Perhaps most significant was the military's tolerance of homosexuality when faced with the exigencies of wartime. While the U.S. military drafted its first explicitly antihomosexual policy during this period, in practice, most lesbians and gay men were allowed to remain in service during the war as a result of the pressures to retain as many able-bodied personnel as possible. Soldiers caught engaging in homosexual acts were discharged, but investigations that actively sought out homosexual service and support staff were explicitly discouraged. The Women's Army Corps (WAC), for instance, had a policy of tolerating lesbianism within its ranks, as long as it was kept relatively quiet and did not disrupt the unit.

This convergence of circumstances allowed the beginnings of lesbian communities to form during the war, but the window of opportunity proved to be short-lived. The postwar period brought with it the passions of cold war McCarthyism, a perspective that viewed communists and homosexuals as nearly equivalent threats to the security and moral fiber of the nation. The wartime tolerance for lesbianism within the military was replaced with witch hunts and dishonorable discharges as personnel needs declined, and vigorous efforts were made to purge the civil service of potential "traitors," a move that included the targeting of lesbians. Between 1947 and 1950, nearly 5,000 gay men and lesbians were discharged from the military; in a single instance, 500 women were purged from a WAC base in Tokyo with dishonorable discharges. In addition, in 1950 a Senate appropriations subcommittee declared homosexuals to be poor security risks who should be removed from government jobs. By the following year, federal agencies were conducting lie detector tests on prospective employees in order to flush out communists and homosexuals. And in 1953, President Dwight D. Eisenhower issued an executive order barring lesbians and gay men from federal employment. During this period, nonconformity was viewed as a threat, and sexual "deviance" became one of the principal targets of the self-appointed morality police.

Shared adversity has the potential to strengthen even embryonic communities, however, and this proved to be the case for lesbians. Many lesbian women remained in urban areas after the war, and lesbian culture became increasingly visible. Working-class women began to congregate in the lesbian bars that appeared in many large American cities, such as Los Angeles, New York, and San Francisco, and they developed a generally supportive culture called "butch-femme," in which women were required to don either a masculine or a feminine role. The bar scene was not without its challenges. Bars seldom stayed in business for long and were often located in isolated and sometimes dangerous neighborhoods. Some were run by the Mafia, and most were subject to frequent harassment by both hooligans and police. Nonetheless, bars in urban areas were increasingly settings where lesbians could go for fun and acceptance. It was out of this environment that a political consciousness began to develop.

The trajectory for middle-class lesbians was somewhat different. They rarely frequented bars and more often attempted to fit into mainstream society as "normal" women. This was in part for fear of losing jobs in professions such as teaching and nursing. In the mid-1950s, however, a few middle-class lesbians in San Francisco started to organize politically, giving birth to the "homophile" organization Daughters of Bilitis (DOB). Inspired by the African American civil rights movement of the 1950s and 1960s, DOB and comparable gay male organizations like the Mattachine Society sought to integrate lesbians and gays into mainstream society by arguing that they were no different from "ordinary" citizens and hence deserving of the same legal rights and recognition within society. The movement remained small throughout the 1950s and into the 1960s, in part because of the risks involved in belonging to openly gay groups in a climate of homosexual witch hunts. Still, many historians credit the combined effects of the growing bar scene and the homophile movement with laying the groundwork for future lesbian and gay activism.

1960s and 1970s

The 1960s ushered in the era of hippies, antiwar activism, and the Black Power movement, which together created a social climate in which lesbians and other marginalized groups could begin to articulate their political aspirations in radical terms that would have been unimaginable in the 1950s. Specifically, gay and lesbian radicalism was catalyzed by the Stonewall riots of June 1969, in which drag queens and other "gender benders" at the Stonewall Inn in Greenwich Village rioted in reaction to years of police harassment.

In the weeks following the riots, a newly formed gay liberation movement mushroomed, asserting the theme of gay pride for the first time and questioning the idea that the heterosexual nuclear family was inevitable or natural. Lesbians were active in gay liberation from the beginning, and some women remained committed to joint activism with gay men over many years. Others, however, became disillusioned with the frequent sexism of gay liberation politics and helped to found lesbian feminism, a movement that became an important strand within the broader feminist movement.

A distinctive lesbian culture in America began to form in the 1950s, merged into the broader gay rights movement in the 1960s, and became a visible part of consumer culture by the 1980s. The AIDS crisis then forced a return to joint gay activism. (Robert Sherbow/Time & Life Pictures/Getty Images)

Within its framework, lesbianism became a mandatory political choice in response to what was viewed as patriarchal oppression, and Adrienne Rich's iconic article, "Compulsory Heterosexuality and Lesbian Existence" (1980), declared that all women who made their primary emotional and political commitments to women were lesbians by definition. This approach de-emphasized sex in favor of "woman identification," and the sex that did take place was expected to be "vanilla," that is, to be egalitarian, respectful, and avoiding the power imbalances inherent in heterosexual relationships. In this wave of sexual political correctness, butch-femme relationships generally were considered a misguided imitation of heterosexuality.

Lesbian feminism also promoted a separatist culture "by and for women," sometimes referred to as Lesbian Nation, which defined itself in opposition to and separate from patriarchy and other hierarchical structures such as racism, classism, and imperialism. This political vision led to the creation of women's communes, women's record companies such as Olivia Records, women's spirituality groups such as the Matriarchists in New York City, and the feminist filmmakers Women Make Movies.

Yet by the early 1980s, the dream of a separatist Lesbian Nation was nearly extinguished. Many women's communes had collapsed under the weight of factionalism, and lesbians of color were increasingly refusing to be torn between allegiances to the "sisterhood" and their communities of origin. There was also a growing reaction to the prescriptive nature of "correct" feminist sex, and "sex radicals" were beginning to claim space for casual sex, sadomasochism, women's pornography, and a revival of butch-femme relationships.

Some lesbians, disillusioned by a failed utopia, went mainstream. Like their straight sisters, upwardly mobile lesbians took advantage of expanding professional opportunities for women and became a visible part of an

American consumer culture that was waking up to the potential of capturing lesbian and gay “pink dollars.” Lipstick lesbians, a more playful version of 1950s-era femmes, were just one component of a commercialized 1980s version of lesbian chic, and “luppies” (lesbian urban professionals) took their place alongside yuppies as businesspeople, lawyers, lunchtime joggers, and restaurant connoisseurs.

Queer Activism and Backlash

Not all lesbian feminists went mainstream in the 1980s, however; many felt compelled to return to joint activism with gay men in the face of the AIDS crisis that began to unfold in 1981. In its initial phases, AIDS affected mainly gay men, intravenous drug users, and some immigrant populations; gay male communities experienced a huge loss of life, especially before medications became available that could slow the progression of disease. In these early years, AIDS was considered a “gay disease” by many, a characterization that provoked virulent homophobia and an increase in antigay violence.

This hostile political climate led some gay activists to form nonviolent direct-action groups such as ACT UP (AIDS Coalition to Unleash Power), founded on the principle that “silence = death.” They mobilized numerous protests and staged “die-ins” to draw attention to the magnitude of the crisis. Many lesbians joined ACT UP and other AIDS-action groups, and volunteered to care for gay men afflicted with AIDS.

They were also early members of multi-issue groups inspired by ACT UP, most notably Queer Nation, founded in 1990, which rallied to slogans such as “We’re here. We’re queer. Get used to it” and “Queers bash back.” Queer Nation focused on confrontation, parody, and the attempted subversion of mainstream sexual norms, eschewing assimilation into “normal” society as misguided and ultimately self-defeating.

By the early 1990s, most Queer Nation chapters had been disbanded, and as the decade progressed the call for equal rights for gays and lesbians, especially the right to marry, began to take center stage. Gone were the 1970s lesbian feminist critiques of marriage as an inherently patriarchal institution. Gone, too, were the gender bending and parody of Queer Nation.

The late 1990s and early twenty-first century have ushered in an era in which an identifiable lesbian culture has largely been replaced by lesbian women, alongside their gay male counterparts, asserting their right to settle down with a wife and kids and get on with the business of life. The focus on civil rights has succeeded in producing a modicum of legislative change. In a landmark decision in 2004, the state of Massachusetts, following the example of a handful of European countries and the civil-union legislation in the state of Vermont, recognized the right of same-sex couples to marry. A handful of other states followed suit. Increasing acceptance for lesbians and gays within mainstream culture is also evident in a media environment in which “out” celebrities and lesbian and gay characters have become commonplace.

Equally visible, however, was the dramatic resurgence of a Christian fundamentalism promoting a version of family values that defines itself in part by its opposition to homosexuality. An ever-growing number of states (thirty by 2009) passed constitutional amendments defining marriage as solely between a man and a woman. President George W. Bush repeatedly indicated his support for a corresponding amendment to the U.S. Constitution, though President Barack Obama opposed such a measure. The federal amendment seemed unlikely to pass in the foreseeable future, but a strong backlash against the increasing acceptance of lesbians and gays was undeniable. The American public remained deeply polarized over homosexuality, and lesbians’ struggle for acceptance and equality within American culture seemed set to continue.

Liberator, The

From 1918 to 1922, socialist reformers Max and Crystal Eastman published a monthly left-wing journal called *The Liberator*, as a successor to their earlier magazine, *The Masses* (1912–1917), which had garnered extraordinary praise as well as notoriety for its radical views on politics and the arts. Although it published many of the same writers and artists as its predecessor and was known for its iconoclastic originality, *The Liberator's* reputation never equaled that of *The Masses*.

Unlike *The Masses*, which was owned collectively by its editorial board and staff, *The Liberator* was under the Eastmans' sole control. Despite a noticeable shift in content toward political affairs, however, *The Liberator* was published very much in the spirit of its predecessor, offering poetry and drawings, as well as theoretical reflections, political commentaries, and news items.

In addition to the Eastmans, notable contributors included Harlem Renaissance novelist Claude McKay, anthologist and poet Louis Untermeyer, poet Maxwell Bodenheim, Welsh mathematician Bertrand Russell, Communist Labor Party organizer John Reed, and social researcher Louise Bryant, among many others. Contributing artists included cartoonist Art Young, realist painter George Bellows, German painter George Grosz, Ashcan school painter Robert Henri, and the Spanish modernist Pablo Picasso.

The Liberator engaged a broad range of contemporary topics. In addition to social criticism and commentary, its pages included accounts of the Industrial Workers of the World (IWW) leaders' trial in Chicago in 1918; IWW founder "Big Bill" Haywood's conversion to communism; the radical Spartacist revolt in Germany; and the communist Béla Kun regime in Hungary. Crystal Eastman reported on the Kun regime and introduced the young Hungarian philosopher and revolutionary Georg Lukács to American audiences. While Max Eastman remained sympathetic to the revolutionary communist cause, he also was a skeptic and iconoclast who did not shy away

from criticizing the Soviet Union and those who idealized it.

By 1922, with the magazine beset by growing division among members of the editorial board, the Eastmans turned over the editorship to cartoonist and American Communist Party member Robert Minor. Without their vision and dynamism, the magazine soon became an orthodox Communist Party journal and lost much of the character that had appealed to its readership. In 1924, *The Liberator* was merged with two other communist publications to form the *Workers Monthly*.

Lippmann, Walter (1889–1974)

One of the most influential and yet misunderstood public intellectuals of the twentieth century, the columnist, editor, and political commentator Walter Lippmann boldly questioned popular thinking and government policy that disregarded Western traditions of civic activism and conformity to natural law.

Lippmann was born in New York City on September 22, 1889, to German-Jewish parents. He entered Harvard University at age seventeen, studied philosophy under William James and George Santayana, cofounded the Harvard Socialist Club, and graduated after three years, in 1909. After college, he worked as a journalist among Greenwich Village bohemians and sided with those in support of Progressive Party candidate Theodore Roosevelt's pro-labor, social-welfare platform for the 1912 presidential election. The journal of political commentary he cofounded in 1914, *The New Republic*, along with his first two books, *A Preface to Politics* (1913) and *Drift and Mastery* (1914), were littered with novel reflections in support of a more inclusive, participatory democracy. Lippmann's early support for American intervention into World War I, in the hope of securing progressive ideals of peace internationally, won him an appointment to the Military Intelligence Branch of the U.S. Army and then the position of assistant secretary of war. As a primary architect of Woodrow Wilson's Fourteen Points peace program, Lippmann was all the more disillusioned by its failure.

In the aftermath of the war, Lippmann's thinking seemed to drift in favor of the rule of self-appointed experts in business, technology, and government. He joined the editorial staff of the *New York World* and participated in civilian foreign-policy think tanks. His major writings of this period, *Public Opinion* (1922) and *The Phantom Public* (1925), challenged the average citizen's ability to render wise political judgments in a complex society and interdependent planet. To former allies such as philosopher and educational reformer John Dewey, it appeared that Lippmann was abandoning his earlier progressivism in lieu of the increasing regulation of society by a new

scientific elite. Lippmann's widely read critique of Protestantism, *A Preface to Morals* (1929), revealed instead a person in search of empowerment for individuals likewise troubled by pervasive ethical uncertainties.

Lippmann found reasons to resist totalitarian government in the natural law tradition of Roman Catholicism. He began corresponding with Catholic intellectuals after 1928 and almost converted during World War II. Though he initially promoted President Franklin D. Roosevelt's economic recovery program, the New Deal, through his popular New York *Herald Tribune* column, Lippmann later condemned federal social planning in his 1937 polemic, *The Good Society*. His appeal to common-law limits on state and corporate power was widely praised by Catholic readers. Lippmann's countercultural genius lay in his demand for fidelity to ancient religious and moral creeds—the “public philosophy,” as he would call it in a 1955 book—as a means to curb the power of mass suggestion by potentially unscrupulous leaders.

Despite substantial misreading and rejection of his political positions, Lippmann remained an internationally respected news correspondent until his death. While coining the term *cold war* in a 1947 book of the same name, Lippmann upset many Washington insiders for criticizing the Truman Doctrine and U.S. involvement in the Korean War.

Lippmann won a special Pulitzer Prize for lifetime achievement in 1958 and another Pulitzer for international reporting in 1962. His editorials, which appeared in more than 150 newspapers, were read by an estimated 40 million Americans and 10 million foreigners each day. Walter Lippmann died on December 14, 1974, after suffering numerous heart attacks.

Living Theatre

The Living Theatre was founded in 1947 by playwright and actress Judith Malina, a protégé of the avant-garde director Erwin Piscator, and the abstract expressionist painter Julian Beck. Seeking an alternative to the commercial theatrical fare on offer in New York City at the time, the original collective presented low-budget plays in Beck's own living room. By 1950, it had found a more official home at New York's Cherry Lane Theatre in Greenwich Village.

The Living Theatre, in the words of Beck and Malina, originally committed itself to “the unconventional staging of poetic drama,” offering plays by American poets such as Gertrude Stein and William Carlos Williams. The group also introduced to the American stage such notable European writers as the French dramatist Jean Cocteau, the Spanish poet and playwright Federico García Lorca, the German Communist playwright Bertolt Brecht, and the Italian dramatist and novelist Luigi Pirandello.

Plagued by troubles with New York City authorities—the company's Cherry Lane venue was closed by the Fire Department in 1953, and its new uptown home, the Living Theatre Studio, was closed by the Buildings Department in 1956—the group grew increasingly radical in the late 1950s and early 1960s. It attracted critical attention with the 1959 production of Jack Gelber's *The Connection*, a harrowingly realistic depiction of drug dealers and addicts living in New York. Success followed again a few years later with the 1963 staging of Kenneth Brown's *The Brig*, about the brutality of military discipline. Both productions challenged audiences to confront firsthand the grisly horrors of aspects of American society generally kept from the public eye.

Beck and Malina refused to pay taxes, which brought trouble with the Internal Revenue Service, closed the Living Theatre's venue on Fourteenth Street, and landed both artists in jail in 1963. Upon their release, the Living Theatre entered a new epoch as a nomadic touring ensemble, presenting participatory works of political theater in public spaces and theaters across Europe. It returned to the United States in 1968 with *Paradise Now*, a participatory and partially improvised play intended to foment revolution. The group continued its nomadic existence for another decade, developing and presenting original works "from the prisons of Brazil to the gates of the Pittsburgh steel mills," as Beck and Malina phrased it. In the 1980s, they attempted again to establish a permanent theater in New York, but the death of Beck in 1985 and the closing of their venue by the Buildings Department in 1992 prompted a permanent relocation to Italy.

The Living Theatre today continues its mission of presenting provocative works of political theater under the guidance of Malina and company veteran Hanon Reznikov, but the period of its greatest influence has long passed. Rising from obscurity in the 1950s, the group came to inspire a generation of politically minded, groundbreaking theater artists in the 1960s, most notably the breakaway ensembles the Performance Group and the Open Theatre. The group galvanized the off-Broadway movement and infused New York theater with an experimental energy comparable to contemporary avant-garde developments in Europe.

London, Jack (1876–1916)

One of the most prolific American writers of the early twentieth century—producing more than fifty novels and hundreds of short stories and nonfiction pieces—Jack London was best known for his novels of conflict, adventure, and the struggle to survive. These include *The Call of the Wild* (1903), *The Sea-Wolf* (1904), and *White Fang* (1906). A child of poverty, London dramatized his concern for social outcasts in both his fiction and his nonfiction, at once promoting a philosophy of radical socialism and the spirit of individualism. His own life of adventure provided the raw material for much of his work, much as his reading provided the philosophical

underpinnings.

Jack Griffith London was born in San Francisco on January 12, 1876. After his father abandoned the family, he was raised in nearby Oakland by his mother, Flora Wellman, and stepfather, John London. During his teenage years, London was employed in a variety of jobs that spurred his sense of adventure—working on fishing boats in San Francisco Harbor and sailing the Pacific Ocean as a deckhand on a sealing ship—and he spent endless hours reading in the Oakland Public Library.

At the age of seventeen, London embarked on a journey across America as a tramp, the details of which are chronicled in his autobiographical work, *The Road* (1907). Along the way, in 1894, he joined the West Coast contingent of Jacob Coxey's march on Washington, D.C., to demand solutions to the nation's growing unemployment problem.

London never actually made it to Washington—he was briefly jailed for vagrancy along with other hoboes—but it was on this journey that he began to cultivate his interest in socialism. After returning to San Francisco, London began promoting the politics of socialism and became an active member in the Socialist Labor Party. His letter-writing campaign to local newspapers and street-corner speeches earned him the nickname “boy socialist.”

After attending the University of California, Berkeley, for one semester in 1897, London headed off to the Yukon in Alaska, to take part in the Klondike Gold Rush. Although he never discovered gold, the adventure provided many of the experiences and the “man versus nature” theme for many of his short stories and novels. During his time in the Klondike, London also studied the works of the German political philosopher Karl Marx and the English naturalist Charles Darwin, whose themes of social justice and the struggle for survival permeated his work.

As his notoriety increased, London promoted socialism with increasing fervor. Sponsored by the Intercollegiate Socialist Society, he traveled around the country in 1905 to argue against the evils of capitalism and invoke the inevitable socialist revolution that would sweep the world. Also that year, he ran unsuccessfully as the Socialist candidate for the office of mayor of Oakland.

London launched a broadside attack on capitalism in his 1907 novel, *The Iron Heel*, whose protagonist prophesizes a war between socialists and capitalists. Although the work never became a best seller on the scale of *The Call of the Wild* and other London classics, it came to be recognized as one of the most politically radical novels ever written by an American author. While it made him especially popular in socialist circles worldwide, the novel also proved prescient about the rise of fascism in twentieth-century industrial society.

Despite his radical politics, London was disillusioned by war and deeply disturbed by the advent of World War I. He opposed German socialists who supported the kaiser's aggressive goals in Europe and, coming to believe that the world would never be united by true socialist ideals or a common socialist government, he gradually withdrew from the international socialist movement.

On November 22, 1916, London died of kidney failure, perhaps having taken a fatal dose of morphine. His passing marked the end of a legendary literary career that inspired readers to dream of adventure and embrace alternative ways of life.

Los Angeles

Metropolitan Los Angeles, the City of Angels, has been a city of dreams for American and global migrants, for those absorbing Hollywood myths and lifestyles, and for those seeking new freedoms—whether utopian ideals, artistic visions, labor rights, or religious freedoms. Counterculture movements have both intersected with and faced challenges from embattled peoples of color—black, Latino, and Asian—seeking a place in Southern California society. Even mainstream L.A. values have been imbued with countercultural flourishes: As Hollywood media conglomerates have broadcast American culture worldwide, film celebrities have experimented with sexual freedom and alternative lifestyles while adopting crusades on behalf of political and social causes from pacifism, racism, and AIDS to environmentalism and world hunger.

Early History

The settlement of Nuestra Señora la Reyna de los Angeles de Porciúncula (Our Lady the Queen of Angels of Porciúncula) was founded by Felipe de Neve, the Spanish governor of Las Californias, in 1781. It was still a sluggish outpost of Spanish colonialism when newly united Mexico subsumed the settlement in 1822. The United States annexed California in 1848, leading to statehood two years later.

The 1849 Gold Rush revitalized San Francisco and Northern California, but Los Angeles remained a small ranching city, where white settlers lived among Chinese, Japanese, and polyglot Hispanic peoples. Transcontinental rail connections in 1876 and citrus-fruits businesses caused the city to explode from 2,300 residents in 1860 to 100,000 in 1900.

Many migrants found inspiration in the geographic setting and climate of the growing metropolis, spurring explorations of new landscapes, styles, and ways of life. The arts and crafts movement—an American aesthetic movement that dominated architecture and interior design in the late nineteenth and early twentieth centuries—characterized much of early Los Angeles architecture. Other creative reshaping of the homes and landscapes of metropolitan area emerged from architects as diverse as Frank Lloyd Wright, Richard Neutra, and, beginning later in the twentieth century, Frank Gehry, Thom Mayne, and Eric Owen Moss.

Utopian planners also diversified the area in and around the city. Antelope Valley sheltered the Llano del Rio Cooperative Colony (1914–1918), led by John Harriman, a socialist politician who battled the *Los Angeles Times*'s virulently anti-unionist Harrison Gray Otis and defended the men accused of bombing Otis's offices in 1910. (The satirical and dystopian novelist Aldous Huxley lived amid the Llano ruins in the 1940s; historian Mike Davis explored them in *City of Quartz*, which was published in 1990.) A cooperative farm society called Little Landers settled the town of Tujunga (1913–1920), while Theosophists founded the Krotona Institute in the hills above Ojai, California. A utopian industrialist built Torrance as a model community for labor and capital in 1914. The Utopian Society, begun in 1933 in Los Angeles as a secret fraternal society, promoted biracialism and scientific management.

Utopian visions also became political. In the 1920s, amid new booms of oil, Hollywood, and industrialization, labor and social reformers joined ethnic and ideological movements in protests that intensified during the Great Depression. Novelist Upton Sinclair created his End Poverty in California (EPIC) platform and ran for governor in 1934. Los Angeles was also home to plans that foreshadowed social security.

Religion also spurred countercultural transformations in early Los Angeles. Mormons settled in nearby San Bernardino by 1851. William Seymour, expelled from his African Methodist Episcopal church, founded the Azusa Street Mission in 1906. It became the birthplace of the expressive spirituality of American Pentecostalism. By the 1930s, Aimee Semple McPherson built her Foursquare Gospel through theatrical preaching and radio evangelism before she was destroyed by personal scandal. Angelus Temple, its main house of worship, opened on January 1, 1923, in the Echo Park district.

Hippiedom and Activism

By the mid-twentieth century, the canyons of Greater L.A. provided areas outside the commercial and industrial city in which alternative lifestyles could take place. Among these movements, direct forerunners of the 1960s counterculture included Nature Boys, followers of nineteenth-century German ideologies that had promoted the healing values of sun, nudism, vegetarianism, communal living, self-sufficiency, and other new cultural ideals. German Nature Boys and their followers found sun, fruit, and space in the hills surrounding Los Angeles. They became known for long hair, sandals, and back-to-the-earth lifestyles that foreshadowed those of later hippies. They also made contact with local celebrities (singer-songwriter Nat King Cole recorded "Nature Boy" in 1948), and the eclectic vegetarian Gypsy Boots gained his own television show and appeared at the Monterey Jazz Festival.

As early as the silent-film era, Laurel Canyon, winding upward from the famous Hollywood sites of the Sunset Strip, had become a haven for actors and entertainers such as Errol Flynn and Harry Houdini. In the 1960s, its humble houses and rugged landscapes made this area a center for music and a lifestyle that combined entertainment with older Nature Boys' values. Joni Mitchell, the Byrds, Frank Zappa, the Mamas and the Papas, and Crosby, Stills and Nash gathered in homes and at parties there, producing the music of a new generation in natural settings around the modest Laurel Canyon general store rather than in Hollywood clubs. Yet they also had ready access to commercial producers and the mass media. In fact, the theme song of San Francisco's Summer of Love, "If You're Going to San Francisco," was written and produced in Laurel Canyon in 1967.

The idyllic years of the canyon, however, were undercut by cocaine and other drugs, the professionalization and departure of participants, and the horrific impact of the Charles Manson murders. The magnetic Manson had begun to assemble a communal family around him in Berkeley, California, and the Haight-Ashbury district of San Francisco in 1967, but then he moved southward, living off celebrities such as Dennis Wilson of the Beach Boys before finding a communal home in Topanga Canyon, once used as a locale in Western films. Rejected by record producers, he guided his followers into revenge, including the bloody murders of actress Sharon Tate and others at her home in the nearby Hollywood Hills. Over time, Laurel Canyon and its outlying areas became sites of gentrification as much as alternative lifestyle.

Migration into the city by Northeastern and Midwestern Americans, however, dispossessed Mexicans and restricted Asians who formed important segments of the local population. Olvera Street, a romantic re-creation of the historical Spanish settlement, was the site of the 1943 zoot suit riots that pitted flamboyantly dressed Mexican Americans against the military and the police. (In the early decades of the twentieth century, anarchist Emma Goldman, Mexican radicals, and labor organizers had addressed crowds on Olvera Street.) The deportation of local Japanese and the internment of Japanese and Japanese Americans during World War II left festering issues. In the 1940s, however, African American migrants formed a thriving community around Central Avenue, which offered support to local residents through much of this economically challenged and culturally tense period.

With post-World War II growth, Angelenos demanded wide social and economic opportunities amid urban deterioration. Leftists, veterans, women's groups, and clergy formed coalitions to reform community-based public housing, but the specter of socialism brought the experiment to a halt. The civil rights movement of the 1950s and 1960s provided new social visions. Police brutality in the 1965 Watts riots fueled the militant Black Panther Party and a variety of reformers and rebels who saw the Los Angeles Police Department as a white vigilante gang. Mexican American youth in high schools and colleges found solidarity in the Chicanismo cultural pride movement,

although this sometimes pitted locals against international labor and immigration groups, given Los Angeles's exploding, diverse Hispanic presence. Asian organizations, such as the Japanese American East Wind Collective, formed part of a Marxist "Third-World Left" that sought to unite people of color and address shared problems in the 1960s and 1970s.

African American mayor Tom Bradley began two decades in office in 1973 but did not effectively control the police or tackle economic inequalities. This contributed to Los Angeles's 1992 riots, violently dividing races, classes, and ethnic areas across the city. Decades later, alongside the glamour of Hollywood and the lifestyles of beaches and canyons, these Los Angeles residents continue to make the city a crucible for diverse thoughts and actions challenging mainstream America.

Lost Generation

The Lost Generation refers to novelists, artists, poets, intellectuals, publishers, and painters who searched for self-development and self-expression in Europe from the end of World War I to the beginning of the Great Depression. Many were permanent expatriates; others stayed in Europe only a short time, returning to homes in America where they produced art from their liberated souls.

Significant members included writers Sherwood Anderson, John Dos Passos, F. Scott Fitzgerald, and Ernest Hemingway; painter Waldo Peirce; and poets E.E. Cummings, T.S. Eliot, and Ezra Pound. According to Hemingway (who popularized the name of the group in his novel *The Sun Also Rises*, 1926), writer and patron

Gertrude Stein applied the designation “Lost Generation” to him and his contemporaries after she overheard the owner of the garage where she took her automobile for repair chastise his incompetent employee as part of a *generation perdue* (“lost generation”), characterized by excessive drinking and iconoclasm.

Veterans of World War I

Encouraged by President Woodrow Wilson’s patriotism over America’s involvement in World War I in 1917, many young American men joined the war effort. Some were motivated less by patriotism than by restlessness and a craving for adventure. Those who were opposed to the war served in more humane ways, such as volunteering for the ambulance corps. Among those who served in the ambulance corps were several who would go on to make a mark in American letters: Hemingway, Dos Passos, Cummings, and Malcolm Cowley.

The generation of Americans who returned from World War I was changed by the mass slaughter of men in the trenches. The horror and futility of war, and the political propaganda that went with it, affected not only the men who served, but many others living during the war years. It was a time of disillusionment and disenchantment; prewar romantic inspiration had given way to postwar apathy.

In direct contrast to America, Paris in the 1920s provided a sacred space for American artists, intellectuals, and disaffected young people who were full of nervous energy and a restlessness for living not satisfied by American culture. In Paris, they could live cheaply and be free. They were apolitical, interested more in self-expression and self-development than in changing the world. In Paris and other European cities, days and nights were filled with conversation, sexual adventure, parties, gaming, sports, and a spirit of excess and merriment. In the 1920s, upper-class Parisians generally occupied the Right Bank of the Seine River; poor artists and bohemians found each other and their daily sustenance in the neighborhoods of the Left Bank. A place for experimentation in art, narrative, poetry, music, and sex, Paris offered opportunity for anyone to find a voice and express it.

Owner Sylvia Beach stands in the doorway of Shakespeare and Company, her bookstore in Paris that became a haven for the expatriate American writers of the 1920s who were known as the Lost Generation. (Sylvia Beach/Hulton Archive/Getty Images)

The Lost Generation—rooted mainly in Paris— established the party as a commonplace social event. Alcohol, dancing, music (usually hot jazz), and flirtations were common. Sexual freedom, including gay and lesbian lifestyles, was part of the generation’s exploration of authenticity. The prototypical flapper, with her low waistline, flat bosom, and openness to adventure, also marked the freedom this generation sought. Author Henry Miller

described this lifestyle and quest for self-realization in his essentially autobiographical novels *Tropic of Cancer* (1934) and *Tropic of Capricorn* (1939).

Venues

The Lost Generation lived simultaneously in poverty and affluence. Cafés and bistros became the cultural centers of the disaffected. Many who frequented the cafés did so out of necessity, to escape cheap rooms with no cooking facilities and little or no heat in winter. At public tables, they wrote and talked and planned and dreamed, often for the price of a cup of coffee. Writers such as Hemingway wrote stories in Left Bank cafés; his favorite was the Brasserie Lipp. Other popular gathering places were Les Deux-Magots and La Rotunde.

The cabaret was another place that gave the expatriates an opportunity to meet others who were searching for whatever they could find in life. They were dazzled by such free spirits as Josephine Baker, a Midwest-born African American beauty who brought her raw sexuality and provocative dance routine to Paris in 1925. Baker's stage show, *La Revue Negre*, incited the passions and imaginations of audiences. She took Paris by storm, introducing such expressions into the French language as "jazz band," "un cocktail," and "up to date."

Sports such as bicycle racing, held indoors for as long as six days at a time, drew large crowds of fans. Gaming sports such as horse racing also became a popular means for this generation to socialize and perhaps help finance their lifestyle. Americans also sought prizefights, tennis, golf, and miniature golf to fill their leisure time. Endurance contests such as dance marathons were another popular diversion in the 1920s and 1930s.

Important meeting places were provided by two of the notable influences on the artistic and intellectual life of the Lost Generation in Paris, Stein and Sylvia Beach. Stein carried on the French tradition of the salon, where men and women would gather in the home of a wealthy patron, enjoying food, drink, and conversation. Beach owned and ran the bookstore and publisher Shakespeare and Company.

The period was rich in ideas and imagination, as writers explored new ground in lyric and narrative, and artists pursued their modernist visions. Art manifestos and statements of a new way of doing things abounded. Hemingway's new prose style influenced the very speech patterns of young men who had recognized their voices in his works. Life was imitating art.

Many American exiles lived in Paris only for a year or two. Yet, after 1924, the city was flooded with Americans with money and ideals, some just looking for the less rigid morality that living in France offered. Gerald and Sara Murphy were one rich American couple who entertained the talented and elite of the day. Gerald Murphy, an artist whose paintings of common objects resembled the pop art that would emerge later in the twentieth century, was the inspiration for Dick Diver, Fitzgerald's protagonist in the 1934 novel *Tender Is the Night*. The Murphys threw lavish parties at their Villa América in the south of France, attracting such guests as Dos Passos and Fitzgerald, playwright Anita Loos, actor Rudolph Valentino, and abstract artist Pablo Picasso.

Although members of the Lost Generation excelled in various art genres, it was the writers of this generation who gained particular prominence. Their innovative and impassioned youthful works paved the way for subsequent generations of writers.

Lovecraft, H.P. (1890–1937)

Howard Phillips (H.P.) Lovecraft was an influential writer of horror, science fiction, and fantasy stories, many of which are collectively referred to as the Cthulhu Mythos. Since his death, Lovecraft's corpus of three novellas and approximately sixty short stories has gained a cult following. Now regarded as America's most important horror writer since Edgar Allan Poe, he attained near-iconic status within the literary community with the publication of a Library of America edition of his work in 2005.

Lovecraft was born on August 20, 1890, in Providence, Rhode Island, a location that would be featured in much of his fiction. After the death of his father, Lovecraft's upbringing fell to his mother, two aunts, and grandfather. A child prodigy who read the *Arabian Nights* at the age of five, he was plagued with sickness as a youth and never completed his formal education. His grandfather died in 1904, and the family suffered severe financial difficulties.

From the age of eighteen to twenty-four, Lovecraft lived a reclusive life with his mother, cultivating his literary skills and interest in astronomy. His mother suffered a nervous breakdown in 1919 and was confined to an institution until her death in 1921. In 1924, Lovecraft married and moved to New York. Failing to find work and increasingly appalled by the immigrants whom he felt threatened Anglo-American culture, he returned to Providence in 1926 and was divorced in 1929. He spent the rest of his life in New England, writing and engaging in a voluminous correspondence.

Many of Lovecraft's short stories and novellas were first published in pulp magazines such as *Weird Tales*. From the mid-1920s to his death, he produced the stories that formed the Cthulhu Mythos, including "The Call of Cthulhu" (1926), "The Case of Charles Dexter Ward" (1927), "The Color Out of Space" (1927), "The Dunwich Horror" (1928), "The Whisperer in Darkness" (1930), "At the Mountains of Madness" (1931), "The Shadow Over Innsmouth," (1931), "The Haunter of the Dark" (1935), and "The Shadow Out of Time" (1935).

The tales that make up the Cthulhu Mythos filter motifs from Gothic fiction through an imagination acute to the anxieties induced by modernity. Common tropes include dangerous and forbidden knowledge, sublime landscapes and cityscapes, a sense of inexpressible horror, an overwrought psychological symbolism connected with enclosed spaces and great abysses, and a violent and terrifying intrusion of otherness into so-called normal reality. Lovecraft's stories present a pessimistic cosmology in which the irrelevance of man is contrasted with the

endurance of ancient powers. They present an intricate mythology of alien beings called “The Old Ones,” including Shub-Niggurath, “the black goat with a thousand young”; Nyarlathotep, “the crawling chaos”; the idiot god Azathoth; and Cthulhu, who sleeps in the submerged city of R’lyeh. In many of the stories, the protagonists discover some form of access to these alien beings, through occult texts or ancient ruins. This forbidden knowledge, and the terrible discoveries that accompany it, invariably precipitate their destruction.

Lovecraft’s work gains much of its power through the creation of a quasi-historical, pseudo-scholarly context for the revelation of cosmic horrors. Many of his protagonists are antiquarians or scholars from the fictional Miskatonic University, stumbling upon ancient evil in the course of their research.

An occult text called the *Necronomicon* features in many tales. Supposedly written by the mad Arab Abdul Alhazred, the *Necronomicon* was one of Lovecraft’s most successful creations. Many readers were convinced the book actually existed, a belief exacerbated by the publication of numerous fake editions. The mythos was expanded and developed by many of Lovecraft’s correspondents, including Robert Bloch (author of *Psycho*, 1959) and Robert E. Howard, who pioneered the “sword and sorcery” genre with *Conan the Barbarian* (1954).

Lovecraft was diagnosed with cancer of the intestine in early 1937 and died on March 15 of that year. In the years following his death, fans and literary executors August Derleth and Donald Wandrei collected a series of Lovecraft’s stories and looked for a publisher. Failing in their efforts, they formed the Arkham House imprint in 1939 and published the first collection of Lovecraft’s work, *The Outsider and Others* (1939).

Lovecraft’s work has influenced many horror and science fiction writers, such as Stephen King and Peter Straub, as well as a breadth of other writers, including Jorge Luis Borges, William S. Burroughs, Michel Houellebecq, and Joyce Carol Oates. The influence of his work is seen as well in films, role-playing and computer games, and heavy metal bands from Morbid Angel to Fields of Nephilim. Some devotees worship his fictional creations as an alternative to Satanism. His work also has been the subject of extensive scholarship, with several journals devoted to his legacy.

Love-Ins

Love-ins were spontaneous gatherings of individuals who came together to promote a message of solidarity, world peace, and harmony through free love—an idea most closely affiliated with the hippie counterculture of the late 1960s. The motivation and intent of a specific love-in event tended to vary according to the interests of the participants involved. These events ranged from simple displays of nonsexual physical closeness to mass sexual experimentation, including nude parties and orgies. Drug use and music were integral elements.

Love-ins were a part of the larger “-in” movement of the 1960s, a designation for protest tactics derived from the sit-ins of the civil rights movement of the early years of the decade. In the same way that sit-ins were intended to spontaneously bring people together and unite them for a common goal (in this case, to protest laws that enforced racial discrimination in public places), other “-ins” sought to convey a similar message of unity through protest. Many of these gatherings were intended to educate participants about opposition to the Vietnam War, such as the teach-ins held at the University of Michigan in March 1965 and at the University of California, Berkeley, in May 1965.

The first Human Be-In, held on January 14, 1967, at Golden Gate Park in San Francisco, was the inspiration for other large social gatherings of people in cities across the country. The nearby Haight-Ashbury district was the epicenter of the Summer of Love in 1967, in which thousands of hippies came together to engage in free love and sexual experimentation. The popular counterculture slogan “Make love not war” suggested a role for love-ins in the antiwar movement. The 1968 Broadway rock musical *Hair* also connected free love and antiwar protest. The show’s onstage nudity and explicitly sexual lyrics further promoted the love-in as an integral part of the hippie counterculture.

Thousands of flower children gather at Elysian Park in Los Angeles for an early “love-in,” or outdoor celebration of peace and love, in March 1967. (Michael Ochs Archives/Stringer/Getty Images)

In 1969, Beatle John Lennon and his wife, Yoko Ono, staged variations on the love-in with their two “Bed-Ins for Peace” in Amsterdam and Montreal, to promote peace and protest the war in Vietnam. Shortly after their marriage on March 20, Lennon and Ono invited the press to visit them in their Amsterdam hotel, where they spent the better part of a week in bed, beneath signs that read “Hair Peace” and “Bed Peace.”

Although the popularity of love-ins waned as the antiwar movement adopted increasingly violent means of protest, love-ins remain a prominent folk memory of American counterculture in the 1960s.

Lowriders

Customized cars and other vehicles that have been modified to drive as low to the ground as possible, lowriders gained prominence in the post–World War II era as a social symbol of independence, strength, and creativity in the Mexican American subculture. Originating in Los Angeles, these colorful vehicles were a statement of resistance to mainstream white culture on the part of the Chicano minority, then spread to other Latino communities in the Southwest and elsewhere, and by the 1990s emerged as an expression of urban hip-hop culture as well.

Structurally, lowriders were adapted from the frames of older car models that Chicano youth could afford. In the late 1940s, the original lowrider artists sought out standard models from such manufacturers as Buick, Chevrolet, and Ford, because these cars were often the least expensive and most abundant. The process of “lowering” was originally achieved by placing heavy bricks and cement bags in the trunk of the car. Sometimes the springs in the shocks could be shortened so that the chassis would ride closer to the ground. Later, hydraulic lifts, controlled manually by the driver, were used to lower and raise the front and rear ends of a car.

Blending ingenuity with artistic license, Chicanos transformed ordinary cars into artistic social statements that reflected their pride in Mexican culture. The vehicles often were decorated with pinstriping and native cultural motifs, such as fire lace designs and custom murals. Common pictorial themes included ancient Mayan scenes and Mexican religious icons such as the Virgin Mary.

Lowriders became a prominent expression of barrio street culture. In these neighborhoods, immigrants reinvented the courtship custom of strolling, *el paseo*. Rather than use horses to attract attention, Chicano youth used lowriders to popularize the pastime of “car cruising.” Along the boulevards of Southern California especially, the concept of cruising soon became a universal cultural phenomenon among suburban youth.

Thus, from the outset, lowriding was as much about the attitude as about the vehicles. Unlike muscle cars—more expensive, high-speed models built for speed—lowriders offered a calm and composed statement of coolness in which image and style mattered more than performance. In the late 1940s and 1950s, the lowrider was perceived as a stylistic complement to the zoot suit and the drooping mustache—all bold social statements of divergence from predominantly white culture and style.

Beyond the barrio, U.S. Navy veteran George Barris became the public face of lowriders by developing one of the first businesses to customize these unusual cars. Known as the King of the Kustomizers, Barris and his brother Sam set up a shop in Los Angeles where they lowered chassis, straightened fenders, bolted on accessories, and

used paint schemes to meet the tastes of customers seeking something different in car styling. In only a few years, lowriders and other creations from the Barris brothers burgeoned into a highly profitable custom car business.

Cars were not the only vehicles, however, transformed by the lowriding phenomenon. During the 1960s, the trend became popular in the bicycling world as well. As the cost of remodeling cars increased, young people who could not afford lowrider cars began modifying their bicycles along the same lines. Again, commercial interests soon got involved. In 1963, Schwinn came out with a revolutionary new model, the Sting-Ray, designed to mimic a custom dragster.

Originating in the poverty of the barrio as a symbol and expression of Chicano counterculture, lowriders developed into a diverse and highly individualized art form across American cultures. From Los Angeles to Chicago to Florida, the art of customizing cars and bicycles into lowriders remains a popular craft and social statement.

LSD

LSD (lysergic acid diethylamide, or "acid" for short) has a tumultuous history for a chemical compound discovered as recently as the mid-twentieth century. It has been embraced by those who seek spiritual truths in the hallucinogenic experiences it produces, studied by the U.S. military, and demonized by the press and legal system.

Before LSD became a recreational drug used and abused by the counterculture of the 1960s, it was a subject of intrigue and curiosity to intellectuals, scientists, chemists, psychiatrists, and psychoanalysts. To the hippie counterculture, it played an important role in the formation of a distinctive worldview, generational identity, and aesthetic.

Origins

The molecule lysergic acid diethylamide originally was isolated from a substance called ergot derived from fungus

that grows on rye and other grains. When ingested, it produces an altered state of consciousness that may last up to twelve hours. In the Middle Ages, ergot-tainted wheat was linked to outbreaks of mass hysteria.

When the Swiss pharmaceutical company Sandoz embarked on a project in 1938 to develop various ergot-based substances, chemist Albert Hofmann proceeded to synthesize a series of ergot alkaloids, including LSD-25, the twenty-fifth in the series. Although he originally was seeking a substance to stimulate blood circulation and respiration, Hofmann discovered unexpected properties of LSD-25 when he decided to reexamine the compound on April 16, 1943. Partway through his experimentation, Hofmann began to feel strange, as if he were dreaming, and he decided to go home to rest. Purposefully testing the substance again three days later, he realized that a miniscule amount had the ability to induce altered consciousness and hallucinations. In short, Hofmann had synthesized a potent psychedelic substance.

During the 1950s and 1960s, intellectuals, scientists, and psychiatrists became intrigued by the hallucinogenic properties of LSD and experimented with it, both personally and in the laboratory. Some psychiatrists compared the altered state of consciousness induced by LSD—complete with visual hallucinations, enhanced senses, and feelings of religious insight—to schizophrenia. While these researchers believed the “LSD psychosis” could help reveal the nature of mental illness, others valued the LSD experience as the door to a level of reality not otherwise available. Some felt LSD could provoke a mystical experience and represented a vehicle of personal and spiritual growth. This belief prompted experimentation with LSD as a supplement to psychological therapy.

In the late 1950s, the Central Intelligence Agency (CIA) briefly conducted experiments with LSD to test its usefulness as a brainwashing drug and truth serum. Secret experiments were conducted on a variety of test populations, including prisoners, men enlisted in the military, unsuspecting civilians, and CIA agents. One of the latter, Frank Olson, died under mysterious circumstances in 1953, and the experiments eventually were halted. Senate investigations in 1977 revealed the extent of CIA involvement in the use of LSD.

Cultural Influence

LSD influenced a great many writers, intellectuals, and artists who experimented with it. British writer Aldous Huxley, whose first psychedelic experience was with mescaline, took LSD approximately six times and considered it a valuable tool of insight.

Psychoanalysts and psychologists began to experiment with LSD therapy, in which a patient supplemented traditional talk therapy with doses of LSD to heighten the experience, produce a deeper emotional reaction, reveal unconscious mechanisms, and promote insight. One of the most famous LSD therapy patients in the 1950s was actor Cary Grant, who claimed it changed his life.

At Harvard University, psychology professor Timothy Leary began to study the effects of psychedelic substances in the early 1960s. Working at first with prison inmates, he observed that psychedelic experiences seemed to reform even the most hardened criminals. After expanding his experiments to friends and students, he was dismissed from Harvard in 1963. Blending his interest in psychedelic experience with non-Western religious and philosophical ideas, he formed several foundations and centers, including the Millbrook Commune in New York, to introduce others to the insights offered by LSD. The psychedelic experience, he believed, could help the human race achieve a higher state of being, and he encouraged his followers to pursue altered states of consciousness as a fundamental right. Leary gained near-guru status as a leader of the psychedelic community.

Writer Ken Kesey attributed part of the inspiration for his novel *One Flew Over the Cuckoo's Nest* (1962) to the effects of LSD. He later became the spokesperson for the Merry Pranksters, a group based in California who threw public dance parties where LSD was abundant.

By the late 1960s, LSD was becoming a popular recreational drug among the hippies of San Francisco and other antiestablishment groups. In spite of the unpredictable effects, which could include panic and intense paranoid delusions, acid was believed by many in the counterculture to reveal the true workings of the human mind and the

falseness of social norms. The underground network of manufacturing and distribution thrived.

When the Los Angeles Police Department and New York City hospitals began to notice the negative effects of LSD, a special U.S. Senate committee was formed to investigate the substance. In 1966, the committee heard evidence that convinced them LSD had no legitimate medical use and should be made illegal. Under the Controlled Substances Act of 1970, it was declared a Schedule I drug and effectively declared illegal.

The popularity of LSD as a recreational drug diminished but hardly disappeared. The Department of Justice reported in 1966 that some 14 percent of all Americans had experimented with LSD. According to government statistics, however, LSD use in America decreased during the 1980s. In 2002, a study by the Department of Health and Human Services estimated that 10.5 percent of adults twenty-six years old or older had tried LSD.

Ludlow, Fitz Hugh (1836–1870)

Fitz Hugh Ludlow was a nineteenth-century American author and journalist who gained prominence in the counterculture of his own time and in the mid-twentieth century as a commentator on mind-expanding drugs. His explorations of drug-induced mental states, most notably in his autobiographical *The Hasheesh Eater* (1857), have become classics of surreal and experimental literature. In addition to writing travelogues, art criticism, short fiction, and an influential essay on the treatment of drug addiction, Ludlow also was an active abolitionist.

Born on September 11, 1836, in New York City, he was the son of an ardent abolitionist and temperance advocate. In particular, his father's passionate opposition to slavery and participation in the Underground Railroad inspired the younger Ludlow's writings on mental and physical liberty. His philosophical explorations on the need for freedom also were informed by his mother's long-term illness and death at an early age.

At Union College in New York State, Ludlow received basic medical training, began specializing in anesthesiology,

and wrote on the effects of anesthesia on the mind of the patient. He also wrote the Union College alma mater, or school hymn, which is still sung there today. The lyrics to “Song to Old Union” contain references to the Delphic waters of Greek mythology, which some regard as a veiled allusion to drug-induced states of consciousness. During his college years, Ludlow was widely known as a prolific consumer of hashish and medicinal extracts that included hashish as an ingredient. In his later writings, Ludlow posited drug use as an efficient means of traveling to other cultural and mental realms, and as a boon to creativity.

At age twenty-one, Ludlow published *The Hasheesh Eater*, an account of the states of mind he had entered while consuming the drug. The book was praised for its dramatic descriptions of psychedelic visions and drug-induced hallucinations, though Ludlow also considered the deleterious effects of hashish use. Ludlow’s accomplishments with language have since been imitated in many books on the drug culture.

The Hasheesh Eater was a hit with the public, gaining Ludlow access to literary society in New York during the late 1850s and early 1860s. By his twenty-fifth birthday, Ludlow had published ten short stories and several poems, while *The Hasheesh Eater* had gone through several printings. Meanwhile, he had moved to Florida, where the cultural landscape encouraged him to write essays on abolition, following on the work of his father.

Influenced by popular photographs of the American frontier and Albert Bierstadt’s great landscape paintings, Ludlow traveled overland to the West Coast in the 1860s. En route, he lived briefly among the Mormons in Utah, of whose social order he wrote critically in the popular article “First Impressions of Mormonism.” He eventually made his way to San Francisco, where he fell in with the local literary set that included Mark Twain (still largely unknown) and Bret Harte. He also observed the depredations of opium addiction among Chinese immigrants.

By the late 1860s, Ludlow himself was battling an addiction to opium, which resulted in the deterioration of both his health and his efforts to help other addicts. Before his death at the age of thirty-four, he was able to complete an influential essay on the treatment of addiction, “Outlines of the Opium Cure” (1868), and his second book-length work, *The Heart of the Continent: A Record of Travel Across the Plains and in Oregon* (1870).

Ludlow died on September 12, 1870, while traveling in Europe. *The Hasheesh Eater*, rediscovered by the underground press in the 1960s, became required reading both in the drug counterculture and in the scientific drug and addiction research community.

Luhan, Mabel Dodge (1879–1962)

Heir to a banking fortune in Buffalo, New York, Mabel Dodge Luhan used her wealth to encourage creativity in a number of avant-garde writers and artists in the early and middle years of the twentieth century, both at the salons she hosted in New York City's Greenwich Village and at her expansive home in the mountains of New Mexico.

Arts patron, socialite, and political activist Mabel Dodge Luhan supported the cultural avant-garde of New York in the 1910s. In later decades, she housed artists, writers, and musicians at her compound in Taos, New Mexico.
(Library of Congress)

She was born Mabel Ganson on February 26, 1879, in Buffalo. Her education included attendance at St. Margaret's, Miss Graham's Young Ladies' Boarding School, and a year at a finishing school, after which time she made her social debut in 1897.

Her secret marriage to Carl Evans, the son of a steamship owner, in 1900 was followed by a society wedding. When Evans was killed in a duck-hunting accident two years later, Mabel was already a mother, to John Evans.

In 1903, while traveling in Europe, she met the wealthy American architect Edwin Dodge in Paris. After marrying later that year, the couple moved to Florence, Italy, where she became one of the best-known hostesses in Europe. She would dress in a flamboyant Renaissance costume, and she was celebrated for her role as muse to such luminaries as the French novelist André Gide and the American writer Gertrude Stein.

When the couple returned to America in 1912, Mabel founded one of the leading salons of the Greenwich Village avant-garde. Her "Wednesday evenings" were filled with artists, philosophers, and reformers who discussed sociopolitical issues of the day. In addition to her role as social hostess, she cosponsored the 1913 Armory Show, the first major international exhibition of modern art in America; contributed to the left-wing literary and political journal *The Masses*; and supported a variety of progressive organizations, from the Woman's Peace Party, a pacifist group dedicated to bringing an end to World War I, to Margaret Sanger's National Birth Control League, which provided education to women about birth control.

After divorcing Dodge, she married painter Maurice Sterne, with whom she moved to Taos, New Mexico. Divorcing

Sterne, she married Tony Luhan (Lujan), a Pueblo Indian.

Like many of her contemporaries who became expatriates in Europe, Mabel Dodge Luhan was disillusioned by the United States's entry into World War I. She was determined to establish her home as a center for a new world system that would regenerate American society by shifting its focus from industrialization, materialism, and individualism. Her goal was to attract the nation's great artists and writers, and encourage them to experience the social and cultural benefits of interacting with native communities.

The New Mexico landscape that surrounded the Luhan property presented a utopian ideal. In a reinterpretation of the traditional Western myth, it replaced the image of a lone cowboy challenging the unforgiving land on the edge of civilization with artists who pitted paintbrushes, pens, and cameras against the rugged landscape. While guests, such as writers Willa Cather, Aldous Huxley, and D.H. Lawrence and artists Ansel Adams and Georgia O'Keeffe, brought with them different styles and temperaments, collectively they embodied the spirit of transcendental modernism: an eclectic blend of Theosophy, Eastern religious philosophy, and nineteenth-century American transcendentalism. Central to their ideal was the belief that cultural vision was integral to social revolution. They advocated the preservation of the natural environment and a native way of life.

After a lifetime of encouraging writers, painters, and other artists, Luhan died on August 13, 1962, in Taos. Her former home was designated as a national landmark, and it continues to serve as a guesthouse and place of creative reflection for artists and writers.

Lumpkin, Grace (ca. 1891-1980)

A radical and proletarian novelist of the 1930s, Grace Lumpkin is best known for her novel *To Make My Bread* (1932). Telling the story of an Appalachian mountaineer family transformed into strikers that parallels events of the 1929 Gastonia, North Carolina, textile strike, it won the Maxim Gorky Prize for best labor novel.

Lumpkin was born on March 3, 1891, in the town of Milledgeville, Georgia, to William Wallace and Annette Morris

Lumpkin. Although the family had a genealogy rich in history and wealth, it fell on hard times after the American Civil War, and thereafter began to associate more with the working class and sharecroppers than with aristocrats and plantation owners. Lumpkin was able to attend school, however, eventually enrolling in a teacher's training program at Brenau College in Gainesville, Georgia. After receiving her teaching certificate, she worked at a variety of odd jobs, including teaching school and directing a Young Women's Christian Association (YWCA) chapter. She also began publishing stories.

It was during this time that Lumpkin began to develop her political views and devote more time to her writing. After moving to New York City in 1924, she became a staff writer at *The World Tomorrow*, a Quaker publication that promoted peace, criticized war, and advocated a Christian worldview. The offices of the publication also were a hotbed of radical and socialist sympathizers, and Lumpkin began to form close alliances with associates who shared her radical views. While on staff at *The World Tomorrow*, Lumpkin covered a number of strikes and job actions. This, along with her ties with radical thinkers of the time, caused her to move even more decidedly to the left.

During this time, Lumpkin became immersed in the radical culture of New York City, writing for the journal *New Masses*, organizing workers for the Gastonia strike, and being arrested with other communist sympathizers while picketing for Italian American political radicals Nicola Sacco and Bartolomeo Vanzetti (whose 1921 conviction for murder in South Braintree, Massachusetts, set off countrywide protests). After witnessing the violent 1926 textile strike in Passaic, New Jersey, Lumpkin joined the Communist Party.

Lumpkin made use of the Gastonia strike as source material for her most critically acclaimed work, *To Make My Bread*. A prime example of the "radical novel" and a searing portrayal of Southern working-class life, *To Make My Bread* is the story of the McClures, a family of Appalachian farmers and mountaineers who move to a mill town to take jobs and create better lives for themselves. In addition to chronicling the shift from agrarian to urban life, the book also casts a stark light on the plight of women workers and their multiple hardships.

Lumpkin's affiliations with the Communist Party and radicalism were short-lived. She voluntarily left the party in 1939, having had doubts about its ideology and motivations for some time. She converted to fundamentalist Christianity during the 1940s, a period in which she began to feel even more resentment toward the party. As a result, she willingly testified against former comrades when called before the U.S. Senate Subcommittee on Government Operations in 1953. Soon after her testimony, Lumpkin returned to the South, settling in rural Virginia, where she lived throughout the 1960s and 1970s.

Her other novels include *A Sign for Cain* (1935), *The Wedding* (1939), and her autobiographical novel *Full Circle* (1962), which explores her Communist-to-Christian conversion experience. Grace Lumpkin died in Columbia, South Carolina, on March 23, 1980.

Lyceum Movement

The lyceum movement was a form of public education for adults that operated from the mid-nineteenth to early twentieth centuries. *Lyceum* refers to both the meeting halls used for public lectures or discussions and the movement. (The term comes from ancient Greece, where in the fourth century B.C.E. Aristotle taught in a building near a site that was sacred to the god Apollo Lyceus.) The American movement was inspired by programs first established in Scotland by Dr. George Birkbeck during the early nineteenth century that later spread to France.

In the United States, proponents of the lyceum movement believed that continued adult education would provide a source of temperance, increased democratic activity, and personal and community development, and would deter the formation of rigid social hierarchies based on class or education, thereby creating a freer and more egalitarian society, in keeping with the general spirit of Jacksonian democracy and personal improvement that characterized the era. As American lyceums developed, they also became an important arena for the distribution and development of controversial and countercultural ideas.

Josiah Holbrook, a Yale-educated lecturer and teacher, founded the earliest American lyceum in 1826 at Millsbury, Massachusetts, where he lived. Named the "Millsbury Branch, Number 1, of the American Lyceum," it initially operated as a weekly study group and lecture series that focused largely on popular topics of the day, such as economics, science, and philosophy, that attracted a following.

Between 1826 and 1840, lyceums spread throughout the Northeast, encouraged by public interest and facilitated by the growth of railroads and the construction of the Erie Canal, which increased the ease of travel and commerce, leading to the expansion of towns and settlements. As national networks of rails and canals expanded westward, so, too, did the lyceum. While some lyceums were established in Southern states, such as Florida and Virginia, support for the lyceum movement was much less pronounced in slave-based economies, which lacked a significant middle class, the lyceums' largest audience, to attend lectures. In addition, education for poor whites and slaves was perceived as a threat to socioeconomic hierarchies. In 1835, there were about 3,000 lyceums operating in towns across America, many of which were in Northeastern states such as Massachusetts and Connecticut.

During this expansion, lyceums began emphasizing new topics such as literature, history, and culture. Boosters promoted lyceums as a form of learned but egalitarian public education and as a progressive remedy for prejudice and ignorance. The lyceum became a key source of education regarding controversial topics, critiques of American culture, and philosophies of alternative thought. Popular lecture topics included transcendentalism, free public schools, morality, politics, abolitionism, women's education, and woman suffrage.

According to conventional lyceum wisdom and in spite of the many women who lectured, the ideal lecturer was a man who had achieved success and notoriety in a given field and who lectured as a public service. Noteworthy lecturers included such writers, abolitionists, and philosophers as Bronson Alcott, Henry Ward Beecher, Harriet Beecher Stowe, Emma Hart Willard, DeWitt Clinton, Frederick Douglass, Henry David Thoreau, Ralph Waldo Emerson, and Horace Greeley. These men and women traveled from town to town, exposing various problems in society by leading discussions. Lecturers commonly found meeting halls in every town overflowing with eager people willing to learn.

Lyceum activity ceased during the American Civil War. After the war, the lyceums that reopened and those that spread westward were of a different character than the antebellum lyceum. During this period, lyceums increasingly sought to provide popular entertainment as well as more traditional lectures and debates. While lecturers on social reform, woman's rights, transcendentalism, and similar topics by speakers such as Susan B. Anthony and Julia Ward Howe remained popular, these educational presentations were accompanied by singers,

minstrel shows, magic acts, animal shows, and early incarnations of vaudeville.

These new lyceums continued to grow in popularity. By the end of the nineteenth century, the nation's twelve lyceum booking agencies, or lyceum bureaus, booked more than 3,000 events each per year. In the twentieth century, however, the lyceum movement began to decline in popularity. As the services provided by the lyceum gradually came to be replaced by increased access to public education, entertainment halls, and emerging forms of popular entertainment such as radio and movies, public interest in the lyceum waned.

After the 1920s, the lyceum faded from existence. Its tradition was carried on by the Chautauqua movement, an adult education movement similar to the lyceum movement in structure and practice that was founded in the late nineteenth century and continues to maintain its original institution in Chautauqua, New York.

Macfadden, Bernarr (1868–1955)

The founder of a magazine-publishing empire in the early twentieth century, Bernarr Macfadden used his wealth, fame, and colorful public persona to promote healthy living. He became the self-described father of the "Physical Culture Movement," which entailed a philosophy and lifestyle regimen dedicated to maximum physical development through weight-resistance training, aerobic exercise, a healthful diet, and mental discipline.

He was born Bernard Adolphus McFadden in Mill Spring, Missouri, on August 16, 1868. A pale and sickly orphan, he passed through the homes of several distant family members, often working as a servant. As a teenager, he drifted through the Midwest, taking odd jobs to support himself.

In an effort to overcome his chronic poor health, he began to train with dumbbells and in gymnastics. In 1893, at the World's Fair in Chicago, he saw the sideshow strong man Sandow the Magnificent perform in front of hordes of spectators and resolved to devote his life to health and fitness.

Moving to New York City and changing his name to Bernarr Macfadden, he opened what he called a "physical culture studio" to train Manhattan businessmen in healthy living. He also embarked on a promotional campaign that established both his business and his flamboyant personal style. In 1899, he began publishing *Physical Culture*, a monthly magazine that proved highly popular and became the foundation of the Macfadden Publications empire.

Physical Culture was based on Macfadden's philosophy that a strong body leads to good health and moral character. Macfadden regarded the healthy human body, male or female, as an object to admire. In celebration of the human form, as well as to increase circulation, the magazine featured photographs of nude and seminude models. Although nudity frequently ran him afoul of censors, Macfadden considered his publication an important educational tool. By promoting knowledge of and respect for the human body, he believed, he would build a society more wholesome than one produced by repressed and prudish censors.

Macfadden also ran afoul of the medical profession. He believed that vigorous exercise, wholesome foods, moderate consumption, and abstinence from alcohol and tobacco marked the path to good health. Failure to live according to the philosophy of *Physical Culture* made people sick, and recovery depended on allowing the body to return to its natural equilibrium. Thus, Macfadden maintained, fasting provided the best cure for illness; it was a treatment he frequently prescribed for himself. He also believed that professional medicine did more harm than good, as doctors pumped patients full of drugs and unwholesome food that hindered natural healing.

Macfadden expanded his magazine venture by launching another monthly, *True Story*, in May 1919. Featuring the romantic confessions of amateur writers, it quickly gained mass circulation and spawned other titles, such as *True Romances*, *True Detective*, and *Photoplay*, a popular movie magazine. Macfadden Publications was a thriving, multimillion-dollar enterprise throughout the 1920s and 1930s. Macfadden also pursued newspaper publishing and politics, two endeavors in which he failed to repeat his earlier success.

After a series of failed business ventures, he finally lost control of his company in 1941. He died insolvent on October 12, 1955.

MAD

A humor and satire magazine aimed at teenage readers, *MAD* began in 1952 as the dime comic *Tales Calculated to Drive You Mad*. It was produced by publisher William M. Gaines and editor Harvey Kurtzman under the EC imprint, best known for its publication of horror comics.

Two factors prompted the shift from comic to magazine format. The first was Kurtzman's desire to move beyond comics to more prestigious formats, which ultimately led to his break with Gaines. The second was the creation of the Comics Code Authority (CCA) in 1955. The CCA was a response to Dr. Fredric Wertham's book *Seduction of the Innocent*, in which he alleged that violent horror comics were leading to a wave of juvenile delinquency. Critics charged that many of the CCA restrictions were deliberately aimed at driving EC and other comic-book companies out of business.

MAD magazine was launched as a comic book in 1952, shifting to a monthly magazine format two years later. Since then, it has cast a satiric eye on any and all aspects of American society. This cover dates to May 1954. (Hulton Archive/Getty Images)

In magazine form, *MAD* immediately moved outside the scope of the CCA and gained access to better distribution channels. Without the CCA constraints—which prohibited any form of disrespect for authority or images of sex,

violence, and monsters—*MAD* was free to satirize American society. Many well-known artists, including Jack Davis, Bill Elder, and Wally Wood, drew for *MAD*. They regularly mocked sentimental staples of American pop culture, such as the comic-book characters Superman and Archie, pointing up their phoniness. Because *MAD* did not take advertising and depended solely on sales revenue, it could satirize commercial culture without fear of financial loss.

MAD developed its own mascot, Alfred E. Neuman, a grinning, gap-toothed boy whose motto was “What, me worry?” His image had appeared on other sources, including medicine labels and signs for roadside diners, but *MAD* developed him into a full-fledged character with a name and regularly featured him in various guises on the cover.

The success of *MAD* led to the creation of a number of imitators, few of which lasted more than two or three issues. One of the longest-running was *Cracked*. Gaines is said to have owned a voodoo doll, into which he pushed a pin labeled with the name of each *MAD* imitator. He would pull each pin out when the magazine ceased to publish. When Gaines died in 1992, only the pin for *Cracked* remained.

By the 1990s, *MAD* was such a cultural icon that it became the subject of satirical reference itself, particularly on the Fox Network cartoon show *The Simpsons*. During the presidency of George W. Bush, a number of political cartoonists suggested a resemblance between the president and Neuman, implying that Bush shared Neuman’s lackadaisical attitude, even toward serious political issues.

Madison, Wisconsin

Covering 85 square miles (220 square kilometers), Madison is located about 120 miles (190 kilometers) northwest of Chicago in the south-central part of Wisconsin. The city is located on an isthmus surrounded by Lakes Mendota, Monona, Wingra, and Waubesa. Before European settlement in the early nineteenth century, the Ho-Chunk Indians lived in the area and called it Taychopera, or “land of the four lakes.” In 1836, the governor of Michigan and others had the city surveyed and named it in honor of President James Madison. It was finally chartered as a city in 1856, eight years after the establishment of the state of Wisconsin and is the state capital.

Since its early years, Madison has had countercultural leanings. Robert “Fighting Bob” La Follette, who served in Madison as the governor of Wisconsin from 1901 to 1906, passed a direct-primary law, tax reform legislation, social welfare policies, and other measures collectively referred to as the Wisconsin Idea. La Follette’s magazine, *The Progressive*, was founded in 1909 and is still published in Madison today. Committed to peace, social and economic justice, civil rights, civil liberties, human rights, a reinvigorated democracy, and preserving the

environment, the publication's bedrock values remain nonviolence and freedom of speech.

From 1940 to 1970, Madison's population increased by more than 150 percent due to the end of World War II and the GI Bill that brought soldiers to this college town. The Madison branch of the University of Wisconsin (UW) has a reputation as a service university that is a hotbed of liberalism, free speech, and free thought. During the hippie era of the 1960s, students became counterculture radicals, helped other Wisconsin radicals in demonstrations at the state capital, and created alternative forms of media. The Wisconsin Historical Society lists two dozen underground newspapers published in Madison between 1967 and 2001, including *Connections*, *Kaleidoscope*, *Radical America*, and the journal *Studies on the Left*, published by graduate students in UW's Department of History under the direction of Professor William Appleman Williams and others. In addition, the Marxist journal *Telos* features the writings of former Madison radicals, while the socialist weekly *In These Times* has editors trained at UW.

Madison residents, including UW students and faculty, have worked for local chapters of national civil rights groups and have initiated a large number of unique countercultural organizations. Among these are the UW Socialist Club, the Ad-Hoc Committee for Thinking, the Marxist Study Group, the Young Socialist Alliance, the Committee to End the War in Vietnam, the Labor Youth League, the Madison Area Peace Action Council, housing communes, the Wisconsin Draft Resistance Union, the Radical Education Project, and the Pail and Shovel Party. The last was a UW club that ran the student government during the 1970s and organized two pranks that remain part of local lore: setting a Styrofoam replica of the Statue of Liberty on frozen Lake Mendota and putting a flock of plastic pink flamingos in front of the statue of Abraham Lincoln.

The proliferation of countercultural organizations has corresponded with political activism. In 1964, for example, a local department store was desegregated in a "shop-in" that gained national attention. A year later, antiwar demonstrators presented a citizen's arrest warrant to Colonel Arrowsmith at Truax Air Force Base, and students organized an Anti-Military Ball the night before the annual Reserve Officers' Training Corps (ROTC) Dance.

In 1966, UW faculty conducted teach-ins on Vietnamese culture and history in which they encouraged students to protest against the local draft board. Students held sit-ins criticizing military recruiters and the Dow Chemical Company, manufacturer of napalm, an incendiary substance used in jungle warfare in Vietnam. Demonstrations against Dow in October 1967 became so fierce that the National Guard was called in. Hundreds of students were beaten and arrested. The Black Student Strike in February 1968 also prompted state authorities to call in the National Guard, escalating tensions.

In May 1970, students were shocked to hear that four white students had been killed by the National Guard at Kent State University in Ohio. For two weeks, thousands of students took to the streets of Madison. Small firebombings occurred at the home of the Air Force ROTC commandant, the Naval Training Center, the campus ROTC building, and a local supermarket. The violence peaked in August 1970 with the bombing of Sterling Hall, the site of the U.S. Army Mathematics Research Center. Two brothers from Madison were arrested for the killing of Robert Fassnacht, a research assistant who was working late in his office, that night.

In March 1971, rioting broke out during a Youth International Party (yippie) convention held in Madison. Fighting escalated between law enforcement authorities and students, as armored police wagons rushed to the scene. The events were captured in a classic documentary film on the Madison counterculture, *War at Home* (1979).

Among the prominent centers of the counterculture in Madison in the 1960s was the neighborhood around Mifflin Street, where students experimented with drugs, free love, and a variety of alternative cultural forms. They painted murals, opened shops, and created food cooperatives. The Mifflin Street Co-op, a symbol of resistance and a hub of counterculture activity, began a fund known as the Electric Teradactyl Transit Authority to provide bail to people arrested during the police riots. Paul Soglin, a twenty-seven-year-old law student, was elected alderman, quickly gained a reputation as an antiwar militant, and led his leftist constituents in demonstrations during the Mifflin riots of 1969. The police were aided by 1,800 National Guard who used nightsticks, tear gas, and low-flying helicopters to overpower the protestors. Soglin later became mayor of Madison, serving from 1973 to 1979 and from 1989 to

1997.

Today, Madison is home to more than 400,000 metropolitan-area residents. Those employed in and around the city are likely to work for the state, the University of Wisconsin, and companies that specialize in agriculture, research laboratories, meat, high technology, medicine, insurance, or forestry products. Yet if one looks off the beaten path, one will still find the counterculture movement alive and well in Madison.

Mafia

Since the mid-twentieth century, the Mafia, a criminal organization, has made the transition from the shadowy underground to being the subject of popular movies, television shows, and works of fiction. Today, Mafia leaders, such as the late New York crime boss John Gotti, have become celebrities as much as they are criminals. The American public has a love-hate relation with the Mafia, which remains both a countercultural organization and a prominent fixture of the popular culture.

Also known as *La Cosa Nostra* (Italian for “this thing of ours”), the Mafia is believed to have originated in Sicily during the Middle Ages as a patriotic movement to rid the island of foreign occupation. The loose-knit group’s strengths were its code of silence and strict rules of conduct, which prevented a member from betraying others. By the end of the nineteenth century, the Mafia was a powerful force in Sicily, despite efforts by the Italian government to eradicate it.

Mafiosi were among the Italian immigrants who came to the United States in the late 1800s. Most settled in large cities, including New York and New Orleans, where they continued their criminal activities, especially extortion schemes. Early criminal gangs were known by such nicknames as the “Black Hand.” Victims rarely, if ever, went to the police, fearing retaliation, even death.

Prohibition, from 1920 to 1933, provided the opportunity for criminal organizations to grow and enrich themselves. Although alcohol was outlawed, demand remained high. Successful organizations developed methods to import or produce alcohol and then distribute it to consumers, in many ways mirroring legitimate businesses. The large amounts of money that could be made from alcohol led to increased violence, deaths, and consolidation of the criminal organizations. The gangs expanded their involvement beyond the Italian community and into other criminal activities. The media reported the violence, but often in such a way as to glorify the gangsters.

In 1930 and 1931, two groups of Italian gangsters battled for control over New York’s criminal activities. On April 15, 1931, Giuseppe “Joe the Boss” Masseria, the head of one group, was murdered. Within six months, on September 10, 1931, Salvatore Maranzano, the leader of the other group, comprised largely of Sicilians fleeing Fascist persecution, was assassinated. The gangs came together, and, guided by Charles “Lucky” Luciano,

divided the United States into regions controlled by twenty-four families. These families established the modern Mafia.

The families were involved in a variety of illegal crime circuits, including the sale and distribution of narcotics, gambling and prostitution rings, and labor racketeering. Such illegal activities were combined with legitimate businesses, such as construction, under each family. A national ruling body, known as the Commission and composed of the heads of the families, was established to settle disagreements between families and to regulate joint activities.

The existence of an organized-crime group was denied by everyone involved. The first widespread mention of the term *Mafia* was during televised congressional hearings held by Senator Estes Kefauver in 1951, the first concerned with organized crime as a national problem. Six years later, the New York State Police broke up a high-level conference of Mafia leaders in the upstate town of Apalachin. The so-called Apalachin Conference proved the existence of a national crime organization and received widespread media coverage.

Many Mafia secrets were revealed in 1963, when Joseph Valachi became the first member to break the code of silence. In front of the Senate Permanent Investigations Subcommittee, Valachi revealed much of the Mafia's structure, secret rituals, and culture before a national television audience. Knowledge of the Mafia's existence entered mainstream American consciousness.

Americans gained further understanding of the Mafia after Mario Puzo published the best-selling novel *The Godfather* in 1969. It depicts the fictional Corleone family balancing the demands of family life with the business of crime. Millions were fascinated by the movie version, which appeared in 1972. Other novels and movies followed.

By the time John Gotti, head of the Gambino family, first went to trial, in 1987, on charges of racketeering, many Americans regarded him as a kind of folk hero. The media nicknamed him the "Dapper Don" and the "Teflon Don" for his impeccably neat appearance and his long-lasting ability to avoid having charges "stick."

America's love-hate relation with the Mafia has continued, as evidenced by the popular TV show *Growing Up Gotti* (2004), starring John Gotti's daughter Victoria and her three sons, and the hit series *The Sopranos* (1999–2007), about a New Jersey crime family whose domestic and personal crises mix with criminal ones.

Magazines, Little

Little magazines are periodicals that offer an alternative voice—typically in literature, the arts, and social theory—to mass-circulation popular magazines. Originating in the mid-nineteenth century, little magazines have differed from their commercial counterparts by providing a forum for lesser-known writers, out-of-the-mainstream literary trends, and radical political, social, and artistic theories. “Little” does not refer to the physical size of the publication but to the relative size of the readership. It also implies marginal profitability, reliance on private financial backing, and meager remuneration to contributors. The subscription base of such publications generally is small, the life expectancy short. Little magazines are concerned not with making money but with expressing new ideas and unconventional opinions not to be found in the popular publications of the day.

