans in American religious history means that iconoclasm within religion became the frame to interpret the relationship between religious people and images. This vilified reaction to images obscured that Protestants, and other Christians, employed pictures for devotional purposes as well.

Thirdly, McDannell pointed out that the reason material culture has not been explored by historians is because of the types of people who rely upon objects. McDannell argued that the use of objects is often deemed by scholars as less authentic religious practice, and those who rely on the tangible rather than words are viewed as lesser. The uneducated, women, and children were drawn to these material forms. According to McDannell, historians accepted the emphasis on Christian iconoclasm by Protestant theologians, and thus, the historians of the “Puritan model” ignored those Christians who used objects to worship because they were somehow lesser than scriptural Protestants. McDannell, however, demonstrated that not only did the uneducated, women, and children use religious objects, but educated men did as well. Material forms not only allowed a venue to illuminate the religious lives of masses, but these forms also allow historians to explore how the “elite” used objects as well. McDannell and others have attuned American religious historians to objects, landscapes, and architecture to explore religious practice.

Visual Culture of American Religions

American religious historians employ art history, geography, folklore, fashion theory, sociology, and anthropology to explore the religious lives of Americans. Art historian David Freedberg is often cited because of his understanding of the power of sacred objects and the diversity of their interpretations. For Freedberg, objects have sacred power and meaning for the people who interact with them. The study of visual culture, a subset of material culture, primarily focuses upon images and how these images affect, create, and maintain

cultural ideas. Not surprisingly, religious historians who have ventured into the realm of visual culture have applied art historical methods to describe and interpret images. In *The Visual Culture of American Religions*, David Morgan and Sally Promey bring together a series of articles interrogating the role of religion and visual culture that consider art, media, santos, illustrations and postcards. This work moves beyond the mere appreciation of art for art's sake to an understanding of the cultural impact of images. Images have the ability to foster community, signal religious ritual, and contain power over the mundane as well as the sacred. Morgan has examined representations of Jesus as well as Protestant print culture to show the communications of religious values. Art can also contain the religious and spiritual, which allows for a glimpse into the artist's visions of religious worlds. The visual representations of religion signal the importance of seeing for religious experience.

Material Culture and Religion: Selections

Geography

Geography is useful in the conceptualization of sacred space. Native American peoples have staked claim on various geographies in the United States as sacred spaces to their religious praxis. Something as ordinary as dirt takes on sacred significance for the Navajo, who used dirt from the San Francisco Peaks for the pouches of their medicine men. Robert S. Michaelsen argued that the sacred geography of the Navajo was overlooked in the U.S. court system because it falls under the category of land rights. The courts have not recognized the religious rights of the Navajo for this area because of American understandings of property. Examining the conflicts over geography demonstrates the importance of space and object, dirt, in the religious worldview of the Navajo, and this conflict also highlights the difference in understanding what religion actually encompasses. Thomas Tweed relied heavily upon geographic metaphors to understand the sacred space in his analysis of the shrine for Our Lady of Charity in Miami, Florida. He examined the details of the natural landscape as well as the construction of the shrine. Tweed also noted the power of artifacts to help create and maintain collective identity in medals and prayer cards. The shrine, Tweed argued, created a collective identity for devotees as a diasporic people. It was positioned to mimic the Cuban landscape; the cornerstone contained elements of native soil; souvenirs, flags, and maps create a collective past and give hope for a future liberated Cuba. For Tweed, the

shrine not only functioned as a diasporic religious symbol but also constructed the collective identity of the Cuban exiles who visited it. These men and women might enter the shrine as exiles, but they emerge from the structure as people bonded together in diaspora with a hope for the "true" Cuban nation.

Architecture

Architecture is also employed by American religious historians to understand the creation of chapels, churches, and temples. Peter Williams's work on religious architecture catalogued American places of worship all over the country to demonstrate how these places communicated religious vision and belief. His goal was to show how constructed environments of religion impacted expression of belief and the cultural meaning of these sites. Region, denomination, and style defined these houses of worship. Each region contained distinct religious movements that found expression in different types of architecture. Jeanne Kilde examined the building of churches by evangelicals in the nineteenth century and the communication of their religious beliefs in the structure of the building. Kilde noted that the theatrical style of worship was mimicked in the architecture, so that the changing style of evangelicalism also took place structurally in the creation of churches.

Dress

Folklore and anthropology are increasingly helpful because both fields teach material culturists to rely on their senses in interaction with objects. Colleen McDannell argued that this attention to the senses would allow intimate response to the objects of study, which would connect the scholar to those who created and used the object. American religious historians find themselves enmeshed in particular fields to figure out how specific artifacts function, like excursions into fashion theory to understand religious dress. For instance, Leigh Schmidt approached not only theories of dress but also histories of costume to explore early American religious dress. What becomes increasingly clear is that to study the material culture of religion, a scholar must be ready to employ a multiplicity of models to understand artifacts, which often are found with no written history of their own.

Religious Items and Collective Identity

People use objects in devotions, as decorations, and, most important, to identify religious affiliation and help

maintain collective identity. Teapots in the shape of John Wesley's head, rosaries, baseball caps proclaiming Jesus as Savior, Quaker plain dress, T-shirts and flags with the image of Our Lady of Charity, Mormon garments, the *hijab*, crucifixes, Christian fish decals, and bottled Lourdes water are all religious goods that proclaim their owner's affiliation with a religious tradition. Religious objects signal that one belongs to a religious group. Ownership of these objects illuminates the difference between in-group and out-group. Religious goods mark the members of religious communities. Religious objects can be private testaments of one's faith or bold exclamations of affiliation. Colleen McDannell demonstrated that Methodists have purchased and displayed commemorative teapots with John Wesley's likeness beginning in 1775, and the teapots were reproduced in the 1880s, early 1900s, and 1960s. These teapots were not relics, and they did not carry the power of John Wesley to Methodists. What the teapots did convey was that their owners were faithful Methodists.

Mormon Garments

McDannell also explored the function of Mormon garments, which Mormons are supposed to wear after their initiation rites. These garments demonstrated the Mormon commitment to God and to community because wearing them showed that one was a Mormon. This practice, additionally, set Mormons apart from the wider community because wearing garments separated Mormons from non-Mormons. Their clothing visibly demonstrated their piety and their commitment to their belief system. For McDannell, being a Mormon was obvious more by what one did than by how one thought. For example, Mormons who did not agree with church teachings still wore their garments to be a part of the group despite their reluctance to accept institutional beliefs. For Mormons who did not accept doctrine, wearing the garments was a method to maintain their collective identities but to protest doctrinal inadequacies.

Quaker Dress

Leigh Schmidt and Pamela Klassen also traced the linkage of dress, a material artifact, to community. Schmidt examined how Quakers used dress, or lack thereof, as a vehicle of dissent from hierarchical religious traditions of early America. Schmidt argued that Quakers asserted themselves as a people through plain dress. For Quakers, plain dress marked the boundaries between saved and unsaved. Clothes became the symbol in early America that defined communities and

enforced communal boundaries. Dress was the method for Quakers to distinguish themselves from the rest of colonial America and proclaim their religious message of spiritual equality. Schmidt also noted that itinerant preachers abandoned clerical garb to demonstrate their solidarity with common people rather than authority. Clothes became a tool to announce one's affiliation as well as protest against other religious groups. Pamela Klassen noted that clothes became a tool for African American women in the nineteenth century to define themselves and their communities. Women of the African Methodist Episcopal Church (AME) used dress to counter stereotypes of African American women's sexuality, and they wanted their clothes to represent the respectable character of their communities. These women adopted both plain dress and "respectable dress," fashionable yet reasonable (and reasonably priced) dress. African American women adopted plain dress for many of the same reasons that Quakers did: to uplift spiritual equality and to mark group identity. Many AME women turned to respectable dress as a way to show their piety and to develop a community ideal of respectability. These women dressed in a way that would demonstrate (to whites) that their communities were civilized. For AME women, dress was a tool to construct their collective identity in their own terms.

Jewish Prayer Texts and Shawls

Material culture approaches to American Judaism have also signaled the centrality of community as well as moved beyond textual understandings of Judaism. Jeremy Stolow examines how ArtScroll, an Orthodox Jewish publisher, made print culture as well as artifacts essential to Jewish social life. He suggests that the Jewish people are labeled as textual, but engagement with texts is concrete and embodied. Consumers of ArtScroll's texts engage them materially as well as intellectually. They do not just read their prayer books but display them. The Jewish people who purchased ArtScroll's products were able to identify themselves and their piety through which products they bought. The texts were admired for their quality as well as the spiritual knowledge contained within the pages. In her study of the *tallit*, the prayer shawl, Ayala Emmett demonstrates how women's appropriation of the shawl, which had primarily been worn by men, expresses the gender dynamics of Conservative Jewish synagogues. Jewish women adopted the prayer shawl like their male brethren. Emmett notes that just because women embraced the masculine garment does not mean that gender roles are that different in these synagogues. The

synagogue was not feminized, but rather the adoption of the shawl signaled that the synagogue reflected the gender dynamics of modern times. Women wrapped in prayer shawls would be unrecognizable to previous generations of Jews. By adopting the ritual garments, women in the synagogue expressed their faith and a desire for gender equality. The analysis of the tallit provided a glimpse into the life of the synagogue.

Nation of Islam Diets

Edward E. Curtis IV's study of the Nation of Islam (NOI) relied upon dress, cartoons, and food to communicate how black Muslims understood their faith and proved their commitment. The focus on diet among NOI members demonstrated their commitment to bodily purity. To keep unclean elements out of the body made not only members strong but also the whole community. The rules about dress signaled NOI's concern with modesty and civilization. Curtis pointed out that through restrictions on food and dress, this religious community presented its concern with purity and the importance of the black body. By examining the material culture of NOI, Curtis demonstrated the central values of the movement that others missed by focusing on the fantastic theology of NOI.

Elvis Artifacts

The study of artifacts also allows an understanding of how something that might not seem religious could qualify as religion. Erika Doss's work on Elvis fans and their devotion to the King demonstrates the religious dimensions to this devotion. Doss showcases how fans of Elvis perform acts of piety using images and objects in their homes and in public culture. Graceland becomes a shrine, a place of pilgrimage where fans leave flowers, books, stuffed animals, and other gifts in remembrance of Elvis. The gifts serve as both tributes and thank-yous for the presence of the King in his fans' lives. Not only are devotions to Elvis religious in nature, but this hints to the religious nature of other memorials and tourist sites in America. Reflecting upon spontaneous memorials, Doss noted that material culture and mourning are intimately related. The material culture present at the Columbine memorial demonstrated how Americans use objects to manage the difficulty of grief and tragedy. The memorials become tangible relationships between the living and the dead. Things communicate the grief of the living and their continuing relationships with the dead. The patterns of mourning become more visible and understandable through

the use of material analysis. The study of things moves scholars past traditional notions of what is and is not religious.

Bodily Construction in Religion

The study of material culture and religious praxis demonstrates how the body is created by and creates religion. The examination of Christian material culture demonstrated the connection between spirituality and the body. Not only is Christian language filled with bodily images, but Christian practice also involved the body. Lourdes water was a cure for the body that produced signs of supernatural healing. For Mormons, religious objects, garments, marked the body as a part of the community and protected the body from physical harm. The dualism of Christianity, which marks the body as profane, obscured that Christians have used their bodies to express their religious allegiance. Through the examination of material culture (especially dress), one can see how religion is inscribed onto bodies. This inscription entails that the body is molded by the religious system to reflect values and ideas as well as to perform certain bodily comportments. For instance, Mormon garments inscribed not only communal ties but also values about sexuality and purity. The body became a reflection of God and a sacred space to be protected from the uninitiated. In addition, the garments served as material reminders for the Mormons of their commitment to the sexual mores of their religious system. McDannell noted that the sacred garments allowed Mormons to connect their physical and spiritual selves.

Leigh Schmidt noted how dress and dress-wearing bodies could reflect virtue and doctrinal significance. In colonial America, Puritans and evangelicals sought to control women's bodies, through dress, to define norms of piety as well as femininity. Women also embraced fashions, which would counter the ministerial preference for dress, to assert autonomy over their bodies. The dressed body could conform, resist, or represent religious injunctions. Schmidt, like McDannell, demonstrated how important bodies and their adornments were for religious systems. Robert Orsi argued that religion not only creates bodies but also is created by bodies. Orsi examined how children made Catholicism real through bodily practice. Religion might have inscribed ideals on believers' bodies, but religion came to life in the bodies of believers. By disciplining children's bodies in prayer, adults made children's bodies attentive to the presence of religion. Certain postures, genuflections, and the handling of religious objects made religion real for children. Material culture and bodily praxis created religion for believers, and

thus, the study of religious material culture becomes paramount to how we study religion.

Critical Assessment

Despite the focus on material culture approaches as methods of inclusion of various religious peoples, material Christianity dominates much of the scholarship. The focus on the Protestant nature of religious studies meant that studies of American Catholics proliferated to show the sensual side of religious experience. Studies of the materiality of American Jewish practice are apparent, though this requires more study to show how text and artifact are central to religious practice. However, there is still a need for works that catalogue the materiality of Asian religions, Native American religions, Islam, and new religious movements. Material Christians populate most studies, so it would be beneficial to have works on material Muslims, Hindus, and pagans. The material practice of Asian religions appears in works about these religions globally but not necessarily in North America. Thomas Tweed notes that the American media have portrayed both Buddhism and Islam in ways that downplay the complexity of the traditions. The visual imagery of Buddhism presents a sole figure meditating in the lotus position, which does not reflect the religious praxis of most Buddhists globally or in America. Moreover, images of Islam center on polygamy, Muhammad, and violence. Buddhism has been disassociated from violence in our visual culture, while Islam is mired in it. Understandings of the visual and material culture of both movements could counteract the stereotypical representations of each movement in American public culture. Laurie Maffly-Kipp notes that material culture can be used to rewrite the narratives of Euro-American encounter by including reactions to Asian religions and immigrants. Her work explores the reaction to Chinese immigrants and religions in print and visual culture. By exploring newspapers, Maffly-Kipp suggests that scholars can move beyond studies in American religious history on elite traditions and illuminate popular practices of immigrants and lay practitioners. To begin to examine the materiality of various religious movements, not just Christianity, in American religious history would allow a richer narrative of how Americans practice their religions.

Despite these shortcomings, material culture approaches to the study of religion force scholars to think about religion beyond belief and doctrine. Material religion signals the complexity of religious life that encompasses belief and action, the abstract and the embodied. The approach to

religion becomes more holistic and inclusive. The focus on practice and things does not signal the secularization of a movement but rather the novelty of members of various movements who combine artifacts, bodily postures, and beliefs in their own ways. This use of objects signals the creativity of religious peoples to make religion fit into their lives and to make sense of the world around them. The study of religious material culture illuminates how members practice their religion in everyday life. This shows how the faithful navigate the doctrinal and theological components of their movement as well as how they practice their faiths in novel ways. Examining the material culture can illuminate the power struggle between elite and popular religion. Doctrinal statements might suggest a focus on words and the abstract, but popular reaction might suggest something different, like devotion with wax body parts or theological statements on bumper stickers. Yet material religion also showcases the mingling of elite and popular in religious praxis. Clergy participate in these practices as well. Religion is not limited by the textual. The material culture of religious movements shows that religion is not just about belief or practice but an intimate melding of both. The creation of the journal *Material Religion* in 2005 demonstrates how focus on material culture has affected religious studies. The journal centers upon the material dimension of religious life globally, and its creation and popularity signal how material culture approaches have become more mainstream in American religious history as well as religious studies broadly. The stuff of religion tells new stories or reaffirms old ones. Teapots, cemeteries, and dirt all explain dimensions of religious experience that are sensual and physical. Religion is about the transcendent and the embodied. Material culture approaches illuminate the wide spectrum of religious devotion and adherence. Religious people interact with spiritual, unseen worlds as well as material, tangible worlds, and they somehow manage to navigate both. The materiality of religion allows for a fuller understanding of the lives of Americans, devotions to Elvis, prayer shawls, fish decals, food, clothes, churches, temples, or even landscapes. Americans practice their religions in a multitude of spaces, using texts and objects to communicate with the divine. The material nature of religion allows scholars to develop richer, sensual narratives of what it means to be religious and to showcase the tangible side of religious experience.

Megachurches

The term *megachurch* is frustratingly vague, suggesting more a weight class than a religious and social phenomenon. Broadly defined, a megachurch is a church with a congregation numbering 2,000 or more regular attendees. Size is only half the story, however. In fact, megachurches have fundamentally altered the American religious landscape. Megachurches have redefined the concept of church. For millions of Americans, church is a place with a food court, a celebrity pastor, and a dizzying array of service options catering to every age and taste. Megachurches are willing and able to craft the delivery of their message in order to cater to cultural trends and specific demographics. They respond to every desire and anxiety of the prospective newcomer, facilitate thousands of highly specific small groups to maintain membership ties, and tailor sermon topics and services around popular culture, demographic shifts, and attention spans. In short, megachurches are in the business of marketing.

Demographic Characteristics

Megachurches are almost exclusively evangelical, often with fundamentalist leanings. Some are denominationally affiliated, but most eschew denominational membership to facilitate a broad appeal. The leaders are charismatic, but casual and plainspoken—and they are more likely to have degrees in business than in divinity. The congregations are obviously large, but typically not diverse. The majority of attendees are white, middle-class or upper-middle-class suburbanites, although there are predominantly African American congregations as well. Although these latter tend to cater to a middle-class community, they are more likely to draw from urban areas. Megachurches got their start in the sun belt, but have since spread nationwide. Some, like Joel Osteen’s Lakewood Church in Houston, occupy former sports stadiums, but most are custom-built, multi-facility complexes.

Despite this formula, each megachurch caters to a particular niche. Megachurches are designed to attract a target market; as such, each church is unique. What unites them is

the priority they place upon attracting that target demographic. Megachurches decide who their consumers are and then package their product according to what that consumer requires. It may seem strange, and perhaps even distasteful, to describe evangelical Christianity as a product, or believers as consumers; however, this language offers the most accurate characterization of what megachurches do—and it is language, after all, that megachurch leaders themselves are least shy of using.

In his best-selling book *The Purpose Driven Church*, Rick Warren (1954–), the founder of Saddleback Church in Lake Forest, California, offers a visual representation of the man he calls “Saddleback Sam,” the personification of his target market. In extreme detail, Warren describes Sam’s likes and dislikes, habits, and hobbies. Noticeably, very little in the description speaks directly to Sam’s religious views. “Sam” is the sketch of a lifestyle. Warren explains that understanding Sam’s lifestyle makes it easier to cast Saddleback as a compatible part of that lifestyle. Where many religious organizations, particularly in the United States, may have committees and events devoted to outreach, megachurches are built from the ground up to suit the needs and desires of would-be congregants. This approach is not entirely new.

Historical Forerunners: Institutional Churches and the Jesus Movement

From the boisterous revivals of the Second Great Awakening of the early nineteenth century to the modern Christian rock concert, evangelicals enjoy a legacy of religious innovation and entrepreneurialism. One such innovation was the nineteenth-century “institutional church.” Arguably a forerunner of the megachurch, the institutional church was an urban facility built by what we now call the mainline traditions. Institutional churches were designed to attract the masses of young people abandoning rural communities and small towns for burgeoning urban landscapes. They offered religious services, but also secular activities such as socials, adult education, and child care. Like the modern megachurch, institutional churches were physically large plants with expansive sanctuaries but also basketball courts, classrooms, and recreation space to accommodate community events. Some of these churches, for example Chicago’s Fourth Presbyterian and Boston’s Trinity Episcopal, remain today active members of their (albeit changed) communities.

In many ways, the megachurch may seem the next evolution of the institutional churches of the nineteenth century. However, philosophically they are very different. Where

urban institutional churches sought to improve the community by offering alternatives to the cities’ less exalted entertainments, megachurches rarely have such local goals. This is in part because they are so often located in disconnected exurban or suburban communities. Megachurch attendees tend to be more concerned with the needs and challenges of their own families than with broader social concerns. As such, most sermons, workshops, and other church activities are more likely to address individual rather than social improvement.

Other forerunners to the megachurch include Aimee Semple McPherson’s Angelus Temple and Robert Schuller’s Crystal Cathedral. Not coincidentally, both of these churches are located in Southern California, which has long been (and continues to be) a hotbed of evangelical innovation. When Schuller (1926–) arrived in Los Angeles in 1955, he immediately recognized that it was a car-centered culture. In deference to the all-powerful automobile, Schuller gave his sermons at a drive-in movie theater. Twenty-five years prior to Schuller, Aimee Semple McPherson (1890–1944) tapped into the power of Hollywood by crafting her energetic sermons to entertain as much as to inspire. The controversial and eccentric founder of the Church of the Four-Square Gospel, McPherson railed against evolution and pushed for racial equality with popularly inspired music and elaborate stage productions. When McPherson’s Angelus Temple was completed in 1923, it was capable of holding more than 5,000 people.

Like Schuller and McPherson, today’s megachurch leaders adapt their methods and styles to suit social and cultural trends. In the mid-1960s, pastor Chuck Smith (1927–) began preaching to the young “hippies” he saw gathering on the beaches near his Costa Mesa, California, church. Responding to the tumultuous antiauthoritarian underpinnings of the counterculture, Smith recast Jesus as the ultimate rebel. In so doing, Smith launched the Jesus Movement, an evangelical counterculture phenomenon that blended evangelical fundamentalism with “hippie” popular culture. Smith’s Calvary Chapel grew exponentially, and today it hosts more than 5,000 congregants at its weekend services and oversees more than thirteen hundred branch churches worldwide.

The Styles of Contemporary Megachurches

The Jesus Movement dwindled away with the counterculture, but in the 1980s, with consumer culture booming, a young businessman turned minister named Bill Hybels (1951–) was preparing to build a church to suit the new

cultural trends. Before proceeding Hybels, acting on his business acumen, conducted a market research survey to discover why suburban Chicagoans were not attending church. He learned that many people avoided church because it was “stuffy” or made them uncomfortable, they didn’t find it personally relevant, or they just found church boring.

Hybels believed that if evangelicalism was going to compete in the free market of American religion, the concept of church needed redefining. Church needed to become a place where the target demographic felt comfortable, a place that was entertaining, uplifting, and never dull. The result was Willow Creek Community Church, in South Barrington, Illinois, arguably the first contemporary megachurch. With a congregation now numbering more than 20,000, Willow Creek is prototypical of the megachurch movement. Boasting a massive multi-functional campus, Willow Creek looks like a corporate office complex. With its architecture, as with its programming and organization, Willow Creek has crafted a distinctively un-churchly image, and in doing so has changed the definition of church for thousands of people.

At Willow Creek, as at most megachurches, the services are highly choreographed, yet seemingly impromptu. Dress depends on the community the church is attempting to reach: flip-flops and board shorts are perfectly acceptable at Smith’s Calvary Chapel while at Bellevue Baptist in Memphis, Tennessee, male congregants are more likely to wear a tie. The sermons are precisely timed and often augmented by dramatizations, film clips, and Power Point slides. To facilitate intimacy and dispel hierarchy, pulpits are usually absent. Traditional Christian symbolism is also muted. At Osteen’s Lakewood Church no cross appears on the center stage. Similarly, at New Life Church in Colorado Springs, Colorado (formerly headed by Ted Haggard), large speakers and colossal video screens flank the stage. There are no hymnals. The lyrics to the upbeat songs appear on giant screens. Music is usually very important. Many megachurch leaders consider it the key to their success and may allot nearly half of the service time to music and congregational singing. At Saddleback Church, for example, congregants can choose from a variety of “venues,” each offering a different musical style, ranging from gospel to country.

Megachurch leaders choose sermon topics and craft their tone based on whether their congregants are surfers or CEOs. It is through cultural mimicry that a megachurch’s architecture offers the most visible evidence of a particular church’s demographic target. Like Willow Creek, Warren’s Saddleback was informed by local market research. Warren,

however, wasn’t aiming at the corporate culture of a mid-western commuter suburb. His church could not look like an office complex. Instead Saddleback looks like one of Orange County’s many outdoor promenade malls. It features Spanish tiles on the roof and several large plazas with outdoor cafes, hanging flower baskets, and mosaic tile. The architecture is consciously un-churchlike, responding as it does to a specific demographic accustomed to a casual but wealthy Southern Californian lifestyle.

Theology in Megachurches

Theologically, megachurches occupy various corners of the nebulous evangelical category. Most hold to basic theological tenets. Although they may use different language, most megachurch statements of belief will purport that salvation is given through God’s grace when one accepts Jesus as one’s savior. Most megachurches also hold to the imperative to evangelize and to some form of biblical inerrancy. Some may claim that the Bible is literally true; others may qualify this with “in its original manuscripts” disclaimers, thereby allowing for flexibility. Megachurch leaders typically avoid eschatology; however, most hold to a pre-millennial dispensationalist theology.

Some megachurches utilize prosperity gospel theology—the notion that spiritual righteousness is rewarded with material gain. Perhaps as a result of a legacy of discrimination and economic disenfranchisement, megachurches with predominantly African American congregants are more likely to fall into this category. Despite statements of faith, in practice most megachurches avoid discussion of difficult or controversial theological concepts in their public services. Instead they opt to focus on the Bible’s practical applications, offering comfort and guidance in the common challenges of ordinary life.

Marketing and the Growth of Megachurches

Megachurches are often described by their founders as miraculous demonstrations of the power of the evangelical message. Pastors discuss their churches’ growth with a tone of humility and surprise, characterizing the stadium-sized auditoriums as necessary for handling the exponential and unexplainable growth. This characterization is not entirely untrue, but it is not entirely accurate either. Careful target marketing makes churches grow, but the growth itself becomes a reason to attend if the target demographic believes that bigger is better. By being one among thousands, megachurch-goers can count themselves as part of something powerful and

popular without having to commit to the responsibilities that membership at a smaller church may require. It is accurate to say that these churches are multi-functional mega-complexes because their numbers require them to be so, but it is also true that they attract such numbers because they are multi-functional mega-complexes.

This focus on marketing has, perhaps ironically, sheltered megachurches from the political and social trends that continue to dismantle the religious right. Despite the fact that on paper megachurches typically fall theologically in line with the religious right and the socially conservative evangelical agendas that gained prominence in the 1980s and 1990s, their careful avoidance of divisive theological and political issues has given them a guise of inclusivity that serves to safeguard their popularity.

Post 9/11, some megachurch leaders began to steer the movement toward a globally conscious and politically balanced agenda. At the helm of this shift was Warren. In tackling such causes as AIDS, climate change, and global poverty, Warren is addressing issues previously considered untouchable by evangelical pastors. During the 2008 presidential campaign, Warren invited political candidates from both parties to his church and frequently partnered with other religious and secular leaders to campaign for his causes. Most significant, his actions to shift away from the socially conservative domestic issues have generated little criticism from the megachurch movement or from the evangelical discourse more generally.

Critics have lobbied that megachurches prompt religious homogenization—that they are “McChurches” peddling “Christianity Lite.” Although the characterization does capture the highly polished environments and practical theology, supporters believe such criticism unfairly casts the megachurch as the cause of consumerist religion. Such a charge, they contend, neglects the defining characteristic of a megachurch—cultural responsiveness and mimicry. Others argue that if megachurches are in fact “McChurches,” it is because they are attempting to reach a market that *wants* a “McChurch.” Megachurches, these observers maintain, are simply mirrors of the surrounding culture, one that might be dubbed a “McCulture.”

Methodists: African American

In the rise of Methodism from its arrival in America during the revivalist awakenings of the mid-1760s to its assumption of place as the most popular religious tradition in the United States a mere half century later, African Americans played a significant role. According to early black Methodist Richard Allen (1760–1831), the “plain and simple gospel” of the Methodists was more suitable to African Americans than any other religious doctrine. A Methodist advantage that Allen noted was their acceptance of “unlearned” people. The sense of community engendered by Methodists’ ecstatic revivals cut across lines of race and class. In the South, the Methodists’ first American bastion, both poor, less educated whites and blacks were attracted to this new religious movement, and from Maryland to South Carolina, it was not uncommon for African American adherents to greatly outnumber white adherents, often by two to one (some Maryland congregations) or even ten to one (Charleston, South Carolina, prior to African American withdrawals from the Methodist Episcopal Church in the mid-1810s).

Early Tensions between Integration and Segregation

During the early organizing period of the Methodist Episcopal Church (MEC) in the early 1780s, culminating in the Christmas Conference that met in Baltimore in 1784, Methodists, both white and black, followed the anti-slavery doctrine set forth a decade earlier in England by their

founder John Wesley (*Thoughts upon Slavery*, 1774) by passing church regulations against slave owning and slave merchandising. By 1785, the MEC had already begun to relax these regulations, especially as they applied to clergy, under pressure from southern whites, but the reputation of Methodists as an antislavery denomination second only to Quakers persisted for decades afterward. This social aspect of the Methodist gospel had concrete results exemplified in Richard Allen's own emancipation; it was in the aftermath of an antislavery sermon delivered in the home of Stokely Sturgis, Allen's master, that Sturgis decided to enter into an agreement with Allen in 1780 that permitted the latter to purchase his freedom from savings earned from his own labor.

White Methodists were often ambivalent in how to include African Americans, especially African American leaders, in the denominational fold. African American converts included preachers and ministers of great ability, such as Allen, Harry Hosier (d. 1806), and Henry Evans (d. 1810). Sometimes it was an African American minister who took the initiative in establishing Methodism in a given locale, as was the case with Evans in Wilmington, North Carolina, from about 1790 to 1810. When Harry Hosier traveled in the ministry with a white yokefellow, it was frequently Hosier's preaching that was most highly praised. Hosier, though illiterate, preached well-informed, zealous, and moving sermons; as would be the case with many other black ministers in following decades, his extraordinary memory compensated for his illiteracy.

Still, the patterns of racial association that developed among the early Methodists were usually segregated ones. All-black bands and classes were the rule. Allen, the leading black Methodist preacher in Philadelphia, preached in the mid-1780s to segregated services at St. George's Methodist Church preceding the main services. Hosier's ministry was announced invariably for the African American portion of the audience, although his preaching was so famous that usually white listeners stayed to hear him. Black ministers were treated as junior partners. When Bishop Francis Asbury sought black traveling companions, he openly warned them that they would not be allowed to socialize with slaves and that they would often have to sleep in his carriage. Not all African American ministers found such conditions acceptable. Allen was one who did not.

Rise of Separate Black Methodist Congregations

Separate black Methodist congregations and denominations arose out of a complex set of factors, including racial

discrimination for whites and a desire for some degree of cultural autonomy among many African Americans. In an event that has been dated variously from 1787 to 1793, a group of African American Methodist leaders including Allen exited St. George's Methodist Church after a white deacon threatened to pull them off their knees for sitting in the wrong part of the church. Allen, citing recent renovations to the church, asserted that the African Americans had been unclear as to their appropriate seats and recalled that they offered to move at the conclusion of prayer, but that this had been unacceptable to the deacon. A more pervasive problem was the refusal of white Methodists to allow suitable ordinations to black preachers. Beginning with Allen, Bishop Asbury ordained nine African Americans as local deacons (a status unrecognized in the Methodist discipline) in New York, Pennsylvania, and Virginia between 1799 and 1809, but then he stopped, and no more black ministers would be ordained until after his death in 1818. No African Americans had the higher ordination of elder conferred upon them during Asbury's lifetime, and very few prior to the Civil War.

Other offensive or racially discriminatory actions that black Methodists sometimes encountered included unequal access to the sacraments, publication of pro-slavery books by white ministers serving largely black congregations, unequal access to church cemeteries, and attempts to restrain the loudness of expression of African Americans during worship services. Each of these actions served, at some time during the first half century of American Methodist history, as grievances cited by African Americans when they decided to form separate black Methodist churches.

Between 1794 and 1813, separate black Methodist congregations formed in several American cities, including Bethel in central Philadelphia and Zoar in northern Philadelphia (1794); Zion (1796) and Asbury (1813) in New York; Sharp Street in Baltimore (1797); Ezion in Wilmington, Delaware (1805); and Mount Zion in Washington, D.C. (1812). Many of these congregations formed around a charismatic leader. Thus, in Philadelphia, Allen was the highly respected pastor of Bethel, and Lunar Brown, a layman, was a prominent organizer and early trustee of Zoar. Jacob Pindergrass and, increasingly, Peter Spencer (1779–1843) provided spiritual leadership at Ezion, and Daniel Coker (ca. 1780–1846) was the most renowned of the African American ministers as Sharp Street. The Zion Church in New York had a more diversified leadership. During these two decades, all of these separate black congregations maintained a connection with the predominantly white

MEC. For example, Bishop Asbury presided over the consecration of Bethel in 1794 and the ordination of Allen as local deacon five years later.

But the denominational affiliation of some of these black Methodist congregations was to change between 1813 and 1822, when three new independent black denominations were organized. The majority of Ezion's congregation members withdrew from the MEC in 1813, unhappy that the white denomination maintained control over almost all aspects of Ezion's affairs, including the assignment of a pastor, invariably white. They formed a new congregation (the Old Stone Church) and a new denomination (the African Union Church), choosing Peter Spencer as their pastor. Over succeeding years, the African Union Church grew slowly, with its greatest concentration of membership in the Delmarva Peninsula. Since 1865, there has been a separation between those in the Spencer tradition who favor an episcopal form of church government and those who do not; the first denomination is known as the Union American Methodist Church, and the second, the African Union First Colored Methodist Protestant Church.

African Methodist Episcopal and African Methodist Episcopal Zion Churches

Meanwhile, Richard Allen and the black Methodists in Philadelphia's Bethel Church were in a long-standing battle with white Methodists in their city over the ability of white Methodists to appoint ministers to Bethel and the validity of Bethel's bylaws as amended by its "African Supplement," approved in 1806; with the supplement, the bylaws gave Bethel members great power over their congregational affairs. A January 1816 decision by the Pennsylvania Supreme Court ruled on behalf of Bethel and Allen, setting the stage for the organizing conference of the African Methodist Episcopal (AME) Church three months later. In this new venture, Allen was joined by Coker and a minority of Baltimore's black Methodists. Allen was chosen by the delegates as the first bishop of the AME Church. His long-time friend Absalom Jones, now a priest for the St. Thomas African Episcopal Church in Philadelphia, participated in Allen's ordination as an elder and consecration as bishop on successive days at this founding conference. In succeeding decades, the AME Church gained considerable membership in large swaths of the United States, including the Midwest and southern border states.

Among the Zion Methodists in New York, the most pressing issue was the unwillingness of white Methodists to

ordain any elders or sufficient ministers at the lower rank of deacon for the needs of their congregation. In 1822, they held their organizing convention, and they also chose the name African Methodist Episcopal Church, although this would in 1848 be changed to African Methodist Episcopal Zion (AMEZ) Church for easier distinction from Allen's denomination. Friendly white elders assisted in the ordination of three of the Zion Methodists to the rank of elder, with one of these new elders—James Varick—also set aside as the new superintendent of the denomination.

Their less hierarchical intentions were demonstrated by their choice of "superintendent" rather than "bishop" to designate their denomination leadership, in addition to their regulations that superintendents did not serve for life—as was the case in both the AME and ME Churches—but were to stand for election every four years. By 1880, however, the AMEZ Church would conform to the patterns prevalent throughout most of the rest of American Methodism by reversing its stand on both issues and electing bishops for life. The AMEZ Church was always the second largest of the black Methodist denominations, after the AME Church, but it had similar aspirations for a far-flung missionary effort.

Additional Branches of Black Methodists

Many black Methodists, however, did not join any of these independent black denominations but decided to remain within the predominantly white MEC to continue the struggle for justice and equality there. Among the predominantly black congregations remaining within the MEC were Zoar in Philadelphia and Sharp Street in Baltimore (without the congregational minority led by Coker into the AME Church). In 1822, Zoar successfully sought its financial independence but still remained within the Philadelphia Conference of the MEC. By the 1830s, the Philadelphia Conference had begun ordaining black ministers as elders, although still not conferring upon them equal status with whites; its appointments to the Zoar pastorate were drawn from the ranks of these ordained African Americans.

A fifth major branch of black Methodism, the Colored Methodist Episcopal (CME) Church, arose in the South following the Civil War. The main progenitor of the CME Church was the Methodist Episcopal Church, South (MECS), which had separated from the MEC in 1844 over the issue of whether James Osgood Andrew, a Methodist minister, was disqualified from the episcopacy because he owned slaves. (The occasion for this schism had of course been obviated by the Thirteenth Amendment to the U.S.

Constitution, but reunion between the MEC and the MECS would not come until 1939.) The ME, AME, and AMEZ denominations all competed vigorously for the loyalty and membership of the freed people who belonged to the plantation missions and the urban black congregations that had, prior to the war, fallen under the aegis of the MECS. While each of these denominations, with their northern bases of operation, made some headway among the South's freed people, there were a minority of southern black Methodists who desired to affiliate with none of the denominations that arrived in the aftermath of emancipation and U.S. Army occupation. These Methodists affiliated instead with the CME Church, which held its first General Conference in Jackson, Tennessee, in 1870, although state conventions of what was to become the CME Church had been held as early as 1865.

The first two CME bishops were William Henry Miles (1828–1892) and Richard Vanderhorst (1813–1872), the latter a former AME minister. Although initially the CME Church appeared to counsel against political involvement more than other African American Methodists, and also to court a closer relationship with southern white Methodists, these distinctions turned out to be short-lived. In 1954, the name of the denomination was changed to the Christian Methodist Episcopal Church.

Black Methodism and the Antislavery Movement

Black Methodists pursued diverse antislavery strategies from 1810 to 1860. Only a few, such as Daniel Coker, supported the settlement in Liberia sponsored by the American Colonization Society, but more widespread in the 1820s was a movement to emigrate to a newly independent Haiti. Richard Allen supported this movement, and his son, Richard Allen Jr., moved to Haiti for a time. From the 1830s onward, the abolitionist movement led by William Lloyd Garrison attracted many black Methodists in the North. Jermain Loguen (1809–1872), an AMEZ minister in Syracuse, New York, was a leading activist in the abolitionist movement and the Underground Railroad, facilitating the 1851 “Jerry Rescue,” when abolitionists stormed the Syracuse jail to free African American barrel maker William Henry, who had been detained under the Fugitive Slave Act of 1850.

Thomas W. Henry (1794–1877), an AME minister, had to flee his Hagerstown, Maryland, home when his name was found in the papers of John Brown, leader of an 1859 antislavery insurrection in Harper's Ferry, Virginia. Despite such

activism, the most notable contribution of black Methodists to antislavery during the mid-nineteenth century may well have been their quiet building of African American community institutions, places of refuge from white hostility, exploitation, and violence.

Some southern white Methodists, while loudly proslavery, quietly nurtured future black church leaders, including Henry McNeal Turner (1834–1915), a minister in the AME Church after 1858, and the CME's Lucius Holsey (1842–1920). A significant minority of southern Methodists were opposed to laws forbidding instruction in literacy for African Americans, and future African American leaders such as Turner sometimes benefited from their quiet circumvention of such laws.

African American Methodists, such as AME bishop Daniel Payne (1812–1893), cheered President Abraham Lincoln's emancipation policies from 1862 onwards, and Turner and a few other black Methodist ministers served as chaplains in the Union Army. In efforts beginning in Union Army-liberated areas and accelerating at war's end, black Methodists such as James Lynch, an AME minister who later joined the MEC; James Hood; and Turner welcomed southern black Methodists into their respective denominations, conducted successful revivals swelling the membership of their southern churches, and participated in efforts to establish Reconstruction governments in southern states. Southern whites strongly opposed their political work, but their church work continued largely unimpeded, and by the 1880s a large majority of the two largest black Methodist denominations, the AME and AMEZ Churches, existed in the former states of the Confederacy.

Mission work in Africa claimed the attention of the larger branches of American Methodism, both those that were predominantly white and those that were predominantly black. The first African American bishop in the MEC was Francis Burns (1809–1863), a missionary to Liberia; he was consecrated in 1858. In the southern states during Reconstruction, some MEC ministers such as the abolitionist Gilbert Haven (1821–1880) in Atlanta worked hard to encourage racially integrated congregations, but with little success. Most MEC congregations in the South had overwhelming majorities of either white or black. There were, however, racially mixed annual conferences.

Women in Black Methodism

Black Methodist women, such as the AME's Jarena Lee (1783–ca. 1850) and the AMEZ's Zilpha Elaw (1790–ca.

1845), were instrumental in missionary work among African Americans. On the basis of their gender, they received equivocal support from some black Methodist clergy such as Richard Allen and pointed opposition from others. Lee, an evangelist who was not ordained as a minister, was unsuccessful in persuading AME men to open the ranks of the ordained ministry to women. In 1848, she even began a short-lived parallel connection of female ministers. Many black Methodist women followed in the footsteps of Lee and Elaw, evangelizing widely but not seeking ordination. One such was the famed Holiness evangelist Amanda Berry Smith (1837–1915), who triumphantly addressed the 1872 AME General Conference in Nashville, asserting that she had no need for the denomination's blessing for her ministry, because she was "satisfied with the ordination that the Lord has given me."

Some women, however, did continue to seek an official ordination as minister. Turner ordained Sarah Ann Hughes of North Carolina as a deacon in the AME Church in 1885, but his action was overturned on gender grounds two years later; Turner was reprovved by the AME General Conference in 1888 for having exceeded his authority. In 1894, Julia A. J. Foote (ca. 1823–1900) was ordained as a deacon in the AMEZ Church, and Mary J. Small (1850–1945) was ordained to the same office in the following year; Small was then ordained as an elder in 1898, and Foote to the same office two years later. These ordinations were not overturned. In 1915, two CME women were ordained as deacons, but "full ministry rights" were not granted to CME female preachers until 1966; in that same year, Virgie Grant was the first CME woman to receive the ordination of elder. The first AME ordination of a woman that was not overturned was that of Rebecca Glover in 1948. Women's church organizations such as female missionary societies were an important and less controversial avenue for black female Methodist leadership in the late nineteenth and early twentieth centuries.

Black Methodist Consideration of Mergers

Talks regarding union of Methodist denominations with black Methodist members began in the 1860s and have continued with meager results. Some such talks involved only predominantly African American Methodist denominations. Thus, in 1864, the AME and AMEZ Churches agreed on a merger four years later, but that merger was never consummated. The CME and AMEZ Churches have been in a protracted dialogue about merger, but the outcome

remains uncertain. Controversy over the name of the resulting merged denomination has often been a stumbling block, with the word "African" seen as indispensable to some and undesirable to others. Other talks have involved both predominantly white and predominantly black Methodist denominations. The AMEZ and ME Churches, for example, discussed merger in the 1860s but were unable to reach agreement.

In the early twentieth century, after decades-long negotiations, a merger between the MEC and MECS in 1939 resulted in the lumping of all African American Methodists together in a segregated, unwieldy, continent-wide Central Jurisdiction, thus bringing to an end racially mixed annual conferences in the MEC, which in any case had suffered attrition and widespread resegregation since Reconstruction's end. At issue was whether African American Methodists could ever be permitted to exercise authority over white Methodists. The obvious second-class nature of black Methodist citizenship in the merged denomination came under attack before, during, and after the merger process; but the Central Jurisdiction endured for almost three decades, until it was abolished in 1968 as part of another merger that formed the present United Methodist Church. The first African American bishops in the MEC were Robert E. Jones (1872–1960) and Matthew W. Clair Sr. (1865–1943), both elected to the episcopacy in 1920; they were both assigned to superintend African American churches exclusively during their entire episcopal careers. The first African American Methodist bishop assigned to supervise predominantly white churches was James Thomas (1919–), who presided over the Iowa area of the United Methodist Church beginning in 1964.

Black Methodist Higher Education

The first black Methodist college was Wilberforce College near Xenia, Ohio, founded by AME bishop Daniel Payne in 1856. Following emancipation, the MEC, AME, AMEZ, and CME Churches all established colleges in the South open to African Americans. Some, such as the MEC's New Orleans University, clearly intended an integrated faculty and student body, although obstacles posed by the Louisiana legislature and the native white population ensured that the college served almost entirely African American students. It subsequently merged with a Congregationalist college to form Dillard University. Other colleges were founded, especially by the historically black denominations, with an African American student body as the desired goal. Each of

these denominations founded at least one theological seminary for African Americans. Three seminaries in Atlanta—the MEC's Gammon, the AME's Turner, and the CME's Phillips—eventually consolidated, along with other denominations, to form the Interdenominational Theological Seminary. In addition, the AMEZ seminary, Hood, was located in Salisbury, North Carolina; and another AME seminary, Payne, was located alongside Wilberforce College in Ohio.

The “Great Migration”

As the oppression of African Americans in the South intensified in the early twentieth century, black Methodists participated in a large-scale exodus from the South to northern cities such as Chicago, Philadelphia, and New York. A study of five selected northern cities found that Methodist churches increased their numbers by 85 percent between 1916 and 1926, a more modest level of growth than the Baptists' 151 percent increase. Many black Methodist pastors and church members were hospitable to the southern migrants. But this was also a turbulent time in black Methodist history, as long-established members frequently battled newcomers for control of congregations. One such conflict was responsible for the removal in 1920 of Robert Williams from the pastorate of one of the most high-profile AME churches, Philadelphia's Mother Bethel AME Church founded by Richard Allen. One strategy to address the urban problems faced by rapidly swelling numbers of black Methodists was the Social Gospel theology advanced by such black Methodists as Reverdy Ransom (1861–1959) and Richard R. Wright Jr. (1878–1967), but this too was controversial. AME minister (later bishop) Ransom's Institutional Church and Social Settlement, founded in 1900, included vocational training classes, child care, and an employment agency. Ransom resigned this pastorate in 1904, shortly before he would have been forced out by other AME Church members who did not believe that “bearing a message of social, moral, economic and civic salvation [was] a function of the church.”

Black Methodists in the Struggle for Civil Rights

Many of the civil rights and black power activists of the mid-twentieth century were black Methodists. Daisy Bates (1914–1999), an activist during the Little Rock school desegregation struggle; Roy Wilkins (1901–1981), longtime head of the NAACP; labor leader A. Philip Randolph; and Oliver Brown (1903–1961) and his daughter Linda, on

whose behalf the *Brown v. Board of Education* suit was filed, were all members of the AME Church. Septima Poinsette Clark (1898–1987), heading the Southern Christian Leadership Conference's (SCLC's) voter education project and active in many other phases of the movement, was associated with the Old Bethel Methodist Church in Charleston, South Carolina. Joseph Lowery (1921–), who provided leadership for the SCLC over a period of several decades, was a United Methodist minister. Ruby Doris Smith Robinson (1942–1967), organizer of sit-ins and a leader of the Student Nonviolent Coordinating Committee, was one of the CME members involved with the movement.

Many black Methodist churches, including the Brown Chapel AME Church in Selma, Alabama, provided vital meeting places for civil rights activists. Eleven of the forty-eight signers of the “Black Power” statement of the National Conference of Black Churchmen were identified as black Methodists, representing four different denominations: five were AME, four United Methodist, and one each AMEZ and CME. In the wake of these movements, black Methodists sought and often gained offices at the local, state, and federal level. For example, Floyd Flake (b. 1945), pastor of the Greater Allen AME Church in Queens, New York, was also a member of Congress from 1987 to 1997.

Black Methodist Leadership in the Early Twenty-First Century

In the United Methodist Church, African Americans are far more strongly represented in ecclesiastical leadership than in the past. As of 2008, ten of fifty active U.S. bishops were African American. In 1984, United Methodists elected their first African American female bishop, Leontine T. C. Kelly (b. 1920), now retired. The first woman elected to the episcopacy of a historically black denomination was the AME's Vashti McKenzie (b. 1947) in 2000. Other African American women have subsequently been elected as bishops in both of these denominations.

Black Methodists for Church Renewal note that there are at least 2,400 black United Methodist Church congregations and about 500,000 African American members. Yet the organization is not satisfied with this level of involvement, noting that while African Americans have been increasing as a percentage of the U.S. population, African American membership in the United Methodist Church has been declining. Black Methodists for Church Renewal seeks to “expose . . . racism” in church agencies, to encourage black Methodist involvement in the work of economic

and social betterment, and to further strategies “for the development, maintenance and growth of strong Black churches.” In the AME Church, charismatic and neo-Pentecostal movements have contributed to notable growth in some congregations.

Future of Black Methodism: Organic Union or Further Distinction?

Maintenance of the subtle brand distinctions between the several branches of black Methodism has appeal to some, especially to the bishops who administer those branches, but church revitalization efforts probably would receive a boost if African American Methodists, scattered among denominations of various sizes, were able to coalesce into one body. Yet efforts toward organic union of the historically black Methodist denominations, as well as that of black Methodists with United Methodists, continued to be stymied; ecumenical relationships through the National Council of Churches and other venues seem to be the most that can be managed.

Methodists: Through the Nineteenth Century

The Methodists are a denominational family of Protestant Christians born in England from the theological and ecclesiastical reforms of John Wesley (1703–1791) and his brother Charles Wesley (1707–1788) starting in the 1730s. Methodism became one of the most influential religious movements within the North American landscape by the middle of the nineteenth century. Beginning with the immigration of Methodists from the British Isles in the 1760s, which followed the revival influence of George Whitefield (1714–1770) in the colonies, this reform movement within the Church of England became a new denomination in America in 1784 known as the Methodist Episcopal Church (MEC).

Over the course of the following century, the movement would divide and multiply to the extent that on the eve of the Civil War, the MEC was the largest Protestant denomination in the United States. Primarily exhibiting Arminian rather than Calvinist theological roots, the Methodists emphasized the availability of salvation to everyone, leading to their rapid expansion despite the higher moral rigor demanded of members in comparison to many other denominations. This theological and moral foundation often led to a convergence of progressive and conservative social and political stands, placing the Methodists in the center of public debate on a wide variety of topics such as abolitionism and temperance.

Beginnings of the Movement

In November 1729, John Wesley and three others at Oxford University began to meet regularly to pursue life according to the method of biblical religion. This group, known as the Holy Club, can be designated as the beginning of Methodism. The Wesleys, as well as Whitefield and the few others who joined the group, would go on to become leaders in the

great revival of religion in Great Britain and in the British Colonies in North America sometimes known as the first Great Awakening. Whitefield, though not in full theological agreement with Wesley's Arminianism, was a direct leader in America, spending time across the Atlantic through seven evangelistic journeys spanning Georgia to New England. Both Wesleys had for a short time lived in Georgia in the 1730s, and though this time was not successful for them either personally or professionally, it was instrumental in the later success of the Methodist movement through Wesley's exposure to the Pietism and small group methodology of the Moravian missionaries there.

After his return to England and the famous "Aldersgate experience," Wesley spent the next decades growing the Methodist movement in England through the establishment of weekly society meetings that met in parallel with normal attendance at Anglican (and Dissenting) churches for the sacraments and normal church life. This movement was progressively organized into a "connexion" of societies that would essentially stand on its own by the time of Wesley's death in 1791. Much as it would in America, the movement exhibited a tension between the democratization of religion—the opening up of religion to the masses—and a hierarchy tightly controlled by the charismatic John Wesley. As the movement grew, Wesley authorized men to travel and preach just as he did, although until his death Wesley saw himself as a faithful Anglican priest and did not take it upon himself to ordain these lay preachers as clergy in England.

In the 1760s Wesley began encouraging some of his followers to make the journey to the British colonies in America. Barbara Heck (1734–1804), known as the "mother" of American Methodism, was instrumental in these earliest days. After being converted to Methodism in Ireland, the Palatine German immigrated to New York City in 1760. According to a story with a hagiographic tint, in 1766 Heck walked into a room of her fellow German immigrants and saw them playing cards—the final straw of immorality upon her back. She promptly walked over and swept the cards into her apron and deposited them into the fire. She then quickly convinced her cousin, Philip Embury (1729–1775), to begin preaching; and she, along with her husband, a working man, and a black female servant became—in one version—the first Methodist society in North America. She would later be instrumental in building the first Methodist church building in New York, and then, after revolutionary tensions arose and her family moved north to find more loyalist safety, she founded the first Methodist society in Canada.

While there is evidence that Whitefield may have started societies in the southern colonies earlier than the first in New York, these did not last. This is not the only claim to southern priority, though. Some have concluded that the earliest Methodist roots in America lie in the labors of lay minister Robert Strawbridge (ca. 1732–1781) in Frederick County, Maryland, in the 1760s. The traditions place this work as earlier, perhaps as early as 1762, but the evidence is less definite than the clearer New York tradition. The societies started by Strawbridge in the Delmarva region (Delaware, Maryland, and Virginia) were solidified with a concerted effort there in the 1770s. Regardless of which region had chronological priority, it was the southern expression that would eventually have more to say in the sociocultural nature of American Methodism.

To solidify these burgeoning works in the colonies, Wesley dispatched experienced lay preachers to the colonies. The first pair to go was Richard Boardman (1738–1782) and Joseph Pilmore (1739–1825), who arrived in Philadelphia in 1769. Boardman was the more senior and was placed in charge of the American work. He left Pilmore in Philadelphia to better organize the society they unexpectedly found there, led by the colorful layman Captain Thomas Webb (1724–1796), while he went on to New York, their original destination. While Webb was a diligent organizer and a passionate speaker, he had not adequately formed the Philadelphia society into the proper mold. Pilmore, the more energetic and effective of the two ministers Wesley had sent, worked in cooperation with the Anglican clergyman of St. Paul's Church in Philadelphia as he began preaching open-air meetings, organizing prayer meetings, visiting prisoners, and eventually taking possession of Old St. George's church building for housing the parent society in Philadelphia.

Pilmore also initiated the practice of the love feast. This was the Methodist practice, influenced by the Moravians, of meeting to pray, sing, experience fellowship over bread and water, and give impromptu testimonies. Only members in good standing, as evidenced by possession of admission tickets received after completing a quarterly examination at the class meeting, were allowed to attend these love feasts. Although the Methodist movement as a whole was referred to as the "Connexion," the basic building block of the movement was the class meeting. The class meeting was born out of financial pragmatism as a means for lay leaders to collect donations, but it became the basic discipleship tool through its weekly meetings. These meetings of approximately twenty to thirty Methodists not only served

as the primary forum for discipleship and spiritual accountability; it was the home to leadership training as most of the itinerant preachers started off as class leaders. Between the class meetings and the love feasts, the growth of the Methodist movement in America was propelled through a distinct emphasis on camaraderie and fellowship. Additionally, the Methodists met in quarterly meetings to conduct church business. These quarterly meetings were based on the circuits to which preachers were appointed. These were regions that contained preaching locations and societies that the preachers would regularly visit. There may have been local preachers who assisted with the circuit, but the circuits were overseen by a traveling preacher, or circuit rider. They were originally centered in larger cities, such as New York and Philadelphia, and then branched out increasingly into rural areas.

With the growing revolutionary spirit taking root in the colonies and then the War of Independence itself, many of the Anglican priests and Methodist preachers were forced to withdraw from the colonial mission field and return to the political safety of England, where they were surrounded by friendly Tories. The practical, ecclesiastical, and liturgical result was that the Methodists were without access to the sacraments. Thus, while Anglican polity required a bishop to ordain priests, in 1784 John Wesley, Thomas Coke (1747–1814), and James Creighton (1737–1819) (each a priest in the Church of England, but none a bishop) ordained two preachers as deacons and elders—Richard Whatcoat (1736–1806) and Thomas Vasey (ca. 1745–1826)—in order that they might be sent to America to administer the sacraments and provide clerical leadership. At the same time, Wesley also ordained Coke as superintendent of the work in America. In December of that year, Methodist preachers came together in Baltimore, Maryland, a gathering that would later be known as the “Christmas Conference.” At this meeting the lay preachers were ordained by Coke, including Francis Asbury (1745–1816), who, under instructions from Wesley, was ordained as deacon, then elder, then superintendent. Asbury accepted the position of superintendent only after the preachers voted unanimously to proclaim him as such. Perhaps in this act one can see that a bit of the American democratic spirit had already rubbed off on him despite the exhortations of Wesley, who was against the Revolution. Wesley was incensed when he found out that Asbury and Coke had changed their title from superintendent to bishop. It was also at the Christmas Conference that, due to both internal and external factors, the group organized as the

Methodist Episcopal Church, a separate denomination from the remnants of the Church of England in the new nation that would soon become the Protestant Episcopal Church. This move to official independence would come later in England when in 1795 the movement separated from the Church of England. In addition to these measures taken at the conference in Baltimore, the group (which included sixty of the eighty-one Methodist preachers on the continent) also affirmed their allegiance to Wesley, strongly opposed slavery, and banned the use of intoxicating drinks by the clergy.

The Movement Gains New World Momentum

Francis Asbury had arrived in North America much earlier than the Christmas Conference. Born near Birmingham, England, and converted under one of Wesley’s itinerant preachers, Asbury had served as the leader of the Methodists in Northamptonshire before being dispatched to the colonies in 1771 in the second delegation. Asbury proved to be a relentless missionary, rooting out converts and congregations throughout the colonies, and is considered the greatest of the early leaders of American Methodism. He showed the other preachers the way out of the relative comfort of the coastal towns and cities to the expanding population in the mountains of Appalachia and the West. He soon became the de facto leader of the American Methodists and was recognized as such by Wesley. Asbury worked tirelessly (and celibately) in his travels to preach, organize societies, settle disputes, and impose discipline. During his ministry he traveled over a quarter million miles on horseback providing leadership by example to the other ministers in the movement. Asbury exemplified the manner in which the Methodists went about conquering the new territories. Circuit riding preachers would be assigned an area within which they would travel to speak in chapels, homes, fields, and anywhere else people would listen. They would establish classes and societies and build congregations together out of the intrepid pioneers forging further and further west. The Methodists were not always popular on the frontier. It takes a certain type of person to venture into the unknown, to do the hard work of establishing farms, towns, and cities where they did not exist before. These people tended to be adventurous and rough, people who sought to be their own authority. The Methodists came preaching temperance and holiness, and this did not always set well. Yet these Methodist preachers and laypeople were on a divine mission and adventure of their own. Persistent and dedicated, they won

convert after convert, sometimes one by one, sometimes in droves, especially at camp meetings.

The camp meetings were a new phenomenon. Established on the American frontier as a way to bring large groups of people together for extended time periods for religious purposes, people would set up tents surrounding a central meeting area. The meetings were held during off seasons for farmers and during the warm months and would last a week or longer. Those who came would gather several times a day for prayer, worship, and exhortation from both clergy and laity. Though this technique was not exclusive to them, the Methodists and their progeny were prolific in its employment. Although the format of the camp meeting evolved over the years, the form used in the Second Great Awakening in the late eighteenth and early nineteenth centuries proved enduring among Methodists and their spiritual descendents. Camp meetings would be utilized during the revivals later in the nineteenth century, though they were often adapted to more urban settings, and they even persisted into the twentieth century. That which had originally been a highly emotional, agrarian spiritual retreat became a part of urban revivalism or merged with the quarterly circuit meetings into a hybrid of business meeting and spiritual awakening.

It was in this revivalist setting that Methodism took on a somewhat different flavor. While the Wesleys and Whitefield had been educated at Oxford, overwhelmingly the early Methodists were not of that stripe. The itinerant preachers were much like their parishioners—lower- to middle-class artisans and tradespeople who tended to have a common school education, at best. Likewise, the clergy were grossly underpaid in comparison to those in the more established denominations. In 1800, Congregationalist ministers, many of whom had been educated at Yale or Harvard, received an annual salary of \$400. Meanwhile, a single, full-time Methodist minister was rejoicing in his recent raise to \$80 per year. This socioeconomic setting therefore engendered a different set of priorities and skills.

In 1597, Richard Hooker had laid out in *Of the Lawes of Ecclesiasticall Politie* the “threefold cord” of Bible, church, and reason that was the standard of Anglican theology. Expanding on this, Wesley championed a fourfold religious epistemology that scholars later called the Wesleyan Quadrilateral. Wesley pointed to the four corners of scripture, tradition, reason, and experience that were to be kept in complementary relationship as valid sources of knowledge about God and the way one ought to live in the world. Though driven

to the fields from his high-church origins, Wesley never fully embraced a radical emotionalism—yet in the camp meetings, emotion burned long and bright. The preaching of the circuit riding and camp meeting preachers was performed in the everyday language of the working folk in attendance. Not only was it performed in understandable language, it was delivered with passion. The Methodist sermons well fit Abraham Lincoln’s popular description of his favorite preaching style: bee-fighting. A response from the hearers was obligatory, and in firsthand accounts one finds widespread occurrence of trances, visions, shaking, screaming, barking and other animal sounds, and being “slain in the Spirit.” Methodists would proceed in later years to found numerous educational institutions, many of which are now considered top-tier schools, such as Duke and Vanderbilt Universities. The first one for training ministers was the “Bible Institute” in Boston, later to be Boston University School of Theology. This emphasis on reason was never completely absent, and the Bible and church were always at the forefront, but in the early and mid-nineteenth century emotionalism fueled the expansion of the movement.

A Segmented Movement

Methodism was never a blandly uniform or hermetically sealed unit. The earliest partitions within the Methodist family can be found not in groups that split off of the central branch, but in similar groups that were begun somewhat independently and would later become part of the United Methodist Church. The first of these was begun by a German immigrant, Philip William Otterbein (1726–1813). Having been educated in Germany, Otterbein moved to Lancaster, Pennsylvania, where he served as pastor of the German Reformed congregation. In 1754, he experienced a dramatic religious experience that drove him toward evangelical thinking and preaching. He came into contact with the ministry of Martin Boehm (1725–1812), a Mennonite who was later disfellowshipped because he too was overly evangelical for his denomination. The two men gathered a group of preachers and followers around them over the next thirty years, who then organized, with Otterbein and Boehm as the first superintendents, as the United Brethren in Christ in 1800. This movement was structured much like the Methodists, with whom the United Brethren carried on a lively fellowship. In fact, Otterbein was an invited participant in the ordination ceremony of Francis Asbury.

A second related denomination was first known as “Albright’s People” and would later assume the name

Evangelical Association. Jacob Albright (1759–1808) was born in Pennsylvania of a German Lutheran background that was filtered through Pietism. After converting to the Methodist movement and becoming an exhorter, Albright began building classes in eastern Pennsylvania, Maryland, and the Shenandoah Valley. In 1799, he gathered his assistants together for a meeting that would prove the beginning of a distinct movement. Albright and his associates organized as a society and by 1807 had established a “regular” annual conference and were developing an ecclesial code of discipline based on the Methodist *Discipline*. At the same time, they adopted the label “Newly-Formed Methodist Conference,” which signaled their own interdependence with the Methodist movements on the whole. Albright soon passed away, but the movement carried on under new leadership. The movement hung true to its German roots, clinging almost exclusively to the German language and culture, at times even at the risk of excommunication. It was at its first General Conference in 1816 that the name Evangelical Association was adopted. Through the first half of the nineteenth century, the Evangelical Association was able to establish “Articles of Faith,” a publishing wing, and a missions program.

The first schism within American Methodism dealt with issues of polity. James O’Kelly (ca. 1735–1826) had been ordained at the Christmas Conference and had early been inspired by Asbury, but he was to become the proverbial thorn in Asbury’s side. At the General Conference of 1792, O’Kelly, a veteran of the Revolutionary War, moved that preachers should have the right to appeal to the Conference in response to episcopal appointments—a direct attack on what he deemed to be an overly authoritative bishopric. Having just fought in defense of representative principles, O’Kelly thought the same should apply to church policies. His motion was defeated, however, and he left to start the Republican Methodist Church. This new church would build a substantial following in North Carolina and southern Virginia, but the Christian Church (as it became known in 1801) would not last, and its members filtered into various other groups in the early nineteenth century: some returned to the MEC, while others were drawn into the Stone–Campbell Movement.

The Methodist Protestant Church formed in 1830, the result of a failed reform movement that had been active over the previous decade. In the 1820s, a group of preachers organized around the principle of more egalitarian church politics. They had argued at conferences and through

publications in favor of four changes to Methodist polity: elimination of the rank of bishop, presiding elders to be elected rather than appointed, Annual and General Conferences to have an equal representation of laity and clergy, and local preachers to be elevated to full ministerial rights. When their efforts failed and a number of the movement’s participants were expelled from the MEC for “ecclesiastical treason” they formed the Methodist Protestant Church, which implemented each of the principles, save the last. Though always one of the smaller Methodist denominations, it enjoyed growth throughout its history until reunification into the Methodist Church in 1939.

The Holiness movement, not originally a Methodist splinter group but the church’s own revival movement, would eventually produce several new denominations in the face of what was perceived to be a growing spiritual compromise within Methodism. One of the most popular figures of the nineteenth century was the Holiness writer, teacher, and revivalist Phoebe Palmer (1807–1874). Palmer would have one of the greatest impacts on post–Civil War evangelicalism through her teachings concerning the higher Christian life. Through Palmer, Wesley’s ideas concerning sanctification were even more clearly and rigidly taught—and extended. Through the “Tuesday Meeting for the Promotion of Holiness,” a Methodist society meeting held at her home in New York City from the mid-1830s through the mid-1860s; her popular books such as *The Way of Holiness* (1843) and *Entire Devotion to God* (1845) and the periodical she edited for many years, *Guide to Holiness*; as well as her immensely popular services at camp meetings and conventions, Palmer spread the message of entire sanctification. She delineated this doctrine in three steps: a private decision to surrender fully to God, an “altar” faith that focused on a sacrifice of the self that was to be worked out in the prayers at the front of the revival meetings, and a public testimony of the personal experience of sanctification by the recipient. Palmer’s version of sanctification was a more private understanding of the experience than that proffered by both the Calvinist Puritans and by Wesley, who gave more credence to the communal recognition of holiness than to personal testimony. Palmer’s version of entire sanctification also had a direct relationship with the surrounding society—opposition to it. For Palmer, holiness meant a consecration away from social gentility and all of its trappings and adornments. The biblical call to “be not conformed to this world” insisted upon restrictions from dancing, the theater, fashionable dress, and other frivolous activities. Her

emphasis on personal piety had a lasting influence in the Holiness movement of the nineteenth and twentieth centuries (including the Salvation Army, Church of the Nazarene, and Wesleyan churches), as well as the traditional Pentecostal movement begun around the turn of the twentieth century (including the Church of God [Cleveland, Tennessee] and the International Pentecostal Holiness Church).

With Palmer, we can also see another side—a bent toward social activism. Although not rare among evangelicals of her day, it nevertheless did not have the same lasting effect within conservative evangelicalism as her theology. Palmer never sought ordination herself (the first woman to enjoy ordination in American Methodism was Helenor Davison of the Methodist Protestant Church in 1866), but she pushed strongly against the norm by being a wildly popular public speaker. She also published in 1859 the four-hundred-page tome *The Promise of the Father* in which she resolutely argued for the position of women in ministry. And although she was careful to not make the issue a topic of her public teaching, Palmer labored behind the scenes in the abolitionist movement and did so publicly in the temperance movement. Activism among Methodist women was also brought to the fore by the prominent leader of the Woman's Christian Temperance Union, Frances Willard (1839–1898). Willard was a leader in the suffrage movement; advocated for the ordination of women; was involved in the labor movement later in life; and was pivotal in the establishment and development of higher education for women, becoming the founding president of Northwestern Ladies College, which later merged with Northwestern University.

Methodism among African Americans

African slaves had been a part of Methodism in America from its beginning, worshipping together with whites under a relatively loose set of social guidelines. This arrangement did not always work without tension, however. Former slave Richard Allen (1760–1831) was converted to Methodism at the age of seventeen. After itinerating with Richard Whatcoat and preaching under the appointment of Asbury, Allen and Absalom Jones (1746–1818) led a movement in 1786 to preach to the blacks of Philadelphia. This move was rejected by the largely white St. George's Methodist Church and subsequently led to even more radical measures against Allen and the black Methodists following him. Through stages, Allen and Jones founded two separate black congregations. Jones led those who had become overly impatient

with the Methodists, founding a congregation that later became associated with the Protestant Episcopal Church. Allen led the group that wanted to remain within Methodism. By 1816, even Asbury had felt the pressure from the southern Methodists and had silenced his antislavery efforts and stopped ordaining blacks as deacons. This led Allen's group from Philadelphia to merge with other discontented African American churches in New York, New Jersey, Delaware, and Maryland, establishing the African Methodist Episcopal (AME) Church with Allen as its first bishop. Allen's leadership of the AME Church along with his social activism in partnership with Jones places him as among the first black leaders in America with national prominence.

The first female approved to preach by Bishop Allen in the AME Church was Jarena Lee (b. 1783), though her ministry was much broader than this single denomination. From the 1820s through the 1840s, Lee was one of the more popular preachers in North America. Although most of those who attended her meetings were of African descent, that was by no means exclusive. White Methodist lawyers, doctors, and merchants were commonly in attendance. Inundated with criticism and pressure to abandon the controversial practice of preaching by a woman, Lee argued the point extensively in language that would set the stage for later feminist arguments on this issue. Although nothing is known of the last years of her life, Jarena Lee had a profound and enduring impact upon the nature of evangelical, and specifically Methodist, culture in the nineteenth century.

James Varick (1750–1827) was elected the first general superintendent of the African Methodist Episcopal Church—Zion (AME-Zion) in 1822. This culminated a long process of separation that included attempts at reconciliation with the MEC, attempts at unification with the Philadelphia-based AME group led by Allen, and lingering liturgical and sacramental leadership by white ministers of the MEC. Originally born out of success in the John Street Church and its overcrowded services in the 1790s, the African American members desired to meet on their own. By 1801, they had purchased their own property and incorporated the African Methodist Episcopal Church in the City of New York (Zion Chapel). In 1820, a conference was held in which the preachers Varick, Abraham Thompson, and Christopher Rush (1777–1873) were ordained as elders by the MEC, negating the need for white ministerial intrusion. The process ultimately led to the official separation and establishment of the church named after its first chapel in New York

City. Varick was followed as bishop by the popular Christopher Rush in 1828. Though not the largest of the African American Methodist movements, the AME-Zion church does boast such illustrious figures as Sojourner Truth (1797–1883), Frederick Douglass (1818–1895), and Harriet Tubman (ca. 1820–1913) among its historic constituents and contributors.

Splits over Slavery and Civil War

In terms of numerical and socioeconomic effect, perhaps the most significant of the divisions within nineteenth-century Methodism is the 1844 split between the MEC and the Methodist Episcopal Church, South (MECS). During the early nineteenth century, the once unified position of the American Methodists—a stance in vocal opposition to slavery—had become diffused, largely on geographical and social grounds, rather than theological. John Wesley had stated that the American version of slavery was “the vilest under the sun,” but as time moved on and social conditions changed, the position in the church moderated and dissenting voices raised their volume. Whereas the 1785 *Discipline* of the MEC described slavery as standing against the “Golden Law of God . . . the unalienable Rights of Mankind” and “every Principle of the Revolution,” the church’s position by the 1816 General Conference was laissez-faire. When the General Conference of 1836 brought the issue up for debate in response to the burgeoning abolitionist movement, the conclusion was to come to no conclusion. This reflects the general trend toward compromise with the pro-slavery party that had already been seen in the General Conference decision of 1804 to publish different versions of the *Discipline* for regional distribution. The southern version included the “spiritual part” without the portion on slavery.

This lack of action led some of the more committed antislavery advocates to withdraw under the leadership of New England preacher Orange Scott (1800–1847). In 1843 they organized the Wesleyan Methodist Connection with about 6,000 members. A year later, at their first General Conference, they reported more than 15,000. From the 1840s through the Civil War, the group had a two-pronged ideological front: a clear-cut stance against slavery and dedication to Wesley’s doctrine of entire sanctification. Although the first prong tended to draw in members, the second tended to discourage growth. After the War Between the States, the focus of the church was limited to the message of holiness and the movement’s growth moderated. The

presence of stringent guidelines on daily life was a factor in limiting net growth to only 7,000 additional members by the 1920s. This movement became known as the Wesleyan Church in its 1968 unification with the Pilgrim Holiness Church.

The United Brethren and the Evangelical Association were somewhat immune from the pressure to accept slavery due to their geographical placement in non-slaveholding areas, and they thus retained strong statements against it in American society. For the larger number of Methodists, however, the issue came to a head in 1844, after heated debates concerning the suspension of a preacher from Maryland and a bishop from Georgia because of their acquisition of slaves through marriage. Within a few days of the vote on Bishop James Andrew, a Plan of Separation was given to the Conference by its southern delegates. The plan allowed for the annual conferences of the slaveholding states to withdraw from the MEC to form a new organization, while the conferences and local churches in border states would be permitted to join either church through the majority vote of their membership. Ministers could choose with which church to affiliate. Church property issues were also addressed in the plan. The plan resulted in the creation of the MECS at a meeting of delegates the next year.

Although many hoped to retain amiable relations despite the official separation, this was not to be. Animosity only grew between the two churches. Many northern Methodists saw the split as against the church’s polity and as such attempted to retain control over all assets, especially those of the publishing house. The southern church would eventually gain a share of the publishing venture through court order. Rather than a civil, democratic process within the border states in choosing denominational affiliation, church meetings quite often ended in heated arguments. In the midst of this chaos, the churches nevertheless showed great public strength—they were each the largest Protestant denomination in their regions, the northerners having almost 800,000 members and the southerners more than 600,000 in 1850.

Such a large group was unable to stand on the sidelines when the hostilities reached a climax in the war. Methodists, like most religious groups, found themselves fighting on opposite sides, each convinced they were battling in the Lord’s army. Consequently, even in defeat, the MECS played a large role in the creation of a southern civil religion—the religion of the Lost Cause. Sam Jones (1847–1906), a renowned Methodist evangelist from Georgia, regularly

used Confederate veterans in his revival meetings to testify of God's work in their lives, especially as an inspirational force during the war. The heroes of the war thus became the heroes of the faith, and the cause of the South was sanctified. Although there had been some talk of reunification with the MEC soon after the war, the southern church resisted and redoubled its efforts to rebuild from its losses of both membership and property.

Era of Reconstruction

One decision that had to be made, though, was what to do with the black members of the MECS. In a radically changing society that was perceived to be turned on its head, the southern church felt a need to clearly delineate the ecclesial roles of the races. In December 1870, a new church was formed named the Colored Methodist Episcopal (CME) Church, and all of the black members—about 60,000—were transferred into it. They were led by the newly elected bishops William H. Miles (1828–1892) of Kentucky and Richard H. Vanderhorst (d. 1872) of Georgia. Miles had spent some time in the AME–Zion Church, and Vanderhorst had spent some time in the AME church prior to reuniting with the MECS. This separation was cordial enough, as both sides were eager to try to find their way in their new world, but a restriction on political activity was placed on the CME Church in exchange for a transfer of church property. This led to a particular picture of the CME Church as socially conservative and politically inactive, an image that would later be shed. In the 1950s, the name of the church was altered so that “Colored” was replaced with “Christian.”

Conclusion

The process of division and segmentation especially prevalent within American Methodism in the nineteenth century was a two-edged sword. On one hand, the splits and schisms were often quite emotionally charged and reflective of negative personal and social issues, for example, personal ambition and slavery. On the other hand, this phenomenon is reflective of the burgeoning democratic and capitalist society of the new nation. Nowhere else did people have the amount of religious options available to them as in the United States. This was especially noticeable and beneficial in the arena of ethnic diversity. During the nineteenth century, the golden era of immigration, the Methodist churches were intentional in their efforts to bridge ethnic gaps, largely by providing autonomous or semi-autonomous ethnic movements, especially among Native Americans,

Hispanic Americans, Germans, Scandinavians, and Japanese. New leaders were discovered who were able to gather people around them in a wild diversity of related groups. This diversification led to great numerical growth. In 1900, the Evangelical Association had a membership of just over 166,000. This stands in comparison to 184,000 for the Methodist Protestant Church, 241,000 for the United Brethren, almost 3 million for the MEC, and nearly 1.5 million for the MECS.

Not only did the Methodists exemplify growth through division principle, they also reflected the stereotypical movement from lower-class and uneducated to middle-class and ambitious. Not only did they found numerous institutions of higher education, their membership largely transformed from working-class laborers and artisans into business owners and sociopolitical leaders. Similarly to the embrace of the slave society in the South by Methodists in the region, Methodists throughout the nation sought after social respectability through a subtle compromise with social mores and norms. Reflective of an always-present tension between being social rebels and champions of social and ecclesiastical order, the moral discipline of the class meetings wavered, and increasingly Methodists were no longer seen as peculiar people. Methodist preachers who had originally been drawn from the theologically uneducated membership were increasingly expected to be seminary-trained professionals. Simultaneously, these newer Methodist preachers were increasingly interested in planting families, which resulted in appointments to stations and charges (one to three churches in a small area) rather than traveling a widespread circuit with frequent reassignments. Early in Methodist history, it was difficult to become a Methodist and very easy to be expelled. By the end of the nineteenth century, this had reversed. Methodists had passed this legacy off to their sanctified progeny, the Holiness movement, and had moved on to social respectability.

Methodists: Since the Nineteenth Century

At the dawn of the twentieth century Methodism in America was one of the largest and most powerful denominations in the country. Methodists had good reason to be optimistic. By 1900 no fewer than four U.S. presidents had embraced Methodism; denominational rivalry had given way to interdenominational cooperation; and, in 1910 in Edinburgh, Scotland, a Methodist, John R. Mott, was presiding at a World Missionary Conference that would signal a full-fledged ecumenical movement. Methodism was healthy and vibrant.

The Expansion of Methodism

Contentious debate in the nineteenth century over the issues of race and states' rights had splintered the Methodist Episcopal Church (MEC) into several segments, and multiple attempts at reconciliation had proven unsuccessful. By the beginning of the twentieth century Methodism consisted of two larger branches, the MEC and the Methodist Episcopal Church, South (MECS), and several smaller branches, among

them the Methodist Protestant Church and the United Brethren Church. Although the church would ultimately succeed in its efforts to reconcile its two larger branches, new tensions rose to the surface during this period.

The rise to prominence of the Social Gospel movement was one critical issue that proved divisive. A response to the excesses of the late nineteenth century's Gilded Age, the Social Gospel movement was a pan-denominational enterprise aimed at improving the social welfare of all persons. Although other Protestant denominations helped in its launch, Methodism emerged as the movement's leading denominational force during the first half of the twentieth century. This period saw Americans developing a new social awareness as problems in society multiplied in the wake of industrialization and rapid technological advancement. These advances, while making life more convenient, also made life more dangerous as working conditions worsened and poverty increased. The Social Gospel movement, like woman suffrage and temperance, was a response to the tenuous social conditions. Progressive Methodists believed they had a cure for the ills of society and that a change of perspective among Methodists was needed in order to promote the welfare of all Americans.

Prior to the influence of the Social Gospel, Methodists primarily desired and promoted a personal moral righteousness. By contrast, Social Gospelers believed that the social, political, and economic problems within society superseded individual issues; a collective moral righteousness, they insisted, needed to be developed and nurtured. They maintained that the gospel compelled them to promote and work towards a socially just society, one in which a concern for the individual was balanced by a concern for all persons. To attain "social salvation" Social Gospel Methodists sought to develop a social ethic. Leading the charge were renowned minister Frank Mason North, president of the Federal Council of Churches, and Harry F. Ward, professor of ethics at Union Theological Seminary in New York City. At the Northern General Conference of 1900 North called on Methodists to construct a social Christianity aimed at confronting the problems of the urban-industrial environment. Methodists took seriously North's charge, and in 1907 Ward co-founded the Methodist Federation for Social Service, later renamed the Methodist Federation for Social Action. In the same year Ward co-authored the "Social Creed of the Churches," which was subsequently adopted by three Methodist denominations and the newly formed Federal Council of Churches. The Social Creed denounced child labor, advocated better working

conditions for the poor, and called for the safeguarding of the economic rights of all workers. Although the Social Creed would undergo several revisions in subsequent years, it persisted as the definitive statement of Methodism's views on social issues until 1972, when the General Conference reconfigured and renamed it "Social Principles of the United Methodist Church" in an effort to more accurately represent the social principles of contemporary Methodism.

Emergence of Liberal Theology

The growth and spread of liberal theology generated perhaps the most heated debate among Methodists during the early twentieth century. While theological liberalism was by no means a unified movement, it is generally recognized that advocates of liberal theology attempted to unite modern intellectual thought with traditional Christianity. Furthermore, they emphasized the need for a historical-critical interpretation of the Bible, for making explicit the relevance of the Christian religion to contemporary life, and for safeguarding intellectual liberty in the pursuit of truth. Freedom of inquiry combined with new historical methods of interpretation led in some forms of liberalism to the rejection of such orthodoxies as the virgin birth and the resurrection of Christ. In spite of its heresies, liberal theology took firm hold in the nation's Methodist denominational colleges and seminaries, and by the 1930s nearly every major Methodist theologian had embraced some form of liberal theology.

The reinterpretation of Methodist theology by liberal theologians found support in the work of scholars such as Borden Parker Bowne. Bowne, a professor of philosophy at Boston University School of Theology, developed the philosophical approach to theology known as "Boston school personalism." This theological position affirmed that God had a profound personal nature, although it tried to avoid anthropomorphic terms to describe that nature. Likewise, it affirmed that human beings, because they had distinct personal character, were of ultimate value and that this personal character provided a link with the personal nature of God. Dissemination of these views quickened the spread of liberalism to younger ministers, and through them liberal ideas filtered to the pews. It is no coincidence that theological liberalism's rapid spread among Methodists and other Protestant denominations occurred in concert with the growth of the Social Gospel movement. A common theology and ethics existed. Both shared, for example, the belief that the kingdom of God was present in, and worked through, culture. And culture, moreover, was held by both to advance

through evolutionary progress. Throughout this period theological liberalism and the Social Gospel movement maintained a symbiotic relationship.

Conservative Response

Although extremely popular, the appropriation of liberal theology was not universal. For some the new theology presented major problems. A number of theologians perceived a strong tension between, on the one hand, the historical-critical method of investigation and Darwin's theory of evolution and, on the other, traditional Protestant Christianity. The result for some Methodists was the conviction that these new and innovative theological ideas were inconsistent with the doctrinal standards of Methodism and of Protestant Christian orthodoxy.

Not surprisingly, the spread and general acceptance of liberalism provoked a backlash from conservatives and some moderates. For example, in 1895, and again in 1900 and 1905, Hinckley G. Mitchell, Old Testament scholar at Boston University School of Theology, was accused of doctrinal heresy for holding lax views of scripture. Mitchell's insistence on intellectual freedom landed him in front of the Judiciary Committee of the General Conference of 1908. After much debate the committee ruled in Mitchell's favor. This outcome represented a considerable step forward in the development of academic freedom and helped to establish a tradition of tolerance and diversity within the MEC.

Conservative attempts to curtail the spread of liberal theology did not desist, however. Leading conservative figures such as John Alfred Faulkner, professor of church history at Drew Theological Seminary in Madison, New Jersey, and Harold Paul Sloan, a prominent pastor of the New Jersey annual conference, sought to minimize the spread of liberal theology. Faulkner published a work in 1921 entitled *Modernism and the Christian Faith* in which he identified the scriptures as divinely inspired historical writings and emphasized founder John Wesley's belief in miracles, the divinity of Christ, and the virgin birth. Views that denied these theological truths, Faulkner asserted, were to be rejected. Sloan, alarmed at the adoption of liberal thought in the Conference Course of Study, a program for educating and training pastors within the denomination, helped to create the Methodist League for Faith and Life in 1925. Conservative efforts to define the parameters of Methodist theology sparked furious debate, prompting a response by the General Conference of 1928, which again rejected conservatives' attempts to suppress liberal teachings at Methodist institutions.

Other conservatives threw their efforts behind the controversial neo-orthodox movement, which arose specifically to oppose liberal theology. Edwin Lewis, professor of theology at Drew Theological Seminary, was one such figure. Lewis's understanding of the Christian faith was once in tune with liberal thought and practice, particularly that of Boston personalism. But after encountering the writings of the German theologian and leading figure of the neo-orthodox movement, Karl Barth, Lewis published *A Christian Manifesto* (1934), in which he argued for a Christianity more sympathetic to traditional Protestant orthodoxy. Following this work Lewis cemented his role as a proponent of conservatism within Methodism through numerous lectures and dozens of publications.

Similar upheaval was occurring in the MECS. Vanderbilt University, founded in 1886 in Nashville, Tennessee, and sponsored by the MECS, struggled from 1905 to 1914 to free itself of ecclesiastical control. Although the contention generally centered on finances, perhaps more tellingly the university sought to challenge Methodist identity and authority. To receive funds from the Baptist-leaning General Education Fund and the Carnegie Foundation, which required recipients to be denominationally independent, the financially ailing university attempted to appoint a Baptist as dean of the university and made arrangements to free itself from the MECS. These actions were pursued over the objections of the MECS, particularly those of Bishop Warren Candler, who believed the prominent position should be given to a Methodist and that the church should retain control over the institution. A lawsuit ensued. The church ultimately lost control of the university when the Tennessee Supreme Court ruled in favor of the university. Bishop Candler's reaction, aided by his wealthy family and powerful friends, was to shift support to the MECS-controlled Emory University in Atlanta, Georgia, where Candler and his allies had invested more than \$8 million by the 1930s. Similar developments occurred at other MECS-controlled schools such as Southern Methodist University in Dallas, Texas, and Duke University, formerly Trinity College, in Durham, North Carolina. Through these efforts the MECS made clear its commitment to keeping its institutions distinctly Methodist, both administratively and theologically.

Liberal Theology Prevails

The conservative response to theological liberalism was neither powerful nor unified. The absence of a forceful resistance is generally attributable to a lack of strong conservative

leadership. Additionally, the denomination's reluctance to define the contours of its theology with the exactitude characteristic of, for example, Presbyterians allowed for greater theological freedom. As a result conservative attempts to buttress traditional Christianity failed to block the dissemination of theological liberalism among the general population of Methodists. The spread of new intellectual and theological ideas, combined with larger socioeconomic changes during this period, created a general shift in the religious and moral attitudes of Methodists.

Reconciliation and Cooperation

In 1844 the MECS separated from the MEC over the issues of slavery and states' rights. Nearly one hundred years later the issue of race and the place of African Americans remained as salient as ever. Even as Methodism's generally liberal shift in belief and attitude brought about in 1939 the convergence of the MEC and the MECS, racism remained pervasive. African American Methodists were no more exempt from discrimination than their counterparts in the general population. In the two decades following World War I, 528 lynchings were recorded across the United States. Although northern Methodists were quick to endorse anti-lynching legislation and advocate justice and equality for African Americans, they failed to fully comprehend the social, economic, and religious discrimination experienced by the nation's African Americans.

The agreed-on plan of reunion between the northern and southern branches called for the continued segregation of African Americans from the rest of the denomination. Five regional jurisdictions were drawn up, and one additional, nongeographic jurisdiction was created: the Central Jurisdiction. This jurisdiction encompassed African American Methodists and was the product of the denomination's attempt to appease largely southern Methodists who believed the church should remain segregated. Critics have dubbed this move the "crime of '39." In their view, the church's decision to choose expediency over racial reconciliation was a grave mistake.

Another quarter century passed before the General Conference of 1964, in an effort to end the long-standing system of Methodist segregation, adopted a plan to eliminate the Central Jurisdiction. The plan initiated a phased process whereby African American members would ultimately join with their respective regional jurisdictions. In 1968, when the Methodist Church and the Evangelical United Brethren Church (EUB) combined to form the United Methodist

Church (UMC), the Central Jurisdiction was terminated. By 1972 members of the former Central Jurisdiction had joined their respective regional jurisdictions, beginning a process of integration within local churches. While the move was controversial—some local churches exited the denomination—the plan for desegregating the jurisdictions found approval among most Methodists.

The Black Methodists for Church Renewal convened in 1968 at the First National Conference of Negro Methodists in Cincinnati, Ohio. That same year the newly formed UMC created the General Commission on Religion and Race to help correct past discrimination and further racial equality. White Methodists were also involved in the civil rights movement in various capacities. Despite these efforts Methodism throughout the twentieth century remained a primarily white denomination. In 1940 African American Methodists accounted for 4.2 percent of the denomination's members. By 1976 African American membership had experienced a slight decline, accounting for 3.57 percent of the total ethnic minority membership of 4.25 percent. The dominance of a white constituency has continued into the twenty-first century, with the church reporting in 2002 that 93.2 percent of its membership is white. To a certain extent these figures are unsurprising. African American Methodists tend to gravitate towards one of two denominations that split from the MEC in the nineteenth century, the African Methodist Episcopal Church or the African Methodist Episcopal Zion Church. Other minorities, including Asian Americans and Native Americans, account for a fraction of church members. In 1996 Korean American Hae-Jong Kim was elected the first Asian American bishop in the UMC.

Political and Social Involvement

By the last decade of the nineteenth century Methodists had become deeply involved in politics, both locally and nationally. William McKinley, a devout Methodist, entered the White House in 1897. Methodists' committed political activity persisted into the twentieth century and was expressed in varying ways. In particular Methodists proved eager to apply their newly developed social ethic to the political and economic landscape of America.

Role of Women in the Church

Over the course of its history the Methodist Church has seen women in leadership roles. The Countess of Huntingdon and Mary Bosanquet in the eighteenth century and Phoebe Palmer and Maggie Newton Van Cott

in the nineteenth each held prominent positions in Methodism. The accomplishments of these women notwithstanding, equal rights for women was no more the norm in Methodist circles than in American society at large. At the beginning of the twentieth century the national woman suffrage movement, established in 1848 at Seneca Falls, New York, had little to show for its five decades of pioneering activity. Although some women had exercised leadership in the missionary and temperance organizations for many years, Methodist women did not achieve full laity rights until 1900; four years later they were admitted as delegates to the General Conference. In 1920, after intense pressure and nearly seventy years of organized agitation, the U.S. Congress passed the Nineteenth Amendment granting women the right to vote. In 1922, on the heels of this decision, the MECS followed the MEC's lead and granted women full laity rights.

The creation of the EUB in 1946 represented a bitter-sweet moment for Methodist women. On the one hand the schism between the Evangelical Church and the United Brethren Church (UBC) was repaired. On the other women who had held clergy rights in the UBC lost those rights when the two branches united. It was not until the EUB joined with the Methodist Church in 1968 that women's full clergy rights were restored.

The advancement of women in leadership roles progressed. In 1955 Paula Mojzes was appointed the first female district superintendent in the Methodist Church, and in 1956 women gained full clergy rights. Another boon for women came in the 1960s when Methodist theologian Georgia Harkness was awarded tenure at the Pacific School of Religion in Berkeley, California. In 1972 the General Commission on the Status and Role of Women was created, and in 1980 Marjorie Matthews became the first woman to be elected a bishop. By 1990 fifty women were serving as district superintendents in the UMC.

Social Reform: Prohibition

The fight for the prohibition of alcohol sparked strong political involvement among Methodists during the early twentieth century. Like the Social Gospel movement, the temperance movement had roots in nineteenth-century America. Many Methodists, through Sunday school literature and organizations such as the Woman's Christian Temperance Union, which was founded in 1880 in Evanston, Illinois—at the time a hotbed of Methodist political activity—supported total abstinence. It was not long

before widespread disdain for the consumption of alcohol took hold in church circles. This deep concern over the use of alcohol was in evidence in 1880 when, at the General Conference, it was determined that whenever practicable Methodist ministers should use grape juice in place of wine. By 1916 the use of grape juice was mandatory. The belief that society's ills could be traced to the abuse of alcohol convinced many Methodists that the prohibition of alcohol was the only way to rehabilitate America's conscience. Methodists joined with others to press Congress to pass legislation prohibiting the manufacture, sale, or transportation of alcohol. The Eighteenth Amendment, which did all these things, was ratified in 1919. Arguably a noble experiment, Prohibition famously proved a lost cause. Thirteen years later, Congress passed the Twenty-first Amendment repealing the Eighteenth and ending Prohibition.

Social Reform: Capitalism

The stock market crash of 1929 ignited widespread concern over the economy and, for Methodists in particular, the morality of capitalism. During the 1920s and 1930s church members debated the role of capitalism in society. The view that capitalism was undemocratic and reflected an unconscionable concentration of power and wealth in the hands of a small coterie of elites found favor among Methodists. As the Great Depression dragged on Methodists became embroiled in debates over capitalism and Franklin D. Roosevelt's New Deal response. At the General Conference of 1932 critics went so far as to state that the industrial order of America was both unethical and un-Christian. This attack on capitalism found expression in the Methodist Federation for Social Action (MFSA), which began to monitor and analyze the New Deal. The MFSA concluded that the New Deal represented "organized poverty," its economic principles governed by a capitalist ideology that favored one social class, the wealthy, over another, the poor. These views would later haunt the MFSA when the onset of the Cold War and the rise of anticommunist sentiments in the United States left it open to accusations of communist infiltration. The MFSA experienced a resurgence of activity and support in the 1960s and 1970s, support that continues today, enabling it to remain active in promoting peace, equality, and justice both within Methodism and in the broader society.

Social Reform: Pacifism and War

Pacifism and American participation in war were particularly contentious subjects among Methodists in the first

half of the twentieth century. A minority of Methodists participated in pacifist activity during World War I, but as public opinion shifted toward the support of American involvement Methodist sentiment followed. During the interwar period Methodists ardently promoted world peace. Prominent ministers such as Albert Edward Day, minister of several eminent Methodist churches and vice president of the Federal Council of Churches, and Ernest Fremont Tittle, renowned minister of First Methodist Church in Evanston, Illinois, passionately urged Methodists not to endorse or participate in the promotion of war during the 1940s. This issue ignited a heated debate at the General Conference of 1944 when pacifists sought affirmation in a declaration they had prepared. Many clergy supported the declaration; an overwhelming majority of the laymen, however, voted against it, believing America's involvement in the war just. The declaration was not affirmed.

Methodists continued to express ambivalence toward American involvement in war in later decades. As the Vietnam War escalated, for example, the General Conference of 1968, now representative of the newly formed UMC, issued a statement calling for the immediate withdrawal of American forces from Vietnam. In 1972 the General Conference declared that the actions of the United States in Southeast Asia amounted to crimes against humanity. In so doing the conference affirmed the view that war was incompatible with the Christian teachings of Methodism. At the same time the church, somewhat paradoxically, maintained that when all efforts towards peace are exhausted war is preferable to tyranny and genocide. This view has since been reaffirmed in the UMC Social Principles, issued by the General Board of Church and Society. Further statements by the UMC have condemned any use of nuclear weapons, terrorist acts of violence, and the indiscriminate use of military force to combat terrorism. More recently Christian pacifism has found new impetus in the nonviolence teachings of Methodist theologian Stanley Hauerwas of Duke Divinity School in Durham, North Carolina. Although not fully embracing pacifism, the UMC continues to reject war as incompatible with the teachings of Christ.

The latter half of the twentieth century saw Methodists exercising their tradition of political activity through the founding of various organizations aimed at influencing domestic and foreign policy on a wide variety of issues. The United Methodist Building, completed in 1923 and currently the only nongovernment building on Capitol Hill, was established to lobby Congress and the executive

branch on matters of importance to Methodists. In the 1950s Bishop G. Bromley Oxnam was transferred to Washington, D.C., to take advantage of his friendship with John Foster Dulles, secretary of state under President Dwight D. Eisenhower. The Methodist Church's Washington-based advocacy stands as testament to its determination that the church's religious and political concerns be taken seriously.

New Political Groups

A different type of political group began to emerge in the years surrounding the Vietnam War. Although political groups had previously existed within Methodism, they tended to be of an ad hoc nature and to generally represent the sentiments of the denomination as a whole. These new political groups, however, began to function not as member organizations or commissions within the denomination, but as affinity groups that arose alongside the denomination. They developed their own political and religious agendas, disseminating information in a prophetic fashion in the hopes that their ideas would be appropriated by other Methodists and even officially sanctioned by the denomination. In subsequent years these groups multiplied. In most cases their intentions have been to strengthen Methodism; in some instances, however, their actions have been viewed as aggressive and insensitive by those in disagreement with their political and religious ideas.

One of the earliest of these groups to emerge was the Good News movement in 1966. Believing that church leaders were too liberal and therefore out of step with a majority of church members, the Good News movement sought to voice the concerns of conservative evangelicals. It threw itself into all areas of church life, from Sunday school curricula and seminary education to world missions. The group's primary aim has been to support and encourage conservatives in the church and to monitor and maintain what it holds to be the theological beliefs and spiritual practices of the church.

Two newer groups are the Reconciling Ministries Network (RMN) and the Institute on Religion and Democracy (IRD). The RMN, known as the Reconciling Congregation Program between 1983 and 2000, is dedicated to the inclusion of all people in the UMC, particularly gay, lesbian, and transgender individuals. Its central aim is to change church policy concerning the membership, ordination, and marriage of gay and lesbian Methodists.

The IRD, founded in 1981 and based in Washington, D.C., seeks to influence political decisions and American

political philosophy by placing faith in a more central role. The IRD aims to "reform their churches' social witness, in accord with biblical and historic Christian teachings, thereby contributing to the renewal of democratic society at home and abroad." The institute's members and religious and political efforts have generally been conservative. The majority of their effort is directed towards upholding a traditional view of marriage and advocating a pro-life position on abortion.

In the early twenty-first century Methodists have risen to the top echelons of U.S. political life. Former president George W. Bush and Hillary Rodham Clinton, secretary of state in the Obama administration, are both members of the Methodist Church. Moreover, one of the UMC's flagship universities, Southern Methodist University in Dallas, Texas, was selected in 2008 to be the home of the George W. Bush Presidential Center. Methodists continue to make significant contributions to the political life of American society.

Belief and Practice

Methodist thought and practice during the twentieth and twenty-first centuries are notable for their diversity. As Methodism strives to engage in critical and creative theological reflection, it cannot help but be influenced by the surrounding social and cultural context. This context fosters in Methodism a broad-ranging theological and experiential palette. The UMC in the twenty-first century in its doctrine and polity seeks to accommodate this diversity while retaining the contours of its traditional faith and practice.

Church Polity: Governance and Organization

The UMC maintains an episcopal system of governance. Although bishops provide the highest form of leadership, in many ways the church's style of governance is similar to a democratic system, as evidenced in the organization of its General Conference. The General Conference is an assembly within the Methodist Church comprised of elected representatives, both clergy and laypersons, who gather every four years to discuss matters related to the denomination as a whole. As the chief governing body this delegation has the authority to modify church law and is the only assembly that can make official policy decisions. The General Conference elects members to the Judicial Council, which is comprised of nine members who serve eight-year terms. When issues are formally brought to its attention, the Judicial Council will monitor the UMC to ensure that its actions conform to the principles of the Methodist constitution.

The Council of Bishops is another assembly that provides oversight. Bishops are elected by the jurisdictional conferences and meet semi-annually to discuss matters relating to the church. To be elected bishop a person must be an ordained elder. There are no other requirements. More than fifty episcopal areas exist across the United States. Each is presided over by a single bishop who exerts over that area ultimate leadership responsibility.

The UMC consists of districts that are comprised of groups of local churches. Each district is overseen by a district superintendent. Districts are part of a regional conference that meets annually to share fellowship and discuss the life of the church. The annual conferences are attended by all clergy and an equal number of laypeople selected by the local churches. There are presently sixty-three annual conferences, supervised by more than fifty bishops in five U.S. jurisdictions: Northeastern, Southeastern, North Central, South Central, and Western. These U.S. jurisdictions, along with the overseas-based Central conferences, are supervised by the General Conference.

Theology

The Methodist Church shares the same commitment to traditional orthodox Christianity as most other Protestant denominations. It upholds the classic historical creeds, such as the Apostle's Creed, that have been incorporated into the United Methodist Hymnal, as well as the authority of scripture and the justification of sinners by grace through faith in Christ's atoning death on the cross. Finally, it affirms the role of sacraments as signs of God's grace, especially Holy Communion and Baptism.

In addition, Methodists emphasize a number of distinct beliefs that distinguish their theology from that of other Protestant denominations. In the latter half of the twentieth century Albert Outler, a leading Methodist theologian, developed a fourfold pattern of priorities rooted in the works of John Wesley. Outler and other Methodists argued that Wesley interpreted scripture through the lenses of reason, tradition, and experience. For many Methodists the Wesleyan quadrilateral, as the conceptual theological pattern came to be known, offered a model through which to identify and distinguish Methodist beliefs. The quadrilateral has subsequently served as a guide for modern Methodist doctrine, appearing in each new issue of the *Book of Discipline* since the founding of the UMC in 1968. However, the degree to which this model accurately represents Wesley's thought and its adequacy for theological analysis has been

seriously challenged by contemporary Methodist theologians and historians.

The four notable Wesleyan theological distinctives that can be identified within Methodism are prevenient grace, Christian perfection or entire sanctification, assurance, and justification. The first of these, prevenient grace, is a divine grace that comes before salvation and facilitates an individual response to God's offer of forgiveness. It is free to all—as opposed to the doctrine of election, which declares that God only elects some people for salvation—and serves to illuminate the way of salvation, allowing people to freely choose to repent of their sins.

The second theological distinctive, Christian perfection, is the concept of perfection, or entire sanctification, whereby a person is made holy or sanctified by God's grace and obtains a state of perfect love. This distinctive has generated much debate as theologians struggle to decide whether the process of attaining Christian perfection is instantaneous or gradual. Although there is flexibility in this doctrine, Methodists tend to believe that Christian perfection is a gracious gift from God and is obtained after a life-long process during which individuals earnestly strive for holiness in belief and conduct.

Christian assurance and justification, the final two theological distinctives, are intimately linked. Christian assurance is the state wherein an individual possesses surety of his or her salvation or pardon from sin and is aided by the inward witness of the Holy Spirit. This inward testimony follows conversion and is a natural process for all those who embrace Christ.

Justification by faith refers to the way in which a person is saved from the penalty of individual sin. Methodists affirm that Christians are justified when they believe that Christ's divine act of atonement removes the penalty of sin from their lives. The merging of these distinct beliefs with traditional Christian orthodoxy provides Methodism with a unique flavor that is identifiable as evangelical Arminianism.

Evangelism and Mission

Perhaps the single most important purpose within Methodism is to share the gospel of Christ. While Methodists in the twentieth century focused primarily on social concerns, recent years have seen a revitalized commitment to evangelism and a renewed focus on missionary activities and dissemination of gospel around the world. Methodists continue today to develop a holistic view of evangelism

and mission in which the evangelical witness is mutually reinforced by Christian social action. Methodist missionary efforts are overseen by the General Board of Global Ministries of the UMC.

Worship

Methodist churches practice a variety of worship styles. For example, some congregations sing hymns while others favor contemporary music. Most use a lectionary, which is a book consisting of scripture passages assigned for reading during worship, as well as hymns, which in the Wesleyan tradition tend to be faithful expositions of Christian teaching. In addition to Christmas and Easter, many Methodist congregations, influenced by their Anglican heritage, continue to celebrate aspects of the liturgical calendar, such as Ash Wednesday and the Advent season.

During the 1980s Methodists recognized the need to produce songbooks with greater variety to reflect the growing cultural and ethnic diversity within their denomination. In 1989 a new hymnal was issued that included a new Psalter and revised liturgies for baptism, the Lord's Supper, weddings, and funerals. The Methodist hymnal continues to receive revisions as new concerns emerge.

Expressions of New Vitality: Resurgence and Diversity

The UMC in America has witnessed a steady decline in membership since its creation in 1968. Between 1970 and 2007, for example, membership decreased by an average rate of 7.3 percent per decade, from 10.6 million members to 7.8 million. In contrast, the number of Methodist constituents—those persons who are not church members but who participate in the life of a particular congregation—increased by nearly 7 percent between 2001 and 2007, from 1.4 million to 1.5 million.

In the face of this decline in membership and the accompanying reduction in financial support, a growing number of American Methodists have been striving for spiritual and theological renewal. In particular, the two transdenominational voices represented by the Confessing movement and the Welcoming Church movement have gained prominence within Methodism in recent years and have helped to lend to it a revised focus and a renewed vitality.

The Confessing movement has given rise to a new generation of Methodists who are rediscovering the church's eighteenth- and nineteenth-century evangelical roots. These Methodists are injecting the church with a new theological

sobriety and combining it with action directed at social issues such as environmental stewardship and the elimination of poverty to appeal to contemporary concerns. They are also experimenting with alternative worship styles and new methods of evangelizing.

The Welcoming Church movement seeks to create and embody a holistic concept of church. Methodists who identify themselves with this movement are working towards building a membership that more fully reflects the diversity of God's people. They seek those individuals who are socially, ethnically, and economically marginalized, believing that the established church and persons on the social periphery can mutually benefit one another in the project of imagining and constructing a more inclusive church. Toward this end, the Welcoming Church movement actively pursues racial reconciliation in the church, believing that here no less than in the wider American society the issue of race relations remains a significant challenge.