Predominantly a twentieth-century phenomenon, little magazines had prototypes in such earlier publications as the transcendentalist magazine of the 1840s, *The Dial*, edited by Margaret Fuller and Ralph Waldo Emerson, and Henry Clapp’s literary journal of New York in the 1860s, the *Saturday Press*, which featured works by such unknowns as Walt Whitman and Mark Twain. Indeed, little magazines have played a vital role in introducing alternative and new voices to American letters, as well as in inspiring literary and political movements that have challenged the status quo.

The Movement

The little magazine movement emerged in the second decade of the twentieth century with two small but enduringly influential publications, the Chicago-based monthly *Poetry* (1912–), founded and edited by Harriet Moore, and the modernist literary magazine *The Little Review* (1914–1929), also founded in Chicago. From the beginning, these and other little magazines promoted new writers and writing styles. *Poetry* featured T.S. Eliot’s first published poem, “The Love Song of J. Alfred Prufrock,” for example, and discovered other leading voices of contemporary American poetry. *The Little Review* debuted James Joyce’s novel *Ulysses* (in installments) in America.

Other notable writers who owed their first publications or early reputations to little magazines included Hart Crane, William Faulkner, Robert Frost, Ernest Hemingway, Edgar Lee Masters, Ezra Pound, Wallace Stevens, and Thornton Wilder. Hemingway published poetry and his first short story in *Double Dealer* in May 1922; the June issue of this publication included a story by Faulkner; and Jean Toomer and Thornton Wilder made appearances in the September issue.

In the decades that followed, little magazines were published in diverse geographical regions and subject areas, and they included a wide variety political and social ideologies and literary or artistic movements, such as vorticism, imagism, and surrealism. In addition to *Poetry* and *The Little Review*, notable literary magazines in the early part of the century included *The Fugitive* (1922–1925) and *Others* (1915–1919). Influential left-wing political magazines included *The Masses* (1911–1917), *New Masses* (1926–1948), and *The Anvil* (1933–1935). *The Midland* (1915–1933) was an example of a little magazine with a regional focus. Other significant little magazines during the 1920s include *Modern Review*, *Voices*, *Secession*, *Broom*, and *The Dial*, which had grown to 30,000 readers under the editorship of poet Marianne Moore.

Many little magazines sought to present high-quality writing without a catering to a particular group. For example, *Contempo* (1931–1934) was published in North Carolina by an editor who was a communist, but the content of the magazine was devoted to literature, featuring pieces by the likes of Sherwood Anderson, Langston Hughes, James Joyce, and Nathaniel West. Contributors were not paid for their writing, but they were given the opportunity to criticize themselves or respond to other critics in a feature called “Authorview.”

A little magazine often was the result of one editor’s vision; in other cases, individual issues reflected the tastes and interests of a particular editor. Some magazines were started by writers and artists themselves. T.S. Eliot launched *The Criterion* in 1922, which ran until 1939, and William Carlos Williams and Robert McAlmon established *Contact* in December 1920, which ran irregularly until July 1923.

Another magazine of this period associated with Williams and imagist poetry was *Others*, edited by Alfred Kreyborg, who also edited *Broom* from November 1921 to February 1922. Featuring experimental writing, *Broom* was founded and financed by Harold Loeb, and published at various times in Berlin, Rome, and New York.

Postwar Voices

Post–World War II America provided the milieu for a group of disaffected young writers and poets who came to be called the “Beat Generation”—a group that often shared its writings by means of notebooks and readings. In 1961, two such writers, LeRoi Jones (later Amiri Baraka) and Diane di Prima, began *The Floating Bear: A Newsletter*, a mimeographed publication that would become a paragon for other informal, underground literary magazines of the decade. *The Floating Bear* was an outlet for Beat poets, for representatives of groups such as the Black Mountain (College) poets, and for a number of completely independent writers. Published until 1969, *The Floating Bear* presented writers such as William S. Burroughs, Robert Creeley, Allen Ginsberg, Frank O’Hara, and Charles Olson, who explored alternative values, lifestyles, and literary forms, and political points of view that challenged the status quo.

Another influential post–World War II little magazine was *The Ark*, launched in 1947 and committed to political and literary works that promoted a subversive spirit, usually associated with anarchist and pacifist groups. Its pages included publications by Kenneth Rexroth, Paul Goodman, and Robert Duncan, whose 1944 essay “The Homosexual in Society” had made him “untouchable” by commercial presses and even significant literary journals such as *The Kenyon Review*.

Many writers who continued to challenge the status quo through the 1960s and the 1970s were associated with the San Francisco Renaissance that had begun in the mid-1950s, including writers such as Michael McClure, Gary Snyder, Jack Spicer, and Philip Whalen. In fact, Spicer continued to publish the work of other alternative writers until his death in 1975.

Another significant little magazine of the 1970s was *Big Sky*, which featured writers from Bolinas, California. *Big Sky* did not represent a particular school or a movement; its purpose was to present another outlet for alternative political and literary voices.

In the last two decades of the twentieth century, independent publishers and publications continued to thrive with subscription papers, such as *The Threepenny Review*. Desktop publishing and the World Wide Web created a new form that mirrored the informality of the mimeograph publishing phenomenon of the 1960s and 1970s for a new generation, enabling individuals and small groups to express their ideas, views, and commentary on popular culture. Zines became yet another new form of alternative publishing—in the tradition of little magazines as much as a century and half earlier—as technology opened vast new sources of information, opinion, and countercultural perspective.

Magic and Magicians

The history of magic and magicians in America includes two overlapping traditions: popular spiritual magic and professional stage magic in the entertainment industry. Both phenomena have capitalized on the popular desire for secret wisdom and mystery in an increasingly rational modern world.

Spiritual Magic

A system of rituals controlling the unseen, blind forces of the universe, spiritual magic has been practiced in virtually every culture in human history. Popular American magic, occultism, and spiritualism developed out of folk traditions brought by immigrants from every corner of the globe, some of which combined with existing Native American practices. *Santería*, voodoo, shamanism, occultism, and other traditional or organized mystical practices—not to mention superstitions and folk beliefs—have existed side by side with belief in God, church attendance, and public secularism.

Fortune-tellers, spiritualists, and healers preach that magical rituals, charms, and spells can focus a person's inner divine energy toward a certain task. Advertisements for lucky charms, amulets, books of secret wisdom, psychic readings, supernatural healing, and specially endowed objects and substances ranging from jade jewelry, lodestones, and wood carvings to incense, candles, and special oils or powders have appeared in American newspapers and magazines since the 1800s. The advice of psychics and various types of good-luck charms can still be obtained in shops, at amusement parks, at various fairs and festivals, or on the Internet, and astrological advice and daily fortunes can be found in newspaper horoscopes.

The sellers of magical objects have long authenticated their wares by billing themselves as mystics, seers, occultists, or metaphysicians with secret wisdom available only to the chosen few. Magical products and their purveyors often are associated with Gypsies, Southern African American cultures, or those of ancient Arabia, China, Egypt, or India. Exotic personae, often women, became commonplace promoters, invoking traditions and cultures that predate modern science.

Many entrepreneurs of magic have been commercial opportunists who knew their claims to be fraudulent. However, many fortune-tellers and charm vendors have been believers who regard personal financial gain as incidental evidence of their own magical powers.

Stage Magic

In the 1840s, the acknowledged father of modern magic, Frenchman Jean-Eugène Robert-Houdin, established the art of stage magic as a scientific form through which to destroy superstition and credulity by instructing audiences to be more critical. Since the late nineteenth century, the mostly male club of professional stage magicians has been spiritual magic's sharpest critic. At the turn of the twentieth century, there were about 2,000 professional stage magicians working in the United States and an estimated 10,000 amateurs. Most native-born magicians were young men who started out in their late teens or early twenties doing coin and card tricks at the local opera house or in vaudeville, and later moved up to circuses, the home-parlor circuit of the well-to-do, amusement parks, world's fairs, and their own theater shows.

Between 1890 and 1940, magician-entertainers such as Harry Houdini (a Hungarian immigrant, Ehrich Weiss derived his stage from that of the French founder of modern magic), Hermann the Magnificent (Compars or Carl Hermann, another European-born magician who came to America), and the Great Kellar (Pennsylvania-born Heinrich or Harry Kellar, founder of the "Royal Dynasty of American Magicians") built lifelong careers by devising

truly original illusions, the secrets to which they guarded jealously. Meanwhile, a small but talented group of non-white foreign-born magicians, such as the famous Ching Ling Foo, and nonwhite American-born performers traveled the United States performing as Chinese, Persian, “Hindoo,” or Egyptian magicians. Some Caucasian American magicians also adopted exotic stage personae, making it difficult to determine in retrospect how many performers were foreign and how many were native born.

Props such as turbans, capes, magic wands, smoking cauldrons, and brass lamps with mist drifting skyward accompanied the exotic characters. Posters and other promotional materials were embellished with astrological symbols and other mysterious images to inject the same sense of the occult as that invoked by fortune-tellers and crystal-ball vendors.

Stage magicians’ tricks could include simple coin and card standards, disappearances, the production of small animals from thin air, levitation, and “sawing a woman in half,” as well as thousands of other original creations. During the golden age of professional stage magic in vaudeville, magicians’ trade journals such as *The Sphinx*, *Magic Wand*, and *Mahatma*, as well as dozens of how-to manuals, made the mechanics of modern magical illusions an open secret within the industry and to any attentive fan.

Modern Magic

By the mid-twentieth century, fewer American magicians survived as professional entertainers, though the ones who did tended to put on extravagant stage shows in resort hotels and other large venues. In the 1970s, Doug Henning revived magic for mainstream America, developing the live theatrical show, *Spellbound*, for Broadway and *Doug Henning’s World of Magic* for television. Also beginning in the 1970s, the internationally famous stage magician and illusionist David Copperfield performed in major arenas, outdoors, and on special television broadcasts.

Stage magicians traditionally have asserted that they perform entertaining illusions only, and that their stage names, costumes, accoutrements, and claims of secret powers are not to be taken entirely seriously. They have invited audiences to consider how the tricks are done and to learn to avoid being fooled in the future. When modern magicians look at the perceived miracles and psychic powers of exotic fortune-tellers and other mystical advisers, they see the same tricks and illusions that they have performed on the vaudeville, or, more recently, Las Vegas, stages every night.

Magicians from Harry Houdini in the early twentieth century to Penn and Teller and James Randi today have made second careers out of exposing the methods of spiritual magicians and faith healers who make spiritual truth claims to explain their work. Believers in spiritual magic respond that these attacks are a way for stage magicians—who are unable to comprehend true spiritual power—to gain notoriety and promote their own performances.

Malcolm X (1925–1965)

A charismatic Black Muslim leader, community organizer, public speaker, and advocate of black nationalism, Malcolm X foreshadowed the transition from the civil rights movement of the late 1950s and early 1960s to the Black Power movement of the later 1960s. His intellectual legacies include criticism of nonviolence, a distinctive African American theology, and internationalizing the African American freedom struggle by fomenting political and cultural interest in Africa, Asia, and Islam. Framing revolutionary upheaval in terms of race and class conflict, the fight for land, identification of a new political force, and the street youth and the prison population as central to liberation movements, he made redemption and personal discipline an attribute of the counterculture. Above all, he was a great educator. His lack of formal education gave him the gift of allowing his grassroots constituency to see the essence of intellectual endeavor without the mediation of formal academic institutions and processes or the mystifications of media and government, as well as to see it as the pursuit of self-knowledge and social practice.

Black Muslim minister Malcolm X broke from the Nation of Islam and advocated a radical brand of political and economic nationalism. He converted to orthodox Islam in 1964 and was assassinated in February of the following year. (Library of Congress)

Born on May 19, 1925, in Omaha, Nebraska, as Malcolm Little to parents who were members of the Marcus Garvey black nationalist movement of the early twentieth century, he had a tragic childhood. His father, Earl, was assassinated for his activism. His mother, Louise, under the pressure of raising her large family in poverty, became mentally ill. Malcolm became separated from his family for a time as a ward of the state in Michigan, and

he received an inadequate education.

After working as a Pullman porter, he became a pimp, drug dealer, and petty criminal in Boston and New York City. He later reflected on his youth as a time of both self-hatred and ingenuity, marked by some joy as he pursued the fashions of popular culture—jazz, the zoot suit, and the Lindy Hop.

Malcolm had his awakening in prison. Serving a sentence from 1946 to 1952 on burglary charges, he read extensively and discovered the teachings of Black Muslim leader Elijah Muhammad. Upon his release from prison, he joined the Nation of Islam (NOI) and changed his name to Malcolm X. (As it was for other Black Muslims, the X was a rejection of a name imposed under slavery and signified the absence of an inherited African name.)

What made the NOI unique and controversial was its racial separatism and opposition to social integration and equality, an ideology that contradicted the main planks of the civil rights movement. The NOI believed in black economic autonomy from, and cultural superiority to, whites. Malcolm X came to personify this small but growing organization.

Through itinerant preaching and editing the newspaper *Muhammad Speaks*, known for its international perspective, Malcolm proved instrumental in building a movement by helping thousands of African Americans reclaim their lives from drugs, alcohol abuse, and crime, and in fostering their sense of personal dignity and cultural pride. His most famous recruit was heavyweight boxing champion Cassius Clay, who joined the NOI in 1964 and changed his name to Muhammad Ali.

CBS-TV introduced the NOI to mainstream America in a 1959 documentary as “the hate that hate produced.” The characterization was ironic, for despite the backgrounds of some of its membership and its rhetoric, the group was largely distinguished by a public reputation of asceticism and mild manners. Still, divisions would arise between Malcolm X and the Nation, as Elijah Muhammad became personally wealthy and fathered several children outside his marriage, and as the civil rights movement began to accelerate and be subjected to increasing brutality.

Malcolm X was critical of the August 1963 March on Washington for Jobs and Freedom led by the Reverend Martin Luther King, Jr. He called it “the farce on Washington” for its elite sponsorship and acceptance by the government. In November of that year, he declared the assassination of President John F. Kennedy a case of “chickens coming home to roost.” The hatred and violence that white society had directed at blacks, he contended, had escalated to the point of the murder of the president. Malcolm X advocated a direct-action movement against police brutality and the violence of the white supremacist fraternal organization the Ku Klux Klan.

In March 1964, Malcolm X permanently broke ties with the NOI after his criticism of organization leadership. After returning from a pilgrimage to Mecca and a tour of Africa in April and May of that year, he announced that he had become an orthodox Sunni Muslim and he founded the rival Muslim Mosque, Inc. and the Organization of Afro-American Unity (OAAU).

The final year of Malcolm’s life was remarkable for his evolving views. His visits to African nations and Mecca clarified to him a politics and fellowship beyond the color line even as he continued to oppose white supremacy. He became a more ecumenical public figure, minimizing religious differences and fostering a secular revolutionary Pan-Africanism, which as both an ideology and a movement strove to unify all blacks as part of a global African community. Still defending the need for autonomous black political and cultural organizations, he rejected racial separatism as an ultimate goal, promoting coalition with people of color of all nationalities and sincere whites. His fledgling group, the short-lived OAAU, strove to place women in positions of equality and leadership, and through its public forums was an important predecessor of the black studies movement.

The public war of words between Malcolm X and Elijah Muhammad led to threats against Malcolm X’s life and finally to his assassination, with the apparent support of the FBI. He was shot and killed while giving a speech in New York City on February 21, 1965.

Manson Family

The dark side of the often romanticized Flower Power era of the late 1960s was arguably best exemplified by the California death cult led by career criminal Charles Manson, whose followers collectively referred to themselves as “the Family.” The group consisted of people, most female and most in their late teens and early twenties, whose alienation from their parents, from traditional religion, and from “straight” society in general rendered them vulnerable to exploitation by an opportunistic and (at first) benign-looking guru known as “Charlie” Manson. In the summer of 1969, Manson inspired his followers to embark on a horrendous murder spree.

Family Roots

Beginning shortly after Manson’s release from prison in March 1967—at age thirty-three, he had been incarcerated for more than half his life for crimes ranging from car theft to forgery to pimping to robbery—the Family began to form in the San Francisco Bay Area. The group was drawn together over the course of several months and was held together by Manson’s personal charisma and his peculiar talent for interpersonal domination. Manson and his eight or nine followers adopted an itinerant existence, using an old school bus to float between temporary communes located mainly in the San Francisco and Los Angeles areas.

The Family, which included Manson’s girlfriend, Mary Theresa Brunner, and their infant son, Valentine Michael Manson, subsisted largely on odd jobs, the largesse of friends, petty crime, drugs, and religious fervor. Retention in the Family required the adoption of Manson’s eclectic mix of metaphysical and theological teachings, including a belief in reincarnation, the worship of both God and Satan, participation in or promotion of Manson’s ever-expanding harem, and the belief that “Charlie,” as he was known to Family members, was the living incarnation of Jesus Christ.

Manson and his followers—among them future murderers Susan (“Sadie Mae Glutz”) Atkins, Robert (“Cupid”) Beausoleil, Brunner, Bruce McGregor Davis, Steve (“Clem”) Grogan, Patricia Krenwinkel, Leslie (“LuLu”) Van Houten, and Charles (“Tex”) Watson—methodically took advantage of the disaffected children of the affluent and absorbed adult “truth seekers” into their ranks. The former Methodist minister Dean Moorehouse, father of Ruth Ann “Ouisch” Moorehouse, a young Manson acolyte whom the elder Moorehouse had initially sought to free from Manson’s clutches, eventually joined the Family himself.

Manson had achieved a degree of proficiency as a singer, guitarist, and songwriter while in prison. After his 1967 release, he participated in a number of professional recording sessions and received serious consideration as a potential recording artist by producer Terry Melcher.

Manson began to draw new converts and patrons from the entertainment industry. The most prominent of these celebrity contacts was Dennis Wilson, drummer and singer for the Beach Boys, who allowed the Family the run of his Los Angeles mansion through much of 1968 and sustained losses of upward of \$100,000 as a consequence of Manson’s extended stay.

Cult Mentality

Like the charismatic leaders of many religious cults, Manson achieved an extraordinary degree of control over the lives and attitudes of his followers. He accomplished this largely through a regime of repetitive preaching and the application of fear and intimidation, reinforced by the use of psychoactive drugs, especially marijuana and LSD.

As the 1967 Summer of Love and its message of peace and love receded into history, Manson’s control over his flock intensified. His associations with a network of Los Angeles–area criminals, including several outlaw motorcycle gangs, turned his thoughts increasingly toward violence in 1968 and 1969. The mood of the Family darkened correspondingly.

Ex-convict Charles Manson controlled the members of his California “family,” a small group of followers, by means of drugs, fear, and cult teachings. Manson and his family were convicted of a gruesome multiple murder committed in August 1969. (Sahm Doherty/Time & Life Pictures/Getty Images)

According to witnesses, Manson seemed to get an ever-increasing charge out of violence and death after ordering

the killing of Gary Hinman, a Los Angeles music teacher and drug dealer, in late July 1969. Murder witness Paul Watkins would later testify, "Death is Charlie's trip."

Manson came to believe in the inevitability of an all-out race war. After the conflict, he maintained that blacks would take over whatever remained of the world but would require the assistance of Charlie and the Family in order to rule successfully. Manson justified his apocalyptic vision based on his interpretation of the Book of Revelation and the lyrics of the Beatles. He eventually decided to ignite the race war himself by committing acts of violence calculated to provoke the nation's white-dominated power structure to respond in a way that would rouse blacks to all-out war.

Manson's control over the emotional lives of his followers made the Family a veritable extension of his growing preoccupation with quasi-eschatological violence. That obsession culminated on August 9, 1969, in the brutal knife-slayings of actress Sharon Tate (the wife of film director Roman Polanski), coffee heiress Abigail Folger and her boyfriend Wojciech (Voytek) Frykowski, internationally known hairstylist Jay Sebring, and teenage visitor Steve Parent. This was followed the next night by the killings of wealthy grocery-store magnates Leno and Rosemary LaBianca.

In the initial incident, Manson ordered Family members Watkins, Atkins, Krenwinkel, and Linda Kasabian to break in to the Tate-Polanski home near Bel Air, California, and kill whoever was inside. In the case of the LaBianca murders, Manson himself joined five other members in carrying out the brutal attacks. In furtherance of Manson's bizarre vision of a race war, Family members used their victims' blood to scrawl slogans on walls, doors, and appliances, such as "Rise," "Death to Pigs," and "Healter Skelter" [*sic*], all derived from the Beatles's 1968 release popularly known as *The White Album*.

Murder Trial, Imprisonment, and Beyond

Manson and the Family members who participated in the slayings were apprehended over the course of the next several months and put on trial in Los Angeles in June 1970. The proceedings became notorious for the noisy theatrics of the defendants—including chanting, shouting, the carving of swastikas into their foreheads, and even an attempt by Manson to rush the judge's bench—which resulted in their removal from the courtroom to watch the proceedings on closed-circuit television.

Found guilty of murder and conspiracy in January 1971, Manson and several Family members were sentenced to death at the end of the trial's penalty phase in April. Their sentences were reduced to life imprisonment after the California Supreme Court abolished the death penalty in 1972.

Although Manson has remained in custody continuously since late 1969, almost certain never to qualify for parole, the Family survived the conviction and confinement of him and other members. Manson acolytes not implicated in the murders maintained a vigil outside the courthouse during the legal proceedings in 1970 and 1971, and they continued to engage in further crimes in Manson's name.

Family members killed Manson's court-appointed defense lawyer, Ronald Hughes, during the trial because of Manson's wish to represent himself. On September 5, 1975, Manson lieutenant Lynette "Squeaky" Fromme made a failed attempt to assassinate President Gerald R. Ford, for which she, too, was arrested, tried, and sentenced to life in prison. Though much diminished, remnants of the Family survive to the present day.

In the annals of violent crime in America, the murder spree of Charles Manson's Family stands out as particularly shocking, not merely for its heinousness but also because of the way the group's cult mentality and ideology of hatred grew and festered amid the hippie idealism of the late 1960s. Manson himself, denied parole eleven times as of mid-2007, continues to receive thousands of pieces of fan mail annually, mostly from alienated young people seeking permission to join the Family.

Mapplethorpe, Robert (1946–1989)

The controversial fine art photographer Robert Mapplethorpe produced elegant floral still lifes, sensual male and female nudes, and celebrity portraits, but he is most known for his homoerotic and sexually charged work and its role in the federal arts-funding controversies of the late 1980s. A 1989 retrospective exhibition of his work, titled "The Perfect Moment," toured seven major U.S. cities, receiving only moderate attention at some venues but enormous amounts at others. By its conclusion, the exhibition had suffered a cancellation in Washington, D.C., had resulted in the criminal prosecution of a museum director in Cincinnati, and had aided Senator Jesse Helms (R-NC) in his drive to slash funding for the National Endowment for the Arts (NEA), an independent federal agency supporting artists and arts organizations.

Born in New York City on November 4, 1946, Mapplethorpe attended the Pratt Institute in Brooklyn from 1963 to 1970. He began his career as a filmmaker and sculptor. He began pursuing photography in the mid-1970s and began gaining attention for his large-scale black-and-white portraits and compositions.

Many of Mapplethorpe's photographs of the 1970s and early 1980s make reference to the gay lifestyle, of which he was an active participant. His subjects range from sensually isolated body parts to amorous same-sex embraces. More controversial, however, were his obvious references to homoerotic sadomasochism. Leather-clad men with whips and chains, and naked men in positions of bondage, confronted viewers with a disconcerting mixture of eroticism and violence.

Mapplethorpe also provoked criticism for his mixing of black and white models and his depictions of black men. "Thomas and Dovanna" (1987), in which a naked black man dances with a clothed white woman, alternately legitimated interracial relations or confirmed white-racist fears of miscegenation. While some critics praised Mapplethorpe's repeated treatment of the black male nude as a subversion of racial hierarchy, others saw his practice as objectifying and exploitative. "Man in a Polyester Suit" (1980), a cropped image of a black man in a three-piece suit with his large penis exposed, was criticized for reinforcing racial stereotypes.

Mapplethorpe's photographs of children provoked nearly as much controversy as his references to sadomasochism. Two photographs, "Honey" (1976) and "Jesse McBride" (1976), depict young children with their genitals exposed. Both photographs were quickly labeled as child pornography, which was another dimension to the controversy over his work.

As "The Perfect Moment" toured the country in 1989 and 1990, public and critical reactions varied widely. The exhibition went largely unremarked in Chicago and Philadelphia but caused a firestorm when it reached the

nation's capital. Days before the show was to open in Washington, Director Christina Orr-Cahall announced that the Corcoran Gallery was withdrawing as a host venue. Rather than calming the already heated political climate, the cancellation fanned the flames, alienating the art world while apparently affirming the views of conservative politicians and other critics.

Mapplethorpe's supporters actively protested the decision, while Senator Helms worked tirelessly to restrict the actions of the NEA. Helms eventually secured a ban on federal funding for any work of art that could be considered obscene. This legislation proved pivotal when the Mapplethorpe exhibition was shut down at the Cincinnati Contemporary Art Center and Director Dennis Barrie was prosecuted, though later acquitted, for "pandering obscenity." Barrie's acquittal by a Cincinnati jury in 1990 and its ruling of Mapplethorpe's work as valid have provided a legal cornerstone for photographers whose work has been labeled obscene.

Throughout his career, Mapplethorpe explored his own subjectivity through a series of self-portraits. He included himself in his depictions of sadomasochistic behavior and in more elegant portraits of his naked body. In the late 1980s, as he was battling the disease AIDS, Mapplethorpe produced haunting self-portraits documenting his increasingly gaunt appearance. He died on March 9, 1989, at the age of 42, only months before the political uproar that attended his retrospective developed.

Marcuse, Herbert (1898–1979)

The German-born social philosopher Herbert Marcuse was perhaps the most influential theorist for the American New Left, the counterculture movement associated with the liberal, sometimes radical, political protest that took place on college campuses across America in the 1960s and 1970s. His theories of "one-dimensional man," criticizing the industrialization and bureaucratization of modern society (capitalist and communist alike), and of the "great refusal," advocating the popular rejection of a repressive social order without waiting for violent revolution, earned him a large following among campus radicals of the time.

Marcuse was born on July 19, 1898, to Jewish parents in Berlin, Germany. He was drafted for military service in 1916 but, due to poor eyesight, remained on the home front during World War I and was discharged in the winter of 1918. It was during the Great War and the German Revolution of 1918 that Marcuse first became interested in Marxist politics.

When the war was over, Marcuse entered Humboldt University in Berlin and later studied literature, philosophy, and political economy at the University of Freiburg, completing his doctoral dissertation in 1922. He returned to Freiburg in 1929 to work on his habilitation (post-doctorate dissertation) under the philosopher Martin Heidegger, but his studies were interrupted in 1932 by the rise to power of the openly anti-Semitic Nazi Party. He applied to work for the Institute for Social Research, also known as the Frankfurt school.

Marcuse joined the Institute for Social Research's branch office in Geneva, which director Max Horkheimer had presciently set up in anticipation of Nazi repression. Marcuse would later follow the institute as it moved to Paris and, ultimately, New York. Because of his strong ties to the institute and its members, Marcuse began to distance himself from his early intellectual interests in ontology and the development of a phenomenological Marxism. He began instead to devote himself to the institute's broader project of developing a critical social theory capable of grasping society as a whole.

Marcuse became a U.S. citizen in 1940. He worked for the Office of Strategic Services (OSS, a precursor to the Central Intelligence Agency) from World War II until 1951. At the OSS, he joined a group of left-wing academics and intellectuals who worked on research related to social and cultural aspects of Nazi ideology and on plans for dealing with Germany after the war. In 1952, he began what would be a highly successful teaching career at American universities, including Columbia, Harvard, Brandeis, and the University of California, San Diego.

It was his criticism of capitalism and capitalist society, particularly in the books *Eros and Civilization* (1955) and *One-Dimensional Man* (1964), that had the most powerful influence on the New Left and antiwar movements; the latter became a best seller among left-wing university students. According to scholar Douglas Kellner, Marcuse's view that modern, consumption-oriented, capitalist man "has lost, or is losing, individuality, freedom and the ability to dissent and to control one's own destiny [to a] society which shapes aspirations, hopes, fears and values, even manipulating vital needs" struck a chord with the American counterculture of the 1960s.

Thus, it was Marcuse's ability to capture the disenchantment with society felt by so many people in the 1960s and 1970s that led so many students to flock to his lectures and read his books. He died on July 29, 1979.

Marijuana

“Smoking pot makes you a criminal and a revolutionary. As soon as you take your first puff, you are an enemy of society,” proclaimed 1960s counterculture leader Jerry Rubin. Illegal in the United States since 1937, marijuana was a symbol of antiestablishment rebellion throughout most of the twentieth century.

The marijuana plant, or *Cannabis sativa*, grows in temperate and tropical climate zones. It has hairy, finely serrated leaves, small flowers, and seeds that emit a sticky resin containing the mind-altering chemical tetrahydrocannabinol (THC). When the dried foliage or seeds are smoked, or consumed in a food or beverage, the user feels a sense of euphoria accompanied by intensified physical sensations, a greater awareness of audio and visual stimuli, and, often, uncontrollable giggles. Marijuana, known by hundreds of slang terms—including *pot*, *grass*, *hash*, *Mary Jane*, *weed*, *herb*, *dope*, *reefer*, and *ganja*—is the most commonly used illegal drug in America, in spite of the fact that users, dealers, and growers chance prison terms for possession of it.

Since the 1920s, associations between marijuana, countercultural music genres, and fringe lifestyles have caused mainstream America to view the drug, and its users, as subversive to traditional values. During Prohibition (1920–1933), men and women gathered in speakeasies (nightclubs that served illegal liquor) to drink, dance, listen to jazz, and smoke. Jazz songs such as Bessie Smith’s “Gimme a Reefer” (1933) and Fats Waller’s “Viper’s Drag” (1929) reflected the popularity of marijuana among musicians, who often “lit up” and “got high” on hand-rolled “joints,” or cigarettes, between sets. “Tea pads,” similar to opium dens, where customers could relax and smoke marijuana in relative comfort, were established in cities such as San Francisco and New York.

Marijuana use was so widespread by the 1930s that moral crusaders, public health reformers, and the Federal Bureau of Narcotics engaged in antipot campaigns that characterized marijuana as a threatening substance in public health announcements and movies such as *Reefer Madness* (1936), which warned that marijuana use could lead to rape, suicide, and manslaughter. Yet, marijuana’s popularity continued to grow during the post–World War II era.

The drug’s illegal status only seemed to increase its appeal to disaffected youth who reveled in dissident behavior directly challenging mainstream conformity. Allen Ginsberg’s highly controversial *Howl and Other Poems* (1956) and Jack Kerouac’s *On the Road* (1957) flaunted excessive marijuana use, while defining the 1950s Beat culture as well as the hippie movement of the 1960s and 1970s. Marijuana featured prominently in the anti–Vietnam War protests, the Free Speech Movement, counterculture “be-ins,” and rock music of the 1960s.

A staple of the 1960s counterculture, marijuana was declared a Schedule I drug—one that has a high risk of abuse—under the Controlled Substances Act of 1970. Since then, a number of jurisdictions have decriminalized marijuana, even for nonmedical use. (Co Rentmeester/Stringer/Time & Life Pictures/Getty Images)

The euphoria and sense of community experienced by users created a daring culture of unity-in-rebellion. Popular music groups such as the Grateful Dead, the Rolling Stones, the Beatles, and many others acknowledged using the drug and wrote songs under its influence. Implements for smoking marijuana such as pipes, bongs (water pipes), and roach clips (to hold the butt of a joint) entered the American vernacular. Some paraphernalia also became fashion accessories—for instance, roach clips disguised as decorative hair clips, jewelry, and key chains.

In spite of its illegal status, recreational marijuana use in America has continued to increase. More recently, its medical use as an antiemetic—to help combat nausea and vomiting caused by chemotherapy and other cancer treatments—has been the source of sometimes rancorous public policy debate. While at least a dozen states have passed legislation allowing doctors' prescriptions for cannabis, the federal government does not recognize legitimate medical use. Possession and distribution of marijuana thus remain illegal. Large protest demonstrations have been held in several of the states where medical cannabis statutes have been overruled and access to the drug effectively blocked.

Masses, The

The Masses was a wide-ranging journal of socialist politics and culture published from 1911 to 1917 under the leadership of two successive editors. It was established by the Dutch-born socialist Piet Vlag in 1911, with the financial backing of a wealthy, progressive executive. In its original incarnation, the journal was not dissimilar from other Socialist Party publications in form and content.

Despite attracting prominent writers and artists—including journalists Walter Lippmann and Mary Heaton Vorse, illustrator Art Young, and the Russian novelist and moral philosopher Leo Tolstoy—the publication was underfunded and could not find a place among the left-wing press. It failed in August 1912. By December of the same year, however, a group of writers and artists had decided to try to revive the journal, this time without any financial support, and they invited activist and writer Max Eastman to serve as editor.

For five years, Eastman's *The Masses* provided one of the premier venues in America for left-wing writing and progressive arguments (often independent and critical of Socialist Party doctrines), not solely on topics considered strictly political, but also on sexual freedom, birth control, artistic practice, and free expression. In many ways, it was as much a magazine of arts and culture as of politics.

Within months of taking on the originally unsalaried position, Eastman had conceived a new graphic design and layout for the publication, which, according to historian Christine Stansell, Eastman believed served as the inspiration for *The New Yorker*. *The Masses* introduced cleaner lines, wider margins, modern type, and illustrations and political cartoons of unparalleled quality. The journal's art editor, John Sloan, aided Eastman in attracting illustrators and cartoonists such as Robert Henri, Mary Ellen Sigsbee, Rockwell Kent, Art Young, George Bellows, Glenn Coleman, Boardman Robinson, and Maurice Becker.

Changes to the magazine came not only in its design, but also in the writing talent Eastman was able to attract. In poetry and fiction, Eastman published William Carlos Williams, Amy Lowell, Louis Untermeyer, Sherwood Anderson, and Carl Sandburg; in articles and reporting, he attracted Randolph Bourne, Louise Bryant, Mabel Luhan Dodge, Floyd Dell, Upton Sinclair, Helen Keller, Crystal Eastman, William Walling, and John Reed.

While *The Masses* could never be described as a financial success, Eastman's charm and rhetorical skills allowed him to raise funds from wealthy radicals, from which he could draw a salary and pay magazine expenses. Under his tenure from 1912 to 1917, the magazine circulation increased fourfold in as many years, growing from fewer

than 10,000 (mostly Socialist Party sympathizers) to more than 40,000 readers of varied backgrounds.

The magazine ran into trouble with governmental authorities several times for its leftist editorial positions. Finally, in 1917, when Eastman was strongly pressing an anti–World War I position, the federal government utilized the recently passed Espionage Act (which made it illegal to disclose information regarding national defense or interfere with the operation or success of the war effort) to revoke the serial's mailing rights and placed several editorial staff members on trial.

With their distribution system severely hampered, *The Masses* ceased publication in December 1917. The journal's legacy has been considerable, not only due to its content, but also because it served as an inspiring example for other publications—including *The Liberator* and the *New Masses*—that would capture the force of social movements in print.

Mattachine Society

The first gay rights and homophile consciousness-raising group in America, the Mattachine Foundation was established in Los Angeles on November 11, 1950, by former Communist Party organizer Harry Hay and a small group of gay friends. The organization was founded as part of a broader vision of generating pride, meaning, and identity for gay males in America and the cultivation of a “homosexual ethic.” The group, which became known as the Mattachine Society in 1953, took its name from Les Mattachines, a secret society of medieval French folk dancers who performed a ritual that entailed the intertwining of swords by dancers who blurred gender roles. The dance troupe, made up of unmarried men who performed only in masks, traveled from town to town, often to protest social injustice against peasants.

Hay was a central figure in the formation of the larger homophile movement as well as the Mattachine Society in particular. A proponent of Marxist ideology, he understood and promoted homosexuality as a unified culture, with its own language and traits, that had been oppressed throughout history. Among other associations, Hay's invocation of the name Mattachine reflected the importance of homosexuals to society in the period before industrialization. That legacy, he felt, was appropriate to the formation of an organization based on cultural, rather than modern legal or medical, identity. Such a position advanced the new, homophile concept that gay men constitute a cultural minority akin to African Americans, Asian Americans, and Latinos rather than a secret,

degenerate subculture.

Hay's association with the Communist Party, as well as this somewhat revolutionary stance on homosexuality, drew the ire of the federal government. From the early 1950s, the Federal Bureau of Investigation and its Counter Intelligence Program, COINTELPRO, began conducting surveillance of the Mattachine group.

In 1953, the organization faced a crisis regarding its relationship to Hay's cultural thesis and its political leanings, leading to a shake-up of Mattachine's leadership. The result was a general restructuring of the organization along more conservative lines, emphasizing societal accommodation rather than cultural change, and the adoption of the name Mattachine Society.

Perhaps foreshadowing these changes, a number of Mattachine members had left the original group in 1952 to form ONE, whose chief purpose was to create education programs on gay issues through the publication of *ONE* magazine. In 1955, the renamed parent society began publishing the *Mattachine Review*.

While these ideological splits may have weakened the cohesiveness of the organization, Mattachine's importance to the overall gay rights movement cannot be overstated. Unaffiliated Mattachine Societies were formed across the United States—most notably in New York and San Francisco—and the various entities became part of the larger counterculture struggle against oppression, including the civil rights movement, the anti-Vietnam War movement, and the women's rights movement.

As some groups took a more radical approach to gay rights, more conservative members advocated assimilation into mainstream society. That schism, combined with financial difficulties, led to the final demise of the organization in the mid-1980s.

Max, Peter (1937–)

The work and career of American pop artist Peter Max has passed through divergent phases since he burst onto the New York art scene in the 1960s—from psychedelic poster graphics and colorful silk screens of the hippie

counterculture to mainstream commercial advertising and corporate design. His cosmic-art images have appeared on the covers of national magazines such as *Time* and *Life*. He has produced several high-profile art projects, including *Peter Max Paints America*, an installation and book of paintings for every state in the Union to commemorate America's bicentennial in 1976. And he has designed the livery (the corporate design and paint scheme) for a Continental Airlines Boeing 777 aircraft.

The colorful, kaleidoscopic designs of artist Peter Max—posters, silk screens, murals, books, album covers, and consumer products—became the signature graphic style of the 1960s “love generation.” (Henry Groskinsky/Stringer/Time & Life Pictures/Getty Images)

Born Peter Finkelstein in Berlin, Germany, on October 19, 1937, he was raised in Shanghai, China, where he lived in a pagoda-style house surrounded by a Buddhist monastery and a Sikh temple. His family moved to New York City in 1953, where he studied at the Art Students League, the Pratt Institute, and the School of Visual Arts.

He attained celebrity status nearly overnight in the late 1960s with his boldly colored silk screen posters. By the end of the decade, he was running a large-scale workshop, printing thousands of posters with innovative methods. Max's posters helped define the artistic style of the 1960s counterculture. His graphics, in the eyes of many, approximated the psychedelic-drug experience and were embraced by hippies and the rock and roll culture. Beginning with bold colors and a strong linearity, he experimented with swirling color patterns and neon black-lighting for visually stunning effects. Some of his posters featured kaleidoscopic imagery, while others incorporated the patterns and symmetries of tie-dye. Many made direct reference to the symbols and icons of the counterculture, featuring peace signs or rock and roll performers such as the Beatles.

In 1967, Max produced a poster featuring the words “Be” and “In” that inspired hundreds of thousands of New Yorkers to gather in Central Park at an event that became known, in part because of Max's publicity, as the “Be-In.” Milos Forman commemorated the scene in his 1979 film, *Hair*, an epic celebration of 1960s counterculture.

Max turned to another aspect of the counterculture when he embraced the trend of Eastern spirituality. He described a 1966 meeting in Paris, with yoga master Sri Swami Satchidananda as “life-changing” and became a devoted student. Max then invited the swami to New York City and became instrumental in introducing yoga to the United States. Together, they founded the Integral Yoga Institute and opened dozens of yoga centers around the country. Yoga, which Max describes as a way to find inner peace and to “love all and serve all,” coincided with the

peaceful idealism espoused by hippies.

In the early 1970s, Max retreated from public life, closing down his workshop to focus on painting and his family. He returned to the public eye intermittently, however, taking on occasional, high-profile commissions from organizations as diverse as the United States Postal Service (including the first environmental postage stamp in 1974) and the animal rights organization People for the Ethical Treatment of Animals (PETA). He also spearheaded the 1981 campaign to restore the Statue of Liberty, an icon he has painted countless times.

While Max's early work was closely associated with the social counterculture, his visually compelling designs always had a mass-market appeal. During the 1960s, the General Electric Corporation asked Max to design a line of clocks. By the end of that decade, his drawings adorned scores of commercial products.

Unlike artists who disdain commercial design and graphics—especially ones closely associated with a counterculture movement—Peter Max has become an artist of the people. Among other well-known projects, he has produced works to promote the Super Bowl, the Kentucky Derby, and the 1994 World Cup soccer tournament.

MC5

An icon of late 1960s left-wing political music, the hard-rock band MC5 (short for Motor City Five) was based in Detroit and managed by John Sinclair. A counterculture figure, Sinclair formed the Trans-Love Energies Unlimited Commune, a radical arts cooperative, in Detroit in 1967, and the White Panther Party in 1968. The White Panthers were an American political collective modeled on the Black Panthers and were originally intended as an arm of activist Abbie Hoffman's highly theatrical Youth International Party (yippies). They gave free concerts and grew to have chapters throughout the United States.

Active from 1965 to 1972, the MC5 explored the anarchic outer limits of noise in an effort to destroy traditional boundaries of song. Its loud, aggressive, grungy sound incorporated elements of rock, avant-garde jazz, and blues; its lyrics invoked aggressive, macho sexuality; and its performance style incorporated substantial elements of late 1960s absurdist street theater. The band featured Brother J.C. Crawford, a member of the Trans-Love Energies collective, who would preach in a Southern hell-and-brimstone style. Ironically, the band's involvement with radical left politics was in part superficial, used to further their musical career. The connection between the MC5 and the White Panthers was based entirely on Sinclair's efforts to promote the two entities.

The band consisted of five members, all of who came from working-class backgrounds in Detroit: Rob Tyner, famous for his giant, white Afro hairstyle; guitarist Wayne Kramer; Fred "Sonic" Smith, who later married musician-

poet Patti Smith; Dennis Thompson; and Michael Davis. The band released three albums. The first, *Kick Out the Jams* (1969), is the most notable, as it conveys the unprecedented, raw intensity of the MC5 in live performance. The song “Kick Out the Jams,” a blast of street theater, was a deliberate incitement to riot. In performance, Tyler would scream out the anthemic refrain “Kick out the jams *motherfuckers!*” as an act of provocation to the police to storm the stage and arrest the band on obscenity charges.

The MC5 was the only band to perform at the 1968 Democratic Party National Convention in Chicago. They energized the antiwar protesters who had converged on the city with the song “Black to Comm,” featuring an extended avant-garde white noise musical freak-out and radical exhortations.

Ever the provocateur, Sinclair was a target of the police, and in 1969, he was sentenced to ten years in prison for possession of two marijuana cigarettes. In 1971, the Free John Now Rally was held in Ann Arbor, Michigan, featuring performances by John Lennon, who sang his song penned for the occasion, “John Sinclair.”

Three days after the rally, Sinclair was freed, although his release would not save the band from its demise. Amid heavy drug use (particularly heroin use by Davis), the MC5 broke up in 1972.

McCarthy, Eugene (1916–2005)

The Minnesota politician, educator, and writer Eugene McCarthy was most noted for his service in Congress (five terms in the House of Representatives, 1949–1959, and two terms in the Senate, 1959–1971), his opposition to the Vietnam War, and five unsuccessful bids for the U.S. presidency. He received nationwide attention in 1968 when he challenged President Lyndon B. Johnson for the Democratic presidential nomination, running primarily as an antiwar candidate. His opposition to U.S. involvement in Vietnam earned him a strong following among America’s youth and a reputation as an outspoken, honest politician.

Eugene Joseph McCarthy was born on March 29, 1916, in Watkins, Minnesota. He earned a bachelor’s degree from St. John’s University (Minnesota) in 1935 and a master of arts degree from the University of Minnesota in 1939. He worked as a public school teacher in Minnesota and North Dakota until 1940, followed by professorships in economics at St. John’s and the College of St. Thomas.

His initial foray into politics came in 1947, when he worked as an organizer for the Democratic-Farmer-Labor Party in St. Paul. In 1948, he won the race for Minnesota’s Fourth Congressional District and spent the next ten years in the U.S. House of Representatives. His service in the House was distinguished by a national television debate with Republican Senator Joseph McCarthy in 1952 and his ongoing efforts to limit the activities of the Central Intelligence Agency.

McCarthy's constituency elected him as a Democrat to the U.S. Senate in 1958 and again in 1964. In that body, he chaired the Special Committee on Unemployment and served on the Foreign Relations Committee.

In the mid-1960s, McCarthy became one of the leading critics of President Johnson's foreign policy. Although he had voted to approve the Gulf of Tonkin Resolution in 1964 (giving the president broad powers in prosecuting the war), he eventually called for the full withdrawal of American troops from Southeast Asia and a negotiated peace. His opposition to the war and his commonsense approach to foreign policy, which struck a chord especially among college students, led McCarthy to launch a bid for the Democratic presidential nomination in November 1967 in opposition to Johnson.

The Tet offensive, a major series of attacks by the Vietcong in January 1968, shocked American public opinion and boosted McCarthy's campaign. His popularity soared among Democrats, as many voters saw him as offering hope for an end to America's involvement in Vietnam. In preparation for door-to-door canvassing, young antiwar volunteers cut their hair and shaved their beards to go "neat and clean for Gene." In the New Hampshire Democratic primary that March, McCarthy captured a stunning 42 percent of the vote.

The public's enthusiasm did not translate into the party's nomination, however. Senator Robert Kennedy, who also opposed the war, entered the race four days after the New Hampshire primary. President Johnson, recognizing the powerful antiwar sentiment in the party, announced he would not seek reelection, and Vice President Hubert Humphrey entered the race.

By early June, it appeared that Humphrey and Kennedy both would have more delegates at the convention than McCarthy. Kennedy's death on June 6 cast the race, and the nation, into turmoil, and the nomination finally devolved to Humphrey. Although he was not strictly an antiwar candidate, Democrats hoped he could unite the party and succeed where President Johnson had failed.

McCarthy told his activist supporters to stay away from Chicago during the Democratic convention that summer, but thousands descended on the city to demonstrate against the war and the political establishment. Television cameras captured the violent clashes between police and demonstrators, as well as the chaos that reigned inside the convention hall.

McCarthy sought the presidency four more times—as a Democrat in 1972 and 1992, as an Independent in 1976, and as a candidate of several left-wing state parties in 1988—but none of those campaigns captured nearly as much attention as his 1968 bid. A prolific author, the former senator wrote a number of books on politics, as well as a volume of poetry and a children's book. He died on December 10, 2005.

McCarthyism

McCarthyism is a broad term commonly used to describe the anti-Communist and anti-leftist activities and atmosphere that characterized the 1950s through early 1960s. It refers to Senator Joseph R. McCarthy, a Republican from Wisconsin who raised the anti-Communist crusade to an unprecedented level of excess with his claims of rampant Communist activities in the federal government. McCarthy, who initially produced no hard evidence to back up his claims of Communists working for the government, was an effective propagandist. This was because the U.S. government already had taken action to track down and expose Communists in American society, largely through the efforts of the House Committee on Un-American Activities (HUAC), an investigative committee of the House of Representatives formed in 1938.

The phenomenon that bore McCarthy's name thus was part of a larger political effort to discredit and marginalize the American political counterculture that included Communists, socialists, and other leftists (and, ultimately, liberals). McCarthyism pandered to the general climate of fear in the United States in the late 1940s and early 1950s, the beginning of the cold war era in which the Soviet Union and Communism were regarded as dire threats to American security.

McCarthy, who served in the Senate from 1947 to 1957, was relatively undistinguished until he began his anti-Communist crusade. He launched his campaign with a February 1950 speech in Wheeling, West Virginia, in which he warned of the presence of hundreds of Communists in the U.S. Department of State, which he blamed for the 1949 "loss" of China to Communist revolutionaries.

Although an initial Senate investigation disproved McCarthy's charges, he continued to make allegations of Communist infiltration, while managing to avoid producing evidence. As chairman of the Senate Permanent Subcommittee on Investigations, he went on to make accusations against the Democratic administration of President Harry S. Truman, the Voice of America (the official radio and television broadcasting service of the government), and other segments of public life, while receiving support from conservatives, including many Americans who shared his Irish Catholic background.

Following the inauguration of the Republican President Dwight D. Eisenhower in 1953, McCarthy began an investigation into the U.S. Army, which turned up only one person who had belonged to a left-leaning group, the American Labor Party. McCarthy's continued harassment, however, finally led the army to turn the tables on him in 1954, calling for an investigation into McCarthy's alleged efforts to seek preferential treatment for a former aide, U.S. Army Private G. David Schine. The resulting U.S. Army–McCarthy Hearings, broadcast on television from a Senate hearing room from April to June, exposed McCarthy and led to his public downfall and censure by the Senate.

Investigations soon spread to Hollywood, organized labor, higher education, and public education. Countless careers and lives were ruined, whether as a result of actual arrest for Communist activities, or simply because of the stigma of being called before HUAC or one of the other investigating committees.

In Hollywood, hundreds of actors, writers, and directors were affected by a "blacklist" and by the publication of a pamphlet known as *Red Channels* that identified "subversives" in the entertainment business. Many writers, intellectuals, and performing artists, including those who had made serious contributions to the American counterculture, such as playwright Lillian Hellman, essayist and playwright Arthur Miller, and folk singer Pete Seeger, were blacklisted. Others had to choose between their careers and their beliefs and several earned opprobrium by naming names in order to clear their own, most notably playwright Bertolt Brecht and film director Elia Kazan.

While Communists were the official targets of McCarthyism, a variety of leftists and liberals, many of whom had belonged to socialist parties or related organizations in the 1930s, found themselves under suspicion and on the

defensive for expressing views that dissented from an increasingly conservative political mainstream. For example, leftist intellectuals such as Philip Rahv and William Phillips, the founding editors of *Partisan Review*, who had firsthand knowledge of the Communist Party USA and formed the anti-Stalinist left, found themselves in the difficult position of condemning the Soviet Union, while at the same time being tarred with its brush.

Lasting damage was done to America's leftist intellectual counterculture, pushing it even farther to the margins of mainstream American society. McCarthyism also helped pave the way for the birth of the neoconservative movement, which began as a political counterculture in the wake of increased challenges to liberalism in the American mainstream.

Since the late twentieth century, McCarthyism has become increasingly detached from its historical context. The term is used in reference to a range of activities and mindsets, from the moderate censoriousness that has characterized the twenty-first-century War on Terror to more general censorship (perceived or actual) of views that dissent from the mainstream, whether liberal or conservative. In no case, however, has there been government-sponsored censorship of dissenting views on a scale approaching what occurred during the height of Joseph McCarthy's influence.

McKenna, Terence (1946–2000)

Renegade philosopher, writer, and psychedelics advocate Terence McKenna published several books that recounted his hallucinogenic experiences and was a guru to the drug counterculture of the 1960s and 1970s. Critics have labeled him a "radical ethnobotanist" for his belief that many of society's ills can be traced to humanity's disconnection from psychedelics, plants, and other natural substances that produce altered states. His writings and lectures addressed such other wide-ranging themes as cosmic consciousness, virtual reality, the origins of culture and the human psyche, eschatology (the religion and philosophy of human destiny and finite time), and several highly original theories based on what he called "stoned apes" and "time waves."

Terence Kemp McKenna was born on November 6, 1946, in Paonia, Colorado, and moved to the San Francisco Bay Area in California after his sophomore year in high school. At age nineteen, he began course work at Tussman Experimental College, a short-lived two-year undergraduate program at the University of California, Berkeley.

While not a high-profile figure of the 1960s counterculture revolution, McKenna in many ways had a typical 1960s experience. After completing the Tussman program in 1967, he traveled extensively through Asia, Europe, and Central and South America. In 1972, he returned to Berkeley to finish his bachelor of science degree in ecology and the conservation of natural resources. His self-tailored degree program included an emphasis on the study of shamanism.

McKenna and his brother Dennis chronicled their psychedelic experiences traveling through the Colombian Amazon in their book *The Invisible Landscape: Mind, Hallucinogens, and the I Ching* (1975). The trip and the hallucinogenic experiences he had on it had a profound effect on McKenna's thinking. It was there that he began to formulate his unorthodox theory of the fundamental role played by psilocybin (psychedelic mushrooms) in the dawning of human civilization. So also emerged his interests in ethnobotany, or ethnopharmacology, and shamanism.

In 1976, the McKennas published a guide (under pseudonyms) on growing "magic mushrooms," which garnered them a certain celebrity within the psychedelic community. The San Francisco acid-rock band the Grateful Dead were fans of Terence McKenna's work; lead guitarist and vocalist Jerry Garcia called him "the only person who has made a serious effort to objectify the psychedelic experience." LSD advocate Timothy Leary later called him the "Timothy Leary of the 1990s."

In the 1980s, McKenna began consulting and writing extensively, eventually becoming known around the world for his highly original, wide-ranging ideas, his wit, and his adroit use of language, as seen in works such as *The Archaic Revival: Speculations on Psychedelic Mushrooms, the Amazon, Virtual Reality, UFOs, Evolution, Shamanism, the Rebirth of the Goddess, and the End of History* (1991) and *Dialogues at the Edge of the West: Chaos, Creativity, and the Resacrilization of the World* (1992).

McKenna was perhaps best known for his theory of novelty, formalized in a complex mathematical model he dubbed "Time Wave Zero," based on the *I Ching* (the Book of Changes, a central text of Chinese Confucianism). According to Time Wave Zero, an explosion of novelty—which he refers to as "runaway newness," or "extropy"—will take place in the period leading up to the year 2012 and result in the end of history.

With his wife, Katherine Harrison, McKenna founded Botanical Dimensions, a "nonprofit organization dedicated to the collection and propagation of medicinal and shamanic plants from the tropics around the world," in a Hawaiian rain forest in 1985. He was also a regular speaker at annual ethnobotanical symposia held throughout the 1990s in Mexico at the ruins of ancient Mayan cities such as Palenque. Because of McKenna's strong desire to openly share his knowledge and experiences, he encouraged the recording of his lectures and interviews, and they are available for free from numerous Internet sites maintained by his friends and fans.

Self-described as an "itinerant intellectual," McKenna relished his role as a "scientist without portfolio" and became a reluctant cult personality among youth in the California rave scene and the New Age psychedelic movement. What he termed the "archaic revival" was particularly evident in these cultural movements by the time of his death.

He died on April 3, 2000, from a rare form of brain cancer. His personal papers and rare book collection were destroyed in a fire at a storage facility owned by the Esalen Institute in California, in February 2007.

McLuhan, Marshall (1911–1980)

The Canadian communications and media theorist Herbert Marshall McLuhan was among the most famous academic icons of the 1960s and 1970s. His provocative ideas at the intersection of popular culture and technology offered a theoretical framework for understanding, on a global scale and in historical perspective, the powerful influence of media. The fact that his reputation transcended academia was evidenced in, for example, the enormous sale of his books, a McLuhan festival held in San Francisco in 1965 at the height of the hippie movement, dozens of interviews in the popular press (including *Playboy* magazine in March 1969), a cameo appearance in Woody Allen's 1977 film *Annie Hall*, and numerous speaking engagements to corporate and private sponsors. He was variously referred to as “the Guru of the Boob Tube,” “the Oracle of the Electronic Age,” “the High Priest of Pophink,” and “the Dr. Spock of Pop Culture.”

McLuhan was born on July 21, 1911, in Edmonton, Alberta, Canada. After receiving his master's degree in English literature at the University of Manitoba in 1934, he earned his Ph.D. degree at Cambridge University in 1942 (submitting his dissertation from the United States) under the influential literary critic I.A. Richards.

In 1937, meanwhile, he had formally embraced Catholicism and begun teaching at St. Louis University. It was in St. Louis that he met his wife, Corinne Lewis, with whom he would have six children. Returning to Canada, he held teaching positions at Assumption College in Windsor, Ontario (1944–1946), and the University of Toronto (1946–1979). In 1963, he was made director of the University of Toronto's Center for Culture and Technology.

From his academic training in literary criticism, McLuhan learned to read texts closely and in historical context. This New Criticism approach is evident in his first book, *The Mechanical Bride* (1951), in which advertisements, rather than works of literature, are subjected to close readings. Such forays into popular culture ultimately expanded to more than 150 publications, his most prolific period being from 1962 to 1972. During that span, he published *The Gutenberg Galaxy* (1962), *Understanding Media* (1964), *The Medium Is the Message* (1967), *War and Peace in the Global Village* (1968), *Culture Is Our Business* (1970), *From Cliché to Archetype* (1970), and *Take Today* (1972).

Written during a period of radical social and political change, these works offered both a general lexicon and specific aphorisms to understand the new “postliterate” age. The counterculture especially embraced McLuhan's idea of the global village as a metaphor for peace building, environmental concern, and the transformation of consciousness. His work also encouraged a critique of corporate and establishment practices.

For McLuhan, the term *media* refers to any extension of the human body and senses. These extensions, or technologies, and particularly electronic media, powerfully and invisibly influence individual perception and society even as they extend the body and senses. But the power of such changes, he maintains, rests not so much in the information (content/product) delivered by such technologies, but in the means (form/process) of delivery: “the medium is the message” (or as McLuhan punningly put it, the medium is the *massage*—the receiver is molded and manipulated by the medium of this “mass-age”).

Noting the speed and pervasiveness of electric technologies, McLuhan viewed the global village as metaphorically shrinking but literally connected. This, he felt, represented a movement away from linear, fragmented, mechanical models that hitherto had dominated cultural behaviors. McLuhan also theorized a demarcation between “hot” and “cool” media, the former referring to passive audience participation and the latter to interactivity.

Marshall McLuhan died in Toronto on December 31, 1980. The McLuhan Program in Culture and Technology at the University of Toronto continues his work.

McPherson, Aimee Semple (1890–1944)

Aimee Semple McPherson was a pioneer of the Pentecostal movement of the early twentieth century and the founder of the popular and influential Foursquare Gospel Church in Los Angeles. Although she was never ordained, McPherson was one of the few women in the United States to form her own denomination, and she was the most famous female evangelist in American religious history.

She was born Aimee Elizabeth Kennedy on October 9, 1890, and grew up on a small farm near Salford, Ontario, Canada. The area was overwhelmingly Protestant, and Aimee was involved in the religious life of her family and community. However, it was not until her 1907 conversion in a Pentecostal mission in the nearby town of Ingersoll that her life took on specific purpose and energy.

Her first husband, Irish Pentecostal missionary Robert James Semple, died while the couple was serving as missionaries in China in 1910, and Aimee pledged to carry on his work. She would take this pledge with her throughout her lifetime, refusing to settle down to a quiet domestic life with her second husband, Harold McPherson, from whom she was divorced in 1921.

After the split, Aimee Semple McPherson established herself as a lay evangelist in Ontario, embracing a Pentecostal Christian ministry characterized by faith healing, glossolalia (speaking in tongues), the message of the Bible and the love of God, and showmanship. By 1923, she had become pastor of Angelus Temple in Los Angeles, where thousands would flock to hear her preach, and she founded the evangelical Pentecostal denomination today known as the International Church of the Foursquare Gospel. Her followers lovingly called her Sister Aimee.

McPherson received much media attention, and she embraced the spotlight. In May 1926, she disappeared for thirty-two days, returning with a story of kidnap and escape that was met with accusations that she had been seen with a married man in Carmel, California. Her unconventional activities continued, as she continued to speak against the perceived evils of mainstream society, while emphasizing that God's love and healing can rescue one

from them.

To spread her message, she capitalized on many elements of contemporary American society, including radio and her personal relationships with popular Hollywood figures. In 1924, in an effort to rescue humanity from worldly sin, she became the first woman to preach a radio sermon, on the Foursquare-owned station KSFG (now KXOL). While not particularly vocal on the issue, nor providing a developed argument for women in the ministry, McPherson became an early example of a strong female religious leader.

On September 27, 1944, McPherson was found unconscious in an Oakland, California, hotel room with a half-empty bottle of sedatives lying nearby. Her subsequent death was ruled an accident, but rumors of suicide persisted. It was one more controversial incident in the dramatic life of Sister Aimee.

Me Decade

The *Me Decade*, a term coined by novelist Tom Wolfe in 1976, refers to a perceived trend toward self-absorption and away from political and social awareness in America during the 1970s. It was a broad cultural phenomenon that entailed a turning away from 1960s radicalism and embraced self-reflection, self-improvement, and self-fulfillment. In place of the acute political awareness and community organizing of the 1960s, the Me Decade brought a retreat from collective action to the personal pursuit of material and spiritual well-being.

During the Me Decade, Americans were concerned about crime, drugs, sexual deviance, and rising gas prices. These issues caused many to want to escape the world's problems by instead focusing on the individual realm of physical and psychological growth. How Americans viewed the sources of social problems also changed. In the 1960s, the problems of society tended to be perceived as systemic ills that could be altered by community activism and human reciprocity. During the Me Decade, that optimism was replaced by the view that society's problems were too daunting to be solved through activism or community organization.

Personal growth was a catchphrase of the Me Decade, especially in the spiritual realm. This manifested itself in the rise of New Age beliefs and the human potential movement. Encompassing a wide range of concepts, practices, and healing methods—from astrology, reincarnation, meditation, and out-of-body experiences to the use of crystals, pyramids, and indigenous belief systems for psychic healing—New Age thinking provided an eclectic, easily individualized approach to the achievement of a higher, better self. Other popular elements of New Age thought included such long-established traditions as Hinduism, Zen Buddhism, Taoism, Theosophy, and Wicca. Beyond that, the spiritual yearnings of the Me Decade—the desire for inner peace and a sense of belonging—also gave rise to a spate of new religious cults.

In the everyday world of the body and mind, the Me Decade popularized self-help books that offered psychological guidance and supported a variety of health and fitness fads. Notable among these works were *I'm OK, You're OK* (1969) by Thomas Harris, which hit the best-seller list three years later; *Dr. Atkins' Diet Revolution* (1972), by Robert Atkins; *The Complete Book of Running* (1978), by James Fixx; and *The Complete Scarsdale Medical Diet* (1979), by Dr. Herman Tarnower and Samm Sinclair Baker (1979). Eating healthy, participating in aerobics, and jogging became cultural obsessions among the suburban middle class. Even jewelry reflected the American obsession with self-reflection, as mood rings became all the rage; the "stone" (a thermotropic crystal surrounded by glass) would change color according to the wearer's mood, supposedly offering insights into his or her emotions.

The sexual revolution was also important to the American way of life during the Me Decade. Higher rates of participation in premarital sex, single-parent households, and divorce all reflected disillusionment with the nuclear family and the pursuit of personal pleasure. The latter was apparent in popular media of the time, which turned away from socially relevant themes and toward more trivial ones, resulting in programs that prompted critics to call it the era of "jiggle television." Crime-fighting shows, such as *Charlie's Angels*, and fantasies, such as *Love Boat* and *Fantasy Island*, exemplified the viewing public's desire to escape from reality.

A sense of community was hard to foster during the Me Decade, as Americans picked up fads and, often, dropped them quickly. Fads in dance and music (disco, country, punk rock), fashion (Western wear, bell-bottoms, hot pants, platform shoes), play (pet rocks, ping-pong), and dieting and exercise represented the eclectic ways Americans in the Me Decade searched for happiness.

Media, Alternative

The term *alternative media* refers to composing, organizing, producing, distributing, and interpreting cultural artifacts in ways different from, and often in opposition to, those used in conjunction with commercial media organizations. It typically designates media activities related to current affairs and other "factual" matters rather than entertainment or fictional material.

Alternative-media projects seek to provide a voice to groups in society whose viewpoints, lives, and concerns appear stereotypically, minimally, or not at all in commercial media products. Their rationale derives generally from liberal-democratic political theory: to provide the widest possible range of information and viewpoints and thus to aid informed public deliberation on public matters.

The term *alternative media* began appearing in conjunction with mainstream acceptance of the cultural values of the civil rights, feminist, and antiwar movements of the 1960s and the emergence of a large, youth-centered

popular culture. Explicit use of the term to describe media practices outside the mainstream can be traced to the early 1970s and the remaking of the 1960s “underground” counterculture into the post-1960s “alternative” culture.

Such developments included renaming the Underground Press Syndicate the Alternative Press Syndicate in 1973; the appearance of directories and how-to pamphlets and books on alternative media; and the emergence of alternative urban weekly newsmagazines as a niche, commercial publications targeted at young, hip readers, along with the formation of the Association of Alternative Newsweeklies (AAN) as the industry’s umbrella group. Since the early 1980s and the appearance of such books as *A Trumpet to Arms: Alternative Media in America* (1981), the term *alternative media* has been readily recognized and accepted.

Polemics

Although the term *alternative media* is relatively recent, the practice has roots in long-standing forms of radical criticism and representation. Polemical forms, in which writers assert their positions in carefully reasoned, witty, literate, and often passionate arguments, have their basis in the Enlightenment tradition of civil public deliberation centered in the exercise of human reason.

Exemplars such as Richard Steele and Joseph Addison debated political positions in pamphlets, newspapers, and literary magazines from the beginnings of popular publishing in England in the early eighteenth century. Political agitators such as Samuel Adams, Thomas Paine, and others working in the colonial American presses during the War of Independence also expressed their positions largely in polemical form, as did writers in the U.S. political press of the early to mid-nineteenth century.

Polemics was used as well in the publications of a wide range of nineteenth-century political and social reform movements, including abolitionism, women’s rights, labor, socialism, Evangelicalism, and ethnic movements. Prominent examples include William Lloyd Garrison’s abolitionist newspaper *The Liberator*, labor papers such as the *Workingman’s Advocate*, evangelical presses such as those operated by the New York City Tract Society, and a number of ethnic presses whose viewpoints often coincided with those of labor and socialist movements.

Polemics also was embodied in radical public oratory. For example, it was a feature of speeches by such late-nineteenth- and early-twentieth-century figures as anarchist Emma Goldman and socialist Eugene V. Debs.

Closely related to polemics is critical commentary, in which a writer establishes his or her position by rebutting dominant views found in mainstream news stories. Prominent examples include many nineteenth-century socialist publications, such as the *Appeal to Reason*, twentieth-century independent projects such as the writings of George Seldes and the newsletter *I.F. Stone’s Weekly*, and the more recent writings of critics such as Noam Chomsky and Edward Said.

Naturalism

A second form of alternative-media activity derives from naturalism, best understood as the belief that truth can be found and shared not simply through argumentation (as in polemics) but by uncovering and showing or describing through prose and image an actual event or situation. Once people see an unjust situation, it is believed, they will naturally take action to correct it.

This form was represented in magazines, novels, and early photography by work as varied as that of early-twentieth-century muckraking journalists Ida Tarbell and Lincoln Steffens, who wrote exposés of corporate and governmental corruption and abuse of power, realist novelists such as Frank Norris and Upton Sinclair, and the photography projects of social reformers such as Jacob Riis.

By the late nineteenth century, a third form of alternative-media activity emerged, deriving from modernism. Proto-modernist thinkers such as British naturalist Charles Darwin, German political philosopher Karl Marx, and the Austrian founder of psychoanalysis, Sigmund Freud, refuted claims of human rationality and the truth inherent in direct appearances by detecting forces beyond the control and direct observation of individual humans (evolution,

material conditions, and the unconscious), which they claimed to be the real shapers of human lives and actions.

A positive take on modernism expressed faith in the rationality of technological progress, in universal theories that purported to explain timeless truths, in the scientific method as a means of finding truth, and in the universal community of humanity. The critical take focused instead on increasing dehumanization in the shadow of increasing powers of the state and the economic market, the uncontrollability of inhuman forces, and the resulting irrationality of “rational” modern human society, exemplified in stark terms in World War I and World War II.

In such an era, truth could not be found through reason or by showing or describing an external, universal reality. Instead, the only truth possible was individual, internal, and subjective. Applied to the making and interpretation of critical media products, the failure of naturalism and the corresponding elevation of individual points of view suggested in turn that deeper realities could be apprehended through seemingly unnatural means of representation.

Modernism

Modernism as a tradition of alternative-media composition and interpretation was particularly amenable to visual representation in the early decades of the twentieth century. For example, while political satire had long been expressed through allegorical illustrations (the precursor of present-day editorial newspaper cartoons), the emergence of the techniques of collage and montage, along with the proliferation of news-photo services and publicity firms, made possible not only an avalanche of widely available current-events photographs but also a technique of merging and reproducing combinations of separate photographs into new, public, critical compositions. The aim of montage was not simply to argue one’s point or to reveal a truth in direct appearances. Rather, it was to encourage people to recognize processes and connections submerged beneath common, accepted events and actions.

Avant-garde artists such as Raoul Housemann and others in the Dada movement, and André Breton and others who aligned themselves with surrealism, pioneered montage as a means of depicting the truths hidden behind gaps in time and space, mere appearances, and a barrier of socialization and unquestioned habit. Anti-Nazi propagandist John Heartfield developed montage to a high degree in his radical critiques of the German Nazi movement. Modernist aesthetics in stage theater—such as the “epic theater” pioneered by Bertolt Brecht—were further developed and democratized outside avant-garde theater in expressions such as the workers’ theater movement.

These traditions of alternative media—rationalist, naturalist, modernist—coalesced in 1960s counterculture, where criticism of the dominant culture and society took such varied forms as street theater, billboards and posters, and underground newspapers, all of which contained varying combinations of polemical arguments, naturalist exposés, and modernist visual critiques. Despite its ties to commercial record companies, popular music also embodied, for many counterculture activists, a collective voice of empowerment.

New Technologies

Alternative media were enabled further by increasingly cheap and available means of reproduction in the 1960s. Improvements in imaging came with the development of mass-produced film cameras, then with offset printing, mimeograph, and photocopying.

Paired with such advances were new means of electronic reproduction, best represented by the videocassette recorder and half-inch video Portapak, which freed video from the confines of studios and professional production companies. Guerrilla video collectives, such as People’s Video Theater, the Videofreex, Global Village, and Raintance, were among the groups that adapted this new technology to existing traditions of alternative media. In the post-1960s era, alternative-media practitioners within new social movements have elaborated and blended these traditions with new technologies.

Pirate radio (illegal or unregulated radio) of the 1960s continued in the footsteps of earlier labor radio stations such as WCFL, and helped spawn progressive radio organizations such as Pacifica Radio and Democracy Now! While polemical and critical commentary form the bulk of “serious” content, many pirate radio operators feel that simply playing music unavailable on commercial radio is a way to criticize the domination of the heavily formatted music industry. An attempt in early 2000 by the Federal Communications Commission to legalize community radio by establishing a low-power FM radio service became ensnared in bureaucratic regulation and has yet to fulfill its promise. However, Web radio (or Webcasting) seeks to overcome some of the regulatory limitations placed on over-the-air broadcasts and thus continues to work for social change.

Internet-based organizations such as Truthout.org and the Center for Media and Democracy distribute compilations of critical items from mainstream publications and provide critical commentary. The emergence of rentable satellite distribution has made possible a variety of alternative video services, such as Deep Dish TV, Free Speech TV, and Paper Tiger TV. Street theater continues in such ways as the parody of evangelical Christianity and consumerism by Reverend Billy and the Church of Stop Shopping.

With the spread of personal computers, the Internet access, and the proliferation of Web sites, modernist forms of critique such as montage have morphed into such innovations as “culture jamming.” Groups such as AdBusters either re-create existing advertising images or digitize them with slight changes that criticize their original intention. Such activity draws its rationale in part from the work of Guy Debord and the Situationist movement of the 1960s.

Another important modernist innovation is self-publishing in the form of zines, personal statements in the form of magazine-style stories written by a single person and sent through the regular mail to whomever requests a copy. Zines are based in anarchist or existentialist perspectives that have been blended with the DIY (do-it-yourself) culture embodied most aggressively in the punk movement of the 1970s and 1980s. The advent of the mimeograph and then the photocopier made them technically possible. Personal Web sites are extensions and variations of the paper-based zine.

New kinds of computer and Internet-aided forms of alternative media mushroomed in the wake of the World Trade Organization (WTO) meeting in Seattle in late 1999. A collective named TMark created Gatt.org, a culture jam of the official WTO Web site. Other groups involved in Internet-aided efforts to disrupt the Seattle meeting included the Yes Men, the Electrohippies, and Electronic Disturbance Theater. Text messaging has become an increasingly important alternative means of tactical, real-time organizing.

The anarchist-inspired, populist notion that making media is something anyone can do is increasingly expressed in innovative organizations such as Indymedia, which pioneered Web-based “open publishing,” whereby anyone can post text, images, audio, and/or video of a news event to the site. Similar Web-based services include OneWorld TV and OneWorld Radio. Many of these draw inspiration from the use of Internet-based technologies in the Zapatistas’ drive for political autonomy in southern Mexico.

A number of reactionary or depoliticized movements, ranging from the Republican Party to newsmagazines seeking young, urban readers, attempt to appropriate the countercultural tradition and energy of alternative media for their own programs of conservative politics or marketing.

The future of alternative media is not diminished by these and similar efforts, nor is it defined simply by the technology of the moment. Instead, its vitality is rooted in the handiwork of hundreds of thousands of people throughout the world who constantly are figuring out new means of sharing a sense of not just what is right and wrong with the world, but what the world might yet become.

Medicine, Alternative

Alternative medicine, as its name implies, is comprised of therapeutic practices that fall outside the general boundaries of conventional treatment as practiced by modern mainstream physicians in the West. Natural, noninvasive therapies without the use of prescription drugs are common elements of alternative medicine. Examples include the practice of acupuncture (inserting needles through the skin at specific points to achieve physical and spiritual balance); the use of herbal medicine (herbs applied for medicinal or therapeutic purposes); and chiropractic therapy (involving spinal manipulation). With roots in traditional and ethnic practices as well as nineteenth-century medical experimentation, alternative medicine grew in popularity as the youth counterculture and New Age movement of the 1960s and 1970s emphasized the spiritual and physical well-being of the individual.

Nineteenth-Century Origins

A number of alternative practices date from two periods in the nineteenth century when American reformers sought therapies to counter traditional medical practice, such as bloodletting (phlebotomy), which was commonplace until the early nineteenth century. These alternative practices were viewed by some as quackery and heretical to the tenets of the medical community, but they were popular in society at large for varying periods of time.

The first period of reform, from the 1830s to the 1850s, saw the introduction of a number of alternative treatments and practices in the United States. One of the earliest movements was represented by followers of Samuel Thomson of New Hampshire who, although receiving little formal education, put forth a system of alternative medicine using herbs and botanicals, or specific plants that could be used in the healing process. Thomson based his therapeutic approach on the belief that harmful toxins in the body can be purged by natural remedies. He developed a system of plant-based drugs, broken down into categories for particular types of afflictions. Among the attractions of his therapy was the fact that a licensed physician was not required to administer the drugs. Thomsonianism, as it was called, became popular for its self-prescribing aspect in the individualistic, antielitist spirit of Jacksonian America. Although Thomsonianism would never regain the popularity it enjoyed in the 1830s, its emphasis on plant-based remedies continues to be regarded as an important step in the development of modern herbology.

Even more influential in the rise of alternative medicine were the theories and therapies of the Reverend Sylvester Graham, a Presbyterian minister from Connecticut. His anti-alcohol campaign soon expanded to include a program advocating avoidance of tobacco, coffee, tea, spices, meat, and all drugs. Based on his diet prescription, Graham came to be regarded as the “father of vegetarianism” in the United States. Active from about the 1860s to the 1880s, Graham’s followers, known as Grahamites, believed in proper exercise, frequent bathing, limited sexual activity, and a strict eating regimen. They preferred whole wheat to processed white wheat flour and devised an alternative to white bread called “Graham bread”—the original form of the graham cracker still eaten today. The modern vegetarian and vegan movements, both associated with late-twentieth-century countercultures, can be traced to the theories of Graham and his followers in the nineteenth century.

Two other nonconventional medical systems that arose in the first half of the nineteenth century were hydrotherapy and homeopathy. Hydrotherapy, or water treatment, is based on the concept that all diseases can be cured by bathing in or drinking water. This practice dates to the ancient Greeks and was further enhanced by the Romans, who built public baths, or spas, for therapeutic as well as hygienic purposes. The originator of modern hydrotherapy as an alternative medical treatment was an Austrian named Vincent Priessnitz, whose “nature cure” of mountain spring water and fresh air spread through Europe and to the United States in the 1840s. From the mid-nineteenth century to the early twentieth century, “water cures” remained popular among millions of Americans. The natural healing power of water was recognized again in the 1960s and 1970s, when hot springs and spas became popular as a therapeutic alternative to scientific medical treatments.

Homeopathy—an alternative system of medicine introduced in Europe in the 1790s and brought to the United States in the 1820s—was devised by a German, Samuel Hahnemann, who understood the symptoms of an illness as evidence of the curative response of the body. Based on that theory, he developed treatments from substances that cause or promote the specific disease symptoms and thereby hasten the natural curing process, called the “homeopathic effect.” Although the basis of homeopathy can be traced to folk remedies used for centuries, Hahnemann systematized the “law of similars” and developed a materia medica, or list of remedies and dosages. Like other alternative systems of treatment that originated in the late eighteenth and early nineteenth century, homeopathy was widely revived in the second half of the nineteenth century, in part because of its success in treating cholera and other diseases widespread at the time. Homeopathy again became popular from the 1960s on because of its emphasis on natural healing.

A second phase of health reforms swept the United States late in the nineteenth century, offering new precedents to alternative medical treatments that would come to fruition in the youth counterculture and New Age movement of the 1960s and 1970s. A therapy introduced by Andrew Taylor Still in the 1870s was based on the age-old practice of massage, as well as bone-setting techniques and gymnastics. Still had become disillusioned with regular medical practices of the day, which he regarded as ineffective and often barbaric, and he began to practice physical manipulation of the body to address various ailments. Adopting the name “osteopathy” (from *oste*, Greek for bone, and *pathy*, Greek for suffering), he devised a holistic system of treatment that combined manipulation of the musculoskeletal system and facilitation of the natural healing process through proper diet, exercise, and integration of the mind and body. Interest in osteopathy grew in the late nineteenth century, leading

to the opening of the first osteopathic school in the 1890s in Kirksville, Kansas.

In Iowa, meanwhile, a grocer named Daniel David Palmer drew upon a variety of alternative therapies, including magnetic healing, to bring forth in 1896 what he called “chiropractic” (literally, “done by hand”). Chiropractic therapy involves the manipulation of the spine, joints, and muscle tissue, especially in the back, to restore the proper functioning of the nerves. In 1897, the Palmer Chiropractic School opened in Davenport, Iowa. It was followed by other institutions in the next several years, and the first journal of chiropractic was published in 1903. Three years later, however, Palmer was prosecuted under a new state law and went to jail for practicing medicine without a license. Aside from opposition by the mainstream medical community, the chiropractic movement was weakened in the early twentieth century by dissension within the community of practitioners.

Yet another therapeutic approach that grew out of late-nineteenth-century interest in alternative methods of treating disease and promoting health was naturopathy. The basis for naturopathy can be traced to water cure treatments earlier in the century, particularly those of the Bavarian priest Sebastian Kneipp, who elaborated on the principles of hydropathy to develop his own water cure system. One of the advocates of Kneippism was Benedict Lust, who came to the United States from Germany in the early 1890s. Lust added several other nature cures to the Kneipp treatment, such as massage, exercise, and diet, and he purchased rights to the term *naturopathy*. In 1905, he founded the American School of Naturopathy in New York City, which awarded the first naturopathic doctorate degrees (NDs) two years later.

The next two decades saw the establishment of several other schools of naturopathy, the founding of professional naturopathic journals, and the opening of numerous health resorts featuring naturopathic regimens. Despite its early and ongoing popularity, interest in naturopathy as an alternative therapy made a quantum leap as the postwar counterculture movement sought more natural healing and hygienic practices.

The latter decades of the twentieth century brought a rise in non-Western and other “alternative” forms of medical treatment in the United States. Here, a woman undergoes the traditional cupping method of ancient Chinese acupuncture. (Lynn Johnson/Aurora/Getty Images)

Twentieth-Century Resurgence

Even as osteopathy, chiropractic, and naturopathy gained adherents in the early twentieth century, they also faced increasing attacks by the mainstream medical community, which had flourished with the rise of scientific medicine,

reforms in medical education, and the establishment of professional associations. Characterizations of such alternative therapies as quackery or medical cults became commonplace, as the mainstream medical community, pharmaceutical companies, and supporting services and institutions grew in strength and power through the twentieth century.

Only with the rise of the postwar counterculture was there an environment conducive to the rediscovery and revitalization of these alternative therapies. For many of the same reasons that such new approaches were developed in the nineteenth century, the philosophies of the youth counterculture—emphasizing a return to nature, spirituality, and personal growth—left many Americans open to practices antithetical to conventional Western medicine. Indeed, alternative therapies were essentially countercultural in their very nature, adding to their appeal and promoting a natural, holistic, more enlightened lifestyle.

The spread of unconventional treatments and therapies in the youth counterculture and New Age movement of the 1960s and early 1970s led to more mainstream acceptance and the adoption of the generic term *alternative medicine* in the late 1970s.

While alternative medical practices are still regarded with varying degrees of skepticism by the conventional medical community, the stigmas of cult and quackery have begun to diminish in some cases. In the last two decades of the twentieth century, the term *complementary medicine* began to be used in lieu of, or in combination with, *alternative medicine*, as a number of alternative approaches have been integrated into mainstream biomedical research and treatment.

Medieval Reenactment

Medieval reenactment is an activity in which participants re-create various aspects of medieval European life, including combat, music, dancing, arts, armoring, blacksmithing, folklore, and other skills, trades, and special events. In the broadest sense, the term includes the many clubs, organizations, and businesses that sponsor or participate in reenactments. Reenactment groups may focus on different periods of time, different locations, and different skills or activities of medieval life. Some groups strive for strict historical authenticity, allowing only weapons, implements, and costumes that follow those of the specific period, while other groups allow a much wider variety of influences, including fantasy literature and film.

In the United States, the oldest and most well-established medieval reenactment group is the Society for Creative

Anachronism (SCA) in California, which boasts tens of thousands of members. The SCA began as a single chivalric tournament hosted by college friends David Thewlis, Ken de Maiffe, and Diana Paxson on May 1, 1966, in Berkeley, California. The medieval-style tournament was based on the Earl of Eglanton's Last Tournament in Scotland in 1839, a fair held by the young nobleman to celebrate the values of agrarian chivalry. In the face of rapid industrialization, the fair offered a return to the romantic values eulogized in the novels of Scottish poet and novelist Sir Walter Scott. Unfortunately, the Earl of Eglanton's 1839 event was rained out.

The weather for the Berkeley event in 1966 was favorable, however, and the new Last Tournament went off without a hitch and became an annual event. The idea of chivalric tournaments with fighting, dancing, and feasting spread quickly. The three University of California, Berkeley students had not expected the event to expand into the massive organization it has become in the twenty-first century, encompassing all aspects of archaic European reenactment, from armored combat with wooden swords to arts and sciences.

The rapid growth of the SCA sparked a medieval revival in the United States, and the subculture of medieval reenactment has grown exponentially. Most groups focus on medieval-style combat, using simulated swords with an array of costuming and armor. Combat-oriented groups run the gamut from armored fighting with metal weaponry ("live steel" fighting) to full-contact melees with padded weapons and armor ("boffer" or "foam" fighting). Other groups are strictly noncombat oriented, focusing on the revitalization of arts and crafts such as dance, folklore, blacksmithing, and weaving.

Most groups encourage members to take on a fictional name and persona to use at reenactment events. The personae adopted by reenactors largely depend on the group to which they belong. J.R.R. Tolkien's *Lord of the Rings* (1954), as well as a number of contemporary fantasy novels, are important influences for some groups, especially literature focusing on character development and role playing.

A cottage industry has grown up to support the diverse interests of medieval reenactors, with numerous small companies manufacturing weapons, armor, clothing, jewelry, and other accoutrements of the hobby. Most states boast at least one semipermanent Renaissance fair (often called a "faire" or "festival"), where the general public pays admission to visit a multifaceted medieval reenactment in a theme-park atmosphere. Other events more closely resemble a country fair with elements of a traveling circus or minstrel show, featuring medieval music, acrobatics, short plays, storytelling, fortune-telling, and other entertainment, a variety of vendors, and exhibitions of traditional crafts. Again, attendees are encouraged to dress in period-appropriate garb and participate in the event.

Menken, Adah Isaacs (1835–1868)

The actress, poet, and essayist Adah Isaacs Menken was a visible and controversial member of New York's counterculture during the 1860s. She challenged the cultural mainstream by bringing burlesque and apparent nudity to the middle-class theater. She is especially known for appearing nude (she was actually wearing a sheer body stocking) while strapped to a horse in the play *Mazeppa; or The Wild Horse of Tartary* (1861). In addition to

challenging the sexual mores of the period, she also contested the dominant gender norms in her poems and essays.

According to most scholars, she was born Adah Bertha Theodore on June 15, 1835, to a French Creole mother and free black father in New Orleans. Many of the facts about her early life are uncertain, however, because she often gave contradictory accounts of her childhood and ethnicity.

She began performing at a young age, dancing in the New Orleans French Opera House, and made her theatrical debut in 1857 in Louisiana in *The Lady of Lyons*. In 1859, she made her New York debut in *The Soldier's Daughter* and appeared on Broadway as well in *The French Spy*. Converting to Judaism, she married a Jewish musician named Alexander Isaac Menken and took his last name. Later divorced, she retained both her Jewish faith and the name Menken through three more marriages.

In an 1860 essay titled "Women of the World," Adah Menken advocated an expanded role for women in American society, criticizing the conventional limitation on women to the roles of wife and mother. In another essay that year, "Shylock," she challenged the idea among social reformers that strict adherence to Christianity would eliminate vice. Menken challenged men's domination of the public sphere by openly voicing her opinions on a wide range of political matters. Although there is no evidence that she participated in a homosexual relationship, literary critics have identified references to homosexuality in her poems and letters.

In *Mazeppa*, Menken played the title role, that of a male hero. Although the play had been popular with American audiences since the 1830s, no one had seen a woman play the title character. On June 7, 1861, crowds rushed to the Green Street Theatre in Albany, New York, to see if Menken, like the actors who had played the character before, would strip on stage. At the end of the first scene, Mazeppa is strapped to a horse and dragged across the stage, up a mountain of scaffolding, and into the rafters. Male actors considered the scene so dangerous that dummies had been used in their place. Menken performed the stunt herself.

She thus became the first woman to remove her clothes (or appear to) onstage in a middle-class theater, and she challenged gender stereotypes by doing what no male actor had dared do in the same role. She repeated the performance in productions of *Mazeppa* across the United States.

The notoriety of *Mazeppa* led to acting opportunities in Europe, where Menken lived from 1866 to 1868. She spent the final years of her life in Paris, Vienna, and London, and died in Paris at age thirty-three on August 10, 1868.

Mennonites

Mennonites are members of a Christian religious sect with roots in Anabaptism, a radical movement of the sixteenth century marked by a rejection of infant baptism. Some Anabaptist sects were products of the Protestant Reformation, the sixteenth-century movement to reform the Catholic Church; others were of independent origin. Anabaptists were the spearhead of the democratic religious movement and were ceaselessly persecuted, an estimated 2,000 being executed before 1530. Some Anabaptists acquired a permanent foothold in Holland, where they took the name of Mennonites from Menno Simons, a Dutch priest who at forty years of age renounced the Catholic faith and joined the Anabaptists. His followers adopted the name "Mennonites" to escape persecution.

The first German settlers in America were Mennonites who arrived and settled 10 miles (16 kilometers) north of Philadelphia, Pennsylvania, naming their settlement Germantown (now part of Philadelphia). In 1683, Mennonite settlers also arrived in Pennsylvania's Bucks, Berks, and Northampton counties. By 1712, there were some 200 Mennonites in Pennsylvania with a collective church membership of at least 100. Perhaps the largest Mennonite community in the American colonies was in located present-day Lancaster County, Pennsylvania, which was made up largely of Swiss immigrants. Some were Amish Mennonites, who represented the most conservative branch of the body. By the end of the colonial period, there were 2,000 Mennonite families in America, most of them in Pennsylvania.

Many Mennonites wear distinctive clothing: a jacket without lapels known as the "plain coat" for men, and a small lace hat known as the "covering" for women. Mennonites are characterized by their beliefs in adult baptism, pacifism, and nonresistance. Their core belief is that Jesus Christ is central to worship and everyday living; proper behavior is to follow his example.

The Bible is considered the inspired word of God, and Mennonite worship services are focused on sermons that affirm the Scriptures. Congregational singing is traditionally in four-part a cappella style, though organ music in worship services gained popularity in the late twentieth century. Membership continues to be voluntary, with adult baptism performed upon the public declaration and confession of one's faith.

Mennonites are known for their staunch pacifism, based on their understanding of Jesus as a teacher of peace. Many members choose not to participate in military service. Some object to government military expenditures, with a few refusing to pay the percentage of their annual income tax that would go for military purposes.

In 1847, the Mennonite church experienced a schism between those who wished to adhere to the "old" practices and separation from other Christian churches and those who desired to become more secular. The division ultimately resulted in the founding of the General Conference Mennonite Church in 1860. Over the next century, however, many advocated for reconciliation.

In 2002, the two denominations officially joined to form the Mennonite Church USA; in Canada, the joint churches are called Mennonite Church Canada. Today, Mennonites number an estimated 1.5 million members in sixty countries. They exhibit a wide range of practices and embody various lifestyles, from those of traditional "plain people" to those of members indistinguishable from the general population.

Men's Movements

The American men's movements were multifaceted responses to changes that emerged following the civil rights movement, gay rights movement, and second wave of feminism of the 1960s and 1970s. These social movements had served to destabilize the social, economic, and political dominance of heterosexual white masculinity in America. This shift in and questioning of traditional power relationships created confusion, frustration, and, in some cases, enlightenment, predominantly among white men, regarding their role in society, and prompted many to take part in the diverse new men's movement. Some groups were largely conservative, aiming to solidify traditional power relationships between men and women, while others were progressive, advancing new roles for both genders and attending to issues related to race and sexuality.

The men's liberation movement of the early 1970s focused on the ways gender roles negatively affected men, especially through the societal pressure to be competitive "breadwinners" and "success objects" at the expense of personal relationships and emotional connectivity. The men's liberation movement supported feminism and saw the feminist movement as a step toward human liberation, but proponents saw men as no less oppressed by gender roles than women were.

The men's rights movement of the late 1970s and early 1980s was an outgrowth of the men's liberation movement, but it focused on men as victims both of traditional expectations of masculine performance and of the feminist movement, which it regarded as the impetus for a turning tide in American culture that gave women more power than men. The participants in this movement were concerned about the confining nature of traditional conceptions of masculinity and they sought to improve men's lives, but they did not agree with feminists that men enjoyed cultural, structural, and institutional privileges. Indeed, they were particularly concerned about the ways in which men were placed at a growing disadvantage in U.S. society, such as in child-custody battles, alimony situations, and the military draft.

The profeminist men's movement arose in the mid-1970s in response to the second wave of the women's movement, and it continues to some extent into the twenty-first century. This movement is the most progressive of the men's movements. Not only does it question the ways in which men are privileged in patriarchal societies, it also investigates the centrality of homophobia in men's lives and its intersection with sexism.

Profeminist men seriously consider feminist concerns regarding male dominance and they attempt to redefine masculinity to include a merging of both male and female qualities, which they argue are arbitrarily bifurcated based on social construction, not biology. They also address the ways in which homophobia works as a system of oppression. Today, many profeminist men are public intellectuals who publish widely.

Additionally, the National Organization for Men Against Sexism (NOMAS) is a social-justice organization that grew out of this movement and advances profeminist, gay-affirmative perspectives. The organization seeks to affirm men of all intersecting identities (men of color, gay men, and men of various spiritual backgrounds), while working to achieve democratic ideals of equality. The profeminist men's movement is marked by more cultural diversity than the other movements. It is largely a North American phenomenon, with major proponents living in the United States and Canada.

Perhaps the most flamboyant of the movements is the mythopoetic men's movement, commonly associated with Robert Bly, a poet and the author of the best-selling book *Iron John* (1990). The movement emerged in the 1980s and dissipated by the mid-1990s. The mythopoetic men's movement focused on the poverty of men's relationships with one another, particularly father-son relationships and relationships between coworkers, in modern industrial society.

Men who participated in the mythopoetic men's movement attempted to reconnect with other men and empower themselves psychologically and spiritually by getting in touch with a sacred masculine space, based on preindustrial rituals rooted in essentialist notions of masculinity. Participants gathered at seminars and retreats to take part in ritualistic events such as face painting, chanting, and dancing around bonfires, with the ultimate goal of connecting on an emotional and spiritual level. Such groups encouraged men to share their feelings and concerns with other men in an effort to heal past wounds. Although the mythopoetic movement was widely ridiculed and trivialized in the popular media, it held significant appeal for many men.

The fifth major strain of the men's movement is Promise Keepers, a Christian men's organization led by Bill McCartney that emerged in 1990 and peaked in the mid-1990s but still has adherents today. The group attempts to reinvigorate men's enthusiasm for leadership roles in the church and in society at large. Men involved in this movement come together in large gatherings to hear sermons and to engage in worship.

Members of Promise Keepers, a Christian men's organization that emphasizes individual social and spiritual responsibility, join in prayer on the Mall in Washington, D.C., in October 1997. The rally was called the largest gathering of men in U.S. history. (Porter Gifford/Getty Images)

Promise Keepers argue that the contemporary American male has become feminized and that this has forced women to take the leadership roles men should have assumed; men are encouraged to reclaim these roles. The movement's discourse often evokes images of Jesus and the Christian male as hypermasculine, and encourages men to reinvest in traditional notions of masculinity. While men in this organization may find the rhetoric espoused empowering, some women of faith who seek or hold leadership roles in their places of worship are troubled about the valorization of men's leadership at the expense and marginalization of women's leadership abilities.

Merry Pranksters

In the amorphous early hippie counterculture of the early 1960s in San Francisco, novelist Ken Kesey and a group of his friends informally banded together as the Merry Pranksters, a group that promoted psychedelic drug use and an outrageous aesthetic. Key members of the group were Ken Babbs, Ron ("Hassler") Bevir, and Carolyn Adams Garcia (known as "Mountain Girl," who had a child with Kesey and later married Grateful Dead band member Jerry Garcia).

In 1964, Kesey and the Merry Pranksters set off on a road trip that became legendary in counterculture history. The journey was an effort to push the frontiers of consciousness and shock mainstream America. In pursuit of these goals, the Pranksters named the bus "Furthur" (deliberately misspelled) and attracted as much media attention as they could. Neal Cassady, a member of the circle of 1950s Beat writers, drove the bus, establishing a link between the Beats and the blossoming hippie counterculture. Although similar to the Beats in their desire to experience each moment in its full intensity, the Pranksters represented a flamboyant new generation with little respect for social norms. Accompanied by Beat poet Allen Ginsberg, they met Beat novelist Jack Kerouac in New York, but offended him with their flagrant lack of respect for an American flag, which they had cut up for clothing.

The journey also served to link the psychedelic cultures of the West and East coasts. Former Harvard University professor Timothy Leary and other intellectuals on the East Coast considered some individuals better candidates for psychedelic use than others, and melded psychedelic use with Eastern philosophies, an air of scholarly mysticism, and the idea that one had to be prepared to take hallucinogenic substances.

Kesey and the Merry Pranksters refused this approach and handed out free LSD at parties called "Acid Tests," sometimes without the knowledge of the partygoers, and promoted the idea that anyone could benefit from the insights of the drug. The events, held in the San Francisco Bay Area, aimed to provide as much visual and auditory stimulus as possible to turn the use of psychoactive substances into a mind-blowing experience. The Grateful Dead and other West Coast bands became popular performers at these events, which eventually were billed as Trips Festivals.

Although the Pranksters sought to introduce their freewheeling sense of aesthetics and spontaneity to what they interpreted as an East Coast psychedelic snobbery, they were not especially successful. When the Pranksters arrived unannounced at Millbrook, Timothy Leary's psychedelic community in New York, they were greeted coolly.

The meshing of subcultures was more successful when freelance journalist Hunter S. Thompson introduced the Pranksters to the motorcycle gang Hells Angels in 1965, and they embarked on a friendly alliance lubricated by drug use. Thompson wrote a description of the event in *Hell's Angels: A Strange and Terrible Saga* (1967).

Although Kesey died in 2001, the Prankster legacy is continued by his son Zane and Babbs's son Simon. Their company, Intrepid Trips, sells videos, T-shirts, books, and other memorabilia related to the Merry Pranksters. The exploits of the Pranksters are chronicled most notably in Tom Wolfe's 1968 New Journalism novel, *The Electric Kool-Aid Acid Test*.

Mesmerism

Mesmerism, also referred to as “animal magnetism,” is the term for the theories of Franz Anton Mesmer, an eighteenth-century Austrian-born physician who sought scientific explanations for the nonphysical universe. Mesmer observed how the planets, celestial orbits, and the sun and moon all affect one other, and also affect earthly processes such as the tides. Cosmic occurrences, he asserted, influence all animate beings and systems, including the human nervous system, and can be explained in terms of an all-penetrating or invisible fluid that imbues everything in the cosmos. He also observed that earthly beings are subject to fluctuations similar to those in nature. The “ebb and flow,” or “intensification and remission” of the sea, for example, are said to be similar to the dynamics of a living being. The controlling factor, he theorized, is a form of magnetism emitted from stars and animals alike.

The theory of animal magnetism, the “vital life force” contained in all beings, also was used to explain the health or sickness of an individual. If the substance is distributed equally through the body, Mesmer believed, the person will be healthy; if not, the imbalance can cause illness. The technique proposed for curing an individual suffering from such an imbalance consisted of getting the sick person into a relaxed state and having the physician pass bare hands along his or her body, thereby shifting the magnetic force to restore balance. Mesmer believed that convulsions were part of the healing process, but later practitioners of mesmerism did not share this view.

Mesmer initially believed that magnets could help redirect the magnetic material in the body, but he later recanted this view. Others misunderstood him, however, and kept trying to test his ideas using magnets. When they produced no results, he was criticized.

In 1784, a French royal commission was created to investigate mesmerism. Among those who served on the commission were the American statesman and scientist Benjamin Franklin and the founder of modern chemistry, Antoine Lavoisier. The group concluded that the relationship between patient and physician could produce all of

the effects claimed by Mesmer, but that they were produced by patients' imaginations rather than by any "magnetic fluid." Mesmer spent the rest of his life trying to verify his nontraditional theories and refute claims of fraud—a difficult proposition given that his theory was not objectively verifiable.

By the late eighteenth century, students and followers shifted the direction of mesmerism. The French aristocrat Marquis de Puységur focused more on the effects of somnambulistic, or trancelike, states, rather than on trying to manipulate invisible substances in the body. Puységur, according to scholar Robert C. Fuller, found that people in "sleeplike consciousness" had "remembered long forgotten experiences with astonishing accuracy" and "spontaneously performed feats of telepathy, clairvoyance, and precognition." Such discoveries brought about new interest in somnambulist states, and the study and practice of hypnotism (a term invented much later) began to spread. Mesmerism, as it was then called, developed simultaneously as an applied "science" and a form of entertainment, spawning a generation of itinerant practitioners. In the 1830s, Frenchman Charles Poyen brought mesmerism to the United States, where John Bovee Dods and Reverend George Bush helped to spread the theory with lectures and demonstrations. LaRoy Sunderland toured up and down the Atlantic seaboard and claimed to have mesmerized thousands of people.

Once accepted by the American public, mesmerism provided a so-called scientific platform for a broader movement that was a reaction against the perceived constraints of established and organized religion—a reaction central to the religious modalities of American counterculture. In providing an apparent link between the human mind and higher realms of consciousness, mesmerism underwrote a more experimental and experiential approach to religious belief. The most notable nineteenth-century example was spiritualism—a "spiritual science" that was peculiarly American in its combination of science, religion, commerce, and popular entertainment.

Although the theoretical underpinnings of mesmerism are no longer taken seriously, the study of trancelike states has helped shape modern psychology and psychiatric practice. Mesmerism's most significant contribution was a deeper understanding of the subtle and intricate workings of the mind through the process of hypnotism.

Millay, Edna St. Vincent (1892–1950)

Edna St. Vincent Millay, the scandalous "girl poet" of bohemian Greenwich Village, personified the flapper culture of the 1920s, yet she became the first American woman to win the Pulitzer Prize in poetry, in 1923. Her sensuous, semi-autobiographical lyric verse won critical acclaim, even as her elfin beauty, bisexuality, and numerous

romantic affairs unsettled literary and social circles in 1920s New York City.

“Vincent,” as she was known to family and friends, was born in Rockland, Maine, on February 22, 1892. The family moved frequently, and her father abandoned them circa 1900. Despite stark poverty, her mother, Cora, encouraged musical and literary expression, and at age fourteen Edna Millay won prizes for poems published in a children’s magazine. Too poor to consider college, she remained at home after high school.

At age nineteen, she submitted the poem “Renascence” to a national contest. Although the poem did not win, it was published and led to lifelong friendships with poets Arthur Davison Ficke and Witter Bynner.

In 1912, Millay’s sister persuaded her to give a poetry reading at a nearby resort, which led a group of guests to arrange a scholarship for her to Vassar College. After graduating in 1917, she published her first book of verse, *Renascence, and Other Poems*, and moved to Greenwich Village in New York City. She would spend the next several years there, living a bohemian lifestyle, writing poetry and plays, and becoming involved in leftist political circles.

In 1918, she began acting with the Provincetown Players, an experimental theater group that included young playwrights Susan Glaspell and Eugene O’Neill. Floyd Dell, who was then fighting the government closure of his socialist magazine *The Masses*, cast her as the lead in his play *The Angel Intrudes*. He also introduced Millay to other radical friends, including journalist John Reed, who had recently returned from covering the Russian Revolution and World War I in Europe.

And she continued writing. In 1919 and 1920, the Washington Square Players produced her antiwar play, *Aria da Capo*. In the next three years, she published four more poetry collections: *A Few Figs from Thistles* (1920), *Second April* (1921), *The Ballad of the Harp-Weaver* (1922), and *The Harp-Weaver and Other Poems* (1923), for which she was awarded the Pulitzer.

Millay was unlike any poet Americans had ever known. Technically refined and often in conventional sonnet form, her poems nevertheless dealt with passion rather than love and epitomized the death of Victorian respectability.

Millay herself was as unexpected as her poetry. Her vibrant voice, flaming red hair, and unorthodox lifestyle raised eyebrows. Like others in Greenwich Village at the time, Millay made little effort to hide her sexual relations with both men and women. She attracted suitors including the critic Edmund Wilson and the poet John Peale Bishop, and some accused her of flaunting her sexuality for the sake of publicity.

In 1923, Millay married Eugen Boissevain, a widower who had been married to the suffragist Inez Mulholland. While they remained in contact with Greenwich Village friends, the couple lived primarily at Steepletop, their farm in Austerlitz, New York. It was an open marriage that survived Millay’s extramarital relationships and endured until Boissevain’s death in 1949.

Millay’s health was taxed by her frequent reading tours, yet she remained a prolific and popular writer. In 1925, she completed the libretto for a Metropolitan Opera production, *The King’s Henchman*. She also continued to profess her leftist politics and, in 1927, was arrested while protesting the Sacco and Vanzetti execution in Boston.

During the 1930s, Millay became increasingly despondent over the rise of fascism in Europe. In June 1940, she announced her rejection of pacifism in the book-length poem *There Are No Islands, Any More*. Her patriotic wartime poetry was popular among the general public but condemned by literary critics who preferred the Greenwich Village rebel of the 1920s.

Millay struggled with alcoholism in her final years, but she continued to write. She died on October 19, 1950, at her New York farmhouse after a fall on the stairs. At the time of her death, she was surrounded by penciled drafts of new poetry.

Miller, Henry (1891–1980)

Henry Miller, the author of a number of semiautobiographical novels containing sexually explicit material, obscene language, and surreal images, was one of the most significant figures in the American literary counterculture from the 1930s to the 1970s. His most famous work, *Tropic of Cancer* (1934) was banned from publication in the United States for its detailed sexual descriptions and obscene language. The ban was lifted by the U.S. Supreme Court in the case of *Grove Press v. Gerstein* (1963), which reversed a lower-court ruling and defined the work as one of literature rather than obscenity. As an anarchist and nonconformist, Miller was regarded as a literary outlaw for much of the twentieth century. Beyond issues of obscenity, his surreal writing style also broke with accepted literary conventions such as straightforward narration; his “stream of consciousness” style generated controversy between his devotees and mainstream literary critics who questioned the quality of his writing.

Henry Valentine Miller was born on December 26, 1891, in New York City, to Heinrich and Louise Niering Miller, German American Catholics, and he grew up in Brooklyn. Miller graduated from high school in 1909 and briefly attended New York’s City College.

After working various jobs, marrying twice, and making unsuccessful writing attempts, he moved to Paris in 1929 to join a group of expatriate American writers and artists, scraping together what income he could from teaching, proofreading, and writing. During his years in France, he drafted his first successful work, *Tropic of Cancer*, based on his life (including personal details) in Paris, where the book was first published in 1934.

Miller published his second novel, *Black Spring*, in 1936. It was followed by such notable works as *Tropic of Capricorn* (1939), a continuation of *Tropic of Cancer*, *The Colossus of Maroussi* (1941), based on Miller’s travels in Greece, and *Big Sur and the Oranges of Hieronymus Bosch* (1957), which promoted his vision of utopia.

As Miller’s fame as a writer grew, so did his notoriety. His prospective American publisher, Grove Press, lobbied for years for the acceptance of his work in the United States. The U.S. Supreme Court ruling in *Grove Press v. Gerstein* was a breakthrough for writers of other important works of literature that had been deemed “obscene.”

Miller took the banning of his work and its lukewarm reception in stride, turning notoriety to his advantage to help lead the modernist literary movement. Unlike some of his contemporaries, notably Ernest Hemingway, Miller, who married five times, not only was personally untroubled, but publicly proclaimed his happiness. He died peacefully on June 7, 1980, at the age of 89.

Although he is best remembered for the erotica of the *Tropics* books, Miller was a prolific writer whose modern, individualistic style had a profound influence on subsequent generations of authors, including the Beat Generation

of poets. His novels were especially popular in the 1960s and 1970s counterculture, appealing to a generation whose sexual mores were increasingly shaped by the sexual revolution and loosening of social conventions.

Miller, William (1782–1849)

William Miller was a self-educated Baptist preacher and prophet who spearheaded the religious movement of Adventism in the 1830s and 1840s. Persuaded by his reading of the Bible that the Second Coming of Christ was imminent, Miller attracted a large group of followers—called Millerites—and fostered a renewed sense of spiritual urgency in American culture. Among the denominations that grew out of his teachings are Seventh-Day Adventists, the Advent Christian Church, the Jehovah’s Witnesses, and the Bible Students.

Miller was born on February 15, 1782, in Pittsfield, Massachusetts. Raised on a farm in upstate New York, he had little opportunity for formal education and gained most of his knowledge by reading books—especially the Bible—on his own. Despite being instilled with strong Christian beliefs throughout his childhood, he struggled with his faith and eventually grew to embrace deism.

This personal spiritual battle would become a lifelong torment for Miller, especially while he served in the War of 1812. Confronted with the horrors and senselessness of battle, Miller sought solace in his familiar Christian beliefs and joined the Baptist faith. Still not entirely committed to embracing any one dogma, however, he began an intensive study to harmonize the inconsistencies of the Bible using only Scripture and *Cruden’s Concordance*.

In his quest for religious accord, Miller came upon a passage in the Hebrew Bible, Daniel 8:14, that alludes to the time believed to precede Armageddon. (“And he said unto me, Unto two thousand and three hundred days; then shall the sanctuary be cleansed.”) Based on a theory called the “day-year principle” and various assumptions, Miller predicted that the period would end sometime between 1843 and 1844.

Recognizing the dire urgency of his discovery, Miller began to relate his insights to family and friends; none was convinced. Despite these frustrations, Miller believed that he was given a personal sign by God to preach about his discovery in the Baptist Church. In 1831, Miller gave his first sermon on Christ’s impending return.

Inspired by Miller’s lectures, the Advent or Millerite movement spread through Baptist, Methodist, Presbyterian, and Congregational churches across New England. Many of Miller’s followers came from the region of upstate New York referred to as the “Burned-Over District,” which witnessed a series of revivals and spontaneous

religious movements that gave birth not only to the Adventist movement but also to Pentecostalism and Mormonism. (The term *burned-over* was coined by historian Whitney Cross to illustrate the extent to which the area had been converted during the Second Great Awakening, which occurred from 1800 to 1840.)

Miller's message, which emphasized the importance of personal soul-searching, moved congregants with his intensity and fresh insights into traditional Scripture. Followers were so convinced the end was fast approaching that they refrained from planting crops and sold their possessions.

By October 22, 1844, Miller's interfaith movement had grown to 100,000 believers. Yet this also was the last of several dates he had proposed for Christ's Second Coming. When the great event did not occur, thousands of embittered and disillusioned Millerites abandoned the movement.

While many deemed Miller's fundamentalist approach a hoax, others remained convinced of his authority and the validity of Adventist prophecies. Some of Miller's stalwart followers turned to other ideas regarding Daniel 8:14 and the prophecies associated with 1844. Seventh-Day Adventists, for example, came to believe that the sanctuary being cleansed in Daniel's verse referred to the sanctuary in heaven, not on earth. Ever firm in his convictions, Miller died on December 20, 1849, still believing that the world would soon be revisited by its savior.

Mills, C. Wright (1916–1962)

C. Wright Mills was a Marxian sociologist who gained popularity in the 1950s and 1960s counterculture for his radical critique of American society. His writings, along with those of other radical commentators of the early-to mid-twentieth century, such as Herbert Marcuse, contributed to the intellectual underpinnings of the counterculture movement.

Charles Wright Mills was born in Waco, Texas, on August 28, 1916, to a middle-class Catholic family. He matriculated at Texas A&M University (a quasi-military institution that provided insights into the military establishment he would later examine as an academic) and transferred to the University of Texas, where he received his undergraduate degree in 1939. He attended graduate school at the University of Wisconsin, where he earned his Ph.D. in 1941 and met his mentor and later collaborator, Hans Gerth.

Mills was especially concerned with aspects of power in American society, publishing three major works on this subject: *The New Men of Power: American's Labor Leaders* (1948), *White Collar: The American Middle Classes*

(1951), and *The Power Elite* (1956). The first book was a study of how the growing labor movement in America would cause workers to integrate with the dominant classes rather than rise up against them (as Karl Marx had theorized). The second work was an analysis of a rapidly emerging middle class that was becoming frighteningly conformist. The third book examined changes in American society after World War II that placed power in the hands of three major groups—the government, big business, and the military—that together constituted what President Dwight Eisenhower had called the “military-industrial complex.”

A later work, *The Sociological Imagination* (1959), became a classic in the field for its focus on the relationships between individual experience and societal structures. It solidified Mills’s reputation as one of the most popular and important social scientists of his era.

The young people of the 1950s who were to become the New Left were captivated by Mills’s maverick style and iconoclastic ideas. His nonconformist image was expressed not only in his writing but also through his persona. Despite being an Ivy League professor—teaching at Columbia University from 1945 to 1962—he was a burly, casually dressed motorcycle rider who seemed to thumb his nose at the establishment. He developed something of a cult among young intellectuals of Students for a Democratic Society (SDS) and other leftist organizations.

Although Mills’s writings exerted a profound influence on the youth of the 1960s, he did not live to see the activism of the counterculture movement. On March 20, 1962, while preparing for a debate on U.S. policy toward Cuba (just months prior to the Cuban missile crisis) that was to be nationally televised, he died of a heart attack at the age of forty-five.

Mod

Mod is a shorthand term (originally *modernist* and sometimes *modist*) for a youth subculture and style popular in Great Britain and the United States in the late 1950s and early 1960s. The original mod was a well-to-do young man who wore slim-fitting Italian-style suits, listened to modern jazz music, and rode a motor scooter, projecting an air of urbane sophistication and rebelliousness. The height of the mod movement in Britain coincided with the rise of the Beat Generation in the United States; but when the movement arrived in America, it blended with existing countercultural trends to produce a new, uniquely American style. The mod counterculture presented itself as fresh, youthful, and trendy, free from outdated standards and ideas, and more open to experimentation.

Originally, the mods were an offshoot of the Teddy Boy subculture fashionable in Britain during the 1950s. Teddy Boys wore clothing inspired by the styles of the Edwardian era—high-waisted trousers and high-collared shirts,

worn with thin neckties and often with embroidered waistcoats.

As the Teddy Boy style began to fall out of fashion in the later 1950s, two other trendy subcultures emerged among British youth: those of the mods and the rockers. While the rockers tended to be working-class youths who favored jeans, leather jackets, motorcycles, and rock and roll music, the mods wore more traditional clothing—fashionable, European-style suits and ties—and listened to music that was less outwardly shocking to adults.

Rockers viewed mods as effeminate and snobbish, while mods looked down on rockers' uncultured, scruffy appearance and boorish attitudes. Fights often broke out when mods and rockers encroached on each other's territory. During the summer of 1964, gangs of mods and rockers fought pitched battles in seaside towns along the south coast of England. Even after police restored order, public disapproval of both youth subcultures continued, reinforced by media coverage of the "moral dilemma" facing Britain.

In sharp contrast to the violent conflicts depicted in the press, the mod image emphasized sophistication and a more relaxed attitude toward society, as opposed to the traditional and conservative attitudes against which the mod culture rebelled. As part of their interest in avant-garde Continental culture, mods enjoyed Italian neorealist and French New Wave (*Nouvelle Vague*) films, which rejected classical cinematic form in favor of a more expressionist approach. Mods also read the work of existentialist European philosophers such as Jean-Paul Sartre, Albert Camus, Maurice Merleau-Ponty, and Simone de Beauvoir, whom they revered for rejecting the historical traditions of Western philosophy.

Along with modern jazz, mods listened to the soul, ska, and rhythm and blues music popularized by American songwriters and record companies. The center of mod style and fashion in the United Kingdom was Carnaby Street in the Soho section of London, home to many independent music stores and small boutiques, including the fashionable shop of clothing designer Mary Quant.

Mod culture came to the United States as part of the British Invasion of rock bands and fashion in the early to mid-1960s, particularly as a result of the Beatles's popularity with American audiences. The U.S. mod scene built on the trends popularized by British youth, but mod style also influenced other aspects of American counterculture. The "hip" and subtly defiant image projected by the mods resonated with the emerging hippie counterculture, and the term *mod* eventually came to describe a young person who was "with it"—aware of the latest fashion and music trends and displaying a relaxed or even cavalier attitude toward traditional social and moral standards.

The influence of mod culture spread throughout the counterculture, spilling over into mainstream styles as well. The daring patterns and sleek lines of London's mod fashion designers influenced the bright, colorful clothes seen in magazines and on popular television shows such as *Rowan and Martin's Laugh-In*.

The popular series *The Mod Squad*, which ran on ABC-TV from 1968 to 1973, portrayed a group of young people who had agreed to work as undercover police officers to avoid being sent to prison for their own, minor criminal offenses. In contrast to the regular police force, members of the *Mod Squad* were able to use their youthful, hip personas to blend into the counterculture scene and investigate the suspects they had been assigned to bring to justice.

By the 1970s, mod style began to fall out of fashion as the hippie counterculture grew in popularity and new fashion trends began to emerge. There was a brief revival of the mod movement in Britain during the late 1970s and in America during the early 1980s, but the mod image remains primarily associated with London in the "Swinging Sixties"—perhaps best illustrated today by the character of Austin Powers (played by Mike Myers) in the eponymous movie series from 1997 to 2002.

Mod Squad, The

The first prime-time television series to target a counterculture viewership, *The Mod Squad* was an episodic police drama that aired on the American Broadcasting Company (ABC) network for a total of 123 episodes from 1968 to 1973, corresponding to the latter phase of the hippie movement.

Officially the creation of producers Aaron Spelling and comedian-turned-producer Danny Thomas, *The Mod Squad* was conceived by Bud Ruskin, a former Los Angeles police officer who derived the idea from his experiences working with a special youth squad ten or more years earlier. The premise was simple: A police captain, Greer (Tige Andrews), recruited three disparate members of the counterculture for a special undercover task force in exchange for dropping criminal charges pending against them.

The three hip recruits were Pete Cochran (Michael Cole), the troubled scion of a wealthy Beverly Hills family; Linc Hayes (Clarence Williams III), a radical African American; and Julie Barnes (Peggy Lipton), the daughter of a San Francisco prostitute. Their mission was to use their street credentials and hippie personae to infiltrate and obtain evidence against drug pushers, radicals, and other underworld factions.

The formula worked. The show proved extremely popular in the targeted demographic group, at least for the first few years, and the actors emerged as media sex symbols. Cole was a minor actor who had appeared in soap operas. Williams was a serious stage actor who continues to appear on TV shows in the 2000s. Lipton was a former model whose indifference to fame and being a sex symbol was reflected in her retirement from the screen after marrying music mogul Quincy Jones. (She returned to acting after her divorce in the late 1980s.)

Michael Cole (left, as Pete Cochran), Peggy Lipton (Julie Barnes), and Clarence Williams III (Linc Hayes) starred as hip, young undercover cops in the 1968–1973 television series The Mod Squad. (Authenticated News/Handout/Hulton Archive/Getty Images)

The cast and its acting skills were mocked in such venues as *MAD* magazine—this focus in itself testimony to their popularity at the time—but the most frequent criticism, the fact that the actors exhibited limited facial expressions, was in fact well suited to the characters they portrayed and the themes of the episodes. The inexpressiveness of the characters reflected their refusal to be fooled by “the Man” and was well suited to the seriousness of the social issues addressed in the show, including racial discord, drug use, and sexual promiscuity.

The Mod Squad is remembered fondly by TV-nostalgia buffs, and the cast gathered for a reunion show (“The Return of the Mod Squad”) in 1979. In one of a myriad of attempts by Hollywood to tap into the nostalgia, a film version of *The Mod Squad* was released in 1999, starring Claire Danes, Giovanni Ribisi, and Omar Epps as Julie, Pete, and Linc, respectively. Critical response was uniformly unenthusiastic.

Modern Times

Modern Times was an individualist, free love commune founded in 1851 on Long Island, New York, by anarchists Josiah Warren and Stephen Pearl Andrews. The community was based on the concepts of individual sovereignty

and responsibility as espoused by its founders. Land and the products of labor were privately owned, and there were no civil or law enforcement authorities. Members were left to pursue their own interests. Modern Times continued to operate until the mid-1860s.

Located on 750 acres (304 hectares) in present-day Brentwood, New York, some 40 miles (64 kilometers) from New York City, Modern Times was Warren's fourth attempt to establish an "individualist" or "equitable" venture. In 1827, he experimented with a commercial enterprise in Cincinnati called a time store or equity store, in which an equal exchange of labor was included in the cost of any item; the store lasted two years. In 1830, based on the Cincinnati experiment and his earlier involvement in the New Harmony community of Robert Owen in Indiana, Warren established a community in Tuscarawas County, Ohio, that he called Equity. This attempt failed for several reasons, not least of which was its location in an area prone to outbreaks of malaria. In 1846, he self-published a book of his philosophy titled *Equitable Commerce*. Soon after its publication, he established another community near Claremont, Ohio, called Utopia, that lasted until 1850.

In 1850, Warren moved to New York, where he further developed his ideas and gave public lectures on the subject. Stephen Pearl Andrews heard Warren's message and found it consistent with his own views of labor, wages, and individual responsibility. Together, Warren and Andrews made plans for a new community, which they opened on March 21, 1851.

Accessible from New York City by the Long Island Rail Road, Modern Times drew a wide range of reformers, from abolitionists to advocates of vegetarianism. Among the reformers were advocates of free love, who applied Warren's concept of individual sovereignty to love relations and regarded conventional marriage laws as oppressive. The free love ethic soon overshadowed the original focus of the community and led to frequent attacks in the press. For several months in late 1852 and early 1853, the settlement and its ideology became the object of a debate in the pages of the *New York Tribune*, involving editor Horace Greeley, Andrews, and theologian Henry James, Sr. Andrews compiled the exchanges in a book titled *Love, Marriage, and Divorce, and the Sovereignty of the Individual* (1853).

Modern Times survived the free love controversy but never regained the focus on equitable commerce that Warren and Andrews sought, and became a haven for other radical reformists of the period. At its peak, the community had no more than about 200 inhabitants, though many more passed through.

Andrews left the community in the mid-1850s and founded another utopian community in Manhattan (Unitary House) in 1857. Warren stayed on until 1862, when the American Civil War further dampened the utopian ideals of the community. By 1864, much of the spirit of reform had subsided, and the community dissolved.

Mole people is a term used to describe individuals who live in underground tunnels or subway systems, specifically in New York City; most are homeless and have nowhere else to go for shelter. Beginning in the 1980s, however, an urban legend developed that many of the mole people had organized into small groups that lived according to their own social codes, without interference from surface dwellers.

While all large cities have tunnels and subterranean areas, New York City likely has the largest underground complex in urban America. During the 1980s, stories began to circulate that groups of homeless people were living in the city's abandoned or forgotten subway tunnels. While the number was hard to gauge with any certainty, one estimate put the figure at several thousand. The idea of subterranean societies was used as part of the backstory in the television series *Beauty and the Beast* (1987–1989).

Firsthand accounts of organized mole societies date to 1993, when Jennifer Toth's book *The Mole People: Life in the Tunnels Beneath New York City* was published. In it, Toth describes her adventures as an intern for the *Los Angeles Times*, in which she traveled among the mole people of New York and learned how they lived. According to Toth, these were not just homeless people who lived as they could in the tunnel system where no one would bother them. Instead, she reported, the mole people indeed had formed small, functioning communities, similar to tribes. Numbering up to 200 people each, the groups were united by a sense of alienation from the world above and a sense that they lived a better life underground than in mainstream society.

The mole people viewed theirs as an alternative society based on caring and mutual protection; communication and love for other members were considered paramount. Some groups had members who were teachers and health-care givers. Other members were runners, who traveled aboveground to bring back supplies and mail. Although luxuries were limited, Toth's mole people tapped into utility systems for electricity, water, and showers. Scavengers brought back food and other necessities.

The authenticity of Toth's account has been questioned by some commentators. The tunnel system she describes does not correspond to the one known to exist, it has been said, and her account of group life is believed to be unrealistic. Nevertheless, few disagree that many people do live in the New York underground.

In 1989, authorities estimated that up to 5,000 people lived in the city's tunnel and subway systems. About half were believed to have some legal income, whether through collecting recyclables or minimum-wage jobs. A large proportion suffered from drug addiction or mental health problems. Many were harassed by gangs and other homeless people.

Toth's book inspired others to seek out mole people in the years that followed. In 1994, Steven Dupler made a short documentary film, *Outside Society*, in which he explored New York's underground, looking for communities such as the one Toth described. The year 2000 brought the release of *Dark Days*, a documentary made by people who lived in the tunnels to raise money for the underground homeless. Other books documenting mole settlements include Margaret Morton's *The Tunnel: The Underground Homeless of New York City* (1995).

Although efforts by city, state, and federal officials have reduced the number of homeless in the tunnels of New York, thousands of mole people are still known to reside in the city's underground rail and subway systems, adjacent to yet outside the boundaries of mainstream society.

Moonies

The Unification Church, known officially as the Holy Spirit Association for the Unification of World Christianity (HSA-UCW), was founded by Sun Myung Moon in Seoul, Korea on May 1, 1954, and established a U.S. headquarters by 1959. Moon would declare himself the true father of humanity and a messiah; followers became known as “Moonies.” The Unification Church was relatively obscure in the United States until the early 1970s, when it entered onto the political scene in support of the war in Vietnam and the beleaguered presidency of Richard M. Nixon.

Among the central tenets of the church’s philosophy is that God is both male and female. This conjoining of feminine and masculine principles finds primary worldly manifestation in the “true love” relationship between the perfected man and the perfected woman. The focus on love and marriage lends itself to one of the church’s more notorious rites, the “marriage blessing,” or mass marriage.

The first of these events, conducted by Moon in Seoul in 1961, brought together thirty-six couples. Growing in size over the years, these ceremonies continued to follow the same abiding philosophy: By entering into a marriage consecrated, and often arranged, by Moon himself (this practice has shifted somewhat, with parents of prospective couples entering more actively into matchmaking), the man and woman joining in marriage remove themselves from the sinful lineage of humankind. Thus, any child issuing from their union is born free from the burden of original sin. Entering into a marriage arranged by the church—often with a person previously unknown and of a different national and cultural background—is seen by members as a central act of faith. The first large-scale blessing outside of Korea took place at New York’s Madison Square Garden in 1982, witnessing the marriage of 2,075 couples and drawing enormous publicity and public interest. The ritual was liberalized in the 1990s, as non-church members became eligible for the blessing.

Another major source of public interest and controversy was the church’s use of recruitment and indoctrination practices that opponents referred to as “brainwashing.” Fear of “mind control” on the part of Moonie members’ families gave rise to the practice of abducting and “deprogramming,” as relatives saw it, cult members.

The controversies associated with the Moonies were part of a generalized moral panic that accompanied the rise of new religious movements in America during the 1960s and 1970s. In its search for alternatives to Western materialism, the counterculture had engaged in wide-ranging religious experimentation. A fascination with Buddhism had been inherited from the Beat movement, and classic texts of Hinduism and Taoism gained whole new audiences. The scriptural encounter with Eastern religious traditions was accompanied by a more experiential component, with contemporary exponents of Eastern mysticism drawing the attention of spiritual seekers. The transcendental meditation of Maharishi Mahesh Yogi, the ashrams of Bhagwan Shree Rajneesh, and Bhaktivedanta Swami Prabhupada’s International Society for Krishna Consciousness all drew young adherents and touched off a variety of controversies over religious freedom. Brainwashing, deprogramming, and the supposedly hypnotic powers of charismatic leaders all came under scrutiny in what authors David G. Bromley and Anson D. Shupe, Jr., have called “the great American cult scare.”

Over the years, much of the Unification Church's growth in the United States has consisted of the creation of an increasingly complex web of affiliated organizations and political alliances. The twenty-first-century membership and organizational size of the church are difficult to determine given its propensity for front organizations and diverse commercial holdings (the list of affiliated organizations, according to the Freedom of Mind Center, runs into the hundreds). The church itself claimed a worldwide membership of 3 million in 1995, including 50,000 in the United States. More conservative estimates place worldwide membership in the hundreds of thousands and U.S. membership around 5,000. Today, the Unification Church stands both as a functioning religious and political organization and as an object of controversy in the area of non-Judeo-Christian spiritual practice in America.

Moore, Michael (1954–)

A political-documentary writer and director, Michael Moore broke onto the national scene in 1989 with *Roger & Me*, a film about trying to track down the chairman of General Motors (GM) and confront him about job losses in Flint, Michigan. Moore became a gadfly to conservatives and Republicans with subsequent films and books critiquing America's gun culture, economic leadership, foreign policy, health-care system, and financial system..

Michael Francis Moore was born on April 23, 1954, to working-class parents in Flint. He attended Catholic school as a child. Wanting to effect social change by becoming a priest, he enrolled in seminary after eighth grade. He quit one year later and started tenth grade. Soon after turning eighteen, he won election to the local school board. Dropping out of college following his freshman year, he returned home to host a weekly radio show, *Radio Free Flint*, and to start an alternative newspaper called *The Flint Voice*.

In early 1986, Moore moved from Flint to San Francisco to work as an editor at *Mother Jones* magazine—which fired him four months later. He sued for wrongful termination and received \$58,000 in damages. Moore used the money to write, produce, direct, and narrate *Roger & Me*. The film chronicles the disastrous effects of massive autoworker layoffs in Flint by GM in the 1980s and Moore's hilarious attempts to persuade GM chairman Roger

Smith to visit Flint. *Roger & Me* became the highest-grossing documentary film up to that time, garnering accolades for Moore and catapulting him into the national spotlight as a progressive voice for the working class in postindustrial America.

Moore kept busy throughout the 1990s, making two full-length films. *Canadian Bacon* (1995) is a fictional story about an American president who tries to start a cold war against Canada to raise his sagging popularity during bad economic times. *The Big One* (1997) is a documentary about the promotional tour of his 1996 book *Downsize This! Random Threats from an Unarmed American*. Neither film achieved the critical or box-office success of *Roger & Me*; however, his book was a best seller.

The first of his two television shows, *TV Nation* (1994–1995), which satirized persistent social problems such as racism and poverty, aired on NBC and won an Emmy Award for outstanding informational series. His second show, *The Awful Truth* (1999–2000), which satirized corporate crooks, inept police officers, and corrupt politicians, aired on cable television.

In 2001, Moore published *Stupid White Men... and Other Sorry Excuses for the State of the Nation*, an irreverent critique of the 2000 presidential election and the administration of President George W. Bush. The book stayed on *The New York Times*' best-seller list for over a year and sold more than 4 million copies worldwide.

Documentary filmmaker Michael Moore, an avowed liberal, has tweaked conservatives, Republicans, and corporate America with features on job loss in the automotive industry, globalization, the gun culture, the War on Terror, and the health-care system. (Stephen J. Boitano/Stringer/Getty Images)

The next year, he released the film *Bowling for Columbine*, which examines America's gun culture. It concludes that Americans, unlike people in other liberal, democratic countries, are so violent because they live in a nation dominated by a culture of fear, bigotry, and violence. The documentary earned more than \$21 million at the domestic box office (tripling the record held by *Roger & Me*) and received an Academy Award for best documentary. During his acceptance speech, which was watched by 1 billion television viewers in March 2003, less than a week after the start of the second American-led war against Iraq, Moore denounced President Bush and the war. He was cheered and booed.

Later in 2002, he published the best-selling book *Dude, Where's My Country?* In this work, Moore analyzes the weakness of America's Republican administrations and ways the Bush administration has used the War on Terror to strip Americans of their civil rights.

Weathering a firestorm of controversy in the summer of 2004, Moore released *Fahrenheit 9/11*, a cinematic op-ed piece highly critical of the Bush administration's actions before, during, and after the September 11, 2001, terrorist attacks in New York City and Washington, D.C. After being dropped by its initial U.S. distributor just weeks before release, the film went on to win the prestigious Palme d'Or (first place) at the Cannes Film Festival in France. It soon found another U.S. distributor and opened in America, earning \$25 million during its first weekend and setting attendance records for a documentary. A month later, it passed the \$100 million mark. In 2007, Moore released *Sicko*, a documentary condemning the highly profitable American health-care industry, to critical acclaim. In 2009 came *Capitalism: A Love Story*, an indictment of the U.S. financial system and capitalist economic order in the context of the 2007–2009 credit crisis and recession.

Despite his phenomenal success as an author and filmmaker, critics accuse Moore of anti-Americanism and omitting important pieces of evidence or context in his works in order to justify his agenda. Nevertheless, he remains one of the most recognizable and provocative political and social commentators on the American scene.

Moravians

The Moravian Church, now a relatively mainstream Protestant denomination closely associated with Lutheranism, was, for at least the first 300 years of its history, part of a Christian counterculture in Europe and colonial North America. This counterculture's practices and beliefs set it apart from the religious and secular mainstream.

Formally known as the *Unitas Fratrum*, or United Brethren, the church was established in an area of central Europe called Moravia during the late fourteenth century. Rebelling against the Catholic Church in Rome more than a century before Martin Luther, the early Moravians rejected the authority of the pope and believed that the gospel should be preached in the local language rather than in Latin. These beliefs led to frequent persecution. Their leader, Jan Hus, was burned at the stake in 1415; the church itself was nearly wiped out by the religious wars of the seventeenth century.

In 1722, however, a small band of Moravians was taken under the wing of a German nobleman named Nikolaus von Zinzendorf. The movement grew under his protection, and by the 1730s the Moravians were sending missionaries to the New World and elsewhere. (Theirs was the first large-scale missionary movement among Protestant sects.) In the British colonies of North America, the largest Moravian settlements were Bethlehem, Pennsylvania (founded 1741), and Salem, North Carolina (1753).

The Moravians of eighteenth-century America believed that mainstream Christianity had become too rigid and legalistic. While other Protestant denominations focused on sin, guilt, and the fine points of doctrine, Moravians practiced a "heart religion" that emphasized joy, pleasure, and an intimate personal relationship with God. Many of their fellow colonists were disturbed by these beliefs, which they felt undermined their own social order as well as religious principles. At a time when European colonists were almost constantly at war with Native Americans, the Moravians sent missionaries to the frontier to learn the languages of the native peoples and bring to them a message of peace.

Moravians practiced communal living and believed in universal education and equality. The basic unit of religious and social organization in Moravian communities was the "choir," a community system that grew out the belief that men and women benefit more from the shared experiences of people at the same stage in life than from members of their biological families. All choirs—peer groups organized by age, gender, and marital status for worship, work, and instruction—were considered equal, and the fact that the Holy Spirit was believed to be female helped ensure equal rights for women.

The feminine characteristics of Jesus Christ were emphasized as well, with particular importance attached to his side wound in the crucifixion. Just as the vagina is the opening through which a human child is born, so, according to Moravians, the wound in Christ's side is the locus of spiritual rebirth. During the so-called sifting period (ca. 1740–1760), the Moravians were criticized for the use of erotic language in their hymns and religious poetry. The Moravians in Pennsylvania in particular held liberal attitudes toward sex, encouraging couples not to think of it as sinful as long as it is done with respect for one's partner and in moderation.

The influence of the Moravian Church spread as members moved west with other German settlers in the nineteenth century. Many sought political freedom and social acceptance, although, by that time, the church had adopted less-radical views and was no longer considered a threat to mainstream Protestant belief.

Despite the fact that their communities were no longer closed to outsiders, Moravians, like the Amish, continued to be set apart by their use of the German language. Another aspect of Moravian belief and practice that distinguished them from many mainstream Americans in the nineteenth century was their active opposition to slavery.

Now numbering 50,000 in the United States, the Moravians continue to emphasize tolerance, simplicity, and the importance of individual experience. Their motto is: "In essentials, unity; in nonessentials, liberty; and in all things, love."

Mormonism

Mormonism is the set of religious beliefs and way of life practiced by those who accept the nineteenth-century leader Joseph Smith as a prophet of God who translated the divinely inspired *Book of Mormon*. Mormonism significantly challenges traditional Christianity by adding scriptural revelation as well as differing views of God, atonement, sin, and creation. In addition, Mormonism, especially in its early years, has challenged traditional views of family, community, economics, and politics. The Church of Jesus Christ of Latter-day Saints (LDS), based in Salt Lake City, Utah, remains the largest group of Mormons.

Origins and Early History

In Palmyra, New York, on September 21, 1823, Joseph Smith claimed to have had a vision in which the angel Moroni told him that all current churches were wrong and that Smith would be given a great work to do. The day after that vision, subsequently canonized within Mormonism as the First Vision, Moroni showed Smith a golden book, which he was not allowed to begin translating until September 22, 1827.

Behind a curtain, and with the aid of the Old Testament breastplate stones Urim and Thummim, Smith began translating, with the help of scribes, what would become the *Book of Mormon*. Mormons faithfully believe that Moroni and his father, Mormon, had written the book many centuries earlier and that Smith ultimately returned the original gold Bible and breastplate stones to Moroni.

Every copy of the *Book of Mormon*, initially printed in March 1830, includes the Testimony of the Three Witnesses and the Testimony of the Eight Witnesses, contemporaries who claimed that they saw the gold plates before they were returned to Moroni. These statements have been used to counter criticisms leveled at the book for its anachronisms, such as the appearance of horses and steel weapons centuries before their arrival in North America, and the lack of archeological evidence supporting the story.

Considered God-inspired scripture and held in as high or higher regard than the Christian Bible, the *Book of Mormon* tells the story of the ancient Israelites and their descendants in America. According to the book, the Jaredites migrated to the Americas around the time of the city of Babel, or roughly 2250 B.C.E. In about 600 B.C.E., just prior to the Babylonian captivity, the Hebrew prophet Lehi is said to have fled with his family to America. Jesus Christ, it is written, visited these “lost Israelites” after his death and resurrection.

Lehi’s descendants through his son Nephi became prosperous city builders who retained the word of God; Lehi’s descendants through his son Laman become nomadic warriors cursed with dark skin. The Lamanites, whom Mormons identify as the ancestors of American Indians, ultimately defeated the Nephites in a great battle at Hill Cumorah, a site in New York’s Finger Lakes region. Mormon, one of the last Nephite leaders, passed the historical account of these events to his son, Moroni, who, in his post-mortal angelic state, revealed its location to Smith.

Six individuals officially chartered the Church of Christ, which met for the first time on April 6, 1830, with some thirty followers, in Fayette, New York. In 1831, the group relocated to Kirtland, Ohio. In 1834, to reflect their belief in Christ’s imminent return, they changed their name to the Church of Latter-day Saints. The church taught that all current churches fell into a “Great Apostasy” shortly after Christ’s resurrection, and that Mormons alone knew the true gospel. In 1835, Smith bought some papyri and Egyptian mummies from a traveling showman. Claiming that the papyri had been handwritten by Abraham while traveling in Egypt, Smith undertook a translation that became known as the *Book of Abraham*. That text, along with the *Book of Moses*, a “retranslated” section of the Gospel of Matthew, the thirteen *Articles of Faith*, and the canonized version of the First Vision, would ultimately comprise Mormonism’s third book of added scripture: *The Pearl of Great Price*.

When, in 1831, Smith declared Independence, Missouri, the “center place”—site of the Garden of Eden in the past and of Christ’s Second Coming in the future—Mormons moved again. In 1838, Smith and his followers changed the name of their church one last time, to the Church of Jesus Christ of Latter-day Saints. Later that year, amid increasing attacks by neighboring groups, seventeen Mormons were slaughtered at Haun’s Mill. To the faithful, harassment and persecution only confirmed their status as the true church.

Brigham Young and Later History

In 1839, a follower named Brigham Young ferried refugees from Missouri to Illinois, where they developed many of the church’s most distinctive practices. Smith, who had been jailed, rejoined his followers in the town of Nauvoo and served as mayor. In the face of ongoing persecution, he established a militia with state-authorized commissions and equipment, and a unique city charter with a habeas corpus provision, whereby the city council could free arrested persons. Intended as protection for Mormons, the provision resulted in Nauvoo’s reputation as a haven for counterfeiters and river pirates.

In 1841, the church began vicarious baptism for the dead; the following year, it began the practice of “endowment,” which included rituals and symbols borrowed from Freemasonry. In 1843, Smith began teaching that God once had a body of flesh and bone, and on April 7 of the following year, he delivered the King Follett Discourse, laying out Mormonism’s most radical departures from Christianity. Among these were the beliefs that God had been human, that there were numerous gods, and that God “created” by organizing already existing matter. Four days later, Smith had himself appointed “king, priest, and ruler over Israel on Earth.” He went on to announce his candidacy for president of the United States and later declared that all of America was Zion.

In secret, Smith and other church leaders took plural wives, publicly denying doing so when rumors about the practice began circulating. However, these marriages, including both polygyny (more than one wife per husband) and, more rarely, polyandry (more than one husband per wife) created strong bonds of loyalty and increased family ties among the leadership.

As a result of these practices, some of Smith's earlier followers left the fold and on May 12, 1844, established the Reformed Church of Jesus Christ of Latter Day Saints. This was not the first schism within Mormon ranks, nor would it be the last. When the *Nauvoo Expositor* began criticizing the new doctrines and the habeas corpus provision, Smith ordered its printing press destroyed. The climate of fear and mutual suspicion between Mormons and other settlers in the area escalated. On June 27, an angry mob killed Smith and his brother Hyrum in the Carthage, Illinois, jail.

It was Young, again, who led the Mormon refugees to safety, this time into Utah. Not everyone chose to go, however; among those who stayed behind were Smith's first wife, Emma. Once in Utah, the Mormons openly practiced polygamy and went about building a theocratic community, developing a number of cooperative irrigation and business projects. To help new converts move to Salt Lake City, the church established the Perpetual Emigrating Fund; to minimize costs (covered wagons were expensive), handcarts were used to help settlers walk their possessions to Utah.

In the 1856 presidential election campaign, the Republican Party platform promised to rid the country of the "twin barbarisms" of slavery and polygamy. Of greater concern was the quasi-independence of the theocratic kingdom developing at Salt Lake.

In 1857, President James Buchanan, falsely informed that the Mormons were rebelling, dispatched the largest peacetime army to date to install the territorial governor. In the resulting Utah War of 1857 to 1858 not a shot was fired, despite apocalyptic rhetoric. In September 1857, Mormons refused to sell goods to a non-Mormon wagon train, whose occupants responded with taunts. The angry Mormons, not authorized by church elders, attacked the wagon train and killed more than 120 settlers in what came to be called the "Mountain Meadows Massacre."

As long as Utah was a territory, the federal government appointed governors and other local officials. The Mormons thus desired statehood and the freedom it would bring. Polygamy became an issue upon which to delay statehood, but non-Mormons were more worried about church control. As part of the campaign to end polygamy, in 1870 Utah women became the first in the nation to receive the (territorial) right to vote. Polygamy cases finally went to the U.S. Supreme Court in 1879 and 1880; its ruling in *Reynolds v. United States* (1879) that the First Amendment does not protect the practice of polygamy represented its first limitation on religious liberty. In 1887, the government dissolved the initial corporation of the church and set about disposing of its assets.

Struggling for survival, the Mormon Church announced the end of polygamy in its "Manifesto" of September 25, 1890. The next year, the church dissolved its People's Party and told members to choose between the two national parties. Utah was granted statehood in 1896, but polygamy was still practiced and quietly condoned until the church officially denounced the practice in 1904, threatening polygamists with excommunication. Fourteen years of ambiguity fueled the rise of splinter groups, some of which continue the practice of polygamy to this day.

Structure and Beliefs

The Church of Jesus Christ of Latter-day Saints maintains top-down control and a three-in-one leadership structure. At the top of the pyramid, known as the General Authorities, are the First Presidency (the president assisted by the first and second counselors) and the Quorum of Twelve Apostles. Below them, the seven-man Presidency of the Seventy supervises all Quorums of the Seventy (who do not actually number seventy) and the Second Quorum of Seventy (who do not number seventy either). A president with a first and second counselor lead the church's regional unit, called a "stake." A bishop with a first and second counselor (called a "bishopric") leads the local congregations, called "wards."

All choices are approved by those higher up. The bishopric appoints the heads and approves the counselors who form the leadership trio for the women's Relief Society, Young Women, Young Men, Primary, and Sunday School auxiliaries. Leaders of local congregations interview each member annually about loyalty to church leaders, paying the full 10 percent tithe to the church, and upholding church teachings. Appropriate responses earn the member a wallet-sized "temple recommend" card, without which the member cannot perform the central rituals of the faith.

Mormonism has a universal priesthood for males, but there is no paid clergy. Children born into the Mormon faith are baptized at age eight, and boys enter the Aaronic priesthood at age twelve. Between the ages of fourteen and sixteen, they can become teachers, speak at church meetings, and participate in home teaching (the monthly visit to each ward household for spiritual strengthening). Between the ages of sixteen and eighteen, they can become priests—which allows them to conduct home teachings, baptize, administer the sacrament, and ordain teachers. At age eighteen or older, young men enter the three-tiered Melchizedek priesthood. As first-tier elders, they can lay hands to pronounce blessings, pray for healings or confer the priesthood, hold leadership positions, or become a church missionary.

Church missionaries work in pairs, wear a distinctive white shirt and dark suit, and serve unpaid for two years, completing their mission before graduating from college. The second-or high-priest level is held by the ward bishop, stake president, or higher church authority. The rank of Seventy or Apostle is reached by men who hold those titles among the General Authorities. African Americans were denied the priesthood until a 1978 "prophecy" declared it open to them.

Marriage is required to achieve the highest level in Mormonism's three-tiered heaven. The goal is to procreate a family throughout eternity, and begin the creation of worlds for one's own spirit children. For Mormons, existence passes through three stages: a pre-mortal state of spirits waiting to be born, the current mortal state, and a post-mortal state as potential gods. Domestic bliss is the future goal and cultivated in this life. Members have the opportunity to "seal" their marriages for all eternity if they wish.

The goal of reuniting families for all eternity, coupled with the belief in a vicarious baptism for the dead, makes genealogy of fundamental theological importance to Mormons. Indeed, the LDS Church operates the largest genealogical archive on Earth, with more than 2 billion names on record. Members conduct proxy baptisms (whereby the dead are given the chance to accept Christ's offer of entering his kingdom) for family ancestors as well as for others. Volunteers take the names of deceased persons from public records and submit them for ordinance work.

Some of the lifestyle demands of the Mormon Church are similar to those of conservative Christianity, while others are unique. Mormons are expected to remain chaste until married; abstain from drugs, tobacco, alcohol, and caffeine (hot or cold); avoid debt, gambling, and pornography; and be good citizens. As a legacy of their millennialist background, Mormon families store a year's worth of food supplies. And as a reminder of their unique beliefs, they wear holy underwear.

The single greatest challenge to Christianity posed by Mormonism is the doctrine of God. While mainstream Christians wrestle with the paradox of how an all-powerful God can allow evil, Mormons avoid the dilemma entirely. The Mormon God is a self-made deity who once was human and continues an ongoing process of moral development. God the Father, Jesus Christ, and the Holy Spirit are separate entities. As God the Father is married, there is also a mother God (though Mormons do not pray to her).

For Mormons, Adam's fall was a planned transgression that allowed him and Eve to fulfill the first commandment to "Be fruitful and multiply." Eating from the Tree of Life was a deliberate act, done to enable them to follow the sacred goal of procreating—making Adam a hero next to Jesus Christ. For Mormons, there is no concept of Original Sin; nor does Christ take on the sins of others.

For many, the greatest appeal of Mormonism is its strong support system—its tradition of involving all members and its emphasis on family values. Most Mormon converts come from Christian backgrounds, and the faith

continues to grow throughout the world. The religion has grown so rapidly in recent years—to nearly 14 million worldwide according to the LDS Church in 2009—that some scholars believe Mormonism could become the first important new world religion since Islam.

Morrison, Jim (1943–1971)

Jim Morrison, lead singer and lyricist for the rock group the Doors, brought a dark, poetic sensibility to the acid rock scene of the late 1960s. Backed by the dark-carnival sound of the band, Morrison's lyrics described a world of guilt, foreboding, violence, and dread—themes that were a direct contradiction of the themes of peace and love espoused by the popular music of the day. Morrison helped create the “post-Elvis” rock god archetype and found himself at odds with the “establishment” before dying a death that some consider as mysterious as his life.

James Douglas Morrison was born in Melbourne, Florida, on December 8, 1943, into a career military family. As a student, he was intelligent and driven, with particular interest in fields as diverse as literature, psychology, religion, and philosophy. While still a teenager, he discovered the writings of German philosopher Friedrich Nietzsche, Beat poet Jack Kerouac, French poet Arthur Rimbaud, German political philosopher Karl Marx, and English poet and mystic William Blake, each of whom helped shape Morrison's growing antiestablishment worldview.

After a brief stint at a local community college, Morrison studied film at the University of California, Los Angeles, where he befriended keyboardist Ray Manzarek. The duo, along with guitarist Robby Krieger and drummer John Densmore, formed the Doors, naming the band after a line from William Blake's *The Marriage of Heaven and Hell* (1793), “If the doors of perception were cleansed, everything would appear to man as it is, infinite,” which Morrison had discovered in Aldous Huxley's book *The Doors of Perception* (1954).

The band built a fan base playing gigs in the L.A. club scene and signed a recording contract in 1966 with Elektra Records, then a small folk music label. They released their first album, *The Doors*, the following year, and it

became one of the best-selling albums of the late 1960s. The album featured the group's best-known song, "Light My Fire," but it was the oedipal musings of "The End," in which Morrison symbolically kills his father, that became emblematic of the band's image and dark, moody themes. Morrison cited Nietzsche's *The Birth of Tragedy* (1872) as an influence on his lyrics, with the overarching themes of cutting ties with the establishment and symbolic death and rebirth.

The single "Light My Fire" hit number one in 1967. This landed Morrison and the Doors their first shot at nationwide U.S. media exposure, an invitation to appear on the popular *Ed Sullivan Show*. The prime-time TV variety show was already notorious in the music industry for having censored Elvis's gyrating hips, and Morrison should not have been surprised when censors demanded that the Doors change the lyrics of "Light My Fire" from "Baby we couldn't get much higher" to the less threatening "Baby we couldn't get much better." The band agreed, but Morrison sang the original lyrics in the live performance. Sullivan was so angry that he refused to shake their hands after the performance and made sure they were never invited back. This was the first time Morrison openly challenged the establishment and lost.

Trying to capitalize on the success of their debut album, the band released *Strange Days* in 1967, *Waiting for the Sun* in 1968, and *The Soft Parade* in 1969. As the Doors became more successful, however, Morrison became more self-destructive, pursuing a bohemian lifestyle of drugs, alcohol, and sex. His self-abuse led to a decline in the quality of music the band produced and in Morrison's onstage persona. He became less of a sex object and more rebellious, which led to a number of brushes with the law.

This culminated in Morrison's March 1969 arrest for allegedly exposing himself to a concert audience in Miami. He was later convicted of indecent exposure and sentenced to six months of hard labor. Out of jail while the case was on appeal, he moved to Paris, France, in March 1971—just before the release of the Doors' final studio album, *LA Woman*—to focus on his writing.