The particular emphases of these two fresh expressions of Methodism have contributed to the hardening of old divisions, as the Confessing movement and the Welcoming Church movement have tended to align themselves, respectively, with conservatism and liberalism. A result has been the injection of new tensions and conflict into Methodism.

One especially salient issue is that of homosexuality in the church. Beginning in 1972 the General Conference, recognizing an increase in discussions about homosexuality in church and society, revised its Social Principles document to affirm the sacred worth of homosexuals but not the practice of homosexuality. Some Methodists, however, have repeatedly challenged this view, believing that gay, lesbian, bisexual, and transgender Methodists should play an active role in church life. In 2003 Methodist minister Irene Elizabeth Stroud admitted she was a lesbian and in a committed relationship. The following year she was placed on trial and found guilty of violating church doctrine. Her ordination credentials were subsequently withdrawn. Since its initial statement on the topic in 1972, the General Conference has created a number of committees and task forces to explore the issue of homosexuality. Today the UMC continues to uphold its view, affirming the individual while rejecting homosexuality and homosexual union.

Despite these tensions and the divisive tendencies they evince, the UMC strives in the twenty-first century to generate a deeper commitment to the Christian faith among its members and develop new and creative ways for Methodists to minister to one another and the larger world.

Methodists are increasingly cooperating with other denominational organizations and institutions to create mutually beneficial relationships in pursuit of these goals. Finally, Methodists today draw inspiration and hope for the future from the expansion and vigor of Methodism in Africa, Asia, and Latin America.

Methodists: Tradition and Heritage

Methodism, arguably the most American of all the Protestant denominations, began life in England as part of the eighteenth-century Evangelical Revival, a movement originally meant to reinvigorate, not replace, the state church. Though

important (and still extant) in the country of its birth, where it emerged from the work of two otherwise conservative Anglican priests, the brothers John (1703–1791) and Charles (1707–1788) Wesley, it achieved its most spectacular successes after migrating to British North America. Arriving in the decade prior to the Revolution and establishing itself as a fully fledged church in 1784, the year following the ratification of a peace treaty, Methodism found a niche among disparate populations (including artisans, farmers, women, and African Americans) both on the eastern seaboard and on the opening frontier to the west. It drew energy from the seeming opposition of two defining characteristics—an exuberant popular supernaturalism and a disciplined organization—and proceeded to become the largest and best-distributed European Protestant tradition in the United States by the middle of the nineteenth century.

Theological, liturgical, organizational, racial, and regional conflicts appeared along with this ascendancy, and some of the schisms were never healed. Nevertheless, by the end of the twentieth century the mainstream United Methodist Church, thoroughly middle class with most of the rough edges rubbed away and waning in membership, was still the third largest religious organization in the country, behind the Roman Catholic Church and the Southern Baptist Convention.

Its influence continues in the twenty-first century, especially if one considers the wider denominational family, including groups that broke off from the original Methodist Episcopal Church over some of the tensions mentioned above but maintained a recognizable Wesleyan DNA. Examples included several African American denominations, notably the African Methodist Episcopal (AME), the African Methodist Episcopal Zion (AMEZ), and Christian Methodist Episcopal (CME) Churches, and Holiness offshoots such as the Wesleyan Church, the Free Methodist Church, and the Church of the Nazarene. That genetic influence is noteworthy and perhaps even more important beyond schismatic organizational developments as an influence in wider cultural and religious tendencies. Wesley's Arminianism (his belief that Christ died potentially for all people and not just a predestined few) and his related emphasis on "Christian perfection" (or less controversially, "scriptural holiness"), for instance, helped promote the "declension" of New England Calvinism; and similar tendencies leant themselves both to a broad nineteenth-century push for personal holiness and to the "Social Gospel" movements of the early twentieth century. Pentecostalism, too, is arguably descended from aspects

Methodism emerged in England from the work of two otherwise conservative Anglican priests, brothers John and Charles Wesley. The movement succeeded after migrating to British North America.

of Methodism, in a generation of holiness advocates who also drew on the emotional expressiveness that had typified conversions in John Wesley's and George Whitefield's (1714–1770) field preaching as well as the proverbial “shouting Methodists” of the Second Great Awakening in the early nineteenth century. An ecumenical inclination and a typically positive engagement with science and education is also traceable back to the Wesleys. Furthermore, the fruit of Methodist overseas missions, growing at a swift rate in post-colonial Africa in the early twenty-first century, is further evidence of a lively and influential heritage, even as it occasionally rebukes the tree from which it grew.

Though no longer fully comfortable with its revivalist origins, Methodism was itself part of a wider early modern “awakening” or “revival” sweeping through many Reformation (and other) traditions in late seventeenth- and early eighteenth-century Europe and North America. Like many other “new religious movements,” it received its name not from its founders but rather—years before it took hold on either side of the Atlantic—from “cultured despisers,”

in this case bemused Oxford undergraduates making fun of the precise piety of the Wesleys and their friends at the university.

Wesleyan Origins

John Wesley, the organizer of early Methodism, and Charles Wesley, path-breaking hymn writer and jealous guard of Methodism's Anglican connection, were born in 1703 and 1707, respectively, in the obscure north Lincolnshire town of Epworth. Their father Samuel served as rector of the parish for upwards of thirty-five years, and their mother Susanna presided over the rectory and the initial education of the ten children (seven girls and three boys) who survived infancy. Both parents had begun life as dissenters (members of Protestant denominations objecting to Prayer Book worship and episcopal government in the state church). They both converted from their moderate Puritanism to a conservative Anglicanism in the cosmopolitan atmosphere of Restoration London, where the Stuart monarchy, Church of England bishops, coffeehouses, and the theater and other literary

production coexisted. Oxford education, followed by ordination, was then available to Samuel; and continued deep reading, writing, and teaching of “practical divinity” engaged Susanna as they married, began a family, and found preferment, full-time appointment as a parish priest, in the church. Unfortunately for his clerical ambitions, Samuel was never able to move beyond the Epworth assignment, and though he made good effort as a priest, he never felt completely comfortable with his parishioners, far from the ecclesiastical and literary center of London.

Nevertheless, the family setting proved formative for the two youngest Wesley brothers. In the first place, they could draw on an ecclesiastical heritage from both parents that comprehended both Puritan and High Church elements of English Protestantism, as interpreted through the latest thought and practice from London. For instance, Samuel Wesley tried to start an Anglican “religious society” (a pre-Methodist model of small-group moral and religious work within the Church of England). He was also an early supporter of recently founded missionary organizations such as the Society for the Propagation of the Gospel. A generously stocked rectory library meant that he could pursue his scholarly and literary aspirations (he was something of a pedant and a poet). Meanwhile, Susanna could savor contemporary practical theology (including the latest scientific theory) as well as John Locke’s empiricism, wrestling with it in her spiritual journal and employing it all in her own unpublished catechetical writing and her children’s home-schooling.

Secondly, the brothers were shaped by the experience of growing up in the Epworth rectory. From their mother, who ran a tight ship, a *methodical* household, they imbibed not only the rudiments of Christianity but also a loving and rational discipline (a necessity, one might argue, in a household of roughly a dozen people). From their father and their older brother they absorbed the habits of academic, literary, and clerical life as they often combined in the universities and the church of the day. From their sisters, the brothers gained an appreciation for female intelligence in a culture that did not often encourage it, particularly in the rural north.

Finally, particular family experiences have grown into Methodist myths of origin. One was the family’s miraculous escape from a devastating rectory fire in 1709 (possibly set by disgruntled parishioners). In that scenario, six-year-old John’s rescue through a window from a flame-swept upper-story room marked him as a “brand plucked from

the burning” for future service. The second account involves John’s presence a few years later at an “irregular” evening prayer service, conducted for all and sundry by Susanna Wesley in the rectory kitchen during her husband’s absence in London and against his will. Historians have speculated that some of his own later departures from strict Anglican practice (a greater openness both to services held outside of church and to women’s leadership) may have been nurtured here.

At any rate, John and Charles soon thereafter left for formal “public” schooling in London. John attended the Charterhouse beginning in 1714, Charles, Westminster in 1716; and both successfully prepared for study at Christ Church, Oxford, starting in 1721 and 1726, respectively. John received his bachelor’s degree in 1724 and, with encouragement from both parents, began preparing for ordination, following the “holy living” tradition traceable to the practical theological work recommended by his mother: authors such as Thomas à Kempis, Jeremy Taylor, and William Law. He took deacon’s orders in 1725, became a fellow of Lincoln College the following year, received his master’s degree the year after that, and was ordained to the priesthood in 1729. During the last couple of years he absented himself from Oxford to assist his father and gain pastoral experience back in Epworth, but he soon returned to take up his teaching duties at Lincoln. At that point Charles, still an undergraduate, was meeting with a loosely knit group of pious students; and John, with his more advanced academic and ecclesiastical status, soon began to take a leadership role. They read scripture and studied primitive Christianity; prayed, fasted, and attended the sacrament together; and visited the poor and imprisoned. Still informal, the group was visible enough to attract notoriety among less devout undergraduates, who variously branded them Bible Moths, Sacramentarians, the Holy Club—and Methodists. Looking back later from the perspective of a more fully established movement, John labeled this extended Oxford experience as “the first rise of Methodism.”

The movement’s pursuit of holy living, including diary keeping, self-examination, and promotion of what they took to be a primitive Christian lifestyle caught on with some, but it also ran into a number of roadblocks. A rumor spread charging Methodist asceticism with the death of William Morgan, a sometime member of their group; and an unflattering anti-Methodist pamphlet was published, “framing” the issue more persuasively for some than Wesley’s sermon before the University (“Circumcision of the Heart”) that

outlined his positive rationale for a life of holiness. Meanwhile, a number of the Oxford Methodists were leaving to take up positions and pursuits beyond the university, and John Wesley himself was at a bit of a vocational crossroads, pressed by his ailing father to assume the living at Epworth (a sacrifice Wesley was not ready to make). Following his father's death in 1735, though, a new option cropped up: missionary service in James Oglethorpe's North American colony of Georgia, a scheme that Samuel Wesley had early supported.

An Initial American Experience

The Wesleys' brief and not particularly successful sojourn in Georgia occasioned what John later called the "second rise of Methodism." Even though the experiment did not closely resemble the movement that appeared in England soon after his return to London two years later, much less the Methodism that remade its way to America in the 1760s, it is nevertheless hard to imagine the Wesleyan revival, and Methodism as a movement and a church, without this one experience.

John was recruited as a voluntary missionary of the Society for the Propagation of the Gospel, and the recently ordained Charles became secretary to Governor Oglethorpe. They sailed in October 1735 with two other acquaintances and a large group of emigrants, both English and German. The most exotic possibility would have been a mission to the Indians, but John Wesley's own motivation seemed to be saving his "own soul" and "doing more good in America"—in other words, a continuation of his Oxford spiritual program, only now in the wilds of North America. Landing in February 1736, John was assigned as priest in Savannah and Charles in Federica, where they either inherited or founded religious societies along the Anglican and Oxford Methodist model.

That much was not unexpected; nor was the cultural pluralism of colonial life in Georgia. An initial encounter with a local chief of the Creek nation revealed an understandable level of caution with the English missionaries, based on the harsh treatment his people had already received at the hands of the Spanish. Neither did Wesley find the Chocktaws receptive; and since Oglethorpe was loath to leave the Savannah church without a priest, there was little motivation on any side to turn Wesley loose with the Indian peoples. He did, however, take a more active role with regard to African Americans. In addition to recording his catechetical conversation with a young black girl, he also

worked out a scheme for the evangelization of slaves on plantations and began noticing instances of inhumane treatment that doubtless fueled his later stands against the slave trade. Other residents of his two-hundred-mile-long parish included Sephardic Jews (inducing Wesley to learn Spanish); Vaudois, the pre-Reformation group also known as Waldensians, for whom Wesley led prayer in Italian; as well as French and German Protestants.

He had first encountered a community of the last group, the so-called Moravians, on board the *Simmonds* en route from England. Also known as the *Unitas Fratrum* (Unity of the Brethren), they traced their origins to pre-Reformation Hussites, but they had left Bohemia under persecution and were granted refuge on his Saxony estate Herrnhut by the Pietist Lutheran Count Nicholas von Zinzendorf. Their warm-hearted Christocentrism led them not so much into evangelism as into piety and outreach rooted in communal living. Wesley attended their shipboard evening worship services and contrasted his own and others' terror during a raging Atlantic storm with their calm and simple faith (women and children included). Impressed by the assurance he lacked, he sought out Augustus Gottlieb Spangenberg, a Moravian leader, on reaching Savannah. He learned German, began translating their hymns, which he published in *A Collection of Psalms and Hymns* in 1737 (the first hymnbook in North America), and started an important theological conversation that was to continue with other Moravians in London. Unfortunately, he did not fully acquire their warmhearted Lutheran piety soon enough. It might have attenuated the disciplinary extremes of his High Church Anglicanism—which contributed to his hasty exit from the colony less than two years after his arrival.

The presenting cause was a botched relationship with a young woman, Sophy Hopkey, whom he was tutoring in French and divinity. Never very surefooted in affairs of the heart, Wesley had trouble admitting an interest in Hopkey either to her or to himself and certainly was not ready to make a commitment. She, reading the situation more accurately, lost interest in Wesley and eventually married another man. Wesley's response (again, not very self-aware) included refusing the newly married couple Communion on their return to Savannah, based on a technical reading of the Prayer Book rubrics. Good discipline it may have been, part and parcel of the quest for holy living, and yet it rankled the small community. More to the point, Hopkey's uncle and guardian was the colony's chief magistrate, and there was no shortage of others willing to help a grand jury fill in an

indictment. Most of the particulars involved Wesley's zeal-ousness in church discipline: taking a firm stand on who might or might not be baptized, admitted to Communion (including Sophy Hopkey Williamson), and buried. No heinous crimes had been committed, but significant opposition had developed; and Wesley, knowing vindication would be difficult, left under cover of darkness and boarded ship for England in December 1737 before a trial could take place.

What had his two-year American experience provided Wesley? (1) A taste, at least, of "propagating the gospel in foreign parts"—to native people of North America and to Africans and African-descended people, both slave and free, as well as to a host of immigrants from various European settings. (2) A feel for the theological and political difficulties of being a conscientious frontier parson. (3) A stock of metaphors, not all of them complimentary, to describe the weather or the behavior he would later observe in his itinerations around the British Isles; as well as images that would help him, when ensconced back in England, interpret the later "work" in North America. (4) The beginnings of hymn singing in Methodism (at the time not Church of England practice). The *Collection of Psalms and Hymns* was soon followed by dozens of additional volumes published during the rest of the century and featuring the poetic talents of Charles Wesley. Charles had himself run into political and ecclesiastical difficulties in Georgia, as well as ill health, and left the colony after only five months on the job; his return trip included a month's stay in Boston before a final voyage back to England, arriving in early December 1736. (5) The most important result of all was Wesley's discovery of the "heart religion" that he had experienced among the Moravians.

"Our Little Society" and the Revival's Beginning

The "last rise" of Methodism in Wesley's calculation took place under this increased influence of Moravians and particularly one of its leaders, Peter Böhler (1712–1776), who was then passing through London. Forty or fifty people met on Wednesday evenings for conversation, singing, and prayer in a room in Fetter Lane. But the format (something of a cross between a Moravian meeting and an Anglican religious society) was not as important as the new lived sense of an old Reformation doctrine that Böhler promoted—justification by faith, which brought with it a full experience of assurance. Böhler convinced Wesley that he did not have such faith but suggested he might "Preach faith *till* you have it, and then, *because* you have it, you *will* preach faith." This

Wesley began to do—in interesting contrast, as Henry Rack comments, to later Moravian doctrine and the parallel evangelical and Pietist contention that an "unconverted ministry" might be not only ineffective but dangerous. Wesley was effective on two accounts: many hearers were convinced, and many clergy began to close their pulpits to him and this "novel" doctrinal emphasis. Wesley, though, soldiered on, discovering in the process that the Moravian definition of faith was not so different from that laid out in his own church's Book of Homilies: "A sure trust and confidence which a man hath in God, that through the merits of Christ his sins are forgiven, and he reconciled to the favour of God." Theoretically, at least, Moravian faith not only balanced Anglican holiness but helped shed light on a forgotten element in that same Reformation tradition.

Wesley's own appropriation of the newly discovered (or rediscovered) doctrine became paradigmatic for his movement, but it drew on a much wider set of revivals then moving through North American and European Protestantism. The Moravians were only one small, somewhat idiosyncratic branch of the late seventeenth-century Pietist movement emanating from A. H. Francke's work at Halle, a movement that was building a more practical, less theologically arid version of Lutheranism and the Reformed tradition. Other parallel and related awakenings and revivals included the continuing seventeenth-century Scottish tradition of outdoor sacramental occasions (predecessors of the American camp meetings a century later); a Welsh awakening under Griffith Jones, Daniel Rowland, and Howell Harris; and the Great Awakening in Jonathan Edwards's Northampton, Massachusetts, and beyond. Closer to home a new evangelical star was streaking across the sky, a man who would in some ways connect these movements (though also divide them) and become their most famous exemplar: George Whitefield.

Whitefield, a younger undergraduate colleague of the Wesleys at Oxford, literally read himself into a conversion the same year John and Charles volunteered for Georgia (the persuasive book was Henry Scougal's *The Life of God in the Soul of Man* [1677]). Ordained in 1736, he achieved immediate success as a preacher in London, Bristol, and elsewhere. Just as John was returning from Savannah, Whitefield was leaving to replace him there in what was to be the first of seven visits to North America. Dramatic preaching, conversion, and "heart religion" were all very much in the air. To top it all off, Charles Wesley had experienced his own conversion on Pentecost Sunday 1738, composing a hymn

in celebration, “Where Shall My Wandering Soul Begin.” John, very much in a searching mode following his perceived “failure” as a colonial missionary and as a result of his intense connection with the Moravians, was ripe for a similar experience.

That iconic moment, much promoted and contested in later Methodism, came on May 24, 1738. Earlier in the day he had meditated on scripture, attended evensong at St. Paul’s Cathedral, and then, “very unwillingly,” a society meeting in nearby Aldersgate Street. Like the Fetter Lane Society, this gathering consisted of Moravian and Anglican participants—both Böhler and Whitefield had exercised leadership there at one point or another in the previous year. This night what caught Wesley’s attention was a reading from Luther’s Preface to the Epistle to the Romans. His famous journal entry continues the story:

About a quarter before nine, while he was describing the change which God works in the heart through faith in Christ, I felt my heart strangely warmed. I felt I did trust in Christ, Christ alone for salvation, and an assurance was given me that he had taken away my sins, even mine, and saved me from the law of sin and death.

Scholars argue that this event was not the only important turning point in Wesley’s life. He did not gain total freedom from doubt and despair, and he rarely if ever alluded to his experience later. Nevertheless, it was his personal appropriation of “salvation by faith,” his own experience of assurance, his own evangelical rite of passage. Böhler’s advice had worked: he had “preached faith” prior to “Aldersgate,” and now he could proclaim it *because* he had it. This he did in his University Sermon at Oxford less than three weeks later. “Salvation by Faith” may not have elicited the total approval of his academic congregation, but it did become his evangelical manifesto both within and beyond the university and was accorded pride of place as the first in his published collection *Sermons on Several Occasions*. Meanwhile, Aldersgate, with its precise noting of the “strangely warmed” heart, has become for some *the* Methodist myth of origins and the paradigm for all good followers of the Wesleys.

Wesley was not only experiencing assurance but a vocational conversion as well. Though he kept his college fellowship (in absentia) until his marriage some thirteen years later, it was clear his life’s work would not be as a university teacher but as a preacher and organizer in the church (to the extent it would let him) and in the wider society. The exact

shape of his calling, however, was still to be determined. His discernment process in part involved activities both intentional and serendipitous. He arranged to visit Herrnhut, the German headquarters of the Moravians, where he experienced their community. There he observed several practices he later adapted for Methodists: the division of societies into smaller, more spiritually focused “bands” and “classes” along gender or geographical lines; the reinstated New Testament ritual meals known as “love feasts”; and religious conferences. He also read and was influenced by Jonathan Edwards’s *Faithful Narrative* of the Spirit’s power in the Northampton Awakening. He continued to read in the Church of England homilies as he began to question Moravian theology. He started to back away from the insistence that faith and assurance were one and that it was an all-or-nothing situation. And he maintained contact with a number of religious societies in London and Oxford while preaching in the few churches that still welcomed him.

Of particular note was his continuing association, not always smooth, with George Whitefield. Briefly back from Georgia to raise money for his projected Savannah orphanage, Whitefield met with Bristol’s religious societies and preached to huge crowds—in churches until he was disinvented and then out of doors. As the revival grew he wrote Wesley, urging him to leave London and join him. Before setting out for Bristol, Wesley responded to a criticism that he had no business preaching in other clergy’s parishes (whether in Oxford, London, or Bristol). Partly a rationalization based on his status as a priest appointed as a fellow of a college and partly a provocative statement based on his new spiritual awareness, it has become another oft-repeated Methodist phrase: “I look upon all the world as my parish.” It became the mythic basis of Methodism’s itinerant ministry.

In justifying the extension of his ministry into Bristol, though, Wesley had no idea what he was getting himself into: full-scale revival with attendant “enthusiasm” and much ecclesiastical irregularity. The newly assured, forgiven, saved, and emboldened Oxford don arrived in the western port city and overlapped with Whitefield only briefly. The younger but more experienced evangelist was soon off to nearby Wales, though not before Wesley observed him in the act of “field preaching” to vast multitudes. Outdoor sermonizing was a format that challenged Wesley’s Anglican sense of “decency and order,” but it required no or minimal permission, could accommodate huge crowds that might be uncomfortable in church, and was made to order for a dramatic and powerfully voiced preacher. Possibly to

convince himself, Wesley even tried on for size (indoors to a small society meeting!) a text from Matthew recounting the Sermon on the Mount, “one pretty remarkable precedent of field preaching,” as he remarked later in his published journal. The precedents worked, both Whitefield’s and Jesus’. The next day, Wesley “submitted to be more vile” (the biblical reference is to David’s “disgracing” himself by dancing in front of the Ark of the Covenant) and preached to 3,000 people in a brickyard just outside the city. He continued the practice in the following days and began to notice “results” in listeners who seemed to be having experiences much like his at Aldersgate, though often with more dramatic bodily expressiveness—agitation, shouting, convulsions, and finally a sort of peace. Such conversions might be momentary expressions of “enthusiasm,” emotional excesses disdained by arbiters of the Enlightenment. However, they might also prepare good members for the societies and bands, where community discipline and education could move forgiven men and women toward the “godly, righteous and sober” lives described in the Book of Common Prayer.

Methodist Distinctiveness Emerges

Emotional expression and organizational discipline each played an essential role in the Revival, and they were often functioning simultaneously. Thus, the consolidating process seemed to be at work in the Bristol area, even as the emotional height of new conversions continued. Although both revival leaders had a hand in both elements, Wesley excelled at the regularizing process, even as Whitefield’s particular gift seemed to be more venturesome preaching. The former continued to meet with the several societies, still recognizably Anglican, and to organize bands, small spiritual growth groups segregated by gender, age, and marital status, following the Moravian model. An organizational transition was at hand, however. As numbers grew, the use of private homes or rented rooms became cumbersome, and institutions more recognizably Methodist began to evolve. Two of the larger societies acquired land, and Wesley himself contributed funds toward building a “New Room” that became the first of three regional headquarters and is still a place of Methodist pilgrimage. Wesley made sure he maintained legal ownership and control, a centralizing feature that has followed Methodism’s buildings ever since.

In addition to field preaching and the construction of Methodist-owned property for the use of societies and bands, the Bristol area provided one other important first:

the Kingswood School. Begun in June 1739 for the children of impoverished miners to whom Whitefield and Wesley often preached, it symbolized the Wesleyan attachment to education, as well as salvation, for all. Eventually it became a school for the sons of Methodist preachers, Wesley’s Methodist curricular equivalent of an Oxford or Cambridge college. Finally, it moved to nearby Bath in the mid-nineteenth century, evolving into a respected boarding school that still maintains its Methodist connection. Kingswood signaled further educational ventures, including Wesley’s robust publishing program: his own sermons and journals; periodical literature such as *The Arminian Magazine*; and *The Christian Library*, a series of (heavily edited and condensed, but cheap) theological classics for distribution to the people called Methodists. Kingswood was the first of a number of educational foundations. Methodism did not originate the Sunday school but was heavily involved in its development and growth on both sides of the Atlantic. The Wesleyan movement, as we have seen, began in a university, and it has distinguished itself particularly in North America with the foundation and sponsorship of more than a hundred colleges and universities.

Wesley began to hammer out a distinctive Methodist set of doctrinal emphases in controversy with two important previously positive influences: the Moravians and George Whitefield. The former group, so helpful in recalling the searching Wesley to his Protestant roots, finally lost him by insisting on a doctrine of “stillness”—the abandoning of all “outward works” including the Lord’s Supper and other “means of grace” until God supplied adequate faith. Steeped in Anglican practice and theology, Wesley countered that the means of grace were just that: the Eucharist could be a “converting ordinance” and a strengthener of faith and ought not to be given up. Meetings of the Fetter Lane Society became contentious, as the Moravian “quietist” position drew opposition from Wesley and other likeminded members. Finally the latter group withdrew and founded its own society in the first half of 1740. The secession corresponded to Wesley’s acquisition and renovation of a ruined cannon foundry in the City of London, not far from the present site of Wesley’s Chapel. Much like the “New Room” in Bristol, “the Foundry” provided a multipurpose facility under Wesley’s own control. With preaching, meeting, and living space, it quickly became the hub of Wesley’s operations.

George Whitefield’s Calvinism, with its focus on divine power, predestination, and “perseverance of the saints,” was a second intrarevival irritant. As good Anglican members of

the anti-Calvinist “Arminian” camp, the Wesleys understood that Christ’s sacrificial death was “for all,” not just for “the elect,” and that human freedom and agency played a role in the drama of salvation. One could choose to accept or reject God’s offer of salvation; one could also “backslide” after having been justified; and alternatively—and controversially—one could continue to “go on to perfection” in this life. Thus, Whitefield and Wesley not only possessed differing talents when it came to the business of revival but represented *the* major rift in Protestant theological thinking. Scholars note the divide existing already during the Bristol revival, not just at the leadership level but among members of the societies and bands. Despite surface courtesies and a measure of cooperation with one another, it is hard to deny their competition for the revival’s leadership, which lasted until Whitefield’s death in 1770.

A third area of Methodist identity development was with the beliefs and practices of the Church of England, Wesley’s ecclesiastical home. Claiming to be a true son of the church, he wished both to defend it and to freelance various alternatives for his movement when circumstances and the gospel compelled him. The revival’s irregularities, real and imagined—behavioral, theological, and organizational—provided church authorities plenty to grouse about. Charges of “enthusiasm” had already been noticed and were hard to refute, given the pervasiveness of emotional phenomena in outdoor preaching as well as indoor society meetings, and given the publicity accorded such behavior in both Whitefield’s and Wesley’s accounts of the revival. Thus, when the anti-Methodist tracts began to pour forth from bishops and other guardians of ecclesiastical order, Wesley, a trained logician as well as theologian and revival leader, argued that his doctrine of assurance was not the mindless ranting of the mad. In one sermon he granted his critics’ point that there might be a problem (in fact he was ready to dismiss preachers he felt guilty of such “false, imaginary inspiration”) but simultaneously defended the experiential basis of the revival:

May we not steer a middle course? Keep a sufficient distance from that spirit of error and enthusiasm without denying the gift of God and giving up the great privilege of his children? Surely we may. (“The Witness of the Spirit—Discourse I,” 1746)

Contention over alleged supernatural experience and its physical expression was to be expected in the Age of Reason, but Wesley’s Anglican critics also attacked him on “justification by faith,” as if that entailed the denial of

“good works,” and misidentified Whitefield’s trademark predestination as his.

Less Anglican offense was taken at Methodist doctrine than at the movement’s violation of parochial and diocesan discipline. Wesley admitted the difficulty just before following in Whitefield’s steps and taking up field preaching, which also brought visions of unruly early Quakers and other Civil War sectarians. Clergy refused to host him in their churches, and many who might have been disposed to were forbidden by their bishops to do so. Some bishops, like Butler of Bristol, refused to license Wesley in their dioceses. Wesley’s typical reaction to such criticism was (1) to argue legalistically (I am in fact not in violation of canon law) and (2) to fall back on his theological bottom line (serving God and saving souls trumps even canon law).

These retorts were used to defend another irregularity: lay preaching, which Wesley began to permit in his movement as early as 1740. Though Wesley would not admit it, he was cobbling together a set of alternative ecclesiastical institutions, a “connection,” with its center and supervisory authority in him. In this parallel to the Church of England, which Wesley never left, there were functional equivalents. “Helpers” (lay preachers) were a kind of clergy equivalent. Buildings such as the New Room and the Foundery, and soon other “preaching houses,” gave the movement a community presence in much the same way parish churches or nonconformist chapels did. The “love feast” served as a sort of evangelical folk Eucharist. Perhaps most important in the long run, Methodist preaching and small-group work began to feature Charles Wesley’s amazing hymn output. Among his more than 6,000 sacred songs, many celebrated evangelical experience (“And Can It Be that I Should Gain”) and Methodist doctrinal emphases (“Love Divine, All Loves Excelling”), as well as the Church’s Holy Communion (“Come, Sinners, to the Gospel Feast”) and its major festivals (“Hark, the Herald Angels Sing” and “Christ the Lord Is Risen Today”). In place of canon law and the various Anglican parishes, Wesley developed multiple sets of rules (most particularly, the 1743 “General Rules of the United Societies”) to set the ethical and spiritual tone of Methodist organization. Then beginning in 1744, he called together sympathetic clergy as well as lay preachers to attend a “Conference” to work out details of faith, practice, and polity. This annual gathering soon typified Methodist “connectionalism” (the interdependent Methodist polity and ethos, with John Wesley at the center). There was plenty for the church to oppose in this growing alternative spiritual culture, and

that opposition took the form not just of anti-Methodist publications but, occasionally, in the early days, anti-Methodist riots. Even within the movement there were those, most notably led by Charles Wesley, who resisted the spin-off toward irregularity, denominationalism, and what looked like (despite the founder's protestations) dissent.

Further Growth and Consolidation

However, the two decades before Methodism remigrated across the Atlantic, the 1740s and 1750s, saw further growth and consolidation of the new movement. "Classes" were instituted as the basic unit within the local societies, when a member in Bristol suggested a fund-raising strategy for retiring the New Room debt. If the entire society were divided into groups of twelve, a leader could supervise the donation of a penny a week from each member, and if any were too poor could make up the difference. The scheme did produce money, but classes proved more important for small-group fellowship, soon eclipsing the bands; and the class leader evolved into a pastoral associate rather than a collector of donations. In following years spiritually mature society members, people Wesley could trust, were challenged to become class leaders. The financial responsibilities soon devolved upon society "stewards," who collected and dispersed moneys, whether for building upkeep, programmatic and living expenses, or poor relief.

Methodism's spread was dependent on the traveling ministry of John (and initially, at least, Charles), as well as the evangelistic work of some of their clergy friends in other parts of the nation. They expanded their preaching and connecting itinerancy beyond the original London and Bristol headquarters north to the Countess of Huntingdon's estate near Derby to Yorkshire and finally in 1742 to Newcastle-upon-Tyne, where John built yet another facility: an orphan house that functioned also as a preaching house and became Wesley's northern headquarters and, along with the New Room and the Foundery, the third point of an annual tour of the country.

By 1746 Wesley had established seven smaller regional "circuits" or "rounds," staffed by two or three of his lay assistants, who would move around the societies in the area for about a month before reassignment. In addition to London, Bristol, and Newcastle, circuits existed in Cornwall, Evesham, Yorkshire, and Wales. Traveling preachers in these circuits provided an efficient and flexible way to reach people for revival and for their placement and nurture in societies and classes. If the call came from a "new" location, the

Wesleys and/or some of their assistants could travel there, preach, and organize local people. Such was the case in 1747 when Methodism spread to Dublin and Cork in Ireland, and by 1751 Wesley added Scotland to his travels, though with minimal success in that bastion of Calvinism.

By this point a process had been developed by which preachers were called, examined, and put into full-time probationary work. Though there was no expectation of university or seminary training, they were urged to study the Bible and the various works that Wesley was publishing as guidelines to his doctrinal emphases. His three volumes of *Sermons on Several Occasions* (1746–1750) and the *Explanatory Notes upon the New Testament* (1755) became the doctrinal test for the preachers, indeed for the movement as a whole, though these were hardly a set of confessional propositions. In 1749 Wesley published a summary of his various doctrinal and disciplinary decisions from the earlier Conferences; these were expanded and updated, and after 1753 became known as the "Large" *Minutes*, copies of which were given to the new preachers admitted on trial.

Beyond the doctrinal and disciplinary guidelines, other study aids for Methodist preachers, class leaders, and ordinary society members poured forth from the presses. Wesley's quick tour of religious classics, his multivolume *Christian Library* (beginning in 1749–1755), was one key example, but his entire publishing program served the Methodist educational venture. Apologetic, controversial, and historical pieces such as *An Earnest Appeal to Men of Reason and Religion* (1743), *A Letter to the Right Reverend the Lord Bishop of London* (1747), and *A Plain Account of the People Called Methodists* (1749) helped situate Methodism positively and defend it within the intellectual and ecclesiastical context of the time. Collections of hymns provided poetic renderings of the movement's core spirituality, useful in various worship and fellowship settings. Tracts (for example, "A Word to a Drunkard" and "A Word to a Smuggler") underscored the Wesleyan ethical worldview—and so did most of his published sermons, providing reflection "On the Use of Money," "On Dress," and on "The Reformation of Manners," among other issues. The famous *Primitive Physick* (1747, with many editions thereafter), Wesley's collection of "tested" home remedies, demonstrated the movement's concern with bodily as well as spiritual health. Additional publications included dictionaries and other secular educational books and periodicals (*The Arminian Magazine*, started in the furor of a reignited predestination controversy in 1777, soon became a vehicle for recounting the experiences of various

Methodists, printing excerpts from journals, letters, sermons, and poetry). Many of these publications, along with some that Wesley never intended to be published (for example, his shorthand diaries, as opposed to his highly edited-for-publication journals), are included in *The Bicentennial Edition of the Works of John Wesley*, its thirty-four volumes nearly completed.

As the movement continued to expand and consolidate, its maturing structure, including its Wesley-centered, albeit benevolent, hierarchy, implicitly challenged the Church of England, if not the nation as a whole. This in part was Wesley's precise intention, though he clearly wanted it both ways. In typical Methodist question-and-answer mode, the "Large" *Minutes* established Methodism's *raison d'être*, all the while protesting (too much?) that this really was not an alternative religious movement, a new dissenting denomination, a repudiation of the state church.

Q. What may we reasonably believe to be God's design in raising up the Preachers called Methodists?

A. Not to form any new sect; but to reform the nation, particularly the Church; and to spread scriptural holiness over the land.

Answering the question in that form indicated the problem. The Wesleys could urge church attendance, especially for the sacrament, as much as they liked, but Methodist members voted with their feet, especially in parishes where the clergyman was not sympathetic toward the movement; and preachers soon pushed for some sort of ordination—and thereby authority to administer the Lord's Supper. Although Wesley's reading of early church polity convinced him that a priest might, in extraordinary times, function as a bishop and ordain, he refused to take the step, at least until extraordinary events in America overtook him in 1784. In the 1750s his clergy friends, especially his brother, were able to stop any movement in that direction with the slogan, "ordination is separation." By 1760 the Conference had discussed the issue, and the Wesleys had together published a list of twelve *Reasons against a Separation from the Church of England*.

By the 1760s Wesley and his preachers were working out the movement's doctrinal emphases. Given his Anglican orientation, Wesley's Methodism could not deviate too far from his church's *via media* between perceived extremes of Rome and Geneva. As a churchman, he could assume basic tenets of Christianity, as represented in the Apostles' and the

Nicene Creeds and the solid Reformation overlay of the "Articles of Religion" (looking the other way at its Predestinarian Article XVII). But the revival, along with the mixture of influences that helped form Methodism and the multiple controversies that Wesley had to face early in its life, resulted in the foregrounding of four characteristic doctrines: original sin (the Augustinian legacy he shared jointly with both Catholics and Calvinists); justification by grace through faith (part of his Reformation heritage and the antidote to sin); assurance (the revival's signature doctrine: the believer can know and feel his or her sins forgiven); and, most controversially, perfection (the "holy living" side of Wesley's background, a "Catholic" doctrine newly fashioned in the context of evangelical Protestantism).

In the early twentieth century, a British Methodist summarized these distinctive Arminian emphases as the "Four Alls": "All need to be saved; all can be saved; all can know themselves to be saved; and all can be saved to the uttermost." It constitutes a "way of salvation" for the individual, but it implies (indeed demands) the holiness of heart and life laid out in Jesus' summary of the law: loving God with all one's heart, mind, soul, and strength; and loving one's neighbor as oneself.

Methodism's Reintroduction to North America

If Methodism's first visit to North America was mainly a clerical affair, the intentional but brief Georgia mission of the Wesley brothers, followed by that of Whitefield, all in the 1730s, its reintroduction as a mature movement came almost as an afterthought through the work of "unsent" laypeople in the decade of the 1760s. Of course, the "Great Awakening," partly the result of Whitefield's constant and effective itinerations up and down the East Coast, linked the two moments, keeping popular preaching alive, converting thousands, and in the process giving the British colonies a common experience that helped weld together a common stand against the crown in 1776. However, there was little to show in terms of Methodist connectional activity until two Irish Methodist families immigrated independently, one to a farm in central Maryland, the other to New York City. Seeking their fortunes in North America, they recognized a need in their respective communities and reverted to their Methodist practice in Ireland.

Robert and Elizabeth Strawbridge were active in rural Frederick County, Maryland, by 1760, several years later establishing a class meeting (that included at least one African American), converting local agricultural workers, and

building a log chapel (now commemorated in a facsimile near New Windsor, Maryland). Philip Embury and his cousin Barbara Ruckle Heck, sensing a moral decline since landing in New York (card playing seems to have been the straw that broke the Methodist matriarch's back), started holding a Methodist-style class and rented a sailing loft in lower Manhattan as a meeting space. Then, with the help of Captain Thomas Webb, a one-eyed retired British soldier and self-proclaimed "spiritual son of John Wesley," the small community founded a congregation on John Street (a building and congregation still extant). These unofficial initiators of Methodist activity established the class and society structure in the Chesapeake region (soon with an influential center in Baltimore) and New York. Abetted by Captain Webb's energy, Methodism quickly took hold in another important city in between, Philadelphia, where St. George's Church remains as a testimony. People throughout the middle colonies were being converted, class leaders and preachers were being raised up, and the need for organization of the movement was recognized.

Word of developments in North America began to reach England, and by the time Wesley agreed to allow an entrepreneurial itinerant preacher, Robert Williams, to emigrate on his own expense, other, more formal appeals for help had reached him. Wesley's response was the appointment of four pairs of official missionaries from the British Conference in 1769, 1771, 1773, and 1774. Though several of these eight young preachers possessed evangelical and pastoral gifts, only one, Francis Asbury (1745–1816), combined these traits with organizational abilities and a commitment to stay the course, despite the difficulties that the American Revolution would throw in the way. Only twenty-six at the time he began his service in 1771, he became the architect and "master builder" of American Methodism, its most important leader until his death.

During his initial tenure as an "assistant" and the higher-ranking "general assistant," Asbury worked to establish Wesleyan doctrine and practice in the colonies and, after the Revolution, to "superintend" the transition of a movement as it became a new church in a new nation. Two years before his arrival there were an estimated 600 members; two years after, at the first American Conference in 1773, membership totaled 1,160. By 1784, there were nearly 15,000 American Methodists, the majority in Maryland and Virginia. Together with these gains came administrative translations from the old country as the Americans adapted an itinerancy of preachers and a multiple set of regional annual conferences

along with a system of quarterly conferences that oversaw local work.

The American Revolution brought into focus a political tension endemic to the Methodist experiment in America. Wesley's leadership of religious institutions that seemed to compete with those of the establishment and his own experience in Georgia might have made him an American patriot, but he was by ancestry and temperament a Tory. Thus, his republication of the Samuel Johnson tract "Taxation No Tyranny" as "A Calm Address to Our American Colonies" (under his own name) raised suspicion that Methodists also stood with Great Britain in the ensuing struggle. Among the original Wesleyan missionaries to North America, all but Asbury returned to Britain or headed to Canada. Asbury himself boarded with a Methodist magistrate, Judge Thomas White of Delaware, for two years during the fighting, hiding briefly in a nearby swamp when White himself was arrested in the spring of 1778. Neither a partisan nor an opponent of the cause of independence, he "lay low," supporting the work of the numerous American-born preachers during the war. Those very preachers, though, were also suspect because of their Methodist identity. Freeborn Garretson, Jesse Lee, and William Watters all claimed some form of conscientious objection from military service. However, their pacifism was interpreted as support for the British cause, and they risked arrest, beating, and being tarred and feathered.

Monarchy and democracy played out in ecclesiastical polity as well as in anticolonial revolution in the same period. Strawbridge, the immigrant farmer and local preacher who began Methodism in Maryland, possessed a streak of Irish independence that even Asbury's disciplinary abilities could not quell. Recognizing the inability of his frontier neighbors to access the "means of grace," he took it upon himself, unordained and forbidden by Wesley (and later by Asbury), to provide the Lord's Supper and Baptism for those under his care. In 1773 at the first American Conference, the issue was raised and resolved in the following manner, according to Asbury's July 14 journal entry: "That no preacher in our Connection shall be permitted to administer the ordinances, except Mr. Strawbridge, and he under the particular direction of the Assistant." In other words, neither the Conference nor Wesley, nor Wesley's American assistant at the time, Thomas Rankin, was able to keep Strawbridge from behaving like an ordained clergyman. The issue flared a half dozen years later in 1779 to include other preachers. It became more acute as many Anglican priests, the English Methodist

“solution” to the sacramental problem, drifted away with their church and king under attack by the American patriots. The war also kept Asbury and a number of northern preachers from traveling south to Fluvanna County, Virginia, where the regular conference was scheduled in the picturesquely named “Broken Back Church.” So they organized a pre-meeting session in Delaware at which they affirmed Wesleyan discipline and Asburian leadership and postponed any decision on the sacraments for another year. However, three weeks later the regular conference convened as scheduled in Virginia, and the southern preachers determined to form a presbytery of four who would ordain themselves and then as many others who wanted to provide a sacramental ministry among the Methodists. This schismatic decision was minimized through negotiations, by the distance and time it took to get a judgment from Wesley, by Asbury’s fence-mending foray into the south, and by the sense that a colonial victory in the war might lead to an ecclesiastical as well as a political change. The split was more or less healed by 1781, but scholars have noted similar struggles over authority in the establishment of Methodism as a full-fledged church in 1784; the O’Kelly schism of 1792; the various withdrawals of African American congregations in the same decade and beyond; and the political breakaways of the Methodist Protestants, the Wesleyan Methodists, and the Free Methodists in the nineteenth century.

A New Church in a New Nation

The Treaty of Paris concluded the Revolutionary War in September 1783, thus presenting Wesley and his American followers with a new set of circumstances. A year later his letter to them credited a “very uncommon train of providences” with the freeing of the American colonies, cutting them loose from any political and spiritual connection with the mother country. It also provided him the cover to choose consciously what his “logic of practice” was already indicating: the “people called Methodists” (already a “connection” with many ecclesiastical trappings) were about to become a full-fledged independent church, at least in the new United States of America. He was convinced he had all the authority needed to ordain ministers, and although he did not wish to rend the fabric of the Church of England at home, that church no longer existed in North America. Consequently he felt bound in September 1784 to send “Labourers into the Harvest.” Accordingly he “set apart” the Reverend Thomas Coke (1747–1814) as a superintendent for North America, and sent him, along with two of his

preachers whom he had ordained as elders, to organize an episcopally governed Methodist Church in the new country. John’s younger brother, ever the zealous churchman, was incensed and wrote memorable doggerel (see Frank Baker’s *Representative Verse of Charles Wesley*, 367) to mark the occasion: “So easily are bishops made/ By man’s, or woman’s whim./ W[esley] his hands on C[oke] hath laid,/ But who laid hands on him?”

Evangelical necessity had won out. Wesley’s three emissaries arrived in New York in early November, and within a fortnight Coke had consulted with Francis Asbury and other American leaders about Wesley’s plan. Coke also brought resources: a doctrinal statement (Wesley’s abridged version of the Anglican Articles of Religion) and a liturgy (his own edited version of the Book of Common Prayer, along with ordination certificates for Coke and his junior partners, Richard Whatcoat and Thomas Vasey). The larger statement of church polity was already available, the English Methodist “Large Minutes,” which would evolve into the quintessential American Methodist document, *The Discipline*. A call went out for a conference of the preachers to be held beginning December 24, 1784, in Baltimore.

The so-called Christmas Conference met in the small chapel in Lovely Lane and lasted more than a week. The preachers took all the steps necessary to form what was to be called the Methodist Episcopal Church (“episcopal” here denoting a polity dominated by “superintendents” or bishops, rather than a direct connection with the Church of England, soon to be known in the new country as the Protestant Episcopal Church). They accepted Wesley’s documents and his ordinations and affirmed, at Asbury’s request, another part of the plan: that he also be ordained and made a superintendent of the new church to serve alongside Coke. Accordingly, in the space of three days, Asbury was ordained deacon and elder and consecrated superintendent. Asbury’s was the most prominent of the ordinations that took place there, but a dozen or so additional American preachers were also ordained to take up a sacramental ministry. The affirmation of Asbury and the additional initiative the preachers took to shape the polity of the church served to establish the authority of the Conference in Methodist polity, even as Wesley’s autocratic power lingered over it.

Several other details of the Christmas Conference are worth mentioning as they presage future developments. First, as Thomas Coke Ruckle’s nineteenth-century portrait of the occasion indicates, there was at least one African American preacher in attendance. Harry Hosier (d. 1806),

traveling companion to Asbury and popular preacher in his own right, was indeed present at the beginning, and so perhaps also was Richard Allen (1760–1831), who eventually would found and lead the African Methodist Episcopal Church. Their presence at the conference, together with the strong stand taken there against slavery (however attenuated the witness might become in the first four decades of the nineteenth century), underlines the important relationship that African Americans, both slave and free, had with Methodism. Second, and figuring more prominently in Ruckle's picture, was Asbury's friend Philip William Otterbein (1726–1813), a German Reformed missionary and minister whom he had invited to participate in his consecration as a superintendent. Otterbein's presence is a reminder that "heart" religion and awakenings had German-speaking components left over from the previous century and that Otterbein's own evangelical movement, the United Brethren, would eventually merge with Methodism late in the twentieth century. Third, the assembled preachers decided to found a school, to be built outside Baltimore on the order of Wesley's Kingswood School (and given the combined name of the two new superintendents): Cokesbury College. Although the college burned down within a couple of years and Methodist preachers were not formally educated in seminaries until well into the nineteenth century, this venture stands as the first of hundreds of Methodist-founded educational institutions, many still extant, across the country.

The church was now founded, but it had miles to go before achieving the numerical, spiritual, and cultural clout for which it would become famous in nineteenth- and twentieth-century America and beyond. Its evangelical heritage, optimistic theology, and warmhearted practicality ensured a growing popularity. Despite the initial issues that needed addressing, the Methodist Episcopal Church grew rapidly from the time of its birth: 18,000 members were reported in 1785, and by 1790 there were upwards of 57,000, of whom 20 percent were African Americans.

Growing pains led to the continual shaping of new features. Asbury and Coke took a symbolic editorial step in 1787, changing their designation in that year's edition of the *Discipline* from "superintendent" (Wesley's original term) to "bishop" (its simple biblical equivalent). Wesley was annoyed at their putting on airs, but his objections were increasingly irrelevant. More to the point was the increasing suspicion of a bishop's power, by whatever name, especially in a geographically expansive movement. Regional conferences

would continue, but they could not speak for the entire denomination. Tried and discarded, because it gave too much power to a hierarchy, was a "Council" made up of bishops and "presiding elders" (regional assistants to the bishops, another American emendation). Instead a compromise was reached: a policy-making "General" Conference that has met every four years since the first one in 1792. In that same year, a year after Wesley's death in London, the young church faced its first major schism. James O'Kelly (1735–1826), like Strawbridge an "Irish Maverick," proposed that the Conference might override the bishop's power to appoint a preacher to a particular circuit. He did not prevail, and he left with a number of his supporters, largely from Virginia, to form the "Republican Methodist Church," which faded into the Christian and Disciples of Christ movements in the South. The membership loss was quickly recouped, but the struggle (and the splinter group's name) pointed to the friction between the monarchical power of a bishop and the aspirations of preachers and laity in a country with an increasingly democratic ethos.

The popular appeal of a flexible, theologically optimistic, episcopal-style church for ordinary poor and middle-class individuals—anyone wishing to "flee the wrath to come"—guaranteed not just membership growth on the frontier but continuing struggle for democratic reform within the institution. The same theme of popular movement versus church hierarchy played out liturgically; Wesley's version of the Prayer Book was no match for the extempore praying and preaching Methodists were accustomed to. For all the contention over the Lord's Supper, it was not frequently celebrated. However, as in England, Charles Wesley's hymns and less formal services such as love feasts and watch nights continued to engage Methodists. This "low church" version of episcopalianism, however, was very much in keeping with a movement that grew out of the Atlantic Revival and Awakening of the 1730s and 1740s and that would help usher in the Second Great Awakening, with its exuberant camp meetings, in the early 1800s and beyond.

The story of Methodist regionalism also begins in this early era. Not only did the "Chesapeake refraction of Wesleyanism" work to color national Methodism, but a southern populism became visible in the crisis over the ordinances in 1779 in Virginia, in the O'Kelly schism in 1792, and in the impending friction over slavery from 1784 on through to 1844. New England was always somewhat foreign territory for the Methodists, certainly in the time of a Calvinist Congregational establishment and its Unitarian liberal

opposition, as well as later during the influx of Catholic immigrants, but some inroads were achieved. The West, influenced by all three areas, was beginning to lend its own distinctive coloration to Methodism on the frontier. These stories, along with the important features of race and gender, indicate that the Methodist tradition had become a central component of American religious life.

Mexico: Colonial Era

Catholic religion in colonial Mexico was a complex mosaic of beliefs and practices that hardly resembled the orthodox ideals of the colonial church and state in New Spain. In the 1930s, French historian Robert Ricard famously posited the idea of a “spiritual conquest” based on the self-congratulatory reports written by the missionaries in New Spain. Recent research has shown that the evangelization process was neither rapid nor complete, but it is hard to underestimate the disruptive impact of Christianization on native peoples. Missionaries introduced new ways of marking time, altered patterns of settlement and solidarity, disrupted kinship and family ties, and introduced new naming patterns, among other changes. Far from accepting the demands for religious exclusivity from the missionaries, however, native peoples tended to supplement and combine their own religious traditions with those of the colonizers. This was also the case of Africans, who were able to retain many of their old beliefs and rituals even as they embraced Christianity. To the dismay of colonial authorities, African and pre-Columbian traditions would also gain acceptance among the Spaniards and other groups over time. Such religious flexibility, combined with the transferal to the New World of heterodox practices and beliefs that ranged from divination to astrology and mystic illuminism, would be decisive to the creation of the intricate religious tapestry that characterized the colonial era.

Establishment of the Church in New Spain

Since early days of colonial conquest, Christian evangelization was deemed the most important reason for the Spanish presence in the New World. Accordingly, Mercedarian priest Bartolomé de Olmedo and secular

priest Juan Díaz accompanied Hernán Cortés in 1519. Both of them performed sacramental duties for the soldiers and were in charge of explaining the Christian doctrine to the natives. It was not until the arrival of three Franciscans in 1523 and twelve more in 1524, however, that the task of evangelization was carried out in a systematic manner. The second group of Franciscans, among which was Fray Toribio de Benavente (Motolinía), walked barefoot from Veracruz to Mexico City. Upon their entrance to Tenochtitlan, Cortés kneeled before the friars and kissed their hands, to the great amazement of the Native Americans. The Franciscans were convinced that the end of the world was coming and that they could play an important role in hastening the second coming of Christ by converting the natives. Although this apocalyptic vision was not shared by other religious orders, they also participated with enthusiasm in the task of evangelization. The Dominicans arrived in 1525 and were later followed by the Augustinians (1533) and the Jesuits (1571). While the Franciscans tended to concentrate in Mexico City, Tlaxcala, Michoacán, and Yucatán, the Dominicans occupied Oaxaca and Chiapas. Having arrived later than the other orders, the Augustinians worked on “peripheral” areas such as Michoacán, Acolmán, and Hidalgo, while the Jesuits founded missions along the coasts of Sinaloa and Sonora and the east of the Sierra Madre. After the Jesuits’ expulsion in 1768, the Franciscans, who had already ventured as far as New Mexico by the end of the sixteenth century, would take over their missions and expand the evangelization efforts up the California coast.

Because convents were deemed symbols of female piety, urban pride, and status, they also proliferated in colonial Mexico from the beginning of the Spanish occupation. At a time in which charity and religious patronage enhanced the status of donors, people of means were glad to provide the resources for their foundation. Although the first convent founded in 1550, Our Lady of the Conception, accepted elite indigenous women, the vast majority were reserved to Spanish and Creole women. In fact, the first convents for full-blooded indigenous women would not appear until 1724. Nunneries served not only religious functions in society but also economic ones. They employed an enormous number of servants, masons, and craftsmen and became important sources of credit. Inside their walls, highly gifted women found rare opportunities for spiritual and intellectual growth. Many of them wrote and became famous in life, but none would reach the celebrity of Sor Juana Inés de

la Cruz (ca. 1648–1695). A poet, philosopher, and playwright, Sor Juana wrote for the court and the church with the support of viceroys and other important patrons. Her intelligence, independence, and autonomy rendered her an object of both praise and envy. After an unfortunate clash with Bishop Francisco de Aguiar y Seijas, a notorious misogynist, she would be forced to stop reading and writing and give away her impressive library. Pressed to show her religious obedience, Sor Juana would embrace a life of fasting and mortification until her untimely death during an epidemic.

Conflicts among and between the Regular and Secular Orders

The early decades of evangelization were characterized by heated disputes between the members of the secular clergy (diocesan priests) and the regular clergy (mendicant orders), as well as by multiple conflicts among the religious orders themselves. With the blessing of Pope Adrian VI’s bull *Omnimoda* (1522), Charles V entrusted the missionaries to perform all sacraments in the New World, a task normally restricted to the seculars in Europe. The friars were also appointed as bishops because of the lack of qualified secular clergymen. In 1527, Dominican Julián Garcés became bishop of Tlaxcala. Three years later, Franciscan Juan de Zumárraga became the first bishop of Mexico City. He would die an archbishop in 1548, only to be replaced by Dominican Alonso de Montúfar, who ruled the archdiocese from 1554 to 1569. Placed under the direct authority of the pope, the mendicants operated with relative autonomy in the colony. In 1574, however, Philip II issued a series of decrees known as *Ordenanza del Patronazgo* that effectively shifted crown support from the regular to the secular clergy. Among other things, the royal decrees ordered the replacement of missionaries by diocesan priests in native parishes (*doctrinas*). As the numbers of seculars increased in the late sixteenth century, they gained control of the bishoprics and fought the mendicants over diocesan limits, access to indigenous tithes, and control of other resources.

The regular clergy also competed with the *encomenderos* for the control of the Native Americans. The crown granted deserving Spaniards the right to exact tribute and labor from the indigenous people, who would be cared for materially and spiritually in exchange. The idea was to accelerate the process of indigenous acculturation while guaranteeing the protection of the natives. In practice, the *encomienda* became a system of capital accumulation predicated upon the brutal

exploitation of unpaid indigenous labor. In his unpublished *Brief Account of the Destruction of the Indies* (1542), Dominican Bartolomé de Las Casas presented the king with horrifying details of Spanish cruelty and urged him to abolish the *encomienda* system. Las Casas's denunciations apparently led Charles V to issue the New Laws (1542), which contained an article prohibiting *encomienda* inheritance. Unfortunately, the article proved unenforceable because of strong resistance by the colonizers and was later repealed. Although the Franciscans did not oppose the *encomienda* system *per se*, they also denounced Spanish violence and its effects on the tasks of evangelization. The mendicants saw the natives as children and were convinced that only segregation could save them from moral corruption and physical extinction at the hands of Spaniards. Partly responding to the Franciscans' concerns, the crown enacted a system of physical and racial separation that kept the indigenous peoples and the Spaniards in two different administrative and fiscal orders known as *repúblicas* (commonwealths). The system was soon undermined, however, by the constant demands of tribute of labor by the Spaniards. Furthermore, vagrancy, miscegenation, and even illegal settlement of Spaniards in indigenous towns contributed to the already significant intermingling.

Indigenous Catholicism

The conversion of indigenous peoples to Catholicism was the result of a long and complicated process of cultural adaptation and negotiation, which involved the active participation of the natives. Based on their conviction that the conversion of nobles and caciques would bring their followers to the Church, Franciscan missionaries founded schools for the sons of the privileged such as the Colegio de Santa Cruz in Tlatelolco, while Vasco de Quiroga created in Michoacán mission communities inspired by Thomas More's *Utopia* (1516). The missionaries also founded ten schools for the daughters of the Mexican elite in the 1520s, where they would be taught the ideals of Christian femininity as well as practical skills such as embroidery. Besides learning Latin, Spanish, logic, and philosophy, the male young nobles became conversant in the basic rudiments of Catholicism. Although the initial idea was to train natives to become Catholic priests, many non-Franciscans opposed it. By the late 1550s, indigenous people were formally prohibited from receiving ordination. The young nobles would be instrumental, however, in the task of evangelization by helping the friars to compile dictionaries, and grammars, as well as to translate confessional manuals, sermons, and moral treatises

from Zapotec, Purépecha, Maya, Náhuatl, and other languages. The challenges faced by translators, however, were enormous. Among the Nahuas, for example, there were three different concepts of the soul; they neither had a concept for an entity that personified pure evil, like Satan, nor an equivalent term for the European concept of sin; finally, in a world in which order and chaos were seen as both essential to life, the idea of a cosmic battle of good against evil was short of preposterous.

Looking for ways to make Christianity comprehensible to the neophytes, the missionaries adopted elements of pre-Columbian religion, thus paving the way for a problematic mixture of religious practices and beliefs of colonizers and colonized. To be sure, the mixing of native and Christian devotional patterns and beliefs dated back to the early days of conquest. On his way to Tenochtitlan, Cortés and his companions used to place images of the Virgin and holy crosses on indigenous altars after casting down the "idols" of native temples. Later, friars would try to capture indigenous devotional patterns by building churches and chapels on pre-Columbian sacred sites of worship and pilgrimage. Four years after the fall of the Aztec Empire, construction started for a massive cathedral upon the ruins of the great double pyramid temple known as Temple Mayor. In Tlaxcala, Franciscans replaced the site of worship to goddess Toci with a church dedicated to St. Anne and built a church in honor of John the Baptist in Tinanquizmanalco, where Tepuchtlí was honored. Most famously, the missionaries erected a chapel to Our Lady of Guadalupe after she appeared miraculously on Tepeyac Hill, where the goddess Tonantzin used to be venerated. As years went by, local churches became the new symbols of community pride and identity, and people started to spend sizeable sums in the adornment and maintenance of their parishes. Parish priests were often abusive and their moral behavior was questionable, but this did not prevent indigenous people from helping in the church as sacristans, singers, or *fiscales* (administrators and religious policemen). The indigenous people also embraced old Christian institutions like the sodalities, whose main missions were to organize and fund the patron saint celebration and guarantee a Christian burial for their members.

Indigenous Resistance and Rebellion

In spite of the missionaries' enthusiasm, indigenous conversion to Christianity proved to be ephemeral. As the euphoria of the early years of evangelization waned, the disappointed missionaries resorted to coercion and corporal punishment

to bring the indigenous people back to the Church. Acting as inquisitors, the friars chastised Native American “heretics” with brutality in Acolhuacan (1522), Tlaxcala (1527), and other regions in Oaxaca and Yucatan. In 1539, Bishop Juan de Zumárraga famously sentenced Don Carlos Ometochtzin, the cacique of Texcoco, to be burned at the stake on charges of heresy. Few years later, in 1562, Zumárraga’s fellow Franciscan Bishop Diego de Landa conducted a violent three-month campaign against idolatry in Mani, Yucatán, in which more than 4,000 Mayans were savagely tortured. Hundreds lost their lives as a result of the interrogations, while many others took their own lives in despair. Although native neophytes would be removed from inquisitorial jurisdiction in 1571, episcopal authorities of Mexico and Oaxaca would carry out fierce campaigns against native idolatry and sorcery up until the mid-eighteenth century.

Sometimes indigenous rejection of Christianity took violent forms. In 1541, in Nueva Galicia, the Caxcanes rebelled against Spanish rule in response to the brutal wars waged against them by Nuño de Guzmán. Priests announced the return of their god Tlatol, who would destroy the Spaniards and bring forth a new era of abundance. The uprising was only quelled after indigenous allies joined Spanish forces to regain control of the area. In 1680, a medicine man named Papé told the Pueblo Indians that the Spaniards were to blame for the horrible drought, famine, pestilence, and death they had endured for years. Only by killing the colonizers would the *katsina* (the ancient gods) return, bringing about a golden age of prosperity. On August 10, 1680, an army of 8,000 indigenous warriors razed churches and pillaged Spanish settlements, killing more than four hundred settlers within hours. It was not until 1692 that the Spaniards finally succeeded in routing the rebels.

In 1712, a pan-Mayan coalition known as the Cancuc Rebellion inaugurated a new era of indigenous revolts. In contrast to its predecessors, the uprising in Cancuc, Chiapas, did not aim at revitalizing ancient religious mores but rather at defying Spanish control of Catholicism. This movement occurred during the era of the Bourbon reforms, a period of crucial changes for colonial Mexico. Implemented to rationalize colonial exploitation, strengthen the colonies’ links to the metropolis, improve tax collection, and revamp the entire colonial administration, the Bourbon reforms also discouraged popular expressions of piety and collective devotion as unnecessary and extravagant. The combined impact of all these socioeconomic, political, and religious reforms was resented by indigenous groups, who asked

recognition for their religious cults from the Catholic Church as well as for a solution to economic grievances stemming from the new Bourbon policies. It was in this context that around May, a thirteen-year-old indigenous girl, María de la Candelaria, claimed to have seen the Virgin Mary in the outskirts of the town. Although the priest of Cancuc dismissed the apparition, María’s father and other inhabitants built a chapel on the spot where the miracle occurred. Followers of the cult refused to pay tribute and rejected the authority of the king and the bishop. A rebel confederation of thirty-two Tzotzil, Tzeltal, and Chol villages attacked Chilán, Ocosingo, and other towns. Internal differences and increasing attacks by the Spaniards weakened the movement, which was finally crushed around November of the same year.

The African Presence

The religious tapestry of colonial Mexico was complicated even more by the presence of African people. Forcibly brought from West and Central Africa after a series of horrid epidemics decimated the indigenous population, African slaves brought with them a complex set of religious beliefs and practices. Although slaves belonged to different ethnic groups and spoke different languages, they shared cultural and religious traits such as a strong emphasis on ancestor veneration and the possibility of communication between the worlds of the living and the dead. In an effort to turn slaves into a docile labor force, colonial authorities emphasized Christianizing them from the early decades of the slave trade. To the dismay of the colonizers, however, Africans tended to combine their own beliefs with those of their masters and the larger society. Catholic authorities objected to these forms of syncretism, but they found even more distressing the widespread use of African arts of divination, healing, and witchcraft, practices generally deemed diabolic and superstitious, among Spaniards and other ethnic groups.

Like the indigenous peoples, Africans embraced confraternities and sponsored religious celebrations that were often mixed with African customs. More troubling for colonial authorities, however, was the fact that confraternities allowed African slaves to organize their uprisings. In 1611 an angry crowd of fifteen hundred blacks belonging to the confraternity of Nuestra Señora in Mexico City carried the body of a slave woman who had been flogged to death and marched towards the palaces of the Inquisition and the viceroyalty. The outraged mob threw stones at the home of the master, Luis Moreno de Monroy, obliging him to ask protection

from a guard of Spaniards. Afterwards, the Afro-Mexicans named an Angolan couple, Pablo and María, as king and queen, and disbanded after deciding to rebel on April 19, 1612. Eventually the Audiencia of Mexico (the colony's high court) learned of this conspiracy and ordered the main leaders to be tortured. On May 2, 1612, thirty-five blacks, seven women included, were publicly hanged in the city's main square. Authorities quartered their bodies and placed them on the roads, while their heads remained at the gallows until the unbearable stench forced their removal.

Black and white relations were not always abrasive, however. In fact, Spaniards and members of other racial groups frequently resorted to African practitioners of sorcery and mantic arts for different purposes. Clients resorted to diviners and sorcerers to locate lost or stolen objects, secure the sexual favors of the opposite sex, and learn about the future. Using bones, feathers, and earth from graveyards and mountains, Afro-Mexican practitioners created talismans and amulets and offered their clients means to contact or control supernatural forces. By linking elements of African and religious traditions in rituals and devices, conjurers and healers paved the way for the creation of forms of folk Catholicism with strong African content. A similar process resulted from the tendency of indigenous healers and diviners to cater to the needs of their multiethnic clientele by mixing herbal remedies with Christian prayers and pre-Columbian rituals. Facing such an unorthodox religious landscape, the Spanish crown deemed it necessary to establish the Spanish Inquisition across the Atlantic.

The Inquisition

In January 1569, Philip II decreed the establishment of the Tribunal of the Inquisition, appointing Pedro Moya de Contreras as inquisitor of Mexico. In the early years of Spanish colonization, investigation of heresy was a duty of the bishops and, in their absence, of friars. Because of the scarcity of bishops, the pope also granted inquisitorial powers to missionaries in a 1522 bull known as *Omnimoda*. Jurisdiction reverted to the bishops upon their appointment in the colonies, but their powers were officially ended with the arrival of Pedro Moya as inquisitor. The Mexican Holy Office was entrusted with the impossible task of supervising a territory of nearly two million square kilometers, including Mexico, Guatemala, Nicaragua, northern Panama, the Caribbean islands, and the Philippines. Permanently understaffed, riddled with financial difficulties and conflicts of all sorts, the Inquisition ended up concentrating on the major

towns. In fact, most of the colony's population was out of its jurisdiction, for jurisdiction over the natives had been reverted back to the bishops and their ecclesiastical judges or *provisores*.

The repressive activity of the Mexican tribunal followed the procedures and forms of punishment also in force in Spain. Every three years, on a Sunday in Lent or a feast day, inquisitors were expected to promulgate the Edict of Faith in an impressive ceremony to be held in cities that were the seat of a tribunal. The lengthy document contained a detailed description of Jewish and Muslim practices and asked the faithful to denounce within six days, under penalty of excommunication, anyone who practiced such rites or customs or was a follower of Mohammedanism, Protestantism, and Mystic Illuminism; or who had committed crimes such as blasphemy, witchcraft, bigamy, perjury, solicitation of women in confession, divination, astrology, or possession of heretical books. In the smaller towns, the commissioners (representatives of the Inquisition) were to read copies of this proclamation to the faithful, while confessors were instructed to refuse absolution to penitents who did not denounce offences to the Christian faith.

Upon receiving a denunciation, the Inquisition undertook a detailed investigation of the charges involved. A number of theologians determined whether the case warranted prosecution, and if the evidence gathered was deemed sufficient, an order of arrest was issued. Prisoners were allowed to have a lawyer, but this minor officer of the court could do no more than advise the culprits to confess and ask for mercy. After spending months (sometimes years) in prison, the culprits were sentenced. Although arbitrariness was very common, inquisitors tended to take into consideration the importance of the crime committed, the culprits' social standing, and the prisoners' willingness to repent. They thus condemned the offenders to abjure of their crimes *de levi* (for minor offenses) or *de vehementi* and to punishment that ranged from spiritual penances (such as reciting a number of Paternosters) to scourging, public disgrace by being paraded naked to the waist with insignia of their offences, forced labor in presidios and textile workshops, work as an oarsman in the king's galleys, and exile from certain cities. The ultimate punishment was death at the stake, a sentence carried out by state authorities on behalf of the Holy Office and normally reserved for unrepentant or relapsing heretics.

Many of these sentences were announced in an *auto da fé*, an elaborate ceremonial of punishment held either in private

or in public in which the culprits were paraded wearing penitential garments (*sambenitos*), cone-shaped hats (*corozas*), and gags. Both secular and religious authorities attended the *autos* held in public, which soon became a very popular way of edifying the faithful and promoting the tribunals' achievements. The early *autos da fé* featured English seamen charged with Lutheranism, but Crypto-Jewish immigrants would be increasingly targeted in the late sixteenth century. In 1649 Mexico celebrated an *auto da fé* in which all of the 109 penitents but one were Judaizers. This notwithstanding, punishment for heresy represented a very small percentage of the total offenses. The vast majority of the Inquisition's repressive activity involved crimes such as illuminism, blasphemy, heretical propositions, superstition and witchcraft (involving love magic, divination, or diabolism), and bigamy, all of which deserved a milder punishment.

With the advent of the Bourbon dynasty and its absolutist policies, there was a new royal drive to restrict the Inquisition's political privileges and even to reduce significantly its jurisdiction. In an effort to create a more efficient and productive society, the Bourbon reformers not only attacked old institutions such as the tribunal but also promoted an individual path to salvation through personal merit. This implied the abandonment of corporate Catholicism and its ritualistic, collective, and expensive forms of worship. While members of the elite embraced these repressive ideals and controlled forms of piety, plebeians continued to practice forms of religiosity that emphasized collective salvation and were markedly sensual, lavish, and occasionally heterodox. As the Holy Tribunal concentrated its energies of the last decades on the prosecution of liberals, Freemasons, and even insurgents, the prosecution of religious deviation and heterodoxy declined sharply in comparison to previous centuries. In these circumstances, popular Catholicism—an unorthodox mixture of multiple religious traditions, beliefs, and styles of worship—continued to thrive. Similarly, in spite of the Bourbons' best efforts, salvation would remain a collective, ritualistic, and lavish enterprise among the popular classes for many years to come.

Mexico: Independence to the Mexican Revolution

Religion in the Mexican nineteenth century presents a paradoxical picture: it was a century when irreligion, anti-clericalism, and the practice of faiths besides Catholicism all increased, but at the same time, it was a century of Catholic revival. It was a period during which the Catholic Church was politically marginalized and yet became more politically savvy, more adept at carving out space for itself in the modern world. Finally, it was a century during which the Church was moved by the faithful as much as the faithful were moved by the Church.

The Impact of Independence

Religion was an important factor in both popular and elite support for independence from Spain, and not just because the most visible leaders of the wars for independence in 1810—Father Miguel Hidalgo and Father José María Morelos—were priests. From the beginning, the popular insurgency identified itself with important Christian symbols, especially the Virgin of Guadalupe, the “Mexican” Virgin (because she had appeared to a poor Indian near

Mexico City in 1531), whose image was carried into battle against Spain. Later, insurgent leaders at the Congress of Chilpancingo (1813) unhesitatingly linked citizenship in the future nation with Catholicism. Although there were other ideological touchstones in insurgent rhetoric, a significant element was the framing of the insurrection as a defense of religion against the “impious” French and the Spanish liberals. This defense of religion blended with a defense of community, since in most Mexican villages religious practices were intertwined with local identity. But religion was deemed worthy of defense not only by subalterns. The power and potential of Catholicism as a force capable of unifying Mexicans across lines of class and ethnicity was underlined when a very different independence movement—the conservative, elite-oriented movement led by Agustín Iturbide in 1821—also put the protection of the Catholic faith and Church at the center of its promises to the nation. From the early days of the independence movement, then, the Church was seen, across a broad political spectrum, as a vital part of Mexico’s future as a nation.

But the long armed struggles for independence proved costly for the Church. In a narrow financial sense, the Church suffered significant losses of income with the collapse of agricultural production and land values in many parts of the country. People did not tithe when they did not produce, and often they did not pay interest on funds they had borrowed from the Church, either. These losses negatively affected not only the functioning of the Church’s quasi-banking operations, its charitable and welfare institutions, its courts, its seminaries, and its convents, but also basic parish institutions such as confraternities, the majority of which depended on rents, interest, and income from herds—all down steeply. The parishes’ ability to sponsor familiar and meaningful rituals was greatly reduced: funerary processions, fiestas with music and fireworks, organized events such as the Forty Hours devotion, and special masses all diminished in number and lavishness in the decades after 1810, while non-parish-related (and generally unsanctioned) practices like pilgrimages to shrines seem to have increased. There was community pressure on parish priests to lower sacramental fees, which some priests did, cementing the devotion of their poorer parishioners. Others did not, feeding antipriest sentiment that had perhaps always simmered below the surface of village and neighborhood life. Shrinking income and increased tensions between priests and parishioners transformed the priesthood into a less desirable career than it had been during the colonial period.

Another factor affecting the way Catholicism was experienced at both the parish and diocesan levels was the patronage issue. With independence, the Mexican government claimed the right of patronage, a right the Spanish crown had been granted by the papacy in the sixteenth century. But Rome resisted turning over this right to appoint new church personnel to the new nation. The impasse meant that new bishops could not be appointed; new priests could not be ordained; and the circulation of priests within the ecclesiastical bureaucracy, an important mechanism of upward mobility for talented priests and a time-tested way to fill parish vacancies quickly, ground to a halt. A great many parishes remained without priests for years, both because of the bottleneck in ordination and because of the diminished prestige of a clerical career. The number of priests declined from more than 4,200 in 1810 to 1,240 active priests in 1825; important positions within the cathedral chapters went unfilled; and by 1829, all ten bishoprics were vacant.

Church, State, and Laity in the 1830s and 1840s

In 1830, however, President Anastacio Bustamante renounced the right of patronage, allowing the appointment of bishops to proceed, and by the mid-1830s a majority of bishoprics were filled. Also by 1830, the Church had reached agreements with most of its debtors and its economic losses were largely halted, with some hope of an eventual return to past levels of tithe and interest income. Thus, while priests as individuals had been active in politics for two decades, and almost every writer and politician had weighed in on what the Church’s role in the new nation should be, the hierarchy was finally in a position to speak for the Church as an institution and to figure out how to survive in a new political world.

One strategy was to embrace a cooperative relationship with the state. Some leaders within the Church (for example, the bishop of Michoacán, Juan Cayetano Gómez de Portugal) were liberal constitutionalists who believed that strong constitutional guarantees were the best way to protect the Church. Increasingly, however, especially after the radically anticlerical laws proposed by President Valentín Gómez Farías (1833–1834)—which included secularizing education, ending government enforcement of the tithe, and making monastic vows voluntary—even liberal Catholics began to embrace intransigence as a political strategy. In other words, they would oppose any government that failed to defend ecclesiastical privilege. Meanwhile, prominent

priests began to articulate a discourse of providentialism, the idea that Mexico had, in the words of Brian Connaughton, “a divine calling” as a Catholic nation in a world of impiety. This discourse was the positive face of intransigence. If the Church had a providential mission, then it could never accept compromise with any government without going against the will of God. Though this was a message that could be construed as nationalist, since it was Mexico as a Catholic “nation” that clerics praised, the concept also lent itself to an antinationalist reading: if the Church had a mission from God, then it must listen to God alone, and the earthly authority on God’s will was the pope. The message, then, was intransigent, but it could also be read as ultramontane (recognizing the supremacy of the pope’s authority).

It is important to emphasize that this clerical discourse was aimed at the laity, primarily via the sermon. The Church was taking its case to the public. At the same time, it is also important to recognize that the laity were not passive receivers of clerical discourses (or anticlerical discourses, for that matter). In light of the continued scarcity of both priests and parish financial resources, the faithful—sometimes in concert with their priests, sometimes out ahead of them—began to develop new religious practices that were suited to the times. Women appear to have been key actors in this process. Numerically dominant in urban and small-town confraternities since the eighteenth century, women now took the lead in forming vibrant new devotional associations that did not depend on rents from property or loans. Many of these created sites of popular religiosity distinct from—and to a certain extent in replacement of—male-dominated public performances like processions. An early example was the *Vela Perpetua*, formed by a group of women in San Miguel de Allende in 1840 and devoted to organized vigils in adoration of the Blessed Sacrament. The *Vela*, which spread rapidly throughout the dioceses of Michoacán and Guadalajara, was notable for the fact that its constitutionally mandated female officers governed members of both sexes, an upending of the gender hierarchies usually enshrined in church organizations. Another early organization that linked women, charity, and the Church was the Conference of St. Vincent de Paul, which women joined in large numbers beginning in the late 1840s. These reshaped practices and associations invigorated religious enthusiasm at the parish level, even as the hierarchy focused on defending church institutions at the national level. The result of all this was something of a resurgence of the Church as a national force in the late 1830s, 1840s, and early

1850s—the result of a clearer political message, the success of the laity and priests in rebuilding parish organizations, and the substantial recovery of the Church’s economic position.

The Liberal Reform and the Church: Wars over Religion

The disastrous war with the United States (1846–1848) raised profound questions about the causes of Mexico’s political instability and its economic failures, and the answers to these agonized questions returned again and again to the proper role of the Church in the political and economic life of the nation. How could they not, given the Church’s importance as a lender, creditor, property owner, and self-proclaimed force for social stability and cultural unity? These roles had been debated before the war, of course. Opinions had ranged from the radically anti-Church position that church and state should be separated and that religious tolerance (that is, the decoupling of religion and citizenship) should be made law, to the radically pro-Church position that Catholicism must remain Mexico’s official religion and that the government must guarantee the Church’s rights and privileges. But most people had fallen somewhere in between. Relatively few liberals went so far as to advocate religious tolerance. There was also considerable ambivalence toward ultramontanism on the part of many conservatives. The war, however, had a polarizing effect on these ambivalences. Liberals castigated the Church for dragging its heels when it came to financial support of the war effort and fulminated that the Church was not only unpatriotic but an obstacle to modernization (political, cultural, economic). The Church defended itself by arguing vehemently that the nation was threatened not by Catholicism, but by any weakening of it.

These debates came to a head during the unpopular final dictatorship of Antonio López de Santa Anna (1853–1854), which was supported (albeit with some distaste) by the Church. In 1854, one of the more predictable rebellions in Mexican history sent Santa Anna into his final exile. What was not quite so predictable was what came next: a series of radical laws known as the laws of the Reform, which targeted the Church’s ownership of income-producing property, its ability to collect fees and tithes, and its special courts and privileges. In 1857, these intolerable laws, from the Church’s point of view, were followed by an equally repugnant new constitution, notable for its implied separation of church and state and its implied religious tolerance (implied

because the usual protections for the Church were conspicuously absent).

In 1858 a bitter civil war broke out over these anticlerical laws. This war between the “liberals,” the centerpiece of whose program was the disempowerment of the Church, and the “conservatives,” whose main goal was preservation of the Church’s power, lasted for three years. Peasants and indigenous peoples again went to war, many on the side of the conservatives, especially where the Church had historically been present and central to village life, and a smaller but not insignificant number on the side of the liberals, especially where the Church was a weak historical presence. In the middle of the war, in 1859, the liberal government went even further than it had before: it nationalized Church wealth (as opposed to merely forcing the Church to sell its property); it closed convents and monasteries; it abolished confraternities; it created a civil register to replace the Church’s control over who was legally married or legitimately born; and it established freedom of religious worship.

When the victorious liberal armies finally entered Mexico City in 1861, the battle was not yet over. Conservatives sought another way to overturn the liberal laws and the 1857 constitution, this time by bringing in a foreign monarch, Maximilian of Austria, to serve as emperor of Mexico. The period of the French Intervention, so called because Maximilian was supported by the French army, lasted five years before the French pulled out of Mexico in 1867, leaving an inadequate Mexican force to defend the emperor against the liberal army.

The wars of the Reform and French Intervention had lasted a decade. It is true that there were other issues at stake besides the role of the Church in Mexican society, especially after 1862, when the war against the conservatives morphed into a war against a foreign occupier, but arguably the fundamental issue throughout was the liberal view that a modern Mexico required an end to the Church’s public roles and influence. Church property did not circulate, and this blocked the creation of free markets, a requirement for a modern economy. Church capital was invested unproductively, and productive investment was another key to a modern economy. Church dominance of education prevented the creation of a free citizenry whose primary loyalty was to the nation. The priest had a moral influence, especially in the rural areas, that squelched independent thought, another requirement of a free and modern nation. Finally, clerical culture tolerated backward and antimodern (time-wasting, money-wasting, superstition-laden, wishful-thinking) practices

like fiestas, cargo systems, pilgrimages, processions, apparitions, and miracle cures. Liberals were not necessarily irreligious, but those who were believers wanted religion to be dignified, restrained, individual, and private. Many liberals embraced the Catholic concepts of good works and humility but vigorously condemned the other “trappings” of popular Catholicism. In short, the wars were in large part about the Church.

The Church Marginalized

The liberal victory did not mean the defeat of the Church, but it did mean that the Church took the struggle to remain politically, socially, and culturally relevant out of the direct line of liberal fire. The first focus was internal reforms: improved training of priests, achieved by increasing the number of seminaries and by sending especially promising young priests to Rome to the Colegio Pio Latinoamericano, established in 1858 to train Latin American priests; and a strengthened administrative structure, achieved by creating smaller and more tightly controlled bishoprics and smaller and more efficient parishes. These reforms allowed the Church to begin rebuilding its base among the laity during a period when more aggressive, public moves would not have been tolerated.

Indeed, official and popular anticlericalism was still alive and well into the 1870s. The gentle portrait of a humble country priest in the great liberal Ignacio Altamirano’s story *Christmas in the Mountains* (1871) can be read as evidence of liberal affection for a certain kind of primitive Christianity, but the priest in this story, by refusing to accept fees for his services and working for his living as a farmer, stood as an indictment of priestly rapaciousness, an anticlerical message liberals had been sending for years. In the villages and barrios, popular participation on the side of the liberals had provided a language of anticlericalism that associated priests with greed and sexual perversion and the Church with selling out the nation, first to the Americans, and then to the French. In the legislative sphere, liberal anticlericalism peaked in 1874, when President Sebastián Lerdo de Tejada elevated the laws of the Reform to constitutional status; shut down the Sisters of Charity, who, as an active order with a socially useful role (they worked in the Mexico City asylums), had been exempted from the earlier ex-claustration; made it illegal for religious insignia or clothing to be worn outside of churches; and re-expelled the Jesuits.

The establishment of religious tolerance and the liberal military victory had also led to an increase in the number of Protestant missionaries and churches in the 1870s, welcomed by many liberals. Spiritualism, what Terry Rugeley calls “a form of Protestantism in a society not ready or willing to be Protestant,” also spread. It is tempting to see the advance of Protestantism and spiritualism, as well as the rise of widely followed—seemingly more widely than in the prenewspaper, prerailroad past—emotionally powerful popular religious movements around visionaries (such as those studied by Edward Wright-Rios in Oaxaca), and local saints such as Santa Teresa de Cabora in Chihuahua (memorably drawn by historian Paul Vanderwood and novelist Luis Alberto Urrea), as emblematic of the Church’s loss of control over popular belief.

The Church Empowered: Reconciliation with the State and Lay Activism during the Díaz Dictatorship

But while noteworthy, these ongoing challenges to the established Church are not the whole story. In both the political arena and the arena of popular devotion, the fortunes of the Church changed with the rise of Porfirio Díaz, who took over the presidency of Mexico in 1876 and ruled thirty-five years. Díaz was a Freemason and not a religious man, but he recognized that the Church retained considerable loyalty among the populace. Díaz’s first priority was social order, and if the Church’s claim that it promoted order was untested, it was certainly clear from the history of the previous decades that challenges to the Church could produce disorder. And so Díaz made a virtue of necessity by reconciling with the Church. He cultivated good relations with many of the bishops (who also cultivated him), and he went out of the way to make it known that the anticlerical laws on the books would be enforced only in the case of blatant disobedience.

The most striking symbol of the policy of reconciliation was the 1895 coronation of the Virgin of Guadalupe in her basilica in Mexico City. The coronation, long planned and elaborate, involved pilgrimages by train to Mexico City from across the republic, as well as visits from foreign bishops and other dignitaries. The government not only tolerated the disruptions caused by this event but worked with the Church to make it happen smoothly. The concept of the modern pilgrimage by rail was much emulated throughout the country; in the archbishopric of Michoacán, for example, the entire month of June was devoted annually to

organized pilgrimages to the capital city of Morelia to honor the Sacred Heart of Jesus, with different schools, organizations, and parishes from all over the archbishopric assigned a day in which to process through the city. Thus, instead of trying to reform or disempower the Church, as earlier generations of liberals had done, the Díaz government left it alone, even when, as with the coronation, it carried out its activities in exceedingly public terms.

The Church slowly reentered the public sphere in other ways that were more subtle than the coronation and the pilgrimages but more significant, perhaps, for being more in tune with the cultural and political emphasis on Mexico’s attempt to become more modern. Bishops and archbishops like Eugenio Gillow of Oaxaca began to position the Church to shape Catholic modernity rather than to rail against the modern world. Gillow and others worked closely with Díaz to promote the social stability that was at the heart of Díaz’s plans for Mexico but also at the heart of the Church’s resurgence. One of the key moments in the rebuilding of Church power (and a key moment in the government’s policy of reconciliation) was its reacquisition of property and lending power, which it accomplished by pressuring purchasers of Church properties earlier in the century to return them to the Church and by accepting/soliciting donations (carefully made to individual priests, not to the Church as a corporate body).

The Church also moved vigorously back into another “forbidden” arena: education. In addition to the new seminaries mentioned above, there were a number of normal schools established to train women teachers of girls and young boys. Bishops exhorted priests to establish parochial schools, in language that suggested the Church saw itself in active competition with the municipal schools. (At the local level, however, the principle of reconciliation sometimes rendered the competition between the parochial school and the municipal school a friendly one. Schoolteachers in the municipal schools often invited the priest to come into their classrooms to carry out religious instruction, and priests defended the schoolteachers against the bishops’ blanket criticisms.) The laity were deeply involved in promoting these efforts: *campesinos* demanded that their priest found parochial schools; women clamored for the opportunity and the training to become teachers in these schools. Linked to the renewed emphasis on Catholic education, the Church cautiously allowed old convents to reconstitute themselves (though not in their highly visible convent buildings, which in any event had mainly been repurposed by now) and new

religious orders of women to be founded, as the energies of a rapidly increasing number of Mexican nuns were focused on the educational mission.

Another cooperative venture between the active laity and the Church was the formation of pious associations, the new name for lay groups that replaced the banned confraternities in organizing community religious life. The purely devotional associations still thrived (the Vela Perpetua, for example, was nearly ubiquitous in Mexican parishes by 1910), but other kinds of new associations were more “modern,” in the sense that they more explicitly promoted some sort of social or political end. Some were dedicated to religious education and inculcation of Catholic values (for example, the Sociedad Católica and the Hijas de María), others to charity (the Damas Católicas and many others), and still others to the apostolic mission in defense of Catholicism worldwide (for example, the Apostolado de la Oración). Many of these new lay associations dwarfed the old confraternities in membership and ambition; some boasted memberships into the several thousands, even in small towns. These associations were joined by both women and men, but there is little doubt that women continued to dominate numerically, as they did in the organized pilgrimages, where it was not unusual to see 80 to 90 percent of the seats on pilgrim trains sold to women.

One area where the male laity were deeply involved was in the burgeoning Catholic press. This press was not always tightly controlled and sometimes went beyond what the hierarchy was comfortable with (publicizing Church events, lamenting the persecution of Catholics in France—a common theme—and promoting Catholic values and morals), getting involved in political discussions and criticism of the president that the hierarchy generally tried to avoid. Several lay associations were formed with the explicit purpose of raising funds to support the Catholic press—the power of the press was well recognized by the Church and by the middle-class Catholics who were the primary consumers of these newspapers and magazines. We have seen that many of the Church’s strategies for surviving in the aftermath of the liberal reforms involved shedding the label of “antimodern,” which the liberals had used to defeat it, and no strategy was more “modern” than the use of the Catholic press.

The concept of an active laity working in concert with an activist priesthood was taken to yet another level of seriousness after the turn of the twentieth century, when the Church began to put into effect a program of social action, following the dictums of *Rerum Novarum*, the papal call for

“social Catholicism.” Four church councils beginning in 1903 and five “Social Weeks” (*semanas sociales*) brought together clerics and lay leaders to discuss ways to make Catholicism more relevant in peoples’ daily lives. Social Catholicism in Porfirian Mexico revolved around a number of new institutions: Catholic night schools; Catholic vocational schools; Catholic sports teams and recreation centers; Catholic women’s groups, mothers’ groups, fathers’ groups, youth groups, and family groups; and Catholic worker organizations that were part mutual help society, part social club, and part union.

In sum, the Church during the Díaz dictatorship understood the importance of popular mobilization in the modern world well before the Mexican state did. While the Church certainly did not welcome the separation of church and state, during the Porfiriato it turned its own disestablishment into a way to strengthen its base and its organization. Freedom of religion and relative freedom of the press meant that the laity could practice religion without fear of the state’s interference, especially when the particular government that constituted the state was as tolerant as the Díaz government was. Protestantism, spiritualism, and popular Catholic movements that were unsanctioned by the Church were the beneficiaries, but so was the institutional Church, which adapted to a modern world in which it had to compete for the allegiance of the faithful and in which it had to allow the faithful to play a major role in how the Church functioned in their lives. The success of these adaptations may have given rise to the new wave of anticlericalism that accompanied the Mexican Revolution, but they may also have been what allowed the Church to survive these new storms.

Mexico: Indigenous Religions

Indigenous religions in precolonial Mexico were extremely diverse, and this diversity continued to evolve after Spanish contact. Nevertheless, it is possible to identify several common religious features throughout the region. In particular, the major civilizations of Mesoamerica—the sociocultural region extending from the central Mexican highlands, in the north, to Central America in the south—left a profound mark upon the religious landscape of the country as a whole. Beginning with the Olmec culture and continuing through the Maya and Aztec civilizations, Mesoamerica was characterized by the presence of large ceremonial centers that fused religion with political power. By constructing sacred pyramids and marking the movements of the heavenly bodies through a complex calendar system, ancient Mesoamericans sought to align themselves with the cosmos and to engage the gods in the proper relations of reciprocity that would ensure continued life on earth. Trade and pilgrimage facilitated significant cross-cultural interaction, and several important deities—such as the rain god, Tlaloc, and the feathered serpent deity, Quetzalcóatl—appear in diverse cultures, albeit by different names. The arrival of Europeans initiated a centuries-long process of religious change, as indigenous Mexicans alternately rejected, embraced, and selectively adapted aspects of Christianity to their own needs.

Historical Overview

The Olmecs

The earliest archaeological evidence of large sacred structures in Mesoamerica comes from the Olmec culture, which rose to prominence between about 1200 and 400 BCE. Perhaps the best known of these Olmec structures are the

stone carvings of enormous human heads. Up to ten feet tall and weighing twenty tons, these statues likely represented the faces of rulers, indicating the practice of divine kingship. The Olmec settlement of San Lorenzo, located in the south-east of the present-day state of Veracruz and once home to about 1,000 people, contained pyramids and rectangular courts and was arranged on a north-south axis, in line with the movements of the heavenly bodies. The nearby settlement of La Venta contained a ceremonial center with plazas, stone altars, and rows of columns, tombs, and sacred mounds. Built to align with the four directions, these mounds were quite likely precursors to the stone pyramids that would become a central feature of Mesoamerican religious architecture.

The archaeological evidence suggests that the Olmecs worshiped a jaguar god, as well as a feathered serpent deity and a rain god, both of which would remain prominent figures in the Mesoamerican religious landscape. The first traces of a calendar and a writing system were found among Olmec settlements, and Olmec practices of autosacrifice, through which humans drew blood offerings from their own bodies, lay the foundations for later human sacrifice.

Teotihuacán

Cities arose in Mesoamerica between 300 BCE and 250 CE. In addition to serving as nuclei of trade and intercultural contact, they also served as pilgrimage centers. The city of Teotihuacán, today a world-renowned archaeological site, reached a population of more than 100,000 people at its height from 300 to 500 CE. Located about twenty-five miles northeast of present-day Mexico City, Teotihuacán was a cosmopolitan center with a culturally diverse population. The city was founded upon a traditional sacred site and was part of a vast trade network that extended to areas as far as the Guatemalan highlands.

Teotihuacán is famous for an extensive temple complex, which includes the 216-foot Pyramid of the Sun and the 140-foot Pyramid of the Moon. This temple complex was built to correspond with a naturally occurring system of caves and tunnels, which were enlarged to produce underground ritual chambers. Residents of Teotihuacán worshiped the rain god, Tlaloc, and his counterpart, Chalchiuhtlicue, or “she of the jade skirt,” the goddess of lakes, rivers, and other earthly waters. The city’s residents also revered Xiuhtecuhtli, Lord of Fire, and the feathered serpent deity, Quetzalcóatl. With its vast architectural and cultural achievements, Teotihuacán served as an inspiration

for the Aztecs, who in fact gave it the name Teotihuacán, or “birthplace of the gods.”

The Maya

With roots in Olmec culture, the next major appearance upon the Mesoamerican scene was the Mayan civilization. The Maya rose to prominence between 600 and 900 CE. For more than a dozen centuries, the area covered by the present-day Mexican states of Chiapas, Campeche, Yucatán, and Quintana Roo, as well as present-day Guatemala, Belize, and parts of Honduras, was home to a network of Maya kingdoms linked by trade, military alliance, and kinship.

In the Maya cosmos, mountains and caves served as portals to other realms, and temples served as a point of contact between human beings, ancestors, and the divine. The Maya practiced ancestor veneration and elevated deceased rulers as the ancestors of the royal line. The archaeological record suggests that Mayan settlements—with their temples, tombs, palaces, and ball courts—were centers of power that used theatrical pageantry to exercise control over surrounding peoples.

The Maya placed considerable emphasis on the cyclical nature of time, seeking to understand the past to divine the future. This central concern with time and divination drove the Maya to develop calendrical and astronomical systems that rivaled those of their European contemporaries, a mathematical system that included the notion of zero. The Maya also developed an elaborate system of hieroglyphic writing, many examples of which were destroyed during the early colonial period.

The Toltecs

By 900 CE overpopulation and natural resource collapse led the Maya civilization to decline. Shortly afterward, the Toltec civilization, centering around the city of Tula or Tollán, rose to prominence. Located about fifty miles north of Mexico City, the city reached a population of 60,000 at its height between 950 and 1150 CE. Although the origin and identity of Tollán’s residents are under debate, what is known is that the city’s people developed a special devotion to Quetzalcóatl, engaged in heightened military activity, increased the practice of human sacrifice, and were part of a religious and cultural cross-fertilization that influenced postclassic Mayan cities such as Chichén Itzá and Mayapán.

History and myth are closely intertwined in the available sources on the Toltec empire. The present-day archaeological site of Tollán contains a temple pyramid in honor of the god

Quetzalcóatl. The existence of this feathered serpent deity can be traced back to Teotihuacán, but Quetzalcóatl was also the name of a legendary Toltec ruler and priest, Tolpiltzin Quetzalcóatl, who led his people into a golden age of military and cultural achievement. Massive stone warrior figures at Tollán are evidence of the Toltecs’ heightened military activity, and reclining stone Chac Mool figures, holding bowls or trays to receive human hearts, are evidence of the practice of human sacrifice. Legend holds that Tollán was undone by the god Tezcatlipoca, or “Smoking Mirror,” who forced the ruler Quetzalcóatl to flee the city. In fact, invaders from the north—including the Mexica, who would eventually forge the Aztec empire—are responsible for the fall of Tollán in the middle of the twelfth century CE.

The Aztecs

As the last dominant civilization in Mexico before the arrival of Europeans, the Aztec empire reached, at its height, an area of 80,000 square miles. During the twelfth and thirteenth centuries various Chichimec tribes migrated to the Valley of Mexico, gradually displacing the Toltecs. Among these were the Mexica, who established the city of Tenochtitlán in the middle of Lake Texcoco in 1325. The Mexica later joined with the residents of nearby Tlalcoapan and Texcoco to forge a “Triple Alliance” that came, ultimately, to rule a population of up to 6 million. For purposes of clarity, the term “Aztec” will be used here to refer to the Mexica and other Náhuatl-speaking members of this empire.

Aztec religion was both deeply syncretic and deeply intertwined with warfare. The Aztecs drew upon the sacred symbols of past civilizations, striving to establish authority by taking the gods of others as their own. They adopted the Mayan cosmos with its thirteen heavens and nine underworlds, claimed direct descent from Toltec nobles, and embraced the god Quetzalcóatl.

If the Aztecs sought to establish their authority by incorporating the gods of previous civilizations, they also did so by elevating their own patron deity, the war god Huitzilpochtli, to universal status. Another important deity in the Aztec pantheon was the sun god Tonantíuh. As the “People of the Sun,” the Aztecs understood themselves as compelled to provide the sun with sacrificial victims. This sacrificial logic found symbolic expression in the story of Tenochtitlán’s founding. Legend held that the city’s location was divinely revealed through a vision of an eagle resting upon a prickly pear cactus. In Aztec thought the eagle is associated with the sun, and the bright red cactus fruit represents the

human heart. Aztec religion was thus deeply tied to warfare, as the need for sacrificial victims provided a legitimation for expansion. Nevertheless, there is evidence of a separate movement within Aztec religion that had begun to question and resist warfare by the time of European contact.

General Features of Mesoamerican Religions

Precolonial Mexicans did not separate the universe into sacred and profane realms; rather, they saw the earth as a living entity infused with religious significance. Caves, mountains, and bodies of water connected people with the gods and ancestors, and Mesoamericans expanded upon these natural features by building temple pyramids and underground ritual chambers that provided portals of communication with the divine. Mesoamericans revered a wide range of earth-based deities whose dual-gendered nature and relationship to humanity present a challenge to European categories. The gods were enmeshed with human beings in mutually dependent relationships of sacrifice and nourishment, and at times even entered into the bodies of rulers through a tradition of divine kingship.

Mesoamerican religious thought challenges European understandings not only of the divine but also of human nature. The Mesoamerican person was not divided into categories of “body” and “soul,” but instead consisted of multiple vital forces that extended into the natural world. The religious task was not to achieve salvation, but to strive for balance in the world, in part by understanding one’s destiny. Mesoamerican religions placed great emphasis on time as people sought, through careful astronomical and calendrical calculations, to divine the course of future events. Because they understood the present as but one within a vast, cataclysmic cycle of world ages, they did their best to keep the universe in motion by providing the gods with proper nourishment and support. As cities developed throughout Mesoamerica, they served as ceremonial centers, and religion became a principal means through which empires established authority and exercised control over peripheral populations.

The Earth

Mesoamericans understood the earth as a living being. As early as the Olmec culture, the earth was understood as an alligator-like creature resting upon the ocean. Centuries later, the Aztecs conceived of the earth as a giant male-female alligator with snapping jaws. The sky was an inverted bowl with its edges resting upon the sea, and the ridges of the primal monster’s back formed the valleys and mountains

of the world. The many-layered cosmos contained thirteen heavens and nine underworlds, but these layers were not directly charged with moral significance like the Christian heaven and hell. Rather, precolonial Mexicans placed great emphasis on the four directions. The Aztecs understood their city of Tenochtitlán as located at the center of the world’s four quadrants, and Mayan gods were frequently associated with the four directions.

If the earth was a living being, then caves were its wombs, and earthquakes its uterine contractions. The dual-gendered Aztec earth deities were often portrayed as squatting figures, sometimes in the midst of birth. Gazing upward through grinning masks, their faces represented the face of the earth turned toward the sky. The father-mothers of humanity, these deities donned skirts of skulls and cross-bones, for they also devoured the living through the inevitable processes of death and decay. Other earth-related deities included the Aztec maize deities Xilonen, Chicomecoatl, and Cinteotl, and the god of rain, Tlaloc. Known by the Maya as Chaak, this rain deity was one of the most widespread in precolonial Mexico and appears, with his characteristic goggle-eyed mask, in sites as early as Teotihuacán.

Mesoamerican ritual activities centered heavily on the cycles of the natural world, as humans sought to induce the rain and agricultural fertility necessary for survival. Mountaintops, caves, and bodies of water served as sites of communication with ancestors and the divine, and ritual structures acted as an extension of the sacred landscape. For the Aztecs, mountain temples were the “wombs” through which ruler-priests symbolically fertilized the earth; for the Maya, hills were the dwelling-places of the ancestors, and caves the entrance to the underworld, Xibalba.

The Gods

There is no direct English translation for the precolonial Mexican notion of the divine. Mesoamerican gods were complex beings, often containing both male and female characteristics. At times, they entered into the bodies of human beings, giving rise to a widespread tradition of sacred kingship. The Náhuatl word “teotl,” used for the type of beings that Europeans would classify as gods, also encompassed ceremonial items, water, lightening, and the sun. Among the Maya, ancestors, deceased rulers, and even numbers could be classified as gods, and they also recognized a class of beings that resembled animals but had human and divine attributes. The term *other-than-human persons* may offer a more accurate translation for these beings than the

European notion of “god” or “spirit.” For precolonial Mexicans, the world was inhabited by many types of persons, which included but were not limited to humans.

Mesoamerican deities frequently existed as male–female pairs or divine twins. The feminine counterpart to Quetzalcóatl was Cihuacóatl, or “serpent woman,” and the feminine counterpart to Tlaloc was Chalchiuhtlicue, or “she of the jade skirt.” Rather than distinct entities, however, it is quite likely that these divine pairs were understood as separate expressions of a common essence. The Aztec supreme creator god, Ometeotl, was literally the “double god.” At once male and female, Ometeotl was revered as the father–mother of human beings. Although a single being, Ometeotl contained within his and her person the Lord and Lady of Duality, Ometecutli and Omecihuatl. The Maya, similarly, referred to certain gods as father–mother, and Mayan philosophy suggests that numbers, time, and the counting of time derived from the original conceptual divide between male and female.

Humans

The Mesoamerican self was not clearly divided into a material body and an immaterial soul. Mesoamericans instead understood humans as animated by multiple vital sources that extended into the outside world. A common notion was that each human being had a supernatural counterpart, or *nahual*, residing within the body of an animal. Certain powerful people, it was believed, could transform themselves into a *nahual* for malevolent purposes. Aztecs and other Náhuatl speakers also understood the self to contain three vital forces. The *tonalli* represented the individual’s destiny. Located in the head, this force served to connect the individual to his or her divine source. Also translated as “day sign,” a person’s *tonalli* linked her to other entities, both human and nonhuman, that shared the same sign. The *tonalli* could leave the body and travel through dreams at night; it could also escape the body through a process that is still recognized as “soul loss” within Mexican popular religion today. Seated in the heart, the *teyolia* was associated intelligence, knowledge, reason, and memory. Unlike the *tonalli*, the *teyolia* could not leave the body except in death. Finally, a person’s *ihiyotl*, seated in the liver, represented breath. Associated with envy and harmful emanations, the *ihiyotl* was the life force most associated with witchcraft and shamanistic healing.

Mesoamerican shamanism and healing were grounded in the understanding that a person’s vital forces extended beyond the individual body and corresponded to features of

the cosmos. A person’s *tonalli* corresponded with the heavens, the *teyolia* with the earth’s vital center, and the *ihiyotl* with the underworld. The body was permeable to the actions or intentions of other beings, both human and nonhuman. Among the many types of healers in precolonial Mexico, some specialized in herbal knowledge. Other specialists were shamans capable of entering into trance, often with the aid of psychoactive substances, in order to identify and deflect the malevolent forces acting upon the sick person.

If there was no direct equivalent within Mesoamerican thought to the Western categories of “body” and “soul,” neither was there a direct equivalent to the Christian notion of the afterlife. Because the self was understood to consist of multiple vital sources, some of which a person shared with other beings, the Christian system of rewards and punishments based on individual moral behavior would have held little meaning. Rather, among the Aztecs, the circumstances of death determined to which realm the deceased traveled. Women who died in childbirth, for example, became Cihuateteo, goddesses who accompanied the sun on its journey across the sky. Among the Maya, immortality was understood as a collective enterprise, achieved through the continuation of family lines. This collective, kin-based immortality was often represented by the sacred ceiba tree, a cosmic tree whose roots reached into the underworld and whose branches reached into heaven. The religious task facing the individual was not to strive for salvation, but to be aware of one’s own destiny and to strive for harmony in the present life. Mesoamericans had a strong sense of collective responsibility and practiced intense self-discipline to protect themselves and others from harmful forces. Indeed, it was believed that individuals alone could bring about cosmic catastrophe through improper behavior. Sacred texts describe the task of maintaining balance through the metaphor of walking along a narrow ridge, with chaotic depths on either side.