Morrison died, apparently from an overdose of heroin, on July 3, 1971, in Paris. Rumors that he had faked his death to escape the spotlight or that he was assassinated by the establishment circulated. His grave at Père-Lachaise cemetery in Paris has remained a frequently visited counterculture shrine, his stage persona has influenced rock-band leaders from the Who's Roger Daltrey to Led Zeppelin's Robert Plant, and the music of the Doors has attracted fans with each new generation of rock-music listeners.

Morrison, Toni (1931–)

A significant element of American counterculture involves the critique of white racism and cultural dominance. In fiction and nonfiction works renowned for their imaginative language, vivid characters, and sheer power, Toni Morrison unrelentingly asserts the realities and complexities of black life in America, making visible a presence that she argues has been erased and distorted since the founding of the republic.

Born Chloe Anthony Wofford in the multiracial steel town of Lorain, Ohio, on February 18, 1931, she was one of four children of George Wofford and Ramah Willis Wofford. Her working-class parents taught her to read at a young age and, along with the maternal grandparents who shared the family home, imbued her with a deep understanding of African American culture and community.

She changed her name to Toni while attending Howard University, from which she graduated in 1953, and went on to receive a master's degree in English from Cornell University in 1955. She married Harold Morrison, a Jamaican architect, in 1958 and bore two sons before their divorce in 1964.

After completing her master's degree, Toni Morrison took up the first of many academic posts and worked as an editor for Random House, acting as a mentor for many African American writers. She is best known as a novelist, but also is a literary critic, children's author, playwright, and lyricist. Her highly acclaimed novel *Beloved* (1987) won the Pulitzer Prize in 1988. In 1993, she became the first African American woman to win the Nobel Prize in Literature.

Morrison's success can be attributed largely to her gifts as a storyteller, but she also draws heavily on African American folklore, ghost stories, songs, and history as structuring elements of her stories. Her fiction is often highly rhythmic, presents frequent changes in the voice of the narrator, shifts back and forth in time, and moves effortlessly between the real and the supernatural. As a result, her writing sometimes has been characterized as unrealistic or confusing, but more often is celebrated for its lyricism and multiple layers of meaning.

Her writing is overtly political, and her focus on race, as well as class and gender, resonates strongly with central cultural concerns of late-twentieth-century America, as manifested in prominent social movements such as the civil rights movement, Black Power, and feminism. This is evident in her works of fiction; for example, in *The Bluest Eye* (1970), a young African American girl is literally driven mad in 1940s America by pernicious Eurocentric notions of beauty and as a result of being raped by her father. Set in the Caribbean, *Tar Baby* (1981) addresses themes of class and racial difference within the black community by exploring a fraught love affair between the affluent, highly educated model Jadine and the handsome wastrel Son.

On the subject of slavery, *Beloved* is a fictionalized account of the true story of Margaret Garner, a runaway slave who murdered one of her own children to keep her daughter from suffering a life of slavery. *A Mercy* (2008), her ninth novel, describes the life of slaves, their Dutch owners, indentured servants, and Native Americans in and around a Maryland plantation in the late sixteenth century. Morrison believes it is only through storytelling that the deep horror of practices such as slavery or child abuse can be effectively communicated, and that such truth telling is essential in order for African Americans to reclaim their historical experience and assert their rightful place in American society.

Likewise, Morrison's nonfiction focuses on issues of class, race, and gender. The edited anthology, *Race-ing Justice, En-gendering Power* (1992), addresses allegations of sexual harassment investigated in the Senate confirmation hearings of an African American nominee to the U.S. Supreme Court. Her first book of literary criticism, *Playing in the Dark* (1992), investigates the racism of the central texts of the American literary canon. No matter what the genre, Morrison provides a compelling African American literary voice within the antiracist element of American counterculture.

Morton, Thomas (ca. 1576–1647)

The colonial poet, merchant, and adventurer Thomas Morton founded Mare Mount, a community in early-seventeenth-century Massachusetts that, with its lax morality and multiethnic population, challenged the values of its Puritan neighbors. One of America's first poets, his works celebrated freedom as man's natural state and criticized what he believed to be the stifling atmosphere of New England Calvinism, a theological doctrine of the Reformed and Presbyterian churches derived from French theologian John Calvin's *Institutes of the Christian Religion* (1536).

The son of an Anglican military officer, Morton was born in about 1576 in the West Country of England, a region where pro-Stuart, Royalist, and Cavalier attitudes dominated. He was educated at Clifford's Inn in London between 1593 and 1600, and practiced law before signing on with an expedition to seek fame and fortune in the New World. In the spring of 1625, Morton made his way to New England with a group of speculators and indentured servants to supply coastal settlements and market their goods. Established at Mount Wollaston (present-day Quincy), Massachusetts, the enterprise was a failure. When the adventurers went in search of better prospects, Morton remained behind to reorganize the settlement. Aware of the antagonism between Europeans and native peoples, the West Country Cavalier opened his settlement to "all comers" and began exchanging guns for furs with the tribes, a dangerous trade that the Dutch and French had initiated elsewhere.

In addition, Morton transformed the outpost, now renamed Mare Mount, into an intercultural center for Europeans and Native Americans based on trade and entertainment. To improve commerce, he erected an 80-foot (24-meter) Maypole and attached a rack of antlers at the top, ostensibly to serve as a marker for prospective traders. The settlement adopted a carnival-like atmosphere and guests were treated to homemade beer and enjoyed games, revels, sports, dancing, music, and other Elizabethan leisure activities. Native women, "lasses in beaver coats," were even invited to cohabit with Morton and his followers. However bold and risqué, Morton's inducements paid dividends. Trade peaked in 1626 and 1627, as the outpost tapped the fur trade as far north as the Kennebec River in Maine.

While Mare Mount was enjoying its reputation as a lucrative trade and intercultural center, nearby separatists of Plymouth Plantation nervously monitored Morton's activities. Governor William Bradford labeled Morton the "the Lord of Misrule" and charged him with engaging in "illicit" trade.

In early summer 1628, on a day when Morton was too intoxicated to defend himself, Captain Myles Standish seized the host of Mare Mount. Morton was confined on the Isle of Shoals off the New Hampshire coast before being deported to England.

Embittered, Morton returned and attempted to revive his settlement, now dishonorably renamed Mount Dagon by his enemies. He was rearrested in 1630 by the stern Puritan John Endicott and dispatched to England again. This time, officials felt compelled to burn Mare Mount.

Rebuffed but not defeated, Morton returned yet again to New England in 1645. Governor John Winthrop, aware of Morton's disparaging remarks about his Calvinist enemies, most decidedly in the *New English Canaan* (1637), ordered him imprisoned for a year. At age sixty-nine, Morton, still unrepentant, was released and relocated to York, Maine, where he died in 1647.

Mother Jones

Mother Jones magazine was founded in San Francisco in 1976 as part of the Foundation for National Progress, a nonprofit agency devoted to radical scholarship established by Richard Parker, Adam Hochschild, and Paul Jacobs. Named after the legendary labor organizer Mary Harris "Mother" Jones, whose political "hell-raising" the magazine has sought to emulate with its muckraking stories, *Mother Jones* has focused on socially conscious journalism with prize-winning investigative reporting on social justice, environmental issues, and abuses of political and corporate power—especially stories ignored by the mainstream by the media.

Mother Jones first made its mark on American society with a 1977 exposé revealing that the Ford Pinto was prone to explosion in rear-end collisions, and that the Ford Motor Company had been made aware of this fact before production of the automobile, yet willfully ignored the issue. The article won several journalism awards, gained the attention of major media around the country, and prompted Ford to recall 1.5 million Pintos for repairs.

Mother Jones soon came to be recognized as a liberal mainstream news source, as well as a threat to conservative values. In 1981, at the beginning of the Ronald Reagan administration, the Internal Revenue Service (IRS) challenged the magazine's nonprofit, tax-exempt status, resulting in a legal dispute that was resolved in *Mother Jones's* favor in 1983. Many regarded the IRS initiative as a politically motivated attempt to censor the magazine.

Historically, *Mother Jones* has found defining its image to be a challenge, even though its core values have not changed. Reader polls conducted by the magazine have confirmed that, far from drawing the young, countercultural readership of its early years, the primary audience of *Mother Jones* has grown older along with the magazine and now earns a solid upper-middle-class living. As a result, the magazine has undergone several major face-lifts in an effort to appeal not just to its "very loyal band" of readers, but also to a younger audience. In a further attempt to expand its audience, *Mother Jones* in 1993 became the first general-interest magazine to offer its content online.

Over the years, there have been several major shake-ups on the editorial staff; the most famous was when future

filmmaker Michael Moore, who served as editor for four months in 1986, was fired in a highly public way. And while *Mother Jones* reported to readers in 1980 that it was the fastest-growing magazine in the United States, circulation fluctuated throughout the 1980s and much of the 1990s (as of 2008, it exceeded 230,000). In addition, although the magazine began as a monthly publication, by the early 1990s it had become bimonthly.

Like its namesake, the magazine has proven adept in meeting its challenges. *Mother Jones* won the prestigious National Magazine Award for general excellence in 2001, and the publication was nominated for the award again in 2005 for its reporting on Exxon Mobil's payoffs to climate experts.

Movimiento Estudiantil Chicano de Aztlán

El Movimiento Estudiantil Chicano de Aztlán (the Chicano Student Movement of Aztlán, or MEChA) is a student-based organization that was founded in 1969 on two core ideas: Chicanismo and the mythological significance of Aztlán, the legendary Aztec homeland. It was formed to implement El Plan Espiritual de Aztlán (the Spiritual Plan of Aztlán), which articulates a vision of the Chicano people as proud of their heritage and a political imperative to raise consciousness within the community for change, and inspired students to demand change on their respective campuses.

MEChA traces its heritage to the Chicano Movement, a component of the civil rights movement in the United States during the late 1960s and early 1970s that sought political empowerment and civil rights for Mexican Americans. In 1969, the Chicano Coordinating Council on Higher Education held a conference in Santa Barbara, California. Members from diverse organizations within the Chicano Movement, all with vested interests in implementing the Spiritual Plan of Aztlán in the American education system, decided to unite in order to have greater impact. The plan had been devised collectively in Denver that same year, at the National Chicano Youth Liberation Conference. It was at this time that many groups united under the name MEChA.

The ideology embraced by MEChA and Chicanismo represented a departure from previous Mexican American thinking; rather than seeking assimilation in the Anglo American mainstream, Chicanos would promote pride in their own ethnicity and cultural heritage. At the same time, Chicanismo was a community-organizing strategy that put a spotlight on the institutionalized racism still affecting the Mexican American people and called for direct confrontation of it. For MEChA, such action would focus on community-based projects and changing the enrollment and hiring practices in higher education.

Aztlán, the Aztec homeland before the Nahuatl-speaking people migrated south into the area of present-day central Mexico, is a symbol more than a historical fact. It is said to have been located in the heart of what is now the U.S. Southwest, on land gained by the United States in the Treaty of Guadalupe Hidalgo in 1848. Modern

Chicanos chose to identify with their indigenous background through the Aztecs, and the idea of Aztlán continues to serve as a reminder of the U.S. colonization of Mexico after the treaty.

At the heart of the Chicano Movement, it was a call for a separate nationalist movement and a view of history and culture that legitimized for the Chicanos both the right and the responsibility to determine their own destiny. In the educational system, this identification led to actions to redress MEChA's belief that Mexican American culture was being systematically repressed in language, history, course content, and faculty hiring.

While the central focus of MEChA was and continues to be activism in the college and university systems, the movement has always included both community interaction and support of high school students in their campaigns for improved education. The struggle was especially heated in California during the 1960s and 1970s, as Chicanos demanded the establishment of formal Chicano studies departments and degree programs and the hiring of Chicano faculty and administrators. MEChA was also outspoken against the Vietnam War, helping organize antiwar moratoriums and demonstrations against Chicano participation in the war.

In the decades since, the organization has gone through generations of change. Local chapters have pursued their own concerns, while MEChA chapters everywhere continue to be united at the cultural and historical levels in their central purposes: to ensure that the Chicano community has a say in its own liberation and governance, and to battle continuing prejudice and oppression in academic institutions.

Ms.

The pioneering feminist magazine *Ms.*, cofounded by writer-editor Gloria Steinem, was first published as a one-time special supplement to *New York* magazine in December 1971. The first stand-alone issue was published in January 1972, and the magazine went monthly in July of that year, making it America's first mainstream feminist periodical with national circulation. It became widely known as the voice of second-wave feminism, dealing with issues of equality in all areas of women's lives.

The name for the magazine came from the marital-status-neutral title created by feminists as an alternative to Miss or Mrs. Its statement of purpose was clearly outlined in an ad in the first issue: “Ms. is a magazine for female human beings. Unlike traditional women’s publications, it does not identify us by role—as wives, mothers, lovers or even as workers and professionals. It assumes that women are full human beings who are both complex and individual.” This purpose was in stark contrast to traditional women’s magazines of the time, which focused on women’s roles as wives, mothers, and homemakers by running articles on housekeeping, child rearing, and cooking.

Ms. magazine appeared in 1972 as the first national periodical devoted to women’s issues and the feminist movement. Activist Gloria Steinem (left) was a founding editor; Patricia Carbine served as publisher. They are pictured here in the mid-1980s. (Angel Franco/Hulton Archive/Getty Images)

From the outset, *Ms.* was controversial for eschewing these topics and addressing issues that no mainstream women’s magazines—and few other publications at all—would take on. It was the first to identify such contemporary women’s problems as unequal pay for equal work, sexual harassment and discrimination, date rape, domestic violence, the connection between pornography and violence against women, and women’s health, including the dangers of breast implants and illegal abortion. The very first issue featured an image of a female superhero on the cover and included a two-page feature titled “We Have Had Abortions.” The article discussed the dangers of current abortion laws and included a petition for reform with the names of fifty-three prominent women, including Billie Jean King, Nora Ephron, and Steinem herself.

Since its inception, *Ms.* also focused on subjects related to alternative lifestyles for women, from cohabitation (instead of marriage) and lesbianism to nontraditional approaches to child rearing (such as day care, cooperative care, and reversal of professional-homemaker roles between husbands and wives). By examining such issues, the magazine contributed significantly to changing gender roles and identities in America.

The magazine also featured fiction and poetry by women, expanding the audience for feminist literature. Among those whose work have appeared in its pages are Margaret Atwood, Barbara Ehrenreich, and Alice Walker. Political coverage, another major editorial component, has included feminist political theory and women’s perspectives on general electoral politics and world news.

The magazine was a success from its inception, as all 300,000 nationwide test copies sold out in eight days. During the first year, subscriptions rose from 145,000 to 200,000, with another 200,000 copies sold at the newsstand. With multiple readers per copy, the magazine was estimated as having about 1.5 million readers per

issue. In addition to Steinem, the magazine's early editorial content was crafted by several prominent women in the publishing world, including founding editors Letty Cottin Pogrebin and Patricia Carbine (formerly of *McCall's*).

In 1972, the nonprofit Ms. Foundation for Women was founded to organize programs and raise money to promote economic justice for women and reproductive health and rights, and to combat violence against women and teen pregnancy. In 1976, it became the first national foundation in America to grant awards to shelters for battered women. Its most visible project has been the Take Our Daughters to Work Day, launched in 1992 (and renamed Take Our Daughters and Sons to Work Day the following year). In 1979, *Ms.* became the nonprofit publication arm of the Foundation for Education and Communication, a subsidiary of the Ms. Foundation for Women.

The magazine was sold several times between the late 1980s and 2001, when it was purchased by the current owner, the Feminist Majority Foundation. It continues to carry no advertising, and Steinem remains actively involved as a consulting editor. And, true to its original spirit, *Ms.* continues attract attention and spark controversy. A 2005 story by Martha Mendoza, "Between a Woman and Her Doctor," was nominated for a National Magazine Award, and the September 2006 issue carried a new petition to keep abortion legal that began with the names of some of the original 1972 signers.

MTV

MTV (Music Television) is a cable television network based in New York City. It was launched as a single station on August 1, 1981, to showcase music videos for adolescent and young-adult viewers. Today, the MTV network also features news about the entertainment industry, shows on contemporary youth and pop culture, and other fare for the same demographic. MTV became an integral part of the cultural consciousness of the generation of Americans who grew up in the 1980s and 1990s. MTV created a model for music consolidation, dissemination, and consumption that spread throughout the United States and the rest of the world. It changed the way artists produced their music, the way record companies marketed their artists, and the way consumers experience the music. While MTV helped revolutionize the mainstream entertainment industry, it also drew sharp criticism from social conservatives and other segments of mainstream society for its purportedly subversive programming.

The phenomenon of a dedicated channel on which the various players (musicians, producers, industry executives, fans, audiences) could congregate was an innovation of MTV. When it was launched, the official number of U.S.

subscribers was 3 million, a number that has grown exponentially over the years.

Many of the videos that played on MTV in the early years were gritty performances, or scenes excerpted from live concerts. MTV turned many rock music acts into household names during the 1980s, contributing in a major way to the popularity of leading rock artists. In addition to influencing the growth of the recording industry in general, MTV revolutionized the industry as well. The music video became a unique medium of musical expression on film; its arrival was marked with the premiere of the MTV Music Video Awards in 1984. With the advent of music videos, the VJ (video jockey) replaced the traditional DJ (disc jockey).

Millions of Americans fashioned and refashioned their lifestyles around the channel. Significant segments of American youth were turned into MTV junkies, as they took in and regurgitated the lingo, dress, mores, and lifestyles they saw on the station. In the early years, this meant that many youths celebrated a kind of social, cultural, and political radicalism defined by nonchalant indifference to established rules. Thus, many parents reacted negatively to the original channel, which also drew the wrath of America's conservative religious establishment.

In its early years, MTV tended to promote white rock acts, which caused a furor among nonwhite rock and pop groups and their advocates. Michael Jackson was one of the first African American pop acts to break into MTV heavy rotation. Rap music eventually found an outlet on the network, ensuring a more varied mix of pop culture fare and a more racially broad viewership.

Over the years, critics have accused MTV of promoting a subculture of drug use, violence, and misogyny. In the early 1990s, the channel responded by airing popular artists who presented a more wholesome image and represented more benign values. But there were contradictions. The employment of popular artists promoting education and sobriety was largely a move to appease the critics, as the network still promoted the work of artists whose message embraced drug use, condoned violence, and denigrated women.

Beginning in the late 1980s, programming included nonmusic, youth-oriented shows. In the early 1990s, the station aired animated features, including ones that explored mature themes, such as the popular *Beavis and Butt-head*. By the late 1990s, the station was driven by nonmusic shows and comedic presentations such as *Punk'd*. In the 2000s, its major emphasis has been on reality shows. In some respects, in fact, MTV sparked the trend in reality TV shows with the experimental 1992 program *The Real World*.

While diehard fans of the original MTV concept have lamented the network's declining interest in music and music videos and its expanded interest in commercialized programming, the network has attempted to stay on the cusp of new developments in the entertainment industry and popular culture (if outside the exclusive realm of music recording). MTV has divested much of the interest in music to affiliated stations such as VH1, MTV2, BET, CMT, and Tempo; MTV Hits and MTV Jams play music videos exclusively. In addition to these cable networks, the MTV network also operates sister stations for various ethnic and demographic groups in the United States; MHD, a high-definition channel; dozens of affiliated stations for audiences around the world; and the Web site MTV.com.

Nader, Ralph (1934–)

Ralph Nader is an attorney, consumer rights advocate, fierce critic of the automobile industry, and former presidential candidate whose central role in the creation of a modern consumer movement helped launch a new era in public citizenship.

Born on February 27, 1934, in Winsted, Connecticut, to Lebanese parents, Nader graduated from Princeton University in 1955 and received a law degree from Harvard Law School in 1958. At Harvard, young Nader challenged the traditional concerns of corporate law pedagogy by initiating research on safety violations in the automobile industry. This line of inquiry proved highly sensitive, as no product or industry epitomized the postwar consumer society more than the automobile.

After graduation and brief service in the U.S. Army, Nader worked as an independent lawyer in Hartford and taught at the University of Connecticut. In 1964, he moved to Washington, D.C., where, as a consultant to government agencies and research groups and an adviser to a Senate subcommittee investigating automobile hazards, he began his life as a public citizen and consumer rights crusader.

Nader rose to fame with the publication of *Unsafe at Any Speed* (1965), the landmark book that exposed the dangers of General Motors's Chevrolet Corvair and other American car models. By sacrificing automotive safety for stylistic and marketing concerns and by planning for obsolescence, Nader argued, General Motors (GM) had endangered the American consumer and should be held responsible for its actions. As a result of his exposé, the National Traffic and Motor Vehicle Safety Act was passed in 1966. In the era of civil rights and antiestablishment and anti-corporate sentiments, Nader's assault on corporate interests extended the notion of public rights to the American consumer.

Establishing the American consumer as a political agent in his or her own right served as the ideological underpinning for more than two dozen public-interest organizations founded by Nader in the decades that followed. Organizations such as the Center for the Study of Responsive Law, Public Citizen, and the Public Interest Research Groups (PIRGs), for example, have been largely responsible for the passing of important legislative and regulatory measures. Passage of the Freedom of Information Act (1966), a federal law establishing public access to government documents; establishment of the Occupational Safety and Health Administration (1970), a federal agency charged with issuing and enforcing standards for employees' health and safety in the workplace; creation of the Environmental Protection Agency (1970), a federal agency dedicated to protecting the environment; and creation of the Consumer Product Safety Commission (1972), a federal agency charged with protecting the public from unreasonable risks from consumer products are among the public initiatives prompted and aided by Nader's activism.

In the aftermath of Nader's victory on the GM Chevrolet Corvair issue, a number of young, intensely committed activists emerged as an important watchdog consumer-advocacy group. Dubbed "Nader's Raiders" by journalist William Greider of the *Washington Post* in the early 1970s, this mostly volunteer or low-paid coterie of university

students exemplified a new generation of consumer activists who monitored the activities of government and private industry in product and workplace safety, environmental protection, food safety, and other important public issues. Nader's Raiders were mostly law school students who worked in task forces, especially during the summer, to mount campaigns against corporate perpetrators of consumer abuse. The group was recognized as an example of the socially conscious youth movement, committed to public service, that had emerged in America during the 1960s.

Attorney and activist Ralph Nader is regarded as the founding father of the American consumer protection movement. An early advocate of environmentalism as well, he is portrayed in this 1972 political cartoon scaling an industrial smokestack. (Library of Congress)

After extending his crusade against the insurance industry, corporate welfare, and international trade agreements in the 1980s and 1990s, Nader capped a lifetime of public service by running for president under the banner of the Green Party in 2000 and as an independent in 2004 and 2008. He continued to speak out on behalf of Americans and their rights to safety, to education, and to a government that is responsive to the people.

Naropa University

Naropa University is a private, nonprofit liberal arts college located in Boulder, Colorado. Founded in 1974 as Naropa Institute by Buddhist teacher Chögyam Trungpa Rinpoche, its mission has been to combine the best of Eastern intuitive and contemplative studies with Western scholastic and artistic disciplines.

The institute was based on the model of Nalanda, an Indian university that flourished from the fifth to the twelfth centuries. Naropa was the name of an eleventh-century abbot of Nalanda who was known for bringing together scholarly wisdom and meditative insight. Like Nalanda, Naropa University seeks to foster an environment that attracts artists and scholars from diverse disciplines and spiritual orientations in order to foster wisdom with heart.

Chögyam Trungpa was a Tibetan lama who escaped Tibet in 1959 during the Chinese invasion. After four years in India, he migrated to England and studied philosophy, comparative religion, and fine arts at Oxford. After moving to the United States in 1970, Trungpa became one of the most influential conveyors of Buddhist teachings to Western society. In early 1974, he designed and launched the initial program for Naropa, using funding from Karma Dzong, a meditation center he had founded in Boulder three years earlier. Trungpa served as president of Naropa from 1974 to 1985, when the institute was reorganized as an autonomous, nonprofit corporation under the direction of a board of trustees. He died in 1987.

Naropa opened for a summer session in 1974 and hoped to attract about 300 to 400 students. More than 2,000 applied for course offerings in such topics as Eastern philosophies, Tibetan and Sanskrit languages, cybernetics, anthropology, Tai Chi, and tea ceremony. The first classes were taught by Trungpa, the renowned LSD researcher-turned-Hindu-spiritual-leader Ram Dass (formerly Richard Alpert), cyberneticist Gregory Bateson, poet Allen Ginsberg, and other well-known scholars, writers, and artists. Another session was held the following summer, and it was equally successful. Naropa began offering degree and certificate programs in 1976 and applied for accreditation, which was granted in 1986.

The most famous institution within Naropa University is the Jack Kerouac School of Disembodied Poetics. Named after the Beat author of *On the Road* (1957), the department was created by poets Anne Waldman, Diane di Prima, and Ginsberg. Faculty members also have included William S. Burroughs, Gregory Corso, Gary Snyder, Bobbie Louise Hawkins, and numerous other prominent poets and writers.

In the early years, Naropa endured financial difficulties and criticisms of Trungpa's lifestyle and teaching methods, but the school grew steadily in academic prestige and artistic reputation. Its bachelor's and master's degree programs are all fully accredited, and the institution has achieved financial stability.

Naropa University continues to attract prestigious faculty and artists in residence, flourishing as a center for spiritual and religious studies, writing and literature, visual and performing arts, psychology, and environmental studies. Enrollment for the 2009–2010 academic year totaled 1,056 undergraduate and graduate students.

Nation, The

The Nation is a weekly news and opinion magazine that has maintained a consistently leftist/liberal focus—on issues of social liberalism, social democracy, socialism, and communism—since its founding as an abolitionist publication in 1865. As the United States's oldest political journal, its focus always has been on political issues. Since the 1960s, however, *The Nation* has given increased coverage to cultural issues, and in the 2000s has become notable for its book reviews.

Known proudly as “the flagship of the American left since 1865,” *The Nation* was first published on July 6, 1865, as a New York–based abolitionist journal. Under the editorship of Edwin Lawrence Godkin, *The Nation*'s articles promoted civil-service reform, African American rights, and public education. After its first year of operation, Godkin assumed ownership from Joseph H. Richards. Although Godkin sold the journal to Henry Villard in 1881, he continued to edit it until 1899.

When Villard died in 1900, his son Oswald Garrison Villard assumed control of both *The Nation* and the *New York Evening Post*, which published the journal as its weekly supplement. A staunch pacifist and resolutely independent publisher, Villard continued his father's editorial policy of promoting civil rights for African Americans in the pages of *The Nation*, and he cofounded the National Association for the Advancement of Colored People (NAACP) in 1909.

Villard also opposed U.S. participation in World War I. This controversial position, along with *The Nation*'s support of wartime dissenters, forced him to sell the *New York Evening Post* in 1918 over accusations of pro-Germanism. In addition, government authorities delayed the mailing of one issue of *The Nation* because of an editorial proclaiming “Civil Liberty Dead,” and Albert J. Nock's editorial criticizing Samuel Gompers's and the American Federation of Labor's support of U.S. participation in World War I resulted in further government suppression.

The magazine continued publishing under Villard's leadership until 1934. Since separating from the *Post*, *The Nation* remained fiercely independent. While sharply edited by Freda Kirchwey and Carey McWilliams from 1937 through 1965, the magazine barely survived financial crises and major editorial disputes over the cold war.

By 1965, publisher George Kirstein's financial acumen returned stability to the publication, and *The Nation* became known for its incisive criticism of the Vietnam War and its insightful literary and artistic criticism. Ralph Nader first reported the U.S. automobile industry's safety records in the pages of *The Nation* in 1959, and civil rights leader Martin Luther King, Jr., published annual articles on the civil rights movement in the magazine until his death in 1968.

Beyond its role as an alternative journalistic organ, online as well as in print, *The Nation* also has functioned as an educational resource, providing materials for schools and sponsoring special literary/intellectual events, the latter of which have contributed to something of an elitist image. Nonetheless, *The Nation*'s editorial and activist focus has remained decidedly populist, including a 2007 protest against postal rate changes proposed by Time-Warner that would end special publication rates and favor larger publishers at the expense of smaller, independent periodicals.

The Nation's circulation peaked at 186,600 in 2006. The editor and publisher was Katrina vanden Heuvel, and the

editorial board included labor historian Eric Foner, liberal writer and columnist Barbara Ehrenreich, civil rights scholar Lani Guinier, activist Tom Hayden, and novelist Toni Morrison. Regular columnists included feminist writer Katha Pollitt, humorist and novelist Calvin Trillin, and radical journalist Alexander Cockburn.

National Lampoon

National Lampoon was an American humor magazine rooted in the sex, drugs, and rock and roll counterculture of the 1960s. It blended sophisticated wit with scatological, often sophomoric humor and ultimately brought politically charged, sexually themed, and socially taboo humor out of the nightclubs and placed it at the center of American popular culture. The magazine ceased publication in 1998, but the National Lampoon name—forever associated with offbeat humor and satire, often on the brink of bad taste—was licensed to an unending stream of books, films, and shows on television, radio, and the live stage.

First published in April 1970, *National Lampoon* was founded by three recently graduated editors of the *Harvard Lampoon* humor magazine—Douglas Kenney, Henry Beard, and Robert Hoffman—who translated the taboo material of counterculture comics such as Lenny Bruce and Mort Sahl into the mainstream of American mass media. The success of *National Lampoon* ultimately made edgy and sometimes offensive material acceptable to a wide audience, spawning a comedy revolution that was represented in TV shows such as *Saturday Night Live*, *The Simpsons*, and *South Park*, and mock news sources such as *The Onion*.

The magazine mixed humor and all forms of parody (literary, film, magazine), while tackling a number of sensitive subjects (sex, politics, racism) with a no-holds-barred attitude. It was merciless in its treatment of the Nixon administration, yet it also trashed the hippies and the counterculture. The long-running stage variety show *National Lampoon's Lemmings* parodied the Woodstock music festival of August 1969 as a hypocritical sellout by money-hungry rock stars and featured vicious impersonations of musicians James Taylor, Bob Dylan, Joan Baez, and other hippie icons.

National Lampoon also served as a training ground for comedy writers and performers, all of whom avidly contributed to the magazine and many of whom would become well-known figures in mainstream American humor, among them Kenney, Michael O'Donoghue, John Belushi, Gilda Radner, Bill Murray, Christopher Guest, P.J. O'Rourke, Harold Ramis, Ann Beatts, and John Hughes. *National Lampoon* extended its brand into stage shows (*Lemmings*, *The National Lampoon Show*), a nationally syndicated radio show, films (*Animal House*, the *Vacation* series), and television. In 1974, the magazine achieved its peak circulation at roughly 1 million for the October issue; some studies showed the *Lampoon's* primarily male pass-along readership at nearly 8 million, with

the magazine circulated around fraternities, dorms, and high school campuses.

During the first half of the 1970s, several *National Lampoon* covers became popular emblems of counterculture humor, including a rendering of the Mona Lisa as an orangutan (“Mona Gorilla”); Vietnam War criminal Lieutenant William Calley depicted as *MAD* magazine’s mascot Alfred E. Neuman, with the headline, “What, My Lai?”; and the famous “If You Don’t Buy This Magazine, We’ll Kill This Dog” cover, which shows a dog staring nervously at a pistol pointed at his head. That image is routinely named among the most famous magazine covers of the twentieth century.

The best-selling *National Lampoon Encyclopedia of Humor* (1973), edited by O’Donoghue, a frequent contributor to the magazine and later the head writer of *Saturday Night Live*, featured a Volkswagen ad parody with a VW Beetle floating in a body of water (which the automaker claimed it could do) and the headline “If Ted Kennedy Drove a Volkswagen He’d Be President Today.” The parody so accurately depicted an actual ad that Volkswagen received numerous letters of complaint. In 1974, *The National Lampoon 1964 High School Yearbook* became the best-selling special issue in American magazine history and was hailed by *Harper’s Magazine* as “the best example of group writing since the King James Bible.”

The peak of the magazine’s influence was from 1970 to 1975. In the latter year, publisher Matty Simmons was required to buy Kenney, Beard, and Hoffman out of their interest in the magazine at a price of \$7.5 million. The financial impact of that deal, mounting pressure from the Religious Right, and the loss of talent such as Kenney, Beard, and O’Donoghue hampered the magazine in a world that was less shocked by *Lampoon*-style humor. In fact, by the mid-1970s, the magazine’s brand of comedy had become almost mainstream.

The 1978 film *Animal House*, written by Kenney, Chris Miller, and Harold Ramis, helped reestablish the *Lampoon* brand, earning \$60 million in four months and ultimately becoming the most successful comedy film of all time. *National Lampoon* failed to produce another hit until 1983, however, when *National Lampoon’s Vacation* was released. By this time, however, the magazine had lost its place as the preeminent voice of American comedy.

Native American Church

The Native American Church developed as a spiritual movement in the late nineteenth century among various American Indian tribes, combining the beliefs and rituals of tribal traditions with aspects of Christianity. Known for

the sacramental use of the hallucinogenic drug peyote in a ritual ceremony, the Native American Church is the largest religious organization of indigenous people in North America, with an estimated 250,000 followers from a wide variety of tribes and nations. The denomination is also sometimes referred to as the Peyote Church, the Peyote Way Church, Peyotism, and the Native American Church of North America.

Among Native American Church members, peyote, or mescal (the common name of a small, spineless cactus, *Lophophora williamsii*, found from the southwestern United States to central Mexico), is regarded as sacred. Church members ingest peyote as a sacrament, either eating the button or drinking it as a tea. Like the ritual use of psychoactive and hallucinogenic substances (entheogens) in other religious traditions, peyote is used to induce an experience of the divine and reveal the numinous nature of the world. The beliefs and practices of church members vary considerably among different regions and tribes; there is no formal, written doctrine. The religion is taught through vernacular forms of expression, such as oral traditions, folklore and custom, and direct experience. Although not embraced by all members of the Native American Church, common elements include belief in the Great Spirit (a supreme God), the Mother Earth, intermediary gods, and indigenous spirits, and the view that peyote is a sacrament given to native peoples by a divine being, such as Jesus Christ.

Many believers embrace the interconnection of the supernatural and natural worlds, and the idea that the divine is present in natural objects and at specific natural locations. The peyote ceremony itself is rooted in indigenous native and Mexican traditions, and influenced by Christianity; however, Christian themes, rituals, and imagery are embraced only to certain degrees and are mostly absent from ceremonies. The central values and teachings of the Native American Church include proper living, truthfulness, care of family, kindness, self-reliance, community involvement, prayer and meditation, and the avoidance of alcohol and recreational drugs. Peyote is not addictive, and members assert that it purifies the body, decreases the desire for alcohol, and cures alcoholism and other destructive addictions.

The Native American Church was officially founded in Oklahoma in 1918, but the movement had begun among the Kiowa in about 1890, and spiritual use of peyote (referred to as “Father Peyote” by members) already had a long legacy in the Americas—perhaps thousands of years. By the 1600s, its use was a common ritual practice in parts of the American Southwest. In the 1870s, the Comanche and Kiowa tribes embraced the practice, and traveling “peyote roadmen” later promoted the spiritual and ritualistic aspects of peyote throughout the Plains and adjacent areas.

Noteworthy advocates of the movement in the late nineteenth century were the Comanche leader Quanah Parker and John Wilson of the Caddo tribe. The following statement by Parker underscores the experiential spirituality of the peyote ritual: “The White Man goes into his church and talks about Jesus. The Indian goes into his Tipi and talks with Jesus.”

Peyote ceremonies also flourished because they offered an alternative to the versions of Christianity imposed by missionaries, and a renewal of native communities at a time when tribal religions were in decline. Like the Ghost Dance movements of the 1870s and 1890s, peyote religion often has been interpreted as a revitalizing response to the genocide and oppression of Native Americans and the destruction of their traditional cultures.

Although peyote possesses psychedelic properties and contains various alkaloids including mescaline, it is not considered to be a drug by Native American Church members, but a holy medicine with the sacred powers necessary for healing, teaching, blessings, and inspiration. The ingestion of peyote produces feelings of well-being and harmony, a calm euphoria and meditative state, and a revelation of the numinous. For many church members, hunting for peyote buttons is a religious pilgrimage; prayers are offered at the gathering of peyote and in the course of preparation. In the peyote ceremony, usually held in a tepee, a large peyote button (the Chief Peyote) is placed on an altar built of earth, sometimes sharing space with the Bible. In addition to the consumption of peyote, the ceremony—which lasts from evening to dawn—entails the use of various ceremonial objects, the singing of sacred songs, drumming, and chanting prayers, followed by a ritual meal of parched corn, fruit, sweetened meat, and water.

Throughout the Americas, those who practiced the ceremonial use of peyote have been persecuted repeatedly, beginning with early Catholic missionaries who condemned the beliefs connected with the ceremony as “pagan superstition.” By 1620, during the Spanish Inquisition, peyote use was considered diabolical and punished by torture and death.

In the United States, those participating in the ceremonies have been persecuted both by Christian churches and by governmental agencies. As the religious use of peyote grew in popularity in the late 1800s and early 1900s, the Bureau of Indian Affairs, the Board of Indian Commissioners, the Bureau of Catholic Indian Missions, and other white institutions worked aggressively to suppress and condemn the religion. In 1918, the U.S. Congress attempted to outlaw the use of peyote; subsequent decades brought new efforts to declare the religious use of peyote to be illegal. A number of state and federal court cases resulted in the imprisonment of Native American Church members.

Not until the American Indian Religious Freedom Act of 1978, as amended in 1994, was the ritual use of peyote by indigenous peoples protected by federal law—though this hardly put a stop to the legal battles. In the twenty-first century, the sacramental use of peyote remains a profoundly meaningful religious ritual for members of the Native American Church and a symbol of identity, unity, and tradition for many American Indians.

Native Americans

The indigenous peoples of the territories now claimed and occupied by the United States comprise more than 500 distinct groups commonly identified by the terms *Native American* or *American Indian*. Each of these groups—most of which now refer to themselves as independent “nations”—has a unique culture, way of life, and history. Despite the great cultural diversity among America’s indigenous peoples, they have faced similar social prejudices, economic oppression, and government restrictions throughout U.S. history.

Beginning as early as the American Revolution, the tendency of white settlers to treat all Native Americans as the same and to subject them to policies of cultural transformation has produced a long history of resistance and dispute. In the twentieth century, Native American activism developed along with, and was inspired by, various other counterculture movements, such as the civil rights and Black Power movements, relying on similar forms of protest and actions to achieve social justice.

Early History

As a result of constant efforts by the United States to eliminate Native American cultures, histories, and people, every American Indian nation has faced serious decisions about how to preserve their traditions and ways of life. While tribes such as the Cherokee attempted to mold their cultures to meet American expectations, many other native nations furiously resisted demands by European Americans to make cultural changes.

By 1806, the Shawnee nation brothers Tecumseh and Tenskwatawa had begun organizing a coalition of Native American nations in the Ohio Valley to fight to retain their traditional practices and to hold on to the lands targeted by American settlers. After the French and Indian War (1754–1763), England had imposed a Line of Proclamation, forbidding colonists to expand into the North American interior, where native peoples still posed a military threat. After the American Revolution, American settlers began pressing on into these lands, intent on securing new territory, resources, and wealth. Indiana, for example, paid bounty hunters \$50 per Native American scalp.

Tecumseh was well aware of the destruction and dismantling of the native nations to the east, and he recognized that the United States would never cease its expansion or allow native traditions to flourish. Rather than simply await annihilation, Tecumseh looked to develop a transcontinental Native American military, extending north to the Great Lakes and south to the Gulf of Mexico, while his brother crafted the cultural and spiritual resistance.

Tenskwatawa, also known as the “Shawnee Prophet,” established Prophetstown along the Wabash River in northern Indiana, where only traditional cultural practices and religions were allowed, and all elements of European American culture were forbidden. Alcohol, European goods, and the practice of Christianity were prohibited. Tenskwatawa positioned the village to serve as an outpost for watching the border between “white” and “Indian” lands, with his warriors ready to expel any American invaders. While the coalition formed by the Shawnee brothers and their followers ultimately failed to protect their lands and cultures, their organized resistance served as an early example of pan-Indian cooperation against American efforts to colonize the North American interior.

Starting in the 1850s, the U.S. military sought to subdue the nomadic Apache nations in the Southwest so that Americans could settle the territory and the Santa Fe Railroad could build a route into California. Many Apache believed that their territory was given to them by the Creator, Ussen, and that they would die if they left or were removed from their traditional lands.

The Apache ultimately went to war against the United States after a Chiricahua chief, Cochise, was arrested under a flag of truce in 1861 and U.S. soldiers killed the highly respected Apache tribal chief Mangas Coloradas during what was supposed to have been a peaceful meeting at Fort McLane in the territory of New Mexico, in 1863. Geronimo, a respected warrior and medicine man, stated in his autobiography that the killing of Coloradas was “perhaps the greatest wrong ever done” to the Apache, and it set him on a path of resistance against the United States. Geronimo was already at war with Mexico because a local militia had killed his mother, wife, and three children during a raid on the family’s camp in the late 1850s.

In the mid-1870s, more than 100 Chiricahua Apache refused to be confined to the barren San Carlos reservation lands in southeastern Arizona. Led by Geronimo and hereditary leader Naiche, a group of Chiricahua fled the reservation and hid throughout southern Arizona and northern Mexico, eluding capture by both the U.S. and Mexican militaries. For a decade, Geronimo and his followers (including women and children) raided settlements and reservations, while maintaining their traditional nomadic life off the reservation.

After Geronimo’s final surrender in 1886, he and all of his sympathizers were sent to prison at Fort Marion, Florida. Geronimo was never allowed to return to Arizona, and he died at Fort Sill, Oklahoma, in 1909.

Early Twentieth Century

The beginning of the twentieth century was a difficult time for most Native Americans. By 1900, the total

indigenous population of the United States had reached a historic low of 250,000 (compared to an estimated 5 million at the time of contact with Europeans). Native children were being sent to Indian boarding schools to unlearn their native ways of life, tribal communities were assigned Christian missionaries and denied traditional religious practices, and federal land policies were taking millions of acres out of native hands.

In the face of these challenges, many native leaders founded self-help organizations to better their lives, to resist the total destruction of their cultures and populations, and to dispute the usurpation of tribal lands. European Americans who admired native cultures or were upset with federal treatment of Indian peoples frequently supported such organizations and activities, producing effective political coalitions that helped revitalize many native communities.

Following the model set forth by the National Association for the Advancement of Colored People (NAACP) in 1907, Indian boarding school-educated leaders such as Charles Eastman (a Dakota), Carlos Montezuma (a Yavapai), and Arthur C. Parker (a Seneca) organized the Society of American Indians (SAI) on October 12, 1911, in Columbus, Ohio. The SAI sought to create a unified pan-Indian movement that could help native people become social, economic, and political equals to European Americans. Eastman and Montezuma, both practicing physicians, used their national recognition as professionally successful boarding school graduates to gather political and economic support from philanthropists and legislators; they demanded that the federal government fund and support Indian education and development.

In 1917, Montezuma was arrested for encouraging Native Americans to refuse to serve in the military as the United States moved toward participation in World War I, while Parker successfully lobbied the Onondaga nation to independently declare war against Germany as an act of native sovereignty. As the SAI weakened in the early 1920s, it was replaced by another pan-Indian organization, the National Congress of American Indians (NCAI).

Founded in 1926 by Gertrude Simmons Bonnin, a Nakota and former teacher at the Carlisle Indian School in Pennsylvania, the NCAI still functions as a significant national organization for Native Americans. Within twenty years of its establishment, the NCAI was able to pressure the federal government to establish the Indian Claims Court, a legal forum where tribes could contest the means by which they had lost their land. During the court's thirty-two year existence, native nations made more than 800 claims and were awarded more than \$800 million in compensation.

In the early 1920s, Native Americans from Southern California joined with nonnative political activists to form the Mission Indian Federation. Led by Adam Castillo (a Cahuilla), the federation worked to eradicate the power of the Bureau of Indian Affairs (BIA) to make political decisions for native peoples, essentially demanding recognition of full sovereignty for native nations.

Castillo and a European American legal adviser, Jonathan Tibbett, forced the state of California to compensate the tribes of California for the more than 8.5 million acres of land lost after Congress did not ratify eighteen treaties signed between 1851 and 1852. In 1944, the state finally awarded more than \$17 million for the lost lands (although \$12 million was then subtracted for government expenses). Commissioner of Indian Affairs John Collier once noted that the Mission Indian Federation, rather than seeking inclusion as equals with the United States, approached their work as "ousting a foreign power from the native soil or beating off an invasion of a foreign power."

Because of their vehement political opposition to the U.S. government's control over Native Americans (legal "wardship"), Mission Indian Federation members were briefly arrested in 1922 on the charge of "conspiracy against the government"; they were released after all Native Americans were granted full legal citizenship under the 1924 Indian Citizenship Act. The organization continued to work on complex legal issues relating to Native American sovereignty, until it disbanded in the mid-1960s.

Like the Mission Indian Federation, the All-Pueblo Council was formed as a result of a regional coalition of tribes and nonnative supporters sharing concerns about the legal and political standings of Native Americans. In 1922,

twenty Pueblos united as the All-Pueblo Council in order to challenge federal legislation, the Bursum Bill, aimed at opening Pueblo lands and resources to white squatters. The Pueblo people successfully defeated the proposal through alliances with wealthy supporters such as Mabel Dodge Luhan and public appeals at key locations, such as the New York Stock Exchange. The Pueblo activism ultimately contributed to the 1929 conviction of U.S. Secretary of the Interior Albert Fall for accepting bribes from private companies.

The All-Pueblo Council also gave impetus to the Indian Reorganization Act of 1934, which was intended to enhance tribal self-government for all Native American nations. Today, the council remains active in promoting social and economic justice for indigenous peoples.

Late-Twentieth-Century Activism

During the 1960s and 1970s, Native Americans protested social inequalities and began reclaiming traditional cultural practices such as claiming treaty-guaranteed hunting and fishing rights, holding powwows, performing religious ceremonies, and speaking in native languages. More radical activists organized in groups such as the American Indian Movement (AIM), while others worked in moderate organizations such as the Native American Rights Fund (NARF).

Individual native nations across the country, including the Mashantucket Pequot in Connecticut, worked to assert or reclaim their sovereignty from the United States and regain control of their own political, economic, and cultural destinies. In many cases, efforts at cultural identification and self-definition involved the contestation of stereotypical and racist imagery produced by nonnative people, such as the use of Indian figures as team mascots.

In 1970, NARF was established in Boulder, Colorado, by lawyers with expertise in Indian law in order to provide legal services to Native American nations, organizations, and individuals. This nonprofit organization became the first national clearinghouse for legal cases involving individuals who maintain a special legal relationship to the United States as members of sovereign native nations. For instance, NARF was central to the legal challenges made by the Mashantucket Pequot against the United States in the 1980s. In 1996, it filed a lawsuit against the secretary of the interior and the BIA for mismanagement of \$2.4 billion of tribal trust monies.

Since its founding, NARF has been involved in most of the important court cases concerning issues of Native American sovereignty, especially those that have been heard by the U.S. Supreme Court. In its advertising campaigns, NARF has continued to demonstrate that Native American sovereignty is critical to tribal survival and that this special legal standing (established by treaties) remains under attack. In 2007, its advertisements boldly stated that “the Indian Wars never ended” and proudly proclaimed that NARF’s work is that of “modern day warriors” who fight with the weapons of law rather than with violence.

The most recognized event of postwar Native American activism was the 1969 takeover of Alcatraz Island in the San Francisco Bay and the 1973 occupation of Wounded Knee in South Dakota. On November 20, 1969, after a series of brief symbolic takeovers of Alcatraz that often lasted only hours, a group of mostly urban Native American college students came together under the name Indians of All Tribes and began a twenty-month occupation of the abandoned former federal prison. The occupiers cited an 1868 treaty between the Sioux and the United States that promised native people the first claim to surplus government lands.

Among the leaders of the occupation was San Francisco State College student Richard Oakes (a Mohawk), a non-California transplant relocated to the growing urban Indian population of the San Francisco Bay Area. When the San Francisco Indian Center had burned down, in October 1969, Oakes and community organizer and businessman Adam Nordall (an Ojibwe) had come together with local media to plan and enact the full-scale occupation of Alcatraz. The Indians of All Tribes demanded that title to the island be handed over and declared their intention to construct a Native American cultural center, university, and museum to retell and support the history and culture of indigenous peoples. The occupation ended on June 11, 1971, when the handful of remaining occupiers were removed by federal agents. Nevertheless, the government already had responded by

increasing funds to Native American programs and passing six pieces of legislation in support of tribal self-rule and cultural survival.

AIM was formed by urban-based Ojibwe in 1968 in Minneapolis, Minnesota, as a response to police brutality, discrimination, poverty, unemployment, and cultural deprivations. Partly modeled after the Black Panther Party, AIM sought to provide community services, protect native people, and reclaim traditional cultural practices. In 1973, AIM members, led by Russell Means (a Lakota) and Dennis Banks (an Ojibwe), occupied the town of Wounded Knee on the Pine Ridge Reservation in South Dakota, the infamous site of the Sioux massacre of 1890.

The occupation at Wounded Knee was staged in protest over what AIM members and many traditional Lakota saw as the cultural and political corruption of the Pine Ridge Tribal Council. The council was led by tribal chairman Richard Wilson, who was supported by the BIA and ruled the reservation with the help of a personal police force called the GOONS (Guardians of the Oglala Nations). Wilson was accused of political and financial corruption; many Lakota who sought to impeach him called on AIM for assistance. Wilson banned AIM members from the reservation and called in additional armed forces from the BIA, Federal Bureau of Investigation, and U.S. Marshals Service. The seventy-one-day standoff resulted in the deaths of two occupiers (Frank Clearwater and Lawrence Lamont) and prompted the federal government to reconsider its policies of supporting particular tribal governments.

In 1986, the Mashantucket Pequot of Connecticut jump-started the national trend of opening gambling facilities on Native American reservations. For many American Indians, gambling casinos and the economic freedom they represent stand as powerful symbols of tribal sovereignty—the ability to make independent choices about the community's way of life, while not being subject to the dictates of society at large. The Mashantucket, for example, regained lost lands and reestablished themselves as a federally recognized tribe. Their bingo operations eventually would grow into the massive gaming resort Foxwoods in 1991, and their advocacy would open the door for other native nations to build similar facilities of their own. Since reservation lands are exempt from state laws that prohibit high-stakes gambling, Indian casinos have allowed many long-impooverished tribes to fund their governments, community infrastructures, police and fire services, student scholarships, health care, and cultural and language revitalization programs.

In the 1980s and 1990s, the use of purportedly Indian images as institutional mascots became a subject of widespread public debate. Sports teams such as the University of Illinois's Fighting Illini and professional football's Washington Redskins modeled their mascots, names, or both after Native Americans. These were high-profile examples of the use by many nonnative Americans of American Indian imagery as cultural symbols, despite widespread feelings among indigenous people that such images are derogatory and racist.

Efforts by Native American activists and their allies have fostered numerous additional changes by various institutions, while others have resisted social pressures. In 1972, for example, Stanford University changed its sports teams' mascot from the Indian to the Cardinal. Twenty-five years later, the Los Angeles Unified School District required that all of its public schools eliminate Native American mascots. In 1992, Native American activist Suzan Shown Harjo (a Cheyenne and Muskogee) filed suit against the owners of the Redskins, winning a court decision five years later against the trademark license of the team mascot. In February 2007, after decades of intense resistance from its students, administration, and alumni, and following a move by the National Collegiate Athletic Association to ban the school from hosting postseason games in 2005, the University of Illinois announced that it would discontinue the use of its Chief Illiniwek mascot.

While Native Americans have long existed as a kind of counterculture by virtue of their social and economic marginalization, American Indian customs and images also have emerged as popular expressions of other counterculture movements. During the 1960s and 1970s, for example, non-Native Americans began to embrace the ideals of indigenous cultures and traditions, recognizing them as representations of a more authentic and fulfilling way of life. The adoption of Native American spirituality became widespread in the New Age movement that began in the 1960s, even as sports mascots, casino gambling, and mainstream media images continue to shape popular stereotypes.

Neolin (ca. 1720–ca. 1766)

Neolin, also known as the “Delaware Prophet,” was the first of a number of Native American spiritual leaders during the eighteenth century who taught that indigenous life and custom had been corrupted by the encroachment of whites. He called upon native peoples to give up all activities and goods introduced by Europeans and resume their virtuous lives. Among his followers was the Ottawa chief Potomac, who invoked his teachings to build an intertribal following for his war against the British in 1763.

Little is known of Neolin's early life. A member of the Delaware (or Lenni-Lenape) tribe, he is believed to have been born in about 1720. Neolin (his name means “four”) first came to prominence in 1761 in the village of Tuscarawas, which was located on the Muskingum River in Ohio.

At the time, Delaware society and culture were being directly threatened by white settlers. Most tribes east of the Mississippi had been devastated by European diseases and increasingly had adopted elements of European culture. Trade goods, such as firearms, steel knives and tools, and alcohol, were now central to the native lifestyle. Destructive behavior, especially drunkenness, had become commonplace. The native peoples hunted wildlife to extinction for pelts and hides to trade, rather than for subsistence. Much of the territory formerly occupied by the Delaware and other tribes had been taken over by white settlers.

Preaching a message that combined nativist and Christian aspects, Neolin began attracting disciples. Having met the Creator, or Great Spirit, in a vision, Neolin learned that the problems facing his people were the result of corrupting influences by whites. The path to heaven was blocked, Neolin preached, and most Native Americans were doomed to hell (a Christian concept) unless they followed a different path. Native peoples needed to purify

themselves through fasting, the use of emetics, and monogamous relations or sexual abstinence.

The Creator, said Neolin, also expected them to return to their virtuous, traditional way of life. All products of European culture, including alcohol, firearms, and manufactured goods, should be given up. Native Americans should unite and end fighting between different groups. They could then drive the white men out of their lands and live in harmony with the Creator.

Neolin's message spread rapidly through the tribes. As he traveled from place to place, he left copies of a map said to have been given to him by the Creator. The map outlined territories that had been given up to the whites, providing a reminder of what had been lost and what should be regained. Neolin also left prayer sticks, with a prayer to be said morning and night by his followers.

By 1763, tribes as far as the Illinois country had heard Neolin's message. They were concerned because the friendly French, who were dependable trading partners, had been defeated and succeeded by the British. British colonists, who were less generous with gifts and trade goods, also were moving into territory claimed by Native American tribes west of the Appalachians.

In the Great Lakes region, Chief Pontiac became one of Neolin's followers and recognized that his message of Native American unity could help drive out the British. Ignoring certain elements of Neolin's message, such as the rejection of firearms, Pontiac succeeded in bringing the leaders of twenty tribes into an alliance against the British. In April 1763, nearly all British garrisons west of the Appalachians were overwhelmed by a coordinated, three-year campaign that came to be called Pontiac's Rebellion. Only the tenacity of their garrisons at Detroit and Pittsburgh, combined with major reinforcements, saved the British presence.

When the uprising finally faltered, so did faith in Neolin. European observers last saw him in 1766, in a village on the Tuscarawas River in Ohio. His message of renewal and a return to native traditions was taken up by others, such as the Shawnee prophet Tenskwatawa.

New Age

New Age spirituality is a broad term that encompasses a variety of beliefs and interests, including Eastern philosophy, mysticism, neo-paganism, parapsychology, holistic healing, alternative cosmologies, psychic development, paranormal phenomena, metaphysics, meditation, the occult, reincarnation, channeling, enlightenment, and astrology. Persons considered part of the New Age often construct individualized beliefs and practices from various religions and philosophies, modifying them to suit their own views of life and the world.

Adherents of the New Age movement in its many forms, such as these meditators in New Mexico, seek spiritual growth, healing, and self-actualization through a variety of mystical or religiously inspired exercises and rituals. (Michael Mauney/Time & Life Pictures/Getty Images)

1960s and 1970s

The New Age, as a countercultural phenomenon, arose during the 1960s and 1970s. The social, political, and cultural upheavals that led to the creation of the counterculture of the 1960s also led to a greater rejection of organized religion and an intensification of interest in alternative forms of spiritual practice.

Over the next twenty years, these widely differentiated religious and social countercultures began to build up a network of bookstores, publishers, lectures, and conferences that encouraged a shared general outlook and goals for societal uplift. The New Age movement moved into the mainstream with the 1987 television miniseries *Out on a Limb*, which documented actress Shirley MacLaine's exploration of reincarnation and other New Age beliefs. By the late 1980s, the New Age became a recognized part of American popular culture.

While this collective identity emerged slowly in the 1980s, the roots of the New Age extend back to the religious ferment of the nineteenth century. It drew from spiritualism, the belief that it was possible to communicate with the spirits of the dead, and transcendentalism, the philosophical movement associated with New England writers such as Ralph Waldo Emerson and Henry David Thoreau. It also borrowed from Theosophy, the religious philosophy developed by Helena Blavatsky in 1875 that proposes a complicated system of spiritual evolution, and New Thought, a late-nineteenth-century religious movement that argued that spirit is the only reality and stressed the power of the mind over the physical world.

Other important influences included Eastern religions, which began to become familiar to Americans after the U.S. tour of Swami Vivekananda, a Hindu teacher from India, in the 1890s. Decades later, the Immigration and

Naturalization Act of 1965 permitted a large number of immigrants from Asia and Africa and led to wider familiarization with Eastern religious practice and African religious traditions.

By the 1970s, New Age drew on Eastern religious systems such as Buddhism, Hinduism, and Sufism and often borrowed other tools of spiritual expression, such as crystals, tarot, drumming, and yoga. The New Age spiritualism also included elements of Western mysticism and folk religions, including various forms of goddess worship, astrology, Wicca, and other modern neo-pagan movements.

Many advocates of the New Age self-consciously rejected modern technology and rationalism in favor of intuition and a desire to reconnect with elements of Native American or other indigenous spiritual practices from around the world. This tendency was highlighted by the popularity of the writings of Carlos Castaneda, a California anthropologist who wrote a series of books about his supposed encounters with the Yaqui shaman Don Juan Matus. In their willingness to combine elements from a wide variety of sources, New Age adherents continued the tradition of syncretic individualism that has long characterized American spiritual practice.

New New Age Ideas

Along with these spiritual and religious elements, the New Age came to include techniques and practices often associated with psychology and the human potential movement. Psychologist Abraham Maslow's work on self-actualization and Harvard University professor Timothy Leary's advocacy of psychedelics, for example, offered methods for exploring the inner self. Whether it was the hallucinogenic drug LSD or new psychological therapies such as primal therapy, a treatment method developed by Arthur Janov that enabled patients to directly access repressed pain and trauma, almost any method that promised to enhance the process of personal transformation found some place in the emerging New Age movement.

A variety of health practices also were incorporated in the New Age. Many of its adherents rejected modern, Western allopathic medicine in favor of alternative medical practices such as homeopathy, naturopathy, or chiropractic. They embraced ancient medical practices such as Chinese acupuncture or the Indian Ayurvedic system. They also championed organic food, vegetarian and vegan diets, and forms of bodywork like massage, Reiki, and Rolfing, or movement systems such as Feldenkrais. This New Age focus on individual health often went hand in hand with broader concerns for the environment and various forms of animal rights activism.

The use of the term *New Age* reflects the influence of American millenarianism on the movement and highlights the widespread belief that the world was about to experience a spiritual transformation. Moreover, many New Age adherents believed that their work to expand individual consciousness would play a decisive role in ushering in this worldwide enlightenment, which they called the "Age of Aquarius."

Since the 1960s, when the impending arrival of the Age of Aquarius achieved mainstream recognition, there have been claims that a particular date or event would mark this transition. Among these predictions were the so-called Harmonic Convergence of August 16–17, 1987, and the end of the millennium in the year 2000. On the designated dates in 1987, thousands of people from a wide variety of traditions gathered in locations around the world that they believed to be spiritually "charged," in the hope that the moment of change was at hand. After the Harmonic Convergence and the turn of the millennium passed, December 21, 2012—marking the end of the "Fifth Sun" of the ancient Mayan calendar—became a subject of considerable debate and expectation among those who still anticipate the imminent dawning of a New Age.

Just as certain periods of time are considered auspicious for spiritual uplift, so various New Age movements identify particular places as loci of spiritual power. These include sites associated with ancient civilizations such as Machu Picchu in Peru, Stonehenge in England, and the Great Pyramids in Egypt; or natural landscapes, such as Mount Shasta, California, or Sedona, Arizona, that are considered to be charged with special energy. A number of teaching centers, such as the Esalen Institute in Big Sur, California, also have become closely identified with the New Age.

Although many of these elements have faded from the forefront of popular culture, newer and often more subtle forms of New Age spirituality continue to attract attention. Works by writers such as the physician Deepak Chopra and books such as Neale Donald Walsch's *Conversations with God* (1995) continue to find a secure place on best-seller lists. In fact, the entire genre of self-help books, featuring authors such as the motivational speaker Anthony Robbins, owes much to the New Age.

One of the more controversial elements of the New Age movement is channeling. This practice, which also was a part of the spiritualist and theosophical movements of the nineteenth century, posits that certain individuals are able to make contact with spiritual or otherworldly beings. These contacts are often the source of teachings, predictions, or guidance. Channeling has produced some popular manuscripts, such as the Seth material, first channeled by Jane Roberts in 1963, or the widely influential A Course in Miracles series by Helen Schucman and the Foundation for Inner Peace. Channeling also created New Age celebrities such as J.Z. Knight, who rose to prominence in the 1980s by channeling the 35,000-year-old enlightened being Ramtha.

The more unusual and theatrical elements of New Age, like channeling, have led to criticism—and even ridicule—from many quarters. Both secular skeptics and Christian fundamentalists have bemoaned the movement's negative impact on American culture. Many opponents of the New Age have accused it of taking complicated spiritual systems such as Buddhism and transforming them into simplistic, consumer-friendly commodities. Others have blamed the New Age movement for transforming interest in “real” social change, such as political revolution, into personal quests for improvement and transcendence. In response, many advocates of New Age practices argue that the widespread pursuit of individual enlightenment is the best way to achieve broad societal change.

New Left

Consisting largely of college students, the New Left political counterculture came of age in the United States during the 1960s, as many young people were radicalized by the civil rights movement, the war in Vietnam, and the perception of widespread social and economic injustice in America. The first organized group associated with the New Left, and the spearhead of the radical political movement of the 1960s, was the Students for a Democratic Society (SDS). Established in Michigan in 1960, the group held its first convention two years later and

issued a manifesto, the Port Huron Statement, that called for a brand of “participatory democracy” based on the principles of nonviolent civil disobedience.

The SDS and the leftist political movement grew rapidly, stoked first by restrictions imposed at the University of California, Berkeley—triggering a student response that came to be known as the Free Speech Movement—and followed by the escalation of the war in Vietnam and the perceived failure of Great Society poverty programs to remedy the plight of blacks in America. In addition to challenging the institutions and ideologies of mainstream America—referred to as “the establishment”—the young student movement also distinguished itself from the Old Left, whose energies had been devoted largely to the cause of organized labor.

The term *New Left* had been coined by the radical sociologist C. Wright Mills, who called for a new leftist ideology in the United States—one that would move beyond the concerns of the Old Left and toward such underlying contemporary problems as the authoritarianism, alienation, and injustice afflicting postwar American society. As disaffected youth responded to the call, they immediately began challenging the institutions, structures, and prevailing ideologies of government, corporate America, the armed forces, the educational system, and any and all elements of the establishment. The New Left took a radical activist approach that they believed might lead to genuine social and political revolution.

This is not to suggest that the New Left was monolithic in organization, ideology, or tactics. Some elements of the movement were distinctly anarchical in orientation and looked to earlier versions of American socialism—or even foreign communism—for inspiration; revolutionary figures such as Mao Zedong (Mao Tse-tung), Ho Chi Minh, and Che Guevara became icons to the more radical factions in America’s New Left. The movement also drew new inspiration—and adherents—from the African American community, as the civil rights movement gave way to the Black Power movement in the mid-1960s; the Black Panther Party was especially prominent in that regard. The Black Power movement in turn inspired the American Indian Movement, founded in 1968 to actively redress injustices against Native Americans.

By the latter part of the decade, the New Left was beginning to feel the strain of competing goals and agendas, not to mention surveillance, infiltration, and disruption by the Federal Bureau of Investigation and other law enforcement agencies. The New Left began to splinter into smaller organizations, some of which, like the Weathermen, adopted terrorist tactics to further their political and social agendas.

The Weathermen, also known as Weather Underground, adopted the image and ideology of urban terrorists or peasant guerrillas, depending on the current vision of their militant standing within the organization, and attempted to create a myth of political bravado that would force the hand of an entire generation of passive, disengaged youth. Their strategy was based on the shock effect of an almost suicidal militancy; they adopted the radical slogans of the Black Panthers to make their point, chanting such expressions as “Off the pig” and “Seize the initiative.” The Weathermen also engaged in acts of terrorist violence, including bombings of banks, courthouses, and federal facilities throughout the United States, including the Capitol Building (1971) and the Pentagon (1972) in Washington, D.C. The Weathermen’s activities were intended, among other things, to motivate other left-leaning groups, especially younger students and intellectuals, to take action.

In addition to the activist political organizations associated with the New Left, some members of the counterculture sought nonpolitical alternatives that would recapture and exploit the feeling of radical unity from the early days of the movement. The most visible example was the yippies, adherents of the Youth International Party founded by Abbie Hoffman, Jerry Rubin, and others, who believed that the political wing of the movement had overlooked the cultural revolution taking place in the lives of young Americans. The yippies engaged in political theater—such as an invasion of the New York Stock Exchange and the nomination of a pig to serve as president—to dramatize what they regarded as the breakdown of middle-class values. They sought to cause political and social chaos through humorous, highly publicized acts of disruption, often with multiple meanings.

The New Left began to wane in the mid-1970s, as activist groups and individuals committed themselves to party politics, established their own social justice organizations, or dropped out of politics altogether and adopted

alternative lifestyles. Many of those who had supported the New Left during the 1960s became involved in the institutions they had once opposed. Tom Hayden, for example, a founding member of the SDS, served in the California legislature for eighteen years. Yippie founder Rubin later went to work on Wall Street.

In its heyday, the New Left brought together antiwar, free speech, and civil rights advocates, while providing a bridge between liberals and more radical revolutionaries. The SDS, in particular, became the leading organization in the anti-Vietnam War movement on American college campuses.

Elsewhere, other radical political groups of the 1960s and 1970s shared in the spirit and ideology of the American New Left. Among such international movements were the 1968 Prague Spring movement for socialist reform in Czechoslovakia, the student revolt in France in May 1968, the Provo movement in Holland during the mid-1960s, and the socialist blue-collar Autonomia movement in Italy during the late 1960s and early 1970s.

New School, The

The New School, founded in 1919 as the New School for Social Research, was renamed New School University in 1997 and took its current name in 2005. A private, coeducational university located in New York City's Greenwich Village, the New School offers both graduate and undergraduate degree programs. It was founded by former Columbia University faculty, including the historian Charles Beard, who were disaffected by the university administration's decision to take disciplinary action against those who spoke out against U.S. participation in World War I. Over the years, the New School gained a reputation as a haven for émigré faculty members who had fled Nazi, Fascist, and later Communist repression in Europe, and for an academic tradition of merging progressive American thinking with European intellectual trends.

Into the early twentieth century, most American universities were controlled by boards of trustees and presidents who exercised a high level of control over curriculum, faculty appointments, and promotions. School administrators enforced tight codes of conduct for faculty that severely limited their freedom of expression. Such control was most evident in the social sciences and humanities, where professors who challenged the dominant social mores

of the day were often subject to ostracism or removal from their appointments.

During World War I, the situation came to a head at Columbia University when professors who spoke out against U.S. participation in the Great War were fired. The dismissals prompted Beard and other sympathetic faculty to resign in solidarity. The dissident scholars, along with like-minded academics at other institutions, decided that a new type of university was needed—one based on academic freedom and faculty governance. Beard resigned from Columbia in 1917, and the New School for Social Research was founded in Manhattan two years later, with financial support from philanthropist and social activist Dorothy Payne Whitney.

Most of the founders and original faculty members of the New School, who included philosopher and educator John Dewey and economists Thorstein Veblen and James Harvey Robinson, were political and social progressives. They believed that the university should be a space of free thought and inquiry where scholars could pursue their own, self-directed research free from bureaucratic control. The faculty's emphasis on research and scholarship downplayed undergraduate teaching, which many regarded as a distraction from the higher goal of research and critical discussion. In its early years, the New School survived financially on the donations of progressive New York philanthropists and fees collected from its now-famous adult education programs.

Unlike universities that tend to isolate themselves from the local community on fortress-like campuses, the New School from the outset considered itself a part of the wider New York City culture. The original campus consisted of several brownstones in the Chelsea section of lower Manhattan, later adding the famous Bauhaus building on West 12th Street in Greenwich Village. The adult education program consisted of weekly lecture courses offered by prominent public intellectuals of the day, including the controversial Veblen. Students were mostly older adults who attended courses not in order to advance their careers but for intellectual development. Through its adult education program, the New School became an integral part of the wider New York progressive movement, a role and reputation that continues in the twenty-first century.

In the 1930s and 1940s, under the direction of Alvin Johnson, the New School began an ambitious project to rescue European intellectuals under threat from the spread of Fascism and Nazism. Johnson and the New School were responsible for offering many of these scholars academic positions, relocating them to New York, and financing their scholarship. In 1933, Johnson established the University in Exile as an extension of the graduate school specifically for émigré scholars. Among the early notables associated with the University in Exile (later renamed the Graduate Faculty of Political and Social Science) was Max Wertheimer, one of the founders of Gestalt psychology.

Also in 1933, the New School began to offer graduate degrees in the social sciences and humanities. The programs offered by the graduate faculty were unlike those offered at other American universities at the time. The faculty was overwhelmingly Jewish, socialist, or progressive, and the academic culture was more European than American, marked by a spirit of free debate and critical inquiry. The standard form of teaching was the seminar rather than the lecture, with students playing as vital a role in discussions as professors. In the period following World War II, the New School continued to recruit European faculty—including the renowned philosopher Hannah Arendt and political theorist Leo Strauss—and to offer a critical intellectual environment unparalleled elsewhere in North America.

During the 1950s, the faculty's emphasis on democracy and democratic theory meant that it shunned the dominant ethos of McCarthyism, while at the same time strongly criticizing Soviet communism. In the 1960s and 1970s, the New School played a key part in the revival of Greenwich Village as a center of counterculture and radical politics. Faculty members offered courses featuring increasingly radical subject matter, and the seminar style of teaching represented a fundamentally different approach. Still, the New School's emphasis on research and scholarship over activism seemed quiescent to many young radicals of the time, and many rejected the master-apprentice nature of the faculty-student relationship as anachronistic.

Today, the Graduate Faculty remains one of the most prominent centers of left-wing scholarship in the United States and continues to offer unique courses of study. Eugene Lang College, founded in 1985 as the university's

undergraduate liberal arts division, also attracts many students whose politics are out of step with mainstream culture. Twenty-first-century faculty of note include feminist theorist Nancy Fraser, leftist philosopher Richard Bernstein, and socialist historian Robin Blackburn.

Still, the pressure to compete in a globalized education marketplace has brought change to the university. Part of the transformation has been the strengthening of the administration under the presidency of former U.S. Senator Bob Kerrey (2000–) and an attempt to craft an image as a “real university,” in order to promote competitiveness and attract more tuition-paying students in search of practical skills and career advancement. Structural changes and an attempt to more aggressively market the university generated opposition from students and faculty, who regarded such changes as antithetical to the university’s historical mission. The ongoing protests, in the eyes of participants, continued the struggle against the hierarchical control of higher education that led to the creation of the New School in the first place.

New Thought

New Thought was a pantheistic (all is God) religious philosophy that developed in the spiritual turmoil of nineteenth-century America, promoting constructive thinking and meditation as ways of realizing the presence of God. Although adherents were relatively few in number, New Thought was especially influential as a philosophy. Its tenets helped shape the views of the American transcendentalists, especially the nineteenth-century poet and essayist Ralph Waldo Emerson and the twentieth-century author-lecturer Emmet Fox.

The nineteenth century in New England was a very creative and somewhat chaotic time of spiritual experimentation and discovery. As the strictures of Puritan Calvinism crumbled in many segments of the society, especially among the well-educated elite, a barrage of new religious ideas and movements began to appear. Some of these, such as the utopian social experiment of the Oneida Community, were short lived. Others, such as Christian Science and Mormonism, became institutions in their own right. Still others persisted mainly as harbingers of other philosophies. New Thought was one of these.

New Thought philosophy was developed by Phineas Parkhurst Quimby, a philosopher and scientist from Belfast, Maine, who believed that disease is mental in origin and that correct thinking has a healing effect on the body. From his office in Portland, Maine, he treated many patients with physical ailments. Among the students and patients who participated in his studies and helped disseminate his ideas were Warren Felt Evans, the author of

The Mental Cure (1869) and *Mental Medicine* (1872) and founder of a “mind-cure” sanitarium at Salisbury, Massachusetts; Annetta Seabury and Julius Dresser, a husband and wife who practiced mental healing and were the first to organize New Thought as a structured movement; and Mary Baker Eddy, founder of the Christian Science movement.

Quimby's fundamental teaching was that thought itself is a dynamic force in the universe. Quite literally, one creates the world one lives in by one's thoughts. This being the case, group and individual practice of New Thought focused on positive meditation, prayers and affirmations that facilitate positive meditation, and “the power of positive thinking.” The present-day religious denomination most legitimately seen as the institutional heir of New Thought, the Unity Church, is characterized by its avoidance of dogma, focus on group singing, “lifting each other up” in prayer, and a generally open and affirmative atmosphere. There are also less direct connections to the Christian Science and Swedenborgian (New Church) denominations.

Although doctrinal disputes are avoided, differences of opinion among New Thought writers can be discerned. Some modern interpreters make conscious attempts to understand New Thought in light of modern physics. One school of New Thought draws specifically on the Process philosophy of twentieth-century English mathematician and logician Alfred North Whitehead. Others try to remain more determinedly immersed in the writings and cultural context of the nineteenth century.

Some contemporary writers emphasize that New Thought is not simply a New Age philosophy, as it predates the modern New Age trend by at least a century. Nevertheless, New Thought resounds in such widely distributed modern New Age classics as Rhonda Byrne's *The Secret* (2006), which expounds the “Law of Attraction,” an encapsulation of the basic idea that people create the world of reality by the dynamism of their thoughts.

Newport Folk Festival

The Newport Folk Festival is an annual folk-music festival that has been held in the resort town of Newport, Rhode Island, since 1959. The first major outdoor folk event in America, the early festival reflected society's broader civil rights interests and political activity, as performers such as Joan Baez and Peter, Paul and Mary sang songs that promoted social justice and peace. During its most active years, from 1959 to 1970, the Newport festival served as a forum for performers to express their views on contemporary issues, from civil rights to nuclear proliferation to the Vietnam War. It also became a springboard for later outdoor events, such as the Monterey International Pop Festival in California in 1967 and the Woodstock Music and Art Fair in upstate New

York in 1969. In addition, the Newport Folk Festival is renowned for introducing performers who went on to become icons of postwar American music, including Baez and singer-songwriter Bob Dylan.

The Newport festival was founded by folk singer Pete Seeger and three entrepreneurs: jazz pianist and promoter George Wein (also founder of the successful Newport Jazz Festival); Wein's partner, music manager Albert Grossman; and Austrian-born singer and actor Theodore Bikel. About 13,000 people attended the 1959 festival, held from July 11 to 12 in the town's Freebody Park. The inaugural events featured performances by Baez; Chicago folk singer and musician Bob Gibson; bluegrass banjoist Earl Scruggs; Peter Yarrow of the folk trio Peter, Paul and Mary; and the Kingston Trio folk group. Like the Newport Jazz Festivals held nearby for the previous six summers, the folk festival was held outdoors.

The 1960 event was expanded to three days and nights, running from June 24 to 26, 1960. The second annual festival featured more than thirty performers; Baez was the only one to be given two consecutive evening concert spots. Because the 1959 and 1960 festivals were not financially successful and ticket sales had not covered expenses, Seeger recommended the establishment of a nonprofit organization, the Newport Folk Foundation, in 1962. (There was no folk festival in 1961 or 1962.) The foundation had two goals: to present folk music in an atmosphere free of a festival's usual economic necessities; and to help preserve folk-music traditions, featuring both big names and less-known talent. The foundation's board declared that all performers would be paid a flat fee of \$50 per day.

Dylan joined the lineup in 1963, just weeks after he and Seeger sang at a benefit concert supporting voter registration in Greenwood, Mississippi. At the Newport festival, Seeger and Dylan sang Dylan's duet, "Ye Playboys and Playgirls," against "fallout shelter sellers," proponents of "Jim Crow," "insane tongues of war talk," and "red baiters and race haters." Dylan also appeared with a mix of mainstream folk singers (such as Jack Elliott), the gospel-oriented Freedom Singers, Odetta and other blues singers, Peter, Paul and Mary, and Baez.

The performers sang solo, and they sang together, participating in numbers such as "We Shall Overcome," a song Seeger had popularized at many festivals; it would become an anthem of the civil rights movement of the 1960s. One month after the 1963 festival, several of these musicians joined the March on Washington for Jobs and Freedom, a large political rally in Washington, D.C., during which the Reverend Martin Luther King, Jr., delivered his historic "I Have a Dream" speech.

Attendance at the Newport Folk Festival exceeded 46,000 in 1963 and doubled by 1965, when 228 ensembles and musicians performed. The 1965 festival also marked a juncture of change, as Dylan shocked audiences (some of whom booed him) by taking the stage with an electric guitar. Ahead of his time, Bob Dylan was ready to fuse folk and rock music. The sound system at Newport was not set up to accommodate electric instruments very well, and most of what the audience could hear was feedback from the speakers. Dylan was not the only artist to play an electric instrument. Seeger, however, was so incensed that he attempted to cut the power to Dylan's set—not only because of the poor sound quality, but because, to Seeger, Dylan's playing electric folk music was equivalent to selling out to commercialism.

Following the death of American folk balladeer Woody Guthrie in 1967, the 1968 Newport festival included a tribute to the great musician, attended by more than 73,000 fans. The Newport Folk Festival ceased in 1971 due to financial hardship, but it was reinstated as an annual event in 1986. Dylan returned to the festival in 2002.

Still active, the festival continues to attract both less well-known and more mainstream artists, such as Elvis Costello, Hazel Dickens, Linda Ronstadt, Ralph Stanley, the Allman Brothers Band, and Emmylou Harris. The 2009 Newport Folk Festival—the fiftieth annual event—featured performances by cofounder Pete Seeger and Judy Collins.

Newton, Huey (1942–1989)

As cofounder of the militant Black Panther Party (BPP) with Bobby Seale in 1966, Huey Newton was a prominent voice for the self-defense of African Americans against police brutality and white oppression. In an era when the civil rights movement was advocating nonviolent resistance as the means of achieving its goals, Newton espoused a militant alternative. Later, he led the Black Panthers in community organizing and providing independent social services, such as a food program and free clinic, for impoverished blacks of the San Francisco Bay Area.

As a community organizer, Newton was as comfortable working with social workers, academics, and aspiring politicians as he was consulting with the drug dealers, petty thieves, and street-gang members who populated Oakland, California, neighborhoods. Alternately shy and brash, he was an unpredictable public speaker who enjoyed debating and theorizing. Charismatic among crowds, he also could be a recluse. He denounced the growing pervasiveness of drugs in the black community, though he was an addict much of his life.

Newton was born the last of seven children in Monroe, Louisiana, on February 17, 1942. The family migrated to Oakland, where his father, a former sharecropper, served as a Baptist minister. Despite Newton's religious upbringing and close family ties, he was a troubled student. Involved in petty crime and subjected to repeated expulsion from school during adolescence, he was angry and illiterate. Embarrassed, he taught himself to read at age sixteen with the assistance of his older brother and Plato's *Republic*.

After graduating from Oakland Technical High School in 1959, he entered Oakland City College, where he earned his associate's degree. Newton also took courses at San Francisco Law School. Reading the political ideas of the Pan-Africanist educator and historian W.E.B. Du Bois, author and essayist Frantz Fanon, Chinese revolutionary leader Mao Zedong (Mao Tse-tung), and black separatist Malcolm X shaped his thinking.

In college, Newton participated in student activist groups but was never satisfied with their impact. Exposed to groups such as Donald Warden's Afro-American Association, which gave public lectures on black history and culture, and the Soul Students Advisory Council, he would quarrel with leaders of the former about the nature of capitalism and the value of precolonial African culture for contemporary struggle, and the latter over the strategic importance of public promotion of armed self-defense.

Having grown up among poor African Americans, Newton was aware that the legal breakthroughs of the civil rights movement did not create necessary jobs and social services such as adequate health care at the neighborhood level. Neither did such breakthroughs address issues of racial discrimination and pervasive police

brutality. Thus, in October 1966, he cofounded the BPP with Seale, an acquaintance he had met at college, in order to promote African American civil rights and self-defense.

In October 1967, Newton was arrested for allegedly killing Officer John Frey, an Oakland policeman who attempted to disarm him during a Panther street patrol. Newton's trial would be the first among many during the next decade in which police brutality and the mistreatment of blacks under the law were highlighted. The prosecution and defense debated over Newton's character—whether he was a humanist or a cop killer. In September 1968, he was convicted of voluntary manslaughter and sentenced to two to fifteen years in prison.

Members of the BPP formed a coalition with the majority-white Peace and Freedom Party to “Free Huey”; his conviction was later overturned. Meanwhile, the Free Huey campaign made Newton the embodiment of the fight against police brutality and established terms of solidarity for subsequent political prisoners in the United States.

In the early 1970s, Newton attempted to refocus the BPP, placing less emphasis on militancy and more on the development of community outreach programs. In 1972, Newton published his Panther writings and speeches in *To Die for the People: The Writings of Huey P. Newton*; his autobiography, *Revolutionary Suicide*, appeared the following year. Throughout both works, he espoused the radical Black Panther philosophy: If black males of the lower working class and street force were on a self-destructive path in a racist society that found them obsolete and dangerous and favored the rich, they should risk being radical and “die for the people.”

In 1974, Newton was arrested for allegedly killing Kathleen Smith, a teenage prostitute, in a street brawl. Following a three-year exile in Cuba and having earned a place on the Federal Bureau of Investigation's Most Wanted list, Newton returned to the United States and faced charges of murder; he was acquitted.

In 1980, Newton completed his doctoral dissertation, *War Against the Panthers: A Study of Repression in America* (published in 1996), earning his Ph.D. in social philosophy from the University of California, Santa Cruz. On August 22, 1989, he was murdered by a crack dealer in the streets of Oakland, California.

Noyes, John Humphrey (1811–1886)

The social reformer and religious radical John Humphrey Noyes established two experimental utopian societies in the mid-1800s: the Bible Communists, later called Perfectionists, in Putney, Vermont; and the Oneida Community

in Oneida, New York. Noyes was known for his social and religious activism, including experimentation with so-called complex marriages (where all men and women in a group are married to the group rather than to a single partner and thus share partners); male continence (intercourse without ejaculation, as a method of birth control); and eugenics, or deliberate mating strategies to produce ideal human beings.

Born on September 3, 1811, to a wealthy New England businessman in Brattleboro, Vermont, Noyes graduated from Dartmouth College in Hanover, New Hampshire, in 1830 and pursued advanced studies in law. After attending a revival led by the charismatic evangelist Charles Finney, however, Noyes experienced a religious conversion and decided to become a minister.

He enrolled at the Andover Theological Seminary in Massachusetts 1831 and later transferred to Yale Divinity School in Connecticut. At Yale, he first pronounced his belief in the concept of Perfectionism—the idea that freedom from sin, or “perfect holiness,” can be achieved on earth through religious conversion and personal determination. In 1834, having declared himself Perfect and free of sin and, at the same time, maintaining that the Second Coming of Christ was not at hand but had already taken place, he was barred from preaching and expelled from Yale. At about the same time, Noyes expressed dissatisfaction with conventional marriage, perhaps in response to being jilted by his first love, Abigail Merwin, who left him to marry another man.

In 1836, Noyes established a religious society, the Bible Communists. In 1838, he married Harriet Holton, who experienced five difficult pregnancies in the next six years; only one child survived and four were premature. Citing his desire to help women avoid the kind of suffering endured by his wife, Noyes advanced the concepts of complex marriage and male continence among his followers in the society.

Already at the time that he wed the socially well-connected Holton, Noyes had announced that the marriage would not be exclusive. The first recorded practice of complex marriage occurred in 1846, when John and Harriet Noyes exchanged partners with George and Mary Cragin. While Noyes asserted that the extended family system could dissolve selfishness, outsiders viewed it as immoral, and law enforcement authorities viewed it as adulterous. Indeed, Noyes was arrested for adultery in 1847. Fearing that he would be lynched, he forfeited his bail money and fled Vermont with a group of followers. They resettled in central New York State, where Perfectionists he knew owned a large tract of land, and established a new community at Oneida in 1848.

In 1868, Noyes lifted the community ban on procreation and introduced the concept of eugenics—selective mating to produce superior or ideal human beings. Those who were to produce children were carefully chosen and paired. Of the sixty-two children born during the next few years, Noyes fathered nine. When Noyes began engaging in sexual intercourse with teenage girls in the community, the men of Oneida rose in opposition. Accused of rape in 1879, Noyes was forced to flee to Niagra Falls, Ontario, Canada, to avoid legal action. The Oneida Community disbanded two years later.

Noyes is credited with writing a number of books and pamphlets espousing his Perfectionist doctrine, including *The Way of Holiness* (1838), *A Treatise on the Second Coming of Christ* (1840), and *The Berean: A Manual for the Help of Those Who Seek the Faith of the Primitive Church* (1847). He also wrote *History of American Socialisms* (1870), a study of utopian communities in the United States. John Humphrey Noyes died on April 13, 1886, in Niagara Falls.

Nudism and Nudist Colonies

Modern American nudism and its occasionally practiced form of communal life, nudist colonies (sometimes forced on nudists by disapproving surrounding communities), have their origins in a fin-de-siècle German movement. From approximately 1890 to the 1910s, *Nacktkultur* (nudism) emerged in response to a variety of concerns in Germany at the time. Among these were the continually accelerating expansion of an alienating industrial society, the expansion of class division through distinctive clothing styles, and the feeling that modern social life contained unhealthy impurities. This German body culture movement was, in many ways, a neo-Romantic-styled response to modernity that sometimes entailed conservative political elements. The turn of the twentieth century immigration to the United States of groups of German nudists helped establish the American nudism movement.

Although influenced from abroad, American nudism, or naturism, as it is sometimes called, took on distinctive democratic characteristics. For example, while American nudists also regarded the movement as an opportunity to minimize the class distinctions that became obvious when clothes were worn, they stressed the universality of the human form and the acceptance of various body types, questioning societal notions of beauty and value. Occasionally, American nudist language even used biblical imagery to make its points, recalling in particular the original state of humanity in the Garden of Eden.

Early American writers such as Henry David Thoreau and Walt Whitman espoused early forms of naturism, but a major shift for the nudist movement took place when bohemians in early-twentieth-century Greenwich Village (in New York City) took to the practice. The famous 1916 photograph of radical journalist Louise Bryant reclining nude on a beach in Provincetown, Massachusetts, captures the spirit with which social mores were challenged. In the 1910s and 1920s, Bryant's comrades, journalist John Reed, editor-writer Floyd Dell, playwright Eugene O'Neill, and radical editor Max Eastman, were early adherents of social nudism.

The U.S. government made a number of attempts to discourage and prohibit nudism, typically by equating it with obscenity. In 1941, for instance, Congress reinstated the late-nineteenth-century Comstock Law—which prohibited the sending of so-called obscene material through the mail—in order to eliminate the circulation of nudist magazines, which were the primary form of information dissemination and discussion among adherents of nudism.

In early 1958, however, the U.S. Supreme Court ruled that the postmaster general did not have the right to prohibit the distribution of a monthly called *Sunshine and Health*, and nudist magazines began to flourish again in the 1960s. Of the many nudism magazines published during the course of the decade, one in particular—published under variations of the title *Jaybird*, such as *Jaybird Happening* and *Metropolitan Jaybird*—combined traditional naturist practices with 1960s hippie countercultural elements in an especially popular publication.

In 1972, new federal legislation required nudist magazines to be sold exclusively in shops that were licensed to vend “obscene” material. Meanwhile, more and more communities around the country were passing ordinances to curb social nudism.

Nevertheless, the practice of social nudism remains popular, if confined to private camps, colonies, and beaches. Organizations such as the Naturist Society, established by Lee Baxandall in 1980, and the American Association for Nude Recreation, which succeeded the American Sunbathing Association in 1995, show that broader cultural

changes have relaxed stereotypes of nudism.

Nuyorican Poets Café

The Nuyorican Poets Café is a multicultural, multidisciplinary arts venue located on the Lower East Side of Manhattan, in New York City. Cofounded in about 1973 by poet and Rutgers University professor Miguel Algarín, it served as a hub for the Nuyorican literary and cultural movement of the 1970s and as a venue for many of its leading poets and playwrights, including Algarín, cofounder Miguel Piñero, Pedro Pietri, Sandra María Esteves, and Tato Laviera. An important cultural space for New York City's Puerto Rican and Latino communities, over the years it has become an influential arts organization and an internationally renowned forum for innovative music, spoken word, visual and performing arts, comedy, and theater.

The café began as a salon in the living room of Algarín's East Village apartment. It soon became so popular that Algarín and the others were forced to rent a larger space, an Irish bar called the Sunshine Café on East Sixth Street, which they renamed the Nuyorican Poets Café. While *Nuyorican* had been a derogatory term used by Puerto Ricans on the island to refer to their New York counterparts, Algarín and Piñero appropriated it to signify the distinctive culture and artistic expressions of New York Puerto Ricans.

Like the New Rican Village on the Lower East Side, and the Taller Boricua in East Harlem, the Nuyorican Poets Café showcased New York Puerto Rican artists with an antiestablishment sensibility. It attracted such countercultural icons as Allen Ginsberg and Amiri Baraka, both of whom would become semi-regulars. The bilingual, irreverent, and often political poetry performed at the café found a larger audience with the publication, in 1975, of Algarín and Piñero's foundational anthology, *Nuyorican Poetry: An Anthology of Puerto Rican Words and Feelings*.

In 1980, the Nuyorican Poets Café moved into a new building at 236 East Third Street; it closed in 1982 and reopened definitively in 1989. The 1990s brought international popularity to the café, thanks in part to the efforts of poet, performer, and entrepreneur Bob Holman. Holman brought the performance poetry competitions known as "slams," first developed in Chicago in the early 1980s, to the venue, and helped bring a new generation of performance poets to the attention of MTV and *The New York Times*.

By the mid-1990s, the café was the hub of a nationwide poetry renaissance, and a few breakout stars had emerged from the slam scene, among them Edwin Torres, Reg E. Gaines, Tracie Morris, and Paul Beatty. The new generation of poets included many non-Puerto Ricans, especially African Americans and Asian Americans;

the venue's increasingly pan-ethnic and multicultural orientation is evident in the Algarín-Holman anthology *Aloud: Voices from the Nuyorican Poets Café* (1994), which won an American Book Award. In 1997, Algarín and Lois Griffith published *Action: The Nuyorican Poets Café Theater Festival*, a selection of theater pieces by authors affiliated with the café, including Baraka, Ntozake Shange, Ishmael Reed, and Miguel Piñero.

Holman left in the late 1990s, but Algarín remains on the board of directors, and the Nuyorican Poets Café continues in its dual role as New York Puerto Rican community space and multicultural arts organization. Since the 1990s, hip-hop events have attracted especially sizable audiences.

N.W.A.

N.W.A. (Niggaz With Attitude), a hip-hop group formed in 1986 in Compton, California (in Los Angeles County), popularized the subgenre of music known as “gangsta rap.” Gangsta rap reflected the lifestyle and activities of inner-city street-gang members, especially those operating in impoverished neighborhoods in places such as South Central Los Angeles. Featuring heavy bass rhythms and explicit language, gangsta rap offered a bold and unashamed urban voice. The music explicitly described drug dealing and usage, drive-by shootings, gang and prison cultures, prostitution, and sexual acts. In addition to describing street life in often graphic lyrics, N.W.A.’s music also turned national attention to the crime, poverty, unemployment, and violence devastating the country’s inner cities.

The group originally consisted of founders Eazy E (Eric Wright), Dr. Dre (Andre Young), and Ice Cube (O’Shea Jackson), as well as DJ Yella (Antoine Carraby), The D.O.C (Tracy Curry), MC Ren (Lorenzo Patterson), and the Arabian Prince (Mik Lezan). In contrast to the politically oriented lyrics emerging from contemporary East Coast hip-hop groups such as Public Enemy, N.W.A.’s breakout album *Straight Outta Compton* (1988) stirred controversy for its sexual and violence-filled lyrics, embrace of gang life, and descriptions of violence against police.

Frequently called upon to defend their work, the members of N.W.A. argued that their songs were reflections of personal experience in poor, heavily minority urban areas where crime, drugs, gangs, and violence were commonplace. In addition to depicting life on the streets, their songs also called attention to such issues as police brutality and racial profiling against African Americans.

One of their most controversial songs, “F— the Police” (released on *Straight Outta Compton*), prompted a letter from the assistant director of the Federal Bureau of Investigation, who denounced the encouragement of hatred

and violence against police officers. In that song and others, N.W.A. fantasized about fighting back against police, whom they characterized as active racists, and killing them to escape harassment or arrest. After being detained by police for partially performing the song in Detroit in 1989, N.W.A. became notorious in many circles and a symbol of state-sponsored censorship in others.

Despite (or perhaps because of) the controversies over the lyrical content of N.W.A.'s music, record sales skyrocketed, and the group found a strong following among middle-class white listeners. Their lyrics answered this response, continuing the explicit descriptions of violence, inner-city life, and sex. After selling millions of albums, the group disbanded over the course of several years, starting in 1989, as individual members were in conflict over the group's financial arrangements.

Several of the members of N.W.A. went on to individual success as music artists, producers, and actors. Eazy E began producing the innovative rap-singing group Bone Thugs-N-Harmony out of Cleveland, Ohio, before his death in 1995 from HIV/AIDS. Dr. Dre released solo albums, including the highly successful *The Chronic* (1992), and began to produce for such emerging rap stars as Snoop Dogg of Long Beach, California, in 1993 and the Detroit-based white rapper Eminem in 1999. Ice Cube went on to a successful solo career, releasing such albums as *AmeriKKKa's Most Wanted* (1990) and *The Predator* (1992), while also venturing into acting; he has appeared in a number of major motion pictures, including *Boyz n the Hood* (1991), *Three Kings* (1999), and *Barbershop* (2002).

Oberlin College

Oberlin College is a private, four-year liberal arts college located in Oberlin, Ohio. Founded in 1833 by Presbyterian ministers John Shipherd and Philo P. Stewart and named after an Alsatian minister they admired, Oberlin was initially envisioned as a community for progressive Christian learning. The college became widely known during the 1850s, primarily because of the work of its second president, the renowned evangelist Charles Grandison Finney.

Founded as the first coeducational college in the United States, Oberlin also was the first to admit African Americans as full-time students, beginning in 1835. Today it is among the few top-ranked private liberal arts colleges in the United States that also features a music conservatory; the Oberlin Music Conservatory (1865) is the oldest continuously operating conservatory in the country. Most of Oberlin's approximately 2,800 students are enrolled in general liberal arts programs; about 500 are enrolled in the conservatory or pursue degrees in both programs. A higher percentage of Oberlin's students go on to earn doctoral degrees than alumni of any other liberal arts college in the country.

Oberlin traditionally has been associated with progressive causes, most notably abolition and civil rights. During

the era just before the American Civil War, Oberlin attracted national controversy as a hotbed of abolitionism. Students and faculty participated in the controversial rescue of an escaped slave in 1858, known as the Oberlin-Wellington Rescue. A key stop on the Underground Railroad, the secret network that transported Southern slaves to free homes in the North, was located on the Oberlin campus. A monument to the Underground Railroad, in the form of a rail pointing toward the sky, stands on the campus.

A century after the abolition of slavery, Oberlin and its students were heavily involved in the civil rights movement and protests against the Vietnam War. Oberlin students are still dedicated to progressive causes, including various pacifist and human rights campaigns.

Meanwhile, the Oberlin Student Cooperative Association (OSCA) is operated as a nonprofit organization, with members performing a wide variety of community service and outreach projects. OSCA claims to be the nation's largest student community service program relative to the size of the school. The group is also the largest student organization on campus, because Oberlin bans fraternities and sororities. All dormitories are coed; a kibbutz-like project initiated by Jewish students also operates on campus.

Traditionally, Oberlin has been regarded as a welcoming environment for liberal and progressive students. The college features a thriving LGBT (lesbian, gay, bisexual, and transgender) community, and *Princeton Review* has ranked the student body as one of the most politically active in the United States.

Also, more than at most other small colleges in the United States, Oberlin students often have protested against the college's administration and its practices. A 1990 protest against college president S. Frederick Starr resulted in the arrests of several students. Starr was forced to resign over the protests, which had been inspired by his fractious relations with faculty. Later student protests led to the banning of Coca-Cola products on the Oberlin campus, and a 2005 vote of no confidence against college president Nancy S. Dye.

Oberlin is known for its permissive attitudes toward art, music, and sexuality. Student nudity, including streaking, are common on campus during special events, and the college's annual Safer Sex Night and Drag Ball garner national attention.

Above all, perhaps, the Oberlin student body is renowned as a thriving community of musicians, who are offered many venues for performance and networking. Nationally known musical artists to emerge from the Oberlin scene include the Sea and Cake, Come, and the Yeah Yeah Yeahs. Meanwhile, Oberlin runs a unique art rental program, in which the college's Allen Memorial Art Museum allows students to rent famous works of art (including original works by Pablo Picasso, Salvador Dali, and Andy Warhol) for their dormitory rooms.

Oberlin's progressive tradition has been reflected as well in its roster of noteworthy commencement speakers, selected for diversity of background and point of view. Speakers have included civil rights leaders Dr. Martin Luther King, Jr., Archbishop Desmond Tutu, and Jesse Jackson and cultural icons Robert Frost and Pete Seeger.

Oberlin alumni include several Nobel laureates and many renowned academics in a variety of fields. Well-known alumni include the abolitionists Lucy Stone and Antoinette Louisa Brown, award-winning writers Tracy Chevalier and Franz Wright, politicians Erwin Griswold and Adrian Fenty, foreign leaders Eduardo Mondlane of Mozambique and H.H. Kung of China, and entertainers Jim Burrows and Eric Bogosian.

O'Brien, Fitz-James (1828–1862)

Fitz-James O'Brien was an innovative Irish American writer of the mid-nineteenth century who came to be known as a pioneer of supernatural fiction, fantasy, and science fiction. Corresponding with his uninhibited personal life, O'Brien's stories, poetry, and plays were considered wild and unconventional for the antebellum literary scene in America. Through the relatively new medium of the literary magazine, O'Brien helped propel the short story to a new level of popularity.

O'Brien was born in county Limerick, Ireland, on December 31, 1828. An only child, he was left a sizable inheritance upon his father's death. At first, he used the money to further his education at Trinity College in Dublin and to travel abroad. While staying in London in 1849, however, O'Brien fell into a profligate bohemian lifestyle and spent the rest of his fortune.

At the same time, O'Brien succeeded in publishing a large number of poems, stories, and articles in Irish, Scottish, and English periodicals. It was in London that O'Brien also was introduced to the theater, an experience that would inspire his expanding repertoire as a writer, playwright, and critic.

In 1852, O'Brien continued his literary success in the United States. After landing in Washington, D.C., he traveled to New York City and joined with the American enclave of bohemians who frequented Pfaff's Cellar on Broadway. At Pfaff's, O'Brien also was a respected fighter who would incite fisticuffs over any subject from literature to social discourtesies.

Along with such other writers as Henry Clapp and Walt Whitman, O'Brien found literary success by engaging in an uninhibited and avant-garde way of life. His exalted and witty personality was both an asset and detriment to his trade. O'Brien had expensive tastes and many eccentric personal habits, including a propensity for napping. He often slept ten to fifteen hours per day, leading literary historians to suggest that prolonged dreams and subconscious thought may have provided the inspiration for his bizarre creative writing. Such unconventional habits also led to cycles of indolence and exertion, as he would often wait until his deadlines approached before producing his poems, stories, humor pieces, sketches, columns, and reviews.

O'Brien published his first American literary piece in the comic journal the *Lantern*, to which he became a regular contributor. Thereafter, he worked as an editorial writer for *The New York Times*. During the 1850s, he published short stories and poems in a variety of magazines, including *Harper's New Monthly Magazine and Weekly*, *Putnam's Magazine*, *The Atlantic Monthly*, and *Vanity Fair*.

He also wrote a regular column in Henry Clapp's *Saturday Press*, titled "Dramatic Feuilleton." In this column, he encouraged patronage of the emerging American drama scene and criticized U.S. dramatists when they fell short of European standards. The interest in theater he shared with fellow bohemian writers such as John Brougham, Ada Clare, and William Winter led O'Brien to write plays, including *A Gentleman from Ireland* and *The Sisters* in 1854.

Inspired by the supernatural work of Edgar Allan Poe, O'Brien also produced a number of light fantasies and dream stories. His greatest success came in 1858 with the publication of "The Diamond Lens" in *The Atlantic Monthly*. In this creative and bizarre story, an eccentric scientist discovers and falls in love with a microscopic

humanoid creature.

Throughout the later half of the nineteenth century, O'Brien continued to produce innovative and controversial surrealist fiction stories. Dealing with previously untouched subjects such as demons, invisible creatures, and robots, these sensational tales incited awe and intrigue among American readers.

At the onset of the American Civil War, O'Brien felt the need to transfer his passion for writing and fighting to a more noble and righteous setting, and he enlisted in the Union Army. He joined New York's Seventh Regiment of the National Guard with the rank of captain. Both deeply troubled and inspired by this traumatic time, O'Brien produced some of his most celebrated work during the war. Critics regard his Civil War poems as among his best; however, these literary works were also his last.

In February 1862, O'Brien was shot by a Confederate soldier while on a scouting mission. He died from tetanus on April 6 in Cumberland, Maryland.

Ochs, Phil (1940–1976)

A protest singer and songwriter of the 1960s, Phil Ochs identified with an earlier style in American folk music exemplified by Woody Guthrie, Pete Seeger, and the Weavers. His music was direct, timely, and often highly critical of the cruelties of racism and war. Sometimes described as social commentary, his songs were laced with a razor-sharp wit and biting sarcasm that made him controversial. As he wrote in *Broadside* magazine, "Every newspaper headline is a potential song." It was in this tradition that Ochs composed and performed such songs as "Here's to the State of Mississippi," "I Ain't Marching Anymore," and "Love Me, I'm a Liberal" and earned a reputation as a fearless American troubadour.

Born on December 19, 1940, into a somewhat conventional, if nomadic, middle-class family, Ochs began studying music at an early age. He was born in El Paso, Texas, and raised in Far Rockaway (Queens, New York City) and upstate New York. Throwing himself into music at the Capital University Conservatory of Music in Columbus, Ohio, in what became his usual manic way, he excelled at the clarinet, earning the status of principal soloist by age sixteen.

Ochs soon grew less interested in the necessary discipline and more interested in the creativity of writing and politics. He honed these skills studying journalism at Ohio State University, where a friend introduced him to traditional American folk music. Ochs was fascinated by its possibilities. He won his first acoustic guitar in a bet on

the 1960 presidential election with the same friend. Ochs bet \$100 that Massachusetts Senator John F. Kennedy would win the contest. Learning to play the guitar, he also found a way to express himself in lyrics.

By the late 1950s and into the early 1960s, Ochs, like a number of other singer-songwriters of the day, was swept up in a full-blown revival of folk music. This resurgent interest in folk grew out of a combination of ongoing prosperity and the idealism of the era, including the often-violent struggle over civil rights and the anti-Vietnam War movement. Reared on this sense of optimism and social justice, the younger generation became disenchanted by the slow pace of change and the glaring inconsistencies in American life.

Out of this mixture came a counterculture consisting of folk and jazz music, the poetry and prose of the beatniks, the use of marijuana and, in general, the rejection of the assumptions of mainstream society. Ochs was part of a new generation of folk singers-songwriters that included such luminaries as Seeger, Joan Baez, and Bob Dylan, and that brought together the old and new forms of American folk in a way that resonated with young listeners.

For a time, Ochs enjoyed the admiration of both his peers and the wider folk and countercultural audiences. Toward the end of the 1960s, however, he became increasingly dismayed over the tragedy of Vietnam, the confusion and collapse of the 1960s counterculture movements, and the state of American culture and politics. Sinking deeper into depression, he turned increasingly to alcohol and became more and more isolated from his peers. After an extended period of depression, Ochs took his own life on April 9, 1976.

O'Keeffe, Georgia (1887–1986)

The modernist painter Georgia O'Keeffe, an original member of the American avant-garde in the 1920s and a major figure on the American art scene throughout the twentieth century, challenged the conventional roles of women in society and in the arts. Known especially for her paintings of nature and wildlife in the Southwest—especially flowers, still lifes, and landscapes—O'Keeffe pushed the limits of artistic expression by bringing a quiet, mystical, abstract quality to her subjects. She became the first truly successful and influential female artist in the United States.

In the area of Taos, New Mexico, where she began visiting in the 1920s and later settled permanently, painter Georgia O'Keeffe reduced the desert landscape and its natural elements—flowers, bones, rocks, and sky—to objects of stark, simple beauty. (Tony Vaccaro/Hulton Archive/Getty Images)

Born in Sun Prairie, Wisconsin, on November 15, 1887, to a well-established dairy-farming family, O'Keeffe grew up spending a great deal of time outdoors, taking in the natural world. She was a solitary child who showed artistic promise at a young age. The self-confident youngster was ambitious, declaring by the age of thirteen that she would grow up to be an artist. As a teenager, she had already established a kind of mythic persona among her peers for her eccentric behavior, including forgoing social events in favor of art. As she would for much of the rest of her life, she also shunned faddish styles and fashion statements, typically choosing practical, comfortable clothes, usually in black or white, and often dressing like a man.

Beginning art classes at age seventeen, O'Keeffe was dismayed to find that she was required to copy the work of others. She eventually found a teacher who encouraged his students to try their hands at original paintings and drawings. O'Keeffe never studied the great masters, nor even the late-nineteenth-century pioneers of modern art, which was unusual for one who would become an accomplished artist. From a young age, she remained largely uninfluenced by the style and subject matter of others, painting only for herself and only what and how she wished.

While she was an extremely private person who kept her art to herself, not even giving works as gifts, she decided to send some drawings to Anita Pollitzer, a friend from art school. Pollitzer took it upon herself to show the drawings to Alfred Stieglitz, an influential gallery owner credited with introducing modern art to America, and himself an accomplished artistic photographer. Stieglitz experienced a “eureka moment,” having discovered an original, expressive female artist. With his influence artistically, as a manager, and emotionally—he would later become her husband—O'Keeffe pushed herself and excelled in her work.

O'Keeffe found beauty in the natural world, especially in flowers and landscapes, particularly the desolate geographies of Texas and, later, New Mexico. She taught herself to paint the natural world through an emotional perspective. In the 1920s, she began her well-known flower paintings, using a bold palette of colors. The paintings focused on the color, shape, and texture of the flowers, and critics noted their sexual imagery. Only much later, in the 1950s and 1960s, would these paintings gain full acceptance.

As her work became well known, O'Keeffe's paintings started to sell for record amounts. Commercial success

provided financial independence, which fueled her ability to create only the art she chose. Meanwhile, she was beginning to distance herself from the New York art scene. Starting in 1929, O’Keeffe spent her summers away from her aging, older husband, preferring to live in the remote areas of New Mexico outside Taos. There, she began a new series of work, often landscapes; many included sun-bleached bones found in the desert and the hues of a more serene palette.

Despite taking on commercial work, O’Keeffe always remained true to her art, putting it first in her life, using only the techniques, colors, and subjects that were important to her. Friends and travel aside, she spent a great deal of time alone. Her independent spirit and solitary life in the desert, where she permanently relocated in 1949, led her to become a feminist icon as well as an influential modern artist. She died on March 6, 1986, in Santa Fe, New Mexico.

Omphalism

Omphalism (from the Greek *omphalos*, or navel) is the theological concept, originally proposed in the nineteenth century, that Earth and everything on it were created not new but with evidence of aging—thus explaining how Earth can be only thousands of years old, as suggested by biblical scholars, rather than billions of years old, as indicated by science. Although no religious movements were organized expressly around omphalism, it remains one of the intellectual arguments used by some in the Christian fundamentalist counterculture today.

Omphalism derives its name specifically from Philip Henry Gosse’s 1857 book, *Omphalos: An Attempt to Untie the Geological Knot*. In this work, Gosse, an English naturalist and marine biologist, argues that God, in order to create a world that “worked,” included elements that appear to have developed gradually rather than in a moment, even though they had not. Trees were created with their rings, for example, and mammals, rather than evolving from sea creatures, appeared already covered in hair. Similarly, canyons and mountains, while created in a single moment, appear to have emerged through slow, natural processes. Gosse used the term *omphalos* as the catchphrase for his theory because, he said, Adam and Eve were created with navels, even though they were created as adults rather than born by natural means (and hence had no need for an umbilical cord). According to the theory of omphalism, the world came into existence with seemingly “mature” attributes that make it impossible to date the age of God’s creation on the basis of natural objects.

Gosse wrote his book at a critical time in the development of American Christianity. In the decades before the 1850s, European and British geologists such as James Hutton and William Smith had been developing the idea of geological time. They argued that fossils discovered at various levels within the ground showed that Earth

developed over millions or billions of years.

These geological theories directly challenged the widely accepted chronology proposed by the Anglican bishop James Ussher in the 1650s. Ussher had used the dates of events described in the Bible to determine that Earth was created in 4004 B.C.E. This timeline was accepted among Christians into the nineteenth century.

Omphalism supported Ussher's chronology by arguing that fossils and other evidence used by geologists were merely artifacts of the creation process and so provided no evidence of extreme antiquity. Omphalism was only one theory used to explain away geologic arguments. Other supporters of a "Young Earth" argued, for example, that the "days" referred to in Genesis should not be understood literally and actually refer to much longer periods of time.

Omphalism came under widespread criticism. Scientists regarded it as a kind of sophistry, deeming all evidence from the natural world unreliable. Religious critics argued that Gosse presented a God who filled creation with lies and illusions, an image that did not fit well with the idea of a benevolent creator. Other critics have derided omphalism as "Last Thursdayism," claiming that, using Gosse's logic, there is no way to be sure that the world, including the memories of humans, were not created in toto last Thursday.

Despite these attacks, versions of omphalism continue to provide fundamentalist Christians with a rebuttal to scientific theories, both geological and biological, that point to millions or billions of years of gradual evolution.

Oneida Community

The Oneida Community was the utopian Perfectionist society founded in 1848 when social reformer and lay preacher John Humphrey Noyes relocated his group of religious followers from Putney, Vermont, to Oneida, New York. The congregation, which lived together and held all things, including marriage partners, in common, was forced to move following Noyes's arrest for adultery. After posting bond, Noyes fled to Oneida, where a majority of his followers joined him. The members of the Oneida Community believed that Jesus Christ had returned in the year 70 C.E., and, therefore, it was possible to create Christ's millennial kingdom themselves. As Perfectionists, members believed that they could achieve perfection, that is, become entirely free of sin, within their lifetime. What made those at Oneida different from other Perfectionists was their practice of Noyes's innovative ideas, including complex marriage, male continence, mutual criticism, ascending fellowship, and eventually eugenics, or stirpiculture (selective breeding among people).

With complex marriage, Noyes's Perfectionists regarded themselves as wedded to the group as a whole rather than to a single partner. Each should be married to all in body, mind, and spirit. Community members were encouraged to pursue a continuous variety of heterosexual relationships; exclusive sexual or romantic relationships were prohibited. It was not compulsory for couples who had been married prior to joining the community to legally divorce; however, they were expected to share their love, thereby helping bind the community together.

As a sign of grace, males were encouraged to engage in sexual continence, or withholding ejaculation during coitus to avoid impregnating their female partners. Postmenopausal women were encouraged to introduce sex to young boys just entering puberty. This provided both with legitimate partners and entailed little risk of pregnancy while the youth mastered the practice of continence.

In an effort to eliminate objectionable character traits, every member of the community was subject to mutual criticism, either by committee or by the community as a whole, during a general meeting. Noyes himself was subjected to such criticism, although, it has been noted, his occurred less often and was less severe than that of the other members of the community.

Ascending fellowship was an endeavor to improve oneself through sexual relations with those said to be spiritually superior. In the hierarchy of the community, men were regarded as spiritually superior to women, and the elderly superior to the young. After a community member had attained a certain level through ascending fellowship and other factors, he or she was expected to then engage in descending fellowship with those attempting to attain a higher level.

Women did enjoy equality with men in the governance of the community, and Noyes published a tract titled *Slavery and Marriage*, in which he argued against the fashionable idea that women were incapable of self-determination. As a physical representation of their freedom, the women of Oneida wore bloomers (loose trousers over which they wore a short skirt); these also allowed them greater freedom of movement than the cumbersome longer skirts worn by women outside the community.

Initiated in 1869, stirpiculture, or selective reproduction, was intended to create model children. Prospective parents were presented before a committee and matched on the basis of similar spiritual and moral characteristics. Reportedly, fifty-three women and thirty-eight men participated in this experiment, which produced sixty-two children, nine of whom were fathered by Noyes.

Children were raised communally and housed together in a special section of the community house known as the Children's Wing. Biological parents and children were permitted to visit one another, but if it was suspected that a parent and child were becoming too attached, a period of separation was enforced.

Like many other religious, communal, utopian societies in nineteenth-century America—including the Shakers, the Harmony Society, the Society of Separatists of Zoar, and the Amana Society—the Oneida Community was a prosperous, self-sufficient venture. Within the first two years of its existence, the community's original 87 members grew to 172; by 1878, there were more than 300. Growing and canning fruits and vegetables; raising silkworms and producing silk thread; and manufacturing brooms, shoes, and animal traps were the principal commercial enterprises at Oneida. Although monetarily successful, these industries, along with processing flour and milling lumber, were meager compared to the manufacture of silverware, the commodity for which Oneida became best known.

The decline of the Oneida Community began when Noyes attempted to groom his son, Theodore, as his successor. This created a rift from which the community was unable to recover. By 1879, those outside the community deemed complex marriage to be immoral; in addition, Noyes was charged with statutory rape after having sexual relations with teenage girls in the community. Before an arrest warrant could be served, he fled to Niagara Falls, Ontario, Canada, where he lived until his death in 1886.

Those remaining at Oneida agreed to reject complex marriage, and the Oneida Community dissolved during the course of 1880, when more than seventy members entered into traditional marriages. On January 1, 1881, the

Oneida Community was formally reconstituted as a joint stock company, the silverware and cutlery company Oneida Limited.

O'Neill, Eugene (1888–1953)

Playwright Eugene O'Neill, credited with nothing less than elevating the fledgling American theater of the early twentieth century to the level of mainstream world drama, was nevertheless a controversial figure in his time, bucking convention and forging innovative directions. His use of the vernacular, recurring themes of disillusionment and despair, social and moral critiques of American society, and forays into avant-garde expressionism at once defined his distinctive, tragic vision and helped move American theater beyond the conventional melodrama of the commercial Broadway stage. At the height of his creativity, from 1918 to 1928, he wrote more than a dozen plays, including some of the most enduring works of modern American drama.

Eugene Gladstone O'Neill was born on October 16, 1888, to popular melodrama star James O'Neill and Mary Ellen Quinlan O'Neill. Most of his early life was spent traveling the country on tour with his parents. His mother, however, he would later write, "never was an actress, disliked the theatre, and held aloof from its people."

O'Neill was educated at a series of elite private schools, but as a young man he decided to follow the lead of his derelict older brother Jamie, dividing his time between New York flophouses and international adventures. Between 1907 and 1912, he worked as a gold prospector in Honduras, a machinist in Buenos Aires, Argentina, and a seaman on a transatlantic liner. He contracted tuberculosis in 1912 and spent six months recovering at the Gaylord Farm Sanatorium in Wallingford, Connecticut.

There, O'Neill began reading the Greek tragedians and the major nineteenth-century European dramatists. He quickly wrote eleven one-act plays, one of which, *Bound East for Cardiff*, caught the attention of writers Susan Glaspell and George Cook, who were in the process of founding an experimental amateur theater company, the Provincetown Players. O'Neill's one-act was their first production in 1916, staged at their Wharf Theatre in Provincetown, Massachusetts. Other short plays written by O'Neill followed at the group's theater on MacDougal Street in New York City. In 1920, his full-length play *Beyond the Horizon* had found a home on Broadway.

The move from off-Broadway to Broadway marked a shift in O'Neill's dramaturgy. The early, realist plays drew from his experiences wandering the world and brought to the stage characters from the lower rungs of modern society: industrial workers, seamen, and barroom flunkies. Never before had the American theater, long dominated by European imports and sentimental melodramas, seen such unflinching portraits of everyday men and women.

By the 1920s, however, O'Neill had come to reject his early realism in favor of a more expressionistic approach. Drawing on the works of the radical German philosopher Friedrich Nietzsche, the psychologist Sigmund Freud,

and especially Swedish playwright August Strindberg, who himself pioneered a nonrealistic dramatic style in Europe, O'Neill sought to discover ways to present the inner psychological workings of the human mind on stage. This shift marked the first American attempt to seriously engage with the European theatrical avant-garde, and it won O'Neill two Pulitzer Prizes, one for *Beyond the Horizon* and the other for *Anna Christie* (1922).

In 1936, when O'Neill became the first American playwright to win the Nobel Prize in Literature, he was already slipping into obscurity. Isolated from the mainstream American theater, he began crafting unflinching autobiographical accounts of his early family life, composed, he said, "in tears and blood." The works of this period represent some of O'Neill's finest achievements, including *The Iceman Cometh* (1946), *Long Day's Journey into Night* (1956), and *A Moon for the Misbegotten* (written in 1943, published in 1952).

O'Neill died on November 27, 1953, a forgotten icon of the early-twentieth-century stage. In 1956, a revival of *The Iceman Cometh* and the posthumous Broadway premier of *Long Day's Journey* returned him to his status as one of America's most respected dramatists.

Onion, The

A leading source of "faux news," *The Onion*—published weekly in print and daily online—offers news parody, satire, and irreverent commentary on contemporary cultural and current affairs. Founded in 1988 as a small newspaper by two University of Wisconsin students, Tim Keck and Christopher Johnson, *The Onion* was sold two years later. Growing in stature and popularity, it moved to the Internet in 1996.

By 2006, *The Onion* was attracting more than 3 million Web readers weekly, had a print distribution of 549,000 (it was available for free in Chicago, Denver-Boulder, Los Angeles, Madison, Milwaukee, Minneapolis-St. Paul, New York, and San Francisco), a successful radio program, and a best-selling book line. It has won many awards, including the Thurber Prize for American Humor and numerous Webby awards for Best Humor or Best Public Voice.

Often acerbically, *The Onion's* news parody takes aim particularly at the "news you can use" format, style, and language of *USA Today* and other "infotainment" newspapers. All manner of life's small inanities are turned into full-fledged articles. Each issue contains numerous pointless but full-color graphs and charts in its Statshot feature, and many articles mock research or stories of dubious newsworthiness.

Amid the general parodic tone, however, *The Onion* frequently presents adept political and cultural critique. Whether satirizing socioeconomic realities ("Inner-City Stabbings Leave Five Maidless"), politics ("Congress Approves \$540 Million For Evil," "State Department To Hold Enemy Tryouts Next Week"), or global issues

("Sudanese 14-Year-Old Has Midlife Crisis"), or wryly commenting on cultural currents ("Women Now Empowered By Everything A Woman Does"), *The Onion's* articles often contain a measure of serious commentary and depth. Indeed, they provide a running commentary on, and an ever-present undercutting of, dominant news, political, and cultural discourse.

One of its stronger issues, for instance, released just days after American and coalition forces attacked Iraq in March 2003, took a defiant stand against mainstream support for the war and the war's leadership. The attack was dubbed "Operation: Piss Off the Planet," and related articles examined the creation of a bomb capable of killing 1,500 terrorists in a single blast; an American plan for postwar dictatorship in Iraq; and a plan by President George W. Bush for the United States to form its own United Nations. Particularly biting articles reported the aftermath of a misguided missile attack ("Dead Iraqi Would Have Loved Democracy") and took a satiric swipe at institutional racism in America ("U.S. Continues Proud Tradition Of Diversity On Front Lines").

The Onion's continued success can be measured not only by its ever-growing distribution numbers, but also by the success of its line of books anthologizing *Onion* articles, several of which have spent numerous weeks on *The New York Times* best-seller list. One original title, *Our Dumb Century* (1999), even "Onion-ized" American history, providing a fabricated edition of *The Onion* from each year of the twentieth century. *The Onion* writers turned their satirical eyes back in time with such articles as "U.S. Enters War; Wilson Vows To 'Make World Safe for Corporate Oligarchy'" and "Martin Luther King: 'Perhaps We Shall Not Overcome After All.'" *The Onion* followed it up with another original title, *Our Dumb World: Atlas of the Planet Earth*, in 2007.

Ultimately, however, the faux paper has been able to capitalize on the Internet as a safe gestation zone. Both online and in print, the publication continues to offer free countercultural expression and creativity, providing daily relief from and satire of mainstream journalism.

Organic Farming

Organic farming is a method of agriculture that produces food without the use of chemically formulated or synthetic fertilizers, growth stimulants, livestock-feed additives, pesticides, or antibiotics. Instead, it produces food from seed, fertilizer, and other products of plant-or animal-based material only. Prior to the Industrial Revolution of the mid-nineteenth century, all farming could be classified as "organic" because it relied on materials found in nature, as well as on ancient methods such as crop rotation and cultivation, to control insects, pests, and weeds and to provide plant nutrients. That changed as the inventions of the Industrial Revolution led to the use of new,

mechanized methods and tools, and with the introduction of chemicals to increase crop production.

By the turn of the twentieth century, the development of manufacturing processes to produce artificial fertilizers and pesticides led to further changes in farming and increased crop specialization. As a result, chemical farming became the predominant or conventional method of agriculture in North America and Europe. The prevailing belief among scientists at the time was that soil contains few if any useful nutrients and its only function is to hold plants in place.

A small number of farmers and scientists began to take a more holistic view of the relationship between plants and soil, recognizing the importance of maintaining the organic systems by returning nutrients to the soil. This approach ultimately gave rise to modern organic farming; its philosophy is summarized by the motto “feed the soil, not the plant.”

In the early 1900s, Sir Albert Howard, a British botanist, worked in India as an agricultural adviser and became an advocate of traditional Indian farming practices. This approach emphasized the importance of organic soil matter and proper aeration to promote fertility and plant nutrition. As one of the first proponents of a holistic, systems approach to plant-soil cultivation, Howard came to be referred to as the father of modern organic agriculture. In 1940, he published his guidelines and methods in a book titled *An Agricultural Testament*, one of the most influential texts on organic farming and one that is still widely used by organic farmers today.

J.I. (Jerome Irving) Rodale, the son of a New York City grocer, is credited with being the first to popularize the term *organic* in the United States, using it in a series of articles published in the 1920s. Rodale became one of the earliest advocates for organic farming techniques when, in 1930, he founded Rodale Press and, a little more than a decade later in 1942, launched *Organic Farming and Gardening* magazine.

In addition to the magazine, Rodale Press began publishing books and booklets on organic agriculture and other extensions of Howard's work. In them, Rodale outlined what he considered good farming practices, such as crop rotation and mulching. Healthy soil requires the use of compost, he contended, and the avoidance of pesticides and artificial fertilizers. Moreover, healthy soil was said to be linked to healthy living; eating plants grown in organically enhanced soil would make people healthier.

Because his publications were the most accessible and visible source of information about organic farming and gardening, Rodale is credited with having the greatest influence on bringing the organic method to the American public. That influence is still felt today, as Rodale Press—based in Emmaus, Pennsylvania, since its founding—continues to publish books and magazines, and *Organic Farming and Gardening* magazine, now called *Organic Gardening*, remains the most widely read gardening periodical in the world.

Despite Rodale's influence, the use of natural or organic methods was considered a radical idea among American farmers for most of the twentieth century. Most growers continued to embrace conventional technologies and chemicals, accepting their promises of increased crop yields, efficiency, and profitability. In comparison, organic farming still was regarded as impractical and inefficient.

This continued until 1962, when Rachel Carson, a prominent marine biologist, published the book *Silent Spring*, detailing the environmental effects of DDT and other pesticides. The book became an international best seller, and it is widely credited with launching the modern environmental movement. Those who began to look for alternatives to pesticide use and industrial agriculture that relied on chemicals were drawn to organic agriculture because it avoided the use of synthetic pesticides.

For many, organic farming carried the further appeal of being associated with the counterculture movement; it wasn't just an agricultural method, it was a philosophy of living as well. This, in turn, led to differences in approach and a resistance, in some circles, to the true organic processes advanced by Howard and Rodale.

The need for a clearer definition of organic farming became increasingly clear in the 1970s, as an industry and a consumer market began to emerge that needed to be more rigorously distinguished from conventional agriculture

and its products. In 1980, amid increasing pressure from farmers and consumer groups for government regulations, the United States Department of Agriculture (USDA) gave its first official definition of organic farming.

This led to an ongoing series of laws, regulations, and certification standards that began in 1990 with the Organic Foods Production Act (approved but never fully implemented). In 1992, the USDA established the National Organic Program and appointed the National Organic Standards Board. In December 2000, the National Organic Program Rules were finally agreed upon and the National Organic Standards were adopted for certified organic growers. The organic rule went into effect in April 2001, and the Organic Foods Production Act was finally fully implemented in 2002. Today, certified organic farming operates on both the principles of traditional organic farming and new scientific principles such as biodiversity, natural pest management, natural plant nutrition, and sustainability.

The formal definition and regulation of organic agriculture, not to mention the growing popularity of its products, marked the end of its countercultural identification. For a variety of reasons, organic farming and organic products—including meat and dairy as well as fruits and vegetables—have gone mainstream. Since certification rules began to be established in the early 1990s, consumer demand for organic food has increased nearly 20 percent annually, reflecting desires for healthier, higher-quality food, increased food safety, and a reversal of the perceived environmental damage caused by conventional farming.

Outsider Art

Outsider art is a form of creative expression by individuals who, for a variety of reasons, exist on the fringes of society and have not been educated—or indoctrinated—in the traditions, norms, and values of mainstream artistic culture. The individuals who produce outsider art are not merely untrained or self-taught. They also lack awareness of the conventions of so-called high art and do not consider themselves to be artists at all. It is precisely the creators' lack of awareness of formal methods and standards, combined with a lack of aspiration for the achievement of status in the world of visual arts, that separates outsider art from other categories, such as naive art, marginal art (*art singulier*), and folk art.

Coined by British art historian Roger Cardinal in 1972, the term *outsider art* approximates the concept of *art brut*, or “raw art,” as defined in 1945 by the French painter and sculptor Jean Dubuffet in response to works created by psychiatric patients. Dubuffet characterized these works of art as “raw,” meaning that they were “uncooked” or unmediated by cultural influences external to the minds of their creators, and hence more authentic and powerful.

Outsider art, like its French counterpart, is valued for its originality, as well as its unfettered expression of the inner world of the artist. A key difference between the two terms, however, may be found in their levels of exclusivity. *Art brut* is a highly bounded category of work; the designation is now reserved only for works included in the Collection de l’Art Brut in Lausanne, Switzerland. These works are not allowed to be exhibited outside the collection, and the collection alone has the authority to designate any newfound works as *art brut*. *Outsider art* is a much more fluid and amorphous designation, often used, and misused, to refer to a wide range of visual art, from work by the mentally ill, religious visionaries, and autodidactic artists to work by those who have been trained in, but actively reject, mainstream techniques and standards.

Sam Rodia's Watts Towers in Los Angeles—a monument of steel, concrete, and found materials constructed over thirty-three years—epitomizes works of outsider art. Its creators are untrained in formal artistic methods, conventions, and theories. (Hulton Archive/Getty Images)

Since its introduction, the term *outsider art* has been the subject of social and cultural controversy. Those opposed to the term argue that its use serves to reinforce the primacy of “high art”—with standardized, mainstream works by trained artists embraced as “insider art,” while unconventional works by untrained people are cast to the margins. Others find the term useful, however, for highlighting the genesis and nature of unorthodox artistic production. Two issues are key: (1) whether outsider art is different enough, yet cohesive enough, to warrant a unique category; and (2) whether the term *outsider art* (or *outsider artist*) further disenfranchises individuals who are already socially and culturally alienated, and who produce art under marginalized circumstances.

Examples of outsider art include works by Adolph Wölfli, who produced both visual art and music from 1895 until his death in 1930, despite being confined to a psychiatric institution for most of his adult life; the art of Martin Ramirez, who, while also extensively institutionalized, developed an elaborate iconography based on Mexican folk figures, which first caught the attention of a psychologist at DeWitt State Hospital in Auburn, California, in 1948; and the images and narratives of Henry Darger, whose tortured 15,000-page opus, *The Story of the Vivian Girls...* (undated), was discovered after his death in 1973 in the second-floor room of a Chicago boarding house that he had seldom left in more than forty years.

Outsider Music

Outsider music is analogous to so-called outsider art—that is, naive art or *art brut*, produced by untrained artists unaware of their shortcomings in terms of technical competence, taste, creative finesse, and lack of concern for formal standards. Outsider music tends to be produced by nonconformist individuals, but it also includes works by misadvised celebrities. The music may be unintentionally disturbing, funny, creepy, or just plain bad. The genre generally does not encompass avant-garde music, exotic non-Western music deemed amusing to Western ears, novelty or spoof songs, once-cool but now campy tunes, or anything self-consciously kitsch or “cheesy.”

Although outsider music has no doubt been made for as long as music has existed, only through the medium of recording and the advent of exchange networks, such as record companies, information magazines, zines, and the Internet, has an archival trail been blazed and the genre recognized. The United States is a particularly rich breeding ground for the outsider phenomenon, with an economy that allows affordable, readily accessible recording technology to a wide number of people, a cultural obsession with stardom and the idea of the American Dream, and the widespread embracing of the concept of kitsch.

Outsider music generally comes from home recordings or independent studios with no quality control. The best-known examples include works by the Shaggs, a band of sisters from New Hampshire active in the 1960s and 1970s, who have been criticized for seeming to play different songs (badly) at the same time. The 1960s singer-songwriter Tiny Tim is an outsider success story, as his quirky music and personality fortuitously coincided with the sensibility of the hippies, who embraced him as one of their own. Ill-starred celebrity recordings include those by actors Mae West, Telly Savalas, and William Shatner; the latter's 1968 cover of the Beatles' *Lucy in the Sky with Diamonds* marks, according to critics, one of the low points of his entertainment career.

A good portion of outsider music came out of American “song factories” dating back to the 1960s, where would-be pop stars could pay anything up to a few hundred dollars to have their lyrics set to music. Studio musicians composed simple tunes in genres ranging from country to disco, and hired singers warbled out some of the most financially and creatively unsuccessful music to date. One notorious example is Ramsey Kearney's *Blind Man's Penis* (which is “erect because he's blind”), a graphic lyric puzzle sung deadpan by a bleary country singer to a tinny, lackluster tune.

A number of projects have sprung up since the 1980s to exhume the treasures of outsider music. These include radio shows, Internet fan sites, and, most notably, Irwin Chusid's book and recordings, *Songs in the Key of Z* (2000), one of the first commercial attempts to introduce and market outsider music as a genre, and *The American Song-Poem Anthology* (2003), from Bar/None Records, which documents the song-factory phenomenon.

Owen, Robert Dale (1801–1877)

Robert Dale Owen, who lived and worked on his father's utopian community in New Harmony, Indiana, became a leading figure in the American utopian and spiritualist movements of the nineteenth century. The utopian movement—established by notable transcendentalists and utopians, such as William Miller and John Humphrey Noyes, who founded “ideal” communal societies in New England, New York State, and the Midwest—attempted to extricate Americans from the hectic life of capitalism and to provide a tranquil and egalitarian social and economic system.

Owen was born on November 9, 1801, in Glasgow, Scotland. The son of a prominent social reformer and industrialist, Robert Owen, the younger Owen grew up knowing and understanding the ravages of English industrialization. In his youth, he studied at his father's community of New Lanark. Afterward, he continued his studies in Switzerland to pursue his ideological and political development.

In 1825, his father, influenced by his successes at New Lanark, decided to leave England and establish a utopian society in the United States. He purchased the settlement of New Harmony, Indiana, from religious fundamentalist George Rapp, who had managed a vast estate as a haven for religious dissenters who were being persecuted by Protestants. With the new land deal and a utopian vision, this new community of 800 people was to promote the ideals of egalitarianism without unemployment or poverty. New Harmony would be a community of goods distributed according to age, the substitution of ethical lectures for religious worship, the public care of children, and cooperative—rather than competitive and capitalist—labor, with the intention of making it a thriving colony for the mutual benefit of all.

From 1825 to 1827, Robert Dale Owen managed the local newspaper, the *New Harmony Gazette*. First published on October 1, 1825, this free thought journal published all of the elder Owen's speeches, as he reinterpreted Christianity and the Bible. The *Gazette* began with an initial subscription base of only 300 but eventually became popular. The New Harmony commune, however, due to its extremely individualistic nature, did not offer the vocational training necessary to build a successful community, and failed in the spring of 1827.

In the aftermath, Robert Dale Owen partnered with social reformer Frances Wright to form a group of Free Enquirers, who denounced traditional religion, advocated education for all people, and pushed for lenient divorce laws and a fairer distribution of wealth among the masses. Owen moved to New York City in 1829, where he voiced his theories as editor of the *Free Enquirer*, as well as through the Workingmen's Party, the first labor-oriented U.S. political party, formed in New York in 1829.

Like his father, Owen became an advocate of spiritualism, writing two books on the subject, *Footfalls on the Boundary of Another World* (1860) and *The Debatable Land between This World and the Next* (1872). He died on June 24, 1877.

Pacifica Radio

Airing for the first time in April 1949, Pacifica Radio was the first successful experiment in listener-sponsored radio in the United States. With its focus on live, uncensored discussion of political and cultural topics, Pacifica provided an alternative to the commercial, mass-appeal radio that dominated the airwaves throughout the cold war. America's first public radio network, Pacifica today comprises five independently operated, commercial-free, local stations—KPFA in Berkeley, California (the flagship station), KPFK in Los Angeles (site of the network's recording archives), KPFT in Houston, WBAI in New York City, and WPFW in Washington, D.C.—and more than 100 affiliate stations. The network, operated by the Pacifica Foundation, is known for its progressive political and social perspective, with a declared mission “to promote peace and justice through communication between all races, nationalities and cultures” and “to contribute to the democratic process through public discourse and promotion of culture.”

Although the original station was based in Berkeley, the name Pacifica was not a reference to the nearby Pacific Ocean. Instead, it was meant to reflect the pacifist convictions of the organization's founder, Lewis Hill, who had been a conscientious objector during World War II. After the war, Hill worked briefly in radio in Washington, D.C., before moving to the San Francisco Bay Area, where he felt he would have the most freedom to implement his vision of a radio station devoted to pacifist principles. His idea was to harness the democratic potential of radio as a medium to create a public sphere for political discussion and social commentary, a forum in which conversation could be idealized as a mode for creating peace throughout the world.

The first few years were a struggle for survival. Broadcasting on the then-little-used FM band, KPFA found it difficult to build an audience that could support it through sponsorship alone. A 1951 Ford Foundation grant brought stability for a few years, but Pacifica soon found itself plagued by internecine squabbles over government investigations into its purported Communist links.

Although Communist connections were never proven, KPFA's programming during the 1950s was truly revolutionary for American radio. Whether it was interviews with members of the Catholic Worker Movement (the Catholic social service movement founded by Dorothy Day and Peter Maurin in 1933), explanations of Zen Buddhism by philosopher and writer Allan Watts, lessons in anarchist thought by poet and essayist Kenneth Rexroth, or iconoclastic film reviews by Pauline Kael, Pacifica's free-form programming opened new territory in terms of acceptable subject matter for radio discussion.

Pacifica branched out with the establishment of KPFK in Los Angeles in 1959, followed by WBAI in New York City in 1960. The political and cultural currents of the 1960s both enhanced and challenged Pacifica's identity. It gave airtime to representatives of the emerging youth culture who would lead the hippie movement, anti-Vietnam War movement, and the highly theatrical Youth International Party (whose members were called yippies), and it experimented with new styles of radio reportage and commentary, including direct broadcasts from the inner councils of the Berkeley Free Speech Movement in 1964.

Weathering the occasional U.S. Senate investigation, Pacifica continued to press at the boundaries of First Amendment freedoms throughout the 1960s and into the 1970s. WBAI's broadcast of comedian George Carlin's "Seven Dirty Words" routine in 1973 led to stricter Federal Communications Commission regulations, while Bob Fass of the same station pioneered what would come to be called "talk radio," in which individuals who might not otherwise have a public voice were allowed to express themselves on the air.

Despite many challenges from both the left and the right of the political spectrum, Pacifica has remained tied to Hill's original intuition: that a radio station supported by a community of listeners, and thus free from corporate sponsorship and state control, is necessary to the survival of a vibrant democracy.

Pacifism

Although most widely associated in America's collective memory with the civil rights and anti-Vietnam War movements, pacifism has a long and vibrant tradition on U.S. soil. A testament to this tradition is its historical influence on international movements to overthrow tyranny and establish national sovereignty. Indeed, global figures, from Russian social reformer Leo Tolstoy to Indian spiritual leader Mohandas Gandhi and Polish politician and human rights activist Lech Walesa, have acknowledged a debt to America's tradition of nonviolent resistance. That tradition includes such diverse figures as the transcendentalist (but not fully pacifist) Henry David Thoreau, the radical socialist and Catholic Dorothy Day, and civil rights activist Martin Luther King, Jr.

With the lure of religious tolerance, America imported the pacifism of European sects such as the Quakers and Mennonites during the colonial era. Most influential among the foundational sectarian pacifists of the eighteenth century were the Quakers John Woolman and Anthony Benezet, both of whom were tireless activists who helped establish moral suasion as a strategy for opposing social injustice.

From the 1830s onward, William Lloyd Garrison and others added the call to abolish slavery. Although they had professed to rely exclusively on nonviolent tactics to overthrow chattel bondage, legions of Garrisonian abolitionists rushed to enlist in the Union army during the American Civil War. If ultimately unsuccessful in its goal to abolish slavery by nonviolent means, Garrisonian resistance marked a crucial stage in the development of pacifism by transforming the traditionally nonconfrontational ideology into a public challenge of the power structure.

For the next century and beyond, socialists and members of the labor movement, the civil rights movement, prison strikes, and a litany of antiwar movements have employed nonviolent tactics in pacifist political protest. Originally a sectarian ideology based on the sixth commandment of the Hebrew Bible, "Thou shalt not kill," pacifism has adapted to the complexities of twentieth-century military conflict and political struggle. Civil rights leader James Farmer effected a synthesis of cultural traditions by bringing Gandhi's *satyagraha*, or soul-force, to America by systematically training demonstrators in nonviolent direct action.

In a landmark 1965 U.S. Supreme Court case, defendant Daniel Seeger appealed the conviction of a lower court for refusing induction into the armed forces as a conscientious objector. Testing the legal standard for conscientious-objector status, Seeger argued that any sincere philosophical view, moral code, or personal belief system is synonymous with religious conviction. The court found in his favor, overturning the requirement of belief in a Supreme Being and essentially legitimizing secular pacifism as grounds for conscientious-objector status and exemption from military service.

The development of pacifism as an ideology and volatile protest tactic was advanced by the unapologetic radicalism of brothers Daniel and Philip Berrigan, both Catholic priests, who in opposition to the Vietnam War removed Selective Service files from a local Maryland draft board in May 1968 and set them on fire. As had Thoreau after his refusal to pay taxes during the Mexican-American War, the Berrigan brothers interpreted their prison sentence as the cost of nonviolent civil disobedience.

Although the nature of pacifism in America has changed through the centuries, pacifists from all eras are united in their basic adherence to nonviolence, support for causes typically adopted by the political left, commitment to social justice, and revulsion at chauvinistic patriotism. Pacifists have been faced with the prospects of conscription or alternative, noncombatant duty and the dilemmas of living in a capitalist economy that is inextricably intertwined with military aggression. They have refused to pay federal taxes that ultimately finance military endeavors, to serve as noncombatants that potentially free a willing and able-bodied man to fight, or to accept alternative service because, to committed pacifists, any participation in a society mobilized for war is connected with the successful prosecution of military activity.

Generations of pacifists have echoed the sentiments of the "people's historian" (and World War II veteran) Howard Zinn: "I've come to the conclusion that war, by its indiscriminate and mass killing of large numbers of people, cannot be justified for any political cause, any ideological cause, any territorial boundary, any tyranny, any aggression."

Palahniuk, Chuck (1962–)

Author of the apocalyptic cult novel *Fight Club* (1996), Chuck Palahniuk is a critically acclaimed writer and freelance journalist. He won the 1997 Pacific Northwest Bestsellers Association Award and the 1997 Oregon Book Award for *Fight Club*. He was not catapulted to national celebrity, however, until director David Fincher adapted the novel into a 1999 film of the same name, starring Brad Pitt and Edward Norton. In the tradition of William S. Burroughs, J.G. Ballard, Charles Bukowski, and other practitioners of so-called transgressional fiction, Palahniuk in his early novels pursued a genre that explores characters who resort to sometimes self-destructive means to escape the confines of conventional social norms. Later works, while pursuing a number of similar themes, are satirical horror stories.

Charles Michael Palahniuk was born on January 21, 1962, in Pasco, Washington, and raised in the Pacific Northwest. After graduating from the University of Oregon's School of Journalism in 1986, he worked briefly for small newspapers in Portland. Financial hardships forced him to take a job as a diesel mechanic at Freightliner, the truck manufacturer, where he worked until 1999. Palahniuk continued writing, however, and from 1992 to 1996 was enrolled in a community writers' workshop, Dangerous Writing, offered by Portland-based novelist Tom Spanbauer.

In the workshop, Spanbauer's teachings were based on the work of several contemporary minimalists, including Amy Hempel, Denis Johnson, and Gordon Lish. The workshop forced Palahniuk to codify the particularities of the minimalist style he came to use in his best-selling novels, including terse prose, concrete imagery, repeated choruses, and unified metaphors to reinforce overarching ideas. Thematically, Palahniuk's writing addresses cultural alienation in many forms: violence, vandalism, cults, substance abuse, and sex addiction, among others.

All of Palahniuk's novels begin as a single short story, which he later expands into a book-length narrative. During the course of the Dangerous Writing workshop, Palahniuk published the short stories that would evolve into his first three novels, *Fight Club*, *Invisible Monsters* (1999), and *Survivor* (1999).

Palahniuk quit his mechanic's job in 1999, a personally momentous year that brought the release of the *Fight Club* film and his second and third novels. That same year, his father was murdered by the ex-husband of a woman he had met through a classified ad. Palahniuk made headlines again in 2003 while on tour for his sixth novel, *Diary* (2003). He used the occasion to read a new short story, "Guts," and its account of the injuries suffered by men during masturbation caused some forty listeners in North America and Great Britain to pass out.

A prolific writer, Palahniuk continues to publish novels, stories, and journalistic works at a steady rate. In 2003, he published a highly acclaimed travelogue, *Fugitives and Refugees*, about his hometown of Portland. The following year, he brought out a collection of nonfiction pieces titled *Stranger Than Fiction: True Stories*. Other novels have included *Choke* (2001), *Lullaby* (2002), *Haunted* (2005), *Rant* (2007), *Snuff* (2008), *Pygmy* (2009), and *Tell All* (2010).

His work was the subject of academic conferences at Edinboro (Pennsylvania) University in 2001 and 2003, and a documentary film, *Postcards from the Future* (2004). Palahniuk also maintains a strong presence on the Internet through his official Web site, where he has run an online writers' workshop explaining the minimalist writing style and answering questions.

Palmer, Phoebe (1807–1874)

Pioneering theologian Phoebe Palmer was a leader of the nineteenth-century Christian Holiness movement, which was based on the belief that Christians can attain absolute freedom from sin through faith in Jesus and the power of the Holy Spirit. Palmer lived a dynamic and controversial life. She was a revival and camp-meeting evangelist who became one of the best-known religious speakers of her time in North America and Great Britain. Her endearing manner, dynamic personality, and passionate message made her the catalyst of this religiously conservative counterculture movement. Her activities and teachings became especially influential in the Methodist and Pentecostal Christian communities.

She was born Phoebe Worrall in New York City on December 18, 1807. Her father was a convert of the English Methodist preacher John Wesley, and she grew up reading the works of John and Charles Wesley and other Methodist leaders. In 1837, she married physician Walter Palmer, and the couple became interested in Wesley's doctrine of perfection (that the souls of Christians can be cleansed of original sin).

Although Phoebe Palmer's life was traumatic—including the deaths of three young children—she experienced what Wesley called "entire sanctification" (the complete love of God) on July 26, 1837. She had begun teaching the Tuesday Meeting for the Promotion of Holiness in her home the previous year, and this became the primary outlet for her new message, testimony of the Spirit of God within her and the desire to live in a close relationship with God.

Writing extensively about her experiences, in 1843 Palmer published *The Way of Holiness*, the first of her eighteen books, and became the editor of the Holiness periodical, *Guide to Holiness*. Her path to holiness consisted of three steps: self-conscious surrender to God, an "altar" faith of complete personal and spiritual sacrifice, and public testimony of the experience. The emphasis on individuality implied by that process—relocating the confirmation of sanctity from community testimony to individual experience—placed her theology in the American cultural mainstream but contrary to the majority of Christian thought, both Calvinist and traditional Wesleyan.

Although she never referred to herself as a preacher and never sought ordination, Palmer was a feminist by example. At a time when public speaking by women was widely frowned upon, she was busy speaking to thousands at a time. One of her books was a 400-page argument for the support of women in the ministry based on her heritage, experience, and theology concerning the biblical promise of God's spirit working through all humanity, both male and female.

Palmer was also a social activist who supported the antislavery movement by her attendance at meetings and through donations to antislavery organizations. While distributing religious tracts among New York City's poor, she developed the view that meeting material needs such as food, clothing, and shelter was key to God's work among

the people. To this end, she worked for the New York Female Assistance Society for the Relief and Religious Instruction of the Sick Poor and led the Ladies Home Missionary Society in 1850 to found a mission in the Five Points slum district of New York, where the needy were able to access rent-free apartments, a chapel, schools, and public baths.

Palmer's Tuesday Meetings remained popular throughout the remainder of her life. The meetings were continued after her death on November 2, 1874.

Patchen, Kenneth (1911–1972)

Kenneth Patchen was a politically and artistically iconoclastic poet and novelist of the Beat Generation. As a contemporary of Beat writers Lawrence Ferlinghetti, Richard Brautigan, Allen Ginsberg, and Kenneth Rexroth, Patchen shared their nonconformist values, anger at the political status quo, and disillusionment regarding social justice, but he saw love as the cure to society's ills. His creative style was distinguished by experimental verse and prose, painting, and decorative pages of poetry. He played a pivotal role in the poetry revival of the 1950s on the West Coast and was instrumental in establishing a new kind of performance art, reading poetry to a live jazz background.

Patchen was born on December 13, 1911, in Niles, Ohio, to a large working-class family. Early in life, he was sensitized to the plight of workers in the steel and coal industries, as he witnessed his father return from work, black with soot, exhausted from physical labor. Patchen began writing poetry at age twelve as a response to the deaths of his two sisters.

After high school, he worked in an Ohio steel mill to earn enough money to attend Alexander Meiklejohn's Experimental College in Wisconsin, where he honed his already apparent writing skills. In 1930, he attended one semester at Commonwealth College in Arkansas, then left the academic world for New York City to write full time.

In New York, Patchen met Miriam Oikemus, an antiwar organizer at Smith College in Massachusetts. Together, they merged as poet and muse, expressing ideas that would evolve as ideals of the 1960s counterculture. The couple married in 1934 and moved to Greenwich Village, the avant-garde hub of New York City, where artists, musicians, writers, and theater people networked and mingled. There, Patchen published *Before the Brave* (1936), his first book of poems, for which he won a Guggenheim Fellowship.

From the mid-1930s until 1950, Patchen wrote angry and emotional works, including *The Journal of Albion Moonlight* (1941), an antiwar novel set at the time of America's entry into World War II. The protagonist, Albion Moonlight, sees everything that is wrong in society but is powerless to control or change any of it. Other influential works of this period include the collections *Red Wine and Yellow Hair* (1949), *Fables and Other Little Tales* (1953), and *Hurrah for Anything* (1957).

At the height of this productive period, Patchen injured his back and, for the remainder of his life, suffered from intractable pain. His poetry took on a new dimension, as he added illustrations and designs around the margins of each page.

Patchen escaped the military draft for World War II. Saved from the stress of forced regimentation and indoctrination, he expressed his views as a conscientious objector. In 1946, he published *An Astonished Eye Looks Out of the Air*, a collection of antiwar poems. "[That] who destroys his fellow," he wrote in one poem, "destroys himself." In another poem in the collection, he envisions a future world in which love has conquered all and saved everyone.

Although Patchen frequented City Lights, Ferlinghetti's bookstore in San Francisco and the hub of the Beat Generation, he resisted identification with any literary group or artistic movement. Ideas about art and the role of the artist are frequent subjects of his work. Although many of his values—such as the futility of war, the primacy of love, and disdain for organized society—were prominent in the counterculture, he did not share in the hipster persona or dropping-out ethic of many of his contemporaries. Nevertheless, upon his death on January 8, 1972, a memorial service was held at City Lights Books to honor a man who, in their eyes, had influenced a generation of poets and artist.