Time

Given their concern with destiny, Mesoamericans placed tremendous importance on the understanding and measurement of time. The Aztecs and Maya alike understood the present age as but one within a cycle of world ages, each of which had ended cataclysmically. People strove to act properly in the present by understanding the past and keeping track of the days, each of which had special religious significance. As the vital source known as the *tonalli* was, quite literally, a person’s destiny, Aztecs consulted the *tonal-amatl*, or books of destiny, to ascertain the proper time and place

for action. They also strove to understand destiny by consulting a complex ritual calendar. With roots in Olmec culture, the Mesoamerican calendar was based on both a 260-day cycle and a 365-day solar cycle. For the Aztecs, the 260-day cycle, or *tonalpohualli*, functioned as an almanac, and the solar cycle, or *xiuhpohualli*, was used to calculate seasonal festivals. For the Aztecs and Maya alike, these two calendrical cycles aligned every fifty-two years. The alignment was marked by special ritual activity, including the Aztec new fire ceremony, described in more detail below.

Sacrifice and the Divine-Human Relationship

Mesoamerican creation accounts describe a deep-seated interdependence between gods and human beings. The gods, as creators, were the mother-fathers of humanity, but humans were also the mother-fathers of the gods, for they provided the deities with the prayers and sacrifices necessary for their continued strength and survival. The Quiché Mayan creation account known as the *Popol Vuh* offers insight onto this human-divine relationship. At the start of creation, the gods of sea and sky created the earth, filled it with plant life, and forged the heavenly bodies. But creation was not yet complete. The deities strove to bring into existence a class of intelligent, speaking beings who would serve them through prayer and sacrifice, and who would mark the passage of time. The first attempt failed, and the beings became today's animals. The gods tried making humans out of mud and then of wood, but these attempts failed yet again. Finally, the gods fashioned human bodies from corn dough, using water for blood. These beings, at last, could speak, pray, and count the days.

As this creation account makes clear, the gods of pre-colonial Mexico needed humans as much as humans needed gods. Humanity upheld its end of the relationship through prayer and offerings. Yet humans and gods were also related at an even more profound level, for they were understood to exist in a dynamic, cyclical relationship of nourishment and consumption. The *Popol Vuh* tells that humans are made of corn, a divine substance. As humans consume corn and thus receive nourishment from the gods, they in turn feed the gods by offering the blood of their own bodies in sacrificial and autosacrificial rites. People knew that as beings who lived by eating, they too must at some time be consumed. Although the Maya did not engage in human sacrifice to nearly the same degree as the Aztecs, they did practice animal sacrifice and ritual bloodletting. Men pierced the skin of their genitals, and women pierced the

skin of their cheeks and tongues to induce visions that facilitated contact with the ancestors.

Sacrifice was central not only to human-divine relationships in Mesoamerica but also to the movement of the heavenly bodies and therefore to life itself. Like the *Popol Vuh*, the Aztec creation account suggests that creation is an active, ongoing process subject to imperfection and failure. The present era or "sun" is but the fifth in a series of previous eras, each of which has ended in violent destruction. At the start of the fifth era, the gods assembled before a giant fire, knowing that one among them must throw himself into the flames in order to create the sun. Tecuciztecatl, originally chosen for the task, backed away in fear. It was finally the poor Nanauatzin, his body covered in sores and scabs, who succeeded. Nanauatzin became the sun, and Tecuciztecatl, who followed, became the moon. Yet creation was not yet complete. To put the sun and moon into motion and make possible life on earth, the remaining gods cast themselves into the flames. Finally, to bring human beings into existence, Quetzalcóatl descended into the underworld to retrieve the bones of people from past eras, and sprinkled them with his own blood.

Central to the Aztec creation account is the notion that all good things come through sacrifice. The Náhuatl word for human beings, *macehualtin*, literally means "those who are worthy." The gods performed penitence and sacrifice to be worthy of humans' existence, and humans, in turn, provided sacrifice to deserve land, sustenance, and military success. Perhaps the most striking sacrificial rite of the Aztec ceremonial cycle was the new fire ceremony, held at the end of the fifty-two-year solar cycle. At this time the sun must be regenerated, lest it should die and the world come to ruin. In mid-December, all fires in Tenochtitlán and the surrounding valley were extinguished. People held fasts and kept silent, in a ritual death that anticipated the sun's rebirth. So dangerous was this time that pregnant women were shut inside granaries, and children's faces covered by blue masks for protection. As darkness fell, fire-priests proceeded to a temple platform on a hill in sight of the entire valley. The multitudes watched from their rooftops as the priest kindled a fire on the chest of a sacrificial victim. Torch-bearing runners then carried the flames of the new sacred fire to the temple-hearths of the towns and cities throughout the valley. Finally, the new sun would rise, demonstrating to all that it had indeed been nourished with new life. Those watching from their rooftops contributed to the sacrifice by piercing the skin of their earlobes to make small blood offerings.

Religion, Empires, and Power

Although Mesoamericans and their gods depended on one another for their survival, this relationship was not a simple, straightforward exchange between the divine, on the one hand, and universal humanity, on the other. Rather, particular groups of people shared special relationships of loyalty and patronage with particular gods. The *Popol Vuh* tells that the first four Quiché humans sought sacrificial victims among other tribes. When these tribes pleaded for mercy, the Quiché people agreed to accept tribute as a substitute for sacrifice. The gods' appetite for flesh and tribute payments served to justify the Quiché people's domination over others.

The Aztecs also used religion in their efforts to gain control over neighboring populations. By identifying their own patron deity, Huitzilpochtli, with the power of the sun, the Aztecs implied that to resist their authority was to resist the order of the cosmos itself. The thousands of human sacrifices carried out at the Great Pyramid of Tenochtitlán served not only to feed and strengthen the gods but also to demonstrate the extent of Aztec power to peripheral groups.

Mesoamerican cities were simultaneously imperial bases and ceremonial centers, and their rulers played overlapping roles as kings, shamans, and priests. Rulers stood at the axis of the earth, the heavens, and the underworld, and at times even embodied the gods through the tradition of divine kingship. Because the body, in Mesoamerican thought, was highly permeable to spiritual forces, gods were deemed capable of entering into leaders' bodies, rendering them simultaneously human and divine. Many important rulers within central Mexico were "man-gods" of this sort. Among the Maya, rulers were also central to the practice of ancestor worship, for deceased kings were the ancestors of the royal line and therefore, in effect, the ancestors of the people as a whole. Mayan kings also had a shamanic function, for they could transcend time and space to communicate with the gods and predict the future, often through the practice of royal bloodletting. Rulers' blood was understood to be a sacred essence; by burning paper that had been soaked in that essence, the Maya produced visions that facilitated communication with other realms.

Religious Developments after the Conquest

Hernán Cortés (1485–1547) entered the Valley of Mexico in 1519, and two years later the Aztec empire fell to Spanish control. As the invaders spread throughout central Mexico

and beyond, they were met with gifts and lavish entertainment by residents eager to secure the newcomers' good graces. The Spaniards responded with blatant violence that grossly disregarded Mesoamerican diplomatic norms. Like the Aztecs before them, the Spaniards used religion as a means to exercise totalizing control. Rather than appropriating old gods within the general framework of Mesoamerican religious logic, however, the newcomers smashed Mesoamerican "idols," replaced them with a god from across the ocean, and introduced a notion of the soul that was dramatically foreign to Mesoamerican thought. A complex and multifaceted process of religious change ensued, as the indigenous population of Mexico—or New Spain, as it was then called—responded not only to forced Christianization, but also to massive violence, disease, and enslavement at the hands of Europeans.

The encounter between European Catholicism and indigenous Mexican religions was an encounter between two diverse and dynamic forms of religiosity, complicated by the interests and needs of particular individuals and factions. As the conquistadors sought gold and slaves, they frequently used religion as a means of deceit. One Spanish expedition leader, for example, captured people's "idols" and held them as ransom for slaves. Some religious leaders were complicit in the violence and oppression inflicted on the people of Mexico, but others resisted. A famous voice of protest is that of Fray Bartolomé de las Casas (1484–1566), a Dominican priest whose *Short Account of the Destruction of the Indies* (1542) offers an eye-witness account and condemnation of the genocide and torture inflicted on indigenous Mexicans. Another crucial voice is that of Fray Bernardino de Sahagún (1499 or 1500–1590), a Franciscan priest who, with the help of Aztec informants, compiled an account of Aztec life and culture that describes religious practices in tremendous detail. Although the motive of these works was, ultimately, to facilitate Christianization, the depth of detail also demonstrates a genuine respect for the complexity and sophistication of indigenous religious practices.

At the time of the conquest of Mexico the Aztecs were not the only players on the scene. The Tarascans, located in the present-day states of Guerrero and Michoacán, had long resisted Aztec domination and willingly allied themselves with the Spaniards. Other prominent populations at the time of the conquest included the Huastecs in the highlands northeast of the Valley of Mexico, the Totonacs in the present-day state of Veracruz, and the Mixtec and Zapotec cultures of present-day Oaxaca. Although the height of their

empire was long past, the Maya remained a significant presence in the south. Northern Mexico, outside of the region generally identified as Mesoamerica, was home to multiple populations including the Huichol, the Cora, and the Tarahumara. Religious responses to Christianization within this diverse human landscape ranged from withdrawal, to selective accommodation, to violent resistance.

Christianity and Religious Change

Although the majority of the archaeological evidence about religion in precolonial Mexico comes to us from large ceremonial centers, most people at the time of the conquest lived in small, agricultural villages. Religions were collective affairs centered on local deities, and song, dance, and public festivals played a central role. To the extent that indigenous people did convert to Christianity, they did so largely through the logic of these ritual forms and largely in answer to the needs of a village-based agricultural lifestyle. A process of selective adaptation ensued, by which indigenous people drew upon Christianity in ways that resonated with their own cosmologies. Rather than depicting the body of Jesus upon the cross, for example, native artisans trained by European friars often embedded the face of Jesus directly in the middle of the cross, implying that his body was part of the sacred World Tree.

One widespread indigenous adaptation to Christianity was devotion to Catholic patron saints. Among Náhuatl-speakers, towns and villages tended to center around the relics of mythical hero-founders, who connected people to the powers of the universe and protected the town. As the Spaniards built churches over the destroyed remains of temples, Catholic patron saints replaced these indigenous hero-founders as the new community protectors. For people deeply dependent on agricultural fertility and rainfall, these patron saints served, and continue to serve, a crucial role as mediators in matters of pragmatic concern. This process of religious change eventually gave rise to popular Catholicism, a primarily agrarian-based form of religiosity that emphasizes the festival cycle, devotion to the saints, and practices of curing that are often deemed “magical” by the official religious establishment.

Perhaps the best-known indigenous response to Christianity within Mexico is devotion to the Virgin of Guadalupe. Legend holds that the Virgin appeared to a man named Juan Diego in 1531. Her skin was dark, and she spoke to him in his native Náhuatl. This “dark virgin” provided a crucial bridge to Catholicism that facilitated the conversion of

thousands of indigenous Mexicans. Although the actual origins of devotion to the Virgin are more complex, for centuries she has remained a central figure in the religious lives of indigenous Mexicans and Mexican Catholics as a whole. Náhuatl speakers often refer to the Virgin with the Náhuatl term *Tonantzin*, or “our revered mother.” For some, the Virgin may well have served as a veneer under which indigenous people continued to carry out devotion to earth-based mother goddesses. Others, although not looking to her as an indigenous goddess per se, may still have come to her with the needs and concerns that were intrinsic to Mesoamerican religiosity.

Resistance and Rebellion

Although Christianization occurred within colonial Mexico, it did so under conditions of repression and coercion, and an undercurrent of social and religious resistance continued throughout the colonial era. Indigenous religious leaders frequently called upon the people to reject the god of the colonizers and to return to their own true deities. At times, traditional religious practices continued in secret, hidden away in caves and forests. At times, indigenous people inverted Christian symbols, appointing indigenous “popes,” replacing the images of Christian saints with native deities, and conducting “mass” in the form of traditional sacrificial rites. From the moment of conquest, throughout the colonial period, and well into the nineteenth century, dozens of indigenous rebellions throughout Mexico sought to throw off European domination and restore the former social and religious order.

One means of native resistance to colonial rule occurred through the creative adaptation of the central Mexican “man-god” tradition, in which gods were believed to embody the “skin” of particular human beings. After colonization, certain individuals drew upon the man-god tradition to lead religious resistance movements in ways that baffled their conquerors. Resistance movements often had both millenarian and utopian dimensions. As millenarian movements, they anticipated imminent, total, collective, and catastrophic change. As utopian movements, they envisioned new futures that would transcend the oppressive conditions of colonization. Although the vast majority of religious uprisings were quickly suppressed by Spanish powers, an undercurrent of resistance reemerged over the centuries as indigenous people responded to forced relocation, loss of land, and harsh labor conditions in mines and plantations.

Religious resistance was especially prevalent among the Maya, whose relatively decentralized organization allowed them to maintain a degree of religious autonomy. The Mayan books of Chilam Balam, transcribed after European contact, instilled resistance efforts with prophetic motivation, for the books were interpreted to claim that Christianity and Spanish domination would soon vanish from the land. As late as the nineteenth century, Yucatec Mayans mobilized around a miraculous “speaking cross” that combined elements of Catholicism with an indigenous tradition of prophecy. As both oracle and military commander, the cross served as a source of strength and collective mobilization throughout the decades-long Caste War of Yucatán. Religious rebellions were also widespread among the Tarahumara, Huichols, and other indigenous groups in northern Mexico throughout the late sixteenth and seventeenth centuries.

At present, indigenous religions remain a vital part of the Mexican religious landscape. Many features of precolonial religiosity—including the sanctity of mountains and caves, the importance of healing, and the logic of divine-human reciprocity—are still central to the religious experience of members of the more than sixty indigenous language groups in Mexico. Contemporary indigenous religions retain vital connections to the past, but they are not mere “survivors” of an ancient era. Rather, indigenous religions today are flexible systems through which people engage with one another and the natural world in local, national, and international contexts.

Mexico: Protestants

Protestantism has expanded in Mexico even though the nation remains strongly Roman Catholic. The growth of Protestantism, specifically Pentecostalism, in Mexico in recent years has not been on the same scale as the expansion of Protestantism elsewhere in Latin America in places such as Brazil and Guatemala. Even so, religious pluralism has come to form an important part of the modern Mexican religious landscape.

History

Under the royal agreement signed by Pope Alexander VI (1431–1503) and the Iberian monarchs in 1501, the only religion permitted in the New World was Roman Catholicism, thus beginning a colonial legacy of unity of church and state and of a Catholic culture that is integral to Mexican identity even today. Throughout the colonial period in Mexico, then called New Spain, Protestantism—associated in the Spanish world with both heterodoxy and English aggression—was considered a heresy, and its propagation was punishable by both the Inquisition and by civil government. Although the Vatican declined to recognize Mexico’s independence from Spain in 1821, Catholicism remained the official religion of the new republic of Mexico for the first half of the nineteenth century. While

Protestantism was outlawed during Mexico's first decades of nationhood, Liberal intellectuals and leaders were often familiar with Protestant literature and sometimes approved privately of Protestant institutions and values, believing that the religion carried with it elements of modernity and progress that complemented the Liberals' political goals of promoting education and divesting the Catholic Church of its secular authority. With these goals in mind, the Liberal, nationalist government of Benito Juárez (1806–1872)—who once famously stated that he wanted Protestant missionaries to come into the country to “teach Mexicans to read instead of light candles”—established freedom of religion in Mexico in 1856 (known as the Reforma), thus allowing for the entry of Mexico's first legal Protestant missionaries.

U.S. missionary boards were quick to respond. Presbyterians arrived in northern Mexico the following year, establishing churches in the cities of Zacatecas and Monterrey. Baptists arrived in 1862 and Methodists in 1872, also founding churches in the northern half of the country.

Monterrey was the first urban center where Protestantism took root, thanks to the efforts of two men, an Englishman and an American southerner, and a single-minded woman from New England. Englishman Thomas Westrupp came to this northern Mexican city in 1860, working as a bookseller. There he met James Hickey, a Texan abolitionist, who arrived there in 1864 as a representative of the Bible Society of New York. With the support of local Masons, they established a Bible study group that became the foundation for the first congregation of the Mexican Baptist Church. In 1867 a Presbyterian schoolteacher from New England, Melinda Rankin (1811–1888), arrived in Monterrey. Rankin had previously established a primary school for Hispanic girls, one of the first of its kind, in Brownsville, Texas, a town on the Mexican border, and the success of this project inspired Rankin to expand her efforts into Mexico proper. Although she never fully conquered the Spanish language, Rankin became a powerful advocate of women's education. She founded several educational institutions for women in northern Mexico, including an important normal school that became nationally renowned for its training of a generation of women educators.

Another important center for the diffusion of Protestantism were the mining areas. British companies took over the Mexican mining industry in the decades immediately following independence, and their influence expanded far beyond the economic sphere of the mines themselves. Many

British mine owners were devout Methodists, and they tried to introduce Methodism into the camps to their Catholic employees, although such efforts were officially illegal in the years prior to the Reforma. After the Reforma, however, Mexican law permitted mine owners to proselytize openly, and they established small Protestant congregations in mining centers such as Pachuca, Hidalgo, and Real del Monte in the Estado de México.

Following geographic lines that connected them directly to U.S. missionaries, the majority of Mexico's Protestant churches were located in the northern part of the country, near train stations or mining communities accessible by rail. By the beginning of the twentieth century, however, most denominations also had at least one congregation in Mexico City. The Iglesia Metodista established its first church in Mexico City in 1873, while the Iglesia Presbiteriana de Mexico initiated its work in Mexico City's Federal District (D.F.) the following year, in 1874. Baptist missionaries arrived in the capital in 1883. In each case, however, churches were small, although the congregations included Mexicans and foreigners as members.

As Juarez had predicted, Protestant missions tended to engage in institution-building; in particular, mission hospitals and, above all, schools gave the missions a profile and influence that far exceeded their actual numbers in Mexico. For example, the Episcopal-run Hooker School for girls in Mexico City, established in 1894, became one of the city's premier institutions for the education of young women during the Porfiriato, the long rule (1876–1880 and 1884–1911) of Positivist leader Porfirio Díaz (1830–1915). Elsewhere, a Protestant education influenced a generation of young minds who would come of age during and after the Mexican Revolution. Most missionary groups at one time or another also made efforts to evangelize in rural areas among Mexico's large and impoverished indigenous population, but here they met with less success than they did among the urban middle class.

As the trajectory of missionary work tended to follow the geographic lines of foreign political and economic influence, so too did the message of the Protestant missionaries reflect a worldview that conveyed Victorian social values and mores as much as it did Protestant theology. The first missionaries, for example, sought to establish in Mexico an ethical way of life based on the prohibition of alcohol, support for monogamy, and an emphasis on education and the merits of hard work. Missionaries emphasized the betterment of the individual, rather than the community. As this Protestant

worldview, broadly speaking, seemed to advance Liberal political goals of promoting “modernization and progress,” missionaries in the late nineteenth and early twentieth centuries enjoyed the support of international institutions, Liberal leaders, and influential Masonic groups within Mexico.

Church and State Issues in Mexico

The struggle between the Catholic Church and Liberal, and then the revolutionary, governments continued through the turn of the century. At the end of the military phase of the Mexican Revolution, the radical 1917 Constitutional Assembly at Querétaro issued a series of anticlerical legislation that struck hard at the secular and religious power of the Catholic Church but that did not, in general, affect the small Protestant population as adversely. The 1917 Mexican Constitution placed serious limits on religious participation in politics, education, and public expression. The constitution itself codified such strong anticlerical provisions as seizing Church property, prohibiting parochial education, restricting clergy from wearing clerical garb, outlawing religious processions, and forbidding clergy from voting or preaching about the government. It was not, however, until Plutarco Elías Calles (1877–1945) assumed the office of the presidency in 1924 that the government began to enforce these provisions, along with even more strident anticlerical rulings broadly known as the Calles Law.

The Mexican Catholic Church suffered greatly as an institution during this period. In July 1926 the Mexican Catholic bishops declared a religious “strike” to protest the Calles law. This suspension of religious activities became the first volley in a struggle between conservative Catholic activists and the Liberal Mexican state that eventually took the name of the Cristero Rebellion, so named for the cry of the Catholic rebels, “Viva Cristo rey!” The rebellion, which took place mainly in the central Mexican states of Jalisco, Aguascalientes, Guadalajara, and Zacatecas, was violent and bloody, claiming as many as 90,000 lives over the course of the three-year struggle. After the Cristero Rebellion, the Catholic Church was forced to retreat to the sidelines of Mexican political life and, officially, to the margins of Mexican society. During the height of anticlerical feeling, Protestant churches too fell under the scrutiny of the revolutionary government and their clergy were subject to most of the same restrictions as were Catholic priests. Yet, Protestant followers found a space for growth amidst the anti-Catholic regulations. Notable Protestant public leaders such as the brothers Aaron and Moisés Sáenz, Andrés Sáenz, and Alfonso

Herrera emerged, holding key government positions and becoming renowned educators.

Protestant Expansion after the Revolution

On a smaller scale, another event took place during the early decades of the twentieth century that would shape the future of religion in Mexico. In 1912 Romana Valenzuela, a miner’s widow, attended services at the Azusa Street mission in Los Angeles, California, the Pentecostal church led by the great African American preacher William Seymour (1870–1922). Valenzuela converted to Pentecostalism and returned to her community of Villa Aldama, Chihuahua, to found the first Pentecostal church in Mexico, the Apostolic Church in Christ, in 1914. Valenzuela would found several more churches before her premature death in 1918. Another female preacher, Maria de los Angeles Riviera, after converting to Pentecostalism in Tucson, Arizona, founded the Church of God, in Ciudad Obregón, Sonora, in 1926.

While the majority of U.S.-supported Protestant missions were located in the north and central regions of the country, a few missionaries—including a few local Guatemalan pastors—entered Mexico from its southern border to work in the states of Chiapas and Tabasco. Foremost among these was Cameron Townsend (1896–1982), a missionary who had worked among the Maya in Guatemala for a number of years and who founded the Wycliffe Bible Translators/Summer Institute of Linguistics (SIL), a group primarily concerned with translating the Bible into local languages, in 1934. Although Townsend shared few of the political goals of the Mexican revolution, he was invited to work in Mexico by the highly nationalist Mexican president Lázaro Cárdenas (1895–1970) in 1935. Though the two might have seemed to have been strange bedfellows (Townsend had written a scathingly anticommunist novel about El Salvador, while Cárdenas was arguably Mexico’s most socialist president to date), the president supported SIL for its work among the indigenous, particularly in transcribing and translating indigenous languages, and he requested that SIL initiate a project to translate the Bible into every indigenous language in the country. Despite Cárdenas’s patronage, Townsend and his fellow SIL missionaries fell under heavy criticism from members of the Mexican left, who disdained them for their conservative political positions and support of the United States. Although the Mexican government did not end its support of the SIL until 1979, foreign missionaries, SIL included, were generally unsuccessful in converting indigenous peoples to Protestantism. Indeed, generally

speaking, Protestantism remained quite marginal in Mexico for much of the twentieth century, as the vast majority of Mexicans, who were Catholic either by faith or custom, found Protestantism to be simply too alien to their world-views and culture.

While Protestant growth among historic (missionary) churches in general has remained fairly stagnant in Mexico to this day (Mexico, in fact, has one of the smallest percentages of Protestants of any country in Latin America, including Cuba, which until recently was officially atheist), one strand of Protestantism, Pentecostalism, has grown extensively in Mexico in recent years, particularly in the southern states. Pentecostalism is the branch of Christianity that places great emphasis on the Third Person of the Trinity, the Holy Spirit. Believers are “baptized in the Spirit,” an experience that is expressed through miraculous and somatic experiences such as speaking in tongues, healing of illness, and other ecstatic behavior. The history of Pentecostalism differs from other Protestantism in Mexico because of its native, as opposed to missionary, origins. As we have seen, Mexican converts established the nation’s first Pentecostal churches back in the early years of the twentieth century, but Mexico’s Pentecostal “boom” began in the 1970s and continues to the present day. It was during the 1970s that persistent economic crisis in the countryside and sustained migration from country to city pushed people to consider new social, political, and even spiritual alternatives. During that time, Mexican-born preachers and pastors began to travel around the country to evangelize and spread the Gospel. In this changing social climate, Pentecostal beliefs—channeled through local pastors and theological understanding—found great acceptance among the indigenous peoples in rural areas. Many migrants also found conversion in the border cities (both in the north with the United States and in the south with Guatemala) and returned to their original localities with new religions. As a result, Pentecostalism has become the main expression of Protestantism in Mexico, with a membership more oriented to the popular classes of Mexican society, and aided by the formation of Mexican religious leaders, including indigenous pastors, who understand their native cultures and the needs of their people.

In 1990 President Carlos Salinas de Gortari annulled many of the anticlerical laws of the revolutionary period and sought to normalize relations with the churches as part of a larger package of substantial political transformation. In 1992 the Mexican legislature, seeking to expand the ruling party’s faltering political base by recognizing the role that religion

played in Mexican society, passed a series of laws that reversed decades of restrictions on religious activities. Among the most important of these was the enactment of the Law of Religious Associations. This new law opened up the legal recognition and enfranchisement of all religions in Mexico. It established a public registry of all religious associations (*asociaciones religiosas* or ARs) in Mexico, creating a new legal status for churches and groups of belief and allowing for the kind of free public expression of religion that the 1917 constitution had strictly prohibited.

It is interesting to note that more than 4,000 ARs are Protestant or evangelical (including Pentecostal) institutions. Among the largest and most influential of these are Iglesia Nacional Bautista, Iglesia Nacional Metodista, Iglesia Nacional Presbiteriana de México, Iglesia Congregacional, Iglesia Luterana, Asambleas de Dios, Iglesia de Dios, Iglesia Apostólica de la Fe, Movimiento de Iglesias Pentecostales Independientes, La Luz del Mundo, Amistad Cristiana, and Fraternidad Pentecostal Independiente. Beyond these, there are literally thousands of smaller Protestant religious groups.

Current Situation

According to the 2000 census, Mexico had a population of 97,483,412 persons above the age of five. Of this population, 87 percent were Catholic.

Protestants, evangelicals, and Pentecostals (grouped together for census purposes) make up 5.2 percent of the population, or 4,400,000 persons. The census classifies Jehovah’s Witnesses, Mormons, and Seventh-day Adventists as “nonevangelical biblical”; this group constitutes 2.1 percent of the overall population. Persons who claim no religion account for 3.6 percent. The remaining respondents either did not indicate a religion on the census; are members of other religions such as Jews, Muslims, or Buddhists; or belong to marginal systems of belief.

It is important to note that religious preferences in Mexico show strong regional variations. The most singular case is that of the southern state of Chiapas, which has the lowest percentage of Catholic believers in the entire country. Catholics make up 63 percent of Chiapas’s population, while Protestants–evangelicals–Pentecostals account for 13.5 percent. “Biblical nonevangelicals” are 8.5 percent, and nonbelievers (a term that for census purposes includes people who practice native traditions exclusively) also make up 13.5 percent of the state’s population. Chiapas presents many similarities to the religious situation of neighboring

Central American countries, particularly Guatemala. Although Chiapas is the “most Protestant” state in Mexico, several other southern states, including Tabasco, Quintana Roo, and Campeche, all have more than a fourth of their population registered as non-Catholic; in each case, the Protestant-evangelical-Pentecostal population is between 12 and 13 percent of the state’s overall population. Specifically, Protestants–evangelicals–Pentecostals make up 13 percent of the population of Tabasco. They make up 13.1 percent of the population in Campeche and 11.2 percent in Quintana Roo.

This Protestant expansion is not, however, completely limited to southern Mexico. Significant figures for Protestants–evangelicals–Pentecostals appeared in some northern border states such as Baja California (7.9 percent), Chihuahua (7.1 percent), and Tamaulipas (8.6 percent). On the other hand, in the central western region of the country—home to a strong and conservative Iberian tradition and the heartland of the Cristero Rebellion of the 1920s—Catholicism remains strong and Protestants are very few. Protestants make up only 2 percent of the population of Aguascalientes, 1.3 percent of Guanajuato, and 2 percent of the overall population of Jalisco. Not surprisingly, these are also the states that produce the majority of Mexico’s Catholic priests. By contrast, the capital of Mexico, Mexico City, mirrors virtually the same percentages for religion affiliation as the national averages.

According to the 2000 census, the indigenous population of Mexico clearly demonstrates a greater acceptance of Protestantism than does the Mexican population at large. Of Mexicans who speak indigenous languages, 80 percent consider themselves to be Catholics, while 10 percent self-identify as Protestants—almost double the national average. Mayan, Nahuatl, Totonac, Zapotec, and Mixtec ethnic groups all have relatively high Protestants percentages. It is worth noting that of the fifty-one municipalities in Mexico that have a clear Catholic minority, all are rural and (except for one case) are communities of indigenous language speakers.

Religious Problems

Protestant believers still face discrimination in some parts of Mexico. During the 1980s and 1990s, Catholic traditionalists expelled 25,000 to 30,000 persons from the indigenous municipality of San Juan Chamula, Chiapas, because of their refusal to take part in traditional Catholic rituals or to serve in *cofradías* (brotherhoods). Tensions between traditionalists

and Protestants sometimes erupted into violence, resulting in the forced expulsion of many Maya Protestants (mostly Pentecostals) to nearby cities such as San Cristobal de las Casas, where they established their own colonies in the slums that ring the city. On December 22, 1997, religious conflict reached its nadir in Acteal, a small Tzotzil Maya community in Chiapas, when a group of forty-five Catholic pacifists sympathetic to the Zapatista guerrillas, including women and children, were murdered by unidentified assailants while praying in a local chapel. Although the assassins were eventually proven to be part of a paramilitary group likely associated with an established political party, the Partido Revolucionario Institucional (PRI), religious tensions in Chiapas were so high at the time that many feared that the perpetrators of the crime might have been displaced Protestants. Fortunately, the administration of the first elected Protestant governor in the history of Mexico, Pablo Salazar Mendicuchia, halted this terrible situation. During this administration (2000–2006) state and municipal offices of religious affairs worked to settle religious disputes throughout Chiapas, and they allowed exiles to return to their original communities if they so desired.

Unfortunately, religious disputes continue to flare in various states of Mexico, even though federal law officially prohibits religious discrimination. Other states have established regional offices of religious affairs to resolve religious disputes, although neglect remains in many areas. Protestant leaders and human rights organizations today continue to press for complete religious tolerance within the country.

Conclusion

Despite a pervasive history of anticlericalism, Mexico continues to be one of the “most Christian” nations in the world, as measured not only by custom and traditional affiliation but also by actual church attendance. Reflecting trends found elsewhere in Latin America, Protestantism—specifically Pentecostalism—is on the rise in certain areas of Mexico, especially in predominantly indigenous states such as Chiapas and in the border regions. Nevertheless, Mexico today retains a strong Catholic character, as both the institutional Church and popular Catholicism continue to dominate the spiritual landscape of the country.

Mexico: Twentieth Century

During the early twentieth century, Mexico experienced a violent Church-state conflict that culminated in the Catholic Cristero Rebellion. The outcome of this conflict was an uneasy *modus vivendi* between the Roman Catholic Church and the revolutionary regime, which endured for the rest of the century. As the regime declined, and since its collapse in 2000, the Church has begun to reclaim its influential position in Mexican society. However, it is doing so against the backdrop of a dramatic rise of religious pluralism.

Historical Background

On the eve of the Revolution of 1910–1920, liberal reforms in Church-state relations enacted during the second half of the nineteenth century had considerably weakened the once hegemonic position of the Roman Catholic Church. For much of the colonial era, from the conquest until the late eighteenth century, the Spanish Crown had granted the Church a central role in the religious, political, and economic affairs of New Spain. However, gradually escalating state attempts to undermine the power and influence of the Church began during the last decades of colonial rule, strengthened under Liberal leadership after Mexican independence in 1821 and culminated in the great Liberal reform movement of the 1850s and 1860s. By the end of the nineteenth century, Church and state had been separated, and religious tolerance prevailed.

The Liberal constitution of 1857 had stopped short of religious tolerance and Church-state separation. Catholicism remained the state religion. However, the constitution, which incorporated earlier Liberal laws, abolished the clerical *fueros* (legal immunity from civil prosecution); denied the Church the right to own or acquire property, including land, other than that required directly for worship and administration; regulated sacramental fees; deprived the clergy of its political rights; excluded the clergy from education; and granted the state authority to regulate matters of worship. The Church's rejection of these reforms sparked the Three Years' War or War of the Reform (1858–1861) between Liberals and Conservatives. The conflict radicalized both sides. In 1861 Mexico and the Vatican broke off formal diplomatic relations. In 1859 Liberal leader Benito Juárez (1806–1872) issued a series of new decrees that completely separated Church and state; established religious tolerance; nationalized Church wealth and property; introduced a civil registry and declared birth and marriage civil ceremonies; secularized cemeteries; abolished monastic orders and new novitiates; limited the number of religious holidays; prohibited expressions of "external cult," such as public ceremonies, bell ringing, and the wearing of clerical garb; and prohibited members of government from attending acts of worship. President Sebastián Lerdo de Tejada (served 1872–1876) incorporated these laws into the constitution in 1873 and provided enabling legislation in 1874, sparking the *religionero* revolt.

Resurgence of the Roman Catholic Church under the Díaz Regime

Despite these setbacks, the Church proved remarkably resilient. During the tolerant Liberal dictatorship of General Porfirio

Díaz (served 1876–1911), the Reform Laws were not uniformly applied, and Church–state conflict died down temporarily. The authorities allowed the Church to reestablish itself in the realm of private education and generally tolerated outward manifestations of worship. An increasingly ultramontane Church, which sought to reassert control by the papacy, was captained by a new generation of prelates trained at the Pontificio Colegio Pío Latino Americano in Rome. It managed to recoup much of its losses and reestablished an informal working relationship with the state. One of the most prominent members of this new generation, Monsignor Eulogio Gillow y Zavalza (1841–1922), archbishop of Oaxaca, maintained a personal friendship with President Díaz. The Church expanded its institutional reach by increasing the number of clergy; establishing a series of new dioceses and ecclesiastical provinces; developing seminaries, novel religious orders, and lay associations; and resuming its role in education. The Church stimulated new devotions, often of a Marian nature, that combined popular beliefs and ultramontane orthodoxy.

This so-called “reconquest” was not merely institutional and devotional. Pope Leo XIII’s (papacy, 1878–1903) encyclical *Rerum Novarum* (1891) urged clergy and laypeople to address the “social question” in the face of the advance of socialism. Social Catholicism, an important intellectual current that sought to bolster Catholicism across the globe by offering reformist solutions to the problems of the emergent working class in an increasingly capitalist world, became influential in Mexican Catholic circles. Between 1903 and 1909 the Church sponsored several congresses that focused on the plight of the industrial working class and the peasantry and called for the establishment of Catholic workers’ circles, mutualist societies, and schools. Catholics founded a national labor confederation, the Confederación Católica Obrera, to address workers’ needs. This resurgence galvanized lay society. In 1911 Catholics organized the Partido Católico Nacional, a confessional party that made impressive headway in the first postrevolutionary elections, especially in central Mexico, until it was banned in 1913.

Mexican Religiosity on the Eve of the Revolution

At the turn of the century, Mexico remained an overwhelmingly Catholic nation. The admittedly questionable census data available indicate that as late as 1910 more than 99 percent of the population retained the Catholic faith. True, Protestantism had emerged in the mid–nineteenth century with the arrival of foreigners and their ministers, and commercial treaties granted foreigners the right to practice their

faith. During the 1860s Liberal politicians, dissident clergymen, and military officers founded a series of small schismatic religious associations. The spread of Protestantism received a boost when President Lerdo de Tejada (served 1872–1876) permitted U.S. Protestant missionaries into the country in an effort to weaken the hold of the Catholic Church. Mainstream Protestant churches, notably the Methodist, Presbyterian, Baptist, Episcopal, and Congregational, incorporated Mexico’s schismatic associations, which had made considerable headway among Liberal politicians, the ascendant middle class, and sectors of the industrial working class. Across the country, Protestants developed a network of small congregations, schools, and colleges, especially in urban environments but also in dynamic rural areas touched by the expansion of railroads or colonization. Historian Jean–Pierre Bastian (1989) estimated that by 1892 the number of Protestants in Mexico may have risen to as many as 100,000.

The expansion of Freemasonry, which had become an influential vehicle for innovation in circles of liberal elite and middle-class males, reflected the spread of spiritual dissonance. The fashionable practice of Spiritism, which aimed at establishing contact between the living and the dead through séances, automatic writing, and other means, also exerted a strong influence, counting among its adherents influential revolutionary leaders, notably Francisco I. Madero (1873–1913). Masonic lodges, Liberal clubs, mutualist societies, and Spiritist associations established important new forms of sociability that inculcated the modern ideals of individualism, egalitarianism, and democracy in a society still characterized by traditional loyalties.

However, for the vast majority of Mexicans, Catholicism remained intricately intertwined with daily life. Local forms of Catholicism still centered on the devotion to village patron saints and their images; the celebration of yearly saint’s festivals; and the *mayordomías* (also known as cargo systems or civil–religious hierarchies), lay associations closely linked to local power structures that sponsored the devotion to certain saints and promoted personal piety and charitable works. Orthodoxy and popular beliefs conjoined in the ever expanding devotion to Our Lady of Guadalupe, the patroness of Mexico, at her ancient sanctuary at Tepeyac on the outskirts of Mexico City. During the nineteenth century la Guadalupeana had become not only the focal point of a deeply held personal devotion but also a powerful symbol of Mexican national identity. The clergy’s effort to develop this national cult reached its culmination in 1895, when the

Virgin's image was crowned during a lavish public ceremony. Today the enduring strength of this increasingly transnational devotion is reflected in its rapid spread throughout the United States on the coattails of immigration and in the canonization in 2002 of Saint Juan Diego Cuauhtlatoatzin, the humble Indian peasant to whom, according to legend, the Virgin appeared in 1531.

Hybrid forms of folk Catholicism continued to flourish. In the isolated south, indigenous cults with deep roots in the colonial era retained significant elements of Mesoamerican cosmology. Elsewhere, beliefs in folk saints and miraculous apparitions, such as the cult of the living Santa Teresa de Cabora in northern Mexico, inspired peasant and indigenous revolts in the latter years of the Díaz dictatorship.

However, it should be stressed that the Church had been quite successful in disseminating an orthodox, sacramentalized form of Catholic worship in most dioceses, notably in the Catholic heartland or "rosary belt" of central-western Mexico, centered on the Bajío region, but also in areas previously neglected by the Church, such as the indigenous highlands of Oaxaca. Heterodoxy notwithstanding, more Mexicans practiced orthodox forms of Catholicism than ever. The Church's "reconquest" had proven a remarkable success.

From a Liberal Critique of Catholicism to Revolutionary Anticlericalism

The resurgence of the ultramontane Church sparked strong criticism from radical Liberals and anarchists, who denounced Díaz's betrayal of the Liberal anticlerical agenda. Bastian (1989) has argued that during the waning years of the dictatorship, the anticlericalism of religious dissidents inspired a shift towards revolution. While most Liberals, including progressive Catholics, merely sought to enforce the Reform Laws and limit the influence of the Church, some Jacobins, inspired by deism or atheism, attacked the concept of organized religion itself as an obscurantist drag on national development. Radicals began to advocate the "defanaticization" of Mexico's peasantry, and a few even envisioned a Mexico in which all religions would be replaced by a revolutionary cult of humanity. Once the revolution broke out, Church-state relations and religion assumed a prominent place in revolutionary discourse, though no clear, unified agenda emerged.

During the early years of the revolution, under President Madero (served 1911–1913), events still focused on political

change, not church and religion. This changed dramatically in 1913, when General Victoriano Huerta (1850–1916) deposed and assassinated Madero. The Constitutionalist movement that arose to challenge this act of usurpation accused the Church and prominent Catholics of having supported the coup and allowed pent up hostility towards Church and religion to explode during the military offensive of 1914–1915. Constitutionalist military leaders unleashed a series of anticlerical and iconoclastic actions that infuriated Catholics.

Revolutionaries attacked Church and religion from a range of ideological positions. Some viewed the Church as a rival of the state in the realms of social policy, education, and politics. Others considered the Mexican Church an anti-national "state within the state" controlled by a foreign leader, the pope. Radicals denounced traditional religion as "fanaticism" and superstition, an obstacle in the path of modernity. Once the Constitutionalist faction had established military supremacy, anticlerical radicals in the Constitutional Congress at Querétaro in central Mexico incorporated strongly anticlerical and antireligious articles in the revolutionary constitution of 1917. Article 3 prohibited religiously sponsored primary education; Article 5 outlawed religious vows and monastic orders as inimical to human freedom; Article 27 denied the Church the right to own or administer property, including churches and administrative buildings, which now fell to the nation; Article 130 granted the federal government the right to intervene in matters of religion, denied legal personality to the churches, forbade clerical participation in politics including the vote, prohibited confessional political associations, declared marriage a civil contract, granted individual states the authority to regulate the number of priests and other ministers, and stipulated that ministers had to be Mexican born. The Mexican Catholic Church and the Vatican denounced these articles as an assault on religious freedom and mobilized the faithful. The State interpreted the establishment of a new sanctuary for Christ King on the Cerro del Cubilete, a hill in Guanajuato, central Mexico, as a direct challenge to its authority, and the site was bombed in 1928.

While Presidents Venustiano Carranza (served 1917–1920) and Álvaro Obregón (served 1920–1924) demonstrated ambivalence towards the religious question and avoided an escalation of the conflict, President Plutarco Elías Calles (served 1924–1928), a virulent anticlerical, moved to enforce the constitutional articles. The Calles Law of July 2, 1926, provided for enabling legislation and required local

enforcement. States began dramatically to reduce the numbers of priests allowed to officiate in their jurisdictions, and they shut down and confiscated church buildings and schools. Private worship came under close police scrutiny. Federal education demonstrated a profoundly anticlerical bias. The Calles government also sponsored the foundation of a schismatic Mexican Catholic Apostolic Church, an act that inflamed Catholic passions.

The Cristero Rebellion and Its Aftermath

On July 31, 1926, the Mexican episcopate closed the churches and suspended all services, thus forcing laypeople to confront the revolutionary state. This “church strike,” which deprived Catholics of the sacraments, was sustained for three years. The Liga Nacional Defensora de la Libertad Religiosa (LNDR), a lay association, mobilized Catholics to protest against state anticlericalism with a commercial and tax boycott. However, civil disobedience failed to resolve the conflict.

A Catholic guerrilla movement arose in 1926 in many regions, especially central-western Mexico. While the LNDR provided leadership, much of the fighting was the work of peasant communities, which took up arms in defense of local religion, culture, and political autonomy and in opposition to increasing state intrusion, especially in the form of agrarian reform, rationalist education, and state regulation of worship. By 1927 guerrilla activity had evolved into large-scale military operations led by Generals Enrique Gorostieta and Jesús Degollado y Guízar, which posed a serious threat to the federal army and auxiliary forces consisting of peasant *agraristas*, the beneficiaries of revolutionary land reform. The war came to be known as the Cristero Rebellion or Cristiada. According to estimates, the Cristiada mobilized some 40,000 rebels. Though rank-and-file *cristeros* were generally peasants and smallholders, a few priests also participated in the struggle. The Mexican hierarchy and the Vatican did not condone Catholic violence, though individual bishops expressed support for armed resistance. The government responded with brutal reprisals, including the execution of priests, some of whom were canonized as martyrs in 2000.

The war attracted attention in the United States, where prominent Catholic laypeople and clergy pressured President Calvin Coolidge to intervene. In 1929 U.S. ambassador Dwight W. Morrow and influential Catholic negotiators reached an agreement with President Emilio Portes Gil (served 1928–1930), known as the *arreglos* (the deal), that

led to the immediate reopening of the churches and the restoration of the clergy to their parishes. In return for a Church pledge not to intervene in politics and to register the clergy on an officially approved list, the Mexican government promised that the constitutional articles would not be enforced and declared a general amnesty. The agreement did not, however, imply any changes to the constitution or address the issue of religious freedom.

While the *arreglos* led to the end of the Cristiada, anticlerical sentiments remained strong among the political elite, some of whom considered the deal a betrayal of revolutionary ideals. Within a few years tensions resurfaced, as states once again began drastically to limit the numbers of priests or entirely prohibit their activities. The authorities closed down seminaries and religious schools, confiscated Church property, and cracked down on “external,” or public, worship. Federal education assumed a marked anticlerical and often antireligious tone. Tensions culminated during the presidency of Lázaro Cárdenas (served 1934–1940), a member of Calles’s anticlerical inner circle. Cárdenas’s religious policy, symbolized by a highly anticlerical “socialist education,” targeted the beliefs of Catholics. Radical leaders in Tabasco, Sonora, Veracruz, and elsewhere embarked on violent “defanaticization” and iconoclastic campaigns supported by teachers, local officials, Freemasons, and the military. The Church and lay Catholics responded with an effective school boycott, while Catholic guerrillas brutally attacked rural teachers and schools. In urban areas Catholic riots met with state repression, while in the countryside a second Cristero rebellion again threatened social peace and the revolutionary agenda. Though not the primary target of anticlerical measures, Protestant churches were affected as well. By the 1940s they had lost much of the influence gained during the revolution.

Cárdenas decided gradually to abandon anticlerical and antireligious actions and urged the Education Ministry to modify its curriculum. By 1937 most churches closed after the *arreglos* had reopened their doors. In 1938, in an effort to extend an olive branch to the Cárdenas administration, a cautious Church hierarchy decided to support the president’s controversial expropriation of foreign petroleum companies. The rapprochement was completed by Cárdenas’s successor, General Manuel Ávila Camacho, who during the presidential campaign of 1940 famously declared “*Soy creyente*” (“I’m a believer”) or according to a less well known but probably more reliable version, “*Soy Católico.*”

The Postrevolutionary Era: From Modus Vivendi to the Reassertion of Catholic Influence

What emerged by the 1940s was an effective though occasionally uncomfortable modus vivendi between Church and state. While the political elite remained anticlerical, it tolerated another round of Catholic revitalization in which the Church relied on a rapidly expanding Catholic Action network; private schools; and the influential Secretariado Social Mexicano, a Church-supervised social welfare agency. However, chastened and cautious, it avoided politics and union organization, thus abandoning, at least for the moment, its old integralist dreams of establishing an organic Catholic society based on orthodoxy and Papal authority. It instead focused on morality and family values. Some disagreed with the new arrangement. Disgruntled lay Catholics organized a mass movement, the virulently antirevolutionary Unión Nacional Sinarquista, which despite rapid growth after its foundation in 1937 rapidly lost appeal during the 1940s. A year later, middle-class Catholics founded a political party, the Partido Acción Nacional (PAN). PAN would remain a negligible challenge to the ruling Partido Revolucionario Institucional until the 1980s except in circumscribed Catholic strongholds in central Mexico. PAN ultimately managed to reinvent itself during the waning days of the postrevolutionary one-party system and won the presidency in 2000.

The modus vivendi held up well for decades. Change came to the Mexican Church in the form of the progressive Vatican Council II (1962–1965) and the radical liberation theology movement, which sought to address the problems facing Latin America's poor and indigenous population from a radical perspective. Progressive Catholicism exerted a strong influence on some members of the Mexican hierarchy, notably Bishop Sergio Méndez Arceo of Cuernavaca (served 1952–1982), who sought to establish a purified form of Christianity. Liberation theology also influenced members of the Society of Jesus and individual rural clergy. However, the conservative Mexican hierarchy generally resisted innovative trends, while the Vatican, which from 1978 to 2005 was headed by Pope John Paul II, promoted conservatism. Meanwhile, tensions between Church and state arose over controversial issues such as birth control, abortion, and sex education. John Paul II made highly publicized unofficial visits to Mexico in 1979 and 1990, galvanizing Catholics. Conservative lay associations flourished, notably Opus Dei and the Legionarios de Cristo.

Church-state became tense during the 1980s, as Mexico's ruling party faced serious democratic challenges to its authority. The Church, which retained its reputation as the most respected institution in Mexican society at a time when cynicism permeated popular attitudes towards the state, became more assertive. The Church spoke out boldly against the proposed legalization of abortion in 1983 and electoral fraud in the 1986 Chihuahua state elections, thus breaking its longstanding agreement with the state not to engage in politics. In the heavily indigenous state of Chiapas, Bishop Samuel Ruiz García (served 1959–1999), one of the last progressives among Mexico's prelates, denounced the social and political conditions that maintained the indigenous majority in a state of poverty and dependence. Tensions reached a high point after the still unsolved assassination of Cardinal Juan Jesús Posadas Ocampo in 1993. The pope visited Mexico again in 1993, now as an official guest of President Carlos Salinas de Gortari (served 1988–1994).

The 1991 Reform of Church-State Relations and the Rise of Religious Pluralism

As part of a wider neoliberal agenda, President Salinas pledged to "modernize" Church-state relations and grant Catholics religious freedom. In 1991 the congress passed constitutional reforms that recognized the legal personality of "religious associations" but maintained limited government control over worship and the churches. The reformed Article 3 allowed for religious instruction in private schools; Article 5 authorized religious orders; Article 24 permitted worship outside the churches; Article 27 allowed religious associations to own property; Article 130 recognized the legal personality of religious associations and granted the clergy the right to vote, though not to be elected for public office. In 1992 Mexico restored diplomatic relations with the Vatican. The reforms satisfied neither liberals, who felt that they had gone too far, nor the Catholic hierarchy and laity, who considered the enabling laws of 1992 too restrictive and continued to lobby for more far-reaching constitutional reform.

Meanwhile, Mexico had undergone a dramatic shift towards religious pluralism, as more and more Mexicans converted to non-Catholic faiths. However, these were no longer exclusively the established Protestant denominations, though Presbyterian and Baptist churches remained numerous. Instead, from the 1920s on, evangelical and Pentecostal churches gradually spread, generally as small, home-grown congregations led by charismatic Mexican pastors. According

to census data, which must of course be taken with a grain of salt, in 1900 Protestants constituted a mere 0.38 percent of the total population and remained below the 1 percent threshold until the 1950s. Only during the 1980s and 1990s did growth accelerate, topping 5 percent in 2000. Small, idiosyncratic, often unstable evangelical churches with weak international ties proliferated, especially in the southern, heavily indigenous states; along the U.S.-Mexican border; and in major urban areas. Other important denominations, especially Jehovah's Witnesses, Seventh-day Adventists, and Mormons, which combined represent 2 percent of the population, have retained ties to the United States. The new churches generally attract poor individuals, often women, facing serious life challenges, such as health problems, alcoholism, and family conflict. Early research linking conversion with individualist, egalitarian, democratic, capitalist, and even feminist values should be viewed with caution. Other traditional religions have maintained a limited presence in Mexico. In a country where anti-Semitism has a long history dating back to the colonial-era persecution of Jews, a small Jewish population of 45,000 can be found in urban centers. Census figures fail to identify clearly those who practice indigenous forms of religion, either in combination with other faiths or independently.

Despite a significant drop in its membership, the Catholic Church remains the religion of 88 percent of the population. Conversion may well have slowed, as the Church has recently borrowed innovative charismatic practices from its rivals. The main exception is southern Mexico, especially Chiapas State, where today adherents of the new religions constitute the majority in many municipalities, especially those with large indigenous populations.

The Persistence of Old Tensions

Since the end of the twentieth century, divine justifications have served to make intelligible and heal the deep wounds of the Cristero Rebellion. In 2000, Pope John Paul II canonized 25 martyrs of the Cristiada, and a Sanctuary of the Martyrs is under construction in Guadalajara in west-central Mexico. Equally important was the canonization in 2002 of Saint Juan Diego, which reaffirmed Mexico's special role in sacred history. The motto associated with Our Lady of Guadalupe, "*Non fecit taliter omni nationi*" ("God has not done this for any other nation"), reflects her essential connection with Mexican identity and history, a connection that continues to offer Mexicans an alternative source of nationalism to that forged by the revolutionary state.

In the wake of the collapse of the postrevolutionary regime in the democratic presidential elections of 2000, the renewed involvement of the Catholic Church and conservative lay organizations in national politics, social debates, and moral questions (notably the abortion debate championed by the Catholic association Pro-Vida) and their continued drive for constitutional reform and religious freedom, especially in the realm of education, have led to acrimonious public debates. Opponents have declared the constitutional reforms of 1991 a serious mistake and advocate complete secularism (*laicidad*) and a total separation of church and state. Meanwhile, the conservative PAN governments that came to power in 2000 and 2006 supported the Church, especially on abortion and education issues, leading to social polarization and court challenges to the government. At the beginning of the twenty-first century, Mexico's religious conflict remained unresolved.

Ministry, Professional

The professional practices of ministry in America have undergone a sea change far more extensive than the earliest practitioners could have imagined when they crossed the Atlantic hundreds of years ago. Some came to North America seeking to establish the secure religious communities they had been unable to create in their native lands or elsewhere. Some came as missionaries determined to convert the natives to Christianity. And some came in chains, treated as enslaved property for the enrichment of those who owned or controlled them. Out of all emerged a broad array of professional practices that have formed a peculiarly American approach to ministry.

Historical Background

The earliest forms of this professional ministry were the missionary efforts by Roman Catholics who sought to bring Native Americans into the body of Christ. Their missions began in the middle of the sixteenth century and found their first enduring success with the mission in St. Augustine (Florida) in 1565. By the late 1590s, a network of Roman Catholic missions had been established along the southeastern coast and in the southwestern territory of what is now New Mexico. These efforts were the most basic forms of ministry, seeking to preach the Christian gospel, to teach the faith, and to demonstrate Christian life by creating community as well as by serving others.

It was a ministry that took great courage. It was also a ministry that touched every aspect of religious and everyday life, not only preaching, teaching, and baptizing, but also farming the land, providing health care, settling disputes, and otherwise administering the affairs of the community. At the same time, it was also a ministry very closely connected to the economic, military, and imperialistic interests of the European empires that sent the missionaries.

Professional ministry in other parts of North America, notably New England and the middle colonies, also drew from European roots. But in those regions the picture was far more diverse and complex. Some religious establishments, such as the Catholics in Maryland and the Anglicans in Virginia, took hold. In these colonies the professional ministry was inseparable from the social and political order; and ministers' compensation was dependent on civil government allotments from tobacco crops or tax revenues. At the other end of the spectrum were forms of the professional ministry that were entirely separate from the political

system. In Pennsylvania and Rhode Island the clergy depended upon their congregants to compensate them and their own skills as farmers or tradesmen to sustain them. In short, there was no single kind of professional ministry at the founding stages of the Christian movement in North America.

Two keys to understanding the development of professional ministry in America are internal (the politics of churches) and external (the politics of church-state relations). Of the two, the latter may be more important.

In the European background of America's religious experience was the pattern that existed since the age of Constantine in the fourth century. Christianity had become Christendom, and it was the established religion of the state. That basic pattern prevailed through the Middle Ages.

The structure of church-state relations in Europe was basically that of an established religion with one or more dissenting religions. The dissenting churches would operate in a counter-cultural pattern, without public financial support, and with varying degrees of freedom to function. Some dissenters were suppressed, some were oppressed, and some were tolerated. They had to generate their own revenues and maintain their own lands or properties—assuming they were permitted to own land and properties—and they had to find resources to support a professional ministry. This was the background Europeans brought to North America.

A number of the American colonies established religions. Much of New England had a religious establishment run by Puritans, who had been dissenters in Britain. Georgia was founded in 1732 by an Englishman as a place of refuge for imprisoned debtors and other disenfranchised persons. Its professional ministries came with a chaplain from the Church of England. Roman Catholics were the main religious force in colonial Maryland.

Pennsylvania, however, was created as a colony with broad tolerance for all religious groups. As a result, its professional ministries were diversified, ranging from Roman Catholics, who held a highly sacramental view of ordination and an ontological nature of the priesthood, to Quakers, who eschew professional ministry altogether.

Financial support for a professional ministry came from public revenues in some places, from the voluntary gifts in others, and from the creative labors of ministers themselves in still others. This diversity led to some curious problems in the operations of the churches' ministries. Within Methodism, which eventually became known for its aversion to beverage alcohol, some of the preachers supplemented their

meager incomes by selling homemade whiskey. Churches that had taken a moral stance against slavery accepted voluntary contributions that came from adherents who owned slaves. Catholic priests, who were sent by their bishops or their orders to places of service after taking vows of poverty, lived on the largesse of their patrons or their parishioners. Professional ministers who were called to and compensated by congregations found themselves subject to the willful attitudes of their church members. Jonathan Edwards, one of the greatest religious leaders in American history, faced resistance from some members of his Northampton congregation, who did not want to increase his salary because they believed his wife spent too much money on her clothing.

What eventually became the prevailing American pattern of professional ministry was drawn from the conviction embedded in the First Amendment of the United States Constitution that church and state were to be entirely and utterly separate. The country had determined that there would be no religious establishment, that religious groups would be free to form, that religious practices would be protected, and that religious exercises would not be put under the control of the government.

This constitutional guarantee meant, among other things, that each church's internal polity would be responsible for its professional ministry. The state could hold individuals in the professional ministry accountable for any violations of the criminal laws or civil codes. But churches in the United States were understood to be voluntary associations, and their polities would control their professional ministries.

As historian E. Brooks Holifield makes clear in his magisterial study of ministry, *God's Ambassadors: A History of the Christian Clergy in America* (2007), the preparations for and the practices of professional ministry varied by region and ecclesiastical tradition. Calvinists, among the New England Puritans and the Dutch Reformed in New York, emphasized preaching as the most important aspect of a minister's work. They placed such a high value on education for the ministry that 90 percent of the Congregational ministers in colonial New England had a college degree. Anglicans also stressed formal education for ministry, initially bringing priests from England with degrees from Oxford and Cambridge and then establishing the College of William and Mary in 1693 where Virginia Anglicans could study for the priesthood. A minister in these contexts was expected to know the theological traditions; be conversant in matters of literature, philosophy, and science; and be well-versed in

languages. These skills were considered necessary to prepare and preach learned sermons.

But other factors and other forces were also at work. As Holifield notes, demand for clergy outweighed supply in every region except for New England. Finding enough ministers to meet the need may have required lowering the expectations for an educated ministry. Further, some religious traditions in America considered higher education a detriment to effective ministry. Many Methodist circles valued a "converted" ministry more than an educated ministry. Passionate preaching was considered more meritorious than erudite preaching. Moreover, the patterns of compensation for professional ministers were generally unreliable and usually low. So the sense of satisfaction that ministerial professionals found in their work came from vocational fulfillment through their tasks—preaching, pastoral care, and sacramental administration—as their traditions emphasized them.

The Practices of Professional Ministries

A classic theological way to discuss the work of professional ministry is to identify three roles of ministry: the priestly, prophetic, and royal. In America's religious life, all three are practiced. But the degree to which one church body emphasizes one role for its professional ministers, and the degree to which another church body emphasizes a different role is part of the voluntary character of religion in America.

In the priestly role, a professional minister lifts the prayers of the people to God and conducts sacred rituals such as baptism and Holy Communion that convey the promises and presence of God to the people. Hence, the professional minister as priest represents the people to God and represents God to the people.

In the prophetic role, a professional minister conveys God's word to the people. That word is derived from the sources that each church body has determined to be authoritative. For most Protestants, that source is the Bible. For Roman Catholics, it is the Bible and the tradition of the Church expressed through its creeds and doctrines. For Anglicans, there are three authorities: the Bible, doctrines and practices conveyed through the church tradition, and reason. For others, the range of authorities may include reason (Unitarians), emotion (ecstatic groups), or practices that are primarily cultural or ethnic.

In the royal role, a professional minister directs, manages, leads, or controls the life and activities of the community of faith. Professional ministers have responsibility

for maintaining the disciplines of the religious community, for holding people accountable to its standards of conduct. At the same time, professional ministers are accountable for providing a vision than can see far beyond what the followers can see.

In America's religious life, all three of these roles have been present. But various bodies and traditions have affirmed them and have balanced them differently. Along the way, these responsibilities have been carried out with varying levels of success and failure.

The priestly role has been fulfilled in ways that have had an interesting impact on other religious traditions beyond Christianity. Major public events ranging from banquets to political rallies to rodeos are often thought to need some professional minister to "bless" the event. For a Roman Catholic priest, this fits nicely with a sacramental understanding of the priesthood. For a Protestant minister, it feels comfortable to thank God in public. But a rabbi, whose traditional role has been teaching the Law, may find it an odd assignment for one who is not a priest.

The Americanization of the professional ministry has been especially significant in the interpretation and application of the prophetic role. Church and state are separate. The role of the professional ministry is to convey God's word to people. The debate is whether that role is to be exercised only within the religious community or in the public arena as well.

In the 1950s and 1960s, a Baptist preacher, Martin Luther King Jr., fulfilled the prophetic role both internally (within the life of the church) and externally (within the larger American society). His "Letter from Birmingham Jail" was specifically addressed to leading figures in predominantly white churches. His "I Have a Dream" speech was delivered from the steps of the Lincoln Memorial to the institutions of the United States government and to the nation as a whole. Every one of his prophetic acts, spoken from a pulpit or demonstrated in a march across a bridge, was an effort to bring the word of God to bear upon the private feelings and public systems that nurtured racial bigotry, social injustice, or forms of violence.

From the 1950s through the early years of the twenty-first century, another Baptist preacher, Billy Graham, held evangelistic rallies in scores of cities across the country and in many places around the world. He met personally with every president of the United States during those years and was long considered the nation's chief pastor. Yet his exercise of the prophetic role was focused entirely upon individual

behaviors and personal morality. He spoke with people of power, but did not confront them with the prophetic word of God—at least not publicly.

Denominational Jurisdiction over Professional Ministry

In the process of developing and defining professional ministry in America, the primary institution that emerged was the denomination. As the country adopted and implemented a plan for open tolerance of all religions and establishment of none, denominations became the nineteenth and twentieth centuries' major forces in creating standards for professional ministry. Combining doctrinal traditions and liturgical patterns with organizational systems and financial infrastructures, these entities offered mechanisms for providing a professional ministry.

Denominations assumed responsibility for the professionalization of ministry. They established rules for determining how, and by whom, persons could be licensed or ordained or otherwise credentialed for professional ministry. They crafted codes of conduct to establish the boundaries within which a professional minister had to function. They created institutions of higher learning so that the educational standards could be met and the professional criteria could be taught. They instituted mechanisms for outlining how their professional ministers could find places to exercise professional ministry, and to move into new places of service at a future time. They developed support systems for professional ministers, including compensation patterns, health care coverage, retirement planning, and income tax advantages. They excluded women. And they put in place the procedures to be followed should any one of their professional ministers be accused of an offense that could lead to a reprimand or to the loss of professional credentials. All of these denominational efforts granted to those in ministry a social status and security that, in other systems, could have been enjoyed only by those who had the privileges available in an established church.

In addition, the construction of a professional ministry created connections with other parts of society and with other professional associations. Care of the sick included not only a minister's visiting them and praying with or for them, but also the possibility of peer-to-peer conversations with nurses, physicians, psychologists, and social workers. Combating injustice included not only listening to those who have suffered at the hands of an individual's or system's mistreatment, but also the possibility of professional access to

attorneys, courts, elected public officials, police, and the news media.

Expanding horizons for the ministry included specialized nonchurch ministries. Chaplaincies in the military, in hospitals, in long-term health care institutions, in prisons, and elsewhere typically require a credential in the professional ministry from a church to be considered for a position of service. The rise of denominations helped the ministry to become a profession.

Variations from the Denominational Pattern

A professional ministry that was controlled by church bodies, rather than by the government, also opened doors for those who had not been admitted into the profession to function as if they were. In the nineteenth century, a Methodist woman named Phoebe Palmer (1807–1874) was arguably the most compelling preacher of her era. She was especially effective at delivering remarkable sermons—perhaps three hundred of them—for camp meeting associations, one of the most important institutions in that era. In addition, she was the leader of a Bible study program that did more than inform participants about the scriptures. It formed persons for leadership in the church. In addition, she was an insightful theologian who articulated a doctrine of holiness that has been studied for something approaching two hundred years. Yet she did not have an ecclesiastical credential, a church license, or an ordination certificate, because Methodism in her day did not affirm women in ministry.

The denominational pattern was also expanded by many who, though licensed or ordained or credentialed by their respective ecclesiastical bodies, stretched the church and its ministry in unusual ways. Charles Grandison Finney (1792–1875) was a Presbyterian who devised, in the first half of the nineteenth century, a uniquely American contribution to the profession of ministry. First, he conducted “revivals” that were separate from church venues and church auspices. Second, he delivered extemporaneous sermons that were characterized by their emotional ardor rather than by their meticulous preparation. Third, he created a system of “new measures” that included a device that became known as “the anxious bench”—a seat directly in front of the preacher for persons who might be on the verge of conversion from a life of sin to a state of grace. The techniques that he established have become the standard operating procedures for countless numbers of revivalists in the nearly two centuries since he invented them. Any evangelist who invites people to

come forward and accept Christ as Savior owes a debt to Finney, who created the technique.

Finney was widely criticized by those in the church who thought that an emotionally driven conversion was manipulative and, ultimately, inconsequential for it did not include any nurturing in the faith. On the other hand, there is no doubt that Finney made lasting contributions to the professional ministry by creating a process whereby persons who have been unreached by the church might begin a spiritual journey. His revivalist techniques may have attracted significant numbers of people who joined other denominations to continue their religious encounter.

Education for the Profession of Ministry

Within American religious life, especially within American Christianity, two competing and perhaps irreconcilable forces have vied for control of the professional ministry. One is the conviction that notwithstanding all other significant elements that help prepare one for effective ministry, the *sine qua non* is a vital and personal religious experience of depth and power. The other is the conviction that intellectual preparation of the highest order is needed to equip professional ministers for addressing the questions that challenge the essential core of religious faith—theodicy, evil, suffering, and the painful sense of the absence of God. For every person who has been encouraged to heed the call of God and begin the intellectual work of preparing for the ordained ministry, there are several who have been warned about the danger that education will drain away one’s faith.

The educational process of preparing persons for ministry in America was at first a rather informal matter. People would listen to experienced preachers and after a while would be offered an opportunity to proclaim the word as well. Mentoring and tutoring were handled on an individual basis. If the mentee could read—not something that could be taken for granted—the mentor might provide a list of books to study. Indeed, this was not only the nineteenth-century method for preparing to enter the professional ministry; it was the method for entering other professions as well. Finney had apprenticed himself to a lawyer, intending to pursue a career as an attorney before his religious conversion led him toward ministry. He never attended college, yet for fifteen years he was the president of Oberlin.

Denominations made efforts to regularize this informal system of study. They developed comprehensive

reading lists that were intended to be applied across their churches, regardless of the region or the idiosyncrasies of the mentor.

Formal higher education for ministry, although common in New England, was rare in other areas. Harvard was founded early in the seventeenth century to prepare men for a learned ministry. But the urgency of spiritual needs on the expanding frontier, the lack of educational institutions to prepare men for ministry, the low level of literacy that was perceived to be the pattern among laity, and the immediacy of emotionally powerful sermons were reasons enough not to demand high levels of measurable intellectual attainment to qualify for the professional ministry.

Yet church bodies had long been committed to education as an important dimension of their mission and ministry. The first universities in Europe were opened under church auspices. Theology was known as “the queen of the sciences.” The intellectual giants who were formed by the church and to whom subsequent generations turned were religious humanists (like Erasmus) and ecclesiastical architects of doctrine (like Augustine and Aquinas). Catholics, Methodists, and others established schools, colleges, and universities as essential elements of their work. With an increasing amount of energy, laity—not the professionals in ministry—began not only to insist that the intellectual preparation of persons for ministry must improve but also to offer financial assistance to make it happen.

Theological schools began to appear in greater numbers on the American landscape. One of Finney’s strongest critics, John Williamson Nevin, joined forces with Philip Schaaf to provide a vigorous theological faculty in Pennsylvania. They established a movement—the Mercersburg theology—as an antidote to Finney’s new measures. Some schools of theology were established as original academic units of universities. Some were founded and then became the basis of more comprehensive universities. Others began as free-standing institutions. Boston University, Union Theological Seminary, and the University of Chicago’s Divinity School were just a few of the immensely important educational centers to be founded in the nineteenth century by the churches with the financial support of their laity.

Finding able faculty members for those institutions was a challenge. Some gifted persons were sent to European universities to pursue degrees and return to the United States to teach. Others were recruited directly from European universities. Slowly but surely, the churches established the notion that the true educational standard for entry into the

professional ministry was a baccalaureate degree followed by an advanced degree in theological studies. These developments were primarily Protestant.

Roman Catholic Ministry

The Roman Catholic understanding of professional ministry is profoundly different from most Protestant views in a number of ways. First, it is essentially a sacramental ministry. Each priest is ordained not to an office but to a different order of life. The professional duties of a priest are driven by the sacramental responsibilities through which he delivers his arts of ministry. Second, although preaching is an aspect of professional ministry, it is certainly not highly valued in the way that most Protestant churches believe. In the Catholic approach to professional ministry, a homily is one way to convey and sustain the tradition, but skillful oratory is not one of the leading expectations for the priesthood. As ecumenical influences have grown, so has the impetus to pay more attention to preaching in the training of men for the priesthood. That is one way the American experience has affected the professional ministry in Roman Catholic life, especially in modern times.

But Roman Catholics helped shape the religious landscape in America, too. They had an impact on professional ministry not only with the missions they founded in the second half of the sixteenth century, but also through the waves of migration in subsequent periods. The immense tide of Roman Catholic immigration swept into the United States in the late nineteenth century, and the impact of these forces on professional ministry was immense as well as complex. At least three aspects of it merit attention.

The first is the connection between ethnicity and Catholicity. When Irish, Italian, Polish, and other cultural constituencies arrived in North America, a professional cadre of priests was needed to exercise ministries in the manner that each group was accustomed to receiving them. Finding a sufficient number of priests among the immigrant communities was a challenge, as was finding the resources to call, train, and ordain American-born priests for those ethnic and cultural groups.

Second, as the size of the Roman Catholic population grew, in certain places Catholics (including ethnically and culturally identifiable groups of Catholics) came to dominate political affairs in that region. Candidates seeking

election as mayor or as a member of Congress had to show respect for, and be seen with, the appropriate priest, bishop, or cardinal in the right setting.

Third, one aspect of the professional ministry in Roman Catholicism was barely understandable in a Protestant context. Professional ministry in the Catholic context operated with two parallel systems. One was diocesan, under the jurisdiction of a bishop; the other involved religious orders, whose members were not accountable to a diocesan bishop, but to the principal figure in the order.

All of these factors were in addition to the differences in professional ministry that were driven by Roman Catholic doctrine. Having a professional ministry that was accountable not to a congregation or a denominational association but (ultimately) to a pope in Rome or to the leader of an order in some distant setting meant that educational standards, compensation patterns, ecclesiastical disciplines, and ministerial assignments were directed in ways that the prevailing Protestant systems for a professional ministry could not easily grasp.

Eventually the size of the Roman Catholic population in the country dwarfed any of the individual Protestant denominations. Systems of Catholic education, including theological education for those entering the priesthood, quickly appeared.

For religious groups outside of the Christian context, there were other issues in professional ministry. Muslims, Buddhists, Hindus, and others who adhered to their beliefs and practices did not typically modify their approaches to ministerial leadership when they settled in North America. On rare occasions, an imam might appear at an interfaith event. But such brief encounters did not alter the approach of these non-Christian bodies to the recruitment, training, credentialing, or assigning of spiritual leaders.

For Jews, the most visible and socially engaged group of non-Christians, the effect was somewhat different. Traditionally, a rabbi served two major functions in the Jewish community. One was to act as teacher of the Law; the other was to render judgments that were in accordance with the Law. But in the North American context, where priestly or pastoral expectations applied to the understanding of professional ministry, rabbis increasingly sensed that they were to adapt to American patterns. At Sabbath services, they were expected to teach in the engaging manner of a Protestant preacher. During the week, they were expected to visit the sick and otherwise provide pastoral care for those who were troubled. And in public events, they were expected to

occupy places alongside priests and pastors where they might deliver remarks or offer prayers.

Professional Ministry in the Postdenominational Era

In the middle of the twentieth century, the large American denominations were at their peak. New theological schools were being created to prepare growing numbers of individuals for the professional ministry. Colleges and universities that had been created by the denominations in the mainstream of the church were beginning to separate themselves from their parent churches. Yet attendance at local churches in the leading denominations was still growing. Membership statistics were rising. The decade following World War II looked bright and promising for American society and for the American religious establishment.

Moreover, the old animosities between Protestants and Catholics were showing signs of ecumenical cooperation. By the time of the Second Vatican Council in Rome during the early 1960s, local experiments in worship that drew Catholics and mainstream Protestants together were increasingly common. It was not unknown for such events to include a rabbi who read a biblical passage or offered prayer. The mainline denominations were the keys to those efforts. Professional ministry groups and clergy associations expanded their efforts. Preliminary conversations were occurring about possible interdenominational mergers, along with the Consultation on Church Union (now Churches Uniting in Christ) that drew together most of the mainline church bodies and predominantly African American churches that had been formed in the days of slavery and of the institutionalized segregation that followed the Civil War.

By every measure, the churches were strong and the professional ministry was vibrant. New influences were promising even greater things for the church and its professional ministry. Efforts at liturgical renewal, linked in part to the ecumenical spirit, were enhancing worship options and were even influencing the architecture of sanctuaries. Protestants were imagining the recovery of more frequent celebrations of Holy Communion. Music of different genres, such as folk and jazz, found its way into worship, and along with that came experimentation again with instruments that included guitars and percussion. Some people were even starting to dance in services on Sunday morning—an activity that an earlier generation of professional ministers would have frowned upon if their parishioners had tried it in a secular venue on Saturday night!

It was only in the period immediately following those heady mid-century years that the people in professional ministry began to realize that their institutions were beginning to decline. Serious divisions among those in professional ministry arose during the war in Vietnam. Although encouraging developments in racial relations had given some Americans reason to hope that justice would soon prevail, too many violent incidents and too much hateful talk had exposed the depth of racism in American life. And part of what was exposed was the racism in the church. Professional ministers in mainline denominations actually discussed whether to allow African Americans to take Communion in white churches. The professional ministry could not find the wherewithal to be sufficiently priestly, prophetic, or royal in its clarity about the importance of overcoming racism.

Odd alignments developed among religious groups on social, political, and moral issues. One leader of the Southern Baptist Convention asserted that he had more in common with Roman Catholics on abortion—absolute opposition to it—than he did with most Protestants. Jimmy Carter, an evangelical Baptist, could not get political support from the evangelical political action committees when he ran for reelection in the 1980 presidential campaign. These groups favored Ronald Reagan's social and political positions.

At the time, although it was not readily apparent, the professional ministry as a proprietary privilege of the mainline denominations was also in decline. Other alignments were forming along intellectual lines. Academic disciplines besides theology had, from time to time, been extremely influential in the ministry. In the late nineteenth and early twentieth centuries, historical-critical theories of biblical interpretation had challenged the ways scriptures were read. In the 1950s and 1960s the disciplines of psychology came to dominate the field of pastoral care. In the 1960s and 1970s political theology built upon ideological analysis led to the view that history was holding the ministry hostage and that the ministry had to break free. The definition of "religious experience" expanded from the individual phenomenon of a personal, emotional conversion to include the phenomenon of "social location." To understand religion in America, one had to understand not only a person's profession of faith but also where one was raised, whether one was poor, and from what racial or ethnic group one had come.

Meanwhile, guilt over great sin was not going away easily among the growing ranks of professional ministers—the

injustice to persons and the harm to the church that had been created by centuries of denying full ordination rights to women, the practices of racial segregation built upon the prejudice of racial hatred, the awareness that the church had sold its soul to the culture in order to thrive as a social institution. Professional ministers in the premier denominations were no longer the prevailing voices in America's religious life.

An array of different ecclesiastical forms was arising in a clearly postdenominational age. Independent congregations were being founded upon the premise that churches had to be ready to market their products to an increasingly skeptical populace. Brand-name loyalty had disappeared from the landscape of the American economy, and it was disappearing from religious life as well. Perhaps the last car purchased was a Ford, but that hardly had any positive influence on the next purchase. Just because one was raised a Methodist did not mean one would look for a Methodist church in a new community—or any church at all.

There had long been a scattered few churches that de-emphasized their denominational ties. When Ralph W. Sockman (1889–1970) led the merger of two Methodist churches in Manhattan to become a single new congregation in the 1910s, his church was called "Christ Church, Methodist." Placing the denominational affiliation after the comma, where it could easily be dropped or ignored, diminished that connection.

But by the final quarter of the twentieth century, professional ministry was showing many signs—not just a scattered few—that brand-name denominational loyalty was gone. Increasingly, candidates for ordained ministry enrolled in theological schools that had some programs or some faculty members who seemed personally appealing, or in schools that were geographically close, or in classes they could take online. Denomination meant something more than nothing, but not much more.

Mentors as models for ministry were chosen not on the basis of denominational relations but on the basis of personal appeal or ecclesiastical achievement. The Willow Creek Association defines itself not as a denomination but as a gathering of churches that benefit from the organization's programs of continuing education and institutional growth. Doctrinal distinctions and priorities of polity disappear from the list of criteria that matter in professional ministry. Theological education for ministry could soon be viewed as a nonessential qualification for service in a church that will train specialists to do what these churches

want done—rather than what the priestly, prophetic, and royal responsibilities of professional ministry require.

In the midst of this, another crisis for professional ministry became a huge concern. It involved sexual misconduct by a number of persons in professional ministry, particularly the misconduct by Roman Catholic priests who had molested young men and boys in their care. The suffering endured by victims of this abuse is unfathomable and almost impossible to calculate. But the damages to the church are calculable—both in the declining prestige that public opinion polls can measure, and in the billions of dollars that the church has had to spend in resolving legal claims. Professional ministry suffered as a result.

In the early part of the twenty-first century, these trends deepened. The loss of denominational loyalty became the loss of denominational identity. The prevailing image of success in ministry favored very large growth in membership of a congregation that is operating multiple campuses and that functions as an independent entity under the leadership of a strong entrepreneurial pastor. The rising image of effectiveness in professional ministry is that of one who preaches interactive messages with ample use of video and graphic technology while appearing not to need the priestly, prophetic, or royal roles of ministry in which to function.

What may be overlooked in this situation is that we have seen such styles of professional ministry before. George Whitefield (1714–1770) was an eighteenth-century itinerant evangelist who delivered strongly interactive and emotionally engaging sermons to thousands of people at a time. But no institutional form of his church life or his professional ministry endured after his death. Henry Ward Beecher (1813–1887) was as big a celebrity as the nineteenth century ever produced in America, holding forth at the preaching platform of Plymouth Congregational Church in Brooklyn. During his lifetime, he drew thousands to hear his sermons, held auctions to free slaves, and was entrepreneurially successful at building a church around his forceful personality, but little or nothing of it endured in professional ministry. In the ensuing decades of the twenty-first century, the professional ministry will continue to evolve in its entrepreneurial, uniquely American, way.

Missions: Domestic

Although the American history of domestic missions proper starts in the nineteenth century, some of the roots of that later work are evident in the centuries before the respective foundings of the United States and Canada. Spanish, French, and English efforts took on the North American territory as a foreign mission field populated with “heathen” populations. One strong impulse that drove these early missions to North American natives was the European desire to “civilize” those populations, testing their mettle as human beings and encouraging them to adopt European styles of dress, decorum, and devotion. Explorers either working as or accompanied by Catholic missionaries in territories claimed by Spain in the South and West or by France in the Northeast tried as early as the 1520s to transform indigenous communities, engaging them spiritually, culturally, and economically. In response to sometimes brutal treatment of Native Americans by the Spanish, Pope Paul III’s bull *Sublimis Deus* (1537) declared indigenous peoples “truly men,” able to embrace the gospel and therefore entitled to humane methods of missionary engagement. Spanish Franciscans missionized those populations in the Southwest during the sixteenth and seventeenth centuries; French Jesuit and Franciscan brothers and Ursuline sisters labored in the area of present-day Quebec and southward from the early seventeenth century; French Franciscans, then Jesuits, worked in the Saint Lawrence River Valley during the seventeenth

century; and English Puritans and Quakers, in New England down into present-day Pennsylvania and Delaware, also during the seventeenth century.

Nineteenth Century: Missionary Societies Flourish

During the Revolutionary War and early national period in the United States, religious and political leaders of the new nation acted on understandings of the land, its native inhabitants, and the nation's destiny as a trust from God. Soon bolstered by Protestant revival spirit, growing in the latter years of the eighteenth century and exploding in the first decades of the nineteenth, Christian missionaries commissioned by Presbyterians, Congregationalists, Methodists, and Baptists in the Northeast promoted their religion as a civilizing force in towns and on the expanding frontier, among natives and white settlers alike. Missionary societies in this early period included the Society for the Propagation of the Gospel among Indians and Others, founded in Boston in 1787 and comprised of the broadest spectrum of Boston Protestantism, from the orthodox Congregationalist to the proto-Unitarian. A welter of late eighteenth-century foundations of mostly "union" or interdenominational missionary societies in the Northeast—Philadelphia, New York, Connecticut, and Massachusetts—continued through the first decade of the nineteenth century. The founding of the Boston Female Society for Missionary Purposes in 1800 prompted an upsurge of regional imitators, too, including societies within particular denominations, until by 1818 there were ninety-seven female societies that had been devoted primarily before 1810 to financial support of frontier missions. Such societies kept up vigorous correspondence from localities around New England with the original Boston organization, sharing news and collecting and disbursing monetary support for mission work.

The American Board of Commissioners for Foreign Missions (ABCFM), from its founding in 1810 through its first decade, contributed half of its funds to missionizing North American natives and settlers in western territories. ABCFM-sponsored schools propounded white Protestant standards of piety, cleanliness, propriety, education, and industriousness. In the West, both Catholic Jesuits and ABCFM-sponsored laymen worked among Plains Indians. While Catholics tended to emphasize the sacraments, Catholic teaching, and ritual practice—often making use of correspondences between native practice and Christian traditions—Protestants typically emphasized the "civilizing"

work of schooling and literacy, alongside religious work, including the translation of the Bible and Christian classics into native tongues.

"New School" or revivalist Presbyterians and their theological kin the Congregationalists coordinated their respective early nineteenth-century missionary work, formalizing their relationship from 1801 until 1837 with the Plan of Union, wherein they agreed not to compete with one another for frontier mission converts. They also engaged in reform activity, translating the message of the gospel into advocacy for temperance and against slavery and making common cause with other Protestant groups in opposing the importation and spread of Catholicism. In the view of northern Protestants, all of these phenomena threatened not only the purity of individual souls but also the virtue of the fledgling republic. Tyrannies of alcohol, slavery, and (in their view) "Popish" religion had to be dismantled. They addressed these social ills on an individual rather than a systemic basis. The 1852 abolitionist blockbuster *Uncle Tom's Cabin*, written by Harriet Beecher Stowe (1811–1896), for instance, sought to end what she and others saw as the national sin of slavery by appealing to individual readers' feelings of common humanity with the book's enslaved black characters.

Nineteenth Century: An "Evangelical United Front"

The fervor of the Second Great Awakening—a series of early nineteenth-century revivals that took place variously on the frontier, in the Northeast, and in the South—produced a new wave of interest in and organization of home mission projects. Several new endeavors institutionalized that spirit and constituted what historians refer to as an "evangelical united front" against not only irreligion but also illiteracy, poverty, and sexual immorality. This "Benevolent Empire" of voluntary reform groups shared resources and a common concern to promote Protestant Christian culture.

The American Education Society (founded in 1815) united Presbyterians and Congregationalists in an effort to fund the education of much-needed new clergy. The ecumenical American Bible Society (founded in 1816) distributed and eventually offered its own translations of the Christian scriptures. The American Colonization Society (founded in 1817), albeit paternalistically, initiated a campaign to resolve the nation's racial tensions by purchasing and freeing black slaves, then settling them in Africa. The

American Sunday School Union (founded in 1824), based in Philadelphia, devoted its energies to providing materials to Sunday school teachers and didactic reading material to children. The American Tract Society (founded in 1825), another interdenominational Protestant effort, produced and disseminated thousands of pithy expositions and sentimental appeals aimed at converting readers to Christ. The American Home Mission Society (founded in 1826), another Presbyterian–Congregationalist collaboration, provided desperately needed clergy primarily to the western frontier. The American Temperance Union, founded originally in Massachusetts in 1826 and reorganized in 1835, worked to eliminate the bane of alcohol from homes and communities. Later, in midcentury, the Mount Vernon Association of Young Men set out to improve the lives of Boston area youth; this organization developed after the war into the Young Men’s Christian Association and sought to impress upon its members a model of manly middle-class devotion.

These organizations reflected the direct or indirect influence of Lyman Beecher (1775–1863), who was both an orthodox Congregationalist and a supporter of moderate revivalism, especially as a weapon against frontier impiety and Catholic encroachment on American Protestant culture.

These groups reflect an upsurge in religious interest and enthusiasm that relied on new levels of lay involvement, creativity, and leadership, especially on the part of churchwomen. Lay workers engaged in the mission of the church at a level of activity rivaling that of the clergy—leading revivals; conducting home visitations; organizing, funding, and engaging in urban work. Moreover, such organizations testify to a renewed spirit of cooperation among Protestant denominations that took root as creedal differences lessened in importance. What prevailed instead, among denominations that were inclined to deemphasize doctrine and emphasize cooperation, were concerns to express the Holy Spirit’s empowerment of all believers to show Christian love in practical ways and promote social justice. Protestant laypeople felt newly empowered, given the evidence of revival conversions that “democratized” traditional understandings of predestinarian theology and promoted a more robust account of human free will.

This transformation owes much to the work of New York Methodist laywoman Phoebe Palmer (1807–1874). Her Tuesday Meetings for the Promotion of Holiness, her work in New York prison and urban missions—including the institutional Five Points Mission, which she founded in 1850—and her writings on spirituality, lay leadership, and reform

work inspired many and helped legitimate the spread of spiritual regeneration into the social field. The transformation also drew on the theology of Charles Grandison Finney (1792–1875), revivalist and chief popularizer of Christian perfectionist social reform. For Finney, one’s own sanctification necessarily entailed the eradication of such societal evils as poverty—no longer, in the early nineteenth century, seen as the intransigent result of God’s providential design. Greed, ignorance, drunkenness, prostitution, and even gender inequality and (most controversially) slavery came under perfectionist Protestant critique, especially after 1850.

The motives and methods driving domestic missions among Protestants and Catholics in Canada during the nineteenth century resemble those in the United States. Methodists, Presbyterians, and Anglicans—the largest Canadian Protestant groups—as well as French-speaking Quebecois Catholics wanted to ensure that Christianity spread west as settlers did, bringing the Christian religion and “civilized” standards of conduct to the wild frontier. Protestant mission efforts also focused on social reform in Canada’s urban areas, particularly in Ontario, the country’s most populous province by the mid-nineteenth century and the province with the smallest Catholic population. Ontario experienced enormous growth in churches and church membership during the nineteenth century, and its mostly Protestant population turned its considerable energies toward promoting education, temperance, and a generally moral society.

Distinctive historical and cultural conditions in Canada did produce some differences from U.S. mission efforts. Canadians did not join American colonists’ rebellion in 1776 and rebuffed the United States’ hopes that Canada would join the conflict with Britain in 1812; a deep loyalist streak colored Canadian Protestantism in the nineteenth century. A respect for tradition and stability tempered its populist, enthusiastic tendencies, and for the most part squelched the millennialism that powered social reform in the United States. The centuries-long Roman Catholic presence in Quebec—and the conservative quality of that Catholicism—also tempered Protestant fervor. Small Protestant efforts to missionize Quebec’s Catholics and French Catholic work among English-speaking Protestants had limited success. Canada’s public life was therefore much less vexed by Protestant–Catholic tensions that fueled debates about, for instance, public schools and educational reform in the antebellum United States. Canadian provinces, therefore, funded public school systems, and the churches—Protestant and Catholic—organized and ran them.

Post–Civil War: Differences between North and South

After the Civil War, attention in the northern U.S. cities fell to addressing the social crises confronting the reunited nation—problems such as urban poverty, substandard housing, abuse of workers' rights, and alcoholism. Influenced by Phoebe Palmer, Frances Willard (1839–1898) took over the temperance cause in 1874. Her Woman's Christian Temperance Union (W.C.T.U.), led by evangelical middle-class women, took the motto "For God and Home and Native Land," reconceiving Christian womanhood as "organized mother-love" for the sake of society. Reflecting similar concerns, Letitia Youmans (1827–1896) founded the Canadian W.C.T.U. in Ontario that same year.

North and South, religious communities in the United States also grappled with the large population of newly freed southern blacks, hampered by the history of enslavement and by the ever-present threat of racial violence. Purely evangelistic efforts to convert Native Americans, blacks, and non-Protestant Christians—urban Catholic immigrants and Mormons out west—continued as well. Northern Baptists in particular but also Presbyterians and Methodists strove to convert, educate, and "Americanize" these populations.

Domestic missions developed differently among southern Protestants than among those in the North. In the antebellum period, supporters of missions initially engaged in the foreign field and came only later to reformist domestic missions, which carried problematic freight for southern society. Domestic evangelistic and reform work might involve white women outside their own homes and therefore threaten the carefully interwoven racially and sexually repressive southern social, economic, and religious structures. Christian missions to black slaves before the war, such as the work of Presbyterian Charles Colcock Jones (1805–1863) through his Liberty County (Georgia) Association for the Religious Instruction of the Negroes, begun in 1831, propounded a careful gospel that reinforced the control of white master over black slave rather than challenging it. Not till after the Civil War did more autonomous southern missions by white and black Protestant denominations take on religious, educational, and social reform more vigorously.

1880 to World War I: Christianizing and Civilizing

Mission societies of the major white Protestant denominations flourished from 1880 through World War I and

continued their efforts to address the spiritual, material, and educational needs of freed blacks in the South, even as new restrictions began to close off blacks' access to social, legal, and economic advancement. Denominational efforts such as the Congregationalists' American Missionary Association, the American Baptist Home Mission Society, the Freedmen's Aid Society of the Methodist Episcopal Church, and the Presbyterians' Board of Missions to the Freedmen excelled in creating and supporting African American schools. Each of these societies received reinforcement (and sometimes competition for resources) from women's auxiliary societies that flourished until the male-led organizations took them over in the early twentieth century. Unlike the men's associations, the white women's societies cooperated with their black female counterparts in fund-raising, organizing, and engaging in the hands-on work of "uplifting" throngs of southern blacks by preaching Protestant Christianity and propounding "civilized," middle-class mores. Black and white women made common cause especially over the black family, which all sought to mold according to middle-class white standards. Working with white American Baptist women, black National Baptist women, led by Nannie Helen Burroughs (1879–1961), started the National Training School for Women and Girls in Washington, D.C., in 1909. The school promoted a program of "Bible, bath, and broom"—Protestant Christian devotion, personal purity, and domestic skill. In the early twentieth century, such projects and the coordination necessary to run them spurred black women and men to act autonomously, promoting their own evangelical, educational, and economic projects apart from white denominations and mission organizations.

In 1907, the Woman's Home Mission Society (WHMS) of the Methodist Episcopal Church, South, organized a Committee on Social and Industrial Conditions to work for more just working conditions in growing southern industries. A year later, the society initiated a Committee on Sociology and Philanthropy, focused on issues affecting women and children. The WHMS merged into the Woman's Missionary Council (WMC) in 1910, and its Committee on Social Service and Local Work took over domestic missions, teaching, visiting, and working against the influence of gambling, drinking, and prostitution. The WMC continued to ally with other women's groups even as male denominational leaders grew more hostile to the women's support of social reforms such as worker, wage, and voter protection.

Mission activity in cities gave rise to religious creativity, including the formation of new denominations. Perhaps

the most well-known newcomer from this period is the Salvation Army, organized as the Christian Mission in England in 1865 by William (1829–1912) and Catherine (1829–1890) Booth and given its current name in 1878. The Army deployed to the United States in 1879 with its particular blend of Holiness Christianity and lively worship, aimed at and attracting a primarily working-class audience that had not responded to the earnest but sometimes staid middle-class paternalism of mainstream Protestant mission Christianity. The Army took aim at the insouciance of a social order that—in its habits and formal structures—allowed people to descend ever further into spiritual and material degradation. By such methods as the “city colony,” a total mission experience, Salvationists promoted the physical well-being of their mission targets by providing adequate food, shelter, and work opportunities alongside their efforts at Christian conversion. By 1904, when the Booths’ daughter Evangeline arrived in the United States to expand the Salvation Army work, the group ran a panoply of institutions: children’s homes, “slum brigades” that paraded and preached in the most deflated parts of American cities, housing projects for workingmen and the unemployed, programs selling affordable fuel and ice, employment offices, “farm colonies,” and secondhand stores (for which they are most widely known today). In Canada, too, the Army had great success during this period in urban mission work.

1880 to World War I: “Women’s Work” in Missions

Religious creativity rooted in missions has also stirred women’s activism. The history of religion in the United States abounds with debates about women’s fitness for religious work. Supporters of so-called women’s work—mission activity performed by women with a domestic focus and aimed particularly at women and children—have used scripture and a liberating understanding of the gospel to justify women’s special potential for mission work. In the antebellum era, the conservative author and teacher Catharine Beecher (1800–1878), Lyman’s oldest daughter, understood women as naturally fit for the work of religious instructor and pure spiritual exemplar, yet she castigated women—the famous example is Presbyterian-turned-Quaker abolitionist Angelina Grimké (1805–1879)—who sought to expand the impact of their gifts beyond the confines of their own private homes. Only as a teacher, Beecher thought—that is, as someone who sacrificed her own domestic future for the sake of the next generation of

citizens—could a woman justify working away from her own family hearth.

As noted, women participated in the funding and, in some cases, the implementation of antebellum mission and reform projects. During and after the Civil War, however, women’s organizing intensified and expanded, driven by new possibilities in the postwar moment. Promoters of mission, male and female, relied increasingly on a rationale for women’s involvement that saw them specially suited for reaching women and children, rousing new openness to women’s mission autonomy. New and more efficient modes of community and transportation, as well as increasing affluence, allowed mission sponsors, their missionaries, and their targeted populations to be connected as never before. In 1860, New Yorker Sarah Doremus (1802–1877) organized the interdenominational Women’s Union Missionary Society and deployed its members to serve in prisons, hospitals, elder homes, schools, and orphanages. Her work inspired the creation of national women’s mission societies within the major American denominations. As Methodist, Presbyterian, and Baptist women formed their foreign mission societies in the late 1860s and early 1870s, domestic mission advocates worried that the special cachet of “women’s work for heathen women” overseas would pull money, attention, and workers away from the domestic work for women and children and worked to counter that eventuality.

In addition to societies that organized, funded, and disseminated information about particular fields of work, mission training schools taught lay students (mostly female and with widely varied academic preparation) how to conduct effective Bible instruction and other functions of mission work. Between 1880 and 1915, around sixty of these mission training schools came into being in response to the growing need for missionaries to teach the Bible to urban, often Catholic, immigrants and address their material needs. Training schools therefore offered a panoply of Bible classes as well as courses on social work and nursing.

Training school students gained practical experience by ministering to folks in need. The first women’s training school was the Baptist Missionary Training School, started in Chicago in 1881. In 1889, entrepreneurial evangelist Dwight L. Moody (1837–1899) opened his Institute for Home and Foreign Missions, which required all students, male and female, to work in city missions as part of their training, even if they were destined for the foreign field. Among southern Methodists, Belle Harris Bennett (1852–1922) led the charge to train women for missionary service. Christening her

school with the name of its first donor, she started the Scarritt Bible and Training School in St. Louis in 1892 and began preparing women for foreign and domestic service as missionaries, nurses, and pastors' wives, eventually focusing on domestic missions. The school moved to Nashville in 1923 and broadened its student body to include men. Ruth Barker Scarritt, whose husband was the namesake and primary donor to Scarritt Training School, started the Woman's Parsonage and Home Mission Society in 1894, declaring strong home missions the root of strong foreign missions.

Deaconess work—nursing, social work, pastoral assistance, and education—was recognized officially in the 1880s as an avenue for women's work in Methodist, Episcopal, and Lutheran denominations. It gave early expression to the Social Gospel, which would flower in U.S. and Canadian cities in the early twentieth century. Oberlin graduate, author, lecturer, teacher, and Methodist physician Lucy Rider Meyer (1849–1922) opened her Chicago Training School in 1885 to prepare women for home mission work. The program of study featured academic and practical preparation, including courses in medicine and required visitations to the poor and the sick. In 1887, the Chicago Deaconess School opened as an adjunct to Meyer's institution, and in 1888 the Methodist General Conference gave sanction to both the school and the position of deaconess; eventually an adjacent hospital was built. The Boston-based New England Deaconess Home and Training School opened its doors in 1889 and, as in Chicago, paved the way for the construction of an adjacent hospital, built in 1896. These training schools endured until after World War I, when changes in higher education and the broader culture moved their programs into either seminaries or schools of social work.

The desire to reach U.S. populations with the gospel and material assistance also moved Catholics—especially Catholic women religious—to enter the domestic field in the immigrant-rich cities, on the western frontier, and in parts of the South. Catholic women could join one of the European orders that had come to the United States and engage in work directed at poor or ethnic Catholics. Anti-Catholic opposition, forceful and often violent before the Civil War, abated somewhat in the later nineteenth century but still posed obstacles to Catholics determined to pastor to needy Americans. Working in the face of such suspicion, Katharine Drexel (1858–1955) founded a homegrown Catholic home mission organization in 1891. The Sisters of the Blessed Sacrament for Indians and Negroes aimed to convert those

populations to the Catholic faith. Her interest in this area had grown out of her involvement in urban mission efforts in her native Philadelphia and growing familiarity with the poverty of western Native Americans. Her order provided teachers for Native American schools in the West. Mother Katharine and her two sisters also each organized educational efforts aimed at Philadelphia-area African Americans.

Not only did she and her sisters initiate African American Catholic schools across the country, but Drexel founded the first Catholic institution of higher education for African Americans, Xavier University in New Orleans. Her work helped normalize domestic and foreign missions as part of American Catholic life, especially for American Catholic women, who had, along with the church hierarchy, heretofore understood their primary mission to be the spiritual formation of their own children. By 1920 and the founding of the Maryknoll Sisters, Catholic women in the United States could participate not only in domestic missions focused on education, health care, and social services but also on foreign evangelization efforts.

Conclusion

Recent scholarship on missions—both domestic and foreign—has succeeded in presenting a more nuanced picture of the missionary project. While some contemporary narratives of U.S. religion and history either completely ignore missionizers or write them off as unsophisticated puppets of ethnocentric colonial projects, a growing body of scholarship has begun to inquire into the productive tensions at work in the mission enterprise and at the very least has recognized the domestic cultural effects of marginalized, missionized cultures on the mainstream. Nineteenth-century Presbyterian missionaries to the West, for instance, did target “exceptional peoples”—blacks, Mormons, Native Americans, Chinese immigrants, and Catholics—for conversion as part of a larger Americanization project. Liberal Protestant missionaries to Asian immigrants in the early twentieth century, however, argued against laws restricting the entry of Asians into the United States and against racial theories that defined Asians as irremediable and essentially immoral anathema to the survival of white American culture. At least some white missionaries to southern blacks after the Civil War argued for the legitimacy of their work by assailing theories about blacks' essential debility. Continuing investigations into the exchanges brought about as a result of domestic mission will prove a fruitful source of information about religion's place in the formation of U.S. religious, national, and cultural identity.

Missions: Foreign

The history of America's foreign missions is complex and multilayered. It deals with different historical periods, mission boards, relations with other religions, and mission theories. Several important factors and movements are germane to the foreign missions carried out by Christians at different periods in American history, especially from the Protestant perspective. It is important to note from the outset that America's foreign missions grew out of a dominant evangelical tradition. This tradition relied heavily on the intellectual legacy of Jonathan Edwards (1703–1758) and Samuel Hopkins (1721–1803). These two writers also provided the

intellectual foundation for the Puritan scholars of early New England. Samuel Hopkins's principle of universal disinterested benevolence served as a compelling impetus for American missionary enthusiasts. They were driven by a desire to do the will of God without any consideration for a reward on earth or in heaven and with a willingness to provide assistance for people all over the world. The emphasis on *diakonia* (service) was an integral part of the missionary agenda from the beginning.

The word *mission* evokes several meanings, feelings, and dispositions. Some of these include outreach, overseas assignment, dialogue, altruism, conversion, colonialism, cultural arrogance, imperialism, and dependency syndrome. All these facets have been manifested during different periods in the history of America's foreign missions. The missionary enterprise entails a deep understanding of the cultural, social, economic, political, and religious context that has shaped the reception of and response to the gospel.

The First Stage in Foreign Missions

Many scholars consider the nineteenth century "the Great Century" of Protestant and Catholic foreign missions. During this period, Europe was able to impose its hegemonic control on a large section of the world. The economic and political power of Europe, coupled with an unprecedented Christian pietistic revival, affected many churches and denominations. Until this time, America had been a mission field rather than a sender of foreign missionaries. But robust nineteenth-century religious revivals and awakenings, the energy and zeal of a "Christian America," and the nation's increasing international acclaim created an image of America as a global savior. The motivation, rationale, and understanding of mission for members of the missionary societies that emerged from the nineteenth century were complex and varied. No theological consideration dominated the agenda of these societies except that all steadfastly believed that people who did not believe in Jesus Christ were living precariously and were at risk of eternal damnation.

Rufus Anderson, one of the pioneering thinkers of America's foreign missions, basking in the glory of America's splendor and power, said in an 1837 sermon entitled "The Time for the World's Conversion Come" that America was poised for the world's spiritual conquest. He further talked about the need to discern the signs of the times that called for the evangelization of the world. It was a time to claim the divine mandate to proclaim the gospel to all people

without regard to race or religion. The missionary impulse in the North American context is motivated by a vision for spiritual and moral transformation. Its essential message is universal in nature; it is meant for the whole world. This universalism is an integral part of the commission that summoned the disciples of Christ to proclaim the gospel. In the Gospels Jesus Christ commands his disciples go forth and proclaim the good news to all nations (Matthew 28:19); foreign missions are the response to this injunction.

The first stage of American missionary work started in 1810 with the organization of the American Board of Commissioners for Foreign Missions (ABCFM) after a number of students at Andover Theological Seminary in Newton, Massachusetts, committed themselves to foreign missionary service. Just like its British equivalent (the London Missionary Society), which preceded it by almost twenty years, ABCFM was a nondenominational, voluntary organization. For almost half a century, the ABCFM coordinated the bulk of Americans' foreign missions. A sermon by Francis Wayland (1796–1865), the energetic Baptist preacher from Boston who later became the president of Brown University, called “The Moral Dignity of the Missionary Enterprise,” was widely used as a theological justification for missionary work. Another prominent voice was that of Rev. John Scudder (1793–1855) of the Reformed Church. He was a medical missionary to India, and in his book *The Redeemer's Last Command*, he enjoined all American Christians to pursue foreign missions with zeal, diligence, and passion. This period in America's foreign missions emphasized emotionalism and altruism. It was a call to do God's work and to give it all the energy and commitment it deserved. The divine task had to be carried out without any expectation of material benefit or even an eschatological hope. The emphasis was on reaching out to help all God's children all over the world. William Warren's work *These for Those, our Indebtedness to Foreign Missions; or What We Get for What We Give*, published in 1870, however, presented a different perspective on the motives and aspirations of foreign missionaries. He affirmed that certain economic and political gains accrued to those who sent out foreign missionaries and maintained that these benefits were part and parcel of the missionary enterprise.

The early history of America's foreign missions was characterized by a sense of Anglo-Saxon superiority and the perception of a divine mission of Americans to Christianize the world. Congregationalist Lyman Abbott (1835–1922) claimed that “it is the function of the Anglo-Saxon race to

confer the gifts of civilization, through law, commerce, and education of the uncivilized people of the world” (Cracknell, 2005, p. 114). Evoking similar sensibilities, Samuel Harris, an Episcopal bishop (1814–1899), said that “the consistency of the divine purpose in establishing our evangelical civilization is signally illustrated by the fact that it was primarily confided in the keeping of the Anglo-Saxon race” (Cracknell, p. 114.). One New York Methodist minister of the same period claimed that it was the responsibility of American Christians “to conquer the world for Christ by dispossessing feeble races, and assimilating and molding others” (Cracknell, p. 114).