Peace and Freedom Party

The Peace and Freedom Party (PFP) is a socialist, feminist, working-class political organization in California that has been active since the 1960s in presenting a leftist alternative to the Democratic and Republican parties. While the PFP has not achieved statewide or national success at the polls, it has managed to elect its members to local offices and to press a left-wing alternative to the mainstream political agenda.

In 1966, three candidates for the U.S. House of Representatives from New York and Washington identified themselves as members of the Peace and Freedom Party. The party was not officially founded until June 23 of the following year, by activists in the anti-Vietnam War, civil rights, and farmworkers' movements. Many of the

founders were disaffected members of the Democratic Party who opposed its support for the Vietnam War and criticized the party for its failure to support the civil rights and migrant labor movements. More than 100,000 Californians registered for the PFP in 1967, and it was officially placed on California's voting ballot at the start of 1968; a dozen other states followed suit that year.

At the party's 1968 national convention in Ann Arbor, Michigan, black radical Eldridge Cleaver, a major figure in the Black Panther Party, became the PFP's first nominee for president of the United States. Following the convention, supporters of activist and comic Dick Gregory separated from the PFP and formed the Freedom and Peace Party. (In the general election that November, Gregory actually received more votes than Cleaver.) In 1970, the California PFP ran the first Mexican American candidate for governor in the twentieth century, Ricardo Romo. In 1974, it ran the nation's first openly gay candidate for U.S. Senate, Gayle Justice. And in 1978, it ran the first openly lesbian candidate for governor of any state, Marilyn Seals.

According to its Web site, "The PFP is committed to socialism, democracy, ecology, feminism, and racial equality." The PFP's numerous national goals have included popular elections for president, a socialist economy, free high-quality health care, free higher education, an equal rights amendment for women, promotion of gay and lesbian rights, punishment of police brutality, the legalization of marijuana, abolition of the death penalty, an end to U.S. intervention abroad, and open international borders.

As an alternative to the two dominant political parties, which focus much of their efforts on elections, the PFP acknowledges that few of its candidates have run successfully. Instead, it seeks to remain active between elections by fighting oppression at the local level. Community activities and services such as union strikes, food co-ops, and free clinics have been supported and even initiated by the PFP.

Those candidates who do seek office through the PFP have the larger goal of presenting an alternative perspective ignored by the Democratic and Republican parties. Since 1968, the PFP has sometimes sponsored the candidates of other parties. In 1972, for example, it supported the People's Party nominee, Benjamin Spock. The PFP has also sponsored a large number of women running for office. In 1994 and 1998, for example, it backed Gloria La Riva, formerly the presidential nominee of the Workers World Party, in her bid for the California governorship. In 2004, the PFP nominated the militant Native American activist Leonard Peltier—who is serving life sentences for the murder of two Federal Bureau of Investigation agents—as its candidate for president.

Although it lost ballot status in California from 1999 until 2003, the PFP was restored to the slate in 2003 following a widespread mobilization to register new voters. Through its articulation of socialist and feminist national policies and its support of controversial candidates ignored by the Democratic and Republican parties, the PFP has continued to present a left-wing alternative to the political mainstream. The party's 2008 ticket of Ralph Nader for president and Matt Gonzalez for vice-president appeared on the ballots of both California and Iowa, though it did not achieve the 1 percent of votes necessary to ensure ballot status in future voting.

Pentecostalism

The year 1906 was momentous in the history of California. In October, the city of San Francisco was devastated by one of the strongest earthquakes on record and the fires that followed. Six months earlier, a seismic event of a more spiritual cast took place farther down the Pacific Coast. In a former livery stable in Los Angeles, an African American minister named William J. Seymour led the first of a series of religious services that would develop into the Azusa Street Revival and modern Pentecostalism, the movement within Evangelical Christianity that emphasizes direct personal experience of God through baptism in the Holy Spirit. From this small beginning at the turn of the twentieth century, the Pentecostal movement grew to have approximately half a billion adherents worldwide.

Roots of Social Inclusiveness

To many outside observers, the most disturbing part of the revival was not its critique of traditional Christian spirituality, but the unregulated mixing of races and genders in “compromising” physical proximity. In the *Los Angeles Examiner* of September 24, 1906, a local Baptist preacher was quoted as saying, “They rant and jump and dance and roll in a disgusting amalgamation of African voodoo superstition and Caucasian insanity.” Other contemporary newspaper accounts emphasized not only the exhibition of radical spirituality, but highlighted the “disturbing” mixture of black, white, Asian, and Hispanic peoples, as well as of males and females.

Even in the Methodist Wesleyan-Holiness revivals that had developed in the eighteenth and nineteenth centuries, which were radically inclusionary for their times, there was careful adherence to the distinction of male and female roles and the formal segregation of races. In 1906 Los Angeles, by contrast, blacks and whites were laying hands on each other in prayer and embracing each other as tears of joy ran down their faces. Women who had already experienced what was described as the “baptism in the Holy Ghost” would pray over men, some of whom were visiting ministers, so that they might also receive the “blessing.”

As scholar and former Pentecostal minister Walter Hollenweger later wrote, “In the Los Angeles revival white bishops and black workers, men and women, Asians and Mexicans, white professors and black laundry women were equals.” Perhaps above all, it was this gender-and race-based ecclesiastical ethic that members of more established traditions regarded as unacceptable. And it was this democratization of spirituality, revivalism, and church pragmatics that lent countercultural status to the early stages of the Pentecostal movement.

With roots in the “invisible institution” of slave religion, the nineteenth-century Wesleyan-Holiness movement, and the Welsh revival under the leadership of Evan Roberts, Pentecostalism has become the fastest-growing religious movement in the world. From African and African American slave religion, Pentecostalism inherited spirited worship practices that include dancing, shouting, clapping hands, raising hands, “running the aisles,” enthusiastic singing, and being “slain in the spirit” (falling down in a spirit-induced trance). Such practices alone set Pentecostals apart from mainstream Protestants. From the Holiness revival, Pentecostalism took a strong sense of personal piety, the language of being “baptized in the Spirit,” and a sense of communally ordered morality. For Pentecostals, personal sanctification as taught by Christian revivalist preacher Phoebe Palmer and others has remained a vital doctrine and practice.

Through Holiness ministers Joseph Smale and Frank Bartleman, the burgeoning Pentecostal movement drew inspiration and an evangelical fervor from the Welsh Revival. In Wales, they had seen more than 30,000 conversions and 20,000 new church members just after the turn of the twentieth century; the early American Pentecostals saw no reason why their results should be any less impressive.

The most direct ideological influence on the Azusa Street Revival, however, is found in the teachings of Charles Parham, Seymour's spiritual mentor. While his personal ethics, especially after 1909, have caused many scholars of Pentecostalism to de-emphasize Parham's role, it is generally recognized that he was the first to teach a central doctrine of the movement: glossolalia, or speaking in tongues, as confirmation of baptism in the Holy Ghost. In 1901, according to Pentecostal testimony, Parham challenged students at his small Holiness Bible school in Topeka, Kansas, to search the Scriptures for evidence of the baptism. They found it in Acts 2:4: "They were all filled with the Holy Ghost, and began to speak with other tongues, as the Spirit gave them utterance." The verse became a cornerstone of Pentecostal preaching. Parham later taught William Seymour at his Bible school in Houston, where the latter was forced to sit outside because he was African American.

The countercultural aspect of early Pentecostalism lay in social as well as religious factors. Most people involved in the fast-growing movement, whether at Azusa Street, in Topeka, or in the mountains of North Carolina and Tennessee, were in some way disenfranchised from the mainstream of society. They were common laborers, small farmers, and others with little voice in the affairs of society. In their evening revival meetings, however, they created a new communal structure in which the least stood with the greatest. The hierarchy found in established churches did not apply, since the earliest Pentecostals assumed that the majority of church history had been lacking true Christianity. Theirs was an attempt to return to the purity of the New Testament no matter the cost, including persecution.

Legacy

These seeds of Pentecostal cultural, social, and ecclesiastical critique carried throughout the twentieth century, albeit with a decrease in strength. The early practice of racial and gender democratization soon gave way to societal norms in much of the movement as Pentecostals sought to align themselves with Baptists, Methodists, and other established Evangelicals.

The lower-to lower-middle-class status of the vast majority of early Pentecostals has gradually been elevated, making American Pentecostalism more middle class and a less countercultural phenomenon. Though the movement is still not fully aligned with secular democratic society, a number of Pentecostals occupy prominent positions in government, business, and society.

People for the Ethical Treatment of Animals

People for the Ethical Treatment of Animals (PETA), based in Norfolk, Virginia, is the largest and most influential animal rights organization in the United States, with more than 2 million members and supporters as of 2010. According to its mission statement, PETA operates under the principle that “animals are not ours to eat, wear, experiment on or use for entertainment.” PETA sponsors cruelty investigations and protest campaigns, lobbies for legislation, and capitalizes on celebrity advocacy to fight for animal rights in laboratories, factory farms, the clothing industry, and the entertainment industry. PETA differs from more conservative animal rights groups, such as the Humane Society, in its radical methods of protest. These have included picketing or otherwise protesting in the nude, throwing pies at those who wear fur, and, some say, condoning the use of violence and threats against corporations and individuals who do not agree with their views.

A member of People for the Ethical Treatment of Animals protests the treatment of circus animals in 2005. The group resorts to public theatrics, including nudity and overt lawbreaking, to promote its cause. (Timothy A. Clary/AFP/Getty Images

Established in 1980 by Alex Pacheco and Ingrid Newkirk, PETA reflected a growing subculture of animal rights activists at the time. The burgeoning movement was largely influenced by Australian philosopher Peter Singer, who in 1975 published the book *Animal Liberation*. Arguing against speciesism (discrimination against certain species), *Animal Liberation* propelled issues of animal rights into the U.S. cultural arena as a philosophical and ethical debate.

An integral part of this debate was the issue of experimentation on animals, which was demonstrated in the so-called Silver Spring monkey case of the 1980s. In 1981, Pacheco went undercover in the Silver Spring, Maryland, laboratory of Dr. Edward Taub, a researcher who kept seventeen monkeys in small wire cages in unsanitary conditions. Under the premise of researching the regeneration of severed nerves, Taub, with funding from the National Institutes of Health (NIH), carried out experiments with electroshock therapy on the monkeys. As a result of PETA's investigations of his lab, Taub became the first "animal experimenter" to be convicted on animal cruelty charges. Following the verdict, PETA began a lengthy cultural and legal campaign for the guardianship of the Silver Spring monkeys. Although the animals ultimately were euthanized or died in the custody of the NIH, the trial brought PETA and animal rights to the forefront of the American media and cultural imagination.

The advent of the Internet also allowed PETA to reach a wider audience. PETA TV, which is accessible online, features graphic videos of the practices at fur farms, the clubbing of baby seals, and the mistreatment of livestock at dairy and meat farms. It also includes listings of companies that offer "cruelty free" products.

PETA's efforts, however, do not focus only on exposing the moral and ethical quandaries associated with animal cruelty. The organization often enlists celebrities as spokespersons in antifur ad campaigns; among them are the famous "I'd rather go naked than wear fur" ads, which feature scantily clad celebrities denouncing the fur trade. PETA also repudiates celebrities who wear fur by publicly shaming them in the organization's annual worst-dressed list. In support of its mission, PETA also promotes vegetarianism as a lifestyle choice that can provide a more desirable body and hosts a "sexiest vegetarian alive" contest.

Despite its size and celebrity support, PETA remains an essentially marginalized group in American culture. Indeed, its staunch advocacy of animal rights and vegetarianism, unorthodox protest methods, and undercover missions in farms and laboratories have led some to deem PETA a radical organization.

Peoples Temple

Peoples Temple was a millennialist religious cult led by the Reverend James (Jim) Warren Jones. The movement combined revivalist-style Christianity, an apocalyptic view of the world, and a message of deliverance from poverty, racism, and injustice that reflected both the Christian “Social Gospel” and Marxist socialist influences. The Peoples Temple began in Indiana in the 1950s, moved to California in the 1960s, and then relocated to a remote area of Guyana, South America, in 1977, where the members lived communally in an attempted utopian society called Jonestown. The experiment ended tragically on November 18, 1978, with the mass suicide of Jones and nearly all other members, most of whom drank fruit punch mixed with poison. Although there are conflicting accounts and conspiracy theories about the tragedy, Jonestown has come to epitomize the notion of a dangerous “doomsday cult” in American popular culture and consciousness.

More than 900 members of the Peoples Temple commune in Guyana committed mass suicide in November 1978. The group had been led there from California by apocalyptic cult leader Jim Jones, who persuaded them to die together as an act of loyalty. (Matthew Naythons/Getty Images)

Jones began his ministry in the 1950s in Indianapolis, Indiana, as a self-taught preacher in the Pentecostal tradition. His charismatic style made him a popular preacher, and he came to regard himself as a manifestation of the Christ Principle, with powers of healing, prophecy, and salvation. The inclusion of African Americans in his services threatened the administrators of his segregated church, so Jones formed his own interracial congregation, which he named Peoples Temple.

Jones preached a Marxist-influenced version of what he called “apostolic socialism,” asserting that capitalist society dehumanizes people. He embraced deeply apocalyptic beliefs, condemning the world as corrupt and on the verge of annihilation. Claiming to be an end-times prophet, he had visions of nuclear cataclysm and a fascist takeover of the United States, with resulting race wars, and the establishment of a police state and concentration

camps.

After one vision of nuclear war, Jones moved his congregation to Northern California in 1965, believing that they would be safe there from the coming catastrophe. He soon expanded the movement to San Francisco, opening a facility in the Fillmore district, a poor black ghetto, and later established another church in Los Angeles. During this time, Peoples Temple was praised for its humanitarian work and the social services it provided for the poor, the elderly, and members of the African American community.

In 1974, Peoples Temple acquired nearly 4,000 acres (1,620 hectares) of land in a jungle in northwest Guyana, a multiracial, socialist nation whose black minority government welcomed the idea of dissatisfied Americans relocating there. In 1977, after several controversies, government investigation into Temple finances, and accusations against the group by concerned relatives of members of Peoples Temple, Jones and more than 1,000 members moved from California to Guyana. There, Jones attempted to establish his vision of a socialist utopia, opposed to capitalism, poverty, competition, and racism.

The members of Peoples Temple came from a range of socioeconomic backgrounds, and many were attracted to Jones's message of social justice and racial equality. Some residents of Jonestown were African Americans who had come from the ghetto, others were white and college-educated, an estimated one-third of the members were under the age of eighteen, and roughly 150 people (about one-sixth) were senior citizens.

At Jonestown, members of the Peoples Temple worked long hours with minimal food and resources, struggling to support the settlement. Self-sacrifice and commitment to the community were continually stressed, and Jones closely controlled the behavior of members through the use of public confessions, communal punishments, imprisonment, drugging, sleep deprivation, and other types of coercion and manipulation.

During this time, Jones's own physical and mental health reportedly began to deteriorate, he became addicted to various drugs, and his behavior became increasingly erratic. His feelings of persecution and paranoia increased when the Peoples Temple was threatened by damaging news coverage and accusations of members being held against their will.

In 1978, members' relatives persuaded San Francisco Congressman Leo Ryan (D-CA) to travel to Jonestown to investigate possible human rights violations and other allegations against Jones and Peoples Temple. During the tense mid-November visit, about a dozen disaffected members of the community chose to leave with Ryan and his delegation. Convinced that opponents of the Temple were out to destroy the community, Jones's armed guards killed Ryan, three journalists, and one defecting Temple member as the group attempted to leave at a nearby airport. Jones then gathered his community and told them that the end had come for the Peoples Temple, that the outside world would soon persecute and destroy them, and that there was no choice left but collective suicide.

Nurses mixed a vat of purple Fla-Vor-Aid (a British version of Kool-Aid) with cyanide and tranquilizers. Parents gave their children the poison to drink or injected them, and senior citizens were given poison in their dormitories. The evidence seems to indicate that most of the remaining adults took the poison willingly, though some were forced. Jones then apparently committed suicide by shooting himself. More than 900 members of Peoples Temple died in all.

The community had previously practiced loyalty tests as well as suicide drills, according to some accounts, and for Jones and for many of his followers, "revolutionary suicide" was regarded as a protest against and an escape from the cruelty and inhumanity of the world and imminent persecution by outside forces. Suicide was embraced as an expression of true loyalty to the group and to Jones; those who took their own lives apparently were convinced that it was better to die together as a "family" than to witness the destruction of their community or to live in a world that they viewed as evil and doomed.

Perfectionist Movement

The Perfectionist movement, which sought spiritual perfection on Earth, was a product of the revivalist heartland of upstate New York during the Second Great Awakening, a sweeping evangelical revival from the 1800s to the 1830s. The Perfectionist movement emphasized the quest for individual perfection, or seeking a life free from sin. It brought together two strong currents of the activist, revivalist version of Christianity that continue to run deep within the undercurrents of the American counterculture: Holiness teachings, or the view that individuals can rid themselves of the effects of original sin; and the millennial current, the expectation of God's coming to institute a time of earthly harmony, literally heaven on Earth. Among the most extreme Perfectionists are sectarian groups that have institutionalized such ascetic practices as vegetarianism and sexual renunciation. The earliest, most prominent Perfectionist sect was the United Society of Believers in Christ's Second Appearing, commonly known as the Shakers, who believed that Perfectionism could come only through celibacy.

The influence of Perfectionist ideas can be seen among many of the nineteenth-century transcendentalists, such as Ralph Waldo Emerson and Henry David Thoreau. However, historians generally point to reformer John Humphrey Noyes as the central philosopher of Perfectionism, primarily because he employed the term in his writings and also because he founded one of the more interesting communal experiments of the nineteenth century, the Oneida Community in western New York. While the ideal of sinless people living in a perfect society was present in some measure in all utopian socialist programs, the influence of the Perfectionists stemmed from their easy blending of these currents.

Noyes was well educated for his time, having attended the best schools in New England, including Dartmouth College (Hanover, New Hampshire), Andover Theological Seminary (Massachusetts), and Yale University (New Haven, Connecticut). It was during his time at Yale, in the early 1830s, that he formulated his views on the perfectibility of human nature; by 1835, he had declared himself free of sin. Although this declaration placed him outside the Protestant religious establishment, there were many supporters to encourage him in developing his views. Noyes's critical mind soon landed on the institution of monogamous marriage as the foundation of selfish,

possessive, and egotistical (sinful) behavior. Although he did marry in 1838, his search for alternative forms of marriage marked the rest of his life.

Charged with adultery (a criminal offense at the time), Noyes fled his native Vermont for the frontier of western New York, where the laws were more lenient and the social mores less fixed. It was there that he founded his utopian socialist community, Oneida, in 1848. Noyes was determined to rid the community of the sins of egotism and possessiveness associated in his mind with monogamous marriage. To do so, he instituted a system of complex, or plural, marriage (a type of regulated free love) and eventually a system of “stirpation,” in which the community (a committee) decided who would be allowed to have children together.

Outside of communal living, Perfectionists were influential in the abolitionist movement, particularly among the more radical Garrisonians, followers of the abolitionist William Lloyd Garrison. Many, including the former Presbyterian minister Luther Myrick, viewed participation in mainstream denominations—which refused to call for the abolition of slavery—to be corrupting and withdrew to form separate “abolition churches.” Perfectionist abolition churches claimed to free themselves from the bonds of denominationalism, which they portrayed as analogous to the chains of slavery. The abolitionist “come-outers” led in the founding of the Liberty Party, whose mission was to promote abolitionism outside the Democrat and Whig parties. The Liberty Party had a strong Perfectionist element, putting forth its candidates as “entirely sanctified” and defining the party’s ultimate goal as keeping all men from sin.

Following the American Civil War, some Perfectionists became radical pacifists. Others, particularly in the Methodist Holiness movement of the mid-nineteenth century, emphasized self-denying personal behavior, the shunning of alcohol, coffee, and other stimulants, as well as card playing, the theater, and other amusements. Although Christian Perfectionism became much less prominent in American culture in the twentieth century, the Perfectionist impulse to a life free from sin or compromise with a corrupt society has continued to motivate a number of separatist and counterculture groups.

Performance Art

Performance art is avant-garde, conceptual, improvisational art in which the actions of a performer or a group constitute the work itself. It combines in various ways elements of theater, mime, dance, film, and monologue, among other mediums. Performance art emerged in the early 1960s as a criticism of traditional conceptions of art

as objects created by exceptional individual artistic geniuses. By contrast, performance art conceives of art not only as something people do, instead of simply observe or listen to, but as an activity in which every person can participate. Performance art has played a key role in the counterculture by challenging traditional definitions of aesthetic expression and by advancing the view that art has the potential for creating social change.

Performance art can be traced to the bohemian cafés of the nineteenth century, the European artistic movement called Dada, and various other avant-garde artistic movements of the early twentieth century. Its flowering in the United States commenced in the late 1950s and early 1960s in the form of “happenings,” public activities that carried artistic and conceptual significance.

Artist and composer John Cage was a major early influence on the development of happenings in the United States through such works as “Theater Piece No. 1” (1952), in which he joined other artists, performers, and musicians on ladders, each performing simultaneously and among the audience instead of on a stage. Allan Kaprow, a student of Cage’s, took the phenomenon a step further in such happenings as “Household” (1964), in which—among other things—participants applied fruit jam to the hoods of wrecked cars and then licked it off. The work of the international art collective Fluxus (which for a time included Yoko Ono, wife of Beatles singer-songwriter John Lennon) consisted of everyday activities, such as “Instruction No. 2” (1965) by Ben Patterson, which consisted of a small package that contained a bar of soap and the instructions to wash one’s face.

Performance art grew more overtly political in the 1960s. The San Francisco Diggers—a community-action group of improvisational actors active between 1966 and 1968 in the Haight-Ashbury district—confronted traditional values in such performances as “Free Store,” at which anyone could take from or add to its shelves. Abbie Hoffman and Jerry Rubin, as the most visible members of the Youth International Party (known as the yippies), also engaged in politicized performance art in such ways as assembling a crowd of people around the Pentagon in order to “levitate” it during the March on Washington in October 1967. These and similar events often drew media coverage, with members of the press sometimes persuaded to take part.

Performance art has since become more varied. On one hand, a depoliticized version of performance art focuses on celebrity artists and performers, whose fans pay to see them. Examples in the late twentieth and early twenty-first centuries include the multimedia and musical sets of Laurie Anderson; the in-your-face, rapid-fire, raw theater of Eric Bogosian; and the contemplative ruminations of actor and monologist Spalding Gray.

On the other hand, a politicized version of performance art exists entirely outside commercialism and celebrity status. Reverend Billy and the Church of Stop Shopping stages street performances in major U.S. cities in which a white-suited, bouffant-haired, faux televangelist preaches against the sins of consumerism, with his choir and anyone else who wishes trailing in his wake and punctuating his pronouncements with an “Amen!” The Surveillance Camera Players, based in New York City, stage short, iconic plays critical of state video surveillance (with a member of the group filming the performance for display on a security monitor).

More recent forms of inclusive performance art include the flash mob (related to the term *smart mob* coined by futurist and author Howard Rheingold), in which the performance consists of a large group of people meeting in a single location, performing a strange activity, then dispersing. Directions are typically distributed via mobile text messaging, with the ultimate location not revealed until the last minute.

Despite their originality and inspiration, the hoped-for shock value of performance art works has been increasingly diluted by guerrilla marketing and big-budget advertising campaigns. To the extent that performance art becomes either a vehicle for celebrities or, simply, strange publicity events, its political value as a countercultural response and critique remains uneven at best.

Performance Space 122

Performance Space (P.S.) 122 is an off-Broadway, multidisciplinary, nonprofit arts center located in New York City's East Village neighborhood. Along with The Kitchen, Franklin Furnace, and Artists' Space, it is one of a number of downtown "alternative spaces" established during the 1970s that can be distinguished from both music clubs and traditional theaters. The venue is housed in a former school building; hence, P.S. stands for both "public school" and "performance space." Since its inception in 1979, P.S. 122 has developed from marginalized status as a grassroots community improvement initiative to its current position as a key institution for the exhibition of performance genres including dance, theater, and music. Such acclaimed artists as Penny Arcade, Eric Bogosian, Karen Finley, Diamanda Galás, and Holly Hughes have presented work at P.S. 122. Politics, gender issues, and sexuality figure prominently in P.S. 122 performances, and its artists are often confrontational in their delivery.

New York's Lower East Side and East Village neighborhoods were once known not only for their incubation of countercultural groups and arts-activism projects but also for the speed with which these underground currents gave rise to gentrification. P.S. 122 is bound to this story as much as it is a touchstone for the history of the downtown New Wave, gay, and performance art scenes.

In 1977, the building stood empty, and local neighborhood groups solicited artists such as painter Sally Eckhoff and choreographer Charles Moulton, who later recruited performance artists Charles Dennis, Peter Rose, and Tim Miller, to use the space for rehearsals. This informal arrangement lasted until 1979, when Metro-Goldwyn-Mayer shot the film *Fame* at P.S. 122, producing the necessary funds for its refurbishment but also forcing resident artists to temporarily relocate.

During their hiatus, collaborating artists solidified their relationships and began to publicly stage new work on a regular basis. The group returned to P.S. 122 later that year and began presenting weekly performances and workshops. Its long-running cabaret "Avant-Garde-Arama," for example, debuted in 1980 and continues to operate in the 2000s. In little over two years, local artists transformed P.S. 122 from a neighborhood hazard into a thriving creative community.

Some of the artists affiliated with P.S. 122, such as Miller, Finley, and Hughes, were at the center of the 1990 debates in Washington, D.C., on funding distributed through the National Endowment for the Arts (NEA). Senator Jesse Helms (R-NC) and other members of the Christian Right were chiefly responsible for initiating a backlash

against provocative works of art, including performances with themes relating to homosexuality and the AIDS crisis. The NEA's revocation of grants to artists dealing with these issues produced a maelstrom of protest within the art world as well as a wave of support for those affected by government control.

Peter, Paul and Mary

Peter, Paul and Mary was one of the most successful ensembles of the folk music revival of the 1960s. In addition to popularizing songs of social conscience, members Peter Yarrow, Noel Paul Stookey, and Mary Travers played an active role in causes ranging from civil rights and the anti-Vietnam War movement of the 1960s to the anti-nuclear power campaign of the 1970s. Of their social and political activism, Stookey said, "You have to put your body on the line from time to time in order to make a statement or change a law." This philosophy guided the group over the course of its musical career.

Each member had had a fledgling entertainment career before creating the group. Stookey, who had played electric guitar in a rock band during his studies at Michigan State University, had moved to New York and performed as a stand-up comic in Greenwich Village. Travers, with an early interest in folk music, had been a member of the Song Swappers, a group that performed in Carnegie Hall and recorded albums with folk singer Pete Seeger. Yarrow had learned violin and guitar as a child, majored in psychology at Cornell University, and taught music there before returning to New York and taking up folk music full time. He had gone on to perform on the television program *Folk Sound, U.S.A.*, and at the Newport Folk Festival in May 1960.

Folk singer Milt Okun discovered each member individually and encouraged them to form a trio in 1961. With Seeger as their role model, Peter, Paul and Mary debuted in 1962 at The Bitter End in New York City's Greenwich Village, each member able to perform both as lead singer and in harmony. After the early hit singles "Lemon Tree" and "If I Had a Hammer," they released the album *Peter, Paul and Mary* on the Warner Bros. label in 1962.

The album included Seeger's "Where Have All the Flowers Gone," Hedy West's "500 Miles," "If I Had a Hammer" by Seeger and Lee Hays, and Peter Yarrow's "Cruel War," which became anthems of the 1960s counterculture and its participation in the anti-Vietnam War and civil rights movements. The following year, the trio recorded Bob Dylan's protest song "Blowin' in the Wind" and helped it, too, to become a counterculture classic.

Paul Stookey and Mary Travers (with baby) of the Peter, Paul and Mary folk trio protest the closing of New York City coffeehouses for fire code violations in 1960. Like other folk revival and Beat artists, they got their start in the underground club circuit. (Bob Gomel/Stringer/Time & Life Pictures/Getty Images)

On August 28, 1963, Peter, Paul and Mary performed "If I Had a Hammer" before hundreds of thousands of spectators at the Lincoln Memorial in Washington, D.C, where Martin Luther King, Jr., delivered his historic "I Have a Dream" speech. Two years later, the trio marched alongside King and hundreds of other civil rights activists from Selma to Montgomery, Alabama, to protest the discrimination and intimidation that had prevented Selma's black population from registering to vote.

The group also participated in a number of anti-Vietnam War events, including a protest by 100,000 dissidents at the Lincoln Memorial in October 1967. In November 1969, they joined Seeger, Coretta Scott King, and Senators George McGovern (D-SD) and Eugene McCarthy (D-MN) in the March Against Death, also in Washington, D.C.

In 1967, Yarrow composed the antiwar song "The Great Mandala (The Wheel of Life)," later issued on Peter, Paul and Mary's retrospective album *Songs of Conscience and Concern* (1999). A portion of that album's proceeds was donated to nonprofit organizations, including the Center for Constitutional Rights, the Children's Defense Fund, and Oxfam.

In 1970, the group disbanded, as each member recorded solo albums. They united again in 1978 for an antinuclear fund-raiser at the Hollywood Bowl. And in 2005, Peter, Paul and Mary joined the Townsfolk and the Weavers—vocal groups of the 1950s and early 1960s—in *The Civil War*, a documentary video in which they sang folk music of the nineteenth century.

As an ensemble, Peter, Paul and Mary exhibited their complementary personalities and spirituality in such popular songs as "Puff the Magic Dragon" and "Early in the Morning." "Wedding Song" (1971), composed for Yarrow's

marriage to Marybeth McCarthy, the niece of former Senator Eugene McCarthy, and originally released by Stookey, became the founding piece for the Public Domain Foundation, an organization promoting the creation of cause-related music for social and political justice. Stookey's solo performance was reissued on the group's boxed-set recording *Carry It On* (2004). In its program notes, Coretta Scott King remembered the trio as "three of the performing arts' most outstanding champions of social justice." Mary Travers, suffering from leukemia, died on September 16, 2009.

Peyote

The common name for a spineless cactus (*Lophophora williamsii*) with hallucinogenic properties, peyote is found in the southwestern United States and Mexico. Known to indigenous peoples for approximately 10,000 years, peyote has played an important part in some Native American cultures and, in the 1950s and 1960s, sparked an interest in therapeutic psychedelic-substance use. The dried top of the peyote cactus is called a mescal button, and contains more than fifty psychoactive ingredients, including mescaline. When ingested, peyote induces a trancelike state that may last up to twelve hours. Mescaline, isolated from the cactus in 1896 and synthesized in 1918, produces similar effects.

At least 2,000 years before European explorers recorded the use of peyote, indigenous peoples of what are now Mexico and the American Southwest were using the "divine plant" in religious and healing ceremonies. Because peyote induces an altered state of consciousness, these cultures considered it a direct link with the divine and believed it bestowed special powers of healing and clairvoyance on its users.

Spanish conquistadors and Jesuits who came to the New World in the early sixteenth century considered the use of peyote a threat to Christianity and sought to curtail it. Nevertheless, the use of peyote spread to more northern tribes by the late 1800s. Native Americans restricted to reservations began to conduct peyote ceremonies in an effort to revitalize their disintegrating culture. The Cheyenne, Shawnee, Blackfoot, Sioux, and other tribes as far north as Canada adopted peyote rituals at the urgings of Native American prophets such as John Wilson. The Kiowa and Comanche, who had been relocated to Oklahoma, were active proponents of the new peyote religion.

Further opposition to peyote use, this time from local governments, ensued. In 1918, native peoples in Oklahoma organized the Native American Church to protect their freedom of religion, incorporating peyotism—the sacramental use of the drug—as a central element of the faith. By 1922, the church had more than 13,000 members; in the 2000s, membership is estimated at about 250,000.

In the early twentieth century, several intellectuals, including psychologists William James and Havelock Ellis,

experimented with mescaline. In 1953, the English novelist and essayist Aldous Huxley wrote *The Doors of Perception* about the visionary states he had achieved during his first mescaline experience, prompting widespread interest in the use of psychedelic substances in psychiatric treatment as well as for spiritual insight. In the 1950s and 1960s, researchers explored the use of mescaline in treating alcoholism and other psychological problems. At the same time, anthropologists set out to witness the search for wild peyote and its ceremonial use in Native American cultures.

In 1978, the U.S. Congress passed the American Indian Religious Freedom Act, which protected the rights of Native Americans to conduct traditional rituals in their worship. In 1990, however, the U.S. Supreme Court ruled in *Employment Division v. Smith* that peyote use for religious reasons is not protected by the First Amendment and allowed states to regulate the substance.

A storm of protest led to passage of the Religious Freedom Restoration Act in 1993, which was amended in 1994 specifically to permit the religious use of peyote by Native Americans. Although peyote ceremonies differ from tribe to tribe, the Huichol people of western Mexico still conduct peyote ceremonies, as do members of the Native American Church and more than forty Native American tribes.

The controversy over peyote use for religious purposes challenged established boundaries between state and federal law and the rights of individuals to religious freedom. Scientific and anthropological research into the medicinal, psychological, and spiritual uses of peyote also challenged mainstream views about the regulation of illegal substances and the value of altered states of consciousness.

Pfaff's Cellar

Pfaff's Cellar was a subterranean gathering place for American bohemians in antebellum New York. Housed beneath 653 Broadway, north of Bleecker Street, Pfaff's Cellar welcomed writers, artists, intellectuals, actors, and its largest group, journalists. Notable among its patrons were Fitz-James O'Brien, Thomas Bailey Aldrich, Fitz Hugh Ludlow, George Arnold, Walt Whitman, and Henry Clapp, Jr. Pfaff's went against the cultural norm of the times by welcoming women through its doors. Ada Clare, often referred to as the "Queen of Bohemia," was in Pfaff's as much as her male counterparts.

Established by Charles Pfaff in 1855 and modeled after the German rathskeller, Pfaff's became the favorite place

for New York bohemians under the dynamic force of Henry Clapp—the “King of Bohemia” and editor of the *Saturday Review*. Its interior was dark, not very clean, and cramped. Regular patrons were referred to as Pfaffians, cave dwellers, or Clappians.

When the Clappians began meeting at Pfaff’s in the 1850s, the bohemian spirit was still largely a French idea. Edgar Allan Poe, an American who embodied the bohemian spirit and lifestyle, functioned as a kind of spiritual ancestor to the Pfaffians. Poe’s morose cynicism devolved to the Pfaffians, who often talked of suicide and drank heavily—even if observers regarded them as a convivial group of people. Poe’s penury was another aspect of bohemianism that the Pfaffians knew firsthand.

One of Pfaff’s famous patrons was Walt Whitman, who had published the second edition of his poetry collection *Leaves of Grass* in 1856. While Whitman spent many nights at Pfaff’s, he was more of an observer than a participant. Rather than take a place at the table, he would sit, back against the wall, and watch the activities of the evening. He did not drink as much as his companions, but he did receive their praise and, sometimes, their teasing for his poetry.

The American Civil War intruded into the lives of the Pfaffians, propelling them in various directions. The early innocence of the 1850s Pfaffians was replaced by the Poe-like cynicism captured in graffiti on the cellar walls: “See Pfaff’s and die” (referring to the deaths of many of the original patrons).

Pfaff’s had good wine and ale; its food got mixed reviews. Some people did enjoy Pfaff’s ales, wines, and cheeses, but when people wanted a fine dining experience, they would eat at nearby Delmonico’s. Pfaff moved business to midtown in 1870, and the original building was demolished. Pfaff’s Cellar is remembered not for its food or location, but for the people who met there and their bohemian spirit.

Phish

Phish was an American rock band active from 1983 to 2004 and known for its fusion of musical styles, extended improvisational jam sessions, and community of followers in the tradition of the Grateful Dead. Its most devoted fans—referred to as Phans or Phisheads, among other terms—followed the band from concert to concert for weeks or months on end and took on the identity of a distinctive community or subculture.

Formed in 1983 at the University of Vermont, the original band included Trey Anastasio (guitar), Mike Gordon (bass), John Fishman (drums), and Jeff Holdsworth (guitar). Marc Daubert (drums) joined in late 1984 and left in

early 1985; Holdsworth left in 1986. The other longest-running member, Page McConnell (keyboards), joined the band in 1985. Phish followed a meteoric climb from the club scene of Burlington, Vermont, to regional touring and larger clubs, and finally to theaters, indoor arenas, and sprawling outdoor festival sites worldwide.

Phish drew from a wide range of musical influences, including rock, jazz, psychedelia, bluegrass, metal, blues, country, Latin, calypso, folk, funk, hardcore, Broadway, and classical. The band was known for simple lyrics, sophisticated instrumentals, extended improvisation, and extensive musical communication. Phish distinguished itself from other bands by its combination of technical skill, diverse styling, creativity, experimentation, and in-depth study of music across all genres.

Above all, Phish was known and appreciated as a live band. Its extensive song list and tour history encompassed more than 600 songs played at 1,183 shows—and it never played the same set twice. Shows were filled with the antics of band members and the hijinks of audience members. Props used by band members included trampolines, vacuum cleaners, and a Slip'n Slide. The diversity of their music, unpredictable nature of their shows, and roving community of fans define the essence of Phish. Its outdoor concerts became massive festivals that broke records for both attendance and playing duration.

Wherever, whenever, and however Phish played, music was always the focal point—and community was the result. Phish shows were not just concerts; they were throwbacks to the “happenings” of the 1960s. For the devoted, the “event” would start with a road trip, followed by quality time in the parking lot. The “lot scene,” as it was called, was a kind of bazaar at which participants would mingle, converse, and connect, often bartering such items as beads, hemp products, foodstuffs, tapes, CDs, and just about anything imaginable. Then, indoors or outside, the lights would lower, the smoke would rise, and the music and dancing would begin.

Credibility within the Phish subculture was based on the number of shows attended, knowledge of facts about the band, and open-mindedness toward other Phans. Conversations might be filled with requests for extra tickets, catching up with friends, “calling” (predicting) songs, and telling tales from tours. Broader communication might cover politics, sexuality, and spirituality, about which the Phish subculture was generally more open and accepting than society at large. Divisions within the subculture might readily be observed between young professionals swilling from large coolers of beer and more streetwise drifters selling grilled cheese sandwiches or veggie burritos to get to the next show.

Commonly observed apparel included roomy threads reminiscent of hippie or rave clothing styles; hair was generally long and unshaven. Yet it would be a mistake to categorize Phans as hippies, for theirs was a distinct subculture steeped more in music and partying than in antiwar protest or demonstrating for social justice. Exceptions to the ethic of partying for partying's sake were the efforts of the so-called Phunky Bitches, who provided rides and personal care items to women fans in need, and the Mockingbird Foundation, a nonprofit, volunteer organization founded by Phish fans in 1997 to support music education for children.

Phish lyrics were often mysterious, lending themselves to wild speculation, interpretation, and rumor. The song played live most frequently, “You Enjoy Myself” (from the studio album *Junta*, released in 1988), is said to have derived from words uttered during a tour through Italy, though their true origin and meaning remain unknown. That the band's lyrics were often indecipherable was of great appeal, creating fodder for ongoing dialogue and community building.

The stamina and community feeling of the Phish subculture were embodied in seven weekend-long festivals: the Clifford Ball (1996), the Great Went (1997), Lemonwheel (1998), Camp Oswego (1999), Big Cypress (1999), It (2003), and Coventry (2004). The largest, with more than 85,000 people in attendance, was Big Cypress, held December 30 to 31, 1999, at the Big Cypress Seminole Indian Reservation in Florida. Big Cypress was also the longest Phish concert, with the band playing multiple sets over two nights, culminating in a seven-hour set ending at sunrise on New Year's Day.

Phish, as a musical act, officially came to an end in 2004, when Anastasio announced on Phish.com that the band

was breaking up. The band's final concert was held at the Coventry Festival in northern Vermont in August 2004. In keeping with tradition, and for one last weekend, Phish fans created their own community, one larger than many cities.

To the delight of its fans, the band held three reunion concerts in Hampton, Virginia, in March 2009, followed by thirteen shows on a summer tour, the release of a new album—*Joy*—in September, and a fall tour. So, too, the traveling Phish community was revived in full force

Physical Culture Movement

Late nineteenth- and early twentieth-century proponents of Physical Culture—what many people today would call bodybuilding, but which at the time encompassed both other activities and a more expansive philosophy—saw it as a way to restore a vitality they thought they were at risk of losing. To begin with, many white Americans at the time, particularly those in the middle class, were anxious about their place in a country that was changing quickly and drastically. Many were now living in big cities and working for large, impersonal companies, which contributed to a sense of anonymity and loss of community.

The growing sense of alienation and loss of autonomy, combined with contemporary theories about evolution and Social Darwinism—the idea that biological evolution and survival of the fittest operate in society as well, and that social evolution is a product of group conflict—led some to think that perhaps America was becoming *too* civilized. Concerns that turn-of-the-century lifestyles were making Americans “soft” and vulnerable to diseases such as neurasthenia (a widely diagnosed physical ailment thought to be the result of insufficient physical stimulation) thus carried apparent threats to the survival of native-born white Americans as a distinct civilization. And they did so at a time when non-Anglo-Saxon immigrants were entering the country in unprecedented numbers. These newcomers, many of whom worked in physically demanding industrial occupations, seemed to possess exactly the kind of primitive physical prowess that native-born whites were afraid of losing.

The same trends in work also led to increased time for and emphasis on structured recreational activities. The increasing bureaucratization of society and separation of occupation from personal identity contributed to an increased emphasis on crafts, hobbies, vacationing, and physical fitness, among other activities, as expressions of individuality and self-identity. Many people simultaneously gained the means and motivation to begin efforts at self-improvement. Increasingly, they sought out activities and products that would provide them with intense experiences and restored physical vitality, through which they could enjoy all the benefits of living in an advanced civilization while retaining their physical dynamism.

Physical Culture and Its Advocates

Physical Culture was seen as a way of retaining that dynamism by building muscles and strength. The movement challenged long-held beliefs that the body's energy is finite, overexertion depletes that supply and leads to ill health, and maintaining a slight physique helps conserve energy and health. Physical Culture advocates, by contrast, believed that with proper habits, especially vigorous exercise, the body could be shaped, repaired, and conditioned for better health. It is a perfectible machine with a capacity for producing more energy can be tapped the individual.

“Muscular Christianity,” an important element of the broader Physical Culture movement, took this concept further by connecting perfection of the body with perfection of the spirit. It combined the popular emphasis on individualism with concerns about protecting the United States as a whole. Bolstered by such prominent adherents as President Theodore Roosevelt, it held that the best Christians are the strongest and the fittest, and, therefore, that cultivating physical prowess through sports such as weightlifting and boxing advances American Christian civilization.

To address this new public interest and way of thinking, entrepreneurs were quick to begin offering a wide variety of products and services. Among them was the influential European strongman “Professor” Louis Attila (born Ludwig Durlacher), who used his nickname in part to gain prestige for the importance of physical education. Attila came to the United States in 1893 having already run several successful gymnasiums in Europe. After opening a few relatively modest gyms, he constructed an ornate and lavish one in New York City that catered to the social elite. Its clients included financier J.P. Morgan, sportsman Alfred Vanderbilt, theatrical producer Florenz Ziegfeld, theatrical manager Oscar Hammerstein, bandmaster and composer John Philip Sousa, and heavyweight boxing champion James J. Corbett. Their presence both demonstrated and reinforced the popularity of the movement. At first resistant to training women, Attila finally relented, and one of his female students, Carolyn Bowman, became well known for her physique and strength.

The new values of the Physical Culture movement combined with changes in mass culture to help produce a new type of fitness celebrity. The most famous were Attila's student Eugen Sandow and Bernarr Macfadden. Both men sought to embody Physical Culture and the perfection to which it could raise its practitioners, and each believed that his own methods were the most effective ways to achieve that perfection. They considered fitness the most important attribute any person can possess—more so than wealth or social standing—because it is the foundation of all other attributes, including physical health. They considered sickness and physical weakness to be the consequences of bad personal choices and weakness of character. The connection between a person's physical body and inner self was clear to them, and they believed one should cultivate the former to benefit the latter. Accordingly, both men sought always to be the personification of health and strength.

Sandow was born Friedrich Müller in Königsberg, Germany, in 1867. He worked as a circus strongman and wrestler early in his career, but, with the aid of various managers, turned bodybuilding into a business, selling fitness publications and a variety of products to satisfy the public's fascination and desire to acquire a physique like his. Becoming the proverbial poster child (or poster man) of Physical Culture, he made money by displaying his body in exhibitions and photographs and projecting his personal charisma. He was so admired by women that, when he married, his manager tried to conceal the fact in order to maintain the image of his availability. Male emulators were legion.

A talented self-promoter known to be liberal with the truth, Sandow gave countless interviews, produced a magazine to advertise himself and his fitness advice, and published several autobiographies, all of them ghostwritten and containing a number of inconsistencies. He spent much of his career in England, but successfully toured the United States for several years in the 1890s. He left an enduring impression, especially on the man who became his greatest rival, Bernarr Macfadden, who saw Sandow at the Chicago World's Fair of 1893.

Bernarr Macfadden, born in Mill Spring, Missouri, in 1868, had a poor and sickly childhood but grew up to become the most financially successful American bodybuilder of his time, a man whose tombstone bears the inscription

“Father of Physical Culture.” Like Sandow, Macfadden worked for a time as a wrestler, but he soon recognized the business opportunities offered by Physical Culture and capitalized on them. Also like Sandow, he was liberal with the truth about his personal life in the many books and articles he wrote or to which he contributed.

Macfadden used his celebrity status to launch the movement’s first magazine, initially called *Physical Culture*, in 1899, beating *Sandow’s Magazine* by only a few months. A talented businessman, Macfadden used the magazine as the foundation of what would become a publishing empire, Macfadden Publications, which later included such popular titles as *True Story* and *True Romances*, as well as magazines on sports and film and a tabloid newspaper. His holdings also included several hotels, gymnasiums that featured his own style of physical training, and a breakfast cereal called Strengthro.

Both Sandow and Macfadden considered Physical Culture more than just a business and themselves as more than just exercise trainers. They thought of themselves as health reformers, offering a range of lifestyle advice that often challenged both the social conventions and medical wisdom of the time. Macfadden, for example, saw an equal place for women in Physical Culture. He published the first fitness magazine for women, *Women’s Physical Development*, held contests to find the best physically formed woman, and advised women that exercise and muscle development were the way to real beauty. Macfadden was also an advocate of sexual education and, to an extent, sexual liberation. He believed that sex within marriage is healthy, that men should be vigorous lovers, and that women should acknowledge and embrace their own sexual drives.

The medical advice of both men was as unsound as their biographical information: Sandow sold his own line of cigars, and Macfadden was an outspoken disbeliever in germ theory.

Decline and Legacy

The Physical Culture movement thrived well into the 1920s, but declined quickly after the onset of the Great Depression in 1929. Many Americans no longer had the disposable income to spend on gym fees, exercise equipment, or even fitness magazines, and neither of the movement’s two greatest spokesmen was able to stop the decline. Sandow had died in 1925, and the Great Depression took such a severe toll on Macfadden Publications that the founder was ousted from the company (although he remained an active businessman and Physical Culture advocate throughout his life).

The movement did not disappear, however, as a young fan of both Sandow and Macfadden—an Italian immigrant named Angelo Siciliano—ensured that many of the ideals of Physical Culture would live on. In 1922, Siciliano, better known as Charles Atlas, cemented his status as “The World’s Most Perfectly Developed Man” by winning two consecutive contests held by Macfadden and *Physical Culture* magazine. After the second victory, Atlas began selling his own fitness program via the mail, creating what would eventually become one of the most successful mail-order businesses in American history.

Charles Atlas Ltd. took off in the late 1920s after its founder took on a partner named Charles Roman. The company continued to thrive during the Depression because the program stressed affordability. Atlas spurned expensive weightlifting equipment and gym membership fees in favor of an early form of isometric exercise he called “Dynamic Tension.” The only expense was a relatively low one-time fee for the correspondence course.

Atlas was as emphatic a health adviser as his predecessors, but he adapted many of Physical Culture’s concepts regarding health and fitness to new times. His company’s most famous ad, aimed at young men and boys, portrayed muscular development as a way to handle the threat of bullies and offset adolescent insecurity. Still, the program touted benefits to all participants of all ages. Like his predecessors, Atlas considered fitness a lifestyle, not a hobby, and he offered advice on everything from proper sleep habits to the health benefits of regular enemas.

Atlas served as a critical bridge for the Physical Culture movement, helping many of its concepts endure even as others faded. Many of the principles continue to be followed in the 2000s, some directly. Atlas’s company, for

example, remains in business. But the legacy also continues in subtler ways. The public's interest in bodybuilding, muscle-bound movie stars such as former bodybuilder Arnold Schwarzenegger, and in exercising and staying fit retain elements that originated with the turn-of-the-twentieth-century Physical Culture movement.

Pilgrims

The Pilgrims were radical Puritans (also known as Separatists), religious dissidents who fled from England in 1608 to Holland and then to North America to found Plymouth Plantation in 1620, the first English colony in what was to become known as New England. Their historic voyage across the Atlantic Ocean on a ship called the *Mayflower* in search of religious freedom, their survival during their first year, and the feast celebrated with the Pokanoket chief (*sachem*) Massasoit became the basis for the holiday of Thanksgiving and part of the founding myth of the American nation. They were America's first countercultural group.

Puritans, so named because they sought to “purify” the Church of England, opposed the dominant religious culture by rejecting the established church hierarchy, liturgy, and doctrines. They believed that the Reformation had not gone far enough and wanted to rid the Anglican church of Catholic influence. While many Puritans wanted to reform the church from within, the Separatists broke with it altogether and formed independent congregations.

By refusing to participate in the Church of England, the Separatists faced the wrath of the government. Many were persecuted or executed; others fled to the city of Leiden in Holland. After living there for about ten years, a small congregation decided to leave for North America and establish a settlement where they could practice their religion freely and perpetuate their own traditions and lifestyle. The group left Leiden in July 1620, stopped in England to secure finances, and sailed west on the *Mayflower*, dropping anchor at Cape Cod on November 21, 1620. From there, they explored the area inland, looking for a suitable place to settle.

Before establishing their settlement, they drew up the historic Mayflower Compact, a document through which they bound all members of the expedition—both Pilgrims and non-Pilgrims—to a common code. Because the community they were about to establish was not under the jurisdiction of any English grant, it was important to declare a set of governing principles. The compact, signed by forty-one adult males, established majority rule, allegiance to King James I, and the right to establish laws. It was signed on November 11, 1620.

Pilgrim leader William Bradford reads the Mayflower Compact, establishing a “civil body politic,” before landing at what would become the Massachusetts Bay Colony. The Pilgrims were Puritan Separatists who had broken away from the Church of England. (Library of Congress)

On December 21, 1620, the Pilgrims landed at Plymouth and founded Plymouth Plantation. They spent a harsh winter, during which they built their houses, and endured a few skirmishes with Native Americans before meeting and reaching agreement with Massasoit and sachems of other nearby groups, from whom they received considerable help in surviving that first winter. That spring, the natives helped the Pilgrims learn to plant and tend crops.

In the fall of 1621, a feast was held to celebrate the survival of the colony, the harvesting of crops, and the alliance between the Pilgrims and their Native American neighbors. In all likelihood, the feast was held in September or October, not November, and consisted of venison, duck and goose, wild turkey, fish, and items made from the corn, beans, and squash the Indians had taught them how to grow. Of the 103 men, women, and children who sailed on the *Mayflower*, only fifty-two survived the journey and the first year.

Piñero, Miguel (1946–1988)

The Puerto Rican playwright, poet, and performer Miguel Piñero was recognized as one of the key figures of the Nuyorican literary and cultural movement of the 1960s and 1970s. With a mix of irreverence and documentary realism, his work addressed such controversial topics as race and class conflict, incarceration, drug use, homosexuality, prostitution, and socioeconomic oppression. Closely identified with Manhattan's Lower East Side, and in particular with the Nuyorican Poets Café—the renowned cultural space and performance venue that he cofounded—Piñero was known as much for his outlaw persona and rousing readings as for his plays and poems. His work is notorious for its vivid, unvarnished depictions of life in the ghettos, barrios, and prisons in and around New York City.

Piñero was born on December 19, 1946, in Gurabo, Puerto Rico, to Miguel Angel Gómez Ramos and Adelina Piñero. As a young child, he moved with his parents to the Lower East Side; his father would abandon the family a few years later.

By his early teens, Piñero was involved with gangs, hustling, and experimenting with drugs, and he never graduated from high school. By age twenty, he was a heroin addict with a long criminal record, and by age twenty-five he was incarcerated in Sing Sing prison (Ossining, New York) for armed robbery.

While at Sing Sing, he became involved in a theater workshop led by directors Clay Stevenson and Marvin Felix Camillo, where he conceived what would become his best-known play, *Short Eyes* (1974), a sordid and bitterly humorous drama detailing the complex racial, sexual, and political dynamics of life in an unnamed prison. Lauded for its brutal realism and deft use of language (often mixing English and Spanish), *Short Eyes* won an Obie Award, the Drama Desk Award, and a New York Drama Critics' Circle Award for Best American Play, and launched Piñero into overnight fame.

In about 1973, Piñero and his best friend, Rutgers University professor Miguel Algarín, founded the Nuyorican Poets Café on the Lower East Side as a haven for local artists and for the area's sizable Puerto Rican community. Influenced by Beat poets such as Allen Ginsberg and by African American prison poets unknown to the outside world, the bilingual, vernacular, and performance-oriented poems that Piñero showcased at the Poets Café would come to define the Nuyorican movement. They also formed the core of the groundbreaking anthology he coedited with Algarín, *Nuyorican Poetry: An Anthology of Puerto Rican Words and Feelings* (1975). A sampling of these poems, which anticipate the hip-hop and spoken word poetics of the 1990s, was published in 1980 as *La Bodega Sold Dreams*.

In the late 1970s and 1980s, Piñero capitalized on the success of *Short Eyes*, occasionally editing and writing

scripts for television police dramas. He even secured some acting roles on television and in films such as *Fort Apache, the Bronx* (1981), but mostly in secondary roles or typecast as a drug dealer or street person.

Despite his flirtation with Hollywood, Piñero continued writing and publishing, and he was awarded a Guggenheim Fellowship in 1984. Later plays, such as the ironic *The Sun Always Shines for the Cool* (1984), continue his exploration of the outlaw fringes, though none came close to the critical success of *Short Eyes*.

Miguel Piñero died of cirrhosis of the liver in New York City, on June 16, 1988. He is the subject of the Leon Ichaso film *Piñero* (2001).

Pirate Radio

The term *pirate radio* refers to illegal or unwelcome forms of radio broadcasting, usually as unlicensed stations that transmit without official permission. An unlicensed FM station (often run by an amateur radio operator) that manages to occupy a commercial or state-run FM band is an example of a pirate or "bootleg" radio station. Radio stations that operate on legal bandwidths in one location may be considered pirate radio stations in another location, if the station violates the latter's licensing regulations or broadcasting laws. Pirate radio stations operate both on land and at sea, often from transmitting points in international waters and beyond the boundaries of conventional law enforcement.

The earliest forerunner of the pirate radio station was Radio Luxembourg, a small private radio station that began to transmit French- and English-language broadcasts from the Grand Duchy of Luxembourg in 1933. The station was shut down during World War II but returned to the airwaves in the 1950s—and its English-language broadcasts soon began to compete with the British Broadcasting Corporation (BBC) for listening audiences in the United Kingdom. Radio Luxembourg was popular and successful with British audiences, but according to British broadcasting law, it was an "unauthorized" radio station and therefore illegal.

The commercial success of Radio Luxembourg inspired the creation of other pirate radio stations broadcasting to or within the United Kingdom, such as Radio Caroline and Wonderful Radio London. Many of these stations broadcast from sea-based locations, such as specially designed transmitter ships and other marine structures anchored in the waters off the British Isles. The heyday of pirate radio in the United Kingdom drew to a close in the 1970s as changes in broadcasting technology, increased competition from officially licensed broadcasting stations, and increased interference from regulatory authorities made it uneconomical and overly complicated to operate a pirate station.

In the United States, pirate radio stations were part of the counterculture movement of the late 1960s. As an act of rebellion against the mainstream media, small amateur radio operators began to produce unlicensed, clandestine broadcasts described as “free radio.” As its name suggests, free radio was designed to be accessible to anyone without cost, unencumbered by the weight of corporate advertising or political regulation said to taint the programming of mainstream, licensed networks. Advocates of amateur broadcasting soon adopted the term “free radio,” and the Free Radio Association was founded in the United Kingdom to advocate for the rights of amateur radio operators who wished to continue producing their own pirate broadcasts.

U.S. government efforts to shut down pirate radio stations centered on official restrictions on low-power broadcasting. In 1979, the Federal Communications Commission (FCC) eliminated the class D license, the only one available to small, low-power radio stations such as local or college stations. Without an official license, a station could be forced off the air entirely or bumped down to secondary status, severely hampering its broadcast range and accessibility to a potential audience.

Pirate radio stations nonetheless managed to survive. Attempts by the FCC to track down and prosecute pirate radio broadcasts were not always successful, in part because of the wide availability of inexpensive and portable radio equipment. In 2000, after much lobbying on the part of amateur and local radio enthusiasts, the FCC reinstated low-power FM licenses.

Seen from the perspective of Soviet and Eastern European authorities, the U.S. government was also guilty of producing pirate radio transmissions during the cold war era. Radio Free Europe, created in 1950 and initially funded and directed through the Central Intelligence Agency (CIA), broadcast news, information, and American propaganda to the Soviet Union and communist countries of Eastern Europe. Although the original transmitting stations were not illegal, the broadcast material led government authorities in the targeted countries to attempt to jam these unauthorized broadcasts—in much the same way that British and American regulatory authorities attempted to suppress pirate radio stations.

With the development of new digital recording technologies and the wider availability of and access to resources for online broadcasting (clandestine or otherwise), many pirate radio stations have moved from the airwaves to the Internet. Attempts by the FCC and the Recording Industry Association of America (RIAA) to place restrictions on the online broadcasting of music—by instituting mandatory fees that online radio stations must pay to broadcast music legally, for instance—have been met with fierce opposition and protests from old and new free radio enthusiasts. In this sense, pirate radio broadcasters on the Internet continue to carry on the traditions of Radio Caroline and other well-known icons of the amateur radio counterculture.

Pirsig, Robert M. (1928–)

Robert Maynard Pirsig is known as the author of *Zen and the Art of Motorcycle Maintenance* (1974), a philosophical novel that describes his life as a child prodigy who spent his time trying to relate to society and individuals. In the book, Pirsig articulates a philosophy he calls the Metaphysics of Quality (MOQ), a way of viewing reality influenced by his study of East Asian philosophy, pragmatism, and Native American culture. Since its original publication, *Zen and the Art of Motorcycle Maintenance* has sold millions of copies worldwide. It retains its status as a cult favorite into the twenty-first century.

Pirsig was born on September 6, 1928, in Minneapolis, Minnesota. His father was a law professor who spent most of his career teaching at the University of Minnesota Law School. Pirsig was quickly recognized as a prodigy; when he was nine years old, his IQ was measured at 170. Because his abilities were beyond those of other children his age, school administrators advanced him several grades. His youth, small size, and lack of social maturity, however, made it hard for Pirsig to get along with other students. He was often bullied and fell under enormous stress.

By the time he was fifteen, Pirsig was taking college courses at the University of Minnesota. At first, he hoped to specialize in biochemistry, but he could not reconcile the idea that more than one hypothesis could explain various phenomena observed in science. As a result, he turned away from science to search for life's answers in other areas.

In 1946, Pirsig was expelled from the University of Minnesota for insufficient attention to his studies and poor grades. After drifting around Montana, he joined the U.S. Army and was shipped out to South Korea, where he began to study Buddhism and other Asian philosophies. He returned to the University of Minnesota in 1948 to formalize those studies and received a bachelor's degree in 1950; he continued his exploration of Eastern spirituality at Banaras Hindu University in India for a year and a half.

In 1952, he enrolled at the University of Minnesota School of Journalism, where he coedited the university's literary magazine, *The Ivory Tower*, with Nancy Ann James. In 1953, the couple moved to Reno, where James divorced her husband and later married Pirsig.

Pirsig continued his search for enlightenment during the 1950s, even while slipping into mental instability. He supported his family with freelance writing jobs before taking a position teaching first-year students at Montana State College in 1959. His teaching methods were considered unconventional at best; for example, he urged his students to define *quality* in rigorous terms, but he refused to grade their efforts.

After moving to the University of Illinois in Chicago in 1961, Pirsig became unable to function. Over the next two years, he was in and out of mental hospitals and received electroconvulsive shock treatments. He returned to freelance writing but continued to suffer from depression during the 1960s. In an effort to forge a closer bond with his son Chris, Pirsig took him on a cross-country motorcycle trip during the summer of 1968.

It was during that trip that Pirsig began to write *Zen and the Art of Motorcycle Maintenance*, outlining his philosophy of quality. After writing a substantial portion, Pirsig sent copies of the manuscript to publishers. The book was rejected by more than 120 publishers, until James Landis, an editor at William Morrow, recognized its potential; in 1973, the manuscript was finally accepted for publication.

Zen and the Art of Motorcycle Maintenance is Pirsig's story of his quest for truth, using the motorcycle trip as a metaphor for the philosophical journey he had undertaken in life. Through his narrator, Phaedrus, Pirsig discusses the different ways in which people view the universe: While some are satisfied with the large picture without focusing on details, others need to know the inner workings of things. Pirsig saw the best approach as one that combines the Japanese philosophy of Zen Buddhism with rational thought and reason.

The book quickly gained a dedicated following. Many in the American counterculture, themselves searching for

meaning and truth, were entranced by the novel. For Pirsig, however, life continued to be difficult. Chris was stabbed to death in a random mugging in 1979. Pirsig had divorced his wife in 1978 and remarried later that year. He and his second wife, Wendy, spent most of their time sailing, while he worked on his second book, *Lila: An Inquiry into Morals* (1991), which develops his notions of quality through the story of a boat trip on the Hudson River.

Poe, Edgar Allan (1809–1849)

The nineteenth-century short story writer, poet, literary critic, and editor Edgar Allan Poe, best known for his tales of the mysterious and grotesque, is also credited with developing the short story as an American art form, creating the detective genre, and writing one of the earliest, if not first, modern science fiction stories. In literary circles, he was and is known for his critical reviews and keen eye for talent. His collected reviews, *The Literati of New York* (1846), promoted the careers of such early-nineteenth-century American writers as Nathaniel Hawthorne, Caroline Kirkland, and Epes Sargent. His critical theory, formulated in *The Poetic Principle* (1848), foreshadowed the rules and methods of New Criticism, the leading literary theory of modernism. Gaining fame only after death, Poe has become a symbol of the troubled genius or misunderstood artist. He was emblematic of the struggling writer, never gaining financial security, never earning his living from his stories and poems, and suffering from health problems and personal tragedy in addition to poverty. Contrary to myth, however, he was not an alcoholic, a drug addict, or mentally unstable.

Poe was born in Boston on January 19, 1809. His parents, David Poe and Elizabeth Hopkins, were traveling actors. After their separation and Elizabeth's death, in 1811, the two-year-old Edgar was taken into the Virginia home of John Allan, a Richmond merchant, and his wife, Frances.

Poe received a superior education and at age seventeen matriculated at the University of Virginia in Charlottesville. He was an excellent student but soon left the university, as Allan withheld living and study expenses over Poe's gambling debts and literary interests. Thus began an estranged relationship between the two.

Poe enlisted in the U.S. Army, earned the rank of sergeant major, and quietly began his literary career, publishing his first collection of poems, *Tamerlane and Other Poems* (1827), anonymously. In 1830, he entered the United States Military Academy at West Point (New York), but, not receiving sufficient money or support from his foster

father, purposely broke regulations to get himself discharged. His next publication, *Poems by Edgar Allan Poe, Second Edition* (1831), was dedicated to his fellow West Point cadets; it did not meet with critical notice.

His first literary success came with “A MS Found in a Bottle” (1833), which won the *Baltimore Saturday Visitor’s* prize for best story and earned him the position of editor at the *Southern Literary Messenger* in Richmond in 1835. That same year, he secretly married his thirteen-year-old cousin, Virginia Clemm. So began his turbulent literary career, which included editorial positions at *Graham’s Magazine* (1841–1842) and the *New York Evening Mirror* (1844).

Poe moved to Philadelphia in 1838 and lived there until 1844; these were his most fruitful years. In 1838, he published “Ligeia,” his favorite story, which, along with “The Unparalleled Adventures of One Hans Pfaal” (1835), is considered an early example of American science fiction. Also in 1838, Poe published his only novel, *The Narrative of Arthur Gordon Pym*.

In 1839, he published “The Fall of the House of Usher,” one of his most-anthologized stories. “The Murders in the Rue Morgue” (1841), featuring the character Auguste Dupin, and “The Purloined Letter” (1845) are credited as the originators of the detective genre.

In 1842, he published “The Masque of the Red Death.” This was followed by Poe’s most prolific year, 1843, during which he published “The Black Cat,” “The Tell-Tale Heart,” and “The Pit and the Pendulum.” These stories follow the romantic tradition, marked by the macabre, horrific, terrifying, and gothic (though exaggeration of the gothic often hints at irony and parody).

In 1844, Poe moved to New York to work for the *New York Evening Mirror* and later the *Broadway Journal* (1845–1846), which he owned. Although owning a newspaper fulfilled a lifelong dream, the *Broadway* went bankrupt due to unpaid previous debts.

During his New York years, Poe published “The Raven” (1844) and *The Raven and Other Poems* (1845). These works influenced the French poet Charles Baudelaire, who described Poe as a social rebel and became a catalyst of the French symbolist movement. Poe published the last of his famous stories, “The Cask of Amontillado” in 1846. He lost his wife to tuberculosis the following year.

Poe died in Baltimore on October 7, 1849. The cause of his death is still a matter of speculation, but the more reasonable theories attribute it to any of several possible illnesses, including diabetes, epilepsy, and brain lesions.

Polar Bear Clubs

A Polar Bear Club is a group or organization in which members participate in the pastime of swimming in extremely cold waters, particularly during winter when the temperature of oceans and lakes drops to freezing or near-freezing. The practice may include ice swimming (done in a body of water where the surface has frozen over but where the water below the surface remains liquid), but the water does not have to be frozen for members of a Polar Bear Club to swim in it.

In the United States, the Coney Island Polar Bear Club in New York is the oldest organization devoted to ice swimming and winter bathing. It was founded in 1904 by physical fitness advocate Bernarr Macfadden, an early proponent of the benefits of ice swimming as part of a health-conscious lifestyle. Ice swimming was only one of the alternative fitness ideas that Macfadden promoted—his Physical Culture diet included long walks, semivegetarian eating habits, fresh air, and minimal clothing—but the club he founded has continued to attract members since its inception.

The Coney Island Polar Bear Club holds open swims starting in January of each year, most often in the open waters near New York City and specifically near Coney Island (Brooklyn). The club also supports local charitable causes and organizations through fundraising and sponsorship drives, encouraging members of the public to participate in the pastime. A loosely organized network of Polar Bear Clubs and other ice swimming groups and organizations helps connect aficionados in different cities in the United States and around the world, creating an extended subculture.

Club members claim that a number of health benefits can be derived from swimming in cold water. It is said to improve circulation and ease the general symptoms of arthritis, and some ice swimmers claim that regular dips in cold water also may help improve the immune system's ability to resist colds and flu.

The health benefits of ice swimming may be considered a form of alternative medicine. Club members who treat diagnosed medical conditions with ice swimming are participating in a form of physical therapy that many health and medical professionals would consider ineffective, counterproductive, or even physically hazardous. Indeed, the American Medical Association proclaimed Macfadden a practitioner of medical quackery.

Polar Bear Clubs are in part designed to cater to the safety of their members. The dangers of swimming in extremely cold water include hypothermia, which can quickly incapacitate a swimmer and lead to drowning. Ice swimming and other forms of winter bathing also carry the danger of a specific kind of physiological shock caused by the “mammalian diving reflex,” a reflexive reaction that may induce cardiac or respiratory arrest. Not even experienced bathers are immune to this phenomenon, though individuals who are generally in good health usually have less cause for concern than those who have existing heart or other health conditions.

Many clubs provide special equipment to help bathers warm up quickly and safely if they get into difficulties during an icy plunge. Most important, swimming in larger and well-organized groups such as Polar Bear Clubs allows participants to keep an eye on one another and ensure that everyone stays safe in the frigid water.

Pop, Iggy (1947–)

Dubbed by music critics the “godfather of punk rock” for his groundbreaking style, Iggy Pop is one of the most innovative and tenacious countercultural musical figures of the late twentieth and early twenty-first centuries. Although he has never topped the sales charts, Pop has an extensive and highly dedicated fan base in the both the United States and overseas, with a solo discography built up over more than thirty years and a reputation for dynamic stage performance.

Born James Newell Osterberg, Jr., in Ann Arbor, Michigan, on April 21, 1947, the fledgling musician changed his name to Iggy after one of his early bands, the Iguanas. As Iggy Pop, he has consistently flirted with diverse genres, from rock to glam to punk to heavy metal and back to punk, although he has never embraced pop music. Yet he has always retained a distinct musical style, a unique stage persona (incorporating self-mutilation and exhibitionism in his act), and his own personal approach to life.

Pop, whose first important recording was made with his band the Stooges in 1968, proved influential on the American and U.K. music scenes, making it big in glam rock circles. With his punk music of the late 1970s, he influenced icons from the Sex Pistols and the Ramones to such later bands as Guns N’ Roses, the Red Hot Chili Peppers, and, later, Sum 41 and Green Day. Although Pop has enjoyed a revival thanks to the emergence of neo-punk, he was quoted as saying, “I’m not a punk anymore. I’m a damned man!”

Pop has recorded some twenty solo albums, as well as five with the Stooges. Despite occasional hiatuses in recording, he maintains his wildly energetic stage presence. The albums *Raw Power* (1973) and *Lust for Life* (1977) are regarded by many fans and critics as among his best. Songs with which he is widely associated include “I Wanna Be Your Dog,” “No Fun,” “Lust for Life,” “Shake Appeal,” and “Candy,” recorded with Kate Pierson from the B-52s. Although he became addicted to heroin in the early 1970s (a habit he managed to kick), Pop collaborated frequently during that decade with British star David Bowie, who had a hit with his cover of Pop’s “China Girl” in 1981.

Iggy Pop has been the subject of several books, his music has been extensively covered, and no fewer than four tribute albums have been produced. In addition to performing, he has written songs for a number of films, including *Crocodile Dundee* (1986) and *Trainspotting* (1996). He also has acted in a number of film and television productions, including *Sid and Nancy* (1986), *Miami Vice* (1984–1989), *Star Trek: Deep Space Nine* (1993–1999), and *Dead Man* (1995).

Although Pop has never been particularly political, focusing more on issues of sexuality, self-esteem, and rough living, he expresses a particularly strong disenchantment with the music industry. “It’s hard to care anymore,” he wrote in 1993. “The music industry is fat and satisfied. They can buy anything, and turn anyone into a spiritual eunuch. That means no balls.... As for ‘today’s music industry’ and its bed-mate ‘music journalism,’ I just don’t care anymore. How could I?”

Pop Art

In the period after World War II, the American cultural ideals of suburban conformity and mass consumerism were both challenged and embraced by artists who focused their creative attention on the common consumer items flooding the nation's marketplace. Supermarket commodities from soap pads to soup cans and pop-culture products from comic books to the characters inside them became the subject of paintings and sculptures, giving rise to a new modern art form called pop.

Indeed, the new aesthetic represented an enshrinement of contemporary culture and values. Pop art was not uniquely American, as British artists also worked with popular consumer products, and the very term was coined in London by art critic Lawrence Alloway in the mid-1950s. Nevertheless, the omnipresence of American consumer products—combined with the growing international influence of the U.S. television, film, and advertising industries—made pop art a particularly American genre.

Pop art came of age in the early 1960s as the postwar art market boomed and collectors sought new artists and works to invest in and promote. Andy Warhol, Roy Lichtenstein, and James Rosenquist emerged as leaders of the movement in New York, with their work prominently featured at the 1964 World's Fair. These artists began their professional careers as commercial illustrators and designers, and they were savvy about the connections between art and business—a theme they embraced and parodied in their art.

Edward Ruscha, a Los Angeles-based artist and participant in the famous bohemian gallery Ferus (active from 1957 to 1966), often played with themes of success and failure and construction and destruction in his commercially successful paintings. In his painting *Burning Gas Station* (1965–1966), for example, he depicts the burning of a previous work, *Standard Station, Amarillo, Texas* (1963); it is the metaphorical destruction of one of the pieces that had made him famous. The subject of celebrity in modern media culture was a particular fascination of Warhol, whose *Twenty-Five Colored Marilyns* (1962) and *16 Jackies* (1964) forced viewers to see so many mechanical reproductions of the same likeness that the faces—of Marilyn Monroe and Jacqueline Kennedy, in these cases—were rendered at once mundane and iconic.

Pop artists were fascinated by the changing cultural landscape of postwar America, drawing car culture and consumer advertising into constant dialogue. In the wake of the 1956 Interstate Highway Act, an ambitious federal road construction initiative, tens of thousands of miles of asphalt were laid across the country. The new freeways were fast and uniform, marked by standardized billboard advertising, gas stations, and fast-food restaurants. Pop artist Allan D'Arcangelo commented with paintings of dark highways to nowhere, lit only by the light of gas station

signs and reflective road paint. The landscapes of both Ruscha and D'Arcangelo are notable for their lack of people, creating an eerie, unnatural atmosphere amid the familiar advertising motifs.

A museum visitor ponders Andy Warhol's pop art classic Marilyn, 1967. The pop genre both mimicked and challenged the mass consumerism and celebrity culture of postwar American society. (AFP/Stringer/Getty Images)

Art critics generally were not fond of pop. Critic Peter Selz wrote in the summer 1963 issue of *Partisan Review* that “the reason these works leave us thoroughly dissatisfied lies not in their means but in their end: most of them have nothing at all to say.” Similarly, the May 3, 1963, issue of *Time* reported that “[Pop art] is essentially a mild, unrebelling comment on the commonplace made by picturing it without any pretense of taste or orthodox technical skill.”

Despite these critiques, the general public and collectors loved pop art, generating large audiences for museum

exhibits and hefty price tags for artists and their dealers. Collectors paid skyrocketing prices for original pop works. In the twenty-first century, pop continues to sell extremely well. In 2006, Warhol's *Small Torn Campbell Soup Can (Pepper Pot, 1962)* fetched \$11.8 million at auction.

The central conflict of pop art and its criticism is an inherent ambivalence regarding consumer culture and the boundary between popular culture and high art. While pop artists were technically skilled craftsmen, their work seemed—to laymen, at least—unnervingly amateurish. In the case of Warhol, the artist often did not make his own art at all. Rather, he would conceive a piece and then have a staff of studio artists use photo silk-screening to create and reproduce a Warhol “original.” This, in turn, threw into question the authenticity of his work and indeed, the value of art itself. Lichtenstein, best known for his enormous comic-book-style paintings, defended pop in a lecture to the College Art Association in Philadelphia in 1964, stating:

It is, however, the real quality of our subject matter—the particular awkward, bizarre and expedient commercial art styles which Pop Art refers to and amplifies. Since works of art cannot really be the product of blunted sensibilities, what seems at first to be brash and barbarous turns in time to daring and strength, and the concealed subtleties become apparent.

In short, pop represented a creative response to the culture of baby boom affluence and, in both form and function, reflected the tastes and anxieties of American youth. Critics have pointed out that the huge scale of many pop pieces, particularly the well-known outdoor works of Claes Oldenburg and Jeff Koons, bring to mind children’s toys or a child’s perspective on the world. There is something joyful but also terrifying in a 6-foot-tall hamburger (Oldenburg) or a 43-foot-tall puppy (Koons).

Populism

Perhaps most associated with the Populist (or People’s) Party and the political revolt of Western farmers, miners, and industrial workers during the late nineteenth century, the philosophy of populism has a long and vital position in American social, cultural, and political history. From the earliest days of the republic to the present day, conflicts between the powerful and the powerless have permeated American civic life. In almost every election campaign from the eighteenth to the twenty-first century, politicians—both liberal and conservative—have vowed to fight for ordinary Americans and against business interests and government bureaucracy. No matter the vehicle or time

period, populism can be defined as the mobilization of ordinary Americans—variously referred to as the people, the masses, the working class, the middle class, and middle America—against the rich, powerful, self-serving elite and entrenched government and corporate interests.

Ideology and Roots

Populists have waged fierce battles between “us” and “them” throughout the course of American history, often igniting passionate debates about the meaning of Americanism itself. Populists have railed against elites who have ignored, corrupted, or betrayed the core principle of American democracy: rule by the common people. Despite their rhetoric, however, populists have not always advocated a purely democratic society. Although boundaries have shifted over time, the “vast majority of Americans” to whom populist candidates appeal has consisted largely of white working-class men.

Inherent within the populist critique is an evangelical Christian ethic to eradicate sin and protect the producer-citizen, two fundamentally American ideologies that emerged during the Revolutionary period and became commonplace by the 1830s and 1840s—the so-called age of the common man. Populism has its roots in the rhetoric of such figures as Thomas Jefferson, Andrew Jackson, and Abraham Lincoln, whom populists remembered for inspiring ordinary Americans—usually white men—to rise up and defend themselves, and for employing both spiritual and rational arguments to defend democracy. Jefferson fought against the Federalists and pro-British merchants, landholders, and conservative religious leaders. Jackson fought against an elite “money power” in the form of a national bank. And Lincoln fought against the “slave power” that was corrupting both the South and the North and jeopardizing the existence of the Union.

Populism also has roots in the numerous efforts to organize workers and farmers against elite capitalists and their government allies during the period of massive urbanization, industrialization, and immigration known as the Gilded Age (the roughly two-decade period following Reconstruction, from the mid-1870s to the mid-1890s). On Washington’s Birthday in 1892, hundreds of grassroots activists from all over the country came to Exposition Hall in St. Louis to participate in an industrial conference that ended with the formation of the Populist Party, the first national political organization of its kind. Although women played an important role and organizers made a limited effort to include African Americans, the Populist Party remained largely the voice of white male citizen-producers during the 1890s.

The organizing strategy paid off at the ballot box. In 1892, Populist Party presidential nominee James Weaver, a former Union officer from Iowa, won more than a million votes, or 8.5 percent of the total. He earned a majority of votes in three states and a plurality in two other states; all five states were west of the Mississippi, where populists traditionally garnered the most support in their battle against Eastern industrialists and politicians. In 1894, Populist candidates across the country won a total of 1.5 million votes; seven Populists were elected to the U.S. House of Representatives, six to the Senate, and hundreds to state legislatures.

In 1896, the Populists nominated William Jennings Bryan, a thirty-six-year-old former Nebraska congressman, as their presidential candidate. In his historic “Cross of Gold” speech, which he delivered hundreds of times on his 18,000-mile campaign trail, Bryan called for the free coinage of silver as “American Money for Americans,” and he cited Jefferson and Jackson in his defense of Western farmers and miners against businessmen and political elites. Bryan, who became known as the Great Commoner, nevertheless was defeated in three separate bids for the presidency. The People’s Party dissolved after 1908.

Twentieth-Century Populism

The demise of the People’s Party, however, did not mark the end of populism in America. Throughout the twentieth century, a number of political hopefuls with disparate ideas invoked populism to gain the support of ordinary—usually white—citizens in their critique of America’s ruling elite. Populist rhetoric seeped into the organizing efforts of labor leader Samuel Gompers and the American Federation of Labor during the reform-minded Progressive Era (from about the mid-1890s to the end of World War I). It influenced Frances Willard and

the Woman's Christian Temperance Union, which had success in its fight for prohibition during the same period. It figured prominently as well in the rhetoric of Father Charles Coughlin and his largely Catholic following during the Great Depression, and in the efforts of the Congress of Industrial Organizations to build support among workers and ally itself with President Franklin D. Roosevelt and his relief, recovery, and reform programs collectively known as the New Deal.

After World War II, American populism manifested itself in the conservative anticommunist hysteria during the early years of the cold war. The largely white, middle-class Students for a Democratic Society and the African American Student Nonviolent Coordinating Committee also used populism in their efforts to promote civil rights and protest the Vietnam War during the 1960s. Conservatives such as Alabama Governor George C. Wallace and Republican presidential candidate Richard M. Nixon, who claimed to represent ordinary, middle-class Americans during the 1960s and early 1970s, relied on populist rhetoric to win votes.

The rise of conservative Republican Ronald Reagan and the Christian Right during the 1980s was likewise fueled by populist appeals to ordinary voters who had become increasingly critical of President Lyndon B. Johnson's Great Society programs—including aid to education, the institution of Medicare, urban renewal, and the War on Poverty—and the secular humanism of the liberal agenda.

Pornography

A notoriously difficult term to define, *pornography* has generally referred to sexually explicit media considered indecent or distasteful by the general public. In America, it was first officially regulated with an 1842 law prohibiting the importation of "indecent and obscene" visual material. Federal and local obscenity restrictions were not zealously enforced, however, and pornography was not a significant social issue in American until the post–Civil War era and the advent of photography.

In 1873, antice crusader Anthony Comstock persuaded Congress to pass legislation—henceforth referred to as the Comstock Law—that made it illegal to send "obscene, lewd, and/or lascivious" material (including contraceptive devices and related information) through the mail. Not until 1957, in *Roth v. United States*, did the U.S. Supreme Court modify the Comstock Law and the definition of obscenity, ruling that Congress has the authority to ban only material that is "utterly without redeeming social importance."

Increasing Visibility

By the time of *Roth v. United States*, the U.S. pornography market had expanded greatly. Sexually explicit photographs and writings had proliferated over the course of a century, as did “stag films” showing people engaging in sex. But the era following World War II saw a dramatic shift in the character of the commercial porn market, as it grew increasingly visible and accessible.

Hugh Hefner's *Playboy* magazine debuted in 1953, featuring pictures of film star Marilyn Monroe naked and subsequent monthly Playmate centerfolds. Circulation of the magazine surpassed 1 million by the end of the decade, signaling a shift in social mores and again raising the question of what pornography really is or is not. In any event, a flood of *Playboy* imitators followed.

In the meantime, nudity also had entered legitimate movie theaters in the late 1950s. Whereas stag films generally played for private groups, nudist films such as *Garden of Eden* (1954) and Russ Meyer's popular *The Immoral Mr. Teas* (1959) graced the screens of motion-picture houses in the late 1950s. These films included no explicit sex but featured copious female nudity, albeit with the genitals always hidden.

The trend toward increasing cultural visibility was matched by increasing explicitness. The early 1960s saw such films as *White Slaves of Chinatown* (1964) and *The Defilers* (1965) move beyond nudity to include simulated sex, often accompanied by violence.

In the 1962 case of *MANual Enterprises v. Day*, the U.S. Supreme Court ruled that gay male magazines could not be held to more stringent standards than their straight counterparts. Other High Court rulings allowed for the unexpurgated publication of such long-suppressed novels as D.H. Lawrence's *Lady Chatterley's Lover* (1928) and Henry Miller's *Tropic of Cancer* (1934).

Finally, in 1966, two imported films brought full-frontal nudity to the American big screen: *I, a Woman* (1965), from Sweden, and *Blow-Up* (1966), from Italy. Foreign films would continue to lead the march toward greater explicitness, as seen by the 1968 American release of the Swedish *I Am Curious (Yellow)*, which introduced the sight of male full-frontal nudity to legitimate theaters.

Although the Supreme Court continued to expand the boundaries of free speech by overturning obscenity convictions, the movement of pornography—at least in the eyes of many—into the cultural mainstream met with substantial resistance. J. Edgar Hoover, head of the Federal Bureau of Investigation, repeatedly asserted a link between pornography and sex crimes. Picking up where Hoover left off, the national anti-obscenity lobbying group Citizens for Decent Literature rose to prominence during the 1960s. Its head, Charles Keating, claimed that most pornographic publications ended up in the hands of children, who could be transformed by such material into juvenile delinquents, homosexuals, or rapists. The controversy over pornography grew so great that President Lyndon B. Johnson appointed an official Commission on Obscenity and Pornography to investigate the issue in 1968.

By 1970, cinematic depictions of actual intercourse—generally referred to as “hard-core” pornography—had appeared on the screens of several small storefront theaters in large urban areas. Many of the films masqueraded as documentaries, taking anthropological approaches to foreign cultures or offering marital advice, all in the interest of claiming the “redeeming value” required by the Supreme Court. But other films, utilizing the cheap new 16-millimeter film technology, dispensed with narrative and often even titles to simply show people having sex.

Later that year, the president's Commission on Obscenity and Pornography released its findings. Its report asserted that pornography had no relation to sex crimes or deviancy and suggested that all laws prohibiting adult access to obscenity be repealed.

Changing Law

The report had little of its intended effect. By 1970, the conservative Republican Richard M. Nixon had been

elected president and, along with a vast majority of the Congress, rejected the commission's findings. Using his powers of appointment, Nixon also was able to reshape the Supreme Court by replacing retirees with new, conservative judges. The result, in *Miller v. California* (1973), was a ruling that altered the criteria of *Roth* to allow for easier prosecution.

Ironically, as *Miller* was being decided, pornography was entering the mainstream. The hard-core film *Deep Throat* became a surprise hit in spring 1973, attracting massive media attention, glowing reviews by media celebrities, and a box office estimated in the tens or hundreds of millions. Its star, Linda Lovelace, appeared on *The Tonight Show*, and journalists heralded the birth of "porno chic," as middle-class couples began attending films previously aimed largely at single male patrons. Films such as *Behind the Green Door* (1972), *The Devil in Miss Jones* (1973), and *The Opening of Misty Beethoven* (1975) brought better production values and narratives to cinematic pornography, further entrenching porno chic in mainstream American culture.

Neither the *Miller* decision nor porno chic brought the consequences many had expected. Criminal prosecutions did not skyrocket, though high-profile pornography trials such as that of *Deep Throat* star Harry Reems in 1976 kept the issue alive in the media. And porno chic proved a passing fad, as pornographic films returned to their traditional low-cost, lowbrow quality by the late 1970s.

More significant than either the Supreme Court ruling or cultural fads was the advent of the home video market, which allowed consumers to watch films in the privacy of their own homes rather than in theaters. As porn theaters struggled to stay open at the turn of the 1980s, the video market flourished.

Again, however, resistance arose. Feminists in the late 1970s pointed out the sexist, dehumanizing character of pornography and blamed it for the oppression of women. Groups such as Women Against Pornography and authors such as Andrea Dworkin and Catharine MacKinnon amassed large followings with their critiques of porn. Meanwhile, the rising power of the conservative New Right, evidenced by Ronald Reagan's 1980 presidential victory, provided a religiously based condemnation.

Feminists and conservatives, at odds over most other issues, worked together on antipornography legislation in several cities in the 1980s. Only Minneapolis and Indianapolis passed such ordinances, however. In the former case, the mayor vetoed the ordinance; in the latter case, it was overturned in court by proponents of free speech.

The Reagan administration sponsored a new federal investigation under Attorney General Edwin Meese. Not surprisingly, the new commission's report, issued in 1986, rejected the findings of the Johnson-era investigation and found that pornography did indeed have morally corrosive effects on viewers and readers. The new report called for a tightening of restrictions but carried little weight among intellectuals and policymakers, who generally saw it as biased and moralistic.

In the decades since, the pornography debate has continued without resolution. During the 1990s, the terrain of the debate shifted to the Internet and concern over children's access to sexually explicit Web sites. The 1996 Communications Decency Act—the first federal attempt to regulate pornography on the Internet—was declared unconstitutional by the Supreme Court.

Poster Art

Posters—large, printed sheets of paper that combine text and graphics and are displayed in public places—have a long and varied use in commercial advertising. The relatively low production costs of the poster also have made it a medium popular with countercultural groups, who used posters throughout the nineteenth and twentieth centuries to declare their ideas and announce their events to a broad audience. During the 1960s, changes in youth culture and politics, along with changes in technology and art culture, led to an impressive flourishing of countercultural poster art.

The relationship between the artist and the poster has been vexed by its use in advertising, as the poster came to be associated by many U.S. artists with commerce and the masses rather than with fine art. During the Great Depression, many prominent artists working in the United States, such as Mexico's Diego Rivera and David Siqueiros, embraced public art as a part of their socialist politics; the poster, though somewhat less spectacular than the mural, became a popular means for artists to communicate leftist political messages to the masses.

That tradition faded somewhat during the prosperity and political quietism of the 1950s, when advertising and graphic design became increasingly dominant. Even in the realm of art posters per se, the aesthetic developed in applied commercial forms played a significant role for the next decade and more.

Poster art underwent a great resurgence during the 1960s for several reasons. The flourishing of advertising and graphic design began to affect art culture itself, most notably in the advent of the pop art movement, which utilized materials and subjects associated with consumer culture—as in Andy Warhol's paintings of Campbell's soup cans—to imply that the methods and materials of art and commerce were intimately related in mainstream American culture. The silk-screened poster was a popular medium among these artists.

As pop art muddied the boundary between high and applied art, the resurgence of countercultural activism meant that the aspects of the poster that had been seen in the previous decade as unappealing—its association with popular culture and ability to reach a mass audience—became immensely valuable to a New Left that sought to effect a widespread revolution of consciousness. Additionally, counterculture activists of the 1960s recognized the stranglehold that corporate interests had on the powerful medium of television, so they used the poster to communicate their dissent to a large audience in a new age of visually centered mass media.

Although the aesthetic diversity of poster art during its golden age in the late 1960s and early 1970s was impressive, three themes deserve special attention. The first took recognizable poster imagery from the past—including the American flag, advertising images, and popular propaganda imagery from World Wars I and II—and altered them to critique contemporary U.S. culture. One anonymous 1972 poster, for example, features a famous Uncle Sam army-recruiting poster but replaces most of the iconic Sam with a skeleton, making an implied critique of deaths caused by the Vietnam War. Modern artist and printmaker Jasper Johns likewise critiqued the war by selling a poster reproduction from his series of American flag paintings, this one rendered in camouflage and garish orange and titled "Moratorium."

Another poster style deployed a single, bold graphic image and a large, clear slogan to make a point strikingly.

For example, a 1970 poster produced in the Strike Workshop at the Massachusetts College of Art shows a large photograph of Black Panther Bobby Seale behind bars and simply declares, “Free Bobby.”

Finally, a significant trend developed in producing eye-catching posters for concerts by acid rock bands such as Jefferson Airplane and the Grateful Dead. Within that genre, a subgenre of psychedelic posters emerged whose loud colors, wavy lines, and strange typography were meant to evoke the visual hallucinations of a drug experience. This aesthetic remains associated with drug culture to the present day.

In a world where art and commerce are increasingly integrated, the poster continues to be a popular art commodity but is no longer considered a unique medium of design or dissent. As for the countercultural messages of poster art, street art has become a more diverse enterprise that incorporates posters and wheatpasted images with strategies of stenciling and aerosol painting, diminishing the dominance of the rectangular poster.

Pound, Ezra (1885–1972)

The expatriate American poet, cultural critic, and translator Ezra Pound is one of the most famous and controversial literary figures of the twentieth century. He has been variously hailed as a revolutionary modernist master, dismissed as an egotist, and condemned as a traitor and anti-Semite. Critics and scholars regard him as a major force in modern literature not only for his own works, but also for his influence on such other major poets and writers as T. S. Eliot, Robert Frost, Ernest Hemingway, James Joyce, D.H. Lawrence, and William Butler Yeats.

Ezra Loomis Pound was born in Hailey, Idaho, on October 30, 1885, and grew up in the town of Wyncote, Pennsylvania, outside Philadelphia. He earned a bachelor of philosophy degree from Hamilton College, in Clinton, New York, in 1905 and went on to receive a master of arts degree from the University of Pennsylvania in 1906.

In 1907, with little money, Pound sailed to Gibraltar and southern Spain, then on to Venice, where in June 1908 he published, at his own expense, his first book of poems, *A Lume Spento*. That fall, he went to London, where he met the writer and editor Ford Madox Ford, who published his verse in the *English Review*.

Pound entered the circle of William Butler Yeats and joined the “School of Images,” a group of writers who tried to bring a new clarity and directness to poetry through the use of precise visual images. He eventually decided to settle in England, where he published a series of small books of poetry—including *Personae* (1909), *Exultations* (1909), *Canzoni* (1911), and *Ripostes* (1912)—that attracted attention for their originality and erudition.

Pound's works of this period helped establish and promote the principles of imagism. In England, Pound's poetry and criticism were well received. He was the London correspondent for Chicago-based *Poetry* magazine and for a time led a group of poets who subscribed to imagism as a response to the more sentimental and soft-edged poetry of the day.

Pound's largest and most celebrated work is his series of cantos, a highly complex, eclectic collage in which he sought to develop a unifying, modern cultural tradition. These poems, on which he worked for much of his life, appeared in a series of volumes published between 1925 and 1970.

With the Great Depression of the 1930s and worldwide concern over global economic and political conditions, Pound began to write about monetary reform and became increasingly involved in politics. While living in Italy, he became an admirer of Fascist dictator Benito Mussolini and, during World War II, he made a series of radio broadcasts criticizing the U.S. war effort.

After the war, Pound was arrested for treason, but doctors declared him mentally unfit for trial. For twelve years, he remained at a hospital in Washington, D.C., where he continued writing. He was released in 1958, and the charges against him were dropped.

As one of the eccentric leaders of the expatriate avant-garde, Pound lived in Europe for more than fifty of his eighty-seven years. He died on November 1, 1972, in Venice, Italy.

Presley, Elvis (1935–1977)

A revolutionary figure in the history of pop music, Elvis Presley was also one of the most successful entertainers of the twentieth century. From the moment he burst onto the music scene in 1956, his name, his songs, and his stage persona were well known throughout the world—adored by young fans and reviled by older generations. As the so-called King of Rock and Roll, Elvis did more to popularize that musical genre than anyone before or since, and he became the first major embodiment of its social significance.

Elvis Aaron Presley was born on January 8, 1935, into a poor sharecroppers' family in Tupelo, Mississippi. He was exposed to hillbilly music at an early age, came to know gospel music from church services, and listened to rhythm and blues (R&B) aired on black radio stations. He began playing guitar before adolescence and, at age nine, won second prize in the 1946 Mississippi-Alabama Fair and Dairy Show talent contest for his song "Old Shep."

In 1949, the family moved to nearby Memphis, Tennessee, where Elvis attended L.C. Humes High School. After graduating in 1953, he went to work as a truck driver. During the summer of that year, however, he came to the attention of Sam Phillips, president of the Sun Record Company in downtown Memphis. Phillips was seeking “a white man who had the Negro sound and the Negro feel.”

By this time, mainstream American popular music, mostly sentimental ballads and novelty songs, was growing out of fashion. The most vital and attractive genre was black R&B, but many white people felt uncomfortable listening to black music unless it was re-recorded by a white musician or group. Phillips found the performer he was looking for in eighteen-year-old Presley, whose background enabled him to unite disparate musical strains. Even more importantly, Presley had the skills to present the resulting musical fusion with great impact. He could sing black music without sounding pretentious or ridiculous.

In 1954 at Sun, Presley recorded his first commercial releases, “That’s All Right Mama” and “Blue Moon of Kentucky,” an up-tempo blues song with an exuberant sense of freedom. The following year, RCA Victor bought his recording contract from the Sun Record Company.

By 1956, Presley had become a best-selling recording artist and television star. In that year alone, he had five number-one singles: “Heartbreak Hotel,” “I Want You, I Need You, I Love You,” “Don’t Be Cruel,” “Love Me Tender,” and the song that became his signature tune, “Hound Dog.” And for the next two decades, his popularity only grew.

His work in the mid-1950s helped create two new types of music. The first, rockabilly, was a mixture of hillbilly and rhythm and blues. Hillbilly was thereby transformed into country and western, and gained a much wider audience. The second genre, rock and roll, also evolved out of R&B. As rock’s popularity spread, mainstream white culture started to accept black singers and performers.

Although Presley had a pleasant baritone voice and a sincere delivery, it was his suggestive pelvic gyrations—considered wildly sexual by a generation of teenagers and their shocked parents—that launched him to stardom and earned him the nickname Elvis the Pelvis, although he became known to his fans simply as Elvis. Few who saw him perform could forget his unique stage presence and captivating voice.

Presley dominated rock music until 1963 and the arrival of the British Invasion. His musical success also spawned a spate of B movies. The first movie he starred in, *Love Me Tender*, was released in 1956; there would be thirty-two more.

A charismatic entertainer, his rise to fame from obscurity while retaining the common touch became exemplary for a generation. In Presley’s own mind as well his fans’, he became a figure of spiritual dimensions; he believed that his talent and success were gifts from God that he was obliged to share with others. Wishing to entertain as many people as possible and make everyone happy, he drove himself to perform and shared his wealth with people he did not know. Critics severely criticized the concerts of his last years, but fans continued to flock to his performances.

In his later years, unable to go out in public without being mobbed by fans, Presley became increasingly reclusive. He gained weight and took large quantities of prescription drugs.

Elvis Presley was found dead at his Memphis estate, Graceland, on August 16, 1977, having succumbed to heart failure brought on by the heavy use of prescription medicine. His death in no way diminished his popularity with fans. His records continued to sell heavily, Graceland became a kind of shrine, and legions of Elvis impersonators spawned a cottage entertainment industry.

Presses, Small Book

Small book presses have provided an alternative to commercial publishers throughout much of the history of the United States. Along with little magazines, small book presses have provided an alternative, often subversive, voice for the American people. Noncommercial in focus, small presses do not operate solely for profit. They often are independently owned, with private financial backing, usually publishing only a few titles per year, with limited press runs. These presses generally publish unknown writers as well as writers whose work is not appropriate for mainstream, commercial outlets.

During the eighteenth and nineteenth centuries, works not supported by mainstream publishing houses usually were self-published. Walt Whitman's *Leaves of Grass* (1855), Mark Twain's *The Adventures of Huckleberry Finn* (1885), and Stephen Crane's *Maggie: A Girl of the Streets* (1893) all were self-published, either because they were rejected by commercial publishers who deemed their subject matter inappropriate for mainstream audiences, or because the authors did not want to be shackled by the business practices of the mainstream presses.

Modernism's artistic and experimental movements in Europe during the early part of the twentieth century and literary devices such as stream of consciousness influenced American expatriates in Paris to create small presses. Among these were Contact Editions (Robert McAlmon), Three Mountains Press (Bill Beard), Black Sun Press (Harry and Caresse Crosby), and Plain Editions (Gertrude Stein).

In the United States, James Laughlin founded New Directions in New York City to publish works that commercial publishers ignored, such as F. Scott Fitzgerald's *The Crack-Up* in 1945, and reprinted and revived works, such as Fitzgerald's *The Great Gatsby*, when the original 1925 edition was out of print. New Directions continued to publish poets such as Gary Snyder and Denise Levertov in the 1950s and 1960s.

The heyday of small press publishing began in the mid-twentieth century. As commercial printing evolved from lithography to offset press, production became more cost effective and less labor intensive, facts that contributed to the survival of small presses. Because small presses could easily control production and distribution and bypass corporate ownership and censorship, thousands of small presses emerged. Small presses that published alternative social voices and experimental literary voices during this period include Grove Press (established in 1951), City Lights Publishers (1955), Black Sparrow Press (1966), Third World Press (1967), New Rivers Press (1968), the Greenfield Review Press (1969), Shameless Hussy Press (1969), the Feminist Press (1970), Toothpaste Press (1970; later Coffee House Press, 1984), Graywolf Press (1974), the Pushcart Press (1976), and Milkweed Editions (1979).

Grove Press, founded by Barney Rosset, Jr., introduced controversial works. Under Rosset, Grove brought to national prominence the art and artists of the counterculture, including the San Francisco and New York Beats (with works like Jack Kerouac's *The Subterraneans* in 1958). These works, many of which were deemed obscene and had been censored, included D.H. Lawrence's *Lady Chatterley's Lover* (1959), Henry Miller's *Tropic of Cancer*

(1961), and William S. Burroughs's *Naked Lunch* (1962). Shunned by commercial publishers and considered a financial liability for distributors, these novels and others like them found their homes with small presses—and thus reached the market for which they were intended, a readership looking for alternative themes and ideas.

The women's, civil rights, and peace movements of the 1960s and 1970s provided the context for America's small presses to grow in size and influence. Radical thinking, marginalized for years by mainstream publishers, found expression in small presses during these decades. Many activists and intellectuals were involved in starting up the presses, dedicating themselves and their works to exploring innovative and progressive ideas.

Third World Press, formed by Haki R. Madhubuti to give voice to the black experience in America, published such authors as poet Gwendolyn Brooks and activist-poet Amiri Baraka (formerly LeRoi Jones). The Greenfield Review Press, founded by Joseph and Carol Bruchac, was established to present the culture and storytelling art of Native Americans. Shameless Hussy Press, founded by Alta (Gerrey) in Oakland, California, is recognized as the first feminist press in America, and one that inspired the formation of other feminist small presses, such as the Feminist Press (1970), Women's Press Collective of Oakland (1970), Diana Press (1972), and Daughters Inc. (1972). Curbstone Press (founded in 1975), which emerged during the Chicano Movement of the 1970s, publishes works by Latino writers and is dedicated to disseminating books that espouse social change and human rights.

By the end of the 1970s, small book presses provided untold numbers of nonmainstream authors and fringe movements a home for their writing and ideas. In the twenty-first century, small presses continue to publish new and unknown authors, experimental literature, and works representing social causes—from anti-globalization to environmentalism—that might not otherwise find their way into print.

Priestley, Joseph (1733–1804)

The scientist and radical theologian Joseph Priestley was a tireless advocate of rational religion and civil liberties both before and after he emigrated from his native England to the United States in 1794. His Unitarianism and rejection of religious authority deeply influenced the development of American Christianity. Regarded as a founder of modern chemistry, Priestley was also a philosophical materialist who denied any form of spiritual reality and a determinist who denied the doctrine of free will, or the human ability to choose freely between alternatives.

Born near Leeds, England, on March 13, 1733, Priestley came from a family of Protestant Dissenters, opposed to

the established Church of England, and he served as a Dissenting minister and schoolmaster. Although he is best remembered today as a scientist, particularly for his discovery of oxygen, he was equally active in the fields of politics and religion, publishing an enormous number of books and pamphlets.

As a political writer, Priestley was, like many Dissenters, sympathetic to the grievances of the American colonists before the War of Independence. (He also was connected to America through his friendship with statesman Benjamin Franklin, who shared his scientific interests.) Priestley's political pamphlets of the time, such as *Address to Protestant Dissenters on the Approaching Election* (1774), opposed religious discrimination and English oppression of the Americans.

Priestley became a Unitarian, denying Jesus's divinity but continuing to believe him to be the Messiah. This view was illegal in Britain at the time, although the law was rarely enforced. Priestley also was a millenarian, interpreting the French Revolution and the rise of Napoleon as signs of the forthcoming apocalypse. He was an enthusiastic supporter of the French Revolution, and in 1791 a conservative "Church and King" mob, tacitly supported by local magistrates and Church of England clergy, attacked his dwelling in Birmingham, destroying much of it. Priestley emigrated from Britain to the United States with his family in 1794.

In America, Priestley was disappointed in his attempts to found a college near his home in Northumberland, Pennsylvania. Alarmed by the conservatism and hostility to revolutionary France exhibited by the American government under President John Adams, he aligned himself politically with the anti-Federalists, defending his political opinions in *Letters to the Inhabitants of Northumberland* (1799). Some in the U.S. government argued for Priestley's expulsion as a seditious foreigner, but this never happened, possibly out of respect for his eminence as a scientist and religious thinker. Priestley's religious opinions, nevertheless, were received with hostility by many American clergymen.

Although he never sought U.S. citizenship, Priestley became more at home in his adopted country during the administration of President Thomas Jefferson, who was an admirer. Priestley's religious writings were particularly important to Jefferson in forming his own "enlightened" religion. After extended illness, Priestley died at his Northumberland home on February 6, 1804.

Prohibition

Prohibition was the period from 1920 to 1933 when, under the Eighteenth Amendment to the U.S. Constitution, “the manufacture, sale, or transportation of intoxicating liquors” was prohibited in the United States. Drinking remained popular nevertheless, and supplying Americans with alcohol became a major business of organized crime. In addition, Prohibition fostered an underground world of illicit nightclubs, known as speakeasies, attended by drug and tobacco use. Prohibition was repealed by ratification of the Twenty-first Amendment in 1933.

Background

Throughout the course of the nineteenth century, alcohol consumption and alcoholism in America were so high that moral and civic groups pressured the U.S. Congress to make alcohol illegal. The social pressure began to be manifested in the 1790s; by 1846, thirteen states had prohibition laws. Although many of these laws were overturned by courts, temperance groups such as the Woman’s Christian Temperance Union (WCTU) fought for a dry United States. Even before national Prohibition, a number of states experimented with high and low licensing plans to regulate the type of alcohol sold.

The wheels for national Prohibition were set in motion in 1917, when the U.S. Senate and the House of Representatives adopted a resolution to submit the constitutional amendment prohibiting liquor. The Eighteenth Amendment was passed by the Senate on December 18, 1918, and ratified on January 16, 1919. It went into effect one year later.

While the measure prohibited the manufacture, sale, and transportation of alcoholic beverages, it did not specifically proscribe drinking or define what constituted unlawful drinking. In order to effect the intention of the amendment, on October 28, 1919, Congress passed the Volstead Act (over the veto of President Woodrow Wilson), which defined intoxicating beverages as those containing at least one-half of one percent of alcohol by volume.

The intention of Prohibition was to ameliorate negative social conditions resulting from alcohol consumption. While statistics indicate that overall consumption did decline, American society appeared to become more, rather than less, devoted to drinking and frequenting the clandestine meeting places where drinking flourished, the speakeasies. For the average person, secrecy and stealth offered a new measure of excitement. Determined to flaunt the law, people invented creative ways to transport liquor, using hip flasks, hollowed-out books, coconut shells, hot-water bottles, and garden hoses. Commonplace objects of everyday life suddenly became containers for illegal liquor, now at the center of America’s recreational activities.

New words and meanings were added to the popular vocabulary as a result of Prohibition. “Baptized” referred to liquor that had been diluted. A “barrelhouse” was a place where someone could purchase illegal booze; gin mills and speakeasies became popular hangouts for those who wanted to be “wet.” Slang terms for liquor, which proliferated, included “hooch,” “moonshine,” “Red Eye,” “Moon,” “Monkey Swill,” and “squirrel” (whiskey).

Popular Culture

The still became a popular machine in rural areas, manufacturing potent, sometimes lethal, alcoholic products. “Jamaica Jake” was one such poison alcohol popular among lower-income persons; it could cause blindness and paralysis. Popular songs of the era thus alluded to the “jake walk” and “jake leg.”

The Allen Brothers recorded “Jake Walk Blues” in 1930; singer Ma Rainey recorded “Moonshine Blues” and “Barrel House Blues” in 1923 and “Booze and Blues” in 1924. A widely heard tune at the beginning of Prohibition was “Every Day Will Be Sunday When the Town Goes Dry.” Annette Hanshaw’s 1929 version of “Button Up Your

Overcoat” exhorted her lover to “take good care of yourself” by keeping away from “boot leg hooch.”

Harlem, the predominantly black neighborhood of Upper Manhattan in New York City, housed two popular nightclubs during Prohibition, the Cotton Club and the Everglades. In these chic meeting places, many Caucasian patrons listened to jazz by the top African American performers of the day. Classics such as “Tiger Rag,” “West End Blues,” and “St. Louis Blues” were performed there by musicians such as Louis Armstrong, Earl “Fatha” Hines, Fletcher Henderson, and Duke Ellington. African American music, blues and jazz, was especially popular in the speakeasies and nightclubs.

In previous years, during World War I, America had been singing George M. Cohan’s “Over There” and other songs associated with military life, such as “Pack Up Your Troubles in Your Old Kit Bag” and “I’ll Be Seeing You.” During Prohibition, songs such as “I Wish I Could Shimmy Like My Sister Kate,” “Sheik of Araby,” “Hot Time in the Old Town Tonight,” and “I’m Always Chasing Rainbows” were the popular tunes. Novelty or nonsense songs such as “What! No Spinach,” “Aba Daba Honeymoon,” “Crazy Words—Crazy Tune (Vo-do-de-o),” “Yes, We Have No Bananas,” and “I’ve Got a Lovely Bunch of Coconuts” also found an audience. Hot jazz could be heard in Harlem, Kansas City, and Chicago.

Prohibition helped build relations between citizens of the United States and Canada, by way of the roadhouses that sprang up along the shoreline of the Detroit River. Roadhouses were places where patrons could get a drink, listen to hot jazz, gamble, and dance. Public drinking and sale of alcohol was illegal across the border, too, but Canadian laws did not proscribe the manufacture or exportation of liquor. As a result, much of the illegal liquor that came into the United States during Prohibition arrived from the north by way of rumrunners on the Detroit River, Lake Erie, Lake St. Clair, and the St. Clair River.

In New York, wet restaurants, nightclubs, and speakeasies were popular gathering places. Barney Gallant, reportedly the first person to be arrested and jailed in New York for selling alcohol, served it freely in his Greenwich Village establishment. In 1924, he closed the Club Gallant and opened a new club on West Third Street, where a bottle of scotch cost \$16 and a bottle of champagne \$25, large amounts for the day. Gallant’s boldest move came in 1932, when he opened the exclusive Washington Square Club in an equally exclusive neighborhood where elite New York families lived.

Organized crime grew exponentially during Prohibition, bringing with it daily violence, widespread corruption, and a hefty increase in so-called victimless crimes, such as prostitution, gambling, and narcotics. Motion pictures such as *The Public Enemy* (1931), *Little Caesar* (1931), and *Scarface* (1932) presented a window on the world of organized crime and illegal booze.

The enactment of Prohibition in 1919 gave rise to an active national campaign for repeal—as well as illegal resistance in the form of speakeasies and bootlegging controlled by gangsters. The "noble experiment" finally was ended in 1933. (Library of Congress)

Activist groups such as Pauline Sabine's Women's Organization for National Prohibition Reform (WONPR), formed in 1929, began a crusade to overturn the Volstead Act on the grounds that it caused an increase in crime and attracted young people to illicit locales such as nightclubs and speakeasies. By the 1930s, Prohibition had become a hot political issue. Politicians, columnists, and middle-class Americans were among the many who not only flaunted Prohibition but opposed it formally.

The end of Prohibition finally came on December 5, 1933. The thirty-sixth state needed for repeal (Utah) voted to do so, and the Twenty-first Amendment was added to the U.S. Constitution.

Provincetown Players

The Provincetown Players, an experimental theater group that would have a profound influence on the modern American stage, grew out of the summer recreation of a collection of bohemians from New York's Greenwich Village. Escaping the city's summer heat in 1915, writers Susan Glaspell and George "Jig" Cram Cook invited a cadre of playwrights, artists, and political revolutionaries to their summer home in the quiet fishing village of Provincetown, on Cape Cod in Massachusetts, to form an amateur theatrical group and stage plays in the couple's living room.

The next year, the group took steps toward becoming a formalized performance troupe, finding in the work of a young playwright named Eugene O'Neill the material for its first official season. O'Neill's focus on the trials of the working class provided the ensemble with the kind of innovative drama they believed could revolutionize the staid American theater. His one-act play *Bound East for Cardiff* was the company's first official presentation. It took place at the newly opened Wharf Theatre in Provincetown on July 28, 1916.

In search of a larger audience for its radical, new brand of drama, the company moved its primary residence to New York's Greenwich Village in the winter of 1917, opening a venue on MacDougal Street christened the Provincetown Playhouse. There, they premiered works by O'Neill ("nearly all of my short plays," according to the playwright), Glaspell, set designer and writer Robert Edmund Jones, and journalist and revolutionary John Reed, among others. Attempting to replicate in America the kind of small, avant-garde theaters that had become common in Europe in the early twentieth century, the Provincetown Playhouse was, in effect, the first significant off-Broadway venue in New York City, where writers could develop and present challenging new works apart from the commercial pressures of the Broadway stage.

Before long, interest in the little theater rose, and several of its plays, particularly those of O'Neill, began to transfer to Broadway venues. Glaspell and Cook objected to what they saw as the commercialization of their experimental venture, and in 1922 they left the company and relocated to Greece.

Other artists infused the ensemble with new life, in particular the emerging poet and playwright Edna St. Vincent Millay, who joined the Players as an actor but worked her way up to the positions of director and playwright. Even as the company began to produce plays on Broadway in addition to smaller works at the Provincetown Playhouse, it maintained its tradition of promoting groundbreaking works by fledgling authors.

The Provincetown Players dissolved in 1929, unable to weather the stock market crash of that year. Its impact remained great, however, influencing the development of the little theater movement in America—predecessor to the similarly radical regional theater movement of the 1960s—and inspiring the creation of such other notable New York companies as Harold Clurman's Group Theatre and, later, Julian Beck and Judith Malina's Living Theatre. As historian Xavier Xanders would write, "From its inception to its demise in 1929, the Provincetown Players flourished as a noncommercial experimental theater group of actors, playwrights, and stage designers controlled by artists rather than businesspeople."

Pryor, Richard (1940–2005)

The African American comedian Richard Pryor was a highly successful and controversial entertainer of the 1970s and 1980s, drawing on personal and social tragedy for his comic material. His stage appearances were flavored with irreverent, bold, graphic humor that depicted the dark underside of life in America, including racial injustice, poverty, and street culture. He succumbed to drug abuse and made a suicide attempt at the height of his career, but not before selling millions of albums and starring in a number of acclaimed film roles. Pryor's work had a direct

influence on the next generation of black comics, including Eddie Murphy, Whoopi Goldberg, and Arsenio Hall.

Born on December 1, 1940, in Peoria, Illinois, to an unwed mother whom he claimed was a prostitute, Pryor grew up in his grandmother's bordello, where he was routinely exposed to alcohol, drugs, and sex from an early age. When he was eleven years old, Pryor began to hang around a local community theater, where he was eventually cast in several productions and received his first accolades for performing. He served in the U.S. Army from 1958 to 1960 and then began a career as a stand-up comedian in local comedy clubs around Peoria.

Pryor soon established himself on the comedy circuit in the Midwest, including such cities as East St. Louis, Missouri, and Pittsburgh, Pennsylvania. In 1963, he decided to move to New York City, where he continued performing his stand-up act and eventually made television appearances on *The Ed Sullivan Show*, *The Merv Griffin Show*, and *The Tonight Show Starring Johnny Carson*. With more exposure came more opportunities, and Pryor took his act to the West Coast, moving to Los Angeles, where he began appearing in minor film roles as he continued to hone his comedic skills.

In the late 1960s, Pryor's stand-up act began to evolve into his signature form. His material got angrier and edgier, dealing with subjects and subcultures unheard of in most comedy clubs to that time. He routinely invoked such epithets as "nigger" and "motherfucker," with observations about life in the ghetto, drug abuse, alcoholism, and sex. His act became a unique mix of traditional stand-up comedy, performance art, and profanity-laced social commentary. His rants—at once funny and frightening—broke new ground for onstage intensity.

In his personal life, meanwhile, Pryor was abusing alcohol and drugs, had numerous scrapes with the police, and was involved in a number of volatile relationships; he married a total of seven times to five different women. In 1980, in a highly publicized incident, the comedian nearly died after setting himself on fire while freebasing cocaine. (He parodied the event and his subsequent hospital stay in the 1982 concert movie *Live on Sunset Strip*.)

Through it all, Pryor remained popular with his fans and won numerous honors and awards for his comedy recordings and work in films and on television. Acclaimed screen appearances included his role in *Lady Sings the Blues* (1972), a biopic about singer Billie Holiday, for which he earned an Academy Award nomination, and a costarring role in the hit comedy-suspense film *Silver Streak* (1976). Among his most notable comedy albums were Grammy Award winners *That Nigger's Crazy* (1974) and *Bicentennial Nigger* (1976). Critics cited the film *Richard Pryor Live in Concert* (1979) as one of his greatest successes, for his poignantly comic portrayals of America's forgotten class—drunks, junkies, prostitutes, and pool hustlers.

Pryor went on to write, direct, and star in the semi-autobiographical film *Jo Jo Dancer, Your Life Is Calling* (1985), about a popular stand-up comedian who, after severely burning himself in a drug incident, has a spiritual awakening. In 1986, Pryor was diagnosed with multiple sclerosis, which he kept secret for the next five years. He continued to perform but grew progressively weaker over the next decade. As his health declined, Pryor became more reclusive.

In 1998, he became the first performer to win the annual Mark Twain Prize for American Humor from the John F. Kennedy Center for the Performing Arts. Richard Pryor lived quietly for the next several years, making few public appearances. He died of cardiac arrest on December 10, 2005, in Los Angeles.

Pseudoscience

Pseudoscience is any belief or body of knowledge that claims to offer explanations about the world, the universe, or natural processes in a scientific manner but fails to follow generally accepted scientific methodology or requirements of substantiation. The label of pseudoscience generally carries a negative connotation, suggesting that the belief system lacks factual content. Some people, however, justify their belief in a pseudoscience by blaming conspiracies or a lack of open-mindedness on the part of observers as reasons for the label. In rare instances, belief systems that were considered pseudoscience have gained general acceptance. In the majority of cases, they remain unproven.

Prominent contemporary examples of pseudoscience include neuro-linguistic programming, rebirthing, and primal therapy. Neuro-linguistic programming (NLP) is based on theories of psychotherapy and behavior modification; advocates believe that changing sensory input, such as color and brightness, as well as clarifying verbal and nonverbal messages, will lead to self-improvement.

Rebirthing teaches that birth is a traumatic event, the memory of which is suppressed. According to this theory, the experience can subconsciously affect a person's entire life because it is recorded in cellular memory throughout the body. By a system of breathing exercises, students are taught to relive the experience of birth and release or deal with their emotions.

Primal therapy advocates believe that any intense emotional pain is stored in the lower brain and nervous system. Standard psychotherapy cannot relieve the pain, according to the theory, because it does not reach these emotional centers. Only by reliving and experiencing the pain can someone deal successfully with it. As exemplars of pseudoscience, neuro-linguistic programming, rebirthing, and primal therapy all run counter to generally accepted beliefs and values. They hold a promise of relief or improvement for adherents, but independently documented successes are rare.

Origins

The concept of pseudoscience dates to the scientific revolution, the sixteenth- and seventeenth-century movement to find the natural laws that govern the world through observation and experimentation. The idea that the world and nature can be explained in rational ways led to the realization that some beliefs are not scientific; that is, they do not follow universal laws that do not allow for divine intervention. Use of the term *pseudoscience* dates to the middle of the nineteenth century. It first appeared in an 1844 edition of the *Northern Journal of Medicine*, in which an author defined pseudoscience as a collection of facts connected by erroneous reasoning.

In the twentieth century, philosophers such as Karl Popper and Paul Thagard sought to develop criteria by which one could identify a pseudoscience. Popper suggested that science can be distinguished from nonscience by falsifiability. In other words, if a statement can be demonstrated to be false, then the topic is in fact "scientific." But if the statement can be proven to be neither true nor false, it is inherently nonscientific—and possibly an example of pseudoscience. Popper also developed a theory known as the "demarcation problem," referring to the criteria used to distinguish science from pseudoscience. Thagard refined the criteria by proposing that pseudoscience is not progressive in its development and that supporters rarely rely on a pseudoscientific theory in trying to solve

problems or explain phenomena.

Characteristics

Many scientists, psychologists, and philosophers agree that pseudoscientific concepts share general characteristics. The first is that they are not rational, or that they disregard rational principles. Much pseudoscience depends on revelation from some other authority. In some cases, this authority is ancient writings, legend, or word handed down from a spiritual guide. Distinct from religious beliefs, which depend on faith for their authority, however, pseudoscience presents itself as science. For instance, a pseudoscience that draws on ancient writings for its authority is the one Erich von Däniken puts forth in *Chariots of the Gods* (1968), according to which Native American art depicts aliens visiting Earth.

Another characteristic of pseudoscience is the failure to follow scientific method in experimenting or testing a hypothesis. For example, proponents of alternative medicines, including reflexologist Eunice D. Ingraham, Laetrile proponent Ernst Krebs, Jr., and the American Naturopathic Medical Association, have been challenged for failing to confirm whether favorable results are a response to a particular treatment or a function of the placebo effect (a response based on the power of suggestion or other purely psychological factors). Experiments in homeopathy—a form of alternative medicine founded by the German physician Samuel Hahnemann in which substances that cause symptoms similar to those of a disease are heavily diluted and introduced to the body in order to heal it—have been criticized for lacking the laboratory controls to test whether the doses of diluted substances actually cure patients of disease.

Additionally, pseudoscience has been charged with the inability to re-create phenomena or results claimed to have been produced. For example, regarding the theory of orgone energy—the “universal life energy” that psychoanalyst Wilhelm Reich claimed is present in all humans and blockages of which cause illness in the body—nonbelievers are unable to observe or detect the energy, let alone undertake objective experiments to test its effects.

Evidence to support pseudoscientific claims is limited. Supporters tend to cite evidence that supports their claims and ignore that which does not. Much evidence used by pseudoscience is anecdotal and based on isolated observation by individuals. In addition, other factors may influence the experience or observation. A prominent illustration is the “evidence” of unidentified flying objects (UFOs) as typically reported. While many people claim to have seen an unidentified object in the air, there is little evidence that what they have seen is indeed an alien space ship, and the evidence is virtually impossible to reproduce. Unexplained lights or objects may turn out to have any number of plausible explanations that never occur to the observer or that are beyond their realm of knowledge or experience—from planetary motion and meteors to ball lightning and experimental military aircraft.

Pseudoscience also tends to rely on misleading or unclear language. At times, practitioners use this tactic intentionally, to appear more rigorously scientific. Sometimes, the terminology entails the use of unfamiliar terms for common materials, such as “dihydrogen monoxide” for water; the forbidding-sounding name is then listed as a major component in such harmful substances as acid rain and toxic wastes. In other instances, pseudoscience followers have coined their own terms, such as *orgone energy*, which have no universally accepted meaning.

Another defining feature of pseudoscience is its lack of expansion, refinement, or progress. While most scientific fields are subject to the development of new hypotheses, testing, and the advancement of general knowledge in the field, pseudoscience cannot make such claims. New theories and discoveries are rare. While science is based upon recognizing mistakes and modifying claims in response to new hypotheses, pseudoscience and its theories change little, or not at all, over time.

Pseudoscience tends to personalize issues. Nonbelievers are often accused of being enemies or members of a conspiracy to keep the truth from the public. Supporters of pseudoscience also tend to develop networks and communities of like believers. While a hallmark of science is the publication of theories and experimental results in scholarly publications, pseudoscience appears in either popular magazines or journals that circulate primarily in

their own communities.

According to the National Science Foundation, belief in pseudosciences increased during the 1990s with the rise of the New Age movement and peaked around the turn of the millennium. Although pseudoscience has reportedly declined since 2001, popular acceptance remains high. For instance, widespread belief continues in the predictions of astrology, particularly in the form of daily horoscopes. Although the spread of modern science has led many Americans to question the validity of astrology and its popularity has waxed and waned throughout U.S. history, an estimated 88 percent of Americans believe astrology has some scientific basis.

Finally, some theories and areas of study have passed the tests of verifiability sufficiently to have made the transition from pseudoscience to “true” science. Examples include continental drift theory, which posits that the continents shift and move across the surface of the world; osteopathy, a branch of medicine that emphasizes the role of the musculoskeletal system; and physical cosmology, a form of astronomy that studies the large-scale structure of the universe.

Psychedelia

The term *psychedelia* generally refers to the music (often combining jazz improvisation, Indian modality, and folk and blues song structure), fashion (bright colors, wide stripes, paisley patterns sometimes combined with Old West touches or Victorian militaria), and art (often art nouveau inspired) produced by the 1960s hippie subculture. Taking hallucinogenic drugs such as LSD often inspired the original creators of psychedelia, who also intended for their work to be used as part of the psychedelic experience. Thus, psychedelia was a product both of and for the

counterculture.

The psychedelic movement drew on the spiritual and philosophical writings of “guru” authors such as Aldous Huxley, Timothy Leary, Ralph Metzner, and Richard Alpert (also known as Baba Ram Dass) and was expounded in underground newspapers such as the *San Francisco Oracle* (1966–1968). Adherents believed that by expanding the limits of perception with hallucinogenic drugs, the individual could better understand the interconnectivity of the world and his or her place in it. Hallucinogenic drugs combine and associate sensory experiences in unaccustomed ways and dissolve the user’s sense of self, so that he or she begins to perceive and explore previously unrecognized connections. (In his book *The Beyond Within*, 1964, Sidney Cohen refers to the experience as “instant zen.”)

The goal of psychedelia was often the creation of a multimedia experience as a positive setting for this form of experimentation. One of the first artifacts of the psychedelic era was the bus named *Furthur*, used by novelist Ken Kesey and his followers, the Merry Pranksters, on their legendary road trip of 1964. The sight of the bright, swirling patterns of its paint job was shocking enough, but the vehicle was also wired for sound so the Pranksters could play their music and drug-fueled rants to the public.

Liquid light shows, bright swirling colors, and curvilinear art nouveau graphics—products and evocations of the hallucinogenic drug experience—were hallmarks of psychedelic style and aesthetics. (Bill Ray/Stringer/Time & Life Pictures/Getty Images)

As the hippie culture germinated in and around San Francisco from 1965 to 1967, “Acid Tests,” happenings, be-ins, and rock concerts continued to emphasize this multimedia approach. At these gatherings, bands such as the Grateful Dead and the Quicksilver Messenger Service played highly amplified, improvisational, and, at times, formless music that disregarded the normal time and structural constraints of the pop rock formula. Music was perhaps the most important element of these events, but the artwork used for advertisement and decoration (by artists such as Rick Griffin, John van Hamersveld, Gary Grimshaw, Stanley Mouse, and Alton Kelley), the smell of burning incense, the liquid light show that projected over the musicians, the clothing, and the occasional Day-Glo body paint on audience members all were part of an experience meant to envelope participants and create a totalizing effect on their senses.

Psychedelia stagnated after about 1967, as the hippie subculture merged into the mainstream. As an easily appropriated element of the increasingly popular youth culture, psychedelia was co-opted by both commercial interests and consumers, torn from its original context. For example, J.C. Penney sold knock-offs of psychedelic fashion, companies such as Pepsi commissioned psychedelic-style advertising, record labels rushed to sign acid rock bands, and psychedelic-themed clubs sprang up in cities around the country in an attempt to replicate the experiences of the San Francisco ballrooms. Simultaneously, a rise in the use of nonhallucinogenic drugs such as

cocaine, heroin, and speed (methamphetamine) further signaled the turn away from the experimentation that had inspired psychedelia.

Nevertheless, psychedelia remains one of the most durable legacies of the 1960s. Musical groups influenced by the experimentation of the time period, sometimes called “neopsychedelic” bands, have included the Soft Boys and the Teardrop Explodes in the 1970s, the Los Angeles “Paisley Underground” scene of the 1980s, and the various bands of the Elephant Six collective in the 1990s. The bright colors and patterns of psychedelic fashion periodically come back into style. Films set during the 1960s often use psychedelia to evoke the time period, and the first two movies of the Austin Powers franchise are a veritable psychedelic pastiche (absent the essential drug connection).

Aside from postmodern evocations, the continued use of the drugs that inspired psychedelia help explain its endurance. As Beatles singer-songwriter John Lennon said in 1980, “You don’t hear about it anymore, but people are still visiting the cosmos.”

Psychobilly

Psychobilly, also called “punkabilly” or “mutant rockabilly,” is a subculture that emerged in the 1980s from the unlikely combination of rockabilly and punk rock. The provocative and sometimes outrageous style associated with psychobillies (also known as “psychos”) mixes the blue-collar rawness and rebellion of 1950s rockabilly with the confrontational do-it-yourself style of 1970s punk rock, a syncretism infused with themes from monster and horror films, campy sci-fi movies, and even professional wrestling.

Psychobilly bands tend to celebrate gruesome, depraved, and taboo topics, usually presented in an ironic manner: revenge, lust, murder, insanity, death, demons, massacre, lurid sex, and apocalypse, as well as hot rods, werewolves, zombies, vampires, voodoo, flying saucers, booze, broken hearts, and outlaw hillbillies. Influential precursors to psychobilly include Screamin’ Jay Hawkins, Johnny Cash, Hasil Adkins, the Legendary Stardust Cowboy, Link Wray, the Stray Cats, 1960s garage bands, and especially the Cramps, who anticipated the psychobilly movement in the 1970s by combining rockabilly, punk rock, kitschy Americana, sleaze, and monster-

movie themes in their music.

Psychobilly as a distinctive subculture began in the early 1980s with the rise of the Meteors in London. The band got its start in the punk clubs of the day, specifically the Klubfoot in West London, which became the center of the new movement. In response to the notoriously politicized punk scene of the time, the Meteors declared their performances “political free zones,” establishing the apolitical stance that continues to characterize the movement today.

A number of other psychobilly groups were formed in the mid-1980s, and the subculture eventually spread to the European continent, the United States, Canada, and parts of Asia, with an especially fervent following in Japan. The early psychobilly groups typically were minimalist, three-piece bands, with a steel guitar, drums, and an upright bass. In the ensuing years, a number of variant styles have emerged, including Gothbilly, Cowbilly (an emphasis on country and western), and Killbilly (death metal influences).

Regardless of the subgenre, the unifying theme is some innovation on rockabilly in its raw form, as an expression of primordial emotions, pure rebellion, unbridled sexuality, and grassroots revelry, in contrast to the pompous art-rock pretensions of subsequent rock music groups and pop music styles. After the Meteors, notable psychobilly bands have included Batmobile, the Sting-Rays, the Krewman, the Polecats, Coffin Nails, the Sharks, the Guana Bats, the Frantic Flintstones, King Kurt, Demented Are Go, Nekromantix, the Klingonz, the Reverend Horton Heat, Mad Sin, and the Quakes, among others.

The psychobilly subculture is primarily a white male phenomenon, although increasing numbers of females have joined the scene, as have ethnic minorities. The psychobilly scene is strongly heterosexual, unlike the early punk subculture, which tended to emphasize sexual ambiguity and gender confusion.

Male psychobilly expresses themes of working-class masculinity and sexuality, with characteristic styles for men featuring tight, cuffed blue jeans, body art, studded belts, boots, and tight T-shirts or shirts from working-class jobs that are adorned with patches or badges. Often, the sleeves are torn off the shirts, or rolled up, sometimes with a pack of cigarettes curled into a sleeve. Fans may wear black leather jackets, decorated with hand-painted slogans, band logos, and grotesque imagery, and increasingly seem to be adorned in black, “fetish party” styles.

Psychobilly is known for its distinctive hairstyles, in which the Elvis-style rockabilly pompadour is heightened and stylized into an exaggerated quiff (forelock), sometimes dyed in neon colors or bleached. A wedge-shaped pompadour, combined with a punk Mohawk style, is called a “psychohawk.” Other hairstyles include shaved heads, flattops, or other styles from the 1950s. Some psychobilly performers and fans occasionally appear at shows with faces painted to resemble ghouls, zombies, and other characters from horror films, evoking a time-warped vision of a postapocalyptic community of 1950s movie monsters, outcast hillbillies, the living dead, and sexualized “babes and cool cats.”

Female psychobilly style often emulates the hyper-feminized look of the “bad girl” pinup model (especially Bettie Page of the 1950s), while also reflecting a femme fatale and third-wave feminist “tough chick” style, influenced by punk aesthetics, especially the Riot Grrrl subculture. Psychobilly “devil dolls” may simultaneously embrace and mock sexual stereotypes through exaggeration and parody, dressing in a sexually suggestive manner that combines 1950s-style fishnet stockings, tight sweaters, revealing blouses, arm-length gloves, horn-rimmed glasses, and high-heeled shoes with a bricolage of 1970s punk-style bondage gear, spiked collars, chains, leather wear, tattoos, and body piercings. Psychobilly women tend to favor vintage dresses in bold colors, animal prints, and crinoline skirts from the 1950s. Female “psychos” often sport vintage hairdos in the style of Marilyn Monroe or other 1950s stars, and they frequently dye their hair, or at least their bangs, in bright colors, and may use bandannas as headbands.

Both female and male psychobillies tend to be heavily tattooed, usually with traditional American tattoo designs such as flames, dice, pinup girls, demons, skulls, hot rods, horseshoes, playing cards, and other symbols of luck. For some psychobillies, the subculture is a complete way of life that includes, in addition to music, clothes, and

body art, certain types of classic automobiles, vintage home decor, cigarettes, food, and alcoholic beverages.

The hallmark of the psychobilly scene continues to be the “weekender,” which brings together a number of bands for a weekend-long music festival and impromptu community to share styles, merchandise, and other mutual interests. At these weekends, psychobilly fans often engage in “wrecking,” a style of dance described on the psychobilly Web site wreckingpit.com as “a mixture of slam-dancing and freestyle wrestling.” Wrecking is known to be dangerous and violent, a psychobilly version of *Fight Club*-like events, and wreckers are sometimes injured. Despite the appearance of uncontrolled violence, psychobilly wrecking is generally characterized by a degree of decorum and camaraderie, with fallen’billies helped from the floor by their comrades.

Psychobilly remains a marginalized subculture because of its darkly carnivalesque celebration of violence, sex, and the macabre, although in recent years touring bands such as Tiger Army, Nekromantix, Deadbolt, HorrorPops, and the indefatigable Reverend Horton Heat have brought psychobilly to a wider audience. Although it may—or may not—ultimately find its way into the mainstream rock music and youth style markets, it remains a largely noncommodified scene that provides a sense of identity, community, and pure fun for those involved in the movement.

Public Enemy

Public Enemy is a hip-hop music group that originated on Long Island, New York, in 1982 and gained a national and international following for its explicit political messages and focus on African American social issues and history. The original band was made up of main lyricist Chuck D (Carlton Ridenhour), Flavor Flav (William Drayton), Professor Griff (Richard Griffin), and DJ Terminator X (Norman Rogers). In addition to the attention they generated for black urban issues, Public Enemy helped hip-hop expand its audience, as its music attracted middle-class white youth who had previously ignored or been unaware of the music being created in urban areas.

Public Enemy released its first album, *Yo! Bum Rush the Show*, on Def Jam Records in 1987. From the outset, the group built its artistic distinctiveness by openly discussing race and politics, bringing attention to inequality and racism in contemporary America. Its costume and performance style mirrored the militant arm of the black civil rights movement of the 1960s and 1970s; its dance troupe, Security of the First World (or the S1Ws), dressed in paramilitary uniforms and marched on stage with simulation Uzi machine guns. Public Enemy openly participated in political activism, sometimes joining forces with African American community leaders such as the Nation of Islam’s Louis Farrakhan and the Reverend Jesse Jackson, while invoking the words of the late Stokely

Carmichael, Malcolm X, and Martin Luther King, Jr.

The group's music and message garnered immediate popular attention in the late 1980s and early 1990s, especially after the song "Fight the Power," from their third album, *Fear of a Black Planet* (1990), served as the theme music for director Spike Lee's major motion picture release *Do the Right Thing* (1989). In 2005, the Library of Congress selected *Fear of a Black Planet* as one of only fifty sound recordings for preservation as part of the National Recording Registry, reflecting its significance as a musical and cultural phenomenon.

Since the beginning, Public Enemy has remained consistent in its message of political and cultural empowerment for African Americans and all oppressed groups. Its early prominence helped usher in a wave of artists who used hip-hop to express the voice and culture of urban African American communities. Public Enemy's style of highly charged, politically conscious messages dominated East Coast hip-hop groups during the time—the mid-1980s—that the Los Angeles-based group N.W.A. (Niggaz With Attitude) was surfacing with a new, heavily explicit, and violence-filled hip-hop style that would come to be known as gangsta rap.

After a brief hiatus, Public Enemy reemerged on the hip-hop scene in the 2000s. Its 2006 release *Rebirth of a Nation* includes Oakland, California-based rapper Paris (who once dubbed himself the "Black Panther of Rap") and former N.W.A. member MC Ren. *How You Sell Soul to a Soulless People Who Sold Their Soul*, the band's tenth studio album, was released in 2007.

Pulp Fiction

Named for the cheap, rough, untrimmed wood-pulp paper upon which it was printed as much as for its stylistic infelicities, the term *pulp fiction* refers to a broad range of popular American genre fiction that was widely read from the late nineteenth century until about the middle of the twentieth. Driven by the economics of a rapidly expanding U.S. population of unprecedented literacy, as well as by low printing and distribution costs (thanks to the advent of steam-powered presses and cheap, reliable rail transport) and the absence of competing storytelling media such as motion pictures or television, pulp fiction magazines encompassed every popular genre of fiction, including men's adventure, mystery, romance, horror, Westerns, fantasy, and science fiction.

The all-fiction pulp-magazine format was the brainchild of publisher Frank A. Munsey, who devoted his *Argosy* to genre fiction beginning in 1896. *Argosy's* success in anthologizing original genre fiction inspired others, such as

Street & Smith (already successful as the publishers of dime novels and boys' magazines), to enter the pulp market. Street & Smith's *The Popular Magazine* (1903) introduced color covers and grabbed the attention of the pulp adventure audience with a serial by H. Rider Haggard, whose popular work in the "lost world adventure" genre would later help inspire filmmakers George Lucas and Steven Spielberg in the creation of Indiana Jones. The magazines measured approximately 7 inches (18 centimeters) by 10 inches (25 centimeters) and contained anywhere from 128 to 196 pages.

Over the next three decades, pulp publishers proliferated in Cambrian profusion, filling every conceivable audience niche with such titles as *Air Wonder Stories*, *Amazing Stories*, *Black Mask*, *Dime Detective*, *Doc Savage Magazine*, *Flying Aces*, *High Adventure*, *Horror Stories*, *Marvel Tales*, *Oriental Stories*, *The Phantom Detective*, *Planet Stories*, *Science Wonder Stories*, *Scientific Detective Monthly*, *The Shadow*, *Spicy Detective*, *Startling Stories*, *Thrilling Wonder Stories*, *Unknown*, and *Weird Tales*. The last-named magazine debuted many Conan the Barbarian stories by the character's creator, Robert E. Howard, as well as tales of the monstrous elder god Cthulhu by horror master H.P. Lovecraft.

Traces of the early pulp legacy endure to the present day. The digest-sized *Analog Science Fiction-Science Fact*, formerly published in the pulp format as *Astounding Science Fiction*, continues to appear on a monthly basis, as it has since its inception in 1930. Both *Amazing Stories* and *Weird Tales* return intermittently to the newsstands every few years, though not very profitably, as publishing licenses change hands.

Pulp writers, who were paid by the word, had to produce their material quickly to keep up with the public's voracious demand, making the pulp publications literary factories of a sort. Stories, settings, and characters were often formulaic, though the pulp environment nurtured and popularized many well-regarded authors whose works and influence still endure, including Ray Bradbury, Max Brand (also known as Frederick Schiller Faust), Edgar Rice Burroughs, Raymond Chandler, Ray Cummings, George Allan England, Ralph Milne Farley (also known as Roger Sherman Hoar), Dashiell Hammett, William Hope Hodgson, Jack London, A. Merritt, Sax Rohmer, and Garrett Putnam Serviss. The pulps also greatly enhanced the mass-market popularity of the "slick" magazine genre writers they published, such as Haggard and H.G. Wells, arguably forging an organic, countercultural literary movement supported by an audience that America's literary sophisticates did not consider particularly literate.

As distinct from their tamer, more upscale, family-oriented, slick-paper cousins (known in the magazine trade as "the slicks"), the pulp fiction magazines of the first half of the twentieth century are probably best remembered for their frequently exploitative story content and the often lurid illustrations that adorned their colorful, varnished covers. This is not surprising, given that the pulps are the direct descendants of the sensational dime novels and "penny dreadfuls" of the nineteenth century, and ancestors to both the contemporary mass-market paperback and the modern superhero comic book.

Because of the sales impact of the pulp magazines' covers, which usually presented garish images of scantily-clad damsels in distress awaiting rescue by the hero of the hour, pulp cover art was of critical importance. Cover illustrations were sometimes created well in advance of the rest of the magazine's editorial material, which writers would create in haste to conform to the cover images. The pulp fiction era produced a number of acclaimed cover illustrators whose works are still sought after and imitated in the twenty-first century, among them Margaret Brundage, Edd Cartier, Virgil Finlay, Frank Kelly Freas, Frank R. Paul, and Norman Saunders.

Although the rise of the cinema in the 1920s posed serious competition, the heyday of pulp fiction was likely extended by the grinding poverty and despair of the Great Depression, which made cheap, escapist entertainment a psychological necessity for a public more in need of hope, heroism, and distraction than during any earlier period in American history. Paper rationing during World War II spelled the beginning of the end of the pulp era, however, forcing many titles to switch to the smaller digest format familiar to modern audiences, beginning in 1941 with *Ellery Queen's Mystery Magazine*.

Following the war, the pulps lost much of their remaining audience, both to the movies and to the new medium of television. Competition from comic books and the mass-market paperback helped to complete the pulps' eventual

slide into oblivion, although the term *pulp fiction* endures, mostly as a pejorative in the still-ghettoized genre categories of science fiction, crime, adventure, or horror.

In 1994, the medium that arguably bears the most responsibility for the demise of the pulp magazines—cinema—paid tribute with Quentin Tarantino’s unabashedly lurid film *Pulp Fiction*. Like its acid-paper forebears, *Pulp Fiction* told several crime-oriented stories that doted stylishly on violence and sex, braiding together several disparate yet fundamentally “pulpy” elements.

Punk Rock

Punk rock is a musical style that began as a challenge to the perceived commercialism of the music scene. In 1977, an explosion of bands from the United Kingdom reached America, beginning with the Sex Pistols, the Clash, the Damned, X-ray Spex, and Generation X, among others. These groups had been influenced by American pre-punk bands such as the Ramones, who had been formed in 1975 and played loud, abrasive, three-chord rock in and around New York City’s CBGB nightclub. Punk vocals were almost always shouted or sung and backed by electric guitar, electric bass, and acoustic drums. The punk sound was characteristically raw and guitar driven, with heavy distortion and catchy choruses. This musical style, first popularized as a genre in Britain, spawned a vibrant counterculture movement in the United States.

Punk was a protest against the complacency of the hippie culture that typified the early 1970s. (“We don’t care

about long hair,” the Sex Pistols sang, “I don’t wear flares.”) The dress of punk rockers was individualistic, postapocalyptic, and urban, typified by dyed, spiked, or Mohawked hair; torn jeans; boots (combat or Doc Martens); face and body piercings; and studded leather jackets with band names or slogans hand-painted on them. It created an image that was shocking in the late 1970s.

Sometimes compared to Dada and futurism (European art movements of the post–World War I era), punk rock unknowingly shared a few characteristics of these movements, primarily in its outrageous fashion, rejection of traditional art forms, and provocative performances. However, it was punk’s antiestablishment ideology, focusing on such contemporary youth frustrations as unemployment and the threat of nuclear war, that made it relevant as an energetic counterculture movement.

The Sex Pistols—with bass player Sid Vicious (left) and lead singer Johnny Rotten—was the first commercially successful punk band. Raw and rebellious, punk was a kind of antiestablishment rock that spawned a distinctive counterculture in the 1970s. (Michael Ochs Archive/Getty Images)

U.K. Roots

As some of the early British punk bands disbanded or changed musical styles by 1980, many new groups surfaced in the United Kingdom. A second wave of punk rock reached the United States from 1980 to 1984. Now harder and faster in their musical style, these groups included the Exploited, G.B.H., Anti-Nowhere League, and U.K. Subs.

A new, ultrapolitical brand of the punk rock movement also emerged in Britain, characterized by bands such as Crass, Conflict, Subhumans, Discharge, Icons of Filth, Chaos U.K., and Rudimentary Peni, whose songs went beyond earlier social content and addressed such topics as nuclear annihilation, animal rights, and anarchism. These bands helped promote the antiwar and nuclear disarmament movements of the time; brought attention to the plight of animals in factory farms, inspiring some punks to adopt the vegan lifestyle (abstaining from all animal products, including milk and eggs); and charged mainstream politics with rampant corruption.

Punk Rock in America

Punk rock in America was characterized by early West Coast artists such as the Germs, the Weirdos, Black Flag, the Dickies, and X. The Runaways, an early pre-punk, all-female Los Angeles group that featured teenage rock icon Joan Jett, was the original “girl power” band.

By 1982, the American variant of punk rock had taken on a clear identity of its own, with groups such as Black Flag, Fear, the Dead Kennedys, and Bad Brains playing a faster music termed “hardcore,” a synonym for punk. The message of these bands was distinctly antiauthoritarian, with the Dead Kennedys’ lyrics more political than most. Early East Coast bands, such as the Dead Boys and Television, had similar weight in the New York underground. The New York scene would reach its apex in the late 1980s with such bands as Agnostic Front and

Cro-Mags.

In Washington, D.C., Minor Threat, headed by Ian MacKaye, began to question the drug abuse and self-destruction becoming rampant in the punk rock scene, and the band began refraining from alcohol and drugs. Setting themselves apart by marking an X on their hands—which a local D.C. punk rock venue used to identify underage concertgoers at the bar—the band and its fans initiated “straight edge,” a movement that rejected the usage of drug and alcohol. That movement was particularly popular on the East Coast, and later, in Southern California, with bands such as Minor Threat and DYS adhering to the straight edge lifestyle. In the late 1980s and early 1990s, bands such as Youth of Today, Gorilla Biscuits, and Unity fueled a resurgence of straight edge in the United States and worldwide.

On both coasts, and throughout the 1970s and 1980s, punk’s emphasis was on lyrics and energy rather than on technical musical ability, though many groups displayed true talent. Often, punk musicians had little formal training, but many bands, especially in the mid-to late 1980s, began opting for a more commercial, heavy metal sound. Referred to as “crossover,” this style included palming the guitar strings, lengthy guitar solos, and a double-bass pedal on the kick drum. Though some bands, such as D.R.I., had success with this hybrid metal and punk sound, the credibility of some groups was questioned when they signed with record companies owned or distributed by major corporate labels. A trend of the 1990s, in which some punk bands went softer in the pop-punk style, helped make them more radio friendly but also had a damaging effect on their reputation.

Since the late 1980s, Minneapolis, Minnesota, has been an epicenter for anarchist punk rock, mainly due to *Profane Existence*, the name of both a magazine and a record label and distributor. *Profane Existence* began in 1989 as a small underground fanzine, and despite a brief hiatus, remains a popular international punk journal, with a circulation of about 20,000. Minneapolis bands with anarchist-themed lyrics that tackle issues such as animal vivisection include Destroy!, a British-influenced group that played in the fast and heavy “crust” style; Code 13, later formed by singer Felix Von Havoc of Destroy!; and Misery.

A revival of the more political brand of punk continues in the 2000s through the efforts of such street punk bands as Total Chaos, Anti-Flag, and the Casualties. Many of the original ideals of punk, and some of the older bands, remain very much alive, making it one of the longer lasting counterculture movements in the United States.

Punk Culture

Punk has had a major influence on Western trends beyond the music world. The vegan lifestyle was popularized by punk rockers, giving it street credibility. Many bands involved with straight edge began to convert to veganism by the early 1990s. In addition, punk fashion, such as dyed hair, Mohawks, piercings, and military-style boots, have been adopted in the popular culture.

The fans of punk rock have a literature of their own as well, mostly in the form of “zines”—publications with small press runs, often in DIY (do-it-yourself) format with informal typesetting and a local or topical focus. Among the early influential punk zines was the crudely produced British publication *Sniffin’ Glue*, which snidely chronicled the emerging London punk scene in 1976 and 1977. A few American punk zines had larger press runs, such as Los Angeles’s *Flipside*; the in-depth, political, and long-running *Maximum Rocknroll*, published in San Francisco; and the overtly subversive *Profane Existence*.

Punk continues to remain relevant as a social youth movement in America. Many contemporary musicians cite punk rock as an inspiration for learning an instrument and joining a band. The reissue of many older punk LPs—now considered classics—on CD made the message accessible to a younger generation. The combination of strong lyrics and an urgent delivery has contributed to the resilience of punk music and, in turn, its resurgence as a counterculture movement.

Puritans

Puritans were members of extreme dissident Protestant congregations from England, Scotland, and the Netherlands in the sixteenth and seventeenth centuries who rejected the Protestant Reformation for not going far enough in reforming the doctrines, liturgy, and rituals of the Roman Catholic Church. In the early seventeenth century, Puritan groups seeking to break away from the Church of England and escape the pressures of the British Crown migrated to the New World under a series of grants from joint-stock companies that sought to establish permanent settlements there.

The Puritans in America are associated primarily with the Plymouth Colony (established 1620), Massachusetts Bay Colony (1629), and the towns and villages that grew up around the settlement at Boston and spread throughout New England. Their religious beliefs had a deep and lasting influence on the social and political development of what would become the New England colonies and eventually part of the United States.

Philosophy

Puritan religious philosophy encompassed all aspects of human existence, defining mankind's place in the world with rigid and absolute clarity. Faithful Puritans knew who they were, what they might become, and what God expected of them in both the temporal and spiritual spheres.

The fates of individual men and women were less clear. Individuals were aware that God had decided the fate of each person (according to the doctrine of predestination), but there was no specific or infallible outward indication of the nature of God's decision. Therefore, Puritan religious belief stressed that people were entirely without power to influence the choices God already had made. At the same time, individuals were exhorted to use all of their abilities to secure the grace of God, to show proof of their salvation.