Nineteenth-century missionaries depicted the nations they visited as permanently caught in a cesspool of darkness and misery. Their missionary accounts were replete with blatant denigrations of non-Western peoples and cultures. Indigenous religious traditions and the religions of the East were regarded as evil, delusive, and full of lies and fiction. A classic example of this attitude can be found in Presbyterian minister William Sprague's conclusion in 1837 that the study of Christianity and other religions was analogous to a study of light and darkness. He argued that adherents of other religious traditions were the miserable children of darkness who must be shown the indelible light of Christianity.

The grandiose plan of altruism was eventually subverted by the demons of cultural superiority and racist policies and programs. Brazen arrogance on the part of missionaries contributed to their abysmal failure in many regions. The racist ideologies of empire put an indelible stain on the good intentions and humanitarian gestures of foreign missionaries during this era.

The Second Stage in America's Foreign Missions

Between 1890 and 1918 missions became increasingly popular in both churches and society. The Student Volunteer Movement contributed significantly to the recruitment of missionaries and eliciting support for their work. One of the significant dimensions of this period was the establishment of special lectureships that were connected to missions. These included The Cole Lectures at Vanderbilt University; the Fondren Lectures on Christian Missions at Perkins School of Theology, Southern Methodist University; and The Student Lectureship on Christian Missions at Princeton Theological Seminary. These lectures contributed to a new awareness of foreign missions and gave institutional support to intellectual ferment on global missions.

Two towering figures in the missionary community were John R. Mott (1865–1955) and Robert E. Speer (1867–1947). Both were products of the Student Volunteer Movement, and both contributed immensely to the theological understanding of foreign missions. Mott was the leader of the World Student Christian Federation and several international ecumenical organizations. He wrote about the new opportunities, possibilities, and challenges of global missions. He proclaimed that foreign missions were intimately connected to the providential power of God in the world. Speer was very prolific and has been regarded as the greatest leader of American missions after Rufus Anderson. He was a systematic thinker who saw the need for foreign missions and also the necessity of building the indigenous church. He was actively engaged in debate with the various critics of foreign missions. He saw missions as an unequivocal response to the activities of God in the universe. He felt that they were a divine tide that could not be stopped by human forces. He was a practical man who was sensitive to the wider social framework in which Christian missions functioned and wrote about the imperative to connect the gospel with human solidarities and aspirations.

Later Years in America's Foreign Missions

The era after 1918 witnessed a new critical awareness in America of the role of world missions. The *raison d'être* of the missionary enterprise was criticized and reappraised with new intellectual and theological arguments. Various new justifications and theories of missions or criticisms of missions were proposed. In the early twentieth century, it was common to see books with defensive titles such as *Foreign Missions under Fire: Are Foreign Missions Done For?* and *The Foreign Mission Enterprise and Its Sincere Critics*. These books were creative responses to the strident criticisms of missions that were published in magazines such as *The Atlantic Monthly*, *Current History*, and the *Christian Century*. In the twentieth century prominent figures, such as Henry Pitney Van Dusen (1897–1975) at Union Theological Seminary in New York and John A. Mackay (1889–1983) at Princeton Theological Seminary, made important contributions to the understanding of world missions. Van Dusen's writings rendered a descriptive analysis of the gains brought about by world missions. Mackay's work contributed deep analytical and theological insight into the understanding of the Protestant mission in Latin America. Also, Kenneth Scott Latourette (1884–1968), professor of missions at Yale, provided enduring contributions in the field of mission studies.

His works on mission history, theory, and theology were well received by conservative evangelical thinkers and a large number of liberal thinkers. He advocated for the need to indigenize Christianity in mission lands and became a stabilizing influence in mission studies.

The Roman Catholic Dimension

While Protestant organizations in America produced many missionaries in the later part of the nineteenth century, the United States itself was seen by the Roman Catholic Church as a primary field for European Roman Catholic missionary societies. These Roman Catholic societies sent priests, nuns, and other church workers to help Roman Catholic congregations serve the growing surge of immigrants. But by 1900 there were also about eighty American Catholic foreign missionaries working overseas, mostly in the Caribbean and Mexico. In 1907 Propaganda Fide (the Vatican department responsible for missionary activity, now called the Congregation for the Evangelization of Peoples) removed the United States from the list of mission fields.

The number of U.S. Catholic overseas missionaries experienced unprecedented growth with the establishment of the first missionary society founded in the United States, the Maryknoll (Catholic Foreign Mission Society) Fathers in 1911 and Sisters in 1912. The Catholic Foreign Mission Society was established to recruit, send, and support U.S. missionaries all over the world. Established by James Anthony Walsh of Boston and Thomas Frederick Price of North Carolina, Maryknoll sent the first missionaries to China in 1918. By 1966 the number of U.S. Catholic missionaries had grown to over 9,300. This Catholic missionary society continues to play an active role in many countries in Africa, Asia, and Latin America. Throughout their history, Maryknoll missionaries have been committed to social, political, and economic justice and freedom.

Foreign Missions: Methods and Strategy

The nineteenth century witnessed a new orientation in mission methods and strategy. Christian missions experienced new trends of development, and the burgeoning of mission fields coincided with the growth of a modern consciousness that valorized rationality and the application of scientific methodology in all spheres of life.

The early period of America's foreign mission efforts was significantly shaped by the work and involvement of voluntary societies. Rufus Anderson in the early nineteenth century said that the only viable way that the Great Commission

(Jesus' call to spread Christian teachings around the world) could come to full fruition was by what he described as the Protestant form of association; that is, the voluntary societies. In the absence of government help, Protestant missions depended completely on voluntary support. Catholic societies also solicited for lay giving. The principles of voluntary society were carefully laid out: identify the work to be done, find the best way to carry it out, and organize the people to pursue the task. These principles were eventually applied to the work of Christian congregations and to missions. In fact, effective overseas missions started not with the established ecclesiastical bodies but with voluntary societies. By the American Civil War, most denominations had organized their own mission boards, but these boards were energized by the spirit and principles of the voluntary societies already pervasive in American society. The phenomenon of voluntary societies driving missionary initiatives was already popular in Europe; Americans adopted this principle to further missionary work abroad.

American churches made their mission societies or boards integral to the church. By doing this, they made their foreign missions internal and churchwide. Americans saw themselves as missionary communities. This fact was affirmed by Baptists, Methodists, and others. Presbyterians concluded that the church was itself a missionary agency with responsibility for its own outreach. In 1835 the Episcopal Church established a voluntary society and maintained that all Episcopalians belonged to it.

Foreign Missions: The Response to Criticism

In his writings, Professor Lamin Sanneh challenges the normative notion among Christian theologians and secular historians that foreign mission is cultural imperialism. In his work on missions and translatable gospel, he argues against the theory that mission was the surrogate of Western colonialism and that both movements destroyed indigenous cultures. In this view, the emphasis on translation in mission assumes that religion is expressed through culture but also transcends and transforms culture.

Sanneh argues that when first-century Christians translated their sacred texts into Greek, they initiated a process by which the Christian message was continuously restated in new linguistic and cultural forms. This process was an unalloyed affirmation of each language and other cultural parameters utilized in this process. No matter how culturally skewed or politically imperialistic foreign mission has been, because its agents and agencies recognized and utilized the

built-in Christian legacy of translation, they in fact affirmed indigenous cultures and values. Eventually, foreign missionaries recognized the validity of indigenous culture for mission and evangelism. In Africa for instance, foreign missionaries became convinced that Africans had heard of God and that the God enshrined in their sacred canons had to be spoken of in an African context, where God was conceived as a compassionate deity who was approached through the lesser deities. This was a radical departure from the nature of foreign mission as a form of Western cultural authority and an affirmation of *missio Dei*; that is, mission belongs to God, and God preceded the missionaries in Africa.

A theological appropriation of *missio Dei* adds weight to this notion that God's initiative has preceded foreign missionaries. The message of divine love, grace, and reconciliation was embedded in the indigenous religious traditions long before Western missionaries arrived. This a priori divine credential gives validity to the African religious experience and at the same time adds credence to the missionary enterprise. In other words, foreign missionaries were responding to an initiative that was already taking shape within the African religio-cultural landscape.

Sanneh further proposes two alternative mission strategies. One is mission by diffusion, making the missionary culture the inseparable carrier of the message. Religion inexorably moves from its initial cultural base and is implanted in other societies primarily as a matter of cultural identity. He offers Islam as the perfect example of this process.

The other is mission by translation, which makes the recipient culture the true and final locus of the proclamation so that the religion arrives without the presumption of cultural hubris or rejection. The emphasis on translating the Bible into different languages took primary agency away from the missionary and gave it to local churches, which could boldly proclaim their own languages and cultures. This is the genius of translatability, which is contrary to the efforts of Western missionaries to superimpose their moral and theological authority. Translation provides a new interpretative model for understanding the motives and intentions of the missionary movement.

The Tide of Reverse Mission

The twentieth century witnessed an unprecedented dismantling of the hegemonic control Western colonial powers had held in many countries in Africa, Asia, and Latin America. The collapse of that system and its replacement with nationalistic fervor and territorial integrity of nation-states had

far-reaching implications for mission studies. The resurgence of indigenous agencies and an affirmation of a post-Western Christian upswelling led to new and creative strategies in missions.

For generations Christian missionaries from America had journeyed to different parts of the world to propagate their religion. Today, amid a burgeoning of Christianity in the developing world, churches in these countries are sending thousands of missionaries to the United States to preach the gospel in their own way. Reverse mission is essentially this sending of missionaries to North America by churches from Africa, Asia, and Latin America, where countries were at the receiving end of Catholic and Protestant “civilizing mission” from the sixteenth to the late twentieth century. The modus operandi of this new dimension in mission entails an exhaustive process of reeducating the West on the message of the Christian faith and a compelling challenge to the paternalistic assumptions of the West. This new process in mission also underscores the fact that non-Western churches are determined to remain a visible part of world Christianity in the twenty-first century.

Likewise, immigrant religious communities bring a new vitality to the institutional expressions of Christianity, which are in decline in the United States. They also engender a new awareness of “missions from the periphery” by the people of the West.

The Future of Missions

From the 1980s to the present there has been a resurgence in foreign missions. For instance, in 1900 there were about 5,000 Americans involved in foreign missions; today the number has risen to about 40,000. Whereas in the nineteenth century the field of foreign missions was dominated by Protestant denominations, now there are large numbers of Roman Catholic missionaries, as well as Jehovah’s Witnesses, Mormons, Seventh-day Adventists, Pentecostals, and others.

In contemporary times the notion of foreign missions has been replaced by a new paradigm that emphasizes world Christian involvement and engagement. The old model of the West sending missionaries to the far corners of the world is being replaced by a construct that all people are participating in the reconciling mission of God. One of the main challenges facing foreign missions today is how to move beyond the toxic memories associated with the missionary enterprise in many parts of the world and develop new paradigms for mutuality and partnership. One critical

concern that scholars have raised about the missionary enterprise emanating from the North American context is that many Christians from this region have the penchant for assuming that their own brand of Christianity is normative and consequently must be the correct one for Christians all over the globe. Nonetheless, the demographic composition of world Christianity today is a telling testimony to the fact that, in terms of numbers, the modern missionary movement has had success. In many parts of the world, men and women have claimed Christianity as their own, and they continue to shape the religion as they deem fit.

Missions: Native American

The impulse to conduct missions among the unconverted is as old as Christianity itself. But by the time this new religious movement had begun to gain momentum, human beings had been living in the Western Hemisphere for approximately 40,000 years. During successive ice ages they

had traveled on foot across the Bering Land Bridge and spread throughout two continents, developing an immense variety of cultural orientations in the process. But we usually date the “discovery” of the “New World” by Christopher Columbus as the beginning of true history regarding Native Americans because Euro-American observers are generally tied to written sources as the most reliable form of historical evidence. This biased preference for written documents looked askance at cultures that defined themselves by means of oral traditions. More recently, sophisticated techniques in archeology, linguistics, and anthropology have shed additional light on native peoples who first heard of Christianity in the early 1500s.

Early Spanish Missions

The sixteenth century was largely a time of exploration, conquest, and exploitation, activities conducted particularly by the Spanish in Mexico and Central and South America. Roman Catholic missionaries, consisting mostly of Franciscans and a few Jesuits, considered themselves to be an integral part of Hispanic culture and so dealt with natives in ways that would incorporate them into European military, economic, and political patterns. Primarily because of witnessing cannibalism among the Aztecs, Spanish missions were driven by an objective of destroying pagan ways and replacing them with their own form of Christianity. This experience in the Americas gave their evangelical work a harsh, repressive edge. Christianizing natives meant destroying the paganism of precontact ways and filling the resultant vacuum with the proper creed and ethics transported from across the Atlantic.

By the seventeenth century Spanish Franciscans had spread north into the Rio Grande drainage area where various agricultural groups, known collectively as Pueblos, lived in diverse self-sufficient villages. Soon the clergy, as part of an official colonizing venture, claimed that numerous missions were so successful that the king’s viceroy defined New Mexico as primarily a mission outpost dedicated to spreading Spanish Catholicism. Radiating out from the principal city of Santa Fe, missionaries visited most Pueblo towns and reported usually friendly receptions. But convinced that their beliefs and behaviors were the only forms pleasing to God, the missionaries took vigorous measures against natives to “reduce them to Christianity.”

Missionaries in New Mexico never bothered to learn native languages; they rarely lived at any particular pueblo for more than a year; they encouraged converts to oppose

tribal conformity that enhanced social harmony; they directed secular authorities to confiscate and burn ritual paraphernalia, such as masks and dance costumes; and they ordered the traditional kivas, local sacred structures, to be destroyed as well.

In less than a century the Franciscans’ repressive program had accumulated enough local resentment to produce an armed rebellion. Pueblos revolted in 1680 in a markedly anticlerical show of force. With priests killed and churches burned, Pueblo forces simply expelled the bulk of Hispanic settlers back into northern Mexico. After several efforts Spanish forces returned to power in 1696. Many Pueblos died in battle; some migrated west to live among the Hopi; and those who remained learned to accommodate themselves to the unwanted overlords. Catholic clergy returned too, but in the 1700s they turned increasingly to pastoral care within the Hispanic population. Natives retained their languages, community leadership patterns, and sacred art. Over succeeding generations there has been some blending of native spiritualism with Catholic practices, but it remains to be seen how distinctive or powerful these forms may become.

Early French Missions

During the seventeenth century the French also undertook evangelical activity in the New World, still Roman Catholic in content but conducted primarily by Jesuits. One of the best known of these efforts took place among the Hurons, an Iroquoian-speaking people who lived in the Great Lakes region. Unlike the Franciscans, the Jesuits approached the unconverted with a significantly different viewpoint. They did not see natives categorically as Satan-worshipping savages whose ideas were utterly depraved. Jesuit theology acknowledged sinfulness in everyone, but it held that there was still a spark of God-given rationality in all people, no matter how depraved they seemed to be. So missionary work began with a common denominator, an understanding of spirit power, human propriety, and proper worship on which discussion could build bridges to increased agreement.

An exemplary missionary of this cadre was Jean de Brébeuf (1593–1649), who inspired other emissaries in Huronia. Brébeuf lived permanently with his charges in their palisaded towns. He learned to preach and conduct daily prayers in the native language. He shared their food and sought to endure cheerfully what he must have often regarded as hardships. He identified elements in Huron culture and used them as avenues toward a more Christian

lifestyle, winning hearts through a gentle, patient, cooperative manner. Then he proceeded to recommend what he thought to be more accurate beliefs about God and more admirable standards of conduct. Conversions occurred first among individuals and then extended families; Christian enclaves grew in many Huron towns, particularly at Ossosane where Brébeuf resided. Successful activities of this sort flourished for two decades, but came to an abrupt end in 1648 when warriors from the Iroquois Confederacy invaded Huronia and began a war of attrition. By the early months of the following year, Brébeuf and several colleagues had been killed, and the diminished group of Hurons fled into Canada where their descendants remain today.

Early English (Puritan) Missions

English Puritans in Massachusetts undertook some minor evangelical efforts with their native hosts. Clerics and their parishioners in the new colony were Calvinist in theology and Congregational in polity. Laws regarding church and state were derived from and made suitable to biblical standards as understood by the Puritan ruling minority. Ethics and worship were stringently regulated by those who wished to embody a “Holy Commonwealth” in the setting that emigration had afforded. Congregationalist ministers who reached out beyond local duties to contact Indians included these same rigorous demands as they sought to Christianize them. The most notable of these was John Eliot (1604–1690), whose work epitomized the strength and weakness, the success and failure of the English Puritan version of missions.

In Calvinist thought salvation begins with grace. This gift comes from God alone and cannot be acquired. Eliot and others easily granted that God chose those whom he would save, and recipients could include Native Americans as well as Cambridge graduates. But it was crucial to show gratitude for grace by living a godly life, and all such proper behavior was quite thoroughly and uncritically identified with a select set of English cultural norms. Settlers from the old country found such urgings familiar, but to native converts most of them were alien in their content and wrenching in their effect. In 1646 Eliot learned to speak the local dialect and delivered his first sermon to natives in their own language, eventually translating the whole Bible into Algonkian in 1663. Examples of the expectations that Eliot included as parts of Christian living were private ownership of land, permanent housing, farms for prosperity and profit, monogamy with no divorce, literacy, theological knowledge and rectitude, and settlement in Christian Indian townships.

None of these demands about religious propriety corresponded to any precontact habits or precepts. But despite this combination of divine influence and English acculturation, converts emerged in southeastern New England, especially among the Algonkian-speaking tribes known as Massachusetts and Wampanoags. Called “Praying Indians” by natives and whites alike, converts settled in at least a dozen independent towns, many of them formed with Eliot’s advice and leadership. Growth continued for more than three decades until the hostilities known as “King Philip’s War” broke out in 1675 in Rhode Island. Most belligerents were Wampanoag, but a few individuals from all surrounding tribes joined as well. White reaction in Massachusetts was to suspect every Indian as siding with the enemy. Natives from the Christian towns were put into what amounted to concentration camps, and many died from exposure and neglect. War ended in 1676, but by then Eliot’s native flock had dwindled to mere vestiges of what they had been. There was hardly any recovery or expansion after that, and Puritan missions foundered because of racism exacerbated by war, as rebellion and invasion had crippled Spanish Franciscan and French Jesuit efforts in other areas.

Missions in the Eighteenth Century

In the eighteenth century Spanish missions flourished especially along the California coast where Junípero Serra (1713–1784) established nine stations from San Diego to San Buenaventura in his lifetime; eventually twenty-one missions were built. On the eastern seaboard English missions received better financial backing with the formation of the New England Company and the Society for the Propagation of the Gospel in Foreign Parts, which focused on African slaves in America as well as Indians. But as was often the case, men who began as emissaries to these minority groups soon abandoned the rigors of such work and settled down as pastors of white congregants. Financing continued, but missions languished.

One exception to that generalization was Eleazar Wheelock (1711–1779), a Congregationalist minister in Connecticut and founder of Dartmouth College. Wheelock established a school to train Indian youths in the ways of civilization and evangelical outreach. The school accepted both male and female applicants from any tribe in New England and New York and made some strides in encouraging literacy, piety, and domestic industry. The most outstanding product of this school was Samson Occom (1723–1792), who served as an ordained Presbyterian minister for more

than three decades. After the American Revolution he assumed the role of Moses by leading remnants of threatened tribes into upstate New York refuges. There he served both white and native churches as a spiritual and temporal patriarch.

Also worth mentioning are the Brainerd brothers, David (1718–1747) and John (1720–1781), who evangelized principally among the Delaware peoples in New Jersey and Pennsylvania. After the Revolution John guided his charges from their war-torn homes to the safety of Brotherton, Occom's home for refugees in New York. Work among Pennsylvania Delawares became part of Moravian outreach in the person of David Zeisberger (1721–1808). Stressing the principle of pacifism as part of his definition of Christianity, Zeisberger stayed with his converts and suffered the hardships imposed on them during Pontiac's rebellion and the Revolution. He moved with them into Ohio and then Upper Canada to avoid warfare, but circumstances intervened, especially at Gnadenhütten in 1782 where ninety native Moravians were murdered by American irregulars. After Zeisberger's death most Delawares remained in Canada, and several Moravian missions moved south into Appalachia.

Missions in the Nineteenth Century

Missions in the nineteenth century consisted primarily of an amalgam of Christian behavioral patterns that were uncritically equated with American standards forged in the new Republic. One notable example of such missionaries was Samuel A. Worcester (1798–1859), who worked among the Cherokees in northern Georgia where he combined trinitarian beliefs with literacy and agriculture as pathways to American citizenship. Working alongside him much of the time was a full-blood Cherokee known as Galagina or by his adoptive name Elias Boudinot (1802?–1839). Together they worked to stimulate interest in the benefits of schooling, trade, republican government, and Protestant morality. After a native named Sequoia created a syllabary for the language, Worcester and Boudinot began publishing the *Cherokee Phoenix* in 1828, the first native language newspaper in American history. Christianization and Americanization made forward strides, enough for the Cherokees to be considered one of the “civilized tribes” of the southeastern region. But national policy developed by President Andrew Jackson decreed that all Indians be removed to territories west of the Mississippi River. After much resistance from missionaries and negotiations in Washington by tribal leaders,

this policy eventually led to the 1838–1839 “Trail of Tears” when most Cherokees were forced to leave their homeland and move to Oklahoma Territory. Worcester went with his people and continued to minister to them in churches that still exist today.

Another important missionary of the century was Stephen R. Riggs (1812–1883), who lived and worked among the Sioux peoples of Minnesota. Continuing the emphasis on white living standards as the key to Christian civilization, he once remarked that the gospel of soap was a necessary part of the gospel of salvation. He made some headway with local natives during his first twenty-five years among them, enough to have converts bind together into a Christian enclave which they called the Hazelwood Republic. But in 1862 untoward circumstances threatened to end the mission. In a complex set of events, including impatient native warriors and inefficient and corrupt government officials, hostilities broke out in August of that year. The uprising known as “Little Crow's War” sparked widespread raids and reprisals and caught Riggs and his native Christians in a hopeless dilemma. They refused to side with native belligerents and yet were reviled by whites as untrustworthy savages. In the end, Christian Sioux were lumped together with defeated hostiles, expelled from Minnesota, and made to resettle in Dakota Territory. Riggs kept in contact with his former charges for the rest of his life, producing in 1880, after many translations of other tracts and hymns, the entire Bible in the Dakota dialect. The removal of the Sioux peoples to the Dakotas signaled the beginning of a new era, when all American tribes were deprived of independence and placed, often involuntarily, on reservations in geographical isolation with meager government services.

Missions in the Twentieth Century

Assimilationist pressures continued well into the twentieth century. The great majority of missionaries distrusted Indian spirituality and rituals, repressing such vitality and trying to incorporate detribalized individuals into national homogeneity. But in 1934 Congress passed the Indian Reorganization Act (IRA), which provided for restoration of tribal lands, greater home rule on reservations, and permission for natives once again to observe long-banned traditional worship services. The law provoked serious missionary opposition because most still regarded native religious expressions to be almost entirely incompatible with Christianity. The choices for natives, as the missionaries saw them, were to remain pagan at heart or to abandon those patterns and

accept complete transformation. Missionaries approached Indians with the conviction that they offered an improved way of life, saving souls and enhancing social behavior. But evidence stretching over half a millennium shows that such versions of Christianity did not attract many natives. Considering the whites' alien cultural demands and confusing ideas such as trinitarian monotheism, human depravity, and vicarious sacrifice, perhaps the remarkable thing about missionary efforts is not that they failed in most cases but that any succeeded at all. In historical perspective, it seems likely that if a Native American ever became Christian, that process entailed a form of cultural suicide wherein the individual ceased to be Indian and is transformed into another entity altogether.

Some studies of missions reveal that many view the results negatively, following some version of this reasoning: if natives resisted conversion, then errands by clerical whites into the wilderness were hopeless from the start. If people converted to Christianity, then natives burned their bridges behind them, selling out their precontact traditions and never finding a new, full-fledged identity in white settings because of racial discrimination. One can acknowledge that missionaries often approached their work with high ideals, but it is also true that they acted in ways that violated native social values and denied the legitimacy of ingrained character traits. Ethical standards that extended to the obviously acculturated extremes regarding dress codes, capitalist economy, patriarchal family arrangements, and fairly rigidly defined gender roles were often perceived by natives as too oppressive. Gospel messengers—together with other whites—produced more negative than positive effects among Indians from beginning to end. If natives accepted the benefits of what was offered to them, they sold their birthright and, neither fish nor fowl, forfeited their Indian identity.

Resurgence of Christian Native Identity

In recent times new perspectives have moved away from this rather despairing interpretation to suggest that Christian Indians did not turn their backs on traditional cultural values and self-identity. Instead, Christian affirmations have helped to strengthen their tribal orientations and ethnic self-awareness. One aspect of this vigorous new perspective begins with the resurgence of various traditional religious orientations with the IRA in the 1930s, and careful observers explain how such revived practices have grown to new popularity by absorbing and synthesizing Christian references. It may have been true all along, but observers are now

discerning how native Christians, despite hardships and disappointments, have been able to affirm vital truths to be found in the Bible and also in their personal experiences as native peoples.

One example of this new syncretism is to be found in the revived Sun Dance among tribes of the High Plains. Earlier practices of piercing and mutilation are still rejected, and Christian meanings are read into categories such as sacrifice, devotion, and community solidarity, renewing traditional commitments with fresh ideological vigor. In addition, the calumet or sacred pipe, which has always evoked great reverence among people of the Plains, now embodies more significance because many treat it as a symbol of the incarnate Christ. In many Catholic churches the calumet and peyote are present on altars alongside elements of the Mass. Harking back to the 1918 legal incorporation of the Native American Church in the state of Oklahoma, that church blends the use of peyote as a sacrament along with Christian prayers and ethics. Its members regard themselves as constituting as much a legitimate form of organized Christianity as Presbyterians, Baptists, Catholics, or Mormons. These expanding and reintegrating versions of Indian and pan-Indian perspectives are producing broader and stronger expressions of ethnic identity in modern times. Indians are not disappearing through either sellout or suppression. They are gaining new strength, and Christian affirmations are helping in the process. Indian Christians have not had their Indianness leached out of them through acculturation. Although much native spontaneity was repressed over centuries of European theological dogmatism and religious colonialism, today's representatives of Christian life lend new fervor to native proclamations about faith and cultural stability, exhibiting outstanding examples of complex and sophisticated religious creativity.

Most outsiders have been slow to recognize the changes occurring among native populations, but that situation may be improving. The quality of health and educational services offered to Native Americans rose slowly during the twentieth century, and native populations began to recover from the threat of extinction. The growth of literacy was a crucial factor in enabling Indian viewpoints to reach a more widespread American audience, laymen and scholars alike. Debates have continued for many years over whether natives should learn to read and write in their traditional languages or in English. In the nineteenth century the standard missionary attitude was based on eradicating native dialects, even to the point of punishing recalcitrant students who persisted in

retaining traditional expressions. In the twentieth century forms of compromise appeared, accepting some degree of competence in the formal use of English while preserving native idioms in family life and private conversation.

During the Second World War natives from many different reservations joined branches of America's armed forces. Others moved to major urban areas to work in wartime facilities such as aircraft plants and munitions factories. Uprooted from the comforts of tribal affiliation, many began to associate with other similarly isolated Native Americans instead of seeking companionship with whites. This circumstance was an important element in the modern phenomenon known as the "pan-Indian movement." Tribalism has persisted as a delimiting factor in native achievements. Whenever several tribes cooperated with each other to reach a common objective, most often armed resistance to white aggression, the coalition would usually produce impressive results. But recidivist tribalism would almost immediately assert itself, and groups would once again revert to narrow viewpoints and restricted concerns. By the end of the twentieth century many natives began to recognize the importance of sharing experiences with natives of other traditions. Pooling resources for socioeconomic goals as well as for ethnic awareness has been making greater headway, and Christian churches have played a major role in facilitating this enlarged and more inclusive perspective.

Another important sequence of events that turned Christianity into affirmations rather than denials of Indianness began with the life of a single native girl named Kateri Tekawitha (1656?–1680). Daughter of a Mohawk father and an Algonkian mother, her eyesight was impaired by smallpox, which also left her an orphan. She converted to Christianity in 1676 and was baptized on Easter Day of that year. Less than a year later she escaped the hostile environment of her native village and went to live in a Christian Indian town named Caughnawaga in Upper Canada. During her brief but remarkable life, Kateri attracted wide admiration for her notable austerities and chastity. Permitted to establish a convent patterned after the Hospital Sisters in Montreal, she inspired white and Indian neighbors who revered her as the epitome of a holy woman. In 1932 she was nominated for sainthood as one who embodied Catholic piety in New France. She was pronounced blessed on June 22, 1980.

Perhaps the more remarkable aspect of Kateri's life is that her significance has expanded over succeeding generations. Christians in many tribes across the country have embraced her as "one of our own," esteeming her pious example that

stands for all humanity but especially because she was Native American. Shrines in her honor have been established in New Mexico and New York where she is portrayed in respectively local dress. For the past twenty-five years, conferences in her name have been held, meetings where Christian leaders from all tribes and denominations consult with each other. Kateri's precedent provides a basis for sharing problems and insights for affirming Christian worship within a specifically Indian ethnicity. At times such conferences have provided a setting for creative combinations of traditional music and dance alongside standard sacraments such as baptism and Holy Communion. At other times the clergy and religious who attend these meetings inspire each other with similar ideas and create confessions of faith that bear the marks of a distinctively native perspective. Now that Indian Christians are able to speak for themselves, and are being taken seriously by other church members in their denominations, ethnic stability and Christian identity stand together on an unshakable foundation.

Moravians

The Moravians in America claim a heritage that reaches back before the Reformation of the sixteenth century. The history of the Moravian Church (officially named the *Unitas Fratrum*) falls into three distinct periods. The first period covers the years from 1457 to 1722 when the church was concentrated in Slavic lands and was known as the Unity of the Brethren (*Jednota Bratrska*). The second period began with the renewal of the church in Germany under the leadership of Count Zinzendorf in the 1720s. The *Brüdergemeine*, as the church is called in Germany, established several utopian communities in Europe and America, and it had one of the most ambitious mission programs in the history of Christianity. The third phase of the church's history covers the period since 1850 when the church abandoned many aspects of the Zinzendorffian era and redefined itself as a typical Protestant denomination.

It is only in English-speaking lands that the *Unitas Fratrum* is known as the Moravian Church. "Moravian" is a misnomer since it implies that the church was primarily an ethnical Czech community of faith. The Czech Republic today is comprised of three regions: Bohemia, Moravia, and Silesia. Since the renewal in 1727, the Moravian Church has been a multiethnic, multilingual body. In fact, it was the only Protestant Church in colonial America that was not a national or ethnic church (Anglican, Dutch Reformed, Scottish Presbyterian). From the beginning, the church in America included Dutch, English, Irish, Czech, Polish, Danish, African, and American "brothers" and "sisters." Currently, the worldwide *Unitas Fratrum* is divided into seventeen relatively independent provinces bound together by a Unity Synod and a common confession of faith known as the Ground of the Unity. The church has about one million members, with about 65,000 members in North America. The church has four provinces in North America:

Northern, Southern, Alaskan, and Labrador. Though most American Moravians are of European descent, many congregations are comprised primarily of people of African descent who emigrated from the Caribbean.

The Unity of the Brethren

The history of the Moravian Church begins with the Hussite or Czech Reformation of the fifteenth century in Bohemia and Moravia. The most prominent preacher of reform in Bohemia was Jan Hus (ca. 1372–1415), the rector of the University of Prague. Though modern scholars have demonstrated that Hus's theology was technically within the bounds of medieval orthodoxy, his call for reform was so threatening to the stability of the Roman Catholic Church and the Holy Roman Empire that he was condemned to death by the Council of Constance (1414–1417). His burning at the stake in 1415 caused the people of Bohemia and Moravia to rise up in protest. Hussite priests allowed the laity to drink from the chalice during the Mass, a practice condemned by the Council of Constance. Quickly, the lay chalice or "communion in both kinds" ("*utraquism*" in Latin) became the unifying practice of the Hussites (and the Protestants a century later).

The most radical Hussites, called Taborites, attempted a more fundamental reform of church and society along lines similar to those later adopted by the Calvinists. Taborite warriors formed the backbone of the anti-imperial Czech army until they were decisively defeated in 1437. The fortified city of Tabor capitulated in 1454 to King George Podebrady, the first Protestant monarch. Shortly after this, a group of young men led by a tailor named Gregory tried to reclaim the idealism of Tabor while rejecting violence. Gregory drew heavily on the writings of the most radical theorist of the Czech Reformation, Peter Chelcicky (d. 1458). In critiques of the medieval social order, Peter argued that true Christianity is based solely on the Law of Christ. The state church, particularly the Catholic Church, was the false church of the "antichrist" because of its reliance on violence and coercion. Chelcicky used the Waldensian argument that the Roman emperor Constantine had corrupted the institutional church by granting it political status. (The Waldensians were a medieval reform movement that saw the New Testament as normative for the church.) The true church was the church of the martyrs, not the church of Christendom. Sometime in 1457 or 1458 near the village of Kunwald in eastern Bohemia, Gregory formed a covenant community separate from the state church that tried to live according to the teachings of the Sermon on the Mount.

Chelcicky's writings provided the doctrine for the original Unity of the Brethren, which was both the first "peace church" and the first voluntary church in Europe. In 1467, the Brethren decisively and illegally separated from the state church when they ordained their own priests and a bishop. Over the next two decades, the Unity developed a distinctive form of church order that included different levels of membership: beginners, those progressing, and the perfect (or moving toward perfection). The church also had lay leaders, called congregational judges, who assisted in pastoral care. The judges included women as well as men. The Brethren considered themselves a voluntary society within the greater body of Christ. The first generation of the Unity was marked by sectarianism as well as pacifism. Members were forbidden to swear oaths or participate in the legal system, since by doing so, they might contribute to the death of a convicted person. The second generation of Brethren moderated this sectarianism and liberalized the rules of the community, which provoked a schism in the 1490s.

The "New Brethren" were led by Luke of Prague, who had studied theology at the University of Prague. Luke was the author of the first Protestant manual of pastoral care, and he was responsible for the printing of the first Protestant hymnal and the first Protestant catechism. When word reached the Unity that Martin Luther was reforming the church in Germany and had adopted some Hussite doctrines, the Brethren were pleased. But they chose not to join the Lutherans completely. Luke and Luther disagreed over many points of doctrine. The Unity taught that Christ was truly, spiritually present in the Eucharist rather than physically present. Luke also objected to Luther's formula of justification by faith alone, insisting that faith must be completed in works of love.

After the death of Luke in 1528, the Unity established close ties with both the Lutheran and Reformed branches of the Reformation. The Brethren accepted the Protestant understanding that there are only two sacraments, but they retained the other five Catholic sacraments as sacred rites. Their 1535 Confession was the first Protestant confession to begin with a statement on scripture as the foundation of doctrine, and by the end of the sixteenth century, the Unity's confession was often printed in collections of Reformed doctrinal statements. Many of the Brethren's hymns, in German translation, became part of the Protestant musical canon. Despite its close ties to the Reformed churches, the Unity maintained its separate ecclesial status for two main reasons. One, they felt that the other Protestant communions lacked

discipline and a commitment to social justice. Two, the Brethren insisted on a strict separation of church and state. They asserted that coercion has no place in matters of faith.

The Brethren were pioneers in universal education for men and women, and the church produced the first complete translation of the Bible into Czech (completed about 1588). Because it was printed on the Brethren's press in Kralice, it is often called the Kralice Bible. Perhaps the greatest contribution of the Unity to Western culture was John Amos Comenius (1592–1670), who served as the last bishop of the Moravian and Bohemian branch of the church. Comenius drew upon the doctrine and practice of the Unity in his proposals for the reform of Christianity and Western society. He is most famous for his innovative teaching methods that were designed to make schools gardens of delight rather than "slaughterhouses of the mind," but his vision was much broader than the classroom. He proposed a universal reform of human affairs in which justice, mercy, and wisdom would rule rather than violence, oppression, and ignorance. Cotton Mather reported that Comenius was recruited to be the president of Harvard College in the 1640s but accepted an offer from the Queen of Sweden instead to establish a national school system.

Despite periods of severe persecution, the Unity thrived in Czech lands, Poland, and parts of Hungary until the Thirty Years' War (1618–1648). The severity of the Counter-Reformation in Habsburg lands after the Protestant defeat at White Mountain drove the surviving members of the Unity into permanent exile in 1627. The Unity of the Brethren was excluded in the Peace of Westphalia in 1648, and many Brethren simply joined Reformed congregations. By 1700, the Unity was extinct except for a few congregations in Poland/Prussia and secret adherents in the homeland. However, its witness was valued by Lutheran and Reformed church leaders in the Pietist movement. The Pietist center of Halle preserved many of Comenius's unpublished papers. Moravian historians often refer to the period between the exile in 1627 and the renewal in the 1720s as the time of "the Hidden Seed," an allusion to a prayer offered by Comenius as he led the Brethren into exile.

The Zinzendorf Era

In the 1720s, Count Nikolaus von Zinzendorf offered refuge to over a hundred Czech Protestants who had been inspired by the evangelistic efforts of a Czech émigré named Christian David, who had experienced conversion during a revival in Silesia. Christian David encouraged secret

Protestants to leave their homes in Moravia so they could worship as their ancestors in the Unity had. Their original goal was to connect with the remnants of the Unity of the Brethren in Poland, but instead they found refuge on Zinzendorf's estate. There they built a village they named Herrnhut. Eventually the Hapsburg authorities stopped the exodus from Moravia.

Under Zinzendorf's leadership, the Moravian refugees were able to resurrect the Unity of the Brethren in a new form known as the Brüdergemeine. In May 1727, the residents of Herrnhut signed a "Brotherly Agreement" that defined their village as a religious community dedicated to the teachings of Christ. On August 13 of that year, the residents experienced a revival during a celebration of Holy Communion, which they interpreted as an experience of the outpouring of the Holy Spirit. This was seen as the date of the renewal of the *Unitas Fratrum*. In November of 1741, the leaders of the church officially appointed Jesus Christ as the "Chief Elder" of the church. One of the most controversial practices during the Zinzendorffian era was the use of the Lot by elders to make major decisions, including marriage decisions. The elders would pray and ask a specific question and then draw a slip of paper that would indicate the affirmative or negative. The Lot was based on the divination stones of the Israelite priests in the Old Testament, and Moravians believed this was a way to discern the will of Christ in the community. The last official use of the Lot was to elect a bishop in the late nineteenth century.

Like the original Unity of the Brethren, the Brotherly Agreement defined true Christianity in terms of behavior rather than professed beliefs. Members of the church agreed to let the church's elders have authority over economic as well as spiritual matters, including choice of spouse and vocation. Over a thirty-year period, the church founded several "congregational towns," most notably Bethlehem in Pennsylvania and Salem in North Carolina. From 1742 to 1762, Bethlehem operated under a communal economy with common housing. It was one of the most successful communes in American history.

In an attempt to reclaim the church of the New Testament and the practices of the Unity of the Brethren, the Moravians in Herrnhut experimented with a number of "apostolic" offices for both men and women. People were ordained as deacons, deaconesses, elders, and eldersses regardless of their social status or educational achievements. The criteria were spiritual wisdom and apostolic lifestyle. For a brief period of time in the 1750s, women were even

ordained to the priesthood. Throughout the eighteenth century, women played important roles in the life of the church, serving as missionaries, pastors, teachers, and even administrators. That declined in the nineteenth century as the church modeled itself increasingly on other American denominations.

By 1735, the main structures of the renewed Moravian Church were in place, and the grandson of Comenius, Bishop Daniel Ernst Jablonski, consecrated a carpenter named David Nitschmann as the first bishop of the resurrected *Unitas Fratrum*. Nitschmann was part of the original group that fled their home in Suchdol, Moravia. As a bishop, he helped establish Moravian work in the Caribbean, Greenland, and North America. The first official episcopal act by a bishop of any church in North America was performed by Bishop August Spangenberg in Bethlehem, when he ordained a deacon in the 1740s. In 1749, the British Parliament officially recognized the Moravian Church as an "Episcopal church," with full rights of a church rather than classifying it as a dissenter group or sect.

Soon after the August 13 experience, the Moravians began sending evangelists and teachers throughout Northern and Eastern Europe in support of the Pietist revival. Moravians called this work the diaspora, and it was most effective in the Baltic region. Tens of thousands of Protestants began using Moravian hymns and reading Zinzendorf's sermons. Many of the Lutherans who immigrated to the United States in the nineteenth century were connected to this diaspora. The most famous figure nurtured in a diaspora community in Denmark was Søren Kierkegaard.

The Moravian Church also established boarding schools, the most famous of which was in Niesky, Germany, where Friedrich Schleiermacher was enrolled. Zinzendorf's daughter Benigna founded the first school for girls in Pennsylvania in 1742; it later developed into Moravian College. The school for girls in North Carolina became Salem Academy and College. Moravian schools were noted for their ability to combine warm-hearted piety with serious education in languages and science. In 1807, the Moravians in America decided that it was no longer practical to send men to Germany to prepare for the ministry, so they established a theological seminary in Pennsylvania. Most Moravian pastors today were educated at Moravian Theological Seminary, but it is increasingly an ecumenical seminary serving the Lehigh Valley of Pennsylvania.

Zinzendorf had been educated in the Pietist center of Halle, Germany, and was familiar with Halle's pioneering

efforts in missions to non-Christian peoples. After the August 13 experience, he inspired the Moravian refugees in Herrnhut to view their exile as an opportunity to serve the Lord anywhere in the world. In 1732, the first Moravian missionaries went to the slaves on the Danish colony of St. Thomas. The slaveholders were hostile to the Moravian missionaries' message of God's love for slaves, and they could be brutal in their opposition. Disease and climate took its toll as well, and ten of the first twelve missionaries died within months of arriving on the island, but the church kept sending workers into the fields.

The success of the Moravian mission depended on a freed woman named Rebecca who recognized that the Moravian version of the gospel was different from that preached by most white imperialists. She became the most effective evangelist and soon married Matthias Freundlich, one of the missionaries. Both were imprisoned by the authorities on St. Thomas, and it took a personal visit by Count Zinzendorf to secure their release. Rebecca was one of the first African women to be ordained by any church, and she ended her career as missionary back in her African homeland. Some distinctive practices of the black church in America may be traced to the Moravian mission, particularly the Watchnight Service on New Year's Eve and the practice of waiting until all are served before partaking of Communion. Methodist and Baptist missionaries in the early nineteenth century learned from the Moravians.

By 1760, Moravian work was established in South Africa, Surinam, Guyana, Greenland, India, and North America. The artist Valentin Haidt depicted the scope of Moravian missions in the mid-eighteenth century in his painting *First Fruits*, in which individual converts are depicted in their native dress. Moravian missions to native tribes in America are particularly noteworthy because of the church's respectful treatment of native culture and attempts to protect natives from abuse by European settlers. Unlike other missionaries, Moravians learned native languages and their communal understanding of Christianity was congenial to tribal peoples. David Zeisberger was particularly effective because he worked well with native "helpers" (pastors). Tragically, nearly a hundred Moravian Indians were massacred by an American militia in their village of Gnadenhütten in Ohio in 1782. Moravian missionaries among the Cherokee were unable to prevent the Trail of Tears, but they did reestablish their work with the Cherokee in Oklahoma.

The Moravians participated in General Oglethorpe's philanthropic experiment in Georgia in the 1730s. This was

the church's first attempt to establish a communal society outside of Germany, and it did not go well. The English were suspicious of the theology of the German Pietists and their efforts to minister to slaves and natives. It was the Moravians' refusal to bear arms that caused the most conflict in Georgia, and eventually the Moravians abandoned Georgia. Many of them relocated to the Quaker colony of Pennsylvania with the help of George Whitefield. Despite the failure in Georgia, the Moravians there had a lasting impact on American Christianity through the impression they made on John Wesley. After his own failure in the colonies, Wesley joined the Moravians in London where he had his experience of grace. He adopted many practices from the Moravians, including his famous "bands."

Bethlehem, Pennsylvania, became the headquarters of the Moravian work in America. Under Bishop Spangenberg, the Moravians built an efficient communal economy, trained and sent out dozens of missionaries to the Indians, and established a network of congregations from New England to North Carolina. Zinzendorf visited Pennsylvania in 1742 and attempted to bring together all German-speaking Protestants into an ecumenical church body, marking the first truly ecumenical venture in American history. It failed, and the final result was that the German Lutherans and German Reformed sped up their efforts at ecclesiastical organization.

The Modern Era

Unlike all other churches in America, the Moravians did not break their formal ties to Europe following the American Revolution. It was not until the 1850s that the Northern and Southern Provinces were established as semiautonomous entities. Today, the *Unitas Fratrum* remains a single global church. The Revolution, however, did profoundly affect the Moravians in North America. The communal system went into an irreversible decline and was finally abolished in the middle of the nineteenth century. The mission to Native Americans likewise declined and was eventually abandoned.

Slowly, Moravians in America adopted the attitudes and practices of other American Christians, including the ownership of slaves. The Moravians had been deeply involved in the Great Awakening of the 1740s, but they were largely absent from the Second Great Awakening in the nineteenth century. At a time when other churches were expanding rapidly toward the West or energetically addressing the social problems of the industrial age in the East, the Moravians turned inward. Moravians never fully adjusted to the

competitive nature of American religion. Gradually, the church gave up its traditional pacifism as it assimilated to American culture, and in 1861, Moravians enlisted in both the American and Confederate armies.

In 1857, the Moravian Church was reorganized, and the American and British provinces were made autonomous. The American Northern Province was headquartered in Bethlehem, Pennsylvania, and the Southern Province in Salem, North Carolina. The Northern Province grew in the late nineteenth century, primarily because of German and Scandinavian immigration to the Midwest. Green Bay, Wisconsin, was one of the last attempts to found a Herrnhut-style community in America, but instead it quickly became a secular industrial center. The Moravian congregation of Sturgeon Bay in Wisconsin produced more Moravian ministers than any other congregation in the twentieth century. The Southern Province experienced its greatest period of growth after the ending of Reconstruction, as preachers adopted revival methods from the Methodists. Many of the new congregations in the Southern Province were connected to textile mills.

In the mid-nineteenth century, Moravians in America began a long process of redefinition that is not yet complete. Efforts were made to preserve some of the distinctive practices of the Zinzendorffian era, such as the love feast and use of the Daily Texts in personal devotions, but much of the provocative and progressive theology and praxis of the earlier era was repudiated. For instance, only recently have scholars rediscovered the importance of the doctrine of the Mother Office of the Holy Spirit in the eighteenth-century Moravian Church. It is perhaps ironic that during this period of searching for an identity, Moravians in America actively promoted its roots in the Czech Unity of the Brethren but rejected many of the most distinctive aspects of that church.

During the formative period in Herrnhut, the Moravians developed many of the rituals that continue to be used in the modern era, such as the famous Easter Dawn service. This ritual includes a visit to the church's cemetery (called God's Acre) before sunrise on Easter in commemoration of the original visit of the women to Jesus' tomb. There, among the remains of those who await resurrection, the church professes its faith using a liturgy based on Luther's Small Catechism. Perhaps the most distinctive ritual of the Moravians today is the practice of love feast, which is based on the Early Church's agape meal. The Moravian love feast continues to be observed in most provinces around the world. In

its simplest form, the ritual is simply a sharing of food and drink in the context of worship. Typically, the congregation sings for much of the service. Often there is choir music during the eating of the meal, and a sermon may follow. Normally, the food and beverage are sweet and festive, even during a solemn occasion such as Holy Sabbath.

Several rituals that were vital to the Moravians in the eighteenth century fell into disuse in the nineteenth century. Among these were foot washing, prostrate prayer, and the Kiss of Peace. They were more suited to a communal setting and are now considered sectarian. Other Moravian rituals have been preserved primarily among clergy and in some traditional Moravian families, most notably the Cup of Covenant and the singing of blessings at meals, birthdays, and special events. The Eucharist in the Moravian Church was understood as a foretaste of the "marriage banquet of the Lamb" and a joyful testament to salvation in Christ. The most distinctive aspect of Moravian practice in Communion is that the pastor goes out into the congregation to serve the gifts of bread and wine (or grape juice) in imitation of Jesus who came to serve, not to be served. True to their commitment to community rather than individualism, Moravians tend to eat the Communion bread in unison. The "right hand of fellowship" has replaced the Kiss of Peace.

In the twentieth century, the Moravian Church was most noteworthy for its active involvement in the ecumenical movement and global missions. Two presidents of the National Council of Churches of Christ have been Moravians: Gordon Sommers (1994–1995) and Peggy Chamberlen (2010–2011). With the end of European colonialism after World War II, the worldwide *Unitas Fratrum* was restructured and former mission fields became semiautonomous provinces equal to those in Europe and America. In 1957, the Unity Synod adopted a new statement of faith called the *Ground of the Unity*, which was one of the first confessional statements to incorporate insights from the ecumenical movement.

Like most denominations, the Moravian Church in America experienced a brief boom in membership in the 1950s, followed by years of steady decline. During the 1960s, congregations were established in rapidly growing areas of California, Florida, and the Midwest, but many of those newer congregations failed to thrive and were eventually closed. During the post-World War II period, the church expanded rapidly in Africa and Central America, as former mission fields took responsibility for their own affairs. Today, the Moravian Church continues to struggle with its global

characters, questions of identity, and radical past. Moravians still tend to define Christianity in terms of behavior rather than doctrine, and their guiding principles are presented in the Moravian Covenant for Christian Living, which has its roots in the original Brotherly Agreement.

Mountain West and Prairie Region

The Mountain West is uniquely diverse in its landscape, population, and faith traditions. This vast geographical space—here defined as the area between the Continental Divide and the Pacific coastal states, excluding the Southwest (New Mexico and Arizona), but including Utah, Colorado, Wyoming, Nevada, Montana, and Idaho—is characterized by high plains and mountain ranges, open vistas

and big skies, forests and deserts. Between Denver and Salt Lake City lie 500 miles of Rocky Mountains, which stretch longitudinally from Canada southward to New Mexico, thus defining the entire region. The natural beauty of the area has drawn people for centuries, and its various population groups—Native Americans, Hispanics, Europeans of various ethnicities and religious affiliations, and Mormons, among others—make for a culturally and religiously complicated scene.

Jacques Maritain, the twentieth-century French philosopher, observed in America both a spiritual and a practical “sense of becoming.” This has been truest in the West. From its beginnings, the American West was an environment of both threat and promise. Those who braved its distant empty spaces and rugged terrain brought their faith traditions with them, along with great optimism about what the region and the future might hold. Because no religion was ever legally established in the U.S. West, the pioneers did much building and adapting of religious institutions. The West was therefore characterized by religious pluralism even while the rest of America still thought of itself as a (mostly) Protestant empire. As Edwin Gaustad has noted, by the early nineteenth century, the U.S. West was Protestant, Catholic, and Jewish; the West was experimental in ways that went far beyond historic Christianity or Judaism; the West was more secular than the East; and the West (mostly along the Pacific coast) “discovered” Asia—and with it, Buddhism, Shinto, Confucianism, and Taoism.

The Mountain West had historically, and has still, a lower population density than anywhere else in the United States. In the early twenty-first century, there are only slightly more than 22 people per square mile in this region, compared with 54 in Washington and Oregon, 223 in New England, and 80 in the nation as a whole. The popular image of the West as a wild, mostly uninhabited expanse of land—and its people as hardy and isolated—is thus somewhat accurate, especially in rural areas. Eighty percent of people in the U.S. West, however, now live in urban and suburban areas. And, with the Southwest, the Mountain West region of the United States (excluding Montana, Wyoming, and northern Idaho) in 2009 ranked as the fastest growing region in the country. These demographics have contributed to the diversity, openness, and flexibility in religious matters that have long been characteristic of the West.

The major religious traditions represented in this region include a variety of Native American religions, the Church of Jesus Christ of Latter-day Saints (the Mormons), Roman

Catholicism, and Protestantism of various stripes, along with pockets of Eastern religions and centers of New Age spirituality. Outside of heavily-Mormon Utah and southern Idaho, however, people who are religiously nonaffiliated outnumber everyone else. They are thus the majority—almost 50 percent of people who live in this region, as opposed to 41 percent nationally. In short, the Mountain West has an unusually high proportion (compared to the United States as a whole) of Catholics, especially Hispanic Catholics; Latter-day Saints; and those who check the “none” box when asked for their religious affiliation.

The U.S. western frontier, like every frontier, has been a zone of cultural encounters—a place in which civilization and savagery have met on both sides, along with a mixture of good intentions and misunderstandings, cooperation and conflict, freedom and danger. The story of religion in the American West is one in which Mormons met Native Americans, Spanish Catholics met Swedish Baptists, learned clergy met rough miners and homesteaders, and Methodists competed with all of them. In the American West, unlike Europe or the eastern seaboard of the United States, European settlers had no religious roots in the region. The religious traditions, institutions, and leaders they brought with them, therefore, played an important role in settling, cultivating, and organizing the region. But long before they arrived, American religious pluralism was well underway.

Native American Religions

The religious history of the Mountain West begins, of course, with the Native Americans and their great variety of spiritual beliefs and practices. The concentration of Native Americans in the U.S. West resulted from an often-tragic process by which European Americans pushed the Indians as far west as they could go, sequestering them on reservations. American Indians—or images thereof—have since become emblematic of the region. Because Native American religions are inseparable from the particular land and people from which they grow, western tribes—including the Navajo, Apache, Pueblo, Blackfeet, Crow, Shoshoni, and Utes, among many others—have drawn spiritual value from the mountains, deserts, oases, valleys, and plains of the Mountain West.

European Christianity, beginning in the fifteenth century, tended both to exacerbate conflict with Native Americans and to moderate it. Both Catholic and Protestant missionaries to the Mountain West, for instance, while zealous to convert the Natives, were often just as keen to understand

and report accurately on tribal traditions, thus serving as collectors of Indian languages, artifacts, and folklore later so valuable to anthropologists and historians. And they often made efforts to stop the worst abuses of Europeans. Although many Native Americans remained suspicious of Christianity, conversion was often seen as the most expedient path to respectability, access to white power, and a good education. But conversion was not the only option. Native responses to Christianity in its various forms also included competing prophecies; rebellion; syncretism with, or borrowing from, certain elements of Christianity; and new Native religious forms. In the decades following the Civil War, six major revitalization movements occurred among western American Indians, including the Ghost Dance and the peyote religion.

The Ghost Dance originated in the Mason Valley of Nevada, where the Paiute Wovoka (ca. 1858–1932), the Ghost Dance prophet, lived. Performing the ritual circle dance that Wovoka had seen in a vision in 1889, the Indians believed, would bring renewal and peace—indeed, a new creation. Wovoka had been informally educated in Protestant theology, and he integrated some elements of Christianity into his new religion—with emphasis on one god, rebirth, and the afterlife. But the Ghost Dance was uniquely Indian. Its practice spread all over the Great Basin region between the Rockies and the Sierras, and into the Great Plains, where it was adapted by different tribes. The Ghost Dance peaked around 1894 and had essentially died out by 1910, but it caught the imaginations of many Native Americans, serving for nearly twenty years as an alternative to European Christianity and as a source of hope.

If the Ghost Dance focused on a renewed world, the peyote religion gave greater emphasis to personal redemption. Revived in the late nineteenth century by the Comanche Quanah Parker, the peyote ritual had diverse expressions, with varying amounts of Christianity mixed in. But it gained notoriety for its use of the hallucinogenic substance taken from the peyote cactus. The Native American Church (NAC), which advocates the use of peyote, identified itself in its founding documents as “the Christian religion with the practice of the peyote sacrament.” Formed in 1918, the NAC began in Oklahoma and spread westward, incorporating members of many tribes, especially the Navajo. In the early twenty-first century, there are NAC chapters on most western reservations.

But such revitalization movements among Native Americans invariably met with challenges. In 1871, President

Ulysses S. Grant's Indian "Peace Policy," spearheaded by Protestant groups, adopted the goal of Christianizing and civilizing rather than fighting the remaining "savages" in the West. "Indianness" would thus totally disappear via acculturation and assimilation. Efforts by both Protestant and Catholic missionaries increased at this time. As opposed to earlier mission work among Hispanics, Mormons, and white settlers, these missions were unique in that denominational agents relied on a partnership with the federal government to solve the "Indian problem." The Native Americans often proved a great challenge to Christian missionaries, not only because of language and cultural chasms but also because of the Indians' resistance to assimilation.

Although the Peace Policy faded by 1890, the churches retained (even into the twenty-first century) an interest in the tribes to which they had been assigned. After World War I, many Christian church bodies began to rethink the goal of Indian missions, turning their focus away from saving souls—and the cultural imperialism that often went with it—and toward ministries of social, political, and economic justice. Many modern religious groups, for instance, have been active in helping Native Americans preserve and restore their traditional sacred sites, like Devil's Tower and Medicine Wheel in Wyoming. Although many Native American groups struggle with poverty, suicide, alcoholism, unemployment, and domestic violence, there is also an ongoing creative retrieval of ancient arts, rituals, and customs that prove, once again, the dynamism and resilience of Native American spirituality.

Denominational Expansion in the Mountain West

Although the Spanish maintained a strong presence in the American Southwest since the sixteenth century, New Spain did not reach as far as the Mountain West region (as here defined), which remained largely uninhabited by Europeans until the early nineteenth century, when the United States began its westward expansion in earnest. Thomas Jefferson's purchase of the Louisiana Territory in 1803 virtually doubled the size of the nation; the land base was augmented again in 1846 by territory won in the Mexican-American War (the Pacific Southwest) and by a treaty with Great Britain (the Pacific Northwest). Thus, by 1850 the United States and its territories reached from the Atlantic to the Pacific.

Such rapid westward expansion presented a near-overwhelming task for Christian church bodies in the East—for now the vast West had to be "won for Christ." Moreover,

westerners had already acquired a reputation (deserved or not) for wild living. At the beginning of the nineteenth century, Yale president Timothy Dwight remarked that the West lacked "regular society" that would keep people from idleness and trouble. Without religion and morality, he feared, the West would "sink into barbarism." But there was also at this time much optimism about opportunity to Christianize the region. With religion, said Congregationalist Lyman Beecher in the mid-nineteenth century, the West will become "glorious." All the people scattered throughout the western terrain needed was Bibles, Sunday schools, Christian colleges, social services, and clergy to order their lives and lead them in the way they should go.

Apart from a few fur-trappers and traders, Mormons (discussed below) were the first white settlers west of the Rockies, arriving in the Great Salt Lake Basin in 1847. At the same time, Presbyterians and Congregationalists—followed by Methodists and Baptists—began establishing home mission societies in the East to send pastors and missionaries to the West. These Protestants scorned both Mormonism and the Spanish and French Catholicism already present (however sporadically) in the region. They wrote back to their superiors with dismay, denouncing the drinking, gambling, prostitution, religious indifference, and Sabbath-breaking they encountered among many other pioneers beyond the Mississippi. But having witnessed the enormous success of the Second Great Awakening in the East at the beginning of the nineteenth century, Protestants who wished to proselytize beyond the former colonies had the tools they needed for the religious conversion and moral education of others—preachers, Christian literature, revival meetings, spiritual zeal, and plenty of outdoor space.

In reporting to denominational headquarters on the state of the region and its people, western missionaries often included information about the Indians, their culture, and the negative aspects of their contact with European (that is, Spanish, French, British, and American) conquistadors, explorers, traders, and settlers. Missionaries sometimes took on the role of "cultural broker" as they worked with both newly arriving settlers and the Native Americans. Far from home, many suffered from loneliness and depression; they also often faced failure in their efforts, as many Native Americans misunderstood or rejected their evangelistic efforts, and white settlers often failed to congeal into viable congregations. Circuit-riding Methodists and local farmer-preacher Baptists proved most successful. Without the constraints yet of higher education or church hierarchy, these

preachers were free to gather people wherever they could be found.

Denominational Competition and Cooperation

By 1850, Catholics were most numerous among Christians in the West, followed by Methodists, Baptists, Presbyterians, Congregationalists, and Episcopalians. Lutherans held seventh place. While prominent in the Great Plains and (later) the Pacific Northwest, the Lutheran focus on seeking out other Lutherans and organizing according to nationality put a damper on their growth. The other mainline Protestant denominations, while not as “rough and ready” as the Baptists and Methodists, were nonetheless keen to send representatives from the East who brought organized denominational life and institutions. Presbyterian Sheldon Jackson (1834–1909), for example—self-appointed “Rocky Mountain Superintendent”—embodied Protestant zeal and optimism, devoting his life to establishing churches and schools and working with Native Americans in several states across the Mountain West.

The Gold Rush began in the Denver area, just east of the Rockies, in 1859. The first transcontinental railroad in the late 1860s further opened up the West as it crossed Wyoming and Utah, bringing settlements with it. Once the Civil War had ended, the United States could focus its attention once again on westward expansion and religious groups on westward evangelization. From the late nineteenth century through the early twentieth, both Catholic and Protestant homesteaders poured in to take advantage of mining, farming, and ranching opportunities. Although it took time for churches to catch up with population growth in the Mountain West, and congregations were often small and short-lived, the mainline denominations were eventually established in this region through the combined effects of circuit riding, transportation corridors, and Indian missions.

Throughout the nineteenth century, there were strong denominational rivalries (“shouting wars”) among the American churches and, consequently, a race westward to establish a strong denominational presence. By the end of the Civil War, 86 percent of all colleges in the United States were church-related; and in the West, almost all institutions (schools, hospitals, and orphanages) had denominational ties. Given the lack of established institutions and customs among early western settlers, the spread of religion depended on adequate funding, speed, confidence, and persuasion, especially in the forms of revival, itinerant evangelists, and tenacious denominational missionaries. The organization of

schools took high priority for many Protestant denominations, for these would supply pastors and teachers for the whole region, thus mitigating the influence of Catholics, Mormons, and secularists.

Roman Catholicism, however, remained the largest denomination both in the West and in the United States as a whole, mainly due to massive immigration from Ireland and, later, Italy and Eastern Europe. Because Catholics outside of Maryland experienced discrimination among the majority Protestant Anglo-Saxons, the more welcoming West beckoned for many. Unlike Protestants, Catholics did not have to start from scratch in the West, as the pioneering work of the Spanish had left its mark in the form of mission churches and scattered congregations. But in the eyes of Eastern Catholics, Catholicism in the West suffered from neglect and backwardness and was therefore in need of renewal. Catholics had to deal with Protestant competition and hostility in the region, as well as ethnic differences among themselves. Furthermore, Eastern Church authorities were not able or willing to devote resources to church-building in the West, as they had their hands full with the great numbers of Catholic immigrants thronging the major East Coast cities.

Catholics and Protestants took different approaches to missionizing. Jesuits, for example, known for their accommodation of Native American culture and patience with the conversion process, were much more successful on the whole than Protestants, who were often seen by Native Americans as verbose, cold, and distant. Catholic visual and material culture, plus its ritual and sensory approach to spirituality, resonated better with Indian tradition than did Protestants’ more bookish approach. Notable Jesuit missionaries to the West in the nineteenth century included Pierre Jean DeSmet, Joseph Cataldo (who went to Idaho), Anthony Rivalli (who served in Montana), and many nameless nuns who staffed church schools and hospitals. DeSmet (1801–1873) served as an effective intermediary between Indians, for whom he had much admiration, and the white settlers from Iowa to Oregon.

In the period immediately following the Civil War, between 1860 and 1890, newly arrived immigrants to the United States as a whole numbered around 10 million; and from 1890 to 1915, another 15 million came. Of these, many Germans, Scandinavians, Irish, and other Europeans found their way to the open expanses and opportunities of the Mountain West. This incredible movement of people was augmented by migrations north from Mexico and by an influx of Chinese and Japanese along the Pacific Coast—not

to mention emancipated slaves, farmers, and homesteaders from New England and the Midwest, and gold seekers from everywhere. There were now in the nation as a whole, including the West, a great variety of Catholics; and Jews became, for the first time, a large and visible presence. By 1920, Muslims, Buddhists, and adherents of other Eastern religions, while still small in number, were more prominent in the West than elsewhere.

The men and women who went to the West as religious workers played a vital role in their growing communities, not only as spiritual guides but also—because they were usually the most educated and cultured people in town—as teachers, reformers, social workers, librarians, and organizers of recitals, lectures, and spelling bees. Western communities matured and became more settled in the early twentieth century, and churches, clergy, and denominational schools played a major role in this development. As urban areas grew, the denominations erected many new schools, hospitals, and houses of worship. Since the western populations remained relatively sparse and transient, and denominations were diverse and often fractious, not all such ventures succeeded. But denominational competition spurred each group on, and cooperation among denominations helped bring resources, stability, and cohesion to the western religious landscape. No one religious body could do it alone. In addition, Protestants and Catholics in the West shared hostility toward Mormons and hoped to bring them closer to the traditional Christian fold.

Latter-day Saints

Mormons rank as one of the fastest-growing religions in U.S. history. They began in 1830 with six members in upstate New York, and in the early twenty-first century there are five million Mormons in the United States and thirteen million worldwide, with headquarters in Salt Lake City, Utah. The early history of the Latter-day Saints (LDS), like that of America itself, is of movement from east to west. Because of persecution in New York, Ohio, Missouri, and Illinois, about sixteen-thousand Mormons made the long trek from the Midwest to the Salt Lake Valley in the 1840s. Brigham Young (1801–1877), Smith's successor as LDS prophet and leader, declared in 1845: "The exodus of the nation of the only true Israel from these United States to a far distant region of the west, where bigotry, intolerance, and insatiable oppression lose their power over them, forms a new epoch, not only in the history of the church, but of this nation" (Gaustad and Noll 2003, 348).

The first Mormon arrival in the Salt Lake Basin in 1847 led to settlement elsewhere in Utah, Idaho, and adjacent fringes of neighboring states. The second generation of Mormons spread out even further to southern Utah, Arizona, New Mexico, and California. Converts came not just from the eastern United States but, by 1850, also from England, Scotland, Wales, Germany, and Scandinavia. Hard work and a strong community ethic, plus a powerful sense of being the new Chosen People in a new promised land, helped the growing body of LDS succeed and prosper. Life in the West let them escape the intolerance and oppression of which Young had spoken, and for two generations they were largely left alone.

But violent confrontation with "Gentiles" (non-Mormons) proved inevitable. In 1857, a group of Mormon militiamen and their Indian allies attacked a caravan of immigrants from Arkansas and Missouri who were on their way to California, killing 120 of them. This event, which came to be known as the Mountain Meadows Massacre, still ranks as the worst act of religious violence in U.S. history; and it gave opponents much grist for their anti-Mormon rhetoric. In denying the legitimacy of all other Christian denominations, the Mormons developed such a strong sense of identity that they considered themselves a separate nation. In 1857, they spoke seriously of seceding from the Union; but Abraham Lincoln's wise "hands-off policy" toward Mormons during the Civil War helped prevent such an action. In the meantime, LDS remained strong, as persecution, hardship, and the shared journey to the West bound them together. Songs, stories, reenactments of the arduous trek, and anniversaries of signal events—like their entrance into the Salt Lake Valley on July 24, 1847—still serve as foundations for LDS identity.

When the first Protestant ministers arrived in Utah in the mid-1860s, the LDS had been there for almost twenty years and were 40,000 strong. At the same time, there were only about 500 non-Mormons in the area, including a few Jews. The newcomers were met mostly with hostility from Mormons; but the contempt was mutual, leading to open (verbal) warfare, cold disregard, or, at best, polite coexistence. Gentiles proceeded to build churches, hospitals, and schools, optimistic that Mormonism would collapse in the face of what they believed to be true Christianity. Mormons countered with their own institution building. In the 1890s, the Mormons completed their Temple in Salt Lake City. Soon, other Mormon temples appeared in Utah and elsewhere. Their exteriors modeled on English cathedrals, these

temples were arguably the most impressive religious architecture in the nineteenth-century United States.

Schools were the Mormons' weak point in the nineteenth century. Mormon schools were few and unsatisfactory, and books other than Mormon scriptures were rare. Presbyterians, Congregationalists, and Episcopalians were first in the Protestant rush to fill this void, and they eventually set up dozens of schools in the Mountain West. As Protestant missionaries had done in the Southwest among Hispanic Catholics, they turned in Utah primarily to schools, and later to itinerant evangelists, to undermine the Mormon hierarchy. In 1890, about 67 percent of Mormon children were enrolled in Protestant mission schools, which were generally of higher caliber than the Mormon schools. Converts were few, but the mainline denominations' emphasis on Bible reading and "Americanization" helped nudge the Mormons into the mainstream. Women teachers, often more committed than men to long-term mission work, were key to the schools' success. By the second decade of the twentieth century, Mormons had their own schools and colleges in place, building on the skills they had learned from non-Mormons; and with this the Protestant institutions waned.

Utah joined the United States in 1896, the Mormons having officially abolished polygamy—a sticking-point in their quest for statehood—by 1890 (though fundamentalist LDS groups in Utah and northern Arizona still practice plural marriage). Despite their efforts to become mainstream Americans and good citizens, Mormons continued to receive bad press and ridicule well into the twentieth century due to their unorthodox belief system, their extrabiblical scripture, their political and economic clout, and rumors of continued polygamy. Mormons were misunderstood and demonized in the popular media as well as in politics; they were always the villains in nineteenth-century Western novels, for instance, and never the heroes. Something of a breakthrough occurred for the Mormons' public image, however, when LDS apostle Reed Smoot was elected to the U.S. Senate in 1902.

A century after the Mormons' arrival in the Salt Lake Valley, they dominated all of Utah and much of the surrounding area. The Mountain West, with its untapped potential, freedom, and isolation, turned out to be the ideal setting for LDS religious entrepreneurship. Other reasons for their success include their community solidarity; the value they place on family and ancestry; a distinctive theology that gives America, and the American West in particular, a special place; their ability to resolve current religious questions with ongoing

revelation; a balance of the spiritual and the practical; high expectations of members; and strong leadership from the church hierarchy. Walking the line between being mainstream and distinctive remains their challenge.

As Jan Shipps has noted, the Church of Jesus Christ of Latter-day Saints is, for all practical purposes, the established church in Utah. Although other faiths are never harassed, the institutional form of Mormonism still dominates the state. To a lesser but still considerable degree, the same is true in Idaho, as the bulk of Idaho's population lives in the heavily Mormon southern part of the state. After World War I, most other Christians reduced their open attacks on the LDS, and interdenominational cooperation improved somewhat. Many LDS, in turn, have tried to reach out by sharing their considerable wealth with non-Mormons and through ecumenical efforts. Mormons have also taken strong stands on issues of national import. In the early 1980s, for instance, the LDS Church officially opposed a federal proposal to place an intercontinental missile system in Beaver County, Utah; and their opposition essentially killed the project. Yet, even in the twenty-first century, tensions between Mormons and non-Mormons continue in the region on issues ranging from beverage service to gay marriage.

Jewish Immigration to the U.S. West

Jewish immigrants to the United States, many from European ghettos, saw America in general, and the West in particular, as a place where religious freedom could find fuller expression. Most Jews didn't initially plan to settle in the West; rather, their idea was to set up shop temporarily, make some money, and come back east. But after a while they settled permanently in the region, and synagogues—though few and far between—emerged by the late nineteenth century. Because Jews were such a small minority in the West, their greatest danger lay in the possible loss of their sense of religious identity and community. Institution building, however modest at first, helped them cohere as a community and keep their traditions intact.

Jews came to the West in larger numbers after the Civil War, finding greater social mobility and equality on the frontier than in the East. In the nineteenth-century West, all groups except for the Native Americans were immigrants. There was a virtual absence of overt anti-Semitism, and Jews had an influential role in economic development well beyond their numbers. On the whole, gentiles viewed the Jews as good contributors to society—stable, industrious, and socially conscious. Many Jews participated in gold and

silver mining, especially as suppliers; and many also were peddlers, bankers, business owners, farmers, and ranchers. But most were merchants.

As the Jewish communities became larger in the West, they began to build Hebrew Benevolent Societies and B'nai B'rith lodges. They also tried, with mixed success, to establish worshipping communities with regular observance, libraries, kosher butchers, cemeteries, and schools. In places that lacked a critical mass, Judaism was maintained in homes, in absence of permanent synagogues. By 1912, Jews in the West enjoyed a religious equality that their East Coast coreligionists often lacked. Many western cities boasted Jewish mayors; and several of the larger cities, like San Francisco, had both a Jewish and a Catholic elite.

New Thought in the Mountain West

Intellectual debates of the type that roiled the East Coast churches in the late nineteenth and early twentieth centuries—including those over evolution, biblical criticism, and comparative religion—were less important in the West, where practical and personal concerns tended to take precedence over intellectual ones. Still, given its vast open spaces, the West became home to many new spiritual ideas and practitioners. By the mid-nineteenth century, rationalism, atheism, “mesmerism,” and other departures from traditional Christianity were evident in the region. A variety of ideas and practices that came to be categorized as New Thought took hold in the United States during the second half of the nineteenth century, though the term was not coined until 1887, spawning movements that flourished in the twentieth century.

New Thought's emphasis on health, happiness, and prosperity; access to, and alignment with, the supernatural; and positive or “possibility” thinking attracted many followers. Such emphases infiltrated the vocabulary of mainline religious denominations as well, and they inspired various “New Age” ideas and holistic healing movements in the latter half of the twentieth century. New Thought was an amalgam of Arminian theology, with its emphasis on personal choice and self-determination, theological liberalism, transcendentalism, and Eastern religions. It arose in tandem, as well, with new ideas about science and medicine. These emerging movements promoted a spiritual optimism about the unity and divinity (or perfectibility) of all things, including human beings; the belief that evil has no independent existence; and a thorough renunciation of the doctrine of original sin.

The International New Thought Alliance was organized in 1915, and the West was the birthplace of several New Thought movements—including the Church of Divine Science, founded in Denver, Colorado, in the late nineteenth century by Malinda Cramer and Nona Brooks. As with Divine Science, many New Thought movements had women leaders, while most Christian denominations would not ordain women to ministry for decades. Ultimately, New Thought was successful in the West, not only because of the region's inspiring natural beauty, remoteness, and short religious memory, but also because of its embrace of a wide variety of people. Many, for instance, had come to the mountains and high deserts of the West for healing, especially of tuberculosis. New Thought embraced them. In the last 150 years, the Mountain West has become a mecca for New Age seekers and adherents of Eastern religions, or hybrids thereof, many of which took hold in the spiritually fertile soil prepared for them by earlier New Thought movements.

Western Religion in the Twentieth Century

By the onset of the twentieth century, America's “manifest destiny” was essentially complete. In regions like the Mountain West, sparsely populated by people on isolated ranches and farmsteads and in small towns and villages, cities began to emerge—notably Denver, Salt Lake City, Las Vegas, and Phoenix—albeit several hundred miles apart. At the same time, Protestant Christianity was badly divided, as controversies over slavery, evolutionary theory, and biblical interpretation fractured Baptists, Methodists, and Presbyterians. Catholics, too, were driven by ideological and ethnic differences. Newly forged fundamentalist, evangelical, and Pentecostal sects, and the growing appeal of “none of the above,” added to the fray. Many religious bodies during the Progressive Era (1890–1913), however, made efforts to work together to ameliorate the loneliness, boredom, crime, filth, and poor working conditions that came with urbanization.

The Social Gospel, as Christians called it, was rooted in the theology of Walter Rauschenbusch, who said that Jesus came to save the social order as well as individual souls. The Social Gospel in the West was focused on emerging cities and their immigrant slums, especially in Denver (the only big city as yet in the Mountain West); but it also reached medium-sized cities like Salt Lake City, Boise, and Missoula, all of which had experienced rapid growth after the Civil War and which already had a substantial number of poor and disenfranchised residents. Religious bodies committed

to social outreach developed institutional churches—that is, churches that were open seven days a week and offered social services to the community. These included medical dispensaries, second-hand clothing stores, employment bureaus, English classes, kindergartens, shelters for homeless people and orphans, soup kitchens, libraries and reading rooms, gymnasiums, and youth clubs. Such churches also aimed to improve their communities by attempting to close down “vice districts” with their saloons, brothels, and opium dens; to curb gambling; and to improve working conditions in mines, mills, and factories.

In the West, the Social Gospel extended also to schools for Chinese railroad workers and miners, who were social outcasts in their own communities; and aid for immigrant health seekers, in the form of hospitals, sanitariums, and pastoral care. One response to the Great Depression (1929–1941) was the rise of religious welfare systems. In this, the Mormons were most innovative, creating farms and hiring people (Mormon and non-Mormon alike) to work on them. People fleeing the dust bowl included a significant number of African Americans hoping to start a new life in the West; and churches reached out to them, too. Since western clergy had often emphasized the practical nature of faith, the Social Gospel in the West was not a big departure from the usual modes of operation. Religious social and political activism continues to be lively in the Mountain West. In the early twenty-first century, for instance, many such activists have protested nuclear testing, especially at the Nevada test site.

In the 1950s and 1960s, civil rights movements and liberation theologies had applications in the West as well. Because of white hegemony in the Catholic Church, Hispanic Catholics in the West did not have an ethnic bishop until 1970. The lack of representation they experienced in the preceding centuries colored both their civic and religious views, and in two National Pastoral Hispanic Conferences in the 1970s, Hispanic Catholics came together to discuss human rights, education, political responsibility, and the nature of existing Roman Catholic leadership. Native Americans, too, in the second half of the twentieth century, agitated for expanded civic and religious rights. In 1978, the U.S. Congress passed the American Indian Religious Freedom Act that gave Native Americans more room to define and act upon their own religious traditions; even so, debates surrounding peyote and various Native sacred sites continue to the present day.

The 1965 federal immigration law had an enormous impact on American religious diversity as well. After a

forty-year hiatus in immigration, from 1925 to 1965, people began to immigrate to the United States once again in great numbers. Immigrants to the Mountain West came especially from Mexico, Central America, and Asia, raising the number of Hispanic Catholics, Muslims, and adherents of Eastern religions by considerable numbers.

Early Twenty-First Century Trends

The contemporary Mountain West continues to be known for its religious diversity, characterized by openness and syncretism, and with a complex mixture of organized religious communities, loose collectives, and individual seekers. These include various charismatics, Buddhists, and New Age adherents alongside Catholics, Protestants, Native Americans, and those who are “spiritual but not religious.” The Latino influx has made the region more Catholic in recent decades, and in fact, Catholics remain the largest religious group in the area, as they have been since the mid-nineteenth century. The Mountain West has also experienced an upsurge in Protestant evangelicalism, along with a downturn in traditional mainline churches. Colorado’s western slope and eastern plains counties have emerged as the most conservative Protestant religious areas in the region. Mormon proselytizing continues, and their numbers continue to grow as well. No institutionalized faith dominates the West today, however, except in Utah and Idaho, which remain overwhelmingly Mormon. In sum, the West, with all its colorful religious variegation, is doing its part to make good on America’s historic promise of religious freedom.

Music: African American

Music, combinations of sound and silence emerging from sociocultural, religious, aesthetic, communal, and individual experiences, is part of the lived experience of persons with African roots in the United States. Many African diasporan persons of faith, those first enslaved and contemporary individuals and communities, experience God through music: engaged participation through performance or listening to recordings (from 45s or LPs, if over age fifty, to CDs, the Internet, MP3s, and iPods (if under thirty). Music bolsters W. E. B. Du Bois's "souls of Black folk," from slavery through reconstruction, two World Wars, Korea, Vietnam, the 1960s civil rights movement, and two Gulf wars amid the twenty-first century. Rooted in African traditions and cultural practices, African American religious music is diverse, vast, and dynamic, involving congregational, choral, and solo singing. African Americans have engaged West African and white Protestant denominational traditions, black secular idioms, and original black compositions.

African Musical and Philosophical Context

African scholars define African-based philosophy as the comprehension, mental attitude, acuity, and logic that frame how African persons think, speak, or act. African-based philosophies do not distinguish between sacred and secular; all life exists together in synergistic harmony, or fluid combination. The African self embodies the unity and identity of self and ancestry, concerned for self, humanity, and environment.

The African individual typifies, and always carries, her or his religion and societal relations: a person is a religious, communal being. Self-esteem, the crux of African religious manner, leads to personal dignity and values humanity. The traditional, dynamic African religious worldview consists of a creator God, ruling powers, spirits, and people. The knowledge of and relationship with God is paradoxical, beyond understanding. Africans see the world as space for activity and life as practical reality. They know God through ritual and usually overlook philosophical or theological distinctions; those rituals include music.

Thus, Africans have a religious, social ontology expressed in human culture. Enslaved Africans of the diaspora embraced tenets of traditional African life in their communal sense of being. Communal life involved an immediate sense of God and was daily integrated with music. Enslaved Africans, dispersed across the Atlantic, expressed themselves in their music. Traditional African musical practices do not separate performer(s) and audience, as music making involves the entire community. African thought, which supports the ethical, toward self-knowledge, self-mastery, and empowerment, undergirds the sense of justice in the spirituals. Spirituals, more communal music productions, involve the entire a cappella community, with rhythms created by their bodies and improvised instruments. African diasporan spiritual and cultural tradition includes call-response structure, extensive melodic ornamentation and improvisation, complex rhythmic structures, song and dance.

A poster chart by ethnomusicologist and anthropologist Portia Maultsby graphically represents the evolution of African American music (1992). From African musical roots, there are three trajectories: African American sacred traditions, African American nonjazz secular traditions, and African American jazz secular traditions. With direct influences and cross influences, the lines between so-called sacred and secular traditions are blurred. The sacred tradition trajectory includes folk spirituals; arranged spirituals; folk jubilee quartets; folk-gospel; gospel-hymn; traditional gospels; gospel quartets; gospel groups; gospel choirs; and contemporary gospels. This lineage influences and is influenced by the various iterations of blues; ragtime; jazz; boogie-woogie; rhythm & blues; civil rights songs; rock 'n' roll; soul; brass bands; swing; bebop; disco; funk; new jack swing; and rap.

The Spirituals

Spirituals, songs of hope and justice, are "chants of collective exorcism" that helped an oppressed people grapple with the

social evils of racism. Musically, spirituals involved stanzas or verses and choruses built on strong, syncopated rhythmic patterns in a quadruple or duple meter: beats of four or two per measure. Melodically, spirituals had three general performance formats: (1) leader/soloist calls out and the community/congregation reacts or responds in answer; (2) musical line consists of short syncopated rhythmic patterns; and (3) phrases are long and sustained, and tempo is slow. This preliterate antebellum church music, of the invisible institution, would later sustain a healing reality during the 1960s civil rights era. Sociohistorically, slaves affirmed God in the spirituals as they coped with existential angst and ontological fatigue and sought healing and wholeness. The spirituals evolved during legalized slavery, between the seventeenth and the nineteenth century, as African Americans stolen against their will—sometimes sold off by their own tribal chieftains—were then legally objectified by state and church in the United States. With “signifying,” a rhetorical device where one uses secret or double meanings of words either to communicate multiple meanings to different audiences or to trick them, black folk could creatively cloak their identity politics in an apparently mundane song while plotting to escape, or use it to bolster morale or to warn others of danger through the power of song. Spirituals embody survival and hope, energetic power and quintessence, of African American spirituality, creativity, and sacrality. They express a collective African American folk aesthetic.

According to John Lovell Jr., peoples of the African diaspora created 6,000 extant spirituals (for example, “This Little Light of Mine”; “Go Tell It on the Mountain”; “Sweet, Little Jesus Boy;” “Deep River”; “Roll, Jordan Roll”; “Let Us Break Bread Together”; “Mary Had a Baby”), which employ many traditional African musical elements and a distinct blending of voices to create a polyphonic sound. Slave bards composed their own tunes and appropriated tunes they heard as they improvised songs, creating totally new communal versions. Diasporan Africans easily connected their traditional philosophy with many liberationist tenets of Christianity in the spirituals. With Muntu and Jesus as “Logos,” or Word, and the Incarnation, divine-human qualities emerge in Jesus. Muntu means human, and Nommo means divine. Muntu and Nommo together create life. Closely connected with the spirituals is the ring shout: dancers would usually sing a shout song or “running spiritual” as they moved through steps of a cadenced, syncopated dragging or shuffling manner, with body slapping or hand clapping performed by those watching from outside the

circle. Early on, spirituals emerged spontaneously during the preaching event. Probably from the preacher’s sung or chanted proclamation and interspersed responses by the congregation, this musical call and response evolved in song: in camp meetings and other religious services, according to C. Eric Lincoln and Lawrence Mamiya. Composed anonymously, spirituals today appear in a variety of arrangements, from a cappella, solos, and four-part chorus performed by trained choirs to instrumental and orchestral works, within classical, church, and academic music repertoire.

Gospel Music (1890s to the Twenty-First Century)

Folk-gospel (1890s) and the gospel-hymn (1900s), like the spirituals, concerned congregational singing. In the folk tradition gospel songwriters compose music and words and perform. They disseminated their songs orally, through sheet music and recordings, engaging the melody and message, using personal experiences and scriptural verses. Gospel songs focus on Christianity, the church, and Jesus’ life, teaching and ministry, particularly salvation by grace. These songs bear the name *gospel* because many lyrics come from the first four New Testament books. Having great value for the poor, gospel music emerged and developed in the northern United States. The spirituals that arose in rural settings could not help African Americans cope satisfactorily in urban settings, where so many had migrated. Some mistakenly call all black religious music spirituals or gospels. While both emerge out of the African diasporan context in the United States, shaped by the lived experience of a people often oppressed, their musical styles, use of texts, and performance practices differ. Theologically, spirituals tend to be more communally oriented, even if the text focuses on the individual, who becomes the collective voice. With much gospel music, whether a solo with verses, a song set for solo and chorus, or a choral number, the language indicates a deeply personal experience with Jesus Christ. Sharing this witness as evangelism and discipleship affords others an opportunity to have a personal relationship with Christ. Influenced by and growing along with 1880s secular, rural music, gospel music singing comes into its own with the Pentecostal movement expansion of the Azusa Street revival (Los Angeles), with William Seymour. Not everyone readily accepted this music. While northern storefront churches had an open reception to gospel music, initially mainstream southern Protestant churches often rejected the music as too aligned with the blues. The popularity of gospel music grew with the works of those such as Thomas Dorsey, Charles

Tindley, and Charles Price Jones, beginning in the 1890s and 1900s, and the artistry of Mahalia Jackson, through the 1930s. In the 1940s–1970s, gospel music expanded with the touring of gospel singing groups, the production of sheet music, recording industry growth, and the development of the Gospel Workshop of America, meeting each August, where musicians study, train, and record. Some of the most influential gospel composers, directors, and performers, many of whom are ordained, are Doris Akers, Shirley Caesar, Lucie Campbell, James Cleveland, Aretha Franklin, Theodore Frye, Dorothy Love, Sallie Martin, Kenneth Morris, Rosetta Tharpe, and Albertina Walker. Contemporary gospel music burst on the national scene, riveting the larger music industry with the popularity of Walter Hawkins’s version of “Oh, Happy Day.” Hundreds of gospel-singing groups, including the Dixie Hummingbirds, Fairfield Four, Five Blind Boys of Alabama, Hawkins Family, Martin & Morris Singers, Pilgrim Travelers, Roberta Martin Singers, and, most recently, Take 6, across the country sing in churches, record in studios, and perform in places from Carnegie Hall and storefront churches to night clubs. Contemporary gospel composers and singers since the 1970s include Yolanda Adams, the Clark sisters, Andraé Crouch, Sandra Crouch, Kirk Franklin, Fred Hammond, Edwin Hawkins, Walter Hawkins, Dr. Bobby Jones, Mary Mary, Donnie McClurkin, Richard Smallwood, Hezekiah Walker, and Bebe and CeCe Winans.

Anthems, Contemporary Hymns, Praise Songs

Many African American churches have Senior, Chancel, or Sanctuary choirs, terms often used synonymously referring to groups of young to older adults that primarily sing arranged spirituals, hymns, classical sacred music, and anthems. James Abbingon observes differences between how anthems function in liturgical and so-called nonliturgical African American churches. In liturgical churches (Lutheran, Episcopal, Catholic), anthems support, complement, and reinforce the theme, time, or season of the liturgical Christian year. Some scholars would include Methodist and Presbyterian in the liturgical group, but others would not. Abbingon suggests that the nonliturgical churches (Baptist, Disciples of Christ, United Church of Christ, Seventh-day Adventist, Church of God in Christ, some Methodist and Presbyterian churches, and so forth) use anthems to observe Christmas, Palm Sunday, Good Friday, Easter, and Pentecost. Many such churches in the African American context use anthems with nonliturgical days that

are standard days of worship in their calendar year, for example, Women’s Day, Men’s Day, Black History Month, Martin Luther King Sunday, Children’s Day, Pastor’s Appreciation, and Installation of Officers Sunday. The following defining factors determine the anthems sung most frequently: First, texts have meaning, significance, and consistency and support theological, biblical, sociocultural, and justice issues essential for their mission to be faithful, liberating, hopeful, and eschatological in praise and worship toward outreach, revival, and evangelism. Second, aesthetic musical characteristics from grandeur and power to splendor and transcendence must touch, move, and please performers and listeners. Third, because of their longevity and generational use, these anthems are not in the standard repertoire or musical canon of most African American churches.

Contemporary hymns and praise songs often have a gospel feel to them; repetitive choruses, sometimes with verses, used to help people prepare themselves for an outpouring of the Holy Spirit and for devotion prior to worship. Repetition and simple tunes make it easy for congregations to join in, reading the music projected on screens or blank walls. Praise and worship music has greatly affected how people connect with, and experience, God. The focus of this music includes confession, a desire for intimacy with God, love of God and neighbor, experiences of healing, staying the course, and being open to Grace. Some praise songs adapt older hymn texts with new tunes. Some place contemporary or urban praise songs under the umbrella of gospel music. Sometimes praise songs originate within the African American community; other times, African American musicians include praise songs originating from white evangelical churches in their repertoire. The instrumentation usually includes electronic keyboard, percussion, guitars, tambourines, and sometimes winds or horns.

Christian Hip-Hop and Rap

Hip-hop surfaced as disenfranchised young people created other identities, using music, language, fashion, and distinctive physical performance styles. Rap, hip-hop’s vocal representation, is a revolutionary, emotional galvanizing performance practice. Hip-hop, a cultural movement originating in the 1970s from urban African Americans in New York City, has gone global. Hip-hop, the cultural and attitudinal context that nurtured rap music, has these characteristics: attitude, dress, dance, language, and distinctive graffiti. This cultural experience includes political activism, fashion, slang, double Dutch moves (complicated styles of jumping rope), and

beatboxing (the vocal percussion facet of hip-hop culture and music). It can involve vocal scratching (the imitation of turntable skills), singing, and simulating numerous musical instruments. The thematic and stylistic roots come from signifying, toasting, and the dozens traditions—various rhetorical devices used to communicate multiple meanings; a style of communicating, by chanting over a rhythm or beat; and oral tradition, where two competitors challenge each other through good-natured, often ironic, poetic talk, respectively—from the United States and Jamaica; double-Dutch chants, children's singsong games; black colloquial speech-preaching styles; jazz vocalism; the on-the-air black DJs verbal talent; scat singing; romantic raps; the politicized storytelling of Gil Scott-Heron and the Last Poets; and preacherly vocal utterances of many R&B and soul singers. Some use hip-hop synonymously with rap music. A source of motivating pride and identity, hip-hop culture provided rap as a vehicle for poor blacks in the United States in the 1980s, mimicking the 1970s witness of reggae for Jamaicans. Rap music, an African American genre or type of music, unfolds as performers rhyme lyrics as they sing, do speak-singing, or chant in time to a musical accompaniment of prerecorded sounds. Rap and hip-hop culture are both indigenous art and highly capitalistic, commercialized, corporate venture. Hip-hop navigates between conflict and contradiction and often appeals to suburban white youth, a pattern that follows many other discourses invented by black folk.

The hybrid nature of hip-hop and contemporary black gospel music follows the tradition of other black music before it. Similar tensions existed earlier when gospel music was first introduced in church, and blues and honky-tonk were popular in society. Thomas Dorsey, the father of gospel music, played nightclubs during the week to pay rent and played in church on Sunday. The clash between tradition/convention and innovation/expression has sourced much musical creativity in churches. With the commercial status of gospel and hip-hop, some question whether the latter can uplift the gospel message. Further, methods of presentation, and language use and multiple meanings of texts, machismo, textual violence, and strong sexual presence in "standard" hip-hop call into question how this style affects holy hip-hop. In Christian hip-hop as in other African diasporan genres of music, musical performance (for the music must be heard or performed to come alive) shapes our perceptions of society and nihilism, mixes musical genres, and moves us to critique our understandings of sacred and secular, and commercialism. With Christian hip-hop, performers trope;

signify; and use minimal instrumentation, lots of repetition, and patterlike, fast-paced spoken word to praise God, using biblical and theological themes in rhythmic banter. In so doing, many of them continue to rhyme in secular arenas, with prayer and careful planning, and prominently in urban church settings; there is increasing use of hip-hop music for Christ in the United States and other places throughout the world where ministry to youth and young adults seeks to be innovative and relevant to the needs of young adults. Selected Christian hip-hop artists include Flexx, Lyryst, Toby Mac, Manafest, John Reuben, and Soul Survivors.

Conclusion

African American religious music is dynamic, transformative, and synergistic. The music, poets, composers, instrumentation, and styles emerge from traditional African philosophy and cultural practices. As communal and individual reflection, this music focuses on praise, protest, and justice; wholeness and transformation; and the human quest for ultimate relationships with God. Strands of so-called sacred and secular commingle. This religious music reflects a rich tradition, reveres a powerful sense of overcoming tenacity, and honors the God-given creativity that undergirds a people's commitment to live and worship God.

Music: African American Gospel

Traditionally, the word *gospel* referred to the first four New Testament books. Gospel music, connected to these texts, is both African American music genre and style that focuses on the Christian life and engages Jesus' teaching and ministry, especially salvation by grace. As genre, music emerges from the spirituals and secular music proclaiming good news. As performance style, gospel music ranges from free improvisation to simple lines with slow rhythms to complex harmonies and instrumentation. African American gospel music emerges as folk-gospel (1890s) and gospel-hymn (1900s), involving congregational singing. Isaac Watts's lyrics and Charles Wesley's hymns were foundational. In the folk music tradition, gospel songwriters create words, compose music, and sing their music as a group's soloist/leader. The public met this music through concerts, revivals, radio and television broadcasts, workshops, sheet music, recordings, and, today, via the Internet.

Introduction: A Theology of Experience

Gospel musicians, performers, and composers attend to the song's message and melody, which incorporate personal experiences, scripture, and daily life observations. As personal testimony, gospel music inspires others, since they may know similar struggles. Gospel developed in northern states as poor people migrated from the rural, agrarian South and were confronted with urban difficulties. Spirituals had value but could not help these transplants adequately adapt.

William McClain argues that amid gospel song's sacred basis, God creates and sustains God's people. Gospel music

engages hopeful imagination, where one's God-focused perspective creates songs of faith, celebration, and transformation. Gospel songs include a theology of grace nurturing one's intimate relationship with God, toward liberation and survival, despite societal and personal oppression (such as classism, sexism, racism, homophobia) that may result in spiritual, physical, emotional, psychological, and financial distress. For Melva Costen, African American gospel music is performance style and musical genre: one can "gospelize" spirituals, hymns, and anthems to suit musical tastes within worship's liturgical drama.

Traditional gospel (1930s) and gospel quartets (1930s) grew along with and were influenced by so-called secular counterparts of rural (1880s) and vaudeville blues (1900s), boogie woogie (1900s), syncopated (1890s), and New Orleans-style jazz (1900s), as the transition into the big bands (1920s) led to swing bands (1930s). Between the 1890s and 1920s the Azusa Street revival (Los Angeles) boosted gospel music singing, which led to a nationwide expansion of Pentecostalism (1906–1909). Concurrently, singing Pentecostal preachers developed ministries amid congregational gospel music singing in Pentecostal churches. Initially, many elite African American Protestant churches distanced themselves from gospel music because it was too close to secular blues music; it became more prevalent nationwide as southern, rural African Americans migrated to the West Coast and the urban North during World War II. When the National Baptist Convention publicly sanctioned it, gospel music's popularity increased.

The shift began in Chicago in 1930. Many call Thomas A. Dorsey (1899–1993) the "father of black gospel music"; he shifted from vaudeville and blues to performing and writing gospel music. Dorsey, a prolific composer, pianist, and choral conductor, reshaped impoverished life experiences into elegant, moving songs, such as "Precious Lord Take My Hand" and "The Lord Will Make a Way Somehow." He understood the human voice and was a genius lyricist and composer. Dorsey and his friends advanced gospel by strategizing, publishing, and establishing the National Convention of Gospel Choirs and Choruses.

Dorsey championed Charles A. Tindley (1865–1933), known for "We'll Understand It Better By and By" and "Stand by Me" and creator, with C. P. Jones, of the 1900–1930s gospel-hymns. Tindley, a songwriter with a significant outreach ministry, wrote songs regarding worldly misery, joys, and blessings, sculpting imagery and symbolism into an endearing story line. William H. Sherwood and Lucie Eddie

Campbell also join this pantheon of gospel greats. Sherwood, composer of uplifting, encouraging, self-assured songs, was the first African American publisher of songs (1891, 1893), the precursor of what would become gospel thirty years later.

William H. Brewster Sr. (1897/1899–1987), a poetic storyteller, composer, innovator, and arranger, popularized the gospel blues tradition, gospel ballad style, and lyrics steeped in biblical language (“How I Got Over”). A major architect of the modern gospel sound, Brewster pioneered the sacred pageant, or plays set to gospel music, and his music helped launch national careers of many singers, including Marion Williams, Clara Ward, and Mahalia Jackson.

Female Pioneers in Gospel Music

Lucie Eddie Campbell (Williams) (1885–1963), the first female gospel composer, helped select music for the classic 1921 volume *The Gospel Pearls*. Campbell shaped the music of the National Baptist Convention, Inc. (USA), the largest body of African American Christians (1919–1962). She created the gospel waltz and perfected the lined hymn style, where the song leader first “calls out” words and then the congregation responds.

Clara Ward (1924–1973) sang in a family trio that performed at the National Baptist Convention annual meetings (1940s), including the song “How I Got Over.” The group expanded, drew large crowds (1950s), recorded extensively, toured widely, and made controversial moves; for example, they were the first to wear sequined gowns and large ornate wigs during performances, to sing at jazz festivals, and to appear in gospel musicals and films. For some, the Ward Singers are the earliest progenitors and innovators of pop-gospel style.

Roberta Martin (1907–1969), composer, singer, pianist, arranger, and group and choral organizer, introduced and developed the classical, paradigmatic gospel choral sound (“God Is Still on the Throne”). Martin, the first to add female voices to her all-male group, operated her gospel music publishing house in Chicago. She combined the “moan” from her Arkansas Baptist childhood, the Dorsey bounce (a distinctive rhythmic movement), and the sanctified churches’ syncopation toward the classic gospel music sound. The Martin sound continues and may be heard in many other genres, including rock music and symphonies, and even commercials for soap detergent.

Several female composers/musicians—notably, Doris Akers (1923–1995), Dorothy Simmons (1910–1996), and

Sallie Martin (1895–1988)—transformed the congregational gospel hymn of the transitional period (1900–1930) into the gospel music song of the golden age (1930–1969). Martin is especially significant. As an orator and singer, she turned Dorsey’s gospel texts into powerful sermon-like presentations. Proclaimed the “mother of gospel,” she traveled to organize gospel choruses. Martin and Dorsey organized the yearly National Convention of Gospel Choirs and Choruses, and Martin cofounded the first and ultimately the largest national black gospel music publishing company, located in Chicago (1940–1980s) with Clarence Cobb and Kenneth Morris (an arranger, composer, innovator, organist, and publisher who wrote “Yes, God Is Real” and also introduced the Hammond organ to gospel music sound). She also formed the Sallie Martin Singers, the first female gospel group. Mahalia Jackson (1911–1972), a world-renowned gospel singer, radio/TV personality, recording artist, entrepreneur/producer, and businesswoman, sang a fusion of ragtime, blues, jazz, and gospel, notably “In the Upper Room.” With her Pentecostal flair and Southern temperament, Jackson sang songs of life and death, faith and comfort, of one’s relationship with God. Though her music sometimes became more commercialized with popularity, her heart always returned to Dr. Watts’s hymns.

Gospel Music, 1940s–1970s

During the mid-twentieth century, African American gospel music maintained its energetic, deeply emotional character and heightened in sophistication. Changes amid performers, performance practices, and keyboard accompaniment style expanded. In the 1940s, triggered by Rosetta Tharpe’s performance practices and her debut at Harlem’s Apollo Theater, many gospel singers moved into the secular realm. Was gospel for religion or entertainment? Tharpe (1915–1973), a child prodigy, combined spirituals, blues, and swing, stretching gospel music and rousing acclamation and controversy. A singing, guitar-playing sensation, influenced by secular music and the Church of God in Christ, Tharpe often upset her denomination because she mixed blues and jazz with gospel and because she sang gospel music in nightclubs. Radio gospel programs, gospel recordings, and the work of Mahalia Jackson and Theodore Frye, organizers of the National Baptist Music Convention, legitimated gospel as genre and style.

In the 1950s, gospel music debuted at Carnegie Hall, Madison Square Garden, jazz festivals, and coffeehouses; on

television; and in nightclubs. Gospel ensemble accompaniment included electric organ—particularly the Hammond B3 organ—and amplified guitars. In the 1960s the demanding piano style involved complex chords and harmonies. By 1963, *TV Gospel Time* was broadcast nationally every Sunday morning. Much of the development of gospel music occurs through the creativity of gospel music industry giants.

Gospel singer, arranger, composer, choir director, and pianist extraordinaire, the Rev. James Cleveland (1932–1991) helped design contemporary gospel music. Cleveland merged traditional gospel, gospel quartets, and twenty-first-century gospel music. He became a minister and founded the Cornerstone Institutional Baptist Church (Los Angeles), a venue for nurturing gospel musicians and gospel music. In 1968, Cleveland and friends such as Helen Stephens organized the Gospel Music Workshop of America (GMWA), which paralleled Dorsey's 1933 organization. This group now has over 30,000 members and 150 worldwide chapters.

Two of the most notable gospel male quartets that toured the country are the Mighty Clouds of Joy and the Five Blind Boys of Alabama. Since the 1950s the Mighty Clouds broke new ground with instrumental combo accompaniment, hot choreography, colorful suits, and a variety of musical styles. With their Off-Broadway comeback performance in *The Gospel at Colonus* (1983), the Blind Boys offered dynamic, energetic, innovative performances.

Walter L. Hawkins Sr. (1949–), bishop of Love Center Ministries, Inc. and a celebrated gospel musician, songwriter, singer, producer, preacher, and teacher, has many hit gospel recordings. He has preached and performed globally with the Edwin Hawkins Singers and the Hawkins Family. “Oh Happy Day” became a pop hit in 1969 and made gospel more mainstream Americana. Hawkins collaborated with many other artists in his 1997 concert and album titled the *Live Alive V—25th Anniversary Reunion*.

Aretha Franklin (1942–), the queen of soul, sang gospel as she traveled with her father, at age six. Her gospel heritage of fiery, fervent vocals and powerful piano accompaniment is foundational for her entrancing style with major hits in gospel (“Precious Memories”), soul, rhythm and blues (R&B), pop, jazz, and rock 'n' roll. Franklin inherited her father's dramatic delivery and her mother's vocal ability. Luminaries, from Clara Ward and James Cleveland to Art Tatum, Marion Williams, and Lionel Hampton, shaped her life, visiting the Franklin home. The true Franklin emerged when she and her sister, Carolyn, recorded “Respect” in 1967.

Reverend Shirley Caesar (1938–), a gospel singer-composer who emerged during the 1950s–1970s, is an evangelist, a pastor, a civic leader, a businesswoman, and a soulful spirit who is known for singing “No Charge” and “You Can Make It.” A former city councilor, Caesar spends numerous hours in outreach ministry, focusing on emergency support for the destitute and needy—to give a hand, not a handout. Her “House-Rocking” songs involve a fast or medium tempo, her top range, ornamentation, and improvisations as she runs and shouts for Jesus: over 150 concerts a year and The Caravans reunion concerts. Known as both the first lady and queen of gospel, she has countless honors, has toured Broadway, has been involved with motion picture sound tracks, and uses her music to serve God and build up God's people.

Contemporary Gospel (1970s–)

Since 1969, with the debut of Edwin Hawkins's version of “Oh Happy Day,” Pentecostal artists of the Church of God in Christ have dominated the modern gospel era or contemporary period. Many new gospel singers have emerged, and gospel music has gone mainstream and across cultures, received Grammy Awards, become a multimillion-dollar business through the sale of CDs and movie sound tracks. The Anointed Pace Sisters, from a family of musicians, singers, and preachers, became a part of the Action Revival Team in the mid- to late 1970s. In 1992 these nine vivacious sisters made their debut album on Savoy Records entitled *U-Know*, which stayed on the Billboard Charts for over a year.

Andraé Crouch (1942–), a child composer and pianist, experienced his call to ministry, formed the singing group The Disciples, and has performed to sold-out audiences throughout the world, with such songs as “Soon and Very Soon” and “Take Me Back.” As an international, Grammy-winning producer, performer, vocalist, and songwriter, Crouch has accrued numerous awards and credits for film writing, producing, and arranging movie scores. His music explores myriad experiences of life, offers hope and affirmation, and combines rock, country music, popular music, and soul with traditional gospel, amid electronic and acoustical instruments

CeCe (Priscilla Marie) Winans (1964–) singer, author, philanthropist, businesswoman, actor, and television personality sang duo with her brother BeBe, leaping into the musical mainstream (late 1980s) with smash R&B singles and performing well with Christian radio singles such as “Meantime” and “Count It All Joy.”

Urban Gospel and Holy Hip Hop

Professor Robert Darden suggests several critical award-winning, popular, and representative voices for urban gospel music. Grammy-winner Tramaine Hawkins, featured on *Love Alive* with Walter Hawkins, engages traditional, contemporary, and orchestral styles as inspirational music. Child prodigy and former drug addict John P. Kee, a pastor, songwriter, musician, and producer, uses a variety of music, from ballads to hip-hop, to inspire and worship. Vickie Winans, singer, comedian, designer, and producer, sings a variety of music amid the urban gospel market.

Three of Darden's award-winning, popular voices in urban gospel (Donnie McClurkin, Kirk Franklin, and Yolanda Adams) include hip-hop in their repertoire. Hip-hop, a cultural movement originating in the 1970s from urban African diasporan peoples in New York City and Jamaica, is now a global phenomenon that includes political activism, fashion, slang, double Dutch moves (complicated jump rope), and beatboxing. Beatboxing, using a machine that generates an electronic beat, the vocal percussion facet of hip-hop culture and music, creates beats, rhythms, and melodies using the human mouth. Vocal scratching (imitating turntable skills) involves singing, simulating various musical instruments, and it replicates sound effects. Though some use the term *hip-hop* synonymously with *rap* music, many understand hip-hop in the cosmology or cultural context and rap as a musical by-product of hip-hop.

Donnie McClurkin (1961–), up from a life of violence and abuse, founded a church and sings messages of hope in albums *Tis So Sweet* and *Valley of God*. Yolanda Adams (1961–), shattered by her dad's premature death, combines traditional song, jazz, soul, hip-hop, and funk as accompaniments, to know the joy of the Lord, in such albums as *Through the Storm* and *Day by Day*. Pianist, composer, producer, and cultural icon Kirk Franklin is a crossover artist, from so-called secular to sacred or holy hip-hop, with overtly Christian gospel message albums such as *God's Property* and *Fight of My Life*.

Gospel performer Tye Tribbett (1977–) with his choir, Greater Anointing (G.A.), delivers energetic, passionate, hip-hop-influenced messages honoring God's kingdom. Launched in the mainstream by the group's performances on the sound track for *The Prince of Egypt* (inspirational) album, Tribbett recognized his divine calling when the secular and sacred music worlds clashed. Pastor Mason Betha (1975–) transformed from Ma\$e, a multimillion-dollar rapper, to a minister of the gospel in 1991. Betha left his life of

Urban gospel singer Donnie McClurkin at the Recording Academy New York Chapter Tribute to Bon Jovi, Alicia Keys, Donnie McClurkin, and the creators of "West Side Story" in 2007. McClurkin's musical style combines hip-hop and gospel.

record labels and groupies, experienced the anointing of the Holy Spirit, gave up rap for God's kingdom, and founded S.A.N.E. ministries: *Saving a Nation Endangered Ministries*. With his comeback, he performs rap but avoids profanity.

Conclusion

Gospel music, from its inception, is about inspiration, transformation, and connecting the folk with their God. Vocal and musical style, performance practices, texts and contexts emerge as testimony, shaped by real lived experiences and informed by sacred and secular musical traditions. Gospel music in its various twenty-first-century iterations continues the twentieth-century legacies of gospel blues and

ballads through hip-hop urban gospel and can be heard on the airways and found in the music of many churches, transcending race and class to bring the good news of Christ, to be a balm that can heal the wounded soul.

Music: African American Spirituals

Spirituals, the antebellum and redacted 1960s songs that emerged from communal experience, function as liturgical songs of reformation that unmask, portray, and oust the collective sins of slavery and racism. These dynamic melodies celebrate healing and wholeness and allow human empowerment as they reflect God-infused experiences of reflection, critical thinking, music, and justice. The spirituals nurtured and delivered souls of black folk from total despair during the pre-Civil War era in the United States and were revived and revised for use during the 1960s civil rights movement. These chants of collective exorcism gave enslaved Africans a way to communicate their experiences. Spirituals, songs born as a cappella, or unaccompanied musical numbers, emerged in the fields of plantations from the folk in community; over hot stoves in kitchens of the master's, or big, house; on caravans of the underground railroad; and in hush arbors wherever slave bards gathered in a community cloaked in faith, as these weary souls commiserated about a particular circumstance or event, from the seventeenth through the nineteenth century. These chants delivered souls of black folk as they merged African and particular Christian traditions in their powerful self-expressions. Spirituals were communal offerings, in that they were not composed per se by an individual at a desk. These songs came out of their lived experience together as they had to daily face inhumanity and degradation.

As enslaved bards cried out in praise, grief, and hope, they desired to communicate with their God and to send messages of protest within their own community without being detected by the dominant culture. Musically, the spirituals had verses or stanzas and choruses constructed on powerful, syncopated rhythmic patterns, usually in meters of two or four. Most of the songs are in a major key, though a few are in minor keys. Melodically, spirituals had three basic performance formats: (1) leader/soloist calls out and the congregation/community responds/answers, alternating a solo verse line with a choral response of a word or short phrase. The words of the call change, while the choral response usually stays the same, for example, "Go Down, Moses" and "Walk Together Children"; (2) the musical line involves short syncopated rhythmic patterns, for example, "Little David, Play on Your Harp" and "Ezekiel Saw the Wheel"; and (3) long, sustained phrases involve a slow tempo, for example, "Deep River" and "There Is a Balm in Gilead to Heal the Sin-Sick Soul."

The spirituals named multiple oppressions within the diasporic reality of Africans kidnapped and sent to the Americas, particularly the United States. These chants emerged as the African American community gathered together to improve its fragile existence in an apartheid-driven world where it had little or no control. Enslaved Africans survived a violent, heinous, humiliating system by using the spirituals to communicate, to live, and to withstand such evil. These songs involved coded, symbolic language, which allowed the enslaved to critique their dreadful treatment: they could be beaten or murdered for running away, talking back, being uppity, reading and writing, and not knowing their place. These chants, numbering some 6,000, according to James Lovell Jr., incorporated their African heritage to triumph over their bondage, to honor their lives where important relationships grew within close-knit communities, as persons of faith. The music sustained them, despite the lies and ideologies of their captors, naming them barbaric heathens and infidels and valuing them as three-fifths a person—mainly to assuage Southern, aristocratic political sensibilities.

Spirituals from the Nineteenth Century Onward

The spirituals became more widely known with William Allen's publication *Slave Songs of the United States* (1867), accredited as being the first collection of U.S. African American (Negro) folk songs. Composers began arranging the spirituals, from the early twentieth century, and they continue to metamorphose. Of note were the arrangements and history-making concert tours of the Fisk Jubilee Singers, of Fisk University, Nashville, Tennessee (1871–1878). The Jubilee singers are the first internationally acclaimed group of African American musicians to attain recognition, fame, and financial success. Made up of young ex-enslaved persons, the group toured in international concerts in an effort to help move their financially troubled school to solvency. The Jubilee Singers, the first group to publicly perform the songs of the enslaved, introduced audiences to the power of spirituals, helping to preserve this music from extinction. The Fisk director, as others would follow, wrote down the melodies and then arranged them with classical harmony for soprano, alto, tenor, and bass, transforming the spirituals from performance practices of the plantation and rural church to that of the formal concert hall. This complex music framed the pathos, pain, poignancy, and passion of the texts.

This music of the formerly invisible institution, the often unschooled antebellum church, later sustained wholeness, encouragement, and healing during the 1960s civil rights era. Antebellum spirituals are in the family of African American music and are a different genre from gospels and blues. The blues, composed mostly after slavery, champion secular matters and are authored by an individual or group of individuals; they can have words or be an instrumental number. Gospel music, the youngest of these song genres, is composed music that usually reflects scripture, personal life, and one's relationship with God. All these genres reflect one's lived reality in a world fraught with institutional, systemic oppression, spanning from sorrow and lament to hope and transformation. In their structure and meaning, spirituals engaged ironic tension between enslaved persons' spiritual reality and their physical appearance, contrasting the real strength and dignity of African Americans with society's need to force them into poverty and believe they were inferior.

Sources and Power of Spirituals

Spirituals epitomize the powerful energy and personification of African American spirituality, creativity, and sacrality. They express a collective African American folk aesthetic that involves the formal and folk aspects of life experiences. One sees motivation, the freedom and literacy of African American life shaped by sociopolitical realities, their spirituality, and embodied beauty. The spirituals signify poetry, metaphorical language, stories, and songs as shared communal knowledge toward justice, often framed by humor or irony, naming good and evil in an imperfect world. Use of repetition, as signification, helped to empower inner strength and teach those forbidden to read and write so they could remember their history, culture, and theology and orally share these experiences with others.

African American folk spirituals dating from the seventeenth century emerge from particular sources: West African musical traditions, original black secular idioms, and Euro-American Protestant hymns, psalms, and spiritual songs. The music incubated in autonomous black congregations, notably spirituals and gospels, involved aesthetic concepts and social norms from West African cultures. The influence of Euro-American Protestant hymnody on other black congregations would combine the ethos of Western European performance traditions in concert with African American aesthetics. These cultural habits emerged

when the enslaved began to be converted to Christianity, between the seventeenth and the eighteenth century. The evolution of slavery in the North and South diverged, for those in the North lived in closer proximity to whites and had to comply with Western song traditions and thus were unable to develop a singular song tradition until the advent of independent African American churches. Slaves in the South lived a distance away from the master's house, and thus he and his family had little to no influence on musical practices and religious education of the enslaved.

Through the spirituals one can view personal and communal dynamics amid the music—aesthetic patterns of sounds and silence—to uncover a vocabulary of how life was for enslaved, for antebellum persons, and, later, for oppressed twentieth-century black folk. Amid the complex human action of sound, words, and behavior patterns, the spirituals identify and reinforce cultural structures, practices, and values. Spirituals, chants of hope, protest, and justice, helped an oppressed people grapple with the social evils of oppression, including racism, sexism, and classism. Performed spirituals celebrate a rich African sociocultural legacy, reveal harmonies of captivity, and blend African, American, and African American music, creating a new music quilted as a vital black aesthetic of justice and freedom. The texts of spirituals in and of themselves cannot invoke human response as can performed spirituals, for it is in the performance itself that myriad messages occur, that transformation can happen. The spirituals reflect a collective black folk aesthetic that reflects the double veil, which signifies W. E. B. Du Bois's understanding of double-consciousness, the divided self. Part of the genius of the spirituals is that while white slave owners regarded them as nice ditties that their happy slaves were singing, in actuality, to insiders there were multiple layers of meaning, not only communicating their faith but also signaling coded messages about issues, from their hopes and dreams they desired to realize in this life to news about an underground railroad connection. The spirituals, as living, transformative art, involve beautiful, active engagement, have depth, and have an enduring impact. Black music, particularly the spirituals, reconstructs reality and reflects art as life duplicating life. Spirituals indict the two evils that helped induce their birth: slavery and racism. Racism is the United States' original sin against the Holy Spirit, an expulsion from the grounding and "garden of love." Spirituals combine characters and texts from the secular and sacred realms to tell a story of protest toward liberation, justice, and celebration.

The impact of spirituals has been foundational for other musical genres. Portia K. Maultsby, ethnomusicologist and anthropologist, notes that there are three pathways of music emerging from African musical roots: sacred traditions, non-jazz secular traditions, and jazz secular traditions. There are direct influences and cross influences, between the sacred tradition of the spirituals to various gospel genres and iterations of blues and jazz, connecting the lineage of all African American music. The power of this music to appeal to universal audiences, a gift to global culture, may be its tenacity of expressing lived realities of struggle and triumph over systemic oppression, evoking truth to power.

Biblical Themes and Political Power of Spirituals

The spirituals make a compilation of biblical heroes and tales, from Creation in Genesis to John at Patmos naming names in Revelations. Many stories are omitted; many other characters and themes get repeated, or fused. Some characters are portrayed in unusual ways, where their biblical lives are reinterpreted to suit the story and transformative needs of the community. Noah, Moses, Joshua, Samson, Jonah, Lazarus, and Mary all serve as symbols. Jesus appears in numerous spirituals, in roles spanning from that of infant, savior, brother, and friend to a composite of God, Lord, and Holy Spirit all in one. Jesus' Passion is the subject of many spirituals. These chants of collective exorcism forge together belief and experience out of their desire for freedom, love, compassion, and relationship with God and community.

The spirituals challenged the colonial American conscience to reconsider its understanding of God, humanity, evil, and freedom. The enslaved poets affirmed freedom in linguistic fervor, rhythm, and movement. Connecting black liberation with divine revelation, amid communal encounter where grace heals brokenness, the spirituals deal with injustice and hope. For Howard Thurman (1899–1981), a deeply spiritual, intellectual pastor and educator who helped found the first racially integrated, multicultural church in the United States, these songs record human suffering and Jesus' gift of liberation. For martyr, preacher, author, civil rights activist, and Southern Christian Leadership Conference cofounder Martin Luther King Jr., the spirituals impart symbols of personal vision, belief, and a dialectical nature of the spiritual, physical, and ethical life. For black theologian-scholar James H. Cone, these songs afford documents of confession, resistance, and theology to address human salvation as power. In practice, these three thinkers used the spirituals to study the place of God, the oppressed, and the

oppressor regarding societal responsibility for evil and suffering, toward complete liberation, where their use of the spirituals and their messages of theodicy parallel the theodicy uncovered in the 1960s redacted (edited) spirituals.

Theodicy and the Philosophy of Spirituals

Philosophers and theologians explore the contradiction that both an all good, all loving, all powerful, all knowing *God* exists together with the exact opposite or absence of good—*evil*—when they argue the question of theodicy: “Does God exist, given the historically identifiable reality of evil?” “Does evil exist, given the historically identifiable reality of God/good?” “Is there a contradiction between a good God and evil, if one argues a dual system of good and evil, for one needs the reality of one to recognize the other?” The Christian theodicy articulated in the spirituals presumes God’s existence and that some questions remained unanswered; and it views the nature of evil as a problem related to the relationships and responsibilities between God and humanity. Racist evil is a product of distorted freedom. The spirituals challenge evil, anticipating imminent salvation as liberation for all. Theodicy requires and refers to divine and human work for justice that overcomes the societal evils of slavery and racism. The basis of spirituality and theology in the spirituals arises from traditional African philosophy.

For many African scholars African-based philosophy is the mental attitude, understanding, perception, and logic that frame the way African persons think, speak, or act. African philosophical and religious materials do not separate sacred from secular; thus the spirituals coexist in synergistic harmony. Within African spirituality, the African self embodies unity and identity of self and ancestry, with a concern for self and surrounding environment. Africans exist communally, as part of religion; thus an African individual carries her religion wherever she goes: a person is a religious being. For Africans, religion is within their entire cosmos of being. The traditional African religious worldview is a dynamic one that consists of a creator God, ruling powers, spirits, and human beings. Africans know God through ritual and have a certainty that by conforming to a universal order they are close to God. Proverbs, prayers, brief statements, songs, names, myths, religious rituals, and stories express African knowledge of God. African peoples’ religious beliefs vary in the number and nature of those beliefs. Africans have a religious, social sense of being expressed in human culture, the ethos out of which the spirituals arose.

A thorough embracing of the spirituals—studying the history, spirituality, sociopolitical realities, and psychological underpinnings—along with singing them and hearing others perform them provide a wealth of information: context, story, creative spirit, and faith/thought. The context reflects the environment or milieu that birthed the spirituals, and the tensions within, symbolized well by French historian and philosopher René Girard’s notion of double bind, where one person (subject) teaches another (disciple) and the relationships break down when the object (knowledge) disappears in their struggles around identity, need, and power. The story unfolds the narratives or life and times of black folk in the United States where they never accepted enforced societal subjugation, epitomized by Du Bois’s notion of the veil and double consciousness, pressing one to deal with being African and American. The creative spirit, where both lyrics or words and melody are two texts together, celebrates a connection between God and the souls of black folk, represented in Henry L. Gates’s notion of signifying, producing double voicing, that is, the voices of both words and music. The arena of faith/thought creates an understanding of relationships, of double-relatedness, amid the thought of Martin Buber’s notions of I-Thou and I-It. The former produces respect and intimacy; the latter objectifies. Such information ultimately informs those who have helped transmit the power of these songs.

Famous Singers and Spirituals

Singers who have popularized the spirituals and a key spiritual in their repertoire include: Marian Anderson (1897–1993), internationally renown mezzo-soprano who sang on the steps of the Lincoln Memorial on Easter Sunday in 1939 after being denied access to Constitution Hall by the Daughters of the American Revolution (“My Soul Is Anchored in the Lord”); Paul Robeson (1898–1976), renaissance man, scholar, athlete, concert artist, lawyer, actor, bass-baritone who was denied access to performance engagements for his communist leanings (“Deep River”); Two Kennedy Center awardees, Leontyne Price (1927–) and Jessye Norman (1945–), both incredible sopranos with international operatic and concert singing careers, who are noted for singing the spirituals “He’s Got the Whole World in His Hands” and “Give Me Jesus,” respectively; and Kathleen Battle (1948–), lyric soprano and award winner (“Fix Me, Jesus”).

Selected arrangers of spirituals include a noted baritone and accomplished editor, Harry T. Burleigh (1866–1949),

who was a major player in developing the American art song as composer of over two hundred songs and for his arrangements of spirituals. James Weldon Johnson (1871–1938), educator, activist, anthropologist, diplomat, poet, songwriter, and civil rights activist, collaborated with his brother J. Rosamond Johnson (1873–1954), pianist, songwriter, producer, soldier, singer, and actor, in musical theater and in *The Book of American Negro Spirituals* (1925) and *The Second Book of Negro Spirituals* (1926). Edward Boatner (1898–1981), a concert singer, educator, and conductor-director of studio, community, and church choirs, was a composer with many popular concert arrangements of the spirituals. William Dawson (1899–1990), trombonist, composer, professor, and choir director also arranged spirituals. Jester Hairston (1901–2000), a composer, songwriter, arranger, choral conductor, and actor who conducted choirs and traveled worldwide with groups singing spirituals, also wrote “Amen” for the film *Lilies of the Field* (1963).

Undine Moore (1904–1989), the “dean of black women composers,” wrote vocal, piano, chamber, and choral music, including sacred works, and completed many arrangements of spirituals. Margaret Bonds (1913–1972), arranger of spirituals, composer, pianist, teacher, and winner of the 1932 Wanamaker Prize in composition, was the first African American soloist with the Chicago Symphony at the Chicago World’s Fair in 1933. Rachel Eubanks (1923–), the founder and director of the Eubanks Conservatory of Music, Los Angeles, composes for chorus and orchestra, for multiple instruments and solo voice, chamber works and many songs, including arrangements of spirituals. Lena Johnson McLin (1928–) has written cantatas, masses, solo and choral arrangements of spirituals, anthems, art songs, rock operas, soul songs, works for piano and orchestra, and electronic music. Wendell Whalum (1931–1987), composer, author, and educator, created classically arranged spirituals. Moses Hogan (1957–2003), celebrated pianist, conductor, and arranger of spirituals, founded Moses Hogan Chorale and Moses Hogan Singers and edited *The Oxford Book of Spirituals*. One person who sings, arranges, and uses spirituals in her life’s work is Bernice Johnson Reagon, a MacArthur Genius Award recipient, composer, musician, song talker, scholar, performer, historian, teacher, producer, director, author, and activist in the 1960s civil rights movement. She founded and led (until 2004) Sweet Honey in the Rock, an a cappella women’s singing group that embodies one of its most popular spirituals: “We Who Believe in Freedom Cannot Rest.”

Conclusion

The spirituals then and now are powerful arbiters of justice, hope, faith, community, life, love, and solidarity. These chants come alive when they are performed by folk in the fields, in church congregations, or in choruses by trained voices and professional artists. During the antebellum era, these “chants of collective exorcism” subverted, empowered, and transformed the lives of the enslaved. We will never know how many people’s lives were changed by hearing a spiritual. We do know that these chants have inspired revolutions and celebrate gifts of freedom.

Music: Appalachian Religious

Some of America’s most distinctive sacred music traditions thrive in the southern Appalachians. In this region where

traditional ballads and folk songs, old-time string band music, bluegrass, fiddle and banjo tunes, and dance are often highlighted, religious music has flourished in churches, homes, and communities, less noticed by outsiders. Although the music of Appalachian mainstream denominations is similar to that of their sister churches across the United States, the hymns, spirituals, and religious songs of other churches and sectarian groups are notably different. Among the most distinctive are hymns and rituals in communities of the Eastern Band of Cherokee Indians in western North Carolina; the hymn singing among Old Baptists and others in Alabama, Kentucky, North Carolina, Virginia, and West Virginia; shape-note singing in mountain communities in Alabama, Georgia, North Carolina, and Virginia; and various traditions of gospel singing throughout the region. Ethnicity, doctrine, family and regional history, and regional differences all have contributed to the distinctive performance styles and repertoires for religious song in the churches and communities of Appalachia.

Cherokee Traditional Music

Members of the Eastern Band of Cherokee Indians, a federally recognized tribe of more than 12,500 enrolled members in western North Carolina in 2008, live on their ancestral lands where a distinctive Cherokee culture emerged at least 3,500 years ago. A storied mountain landscape is part of the Cherokee religious heritage. An origin myth, still told by the Cherokee in several versions, tells of the creation of the first man and woman (Kanati and Selu) at Shining Rock in the Shining Rock Wilderness near the southern end of the Blue Ridge Parkway. Another sacred place, Kituhwa, which legends say was the first Cherokee village, is near the present town of Cherokee. At the center of the village of Kituhwa, a mound once stood fifteen to twenty feet high, and Cherokee priests kept a sacred fire burning on it symbolizing the presence of the Creator. In 1996 the Eastern Band bought land that includes the site of the Kituhwa mound, which had been out of Cherokee possession since 1820. The mound, about six feet high now after years of being plowed, is once again a ceremonial site.

Cherokee ceremonial music and dance associated with the older native religion suffered during a period of Christianization that began in the early 1800s. The disruption and trauma of their expulsion from Appalachia in 1838 further weakened the older ceremonial practices. Still, some, such as the stomp dance, survived. Accompanied by a drum and rattles, it has undergone a revival in some of the most

traditional Cherokee communities. Cherokee elder and spiritual leader Walker Calhoun of the Big Cove community near the town of Cherokee helped revive the stomp-dance practice in western North Carolina around 1990, a tradition carried on by his family members on grounds cleared especially for ceremonial purposes.

Cherokee Christian Music

Missionaries began to introduce Christianity in Cherokee communities in 1799. By 1824 the Moravians, Baptists, and Presbyterians, funded in part by the federal government as part of a “civilization” plan, established mission schools to teach the English language, religion, farming, and domestic arts. By 1824 Methodists had begun sending circuit-riding preachers, and some Cherokee men were becoming preachers themselves. Publication of a hymn book in the Cherokee language, using a phonetic writing system or syllabary attributed to Sequoyah, suggests that hymn singing was part of these efforts and was well established among the Cherokee by 1829. Like many hymn books of that period, this one contained no musical notation. Singers would know tunes that could be used with the texts and choose appropriate tunes, as needed. Historical accounts of the Trail of Tears, which began in 1838, reveal that Cherokee people sang hymns such as “Amazing Grace” and “Guide Me, O Thou Great Jehovah” during the removal less than ten years later.

By 2008 most members of the Eastern Band were Christian, and churches such as Methodists, Baptists, Pentecostals, and Church of Jesus Christ of Latter-day Saints retain a strong institutional presence in Cherokee communities. Congregational singing is more often in English than in Cherokee, but both languages are used, and the sound is distinctive. The vocal quality of Cherokee congregational singing, somewhat nasal and tense, reflects the sounds of the Cherokee language, which is being taught once again in Cherokee schools.

A few singers have formed groups to perform gospel songs in both Cherokee and English in their church services, for community festivals and other special occasions, and as a community service in assisted living and other facilities. Some of the texts and tunes of Cherokee hymns and gospel songs are the same as those in other Protestant churches, and others are not. For example, one hymn traditionally used by the Welch Family gospel singers to end their performances is sung unaccompanied in the Cherokee language. Set to a minor-sounding tune with an irregular rhythm reminiscent

of nineteenth-century Old Baptist tunes, it is unlike any other song in their program. At the singers' request, the audience stands while the song is sung in memory of the Cherokee people who suffered on the Trail of Tears.

Old Baptist Hymnody

English, Scots-Irish, and German settlers who moved into southern Appalachia in the late eighteenth and nineteenth centuries brought with them religious song traditions that continue to varying degrees among Primitive Baptists (sometimes called "hard-shell" Baptists), Old Regular Baptists, and Churches of the Brethren (once called German Baptist Brethren and sometimes referred to as "Dunkards"). The churches that preserve the oldest and most distinctive hymn singing practices tend to be those Old Baptist churches that hold to Calvinistic doctrines of predestination and election. Insisting on congregational autonomy, these churches developed a style of hymnody that was an outgrowth of seventeenth-century psalmody of the British Isles and of early eighteenth-century hymnody. Their hymn texts reflect their predestinarian doctrines; their singing is unaccompanied and congregational, slow, mostly unison, sometimes ornamented with vocal twists and turns, and marked by irregular rhythms. Once common in the American colonies, this old way of singing is still practiced in some Old Baptist churches in the mountains of Kentucky, North Carolina, Virginia, and West Virginia; it can also be found in Alabama, among the Creek Indians in Oklahoma, and small groups of Amish and Old Order Mennonites.

The rejection of musical instruments in these churches is a practice that was once embraced by Presbyterians, Methodists, Campbellites, and Mennonites, as well as Baptists. The churches found no authorization in the New Testament for the use of musical instruments in worship, and some thought that instruments were too closely associated with worldly things. The voice was believed to be the only appropriate instrument in the church. Many Old Baptists still insist that all of the singing be congregational as well as unaccompanied, although some congregations will accept solo singing under special circumstances. This attitude sharpens the contrast between music in the church and music outside the church, but it does not dictate whether they participate in music outside of church, where virtuoso musicians are greatly admired. It is not uncommon to hear widely recognized performing musicians acknowledge ties to the Old Baptists.

Hymn books that consist largely of texts by English and American eighteenth- and nineteenth-century hymn

writers fostered the old way of singing throughout the twentieth century and into the twenty-first. Two of the oldest Primitive Baptist hymn books are still in use today: Benjamin Lloyd's *The Primitive Hymns* (1841) and D. H. Goble's *The Primitive Baptist Hymn Book* (1887). Both of these contain only hymn texts without tunes. The same is true of favorite songbooks among Old Regular Baptists: E. W. Billups's *The Sweet Songster* (1854) and E. D. Thomas's *A Choice Selection of Hymns and Spiritual Songs* (1877). Song leaders rely on memory to pair an appropriate tune with any given text. Other later publications offer harmonized tunes with the hymn texts. Even there, however, the books do not govern how the song will be sung. Congregations may simply ignore the published tune and harmony and substitute something else. They may also alter the text with additions, omissions, and substitutions. In a 1982 Primitive Baptist service in Alleghany County, North Carolina, one song leader led the congregation in adding the following chorus after each of the six stanzas of "Amazing Grace" printed in their hymn book:

I want to live a Christian here,
I want to die rejoicing,
I want to feel my Savior's near,
When soul and body's parting.

Among Old Baptists, congregations often devote a full half hour to singing hymns before the service begins. The hymn texts are reflective of Primitive Baptist belief. They rarely express assurance of salvation because uncertainty and doubt are part of the Primitive Baptist theology and experience. Instead, they claim a hope of salvation, as expressed by an unknown author in these lines:

Mixtures of joy and sorrow I daily do pass through;
Sometimes I'm in a valley, And sinking down with
woe,
Sometimes I am exalted, On eagles' wings I fly;
I rise above my troubles, And hope to reach the sky.

Song leaders sometimes line out the hymn text for the congregation, which then sings that text with the hymn tune. The practice, in which a song leader chants one or two lines of text at a time, was meant to be an aid to singing for congregations that had no hymn books or could not read. Lining out has its origins in an antiphonal style initiated by the Westminster Assembly of Divines in England in

1644. Once widespread in American churches, lining out survived among Baptists in the southern mountains long after it was abandoned elsewhere. Lining-out chants vary from one song leader to another. Some chants are quite plain and repetitious. Others, especially among the Old Regular Baptists in southeastern Kentucky, are more ornamented and wide-ranging.

Black Primitive Baptist Music

Lining out has flourished among black Primitive Baptists in Virginia and Alabama, where individual congregations have developed their own ways of combining lined hymn singing with the ceremonial practice of taking the hand of fellowship. In the Virginia mountains, African Americans established their own autonomous churches and associations after the Civil War. Although neighboring black and white congregations continued to sing the same tunes and use the same hymn books, stylistic differences began to emerge that continue today. Typically, when a black song leader lines out the hymn, members of the congregation will not hold a hymn book while they sing. With both hands, they greet each other in ceremonial and rhythmic handshakes.

Brett Sutton describes a practice in Virginia in which each member joins hands with two others and “during the singing of a line, everyone shakes hands in rhythm to the music.” Joyce Cauthen describes the practice in an Alabama church in the Sipsy River Primitive Baptist Association. “In clusters and lines that reach across pews and aisles, they rotate their joined hands in time with the music. As they sing each syllable, they make three rotations and close the syllable with a strong pulse on the fourth beat. They shake hands with two people throughout a four-line verse then move to another place in the hall and fellowship with two others. During the last verse they make their way back to their seats, only to rise from them again when other hymns are sung during the service.”

Shape-Note Singing

Unlike lined-out hymn singing, which has British roots, shape-note singing is an American tradition that grew out of eighteenth-century New England singing schools and efforts to improve congregational singing. It has historical and social as well as religious significance, and it remains especially strong in some Appalachian areas of Alabama, Georgia, and North Carolina, long outliving the singing school movement in New England. Shape-note singing takes its name from music notation that gives each syllable

of the musical scale a distinctive shape. Such notation, first introduced in *The Easy Instructor or A New Method of Teaching Sacred Harmony* by William Little and William Smith in 1801, gave instructors an effective way to teach singers to read tunes and harmony parts without having to learn the complicated system of key signatures.

Shape-note singing, however, represents more than a type of notation. Historically, shape-note tune books document an important repertory of American religious song and an American way of harmonizing the tunes that broke free from the conventions of harmony of the time. Even before 1816, when Ananias Davisson published *Kentucky Harmony, or A Choice Collection of Psalm Tunes, Hymns, and Anthems in Three Parts*, tunes from the oral folk tradition had begun to appear in shape-note tune books. For more than fifty years, tune book compilers produced publications that drew on folk hymnody, or religious texts sung to traditional tunes. Along with newly composed anthems by American composers and harmonized settings of old psalm and hymn tunes, which had been part of the singing school repertory, the shape-note tune book compilers included many spiritual songs with repeated lines and choruses and familiar melodies derived from traditional ballad tunes and fiddle tunes. Such songs were easy to remember and easy to sing; they expressed strong religious feelings reminiscent of the early nineteenth-century Methodist camp meetings and revivals in the southern mountains where many of them originated.

Nineteenth-century publication dates and various editions of those shape-note tune books still in use, combined with extensive contemporary calendars listing hundreds of annual singings, indicate that long-standing traditions are associated with shape-note tune books. The *Harmonia Sacra*, first published in Virginia as *A Compilation of Genuine Church Music* by Joseph Funk in 1832, was in its twenty-third edition in 1972 and remains popular among Mennonites. In 2008 *Harmonia Sacra* singings were held almost every month in Mennonite churches in and near Harrisonburg, Virginia, including one in Old Hamburg church, a 165-year-old meeting house in the village of Hamburg, west of Luray. Two tune books compiled by William Walker, *The Southern Harmony and Musical Companion* (1835) and *The Christian Harmony* (1867) are still popular in the region. The Big Singing from *The Southern Harmony* has been an annual event in Benton, Kentucky, since 1884, and numerous singings from *The Christian Harmony* continue in the western Carolinas, Alabama, Georgia, and East Tennessee. In East

Tennessee, singers also continue to sing from *The New Harp of Columbia* by M. L. Swan (1867). One of the oldest shape-note books in continuous use, and the one most widely used now, especially in Alabama and Georgia, is B. F. White's *The Sacred Harp* (1844). For the Wooten family of Sand Mountain, Alabama, *Sacred Harp* singing has become a long-standing family tradition.

Shape-note singings have their own protocols that foster strong musical and social bonds among the singers. The singings are nondenominational, and all are welcome. Often those meetings are held in local churches. The sound is quite distinct with its unconventional open harmonies above and below the lead or melody in the tenor line and male and female voices singing the melody. The style of singing also affects the sound. The nasal qualities of some voices, the addition of unwritten melodic and rhythmic embellishments, and pitch levels and tempos can all serve to heighten the singers' experience. Trebles, altos, tenors, and basses seat themselves according to their respective parts, each part occupying one side of a hollow square. Singers face the center of the square. Given their pitch and cue by the song leader, singers launch into tunes at full voice, syllables first and then words. It is customary for singers to take turns leading one or two tunes from the center of the square where all voices converge.

Gospel Songs

Gospel songs evolved as a new kind of shape-note tradition after the Civil War, and the southern Appalachian region played a significant role in publishing and promoting early gospel shape-note song books that helped start a major music industry. Aldine Kieffer and Ephraim Ruebush, grandsons of Joseph Funk, founded the Ruebush-Kieffer publishing house in Virginia in 1873 for gospel song books. By 1902 James D. Vaughan, often called the father of southern gospel, had started the James D. Vaughan Company in Lawrenceburg, Tennessee. Vaughan was the first to hire professional singers to market gospel song books. V. O. Stamps sang with one of Vaughan's quartets before starting his own influential publishing company, Stamps Baxter, in Texas in 1924. He continued the emphasis on professional performances to sell song books.

Gospel song books reflect the development of a new type of religious song and changing musical sensibilities that differ in important ways from the older shape-note tune books. The older books use a notation system of four shapes, a separate staff for each vocal part, and an older distinctive

harmonic style. They include many hymns and draw heavily on oral tradition for other repertoires of religious texts and tunes. The gospel song books use a notation system of seven shapes in a standard hymnal format with treble and alto parts printed on one staff and tenor and bass parts on the staff below. Most gospel songs were newly composed with simple major-sounding tunes, often in the highest voice, accompanied by close conventional harmonies. Unlike hymns, which had biblical themes and were expressive of doctrine and religious emotion, gospel song themes ranged widely from optimism about heaven and assurance of personal salvation to interactions with Jesus and sentimental songs about home and family. While shape-note singing always emphasizes participation, gospel singing often emphasizes performance for an audience. Hundreds of local and family groups and individual gospel singers perform in festivals, concerts, churches, and tent revivals throughout the southern Appalachian region, making gospel one of the most popular and diverse religious song traditions in the area, as it is elsewhere.

Bluegrass Gospel

Bluegrass gospel is a style associated with the string band music that originated around 1944 in the southern mountains with Bill Monroe's Blue Grass Boys. Typically played in concert performances, it combines instrumental accompaniments that may include fiddle, banjo, mandolin, guitar, dobro, and bass, with lively tempos and traditional gospel harmonies and texts. Bluegrass gospel groups perform only gospel music, but other bluegrass groups often include one or more gospel songs in their programs. Ralph Stanley introduced the practice of performing at least one gospel song sung unaccompanied in his public concerts, and that has been widely adopted by bluegrass musicians. Singers draw on a wide range of religious song materials, including original compositions, gospel songbooks, the hymn and spiritual song traditions of Primitive and Old Regular Baptists, and traditional hymns from rural America. Pentecostal and other evangelical churches often incorporate gospel songs as special music by one or more persons during a worship service and sometimes offer gospel concerts in the church itself as a special feature of evening services.

Black Gospel Quartets

African Americans developed a distinctly different gospel song tradition in the southern Appalachians, namely, the unaccompanied gospel quartet, which had its heyday in the

early and middle twentieth century. Jefferson County, Alabama, and surrounding areas became the center of development for this music. Black laborers from rural Alabama and Georgia, where shape-note and quartet singing were vibrant, came to the Birmingham area to work in mining camps and other segregated black industrial settlements. Oppressive work environments and industrial-residential communities formed the backdrop for the emergence of the a cappella black gospel quartets that became popular in Birmingham during the 1920s. Among the workers and residents were gifted singers who had learned a style of quartet singing taught by the Tuskegee Institute that stressed attack, release, time, harmony, and articulation. Singers were also open to innovation and other influences, including jazz. By 1930 the number of exceptional African American male and female gospel quartets that had developed around Birmingham gave Jefferson County a reputation as America's capital of gospel quartet singing.

Quartets blended the Tuskegee-style training with close harmonies and old traditions of responsorial song and improvisation. They developed a new style in which each voice carried a separate part, but they blended their voices and harmonies so smoothly that parts were often hard to distinguish. Quartets such as the Famous Blue Jay Singers of Birmingham and the Mighty Kings of Harmony spread this music through numerous recordings and tours across much of the United States. By the 1950s, however, unaccompanied black gospel quartets began losing popularity. Although sound recordings remain and echoes can still be heard in some black gospel performances, the style had all but disappeared by the end of the twentieth century, as younger singers began using instrumental accompaniments and electronically amplified sound systems in the newer hard-driving gospel styles.

Conclusion

The southern Appalachian region continues to enrich the musical landscape of America with traditional distinctive religious songs and singing styles. Conservatism, insistence on congregational and cultural autonomy, history, ethnicity, diverse sectarian and denominational groups, and social changes all contributed to what is now recognized as an important heritage of American religious music. Documentarians, scholars, filmmakers, and other interested people have helped raise awareness of these traditions in and outside the region. Smithsonian Folkways, for example, carries documentary recordings of the singing of Old Regular

Baptists in Kentucky, and the Web site www.folkstreams.org offers documentary films with background notes, transcripts, and other accompanying materials. The singers themselves, however, are their strongest representatives and spokespersons. Shape-note singers from Alabama and Georgia have conducted *Sacred Harp* singing schools across the United States and in England. Some were recorded for the sound track of the 2003 film *Cold Mountain*. Numerous churches and sectarian groups, communities, and performing groups now carry this heritage of traditional southern Appalachian religious song proudly alongside their neighboring churches whose religious music traditions are fully in the mainstream.

Music: Christian

Since Europeans first set foot on North America, music has been a critical aspect of the spread and development of Christianity. Just as the Christian experience has been marked by an extraordinary diversity of faith traditions representing the full range of national, ethnic, and racial groups that populate North America, so its musical expressions have been marked by striking variations in musical and textual repertoires. American Christianity has been energized by the competitive innovations unleashed by an open spiritual marketplace, in which no established church holds a monopoly on faith and multiple denominations and sects therefore compete for adherents. This energetic social economy has also produced exceptional diversity in sacred music, which has itself functioned as a tool of competitive advantage for worship communities.

Major Themes

Amid all these variations two major themes stand out. First, psalms drawn from the Hebrew Bible and the hymns that succeed them have exerted a formidable gravitational pull beyond the realm of Christian worship. Not only have they affected the sacred music of other world religions present in North America (Judaism, Buddhism, native spirituality), but they have influenced the development of America's popular music as well, helping produce perhaps the most globally influential form of American culture. Second, although Christianity has easily been the dominant influence on American society over the centuries, the Hebrew Bible has provided a fund of stories, heroes, images, and themes that has shaped not just Christian music but also American music more generally.

That a region so strongly shaped by Christianity would have its sacred music strongly shaped by the language of Judaism is one irony. Another is that though the repertoire and performance conventions of Christian music have helped generate such distinctive popular genres as rock and roll, country, and soul music, Christian institutions, leaders, and laypeople have often rejected these musical products as antithetical to proper religion—as devil's music. The vitality of America's popular music can be traced to this seminal ambivalence about the proper sphere of Christian music and its power to provide pleasure to those who participate in making music as worshippers, performers, or audiences.

The concept of crossover helps illuminate the social vitality of Christian music. In the music industry, crossover refers to songs or artists identified with one genre that find their way to new audiences associated with another genre. Frequently crossover has a racial dimension, as when an artist moves from a genre associated with one ethnicity to one of another (usually a white audience, which offers the greatest market rewards). We see variations of this kind of crossover among Christian communities, because adherents borrow musical styles from other denominations or faith traditions. Contemporary Catholic worship, for example, often borrows from traditionally Protestant hymns or performance practices; mainline Protestant churches may intersperse black gospel songs or tambourines pioneered in Pentecostal worship.

Another form of crossover traverses the porous boundary separating sacred and secular music. The history of American popular music is one of artists adapting songs and styles they learned in church to nonreligious themes, settings, and audiences, often to the chagrin of Christian gatekeepers. But churches have been equally ardent in seeking innovations from the world of popular music, thereby sacralizing worldly tunes and previously stigmatized musical instruments. Crossover also challenges the implicit distinction between ritual and art, music for participation and music for performance: between singing in the pews and listening to others singing in the choir stall. Viewing the range of Christian music, we see a two-way migration of songs and people across the implicit boundary separating participants from performers. Boundaries of community, genre, or convention are not always permeable, however. Over the centuries, American Christian music has shown itself full of creative ruptures, borrowing, and cross-fertilizations. But assessed on the ground in lived time, Christian music has usually resisted change. Celebrated examples of musical crossover are exceptions that prove the rule.

Historical Developments

It is useful to consider the historical development of American Christian music in six major provisional periods: first, the music that sounded during initial encounters between Europeans and Amerindians, beginning around 1500; second, the introduction of English psalmody around 1620; third, the development of English hymnody around 1740; fourth, the new camp meeting revival songs that came into use after 1800, whose development and spread was assisted by shape note notation in the 1840s; fifth, the proliferation of white gospel and concert spirituals beginning in the 1870s; and, finally, the rise of Christian rock and its variants around 1970. These traditions are not consecutive, with one supplanted by the next. Rather, successive repertoires overlap each other: continuing for some worshippers, challenged and replaced for others, sometimes within a single worship community.

Denominational hymnals have been critical in allowing less popular texts and genres to pass into obsolescence and in legitimizing additions. The 1990 edition of *The Presbyterian Hymnal*, for example, includes tunes and texts from China, Japan, Taiwan, Korea, the Philippines, Mexico, Puerto Rico, Jamaica, Argentina, Brazil, Ghana, Israel, and nearly every European country over the history of Christendom, ranging from high church to vernacular. From America, the collection features many black spirituals, shape note songs, and Amerindian hymns. But it also contains a section of all 150 psalms in consecutive order, a throwback to Puritan psalters of the seventeenth century, even if translations and tunes are drawn from various eras and countries.

It is important to remember, though, that hymnals provide only an approximate guide to what songs are actually used in worship. Many, perhaps most, selections are never chosen, and may be supplemented by other song collections or bulletin inserts. Many churches also don't use bound song volumes at all, but rely instead on call-and-response leading or on projection screens on which texts drawn from nearly any source can be projected.

Early Colonial Encounters

Spain was the first European empire to impact the American spiritual soundscape. Admiral Christopher Columbus is said to have led daily devotions on board, including sunset public prayers and hymns such as *Pater Noster* and *Salve Regina*. Following the conquest of Mexico in 1521, Dominican and Franciscan priests fanned

out to establish missions among Native Americans, finding music to be a useful tool for generating interest in their message and training numbers of native musicians. A flexible and equivocal cultural form, music could be used by Christian missionaries to promote their belief system in an appealing form, and by Amerindians to disguise native beliefs and practices in a form acceptable to Christian authorities. Musical production centered in Mexico City, where masses, responsories, and other liturgical pieces composed for the cathedral by chapel master Fernando Franco are the first polyphonic music produced in America.

The Jesuits who followed closely on French explorers in New France also considered music a useful tool for conversion, spurring efforts that continued sporadically over succeeding centuries among Episcopal and Methodist missionaries in the Great Lakes region. The first Protestant psalms in America came from French Huguenots in the mid-1500s, and English explorers brought sacred music to both California and Jamestown. On the California coast in 1579, Francis Drake recorded that native people "took such pleasure in our singing of Psalms, that whensoever they resorted to us, their first request was commonly this, 'Gnaah,' by which they entreated that we would sing" (*Francis Drake, Privateer: Contemporary Narratives and Documents*, 1972).

Introduction of English Hymnody

More lasting impact came with the Puritan settlement of Massachusetts, first the Pilgrims in 1620 and the Great Migration to Boston a decade later. Puritans accepted Calvinist strictures on the use of *set forms* in worship, limiting their congregational singing to metered psalms, sung in unison without accompaniment. Harmonized versions were acceptable in private and family circles. The sophisticated Ainsworth psalter brought by the Pilgrims, with multiple tunes and meters, proved too challenging for conditions in America, so a new collection of biblical psalms was commissioned and published at newly founded Harvard College; the *Bay Psalm Book* (1640) went through dozens of editions and remained in use for well over a century. As musical skills declined, worshippers adopted the expedience of lining out: a leader would sing a line at a time and the congregation would sing back.

By the end of the seventeenth century, musical standards had deteriorated to a degree that cultured observers found appalling. One minister complained of psalms being "miserably tortured, and twisted, and quavered, in some Churches,

into an horrid Medley of confused and disorderly Noises.” (*Cambridge History of American Music*, 1998) Local singing schools sprang up to teach the rudiments of choral singing, often organized by ministers of church members and staffed by itinerant singing masters. These schools led to the composition of new tunebooks, the earliest original music published in America; the introduction of simple instruments to set the pitch; an inevitable raising of expectations to move beyond familiar hymns to more complex choral music, and the subsequent segregation of skilled singers sitting together in one section. These choirs challenged the traditional Calvinist notion of singing as collective and participatory, not as art to be enjoyed in splendid contemplation. A New Hampshire parishioner complained sarcastically of “a set of Geniuses, who stick themselves up in a Gallery,” monopolizing church music by setting an exclusive standard of musical competence.

Another challenge to traditional psalm singing came from the emergence of hymns. Though the Lutheran tradition welcomed congregational songs that were not metrical translations of Hebrew Psalms, it took the genius of Isaac Watts to win acceptance for hymns in the cultural hearth of Calvinist New England over the course of the eighteenth century. His first collection, *Hymns and Spiritual Songs* (1707), was read as devotional literature, praised by Cotton Mather, and published in American editions in Boston, New York, and Philadelphia. Watts explained that most of the psalms were too far removed from Christian theology to be suitably inspirational for contemporary believers. Despite heated opposition from traditionalists, his devotional poems began to be adopted for worship during the Great Awakening revivals of the 1740s and within a generation or two had been embraced by congregations along the East Coast. Watts and the writers he inspired created a new genre of personal, emotionally charged texts that enabled those singing them to enact the experience of conversion and salvation.

Development of English Hymnody and Spirituals

Also critical in the acceptance of hymns were John and Charles Wesley, who came to Georgia as missionaries in 1735 and were deeply moved by the devotional hymn singing of Moravian families traveling on their ship. John was inspired to learn German and began translating and writing his own hymns. After the brothers returned to England, Charles became an inveterate composer of hymns, ultimately producing at least 6,500 texts. Another Moravian practice the Wesleys absorbed was the tradition of the

Liebesmahl, or love feast, a communal service of music, food, and drink. Along with the powerful evangelical hymns favored by Moravians, these rituals helped Methodists create a powerful evangelical technique that would make them the most effective American denomination over the next century. Although Moravian settlements in Pennsylvania and North Carolina remained secluded from larger currents of Anglo-American culture, their tight-knit communities were outposts of musical sophistication, including an acceptance of instrumental music, often composed in Europe, that won the admiration of Benjamin Franklin, among others.

African Americans were an important constituency for the ideas and musical practices unleashed during the mid-1700s and shaped by the hymn texts of Watts and Wesley. Whether enslaved or free, African Americans created rituals that drew on West African traditional religions and European Christian language, all performed in a context of social exclusion. The distinctive style of black Christianity developed around areas of overlap between these belief systems. African customs of spiritual possession appeared compatible with ecstatic displays of evangelical conversion; water initiation ceremonies paralleled Christian baptism; in Catholic Maryland and Louisiana, West African beliefs coexisted with elements of Catholic liturgy and saints. Especially in the South, African American Christians created both official—acceptable to whites—and covert worship traditions and musical practices. As with Amerindians, music’s intrinsic ambiguity could serve the interests of both Europeans and non-Europeans.

The term *spiritual* refers to a broad range of black vernacular music with spiritual overtones, from ring shouts and work songs to lined-out hymns based on European hymn texts. As a folklorist put it, “A spiritual is nothing but a tune—never twice the same—accompanied by not over two standard verses—not the same—followed by as many other verses from different songs as the singer happens at the time to remember.” Sorrow songs dealt with oppression and struggle, jubilees celebrated God’s power and expectations for a better life to come. Worship settings ranged from authorized services under the supervision of slave owners to covert what were called hush harbors, where worship took place out of earshot of whites.

Typically the only book slaves were allowed to have, the Bible supplied a critical set of tropes, characters, and stories, which often took on covert coded meanings relevant to conditions of social oppression. Whether or not European influences were apparent, African American spirituals

featured fluid, variable structures that allowed nearly unbounded individual expression in the elaboration of both music and words. Rhythmic propulsion was emphasized and bodily movement encouraged; ornamented vocal lines featured a range of effects like slides and hums and were punctuated by interjections.

These performance stylings shaped black communities' uses of European hymns. Texts by Isaac Watts were such particular favorites that the moniker "Dr. Watts" came to stand for any European hymn text. The relatively inclusive spirit of the Methodists, coupled with their fervent worship and enthusiastic singing, held particular appeal. "The Negroes, above all of the human species I ever knew, have the nicest ear from music," wrote a Virginia clergyman. "They have a kind of ecstatic delight in psalmody; nor are there any books they so soon learn, or take so much pleasure in, as those used in that heavenly part of divine worship" (*Works of the Rev. John Wesley*, vol. 2, 1826). Yet blacks faced discrimination in northern churches. In response, Richard Allen founded the first African Methodist Episcopal church in Philadelphia in 1794. Allen's pioneering hymn collection of 1801 featured texts by Isaac Watts, Charles Wesley, and John Newton along with innovative *wandering refrains* that could be attached to different hymns as well as hymns from the oral tradition of camp meetings. At the end of the nineteenth century, another Methodist minister in Philadelphia, Charles Albert Tindley, extended Allen's project by blending the sense of Protestant hymns and spiritual-like refrains, creating early gospel favorites like "We'll Understand It Better By and By."

Camp Meeting Revival Music

With Anglo-American hymns firmly entrenched in Protestant churches by 1800 (and zeal and membership dropping), worshippers began to respond to new evangelical currents manifesting themselves in unprecedented outdoor revivals. The earliest revivals took place in urban areas such as New Haven, Connecticut, where Yale's president Timothy Dwight sought to revitalize student worship, and published his own collection of Watts's hymns in 1800. The most celebrated gatherings took place in the backwoods of Kentucky, where many thousands gathered at camp meetings that dwarfed the state's largest permanent settlement. For several days participants spent their waking hours in praying, singing, listening to preachers, moaning, jumping, and going into trance. Observers were astonished by bizarre practices like the "singing exercise," in which worshippers "would

sing most melodiously, not from the mouth or nose, but entirely in the breast. . . . Such music silenced every thing, and attracted the attention of all." (*Biography of Eld. Barton Warren Stone*, 1847)

This emotional tone of camp meetings and revivals called for simple, direct emotional texts and tunes that did not require hymnbooks or musical literacy. These needs were met by new vernacular songs that drew on popular melodies of secular music: ballads, fiddle tunes, and dance songs often imported from the British isles, usually featuring wandering refrains that could be easily learned and attached to a number of primary texts. Where hymns fitted naturally in formal worship, directed their focus to God, and complemented prayer, the new sacred songs often focused attention on the hearer and complemented evangelical exhortation. This functional tension has characterized varieties of Christian music through the present.

Revival worship also contributed to the development of a new musical technology, shape-note notation. Responding to concerns about declining musical literacy that inspired the singing-school movement, simplified systems of musical notation were refined over the eighteenth century, reaching their final form in the system of four shapes (triangle, circle, square, and diamond) that corresponded to the notes *fa*, *so*, *la*, and *mi* (the eight-note diatonic scale being denoted by *fa so la fa so la mi fa*). This system allowed participants to sing four-part harmony by reading notes whose relation to each other was determined by shape of the note's *head* rather than its placement on the five-line musical staff. The system was devised by two Philadelphia musicians, William Little and William Smith, and published in a volume called *The Easy Instructor* in 1801. Benefitting both revival worshippers and itinerant singing school instructors, the new tunebooks spread south and west, where the styles flourished and took root even after a reaction developed in metropolitan areas against the supposedly unrefined musical practice of *dunce notes*. Lyrics often came from venerable poets like Watts or Wesley, but new texts also emerged. Shape note (also called sacred harp) singing stabilized certain formal and social practices; it also enabled a particular regional sound, sometimes referred to as white spirituals, that continues to this day.

Although revival camp meetings were not fully integrated, they did generally provide space for African American worshippers and enable a certain amount of musical cross-pollination. The same antebellum decades that saw the proliferation of shape note tunebooks also witnessed increasing public recognition of formerly covert Negro

spirituals. Frederick Douglass famously emphasized the poignant power of spirituals as both an expression of human experience and a survival strategy for enslaved people. “Every tone was a testimony against slavery, and a prayer to God for deliverances from chains,” he wrote in *Narrative of the Life of Frederick Douglass* (1845). “To those songs I trace my first glimmering conception of the dehumanizing character of slavery.” By transcribing and publishing black spirituals heard during the Civil War, abolitionists like Thomas Wentworth Higginson helped develop a national recognition of the spirituals as a distinctive, powerful mode of Christian music. Decades later, W. E. B. Du Bois offered his own profound interpretation of “sorrow songs” in his 1903 masterwork *The Souls of Black Folk*.

Alongside the expansion of Methodists, Baptists, and other denominations, Christian offshoot communities were creating worship music. Like the Moravian communalists who preceded them, sects like the Mormons, Shakers, Oneida Perfectionists, and others created voluntary associations bound by a mutual sense of religious calling, separated from the world, committed to each other and the law, and animated by the expectation of a coming kingdom. Music helped forge community and elevate spiritual awareness. Shakers wrote and adapted thousands of songs, often granted in visions, that accompanied precise, structured dances that ritually enacted the sacred story of community based on their theology of Christ’s dual sexuality. Mormons likewise placed a strong emphasis on music, beginning with Joseph Smith’s 1830 revelation directing his wife “to make a collection of sacred hymns,” many of which were borrowed from Watts, Wesley, and Newton. Following the establishment of Salt Lake City in 1849, the Tabernacle Choir began its rise to national prominence.

Gospel and Concert Spirituals

Within a decade of the Civil War, a new era of evangelical revival prompted innovations in worship that has shaped Christian music to the present. A former shoe salesman turned evangelist named Dwight Moody (1837–1899) teamed up with Ira Sankey (1840–1908) to create one of the most influential worship teams in American history. Moody’s homey, accessible sermons stressed the ease and immediate rewards of accepting Christ, a message that appealed to the first wave of urban dwellers experiencing the anomie of modern industrial cities. As music director and soloist, Sankey composed catchy gospel songs that helped build a receptive atmosphere, prepare and elevate the crowds, and reinforce

Moody’s message. He recruited large volunteer choirs from local churches, taught them his new gospel songs, and deployed their voices dramatically to build anticipation. As the service progressed, Moody’s prayers and exhortations became interspersed with ensemble sings and vocal solos.

Some of Sankey’s influences came from the antebellum revival hymns, others from songs intended for children as part of the Sunday School movement. The lyrics emphasized a gentle, compassionate Jesus, more personal friend than powerful king and judge, upon whom the passive human subject can depend for sustenance and salvation. With simple, but memorable melodies and affecting harmonies, animated by dotted rhythms and easy-to-remember refrains, the songs appealed to many adult worshippers. In 1875 Sankey brought out the first edition of *Gospel Hymns*, which quickly set the standard for the new genre of white gospel music. The impetus for the Sunday School movement came from women like Ann Warner, who made a powerful mark on the themes of the new white gospel music. Most prolific was Fanny Crosby (1820–1915), who was converted at a Methodist revival in New York City while hearing an Isaac Watts hymn and began writing devotional texts at age forty-four. Using more than two hundred pen names Crosby ultimately produced nearly 9,000 gospel songs, many of which were published by Bigelow and Main, the company that published Sankey’s collections.

Concurrent with the rise of the new gospel songs was the emergence of African American concert spirituals as a distinctive genre. Both gospel and spirituals participated in the transatlantic flow of people and culture that accelerated during the final decades of the nineteenth century. Moody’s and Sankey’s careers in the United States were boosted by the rapturous enthusiasm they generated in their tour through the British Isles in 1873, where they nearly crossed paths with a coterie of African American singers performing highly polished ensemble renditions of slave spirituals. The Fisk Jubilee Singers were organized to raise funds for their struggling Nashville school but won ecstatic praise among European aristocrats for sophisticated and affecting renditions of sorrow songs. Taken together, the enthusiastic reception among European audiences for both the Sankey gospel songs and concert spirituals marked the beginning of international acclaim for American music, nearly half a century before early jazz crossed the Atlantic on the heels of World War I.

These theological and musical impulses contributed to the rise of Pentecostalism at the beginning of the twentieth century. Growing out of the Holiness movement of the late

nineteenth century, the new practices of *fire baptism* stressed ecstatic speech, faith healing, trances, and a deep conviction of a glorious millennial future. It quickly spread south and west from its origin on the Great Plains, reaching Los Angeles in 1906, where a revival on Azusa Street featured unprecedented racial mixing in membership and musical style. Pentecostals lifted restrictions on the use of most instruments in worship, opening sanctuaries to tambourines and drums, barrelhouse piano playing, even trumpets and saxophones, all embedded in a communal din of ebullient singing, hand clapping and foot stomping. The sound of early black Pentecostal worship is preserved on 78 rpm commercial recordings made by pastors such as F. W. McGee, D. C. Rice, and most famously J. M. Gates, who began their ministries in the South but gravitated to Chicago, where by the 1930s Pentecostal churches were entrenched in black communities alongside more staid and established Methodist and Baptist churches. With its recent influx of fervent fire-baptized worshippers and their storefront churches, Chicago became the laboratory for the development of modern black gospel music, the gospel blues.

This new musical hybrid was pioneered by Thomas A. Dorsey (1899–1993), a Georgia-raised blues musician of some standing (he had backed singer Ma Rainey). After a series of personal and spiritual crises, Dorsey decided to leave secular music and, with the lifelong collaboration of Sallie Martin, devote his attention to composing and publishing gospel songs, leading choirs, and organizing a national convention to provide institutional support for the new music. The new gospel music grew out of communal worship but lent itself to performance by choirs, quartets, and great soloists. Mahalia Jackson, who migrated from New Orleans to Chicago, absorbed the influence of great blues singers like Bessie Smith and teamed up with Dorsey before building a national career that by the 1940s had made her the most recognizable figure in gospel music.

Independent of these developments, new institutions and associations were restructuring the Protestant musical mainstream. The mainline churches—Methodist, Presbyterian, Congregationalist, Lutheran, and others—developed in the context of increased calls for ecumenicity and pluralism, tendencies that loosened the hold of traditional music within denominations. Ecumenical new hymnals brought out after World War II offered a cross section of hymns from the entire history of Christianity, and increasingly songs from nonwhite ethnic traditions and Christians outside North America. The founding of interdenominational

schools of sacred music underscored the ecumenical impulse, as did the formation of associations such as the Hymn Society of America and American Guild of Organists. Responding to the liturgical renewal movement, hymn writers created new texts for old tunes, or composed completely new hymns in a classic, highbrow vein. As a result, millions of American churchgoers found themselves exposed to worship music that was both technically more refined and more varied, in which musical traditions and denominational identity seemed to matter less. To be sure, numerous pockets of tradition remained untouched by these larger impulses toward musical cosmopolitanism. Again, pastors, music directors, and church organists had ultimate sway over what music members of any particular worship sang on a Sunday morning or Wednesday evening.

Changes in Catholic Music

The social and cultural disruptions of the 1960s shook whatever tentative consensus around Christian music was achieved during the middle third of the twentieth century. Within Catholic worship, the liturgical forms promoted by Vatican II expanded the role of congregational singing and scaled back priestly chanting. Musical practices in Catholic parishes had varied widely according to region, size, ethnicity, and occasion (high Mass, low Mass, Liturgy of the Hours, and so on). The repertoire centered on Gregorian chant, Renaissance-era polyphonic music performed by choirs, and congregational hymns generally set to Victorian-era sentimental ballad tunes. Attempts by Pope Pius X and his successors to regulate sacred music through a 1903 directive and a 1955 encyclical were only partially successful. In general, musical standards were low and lay participation spotty.

The new Mass phased in during 1965 extended beyond Gregorian chant and Renaissance-era polyphonic music to include Protestant-style hymns that congregations were encouraged but not always prepared to sing. These reforms weakened the Irish American cultural domination of Spanish, French, and especially German Catholics since the middle of the nineteenth century, a tradition that had emphasized personal piety and literal observance of church law but jettisoned most of the rich musical traditions that had shaped the Catholic Church in Europe. Publishers quickly brought out new hymnals that were virtually interchangeable with Protestant texts and contained few traditional chants. Worship was opened up to a range of instruments, the possibility of female cantors, and a more physically embodied sense of worship. New texts were less

doctrinal and hierarchical, often imagining Christian experience in the language of nature and personal relationships. These trends affected mainline Protestant music as well, but the contrast and speed of implementation made them seem more dramatic in the Catholic context.

By encouraging the use of vernacular music (and language) in worship, Vatican II reforms made possible such diverse musical innovations as the guitar-centered folk mass that drew on the traditions of roots music then being popularized through the Folk Revival of the 1950s and 1960s by Pete Seeger and others, and Mariachi masses that brought the distinctive trumpet sounds of the Mexican-American borderlands into the Mass. Veteran jazz artist Mary Lou Williams, a Catholic convert, began writing compositions on Catholic themes in 1963 and after years of effort was allowed in 1975 to perform a sophisticated jazz mass at St. Patrick's Cathedral in New York City. The proliferation of vernacular music in Catholic music was reinforced by the rise of the charismatic movement among young Catholics. The new, more mystical and emotional patterns of charismatic worship served as a bridge to the Protestant world, whose baby boomers were themselves casting about for new models of worship music.

Christian Musicals and Contemporary Christian Music

One possibility was peppy, youth-oriented Christian musicals like *Good News* and *Tell It Like It Is*, composed in the 1960s by veteran Christian music arranger Ralph Carmichael. But the attraction of unvarnished pop and rock music was irresistible, overwhelming the appeal of worship music made-to-order for young Christians by their elders. Young Christians, often survivors of the hippie counterculture and devotees of conservative Protestant theology, were quickly inspired to create their own sounds. Larry Norman's song "Why Should the Devil Have All the Good Music?" captured the spirit of the insurgence. This new music was integral to the revival of young seekers dubbed the Jesus Movement in 1971, which advanced most conspicuously in Southern California, where Calvary Chapel became ground zero of the new youth evangelicals and their music. The first music had a gentle folksy quality not unlike guitar masses and was oriented toward worship services, but other musicians were quick to explore the potential of a harder-edged rock sound. Often encountering resistance from more traditional pastors and music directors, the new music spread nationally through church networks, itinerant musicians, and Christian music festivals.

By the 1980s so-called contemporary Christian music—CCM—had developed into a profitable market niche, spawning its own records labels as well as investment by major record companies. Its worship-oriented counterpart, dubbed praise music, challenged the popularity of traditional hymnals especially in the burgeoning megachurches tailored to the tastes of baby boomer and Generation X Christians. Electric praise bands replaced organs and pianos, and worshippers read texts from overhead projectors rather than hymnals. A new vocation was born: the worship leader, typically a layperson, often a working musician, who could both direct the praise band and lead the congregation while playing electric guitar or keyboard. In the latest rerun of hymn schisms that date back to the eighteenth century, some churches found difficulty accommodating the different musical tastes of their congregants, sometimes creating different services marketed to different generations. Continuing the pattern by which musical tastes are broadened and replenished by large revivals, stadium events organized by parachurch groups such as Promise Keepers have brought black Pentecostal music to a broader than ever swath of American Christians.

Psalm 137: American Christian Music Tradition

For centuries, Christian music has unfolded in America amid an ongoing challenge to the traditional and the familiar by the new and untried, a dynamic accentuated by the volatility of the innovation-driven American religious marketplace. We can appreciate this dynamic by tracing the evolution of a particular biblical text over nearly four centuries of American history. Psalm 137 presents a clear example of the exceptional mutability of Christian song in America. Its opening lines are among the best known from the Hebrew Bible:

By the rivers of Babylon,
there we sat down, yea, we wept,
when we remembered Zion.
We hanged our harps upon the willows in the midst
thereof.
For there they that carried us away captive required
of us a song;
and they that wasted us required of us mirth, saying,
sing us one of the songs of Zion.
How shall we sing the LORD's song in a strange
land?

The remaining five verses pledge faithfulness to Jerusalem and, notoriously, vow vengeance against the enemies of

Israel, whose “little ones” will ultimately be dashed “against the stones.”

Whether this psalm was sung by Spanish and French missionaries is unknown, but in 1620 the Pilgrims carried a recent metric version to New England aboard the *Mayflower*. A decade later a larger group of Puritans arrived in Massachusetts, publishing the first English-language book in North America, a new translation of the Psalms. The so-called *Bay Psalm Book* supplanted the more sophisticated Old World collection and went on to dominate worship in New England for generations. Its authority was finally challenged by Isaac Watts’s psalm book of 1719, which pointedly did not include Psalm 137; Watts judged its final verses, like many other psalms, “almost opposite to the Spirit of the Gospel . . . widely different from the present circumstances of Christians.”

Following Watts’s successful innovations in psalm paraphrasing, American hymn-writers like Joel Barlow began to nationalize psalms, placing the newly independent nation in the role traditionally occupied by Israel. A striking example is the anthem composed in 1778 by William Billings, considered America’s first significant composer, under the title “Lamentation Over Boston,” which begins, “By the Rivers of Watertown we sat down & wept/When we remember’d thee o Boston.” With his patriotic fervor, Billings extends the America/Israel-Britain/Babylon analogy, interspersing a trope from Matthew 2:18 (“A voice was heard in Roxbury . . . weeping for Boston because of their Danger”) before vowing that if his loyalty to his native Boston wavers his musical muse should be overcome by discord and dissonance. Decades later, Psalm 137 made its way into the shape note repertoire that would flow south and west from New England: “Babel’s Streams,” a common meter hymn first published in 1811 by Stephen Jenks, a Connecticut-based successor to Billings who composed several tunebooks:

By Babel’s streams we sat and wept, While Zion we
thought on;
Amidst thereof we hung our harps, The willow trees
upon.
With all the pow’r and skill I have, I’ll gently touch
each string;
If I can reach the charming sound, I’ll tune my harp
again.

Psalm 137 was eminently adaptable to the dominant political cause of the nineteenth century: the abolition of slavery. We can’t know if passages from the psalm were

adopted by African Americans in their covert worship, though the Exodus story anchored a number of spirituals. Frederick Douglass made Psalm 137 central to his famous 1852 address, “What to the slave is the Fourth of July?” Drawing his own analogy between the fallen Israel and the slavery-corrupted United States, Douglass cites verbatim the opening verses of Psalm 137, “the plaintive lament of a peeled and woe-smitten people.” The practice of making slaves perform ostensibly merry songs to disguise the appearance of sorrow gave the psalm particular poignancy.

These social and political accents shaped musical adaptations of Psalm 137 over the next century. The great Detroit preacher Rev. C. L. Franklin, whose New Bethel Baptist Church during the middle decades of the twentieth century hosted and sponsored many of the great gospel stars (thereby inspiring his daughter Aretha), based a famous sermon on the psalm. He argued that the Hebrews were wrong not to sing; likewise, African Americans should sing their sacred songs in the face of oppression. In 1969 a Jamaican group created a hit version that switched in Rastafarian language (“How can we sing King Alpha’s song in a strange land?”) and a strong exhortation to “Shout the song of freedom now.” The Melodians’ “Rivers of Babylon” has been covered dozens of times in multiple genres by groups ranging from Sweet Honey and the Rock to Steve Earle. The hit Christian musical *Godspell*’s “On the Willows” paraphrased Psalm 137, impressing it on the ears of a large baby boom audience. A version of the psalm set to a Latvian melody was published in 1964 and made its way into mainline hymnals; some churches sang it in 1980 to remember the American hostages held at the U.S. embassy in Iran.

As the history of Psalm 137 suggests, Christian music in America holds a final irony. Whereas music and religion are often regarded as distinctively national expressions of the unique historical and demographic conditions of America, both music and Christianity reflect centuries of transnational exchange. North America has served as a contact zone for a panoply of religious ideas and musical practices originating in Europe, Africa, and more recently Asia. In assessing the historical development of Christian music, we must consider the cultural flows through North America over the centuries as different groups migrated in and around the continent, bringing with them spiritual beliefs and musical practices.

Music: Contemporary Christian

Contemporary Christian music (CCM) links Christian messages and worldview with contemporary forms of music that range from pop to hip hop, country to hardcore, and acoustic folk rock to death metal. While pop singer Amy

Grant was for decades the CCM standard bearer, since the 1990s an increasing number of CCM artists with diverse musical styles, including Flyleaf, Sixpence None the Richer, Switchfoot, Underoath, Relient K, and DC Talk, have experienced success in the mainstream music arena. Today, CCM generates over \$500 million in sales annually. According to the Gospel Music Association (GMA), Christian/Gospel music accounted for 6.6 percent of all album sales in 2008—exceeding the sales of Latin, Soundtracks, Classical, Jazz, and New Age music. Despite its commercial success, CCM fans and artists continue to debate exactly what makes authentic contemporary Christian music.

History of CCM

Larry Norman (1947–2008) is most often credited with being the father of Christian rock, which eventually became known as CCM. The story, as told by Norman, now holds near legendary status in CCM circles. Norman was a member of the group People, which had a top twenty hit on the pop charts in 1968 with "I Love You (But the Words Won't Come)." Norman and his bandmates wanted to name their album *We Need a Whole Lot More of Jesus (And a Lot Less Rock and Roll)* and include a picture of Jesus on the cover. Capital Records had other ideas and titled the release *I Love You* (1968) and placed a photo of the band on the cover. Norman left the band in protest and went on to record a solo project, *Upon This Rock* (1969), which is generally regarded to be the first Christian rock record. Norman followed this effort with a trilogy of groundbreaking albums, *Only Visiting This Planet* (1972), *So Long Ago the Garden* (1973), and *In Another Land* (1976), that established him as the founder of the genre. Norman also went on to establish his own music label, *Solid Rock Records*, which launched the careers of several notable artists, including Randy Stonehill, Mark Heard, Tom Howard, and Daniel Amos. However, in the ensuing years, Norman's relations with each became strained and they parted ways. Nonetheless, Norman's contributions to the founding of the genre are unquestioned.

CCM was born in the U.S. social, political, and spiritual turmoil of the late 1960s and early 1970s. Some southern California evangelical churches, particularly Calvary Chapel in Costa Mesa, sought to reach out to the crowds of youth descending upon the West Coast at the time. Calvary Chapel became an early focal point for the rise of CCM. Disenchanted hippies turned to Christianity, but they felt that the mainstream church had turned from the historical roots of Christianity. These young, spiritual seekers who became

known as Jesus People married their Christian faith with the rock music of their generation. Love Song, which included Chuck Girard, who previously had some success as a member of the Hondells and the Castells (a band that also included Brian Wilson of Beach Boys fame as well as Glen Campbell), was one of the earliest and most influential CCM bands of the era. With their folk rock harmonies akin to those of Crosby, Stills, and Nash, Love Song introduced Christian rock to the church. One band member, Tommy Coomes, would become an executive at Maranatha! Music, Calvary Chapel's early CCM label, and that would help to usher in the contemporary worship music movement within CCM. Other significant early contributors to the development of CCM include Barry McGuire, Randy Matthews, the Second Chapter of Acts, Phil Keaggy, Resurrection Band, and Petra.

As more rock oriented artists were forging their version of Christian rock, some southern gospel and black gospel artists also were gently pushing the boundaries of what were considered acceptable styles of music in the church. While the Bill Gaither Trio and composer Ralph Carmichael were by no means rock artists, their experimentation with pop styles in their music helped pave the way for the more rock oriented acts to follow. Early pioneers included The Imperials, a gospel quartet with frequently changing membership anchored by founding member Armond Morales. The Imperials, who had once served as Elvis Presley's backup vocal group, began to incorporate more pop-rock styles in their music while continuing to emphasize vocal harmonies. Likewise, Andraé Crouch and the Disciples began to infuse their gospel music with R & B and rock influences, thereby changing the face of gospel music. As these groups, defined by the church as "safe," began to edge toward rock influences, it helped open the door for those Christian rock artists who came from outside the church and were further out on the edge stylistically.

Early Opposition to CCM

But the road was not always an easy one, as early CCM met with strong opposition from within the church. There were two key objections, one moralist and one aesthetic. The moralist objection argued that rock and roll was the devil's music. In this view, rock music and Christian lyrics were like oil and water—the two could not be mixed. Authors and ministers like Bob Larson, David Noebel, David Wilkerson, and Jimmy Swaggart were among those who accused CCM of such things as being "heathen, jungle boogie"—apparently oblivious to the racist undertones of such claims. Urban legends

were circulated about how natives in Africa heard the Christian rock records of missionaries' children and reported that this was the music they used to summon demons prior to their conversion to Christianity. There was also the threat of "backward masked" messages encouraging drug use or devil worship. These backward masked messages supposedly could be heard only when playing records backwards and purportedly could somehow be subconsciously processed by the brain. Others suggested CCM was a Satanic, and sometimes a communist, plot to destroy the youth and the future of the church. While such arguments have fallen out of vogue as baby boomers who grew up listening to rock have become church pastors, elders, and music ministers, a little bit of Internet surfing will turn up Web sites that continue to repeat the moralist objection to CCM. This pattern reflects one commonly found in the last few hundred years. New forms of music that accompany revivals are borrowed from the popular culture of the day. These musical styles are first denounced by traditionalists. Then they are grudgingly tolerated before eventually becoming an accepted part of the church (see, for example, Cusic 1990 and Miller 1993). Despite these initial objections, the revivalists march on. It was William Booth, founder of The Salvation Army, who is credited with the statement, "Why should the devil have all the best tunes?"—which Larry Norman paraphrased into one of the earliest Christian rock anthems, "Why Should the Devil Have All the Good Music?"

A less common, but perhaps longer lasting, objection to early CCM was the argument that rock music is an inherently inferior form of music, as compared to classical music, for example, and is therefore unworthy of carrying a gospel message. Authorities on church music contended that rock and pop music is by its nature entertainment and therefore promotes a shallow, distorted version of the gospel. Given CCM's propensity for self-criticism, it is easy to find artists like Michael Card and Steve Camp, who have taken similar positions arguing that CCM has become shallow and commercial, falling away from a romanticized earlier era in the genre's history. While not rejecting rock as a medium for Christian lyrics, they call for serious reflection and self-assessment by those who make and produce CCM. Despite the frequently repeated concerns of a shallow gospel and entertainment instead of sound theology, Mark Allan Powell, author of the *Encyclopedia of Contemporary Christian Music* (2002), has insisted that this music rarely advanced heretical ideas, but it often has a deeper content than might come through at first hearing.

Rock music fans and critics also were quick to condemn CCM as a pale imitation of rock music. A commonly heard joke in the early days of CCM was, “What’s the difference between gospel music and CCM?” The answer, “Gospel music is good music about God sung by black people. CCM is bad music about God sung by white people.” The joke is indicative of the pressure many CCM labels, fans, and artists felt to justify their genre as worthy. One way the industry tried to deal with charges that CCM was simply an inferior form of rock music with lyrics about God was to latch on to pop music “stars” who became Christians and hold them up as “proof” that CCM was good music. Noel Paul Stookey (of Peter, Paul, and Mary), Barry McGuire (“Eve of Destruction”), B.J. Thomas (“Raindrops Keep Fallin’ on My Head”), Richie Furay (of Buffalo Springfield and Poco), and Dan Peek (of America) are examples of pop and rock stars who later recorded CCM albums. This grasping at legitimacy, along with CCM’s tendency to bill new artists as the “Christian” version of whatever mainstream artists were currently in vogue, contributed to the long-held perception of CCM as a derivative form of music.

Maturation of the Genre

The growth of the genre and the success of artists and bands with unique sounds have made this criticism less valid today, even if it is still frequently heard. DC Talk, the 77s, Daniel Amos, and The Choir, which originated in the 1970s and the 1980s, helped usher in a new era of bands with original sounds and creative lyrics that could not be easily categorized as the “Christian” copycat of secular bands nor as religious tracts set to music. Following the trails blazed by these artists, multiple CCM bands have successfully crossed over to mainstream sales and airplay chart success. Flyleaf, Casting Crowns, Switchfoot, Skillet, TobyMac and Relient K CDs are as likely to be purchased in mainstream retail outlets as they are in Christian bookstores.

However, Amy Grant was CCM’s breakthrough artist who put the genre on the map. Grant, who in the 1980s won five Grammy awards for Best Gospel Performance, is CCM’s most successful artist. Signed to Word Records at age 15, her first album sold an unheard of (for CCM) 50,000 copies in its first year. Her *Age to Age* (1982) became the first CCM album to go platinum and marked Grant’s transition to a mature, serious vocalist. In yet another CCM first, Grant’s duet with Peter Cetera, “The Next Time I Fall in Love (It Will Be With You),” from 1985’s *Unguarded*, was the first song recorded by a Christian artist on a Christian label

(Myrrh) to reach number one on the pop charts since CCM became an identifiable genre. *Heart in Motion* (1991) included a number one song, “Baby, Baby,” written for her six-week-old daughter, and a number two song, “Every Heartbeat,” with sales totaling close to \$6 million. Grant’s success so far has been unmatched in CCM. A divorce in 1999 from husband/guitar player Gary Chapman followed by a second marriage to country singer Vince Gill took some of the shine off of Grant’s star, but she managed to remain a favorite, unlike numerous other CCM artists who were rejected by fans for long periods following a divorce or other public moral “failure.”

The Splintered World of CCM: Separational CCM

As CCM has grown and found sales success, it has continued to struggle with debates regarding what constitutes authentically Christian music. This question was raised in the very first issue of *Contemporary Christian Music* magazine and continues today. Howard and Streck (1999) argue that CCM is a splintered genre wherein artists, fans, music companies, and critics make differing assumptions about the appropriate relationship between Christians and their surrounding culture. These assumptions shape the lyrical content of the music produced. The music produced is a reflection of these often implicit and unarticulated assumptions. The result is that CCM has at least three identifiable subgenres.

Many early CCM musicians took a separational approach to CCM, seeing the world as evil and corrupt, that Christians must separate themselves from it, and call others to separate themselves as well. Ironically, while trying to separate themselves from the world, these bands often went to great lengths to look and sound “like the world,” in order to be able to deliver their call for conversion and separation from the world. In separational CCM, musicians see their role as that of minister, evangelist, or musical missionary to the lost, and the music is often viewed as a tool to be used in ministry. In addition to seeking to evangelize with their music, separational bands frequently seek to edify believers and to facilitate a worship experience. They argue that musical styles are neutral in and of themselves. What matters are the purposes for which the music is used.

Thus many early separational CCM bands (for example, Carman, Petra, Degarmo & Key, and so on) were accused of using music in a utilitarian fashion and merely copying whatever musical styles were popular at the moment. The music has little value in and of itself. Its value is derived from

the ways in which it is used to serve a higher purpose—evangelism, edification, and worship. In separational CCM, the “Christian” content of the lyrics is obvious as bands seek to proselytize the nonbelievers, to encourage the faithful, or to facilitate a worship experience. Fans of separational CCM often criticize the other subgenres for their lack of overtly religious messages in their lyrics. Fans are known to ask, “How often does the band mention Jesus or God in its lyrics?” Adult contemporary CCM artists like Steven Curtis Chapman and the modern worship group The David Crowder Band are examples of separational CCM.

The Splintered World of CCM: Integrational CCM

Rather than seeing the world as evil and corrupt, in CCM’s second subgenre, integrational, at least the highest ideals of the surrounding culture are considered to be consistent with the ideals of Christianity. Thus instead of rejecting the world and seeking to be separate, these performers define themselves as entertainers who happen to be Christians. They see their role not so much as to evangelize nonbelievers, encourage the faithful, and facilitate worship, but to offer a wholesome, positive, pop entertainment alternative to the excesses of popular music.

Amy Grant epitomizes this subgenre. She was frequently criticized by separational CCM fans for failing to be overtly Christian in her song lyrics. The lyrics of integrational CCM are not necessarily religious in nature. Instead, they present reflections on life (for example, falling in love, heartache, and so on) from a Christian perspective, but they may not sound very different from standard pop fare to the uninitiated. For example, the band Flyleaf records for a mainstream label and tours with other mainstream bands. While the members of the band self-identify as Christians, they don’t define themselves as a Christian band but rather a band that happens to be made up of people who are Christians. While Flyleaf song lyrics reflect a Christian-influenced worldview, they are not overtly religious in nature.

The Splintered World of CCM: Transformational CCM

In transformational CCM, the third subgenre, the surrounding culture is neither inherently evil and corrupt nor is it viewed as consistent with Christian ideals. Instead, the world was created good, but it is currently broken or fallen and in need of restoration to God’s original intentions for it. In contrast to the separational CCM “ministers” and the

integrational CCM “entertainers,” transformational CCM performers tend to define themselves as “artists.” They explore the brokenness and pain of living in a fallen world and the resulting music is much darker than either separational or integrational CCM. Transformational artists recognize their own brokenness and that of the church, as well as the fallen state of the culture, more generally. While music critics tend to applaud their efforts, these are the “starving artists” of CCM. Their music tends not to sell as well as integrational and separational CCM. Like the music of integrational performers, the lyrics of transformational artists tend not to be laden with overtly religious language. The bands are also more likely to develop distinct musical styles and cannot legitimately be accused of merely copying whatever styles are popular at the moment. Daniel Amos, the Seventy Sevens, and the Choir are examples of bands that defined this subgenre beginning in the 1980s.

These diverse approaches lead to frequent, often vociferous, debates within the genre about what is and is not authentic contemporary Christian music. Separational fans argue only their bands with overtly Christian lyrics directly mentioning God and Jesus should qualify. Integrational and transformational fans cast a much wider net in their definitions of CCM. Compounding the difficulty is that performers in any of the subgenres face the constraints of the marketplace just as Larry Norman did in the late 1960s. One must sell enough music in order to be signed by record companies and have the opportunity to earn a living as a musician. But record companies have a long history of seeking to make artists’ works more commercially viable—which may create demands for both musical and lyrical compromises.

Debates over Authenticity

CCM cannot be defined by a signature sound musically, perhaps surprisingly, nor can it be easily defined by its lyrical content. The nature of this splintered genre means CCM resists easy definition and is prone to these ongoing arguments regarding authenticity. These debates are epitomized by the furor surrounding the band Sixpence None the Richer’s 1998 mainstream success with the single “Kiss Me”—a good example of integrational CCM. Apparently fearing that “Kiss Me” might be voted the Gospel Music Association’s Song of the Year, the GMA scrambled to create a new definition of gospel music. It settled upon “Gospel music is music in any style whose lyric is substantially based upon historically orthodox Christian truth contained in or derived from the Holy Bible; and/or an expression of

worship of God or praise for His works; and/or testimony of relationship with God through Christ; and/or obviously prompted and informed by a Christian worldview” (see Rabey 1999, 54). Based on this definition, “Kiss Me” was passed over for a Song of the Year nomination. While this incident illustrated the influence of those holding the separatist perspective in CCM, in the end, this definition pleased almost no one.

In his *Encyclopedia of Contemporary Christian Music*, Mark Allan Powell (2002) takes what may be a much more workable approach with this definition: “Contemporary Christian music is music that appeals to self-identified fans of contemporary Christian music on account of a perceived connection to what they regard as Christianity” (p. 13). Powell argues this audience-driven definition of CCM is consistent with the way all other musical genres are defined—a music genre is whatever its fans say it is. In any case, the sometimes vociferous debates regarding which subgenres and which performers make truly “authentic” Christian music will continue for the foreseeable future.

CCM, Gospel Music, and Contemporary Worship Music

Martin Luther King Jr. once called 11 o’clock on Sunday mornings the most segregated hour in America. And just as churches have continued to be largely segregated along racial lines, so has CCM. Despite the early popularity of André Crouch and the Disciples and the significant sales of artists like Kirk Franklin, black gospel and CCM have remained largely separate genres. This is despite the efforts of some within the genre, such as Toby Mac of DC Talk, to promote more rap and R & B artists within CCM. While Toby Mac’s R & B influenced music sells well, most African American artists find limited audiences among white CCM fans.

Perhaps the most significant impact of CCM has been in the area of contemporary worship music—praise and worship choruses set to contemporary pop/folk music. *Your Church* magazine has surveyed churches regarding their style of worship music every three years since 1993 (LaRue 2004). The results indicate that in 1993 nearly half of all churches used traditional worship music while only 13 percent used contemporary worship music exclusively. The remaining churches used a blend of traditional and contemporary music in worship. By 2004, only 31 percent of churches were using traditional music exclusively. Blended formats were utilized in 37 percent of the churches surveyed, and exclusive use of contemporary worship music

was the format in 32 percent of the churches. Churches that utilize contemporary worship also reported more attendance growth than churches that utilized traditional music exclusively. Churches using contemporary worship music exclusively had a mean Sunday morning attendance that was more than 50 percent ahead of traditional churches. It may well be that CCM’s most significant impact has been changing the style of worship music employed in evangelical congregations.

Conclusion

Just as religion is alive and well in the United States, so is contemporary Christian music. While the strict boundaries that have separated CCM from mainstream popular music have begun to blur, the genre is likely to continue to grow. As baby boomers who grew up listening to rock music have become the pastors, deacons, elders, and ministers of music, the arguments against a blending of Christian message and worldview with popular music styles ring hollow today. The challenge for CCM will be to break out of a segregated musical ghetto without losing the identity that distinguishes it.

Music: Coritos/ Spanish-Language

Music reveals the multiple ways U.S. Latino/a Christian faith communities practice everyday religious beliefs within informal and formal situations. Through specialized articulations of music, cultural, generational, denominational, and contextual differences merge with transnational concepts of celebration, varieties of song, and the cross-cultural dimensions of Hispanic/Latino/a worship. This multifaceted creative, artistic, and emotional musical expression characterizes Latino/a popular religion.

The agency of celebration as fiesta or, as some have characterized it, sacred fiesta infuses the music of Latino/a popular religion in individual expressions and corporate settings. Worship as fiesta occurs almost universally in Latino/a Christian faith communities. The breadth of these religious practices is seen in that they appear across a wide religious continuum. Hispanic Roman Catholics and Protestants revel in this communal celebration, a type of neighborhood party to which everyone receives a welcome and an opportunity to contribute to its joyful development. This celebratory expression diametrically opposes a remote, formalized religious production that requires a nonparticipatory audience cordoned from the performance as remote observers. Certainly, Hispanic worship music may comprise elements of a planned ritual, just as one plans a party, but always in an environment where persons are invited to participate as members of the family of God in a particular place. The contextually ritualized music of Latino/a worship simultaneously embraces improvisation as the acts of God are celebrated collaboratively within a communal framework.

Many musical categories infuse these contexts of communal worship and sacred celebration, including those from

popular music. Popular-folk religious music transmits a culturally rich faith whether sung in Spanish, English, Spanglish or an indigenous language of Latin America. The great variety of Latino/a religious music utilizes a rhythmic tapestry, woven from African, indigenous, or European origins, a fusion of many strands again with the context determining the nature of the mix. The spirituality expressed in this folk sacred music may draw on a range of styles such as Tejano, Andean, *nortño*, mariachi, *cumbia*, salsa, Latin rock, *boleros*, *baladas*, *música religiosa* (religious music), *música evangélica* (evangelical music), *cantos espirituales* (spiritual songs), Latino/a contemporary Christian music, updated covers of old hymns (originally in English or Spanish), or the still exceedingly popular genre of *coros*, also known as *coritos*.

The Nature of Coritos

The Spanish word for a chorus is *coro*. Simply defined, a *corito* is a short, popular chorus sung widely in Latina/Latino Christian communal worship. *Coritos* also enable private devotional piety. In some settings the term *estribillo* is used as an alternative designation, although *corito* seems to be more pervasive. Etymologically, the term *corito* becomes instructive in that as the diminutive of the word *coro*, *corito* encompasses concepts of affection toward something and closeness and thereby indicates its high regard by those who regularly utilize them. Within the many faith communities that regularly incorporate such songs in their worship, *coritos* function as vehicles for culturally rooted faith expressions, theological and contextual interpretations of received doctrines. Moreover, *coritos* provide a pathway for the creation of new tenets of belief and folk teachings of the faith that may have immediate contextual applications.

While worshippers may share numerous *coritos*, the corpus of *coritos* is not limited to any one universally recognized hymnal, book, or record. *Coritos* appear in photocopied collections, pamphlets, overhead transparencies, or computer slide presentations, usually without musical notation. The structurally simple songs easily pass from one age group to another as living oral traditions. Conceptually, however, *coritos* possess a profound transformational power within the marginalized communities that celebrate them.

It appears that *coritos* first emerged from the life situations within specific communities of faith. Hispanic/Latino/a *coritos* reflect their homegrown origins as opposed to the liturgical or ritual music that more directly derives from ecclesiastical hierarchies or external missionary activity. In one sense *coritos* become more homegrown through the

rhythms and musical instruments used. Even when the instruments used and the tempo employed vary in specific contexts, the same *corito* is easily recognized from one setting to another. Sometimes a well-known *corito* receives a new verse that reflects the definite life-situation of a specific congregation at a particular time. In this way the core content remains the same across different situations but a continual contextual renewal of meaning emerges.

Coritos express the perceptions of felt concrete manifestations of the supernatural in daily life in Roman Catholic and Protestant settings, with some of the same *coritos* appearing in both contexts. Although the exact source of specific songs remains a mystery, there is clear indication that some *coritos* originate in Latin American and U.S. Latino/a Pentecostal contexts. This testifies to the liturgical, cultural, and counter-hegemonic appeal of these folk religious songs. Often the popularity of *coritos* directly defies the desires of formal ecclesiastical authorities, thereby emphasizing how much people value *coritos* and willingly risk pastoral disapproval to retain something precious to them.

Examples of *Coritos*

Certainly one of the most widely recognized *coritos* is “Alabaré” (“I Will Praise”), a song heard in Baptist churches, Roman Catholic gatherings, Pentecostal prayer services, and other denominational and nondenominational settings. The nearly omnipresent singing of “Alabaré” in a wide assortment of Latino/a worship contexts may be a unique unifying religious practice across the spectrum of the various expressions of Latino/a Christianity in the United States. Indeed, the use of *coritos*, particularly “Alabaré,” appears as a grassroots demonstration of musical and liturgical ecumenism in worship even among groups that formally disagree on doctrines or reject one another outright. “Alabaré” exemplifies the phenomenon that something about *coritos* transcends ethnic, geographic, regional, and doctrinal borders, making them transnational as well as transdenominational. Like other *coritos*, “Alabaré” adapts to its immediate environment and new lyrics may be created for a given setting. However, even with situational sacred improvisation, there does appear to be a core text as shown here:

ALABARÉ

Alabaré, (alabaré), alabaré, (alabaré).

Alabaré a mi Señor. (2x)

Juan vio el número de los redimidos
y todos alababan al Señor:

unos cantaban, otros oraban OR otros oraban, unos
cantaban

y todos alababan al Señor.

[Refrain]

Todos unidos, alegres cantamos

glorias y alabanzas al Señor.

Gloria al Padre, Gloria al Hijo

y gloria al Espíritu de Amor.

[Refrain]

I will praise, (I will praise), I will praise, (I will praise)

I will praise my Lord.

I will praise, I will praise,

I will praise my Lord. (2x)

John saw the number

of the redeemed

And all praise the Lord

Some sing, some pray OR Some pray, some sing

But all praise the Lord.

[Refrain]

All united, happily we sing,

Glory and praises to the Lord

Glory to the Father, glory to the Son

and glory to the Spirit of Love.

[Refrain]

Both the simplicity and sophistication in this unpretentious song draw the contemporary worshipper in the midst of everyday challenges and trials into a wider eschatological community, and thereby there is the potential for a new perspective no matter what is happening in the immediate situation. In only a few lines this *corito* brings the New Testament book of Revelation (probably Revelation chapter five) to life for the worshipper and joins individuals together into the great fiesta at the end of time. In addition to a contextualized biblical reference, this *corito* affirms a corporate trinitarian faith and Christian unity in the form of grassroots doxology. So one short song musically conveys knowledge of the biblical text, teaches Christian doctrine, and makes both immediate and accessible to contemporary communities. This sort of multilayer functionality is typical of *coritos* in general.

“No Hay Dios Tan Grande Como Tú” (“There Is No God Greater than You”), another common *corito*, expresses the singers’ appreciation of the divine’s magnitude as well as the singers’ confidence in a personal God who is directly addressed in a grammatically familiar way. Again, while there

are many versions of “No Hay Dios Tan Grande Como Tú,” the following are commonly found lyrics:

No hay Dios tan grande como Tú, no lo hay, no lo
hay (2x)
No hay Dios que puede hacer las obras como las que
haces Tú (2x)
No es con espada ni con ejército más con tu Santo
Espíritu (2x)
Y esos montes se moverán (3x)
[Common Variant]
Y esas almas se salvarán (3x)
Con tu Santo Espíritu
Con tu Santo Espíritu

There is no god greater than You, there is none, there
is none (2x)
There is no god who can do the works like the ones
You do (2x)

It is not with a sword nor with an army, but with
your Holy Spirit (2x)

And these mountains will be moved (3x)
[Common Variant]
And these souls will be saved (3x)
With your Holy Spirit
With your Holy Spirit

This *corito* alludes to the gospel of Matthew 17:20, “For truly I tell you, if you have faith the size of a mustard seed, you will say to this mountain, ‘Move from here to there,’ and it will move; and nothing will be impossible for you” (NRSV). Here two common variants appear in the lines about mountains moving or souls being saved, but both testify to the Latino/a Christian belief about the active visible power of God at work.

These two examples of *coritos* (“I Will Praise” and “There Is No God Greater than You”) affirm a belief in the transformative power of the Spirit of God and refer to biblical texts, a common feature of *coritos* that demonstrates their function to promote biblical literacy through popular worship. *Coritos* also shape cultural identity and religious and spiritual practices.

Conclusion

Coritos function in Latino/a faith communities as verbal expressions of popular religion and spirituality, flexible

liturgical tools, conduits through which folk rhythms and instruments appear in religious settings and thereby transform religious communities. The flexibility of *coritos* is such that sometimes they are used in counter-hegemonic ways and at other times they may support a status quo. *Coritos* are shapers of religious and cultural identities and traditions and function as dynamic Christian symbols within Latino/a religious communities in the United States. Even as younger generations of Latinas and Latinos embrace new forms of religious worship music, *coritos* continue to enjoy wide acceptance within Latino/a contexts. Whether in church settings or home-made videos on YouTube, sung by members of a small storefront church in the United States with their own instruments, a formal choir, or an internationally renowned religious pop singer in a highly orchestrated way, Latino/a popular Christianity finds unity and self-expression in these beloved *coritos*, seeking to extend to all listeners an invitation to the sacred fiesta.

Music: Hymnody

Hymnody is a generic name for ritual song employed in religious traditions. In its broadest sense, it simply means sacred texts performed by singing. In English usage, however, the term is usually restricted to indicate sacred poems of specific metrical construction composed since the

sixteenth century and set to one or more musical parts for congregational singing. Such a constraint, however, cannot begin to do justice to the many disparate languages, religious traditions, textual and musical forms, and ritual settings in which hymnody has flourished in the territorial United States since pre-Columbian times. The rich Jewish, Muslim, Hindu, and Buddhist hymnodic traditions of today's multicultural America, aside from English translation and occasional new musical settings, have not yet taken a specifically American form.

Hymnody is a complex form of religious culture combining language, music, and ritual performance. Hymnodies are part of dynamic religious traditions and broad cultural change. In formal terms hymnody has been textually conservative and consensual yet musically diverse and contested, while developmentally it has played a crucial role in the formation of American religious identity since colonization.

Indigenous and Mission Hymnodies

There were hymns in America long before Christopher Columbus explored the Caribbean and Hernán Cortés conquered Aztec Mexico. Spanish explorers and conquistadores encountered Aztec and Mayan civilizations with rich religious cultures. The early Franciscan missionary and scholar Bernardino de Sahagún preserved many of the Aztec hymns in his *General History of New Spain* (1569). Mythic narrative hymns called *teotlatolli* or *teocuicatl*, "divine words," or "divine songs," gave accounts of the five eras or epochs, called "suns," that comprised cosmic time for the Aztecs. They understood themselves as living in the Fifth Sun, an age of movement and sudden change, which their hymns describe with characteristic anxiety about its catastrophic ending. The Aztecs also composed sacred hymns that importuned their high gods to counsel and protect them. Hymns to their culture hero Quetzalcoatl celebrated his wisdom; those to Huitzilopochtli asked their war god to accompany the empire's warrior clans in battle. These few examples indicate the central role of hymns in articulating the religious world of the Aztecs at their elaborate festivals and ritual sacrifices.

Elements of this Mesoamerican worldview extended to Native American tribal peoples at least as far as the Pueblo tribes of the Upper Rio Grande and the Cahokia of the mid-Mississippi Valley. For example, the worldview of the Hopi, one of the most ancient Native American peoples, includes peace with all beings; their rituals maintain a finely tuned balance among the people, the natural world, and the spirit world, mediated by *kat'sinas*, or "life-bearers," spirit

beings who travel from one cosmic realm to another. The ceremonials of the Navajo in Arizona, neighbors of the Hopi, entail extraordinarily long and arduous chant performances by holy men. The Night Chant ceremony, for example, is a nine-night rite for healing the head and mind that requires sand painting, fire making, and other exacting preparations. Such elaborate ceremonies require highly trained ritual specialists and can sometimes involve the entire local community in their performance.

Western Coastal, Plains, and Eastern Woodland peoples also inhabit a sacred cosmos that finds its most powerful manifestation in hymnodic chant. These nations maintain their primal religious understanding of the world as a place inhabited by spirit beings both natural and supernatural, including themselves, their land and crops, the animals and birds, the four directions. Eastern Woodland nations also make songs to culture heroes like Hiawatha and Moshup, or to the Trickster, a polymorphous antihero who frustrates human ambitions and rival gods. All of these spirit beings have their particular songs and associated dances through which the people communicate with them and access their powers.

Over the centuries, Catholic and Protestant Christians have sought to missionize Native American peoples and have used hymns prominently in that effort. First to do so successfully was the Dominican friar and bishop Bartolomé de Las Casas. Las Casas argued in *The Only Method of Attracting All People to the True Faith* (1536) that Christianity should be spread to New Spain by hymns and preaching and not by the sword. A year later he used indigenous melodies and original Christian lyrics to help convert the Tuzulutlan people of central Guatemala, for which he named the region Vera Paz, "True Peace."

Christian missionaries have followed Las Casas's strategy over the past five centuries, producing countless hymn collections designed to convert and maintain Native American congregations. The earliest Protestant experiments in North America were promising. As part of his 1663 Algonkian translation of the Bible, New England Puritan minister John Eliot translated the psalms for use by fourteen "praying towns" of Native American converts. The towns were destroyed in King Philip's War (1675–1676), however, and since then Protestant missions to Native Americans have had only very modest success. Indigenous Protestants, moreover, have used mission hymns as vehicles for blending Christianity with their own sacred traditions. The Ojibwe community at Red Earth, Minnesota, for example, has supported a group of itinerant singers who convene traditional mourning rites

by singing translated Episcopal mission hymns with a distinctive intonation and rhythmic pulse that transforms them into an indigenous utterance of comfort and grief. It is likely that this hybridized appropriation of hymns has been a common feature of both Protestant and Catholic missions to Native Americans from the very beginning.

African American slaves encountered mission hymnody quite differently in colonial Catholic Latin America and British North America. In New Spain, the Caribbean, and Brazil, vernacular hymn settings called *negritos* draw heavily from the sacred music and dance heritage of West Africa. In the colonies of the American South, by contrast, preachers and plantation masters taught Christianized slaves Protestant psalms and hymns. They also restricted the public performance of religious song by African Americans to these forms, relegating original slave appropriations of Christianity in music to secretive meetings in the fields and slave quarters. There, African Americans began to sing their own versions of the Christian message, grounded in the Hebrew Bible's stories of Israel's liberation from Egypt and its perilous journey to the promised land of Canaan. Some of these "slave spirituals" may have been formulated as early as the eighteenth century, but they were not documented or widely shared outside the African American community until after the Civil War.

Colonial Hymnodies

The primary function of hymnody for Spanish and English colonizers was to preserve and maintain their respective Catholic and Protestant religious traditions. The greatest exemplar of this process in New Spain has been the devotion to Our Lady of Guadalupe, a 1531 apparition of the Virgin Mary near Mexico City whose miraculous image attracted throngs of pilgrims seeking her aid, singing hymns and pilgrimage songs in her honor. Guadalupe is now the largest pilgrimage site in the Western Hemisphere. By far the most famous of its songs over the centuries has been "Las Mañanitas a la Virgen de Guadalupe," a "wake-up song" for the youthful Virgin as she reappears in ritual time.

Around 1600, Spanish explorers and Franciscan missionaries brought simple two-line hymns called *alabados* from Mexico to Santa Fe and other new settlements in the Upper Rio Grande Valley. With the secularization of the state after the Mexican Revolution of 1815, however, the missions were abandoned and lay brotherhoods stepped in to preserve these traditional sacred songs. These societies came to be known as *Penitentes*, the penitent ones, for their practice of self-flagellation and their vivid reenactments of Christ's

crucifixion on Good Friday. As part of their religious discipline, the Penitentes compiled handmade hymnbooks they called *Hymnos sagrados dedicados a nuestro Padre Jesus de Nazareno* (Sacred Hymns dedicated to our Father Jesus of Nazareth). For nearly two centuries, the Penitentes have continued to preserve the colonial hymnody of New Spain in what was its remotest province.

In British North America, the singing of psalms was an important element in the established religions of the Anglican South and Puritan New England. Daily Anglican worship revolved around the recitation or singing of the psalms at morning and evening prayer as well as during Sunday worship and the Communion service. To supply metrical psalms for the new national liturgy, Elizabeth I authorized a version begun during the 1540s, completed in Geneva in the 1550s, and published in 1561 as *The Whole Booke of Psalmes* by Thomas Sternhold and John Hopkins. Also known as the English Psalter, it became the standard source for Anglican praise for the next century and a half.

The Pilgrims and the Puritans shared with Anglicans the Calvinist limitation of congregational praise to the biblical psalms. While the Pilgrims of Plymouth Colony used *The Psalmes of David Englished* (1612) by the Separatist Henry Ainsworth, Massachusetts Bay Puritans prepared their own translation, published in 1640 as *The Whole Booke of Psalmes faithfully translated into English Metre*. Popularly known as the Bay Psalm Book, it was the first book printed in British North America. Its awkward rhymes and rough-hewn meters, however, did not fully meet Puritan expectations on either side of the Atlantic. The Puritan practice of "lining-out"—reading out one or two lines of the psalm before the congregation sang them back—also constrained the performance of the Bay Psalm Book. In 1651 Harvard president Henry Dunster and his assistant Richard Lyon published a major revision as *The Psalmes, Hymns, and Spiritual Songs of the Old and New Testament faithfully translated into English Metre* (1651). Called the New England Psalm Book to distinguish it from the earlier version, this collection sustained Congregational worship through the eighteenth century.

It did not lack for serious competition, however. In 1696 the crown authorized *A New Version of the Psalmes of David*, a second Anglican metrical psalter by Poet Laureate Nahum Tate and Royal Chaplain Nicholas Brady. The Puritans responded in 1698 by publishing the first music in America, a small tune supplement to the ninth edition of the New England Psalm Book, but the Anglicans countered with the *Supplement to the New Version of the Psalmes* (1702) that

included a rival tune collection as well as hugely popular festival hymns like “While Shepherds Watch’d Their Flocks,” perhaps the most widely sung sacred lyric in colonial America. The 1708 edition of the *Supplement* also introduced a new musical style, known as the English Parish Style, that profoundly shaped American hymnody in the eighteenth century. After the Glorious Revolution, English composers began to compose psalm tunes and anthems for country parishes using simplified Baroque forms and harmonies. Their Parish Style tunes also proved ideally suited for the musical resources and sensibilities of the American colonies.

Cotton Mather tried to regain the textual upper hand for Congregationalism with his blank-verse *Psalterium Americanum* (1718), but the most popular poetic voice of colonial popular religion would be that of the English Independent minister Isaac Watts. Already famous for his controversial volume of *Hymns and Spiritual Songs* (1707), in which he advocated and wrote “hymns of human composure” for use in worship, Watts published *The Psalms of David Imitated in the Language of the New Testament* in 1719. The new work was a true psalter, yet Watts had also aggressively paraphrased the imagery of David’s psalms into highly emotional Christian expressions of salvific religious experience and unshakeable faith.

Around 1720 the unsettled textual and musical situation in New England erupted in the Regular Singing Controversy, the most important hymnodic episode in colonial America. Massachusetts Bay ministers decided to reform Congregational praise by teaching “regular singing”—a combination of musical literacy, vocal training, and new tune repertory—but many rural parishes resisted these challenges to their traditional or “usual” singing. The ministers unleashed a furious pamphlet campaign extolling the spiritual and aesthetic virtues of “regular” singing and denouncing the effrontery of “usual” singers for their disorderly denial of ministerial authority. Most important, they advocated singing schools as a practical remedy for “usual” singing. In 1721, John Tuft’s *Introduction to the Art of Singing Psalm-Tunes* and Thomas Walter’s *Grounds and Rules of Musick Explained* became the staple texts for the singing school movement, which spread slowly but steadily in New England for the next fifty years.

The Great Awakening, Ethnic Hymnodies, and the English Parish Style

During the 1730s and 1740s the singing school movement encountered the Great Awakening (1726–1744), America’s

first mass religious revival. The Awakening embraced the teachings of Congregationalist Jonathan Edwards of Northampton, Massachusetts, whose theology gave hymnody a crucial new role as a prime vehicle for stimulating what he called “the holy affections” requisite for regeneration and sanctification. Edwards himself sponsored a singing school for his congregation in 1736 and embraced Watts’s psalms and hymns for use outside the Sunday service.

During the Awakening, evangelicals began publishing hymn collections specially designed for revivals, family devotions, and prayer meetings or “social worship.” The earliest of these was John Wesley’s *Collection of Psalms and Hymns*, published at Charleston in 1737. It presented texts from the *New Version* and Watts, as well as his brother Charles Wesley’s first published sacred poems and John’s own translations from German Pietist sources. Of greater immediate impact was the 1753 *Collection of Hymns for Social Worship* compiled by George Whitefield, the leading itinerant preacher of the Awakening. Whitefield’s *Collection* employed the same type of ecumenical text mixture that Wesley had done, and with far more success in the American market. The greatest hymnodic beneficiary of the Awakening, however, was Watts, who in effect became the liturgical voice of colonial evangelicalism. So widely accepted were Watts’s psalms and hymns that most colonial evangelical denominations felt no need to publish hymnals of their own. The Anglophone exception was the tiny Seventh-day Baptist communion in New England, who published *Hymns and Spiritual Songs*, the first American denominational hymnal, in 1766.

German-speaking communions in Pennsylvania were far more active in publishing psalters and hymnals. In 1752–1753 the German Reformed reprinted the *Neu-vermehrte-und vollstaendiges Gesang-Buch* (Newly amplified and complete Song Book), containing the metrical psalms of Ambrosius Lobwasser and hymns of Joachim Neander. Lutherans responded in 1757 with an edition of the *Marburger Gesangbuch* (Marburg Song Book), their canonical collection of psalms and hymns by Martin Luther and “other God-blessed teachers.” Pennsylvania also welcomed numerous radical and Pietist German sects—Mennonites, Schwenkfelders, and Moravians—who promptly published their own identifying hymnals. The most original and musically prolific Pennsylvania German sect, however, was the Ephrata community gathered in 1732 by the Seventh-day Baptist Conrad Beissel, a mystic who taught his celibate followers an esoteric musical theology and trained them to sing his hymns in a uniquely delicate and unearthly head tone. Beissel published a

remarkable series of Ephratan hymn collections over more than thirty years, the most notable of which was the *Zionistischer Weyrauchs-Hügel* (Incense-Hill of Zion, 1739).

The colonial Dutch Reformed and Presbyterian churches experienced tensions over hymnody. The former struggled with the challenges of revivalism and English-language worship. In 1766 the Collegiate Church of New York City hired Francis Hopkinson to edit Tate and Brady's *New Version* for their use with traditional Dutch psalm tunes. Hopkinson, a noted Philadelphia poet and composer, produced *The Psalms of David . . . in Metre* (1767) and soon a four-part Parish Style *Collection of the psalm and hymn tunes* (1774) that propelled the Dutch Reformed into fully Anglicized psalmody. In Philadelphia, James Lyon worked toward musical modernization among Presbyterians and Baptists. His tune book *Urania, or A Choice Collection of Psalm-Tunes, Anthems, and Hymns* (1761) provided many popular standard psalm tunes, but also added highly elaborate set pieces and anthems of the Parish Style and eleven new American tunes, including a few of his own. With his treatise *The lawfulness, excellency, and advantage of instrumentall musick in the publick worship of God urg'd and enforc'd* (1763), however, Lyon plunged Presbyterians into a prolonged controversy over texts, tunes, and performance practice that continued into the nineteenth century.

The modernizing psalmody advocated by Lyon and Hopkinson also found support in New England. In Boston, Josiah Flagg published a *Collection of the Best Psalm Tunes* in 1764, among whose 119 tunes were no less than 60 Parish Style compositions printed in America for the first time. During the late 1760s Daniel Bayley of Newburyport, an Anglican printer, potter, and chorister, published new editions of Tans'ur's *Royal Melody Complete* (1735) and Aaron Williams's *Universal Psalmist* (1761), introducing the Parish Style to New England in full detail, including "fuging tunes," a form developed around 1740 featuring a chorus in which the different parts entered separately on the same musical figure and line of text, then combined in a powerful final cadence. The growing demand for these Boston and Philadelphia imprints documented the development of sophisticated singing schools and sacred music ensembles taught by skilled singing masters in America's port cities and market towns on the eve of the Revolution.

Singing Schools, Tune Books, and Hymnals

These colonial patterns of American praise were shattered even before the political revolution by the powerful new musical voice of William Billings of Boston. Billings burst on

the psalmody scene in 1770 with *The New-England Psalm-Singer*, a collection of 118 original compositions in every genre of the Parish Style—plain tunes, fugging tunes, set pieces, and anthems. He was aggressively independent in his approach to composing. Billings claimed to have followed no standard of compositional rules and laid down none of his own for others to follow. The experimental character of his melodies, harmonies, and forms bore out that conviction. Billings's musical declaration of independence bore much fruit. At singing schools he spotted young talent that he trained in music teaching and composition. His followers fanned out across eastern New England, creating an effective itinerant network that brought the singing school to rural communities and spread Billings's music, especially his popular fugging tunes. Billings also set the textual pattern for American tune books by marrying his original tunes to the immensely popular sacred lyrics of Watts. By the end of the eighteenth century, the New England singing school had produced thousands of new psalm and hymn tunes by composers like Daniel Read, Andrew Law, Timothy Swan, Jacob French, and Stephen Jenks.

Adding to the singing school's effectiveness was the introduction of shape notes, a form of musical notation that assigned a different shape to each of the four syllables of the traditional Lancashire Solfa scale—*fa, so, la, and mi*—that Americans used to sound out their parts. The four shapes could be printed on ledger lines, graphically connecting the written score to the oral/aural scale in the singer's ear. *The Easy Instructor* (1801) by William Little and William Smith was the first tune book to use the four-shape system. Its title proved prophetic, as shape notes greatly facilitated the singing master's task of guiding ear-trained singers to music literacy.

The Second Great Awakening, another great national surge of evangelical revivalism from 1799 to 1812 and again from 1826 to 1845, created a hymnodic synthesis that dominated American sacred song through the Civil War. As singing masters spread south and west, they absorbed new musical forms and textual influences—southern spiritual ballads and camp meeting songs, the hymns of Charles Wesley and American evangelical poets. They projected these on to their base of New England texts and tunes, generating dozens of tune books, including classics like William Walker's *Southern Harmony* (1835) and Benjamin Franklin White and Elijah J. King's *Sacred Harp* (1844).

Text-only "worded" hymnals also began to appear in greater numbers. Two of these hymnals also hold great multicultural interest. *A Choice Collection of Hymns and Spiritual*

Songs, published in 1774 by Samson Occom, was the first hymnal compiled by a Native American. Occom, a Mohegan convert, enjoyed success as a Presbyterian missionary to Native American peoples in the Northeast. His *Choice Collection*, however, made no reference to his identity. An early minority hymnal of greater influence was *A Collection of Hymns and Spiritual Songs from Various Authors* (1801) by Richard Allen, founder of the African Methodist Episcopal Church. Allen designed the *Collection* for the Bethel Church of Philadelphia, which he founded in 1794 as the first African American congregation in the North. Surprisingly, his small selection contained more lyrics by Watts than by Wesley; Allen's *Collection* exerted great influence on the African American community through the antebellum period and beyond. Dozens more of these interdenominational evangelical worded hymnals were compiled by editors and theologians during and after the Second Awakening, many of them as supplements to Watts's *Psalms of David Imitated*.

Hymn collections also served as important vehicles for evangelism by the many sectarian movements spawned in or strengthened by the Second Awakening. Armed with the Wesleys' hymn collections, American Methodist editors added occasional new lyrics and concentrated on innovative new formats. As early as the 1780s the Methodists printed their *Pocket Hymn Book Designed as a Constant Companion for the Pious* in a cheap mass-market octavo size that could be distributed free to potential converts. Smaller sects including the Christians, Shakers, Unitarians, Freewill Baptists, Mormons, Adventists, and Disciples of Christ relied heavily on hymnals written by their own members to project their distinctive identities into the fierce religious competition of the Second Awakening.

By mid-century if not before, this frenzied competition among tune book compilers and hymnal editors had produced an American Protestant hymnody of distinctive structure. The constant reiteration of English evangelical psalms and hymns during the Second Awakening created a core textual canon focused on key episodes of creation and fall, penitence and conviction of sin, Christ's atonement and saving grace, providence and perseverance, and longing for heaven. Lyrics like Watts's "Alas, and did my Saviour Bleed" and Samuel Stennett's "On Jordan's Stormy Banks I Stand" appeared in more than half of the American hymnals published before the Civil War. These consensus texts in turn received dozens of different musical settings composed by singing masters eager to capitalize on their popularity. This synergy created an American hybrid of evangelical hymnody

that was thematically narrow and interdenominationally sourced yet musically diverse, continually refreshed by a flow of new vernacular tunes and settings.

"Better Music" and Gospel Hymns

There had always been resistance to the singing school in the new nation's urban centers, where European performers and teachers in America's cities advocated Baroque and classical sacred works. During the 1820s this "better music" alternative found its greatest advocate in Lowell Mason of Medfield, Massachusetts, a Congregational organist, choir director, educator, banker, and sacred music theorist. Mason's *Boston Handel and Haydn Society Collection of Church Music*, an 1822 collection of sacred works by Mozart, Haydn, and other classical masters, sold 50,000 copies, making it the most popular American music imprint of the antebellum period. His *Oration on Church Music* (1826) interpreted sacred music as oratory in two senses—theologically as prayer, following the Latin sense of the term, and performatively as sung language, to which the setting and accompaniment should always be subordinate. Mason's 1,600 hymn tunes, including his famed setting for Ray Palmer's lyric "My Faith looks up to Thee" (1830), embodied his theology of praise.

As Mason's music and theory took firm hold in elite urban congregations on the East Coast and in the Ohio Valley, a new generation of English Victorian hymn writers brought more sentimental hymn texts to evangelical America. Lyrics like Charlotte Elliott's "Just as I am, without one Plea" (1835), Sarah Flower Adams's "Nearer my God to Thee," and Henry F. Lyte's "Abide with Me" (1847) became hugely popular before the Civil War. After the war, catchy Sunday school songs, marches, the Victorian parlor ballad, and popular dances like the waltz and the gallop combined with the new lyrical sensibilities of intimacy and vulnerability to foster the emergence of the gospel hymn. One of the earliest examples of the genre was Robert Lowry's "Shall We Gather at the River" (1864), a lyric of heaven with a gently rocking chorus that defied the dictates of Mason's "better music."

The greatest American lyricist of the new genre was the blind evangelical poet Fanny J. Crosby, author of more than 9,000 hymns. Mason's student William B. Bradbury encountered Crosby's prolific talent while collaborating with her on a Sunday school hymnal in 1864. In just a few years she was working with the best evangelical composers, including Bradbury, composer for "Jesus Keep Me Near the Cross" (1869); William Howard Doane, with whom she wrote "Pass Me Not, O Gentle Savior" (1868/1870) and "I Am Thine,

O Lord" (1875); and Phoebe Palmer Knapp, who provided the tune for "Blessed Assurance, Jesus Is Mine" (1873), the most popular hymn in America over the next century. The new hymn style found a name and its definitive expression in *Gospel Hymns and Sacred Songs*, an 1875 anthology edited by Ira D. Sankey and Philip P. Bliss. Sankey was the soloist for the great urban revivalist Dwight L. Moody. Their spectacular 1872–1874 evangelistic tour of Britain catapulted Sankey's music to international popularity. The success of the 1875 collection generated five more under the same running title. By the time the complete "diamond edition" appeared in 1894, *Gospel Hymns* had sold more than one million copies, making it by far the most popular hymn collection yet published in America.

Not all evangelicals embraced the new style. For example, the National Baptist Convention, an African American denomination that grew explosively from its organization in 1895, pointedly excluded gospel hymns from its 1903 *Hymnal*, opting instead for "Dr. Watts hymns." Not until 1921 did the National Baptists officially sanction the genre in a separate collection called *Gospel Pearls*, edited by Willa A. Townsend. Nor, of course, were evangelicals the only American Protestants. The old mainline denominations—Episcopalian, Congregational, Presbyterian, Lutheran, Unitarian—also resisted gospel hymns. They produced collections of their own that highlighted themes of justice, brotherhood, and social reform. The most notable of these liberal collections was the Congregationalists' *Pilgrim Hymnal* (1912), edited by the Social Gospel theologian Washington Gladden, which included earnest lyrics like Frank Mason North's 1903 hymn "Where Cross the Crowded Ways of Life."

By the time the twin evangelical renewal movements of fundamentalism and Pentecostalism arose at the turn of the twentieth century, however, gospel hymns had become essential articulations of "that old-time religion." Hymn editors from these two movements published dozens of paperback gospel hymn collections. And when they went into eclipse in the late 1920s, evangelicals of all stripes rallied around gospel hymns as a badge of their religious identity. Southern white and urban black evangelicals also extended the musical range of the gospel hymn. In the South, singing school men's quartets placed the melody in the baritone or second tenor and reconceived first tenor as a harmony part. By the 1930s and 1940s this sound had become hugely popular through performances by groups like the Chuck Wagon Gang and the Blackwood Brothers and their recordings of new "gospel songs" such as Albert E. Brumley's 1929 classic "I'll Fly Away."

After World War II groups such as the Happy Goodmans and the Lewis Family carried this "white gospel" style into radio and television venues throughout the South.

An even more dramatic musical transformation took place among African American evangelicals. William Seymour's Azusa Street revival of 1906 in Los Angeles, credited as the beginning of the Pentecostal movement in America, featured singing in the spirit and sustained congregational chant over simple piano chord progressions. As Pentecostalism grew, this mode of "sanctified" gospel music acquired guitar, bass, drums, and, later, electric organ. Another innovation began in 1932 when a Chicago Baptist jazz pianist named Thomas A. Dorsey wrote "Take My Hand, Precious Lord," the first "gospel blues" composition. It became the signature song of Dorsey's student, the great gospel singer Mahalia Jackson, whose recordings established gospel blues as a commercial genre. Sanctified music and gospel blues penetrated even the most conservative African American communions after World War II, producing a new generation of soloists and quartets, many of whom crossed over into successful careers in the early years of rock, pop, and rhythm and blues.

Worship and Praise Music and Inclusive Hymnody

As America's youth began dancing to rock and pop in the 1950s, most white Protestants were still singing Watts and Wesley or gospel hymns. Catholics sang very little at all, constrained as they were by the Latin Mass. These patterns changed suddenly and permanently. In 1962, newly elected Pope John XXIII called a general council to assess the direction the Catholic Church should take in the late twentieth century. *Sacrosanctum Concilium*, the first constitution of the Second Vatican Council (1962–1965), addressed the liturgy. It took the dramatic steps of endorsing the Mass in vernacular languages and calling for new sacred music in popular musical styles to accompany the new liturgies. In America the new directive produced an initial outpouring of hymns and Mass settings in the folk revival style of the 1960s, most of them written by priests or members of religious orders.

In 1971, students at Duquesne University began to pray for gifts or charisms of the Holy Spirit, launching what would grow through the 1970s and 1980s to become a worldwide spiritual movement known as the Charismatic Renewal.

The Renewal brought Catholics into the front rank of American hymnody for the first time, building on the earlier folk mass style to develop its own distinctive worship music. Songs like John Foley, S.J.'s "One Bread, One Body" (1978)

featured unison melodies, guitar accompaniment, and scripture texts or lyrics expressing intimacy with the divine. The most important musical expression of the Charismatic Revival was *Glory and Praise*, a 1979 hymnal that attained extensive use in the American Church and broke all sales records for a Catholic hymnal.

The Renewal was also very powerful in the Hispanic community, where its characteristic music soon found a Spanish-language form in the *corito*, or little song. Renewal musicians referenced traditional *alabados* as a lyrical basis for their *coritos*, but their musical compositions were virtually indistinguishable from the folk/pop ballad style of their English-language counterparts. *Coritos* enjoyed immense popularity, and in recent years they have migrated to the Internet, where thousands of sing-along videos have been posted. While *Glory and Praise* and *coritos* clearly possess Catholic distinctiveness, their christocentric and Spirit-oriented lyrics also reflect their larger American Protestant environment, as does their entry into the world of media innovation and marketing that was once almost exclusively an evangelical domain.

The evangelicals themselves were not slow to capitalize on the spiritual stirring that the Charismatic Renewal indicated. By 1974 a new group of fundamentalist and Pentecostal “televangelists” had begun to develop evangelical programming that was widely syndicated on new private “Christian” cable television networks. By the late 1970s the great Bicentennial Revival was underway, and, as before, it found a distinctive musical style in Christian Contemporary Music and Worship and Praise Music. Christian Contemporary Music’s emotional “love songs to Jesus,” set to pop melodies and arrangements, made gospel megastars out of young singers like Stephen Curtis Chapman, Kirk Franklin, Amy Grant, Michael W. Smith, and BeBe and CeCe Winans. From Nashville, center of a multibillion-dollar gospel music industry, the new style spread to local congregations in the form of Worship and Praise Music. Local congregations developed their own worship bands or played popular Christian Contemporary tracks suitable for worship services. They projected the lyrics on to the unadorned walls of their evangelical churches so that everyone could sing and pray at the same time. Gradually an informal canon of Worship and Praise Music emerged that bore close stylistic affinities to the hymns and spiritual songs of the Catholic Charismatic Renewal. Musically, Worship and Praise was more mainstream pop than folk, but its lyrics featured the same formula of scripture passages and first-person accounts

of religious experience, with easily remembered choruses. A prime early example of the style is Leonard E. Smith Jr.’s vastly popular “Our God Reigns” (1974).

In an effort to regain liturgical currency, the liberal “mainline” denominations—Episcopalian, United Methodist, Evangelical Lutheran, Presbyterian Church USA, United Church of Christ, Disciples of Christ, American Baptist—published new hymnals during the 1980s and 1990s. Their efforts have been greatly aided by a blossoming of liberal hymn writing unsurpassed since the early twentieth century. Under the theological imperative of “inclusive language,” liberal denominations have revised and even rewritten their liturgies and hymns in language carefully designed to exclude no one. Hymns like Brian Wren’s “When Love Is Found” are fired by a vision of Christian community free from all cultural distinctions. Many of these new lyrics have been paired with traditional tunes, but some have also found new contemporary musical settings. More controversially, some liberal lyricists have removed male gender from God the Father and even from Jesus the Son, replacing it with more androgynous language or nonsexual imagery drawn from the Bible. Some of the new hymnals have also banned all references to warfare, in keeping with the peace testimonies of their communions. Not surprisingly, these new hymnals have met some significant opposition, especially when they have revised traditional hymns according to inclusive language principles. Of these new collections, the United Church of Christ’s *New Century Hymnal* (1995) has generated by far the most acrimony.

The beginning of the twenty-first century marks one of the most dynamic moments in the history of American hymnody. Over just the past few decades, both evangelical and liberal Protestants have dramatically changed the style and substance of their worship music, and Catholics have burst upon the scene with an unprecedented outpouring of English and Spanish texts and tunes. More than 200 million Americans are now singing new kinds of praise that articulate their spirituality in the postmodern world. The scale of this change may well be unprecedented, but the very fact of it also underlines the persistent role hymnody has played as a bearer of religious change and musical innovation in America since colonial times.

Music: Jewish

The music of Jews in America is complex and diverse. Jews have been in America and have continued to relocate from other parts of the world since the mid-seventeenth century. For more than three hundred years Jews have brought the music of their countries of origin and adapted their music to the new environment of America in several contexts: the synagogue, life-cycle events, folk and popular expressions, and classical. Although the definition of “Jewish music” is debatable—it has no universal descriptive musical features

such as recognizable rhythms or musical phrases—specific genres of Jewish music are identifiable and are part of American culture.

History

During the second millennium BCE two major regions roughly define Jewish culture: Ashkenazi and Sephardic. Ashkenazi Jews are from western and eastern Europe, and Sephardic Jewry grew out of the golden age of Jewish life in Spain (tenth to twelfth centuries) and communities around the Mediterranean. By the 1500s there were sizable Ashkenazi communities in Germany and eastern Europe. In centuries following, communities grew in western Europe. After the expulsions of Jews from Spain in the fifteenth century, Sephardic Jewish life took hold in the Ottoman Empire, with important centers in Salonika, Istanbul, and Safed (a city in Israel north of Jerusalem). Jewish life prior to modernity was subject to varying degrees of external influence, and although Jews spoke a variety of languages, their prayers and religious texts were predominantly in Hebrew.

In 1654 the first Jews arrived in the North American colonies from South America. These Jews were Sephardic; their families had fled Spain and Portugal because of religious persecution. From 1820 to 1880 Jews emigrated from Germany. During the nineteenth century, although few in number, Jews in America were spread out along the East Coast and in the South and Midwest. In 1880 the landscape of American Jewry changed significantly with arrival of Jews from eastern Europe. From 1880 to 1920 close to 2 million Jews immigrated, changing Jewish culture in America and its music. Jews from Germany brought their nineteenth-century liturgical traditions, including new forms of liturgical expression, influenced by German Protestant worship. The developing American Reform Jewish worship style included the singing of hymns and the inclusion of choirs and organs. The Jews from eastern Europe were largely Orthodox and did not include the use of musical instruments in the synagogue. Their style of Jewish music was based on traditional melodies and musical modes with the innovation of an unaccompanied male choir. As Jews adjusted to America, German and eastern European Jewish liturgical traditions developed into a combined stylistic tradition known as *Minhag America* [the custom or rite of America]. Twentieth-century innovations have followed a range of musical styles from classical to a range of popular styles (jazz, rock, folk), and by the end of the century a

diverse range of musical styles was heard in American synagogue music.

Outside of the synagogue, the music of Jewish immigrants included Yiddish songs, *klezmer* [instrumental] music and songs from Sephardic Jews, including *Judeo-Spanish*, the combined language of Hebrew and Spanish from Spain, and the *piyyutim* [religious poetry] of Jews from North Africa and the Middle East. As Jews assimilated and became successful in America, a growing number flourished in musical theatre (George Gershwin, Irving Berlin, Stephen Sondheim) and as popular artists and composers (Barbra Streisand, Neil Diamond, Billy Joel) and classical composers (Leonard Bernstein, Steven Reich, Sam Adler).

Liturgical Ashkenazi

American synagogue music of the twentieth century combined liturgical musical styles from the eighteenth and nineteenth centuries of central and eastern Europe. The general accepted dichotomy is that German Jews were more modern and the eastern European Jews were more traditional. Musical styles followed a similar dichotomy. Central European liturgical music of the nineteenth century was shaped by classical music idioms with composed metrically driven music. The singing of hymns was an important communal experience modeled after the Protestant church. On the other hand, eastern European music was more ornate melodically and made use of vocal improvisation developing into the art of *hazzanut*. The term *hazzan* refers to the one responsible to lead the prayers with musical intonation. This Hebrew term was first used in the sixth century CE. The traditional chants of synagogue music were in one of three musical modes known as *nusach*. The American style of the first part of the twentieth century combined these styles.

Three musical modes are the foundation for prayer modes of *nusach* in the Ashkenazi Jewish liturgical tradition: (1) the *Hashem Malach* mode is similar intervallically to the western major scale with a lowered seventh (C-D-E-F-G-A-Bb-C); (2) *Magen Avot* is equivalent to a western natural minor scale (C-D-Eb-F-G-Ab-Bb-C); (3) *Ahavah Rabbah* has often been called the most “Jewish” of these modes because it is quite distinctive (C-Db-E-F-G-Ab-Bb-C) and without an equivalent in western music. The essential feature is the augmented second interval between the second and third notes of the mode (D-flat to E-natural). *Ahavah Rabbah* means “great love”; this designation aptly reflects the affective association of this mode, which expresses great love for God through a unique musical sound. The melancholy

nature of the mode enhances its rich musical expression. *Hashem Malach* (“the Lord reigns”) expresses God’s majesty. *Magen Avot* (“shield of our fathers”) does not have an affect and is used as a didactic mode to recite the text. Sabbath prayer makes use of these musical modes.

Central European Influences

European precedents provide the foundation of American synagogue music. The music of Salomon Sulzer (1804–1890) for the synagogue had a lasting permanence. From 1826 he officiated at the New Synagogue in Vienna. He elevated the office of cantor (until then cantors were itinerant and not considered full clergy) with his fine musicianship, respect, and dignity; his singing was admired by Schubert and Liszt. Sulzer published *Shir Zion*, a collection of his compositions and those by other composers he commissioned, in two volumes, the first in 1840, and the second in 1866. Sulzer’s goal was to take the traditional Jewish melodies and “purify” them, as he felt the ornate Baroque musical elaborations were not fitting for the dignity of the service. Sulzer preferred a straightforward lyrical melodic setting of the text as can be seen in the symmetrical phrases in his melodic settings. He created a refinement of the traditional melody. In addition, Sulzer sought to harmonize this melody within the rules of musical art current in his time. He wrote out the music for the cantor and choir. He sought to establish the office of the cantor as a musician drawing from the past but firmly rooted in the present. Sulzer gained wide respect throughout central Europe, and many cantors came to study with him. His impact on synagogue music was unprecedented and long lasting. Shortly after the publication of his *Shir Zion* first volume in 1840, the music quickly spread throughout Europe and America.

Another significant figure in central European synagogue music was Louis Lewandowski (1821–1894). A choral director and composer, Lewandowski served as the music director in Berlin at the Old Synagogue in the Heidereutergasse, and after 1866 at the New Synagogue. His musical compositions appear in two well-known publications: *Kol Rinah U’T’fillah* [*Voice of Song and Prayer*] (1871), for one and two voices; *Todah W’simrah* [*Thanks and Song*] (1876–1882), for four voices and soli, optional organ accompaniment. His contributions to synagogue music can be seen as further refinements of Sulzer’s efforts. Lewandowski provided settings of traditional melodies and wrote unique compositions that both used and did not use *nusach*. His music had a major impact on both Reform and traditional synagogues

throughout Europe and America from the nineteenth century to well into the twentieth century.

Eastern European Styles

The eastern European cantorial style remained traditional in focus. Few eastern European synagogues incorporated the reforms commonly found in central Europe. Adherence to traditional melodies and the Jewish prayer modes dominated practice in the region. Some cantors came to Vienna to study with Sulzer and incorporated his musical innovations in a style appropriate for eastern Europe. Nissan Blumenthal (1805–1903) was born in the Ukraine and introduced German style music at the Brody Synagogue in Odessa. He founded a choir school in 1841 and developed choral singing in four voices. Eliezer Gerovich (1844–1913), a student of Blumenthal, began as a *hazzan* at the Choral Synagogue in Berdichev. After 1887 he was chief *hazzan* in Rostov-on-Don. His setting of traditional melodies make use of extremely ornate cantorial phrases, which are juxtaposed with the choir; at climatic moments in the music the cantor sings above the choir. Gerovich does not make use of symmetrical phrases—nor do other synagogue composers of his period—as melodic freedom is desired.

The hallmark of the eastern European style is the use of recurring melodic fragments intent on conveying a deep emotional feeling to the congregation. Ornate musical embellishments were used to transport the listener into a spiritual realm. Word repetition was not uncommon. The nicely patterned phrases of central Europe came to be known as *hazzanut ha-seder*, which means orderly *hazzanut*, while the free and ornate eastern European style was known as *hazzanut ha-regesh* or emotional *hazzanut*. This latter style became the foundation for the golden age of the cantorate, which proliferated in America in the early twentieth century. However distinct *hazzanut ha-seder* and *hazzanut ha-regesh*, these styles were also intermingled in the compositions of cantors who were immersed in the eastern European musical world but studied with cantors such as Sulzer. David Nowakowsky (1848–1921) was appointed choirmaster and associate cantor in 1870 of the Odessa Synagogue, known as the Broder-Schul. He worked with Cantors Nissan Blumenthal and Pinchos Minkowsky. He is known for choral compositions that show a balanced style, synthesizing central and eastern European musical elements. These two styles were brought to America. A synthesized approach named *Minhag America* developed and refers to the combined aesthetic approach found in the United States in the twentieth century.

American Reform synagogues used the music that was current in Europe, predominantly that of Sulzer and Lewandowski, as well as the music of American composers, such as Sigmund Schlesinger (1835–1906) and Edward Stark (1863–1918). Their music was devoid of traditional prayer modes. Schlesinger was an organist at a synagogue in Mobile, Alabama; he used operatic excerpts from Bellini, Donizetti, and Rossini in synagogue services but changed the words. Stark, a cantor at Temple Emanuel in San Francisco, used some traditional melodies, but his compositions were naïve. Alois Kaiser (1840–1908), born in Hungary, was an apprentice to Sulzer and, after serving communities in Vienna (1859–1863) and Prague (1863–1866), immigrated to America in 1866 and served Congregation Ohab Shalom in Baltimore. His collections of synagogue music include hymnal compositions, melodies with four-part chorale settings, following the Lutheran model of J. S. Bach.

New Music for Synagogues of America

Isaac Mayer Wise, the progenitor of American Reform Judaism, in the mid-nineteenth century coined the term *Minhag America* to refer to a new form of Jewish traditions. Originally the title of a prayer book in 1856, the term has been adopted more generally as the Americanization of European Jewish traditions. Wise and other rabbis of his era felt hymn singing was the quintessential religious expression, producing a spiritual experience through communal singing. In 1892 the Central Conference of American Rabbis resolved to adopt Wise's hymnbook as the official hymnbook of American Jewish Reform congregations. In a discussion of this resolution rabbis commented that they sang a good deal of non-Jewish music out of necessity because few Jewish composers value hymns. One rabbi at the 1892 conference stated that he fully recognized the power of Christian worship to be the communal singing of hymns. The *Union Prayer Book* of 1892 was followed by the *Union Hymnal* in 1897. By 1912 this first edition of the hymnal was deemed a failure, and rabbis of the time encouraged cantors to devote their efforts at creating a more effective version. The third edition in 1932 was widely used by many Reform congregations through the 1950s, but eventually hymn singing fell out of fashion. By this time the use of organs was well established in American Reform synagogues as well as mixed choirs. Women were ordained as cantors beginning in the Reform movement in the mid-1970s.

The American Reform movement spread throughout the country. Although Reform had its roots in western Europe, by the 1930s the large wave of eastern European Jews had contributed their cultural traditions. By the 1940s composers sought to adapt the music of the synagogue to twentieth-century musical style. Composers such as Abraham Binder (1895–1966), Isadore Freed (1900–1960), and Lazare Weiner (1897–1982) sought to take the traditional European tunes and harmonize these melodies in accordance with the Jewish prayer modes to produce harmonies not typically found in western music. Binder and Freed were motivated by the same desires as Sulzer and Lewandowski to innovate known melodies for cantor, choir, and organ in a dignified and tasteful manner according to the music of the surrounding culture.

Binder was a leader who encouraged many synagogue music composers (Fromm, Schalit, and Pikett). *Nusach* was certainly his credo. He championed the incorporation of *nusach* into Reform synagogue music as a composer, music director, writer, and teacher. For him the modality of Israeli/Palestinian music contained a freshness not found in western music. Sometimes these Israeli/Palestinian modes were similar to the Jewish prayer modes, *nusach*, and other times they were different. The developing Mediterranean school of newly arrived European composers in Israel (Ben-Haim and Lavry) used modal and metrically free melodic passages to distinguish their new Israeli music from European music. Likewise the Russian composers of the Society for Jewish Folk Music (Engel, Achron, and Milner) developed an artistry using similar musical techniques as an expression of their Jewish past and creativity. At the same time, Binder sought to bring artistic creativity and integrity to the synagogue based on tradition in an effort to create a religious experience and make Jewish prayer relevant in his new homeland, America.

Binder encouraged noted and aspiring Jewish composers of the day to devote their energies to the synagogue in addition to the concert hall and Broadway. David Putterman, cantor and music director of Park Avenue Synagogue, had successfully commissioned leading composers of the day to write for the synagogue (Bernstein, Castelnuevo Tedesco, Diamond, Milhaud).

Synagogue composers, cantors, and scholars chose to devote a considerable part of their efforts to new compositions for the synagogue. Over many years considerable effort was devoted not only to composing music but also to teaching and writing about Jewish music. The Jewish Music

Forum (1939–1962), modeled in part on the St. Petersburg Folk Music Society, discussed many musical and liturgical issues and gave impetus to a range of musical activity from the gathering of composers for discussion to conferences, concerts, and compositions. This organization fueled the impetus of American cantorial schools such as the School of Sacred Music at Hebrew Union College–Jewish Institute of Religion in 1948, the Cantor's Institute at the Jewish Theological Seminary in 1950, and Yeshiva University's program in 1954. In 1963 the Jewish Music Forum became the Jewish Liturgical Music Society of America; its goal was to find strategies to create a new form of Jewish liturgical music that was distinct from the prior century.

Artistry in synagogue music developed in new ways. Ernest Bloch (1880–1959), a well-known American composer, premiered his *Avodath ha-Kodesh* [Sacred Service] in 1933 for cantor, choir, orchestra, and narrator, which received much acclaim and elevated this work of Jewish liturgy to the status of an oratorio. Towards the middle of the twentieth century two composers, Max Helfman (1901–1963) and Max Janowski (1912–1991), wrote compositions that have become standards for the high holidays: Helfman's *Sh'ma Koleinu* and Janowski's *Avinu Malkeinu*. During the second half of the twentieth century, musical tastes preferred more accessible music. Composers such as Michael Isaacson draw from a variety of musical styles, both classical and contemporary, for their synagogue compositions. He and others also draw from folk, popular, and Israeli style songs. Cantors in Reform synagogues today use the diverse musical compositions of the last 150 years to bring musical variety to their congregations.

Reform, Conservative, and Orthodox Synagogues

The three major denominations of American Judaism, Reform, Conservative, and Orthodox, deal with similar concerns with respect to new music in the synagogue. At issue are the role of the cantor as prayer facilitator and congregational involvement. The European history of the rhythmically precise central European and the rhythmically free eastern European traditions have been combined in varying practices in American congregations. Where Reform synagogues were once the source of artistic innovations, the trend has diminished in favor of participatory services. Trained cantors and some congregants prefer to use music that draws from the rich musical history of the Jewish tradition. Other congregants want a more accessible musical service that facilitates their participation in an idiom they

prefer. Music within this sphere may draw from the Jewish tradition including the use of Hasidic and Israeli melodies, but folk and popular styles are predominant. Debbie Friedman is representative. As an American baby boomer she created new music for synagogues in summer camps in the 1970s; the music caught on quickly and has become a staple of repertoire in Reform synagogues.

The dynamics of the use of music in Conservative synagogues is similar. Traditional melodies may be more commonly heard in Conservative synagogues, but these melodies are less than one hundred years old. Abraham Goldfarb (1879–1956) arrived in the United States in 1893 from Poland and studied at the Jewish Theological Seminary. He produced many books and pamphlets of synagogue melodies that are regularly sung today in synagogues and at home rituals. The *havurah* movement began in the 1970s and sought to empower laity to participate in services and further their education. The result has been an increase in congregational involvement throughout a service. The cantor often functions as an educator and facilitator for congregational participation. But, particularly on the high holidays and for special events, the rich legacy of liturgical music can be heard combining the artistry of cantorial recitatives, taken from or inspired by the golden age of the cantorate, compositions based on the traditional use of prayer modes, and liturgical chants. Volunteer and professional choirs also participate.

Within Orthodox synagogues music serves a more functional purpose. A paid professional cantor is rare in these synagogues, but much more common in Reform and Conservative synagogues. The role of the prayer leader in an Orthodox synagogue is that of *baal tefilah* [prayer leader without melodic embellishment] and vocal embellishments are kept to a minimum. Congregational involvement is interspersed throughout the service. Like the other movements, traditional melodies are more commonly heard on the high holidays. In many Orthodox synagogues a *hazzan* may be employed only during the holidays, and on the other days of the year a congregant serves in this role. Orthodox congregations differ in their use of *nusach*. Some prefer the use of Israeli melodies or tunes from songs popular in the community for the highlighted portions of the prayer such as the *kedusha* in the Sabbath morning service.

Folk and Popular

In the modern period, folk and popular music overlap in interesting ways. Both Ashkenazi and Sephardic Jews have

venerable folk traditions. Major categories within Ashkenazi folk music include Yiddish songs, *klezmer* music, and Hasidic *niggunim* [wordless songs]. In the Sephardic tradition, Judeo-Spanish (Ladino) songs and *piyyutim* [religious poems] are important categories. In the second half of the twentieth century and into the twenty-first century, performers have collected, studied, and taken these Jewish folk traditions into new performance arenas.

Ashkenazi folk songs of central and eastern Europe were part of Jewish life-cycle events and joyous holiday celebrations in the home. Many songs were in Yiddish, the spoken language of most Ashkenazi Jews. Their topics range from religious to secular themes, and many Yiddish songs originated in the Yiddish theater. In America, Jews who maintained an allegiance to a secular Yiddish culture particularly emphasized the preservation of this musical tradition. *Klezmer* (the Yiddish word derives from the Hebrew term for a musical instrument) refers to the instrumental music including accompaniments to Yiddish songs in the theater; *klezmer* music was also heard at Jewish weddings, bar and bat mitzvahs, and other life-cycle events. Many *klezmer* styles derive from eastern European folk traditions. Significant innovation developed with the *klezmer* revival in America, which began in the 1970s and continued in the following decades to combine a variety of musical styles.

The traditions of Sephardic Jews have retained many aspects of medieval Spanish and Portuguese culture. This synthesis of Jewish and Spanish cultures has continued since the 1492 expulsion of Spanish Jews, although the amount of preservation versus new influence has varied in different times and places. The Spanish tradition has been ongoing for Jews in Morocco, and Jews in Turkey and Greece have adopted some local Middle Eastern influences. Some historians hold that the venerable musical forms of these Sephardic Jews, namely the *ballad* and *romancero*, were time-honored traditions, untouched by new cultural influence and thus faithfully transmitted. Modern scholars, however, have been unable to validate this claim. Nevertheless, Judeo-Spanish music has deep historic roots and, like other forms of Jewish music, is both perpetuated and innovatively revitalized by modern performers. Although Sephardic Jews make up less than 10 percent of the Jewish population in America, Judeo-Spanish songs are common in Jewish musical performances.

The practice of singing *piyyutim* is an important part of religious life. This practice started in the sixth century and has continued. In the past two hundred years Sephardic and

Mizrachi (Middle Eastern) communities have renewed this tradition in North Africa, Turkey, Syria, and Iraq. These texts are sung, some with elaborate melodies, on the Sabbath in the synagogue between the reading of Torah portions or at home as part of the festive Sabbath meal. They are also sung at life-cycle events such as bar and bas mitzvahs, weddings, and other celebrations. Mizrachi communities in America actively sing *piyyutim*.

Another Jewish folk music genre during the twentieth century was connected to Zionism and building a Jewish homeland in the land of Israel. These songs were sung in a variety of languages including Yiddish, Judeo-Spanish, Russian, Polish, English, Arabic, and Hebrew. Shortly after the founding of the state of Israel in 1948, traditional Zionist songs and new Israeli compositions became popular in North American Jewish life in synagogues, classrooms, and at social events and camps for youngsters. Popular music has grown significantly in Israel with rock and the incorporation of Mizrachi as well as a variety of Middle Eastern styles; Israeli music had less impact on American Jewish culture toward the end of the twentieth century compared to its more influential period in the 1950s through 1970s.

Music in Jewish life has grown in diversity. Responding and reacting to hope and challenges of life in America Jewish music is an apt expression of this experience. Jewish Americans, whether born in America or immigrants, have made a lasting impact in classical and popular music. They are all accepted into the American mainstream and have, at times, drawn from their Jewish heritage.

Music: Roman Catholic

Roman Catholic music usually refers to liturgical music, strictly speaking. Roman Catholic music is understood as the ritual music that is employed in the Roman Catholic liturgy, sometimes referred to as *sacred music*, *church music*, or *worship music*.

The official documents of the Roman Catholic Church on liturgical music have established certain norms to guide the practice of music in the liturgy. The purpose of liturgical music is to enhance the liturgical celebration: to aid in the proclamation of the Word of God, to help form the worshipping community, and to be one of the main vehicles whereby the active and full participation of the people is brought about. Liturgical music should also possess a humanly attractive aesthetic character.

The practice of liturgical music in the twentieth and early twenty-first centuries in the United States can be described as the attempt by the ecclesiastical and musical leadership to implement the norms put forth in the official documents. This is equally true for Canada but less so for Mexico. Americans and Canadians sing many of same hymns and service music. The most common hymnals, such as *Worship, Gather, Glory and Praise*, and *Journey Songs*, can be found on both sides of the U.S.-Canadian border. Mexico more recently has been developing its own repertoire of liturgical music but with differences that result from language and the rate of implementation of the liturgical reforms.

Liturgical Music in North America before the Second Vatican Council

Liturgical music at the beginning of the twentieth century did not look very different from that of the previous century.

The texts of the music were in Latin, and they continued to act as a layer over the prayers of the Mass that were recited silently by the priest. The distinction between High Mass (*missa cantata*) and Low Mass (*missa recitata*) was still in place. In the case of the High Mass, both the Mass Ordinary (unchanging texts) and the Propers (changing texts) were sung by a choir or soloist. Usually, there was no singing in a Low Mass, although later, under the growing influence of the liturgical movement, the practice of singing hymns in the vernacular was allowed. This developed into what became known as the four-hymn Low Mass in which it was permitted to sing vernacular hymns at those times when the music would have not covered the words of the priest, that is, the entrance, preparation of gifts, Communion, and recessional.

For the most part, the direction of music during the early part of the twentieth century was looking to the past. The concern of the professional church musician was not matters of enculturation (that is, the embedding of the liturgy in the local culture so that eventually it grows from this culture itself), active participation of the assembly, or creativity but, rather, the maintaining of the musical treasury of the Church, which was the chant and polyphonic repertoire of the music of the thirteenth and sixteenth centuries.

Nevertheless, the beginning of the twentieth century was a defining moment in the liturgical and musical life of Catholics especially in Europe and North America (United States and Canada). Real change began with the election of Giuseppe Sarto as Pope Pius X, often called the father of the modern liturgical movement. Pius X had a great interest in church music, and he embraced the renewal of Gregorian chant promoted by the monks and scholars of the monastery of Solesmes. The Solesmes method of singing chant is based on the idea that there is one chant tradition that was lost and can now be recovered through the study of manuscripts. The monks made corrections to what they found in the manuscripts, and believed they did so in the spirit of the tradition. Because Pius X embraced this method, it became almost universally accepted as the way to sing Gregorian chant. Music schools, choir directors, and elementary schools attempted to promote this style of singing of liturgical chant.

Pius X's *Tra le sollecitudini* (1903) (TLS) is the foundational document of the twentieth-century liturgical movement. In it, he promoted the singing of chant and stressed the importance of the active participation of the assembly in the liturgy with the hope that more people would receive Holy Communion. With TLS, the highest authority in the Church had embraced the importance of the liturgical

community, the role of music in the ritual, and liturgy as the primary source of true Christian spirituality.

The document set in motion other documents issued by his successors in the papacy. Pius XI issued *Divini Cultus Sanctitatem* (1928), which basically affirmed what Pius X had begun and reiterated what was widely accepted, namely, that the way to promote active participation in the liturgy is to teach the congregations to sing Gregorian chant. This remained the ideal of participation in the liturgy for most of the first half of the twentieth century. Even in parishes where the chant was poorly rendered, the hope was to learn to sing the chant well. Hymnals began to appear during this period. *St. Gregory's Hymnal* was especially popular and had considerable influence on the music of Catholic liturgy and devotion.

Much of the interest in the liturgy in the first half of the twentieth century logically led to what is truly the Magna Carta of the liturgical movement, the encyclical of Pius XII, *Mediator Dei* (1947) (MD). This was followed by his *Musicae Sacrae Disciplina* (1955) (MSD).

MD's importance lies in the acceptance of the liturgical movement as a legitimate and worthy part of the mission of the Church. It affirmed the value of liturgical music as understood by previous documents and was more favorable to modern music and vernacular singing.

MSD is the most complete statement on church music before the Second Vatican Council. The norms set forth by MSD remained the goals of both the parish musician and music publishers until *The Constitution of the Sacred Liturgy* (1963).

In the years immediately before Pope John XXIII called the council, there was an increased awareness of the importance of music in the liturgy, that the music must be integrated into the ritual itself, and that the Church should be open to different styles of music both choral and instrumental. At the same time, there was a growing discontent between musicians and liturgists. Some of the conflict developed because it was becoming more obvious that the three criteria for liturgical music that Pius X had put forth (holiness, goodness of form, and universality) were only appropriate when applied to Gregorian chant. These three criteria were seen as less helpful in judging what piece of music is acceptable for Christian worship when applied to vernacular hymnody and culturally specific compositions. This conflict was present in the council in that some forces aimed at maintaining the primacy of the Church's treasury of sacred music—that is, chant and polyphony.

Closer to the time of the Second Vatican Council, the four-hymn Mass increasingly became the experience of the Sunday liturgy. Even in larger parishes and cathedrals, there was a combination of the High Mass and the Low Mass with hymns. Many of these hymns were taken from the Protestant traditions. These often were a type of German chorale that employed English texts. Hymns such as “Now thank We All Our God” and “Praise to the Lord” became well known. Vernacular hymnody also found its home in devotional rituals, especially the various Marian devotions with such hymns as “Hail, Holy Queen,” and “Immaculate Mary.” The Stations of the Cross were usually accompanied with the English chant version of “Stabat Mater.” Most congregations at the Benediction of the Blessed Sacrament would combine the Latin “O Salutaris Hostia” and “Tantum Ergo” with “Holy God, We Praise Thy Name.”

The Second Vatican Council and After

In 1963, the council approved the document on the liturgy, *Sacrosanctum Concilium* (SC), which became the Church’s act of approval of the highest hopes of the liturgical pioneers of the nineteenth and twentieth centuries. By mandating recovery, restoration, and reform of the Church’s liturgy both in text and ceremony, the SC became the act that summarized all that went before. It called for a complete renewal of the church worship life theologically, spiritually, and ritually.

Chapter 6 of SC deals with music under the title of “Musica Sacra” and reaffirms the desire from Pius X to the time of the council that music be more fully integrated into the liturgy and that music be one of the primary ways in which full and active participation in the liturgy is possible. While giving preference to the use of Latin, SC also allowed for the development of liturgical music in the vernacular.

When the *Constitution* says that sacred music has a ministerial function in the liturgy, it goes a long way to resolving what had been a neuralgic issue throughout the twentieth century, namely, what is the primary end of the liturgy: the glorification of God or the sanctification of humanity? For those who maintained that the primary purpose of worship is the glorification of God, the use of the Latin repertoire and of sophisticated forms of music is justified and mandated. The council clarified the matter when it stated that the full and actual participation of all the worshippers is also of primary importance. Intelligibility and respect for local cultures are necessary for such participation.

The post-Second Vatican Council practice of liturgical music has been the object of much criticism, especially the

repertory of music itself. There is also criticism about the use of instruments such as the guitar as well as of the competence of some of the church musicians. These criticisms must be understood in context. In embracing the council’s liturgical reforms, the Church created a musical vacuum on the pastoral level as parishes moved from a Latin repertory to a vernacular one. There was an immediate need for music for the new liturgy, but, unlike the Anglican Church, the Roman Catholic Church had no tradition of service music in the vernacular. Immediately after the council a few composers created music for the Ordinary of the Mass so that it was possible to have a sung mass in the vernacular. Since there was no vernacular music for the Propers of the Mass, parishes continued the practice of singing English hymns such as Martin Luther’s “A Mighty Fortress Is Our God,” “Praise to the Lord,” or “Praise God from Whom All Blessings Flow” in place of the designated introit and communion antiphons.

The hymnody of the Methodist Charles Wesley was particularly attractive because his Eucharistic theology has a strong Catholic flavor. Wesley wrote some of the best-known Advent, Christmas, and Easter hymns. The compositions of certain music groups such as the Dameans and the St. Louis Jesuits were very popular. The latter group especially maintained a very close contact to the biblical texts themselves. The psalms settings by Joseph Gelineau, S.J., became very well known and could be rendered by most congregations. Richard Proulx offered worthy settings of the texts of the Mass in the early years after the council. Another major composer of this period after the council was Lucien Deiss. His acclamations and his modern type of chanting that often has a processional quality fit the new liturgy well.

The document that has had the most influence on Catholic Church music after the council was *Musicam Sacram* (1967) (MS). MS makes the significant point that the holiness of liturgical music comes from the degree of integration with the liturgical rites and texts. Music is sacred not simply because of its style but because it facilitates a particular part of the ritual and is integrated into the text. This is true whatever the style of music may be. The theology, norms, and pastoral observations of MS set the agenda for Catholic Church music and musicians for the next several years.

The documents referred to thus far were directed to all the churches of the Roman rite. Two documents from the U.S. Bishops’ Conference were published to deal with some of the issues of liturgical music in United States: *Music in Catholic Worship* (1972) and *Liturgical Music Today* (1982).

Music in Catholic Worship was revised and reissued in 1982. The purpose of these documents was to adapt the more general norms of the Church to the U.S. scene. For instance, the first edition of *The General Instruction on the Roman Missal* (GIRM) had appeared in 1969, and these documents were written in the light of this *General Instruction*. Both documents have a strong pastoral tone because the issues involved were more practical than theoretical in nature. These documents indicate those liturgical texts that because of their importance should be taken by the congregation and begin with the fundamental theological principle that the Roman liturgy is assembly based. The rest flows from that. By this time the notion that there are texts that are ordinary and others that belong to the Propers no longer has much meaning. Each sung text must be understood in terms of its function in the whole liturgical celebration.

These two documents have had an enormous influence on the practice of the liturgical music in the United States and Canada. Influenced by these documents, parishes rebuilt their choirs if they had disbanded them after the Vatican Council. Such documents make it clear that the choir's purpose is to lead the congregation because it is part of the congregation. The choir can enhance the aesthetic quality of the liturgy by singing at those times appropriate to the liturgy. This may be before and after the liturgy, during the procession of gifts and after Communion. Certain composers such as Alexander Peloquin provided music for both choir and congregation. Often that meant that the refrains were composed in an accessible style so the congregations could sing them but the verses were in more complicated forms more engaging for the members of the choirs. Most parishes strove to follow the principles laid down in *Music in Catholic Worship*.

In the aftermath of the council Fr. Virgil Funk founded the National Association of Pastoral Musicians (NPM), which is an organization of musicians, choir directors, composers, and publishers. NPM is the chief instrument in the United States for promoting liturgical and musical education through conferences and publications and has enormous influence in bringing about communication among pastoral music ministers, showcasing liturgical compositions, and bringing about greater musical literacy. NPM continues to be the primary instrument for the enrichment of the ordinary parish music minister.

The main liturgical music publishers since the council are GIA Publications located in Chicago; Oregon Catholic Press (OCP) located in Portland, Oregon; and World Library

Publications located in Franklin Park, Illinois. These publishers provide a great deal of music education through their seminars, workshops, special reading sessions, and training programs.

Roman Catholic Church Music at the Beginning of the Twenty-First Century

The state of Roman Catholic music forty-five years after the Vatican Council's publication of SC is marked by the great achievement in restoring to the congregation its proper role in the liturgy as the primary liturgical symbol. Most Roman Catholics in the United States accept that full and active participation is to be the characteristic of the assembly at prayer. The training of music ministers, the activity of composers, the expanded repertoire of contemporary church music, the greater intelligibility in the liturgy, the admittance of cultural plurality especially in song are all positive signs that the movement furthered by Vatican II continues.

There are still issues to be resolved, and there are challenges ahead, including the following: (1) There are still differences of opinion between those who find in the council documents trajectories for enculturation, creativity, and flexibility and those who interpret the same documents as justifying their desire for greater liturgical uniformity, the preservation of the treasury of sacred music, and the greater emphasis on interior participation. The main problem is that the Mass settings of the past, especially those that could only be rendered by a trained choir, do not fit well into the structure of the reformed liturgy. The choice to sing or not to sing Gregorian chant and Renaissance polyphony is not simply a matter of taste. The reformed liturgy demands new music that will facilitate the participation of the assembly and that will integrate the liturgical texts themselves into the ritual. Most church composers have responded to this demand and are conscious that they are composing for a contemporary liturgical structure. Also, there is now general agreement that there are some places in the liturgy where it is possible to sing pieces from the previous repertoire. Those who will not reconcile themselves to the use of contemporary music in the liturgy are pleased that Pope Benedict XVI has allowed a greater access to the pre-Vatican II Latin liturgy. This has created a parallel rite with its Latin chants for a group of Catholics who want to follow it.

(2) A challenge has arisen because of the new translation of most of the liturgical texts. The praying of liturgical texts in the vernacular is one of the ways in which the liturgy

finds a home in the local culture (enculturation). An important element in any form of enculturation is communication. Vernacular language is the tool for communication in different cultural contexts. Those who translated the present liturgical texts made an effort to speak in the language of the people. Their efforts were judged to be a mixed success. For English-speaking countries the task of translation—that is, rendering the texts communicable—was entrusted to a group called the International Committee on English in the Liturgy (ICEL). ICEL was fully occupied with a revision of the original English translation when the Vatican intervened and changed the direction of the translation process. Previous translators had followed the rule of translation called dynamic equivalence—that is, to translate according to the meaning of the Latin text. The Vatican opted for a direct form of translation from the Latin texts—that is, one that is more literal. This latter program of translation was set forth in the document *Liturgiam Authenticam* (LA) (2001). Some of these newly translated texts have appeared, but there is no date for implementation yet. Composers who want to keep their works available for use in the liturgy will have to rework them according to the principles of LA. Composers such as Dan Schutte, Michael Joncas, and Marty Haugen have already revised their more popular compositions. This is especially true of the texts of the Mass Ordinary, which are frequently used, such as the widely popular “Mass of Creation” by Marty Haugen.

(3) Related to the issue of liturgical texts and translations is what is called “multicultural liturgy.” In pluralistic and mobile countries such as the United States and Canada, various ethnic groups with their cultural differences and languages make up the worshipping assemblies. The ideal of a Catholic liturgy is that all groups can worship together. Multicultural liturgies have developed from this conviction. This usually means using various languages throughout the liturgy, such as English, Spanish, and Vietnamese. For the occasional liturgy this seems to be a successful solution. But the various groups often prefer to have the liturgy in their own language as the regular Sunday fare. Perforce, the larger assembly of the parish is broken into several communities. Composers such as Bob Hurd; Rufino Zaragoza, O.F.M.; Jaime Cortez; and Peter Rubalcava use several languages in a single composition. Roman Catholic congregations are becoming accustomed to singing bilingual texts even in a liturgy that may be in one language such as Spanish or English.

As the U.S. Catholic Church becomes increasingly Hispanic, the composers are being called on to provide music

for the celebrations of Hispanic popular religion. Some Hispanic customs such as the Quinceañera (blessing for the girl when she reaches the age of fifteen) and certain marriage customs are already accepted as part of the liturgy. Presently, the immigrants are familiar with the music that is used. Some of these customs need to be further integrated into the liturgy and made more accessible to second-generation immigrants. Contemporary composers will need to provide music suitable for these customs.

In the 1960s and 1970s when the presence of Hispanics in the mainline churches of the United States became increasingly significant, the immigrants brought with them much of the music used in the liturgy, especially that in Spanish. One heard and can still hear such traditional hymns as “Adiós, Reina del Cielo, Madre de Salvador” (Farewell, O Queen of Heaven), “Bendigamos al Señor, que nos une en Caridad” (Let Us Bless the Lord), and “Perdona a Tu Pueblo, Señor, Perdona Tu Pueblo, Perdonale, Señor” (Forgive Us, Your People). Some music came from Mexico. With the publication and revision of the hymnal *Flor y Canto*, the Spanish hymn repertory was broadened. Both Hispanic and non-Hispanic composers began to write bilingual service music for the liturgy. Hurd was an initiator of this type of composition, and many have followed his example. Now there is very little of borrowing of music from Latin American countries, and the emphasis is on U.S. Hispanics creating their own repertory of liturgical music. Most English hymnals and disposable monthly missals/hymnals contain a selection of songs in Spanish as well as bilingual ones.

(4) The direction and agenda of Roman Catholic music in the United States in the future has been recently set by the Roman Catholic Bishops Conference with the publication of *Sing to the Lord: Music in Divine Worship* (STL), which appeared in November 2007. STL is a revision of the previous document put forward by the bishops, *Music in Catholic Worship*. STL does not really add anything special to the previous document but does define more clearly the criteria for good liturgical music: the three judgments (liturgical, musical, and pastoral). It is more a summary of previous legislation and pastoral suggestions than projections for the future. It can serve as a program of review for the music ministry in any parish. So although there is little new here, STL provides more detail about the Eucharistic liturgy and about specific celebrations of the sacraments, especially marriage. There are several calls in the document for pastoral ministers and religious leaders to exercise prudence, pastoral sensitivity, sound judgment, and flexibility. Even when STL

asks congregations to learn simple Latin chants, it asks that the teaching be done with sensitivity and patience. In general the document has a feel of openness, and even when it calls for the observance of the rubrics and norms, it asks that pastoral concern be a priority.

Music: White Gospel

Gospel music is one of the few American phenomena for which African American identity is widely regarded as normative. For many in the twenty-first century, *black gospel* is redundant; *gospel* signals a distinctly African American form of music.

Although no twentieth- or twenty-first-century varieties of gospel music would have arisen without the contributions of African Americans, gospel music is a wide river, feeding and fed by numerous tributaries of localized innovation. To speak of “white gospel” is to follow one of many possible routes in the stream, paying particular attention to the contributions and tastes of white European Americans. The task is not easy; white Protestants, like all dominant groups, have had the privilege of not attending to their whiteness, nor have they cared on most occasions to acknowledge their debt to nonwhite cultures. However, in the late twentieth and early twenty-first centuries, scholars of sacred music—and a growing number of gospel

artists—forthrightly have attended to the “white” characteristics of many gospel subcultures.

Colonial Precursors

When European Protestants established their first settlements along North America’s eastern seaboard, they brought their musical practices with them. Most of these groups practiced congregational singing—most commonly the singing of the psalms. A cappella psalm-singing provided some convenient parameters for Christians who fretted over the potentially deleterious effects of music: lyrics were strictly biblical, and the only instruments were human voices. Furthermore, the “lining out” of psalms—the song leaders recited or sang a few lines, congregants repeated the lines in song—helped leaders maintain control and order.

Although printed psalters were in relative abundance in the early colonial period (the first book printed in America was the Bay Psalm Book, in 1640), lining out psalms became more popular as settlers moved deeper into the continent in the seventeenth and early eighteenth centuries—away from the European population centers and easy access to print culture. This shift created a crisis in church music. While at one time church leaders could assume that their congregants possessed either a modicum of musical literacy or familiarity with the handful of tunes employed in the psalm-singing, ministers of the early eighteenth century lamented the dearth of musical know-how among churchgoers. The cacophony produced by ill-trained congregations (often led by ill-trained song leaders) precipitated a spate of pedagogical activity among ministers intent on refining psalm-singing.

One innovation was the singing school. Typically employing one of the instructional texts published at the time—such as Rev. Thomas Walter’s *The Grounds and Rules of Music* (1721)—the singing schools taught congregants the rudiments of musical notation. Singing schools appeared all over the colonies throughout the eighteenth century’s middle decades. Occurring as they did in societies that rarely made hard distinctions between religious and secular life, the schools, meeting in taverns and meeting houses alike, popularized singing generally, not simply sacred singing. The schools also coincided with the widespread mid-eighteenth-century revivals, which often employed the innovative work of British songwriters Isaac Watts and Charles Wesley. In the early decades of the century, Watts’s variations on the psalms and self-authored hymns of “human composure” undermined the exclusive biblicism and stylistic rigidity of conventional psalmody. Wesley—influenced like his brother

John by the music-loving Moravians of central Europe—further challenged this tradition, incorporating secular melodies and self-penned lyrics that expressed an intensely personal pietism. Through the endorsement of revivalists like George Whitefield, works such as Watts’s “When I Survey The Wondrous Cross” and Wesley’s “Jesus, Lover of My Soul” gained popularity in an evangelical American religious milieu—one that valued personal conversion and expressiveness. If the singing schools helped to improve the musical skills and literacy of European Americans, the changes in colonial life—particularly Protestant life—ensured that the lessons would not simply be applied to traditional sacred music.

Frontier Revivals and Shape-Notes

By the end of the eighteenth century, the hymns of Wesley and Watts had become standards for many evangelicals. Their work remained popular as another wave of revivals spread across the nation during the early nineteenth century—this one crashing deep into trans-Appalachia and similarly remote areas due to the efforts of Baptist preachers, perambulating Methodists ministers, and self-appointed “lay preachers” who organized frontier camp meetings. However, still-prevalent musical illiteracy, limited access to songbooks, and the relatively broad demographic of camp meetings yielded alterations in sacred music. Joint singing was only possible on the basis of a common knowledge base among singers. Widely recognized folk melodies thus became the foundation of revival music. Moreover, easily memorized lyrics—be they repetitive choruses written in the “common tongue” or truncated versions of Wesley and Watts hymns—made it possible for singers to possess (or to learn quickly) a shared storehouse of songs.

“Great Revival” music was largely an oral/aural affair; no official revival hymnbook existed. However, as revivalistic religion moved from transitory camp meetings to more permanent denominations and churches, and as the nineteenth-century expansion of public education made basic literacy more common, the time was right for the publication of revival songs. But publishers faced a challenge: How could one render the music in an intelligible manner for a people with little or no knowledge of traditional musical notation?

The answer had been provided at the end of the eighteenth century by publishers William Smith and William Little. In their booklet *The Easy Instructor* (1798), Smith and Little introduced what became known as the shape-note

system of musical notation. The system retained the traditional scale and staff (thus the musically literate could read it), but the notes had different shapes according to their position on the scale. Each shape also corresponded with a syllable that marked the note’s position (for example, triangles equaled *fa*, which occurred at the first and fourth interval). Readers of shape-note music needed to know only the four shapes, syllables, and their place on the scale.

Acclaim for the shape-note system began about two decades after *The Easy Instructor* first appeared. The system achieved widespread popularity, mainly in the rural South, during the middle decades of the century—despite protests from devotees of traditional notation, who regarded shape-notes as a capitulation to the masses’ musical ignorance. Of the many popular shape-note collections of the period, Benjamin Franklin White’s *Sacred Harp* (1844) stood the test of time like no other. Although *Sacred Harp*’s continued (if limited) usage in the twenty-first-century South makes Smith’s and Little’s four-shape system the most well known, a seven-shape variation of the system—introduced in Jesse Aikin’s *The Christian Minstrel* (1846)—also garnered many nineteenth- and early twentieth-century users.

The proliferation of shape-note collections occurred alongside the growth of commercial singing schools—schools usually run by the songbooks’ publishers. While communities often had fixed singing schools, many publishers took to the roads like circuit-riding preachers (or traveling salesmen)—establishing ten-day schools throughout the countryside, teaching from and peddling their publications. The tripartite, mutually reinforcing connection among a publisher, his songbook, and his singing school would be a key characteristic of the postbellum gospel music industry. Singers’ reputability became increasingly attached to the attendance of particular singing schools, and concomitantly to the affiliated publishers and songbooks.

Postbellum Gospel Music

While the nineteenth-century rural South was a significant incubator for evangelical Protestant music, it was not the exclusive locus of evangelical activity and innovation. Especially in the decades preceding the Civil War, when industrial expansion and inter- and intranational migration produced urban population booms, evangelical activity in the urban North helped define gospel music.

The best-known postbellum urban ministry was that of Dwight Moody (1837–1899), who worked closely with Chicago’s YMCA (Young Men’s Christian Association) and

whose concerns included social reform and the conversion of the urban masses. While Moody was attending an Indianapolis YMCA convention, he met musician Ira Sankey (1840–1908). Sankey impressed Moody with his ability to rouse a convention audience through song. Having sensed the inspirational power of quality music (and having despaired over the lack of quality music in his gatherings), Moody asked Sankey to join his ministry. The pair's evangelistic journey to England in 1873 marked a new phase in urban revivalism. British minister A. A. Rees's quip during the Moody-Sankey trip to England that Sankey was "singing the gospel" is often cited as the first attachment of the term *gospel* to religious music. While it is impossible to trace exactly the origin of the term *gospel music*, Sankey certainly played a crucial role in proliferating what he termed "gospel songs"—compositions such as "The Ninety and Nine" (Clephane and Sankey, 1868) and "O Christ, What Burdens Bow Thy Head" (Cousin, 1876, and Sankey, ca. 1886) that highlighted the salvific act of Christ's death and resurrection and the need for personal conversion.

Among Sankey's most important contributions to gospel music were his compilations. His numerous music volumes—particularly the six-volume *Gospel Hymns and Sacred Songs* (1875–1891)—exposed millions to the work of many lyricists and tunesmiths. Largely due to Sankey's efforts, interest in gospel songs and the number of gospel songwriters exploded during the century's final decades. Philip Bliss (1838–1876) and Fanny Crosby (1820–1915), who published 6,000 songs and likely wrote 2,000 more, were among the era's most prolific authors.

The preacher-musician partnership that Moody and Sankey modeled had a lasting impact. Preachers desirous of reaching the masses recognized the importance of music to a thriving ministry. Almost without exception, popular evangelists near the turn of the century worked closely with music ministers. The temperament of individuals and the nature of specific ministries dictated the contribution of each musician. But a musician of some variety was regarded as a necessary ingredient for successful evangelism.

Interracial Exchanges and Encounters

While whites dominated the publication of sacred Protestant songs from 1620 to the end of the nineteenth century, they were certainly not the only producers and consumers of sacred music. People of numerous racial identities often shared a soundscape in America, despite efforts to limit interracial contact. While the course of crossracial influence

is impossible to chart precisely, scholars agree that sacred musics were not simply mutually exclusive developments of the white or the black community.

The late eighteenth- and early nineteenth-century revivals were particularly significant sites of interracial encounter. Many of the camp meetings were relatively integrated affairs, though many partitioned blacks and whites by conducting separate services on the same campground. Especially in the former case—and to some extent in the latter—whites, blacks, and occasionally Native Americans heard the musical stylings of racial others. The rhythmic play of African American singing contrasted with the even-metered songs of Wesley and Watts, though many African Americans were moved by the English songwriters' words and adapted versions of them in African American worship. The white fascination with African American singing—though it birthed stereotypical conceptions of blacks as innately musical and especially prone to melodious revivalistic enthusiasm—helped white American Protestant songwriters develop their craft in a direction other than European hymnody. Along with the Celtic-tinged folk music developing in southern Appalachia, African American music gave white evangelicals resources from which they could develop a music consonant with revival energy.

Especially in the South, restrictions on black worship and black-white contact tightened as the Civil War approached. However, the postbellum years witnessed a resurgence of interracial exchange throughout the nation and a growing appreciation for the contributions of African Americans. By century's end, an all-black singing group from Fisk University in Nashville was performing before packed houses everywhere. With unparalleled success, the Fisk Jubilee Singers exposed the world to "Negro spirituals" that had been cultivated on southern plantations. At the same time, the ensemble's tight harmonies and formal stage presentation demonstrated the influence of—and necessary capitulations to—Euro-American norms.

Perhaps the most interesting testament to the cross-pollination of black and white sacred music is the trajectory of the many songs penned near the turn of the century. For example, "Leaning On the Everlasting Arms" (Hoffman and Showalter, 1887) and "His Eye Is On the Sparrow" (Gabriel and Martin, 1905), both penned by white duos and under the arrangement of African American musicians, would assume canonical status in black churches. Although whites still dominated the world of music publishing, African American songwriters slowly began to break into the market. Black minister Charles Albert Tindley's "We'll

Understand It Better By and By” (1905) would become a gospel classic in black and white gospel circles.

Institutional and culturally embedded racism did and would ever circumscribe the possibility of black-white musical cooperation. However, evangelical Protestant music in America entered the twentieth century as the product of numerous influences—a fact that would become more evident with the early twentieth-century birth and spread of Pentecostalism among whites and blacks. Even more demonstrative in their religious expression than their Holiness predecessors, Pentecostals also harbored fewer reservations about highly rhythmic, emotional music. Seeing music as a means by which believers might express the infusion of the Holy Spirit in their lives and by which churches might attract potential believers, Pentecostals less apologetically incorporated modern instrumentation and jazzy arrangements in worship. While internecine quarrels would arise in Pentecostal circles over how much accommodation to popular tastes was too much, Pentecostals would become significant producers and consumers of gospel music.

The Gospel Music Industry

At the turn of the century, James Vaughan (1864–1941) began laying much of the groundwork for the modern gospel music industry in Cumberland, Tennessee—a region that became hot with Pentecostal fire as the twentieth century progressed. Inspired as a young man by attending singing schools sponsored by nineteenth-century music companies, Vaughan published his first compositions and led his first singing schools in the 1890s. His reputation as an excellent teacher coupled with the modest success of his self-published shape-note collection *Gospel Chimes* (1900) led to the creation of the James D. Vaughan Music Company in 1902.

Vaughan was a relentless publisher. For many decades, his company produced at least one new songbook per year, which Vaughan marketed to, and through, singing schools. Vaughan’s greatest legacy, though, was his clever advertising. In 1910, Vaughan sponsored a traveling male singing quartet. Songbooks in tow, the Vaughan Quartet traveled to churches and singing conventions (annual community gatherings in which people sang in unison, typically from a specific company’s songbooks), advertising through performance. The tactic paid off well for Vaughan, who later hired several traveling quartets.

All-male quartets became standard personnel for many early twentieth-century music companies. Most notably, the Stamps-Baxter Music Company (est. 1927), which had

grown out of Vaughan’s company, copied the practice with immense success. Recognizing the advantage of hiring groups who had little incentive to break up, companies also hired family ensembles, whose lifelong careers performing with one another produced seemingly instinctive musical coherence. Vaughan and others tapped the burgeoning radio market in the 1920s, purchasing airspace for their quartets—a maneuver that greatly expanded groups’ listenership. During this time, the companies also established record labels and funded a handful of phonograph recordings of their groups.

They started as singing advertisements, but gospel musicians themselves became marketable objects due to their extensive in-person, radio, and recorded performances. As early as the Great Depression, the popularity of musical groups effected a gradual detachment between performers and publishers. Still requiring financial backing and access to business-owned airwaves, many groups entered into deals with extramusical companies. The foundational country-gospel family group the Carter Quartet joined and eventually became the Chuck Wagon Gang, whose sponsorship by Bewley Flour Mills earned them regular airtime—and sometimes required them to sing while a cook baked biscuits from Bewley flour to distribute to live audiences.

The Industry at Mid-Century

Not until after the Second World War did gospel musicians achieve nearly complete independence from music publishing companies. The growing tendency of musicians to write their own music or to contract directly with specific songwriters, and an expanding radio and television market, helped usher in the virtual end of publishing companies’ sponsorship of musicians.

Gospel musicians had several performance avenues available to them. Continuing the Moody-Sankey legacy, many entered into agreements with evangelists—some of whom traveled from town to town, but many of whom developed successful radio and television ministries. From the West Coast, evangelist Charles Fuller broadcast his *Old Fashioned Revival Hour*—complete with his popular Goose Creek Quartet—across the globe. Billy Graham hired a number of longtime regulars—the most long-lasting a baritone named George Beverly Shea—for his *Crusades*. Under secular sponsorship, a few artists had their own regional radio and television shows, such as the Statesmen Quartet’s Nabisco-sponsored television program (1953–1957). A clever group of entrepreneurs became successful organizers and promoters of massive, multiact concerts, primarily occurring in the South.

For example, the industrious bass singer J. D. Sumner (1924–1998) was instrumental in developing the National Quartet Convention. Premiering in Memphis in 1957, this annual showcase of gospel acts continues to gather in Louisville, Kentucky, in the twenty-first century.

While by no means sites of racial diversity, gospel stages (and more rarely, audiences) of the 1940s and early '50s were occasionally integrated; a few African American groups, such as the Golden Gate Quartet, toured with both the Statesmen and the equally popular Blackwood Brothers Quartet. However, the tumult over *Brown v. Board of Education* (1954) caused white gospel artists, fans, and promoters to draw increasingly impermeable racial boundaries around concerts.

At the same time, the boundaries separating white gospel music from other popular musical forms grew more fluid during these years. At a period when white gospel competed successfully with other genres—especially in the South and rural Midwest—gospel music informed and was shaped by broader musical trends. J. D. Sumner's 1955 purchase and remodeling of a Trailways coach for his Blackwood Brothers' concert travel marked the beginning of the music industry's "tour bus" era. Sumner, whose group later sang backup for Elvis Presley's Las Vegas act, significantly influenced the young Presley, as did the Statesmen's kinetic tenor Jake Hess. Presley and other secular acts regularly scored hits with gospel songs of African American and white composition.

Even more intimate was white gospel's relationship to country music. The two genres shared a primary fan demographic as well as a pool of musicians and songwriters. Familiarity sometimes bred tension. In the 1970s, the Oak Ridge Boys (formerly the gospel act the Oak Ridge Quartet) deliberately dove into the country market—a move that seemed like a betrayal of the genre to many in the gospel community, despite the Oaks' continued performance of gospel songs. Because the gospel genre was so defined by religious identity, such a move was tantamount to apostasy. Although not a new concern, the perception that a crossover act abandoned the gospel message for financial gain and popularity would haunt crossover artists, from J. D. Sumner to contemporary Christian sensation Amy Grant, for the rest of the century.

Christian Rock and "Southern Gospel"

Charges of selling out were not just aimed at musicians who transgressed the ostensible sacred/secular divide. In the late 1960s and early '70s, many Christian artists appropriated the sounds of rock and roll for sacred ends. Riffing off of a quip severally attributed to Martin Luther, the Wesleys, and

Salvation Army founder William Booth, Christian rocker Larry Norman's 1972 song "Why Should the Devil Have All the Good Music?" captured the spirit of the new style.

Although some white gospellers of the old order—among them J. D. Sumner, who spent the 1970s answering critics of his involvement in Presley's Las Vegas act—tentatively embraced Christian rock's experimentation, many were offended. In the minds of conservative evangelicals, Christian rock—or the more broad "Contemporary Christian Music" (CCM)—sacrificed too much for relevance; the music was raucous, its artists worrisomely unkempt. For a white gospel community that for some time had gotten away with implicit negative identity formation (particularly vis-à-vis black gospel), it took the similarly white, similarly evangelical, but stylistically divergent CCM to make white gospellers recognize and reflect upon their genre's makeup. During the 1970s, many CCM groups styled themselves as traditional acts. The term *southern gospel*, long a loose descriptor of predominantly white quartet music, became a more formal name for a Christian music subgenre. With the formation of the Southern Gospel Music Association in 1982—a deliberate break from the supposedly CCM-biased Gospel Music Association, which had been started by members of the gospel quartet industry in 1964—southern gospellers set themselves apart from other Christian musicians.

Despite the growingly nostalgic language, traditionalists were not immune to the changes illustrated and perpetuated by CCM. Quartets and family bands of the 1970s such as the Imperials and the Hinsons updated their wardrobes and experimented with fuller, more electronic instrumentation. Some artists seemed ill suited for either CCM or southern gospel. Husband and wife singer-songwriters Bill and Gloria Gaither (1936–, 1942–) proved a particularly difficult fit. Their Bill Gaither Trio had become popular on Billy Graham's stage, with performances that were at once mellow and grandiose. Even more popular were Gaither songs, which were malleable enough for adoption by groups of all varieties. The Gaither Vocal Band, formed in 1980, was a traditional all-male quartet, but one that self-consciously updated its image and electrified its sound. Sometimes called "inspirational" musicians, groups like the Hinsons and the Gaither ensembles illustrated the spectrum of possibility between tradition and innovation.

White Gospel into the Twenty-First Century

Traditional white gospel survived the 1980s, largely because of the proactivity of the Christian Right, a conservative

movement in which many gospel musicians and fans were involved directly and with which many more identified ideologically. But the rise of the CCM industry meant traditional gospellers had to share space in the evangelical marketplace as they previously had not done. Many traditional quartets and family groups remained popular attractions, but none could compete in album and ticket sales with big-name CCM stars.

In 1990, Bill Gaither reinvigorated southern gospel music almost single-handedly. At a time when many Americans' mainstream musical tastes leaned toward the raw (evidenced in Seattle's grunge movement) and also toward "old-timey" rural life (country music of the Garth Brooks rock-and-roll variety was exploding), Gaither's *Homecoming* concerts, videos, and albums outsold everything in the evangelical music market. Originating as a filmed tribute to aging southern gospel artists—the Gaither Vocal Band recorded an old gospel song with several still-living members of the groups from the 1950s—the *Homecomings* recreated the collective convention singing of the early century, at the same time featuring the music and musicians popular in white gospel's postwar days. Ninety-nine *Homecoming* videos and albums achieved at least gold-level sales; *Homecoming* concerts regularly outsold the concerts of popular secular acts.

The *Homecomings'* success in northern urban environs recalled the Moody-Sankey revivals of the nineteenth century. However, the twenty-first-century surge in interest in bluegrass and folk suggested that many Americans continued to be drawn to ostensibly rural, southern white music. Producer T-Bone Burnett's Grammy-winning *O Brother, Where Art Thou?* soundtrack (2000) was both the cause and effect of a twenty-first-century American return to rural culture. Burnett's album also (re)placed white and black rural musical forms in close proximity with one another. Gaither's projects occasionally made similarly integrative maneuvers, sharing performance space with black artists and ministers such as Jessy Dixon and T. D. Jakes. While black and white gospel were still working out their relationship to

one another in the first years of the twenty-first century, it became impossible for any open-eyed artist, fan, or scholar to pretend that race did not matter in every rendering of gospel music and its history.

N

Nation(s) of Islam

Throughout its history since emerging in the 1930s, the sectarian African American Muslim movement called the Nation of Islam has had a remarkable continuity in its major teachings. However, it has also produced a number of schisms led by charismatic leaders who had different ideas about the best path towards the future for African Americans. Some of the paths led toward orthodox Sunni Islam, while others led to different versions of the Nation of Islam or to some form of religious black nationalism.

Master Fard and the Origins of the Nation of Islam

The original Nation of Islam was established on July 4, 1930, in the Detroit ghetto called “Paradise Valley” by a peddler of sundry goods. While he sold his goods to the poor black migrants of Paradise Valley, often inquiring about their health and spiritual development, he also began telling them about the true religion of the “Asiatic black man” that would liberate black people from white oppression by enabling them to attain “true knowledge of self.” He used both the Christian Bible and the Holy Qur’an in his teaching at meetings, first in individual homes and then later in a rented hall called Temple No. 1.

This mysterious stranger, who referred to himself as Mr. Farrad Muhammad or sometimes as Mr. Wali Fard, W. D. Fard, Wallace D. Fard, and Mr. Fard, was considered to be a prophet by some of his followers. He later came to be recognized as the “Great Mahdi,” or “Savior,” who had come to bring a special message to the suffering blacks in the ghettos

of America. Although some believe that W. D. Fard was associated with Noble Drew Ali and the Moorish Science Temple and may have incorporated some ideas from that movement into his own teaching, the Nation of Islam generally denies any relationship between the two.

In the midst of the Great Depression, when recent black migrants from the South experienced considerable unemployment, Fard taught his followers about the deceptive character and temporary domination of “blue-eyed devils,” or white overlords. He also stressed the importance of attaining “knowledge of self” and “doing for self” as prerequisites for achieving black liberation. He instructed his followers that they were not Americans and therefore owed no allegiance to the American flag, which led many members of the Nation to refuse being drafted into the American military. Fard explained that he might look “white” or Caucasian but that he was actually an “Asiatic black man” who had come to bring a message of liberation to the “Lost-Found Nation in the Wilderness of North America.” He told the story of Yakub, a black mad scientist who had rebelled against Allah by creating the white race, a weak hybrid people who were permitted temporary dominance of the world for a period of 6,000 years. Whites had achieved their power and position through devious means and “tricknology.” They had perpetuated “devilish acts” against black people through slavery, brutality, and lynching and by using alcohol and drugs to weaken them. However, the original black people, he said, had a divine nature.

Several hundred years of slavery followed by continued racial discrimination and economic deprivation in America gave a powerful emotional resonance to Fard’s message. He

wrote two manuals for the movement: *The Secret Ritual of the Nation of Islam* is transmitted orally to members, and *Teaching for the Lost-Found Nation of Islam in a Mathematical Way* is written in symbolic language and requires special interpretation. Within three years, Fard had founded an effective organization with a temple that had its own worship style and rituals, as well as a University of Islam with a special curriculum made up largely of Fard's teaching. The "university" was essentially a combined elementary and secondary school, but for many followers, it was the first step toward cultural and psychological freedom. He also established the Muslim Girls' Training Class (MGT) to teach young women the principles of home economics and their proper role in the Nation of Islam. In 1933 he created the Fruit of Islam, a quasi-military organization of male Muslims who served as honor guards, ushers, and enforcers of internal discipline within the temples, as well as security agents for the Minister of Islam and other leaders. Members of the Fruit and the MGT learned how to frisk and search everyone entering a temple. Under Fard, members of the Fruit also learned to use firearms and techniques of self-defense. Later with Elijah Muhammad's ascension to leadership, the use of weapons was forbidden and the men had to learn martial arts, largely for self-defense. The change was due in part to increased scrutiny by the police and FBI.

The Rise of Elijah Muhammad

One of the earliest officers of the movement, Elijah Poole (later Elijah Karriem and then Elijah Muhammad) became Master Fard's most trusted lieutenant. Born on October 7, 1897, Elijah was the son of a rural Baptist minister and sharecropper and his wife from Sandersville, Georgia. When he was six, his family moved to Cordele, Georgia, where he attended school up to the third grade. At that point he had to stop his education in order to work in the fields and help the family's finances. At the age of fourteen, Elijah witnessed the public lynching of his good friend Albert Hamilton. Hamilton had been accused of raping a white girl, but before he could be tried in a court, he was taken from the local jail by an angry mob and hung from a tree. Then his body was shot 300 times. This lynching, and another just before he headed north, had a great impact on Elijah; he ordered a picture of a lynched black man in a tree to be placed in the front of every Nation of Islam temple when he became the head of the movement. The lynching also made him open to the racial doctrines of Fard's teaching when he encountered them in Detroit.

Elijah married Clara Evans of Cordele in 1919 and migrated to Detroit with other family members in 1923. At a dinner arranged by his wife, Elijah met Fard, and he converted to the Nation of Islam in 1931. Despite his third-grade education, Elijah's intelligence and devotion to Fard enabled him to rise rapidly through the ranks, and in 1933 Fard chose him to preside over the organization as Chief Minister of Islam. Fard began the practice of changing the surnames of his members, dropping their "slave" names and giving them Muslim ones. Hence, Elijah was called Karriem and then Muhammad. In a short period of time, Fard's Temple of Islam had attracted more than 8,000 members.

Master Fard Is Allah and Elijah Muhammad Is His Messenger

The first schism in the Nation's history was spawned over Elijah Muhammad's assumption of leadership when Fard mysteriously disappeared in 1934. Rivalries and factions broke into open hostilities in the struggle for the power to command the organization. Part of the controversy involved Elijah Muhammad's bold proclamation that Fard was Allah and that he himself was Allah's prophet or messenger. It was also during this period that Elijah published the Nation's first newspaper, *The Final Call to Islam*.

As a result of the factional rivalries and death threats, Elijah Muhammad fled Detroit, moving constantly back and forth by himself between Washington, D.C., and Chicago, while Clara Muhammad and their children stayed in the family's southside Chicago residence. Elijah was arrested on May 8, 1942, for failure to register for the draft and sentenced to serve three years at the Federal Correctional Institute in Milan, Michigan. Clara kept the fledgling movement together as Supreme Secretary of the Nation. Elijah was released from Milan on August 24, 1946.

Minister Malcolm X

In the same year that Elijah Muhammad was released from prison, Malcolm Little, a small-time petty thief, pimp, alcohol and drug addict, and street hustler known as "Detroit Red" and "Satan," entered the prison system in Massachusetts to serve a seven-year term for armed robbery. After his conversion to the Nation in prison and the total transformation of his character, Malcolm emerged as one of the most significant leaders of the movement. Through his indefatigable efforts and charismatic personality, he greatly expanded the empire of the Nation of Islam by adding twenty-seven

temples across the country to the seven that were in existence when he was released from prison in 1952.

Malcolm underwent the first of two conversion experiences when he converted to the Nation of Islam. At the Norfolk Prison Colony in Massachusetts in 1948, Malcolm described the powerful, jarring impact that the revelation of religious truth had upon him when his brother Reginald, a member of the Nation, told him that the white man was the devil. The chaos behind prison bars suddenly became a cosmos, an ordered reality that provided a rationale for the extreme poverty and tragedies his family had suffered and for all the years he had spent hustling and pimping. He began to straighten out his life and conform to Islam; he quit smoking and gambling, refused to eat pork in prison, and started the process of self-education. He spent long hours in the prison library, reading all of the books available and memorizing the dictionary. He sharpened his forensic skills by participating in debate classes. The total transformation of Malcolm Little into Malcolm X in prison is a story of the effectiveness of Elijah Muhammad's message to the black man. Following the tradition in the Nation, he replaced his slave surname Little with an X, which symbolized what he had been and had become: "Ex-Negro. Ex-Christian. Ex-slave."

The years between Malcolm's release from prison and his assassination, 1952 to 1965, mark the period of the greatest growth and influence of the Nation of Islam. After meeting Elijah Muhammad in 1952, he began organizing temples of the Nation of Islam in New York, Philadelphia, Boston, and Hartford in the Northeast, and in the South and on the West Coast as well. He founded the Nation's second newspaper, *Muhammad Speaks*, in the basement of his home and initiated the practice of requiring every male Muslim to sell an assigned quota of newspapers on the street as a recruiting and fund-raising device. He articulated the Nation of Islam's beliefs in racial separation. He rose rapidly through the ranks to become the minister of Boston Temple No. 11, which he had organized, and he was later rewarded with the post of minister of Temple No. 7 in Harlem, the largest and most prestigious temple in the Nation after the Chicago headquarters. Recognizing his talents and abilities, Elijah Muhammad also named him the National Representative of the Nation of Islam, second in rank to himself. Elijah had a special affection for Malcolm and considered him his "seventh son." Malcolm effectively carried the Nation's central message to black people to "know yourself" (have self-knowledge) and "do for self" (economic independence). Hundreds of grocery stores, bakeries, and other independent

businesses were set up to create a fledgling internal economic system. Under his lieutenancy, the Nation of Islam achieved a membership estimated at 500,000. But like other movements of this kind, the numbers involved were quite fluid, and the influence of the Nation of Islam refracted through the public charisma of Malcolm X greatly exceeded its actual numbers.

As an articulate public speaker, charismatic personality, and indefatigable organizer, Malcolm X expressed the pent-up anger, the frustration, the bitterness, and the rage of black people during the major phase of the civil rights period from 1955 to 1965. Malcolm's keen intellect, incisive wit, and ardent radicalism made him a formidable critic of American society, including of the civil rights movement. As a favorite media personality, he challenged Dr. Martin Luther King Jr.'s central notions of integration and nonviolence. Malcolm felt that what was at stake, more than the right to sit in a restaurant or even to vote, was the independence and integrity of black selfhood. His biting critique of the "so-called Negro" and his emphasis on the recovery of black identity and independence provided the intellectual foundations for the Black Power and black consciousness movements of the late 1960s and 1970s. In contrast to King's nonviolence, Malcolm urged his followers to defend themselves "by any means possible."

After leaving the Nation of Islam in 1964, Malcolm made the pilgrimage to Mecca, converting to Sunni Islam and taking the name El Hajj Malik El Shabazz. He established the Muslim Mosque Inc. and the Organization for Afro-American Unity. Malcolm was assassinated on February 21, 1965, at the Audubon Ballroom in upper Manhattan.

Transformation of Minds and Bodies in the Nation

The Nation of Islam is known for raising the consciousness of its followers through its emphasis upon self-knowledge and an affirmation of blackness. In addition, author Edward Curtis has used postmodern theory to emphasize the changes in the image and ethics of the body that members went through. Throughout U.S. history, the black body has been enslaved, lynched, beaten, mutilated, imprisoned, raped, and denigrated in numerous ways. This severe oppression has had an enormous impact upon black people, many of whom have had great difficulty in accepting their black skin and African features.

The outward physical appearance of men and women in the Nation changed, with men dressing in dark suits and bow

ties and women wearing long white dresses and covering their heads. Both genders also took part in military drills and precision marching. Members of the Nation incorporated martial arts into their disciplinary training. Elijah Muhammad also tried to influence the diet of members of the Nation through his 1972 book *How to Eat to Live*, instructing members about recommended and prohibited food. Above all, he pointed out that members should eat one meal per day to control their weight and to stay healthy. For Elijah and members of the Nation, the outward changes in physical appearance and acceptance of the black body were symbolic of the inward changes in their religious consciousness.

The Death of Elijah Muhammad and Schism in the Nation

After Malcolm X's death in 1965, his protégé Minister Louis X, renamed Farrakhan, took his place as the Minister of Temple No. 7 and as National Representative of the Nation of Islam, becoming second in command of the organization. Through his charismatic speaking ability, Minister Farrakhan rebuilt the membership of the Nation of Islam.

When Elijah Muhammad died on February 25, 1975, his fifth son, Minister Wallace Deen Muhammad, was chosen to replace him as the supreme leader of the Nation of Islam. Minister Farrakhan had expected to succeed Elijah, but he overcame his disappointment and submitted to Wallace's leadership. Within months of his ascension to leadership, Wallace shocked the country and his members by declaring that the Nation would no longer distinguish between white and black Muslims but rather consider all Muslims to be children of God. He moved rapidly to lead the Nation of Islam towards universal Sunni Islam. He disbanded the key organizations Fruit of Islam and MGT; criticized the separatist teachings and Yakub mythology; and called his new movement the World Community of Al-Islam in the West, later changing the name to the American Muslim Mission. He criticized his father's teachings and denied that he was the Messenger of Allah. Wallace also changed his name to Imam Warith Deen Mohammed.

After two years of silence, in October 1977 Minister Louis Farrakhan started to organize a new Nation of Islam group that preserved the teachings of Fard and Elijah Muhammad. Although Farrakhan's movement eventually emerged as the largest and most successful Nation of Islam, other splinter Nation of Islam groups also arose as a result of dissatisfaction with Wallace's leadership and a reluctance to follow Farrakhan. In 1978 Elijah Muhammad's younger

brother, John Muhammad, started a Nation of Islam group with two mosques in Detroit and Highland, Michigan. In the same year Caliph Emmanuel Abdullah Muhammad of Baltimore also established two mosques, in Baltimore and Chicago. However, the most serious rival to Reverend Farrakhan was Minister Silis Muhammad, a lawyer by profession. Silis Muhammad started his Lost Found Nation of Islam in Atlanta in the summer of 1977, a few months before Farrakhan started his new Nation. Silis's Nation consisted of several thousand members and about eight mosques. The movements led by John Muhammad, Caliph Emmanuel Muhammad, and Silis Muhammad were active in the 1980s and 1990s.

John Muhammad died in 2005, and his movement is sustained by a Web site maintained by his followers. His major disagreement with Farrakhan revolved around the issue of Elijah Muhammad's death. Farrakhan and his movement's theologian Bernard Cushmeer have implied that Elijah Muhammad is still alive and will return one day. John Muhammad also claimed that he was more faithful to Elijah Muhammad's teachings, especially regarding the ban on politics in the Nation, than Farrakhan. In the 1984 presidential primaries, Farrakhan voted for the first time and supported Jesse Jackson.

Caliph Emmanuel Muhammad contended that with the death of the Messenger Elijah Muhammad, the Nation of Islam should establish a caliphate just as the Sunnis did when the Prophet Muhammad Ibn Abdullah died. Thus, he saw himself as the first caliph or successor to Elijah Muhammad.

Silis Muhammad has claimed to be the Savior. His movement declined, especially after Farrakhan's Million Man March in 1995, which drew the largest number of African American men ever assembled in Washington, D.C. Silis claimed that he was willing to join forces with Farrakhan if Farrakhan made the issue of reparations for slavery the major theme of the gathering. However, Farrakhan chose to focus on the spiritual themes of atonement and reconciliation for black men. Although Silis still speaks at his own Savior's Day rallies and his following of several hundred members in Atlanta occasionally publishes *Muhammad Speaks* newspapers, much of the dynamism of his earlier movement has been lost.

Analysis of the Schism in the Nation of Islam

One explanation for the split between Farrakhan's Nation of Islam and Warith Deen Mohammed's American Muslim Mission uses a Weberian analysis that focuses on class shifts within the movement. C. Eric Lincoln described members

of the Nation as “black Puritans” who worked hard and saved their earnings. They were encouraged to seek economic independence, get jobs, and not be on welfare. The Nation also did not allow members to play sports (though an exception was made when professional boxer Muhammad Ali converted) or spend money frivolously. Even professional musician Louis Farrakhan had to give up his musical career on orders from Elijah Muhammad. Membership in the Nation of Islam required a disciplined life without much humor or recreational diversion.

After one or two generations of following these strict economic rules, many members became middle class. One of the unintended consequences of this class mobility was that a large segment of the Nation was ready for the changes that Imam Mohammed introduced. In analyzing religious movements, Max Weber pointed out that while the charisma of the leader may be a major factor in attracting members, the members’ “elective affinity” causes them to choose which parts of the message they will internalize in their lives. For members of the Nation, this included which leader to follow. Thus, about two-thirds of the members of the Nation of Islam were ready for Imam Mohammed’s move towards Sunni Islam and a more relaxed code of conduct.

While Imam Warith Deen Mohammed’s changes appealed to the middle-class or upwardly mobile members of the Nation, Minister Farrakhan began rebuilding his Nation of Islam by returning to Elijah Muhammad’s message to the black man, focusing on the Nation’s traditional target of the black underclass who suffered from America’s racial and economic oppression.

The Nations of Islam Today

The movements of both Imam Mohammed and Minister Farrakhan have produced newspapers: *The Muslim Journal* for Wallace Mohammed and *The Final Call* for Farrakhan. While Wallace Mohammed had the larger following, estimated at 100,000 members compared to Farrakhan’s 50,000, Farrakhan has been far more of a controversial media personality and a more charismatic speaker. Farrakhan’s major rallies in Washington, D.C., the Million Man March in 1995, and the Millions More March in 2005, drew four to five times the numbers of attendees at Martin Luther King Jr.’s March on Washington in 1963. At the 2000 Savior’s Day convention, Imam Mohammed and Minister Farrakhan held a reconciliation meeting, agreeing to cordial relations but not a merger of their movements. In 2006 Farrakhan took a leave of absence from the leadership of the Nation of

Islam due to complications from prostate cancer treatment. A leadership council now runs the daily affairs of the Nation, with Farrakhan making occasional speeches. Imam Mohammed died of cardiac arrest in 2009. Leadership of his movement has been assumed by a council of imams.

Native American Religions

There is no word that translates to “religion” in any of the hundreds of Native American languages. This is because for those who engage in traditional Native American practices,

religion is not regarded as an activity in any way separable from daily life. The study of religion itself was first attempted by Europeans of Christian background who lived in a time and place where the separation of religious activity from secular activity was not only a lived reality, but appeared to be a natural distinction. Since traditional Native American practices do not reflect this division between sacred and secular, they have challenged received notions regarding religion itself. While some current-day practitioners of traditional Native American religions do choose to refer to their own “religion” or “belief,” others point to the words in their languages that have been inaccurately translated as “religion” and observe that they might better be translated as “the way we do things,” or even simply as “doings.”

Native American traditional practices center on recognition of and relationships with a multiplicity of sites of sacred power. These sacred powers are known by differing names in various languages. Perhaps the terms for sacred power most familiar to non-Native people are *orenda*, or *oki* (in Iroquoian languages); *manitou* (in Algonkian languages); and *wakan*, or *wakonda* (in Siouan languages). In addition, like other religions of the world, Native American traditional practices describe and live out these relationships with sacred powers through the recitation of myths, through the performance of rituals, and through the knowledge and use of objects or symbols that carry and represent sacred power and convey religious meaning.

Native American traditional practices are not easily summarized or described, given their great variety. Native American religions vary precisely because of the differing traditional geographies, languages, and material cultures of each nation or tribe. Scholars often classify Native American cultures by linguistic group or by traditional geographic area. The present overview, however, provides examples from a wide representation of tribes or nations in order to illustrate the diversity of Native American religions, as well as the commonalities that can be found both within and across linguistic and regional boundaries.

Myths, rituals, and symbolic objects are tied to specific locations. Myths of origin will often detail the creation of cosmos out of chaos with clear reference to particular features of the landscape found within a tribe or nation’s traditional geography. Rituals of all kinds often establish and enact relationships with sacred powers that are themselves identified with the flora or fauna indigenous to a certain region. Symbolic objects are usually fashioned from or created with explicit reference to natural elements found

(perhaps exclusively) in a culture’s specific location. Throughout Native American religions, sacred powers are present and perceptible in the natural world and its elements. Bodies of water, rocks, trees, plants, animals, winds, clouds, sky, sun, moon, and stars all may contain or embody various sacred powers with which it is critical to establish and maintain a relationship. The land, the water, the flora, the fauna, and the sky and its resident celestial bodies sustain the Native nation, and the people of the nation acknowledge and attend to these powers in order to remain in balance (or redress imbalance) with the sacred.

Myths

Myths and other stories that deal with the sacred have multiple functions in Native American religions. Myths transmit tribal and family histories, narrate and reinforce the importance of sacred spaces, explain the relationships between human beings and sacred powers, clarify central cultural concepts, and validate cultural claims. They serve as both repositories of history and sources of instruction. Myths typically define the elements and delineate the structures of ritual practices.

The recitation of a myth can confer prestige on the skilled teller, and should orient the listener to the cosmic order. In some cultures the recitation of myths is limited to qualified persons; for the Anishinaabe, this is the duty of the *kanawencikewinini*, who is both tribal historian and religious specialist. In many Native cultures there are special times that are set aside for the recitation of myths. For the Haudenosaunee (Iroquois Confederacy), the time is midwinter. In many Native cultures some myths must be shared only with other members of the cultural group, or with fellow members of a smaller, qualified subgroup, such as a medicine society.

Etiological Myths

Etiologies, or stories of origin, are a particularly important mythological type in Native American religions. They often place a nation or tribe in the center of a specific landscape. Because of the deep cultural resonances and meanings of many Native American etiological myths, traditionalists often discount scientific theories of Native migration to the Americas, such as the older Bering Land Bridge theory (in which Native peoples are thought to have migrated to the Americas over land from Asia, beginning in the far north and spreading further south and east over successive millennia) and the more recent pre-Clovis

Pacific coastal migration models (in which Native peoples are thought to have migrated to the Americas in watercraft, establishing settlements along the Pacific coast in both North and South America, and moving inland over time). Myths of emergence from specific landscapes, either ascents from underneath or descents from above, are sometimes invoked by Native groups as evidence of their primordial establishment within a particular geographic area. Etiological myths often circumscribe the boundaries of traditional landscapes and name and describe the location of a people's definitive sacred center.

In the Diné (Navajo) story of the emergence of First Man and First Woman (Altsé Hastiin and Altsé Asdzáá), the Four Sacred Mountains of the Diné are identified and named. In the east is Sis Naajini (Blanca Peak), in the south is Tsoodzil (Mount Taylor), in the west is Dook'o'oolid (San Francisco Peak), and in the north is Dibé Nitsaa (Hesperus Peak). Each mountain is clothed in its own sacred color, with white corresponding to the east, blue to the south, yellow to the west, and black to the north. In the sacred center of this geography, the Insect People (ancestors of the Diné) emerged from their underground origins into the upper Fourth World, where they met their neighbors the Keresans. There, First Man and First Woman came into being. First Man is identified with white corn and First Woman with yellow corn. This conveys something of the central importance of the cultivation of maize for the Diné. The Diné believe they are responsible for maintaining relationships with the sacred powers that both abide in and comprise this sacred landscape.

In the Tsalagi (Cherokee) story of the creation of the world, the animals originally lived above in Galunati, the vault of the sky. It became crowded, so when they looked down and saw the primordial waters they wondered what else might be below. The water beetle, Dayunisi, dove below the waters and came up with some mud, which grew into the earth. The earth was suspended from Galunati by four cords fastened at each of the four directions. Birds then scouted out appropriate places for everyone to live, and the Buzzard sculpted Kituwah, the mountainous Tsalagi homeland, with his wings.

The Klamath and Modoc have similar creation myths. The chief of the powers of the upper world, Gmok'am'c, tired of the cold in his world, carved a hole in the bottom of the sky. The snow and ice that fell through landed on earth and became Mlaiksi (Mount Shasta). He then dug out Euksi (Lake Klamath) with his hands. Giiwas (Crater Lake)

came into being when he defeated Monadalkni, the chief of the below-world, and destroyed Moy-Yaina (Big Mountain). Gmok'am'c created the Klamath and Modoc people from bones and placed them in their traditional homelands near Lake Klamath and Modokni Lake (Tule Lake), respectively.

Mythic Twins

Many Iroquoian-speaking peoples tell an etiological myth in which Grandmother is described as falling (or being pushed) from her home in the sky. She would have drowned in the primordial waters if a succession of animals had not prepared a soft landing by diving into the waters, bringing mud and earth up to the surface, and placing it on the back of Big Turtle to receive her. The mud and earth expanded to become all of Turtle Island, which for some is North America and for others the whole world. The myth continues with the birth of a daughter to Grandmother, who bears twin sons. The twins' names differ depending on the Iroquoian language in which the story is told. Iouskeha and Hahgwehdiyu are two of the names of the brother associated with Order, and Tawiskaron and Hahgwehdaetgan are two of the names of the brother associated with Chaos. The twins set about creating the features of the land, with the twin of Order creating a natural feature (a river) and the twin of Chaos modifying that feature (making the water flow only downstream).

Some southwestern nations also feature twin brothers in their creation narratives. According to the Hopi, Kótyang-wúti (Spider Woman) created twin brothers named Pöqáng-hoya and Palöngahoya. The brothers sculpted the landscape and created the Grand Canyon, the Colorado River, the mesas, and the salt flats. Pöqáng-hoya is associated with youth and solidity, while Palöngahoya is associated with vibration. The Diné and the Apache tell of the brothers called Monster Slayer (Nayé nazgháné) and Born For Water (Túbaadeschine), who were born to Changing Woman/White Painted Woman. According to the Diné, the boys are twins and sons of the same father. In the Apache stories they are not twins and have different fathers (Sun and Rain, respectively). In both cases the boys are culture heroes, sometimes represented symbolically by two bows or two shields.

Culture Heroes, Tricksters

As they are in all cultures, Native American culture heroes are legendary or mythological figures who discover or invent important elements of culture, vanquish destructive forces, or otherwise make the world a safer or better place

for human beings to live. They sometimes create particular familial, social, or political structures. These figures may be of clear historical origin or completely ahistorical in nature. They may work in collaboration with greater sacred powers, or in opposition to them. In some Native American contexts, culture heroes are also tricksters. A trickster is a figure whose wisdom is regularly expressed by means of cleverness, deceit, hyperbole, or irony. Tricksters are sometimes amoral, or at least exemplars of impropriety; in this respect they can serve as humorous illustrations or satires of human foibles. The physical form of the culture hero might be a human being, an animal, or some combination of the two. Culture heroes, particularly tricksters, sometimes demonstrate the ability to shape-shift or to otherwise disguise their form.

Deganawidah, the culture hero of the Haudenosaunee, may have been an actual historical personage. He is credited with condoling the grieving Ayonwatha; bringing the tyrannical Onondaga chief, Tadadaho, to reason; and, most significantly, establishing the Great Law of Peace (*Gawyeh-nehshehgowa*) among the warring five nations of the Haudenosaunee. Deganawidah the Peacemaker united the Seneca, Cayuga, Onondaga, Oneida, and Mohawk nations as the League of Peace and Power.

White Buffalo Calf Woman is the central culture hero of the Lakota people. She is said to have given the Lakota the gifts of the pipe and the stone; inscribed on the stone were the symbols of the Seven Sacred Rites (*Wicoh'an Wakan Sakowin*), the central rituals of the Lakota. The Seven Sacred Rites include the Sweat Lodge (*Inipi*), Crying for a Vision (*Hanbleceyapi*), The Keeping of the Spirit (*Wanagi Wicagluha*), The Sun Dance (*Wiwanyang Waapi*), Making Relatives (*Hunkapi*), The Girls Puberty Rite (*Isnati Awicalowanpi*), and Throwing the Ball (*Tapa Wankayeyapi*). These seven rituals represent essential knowledge. When performed properly these rituals keep the Lakota in harmony with sacred power.

A shared type of creator and culture hero is found among Algonkian speakers. The Wabanaki Confederacy's Gluscap, the Anishinaabe's Nanabozho, and the Cree's Wisakedjak are all benevolent figures who create and transform elements of the cosmos in ways beneficial to their people. All three are credited with bringing the knowledge of the rituals of the *Midewiwin* (Grand Medicine Society) to their people. They make the seasons milder, they tame winds, they defeat threatening monsters, and they bring important knowledge to the people. They are sometimes shape-shifters. Nanabozho most often appears as a rabbit, and Wisakedjak is often described as a crane. They also bring

features of landscape into being or are known to inhabit or prefer certain locations. For example, the Mi'qmaq tell of the time when Gluscap defeated a band of giant beavers who had blocked the Restigouche River with their dams. Gluscap hurled their leader far away, and it was the impact of the beaver leader's body that created Sugarloaf Mountain in New Brunswick. For the Maliseet and Passamaquoddy of Maine, Gluscap's home is Kahtadin.

In the Pacific Northwest, Raven is the most common trickster figure, although Blue Jay also appears in Chinook stories. Like the Algonkian tricksters, Raven is a world-transformer. Many stories about Raven are ribald, and he is both irreverent and cunning. In Tsimshian, Tlingit, and Salish myths Raven is credited with bringing light into the world. He did so through trickery and deceit, by transforming himself into the grandchild of the Sky Grandfather and stealing the box in which the sun was kept. There is a Tlingit myth in which Raven, through a ruse involving defecation and humiliation, stole the source of all of the world's waters from Petrel. While flying away, water dripped from Raven's beak onto the earth, forming the Nass, Stikine, Taku, Chilkat, and Alsek rivers.

The Hočąk (Winnebago) nation's trickster, Wakdjunkaga, is also a bawdy figure. He once dressed as a woman and seduced Fox, Blue Jay, Nit, and even a chief's son. Wakdjunkaga's other adventures, sexual and otherwise, are likewise scatological, including an unsuspecting encounter with a laxative and an unfortunate misunderstanding wherein Wakdjunkaga fails to realize that his anus is part of his own body. One myth relates how, in an exchange with Chipmunk, Wakdjunkaga is shown how to assemble the various parts of his extraordinarily long penis, which he usually carries in a box on his back. This story ends with Chipmunk consuming portions of the penis and the rest being transformed into vegetation that benefits the Hočąk, including turnips, artichokes, and beans.

The Lakota's Iktomi is a trickster who usually manifests in spider form. Iktomi is always hungry but often fails to achieve his goal of acquiring a meal. When he does secure food, he fails to demonstrate proper reciprocity by sharing with others, and thus loses his meal. There is also a sexual aspect to Iktomi. Some stories tell of the lengths to which he goes in order to deceive women into having coitus with him. In some stories he is satisfied; in others he is discovered and rejected.

Coyote is perhaps the most widespread of trickster figures in Native American culture. In the stories told by many

Plateau nations, Coyote is both creator and trickster. He is often associated with the critical resource of salmon, determining where they will live in abundance and where they will not. In California Coyote is often a creator as well as trickster. According to the Miwok, Coyote created both the earth and the people, sometimes with water and seeds and at other times by singing and dancing them into being. In the Great Basin, Coyote is simultaneously hero and trickster. The Shoshone tale of Coyote's theft of fire illustrates his complementary roles. The Nimípuu (Nez Percé) myth of Coyote and the shadow people is particularly illustrative of an ironic aspect of Coyote: his ability to serve as a "false shaman" who fails in establishing a reciprocal relationship with the sacred but whose actions nevertheless result in the transformation of the world. In the Nimípuu story Coyote's wife dies, and Coyote is determined to bring her back from the land of the dead. The sacred power associated with the dead takes him to the land of the shadow people and reunites him with his wife. However, once there he is prohibited from embracing her. Predictably Coyote cannot restrain himself and touches her, thereby transforming death into a permanent and final state for all beings.

Trickster tales are not simply stories that detail events in a legendary past. Coyote, for example, has been deployed in Native American critiques of Euro-American colonists, Indian agents, and non-Native people of all kinds, illustrating the continuing vitality of the trickster figure.

Rituals

Rituals symbolize and actualize relationships with the sacred. Rituals may be dedicated to renewing the cosmos, marking seasonal events, giving thanks to sacred powers, celebrating individual or communal rites of passage, establishing and demonstrating continuing attention to relationships with particular sacred powers, or simply the giving of self for the collective welfare of family, clan, tribe, or nation. Rituals may be enacted individually or in groups. Some rituals may only be performed by certain religious specialists; others require direction by a group of specialists. Some ritual knowledge is confined to members of a religious society, and this knowledge may be secretive in nature. Ritual performances may be strictly calendrical, or they may occur at particular times in the life of a person or of a community. The health of individuals and of groups is dependent upon the correct and regular performance of ritual. Without properly performed ritual actions, a dangerous state of imbalance with sacred power is either courted or permitted

to continue. Every ritual is medicinal in that it heals and restores balance in some significant way.

World Renewal

In the Pacific Northwest, many Native nations perform a cycle of rituals directed toward the renewal of the cosmos. Traditionally, the Wiyot, Chilula, Tolowa, Karuk, Hupa, and Yurok nations reenacted the creation of the world by rebuilding sacred structures, such as sweat houses and dance grounds. The Karuk call this ritual *Pikiavish*, which means "the ritual specialist is going to fix the world." Moving from one sacred place to another, ritual specialists recite sacred narratives and kindle sacred fires. Certain dances must be performed at these times, including the Jump Dance and the White Deerskin Dance. The fineness of the regalia worn and the marked display of wealth, including presentation of dentalium shell wampum, reflect the richness of the cosmos as well as its ripeness for restoration. The reestablishment and strengthening of community ties is a critical part of the ritual. The entire community must cooperate in order for a ritual to be done properly and effectively.

Seasonal Rituals

Rituals are also seasonal. Most seasonal rituals are devoted to the fruits of a particular season and may encourage and mark the growth cycle of vegetation or celebrate the harvest. The Haudenosaunee conduct the Maple Festival (*Hadichisto'ndas*) each March and the Strawberry Festival (*Wainodayo*) each June. The Maple Festival celebrates the running of the sap. Tobacco is offered to the sacred powers so that the gift of the maple might be perpetuated. The Feather Dance is performed, and Chants for the Dead are sung. The Strawberry Festival is a first fruits ritual that celebrates new life and offers thanks for the healing medicine of strawberries. Sacred powers are invoked to ask that growth of all things might continue and full fruition be achieved. The Strawberry Festival is also a time for reflection on personal behavior and proper growth.

The Green Corn Ceremony is the major seasonal festival of the Muskogee (Creek). It also serves as one of the central rituals of many other southeastern nations, including the Tsalagi. This highly elaborate ritual celebrates the ripening corn and the beginning of the new year. People fast in preparation for this lengthy ceremony. Held in the "square ground," or ceremonial center, of each community, the ritual includes the lighting of a new fire, a series of sacred dances, ritual purification by water, a ceremony of healing

(Scratching Ceremony), and the performance of the sacred stickball game.

Thanksgiving Rituals

While all seasonal rituals might be described as rituals of thanksgiving, thanksgiving rituals are not exclusively seasonal. The Haudenosaunee conduct seasonal rituals, but they also have a repository of thanksgiving addresses of varying lengths that must be recited upon the opening and closing of every ritual action, with the exception of rituals associated with the dead. These prayers have a specific structure, one in which elements of the cosmos are invoked and thanked: for example, the people, the earth, the waters, the fish, the plants, the animals, the trees, the birds, the winds, the thunder beings, the sun, the moon, the stars, the wise teachers, the creator, and any being inadvertently omitted.

Hunting rituals often include rituals of thanksgiving. In Inuit cultures all beings are understood to have *inua*, or an animating breath or “selfhood” that persists after death and that must be diligently cared for. A properly conducted bear, seal, or whale hunt must attend to the animal’s *inua*. This means giving thanks to the animal for allowing itself to be hunted and eaten. If this ritual is neglected and proper thanks not given, the animal will tell its relatives that it was treated poorly, and future hunts will suffer.

Medicine People and Medicine Societies

Much of Native American religion involves the restoration or maintenance of health and balance in individual persons and in the general cosmos. The various names of religious specialists from many nations are often translated into English as “medicine man” or “medicine woman.” In some cultures religious specialists are individual practitioners; in others there are societies devoted to the sacred practice of healing and restoration of balance. Religious specialists can be trained by their elders or be accepted as religious specialists by virtue of a demonstrated relationship they have forged with a sacred power. Membership in a medicine society can also be restricted. Some medicine societies are comprised of people who have been successfully healed of an illness. Others are comprised of those who were not successfully healed. Still other medicine societies only admit members through a specialized system of education and initiation.

In traditional Diné culture religious specialists are in charge of performing complex curing ceremonies. As in other Native American contexts, curing relates not only to physical illness but also to disharmony or imbalance. Two

central Diné concepts are *hózhó* (harmony, balance) and *hóchó* (disharmony, disorder). Religious specialists perform ritual chants to restore the imbalanced person to the desired state of harmony. Among the most widely known is the *Hózhóójí* (Blessingway), which preserves a state of harmony and balance. Other chant complexes include the *Hóchó’ojí* (Evilway), which removes *hóchó* from someone who is ill, and the *Lináájí k’ehgo* (Lifeway), which treats physical injuries.

Among the Lakota, *yuwipi* is a relatively recent addition to the traditional Seven Sacred Rites. In the *yuwipi* ceremony, the *yuwipi wicaša*, or medicine man, is tied up with ropes and wrapped in a blanket. He may be placed in a sacred tent or a darkened room. While there, he communicates with sacred powers on behalf of persons in his community who are in need of help or healing.

Yuwipi is analogous to (and may be derived from) the Shaking Tent ceremonies performed by religious specialists (called in Ojibwe *tcisaki*, in Menomini *tcisakos*, and in Potawatomi *tcisakked*) in many Inuit, Algonkian, and Salishan cultures. In these ceremonies a religious specialist constructs and enters a structure called a Shaking Tent, in order to consult with sacred powers and determine the whereabouts of lost objects or the cause of an illness. The specialist is then able to find the missing object or cure the illness.

In some Algonkian cultures, most notably the Anishinaabe, a secretive medicine society known as *Midewiwin* is the sole healing association. Initiation is complex and progressive, and either four or eight ranks are achievable. Both men and women may join. Ritual cleansing of initiates is done through the power of the *Miigis*, a white shell. Under the guidance of more advanced *Midé* (religious specialists), the initiates may progress through specific stages of education and practice. They assemble and carry personal medicine bundles, and the knowledge they gain and the relationships with sacred powers that they establish empower them to heal others through the recitation of ritual songs and the administration of sacred medicine.

A kind of sacred personage, sometimes called a sacred clown or contrary, is also found in some Native American cultures. The Lakota *Heyóklhá* may flagrantly break boundaries of proper behavior or satirize the manners of others. In so doing the *Heyóklhá* sparks reflection on social norms. The *Heyóklhá* is also a powerful healer. By bringing laughter into solemn situations, by being open and frank about despair or shame, he enables others to see what is concealed in every person. By embodying the backwards, the opposite, and the

unconventional, the *Heyókñha* provides sufficient stability for conventional mores to remain in balance within the wider cosmos, which must, by definition, incorporate chaos. In Tewa, Hopi, and Zuñi religious contexts, sacred clowns are also boundary figures. They appear at the beginnings, endings, and interstices of ritual, often violating social and behavioral expectations in extreme ways. These clowns, while humorous, also serve larger cosmic and social functions.

In all Native contexts the medicines themselves were comprised of local trees, flowers, herbs, or products derived from the region's animal population. For example, in the northeastern woodlands, pine needle teas were used to prevent scurvy, and willow bark was chewed for pain relief. In contemporary practices many nations use sage and tobacco for purposes of purification. Traditional healing remedies comprised of local flora and fauna vary widely by geographic location. While knowledge of sacred medicines is still held by traditionalists of many nations, such religious expertise is often closely guarded. The proper ritual practices integral to effective usage are transmitted by these religious specialists only to their apprentices. Because many Native peoples have been removed from their traditional geographies, ethnobotanists are now assisting tribal members in identifying and investigating the ingredients used in traditional medicines.

Sacrificial Rituals

The Sun Dance, practiced by many peoples of the Plains—for example, the A'aninin (Gros Ventre), Arapaho, Arikara, Cheyenne, Hohe Nakota (Assiniboine), Kiowa, Niitsítapi (Blackfoot Confederacy), Omaha, Plains Cree, Ponca, Shoshone, Ute—but claimed by the Lakota as one of their Seven Sacred Rites, is perhaps the paradigmatic Native American sacrificial ritual. The Sun Dance is likely derived from the Mandan *okipa*, for which young men selected sponsors and fasted for several days in preparation. In the central *okipa* ritual, wooden skewers and rawhide thongs were threaded through slits in the young men's backs and chests. These thongs were thrown over the rafters of the ceremonial lodge. The men were then repeatedly raised and lowered from the rafters. These bodily sacrifices were performed in order to achieve visions and to bring balance and prosperity to the nation, but also to demonstrate commitment to the sacred powers, to the young men's families, and to the entire Mandan community. The Sun Dances of other Plains nations recapitulate many of the elements of the Mandan *okipa* but are held outdoors around a central pole.

The sacrifices made by the young men (and in certain contexts today, sometimes young women) are understood to be for the benefit of their families and communities.

Potlatches, discussed below, are held by Native peoples in the Pacific Northwest and may also be understood to be sacrificial in nature.

Rites of Passage and Rituals of Relationship

Depending upon the culture, individual life events can be marked by distinctive rites of passage. Births can be marked by naming or welcoming ceremonies, and young men and women may be initiated into adulthood. In some traditional cultures couples can be joined together through rituals involving the exchange of goods. Death is often marked in ritual fashion, and additional rituals intended to comfort the bereaved may be performed. However, all of these rites of passage are also intimately tied to the establishment of relationships with the sacred, with the larger community, and with all beings. Hence, they are also rituals of relationship. One illustration of this awareness of interrelationship is found in the Lakota phrase *mitakuye oyasin*, or "all my relations," that ends all prayers and can also stand on its own as a sacred utterance.

In traditional Hopi practice when a child was born, he or she was kept in the darkness for twenty days. During this time a perfect ear of corn was kept beside the baby. Each day of this liminal period the infant was bathed and rubbed with cornmeal. At the end of the twenty days the child's mother and aunts bestowed several clan names upon the infant. The village would then hold a feast in the baby's honor.

Among the Kumeyaay (Digueño), boys were initiated into adulthood through a ritual called the Kusi (*toloache* in Spanish). In this rite of passage boys drank a concoction made from jimsonweed steeped or boiled in water. They then danced with their adult male sponsors until they were too tired to continue. The visionary experiences they had while sleeping brought them into relationship with a particular sacred power, which often manifested itself in the form of an animal. This relationship would be maintained for the rest of their lives. After a six-day period, three of which were spent fasting, special songs of power were taught to the young men.

Apache girls are initiated into womanhood by means of the *Na'ii'ees*, or Sunrise Ceremony. Similar to the Diné *Kinaalda*, the ritual demarcates the onset of menstruation and the beginning of womanly responsibilities. The *Na'ii'ees* ritual is suffused with symbolism that balances male and

female, stability and change. Its elements consciously re-enact the creation myth, with particular attention to the journey of Changing Woman (Esdzanadehe). The ritual actions include purification, ornamentation, and “molding” of the body; the preparation of a round corn cake; dancing; running in the four directions; and singing special songs. All of these rituals are designed to bring the young woman into balance with the cosmos and into adult status within her community. The elaborate rites require the participation of extended family, as well as the support of the entire community.

In many Native cultures an exclusive relationship was often established by a couple. This relationship was recognized by their families and the larger community by means of an exchange of gifts. In Haida culture it was necessary for a courting man to negotiate with his beloved’s father in order to determine what gifts to the young woman’s family would be appropriate and sufficient. In Haudenosaunee culture a young man would offer gifts to the young woman directly. She could then decide for herself whether to keep them and thereby encourage the young man or to return them and signal her disinterest.

The most clearly initiatory of the Seven Sacred Rites of the Lakota people is *Hanbleceyapi*, or “crying for a vision.” This ritual is intended to establish a life-long relationship between an individual person and a particular sacred power. Young men were traditionally the primary participants, and it also demarcated their passage into full adulthood. The ritual must be performed under the supervision of a *wicaša wakan* (holy person). This individual guides the youth through the necessary preparations for the quest and assists in interpreting any received visions after the ritual has been completed. Seeking and receiving visions as a marker of adulthood is also practiced by other cultures in other geographic regions. In some Algonkian/Algonkian Great Lakes nations, including the Miami and Shawnee, persons with relationships with the same sacred power join together in vision societies.

The Wendat (Huron) Confederacy’s Feast of the Dead is probably the most famous of Native American mourning rites, and it too was a ritual of relationship. Every decade or so, when a Wendat village had depleted the nutrients in its soil and was preparing to relocate, a Feast of the Dead would be called. Surrounding villages would bring the bodies of their deceased to be interred in a large circular pit. In this way the interrelatedness of all members of the confederated nations was reaffirmed. The Feast of the Dead served as a site of redistribution of wealth, as those families and clans who were bereaved were consoled with gifts from members of

their opposite clans. Those who held the feast gained in status. Just as the dead would now restore the depleted soil, relationships across villages, clans, and nations were renewed and balance was restored.

The highly elaborate potlatch ceremonies of the Pacific Northwest, practiced by the Haida, Kwakwaka’wakw (Kwakiutl), Nuuchahnulth (Nootka), Salish, Tlingit, and Tsimshian people, are held to mark changes in status. The term *potlatch* is derived from the Nuuchahnulth word *pachitle*, which means “to give,” but many contemporary Pacific Northwest people simply call them “doings.” Rites of passage, including birth, name-giving, coming of age, marriage, death, and memorials, are all suitable occasions for a potlatch. The potlatch is a ritual of redistribution of wealth, with those who give away the most accruing higher social status. Potlatches, which can last from one day to several weeks, include feasting and calls for specific performative acts. The songs and dances most important to the occasion are those that narrate the history of the relationship between the host and a particular sacred power. A potlatch ceremony is a fulfillment of responsibility to this relationship.

Religious Structures, Objects, and Symbols

The structures, objects, and symbols used in various Native American religions are dependent on geographic location, reflective of particular mythologies, suited to use in specific ritual, and congruent with the larger material culture. Religious structures are designed to reflect and reinforce the sacred centers and religious symbols described in myths, as well as to accommodate the sizes and needs of kinship groupings (clans, bands). The objects necessary for performance of ritual also refer to mythic themes and narratives. The constitutive materials and particular shapes of sacred objects, as well as any inscriptions upon ritual instruments, are meant to invoke the sacred powers with which these materials, shapes, or inscriptions are associated.

Sacred Centers

Sacred centers are identified and described in a culture’s myths but are also constructed in a culture’s lived reality. They may be large landscapes, as in the case of the Hopi, who identify Black Mesa as *Tuuwanasave’e*, the Earth Center, where sacred power is concentrated, but who also regard their homes on the three mesas to the south as part of the Hopi sacred center. Sacred centers may be small, circumscribed areas or multiple and variable in location. For example, the primary sacred architectural form of many

Southwestern nations is that of the kiva. In the etiological myths of the Hopi, for example, the ancestors emerged from the underworld through a hole called the *sipapu*. A replication of the original sacred center in the form of a *sipapu* is found in every Hopi kiva no matter its location. A kiva may be round, square, or keyhole-shaped, underground or above ground, depending upon the historical era in which it was constructed. But in every case the *sipapu* is the people's place of origin. Each gathering in a kiva reminds the Hopi people of who they are and whence they came.

Sacred centers are often understood to be the only proper locations for ritual, even when the ritual is mobile. For each performance of the Lakota Sun Dance, a center pole must be erected. There is great ritual surrounding the selection of the cottonwood tree that will serve as the pole, as well as the spot in which it will be placed. This spot is the center of the world, or *axis mundi*, for the duration of that Sun Dance. The next dance may be held in a different spot, but a qualified religious specialist must still determine that the spot chosen is in fact the center of the world at that time.

Sacred Structures

Several ancient Native American cultures constructed mounds and earthworks as sacred structures. In the Archaic Period (8000–1000 BCE) and the Woodland Period (1000 BCE–1000 CE), and also during the time of the Mississippian cultures (800–1500 CE), various peoples in the Great Lakes region, Ohio River region, and Mississippi River region built large earthworks that served as funerary and ceremonial structures. Some are flattened or rounded pyramids or cones; others, called effigy mounds, are representational in nature. At 1,330 feet in length and 3 feet in height, Serpent Mound in Adams County, Ohio, likely built by the Fort Ancient culture, is one of the largest effigy mounds in the United States. Some mounds may have had astronomical significance, but all appear to have served religious functions.

Native American dwellings were also reflective of myth and in harmony with religious values. The traditional dwelling and ritual structure of the Diné is the *hooghan*, which is constructed in a circular shape, echoing the horizon and the cosmos. Movement during a ritual inside the *hooghan* is always clockwise or, as the Diné say, “in the direction of the sun.” The south side of the *hooghan* is where men are seated; women sit on the north side of the building. The door faces the east, the direction of sunrise.

In the Southeast the ancestors of the Muskogee built their homes in the shape of a circle. The number of

saplings sunk in the ground and used to support the walls and roof was always a multiple of four, which, among other things, stood for the four cardinal directions. The Muskogee themselves lived in complexes of four square structures surrounding a central courtyard. This domestic arrangement was echoed on a larger scale, as the public space, or square ground, was also built in this way. Rituals were held in the square ground, and the men, who supervised ritual action, were seated in the four corner houses in synchronization with the one of the four directions that symbolically corresponded to their status. For example, old men might be seated in the house facing west, since their stage of life was symbolically articulated in the setting sun.

On the southern Great Plains, the Wichita built grass houses in a domed, beehive shape. These dwellings were eighteen to thirty feet in diameter. The Wichita maintained that the instructions for building them came from sacred powers. The floor of each dwelling was round like the sun, and the structure was supported by four cedar poles gathered from each of the four directions. Builders were divided into four groups: those who gathered swamp grass for the inner layer, those who gathered prairie grass for the outer thatch, those who cut osiers to hold the thatch, and those who acquired the elm bark to tie everything together. Each structure had a door at the east, a door at the west, and a hole at the top facing the south so the sun would shine on the center hearth at midday.

On the northern Great Plains, the Niitsítapi (Blackfoot Confederacy) lived in tipis, dwellings designed for maximum portability as the bands followed the bison migrations. Some Niitsítapi had painted figures on their tipis that were given to the tipi's owner by a sacred power through dreams or visions. These religious symbols were not transferrable, except through specific arrangement and accompanying ritual. Features of landscape and sky (mountains, stars) were sometimes depicted, and animals were a common motif. Figures were not haphazardly placed; larger animals (bison, elk) were generally portrayed in pairs, with the male on the south side and the female on the north. Smaller animals and insects (otters, butterflies) were conventionally painted in several pairs, sometimes winding around the tipi's circumference.

In the northeastern woodlands, Haudenosaunee longhouses were built in the shape of the Confederacy itself—long and narrow, with doors on both ends and a series of center hearths down its length. Traditionally, longhouses

held up to sixty people, all of whom were members of (or married into) the same clan. While contemporary Haudenosaunee people live in many different types of homes, longhouses remain in use as ceremonial structures.

Sacred Objects and Symbols

Nations of the Pacific Northwest are noted for their distinctive totem poles. The term *totem* is derived from the Anishinaabe word *odoodem*, which means “his kin group” or “his clan.” Totem poles are elaborately carved cedar logs containing representations of clan symbols, ancestral lineages, mythic narratives, or historical events. Designs and images may be proprietary, and the creation and erection of a totem pole is done with appropriate ritual observance. Poles are not refurbished or repainted; they are expected, like all things, to eventually decay.

Many Southwestern, Arctic, and Subarctic peoples traditionally carved local minerals, shells, bones, and antlers into the shapes of animals. These so-called fetishes were sacred images and carried sacred power. Today, as they are often produced for the art market or as consumer goods, they are not religious in nature.

Nations of the northern Great Plains were especially noted for the creation of pipes or calumets from local pipestone (catlinite), a very soft mineral. Pipes were ritual instruments used in offerings of tobacco to sacred powers; they were also used in the establishment of alliances. Northeastern nations often carved pipes from other types of stone, and some southeastern nations, such as the Chickasaw and Tsalagi, baked clay for their pipes.

Medicine bundles are small bags containing sacred objects that connect the wearer to one or many sacred powers. These objects may include rocks, herbs, seeds, grasses, leaves, animal parts (teeth, claws, bone), or any item that both symbolizes and incarnates a sacred power with whom the wearer has a relationship. Some medicine bundles are hereditary; others are personal. Some Native groups, like the nations of the Blackfoot Confederacy, focus a great deal of their religious life upon rituals associated with certain special medicine bundles.

In the Southwest some nations practice the sacred art of sandpainting. Among the Diné only religious specialists may create sandpaintings, and they are used exclusively within ritual contexts for purposes of healing. Sacred songs are sung as a painting is created, and the painting itself embodies the balance and harmony that is brought into being by the religious specialist.

Four and six are common sacred numbers in many Native American cultures. Four is the number of the cardinal directions (east, south, west, north), and six is the number of directions when the directions “above” and “below” are included. Five as a sacred number occurs less frequently, but when it does occur it usually reflects the four cardinal directions plus the center. The recurrence of these numbers is testament to the religious significance of place in Native American religions.

Change and Religious Innovation

Native American religions underwent tremendous upheaval and change as a result of encounters with Europeans in the colonial period, and in successive centuries as Americans expanded westward. European colonization was closely associated with Christian missionary activity, and Native peoples engaged with Christianity in various ways. While many Native people rejected Christianity outright, the most widely practiced method of engagement was selective appropriation, which resulted in the lasting transformation of traditional Native religions. Beginning in the eighteenth century, some Native religious specialists brought about significant religious innovations in response to the cultural and religious pressures their people faced. Whether they advocated resistance or accommodation or a mixture of the two, many of these innovators became celebrated as possessors of strong relationships with sacred power. Many of these so-called prophets were especially critical of the practice of witchcraft, which in a Native American religious context refers to the use of one’s relationship with sacred power for individual gain or other selfish reasons. This recurring critique of witchcraft can be interpreted as a desire for the restoration of communal values and a rejection of burgeoning individualism.

Responses to Christian Missions: Tekakwitha, Apess

The experience of the Mohawk woman Catherine Tekakwitha (1656–1680) is remarkable in itself, yet still representative of the ways in which many Native people engaged with Christian missions. The Mohawk, as well as the other nations of the Haudenosaunee Confederacy, suffered greatly during the colonial period. Wars between French, English, and Dutch mercantile interests exacerbated tensions between the Confederacy and surrounding nations. An increase in warfare, along with the ravages of European diseases to which Native folk had no immunities, resulted in serious depopulation. Survival was the paramount concern

of the Mohawk people. The stability of traditional Mohawk culture depended on two things: strong kinship relationships and strong relationships with sacred power (*orenda*). When people died their relatives went into deep mourning, and other clans were charged with the task of consoling them—giving them gifts, making sure they had all the necessities of life, and surrounding them with assurance that they were still part of a larger, functioning culture. With so much death and devastation, many families found themselves in positions where they were unable to adequately condole one another, and formerly sustaining relationships with sacred power became precarious.

After having conversed with Jesuit missionaries and Native converts in her home village of Gandaouagué, Tekakwitha sought baptism from a Jesuit priest and took advantage of the opportunity to establish strong relationships with these new sources of *orenda*. She left her home to live near the French missionaries at Kahnawake, learned about their ascetic practices, and discovered nearby communities of French women who lived ascetic lives and called each other sister. She attempted to establish a community like theirs for displaced and bereaved Native women like herself. They consoled one another, established a new form of kinship relationship, and practiced bodily mortification in an effort to establish strong relationships with *orenda*.

Because of the ways Catholic priests interpreted her actions, Catherine Tekakwitha was extolled by the Jesuits for her virginity, purity, and piety. In 1679 she became the first Native American woman permitted to take a vow of chastity. She assembled other native women in a small religious community at the mission of St. Francis Xavier du Sault near Kahnawake. After her death, the Jesuit priests Cholenec and Chauchetière memorialized her in their writings, attributing revivals in piety, healings, and miracles to her intervention. Her Jesuit biographers, in attempting to illustrate her exceptional nature by emphasizing her virginity and her desire to become a nun, de-emphasized her kinship relationships and her Mohawk cultural and religious orientation. They elevated her above other Native women and removed her from her own culture by composing a hagiography that placed her firmly within the European tradition of saintly ascetic virgins.

William Apess (1798–1839) of the Pequot nation was born during an era in which his people were suffering the aftereffects of colonial onslaught. A century before his birth English colonists had launched repeated military attacks on Pequot villages, and just as devastatingly had introduced

alcohol into the system of trade between Europeans and Native peoples. Abandoned by his parents and abused by his grandparents, Apess was taken from his home and indentured to a succession of Euro-American Christian families. After a stint in the militia during the War of 1812, Apess took up an interest in religion and converted to Methodism in 1818. He married in 1821 and was ordained a Methodist minister in 1829. He was at first an itinerant preacher, but he eventually moved to Mashpee, one of the last extant Native “praying towns” in Massachusetts. While there he became an outspoken advocate for Native rights. Apess was a leader of the Woodland Revolt, which was actually a peaceful protest demanding the right to self-government for the Native residents of Mashpee. Famously, Apess also eulogized the Wampanoag sachem Metacom (King Philip), the chief strategist of the famous but ultimately unsuccessful 1675 revolt against the oppressive policies of the leaders of Plymouth Colony. Although Apess died in obscurity several years later, his autobiography, *A Son of the Forest* (1828), remains an eloquent testament to his belief in a Christian’s responsibility to work for justice and to his tireless advocacy for Native peoples.

Religious Movements of Resistance and Accommodation

Neolin, a name signifying “The Enlightened One,” was bestowed upon a Lenni Lenape man who rose to prominence in the 1750s for preaching a message of reform in the Muskingum Valley of Ohio, to which the Lenni Lenape people had been relocated when their coastal homeland was colonized by Europeans. Also known as the Delaware Prophet, Neolin had experienced a vision in which he was given a message from a sacred power he called the Master of Life. His instructions were to tell Native peoples to reject the trappings of European culture, including alcohol, and to return to hunting with bows and arrows. The people were also to cease warring amongst themselves, to refrain from witchcraft (selfish use of sacred power), and to purify themselves by fasting, sexual continence, and the use of emetics. These actions would restore their relationships with sacred power and enable them to drive out English colonists from their midst. Neolin inscribed a particular prayer on a stick and used a map that illustrated the current dilemmas of Native peoples. According to this map, the land of the Great Spirit, an unspoiled forest where people went after death, had been made inaccessible to Native peoples by the European colonists. In order to regain access to this afterlife,

and to life as it existed prior to colonization, said Neolin, these reforms must be observed. When the Ottawa warrior Pontiac learned of Neolin's message, he used this sacred teaching to convince others to join his program of resistance to the British. When Pontiac's rebellion failed in 1766, Neolin's message of reform receded in currency.

To the north and east another religious reformer came to the fore. In the wake of the American Revolution, the lands of the Haudenosaunee were despoiled. Because of the Haudenosaunee alliance with the British, the newly formed American government was seizing the traditional lands of the Confederacy. The 1783 Treaty of Fort Stanwix and the 1797 Treaty of Big Tree forced the cession of millions of acres, and by 1799 the Haudenosaunee were suffering from factionalism and internal dissension as well as hunger, widespread alcohol abuse, and disease. In 1800 a Seneca man named Ganioda'yo (Handsome Lake) had a vision in which he was given a Good Message (*Gaiwi'io*) from the Creator. This message included strict prohibitions against alcohol, the practice of witchcraft, the performing of abortions, and the use of certain individually oriented medicines such as love charms. The *Gaiwi'io* recommended some appropriations of Euro-American cultural practices, such as a nuclear family structure, monogamy, and education, and the message also contained some elements that were clearly Christian in origin (angels, heaven and hell, Jesus). However, the message also contained a call to return to regular performance of traditional agricultural rituals and to retain traditional Haudenosaunee values. In effect Ganioda'yo provided the Haudenosaunee with an alternative to wholesale conversion to Christianity and to the complete adoption of Euro-American cultural practices. His reforms were lasting. The Good Message is still followed, and the *Gaiwi'io* is ritually recited in longhouses according to a strict sacred calendar. Ganioda'yo's religious reforms enabled the Haudenosaunee to retain what was left of their traditional lands, since their practices were deemed by Americans to be sufficiently civilized.

The Shawnee visionary Tenskwatawa (1775–1863) had his first religious experience in 1805. His religious reforms rejected Euro-American cultural practices, including hunting with rifles, and strongly opposed witchcraft. Like Neolin, Tenskwatawa starkly opposed the sale of land rights and promised that if people followed his vision, their dead relatives would return to life. In addition wild game would again become abundant. If his vision was rejected, however, people would be condemned to suffer in a fiery hell. He and

his charismatic brother, Tecumseh, established villages of their followers in Greenville, Ohio, and later in Prophetstown, Indiana. Tecumseh transformed Tenskwatawa's visionary message into a political alliance by traveling to Michigan, Illinois, Georgia, and Alabama, and convincing other nations of the urgent need to oppose further Euro-American encroachment and retain rights to traditional lands. While Tecumseh was away establishing the first truly pan-Indian religious movement of resistance, Tenskwatawa told his followers to attack a group of soldiers then advancing on his camp under the command of William Henry Harrison. In the resulting battle of Tippecanoe, the Shawnees and their allies were routed. As a result, Tenskwatawa's influence waned. Tecumseh's star, however, continued to rise. He assisted the British against the Americans in the War of 1812, but was killed the following year. Tenskwatawa eventually assisted in the forcible relocation of the Shawnee. He put his influence to work to secure the survival of his people as they made the long trek to Kansas Territory. Tenskwatawa lived a long life and was able to reclaim the respect of his people before he died.

In the Pacific Northwest in the 1850s, a Wanapum visionary called Smohalla (c. 1815–1895) flourished. He had been exiled from his village when he refused to cede land to Euro-American settlers, but also refused to join an armed resistance. Over time he gathered thousands of followers. His Washani religion, which he received in a vision, demanded that lands be treated as sacred, which meant that plowing, mining, and even agriculture were forbidden. Lands could not be transferred to individual ownership, since the people and the land were one. Smohalla and his followers fished, hunted, and gathered; through these methods of subsistence the gifts provided by the land were acquired without harm. Dreaming and visions were encouraged, and a ritual known as the Washat Dance was revived. Smohalla promised that following the Washani religion would bring about the disappearance of Euro-Americans and the resuscitation of the dead. His son and nephew perpetuated this religion after his death, and its influence spread throughout the region.

Wodziwob was the Northern Paiute innovator whose vision led to the Ghost Dance movement of 1870, which spread through the Great Basin and further west into central and northern California. After surviving a wave of disease that wracked the Northern Paiute, Wodziwob had a vision in which he learned that a certain dance must be performed in order to bring about the restoration of the land and the

The late-nineteenth-century Ghost Dance movement encouraged Native Americans to visualize the restoration of the land and the return of abundant game, as well as the resuscitation of their ancestors and their wisdom. As the movement spread, many believed the performance of the dance could bring about the removal of Euro-Americans from the Great Plains.

return of abundant game. Performance of this dance would resuscitate the ancestors—and their much-needed wisdom. Interestingly, Wodziwob’s vision predicted that the ancestors would return by railway. This dance became known among some nations as the Ghost Dance, since it sought to bring the departed back to life.

Wovoka, also known as Jack Wilson and Kwohitsuq, was a practicing religious specialist (“weather doctor”) who became the source of the 1889 vision that resulted in the intertribal Ghost Dance movement that swept eastward across the Great Plains in 1890. His father, Tävibo, had been a follower of Wodziwob. Wovoka’s vision was much like that of his predecessor, but Wovoka seems to have been influenced by Mormons in the Nevada area as well as the Presbyterian practices of his employers. The decimation of the bison, the encroachment of American settlers in search of gold, repeated land seizures by the American government justified by the new policies of allotment, the growing enforcement of government schooling for Native children, and the subsequent epidemics of disease and starvation made many Plains nations ripe for a message of renewal and restoration. Wovoka’s vision promoted peaceful interaction between Native peoples and Euro-Americans, but as the movement spread it accrued a new dimension that

emphasized the potential for the ritual to bring about the removal of Euro-Americans from the Great Plains. The dance took its form from the ancient Round Dance, but this time participants were expected to receive their own visions during the ritual performance. (This is but one of the elements of the ritual that reflect the influence of Christian individualism.) The Arapaho, Sutai and Tsitsistas (Cheyenne tribes), Kiowa, Caddo, and Lakota embraced the movement. The Ghost Dance movement lost its momentum, however, in the wake of the massacre at Wounded Knee. There, in 1890, U.S. Army soldiers murdered many practitioners of the ritual.

There is no individual visionary of the Peyote Religion movement, which sprang up in the wake of the Ghost Dance. Quanah Parker (c.1845–1911), a respected Comanche chief and a vocal fighter in Native resistance to the U.S. Army, was certainly a popularizer of Peyote Religion, but the religious movement had already established itself with the removal of the Apache to Oklahoma territory. The Comanche, Kiowa, and Apache reservations in southwestern Oklahoma were the nourishing grounds of Peyote Religion, which was an accommodationist movement that drew heavily from Christianity but that also allowed Native peoples to maintain their own distinctive religious practices. In Peyote

Religion both God and Jesus are often sacred powers. Jesus is sometimes regarded as a culture hero; in other cases peyote is itself personified as the primary sacred power. Peyote Religion spread as intertribal contact became more common in the late nineteenth and early twentieth century contexts of boarding schools and railroad travel. Like Protestant Christianity and vision quests, Peyote Religion provided a means of individual experience of the sacred; at the same time it offered healing. The central sacrament, the ingestion of peyote, was understood to bring Native people back into a right relationship with sacred power and to heal many from various illnesses, including dependence upon alcohol. Today Peyote Religion enables Native people to maintain a connection with traditional religious practices. Songs, often with biblical references, are sung in Native languages, and traditional ritual objects such as the drum, rattle, stick, and feather fan have been adopted and modified for contemporary use. There is variation in the practice of Peyote Religion. For example, in the Big Moon Ceremony a Bible is placed on the altar, and in the Half Moon Ceremony a peyote button is placed on the altar. Peyote Religion was institutionalized in 1918 as the Native American Church in order to secure religious freedom for its practitioners. It has since become intertribal in nature and is practiced by many Native Americans across the United States and Canada. Although the right to peyote harvesting, possession, and use is guaranteed to members of the Native American Church under U.S. law, difficulties in maintaining religious freedom persist in light of peyote's status as a controversial substance. Practitioners of Peyote Religion currently face the challenge of dwindling peyote grounds as well. While some grounds are no longer available for harvesting because they are privately owned or leased, other grounds have been overharvested, despite the fact that only qualified and licensed *peyoteros* are allowed to harvest the peyote cactus.

Native American Religions: Pre-Contact

Scholars have classified Native American societies by linguistic group and/or by traditional geographic area to identify religious patterns and to point to shared or unique elements within general cultural and religious practices. These taxonomies can be helpful in examining Native American religions as they existed during the thousands of years prior to colonial incursion, because peoples within a language group often share religious orientations and cultural practices and because geographically contiguous nations often spread their religious orientations and cultural practices through participation in trade networks, diplomatic missions, and political alliances, as well as in warfare-captivity-adoption complexes.

While these taxonomies court the danger of generalization, the fundamental importance of landscape to traditional Native American cultures seems to recommend an approach to Native American religions in the period prior to European colonization that is particularly sensitive to geography.

Describing the history of Native American settlement of the Americas presents another challenge. While there are many archaeologically based theories about demographic patterns of settlement and population distribution throughout the Americas, Native American traditionalists usually point to their own myths of descent onto or emergence into a particular landscape, or to oral traditions describing movement from one area to another, thus often making scholarly theories less than resonant with Native peoples themselves.

Both scholars and Native American peoples agree, however, that historically, Native American cultural and religious orientations have placed primary importance upon webs of relationship with all beings and on sacred powers that manifest themselves in the world. The health and vibrancy of any of these relationships is crucial to the well-being of each member of these networks of relation. Each subsection below will thus attend to the networks of relation that are manifested in the physical and religious landscapes of the peoples native to the varied geographic areas that comprise the North American continent.

Demographic Patterns of Settlement

For decades, the predominant scholarly explanation for the peopling of the Americas was the Beringia hypothesis. About 13,500 years ago, a land bridge connecting northeastern Asia to northwestern North America formed across what is now the Bering Strait. Called Beringia, this land bridge was thought to have been the primary route of migration for Asian peoples to the Americas. About 11,000 years ago, the hypothesis continues, a corridor in the glaciation in what is now Canada melted sufficiently for these peoples to migrate further to the south, moving through what is now the Mackenzie Valley and Alberta and eventually into the Plains. Hunters of game, they were equipped with *atlatls* (spear-throwing tools) and spears tipped with carved, fluted points (known as Clovis points).

New discoveries of artifacts in both North and South America dating to before 13,500 years ago are now posing questions the Beringia hypothesis does not answer. These pre-Clovis artifacts, including those found in Arlington Springs, California; in Meadowcroft, Pennsylvania; in Cactus

Hill, Virginia; outside of Mexico City; and in Monte Verde, Chile, may be evidence that the the Clovis people found inhabitants who had arrived earlier than they did. (Other sites also claim pre-Clovis evidence, including the Schaefer and Hebior sites in Wisconsin, Page-Ladson in Florida, Paisley Cave in Oregon, La Sena in Nebraska, Lovewell in Kansas, and Topper in South Carolina). Pre-Clovis artifacts may be evidence of earlier methods of migration to the Americas. The Coastal Entry hypothesis, in which the Americas were populated by migrants coming in waves from both seacoasts, is becoming increasingly popular. Some scholars subscribe to a hypothesis of South American Reentry; that is, South America was populated by migrants who arrived by sea as early as 35,000 years ago, moved northward as the ice receded, and encountered the newly arrived Clovis people. Scholars are also at work combining archaeological evidence with DNA and linguistic evidence in order to arrive at more definitive notions of the population of the Americas. Many contemporary Native American traditionalists, however, see little point in such theorizing, and for some, it has become a point of religious principle to oppose research by refusing to contribute DNA samples for scientific analysis.

Ancient Mound-Building Cultures

A succession of mound-building cultures have provided interesting archaeological evidence of their religious practices. Watson Brake (c. 3400 BCE) in northern Louisiana, the oldest discovered mound complex, has not yielded any human or ceremonial artifacts, but Poverty Point (1650–700 BCE), also in northern Louisiana, comprised of six concentric semicircular ridges and five mounds, appears to have been a ceremonial site at which people gathered at various times of the year. The mounds constructed by the Adena culture (1000 BCE–200 CE), concentrated in the Ohio Valley but also found in Indiana, Pennsylvania, West Virginia, and Kentucky, were sites of funerary rites and possibly other religious activities. The Hopewell tradition (200 BCE–500 CE), comprised of a number of cultures stretching from the Great Lakes to the Gulf of Mexico that were interlinked by trade, created earthworks that served as ceremonial centers. These mounds, some of which are effigy mounds, contain a great deal of pottery and body ornaments, indicating their ceremonial nature. It has been theorized that some Hopewell sites also functioned as astronomical observatories, since their features appear to encode solstices and equinoxes, as

well as other solar and lunar events. The Fort Ancient (1000–1650 CE) and other Mississippian (800–1500 CE) cultures also built earthworks that appear to have had ceremonial and astronomical significance.

Arctic and Subarctic

Although dozens of cultures are native to the Arctic and Subarctic regions of North America, each belongs to one of three linguistic families: Eskimo–Aleut, Athabaskan, and Algonkian. The Inuit, Yupik, and Aleut of the far north practice religions that acknowledge the importance of relationship with the *inua* (animating sacred power) possessed by all residents of that landscape. The ocean, the air, the moon, and the animals all have *inua* that must be ritually acknowledged and respected. Traditionally, hunting and fishing were suffused with ritual to maintain reciprocal relationships with the *inua* of the animals.

Among the dozens of Athabaskan-speaking groups of central and southern Alaska and northwestern Canada are the Gwich'in, Kokuyon, Chilcotin, Dene Suline (Chipewyan), and Dogrib. These Arctic and Subarctic cultures share a mythological emphasis on culture heroes, such as Raven or Crow. In the case of the Dunne-za (Beaver), a human figure known as Swan dominates these stories. The storytelling traditions of these groups reflect the experiences of cultures whose members spent long winters indoors around a fire; outdoor communal rituals are not the center of life for peoples of this climate.

The Algonkian-speaking groups of the Subarctic, like their compatriots in the Eastern Woodlands, also have culture-hero mythologies traditionally recited during long winters, and their rituals also tend toward the individual rather than communal. Religious specialists among the Montagnais, Naskapi, and Cree performed Shaking Tent ceremonies in order to heal, and they drew upon their relationships with sacred powers to moderate inclement weather or to ensure a more profitable hunt.

Eastern Woodlands

Eastern Woodlands nations include both Algonkian-speaking groups and Iroquoian-speaking groups; the only Siouan-speaking group native to this area is the Hocak (Winnebago). Like the Subarctic Algonkian nations, many of the Eastern Woodlands cultures, including groups as geographically widespread as the Wabanaki Confederacy, the Wampanoag, the Shinnecock, the Munsee, the Lenape

(Delaware), the Shawnee, and the Miami, placed medicine societies at the center of their religious lives. The etiological tales told by many Algonkian-speaking peoples mention origins on the Atlantic; the Lenape are called “the grandfathers” by several other Algonkian-speaking groups. Their extensive trade networks, coupled with seasonal mobility for agricultural, fishing, and hunting purposes, made consultations with religious specialists important but also made the portability of one’s individual relationship with sacred power (medicine) a practical necessity. The Anishinaabe, among other Algonkian-speaking peoples, elaborated individual relationships with sacred power into the communitarian Midewiwin society, which served as a powerful transmitter of sacred knowledge and, in many ways, enabled cultural survival through the colonial pressures to come.

The more sedentary Iroquoian cultures of the Northeastern Woodlands were sophisticated agriculturalists. Their clan-based agricultural practices and religious observances of seasonal cycles produced surpluses that led to the expansion and exploitation of trade networks, the creation of strong and reliable yet flexible alliances, and the refinement of the art of diplomacy. Confederacies such as those of the Wendat and Haudenosaunee were of a fundamentally religious nature, modeled on kinship relationships, and ritually established and maintained.

Southeast

The Native American populations of the Southeast were predominantly comprised of nations from the Iroquoian and Algonkian linguistic groups. The indigenous Floridian peoples, including the Timucua, Calusa, and Tequesta, were decimated by disease, killed, and/or enslaved by the Spanish during the colonial period; thus, most of their languages have been lost to history. It has been theorized that many of these groups may have spoken Arawakan languages.

Southeastern Algonkian speakers included the Powhatan, Chickahominy, and Pamunkey (all Virginia Algonkians) and Pamlico (Carolina Algonkians). Like the peoples of the Northeastern Woodlands, these groups fished, hunted, trapped, and farmed. Some lived in longhouse-like homes; others built dwellings by placing bark or woven mats over frames made from saplings.

The Seminole, who are today most closely associated with Florida, are not indigenous to that area but are rather a collection of refugees from varied Muskogean-speaking

groups along the Southeastern seaboard, most notably the Lower Creek of Georgia, who migrated there beginning in the colonial period.

Muskogean-speaking nations of the southeast include the Chickasaw, Choctaw, Apalachee, Alabama, Koasati (Coushatta), Muskogee (Creek), and the Florida Miccosukee. The Muskogee “square ground” is representative of later Muskogean habitation and religious structure; their ancestors arranged their homes in circular fashion but still used the number four as the foundational symbol upon which to pattern the construction of dwellings.

The Iroquoian-speaking Tsalagi may have migrated to the Southeast from the Northeastern Woodlands, or it may have been the Northeastern Iroquoians who migrated from the Southeast. Either way, the Tsalagi have much in common with the Iroquois, including sophisticated agriculture (the Tsalagi developed eastern flint corn), a clan system, and an agricultural ceremonial cycle capped by the Green Corn ceremony. Cherokee oral history maintains that there once were hereditary religious specialists called the Ani-Kutani who were overthrown by mass revolt. Thereafter, one could not inherit a position as religious specialist but could only become one by virtue of demonstrable relationship to sacred power.

Plains

Nations of the Plains are linguistically diverse, speaking Siouan, Caddoan, Kiowa-Tanoan, Algonkian, and even Athabaskan and Uto-Aztecan languages. This diversity resulted from a series of historical migrations, perhaps the most notable being the westward movement of the Cheyenne, Arapaho, and Lakota and the eastward movement of the Comanche and Kiowa when horses arrived in the early colonial period. The religio-cultural complex surrounding the hunting of bison, which served as the basis for what is sometimes seen as a shared “Plains culture,” did not emerge until well after the colonization of North America.

Prior to the coming of the horse and the subsequent rise in the dominance of the bison hunt on the plains, some nations followed bison using sledlike structures pulled by dogs. Mobility was often a necessity, fostering an environment wherein rituals could be performed by small groups or alone. Yet some nations, often more recent arrivals on the plains, maintained a sedentary village life centered around maize agriculture while still partaking in seasonal bison hunting. The Caddoan-speaking Wichita of the Southern Plains lived in conical grass homes and focused on village

life. The Central Plains Pawnee and the Northern Plains Mandan (originally from the Ohio River area) lived in earthen lodges and maintained traditional maize cultures, and their religious practices centered on clan possession of sacred bundles. The Mandan *okipa*, a ritual created to call the bison, was the basis for the Sun Dances later practiced by many Plains nations.

The Siouan-speaking nations perhaps most closely associated with the Plains, the Mdewakantowan (Mdewakanton), Wahpetowan (Wahpeton), Wahpekute, Sissetowan (Sisseton), Ihantowan (Yankton), Ihanktowana (Yanktonai), and Tetonwan (Lakota), were originally Southeastern Woodlands peoples. Their ancestors migrated from the Carolina seaboard through Ohio to the western Great Lakes. Colonial pressures and the introduction of the horse resulted in movement more deeply into the Plains, and these groups contributed greatly to the development of Plains bison culture.

Southwest

The Southwest is the location of ancient civilizations: Ancient Puebloans (Anasazi), the Mogollón, the Hohokam, and the Patayan. The Ancient Puebloans were responsible for the construction of the buildings (including religious structures of many types, such as kivas) that are still found in Chaco Canyon National Park, New Mexico; Mesa Verde National Park, Colorado; and Canyon de Chelly National Monument, Arizona. Some of the structures created by these ancient cultures were clearly religious in nature. Some are astronomically oriented; many are aligned cardinally; and others evidently served as solar calendars.

A great number of linguistic groups were historically located in the Southwest, including Athabaskan, Uto-Aztecan, Hokan, Keresan, and Kiowa-Tanoan, as well as apparent isolates, such as Keres and Zuni. Some Uto-Aztecan, Kiowa-Tanoan, and Keresan peoples, such as the Hopi, the Tanoan Pueblos (Tewa, Tiwa, and Towa), and the Keresan Pueblos were agriculturalists who lived in permanent, densely populated villages in homes of stone or adobe construction. Other Uto-Aztecan, such as the Tohono O’odham (Papago) and Akimel O’odham (Pima), as well as some Hokans, such as the Havasupai, are also agriculturalists but live in more scattered settlements with some seasonal migration. Athabaskan speakers who migrated from the Northwest to the Southwest, such as the Diné and Apache, tended to associate in bands rather than in villages. However, over time they selected aspects of the agricultural and religious repertoires of their neighbors to add to their traditional hunting

and gathering economies and religious practices. These Athabaskan groups were quickest to incorporate sheep and horses into their cultures during the colonial period, while the village agriculturalists tended to be more conservative in maintaining their traditional economies.

The village agriculturalists generally emphasized collective ritual and community and understandably placed great importance upon sacred powers associated with water. The Hopi, for example, conducted rituals in which their ancestors visited them from their homes in the clouds and were associated with rain. The expectation placed on each person to contribute to the religious life of the community by joining a religious society was historically quite strong in these groups, particularly among the Keresan and Tanoan Pueblo peoples. Calendrical agricultural rituals predominated. Band-based societies, on the other hand, tended to emphasize curative rituals performed by individual religious specialists. This is not to say that band culture religious practices were less elaborate; Diné ceremonialism, for example, with its curative Blessingway and Evilway rites, is clearly complex and rich with meaning.

Northwest Coast

Northwest Coast peoples spoke languages of Penutian, Wakashan, Salishan, and Athabaskan stock with at least one apparent isolate present (Quileute). In this culture area, relationships with sacred power were crucial to survival, but these relationships were inheritable; thus, the most powerful men in these strictly hierarchical societies were those who had inherited strong relationships with sacred power from their ancestors. Rituals invoking sacred powers were conducted by the elites for the benefit of all.

While first fruits rituals, most commonly related to the salmon, were performed in spring, the most elaborate rituals were wintertime events, which were supervised by dance societies. Membership in the dance societies was also inherited, but initiation was nonetheless complex and lengthy. Certain rituals were considered to be so powerful that they could only be performed in the presence of persons whose relationships with sacred power were just as strong. Hence, many religious actions were not public but were limited to elite audiences. Ancestral tales were interwoven into the larger mythological corpus so that when tales of sacred powers were told during winter ceremonies, links between the elites and the sacred powers were clarified and elaborated. Totem poles, which represented mythic and ancestral relationships with sacred power, were commissioned and displayed by the elites.

Huge communal dwellings, constructed of cedar logs and planks, were also hierarchical in structure and use. The elites lived in the rooms at the rear, either in front of or within rooms dedicated to their collections of sacred objects. Commoners lived along the sides of the house, and slaves lived by the front entrance.

The famed potlatch rituals took place in these houses; partitions were removed in order to transform the house into one vast room. Potlatches could be held to demarcate rites of passage for members of elite families, to hold funerals and memorials, and to mark the ascent of an elite person to a particular position. Goods were redistributed, and thus others demonstrated their acquiescence to the shift celebrated by the potlatch. Most importantly relationships with sacred powers were reaffirmed and strengthened.

California Intermountain Region

The California Intermountain area comprises California, the Plateau (now within British Columbia, Washington, Oregon, and Idaho), and the Great Basin (now within Nevada and Utah); these three cultural areas comprise vastly different landscapes and even more linguistic diversity. Peoples of the Great Basin all spoke languages in the Numic subgroup of Uto-Aztecan, with the exception of the Washo, which is a Hokan language. On the Plateau, Salishan and Penutian linguistic groups dominated, although the Cayuse and Kutenai isolates were also present. In California, Uto-Aztecan, Hokan, Athabaskan, and Penutian linguistic groups were most common, with a small number of Alaic/Algonkian languages and some few evident isolates present.

Great Basin peoples, such as the Shoshone, Ute, Paiute, and Comanche (who migrated to the southern Plains with the arrival of horses), were hunting and gathering band cultures and lived in small, semipermanent settlements, moving with the seasons. Religion was mostly based in individual relationships with sacred power and in healing, although first fruits rituals and some winter dance rituals were celebrated in community.

On the Plateau, personal relationship with sacred power was even more highly elaborated. Communal rituals, such as winter dances, were comprised of individual enactments of these relationships with specific sacred powers, expressed through dance and song and often involving an impersonation of the animal or bird in which the sacred power resided.

In what is now southern and central California, the ingestion of western jimsonweed (*Datura wrightii*), a hallucinogen, was a common route to establishing a relationship

with sacred power; for some groups, such as the Chumash, this ritual was limited to those who wished to become religious specialists. The Payomkowishum (Luiseño), on the other hand, initiated all young men into adulthood through ritual administration of jimsonweed decoctions.

In northern California, the more common religious society was that of the Kuksu (named after the Pomo culture hero-creator) into which the young men and sometimes the young women were initiated. The Kuksu combined elements of initiation into this religious society, marked by ritual dance and song, with first fruits celebrations and world renewal rituals.

World renewal rituals were celebrated by many Californian nations, including the Hupa, Karok, Yurok, and Tolowa. These ceremonies involved enacting the death and rebirth of the world by constructing or renovating sacred structures, the lighting of sacred fires, the recitation of sacred narratives, and the paying of respects to the sacred powers who had just brought the first fruits into being. Ceremonial dress, feasting, and the ritual consumption of acorns and/or salmon was generally associated with world renewal.

Native American Religions: Post-Contact

Christopher Columbus (c. 1451–1506) returned from his voyages with tales of a “discovery” saturated in language that inspired romantic images of pure waters, a pristine land, and noble savages. This myth’s enduring life represents the post-contact project of imaging and re-creating the past.

Two themes demonstrate evolution in Native American religions since European contact. The first theme, kinship, centers around the importance of family ties both among the living and with ancestral spirits. Often outsiders could be incorporated into kinship networks through methods of reciprocity or ritual ceremony, but these networks were small and localized. The second theme, restoration (also called revitalization), resulted as kinship cosmologies expanded and intertwined with Euro-American cosmologies. Restoration movements are the culmination of a buildup of adjustments and adaptations that effected a tremendous change. At this tipping point of enormous upheaval, Native Americans often responded by attempting to return to past forms of religion. Native American revitalization movements, as seen across regions and in individual prophets like Neolin (the Delaware Prophet; mid-eighteenth century), Tenskwatawa (Shawnee; early nineteenth century), Wovoka (Northern Paiute; c. 1856–1932), and Black Elk (Oglala Lakota; c. 1863–1950), demonstrate a restorationist impulse as Native American cosmologies of kinship have moved toward a pan-Indian cosmology of restorationism.

Europeans did not encounter a static people with pristine religious forms. Despite a repeated tendency to romanticize the American past as a time of spiritual harmony in tune with nature, indigenous peoples did not abide in utopia. Archaeologists have uncovered evidence of drought, malnutrition, fortified dwellings, war accoutrements, overhunting, and depletion of land. European contact, however, brought with it dramatic changes to native ways of life. Colonists, missionaries, traders, surveyors, and explorers spread diseases, intensified intertribal aggression, waged war, and swindled natives out of their land. They recorded interpretations in

government documents, missionary journals, and other interest-invested communications that cast Native American religions and cultures as “primitive.” For the Native Americans who survived, change was cataclysmic.

All attempts to recover Native American religious practices are post-contact enterprises. When Native Americans came into contact with European colonizers, each held pre-existing religious cosmologies, which were dramatically affected by cultural exchange. Many aspects of the two cultures became intertwined, making efforts to recover or restore a time of “pure” religion mere projections on a remote past. As frontier evangelization crashed into their own religious cosmologies, which centered on kinship, Native Americans resisted and adjusted. As the cultures interacted with and borrowed from each other, their religious conceptions also became interconnected. Cosmologies were forever altered, and in that process restorationist interpretations of the past also took on new colorings and emphases.

Southwest

When Spaniards arrived in southwestern North America, they encountered people who had adapted and readapted to alternating times of plenty or scarcity over thousands of years. In 1540 Spanish conquistador Francisco Vázquez de Coronado’s (1510–1554) search for the legendary Seven Cities of Gold led him up from the south to the present-day Four Corners region of the United States, where the Pueblo had begun to farm and build small village clusters about 700 CE. When Coronado arrived, he recited the *requerimiento*. The Pueblo watched as he read, in Spanish, the history of the true religion: the pope had established the king and queen of Spain as the rulers of all people. Coronado then claimed Spanish sovereignty, in the name of that religion, over the Pueblo and their territory. If indigenous peoples chose not to obey, the stipulated penalties ranged from enslavement to being “disposed of.”

At the time of Coronado’s arrival, Pueblo cosmology centered on an intricate web of reciprocity-based kinship. The Pueblo valued kinship bonds among relatives and also extended them to animals, plants, and spirits. Their rituals maintained a proper balance with the cosmos and ingrained children’s relationships to adults; intergender relationships; and humans’ relationships to animals, spirits, and the earth. In addition, outsiders could be incorporated into the kinship framework through the exchange of food or services.

The origin myth handed down to present-day Acoma Pueblo describes this kinship relationship through the story

of Thought Woman, who raises two sisters in the underworld. Thought Woman teaches the sisters an understanding of Mother Earth through processes of germination and fertilization, which parallel human sexual relationships and perpetuated the kinship cosmology. One sister would become Mother of the Corn clan and the other Mother of the Sun clan. Elements such as the deceptive serpent Pishuni, who is at the center of original disobedience and subsequent turmoil, provide parallels between the Pueblo origin myth and the Judeo-Christian creation story.

By the turn of the seventeenth century, Spanish missionaries had followed Coronado’s inland path in their effort to replace Pueblo prayer sticks with the cross. The role of sex in Pueblo kinship bonds shocked celibate Franciscan friars, who worked to implement Christian codes of conduct. Spanish missionaries subverted traditional Pueblo kinship bonds by emphasizing God as Father at the expense of the paternal father. Friars themselves took on the role of spiritual father, accentuating their “fatherly love” to the Native Americans while providing dramatic displays of emasculation of their paternal fathers. The subversion of reciprocal kinship cosmology was compounded by prohibitions placed on Pueblo religious ceremonies and rituals that incorporated performances to entice the conditions necessary for reproduction from the earth. Friars shaved off the hair of those who seemed in their *cosmovisión* to be fornicators.

The Puebloan kinship cosmology did not become extinct; it adapted. By the 1670s drought and famine diminished the potency of the Franciscans’ self-portrayal as rain chiefs with their elaborate prayer rituals. Concern developed that children had broken cosmological bonds by ceasing to respect their seniors in traditional ways. Puebloan medicine men explained that the people suffered because they had abandoned the old ways of gaining the favor of the gods of fertility. One medicine man, Popé, called for the rejection of Spanish innovations and a return to the traditional ways of their ancestors. The groundwork for the Pueblo Revolt had been laid, and the tipping point emerged.

On August 10, 1680, Popé led a band that captured horses, blocked roads, slaughtered Spanish settlers, tortured friars, burned villages, and desecrated Christian relics. They razed churches and restored the kivas, religious ceremonial structures that offered access to ancestral spirits in the underworld, earlier destroyed by the Spanish.

Meanwhile, the Spanish interpreted the Pueblo’s actions as immature. At the outset of the revolt, Fray Juan Pío

arrived outside Santa Fé to say Mass for the Pueblo, and his reaction to the armed revolt—he called the Pueblos “children”—reveals the subverted kinship framework. Santa Fé Governor Antonio de Otermín (served 1678–1682) later attributed the Pueblo Revolt to the Native Americans’ stupidity, ignorance, and vice. The depiction of the Pueblo as innocent and childlike perpetuated the myth of European superiority.

Just as Acoma Pueblo appropriated elements of the Franciscan missionaries’ creation story in reconciling the two cosmologies, interaction with the Christian cosmology likely amplified the restorationist impulse as seen in Thought Woman’s emphasis on the proper forms of prayer and ritual. Transcribed in the twentieth century, the Pueblo origin myth also includes a narrative about the cause of their struggle—the people neglected their traditional kinship bonds, angering the godly *katsina* (deceased Pueblo) and causing a contagion of calamities. The solution to seventeenth-century disturbances was a programmatic return to the traditional ways of kinship respect and reciprocity, as interpreted nearly one century after contact. The Puebloan origin myth called a people who had abandoned traditional ways to ritual restoration, even as it intertwined with decidedly post-contact elements.

Eastern Woodlands

The disembarkation of French and English on the Atlantic Coast brought disease, wars, treaties for land, and a chaotic world that began to reshape Native Americans’ kinship cosmology. Kinship networks among Eastern Woodlands peoples were often fluid and flexible, and new kin were adopted into their networks through religious ceremonies.

As the nations within the Iroquois Confederacy encountered accelerated loss of life through disease and battle, adoption increased as well. Iroquois women held the final say in their society’s matriarchal structure, in which captives could be either adopted into the kinship network or brutally sacrificed. As European contact expedited intertribal combative and diplomatic activity among the Algonkian language family, intertribal kinship relationships formed. The Shawnee, for example, denoted the Iroquois as older brothers and the Delaware as grandfathers.

Historian Gregory Evans Dowd (1992) called the period starting about 1745 and continuing until the eve of the Revolutionary War, the “Indians’ Great Awakening.” It was an era of travel and migration in the Eastern Woodlands. The Delawares, Shawnees, Cherokees, and Creeks met at trade

centers, exchanged ideas, and formed networks of commerce. Missionary reports, such as a missive by Presbyterian David Brainerd in 1744, revealed the development of a strong pan-Indian movement among Native Americans in the Eastern Woodlands.

Previously antagonistic groups began to find commonalities in the face of great obstacles. Terms of kinship began to broaden beyond ancestral ties. Prophets appeared in this atmosphere with a common message: the right behavior could restore Native Americans to their pre-contact status. For example, Brainerd described a reformer among the Delaware who wished to address cultural and moral corruption by restoring the ancient rituals and ceremonies. As with the Pueblo, even creation stories made room for the Europeans.

Neolin, the Delaware Prophet, received his first vision in 1761, in which the Master of Life instructed him to send his people’s enemies back to their land. For them to keep the land, the Master of Life instructed him to avoid liquor, sexual promiscuity, medicine songs, fighting among Native Americans, and placing any other gods before the Master of Life. The emerging understanding of tradition was that of a conservation-minded people who had once lived in an pristine past. Despite Neolin’s emphasis on restoring traditional Native American ways, he was preaching the same tenets introduced by the white man at the expense of native customs, enabling a post-contact reconstruction. Emerging in Neolin’s message was an identification of all Native Americans as sharing inherent characteristics and natural wisdom.

Neolin represents a move from a localized, although fluid, familial kinship network toward one that included all Native Americans. His prophetic visions directly influenced Pontiac (c. 1720–1769), the Ottawa war chief, and his style of prophetic movements can be traced to nineteenth-century prophets such as Handsome Lake of the Seneca. As reservation life limited the traditional male role within Iroquois culture—duties that consisted of extended war and hunting excursions—the traditional matriarchal kinship network revolving around a mother-daughter dynamic shifted to a husband-wife relationship. The Seneca Prophet’s call for restoration to the primitive form of religion, therefore, has been interpreted by Anthony F. C. Wallace (1972) as “a sentence of doom” upon traditional kinship relationships. However, Handsome Lake’s prophetic revelations in the early 1800s called for a particular restoration of the past. His revelations also demonstrate the degree to which

Euro-American religion intertwined in the imagination of the ancient past. In one vision, Jesus told Handsome Lake that his people should not follow the ways of the white people. While the Seneca Prophet employed Jesus in the service of a pan-Indian effort to resist Christians, his application demonstrates the deep influence of biblical themes.

Tenskwatawa and the Pan-Indian Movement

The pan-Indian movement, fueled by prophetic visions, which sought to unite Native Americans in an effort to push the white man off their lands and reclaim proper rituals, continued along the Ohio River Valley, home of the Shawnee. In 1805 Tenskwatawa, the Shawnee Prophet, received his first vision of the afterlife. His visions were similar to those of Neolin, and he described a land rich in game and corn where Shawnee who abided by uncorrupted traditions continued to live in eternal bliss. He also envisioned a realm of fire where Native Americans received punishment for adopting the white man's innovations. Like Neolin, Tenskwatawa advocated a return to traditional and pre-contact Indian ways of life and recast the past in terms of traditional qualities.

Tenskwatawa not only adapted Christian teaching about the afterlife, he also adopted the Euro-American myth of America as a Garden of Eden, spoiled by the arrival of white people. Tenskwatawa's older brother, Tecumseh (1768–1813), spread the revitalization message of eternal reward in a pristine land north to the Great Lakes and south to the Gulf of Mexico and developed a significant confederacy.

Tenskwatawa suffered a major defeat during the War of 1812 at the Battle of Tippecanoe, and Tecumseh died soon after at the Battle of the Thames. Native Americans' last genuine opportunity for the militant relocation of Euro-Americans was also laid to rest. President Andrew Jackson's subsequent Indian Removal reached its climax with the Trail of Tears. The 1838 to 1839 march pushed the Cherokees west of the Mississippi River to the Oklahoma Territory and enhanced American dominance by limiting large-scale militant resistance. However, the pan-Indian vision of the restoration of a pristine faith continued despite the severing of Natives from their land. Nearly a century later, Winnebago practitioners of peyote religion explained that their ceremony was the fulfillment of the Shawnee Prophet's prophecy.

Peyote, a cactus native to present-day northeast Mexico and southwest Texas with hallucinogenic qualities, is used for medicinal and sacramental purposes. Spanish

friars sought to eliminate the use of the divine plant, which had been transported to the Southwest, as part of their declaration of sovereignty over the indigenous people. In the 1880s peyote proselytizers Comanche chief Quanah Parker and Caddo medicine man John Wilson spread the Half Moon and Big Moon (also known as Cross Fire) peyote ceremonies, respectively, from reservation to reservation. Both ceremonies combined native notions of the Great Spirit and Mother Earth with elements of Christianity. Later practitioners of the Ghost Dance and Sun Dance would also practice peyote religion. The legal status of the use of the psychedelic drug evolved toward pan-Indianism as peyote religion was institutionalized in the North American Church, established in 1918 in Oklahoma. The articles of incorporation combined the sacrament of peyote with the objective of teaching Christianity, while cultivating unity among Native Americans. Further legislation defined *Indians* for purposes of legal peyote use as those with one-quarter native blood.

Great Plains and Great Basin

The effects of colonialism spread west ahead of Europeans and their descendants. Horses, firearms, and disease arrived in the Great Plains and Great Basin (now in Utah and Nevada) before those native to the area had ever seen a white man. These changes began to affect kinship networks. Kin-based groups comprised primarily along ancestral ties began to broaden. During the winter these kin groups often joined other families in camps. Horses were traded across "chains of communication," arriving in the Great Basin from the south after the Pueblo Revolt of 1680 accelerated trade. Their arrival expanded migration capabilities and created more contact with enemies. Conflict erupted more frequently and, with the introduction of guns, more devastatingly. New and more permanent alliances were needed with other kinship groups who spoke different languages and practiced different forms of ritual. While traditional kinship cosmologies and religious practices would continue to inform Native Americans' worldview, they were reciprocally affected.

The Lewis and Clark expedition moved through the region in 1805. Thereafter, settlers drove the Oregon Trail with some branching off into California, especially midcentury during the California Gold Rush, while others planted roots in the Great Basin. They settled and imposed their concept of individually owned and enclosed property. As the

U.S. government enforced treaties that confined Native Americans to reservations, concepts of a once pristine land flourished, and the language of kinship extended to civil authorities.

Such was the case with Idaho Territorial Governor Caleb Lyon's insistence that Shoshone Biting Bear and his followers make their new home on the reservation. In 1866 Lyon obliged the kinship ritual of reciprocity as he appropriated the language of kinship in blessing the treaty, referring to the president as the "Great Father" and invoking the Great Spirit.

As treaties proliferated, Native Americans of various kin groups, practicing different religious ceremonies and rituals and speaking various languages and dialects, found themselves occupying the same reservations. Another tipping point arrived. The first Ghost Dance movement in 1870 provided a common language in the midst of great upheaval.

The proximity of another American restorationist movement created a venue for the exchange of ideas. According to Mormon founder Joseph Smith's prophetic visions, the Native Americans were one of the lost tribes of Israel descended from Lamanites. Similarities exist between Smith's subsequent prophecies about the millennium and salvation and the Ghost Dance prophets' expressed anticipation of the end of the world and the resurrection of the dead. Previously, shamanism had provided a method to combat illness among individuals in the Great Basin. Shamans fell into trances to receive a prescription for combating the sickness. Prophets, who also fell into trances and came out of them with messages for healing, offered prescriptions for a broader audience.

A message of pan-Indian unity spread throughout the Great Basin principally through the prophetic visions of Wodziwob, who first performed the Ghost Dance in 1869. Frank Campbell, a reservation employee who witnessed one of Wodziwob's trances, reported that the resulting prophecy called for a restoration of paradise on Earth; all peoples would be destroyed, but three days later Native Americans (later he stipulated Native American believers) would be resurrected to enjoy a land of plenty. The return of the land to a Garden of Eden condition was contingent upon the rejection of European ways and the restoration of proper behavior by Native Americans.

Second Ghost Dance, Sun Dance, and YMCA

The second Ghost Dance movement began in 1890, this one initiated by the Northern Paiute prophet Wovoka.

Bannocks and Shoshone on the Fort Hall Reservation, positioned in a region with a heavy flow of traffic, spread the message of pan-Indian identity and resistance to white encroachment and served as Ghost Dance missionaries. In 1890 Fort Hall Reservation agent Stanton Fisher explained the Ghost Dance as a doctrine that white people would die and Native Americans would enjoy a land with bountiful game, but only if the native peoples adhered to traditional customs.

The prophetic movement that emerged out of cultural upheaval also can be seen in the person of the Lakota prophet Black Elk, who experienced the Wounded Knee Massacre and later became a Catholic catechist. He preached against materialism and in favor of a return among the Lakota to a harmonious relationship with nature. In an effort to resist Americanization and revitalize traditional Lakota religion, Black Elk conflated the Ghost Dance with Catholicism to create the Sun Dance. Author John G. Neihardt represented Black Elk as a tragic hero in *Black Elk Speaks* (1932). The popular and Native embrace of Neihardt's idealistic version of Black Elk can be understood, as Amanda Porterfield (2000) noted, "as an extension of the image of Indians as noble savages that has often functioned as a symbol of resistance to civilization and affinity with nature" (p. 50). The Sun Dance remains vibrant in its celebration by the American Indian Movement (AIM). Since the late 1960s, AIM has attracted native and nonnative involvement alike in advocating the spiritual connectedness of all Native Americans.

Historically Protestant-affiliated groups such as the Camp Fire Girls and the YMCA incorporated Native American themes in what has been termed "Indianized Christianity." The groups dressed in Native American attire, took on Native American names, and incorporated "Native American core values" in their effort to develop greater harmony with nature and tighter bonds with family. The Y-Indian Guides were established in 1926 to strengthen father-son kinship bonds and instill the romanticized virtues of a "green" culture. They and their later mother-daughter, father-daughter, and mother-son instantiations combined the Judeo-Christian teaching "to love thy neighbor as thyself" with language projected upon Native Americans that invoked the Great Spirit and nature. At the turn of the twenty-first century, the YMCA was starting to reject stereotypical applications of Native American culture and transition to the similarly inspired but racially sensitive Y-Adventure Guides. Yet the deeply intertwined influence

between a pristine pan-Indianism and Euro-American religions continues to thrive in American culture.

Native American Religions: Contemporary

In the first decade of the twenty-first century, North America remains home to thousands of indigenous communities and hundreds of tribal nations whose members sustain a wide diversity of religious ideas, visions, and practices. Five hundred years of oppression have taken their toll. Entire societies have been erased, and among those that survive many languages and ceremonies are extinct or endangered. Yet strong currents of indigenous identity remain. Ancient traditions have been guarded and updated; new ideas have been adapted and incorporated, though not all of these

adjustments have been smooth or free of conflict. American Indian religious practices continue to challenge the legal, economic, social, and political norms of surrounding societies, even as Native communities themselves cope with internal tensions. In the United States a handful of Native communities have experienced the rapid influx of wealth from gaming or resource development; others continue to struggle with a deep, persistent poverty that fosters misery and addiction. Both extremes corrode the religious foundations of American Indian societies that are based in respect—for the natural world, for kin and community, and for the enduring legacy of the ancestors.

Resilience of Traditions

Ceremonies provide the clearest evidence to outsiders that Native American religious traditions have survived. In the American Southwest, the elaborate public ceremonies of the Hopi, Zuni, and Pueblo peoples were a major factor in the growth of regional tourism beginning in the 1930s. Many of these ceremonies are still performed today, yet in some cases the presence of tourists and anthropologists is more tightly controlled or has been eliminated altogether. The well-known Northern Plains Sun Dance, which is thought to have originated with the Lakota people, is now performed across the country, from the Navajo Nation in the Southwest to the Onondaga communities in the Northeast. Participants come from many tribal nations and sometimes even include non-Natives as well.

Other ceremonies are locally or privately known, such as the Cherokee Stomp Dance, the seasonal Longhouse dances of the Haudenosaunee (Iroquois) people, or the elaborate dance dramas of the Tlingit, Kwakiutl, and other Pacific Northwest peoples. Few if any outsiders are in attendance. Most Diné (Navajo) ceremonies are performed for the benefit of individuals, though this benefit extends out among relatives and other participants. The ceremony may be one of healing from disease or from some other kind of unrest, or one seeking help and success in an upcoming endeavor. *Kinaaldá* is a demanding ceremony that brings Diné girls into womanhood.

Ceremonial performance is intended to strengthen daily life. For Native Americans, traditional life is built on close observation of the natural world and respectful relations with human as well as other-than-human kin. Daily life is enriched with traditions of planting, hunting, gathering, preparing, and sharing of food and medicine; of storytelling, singing, and dance; and of healing, sport, and artistic

decoration. These traditions can remain strong, even where once common ceremonies have faded and even when a community has adopted an entirely new religious identity, such as Christianity. The most important daily dimension of Native religious practice might well consist of maintaining the social ties of family and clan and the traditions of visiting and mutual care and assistance. Today, Native American communities are reviving those practices of daily life with religious underpinnings. For example, the Chumash people of the central California coast are reviving the practice of building and using oceangoing canoes, while the Makah people of northwestern Washington have asserted their right to resume traditional whaling on religious as well as cultural and legal grounds. Across the continent Native farmers, hunters, artists, dancers, filmmakers, storytellers, and athletes are working with old as well as new media to extend their traditions into the future.

Adaptation

Much scholarship has been devoted to distinguishing “authentic” American Indian culture, including religious practice, from modern innovations and syncretism. Yet even the most conservative practices must sometimes be adapted to changing circumstances. A community undergoing even the most radical change usually retains some connection to the past. For American Indians the past five hundred years have included traumatic dislocations of homeland, livelihood, identity, and culture. The fight for physical survival gave way to the fight for cultural survival. In Canada as well as the United States the practice of traditional ceremonies were outlawed and severely punished, and children were forcibly removed to boarding schools dedicated to destroying Native identity, language, and culture. The results of this determined experiment in forced assimilation were dismal: generations of lost youth, never fully trusted or respected by whites, yet no longer competent in their original cultures. Absolute resistance usually resulted in extermination. Survival required both deep devotion to what was most important in Native identity and culture, and the ability to adapt. Sometimes this called for imaginative ways to hide or disguise Native practices from the watchful eyes of missionary agents, schoolmasters, and police.

Native interpretations of Christianity have only recently gained the attention of scholars, but American Indians have been making Christianity their own for five hundred years. Among the Pueblos of the American Southwest as well as in parts of Mexico, Christian worship and devotions continue

to be layered onto indigenous practice. Mexican communities are experiencing rapid growth in evangelical and pentecostal Christianity even as many indigenous healing practices, rekindled as *curandismo*, continue to thrive. In other places, for example in Choctaw country, in what was once Indian Territory and is now Oklahoma, conversion to Protestant Christianity appeared complete. Yet many Choctaw congregations insisted on controlling their own churches, and within them traditional patterns of kinship reciprocity have resurfaced and thrived. The same is true of Catholic practice in many Native congregations in the Upper Midwest and Great Lakes regions, as well as further north in uppermost Canada and the Canadian Arctic, where most residents in Native communities attend Christian churches.

The Native American Church, organized around the sacramental gift of peyote, has taken a very old tradition and recast it into an intertribal form accessible to Native people from many backgrounds, living contemporary lives. Participation offers physical and emotional healing and enables individuals to achieve and maintain sobriety. Membership continues to grow among all age groups across the United States and Canada.

Threats and Challenges

Misunderstanding and conflict still largely characterize the relationship between indigenous communities and nations in North America and the complex, multicultural societies that surround them. Among other issues of contention, Native American religious practices pose significant legal and moral challenges to U.S. and Canadian societies, based as they are on fundamentally different premises. These challenges have been taken up forcefully by Native peoples from their first contact with outsiders. These efforts gained a wider, more receptive audience during the late 1960s and early 1970s as the Red Power movement emerged alongside the Civil Rights movement to demand redress of grievances and equality of opportunity. Vine Deloria Jr., who exemplified a new kind of scholar-activist—one versed in both traditional knowledge and the processes of legal and social advocacy—developed powerful, critical arguments from Native perspectives and presented them to mainstream society with significant success. As a result Native voices and perspectives have become impossible to ignore.

Two court cases illustrate these conflicts and the disparity of premises that drive them. In the 1988 *Lyng* case the U.S. Supreme Court ruled that on public land the federal government need not be concerned if its actions

infringe on indigenous religious practice. In the 1990 *Smith* case the Court ruled that states can outlaw a religious practice—in this case the use of peyote as a sacrament within the Native American Church—without having to prove the practice is harmful enough to warrant prohibition. The American legal establishment has consistently favored non-Native property and law enforcement interests over Native cultural premises with regard to the nature and meaning of religious experience, or the relationship of human individuals and communities to land, plants, or animals.

The Supreme Court of Canada in its 1997 *Delgamuukw* ruling established the principle that indigenous traditional knowledge must be heard and admitted as evidence in Native rights cases. While this might seem to signal a breakthrough in legitimizing Native experience and perspectives, many First Nations remain skeptical about their prospects. In some cases they feel more may be lost than gained in exposing traditional knowledge to outside scrutiny and evaluation. One of many concerns is that such exposure will open sacred sites to disruption and desecration by New Age seekers and other non-Native enthusiasts who feel that they are spiritually entitled to visit places of Native religious significance and make them their own.

At the same time the survival of traditional ways of life face unprecedented threats at home, some old and some very new. These include threats to sacred places, language erosion, and the weakening of social webs. Relationships to places of religious significance are being damaged by disruption to the places themselves, or by denial of access to Native caretakers and practitioners. Fluency in indigenous languages is rapidly eroding in most Native American communities. Strong efforts to slow or reverse this trend are under way, but irreplaceable traditional knowledge is being lost every day as elders, often the last fluent speakers of these languages, pass away. Finally, social webs of kinship and community are falling apart in many communities. In some cases this is due to alcoholism, the use of methamphetamines and other drugs, sexual and domestic violence, and other social and physical ills that can usually be traced back to historical trauma. In other cases it is due to economic dislocation brought on when community members must move away in order to earn a living. In a handful of communities it is the sudden influx of wealth from tribal gaming operations that breaks down traditional relationships.

Efforts are under way in Native communities to treat these disorders by reinvigorating traditional knowledge. Programs using traditional values to restore healthy relationships and

healthy personal habits abound. Efforts are also under way to restore traditional economies. For example, the Intertribal Bison Cooperative is working to restore healthy buffalo herds in many Native communities. Such efforts, it is contended, will provide benefits both economic and spiritual.

Looking Ahead

In the face of all these threats, the future of Native American religious traditions can appear tenuous. Yet Native Americans themselves remain undeterred in their determination to survive as a distinct people. Even as Native peoples joke and laugh about their predicaments—it would be difficult indeed to find a ceremonial gathering where nobody jokes, nobody laughs, nobody comments on the countless varieties of human weakness and confusion—they endure. Native American peoples diligently plant and tend the seeds of culture, language, and tradition, working to protect and cultivate identity and meaning—not just for themselves, but for the benefit of generations to come, “those faces looking up to us from the ground.”

Along the way the survival of these traditions has something to teach scholars of religion, posing important questions about the definition of religion, what it is and where to look for it; about the dynamics of religious change and persistence; about the relationship between religion, economic life, and ecology; about the importance of jokes, joking, and sexuality in religion. Native responses to academic scrutiny may also pose important questions about motivation in the study of religion, and how it is culturally and politically embedded.

The Native individuals and communities that maintain and grow these religious traditions likely have a more important contribution to make. They have something essential to say about how human societies might better relate to the places, plants, and animals with which they share space and time. The work of Native American writers and artists, newly recognized and growing robustly since the late 1960s, draws from indigenous sources of history, culture, and religion and opens up new possibilities for individuals and societies to understand themselves and their relationships with the natural world, with other species, and with history. Far from being backward-looking, the keepers of these traditions understand them as sources of knowledge and inspiration vital to a sustainable human future.

Nature and Nature Religion

The term *Nature Religion* in the United States and elsewhere in the European-influenced world first calls to mind contemporary New Age and Neopagan practitioners and the remnants of indigenous cultures who still adhere, to a lesser or greater extent, to their nature-based traditional aboriginal religions, having resisted imposed conversion to Christianity during the modern period of European and American colonization. However, using new models for analyzing what constitutes nature religion, the term is increasingly used by anthropologists, sociologists, and religious studies scholars to denote cultural manifestations that stress the strong importance of *nature* in some way or another, either by declaring nature to be imbued with the sacred, holy, or divine, or to be in some manner inherently or intrinsically valuable for its own sake apart from any practical or utilitarian value to humans. Thus, political movements for increased environmental protection that are usually grouped under the heading *secular environmentalism* can be understood as a form of *nature religion*. Further, while the Abrahamic religions of Judaism, Christianity, and Islam are often understood as the very antithesis of nature religion, these broader definitions

of what constitutes nature religion allow various widespread movements within these major world religions to be understood as new nature religions as well. Thus, some of the most widespread forms of nature religion are, in essence, hiding in plain sight, within conventional churches, synagogues, and mosques. This entry explores these newer understandings of nature religion, along with more conventional manifestations such as New Age and Neopaganism.

Nature-Venerating Religions: Defined

In most though not all situations where the term “nature religion” is used, it is understood as a cultural manifestation of a belief system that “venerates” nature. Thus, “nature religion” is usually shorthand for *nature venerating religion*. Defining each of these words is important to understanding the concept. In common parlance, the term *religion* is often thought to relate to rituals and beliefs related to supernatural deities. However, the term is often used much more broadly by religion scholars. Anthropologist Clifford Geertz’s definition is by far the most commonly cited, if only as a starting place for some other scholarly definition. He defined religion as “(1) a system of symbols which acts to (2) establish powerful, pervasive, and long-lasting moods and motivations in [people] by (3) formulating conceptions of a general order of existence and (4) clothing these conceptions with such an aura of factuality that (5) the moods and motivations seem uniquely realistic” (1973, 90). Thus, religion for Geertz and many religion scholars is any system of thought that satisfies the central human need to “explain phenomena” encountered in daily human experience or that otherwise renders human life “comprehensible” (Geertz, 100–101). Following Geertz’s broad definition, anthropologist Carolyn Moxley Rouse declares that “any strongly held belief and orientation to the world,” even “atheism, secular humanism, [and] Marxism, are all properly understood as *religion*” (2004, 139; emphasis supplied). This broad definition of religion has been utilized by state and federal courts who have ruled that atheism is a religion under the federal civil rights statutes and thus protected from discrimination.

As noted above, nature religion in most uses involves the veneration of nature or otherwise deeming nature to be sacred. However, this veneration can but need not involve any supernatural divine beings. For understanding nature religion, it is sufficient to understand *sacred* and *venerating* as indicating a very strong human perception of importance and value, without any necessary connection to a deity or other concept of god.

Finally, *nature*, among a variety of definitions in the Oxford English Dictionary (OED), can mean either the “phenomena of the physical world collectively; especially plants, animals, and other features and products of the earth itself, as opposed to humans and human creations,” or “the whole natural world, including human beings; the cosmos.” Traditionally and historically, the Abrahamic religions have understood nature in the first sense, while most nature religions understand nature in the second sense. Thus, nature religions venerate all that is (this cosmos and any others that may one day be discovered) and understand humanity as just one small part of this venerable whole.

Sacredness as an Order within Reality

It is further helpful for comprehending nature religions to understand where various religions fit within three possible metaphysical categories regarding sacredness as an order within reality. While agnostics take no stand in these determinations, other religions can be understood as fitting within one of these three categories: 1) pure pantheism (all of reality is God or, if the term God is rejected, is sacred, holy, and/or in some way intrinsically valuable or venerable); 2) nihilistic atheism (absolutely nothing in the entirety of reality is in any way sacred, holy, and/or in any way intrinsically meaningful, venerable, or valuable); and 3) dualistic theism (some parts of reality are sacred; other parts are profane or ordinary). The environmental philosopher Edward Abbey, who declared “either everything is divine, or nothing is” (Loeffler 2005, 2), is an example of a pure pantheist. The anthropologist Roy Rappaport provided a good example of nihilistic atheism when he declared that humanity “lives, and can only live, in terms of meanings it must construct in a world devoid of intrinsic meaning but subject to physical law” (Rappaport 1999, 1, 451). Most belief systems fall between these two poles and are forms of *dualistic theism*, seeing reality as a mix of “the sacred” and “the profane,” a distinction used by both the historian of religion, Mircea Eliade, and founding sociologist, Emile Durkheim. While the pure pantheist sees everything as sacred and the nihilistic atheist sees everything as profane, the dualistic theist sees reality as a mix of the two. Most, perhaps all, nature religions share in common their tendency toward the pantheistic end of this spectrum.

Finally, one last term is critical to understanding contemporary nature religion: *panentheism*. The OED defines it as the “theory or belief that God encompasses and interpenetrates the universe but at the same time is greater than and independent of it; frequently contrasted with *pantheism*.” This

is a new definition for the OED as of December 2007. Most dictionaries still do not contain this term. It is an important term, because it is in fairly common use within liberal Christian theology. While pantheism is still deemed in many if not most Christian circles as “a ‘heresy’ label of the worst kind” (Tillich 1951, 233), a growing number of liberal or progressive Christians are willing to understand the divine as penetrating and residing in all existence, even if the divine or sacred is not, in the Abbey sense, exactly the same or coequal with all existence. Similar liberal panentheistic strands are also present in the other Abrahamic religions, in Islam within its Sufi traditions and in the Kabbalistic strands of Judaism. These panentheistic forms of religion, though forms of dualistic theism, are nevertheless examples of nature-venerating religions. To further complicate the matter, some people who use the panentheistic label mean that everything in this universe is part of God, but God in some mysterious unknowable way transcends this universe. Technically, this is just another form of pantheism, that asserts there is more to reality than just our known universe, but assumes that whatever exists is sacred, divine, or God. Regardless, either use of panentheism is an example of nature religion because all of reality has been imbued to at least some extent with sacredness and/or intrinsic worth.

One more scholarly model for analyzing nature religion is Bron Taylor’s heuristic of Dark Green Religion, wherein nature religion is loosely divided into four types. There are two broad categories—Animism and Gaian Earth Religion—with each of these categories divided into naturalistic and supernaturalistic subcategories. Thus the four types are Spiritual Animism, Naturalistic Animism, Gaian Spirituality, and Gaian Naturalism. Both forms of animism accept that there are nonhuman intelligences with their own integrity and value that are entitled to some measure of respect from humanity. Jane Goodall’s passionate concern for her primate research subjects and primates in general is an example of this Naturalistic Animism. Those who also believe in unseen spirits, faeries, and so on, would be examples of Spiritual Animism. Most neopagans and new agers would be in this category.

As to Gaian Earth Religion, this category derives the term *Gaian* from James Lovelock’s Gaia Hypothesis, a scientific model that understands planet Earth as a single physiological system that in many ways behaves as a self-regulating organism. Lovelock took the name for his model from the ancient Greek earth goddess, Gaia. While the hypothesis remains scientifically controversial, the model has been embraced

within many contemporary nature religions, both in America and globally, such that *Gaia* is now an alternative name for our planet among those, both naturalistic and supernaturalistic, who see our planet as an organismic, holistic whole.

The boundaries within Taylor's Dark Green Religion model are not hard and fast. While one is either open to supernatural existences or not, one can be both animistic and Gaian in one's outlook. Many, probably most, manifestations of nature religion would embrace both understandings. Thus, both the supernaturalistic neopagan or new agers and the naturalistic research scientists can and do voice understandings of nature that are both animistic and Gaian within the meanings of this model.

Context for Emerging Nature Religion in the United States

As of 2008, seventy-six percent of Americans self-identify as Christian (a ten percent decline since 1990). Christianity has traditionally been understood as the mirror opposite of nature religion, and it is likely that most American Christians would still agree that one of the most essential tenets of Christianity is that God is the creator of the universe and exists in a realm that is apart from this creation, even if that deity is understood to be aware of and in some sense involved in the physical cosmos revealed by science. As noted above, to be called a pantheist is to be branded with "a 'heresy' label of the worst kind" (Tillich 1951, 233). This animosity toward even partially pantheistic understandings of reality flows out of traditional interpretations of the Hebrew Bible, an ancient collection of writings that is held sacred by Jews, Christians, and Muslims. The ancient pagan religions that the ancient Israelites sought to supplant were notable for the way in which they understood the physical forces of nature as personified gods. The gods were part of nature, not outside of it. Ancient Israel initially shared in the polytheism of the ancient Near East, even while exalting its tribal god as the best and most powerful of these gods. Over time, the ancient Israelites slowly shed their polytheism, and probably by the time of Israel's return from Babylonian captivity in the fifth century BCE, Judaism became known for a rigid monotheism that understood its God not only as singular but also as radically separate from and transcendent over nature, an innovation in human metaphysical understandings up to that point in human history. This led to a newly exalted understanding of the place of humanity within the created order. In this Jewish understanding, only humanity was made in the image of God, and God ranked humanity in a hierarchical

order just below the divine beings known as angels. Because of this professed spiritual superiority over the rest of creation, ancient Judaists believed that their God had given humanity dominion over the rest of creation and had commanded that humanity subdue the earth and extract from it all that was necessary for human support. Ancient Judaism then passed on this diminished concept of nature to the later emerging religions of Christianity and Islam. Upon the emergence of Christianity, one of its earliest proponents, Paul of Tarsus, restated the prohibition on nature worship in his New Testament letter to the Romans, emphasizing that only the transcendent God of the universe, not God's creation, was to be worshiped. This prohibition was then taken up by Islam in the seventh century CE. As the historian Clarence Glacken (1967) noted, the "theme that [hu]man[s], sinful though [t]he[y] be, occup[y] a position on earth comparable to that of God in the universe, as a personal possession, a realm of stewardship, has been one of the key ideas in the religious and philosophical thought of Western civilization regarding [humanity's] place in nature" (p. 155).

This subordinate role for nature as conceived by Christianity—and for the inferior status of aboriginal peoples in the Americas that were understood as being improperly engaged in nature worship—was a central justification for European conquest of the Americas, and it provided support for American ideas of Manifest Destiny that fueled westward expansion and genocidal policies toward Amerindians. When William Bradford stepped off the *Mayflower*, he perceived a "hideous and desolate wilderness." Environmental historian Roderick Nash (2001) interprets this harsh reaction as having two components. First, the natural environment they encountered was unfamiliar and was a formidable threat to the new immigrants' very survival. Second, in large measure as a result of their Christian ideology, they imagined wild country as a moral vacuum fit only for nature-worshipping pagan rites that they were mandated to civilize for the glory of "nation, race, and God" (33). The more the settlers conquered the wilderness by civilizing it, the greater their sense of achievement (38). Nash notes that Tocqueville, that early observer of the American experience, observed that living in the wilds "produced a bias against them" (43).

It is against this Abrahamic backdrop that nature religion eventually emerged in the United States. For all their various differences, American nature religions share in common a rejection of every aspect of the foregoing Abrahamic ideology about nature. With the exception of the emerging strands within the Abrahamic religions described below,

which are developing new theories for overcoming their nature-denigrating past, many nature religions in the United States share a common self-identity as “not Christian.” This shared self-identity was strongly reinforced by the publication in 1967 of Lynn White’s still hugely influential essay, “The Historical Roots of Our Ecologic Crisis.” There, White declared that “in its Western form, Christianity is the most anthropocentric religion the world has seen,” (1205) and opined that much if not most environmental degradation is directly traceable to Christianity’s radical anthropocentrism. White’s essay was seized upon by the then still nascent emerging nature religions and is still widely cited by nature religion advocates, and it continues to reinforce the above-described self identity. While the accuracy of White’s thesis is still debated in academic circles, it is accepted as self-evident within many strands of nature religion.

The Beginnings of Nature Religion in America

A decisive influence on American nature religion was the eighteenth-century Swedish scientist and religious ecstatic Emanuel Swedenborg. Largely forgotten now, Swedenborg was one of the most widely read authors in antebellum nineteenth-century America who believed God had given him the power, through visions, to travel in spirit to other planes of existence. To Swedenborg, while God might transcend the cosmos and exist apart from it, God also existed within and interpenetrated the natural order. Because of this, the natural world was divine and God communicated to humans through nature. Thus, Swedenborg was an early pantheist before the term had even been coined and was a strong influence on the American literary giant, Ralph Waldo Emerson. Swedenborg’s ideas are very evident in Emerson’s seminal pantheistic essay, *Nature*, published in 1836. Emerson thus serves as an important divergent fork in the development of American nature religion. One stream descends from Emerson, through Thoreau, John Muir, Aldo Leopold, Abbey, and current manifestations of religious naturalism—such as deep ecology and naturalistic pantheism—that deny the supernatural but ecstatically embrace the physical reality in which humans find themselves. However, Emerson also influenced Phineas Parkhurst Quimby, an early American spiritualist. Quimby’s student, Mary Baker Eddy, founded the new American religion of Christian Science, which, along with Theosophy and New Thought imported from Britain, descended into their current manifestations in New Age religious ideas that

radically deny physical reality or any ultimate importance to physical matter.

Neopaganism and New Age

Some dictionaries define *paganism* as any non-Abrahamic religion. This definition is waning. If surviving Amerindian spiritualities are thought of as shamanistic religions, neopaganism is a fairly recently minted nature religion that has shamanistic elements but which claims descent out of the pre-Christian aboriginal religions of Northern Europe. Wicca, one of the most widespread and well-known forms of neopaganism in both Europe and North America, initially claimed to be the revived modern continuation of an unbroken line of witch covens that survived underground during nearly two millennia of oppression and persecution. Wicca was founded by Gerald B. Gardner, a retired British civil servant. He claimed to have been initiated by a surviving secret order of witches in 1939, which he then wrote about fictionally. It is now realized that Gardner borrowed from magician Aleister Crowley, writer D.H. Lawrence, Freemasonry, spiritualism, archeology, and many other sources, to synthesize Wicca. Most Wiccans now acknowledge they are not carrying forward an ancient line of unbroken practices from the past, but most will claim they are revitalizing and reinventing ancient practices from pre-Christian Britain.

Wiccans, as well as other neopagans, see the divine as immanent in nature; its goddesses and gods live in the moon, the stars, the earth, and the bodies of humans. The gods, humans, and the rest of nature are all sacred and interconnected. Thus, the divine is in the world, not outside it. Wiccans and other neopagans often are involved in environmental activism, both radical and conventional. Graham Harvey, scholar of contemporary paganism, describes it as a “label for a diversity of spiritual movements and practices focused, in a variety of ways, on the celebration of nature,” movements which are “world-affirming even, or especially, when it confronts what it perceives as threats to ecological diversity or the sanctity of natural life. Its engagement with physicality re-enchants the world not as resource or environment but as a community” (2005, 1250). Neopagans can be both pure pantheists or dualists, with a strong tilt to the far end of the pantheist scale.

While New Agers are often lumped together with neopaganism by many in the dominant Christian culture, New Age religion is, in a number of ways, the opposite of neopaganism. Neopaganism embraces matter and physicality.

New Age practitioners often deny the reality of matter and extol the primacy of spirit. As one New Age practitioner puts it, “We’re not physical beings who have spiritual experiences; we are spirit having physical experiences.” New Agers nevertheless fit well within the category of pure pantheism. The physical may be an illusion, but it’s a divine illusion, a manifestation of the divine, perfect spirit.

However, despite their differences concerning the reality and/or importance of matter, there are commonalities within the two groups as well. Sarah Pike, in her investigations of both “New Agers and Neopagans,” notes that they believe in a highly diverse group of “gods and spirit helpers” that “they contact . . . in ritualized settings. Some of the entities they honor exist on a separate plane of reality, while others are extraterrestrials with special messages intended to improve life on this planet.” Further, in terms of practices, New Agers and Neopagans “consult astrologers and tarot cards, the *I Ching* and other divinatory techniques for guidance in life choices and to further self knowledge. They appropriate the spiritual riches of other cultures, including Tibetan Buddhist, Hindu, Taoist, Egyptian, American Indian, and even some Christian beliefs and practices. They put statues of the Buddha or Hindu or Egyptian deities on their home altars alongside objects such as pentacles, candles, crystals, and goddess figurines” (Pike, 2004, 14–15).

Where the two groups often diverge is in the realm of political activism. Neopagans in general are more likely to be involved with active political engagement on environmental issues, and they indeed view political activism as a form of ritual earth veneration. New agers as a group tend to be more focused on self-improvement through deepened spiritual awareness, and they often recoil from active political engagements because of the negativity they associate with the messiness of direct engagement with what New Agers often see as corrupt political institutions. New Agers as a group see their efforts toward greater spiritual enlightenment as a purer form of activism, the benefits of which will then seep out into the larger culture, thereby improving it. These are, however, broad generalizations, as many neopagans avoid political activism and many New Agers are very committed environmental activists involved in politics and lobbying.

Nature Veneration within Mainstream Christianity

Two schools of Christian thought that emphasize divine immanence in nature rather than divine transcendence over nature have emerged and acquired increasing influence over

the last half century within mainstream Christianity. They are *process theology* (as being derived from the process philosophy of Alfred North Whitehead) and *creation spirituality*. Of course, these new theologies are usually regarded as heretical or at least suspect by conservative Christians, being viewed as against Paul’s prohibition of pantheistic understandings of the divine. To refute this critique, proponents of these immanent theologies often rely on the relatively new metaphysical label discussed above, *panentheism*. This term was popularized in the United States during the 1950s by philosopher and theologian Charles Hartshorne. Contemporary Christian thinkers who use this label are careful to distinguish it from *pantheism*. The OED defines pantheism as “a belief or philosophical theory that God is immanent in or identical with the universe,” while defining panentheism as the “theory or belief that God encompasses and interpenetrates the universe but at the same time is greater than and independent of it.” Conservative branches of Christianity still hold to a completely dualistic understanding of God and maintain that the divine realm is entirely separate from the mundane universe in which humanity resides, even if that God is aware of events in the physical realm and may miraculously intervene on occasion. In mainline to liberal streams of Christianity, panentheistic interpretations of divinity are frequently advanced, often citing the account of Paul’s sermon to the Athenians for scriptural support. There, Paul, quoting with approval an unspecified Greek poet, declared that God “is not far from each one of us. For ‘In him we live and move and have our being’; as even some of your own poets have said” (Acts 17:28 NRSV). This verse imagines a much more immanent, less transcendent God. This passage is one of the most quoted passages by liberal Christian theologians who seek to articulate a more earth-friendly Christianity reconciled with contemporary ecological and evolutionary science. These branches of Christianity usually embrace ecological science as demonstrating the interdependence of things, and they frequently draw on ecology as an exhortation to return humanity to an Arcadian garden of harmony with nature.

These theorists usually claim to accept evolutionary science. However, as Lisa Sideris has noted, liberal Christian theorists often de-emphasize or outright deny that natural selection operates solely in a manner that is blind, random, and purposeless. Instead, even the most liberal Christian thinkers still affirm belief in some form of conscious, supernatural deity that controls or at least influences events within earthly existence, including the manner in which evolution

occurs, even if this deity interpenetrates the whole cosmos. However, there are small movements within Christianity that understand the processes of evolution and their physical manifestations as the primary divine reality and accept its random nature, such as the Christian deep ecology and Christian pantheism.

Deep Ecology and Christian Pantheism

The term *deep ecology* was coined by the Norwegian philosopher Arne Naess in 1972 to name and thereafter identify a branch of environmental philosophy that declares nature has intrinsic value independent from its utility to humans, and nature should be allowed to flourish and continue its evolutionary unfolding. Naess distinguished deep ecology from what he termed “shallow” ecology or that type of environmental concern that worried only about adverse effects upon humans. Also very influential as a founding text of deep ecology is Edward Abbey’s *Desert Solitaire*, where Abbey extolled the virtue of America’s desert southwest as a sacred place where people could discover the nonanthropocentric value of nature, a sacred realm with its own value apart from its instrumental value to humans.

As a belief system that venerates nature, it is properly understood as a form of nature religion, one that has been especially influential in various segments of American environmentalism, both conventional and radical. Within the radical environmentalist movement known as *Earth First!* (a movement known for its use of civil disobedience), deep ecology and various types of neopaganism are often melded together to create new forms of American nature-venerating religion.

More surprising perhaps, deep ecology has also influenced branches of progressive Christian thought. These streams of Christian deep ecology and Christian pantheism move decisively in the direction of a naturalistic worldview that embraces the idea that new scientific understandings of the cosmos may necessarily overturn earlier understandings of the divine. For this new form of Christianity, securing a place in an afterlife is no longer a primary goal. Instead, finding the sacred in this cosmos in which humanity is embedded is understood as the truth that sets humanity free, not continued devotion to traditional Christian doctrines that are seen as no longer credible in light of contemporary science. Instead, the central command of the sage of Nazareth to love God and love your neighbor is understood to include both a humanistic and ecological ethic that extends the circle of moral concern beyond humanity to the whole

of creation, which in turn is understood as the primary, perhaps only, sacred entity.

In fully embracing evolutionary and ecological science and the model of nature provided by it, these Christians often reject all elements of supernaturalism and reject or are at least agnostic about claims of an afterlife. Individuals in such movements see themselves as still Christian in that they still believe in God, even though their God is merely physical reality and its attendant natural laws; they still revere Jesus as an important teacher of ethics while rejecting that his execution had any particular cosmic redeeming significance; and they still appreciate the Christian Bible as their common inspirational text, while rejecting it as in any sense magically inspired by some external deity. Fully accepting reality as revealed by contemporary science is central to these Christians and thus is a Christian manifestation of the new religious movement of religious naturalism.

Religious Naturalism

Religious Naturalism, described as such by its adherents, is another new movement that consciously embraces naturalistic assumptions about the cosmos as revealed by ecological, evolutionary, and all branches of science and yet still insists on using the term “religious.” The Institute on Religion in an Age of Science in 2003 developed a statement of religious naturalism that declared in part that “Our religious quest is informed and guided by the deepening and evolving understandings fostered by scientific inquiry We may describe our religious sensibilities using various words that have various connotations—like the sacred, or the source, or god—but it is our common naturalistic orientation that generates our shared sense of place, gratitude, and joy.” These religious naturalists self-consciously describe their project as constructing systems of human meaning based on what is scientifically revealed about the cosmos.

Religious naturalism appears in unexpected ways. For instance, two well-known advocates of atheism, Daniel Dennett and Sam Harris, nevertheless use traditional religious language to promote their brands of atheism. Dennett (2006, 245) declares that “the world is sacred,” and Harris says, “there is clearly a sacred dimension to our existence and coming to terms with it could well be the highest purpose of human life” (2004, 16). Even Richard Dawkins, another zealous advocate of atheism, makes clear in his book *The God Delusion* (2006, 14) that he is not attacking “the pantheistic reverence [for the cosmos] which many of us share with its most distinguished exponent, Albert Einstein.”

Conclusion

Recent surveys of forms of American religiosity show that nature religions are growing as an overall proportion within American religions. If the current scientific predictions for climate-related environmental stress over the coming decades prove accurate, environmental issues will likely take on a greater sense of urgency, suggesting that nature religions will play an increasing role in American culture.

Neo-Orthodoxy

Neo-orthodoxy usually refers to a constellation of twentieth-century Protestant theological movements that shared a critique of theological liberalism and called for a return to classical Reformation themes. Forged in the crucible of World War I, neo-orthodoxy registered the disillusionment of religious thinkers who traced Western civilization's moral failure to the shortcomings of theological liberalism. Neo-orthodox critics blamed liberals for marrying Christianity to the corrupt culture of the modern West, a culture vitiated by nationalism, capitalism, scientism, and secularism. This unholy union, they believed, had stripped Protestantism of its prophetic witness and transformed it into a mere "culture-religion." Seeking to free Christianity from its servitude to bourgeois culture, neo-orthodox thinkers counseled a return to the wellspring of Protestant theology: the Reformation, with its emphasis on God's sovereignty, human sinfulness, and the primacy of faith. What began as a reaction against theological liberalism soon flowered into a host of constructive theological projects, each inspired in some way by the "dialectical theology" or "theology of crisis" of the Swiss Reformed pastor and theologian Karl Barth (1886–1968). First taking root in Switzerland and Germany, neo-orthodoxy soon spread, especially to Sweden, Scotland, England, and the United States, where the brothers Reinhold Niebuhr (1892–1971) and H. Richard Niebuhr (1894–1962) and the German émigré Paul Tillich (1886–1965) became its most prominent representatives.

However, the term *neo-orthodoxy* is something of a misnomer. No neo-orthodox thinker sought either to return to

an unadulterated Reformation theology or to create a new orthodoxy for a new age. Doing so would have entailed rejecting theological liberalism outright, when in fact neo-orthodox thinkers shared much in common with liberals. Despite believing that historicism had been taken too far, they accepted the higher criticism and rejected biblical literalism. While harboring misgivings about the social sciences, they embraced the findings of the natural sciences, including evolutionary theory. And, like their liberal counterparts, they drew on distinctly modern resources, including existentialism and dialectical method, to analyze the meaning of the Reformation in their day. While neo-orthodoxy captures the movement's retreat from liberalism, it obscures the fact that neo-orthodox thinkers proceeded selectively, jettisoning only certain elements of liberalism and embracing only certain aspects of orthodoxy.

Indeed, these figures' almost universal rejection of the "neo-orthodox" label has led scholars to question the term's accuracy and legitimacy. The historian Sydney Ahlstrom noted in 1957 that detractors coined the label, which helps to explain Barth's preference for "theology of the Word" and Niebuhr's for "Christian realism." Although most scholars of American religion have labeled the Niebuhr brothers and Tillich neo-orthodox thinkers, they have disagreed about other figures. In recent years, even such a narrow reading has come under fire from the historian Gary Dorrien, who terms the Niebuhr brothers and Tillich "neo-liberal" and holds that even Barth owed much to liberalism. According to Dorrien, the term *neo-orthodoxy* downplays the continuities between neo-orthodox thinkers and their liberal foils and reifies neo-orthodox critics' historically inaccurate accounts of liberalism. H. Richard Niebuhr's oft-quoted satirical sketch—"A God without wrath brought men without sin into a kingdom without judgment through the ministrations of a Christ without a cross" (1937, 131)—exemplifies the caricature of liberalism common in neo-orthodox writings. Dorrien argues that the Niebuhr brothers "unfairly equated the entire liberal tradition with its most idealistic and immanentist versions," a charge given credence by their later admissions to that effect (2003, 522–523). His decision to jettison "neo-orthodoxy" in favor of "neo-liberalism" raises a crucial question: Has "neo-orthodoxy" outlived its usefulness, or does it still possess explanatory power?

Neo-Orthodoxy as a Set of Sensibilities

One way to mitigate the danger of making a straw man of liberalism while simultaneously underscoring the strong link

between neo-orthodoxy's critical and constructive dimensions is to view it not as a rigid set of tenets but rather as a flexible set of sensibilities, shared to varying degrees and with differing points of emphasis by a range of thinkers and theological schools. Each of these sensibilities addressed a perceived fault of liberalism:

- Believing that liberals overemphasized God's immanence in human cultures, and even conflated his purposes with theirs, neo-orthodox thinkers emphasized God's transcendence and sovereignty, describing him as "wholly other" and declaring that "God is God" and "man is man."
- Believing that liberals had embraced the Enlightenment's naively optimistic view of human nature, neo-orthodox thinkers articulated a biblical view of human nature as inherently sinful.
- Believing that liberals overestimated man's self-sufficiency, neo-orthodox thinkers emphasized redemption through Christ and the saving role of God's grace for a fallen humanity.
- Believing that liberals placed too much emphasis on Jesus' ethical example, neo-orthodox thinkers described the Word of God and the Christ of faith as the centerpieces of the Christian tradition.
- Believing that liberals viewed history as the progressive march of morality and rationality, neo-orthodox thinkers gravitated toward paradox, irony, and dialectic.
- Believing that liberals equated Western bourgeois culture with the kingdom of God and took their views of both God and man from that culture, neo-orthodox thinkers urged Christians to serve as prophetic witnesses to a decadent civilization.

Neo-orthodox thinkers combined and developed these sensibilities in myriad ways, thereby constituting a loose but self-conscious discursive family.

Neo-Orthodoxy's European Origins

Neo-orthodoxy originated in European theological circles, where Karl Barth led the revolt against the regnant liberalism of Friedrich Schleiermacher (1768–1834), Albrecht Ritschl (1822–1889), and Barth's teacher Adolf von Harnack (1851–1930). Disillusioned by von Harnack and other German theologians' uncritical support for World War I, Barth skewered liberalism in a commentary on Paul's *Epistle to the Romans* (1918, rev. 1921). He discovered a "strange

new world within the Bible,” one that suggested an entirely new theological approach to modernity. Barth sharply separated God’s realm from that known to man, insisting that only God could bridge the gulf. Liberals, he charged, regarded religious experience as the criterion of truth and saw in God simply “man writ large.”

Other theologians, including the Swiss pastors Eduard Thurneysen (1888–1974) and Emil Brunner (1889–1966), the German pastor Friedrich Gogarten (1887–1967), and the German New Testament professor Rudolf Bultmann (1884–1976), joined Barth in elaborating neo-orthodoxy in the 1920s, especially in the journal *Zwischen den Zeiten* (*Between the Times*). By the early 1930s, rifts had opened up between these figures (most famously between Barth and Brunner over the status of natural theology), but such divisions merely facilitated the elaboration of multiple streams of neo-orthodox thought. Barth toiled from 1932 until his death in 1968 on the landmark thirteen-volume *Church Dogmatics*, while other German and Swiss thinkers took neo-orthodoxy in different directions. Meanwhile, new clusters of neo-orthodox thinkers emerged in Scandinavia, Great Britain, and, most influentially, the United States.

The Niebuhr Brothers

Although it is difficult to measure Barth’s impact precisely, the rise of European neo-orthodoxy added impetus and focus, during the late 1920s and early 1930s, to an emerging critique of theological liberalism among young American theologians. Whereas Barth and his followers witnessed the horrors of World War I up close, few Americans experienced its devastation firsthand. American neo-orthodox thinkers responded to different crises, most notably the moral challenges generated by the rise of consumer capitalism, the spiral downward into the Great Depression, and the spread of totalitarianism. These crises weighed heavily on Reinhold and H. Richard Niebuhr, the primary architects of an American brand of neo-orthodoxy known as “Christian realism” or “realistic theology.” The Niebuhr brothers grew up in the tightly knit, German-speaking community of Wright City, Missouri, where their father, a recent immigrant, was a pastor in the German Evangelical Synod of North America. Following in his footsteps, both Reinhold and H. Richard decided to join the ministry, studying first at Elmhurst College in Illinois, then at St. Louis’ Eden Theological Seminary, and finally at Yale Divinity School, where Reinhold earned an M.A. in 1915 and H. Richard a Ph.D. in 1924.

Despite parallels in their career choices and early educational paths, Reinhold and H. Richard possessed strikingly different temperaments. The disparity in their graduate educations both reflected and reinforced this divergence. Prevented by his father’s death in 1913 from considering a Ph.D., Reinhold, a talented but restless student, accepted a pastorate at Bethel Evangelical Church in Detroit upon the completion of his master’s thesis in 1915. Over the next thirteen years, Reinhold transformed Bethel from a small German American congregation into a flourishing interdenominational church. A gifted orator and a prolific writer, he joined the college speaking circuit and penned frequent contributions to the *Christian Century* and other liberal journals. Wearing many hats suited Reinhold, whose tremendous charisma and boundless energy demanded a range of outlets. Serving a middle-class congregation on the outskirts of a booming industrial center exposed him to the strategic dilemmas that consumer capitalism posed to advocates of social justice. The success of Reinhold’s first book, a compilation of occasional pieces provocatively titled *Does Civilization Need Religion?* (1927), earned him both the editorship of the *World Tomorrow* and a position at New York’s Union Theological Seminary in 1928.

H. Richard, the more cautious and studious of the two, took the long route through his graduate studies. Wide-ranging interests in theology, philosophy, history, psychology, and sociology led him to take courses at half a dozen universities before earning a PhD from Yale. H. Richard taught at Eden from 1919 until 1931, excepting a brief stint from 1924 to 1927 as Elmhurst’s president. Under the direction of his Yale mentor, D. C. Macintosh (1877–1948), an advocate of “empirical theology” and an admirer of the pragmatist William James (1842–1910), H. Richard wrote a dissertation on the German theologian and historian Ernst Troeltsch (1865–1923), whose work had not yet appeared in English. H. Richard’s first book, *The Social Sources of Denominationalism* (1929), featured a modified version of Troeltsch’s claim that the dialectical interplay of church, sect, and mysticism had fueled Western historical development. His exploration of the church-sect dynamic in American history established him as a pioneering sociologist of religion and brought an appointment at Yale Divinity School in 1931.

American Discontents and European Influences

Despite being the leading voices of American neo-orthodoxy, the Niebuhr brothers did not create the movement out of whole cloth. Nor did it emerge solely in response to the

importation of European ideas. Although Barth's work became an important point of reference after the late 1920s, American neo-orthodoxy originated earlier in the decade as an indigenous revolt within liberal Protestantism. For instance, Reinhold Niebuhr's writings of the mid-1920s already display a growing frustration with the stale progressivism and cloying optimism he detected in American liberal theology. In 1926, similar frustrations characterized Francis P. Miller's edited volume *The Church and the World*, refuting the liberal theory of missions, and Henry P. Van Dusen's *In Quest of Life's Meaning*, challenging the liberal view of Jesus as a moral paragon. Analogous misgivings surfaced among secular thinkers, as in Joseph Wood Krutch's *The Modern Temper* and Walter Lippmann's *A Preface to Morals*, both published in 1929.

Not until the late 1920s and early 1930s did Barth's thought become a focal point of American theological discussion. A few articles appeared in 1926, but Barth's decisive entrance into the American conversation awaited Douglas Horton's translation of his essays, *The Word of God and the Word of Man*, in 1928, and the later publication of two largely sympathetic accounts of his thought: Wilhelm Pauck's *Karl Barth: Prophet of a New Christianity?* (1931) and Walter Lowrie's *Our Concern with the Theology of Crisis* (1932). An English translation of Barth's *Epistle to the Romans* in 1933 further raised the profile of his ideas. Yet despite these developments, American neo-orthodox thinkers continued to voice serious objections to Barth's theology even as they embraced the broad contours of his diagnosis of the modern condition and his critique of liberalism. Taking issue with Barth's radical separation of God from human history, his use of dialectical method, and his antihistoricist recourse to the letter of biblical texts, American neo-orthodox thinkers crafted their own distinctive responses to the spiritual crisis.

The Niebuhr brothers' engagement with European neo-orthodoxy deepened considerably after a continental sojourn in 1930. Except for two weeks in the USSR, they spent most of their time in Germany. There, Reinhold noted "a general feeling that liberalism runs into the sand of relativism," a fate the Barthians sought to avoid through "a new dogmatism" (quoted in Fox, 1985, 123). Two years later, Reinhold penned the book that garnered him—over his protests—the designation "neo-orthodox." *Moral Man and Immoral Society* (1932) targeted not only theological liberals, whom Niebuhr insisted should use force to promote political justice, but also liberalism's secular avatar, the philosopher John Dewey (1859–1952). Criticizing Dewey's emphasis on scientific

method as a means of reform alongside the theologians' call for the social application of love, Niebuhr argued that only a Christian realism emphasizing the pervasiveness of sin could impel individuals to join in the social struggle.

The Niebuhr brothers found valuable resources for such a realistic faith in the work of Paul Tillich, whom they had met in Germany. H. Richard's 1932 translation of Tillich's *The Religious Situation* signaled a new direction for American neo-orthodoxy. Tillich himself relocated to Union Theological Seminary in the fall of 1933, having lost his post in Frankfurt upon Hitler's rise. Steeped in both Barthianism and Marxism, Tillich became a highly valued conversation partner to the Niebuhr brothers, with whom he could speak in his native German. Tillich profoundly influenced the thought of both Niebuhrs by encouraging them to reframe their critique of Barth's emphasis on God's transcendence. Like most other American thinkers, the Niebuhrs initially called Barth a "neo-fundamentalist" or "neo-supernaturalist." Tillich proposed that they couch this charge in Barth's own terms by describing his view of the relationship between God and man as insufficiently dialectical.

In other areas, Reinhold and H. Richard took very different lessons from their respective engagements with Tillich. For his part, Reinhold adopted Tillich's validation of mythical knowledge in his writings of the mid-1930s. Tillich had argued that, though God escaped the grasp of rational thought, he could be known indirectly but intimately through mythical knowledge: symbolic representations of profound truths that could not be captured as scientific propositions. H. Richard, meanwhile, fused Tillich's conception of God as "the ground of being" with the doctrine of original sin, defining God as "the center of value" and sin as the worship of any entity of human construction, such as the nation or the self. In the words of Jon Diefenthaler, Tillich convinced H. Richard that "the infinite appeared as the self-transcending element in everything finite. To bring a religion like Christianity to bear on any human endeavor, therefore, one had only to analyze that endeavor in terms of the 'faith' that motivated it" (Diefenthaler, 1986, 39). These divergent responses to Tillich's critique of Barth appear in the Niebuhr brothers' publications of 1935: H. Richard's contribution to *The Church against the World* and Reinhold's *An Interpretation of Christian Ethics*.

The Theological Discussion Group and Beyond

Tillich's arrival in America coincided with the birth of an influential center of neo-orthodox ferment, the Theological

Discussion Group. Founded by Union's Henry P. Van Dusen (1897–1975) in the fall of 1933, the group brought together the Niebuhrs, Tillich, and a cadre of other young theologians and philosophers of religion for twice-yearly discussions. Neo-orthodox critics and those friendlier to liberalism fervently debated issues such as the nature of man, the role of revelation, and the position of the church in the world. According to Richard Wightman Fox, the group ushered Reinhold more fully into the neo-orthodox fold; it had a similar effect on H. Richard, who coauthored *The Church against the World* with two fellow members.

From the early 1930s onward, American neo-orthodoxy differed most clearly from its continental counterpart in its preoccupation with questions of human nature and social ethics, concerns that figured centrally in Reinhold Niebuhr's work. Even Niebuhr's two-volume *Nature and Destiny of Man* (1941/1943), the most systematic formulation of his mature theology, dwelt at length on the history of human social forms and their corresponding conceptions of the person. Niebuhr's activist orientation stood out more clearly still in his most popular books, *The Children of Light and the Children of Darkness* (1944) and *The Irony of American History* (1952), which held up Christian realism as the proper response to contemporary political challenges—first Hitler's fascism, then Soviet communism. Indeed, critics have charged that Niebuhr ultimately cared less about theology than politics and thus tended to reason back from a politically derived conception of human nature to a view of God.

Perhaps the most searching critique, although offered cautiously and mostly in private, came from Reinhold's own brother, whom many contemporary interpreters deem the more sophisticated theologian of the two. H. Richard insisted on the primacy of God, not only in human affairs but also in systems of thought. Stressing the inability of sinful human beings to grasp the logic of God's workings in the world, he called for contemplative faith in the face of all political uses of religion. In his only published dispute with his brother, in 1932, H. Richard advanced the seemingly paradoxical claim that withdrawal from the affairs of the world constituted an effective form of religious action. A few years later, with *The Kingdom of God in America* (1937), he helped to launch the "Edwards revival" by arguing that Jonathan Edwards' unswerving belief in God's absolute sovereignty furnished powerful resources for social engagement, lost to subsequent liberals. In *The Meaning of Revelation* (1941), H. Richard addressed the relationship between Christian revelation and human experience by distinguishing

between external and internal views of history: the views, respectively, of subsequent interpreters concerned with questions of causation and of participants in the stream of history itself. During World War II, H. Richard denounced "utilitarian Christianity," a nationalistic tendency to identify Christianity with democratic institutions. H. Richard's postwar writings cinched his theological legacy. He dubbed Christ "the transformer of culture" in *Christ and Culture* (1951) and distinguished, in *Radical Monotheism and Western Culture* (1960), between a truly God-centered, monotheistic perspective and the polytheistic and henotheistic perversions of Christianity found in nationalism and humanism.

During the same years, Paul Tillich established himself as a theologian to reckon with. Freed by his increasing facility in English from the linguistic isolation he had experienced during the interwar years, Tillich garnered a wider American audience with a collection of essays, *The Protestant Era* (1948), and a volume of sermons, *The Shaking of the Foundations* (1948). However, it was the first volume of his *Systematic Theology* (1951) and *The Courage to Be* (1952) that put Tillich decisively on the theological map. These two contributions brought an appointment at Harvard Divinity School in 1955, after Tillich's retirement from Union. There, he published the second volume of *Systematic Theology*; the third and final installment appeared after a move to the University of Chicago in 1962. By the time of his death in 1965, Tillich was widely recognized as one of America's greatest theologians.

The Impact of Neo-Orthodoxy

More than any other figure, Reinhold Niebuhr made American neo-orthodoxy resonate in the wider culture. Within the walls of seminaries and divinity schools, the writings of Emil Brunner, more than those of Barth or the American thinkers, defined neo-orthodoxy for postwar religious thinkers. Beyond them, however, Reinhold Niebuhr symbolized neo-orthodoxy. Known today as a central figure in the history of American liberalism, Niebuhr was one of the most important public intellectuals of the mid-twentieth century. At the height of his influence, from the 1930s through the 1950s, Niebuhr's version of neo-orthodoxy influenced a generation of religious activists, most famously Martin Luther King Jr., and scores of secular intellectuals and political leaders, the so-called atheists for Niebuhr. The historians Perry Miller (1905–1963) and Arthur Schlesinger Jr. (1917–2007), the literary critic Lionel Trilling (1905–1975), and the international relations

expert Hans Morgenthau (1904–1980), to name just a few, found in Niebuhr's writings a realistic sense of the limits of human reason that both challenged and facilitated America's newfound sense of itself as a world leader. The continued invocations of Niebuhr by contemporary politicians and public intellectuals attest to his legacy's durability.

Niebuhr's thought contributed much to the cultural tenor of American life, influencing Americans' ethical sensibilities and national self-concept during World War II and the early Cold War years. Reinhold Niebuhr and Tillich also prepared the ground for Americans' brief but intense postwar engagement with existentialism. Neo-orthodoxy's preoccupation with personal, ethical commitment in the absence of a rationally knowable good mapped easily onto the existentialist concern for authentic action in a world devoid of meaning.

During the 1960s, neo-orthodoxy's fortunes waned as a new generation of theologians and public intellectuals questioned the "realism" of those who had mired America in the Vietnam War. Grappling with the implications of religious difference in an increasingly pluralistic and secular age, some heralded a post-Protestant era, while others spoke of the death of God. Liberation theologians issued the most thoroughgoing challenge to neo-orthodoxy, trading the emphasis on a judging God for a vision of Jesus as a social radical. Members of historically marginalized groups, including women, argued that neo-orthodoxy's emphasis on human sinfulness offered a perfect corrective for the powerful but affected those with an entrenched sense of powerlessness very differently. Some even charged that neo-orthodoxy facilitated American imperialism and a sense of national self-righteousness. Yet for better or worse, neo-orthodoxy made its mark. Just as liberal theology served as both neo-orthodoxy's blueprint and its foil, so too did the movement influence the theologies that emerged in tandem with it (biblical theology) and in its wake (postliberal theology, liberation theology, secular theology, and radical orthodoxy, among others). Beyond the realm of theology, meanwhile, neo-orthodox sensibilities continue to captivate those who seek to understand what our beliefs about God and human nature have to do with the theory and practice of democracy.

Neo-Paganism

Neo-paganism, or contemporary Paganism as many of its practitioners prefer to call it, is a loosely affiliated group of religions or spiritual paths that share a notion of divinity within nature, typically celebrate both a male and female element to the divine, and in most instances practice forms of divination and magic. The term Paganism, like the term Christianity, covers a number of different sects or denominations. Just as Catholics, Eastern Orthodox, Evangelicals, and Calvinists would all be considered Christian, so too Wiccans, Witches, Druids, and Asatru, to name a few groups, would all be considered Pagan. The term pagan comes from the Latin for country dwellers. When Christianity was a new religion spreading through Europe, the term was applied to nonbelievers because of the lag in conversion between urban and rural dwellers. Most contemporary Pagans believe they are worshipping the old deities, reviving older sensibilities, and returning to the ritual practices of the religions that were practiced before the spread of Christianity. Most contemporary Pagans see what they are doing as a recreation or re-imagining of pre-Christian religions. Although a few

groups and individuals still claim an unbroken link to the pre-Christian European religions, this is now rare. No evidence has been found to support claims of continuous practice since antiquity of any contemporary Pagan group.

The largest sect or denomination within Paganism is Wicca; however, two other forms of Paganism are currently increasing in popularity: eclectic Paganism and ethnic Paganism. The former involves individuals who combine beliefs and practices of a number of different traditions and at times poetry, mythology, or science fiction with their own innovation. Ethnic Pagans revive or recreate the pre-Christian religious practices of one part of the world. For example, Druids focus on the Celtic tradition, Asatru worship the northern gods and goddesses, and still others are oriented toward the Greek or Egyptian religions of antiquity. These groups largely rely on mythological, archeological, and anthropological records of these distinct areas to create their rituals and mythology.

The best estimate of the number of Contemporary Pagans in the United States is provided by the American Religious Identity survey (ARIS), which was conducted in 2001. This survey found that there were 307,000 Pagans in the United States. Most scholars of Paganism believe that the ARIS method of phone interviews may have resulted in some Pagans not stating their true religious identity, fearing discrimination for their practice of a nontraditional religion. Internet usage of Pagan Web sites, book purchases, and other indicators also suggest that ARIS's numbers are probably low. Given continued rapid growth in the religion, it would be safe to estimate that there are at least twice as many Pagans as indicated by ARIS.

Surveys of contemporary Pagans consistently paint a picture of a group that is well-educated, middle-class, mostly white, with more women as members than men. Women are drawn to the religion because it includes a female aspect of the divine. Some women, particularly in the 1960s and 1970s, came to Paganism as an extension of, and conforming to their commitment to feminism. Women's spirituality groups and feminist witches typically venerate the goddess or goddesses to the exclusion of the god(s). The Asatru, who worship the northern warrior god and goddess of fertility, tend to have a larger proportion of men than women as do the Druids.

Beliefs

There is no single set of beliefs that all Pagans adhere to, nor is there any central bureaucracy that has the authority to

determine who is or is not a Pagan. Similarly to Eastern religions, beliefs on the whole are less important in most branches of Paganism than experience of the divine, the otherworld, or the spiritual. Nonetheless, there tend to be some beliefs and practices that are common among the different forms of Paganism. Michael York suggests that Pagans tend to share "an essential this-worldliness," as well as a belief in the "earth as sacred source or mother of existence." Additionally York notes that Paganism includes a belief in pantheism, animism, polytheism, humanism, and naturalism, although not all Pagans would adhere to all of these beliefs. For some Pagans the deities are real beings that exist in another plane and who regularly influence human events; for others the deities are Jungian archetypes; and for still others the deities exist within each of us, or are thought forms. As York notes, most Pagans are polytheists but certainly not all. Some believe that the divine is so complex that the only way humans can interact with and understand it is to put names to aspects of the divine. Others worship only the goddess or a dual divinity, the goddess and the god.

Most contemporary Pagans believe in reincarnation, typically after a period of reflection in the Other World. But this is not a religion that focuses on the hereafter; it is a this-worldly religion. As York describes it, Paganism "rejoices in the cyclical round of nature, of birth, death and rebirth, as an open-ended plethora of possibility. . . . Earth is . . . the divine womb of unlimited challenge, discovery. . . . It is to be honored . . . cherished as a gift." Part of the Pagan celebration of nature is celebrating the human body and human sexuality in all of its varieties.

Practices

Paganism is normally called an earth-based spirituality. The emphasis on nature has resulted in some environmental activists finding a home within this religion. There is a debate within Pagan studies about whether or not the religion results in a romanticizing of nature with no actual change of behavior or activism among the participants who have not entered the religion through either environmentalism or feminism. Helen A. Berger and Douglas Ezzy, in their study of teenagers who are primarily Wiccans or Witches, found that while the religion did not result in the teenagers becoming either activists for feminism or environmentalism, and few took either label, it did influence some aspects of their behavior and attitude.

Pagan rituals celebrate the cycle of the year. Typically Pagans follow the Wiccan Wheel of the Year, which divides

the year into eight major Sabbats celebrating the beginning and height of each season, with the corresponding changes in nature for that season and its implications for people's lives (see also *Wicca and Witchcraft*). For example, Beltane on May first celebrates fertility in nature and in human beings—fertility of creativity and of productivity as well as or instead of reproduction. Some forms of Paganism have a different calendar with fewer or more holidays a year. Most Pagans prefer when possible to do their rituals out of doors, availability of a site and weather permitting. Wiccans normally have their rituals at night, while some other forms of Paganism, for example, Druids, prefer to do their rituals in the daytime. Rituals differ somewhat depending on the form of Paganism practiced but normally involve the creation of sacred space, the calling in the four directions (east, south, west, and north) and the divinities associated with those directions, and a “working” that celebrates the holiday. This working normally entails the reading of poetry, an enactment or a description of the meaning of the holiday, meditation, dancing, singing, and raising of magical energy.

Magic is practiced by most Pagans. Within the religion there is an ethic against using magic to harm or manipulate others. How-to guides often present magic in its most mechanical guise—as a series of steps to get a better job, find love, or secure a parking place. Although most Pagans believe magic works, many object to this mechanistic portrayal of magic. For many Pagans magic is part of a spiritual and religious activity that provides one way in which they contact and open themselves to the divine. Different theories exist among Pagans about how magic works. The two most common theories are (1) there are forces in nature that the magician taps into to have his/her will done, and (2) it is a psychological tool that helps the person focus and believe in themselves so they are able to more efficaciously reach their goals. For example, doing magic to find a job would be said to work because it will make the applicant more diligent while searching for work and more confident when going for an interview. Some groups and individuals believe it is a gift from the deities, although this is a less common belief. Magic is in some ways similar to prayer, but differs in that it is believed the magician has more control of the outcome.

Paganism and Contemporary Society

The growth of contemporary Paganism at the end of the twentieth and beginning of the twenty-first centuries is part of the increased interest in spirituality throughout the

developed world. Spirituality is a turn to the subjective, in which individuals seek a direct experience of the divine as an element of their own self-growth and development. The world is viewed holistically—that is humans are not seen as separate or superior to other elements of nature, but as part of a web of life. Animals, plants, and even rocks are part of this interconnected web. Within this worldview, holistic medical treatments are frequently sought out and more generally science is seen as only one possible discourse or framework for understanding the world.

Alternative spirituality was part of the larger movement in the 1960s and 1970s of questioning all authority, including that of science, medicine, and religion. This combined with the growth of interest in magical realism, interest in environmentalism, gender equity, and support of diversity all serve as a backdrop in which Paganism has grown as a religion. Initially the religion was learned in small groups. Books, particularly how-to-books, and journals helped to spread the religion, particularly in areas where there might not be a group already formed. The Internet further has helped to spread the religion, as it makes it cheap and easy for people to find information about the religion. It also makes it possible for individuals to participate in online communities. While initially the religion was composed of converts, there is now a second and third generation of Pagans for whom this is their family religion. Although Paganism remains a minority religion, aspects of Pagan beliefs, such as the belief in reincarnation or the use of alternative medicine, are becoming more commonplace throughout Western societies.

Neo-Thomism

Neo-Thomism refers to the nineteenth- and twentieth-century revival of the study of the philosophical and theological thought of Thomas Aquinas. The term is frequently used interchangeably with neo-scholasticism. The identification of Aquinas's work as the pinnacle of scholasticism provides a partial explanation for the equating of the two terms. The transnational character of Catholicism must be considered to understand how Neo-Thomism pervaded American Catholic life and thought in the twentieth century.

Roots in European Catholic Antimodernism

Neo-Thomism represents more than an intellectual movement. It reflects Catholicism's ongoing attempts to orchestrate a unified response to the threat posed by the rise of the modern European state, with its political and social unrest and the concomitant cultural upheaval. The 1848 Italian Revolution crystallized the extent of the threat in the person of Pius IX and the office of the papacy. Neo-Thomism

emerged at this same time. Leading figures included Jesuits, Joseph Kleutgen and Matteo Liberatore, who assisted Pius IX in identifying and condemning modern movements that threatened to undermine not only the papacy but the Catholic faith. Liberalism with its disruptive effects on the social order was viewed as the political and cultural expression of philosophical modernism, exemplified in Kant's turn to the subject. Neo-Thomism lent philosophical credence to ultramontanist—that is, the centralization of ecclesial authority in the papacy—and it justified Pius IX's antimodern stance.

Giocchino Pecci (Leo XIII) learned the merits of Thomism in his seminary education, and, as bishop of Perugia, Italy, he established a Thomist-based seminary curriculum. As Leo XIII, he extended the reach of the Thomist revival beyond his native Italy. In his encyclical *Aeterni Patris* (4 August 1879), he called for a restoration of Christian philosophy through the study of the Angelic Doctor, Thomas Aquinas. Thomism's preeminence among Catholics was further solidified with Pius X's condemnation of modernism in *Pascendi Dominici Gregis* (1907) and reaffirmation of Thomism as the philosophical counter to modernism's evils. The 1917 new Code of Canon Law ensured Thomism's ubiquity in Catholic intellectual life by mandating its use in every Catholic seminary. Pius XI explicitly reaffirmed the centrality of Thomas's philosophy, most notably in his 1923 encyclical *Studiorum Ducem*. Reliance on Thomas Aquinas thus became the standard resource for twentieth-century Catholic philosophy and theology.

Thomist Manuals and Catholic Revival

The majority of Catholics with direct exposure to neo-Thomism were seminarians who studied theological manuals. The manuals organized church teaching in a series of thesis statements, defended deductively through a selective use of scripture and tradition. The deductive approach mirrored a post-Cartesian philosophical rationalism, with its emphasis on the deductive exposition of clear and distinct ideas rather than the thirteenth-century scholasticism of Thomas, where disputed questions provided an organizing hermeneutic.

Neo-Thomism served twentieth-century Catholicism in several ways that the manuals only dimly reflect, and reducing the Thomist revival to its rejection of modern philosophy masks its thoroughly modern character as a totalizing philosophical system. The historian of U.S. Catholicism, Philip Gleason, rightly describes neo-scholasticism as an

“ideology.” It provided a philosophical rationale for a unified Catholic worldview, in which knowledge of the supernatural was possible and thus truth discernible and faith defensible. The cultural historian, Warren Susman, notes the University of Chicago’s interest in Neo-Thomism in the thirties as part of an even broader American movement that aspired to inform society with certain transcendent values. Neo-Thomism, in other words, articulated the philosophical basis for a faith commitment that had implications for every aspect of personal and communal life, including the social, political, economic, and cultural. It is this vision of a world ordered to a supernatural end that that gave rise to the Catholic Revival, a movement that peaked in mid-twentieth century.

The complexities of the Thomist-informed Catholic revival are clearly evident in the works of Etienne Gilson and Jacques Maritain. Gilson’s historical studies of thirteenth-century scholasticism highlighted the varieties of thirteenth-century scholastic thought and thus relativized Thomas’s work. Maritain’s Thomist-inspired engagement with avant-garde artists suggested that Catholicism shared a certain affinity with a world beyond modernity. To further complicate the Neo-Thomist reception and critical to the Catholic Revival was Pius XI’s 1922 call for the laity to engage in Catholic action, which he defined as the laity’s participation in the apostolate of the hierarchy, with a special focus on the restoration of the Christian social order. This restoration of the social order relied upon the Neo-Thomism of *Aeterni Patris*—that is, the restoration of Christian philosophy—or its intellectual impetus.

The Catholic University of America

The Catholic University of America, founded in 1887, played a distinctive role in the American reception of neo-Thomism. Two examples must suffice to illustrate the broad spectrum in reception even at this single institution. Joseph C. Fenton, Massachusetts diocesan priest, and Francis J. Connell, CSsR, heralded scholastic philosophy as a distinct alternative to contemporary philosophy. From their perspective, engagement with modern thought was at best unnecessary and at worst dangerous. Their significant influence came as faculty members in Catholic University of America’s (CUA) Graduate School of Sacred Theology—Fenton, 1938 to 1964, and Connell, 1940 to 1967. Fenton also served as editor of *American Ecclesiastical Review* (1944–1963). Connell contributed over six hundred articles to the same journal and played a key role in the 1942 revision of

the *Baltimore Catechism*, the principal catechetical guide for American Catholics prior to the Second Vatican Council. These two priests’ well-known opposition to John C. Murray’s position on religious liberty has contributed to neo-Thomism’s identification with a rigid, ahistorical, anti-modern Catholic apologetics.

Edward A. Pace, a CUA professor of philosophy and founder of the university’s department of psychology, exemplifies the other end of the Neo-Thomist spectrum. This diocesan priest received a Rome-based education in Thomistic philosophy (Doctor of Sacred Theology [STD], 1886) as well as a Leipzig doctorate (1891) in experimental psychology, studying under Wilhelm Wundt. He maintained active engagement in both Thomistic philosophy and modern psychology until his retirement from CUA in 1935. Founder and first president of the American Catholic Philosophical Society, he served as an editor for the journal *New Scholasticism*. He worked with and influenced another prominent Catholic educator, Thomas Edward Shields. Shields, another CUA faculty member, played a critical role in promoting higher education for women, especially religious; developed a series of Catholic textbooks with Pace; and founded the *Catholic Educational Review*. The appearance of other new journals gives further evidence of Thomism’s growing influence among U.S. Catholic scholars beyond CUA. The Saint Louis Jesuits founded *Modern Schoolman* in 1925, and the *Thomist* first appeared in 1939, published at the behest of the Dominicans of St. Joseph Province, founders of Providence College, as well as faculty members at the Dominican House of Studies, Washington, D.C.

Catholic Action and Social Justice

Papally endorsed Catholic action provided an incentive for educating the laity in Thomism. Undergraduates at most Catholic colleges and universities encountered Thomism in their philosophy requirements, and some began to study Thomas as part of a theology for the laity. Evidence of efforts to increase access to Thomas includes the 1947 Benziger publication in three volumes of the *Summa Theologica*, the “First Complete American Edition in Three Volumes, literally translated by the Fathers of the English Dominican Province.” Benziger had previously published the fourth volume, *A Companion to the Summa* (1938–1942), by Walter A. Farrell, OP. Interest in the theological education of Catholic college students prompted Sister Madeleva Wolff, CSC, president of Saint Mary’s women’s college, to establish Saint Mary’s Graduate School of Sacred Theology

in 1944, where women, lay and religious, engaged in formal study of Thomas Aquinas and received master's and doctoral degrees. Evidence of a wider interest in Thomism can be seen in various popular media, from F. J. Sheed's *Theology and Sanity* (1946) to Fulton Sheen's television show, *Life is Worth Living* (1952–1957).

Neo-Thomism's influence also appears in American Catholic advocacy of social justice in the emerging industrial-capitalist economy. Leo XIII had promulgated *Rerum Novarum*, *On the Conditions of the Working Classes* in 1891. Inspired by the encyclical, John Ryan, a Minnesota diocesan priest and protégé of the Americanist bishop, John Ireland, had used an historically informed approach to natural law, particularly concerning the right to private property, to defend a worker's right to a living wage. Ryan had in effect followed Leo XIII's instruction in *Aeterni Patris* by bringing contemporary economics into dialogue with Thomistic-based natural law. Ryan also helped shape the U.S. bishops' public role in defending social justice. He was the principal architect of the 1919 U.S. bishops' "Program of Social Reconstruction." He remained a leading advocate for a Catholic-informed social justice as CUA professor and director of the Social Action department of the National Catholic Welfare Conference.

John Ryan was not alone in bringing a historical sensibility to Thomist natural law philosophy. As Patrick Carey has noted, John Courtney Murray developed a historically informed natural law defense of religious liberty based upon the American experience of religious pluralism. Murray's complex argument relies upon an analysis of the human person, the state, and society that allows for a defense of religious liberty based on the limits of the modern state to interfere in religion, thus upholding the church's freedom to teach the faith and defending an individual's right to worship as conscience dictates. As noted earlier, opposition came from Fenton and Connell, who found Murray's historicizing of natural law to be a threat to the transcendent truth of the Catholic faith.

A few American Catholics also displayed an affinity with Maritain's complex cultural engagement in a Thomist-inspired Catholic revival. Admittedly, the Catholic Worker and the liturgical movements shared little in common with the scholastic logic of the manuals, but both sought a basis for the creation of a Catholic culture. Each movement embraced an understanding of grace as restoring and ultimately elevating the good found in all of creation, a view that echoes a certain version of a Thomistic-inspired

integralist Catholic vision. Dorothy Day, cofounder of the Catholic Worker movement, insisted that all aspects of this life—economic, social, cultural, and political—were to be ordered toward their supernatural end and found in this ordering a justification for a socially conscious, radical Catholicism that has continued especially through the peace movement into the twenty-first century. Virgil Michel, OSB, father of the liturgical movement, sought the integration of liturgy and social justice. Thomas Merton, convert and Trappist monk, offers yet another example of a Thomist-inspired engagement in modern culture.

Legacy

Gerald McCool has traced the evolution of Neo-Thomism from its brief existence as a unified philosophical and theological vision to a plurality of perspectives and approaches by the mid-twentieth century. Few have contributed to this plurality more than the transcendental Thomists, Bernard Lonergan, SJ, and Karl Rahner, SJ. Evidence of each man's influence is found in U.S. Catholic theology as it has developed since the Second Vatican Council through the beginning of the twenty-first century. Their influence is most evident in postconciliar theologians' preoccupation with epistemology and methodology. Reactions against these preoccupations have given rise to renewed interest in scholasticism, particularly Thomism, among U.S. Catholic and Protestant theologians in the first decade of the twenty-first century. In light of these developments, one can expect to find evidence of the continuing influence of neo-Thomism on American religious thought for several more decades in the twenty-first century.

New Age Religion(s)

The New Age movement arose during the 1960s and 1970s as both a pioneering social movement and a discourse community. It was a social movement in the sense that it was a large but amorphous network of people who rejected many of the values and assumptions of the dominant Judeo-Christian culture of twentieth-century America. This alternative community adopted an experiential and experimental approach to the body, nature, gender roles, consumption patterns, social activism, health care, and personal spirituality. The New Age movement was a discourse community because its adherents adopted a coherent yet diverse set of spiritual and social values and used a common language to communicate with each other. Put another way, New Agers knew they were in the company of fellow travelers when they heard certain key terms and concepts—for example, *energies*, *auras*, *channeling*, *transformation*, and *empowerment*. Many New Agers were mistrustful of institutions and preferred biodegradable organizational forms that emerged and disappeared as needed. The weekend seminar, the weeklong retreat, workshops, lectures, newsletters, and magazines were the preferred modes of interaction and communication for New Agers. There were, nevertheless, formal organizations whose teachings and practices were congruent with New Age beliefs.

Historical Roots

Historians of religion have observed that the New Age movement has deep roots in the Western Esoteric tradition—including Neoplatonism and Hermeticism—and in the secularized esotericism of nineteenth-century American movements such as Swedenborgianism, spiritualism, mesmerism, Theosophy, new thought, and Rosicrucianism.

Additionally, two metaphysical groups that appeared on the American scene during the 1930s and 1940s can be viewed as forerunners of New Age groups. The first of these, the Association for Research and Enlightenment (ARE), was founded to publicize the psychic teachings of Edgar

Cayce (1877–1945). While in a trance state, Cayce gave “readings” that touched on reincarnation, the lost continent of Atlantis, alternative healing methods, and predictions of future natural catastrophes. Among these “Earth changes” was a repositioning of the earth’s magnetic poles—the so-called pole shift—that would lead to massive flooding of coastal areas in the United States. The ARE was important to the development of the New Age movement in that it popularized notions of coming physical changes on the planet that would coincide with a transformation of cultures and societies, and provided—through the Atlantis allegory—a way for New Agers to address the promises and perils of scientific advances in fields such as genetic engineering and atomic energy.

The Arcane School, another significant New Age forerunner group, emerged in the 1920s to publish spiritual teachings from a disembodied master called “the Tibetan.” These messages were transmitted by spiritual means to a former Theosophist, Alice Bailey. The Arcane School promoted the idea of a coming “World Teacher” who would help inaugurate a New Age of spiritual enlightenment on Earth. The school also began the practice of invoking the world teacher’s appearance through a prayer known as the “Great Invocation.” The idea of receiving advanced instruction from invisible spiritual teachers—known as “channeling” in New Age circles—and the notion of a coming world avatar would become staple elements of New Age teaching.

The UFO (unidentified flying object) craze of the late 1940s and 1950s popularized the idea of advanced civilizations that took an interest in the evolution of life on Earth. Some UFO enthusiasts believed that alien beings had come to bring vital technological and spiritual knowledge to humanity at a critical time in its history. They predicted that wide-scale human resistance to these “space brethren” would bring about great social and political upheavals that would ultimately usher in a millennial era of spiritual enlightenment. Some UFO groups embraced the notion of a coming Aquarian Age whose principle themes included international cooperation, universal brother- and sisterhood, enlightened scientific advance, freedom from oppressive institutions, and transformed human consciousness. The idea of the Aquarian Age comes from an astronomical phenomenon called the “precession of the equinoxes.” In its essentials, the phenomenon divides human history into twelve eras or “ages,” each ruled for 2,160 years by a specific astrological sign. Many UFO religionists believed that the Aquarian Age would begin to dawn in the latter half of the

twentieth century. The ARE, the Arcane School, and the UFO movement were part of a spiritual subculture that by the 1960s had prepared the ground for the New Age movement to emerge in full bloom.

The beginning of the New Age movement can be traced to small communal experiments that emerged during the counterculture era of the 1960s. Probably the most important of these was the Findhorn Community begun in northern Scotland by Peter and Eileen Caddy and Dorothy Maclean. These three pioneers were tied to a fellowship of spiritual visionaries known as the Universal Link. Established by Richard Grave, the Link promoted alternative spiritual communities around the world where innovative experiments with social and spiritual life could take place. These linked communities were seen as “light centers,” exemplary nodes in an emerging network of Aquarian Age communities.

The most important American light centers were the Lorian Association, founded by David Spangler in Wisconsin; the Abode of the Message, founded in upstate New York by Pir Vilayat Khan of the Sufi Order of the West; the Ananda Community, founded in the Sierra Nevada of California by Swami Kriyananda; and Sunrise Ranch, headquarters of the Emissaries of Divine Light, an esoteric community in Colorado. Each of these communities promoted the ideas of planetary transformation, cooperation across spiritual traditions, enlightened human relationships, communication with beings from higher planes of awareness, and the wise use of science.

The New Age movement entered its self-conscious stage in 1971 with the publication of *East West Journal* (later *New Age Journal*). This magazine, along with similar periodicals such as *Yoga Journal*, *New Directions*, and *New Realities*, published an assortment of articles on New Age themes and provided a clearinghouse for the visions of prominent New Age teachers such as Caddy, Spangler, Ram Dass, and Pir Vilayat. *The Year One Catalogue* and *Spiritual Community Guide*, both inaugurated in 1972, listed the vast array of therapies, seminars, communities, and events that would fall under the larger New Age umbrella. Like another publication, *The Seeker's Guide: A New Age Resource Book*, they included information on topics such as biofeedback, Celtic Christianity, acupuncture, sacred dance, yoga, rebirthing, aura readings, and past life regressions, and on groups ranging from Church Universal and Triumphant to ARE, the Holy Order of MANS, Mark Age, the Aetherius Society, and the Lorian Association.

The New Age movement was in full bloom by the late 1970s and, though diverse and amorphous, could be distinguished by five features. The first of these was the belief that humankind was on the verge of a great spiritual transformation—an evolutionary leap that would affect how people viewed themselves, the world, and their place in it. Although the details differed depending on the teacher, most New Agers accepted that this transformation included a profound realization of the oneness of the human family, the innate divinity of the individual, and the intimate relationship between human beings and all other life forms. New Age teacher Jose Arguelles, for example, forecast a great transformation of human consciousness, which he called the “harmonic convergence,” commencing on August 16, 1987. The convergence, he believed, was an epic moment in history when the human race would begin to transcend tribal consciousness and affirm a universal humanity based on unity, love, cooperation, and altruism. He forecast ecological healing, awakened spiritual capacities, the end of militarization, and the widespread harnessing and use of solar energy. Most New Agers saw the coming transformation as gradual, peaceful, and progressive and saw themselves as the vanguard of change. New Age writer Marilyn Ferguson called this leaderless network the “Aquarian Conspiracy.” A minority of New Agers emphasized cataclysmic Earth changes, upheaval, global suffering, and war as the prelude to the millennial age.

The second feature of the New Age movement was an ethic of self-empowerment that included both physical and spiritual dimensions. By raising one's own awareness and changing oneself in the way one desired for the planet, one could effect larger societal transformation. This self-spirituality recognized that ordinary life was mired in unnatural and unhealthy routines, that the ego-centered consciousness must give way to a deeper realm of authentic being, and that powerful spiritual disciplines or technologies were needed to break through the ego's conditioning and uncover the true self. The New Age was almost synonymous with innovative techniques designed to release one's hidden spiritual capacities. These techniques were drawn both from spiritual traditions around the world and from new research into human consciousness and psychology.

A third feature of the New Age movement was the vision of science and religion working in tandem rather than in opposition to each other. New Agers embraced scientific progress and believed that if science were informed with spiritual values and awareness it could be a powerful tool to

enhance humanity's material and spiritual conditions. Many New Age visionaries employed the language of quantum physics, astronomy, and environmental biology to advance their vision of the earth as a single conscious organism alive with subtle spiritual energies and in congruence with macrocosmic processes, a claim sometimes expressed as the "Gaia hypothesis." They argued that science and religion were complementary spheres, which, if properly understood, should work together for the common good.

Fourth, New Agers accepted the idea of a universal spirituality that finds expression at the core of the world's authentic religious traditions. This perennial spirituality meant that competition and warfare between religious communities was wrongheaded and that an ethic of tolerance and pluralism was the way forward in the coming millennium. Accepting that each religious tradition had a right to exist and wisdom to contribute to the human dilemma, New Agers took an eclectic approach to their own spiritual journeys, studying both Western and Eastern traditions and experimenting with a wide variety of spiritual practices. The important thing was to find a spirituality that was personally authentic and meaningful. Conventional dogmas and authorities could be jettisoned, since truth was believed to be within the individual, and enlightened persons could become their own authority in matters of the spirit.

Finally, New Agers adopted an ethic of healing that had both physical and spiritual dimensions and that embraced a wide array of healing therapies and methods. New Agers were apt to experiment with many forms of alternative health practice, including, for example, Reiki, crystal healing, tantra, macrobiotics, meditation, Chinese herbs, acupuncture, labyrinth walking, Bach flower remedies, homeopathy, kung fu, tai chi, rebirthing, creative visualization, Rolfing, and polarity therapy. For New Agers, the healing of the individual was a necessary prelude to the healing of the planet.

Representative Teachers

David Spangler

David Spangler (1945–) was perhaps most influential in defining, interpreting, and critiquing the New Age movement during the late twentieth century. While still in his early twenties, he gained a reputation for delivering profound messages from higher planes of awareness to audiences of spiritual seekers around the United States. He moved to Findhorn in 1970 and became the community's

codirector for three years. During this period he received spiritual messages that were published in 1976 as *Revelation: The Birth of a New Age*. This book became highly influential in New Age circles because of the depth of its vision and clarity of its concepts. Spangler returned to the United States in 1973 and founded the Lorian Association, with Dorothy Maclean, as a vehicle for educational and spiritual outreach related to New Age themes. He also cofounded, with his friend William Irwin Thompson, the Lindisfarne Association in 1974. This association brought together prominent futurists, scholars, scientists, artists, and political visionaries, all of whose writings became popular in New Age circles. Their ranks included, among others, the musician Paul Winter, the social scientist Gregory Bateson, the *Whole Earth Catalogue* publisher Stewart Brand, the scholar of Gnosticism Elaine Pagels, Thompson, Spangler, and the economist E.F. Schumacher. Spangler continued to teach and publish on New Age themes in the 1980s and 1990s and was unique in his willingness to critique the more commercial and narcissistic excesses of New Age activity.

In *Revelation*, Spangler's main theme was bringing to birth the forms of a new planetary civilization. He saw this birth as an organic process working through individuals and communities who had prepared themselves by letting go of outmoded ideas and practices and by opening themselves to inner guidance from spiritual realms. New Age pioneers related to levels of awareness beyond the human and were aware of the higher synergy at work in the creation. By attuning themselves with spiritual energies and beings, New Agers could co-create a world in harmony with the larger rhythms of the universe. They could also become aware of the essential oneness of the world and empowered to bring about a new world based on this vision of oneness.

Spangler emphasized the notion of "light centers" in his writings. He saw Findhorn as the exemplary New Age community, whose spiritual vision radiated out to the many intentional communities around the planet that were attempting to bring forth New Age civilization. He believed that the global network of intentional New Age communities constituted the means through which the Cosmic Christ would pour itself into the earth with its powerful new currents of universal energies. This raising of the earth's vibratory field did not require aggression against the fading world order. Rather, by attuning themselves to the cosmic process, New Agers would witness in their own lives the organic dropping away of the old order. What was still of

value from the old order would survive to assist in the building of the new world society. In Spangler's view, humans must take an active stance and choose to follow the inner guidance being offered them so that the inevitable societal upheaval and suffering that lay ahead could be reduced to a minimum. Spangler's vision of a transformed world was optimistic, in that it believed human beings could access powerful spiritual resources and co-create the new order through conscious group effort.

In his teachings during the 1980s and 1990s, Spangler remained optimistic about the efficacy of human effort to bring about the New Age and critical of more deterministic and apocalyptic scenarios. He also criticized proponents of a sudden New Age transformation, observing that this belief potentially disempowered seekers who might simply sit back and await the inevitable coming global shift. For Spangler, the New Age would occur gradually as individuals became more deeply aware of their connection to larger wholes of social and planetary organization and experienced a liberation from conditioned attitudes and modes of action. Spangler's teachings on synergy, attunement, education, holistic awareness, co-creation, and creative manifestation influenced other progressive New Age thinkers such as Marilyn Ferguson, Jose Arguelles, Barbara Marx Hubbard, and James Redfield.

J. Z. Knight

Perhaps the best-known channeler in New Age circles is J. Z. Knight (1946–), a former Tacoma, Washington, housewife who in 1978 began channeling a spiritual entity calling itself Ramtha. Channeling was one of the characteristic ritual practices of New Agers and entailed a human person entering a special trance state, wherein the mind disengaged itself from the world of time and space. While in this altered state of awareness, spiritual entities from other planes of being fully took over the channeler's physical and mental functions in order to counsel and teach audiences of spiritual seekers. Knight's Ramtha claimed to be a living entity that incarnated 35,000 years ago as a warrior in the fabled lost continent of Lemuria. After a lifetime of spiritual contemplation and inquiry, he purportedly achieved enlightenment and physical immortality. He was able to take his physical body into the spiritual realms and was free to experience all facets of creation at will. From the spiritual realm he could project his consciousness and energy into various physical forms and had chosen Knight to be the channel through which to teach his unique system of spiritual realization.

At first, Knight held what she termed "Dialogues," weekend sessions during which she channeled Ramtha. These sessions occurred around the world and were later transcribed and distributed in various media. Knight terminated the Dialogues in 1988 and created a New Age school of initiation, Ramtha's School of Enlightenment, at her ranch in Yelm, Washington. The school taught a specialized spiritual system designed to awaken students to their divine nature. Knight claimed that Ramtha's system of thought was not a new religion or a philosophical interpretation of reality. Rather, it was the truth as experienced by Ramtha and offered to humankind in a way that could be verified by the individual student.

Ramtha's teaching began by making students aware of their present concepts of God and self. These concepts were then contrasted with Ramtha's own teaching on God and self, which included four basic propositions. The first of these was the idea that "You are God." This teaching resonates with various forms of Gnosticism and the monism of Hindu Advaita Vedanta. It amplifies upon the New Age theme of the discovery of the true self and the empowerment that this discovery entails. The second proposition was that humans had the task of making known the unknown, of embodying, in other words, hidden spiritual potentials. The third proposition was that consciousness and energy created the nature of reality, and that humans could learn to do miraculous things with their minds. The fourth proposition was that humans could learn to overcome the false concepts and conditioning that kept them in a state of ignorance and weakness.

Knight saw Ramtha's teaching as a form of ancient wisdom that had found expression in the spiritual teachings of such historical figures as Plato, Akhnaton, the Buddha, Jesus, Apollonius of Tyana, and John of the Cross. Students of Ramtha thus learned a set of traditional esoteric practices designed to open their awareness to spiritual realms and to move spiritual energies throughout their psycho-physical bodies. As they reawakened to their spiritual origin and nature, students could allegedly navigate the levels of spiritual reality and function as teachers in their own right. The curriculum of Ramtha's school read like a smorgasbord of New Age subjects and themes. It included the nature of consciousness and energy, the redefinition of God as the observer in quantum physics, the story of involution and evolution, the mystery of the soul and the afterlife, the neurobiology of the brain in the creation of reality, telepathy and remote viewing, universal healing, and visualization during sleep.

There was some controversy in the early 1990s concerning the secretive nature of the Ramtha School. In response, Knight invited a panel of distinguished scholars from the fields of science, psychology, sociology, and religion to study her channeling sessions and to decide whether or not they were fraudulent. In 1996, these scholars conducted research on Knight before, during, and after she underwent her channeling trance. Following these tests, the panel concluded that the measured changes in Knight's autonomic nervous system were so dramatic that they could rule out fraud or mental illness as their cause. The publication of these results dampened the criticisms of Knight, although the attacks did not cease altogether.

Representative Groups

Mark Age

Mark Age was a prototypical New Age group created in 1960 by Charles Grentzel and Pauline Sharpe. Influenced by both the UFO subculture and the Arcane School, the organization alleged that its activities were guided by the Hierarchical Board on Earth, an elite spiritual brotherhood led by the Archangel Michael, Lord Maitreya (the future Buddha), and Sananada (a.k.a. Jesus of Nazareth). Mark Age members believed that the late twentieth century was a transition cycle between the fading age of materialism and the dawning New Age of Aquarius. The group's mission was to prepare humanity for the Second Coming of Christ, which they interpreted as both the awakened awareness within individuals of their spiritual essence and the actual manifestation of Jesus the Christ in his resurrected body of light around the year 2000. They accomplished this mission by publishing revelations from the Hierarchical Board relating to proper spiritual living and by cooperating with other New Age groups. Sharpe (a.k.a. Nada-Yolanda) was the vessel for these interdimensional communiqués.

The group had a complex millennial vision that began with its announcement of the Mark Age era (1960–2000). In this era, humankind would begin to transcend the vibratory frequencies of past eras and graduate to fourth dimensional consciousness, the “Christ consciousness.” If humans rejected this new vibratory reality and the evolutionary leap it entailed, they would be removed to another solar system. Even if the earth accepted this higher awareness, it would still experience the birth pangs of a New Age: economic, political, social, and scientific upheavals on a scale unimaginable to past societies. These upheavals would not result in

total destruction, however, but rather a gentle cleansing away of outmoded structures and recalcitrant souls. Echoing the Arcane School's prophecy of the return of the Christ, Mark Age taught that Sananda would return around the year 2000 to organize a spiritual governing body for the earth and to demonstrate the reality of eternal life. He would establish spiritual harmony on the planet and lead humanity to its next stage of evolution. Human life in the New Age would be characterized by loving action emanating from the deeper spiritual self of each person. Armageddon, for Mark Age students, was the battle between good and evil within the heart of human beings, not a physical battle in the land of Israel.

Mark Age continues to promote its millennial vision and has recently laid out seventy-two prophecies for the coming Aquarian Age. For example, it believes that individual nations will be replaced by an enlightened one-world government. In addition, cities such as New York will be destroyed by earthquakes and the world economic system will be completely revolutionized. Mark Age can be viewed as a pioneer of progressive New Age millennialism that promoted themes eventually picked up by later New Age teachers such as Elizabeth Clare Prophet (Church Universal and Triumphant), Earl Blighton (founder of the Holy Order of MANS), and Benjamin Crème. These themes include (1) the need for light bearers to actively bring about the new world; (2) the idea that a hierarchy of advanced spiritual teachers was guiding New Age groups; (3) a Gnostic version of salvation that entails the transcendence of egocentrism and the realization of a higher Self; and (4) gradual and noncatastrophic transformation of the world order.

Holy Order of MANS (HOOM)

The Holy Order of MANS (HOOM) was a California-based New Age community established in 1968 by a retired engineer and esotericist, Earl W. Blighton (1904–1974). Blighton, like other New Age visionaries, was influenced by Eastern mysticism, spiritualism, UFO study groups, Theosophy, and Rosicrucianism. He proclaimed that the order's mission was to reawaken the esoteric path of cosmic initiation that had been lost to conventional Christianity. This path would resuscitate a moribund Christian community in the United States and prepare the nation for the coming New Age of spiritual enlightenment. Organized as a nonsectarian monastic community that some observers dubbed as “New Age Jesuits,” the order set up teaching centers, communities, “brotherhouses,” and “sisterhouses” in

more than sixty American cities between 1968 and 1978. At its height, the group had more than three thousand members in its vowed and lay communities. The order was best known for its creation of shelters for victims of domestic violence and for its attempts to organize Jewish and Christian religious organizations to address the global ecological crisis.

Following Blighton's death in 1974, the order struggled to maintain a coherent leadership structure and sense of mission. Following the mass suicides at the Peoples Temple in Jonestown, Guyana, in 1978, the community adopted a more mainstream public face, dabbling in evangelical Christian, Roman Catholic, and Eastern Orthodox teachings and practices. By the mid-1980s, the group had moved away from its esoteric and New Age teachings and embraced a rigidly sectarian variety of Eastern Orthodox Christianity. Though various splinter groups loyal to Blighton's original vision continued to exist, the main body of the group slowly dissolved into various American Eastern Orthodox jurisdictions.

In its early years, HOOM promoted an optimistic vision of planetary spiritual transformation. Spiritual messages channeled by Blighton claimed that the physical and spiritual bodies of the earth were being supercharged with the solar energies of the great Christos and that all humans were being given the opportunity to experience alchemical regeneration at the molecular level. HOOM was to be the vanguard of this New Age transformation of humanity, but not the only light center on the earth. Like Mark Age, HOOM saw itself as working in tandem with kindred spirits around the globe to bring about the Aquarian dispensation. Also like Mark Age, there was the expectation that those souls who remained resistant to the coming transformation would experience great suffering and ultimate removal to another planetary system. In the New Age, Blighton asserted, women would regain their place of spiritual and earthly equality with men, exclusivist and intolerant religions would disappear, and a world savior from the East would appear to teach a universal path of salvation that transcended sectarian and political divisions and that led to world harmony.

Blighton organized an esoteric priesthood whose mission was to transform the priesthoods of the earth, so they were able to serve as handmaids of the emerging New Age. Order priests were empowered to administer esoteric initiations designed to raise the frequencies of the human form, so it might function productively in the raised vibratory

field that was engulfing the planet. Those who had received the signature order initiations of "Illumination" and "Self-Realization" were seen as "Christed" beings within whom the Second Coming was already manifest. Order missionaries were tasked with creating nodal points in a planetary grid of light. This grid was a spiritual rewiring of the earth's circuits, so it could receive the higher cosmic frequencies being released into the solar system in the late twentieth century.

The order's optimistic millennial vision was replaced in the 1980s by a darkly apocalyptic view that had its roots in Russian Orthodox monasticism. In this view, the New Age itself was seen as a dangerous delusion that could bring about the appearance of the Antichrist. This mythic figure would organize a one-world government and promise an era of peace and prosperity but would in reality lead humanity to eternal perdition. New Ageism, in the Orthodox order perspective, promoted a pseudo-spirituality based on individualism, pluralism, relativism, scientism, and humanism, all poisonous intellectual supports for the godless secularism of modernity. The order's history demonstrated that New Age millennial visions were fluid and subject to distortion and radical alteration as outer social conditions changed. During the optimistic cultural conditions of the 1960s and early 1970s, the order promoted a progressive millennial doctrine that saw impending spiritual regeneration and world harmony. During the more conservative and pessimistic 1980s, this New Age vision changed into a gloomy vision of spiritual jeopardy and apocalyptic catastrophe.

Heaven's Gate

Heaven's Gate is best known as the UFO group that committed mass suicide in the San Diego suburb of Rancho Santa Fe in March 1997. But the group should be viewed in the context of the UFO subculture that emerged during the late 1940s and 1950s and of the New Age subculture that followed in the 1960s, '70s, and '80s. These subcultures shared various forms of millennial dismay with the conditions of modern America and created alternative lifestyles, spiritual paths, and social systems in an attempt to transform the world. Heaven's Gate took this unease with modernity and desire for a transformative spiritual life to an extreme end.

Founded by Marshall Herff Applewhite (1931–1997) and Bonnie Lu Nettles (1927–1985), the group began in the mid-1970s as a neo-Gnostic community committed to self-transformation. Applewhite was the son of a Presbyterian

pastor who had found success in the fields of choral performance and academics. Following accusations of an improper relationship with a student at St. Thomas University in Houston, he left the academy and was in treatment for a mental breakdown. He met Nettles, a registered nurse, and the two soon discovered that they shared similar perspectives on religious and spiritual matters. They concluded that they had been sent as emissaries from what they called the “Kingdom Level beyond Human,” with the mission to call and organize an elite group of humans who were ready for the next stage of planetary spiritual evolution. They saw this work as a continuation of the mission of Jesus of Nazareth, who had similarly called humanity to a higher spiritual level during his lifetime two thousand years earlier.

Applewhite and Nettles left their friends and families in Houston and soon appeared in California preaching their new spiritual philosophy, which was influenced by Christian apocalypticism, Theosophy, and UFO religions. After speaking to skeptical audiences in the Los Angeles area, they moved to southern Oregon and began recruiting a small but loyal band of followers. Calling themselves the Human Individual Metamorphosis, they gained brief notoriety in the mid-1970s as a “UFO cult” before embarking on a twenty-year journey throughout the western United States. Sleeping in remote campsites and keeping a safe distance from mainstream society, the group evolved into a disciplined, tightly knit cohort with a distinctive lifestyle and a vocabulary filled with New Age metaphors and biblical imagery.

A distinctive feature of the group was their conscious rejection of modern American life—the “mammalian ways” that included sexual relationships, drug use, family ties, careers, and personal friendships. By overcoming their desire for these relationships and lifestyles, they believed they could break free from the control of the “Luciferians,” the evil space invaders who ruled the world. Long fasts, strange diets, vision quests, orchestrated ordeals, and revelations from on high received by Nettles (now known as Peep) constituted the group’s months and years in the western wilderness. Applewhite (now called Bo) and Nettles identified themselves to their followers as the two godly prophets referred to in the eleventh chapter of the Book of Revelation. Their destiny was to suffer murder at the hands of their enemies and then to miraculously resurrect three days later before a national television audience. Vindicated to all but their most virulent detractors, the heavenly couple would then rendezvous with a spacecraft from the world beyond and spirit their loyal followers away to a higher world. Those who had

rejected their teachings would be “spaded under” when the earth was destroyed by natural and human catastrophes.

The group, now known as Heaven’s Gate, appeared in Rancho Santa Fe in the early 1990s. They ran a successful computer business that created Web sites and purchased an elegant mansion where most members lived. Applewhite (now known as Do) lived in a separate residence with some close followers but maintained a strict control over the community’s members. By this time, members dressed in unisex clothing, shaved their heads, eschewed sex, and were fascinated by popular movies and television series such as *Star Trek*, *Close Encounters of the Third Kind*, and *Star Wars*. They were taught to defer all decision making to Applewhite and to question any of their own opinions or impulses. The group set up a sophisticated Web site called *Heaven’s Gate* that introduced the world to Applewhite’s teachings.

Applewhite began encountering painful health problems in the mid-1990s and also began proclaiming the imminent “recycling” of the earth and its people. Only highly advanced humans who had heard the group’s call and joined could hope to avoid the coming apocalypse. After proper preparation they would be among the few who would enter an alien spacecraft that was soon to arrive. Applewhite believed the craft was hidden in the tail of the comet Hale-Bopp, which appeared in early 1997 and was taken by the group as a final sign of the end. On March 27, following a shopping spree that included Nike training shoes and purple costumes, the community had a final meal, drank a concoction of alcohol, pudding, and barbiturates, lay down in their beds, and allowed plastic bags to be tied around their heads. The testimony of group survivors indicates that members willingly undertook these preparations and were fully expecting a rendezvous with a spacecraft and a spiritual ascension to the Level beyond Human.

Several Heaven’s Gate survivors lived to tell the group’s story and to publicize Applewhite’s teachings to an international audience. They also maintained the group’s Web presence before taking their own lives in the ensuing two years. The shocking end of Heaven’s Gate created a flurry of new warnings about the dangers of apocalyptic beliefs and authoritarian religious communities. In the case of Heaven’s Gate, the New Age arrived in an act of self-destruction.

Conclusion

The New Age movement had its critics, including, most notably, movement insider David Spangler. Spangler and others admonished New Agers to avoid narcissistic tendencies

and spiritual attitudes that were shallow and lacking a deep integration with the patterns of everyday existence. Although also critical of indiscriminate New Age appropriation of sacred traditions from around the world, he commended the movement for its efforts to bring back a sacred dimension into humanity's view of nature. Other critics, including theologian Matthew Fox (1940–), faulted the New Age tendency to overlook the human capacity for evil action. They also complained that New Agers suffered from a class-based elitism that could steer their focus onto self-empowerment projects, rather than practical activity to relieve social injustice and oppression. Fox applauded New Agers' quest for a mystically centered cosmology and anthropology that transcended conventional Christianity's preoccupation with guilt and sin.

While the movement certainly flirted with a loose spiritual ethos based on personal preferences and self-seeking, it also advanced innovative ideas for a spiritual practice in tune with the emerging global order of the twenty-first century. In its higher iterations, the new spirituality affirmed human potential, valorized feeling and experience in human relationships, helped people discover a personally responsible approach to social activism, fostered a spiritually informed ethic of ecology, pioneered research into alternative healing methods, and pushed society to recognize a universal human kinship that transcended rivalries based on tribal, ethnic, and religious differences. Many New Age themes, including "green" activism, alternative healing practices, religious tolerance, and political reconciliation, have become mainstream in many parts of the world in the twenty-first century.

New England Region

For more than four centuries, New England has been a study in contrasting religious cultures despite persistent myths regarding its homogeneity, rigidity, and conservatism. Even during the so-called Puritan century, the region comprised several communities, each with distinctive religious cultures and practices. Ironically, these included the most religiously homogeneous and restrictive as well as the most diverse and open communities of their time (Massachusetts Bay and Rhode Island, respectively). In the early twenty-first century, the overall religious environment of New England is radically different from its colonial beginnings. Yet in some respects little has changed: the vexing questions regarding public morality, personal behavior, and proper obedience to God that caused conflict among New England's founders still trouble the faithful, and their responses reveal similar polarities and extremes—albeit with vastly different issues, alignments and protagonists. Socially conservative Roman Catholics, for example, dominant throughout the six-state region since the late 1800s, strongly oppose the ordination of homosexuals as well as same-sex marriage. Nevertheless in 2004 New Hampshire Episcopalians elected the nation's first openly gay bishop, and both the Unitarian Universalist Association and the United Church of Christ, contemporary heirs of Puritan Congregationalism, officially support marriage equality. Over four centuries, tradition and

innovation, transition, continuity, and conflict all have characterized the history of religion in New England.

Religion in the First Communities

New England's first worshipers were aboriginal peoples who preceded Europeans in the region by nine or ten thousand years. By the time of initial English settlement, 75,000 men and women in dozens of tribal groups were already practicing their faiths. Reliable detail is scarce, but it is likely that New England's natives shared an integrated view of nature and humankind, believing in the sacredness and powers suffusing all things, as well as the need to thank and appease these powers ceremonially. Contemporary accounts describe colorful—and to most European Christians of the time, unholy—dancing, drumming, and chanting led by *powwows*, native priest-healers specially versed in medical lore and tribal ritual.

Although seventeenth-century entrepreneurs cite conversion of these “heathen” as a primary reason for colonization, the earliest European settlers were motivated by profit, not religion. In August 1607, a fishing settlement of forty-five men was established at the mouth of the Kennebec River. Here, Anglican Richard Seymour preached New England's first recorded sermon. “Sagadahoc” collapsed after its first Maine winter, but a few small commercial settlements antedated the better-known settlements of Plymouth Plantation and Massachusetts Bay, and in northern New England commercial interests continued to vie with religious ones as towns and settlements developed. In the southern communities, economic, social, and patriotic motivations were not absent among Pilgrim and Puritan settlers, but religion played a far more dominant and determinative role in the latter colonies.

That religion was Congregationalism, a movement of protest that had emerged in late sixteenth-century England as a response to perceived corruptions in the Anglican Church. The term *Congregational* describes ecclesiastical structure rather than doctrine. Congregationalists believe Christ's church is most perfectly manifested in a local body of believers to whom God gives all things necessary for faith and practice. Subject to no external control, Congregational churches emphasize mutual responsibility and accountability among members.

All early Congregationalists, however, were not alike. As their name suggests, Puritans (“nonseparating” Congregationalists) believed that, though corrupt, the Anglican Church was capable of reformation. “Separatist” Pilgrims,

on the other hand, denied both the legitimacy and the authority of the Anglican Church and advocated separation from it. Persecuted for this radical view, congregations of Separatists migrated to Holland around 1608, but dissatisfaction with Dutch culture led a group at Leyden to contemplate a second move, to America. Thus 102 men and women (only about 35 of whom were church members) landed in Massachusetts during November 1620 and established New England's first permanent settlement. Lacking at first both a legal charter, and—more troubling—an ordained minister until 1629, the colonists nevertheless gathered a church, built dwellings, planted, and expanded. With royal consolidation of several territories into the Dominion of New England in the mid-1680s, Plymouth was absorbed into Massachusetts. Its contributions to a developing “New England Way” are therefore minimal; its residents, working-class farmers and artisans, had little formal theological training and, with the exception of Governor William Bradford's journal *Of Plimoth Plantation* (1620–1647), left no significant theological work. Yet they achieved both what they intended and what they did not: provision for their own religious needs, and a mythic legacy of strenuous, pioneering faith that remains an enduring part of New England's regional identity.

By contrast, the nonseparating Congregationalists of Massachusetts Bay had more grandiose designs. Governor John Winthrop, referencing the Book of Matthew in 1629, said it most famously in a phrase that continues to be used by politicians today: “We shall be as a City upon a Hill. The eyes of all people are upon us.” Winthrop and others hoped that the eyes of English church leaders would see in their new commonwealth both social and ecclesiastical reforms worthy of emulation; equally, they hoped God would cause their endeavors to flourish. Beginning with a single church gathered in Salem in 1629, a steady stream of middle-class English men and women—more than twenty thousand of them over the next two decades—started Congregational churches and established patterns of civil governance based on their belief that God had established a special covenant with the people of New England, just as he had much earlier with Israel.

Being a chosen people with covenantal obligations entailed collective responsibilities. In the earliest Puritan communities of eastern Massachusetts, homogeneity of both theology and practice was strictly enforced. Sabbath attendance was required for both church members and nonmembers (although only about 10 percent of the population

were full members); personal behavior was scrutinized and breaches punished; deviations from Congregational orthodoxy were prohibited. Education was essential. To ensure a steady supply of trained ministers, Harvard, the nation's first college, was founded in 1636 when "Newtowne" (now Cambridge) was still scarcely more than wilderness. Provisions for public schooling were also quickly instituted. Although Massachusetts was not a theocracy—church and state had separate areas of jurisdiction and separate punishments that were maintained carefully—civil and ecclesiastical realms were partnered. Only church members (the presumed "elect" or saved) had full civil privileges, and magistrates routinely involved themselves in matters that today would be considered spiritual. The Puritans expected that such careful attention to God's requirements would ensure a permanent supply of saints, as well as divine blessing on their enterprise, into the foreseeable future.

From the beginning, however, enforcing Congregational orthodoxy proved difficult. Roger Williams, a Cambridge-educated minister with a penchant for challenging prevailing orthodoxies about everything from biblical interpretation to the "coercion" of people's consciences, fled south from Massachusetts before he could be transported back to England. Founding Providence in the winter of 1636, he established an alternative colony whose religious openness was an affront to orthodox Puritan sensibilities for the remainder of the century. Rhode Island and Providence Plantations (the formal name of both colony and state) was a "livelie experiment," the first of its kind in the new world. Its residents were permitted "full liberty in religious concernments," and its civil government was prohibited from interfering with religion except to maintain good order. Although Roger Williams shortly left the Baptist church he helped found in 1638, his colony remained a haven for Baptists as well as for Quakers, who migrated there in significant numbers at mid-century. By 1700 this tiny but influential colony, called the "sewer of New England" by its opponents, included Anglicans and Jews, among others.

Williams's controversies with the magistrates coincided with developments both north and south of the Bay. In 1636, eight hundred men and women, having received grudging permission from the General Court, left to found the colony of Connecticut. Like Massachusetts, the new colony was Puritan, albeit of a somewhat more tolerant sort. Two years later a second group purchased land from the Native Americans and settled in what is now New Haven, eventually establishing a separate colony; its conservative

Puritan zeal would help define Connecticut for two centuries.

If southern dispersals presented no real threat, settlements in northern New England were a different matter. During the previous decade fishermen and traders had established small communities along the Piscataqua River in both Maine and New Hampshire. Although religious indifference and rowdy worldliness characterized these communities, some residents had Anglican sympathies; moreover, lack of legal restrictions or agencies of enforcement made these settlements attractive to a handful of Baptists and Quakers who had been unwelcome at the Bay. A few miles inland John Wheelwright, another dissident from Massachusetts, had founded the town of Exeter, New Hampshire, and gathered a church of his sympathizers. And still further north in the Maine wilderness, Roman Catholic missionaries were resuming mission work begun earlier. Faced with these multiple threats to security, Massachusetts took steps to annex the northern territories.

The absorption of New Hampshire and Maine, effected by 1658, did to some degree impose Puritan ways upon the scattered people and ensure the eventual dominance of Congregationalism. Yet neither the vast size of the new territory nor its heterogeneous, worldly citizenry meshed cleanly into the existing structures of church and society at the Bay. Northerners, from the beginning a more religiously diverse and tolerant lot, never did practice their faiths nor structure their communities with the fervent, idealistic piety of their southern neighbors.

Decline of the "New England Way"

Whether or not the Puritan era was over by the close of the century is a matter of scholarly dispute. Certainly many aspects of New England's religious life remained relatively unchanged in 1700. Except in Rhode Island, Congregationalism was still overwhelmingly dominant. Although nascent differences in theology and practice were evident, these were not yet widespread or especially troublesome. Congregationalists were thoroughly Calvinistic; they still championed the need for an "established" ministry in each community—that is, an educated Congregational pastor supported by public taxation. They continued to believe that faith is both experiential (a matter of the heart, or "affections") and rational (a matter of learning and properly directed study), and to hold these essentials in careful tension. Throughout the century, of course, non-Congregationalists had challenged the prevailing system, and religious leaders routinely decried the threats

to stability posed by a variety of heretical groups. For the most part, however, such challenges were limited and successfully rebuffed; the so-called Standing Order remained intact. Nevertheless, the religious landscape of New England *was* changing.

One reason was the inevitable difference between founding and inheriting generations. By the 1660s and 1670s, many of the original leaders were dead. Their children, distant from the homeland and knowing nothing of Anglicanism, had no desire either to reform or to offer an alternative to the Church of England. Neither did they share the earlier zeal for a godly commonwealth; many were successful entrepreneurs whose commercial interests were stronger than their religious ones. As idealistic zeal declined, so also did the number of conversions and church members. From the beginning, the Puritan system had been dependent on an ongoing supply of “visible saints,” men and women who could relate a personal experience of God’s converting power and thus give credible evidence of their own salvation or “election.” Conversion was required for church membership; membership, in turn, was required for civil privileges (such as the franchise), as well as for the privilege of participating in the Lord’s Supper or having one’s children baptized. Now compromises and alternative practices regarding these matters promoted heated debate among clergy and undercut the general unity that had earlier prevailed.

Political events in England also contributed to change. In 1660 the Puritan revolution ended and Anglican dominance was restored. Even those American Puritans who still hoped to purify the mother church saw little hope of the reforms their parents had envisioned; increasingly they focused on the struggles of their own churches in the New World. Both natural and human events intensified these struggles. In 1675, King Philip’s War pitted Native Americans against colonists (and the few Christianized or “praying Indians” against their non-Christian colleagues) in a bloody, three-year conflict that affected fully one-third of New England’s towns. War was followed by natural and human-made disasters: the decades of the 1680s and 1690s saw unusually cold weather, and in 1676 downtown Boston was devastated by fire.

Finally, English colonial policies played a critical role. Between 1679 and 1689, Britain sought aggressively to subordinate the several colonies, revoking charters and unifying the region from Maine to the Delaware River under a royally governed “Dominion of New England.” Although the Dominion was chaotic and short-lived (1685–1689), it was a harbinger of permanent religious as well as political

change. In 1691, a new charter affirmed New Hampshire’s status as a separate royal colony, but combined Plymouth, Massachusetts, and Maine. Although some powers were restored to citizens of the Bay, the colony was now firmly under royal control. Meanwhile Britain’s Toleration Act (1689) had transformed these territories into a single colony where—in theory—many of the exclusive religious practices of the “Bible Commonwealth” were outlawed and greater toleration, except for Roman Catholics, had become law. Only Rhode Island and Connecticut remained self-governing charter colonies. Many towns, however, continued to enforce privileges for Congregationalists. In the midst of all these tumultuous events, the Salem witchcraft hysteria of 1692–1693—itself both a product and a precursor of change—caused at least some participants to reflect self-critically and apologetically on their own religious responses to the crisis.

These developments were troubling to religious leaders who were watching closely for evidence of divine approbation or disapproval. Like other seventeenth century Christians, New England Congregationalists believed in a God who was intimately involved in day-to-day matters, routinely communicating with his people through natural and human events. Disasters and successes were not random occurrences, but God’s unique way of admonishing, rewarding, or punishing individuals and communities. From the 1690s until the 1720s, clergy repeatedly exhorted the people to reflect on those “evils that have provoked the Lord to bring his judgments on New England.” Discerning clear indications of God’s displeasure in the recent past, they called for repentance, reform, and return to holier ways.

The ministers’ exhortations or “jeremiads,” however, were not especially successful, and meanwhile other developments continued to effect changes in New England’s religious environment. These included the movement of settlers into the more religiously diverse hinterlands; commercial expansion, with the social and religious diversity that typically accompanies it; and immigration, particularly among Scots-Irish Presbyterians in southeastern New Hampshire and central Massachusetts. Anglicanism, too, had been on the rise since the founding of Boston’s King’s Chapel in 1689. Now Anglican missionaries, sponsored by a new Society for the Propagation of the Gospel (1701), were working among Congregationalists; and in 1722 three Yale College men scandalized Connecticut by abandoning Congregationalism and seeking ordination in the Church of England. By mid-century, more than forty Anglican churches were scattered

throughout the Congregational heartland and Rhode Island. The most profound religious changes, however, occurred in the aftermath of the Great Awakening.

Periodic “harvests”—localized episodes of intense religious concern and clustered conversions—were recorded in New England as early as the 1660s. In 1727, however, a massive earthquake, felt all the way from Maine to Boston, arguably produced the region’s first “revival”: in several towns across the affected region, churches recorded new conversions and spikes in membership. Less than a decade later, an outbreak of “throat distemper” (probably diphtheria) similarly affected a number of congregations. Although the effects of these natural phenomena were short-lived, they prepared the region psychologically for a new, “great and general” religious experience.

The Great Awakening, often described as America’s first intercolonial movement, was a period of religious excitement spanning roughly four decades, from the 1720s to the 1760s. In New England, the Awakening began locally in the late 1730s as a response to the preaching of Northampton, Massachusetts, pastor and theologian Jonathan Edwards; it expanded in 1740 with the arrival of British evangelist George Whitefield (1740–1770), who preached in an impassioned, extemporaneous style that bore little resemblance to the formal, scholarly sermons with which New Englanders were familiar. A majority of Congregational (as well as Baptist and Presbyterian) clergy were early supporters of the revival, believing that God was bringing about the return to piety for which they had long hoped. But the revival also encouraged notorious “excesses,” emotional outbursts that included “bodily manifestations” as well as “shriekings and screamings.” Some supporters even claimed that without a powerful emotional experience, a person was not truly converted. “Unconverted” ministers, they asserted, endangered the very souls of their flocks. By 1743, many former supporters had become harsh critics of the revival.

The Great Awakening had a profound effect on the region’s religious ethos, shaking the very foundations of the New England Way. By authenticating even an uneducated convert’s relationship with God, it effectively undercut the domination of New England’s learned clergy, diminishing the prestige of ministers and of education itself. For the same reason it elevated converts in New England’s underclasses, raising them to new positions of religious and social prominence. And by encouraging itinerant preaching, the revival undercut the rigidity of the Congregational parish system, in which only a settled pastor had the privilege to preach.

Congregationalists, who for years had remained relatively cordial in their differences, splintered into Old Lights and New Lights, respectively condemning and supporting the revival; disputes arose over issues of itinerancy, emotionalism, and conversion. In southern New England especially, the revival’s renewed emphasis on conversion created a more hospitable environment for other groups, particularly Baptists, who had long argued for church membership that emphasized believers’ rather than infant baptism. In New Hampshire and Maine, Baptist growth was delayed for a decade or more. Nevertheless by mid-century Baptist churches were expanding throughout the region, and many “Separates”—New Light Congregationalists who split from their churches over the issue of conversion—eventually found their way into the Baptist fold. The founding of what would become Brown University in 1764 was occasioned, in part, to meet the needs of an increased number of Baptist societies. But despite this numerical growth, in both Massachusetts and Connecticut, Separates and Baptists—along with Episcopalians and other dissenters—continued to struggle until the eve of the Revolution to avoid paying taxes for support of the local Congregational minister.

War and Its Aftermath

On the eve of Revolution, Christians throughout the colonies feared that England would impose bishops in America. In New England, where suspicion of Anglicanism was long-standing, these fears were acute and widely discussed. Scholars today no longer argue that the representative form of church government practiced by New England Congregationalists is the primary source for American democratic thought. Nevertheless the Congregational principles of mutual accountability and governance by the governed undoubtedly contributed to political conversations that bore fruit after the Revolution. While Baptists debated whether or not to support the war, and Quaker pacifists and Anglican loyalists opposed it, Congregationalists unambiguously called for separation from England. Adapting familiar religious rhetoric for revolutionary purposes, they articulated both a religious and political mandate: “Brethren, ye have been called unto liberty.”

During the revolutionary period itself New England saw minimal religious change. War nor independence nor national principles of religious liberty eliminated the Congregational establishment, although some groups did see signs of progress. Baptists in particular continued to gain in number and legitimacy; in 1779 a Baptist was selected for the first time to

preach an election sermon to the Massachusetts General Court. But with more than four hundred churches in Massachusetts, Connecticut, and New Hampshire, Congregationalists retained a regional dominance that was unequalled by any other religious group in the new nation; indeed, New England was its most religiously and ethnically homogeneous region. Furthermore, because the legal separation of church and state codified in the Bill of Rights (1791) applied only to the national government, the alliance between New England's civil and ecclesiastical systems also remained—for the time being—largely intact. Nevertheless, this religious landscape was on the brink of a seismic shift. Growing divisions within the Congregational fold, a new spirit of religious populism and innovation, increasing political pressure from Baptists and others, and the movement of masses into the back country: all these had a transformative effect during the fifty years after the Revolution.

By the turn of the century, Congregationalism comprised an increasingly diverse range of beliefs. Calvinism, reworked and revived by Jonathan Edwards and his followers after the Great Awakening, was known as *the* New England theology until the mid-nineteenth century. But this nomenclature is deceptive. From 1620 on, the Congregational principle of local autonomy had encouraged a wide range of differences, emphases, and innovations in both theology and practice; the same principle had permitted such differences to coexist without open warfare. Many clergy, both Baptists and Congregationalists, remained Calvinists. Others, however, influenced by Enlightenment ideas, had long held beliefs that were both Arminian (humanity is capable of moral choice) and Arian (Christ is subordinate to God the creator). Now the Unitarian controversy, precipitated by the 1805 election of “liberal Christian” Henry Ware to Harvard's prestigious Hollis Professorship of Divinity, brought these and other unspoken differences into sharp relief. Orthodox critics took the first step toward separation by founding their own seminary at Andover, Massachusetts—the first free-standing seminary in the country—and there instituting a mandatory Calvinist creed. Ongoing theological disputes led eventually to schism, formalized by the creation of the American Unitarian Association in 1825 and perpetuated in numerous battles locally. Although Unitarianism had little denominational impact beyond the Congregational churches from which it emerged, its influence on the world of ideas was profound. Ironically, it soon spawned its own protest, Transcendentalism, led by Ralph Waldo Emerson and others who were critical of the “corpse cold”

rationalism they found in Unitarian circles. Their movement, like their short-lived experiment in communal living, Brook Farm, had little or no impact on New England's collective religious life but did have an enormous and enduring influence on American literature.

Unitarianism in New England was—and remains—largely an urban phenomenon, concentrated among the well-educated and economically advantaged. But radical new religious expressions also appeared even before the turn of the century in rural towns and villages. The men and women who flooded into the hill country of Maine, New Hampshire, Vermont, and western Massachusetts after the war settled in land that was largely untouched by the traditional civic and religious institutions of New England. New Light and revivalistic by temperament, populist and egalitarian socially and politically, they quickly developed new religious forms and structures that bore little resemblance to received institutions. Three groups—Shakers, Free Will Baptists, and Universalists—were most numerous. By 1820 they constituted a third of churches in the postwar settlements, and in various ways directly challenged not only Calvinistic ideas but Congregational dominance. The Shakers, most eccentric and controversial of the newcomers, advocated universal celibacy, personal perfection, and the formation of “spiritual communities,” eight of which they established in New England. (The last surviving community of Shakers—as revered today for their distinctive piety and spirituality as they were earlier denounced and feared—is in Sabbathday Lake, Maine.) Free Will Baptists date their New England origins from a church (1780) gathered in New Durham, New Hampshire, by former Congregationalist Benjamin Randel (or Randall). This group combined New Light revivalism with Old Light rationalism, arguing that salvation is not (as Calvinists insisted) predestined, but determined by the free choice of those who seek to be godly. Universalists, with complex roots in late eighteenth-century England and Massachusetts, shared a general antipathy for Calvinism. With the writings of Vermont itinerant Hosea Ballou in the early 1800s, they embraced a comprehensive theology that emphasized God's benevolence toward all humanity and rejected traditional doctrines such as miracles and the Trinity.

Emphasizing heartfelt personal religious experience, these sectarians carried their gospels into the hinterland with charismatic itinerant preaching. They were joined by a host of independent exhorters as well as evangelists from more familiar groups, including Calvinistic Baptists and a few Congregationalists. A Second Great Awakening, which

“quicken” both rural and urban New England at the turn of the century, fostered the levelism of the earlier Awakening by emphasizing the ability of anyone to lay hold of grace. The new revival encouraged the growth of Methodism, an English import (1784), as well as indigenous groups. The largest and most influential of these was the Christian Connection, founded by Elias Smith and Abner Jones of New Hampshire and Vermont, respectively. Broadly accepting of theological differences, at once revivalistic and rationalistic, the Connection confused and troubled outsiders but appealed to many who liked its Bible-based message of denominational unity, moral probity, and private conscience in theological matters. The Christians were among the nation’s first—and strongest—supporters of women’s public religious leadership; as early as 1812 “female laborers in the gospel” were itinerating throughout rural New England alongside their male colleagues.

All these groups were able to develop rapidly, in part because Congregationalism itself lacked a comprehensive system to address the new religious milieu. With no connectional structure to raise funds, no bishops or presbyteries to organize mission efforts beyond town boundaries, and no useful tradition of self-motivated itinerant evangelists, Congregationalists were ill prepared to gather or support churches in the backcountry. That many Congregational churches were planted in rural New England was the result of an explosion of indigenous mission agencies that operated with moderate success across New England from the 1780s until the mid-nineteenth century. By 1807, there were more than five hundred in Massachusetts and New Hampshire alone. Formed primarily to ensure the presence of religion in rural areas, an equally important goal of Congregational churches was to see that the *right* religion was present, specifically, orthodox Congregationalism rather than enthusiasm (sectarian revivalism) or infidelity (Unitarianism or deism).

Challenged numerically by these new groups and pressured politically by older ones, Congregationalists gradually and grudgingly abandoned the system of tax-supported churches they had kept in place for two hundred years. In the end, even staunch opponents such as Lyman Beecher of Connecticut admitted that disestablishment was “the best thing that ever happened” to the churches; without special privileges, the Congregational faithful now had to place their trust in God rather than the political system. New Hampshire (1817) and Connecticut (1819) were followed by Massachusetts, which finally disestablished its Standing

Order in 1833. This did not mean that all faiths were now treated equally. In New England as elsewhere, Christians (typically Protestant Christians) continued to enjoy special political and other privileges for decades. With the end of Congregational dominance, however, a new era in the region’s religious history began.

Change and Challenge in the Nineteenth Century

New England’s faithful were not only reforming their own political systems; like Protestants elsewhere during the early 1800s, they were also engaged in reforming society generally. They proceeded with brash confidence and the conviction—translated directly from the Puritan past and encouraged by the optimism of the Second Great Awakening—that Americans were partnering with God in developing a new nation. Evangelical reformers now put in place a massive “Benevolent Empire” to deal with a host of familiar social issues, as well as new ones that a growing manufacturing environment was making visible. Voluntary societies, founded by individuals rather than by denominational action, addressed concerns that ranged from aid to the poor, literacy, evangelism, and women’s rights to the dangers of gambling, dueling, and drinking. Congregationalists, sometimes partnering with Baptists and Presbyterians, were responsible for initiating a disproportionate number of these, including the American Board of Commissioners for Foreign Missions (1810), the American Bible Society, (1816), the American Home Missionary Society (1826), and the American Education Society (1826). Often leaders deliberately reached across denominational lines to welcome participation and shared governance from the wider Protestant community. Although many social agencies eventually reverted to single-denomination sponsorship, the shared character of the enterprise united New Englanders with members of denominations not widely represented in the Northeast, encouraging a spirit of “interdenominational comity” that helped to produce formal ecumenical conversations in the 1880s and after.

If New Englanders believed reforming the East was important, they knew that redeeming the West was equally so. The territory gained from the Louisiana Purchase of 1803 was vastly larger than New England itself, open, and without stabilizing social or religious institutions; it was both frightening and compelling. To meet the needs of this new American wilderness, New England Congregationalists joined with Presbyterians in a “Plan of Union” (1801) to promote the cooperative founding of churches on the

frontier. Although for a variety of reasons the Plan was only marginally successful, it was the nation's first formal ecumenical venture, lasting for half a century. Meanwhile, virtually all evangelical Protestants in New England were concerned about a development they believed threatened both East and West: the spread of Roman Catholicism.

Protestant fears about the Catholic Church—from papal conspiracies to sexual deviance—date from New England's first settlers. Legal restraints effectively kept all but a few Roman Catholics out of New England until the end of the Revolution, when new state constitutions granted them religious freedom. Nevertheless, at the turn of the century only about 1,000 of perhaps 50,000 Catholics resided in the region. Between 1815 and 1860, however, massive waves of immigration changed the landscape irrevocably. Not only Congregational but Protestant dominance began to give way to a new Catholic majority. At first most Catholic immigrants were from Ireland, driven west by economic pressures and, after 1840, by the famous potato famine that caused widespread starvation in the homeland. Additional waves of immigration—in the 1870s from French Canada, and later from Hungary, Portugal, Poland, and Italy—augmented the numbers and radically increased the region's ethnic diversity. Many of these newcomers migrated to towns and cities in southern New England; an influx of Quebecois in the 1920s peopled the northern mill towns of Maine and New Hampshire.

From the 1820s on, virulent anti-Catholic sentiment in New England cut across lines of class and culture. Working-class people feared for their jobs; the wealthier elite feared the loss of social stability and traditional institutions. The fact that many Roman Catholics were illiterate, poor, and spoke languages other than English linked the politics of anti-Catholicism with those of anti-immigration. Nativist groups such as the Know-Nothing Party found strong support in the Boston area, where many of the first immigrants had settled; there, in 1834, an angry mob set fire to the Ursuline convent in what is now Somerville. The following year Boston evangelicals published the best seller *Six Months in a Convent*, one of the most notorious in a new genre of anti-Catholic conspiracy literature and “captivity narratives.” An avalanche of similar publications followed, some of them written by prominent leaders such as Lyman Beecher and Samuel F. B. Morse, inventor of the telegraph and son of Andover Seminary founder Jedidiah Morse.

Despite this opposition, Roman Catholics quickly established new parishes and dioceses, convents and seminaries;

they set about becoming active American citizens and adopting American ways, including enthusiastic participation in local politics. If Protestants looked upon this growing Catholic power and assimilation with dread, church officials looked on it with pastoral concern, worried that excessive Americanization could result in an independent, schismatic church at odds with the Vatican. Ironically their attempts in the latter half of the century to ensure that the faithful did not depart too far from orthodoxy—by establishing parochial schools, Catholic hospitals, fraternal organizations, and other institutions—increased Protestants' anxiety about Catholic separatism and contributed to their suspicions about the church's ultimate intent to undermine American democracy. Not until the election of John Fitzgerald Kennedy as president of the United States in 1960 were such fears laid to rest.

If urban New Englanders in the 1820s and 1830s perceived a growing religious crisis in their own region, many throughout the area were becoming aware of a larger crisis in the nation as a whole. Slave trade had begun in New England less than twenty years after the Pilgrims landed. Yet the “peculiar institution” was never widespread in the region, nor did it have the profound economic impact it had in the South. Most slaveholders lived in southern New England towns and kept only a few slaves; in the north country, small subsistence farms, diversified agriculture, and an independent citizenry made slaveholding impractical. In part for this reason, and in part because of moral and social convictions that dated to the Puritan century, opposition to slavery among New England churchgoers was both earlier and easier than in the South. In 1701 Congregational layman and Massachusetts judge Samuel Sewall had published America's first antislavery tract, *The Selling of Joseph*. But more than one hundred years would pass before his solitary protest became a regional chorus.

At the beginning of the nineteenth century many Christians in New England and elsewhere opposed slavery. Few, however, were prepared to support “abolitionism”—that is, immediate emancipation. By the 1830s, however, this reluctance to act was giving way to a greater sense of urgency. A major catalyst was William Lloyd Garrison's publication *The Liberator*, begun in 1831. Garrison, a New Englander influenced by Quaker antislavery sentiments, became the primary spokesperson—honored and vilified—for abolitionism; in protest of slavery he famously burned the U.S. Constitution on Boston Common. Soon New England Baptists, Congregationalists, Unitarians, Quakers, Universalists, and others—both black and white—began to speak

out more forcefully. (Baptist David Walker of Boston and Congregationalist minister Lemuel Haynes, both African Americans, were articulate spokespersons for the antislavery cause. Haynes, a Revolutionary War veteran and pastor in Vermont, was the first African American to minister to a white congregation and probably the first to be ordained in the United States.)

The rescue of the Spanish ship *Amistad* in 1839 brought the reality of slavery home to New England churchgoers, many of whom had never even seen a black person. In that year, fifty-three captive Africans from Sierra Leone forcibly took the vessel on which they were being transported to Cuba, killed the ship's captain and several crew members, and attempted unsuccessfully to return home. The *Amistad* was seized off the coast of Connecticut by the American Navy; its captives were jailed and brought to trial for murder. An impressive group of advocates, including students at nearby Yale Divinity School and former President John Quincy Adams, a Massachusetts Congregationalist, argued in Washington on their behalf. Two years later the freed captives were returned to Africa, accompanied by missionaries who took the opportunity to begin evangelistic work there. Throughout New England, even in the rural north, the *Amistad* episode galvanized ordinary men and women who sent donations, wrote letters, and held church meetings to discuss both this situation and slavery more generally. Abolitionists seized the moment to generate new support for immediate action. Over the next two decades antislavery sentiment in New England grew, particularly with publication of Harriet Beecher Stowe's best-selling novel *Uncle Tom's Cabin* in 1852. The daughter of influential clergyman Lyman Beecher, Stowe believed that her book was divinely written; its moral fervor and dramatic portrayal of the evils of slavery had a profound effect on New England and on the nation's collective conscience.

Change and Continuity in the Twentieth Century and Beyond

Like other states along the Atlantic seaboard, New England was touched by pre-Civil War schisms among Methodists (1844), Baptists (1845), and Presbyterians (1857), all of whom split into northern and southern bodies. Yet because the region's founding tradition, Congregationalism, and its Unitarian offspring were structurally unaffected by the war, New England did not at the time experience significant religious destabilization. Roman Catholicism, with its international governance, also remained intact.

Nevertheless, statistics reveal both change and continuity in the period since the Civil War. By 1890 the regional dominance of Roman Catholicism was complete. In the early twenty-first century—by significant but rapidly declining percentages—Catholics remained the largest religious body in every New England state. Among Protestant and other religious groups, both new and old patterns of religiosity presently prevail. Except in Rhode Island, the United Church of Christ, primary denominational heir of Congregationalism, continues to be a major presence, followed by Baptists and Methodists. In Massachusetts, Jews trail Catholics as the second most numerous group, and they are well represented in both Rhode Island and Connecticut. Religion in general, however, has lost some of its former influence: by 2008 the northern states (Maine, Massachusetts, Vermont, and New Hampshire) had replaced the Pacific Northwest as the least religious region in the nation.

The twentieth century saw major changes among New England's Congregational and Roman Catholic communities. In a series of national meetings before and after 1900, Congregationalists established new, more connectional national structures and formally rejected all remaining vestiges of Calvinism. In 1931 they united with members of the Christian Connection and a majority merged again in 1957, this time with the Evangelical and Reformed Church, a body of German heritage. Headquarters of the new United Church of Christ shifted from Boston to New York after the merger, and in 1990 to Cleveland, Ohio.