This philosophy of extreme self-criticism and self-awareness demonstrated a deep Puritan concern with one's state of mind and its relationship to personal salvation. As a result, a common theme in Puritan writings and moral teachings is consideration of the familiar figure of the tormented soul trapped in a mortal body, filled with fearful awe of the final judgment to come.

As the name Puritan suggests, a core tenet of the faith was a desire to cleanse, or purify, both individuals and the

world of sin and evil. The driving force of this desire was a need to purify what they regarded as a corrupt and licentious society that was not worthy of God's creation. (In this sense, the Puritan movement may be compared to similarly motivated religious movements focused on the idea of purification, such as the Calvinist society established in Geneva, Switzerland, in the heyday of the Protestant Reformation; the Wahabi movement in Sunni Islam; and the Shiite revolution that sought to purge Iran of the Western influences personified by secularism and the Westernized shah.)

In Puritan eyes, if a social institution was able to corrupt individuals by enticing them or pressuring them to stray from the strict moral code that faith demanded, then that institution had to be reformed, or destroyed, to prevent people from falling victim to the temptation to sin against God. Yet the removal of one corrupt institution would likely reveal further evils poised to threaten the stability and even existence of the community, perpetuating the quest for purification. The ideal Puritan society thus was one that could be totally controlled, that was as free as possible from temptations that could lead its members astray, and consisted entirely of a community of the "pure" individuals, who accepted their humble position in this world in the hope of a greater reward in the next.

In religious communities similar to that of the Puritans, the goal of individual purity may be either voluntarily accepted by the people or enforced by an authority. The Puritans' authority was vested in the clergy and the well-to-do, pious pillars of the community, who exercised significant control over the civil, social, individual, and, above all, spiritual lives of all who lived in the society. To be a full-fledged member of New England Puritan society, with all the civil rights afforded (such as voting privileges for men), an individual would have to accept in full the covenant of the church, its doctrine, and its discipline.

Even those who did not or could not become members of the church had to pay taxes to support it and its works. Members and nonmembers alike could face public censure or be made to pay fines if they did not attend worship services regularly, or if they violated the holiness of the Sabbath by working or enjoying any worldly pleasures on that day.

In addition, the close-knit nature of the community ensured that there was little personal privacy, further enabling community leaders to keep a close eye on individuals and ensure that the common man or woman knew his or her place. Those who appeared to live beyond their means or station—for instance, by wearing silk or other fine cloth in spite of having a low yearly income—could be subject to fines or public disgrace, with the offender made to serve as an example to the community of the sins of pride or avarice. Laws forbade the wearing of frills, ribbons, or brightly colored fabrics.

Personal failings and shortcomings were also subject to control. The men and women of Puritan New England could be punished for idleness, gossiping, excessive frivolity, drunkenness, gambling, or any other kind of scandalous behavior (especially if the scandal involved fornication or adultery). The concern over individual behavior reflected Puritan fears about the collective nature of evil and the catastrophic fate that might await a society that succumbed to evil influences.

Examples from the Bible and other religious writings suggested that a people who failed to honor their covenant with God would be subjected to both natural and manmade disasters—such as wars, plagues, famine, floods, poor harvests—and only dedicated prayer and sincere repentance would be sufficient to turn away the wrath of the Lord. A community of the faithful and devout, on the other hand, would live in peace and sober prosperity for as long as they dedicated themselves to a simple, purified life in keeping with the teachings of their religious leaders.

New England

The initial "Great Migration" of Puritans lasted from 1629 to 1642, ending only when the outbreak of civil war between Cavaliers (loyalist supporters of King Charles I) and Roundheads (supporters of the more Puritan Parliament, against the king) led Charles I essentially to stop all emigration from England. The Puritan communities of the Massachusetts Bay Colony regarded the English Civil War through the prism of their religious

faith, examining the conflict from a cosmic perspective. Now that the battle between the true church and the corrupt, popish factions that had dominated it appeared to be coming to a head, there was a great temptation to view the war as the means of carrying out the reform and purification so needed in society. New World communities were enjoined to pray for the victory of their Puritan brethren still in England, and the victory of Oliver Cromwell's Roundhead forces in 1651 appeared to herald a new and more godly age.

The temptation to see cosmic battles reflected on Earth was still a potent element of Puritan religious thought. In 1666, when news of the Great Fire of London reached Boston, there were rumors that the end of the world was nigh and that the faithful might look to the sky to see Christ descending with his angels to battle the Antichrist. Yet Cromwell's victory had slowed further Puritan immigration, and as individuals from other religious backgrounds settled in New England, new ideas and beliefs began to challenge the tenets and principles of the initially homogenous society.

Many of the immigrants who arrived in New England after the 1640s regarded the Puritan theocracy as a more oppressive state than the one they had left behind in England. Because the Puritan communities were not strictly separatist (i.e., did not regard themselves as having formally separated from the Church of England), individuals who did wish to see the church break ties with the Anglican community were likely to be accused of heresy and punished accordingly.

Roger Williams, an early proponent of the separation of church and state, was expelled from Puritan Massachusetts in 1635 and founded a settlement in what is present-day Rhode Island, providing a home for Quakers, Baptists, and other religious communities that had been persecuted by the Puritan authorities. Anne Hutchinson was excommunicated from her Puritan congregation in 1638 after being charged with blasphemy, having dared to preach and speak out against the authority of the local ministers.

The fate of Mary Dyer, a Puritan woman who had become a Quaker and who traveled around New England to protest the laws that banned Quakers from preaching, was a particularly noteworthy example of the religious intolerance of the Puritan colony. In May 1660, Dyer was arrested, tried, and convicted of the crime of being a Quaker in Massachusetts; because she refused to repent and renounce her faith, she was hanged on June 1, 1660. Since Puritan religious authority required a firm control over society and the individuals within it, challenges such as these could not be treated leniently.

As immigration to the North American colonies increased in the eighteenth century, the direct control and influence of Puritan religious leaders continued to decline. The restoration of the monarchy to the English throne (with Charles II in 1660), the growth of colonial settlements outside Puritan religious control, the controversies that accompanied social upheavals such as the witch hunts in Hartford (1661–1663) and Salem (1691–1692), and a growing secularization of society in general contributed to the waning of religious authority in colonial New England in general and of Puritan authority in particular.

Puritanism as Counterculture

If the definition of a counterculture is that of a cultural group that embraces a set of personal values and social behaviors that run counter to the mainstream opinion accepted by the group's contemporaries, then the early Puritan immigrants to the New World formed a counterculture. Puritans were not merely a religious counterculture in England and Scotland; their opposition to the unreformed Church of England and the spiritual authority of the Crown placed them in political opposition to the established society of their time.

Persecuted for their beliefs and their vocal demands for liturgical reform, the Puritans fled that persecution with the hope of founding a society where they would be able to create their "city upon a hill" (in the words of early Puritan leader John Winthrop), a purified community of the faithful. In doing so, their counterculture became the dominant culture—one that played a significant part in shaping the foundations of American society and became part of the founding myth that continues to mold the American cultural psyche into the present day.

Purple, Adam (ca. 1932–)

Adam Purple has been variously described by friends and observers as a social activist, visionary, philosopher, artist, and revolutionary. Clad from head to toe in purple clothing, he was, for decades, a vibrant fixture in the community life of the poorest neighborhoods on Manhattan's Lower East Side. Little is known of the early life of the man, born David Wilkie, who would, following his arrival in Manhattan in 1972 and until his eviction in 1999, go on to become an international icon of urban ecological sustainability.

In 1975, Purple initiated the project that would provide his lasting legacy, the internationally renowned Garden of Eden, an urban garden artwork (in Purple's term, an eARTHWORK). Through the Garden of Eden, Purple turned the desolate and crime-ridden abandoned lots behind his tenement at 184 Forsythe Street into a neighborhood sanctuary and gathering space. Before it was bulldozed by the city in 1986, the garden had grown to more than 15,000 square feet (1,400 square meters) as it returned to nature the lots left behind when other tenements were torn down.

Purple "created" the dirt by hand from manure he gathered in Central Park. The garden was built in concentric circles, each composed of similarly colored plants and flowers, making a spiral rainbow. The center of the garden featured double yin-yang symbols, the Buddhist symbol of the unity of differences, and a Chinese Empress tree. A total of forty-five fruit and nut trees flourished in the garden. The stunning work was featured in photo essays in

number of mainstream publications, including *Stern* and *National Geographic*.

The Garden of Eden was appreciated by observers from a diversity of backgrounds and perspectives. Some admired it as an example of urban agriculture and food sharing that provided free corn, cucumbers, tomatoes, peaches, and raspberries to urban residents who might otherwise never have seen the plants that provided their food, outside of pictures. Others, including several arts organizations, celebrated the garden as a living street sculpture. Most of all, the garden was enjoyed by the community members who spent time in it, especially the children who played in its once-threatening yards. For many, it was a refuge from the stresses of urban life.

Some viewed the Garden of Eden as a revolutionary act, an organic and evolving testament against private property. The refusal of city planners to incorporate the garden into their plans for a housing development led many to question their motives. Purple's project was recognized by architects as an inexpensive and healthy convergence of housing and an oxygen-producing landscape.

In 1999, Purple was forced from his own tenement by the city, which had owned the building since 1976. For eighteen years, he had lived in the building without gas, electricity, or running water. During that period, he lived on less than \$2,000 per year, money he earned largely by returning cans and bottles for recycling. His diet consisted primarily of vegetarian stew, made with vegetables from the garden or ones that he had salvaged from the garbage, and water from fire hydrants. Admirers regarded his life as a testament to ecological living and minimizing one's negative impact on the planet.

When his former building was slated for demolition, local residents entered the site to preserve the boxes of papers Purple had accumulated regarding his various projects. Those documents have been archived through the Lower East Side cultural center ABC No Rio, and Purple's experimental book *ZENTences* (1968) is housed in the Rare Books Division of the New York Public Library.

Since his eviction, Adam Purple has, despite being homeless, maintained his local activism. He also has moved his work online, initiating the Internet discussion group "speciesurvivalibrary."

Pynchon, Thomas (1937–)

Thomas Pynchon is a reclusive American novelist, essayist, and short story writer who has been hailed as one of the most important literary figures to emerge from the 1960s. His novels are known for blending high poetic prose and slapstick comedy in a manner that has incorporated traditionally adolescent interests, such as comic books

and conspiracy theories, into mainstream literature.

Thomas Ruggles Pynchon, Jr., was born on May 8, 1937, in Glen Cove, Long Island, New York, to Thomas Ruggles Pynchon, Sr., the scion of a prominent family that traces its roots to the Massachusetts Bay Colony, and the former Katherine Frances Bennett. Pynchon began writing publicly at Oyster Bay High School, from which he graduated early, in 1953, to attend Cornell University in Ithaca, New York, as an engineering student. After a stint in the U.S. Navy, Pynchon returned to Cornell in 1957 as an English major. He took classes from the innovative Russian American fiction master Vladimir Nabokov and became friendly with the charismatic aspiring novelist Richard Fariña. After graduating in 1959, Pynchon went to work for aircraft manufacturer Boeing in Seattle, where he contributed to the in-house magazine.

Meanwhile, having published several short stories in literary magazines, Pynchon produced and published his first novel, *V.*, in 1963. The work won the William Faulkner Foundation Award for best first novel of the year, and Pynchon became an instant cult novelist. His appearance on the literary scene coincided with the rise of the counterculture, and his literary interests matched several concerns of the hippie movement: drug use, sexual liberation, suspicion of the establishment, and a pursuit of political reform coupled with an idealistic pursuit of spiritual enlightenment.

Pynchon validated his early promise with *The Crying of Lot 49* in 1966, but became an international sensation with the publication of *Gravity's Rainbow* in 1973. An epic modernist novel about the dehumanizing effects of technology and the bureaucracy of war, *Gravity's Rainbow* recounts the adventures of various American soldiers, British scientists, European expatriates, and Nazi missile experts toward the end of World War II and after the fall of Berlin. Beginning and ending in mid-sentence, the novel blends comedy and emotionally heightened literary prose, sexual hedonism, and political paranoia in the story of a young American whose sexual encounters seem to anticipate the locations of future V-2 bomb landings. A complex, ambitious work stretching backward and forward in time well beyond the limits of its 760 pages, the novel offers critiques of behavioral psychology, the morality of air war against civilian targets, and religion, among numerous aspects of modern society.

Long gaps stretched out between Pynchon's subsequent novels, while the author himself kept a low profile—much in the manner of J.D. Salinger, whose first-person prose style finds echoes in Pynchon's fiction. A brief collection of short stories and essays, *Slow Learner*, was published in 1984, followed by the novels *Vineland* (1990), *Mason & Dixon* (1997), *Against the Day* (2006), and *Inherent Vice* (2009).

No one publicly admits to knowing Pynchon or his whereabouts, and there are precious few photographs of the writer at any age. In 2004, Pynchon made two anonymous voice-over “appearances” in the satirical, animated Fox television series *The Simpsons*, in which his character appears with a paper bag over his head; he repeated the voice-over cameo in a 2006 episode of the show.

Little is known of Pynchon's whereabouts, family, or way of life.

Quakers

The Religious Society of Friends, whose adherents are commonly known as Quakers, was founded in 1648 as a Nonconformist sect of Christianity. As Separatists from the Anglican Church, the Quakers faced extreme persecution in Puritan England, as well as in the British North American colonies. Some Quakers were put to death for their religious beliefs; the most famous, Mary Dyer, was hanged in Boston for the crime of “being a Quaker in Massachusetts.”(Dyer is believed to be the only woman in the United States to die for religious freedom.) Founded by William Penn, the Commonwealth of Pennsylvania was a safe haven for Quakers, and other religious dissenters, to practice their faith.

George Fox, credited as the founder of Quakerism, was born in 1624 in Drayton-in-the-Clay, Leicestershire, England, approximately 15 miles (24 kilometers) southwest of Leicester. His father, a weaver, espoused strong Puritan beliefs and encouraged his son to enter the ministry. After completing an apprenticeship as a cobbler and shepherd, Fox began to minister publicly in 1648, preaching in marketplaces and farmers' fields. Although this date coincides with the year conventionally accepted as that of the establishment of the Religious Society of Friends, there is no conclusive documentation that Fox founded the religious sect, and several practices observed by Quakers during their worship services, including the most familiar, silent waiting, were known to have been in existence prior to this date.

The name Quaker was first used in 1650, when Fox was charged with blasphemy and brought before the chief magistrate of Derby. In his journal, Fox recounts the judge referring to the church members as Quakers, because they trembled at the word of God. Fox and his followers, who preferred to be known as “children of light” or “friends of the truth,” objected to the name, which continues to be commonly employed by nonmembers. The official name, Religious Society of Friends, was adopted in the eighteenth century; “Quakers” was added in parentheses for the sake of clarity. Some congregations do not include the word *religious* in their name, referring to themselves simply as the Society of Friends.

Divergent Beliefs and Practices

Over time, several divisions have occurred in the Society of Friends. The best known is the Hicksite-Orthodox split, which occurred in 1827 when the views of a liberal New York minister, Elias Hicks, came into conflict with the historical traditions of the Friends. The Quakers who did not follow Hicks were called Orthodox. The 1842 Gurneyite-Wilburite split was the result of a dispute between Joseph Gurney of England and John Wilbur of Rhode Island. Gurney believed in the authority of the Scriptures and promoted working with other Christian groups. Wilbur claimed the authority of the Holy Spirit and worked to preserve the self-sufficiency of the Friends. A third branch, known as the Beanites, became popular in the western United States beginning in the 1870s and 1880s. The Beanites were named for Joel Bean, who opposed the evangelical movement then coming into vogue.

Although the various branches of the Religious Society of Friends have widely divergent beliefs and practices, the central concept—that of God within each person—is uniform. Thus, there is no need for the statements of faith or creeds common in other religions. The lack of a single set of authoritative doctrines has resulted in the development of a broad range of doctrines and beliefs among Friends. A common feature, however, is a strong

commitment to the merit of testimonies, traditional statements of Quaker belief that have evolved over time.

Advocating humanitarian causes as a matter of faith, Quakers were among the earliest and most ardent abolitionists in America. Editor and lecturer Benjamin Lundy of Ohio began the first antislavery newspaper in 1821. (Stock Montage/Hulton Archive/Getty Images)

The Testimony of Simplicity has generally been a reference to material possessions. Friends traditionally limit their property and belongings to essentials and believe they should not use more than their fair share of Earth's resources. The Testimony of Peace enshrines the belief that violence is always wrong. The Religious Society of Friends is considered one of the historic peace churches in America. Through the nation's history, many conscientious objectors to war have been Friends, and in 1947, the Friends Service Council and American Friends Service Committee, Quaker social-service organizations in Great Britain and the United States, respectively, were awarded the Nobel Peace Prize.

The Testimony of Integrity calls on adherents to place God at the center of their lives. Integrity is defined as being honest and fair in dealing with others, acknowledging others' contributions, and accepting responsibility for one's own actions. The Testimony of Equality is based on the belief that all people are created equal and, therefore, deserve equal treatment. Friends were some of the first to campaign for women's rights and to become leaders in the antislavery movement. From its founding, both men and women were permitted to actively participate in

worship services.

Typically, Quaker worship services are referred to as “unprogrammed” or “programmed” meetings. Unprogrammed worship is the more traditional style, in which the members assemble together and silently wait for divine inspiration. It is common for the meeting to be entirely silent, but sometimes members speak when divinely inspired to offer a testimony. It is common for the service to last about one hour; it ends when a predesignated member shakes the hand of his or her neighbor, and then all participants shake hands with their neighbors. Programmed worship resembles a typical Protestant worship service and includes Scripture reading, hymn singing, and a sermon from the minister. Some congregations engage in semi-programmed worship, which combines programmed elements such as hymn singing and Scripture readings with an unprogrammed service.

Role in Countercultures

The basic tenets of Quaker beliefs have led many Friends to support the ideals of various counterculture movements throughout history. Resistance to war and the military have influenced Quaker youth to participate in demonstrations promoting peace and nonviolence. Although many were notable as organizers and frontline demonstrators in the anti-Vietnam War protests of the 1960s, Quakers have been acknowledged as conscientious objectors from the Revolutionary War to the present day.

Quaker involvement in social action and humanitarian service has resulted in their advocacy for social reform. Historically, Quakers have promoted the rights of those considered to be marginalized by society, from slaves and prisoners to the mentally ill and ethnic minorities. Quakers were among the earliest and most active participants in the antislavery movement—the first formal abolitionist organization was founded by Quakers in 1783—including in the Underground Railroad, the secret network to transport escaped slaves from the South to freedom in the U.S. North and in Canada.

Because of its emphasis on the personal experience of God, the Religious Society of Friends is sometimes referred to as one of the mystic religions; this appellation is misleading. Unlike traditional mystical religions, the Quakers focus on group spirituality and not that of the individual. Additionally, the Quakers do not advocate the withdrawal of members from the everyday world.

Today, there are approximately 350,000 Quakers throughout the world, with the highest concentration (43 percent) living in Africa. Thirty percent live in North America, 17 percent in Latin America and the Caribbean, 6 percent in Europe, and 4 percent in Asia and the western Pacific.

Queer Nation

The activist group Queer Nation, with multiple chapters across the United States, took the gay and lesbian community by storm as it sought to eliminate homophobia and increase gay, lesbian, and bisexual visibility through a variety of hands-on tactics. The group was founded in 1990 in New York City by four members of ACT UP (AIDS Coalition to Unleash Power) in response to antigay and antilesbian violence and prejudice. Its united “queer” style of direct action and civil disobedience caught on fast, with additional groups springing up in San Francisco and elsewhere in quick succession. By 1992, most chapters of Queer Nation had dissolved under the weight of internal conflict, but, by then, they had left their mark on American culture.

Queer Nation eschewed the model of social activism in which minority groups politely lobby for their causes. Instead, the group forcefully asserted the presence of homosexual men and women at the center of mainstream culture through such slogans as “We’re here. We’re queer. Get used to it.” Queer Nation actions included “kiss-ins” at straight bars and raucous, campy expeditions into suburban shopping malls by the Suburban Homosexual Outreach Program (SHOP). Queer Nation was out to shock and to claim a place, literally, for gays and lesbians. By invading presumed heterosexual settings, the group proclaimed its right to occupy the center of public space.

Queer Nation’s militant tone was in part a product of the times. The group was strongly influenced by the urgency of the HIV/AIDS epidemic, which, by 1990, had devastated gay male communities and had provoked increased homophobia and antigay violence from people who considered AIDS a “gay disease” or, in some cases, just punishment for sinners. In addition, government response to the epidemic was slow and minimal, leaving queer activists angry, frustrated, and ready for strong action to protect their communities. ACT UP, formed in New York in 1987, with its slogan “Silence = Death” and militant activist tactics, had a major impact on the style and strategies of Queer Nation.

The practices of Queer Nation also echoed the radical activism of the 1960s. In the same way that Black Power advocates had proclaimed “Black is beautiful,” Queer Nationals sought to reclaim the term *queer* as a celebration rather than an insult. And just as radical feminists had parodied sexist norms, for example in “The BITCH Manifesto,” written in 1968, members of Queer Nation mocked the prudishness of so-called normal society by creating committees with acronyms like LABIA (Lesbians and Bisexuals in Action).

Queer Nation differed from earlier movements in how it conceptualized its membership and what those members hoped to achieve. Whereas the feminist and Black Power movements of the 1960s had focused their efforts on liberating clearly defined social groups from oppression, the designation of queer was deliberately ambiguous. While it included bisexuals and transgendered people alongside gays and lesbians, there was a marked reluctance to draw rigid boundaries around group membership. The use of the term was intended to disrupt and raise questions about so-called normal sexuality, rather than to pit homosexual against heterosexual.

In keeping with postmodern cynicism and academic trends, Queer Nation focused as much, or even more, on parody and the subversion of societal norms as on the effort to win liberation. Questions remain, however, regarding the effectiveness of this purposeful ambiguity. Some members alleged that Queer Nation was dominated by white gay men, raising the specter of old-fashioned sexism and racism. Others raised concerns that the focus on parody may have favored aesthetics over politics and diminished the real impact of the group.

Radio

From its early use as a Morse code transmission device to its modern mass-media role as a source of news, music, and information, radio has both shaped and been shaped by America's counterculture movements and trends. The tensions between the scientific exploration, artistic expression, business interests, and altruism that combine in radio have made it not only a revolutionary medium of communication but a manifestation of counterculture itself.

When radio entered mainstream America in the early twentieth century, commercial interests generally viewed it as a novelty, likely to be useful only for minimal communication between businesses and Wall Street. Amateur ham radio operators, however, viewed the new technology as an intellectual challenge. Clubs sprang up across the nation with members as young as ten years old building and operating their own transmitters.

The camaraderie and sense of community that developed among ham operators became the hallmark of countercultural influences in radio. Despite government restrictions and fierce opposition from emerging commercial networks, amateur interest in radio provided the impetus for radio's expansion and maturation.

The Golden Age and Beyond

Technological advances made during World War I allowed commercial stations to broadcast a greater variety of programming during the 1920s and 1930s, primarily on the AM (amplitude modulation) band. The widespread availability of affordable receivers ushered in the golden age of radio with hours of dramas, slapstick comedies, newscasts, and musical performances. An increasing number of performers on the radio were African American. Although the rigid segregation of the Jim Crow era applied to the host venues, there was no way to differentiate between white and black music on the radio. Whites grew to appreciate the talent and originality of black performers, especially jazz artists. The assimilation of black music into white America's youth culture helped soften racial barriers.

As commercial radio expanded after World War II, the gradual integration of black and white culture continued. The social and economic mobility of the emerging black middle class offered too ripe a prize for commercial operators. Despite seemingly inflexible racial limitations, station WDIA in Memphis, Tennessee, beginning in the late 1940s, operated with an exclusively African American broadcast staff and catered to an enormous African American audience, at times as high as 10 percent of the total black population of the United States. It also reached a significant segment of the white population of the rural South. The anonymous accessibility to black culture provided by stations such as WDIA paved the way for "crossover" music and the rock and roll revolution that inundated white America in the 1950s, forever altering the political, social, and musical landscape of America.

Although white disc jockeys (DJs) such as Alan Freed and Wolfman Jack were credited with creating the rock and roll phenomenon, undoubtedly black music was the true object of white teenagers' fascination. DJs attempted to use "race ventriloquism" to sound blacker and therefore more authentic to their white audiences.

As rock became the lingua franca of teenagers, DJs held more sway over teenagers' decisions than did their

parents, let alone societal norms and customs. As white youth embraced black culture and civil rights, the establishment attempted to rein in the forces of cultural change. Many influential DJs fell to the infamous payola scandals involving pay-for-play transactions with record labels, a common practice since the early days of commercial radio. Strict Top 40 playlists and homogenized copy neutralized the DJs' cult of personality, reinstating the monotony of pre-rock mainstream radio.

FM Revolutions

One of the DJs ousted in the payola fiasco, Tom Donahue, resurfaced in San Francisco, where by 1967 the mix of drugs, innovative music, and barren airwaves prompted him to embrace an alternate form of transmission, FM (frequency modulation). With his wife, Rachael, Donahue pioneered a free-form style of broadcasting.

Giving DJs complete freedom of choice and action, the new FM stations not only introduced such legendary artists such as the Doors and Jimi Hendrix, but they also provided a voice and source of information for the hippie counterculture and other movements of the time. From broadcasting public-service announcements concerning tainted drugs to spearheading protests against the Vietnam War, FM radio served as the conduit of communication among, as well as the harbinger of trends within, the various factions of the movement. Ultimately, however, free-form FM's success became its undoing, as corporate control soon stifled DJ creativity and silenced alternate voices much as it had in the 1950s.

As commercial rock became the mainstay of the FM band, its former home, the AM band, saw the development of a novel concept, which, ironically, had its roots in the freewheeling ramblings of the free-form FM DJs. Talk radio stations gained increasingly larger shares of bandwidth and listeners throughout the 1980s and 1990s.

By the mid-1990s, AM talk radio was a bastion of conservative counterculture. Bombastic hosts such as Rush Limbaugh used the airwaves to counter what they perceived as an erosion of morality in American politics and culture through the domination of all forms of media by liberal elites. Ironically, while conservatives vilified National Public Radio (NPR) as liberal and countercultural, most liberals and noncommercial broadcasters viewed the network as not only a tool of the government, but as a collaborator with commercial radio.

In 2004, liberal activists launched an alternative to both NPR and AM talk radio, Air America Radio. Using the deep pockets and name recognition of celebrities such as Al Franken and Robert Kennedy, Jr., Air America created instant buzz and attracted franchise investors across the country.

As talk radio staked its flag on the AM dial, the institution of formats and increasing consolidation of corporate holdings saw FM radio lose its influence among not only the counterculture, but among mainstream listeners as well. Although college radio stations attempted to sustain a modified free-form style, disgust with the state of radio led to the emergence of pirate radio stations.

Although the practice of "squatting" on frequencies dates back to the early days of the ham operators, pirate stations specialize in thumbing their noses at the Federal Communications Commission's (FCC's) regulations as well as at society in general. From call letters to playlists to publicity tactics, pirate stations stand for the fringes, the off-the-beaten-track listeners. Stations such as KPBJ San Francisco and KBLT Los Angeles play cat-and-mouse games with the FCC, while enjoying rabidly loyal followings.

Playing within the law are micro FM stations, low-wattage stations that cater to small geographic areas and often provide the only access to local news and events. Others serve as the voice of political outsiders, such as Radio Conciencia, connecting the embattled Immokalee tomato workers of Florida while transmitting vital weather and news bulletins in Central American dialects. Higher power but geographically limited stations operating as nonprofits, collectively called community radio, also provide alternative voices. Nevertheless, micro FM stations and community radio both lack the range and money to compete with commercial stations.

New technology has continued to revolutionize commercial broadcasting. Some dissatisfied with the state of mainstream radio create Internet-only stations, avoiding the cost and hassle of acquiring a broadcasting license.

Disputes with record labels over royalty payments often silence the stations before fan bases can be built, however.

An older broadcasting method, satellite radio, has emerged as an important commercial player. A subscriber-based format outside the jurisdiction of the FCC, satellite provides cover for nationally syndicated shock jocks such as Howard Stern, who had faced increasing pressure from the FCC to clean up his show's language and content on the FM band. Major satellite networks Sirius and XM Radio have become standard issue in American cars as well as being aired on cable and satellite television, virtually guaranteeing an increasing share of the listening market.

The emergence of satellite and Internet as alternative media outlets has not diminished the impact or allure of traditional radio. Hundreds of thousands of citizens have bombarded the FCC with complaints about consolidation and lobbied for expansion of micro FM licensure. Community stations around the country enjoy robust membership and provide vital community services while crafting innovative programming. If anything, the availability of affordable satellite service and the advent of Internet streaming have only enhanced the reach and mission of alternative radio, ensuring the continuation of the romance between the airwaves and the counterculture.

Ramones, The

Formed in 1974 in Forest Hills (Queens), New York, the Ramones were an iconic punk rock band. Regarded by many as the first punk band, they remained at the heart of the American counterculture for almost twenty years. Famously hardworking, the band produced furiously fast cartoon punk-pop music influenced by early punk artists such as the Stooges, Iggy Pop, and the New York Dolls, as well more mainstream rock bands such as the Who, the Rolling Stones, and the Beatles.

The band included singer Joey Ramone (Jeffrey Hyman); lead guitarist Johnny Ramone (John Cummings); bassist Dee Dee Ramone (Douglas Colvin), who left the group in 1989; and, variously, drummers Tommy Ramone (Thomas Erdelyi), Marky Ramone (Marc Bell), Elvis Ramone (Clem Burke), and C.J. Ramone (Christopher Joseph Ward). In addition to the Ramone surname, inspired by a pseudonym of Beatles singer-songwriter Paul McCartney, band members shared uniform long hair and leather jackets.

The Ramones began playing in the New York City punk club CBGB alongside early versions of the bands the Talking Heads and Blondie. By 1975, the Ramones had earned full-page coverage in *Rolling Stone* magazine. Their eponymous first album was released in 1976 on Sire records, with which they remained signed until 1992, when they moved to the Radioactive label. The Ramones recorded more than twenty-five albums, fourteen of which were original studio recordings.

They rarely reached the singles charts in the United States. However, they gained cult status in South America, Japan, and Europe. They were particularly influential on the British punk scene, where they inspired bands such as the Clash, the Damned, and the Sex Pistols. The pared-down style of songs such as “Sheena Is a Punk Rocker” stood out at a time of musical flamboyance. Meanwhile, the excesses of the members’ rock and roll lifestyle became legendary, particularly their relationship with music producer Phil Spector, who produced four of their singles, including “Baby I Love You.”

Ever ready to deal with marginal or taboo subject matter, the Ramones often were denied airplay on commercial radio stations. Concurrently, their cult status grew, encouraged by celebrity fans such as horror writer Stephen King, who mentioned the band in a number of his books. In turn, the band wrote and recorded a song for the soundtrack of the film *Pet Sematary* (1989), based on King’s novel of the same title. In addition, the Ramones had appeared in the 1979 film *Rock’n’ Roll High School*.

In later years, the band toured alongside U2, Pearl Jam, White Zombie, and Soundgarden. In 1985, Joey Ramone joined Steven van Zandt (guitarist for Bruce Springsteen’s E-Street Band and an actor on the hit television show *The Sopranos*) and other musicians in recording for Artists Against Apartheid, a group founded by van Zandt to denounce apartheid in South Africa. And Dee Dee, while still writing songs for the Ramones, recorded a rap album as Dee Dee King in 1989.

The longevity of the group’s touring career, compounded by health problems and increasing personal animosity, finally led the Ramones to disband after a farewell tour in 1996. They reunited for two final appearances in 1997 and 1999. Three of the band’s original members died in the ensuing years: Joey of Hodgkin’s lymphoma in 2001, Dee Dee of a heroin overdose in 2002, and Johnny of prostate cancer in 2004. The Ramones were inducted into the Rock and Roll Hall of Fame in 2002, and their legacy continues through the music and style of bands on both sides of the Atlantic.

Rand, Ayn (1905–1982)

Novelist and philosopher Ayn Rand, founder of the philosophic system known as Objectivism, was a quintessential counterculture thinker. She often said that she was challenging 2,500 years of traditionalist, Judeo-Christian culture by proclaiming a secular standard of morality for human life and declaring rational self-interest as the means to its achievement. According to Objectivism, reality is what it is, independent of what human beings think or feel, and reason is the only means to knowledge. In novels such as *We the Living* (1936), *The Fountainhead* (1943), and *Atlas Shrugged* (1957), Rand dramatized her views that individual rights are essential to survival in a social context, and that laissez-faire capitalism is the only social system consonant with such rights. In these and other works, she celebrated the fully integrated individual, who recognizes no conflict between mind and body, reason and emotion, thought and action, or morality and prudence.

Rand was born Alisa Zinov'yevna Rosenbaum on February 2, 1905, in St. Petersburg, Russia. Her father's pharmacy was confiscated by the Soviets after the Bolshevik Revolution of 1917, and the family moved to Crimea. She returned to St. Petersburg to study philosophy and history at the University of Petrograd (later St. Petersburg State University), earning her degree in 1924.

In February 1926, having been granted a visa to visit relatives in the United States, she traveled to New York and Chicago—and resolved not to return home. Moving to Hollywood in hopes of becoming a screenwriter, she changed her name to Ayn Rand and found odd jobs as a script reader. She married the actor Frank O'Connor in 1929 (the couple would remain together until his death in 1979) and became a U.S. citizen two years later.

Given her background, Rand's advocacy of capitalism was no mere apologia for the American status quo. She was a radical critic of what she characterized as the mystical, altruist, and collectivist roots of contemporary culture and the "New Fascist" statist politics that it made possible. In nonfiction anthologies such as *The Virtue of Selfishness* (1964) and *Capitalism: The Unknown Ideal* (1966), Rand maintained that government intervention had been the cause of socioeconomic injustice and instability, including militarism, monopolies, business cycles, and ever-increasing social fragmentation along material, racial, ethnic, sexual, generational, and other lines. Conflict among groups was inevitable in the current system, argued Rand, requiring the sacrifice of some groups for the benefit of others and leading to the triumph of groupthink in social life.

Rand's advocacy of free-market capitalism suggested little common ground with the radical left counterculture of the 1960s and 1970s. And while she repudiated the New Left for its "Hegelian" and "Marxist" ideology, and the hippie student rebels of the 1960s for their "emotionalism," "subjectivism," and "nihilism," her work had a certain kinship with the counterculture revolt against authoritarianism and social conformity. Rand shared with the student rebels an opposition to the Vietnam War and the military draft, and she joined in their rejection of social hypocrisy. At the same time, Rand contended that counterculture activists of the time merely reflected the bankruptcy of the establishment by blaming science, technology, and capitalism for the woes of society and by proposing an "anti-Industrial Revolution" as the antidote.

Despite the disdain that Rand heaped on the counterculture, students of the 1960s ranked her as among those who had most influenced, or were most admired by, that generation. Among writers, Rand was tied for sixth place with feminist Germaine Greer, behind satiric novelist Kurt Vonnegut, Lebanese American poet Kahlil Gibran, journalist Tom Wolfe, French philosophers Jean-Paul Sartre and Albert Camus (tied for fourth place), and Beat poet Allen Ginsberg.

Many in the counterculture responded favorably to Rand's attacks on intellectual, political, and educational elites. Her influence would extend to popular artists of the era, including rock musicians such as Neil Peart, drummer and lyricist for the band Rush, which paid tribute to "the genius of Ayn Rand," and comic-book artists and writers Steve Ditko and Frank Miller, whose stories expressed a Randian politics of rebellion.

Although Rand rejected many of the collectivist social and political claims of 1960s sexual liberationists, she also influenced a generation of individualist feminist writers (such as Joan Kennedy Taylor, Wendy McElroy, and Sharon Presley) and gay libertarian writers (including those affiliated with the Independent Gay Forum) who were

inspired by her heroic vision of individual authenticity. Ayn Rand died in New York City on March 6, 1982.

Randolph, A. Philip (1889–1979)

One of the twentieth century's foremost labor organizers and civil rights activists, Asa Philip Randolph was the founder of the first black labor union in the United States, the Brotherhood of Sleeping Car Porters (BSCP), in 1925, and he played a central role in bringing African Americans into the labor movement.

A native of Florida born in Crescent City on April 15, 1889, and raised in nearby Jacksonville, Randolph joined the Great Migration and relocated to New York City in 1911, searching for greater economic and educational opportunities. In his early twenties, Randolph worked a variety of odd jobs to support himself while studying Shakespeare, socialism, public speaking, and other subjects of interest at the free City College.

Along with Chandler Owen, a fellow traveler in New York City's vibrant political and cultural scene during the early twentieth century, Randolph launched a monthly magazine called *The Messenger*. Through the magazine's pages, he denounced U.S. participation in World War I, encouraged African Americans to resist enlistment in a segregated military, and provided an opportunity for scores of writers to articulate a socialist-influenced program for black liberation.

Randolph put his principles into action by dedicating his talents to the BSCP, a predominantly African American labor union representing Pullman porters. As the union's president, Randolph situated himself in the vanguard of a decade-long struggle by black workers to represent themselves in collective bargaining. In addition to confronting a corporation with a strong reputation for hostility to independent unions, Randolph and the BSCP regularly came to loggerheads with the American Federation of Labor (AFL) about racial discrimination in local affiliates, a problem that Randolph would confront throughout his career, well into the 1950s.

In addition to being his generation's premier African American labor leader, Randolph made other significant contributions to the struggle for black equality. Most important among these was the 1941 founding of the March on Washington Movement (MOWM). Supported by African American leaders of the mid-twentieth century, including Walter White, Lester Granger, and Mary McLeod Bethune, the movement threatened widespread public protest during World War II and forced President Franklin D. Roosevelt to issue an executive order prohibiting racial discrimination in defense industries.

Although there was no actual march on the capital, Randolph's harnessing of pressure to force the federal government to address racial inequality was pioneering. Additionally, the MOWM was a training ground for African American activists of the 1940s to discuss and implement Gandhian nonviolent civil disobedience, a protest tactic that would later be widely employed in the civil rights movement.

Randolph's lifetime dedication to struggle included newspaper publishing, labor organizing, spearheading the MOWM and an effective postwar campaign to desegregate the armed forces, and joining Martin Luther King, Jr., in the Prayer Pilgrimage of May 1957 (the largest civil rights demonstration in America to that date). Randolph's final major battle against racial inequality was the 1963 March on Washington for Jobs and Freedom. Organized by Randolph with activist Bayard Rustin, this mass demonstration would prove to be emblematic for many observers of the civil rights movement. Although the day is best remembered for King's historic and moving "I Have a Dream" speech, it was Randolph who, in the demonstration's keynote address, declared, "The civil rights revolution is not confined to Negroes; nor is it confined to civil rights." It is fitting that a protest embodying the goals of the civil rights movement marked the culmination of Randolph's career as an activist.

In more than half a century of struggle, Randolph was guided by progressive socialist principles, but he remained virulently anticommunist, and his faith in American democracy never wavered. As a labor leader, trailblazer in the use of nonviolent mass-protest tactics, and shaper of African American thought, he sought not to destroy capitalism but to incorporate African Americans into the nation's capitalist democracy on equal footing with whites. Randolph died on May 16, 1979, in New York City.

Rankin, Jeannette (1880–1973)

Jeannette Rankin was the first woman to be elected to the U.S. Congress and the only member to vote against U.S. entry into both World War I and World War II. A suffragist, pacifist, and worker for social reform, she assumed roles that were counter to both the prevailing culture and traditional views of femininity.

Rankin was born on June 11, 1880, near Missoula, Montana, where she attended local public schools and graduated from the University of Montana in 1902. She taught school for several years before entering the New York School of Philanthropy in 1908, and she later served as a social worker in Montana and Washington.

Discontented with social work, Rankin enrolled at the University of Washington and while a student there became involved in the woman suffrage movement. Eventually, she became legislative secretary of the National American

Woman Suffrage Association, an organization that, through a series of well-orchestrated state campaigns, was active in securing ratification of the Nineteenth Amendment in 1920, guaranteeing women the right to vote.

A member of the Republican Party, Rankin ran for Congress in Montana in 1916, campaigning for universal suffrage, prohibition, child welfare reform, an end to child labor, and keeping the United States out of World War I. One of her first actions was to introduce a bill that would have allowed women citizenship independent of their husbands.

On the evening Congress convened in April 1917, President Wilson called for a resolution for the United States to enter the Great War. Although Rankin had not been previously identified as a pacifist, she decided to vote against U.S. participation in the conflict. Carrie Chapman Catt of the National American Woman Suffrage Association tried to change Rankin's mind, because she thought that a vote against war would brand suffragists as unpatriotic. By contrast, Alice Paul of the Woman's Party thought that women in politics should speak for peace. In the end, Rankin voted with forty-eight other members of Congress against war with Germany.

Her controversial views on World War I, trade union rights, equal pay for men and women, and birth control cost her the Republican nomination for the U.S. Senate in 1918. She ran as an independent, but was easily defeated without the support of the party.

After leaving Congress in 1919, Rankin campaigned for the Sheppard-Towner Maternity and Infancy Protection Act of 1921, which provided federal funding for the health and welfare of women and children; the Child Labor Amendment, which proposed to limit and regulate child labor; and a variety of pacifist causes and organizations, such as the Women's International League for Peace and Freedom, the oldest women's peace organization in the world. In addition, she served as a field representative for the National Council for the Prevention of War, established in 1921 by representatives of seventeen national pacifist organizations to serve as a clearinghouse for the peace movement.

In 1940, Rankin won reelection to the House of Representatives, again as a Republican from Montana, but this time on an explicitly antiwar platform. After the Japanese attack on Pearl Harbor the following December, she was the only member of Congress to vote against the United States entering World War II. She was convinced that President Franklin D. Roosevelt had deliberately provoked the attack. After casting her vote on FDR's war measure, Rankin hid from angry crowds in a nearby phone booth until police could escort her home. Her vote made her extremely unpopular, and she did not seek reelection in 1942.

In the years after World War II, Rankin traveled to India to study the pacifism of spiritual leader Mohandas Gandhi. In the 1960s, she established a self-sufficient women's cooperative in Georgia and actively campaigned against the Vietnam War. In January 1968, at age eighty-seven, she led 5,000 peace protestors—calling themselves the "Jeannette Rankin Brigade"—in a demonstration against the Vietnam War in Washington, D.C. She died in Carmel, California, on May 18, 1973.

Rap Music

Rap music is a genre defined by the presence of “rapping” (also known as “MCing” or “rhyming”). The term describes a popular form of syncopated, rhythmic street poetry that first gained popularity in the United States through young urban poets in the late 1960s and early 1970s. The art form gained momentum in New York City during the remainder of the 1970s. The term *rap* is commonly understood as an abbreviation of *rapid*, in reference to the comparatively quick, poetic delivery of the genre. In the 1970s and 1980s, rap artists typically infused lyrics with an easy-to-follow rhyme scheme, blunt self-referential humor, and brutal honesty about the harsh circumstances of inner-city life, including gang violence and drug abuse. Rap music, along with emerging affiliated trends such as break dancing, graffiti art, and “turntablism,” formed the elements of a new and accessible hip-hop counterculture movement that was embraced in many urban circles across the nation, primarily in the 1980s.

Young listeners in urban centers, including New York City, Chicago, Los Angeles, and Detroit, often were attracted to early rap music, as many failed to relate to the hollow concepts of love and picturesque good times portrayed in mainstream music. In the wake of the civil rights movement of the 1960s, many African American artists and audiences embraced the genre as a revelatory and definitive new voice in American media. Since the late 1960s, many rap artists have used the genre to explore and comment upon inner-city poverty, violence, race relations, gender issues and roles, urban drug use, and rampant materialism. They have intertwined lyrics with autobiographical touches, particularly in relation to poverty, violence, and romance, and often with humor. Rap artists have addressed these topics from many different perspectives with widely varying aims, including sheer entertainment, political motivation, and shock value.

Iconic figures in rap music throughout the genre’s history include pioneers Kool DJ Herc (Clive Campbell), Afrika Bambaataa (Kevin Donovan), Ice-T (Tracy Marrow), Tupac Shakur, and Dr. Dre (Andre Young), along with groups like the Sugar Hill Gang, Run DMC, N.W.A. (Niggaz With Attitude), Public Enemy, and A Tribe Called Quest.

Slain hip-hop star Tupac Shakur, symbol of the West Coast rap style and subculture, is memorialized in urban graffiti art. West Coast rap emphasized heavy bass music and edgy lyrics about ghetto life. (Al Pereira/Michael Ochs Archives/Getty Images)

Roots

Rap music in America began with the formation and success of the African American, New York City–based group the Last Poets in the late 1960s and early 1970s. Formed in 1968 on Black Muslim leader Malcolm X’s birthday in response to the urban turmoil of the civil rights movement, the group relied heavily on primitive, noninvasive rhythms to showcase rapid-fire poetic delivery. In songs such as “When the Revolution Comes” (1970) and “This Is Madness” (1971), the group’s furious lyrics and delivery were used to explore the circumstances of African Americans living in urban centers. The success of the Last Poets was a watershed event in the history of rap music, as the group’s reliance on harsh tribal rhythms, racially charged lyrics, and frenetic delivery earned it a tremendous following. The Last Poets embraced and endorsed traits that would be further popularized by successful groups such as Public Enemy and the Jungle Brothers in the following decade.

As the 1970s progressed, artists such as New York–based Jamaican refugee Herc solidified the success of the genre through the promotion of rap-based block and club parties in urban centers of the Northeast. Herc, inspired by the uplifting work of black activist and poet Gil Scott-Heron, occupies a dual place in the history of the genre as the first hip-hop disc jockey and one of the first popular American rap artists. Artists who followed closely in Herc’s footsteps, including Coke La Rock and Melle Mel (Melvin Glover), focused primarily on MC duties while allowing DJs to provide beats and samples.

By the close of the 1970s, artists such as Herc, La Rock, and Mel solidified a New York City following at parties and in clubs. A thriving rap-devoted club following developed in the city as the disco movement thrived simultaneously.

In 1979, rap experienced a thunderous embrace from new demographic groups with the release of the Sugar Hill Gang’s first single, “Rapper’s Delight,” on Sugar Hill Records. The nine-member Sugar Hill Gang was formed primarily of workers at a New York City pizzeria. Upon the single’s release, the group gained an immense following from performances at New York City block parties. Often considered the first commercially successful rap single, the group’s sixteen-minute tour de force continues to hold the record as the best-selling single in rap history. Through its easy-to-follow rhyme structure, autobiographical subject matter, and aurally-familiar sampling

of Chic's disco hit "Good Times" (1979), "Rapper's Delight" offered solid proof of the genre's appeal among young audiences, across economic and gender boundaries. Many Sugar Hill artists progressed to success in the early 1980s.

Golden Era

The years 1980 to 1997 are often called the Golden Era of rap music, primarily due to the barrage of genre-defining material that was released then. Many of the rap artists who surfaced in the 1980s reached a degree of critical and commercial acclaim that remains unrivaled by contemporary musicians within the genre.

In 1982, *The Message*, an album by Grandmaster Flash and the Furious Five, married the DJ-produced sound of late Sugar Hill records with the social consciousness and ferocity of the early-1970s work by the Last Poets. This trend continued throughout the decade, as material by artists such as EPMD, Erik B. and Rakim, Run DMC, Biz Markie (Marcel Hall), Slick Rick (Richard Walters), and LL Cool J (James Smith) formed the standard by which critics and audiences judge the majority of contemporary rap music. All of these artists employed the successful formula of "Rapper's Delight" to some degree, combining creative DJ-driven implementation of samples from popular music with straightforward and accessible rhyme delivery.

Golden Era artists, primarily groups, also had an influence on 1980s urban fashion and humor as well as the lifestyles of many teenagers and young adults across the nation. Audiences in New York donned matching leather jackets and gold chains in mimicry of Run DMC. (New York-based artists already had influenced fashion earlier in the decade, when groups of friends across the city purchased matching jumpsuits in emulation of groups such as the Sugar Hill Gang.)

Many Golden Era groups relied on fashion gimmicks, along with humorous lyrics, to win the hearts and minds of increasingly large audiences. This trend was most evident in the work of the George Clinton-inspired, California-based 1980s rap group the Digital Underground, in songs like "The Humpty Dance" and "The Way We Swing" from the album *Sex Packets* (1989). Like Clinton's 1970s-era bands Parliament and Funkadelic, the Digital Underground embraced stage theatrics; during performances, group leader Shock-G (Gregory Jacobs) would often change into contextually specific costumes for different material. Many artists in the Golden Era were also scathingly autobiographical, often with humor and particularly in reference to subjects such as heartbreak. Both of these trends are evident in Biz Markie's "Just a Friend" (1989), in which the rapper leaves behind the genre's traditional romantic boasting to offer consecutive personal tales of unrequited love.

In the late 1980s and early 1990s, as news of the HIV/AIDS epidemic spread, many Golden Era artists, including the California artists Dr. Dre, Snoop Dogg (Calvin Broadus), and Ice Cube (O'Shea Jackson), consistently alluded to safe sex practices. As was the case in the 1970s for limited audiences, Golden Era rap music offered a compelling alternative for listeners tired of the trite themes of more radio-friendly fare. Many young African American teenagers across the country mimicked the style (in humor, fashion, and behavior) of Golden Era MCs, particularly in the case of Run DMC. Rap-exclusive labels such as Tommy Boy Records and Def Jam Records emerged during the 1980s as a result of the genre's overwhelming popularity among young audiences.

In the late 1980s and early 1990s, an interesting dichotomy emerged in American rap music. On the one hand, the emergence of East Coast gangsta rappers, whose violent lyrics were inspired by pioneers like Ice-T, Schoolly D (Jesse Weaver), and KRS-One (Lawrence Parker), gained mainstream appeal in the work of such groups as California's N.W.A. The gangsta subgenre became popular in the 1990s primarily through the efforts of labels such as Death Row Records and Bad Boy Records. The violent, often misogynistic material by California artists such as Eazy E (Eric Wright), Ice Cube, and Dr. Dre was embraced by many West Coast gangs, while Bad Boy Records artists like Biggie Smalls (Christopher Wallace) were embraced by similar audiences on the East Coast. In both regions, gangsta rap labels relied on use of popular hooks and samples in an attempt to increase mainstream appeal and record sales.

On the other end of the rap spectrum, the success of politically and emotionally charged rap artists such as Public

Enemy, the Pharcyde, and A Tribe Called Quest in the late 1980s and early 1990s gave way to an emerging independent rap movement in the 1990s.

Defining record labels emerged for the independent movement, including Quannum Projects and Definitive Jux Records. Gangsta rap flourished until 1997, a year punctuated by the murder of two of the subgenre's biggest names, West Coast rap artist and actor Tupac Shakur in September 1996 and East Coast gangsta Biggie Smalls (or Notorious B.I.G.) in March 1997.

Mainstream Leanings

While independent rap production continues to capture the attention of primarily college-aged audiences, mainstream interest in gangsta rap has given way to an era of label-controlled, homogenized, radio-friendly fare. Overall, critics and audiences often see independent rap music as a continuation or elaboration of traditions and techniques established during the Golden Era. Artists such as Blackalicious, Dead Prez, Jedi Mind Tricks, Sage Francis, and the People Under the Stairs have attained cult followings in recent years. Many of today's mainstream artists continue to maintain popularity despite a hollow lyrical focus on materialism. Traditional rap events in the style of Kool DJ Herc's parties also surface in large-city competitions between lyricists, primarily in California and along the East Coast, where audiences often judge artists on lyrics and rhyme delivery.

On the other hand, many of the artists and producers who embraced the gangsta rap trend either have softened their abrasive lyrics or have catered to mainstream demands to increase popular appeal. In the 2000s, widely diverse styles of rap emerged from mainstream and independent rap artists. Despite the pervasive commercial success of the genre, the countercultural aspects of rap music, including direct inspiration from Golden Era artists, independent record distribution, and rap competitions in large cities, no doubt will continue to flourish.

Rastafari Movement

Rastafarianism is a millenarian religious and cultural movement that arose in the 1930s among black Jamaicans and continues to the present day. According to Rastafarian belief, former Ethiopian Emperor Haile Selassie (originally known as Ras Tafari and accepted as the "Lion of Judah" as referred to in the Hebrew Bible) was God incarnate. Crucial to the emergence and spirit of Rastafarianism were the black separatist teachings of Jamaican

liberationist Marcus Garvey, who advocated the formation of separate black businesses and social institutions, and came to be regarded as a Rastafarian prophet. Other lifestyle practices associated with Rastafarians include growing the hair into long braids known as dreadlocks, not eating certain foods thought to be unclean, such as pork, and the ritual use of ganja (marijuana). The Rastafari movement has spread throughout the world, largely on the strength of its popular musical style, reggae.

Origins

The crowning of Haile Selassie I as emperor of Ethiopia in 1930—making him the monarch of Africa's only independent nation—was regarded by many working-class and peasant Jamaicans as fulfillment of the biblical prophecy that a black king would be crowned in Africa. Although evidence is scant, it appears that several individuals had simultaneously begun to promote Haile Selassie I as a black liberator and messianic figure. The most famous of these was Leonard Howell, who regarded Selassie as the incarnation of God and claimed to be his divine messenger. From 1933 to 1940, Howell preached the tenets of Rastafarianism. His message asserted the superiority of blacks to whites and advocated resistance to white oppression. His advocacy of violent revolution attracted the attention of Jamaican authorities, and in 1933 he was sentenced to a two-year prison term for sedition. In 1940, he established a Rastafarian community known as Pinnacle on an abandoned colonial estate. By the mid-1950s, there were a dozen or more small (20 to 200 members) Rastafarian groups in the Kingston area. By the 1970s, the number had grown to fifty or more.

Rastafarians believe that they are the descendants of the Israelites, whom they see as God's chosen people, and that they will someday be returned to Zion (Ethiopia). Many organized religions throughout history have instructed their downtrodden followers to suffer silently while awaiting their heavenly reward. Rastafarianism, by contrast, teaches that heaven is on Earth and that political struggle can be used to improve social conditions. This philosophy proved appealing to thousands of poor Jamaicans, who could relate to the Rastafarian emphasis on the present human condition as opposed to a mythical afterlife.

The basic tenets of Rastafarianism, according to George Simpson's classic 1955 article "Political Cultism in West Kingston," are as follows: (1) black people were exiled to the West Indies because of their transgressions; (2) whites are inferior to blacks; (3) the Jamaican situation is hopeless—that is, there is no way Jamaican blacks can ever be truly liberated as long as they remain in Jamaica; (4) Ethiopia is heaven; (5) Haile Selassie is the living God; (6) the emperor of Abyssinia (now Ethiopia) will arrange for expatriated persons of African descent to return to the homeland; and (7) blacks will soon get their revenge by compelling whites to serve them.

Despite influences such as Garvey's, modern-day Rastafarianism is a diffuse movement with a wide range of beliefs. Many Rastafarians believe in some but not all of the tenets. For example, some believe in the divinity of Haile Selassie while others do not; some Rastas eat meat while others are vegetarians (although most follow Ital, or "vital," rules for the procurement and preparation of food); and some Rastas smoke ganja while many others choose not to. The variations in belief reflect the loose, decentralized nature of the movement itself. There is no universal structure or central authority and no single leader. Followers, both in the United States and in Jamaica, tend to gather in small, informal groups, and often refuse to take part in elections. This has changed in recent decades, as more Rastafarians have become politically active. Socialist Prime Minister Michael Manley attempted to win Rastafarian votes during the elections of the 1970s by addressing their concerns and adopting reggae songs, most notably Delroy Wilson's "Better Must Come" (1971), as campaign anthems.

Growth and Influences

The mid-to late 1950s was a period of rapid growth for Rastafarianism in Jamaica, as more traditional Afro-Caribbean religions, such as revivalism, went into decline. The growth continued into the 1970s and 1980s. While older Rastafarians believed strongly in the repatriation of Jamaican blacks to their ancestral African homelands, the return-to-Africa movement was de-emphasized in later years as younger Rastafarians insisted that improvements in the living conditions of the Jamaican poor must stem from changes in Jamaican society.

Rastafarians believe that “Babylon,” usually identified with the United States, Great Britain, the Jamaican government, and organized religion, is the root cause of the poverty of Jamaican blacks.

Rastafarianism has had a profound influence on reggae, Jamaica’s indigenous popular music. Rastafarian themes are common in both ska and reggae, and the movement even has its own form of music, known as *nyabinghi*, which makes heavy use of African percussion and polyrhythms. Awareness of African identity and culture is a predominant theme in several forms of Rastafarian cultural expression. Rastafarian culture has spread throughout the Caribbean, the United States, and the world, in large part through reggae music but also through art, literature, and philosophy. Reggae music in general and singer Bob Marley’s work in particular have gained wide popularity all over the world, especially in Africa. Elements of Rastafarian culture also have become popular among non-Rasta American youth, including the dreadlocks hairstyle, ganja smoking, and Rasta-influenced clothing styles.

Rastafarianism in the United States

Although there have been no comprehensive studies of Rastafarianism in the United States, it is believed that the movement was a largely Jamaican phenomenon until the mid-1960s. Many Caribbean people migrated to the United States in the 1960s and 1970s, increasing the visibility of Rastafarians in U.S. cities with substantial Jamaican populations, such as Boston, New Haven, New York, Philadelphia, Washington, D.C., Miami, Chicago, Houston, Los Angeles, and the San Francisco Bay Area. New York City has historically been the most important U.S. urban center for Rastafarianism, in large part because of Marcus Garvey’s early work in that city. Early black leaders such as Leonard Howell also spent significant periods of time in New York.

After a period of growth in the 1970s and 1980s, Rastafarianism in the United States today remains a limited phenomenon. National surveys conducted in 1990 and 2001 indicate that between 10,000 and 15,000 self-identified Rastafarians live in the United States. These numbers are comparable to those for such other folk religions such as Wicca and Eckankar, though many researchers believe that estimates severely under-represent actual numbers of followers. In the earliest days of Rastafarianism in the United States, the movement’s adherents were often portrayed in the mainstream media as violent, drug-addicted criminals.

Most U.S. Rastas are Caribbean immigrants, though others are African, African American, Native American, and even white American. Due partially to their emphasis on self-reliance, many Rastafarians in the United States have started their own businesses, including reggae record stores, health food stores, Rasta accessory stores, and Ital restaurants.

As in Jamaica, the Rastafarian community in the United States is a decentralized and leaderless movement, unaffiliated with any organized church or congregation. Nevertheless, there are several important Rastafarian and Afrocentric churches and other organizations in the United States, among them the Ethiopian World Federation (established in New York City in 1937), the Twelve Tribes of Israel, the Ethiopian Orthodox Church, and the Church of Haile Selassie I.

Rave Culture

Rave culture is the underground music and dance scene associated with raves, all-night parties typically held in warehouses, clubs, or outdoor venues and featuring laser light shows, electronic music, and, in many cases, ecstasy and other drugs. With antecedents in the 1960s, rave emerged as a distinctive culture and style in the 1980s. Rave parties reflect a collective sense of well-being and enthusiasm that, despite the opposition of politicians and law enforcement in the early years, transcends ethnicity, social-economic class, and sexual orientation. It is an inclusive culture in which up to thousands of partiers dance until the sun comes up, at which time they part ways and return to their jobs, schools, neighborhoods, and separate lives.

In the spirit of 1960s psychedelic rock culture, English club-goers in the 1980s combined acid house and techno music with the drug ecstasy in a series of large, outdoor dance events. These raves, as they came to be called, attracted thousands of people to venues in London and Manchester during the summer of 1988. By the early 1990s, New York DJ Frankie Bones shared his English club-scene experiences with America through his STORMraves, huge raves that also attracted thousands of partygoers. British DJ Steve Levy brought raves to Los Angeles, while Dianna Jacobs, Preston Lytton, and Mark Heley (an English expatriate) brought Toon Town parties (cartoon-themed raves) to San Francisco.

Most early raves were held illegally on private property in places such as brickyards, warehouses, parking garages, and even churches, or outdoors on beaches or in deserts, wooded areas, or cow pastures. The illicit and unconventional nature of the events, not to mention the drug use, added elements of danger and excitement that only increased the allure to rebellious partygoers. However, chronic shutdowns by law enforcement proved to be a disappointment for both partygoers and promoters. As a result, promoters such as Les Borsai and his archrival, Daven “the Mad Hatter” Michaels, turned to promoting large, extravagant, themed raves in legally reserved venues.

DJs, or so-called digital shamans, such as Doc Martin, Jenö, Richie Hawtin, and Sven Vath, utilize a combination of synthesizers, turntables, and computer programs to set the mood and control the crowd as it writhes, bounces, and surges to the techno, house, and electronica beats under laser light and artificial fog. A DJ may incorporate punk, pop, funk, rock, movie themes, and even nursery rhymes into the music, laying down a seamless soundtrack for the night's experience. The DJ's role is so crucial to the ambience that good ones are sought after, catered to, and widely celebrated in the rave world.

As the music pulses, ravers—who may be waving glowsticks, wearing “kandi” necklaces and bracelets made of plastic beads, clad in “phat pants,” and sporting nostalgic backpacks and clothing with childhood favorites such as Winnie the Pooh and Teletubbies on them—dance alone, with friends, or with strangers. Drugs such as ecstasy induce a sense of euphoria and unity, while heightening the senses (causing sounds to become sharper and colors more vibrant); some ravers wear dust masks smeared with Vicks VapoRub to enhance the effects of ecstasy. The marathon dancing and drug use carry the risk of dehydration, so many ravers take breaks to lounge together in “chill out” areas with bottles of water. The experience, for some spiritual and for others tribal, culminates in a sense of PLUR (an acronym for peace, love, unity, and respect) that promotes acceptance, connection, and oneness with fellow beings.

The increasing commercialization of raves since the 1980s has led many old-school ravers to lament that “rave is dead.” By its very nature, they argue, rave rejects popular culture and entrenched social mores. Nevertheless, as

raves have gained in popularity, event promoters and corporate sponsors have mainstreamed the experience. Organized raves are regarded by purists as formulaic in presentation, expensive (with promoters charging upwards of \$50 a ticket), and commercialized. Another factor in the changing nature of rave culture is the increased use of harder drugs, such as crystal meth, ketamine (“Special K”), and LSD, as well as alcoholic beverages, such as Vex and Gruv, and highly caffeinated nonalcoholic drinks such as Red Bull. The edgier scene created by harsher drugs, alcohol, and direct marketing is said to detract from the utopia-like environment and has alienated many original ravers.

Ray, Man (1890–1976)

One of the most influential American artists of the early twentieth century (though he lived for much of his life in Paris, France), Man Ray is known primarily for his avant-garde photography, but he also worked as an assemblage artist, draughtsman, painter, and filmmaker. He is credited with founding the American arm of the Dada “anti-art” movement, which began in Europe as a rejection of the aesthetics of modern visual art, and was a central figure as well in the surrealist and abstract art movements.

Born Emmanuel Rudnitsky in Philadelphia on August 27, 1890, to Russian immigrants, he moved with his family to Brooklyn, New York, at an early age. It was there that he developed interest and inclinations in art. Moving to Manhattan after high school to pursue his career as an artist, he eventually befriended the French Dadaists Marcel Duchamp and Francis Picabia, photographer and Gallery 291 owner Alfred Stieglitz, and other members of the early-twentieth-century American avant-garde.

In 1921, after publishing one issue of a magazine called *New York Dada* and helping found a modernist organization called Société Anonyme, Man Ray famously declared that “Dada cannot live in New York” and moved to the Montparnasse section of Paris. While making his mark as an avant-garde photographer, he became deeply involved with both the French Dada and the surrealist art movements. Especially during the interwar years in Paris, Man Ray experimented extensively with photographic technique. This led him to the highly innovative use of solarization—the partial reversal of tones in a photographic image—grain enlargement and prints made without a camera, which he called Rayographs. These, he produced by placing objects directly on photographic paper and exposing them to light to capture their silhouettes.

With a growing reputation for portraiture as well, he documented some of the most famous literary figures of the

period, including James Joyce, T.S. Eliot, Ernest Hemingway, and Gertrude Stein. In addition to the surrealists and other members of the Paris art vanguard, such as Pablo Picasso and Constantin Brancusi, Man Ray's artistic circle included the photographer Lee Miller and the Parisian singer Kiki de Montparnasse, both of whom were his lovers.

Man Ray once said, "I paint what cannot be photographed. I photograph what I do not wish to paint." Many of his works have become icons in the history of modern Western art. Among these are "Tears" (1932), the close-up image of an eye "crying" glass tears; "Ingres' Violin" (1924), picturing Kiki's back with sound holes like those of a stringed instrument; "Gift" (1921), a menacing surrealist object consisting of a flatiron with nails attached to its surface; "Object to Be Destroyed" (1923), an assemblage consisting of a metronome with the photograph of an eye attached to it; and "At the Observatory Hour—The Lovers" (1934), a Magritte-like painting of a pair of disembodied lips floating in the sky.

Man Ray also produced an arresting and impressive body of fashion photographs for *Vanity Fair*, *Harper's Bazaar*, and *Vogue* magazines. His film credits include several surrealist productions of the 1920s, including *Le Retour à la Raison* (*The Return of Reason*, 1923), *Emak Bakia* (1926); *L'Etoile de Mer* (*The Starfish*, 1928), and *Les mystères du Château du Dé* (*The Mysteries of the Château of Dice*, 1929).

To escape the Nazi occupation of Paris, Man Ray returned to America to live in 1940. He went back to Paris in 1951 and remained a resident until his death on November 18, 1976.

Realist, The

Edited and published by social critic and stand-up comic Paul Krassner, *The Realist* was one of the most influential and durable underground publications in America during the latter half of the twentieth century. Beginning with its first issue in 1958, the magazine quickly established itself as a consistently readable source of satire, news, commentary, conspiracy theory, and hoax. Published out of the same building as the satirical *MAD* magazine, *The Realist* was viewed in many ways as the adult counterpart to the teen magazine.

In its most bracing moments, the magazine blurred the line between fiction and reality, often leaving readers questioning what they were willing to accept as true. In perhaps the paper's most outrageous and infamous article, Krassner used a real vignette from the 1960 Democratic Party leadership race between John F. Kennedy and Lyndon B. Johnson to introduce a report claiming that Kennedy's widow, Jacqueline, had caught Johnson having sex with the dead president's neck wound while on the flight from Dallas to Washington following Kennedy's assassination in 1963. The May 1967 article, titled "The Parts That Were Left Out of the Kennedy Book," was presented as unpublished excerpts from historian William Manchester's controversial book about the killing, *The Death of a President*.

Another piece that brought a great deal of attention to *The Realist*, ranging from the wildly positive to the harshly critical, was the Disneyland Memorial Orgy poster in 1967. Illustrated by *MAD* artist Wally Wood and published shortly following the death of Walt Disney, the poster depicted beloved Disney characters in varying states of undress and engaged in a variety of sexual activities. Designed as a statement against the repressive social codes and conservatism of the later 1950s and early 1960s, as represented by Disney, the poster would become probably the most popular, and most enduring, work to appear in the magazine. It has proven such a lasting image that digitally colored versions of the poster still sell in the twenty-first century.

The Realist provided a home for the critical voices of writers and activists who were denied publishing opportunities in the mainstream press. Among those who were given space within its pages were sex-worker organizer Margo St. James and conspiracy theorist Mae Brussell, who detailed the operation of the Watergate break-in well before the mainstream media took notice of it. The magazine also published social commentary by playwright Norman Mailer, novelist Ken Kesey, philosopher Robert Anton Wilson, and satirical novelist Joseph Heller.

In no ways a journal of detached satire, *The Realist* maintained a connection with real-world social developments and movements. Editorship of issue 81 in August 1968 was turned over to the anarchist-communist Diggers collective, providing them with an opportunity to present their radical egalitarian philosophies to a broader public.

Through *The Realist*, Krassner developed an influential form of what he called “participatory journalism.” When, following the publication in 1962 of an interview with humane abortionist Dr. Robert Spence, women called Krassner in search of safe abortions, he provided an underground abortion referral service. While covering the anti-Vietnam War movement in the United States, Krassner ended up cofounding the Youth International Party with Abbie Hoffman and Jerry Rubin in 1967. With money raised by selling “Fuck Communism” posters through *The Realist*, Krassner sent to Southeast Asia a reporter critical of the U.S. war effort.

After publishing regularly throughout the 1960s and into the early 1970s, *The Realist* was forced to suspend publication due to financial constraints in 1974. Krassner revived *The Realist* as an irregular newsletter in 1985 and continued publishing until the final issue, number 146, in 2001.

Recycling

Recycling is the practice and industry of separating, collecting, and breaking down domestic and industrial waste

for the purpose of manufacturing new items from the same raw material. In theory, the practice allows ecologically savvy citizens and businesses to cut back on the amount of waste produced by society at large. The motivation for recycling, ultimately, is to reduce energy consumption and conserve the earth's natural resources. Glass, paper, aluminum, and plastic have been the most commonly recycled materials since the practice was widely adopted in the United States in the latter decades of the twentieth century.

Recycling was implemented in a number of countries during both World War I and World War II, as citizens on the home front were encouraged or required to limit their consumption of vital commodities and to collect others for reuse. Although recycling continued to be encouraged after the wars in areas with depleted resources (such as Japan), Americans became entrenched in a massive cycle of environmental abuse.

Rather than expand or even continue its recycling campaigns, or seeking other solutions for its growing waste problem, the United States continued to open large waste dumps in the late 1940s. The Fresh Kills Landfill in New York, for example, built in 1948, reached such heights that it became the only manmade object visible from outer space besides the Great Wall of China. Other environmentally unsound American innovations of the 1940s included aerosol sprays, Styrofoam, and aluminum beverage cans.

As the suburbs expanded and mass consumption continued to increase in the 1950s and early 1960s, many people began to recognize that rampant waste and environmental destruction had become a fact of everyday life in America. Environmentalists such as Rachel Carson published books that called attention to the damage being caused to the natural world and the threats to human health. Carson's *Silent Spring* (1962), which focused on the indiscriminate use of chemical pesticides and fertilizers, was one of the first books to warn of the danger of ecological carelessness and to suggest recycling as a means of preserving nature. The warnings of Carson and others gave birth to the modern environmental movement.

The first wave of modern recycling programs were drop-off arrangements: participants brought aluminum, paper, and plastic materials to a collection site located in a shopping area or other easily accessible place. There, workers crushed or otherwise prepared the different materials for transport. Generally, brokers bought the recyclable materials and sold them to manufacturers, who in turn used them to create new products.

Federal officials tried several options in the mid-1960s to curb the unparalleled accumulation of waste, starting with the Solid Waste Disposal Act of 1965, which restricted the use of landfills. In 1969, a Modesto, California, group called Ecology Action organized a "Survival Walk" across the state, during which participants, led by environmentally conscious citizens Cliff and Mary Humphrey, created recycling collection sites along the way.

At the turn of the decade, Senator Gaylord Nelson (D-WI) called for the establishment of an annual teach-in called Earth Day. The first Earth Day was held in spring 1970. Modeled after the large-scale antiwar protests of the 1960s, the event attracted 20 million people to activities that promoted environmental education and encouraged Americans to embrace recycling. Within six months, approximately 2,000 collection programs were started nationwide.

As energy prices rose to unprecedented heights during the 1970s, glass bottle return centers and other recycling facilities began to surface in large cities, particularly in the states of California, Oklahoma, and Rhode Island, which offered cash for raw materials. In 1976, the Resource Conservation and Recovery Act mandated the sanitization of existing landfills by establishing Environmental Protection Agency regulations to protect citizens from potentially toxic overflows.

Recycling gradually increased in popularity among average citizens, and curbside collection made it easier to recycle from home. By 1986, San Francisco met its goal of recycling 25 percent of the city's waste. That same year, Rhode Island instituted the first statewide legislation to require citizens to use recycling centers for metal, glass, newspapers, and plastic. In 1987, Philadelphia became the nation's first large city to mandate citywide recycling; other municipalities have followed suit.

Since the late twentieth century, many major corporations, including McDonald's, Coca-Cola, and Pepsi, have

switched to recycled packaging material in an attempt to improve their public images and environmental “footprints.” Recycling retains a positive social connotation in the early twenty-first century, thanks in part to television commercials and films designed to increase environmental awareness. Community services, such as public recycling bins, scheduled pickup of various recycled materials, and the operation of recycling centers in most areas, have made it increasingly easy for citizens to participate in recycling programs.

Reed, John (1887–1920)

The journalist and Communist sympathizer John Reed was a war correspondent, friend of the Russian revolutionist Vladimir Lenin, and founder of the U.S. Communist Labor Party in 1919, one of the predecessors of the Communist Party USA. He is perhaps best known as the author of *Ten Days That Shook the World* (1917), a sympathetic account of the Bolshevik Revolution of 1917, which he experienced firsthand.

Reed was born on October 22, 1887, in Portland, Oregon, in the mansion of his maternal grandparents. Both of his parents were of prominent families; his father sold agricultural implements and insurance. As a boy, Reed attended public schools in Portland and suffered frequent bouts with a kidney ailment.

After graduating from Harvard in 1910, Reed moved to New York, where he worked on the *American Magazine* and published his poetry. During this period, he became acquainted with the work of muckraking journalists Ida Tarbell and Lincoln Steffens, but he felt that they were not doing enough to help oppressed workers. Drawn into socialist circles, Reed joined the staff of Max Eastman’s radical journal *The Masses*, in 1913, contributing more than fifty articles and reviews. He also experienced his first arrest that year, as a result of supporting striking garment workers in Paterson, New Jersey.

In 1914, Reed went to Mexico to report on that country’s revolution. He was sympathetic to Pancho Villa’s revolt there. Villa took a liking to the earnest young American and made him a staff officer with the rank of brigadier general. With the outbreak of World War I in Europe, Reed traveled overseas as a reporter for *Metropolitan Magazine*, serving as a war correspondent on several fronts.

In 1917, his reporting took him and his wife, fellow journalist and feminist Louise Bryant, to Petrograd (later Leningrad and St. Petersburg), Russia, to witness the October Revolution. His coverage of the activities of

revolutionary leaders and the rise to power of the Bolsheviks led to his close friendship with Lenin, who wrote a preface to the original edition of *Ten Days*.

Reed returned to New York as the Russian consul in 1918, but the U.S. government refused any dealings with him. Expelled from the Socialist Party the following year, he joined with a number of other radicals in forming the American Communist Labor Party, the first communist party in the United States. His activities, speeches, and several articles in the *Voice of Labor* led to his indictment for sedition in 1919.

Reed fled the United States for the newly formed Soviet Union in hopes that Lenin would grant him asylum and perhaps even a position in the government. However, Reed's opposition to the increasingly dictatorial nature of the Soviet regime strained relations between him and the Bolsheviks. He attempted to return to the United States several times, hoping to resume his communist agitation at home. During one such attempt, he was arrested in Finland and held for thirteen weeks before being returned to the Soviet Union.

In 1920, Reed contracted typhus. He died on October 20 while still in the Soviet Union. He was given a state funeral and became the only American to be buried at the Kremlin Wall in Moscow.

Reed, Lou (1942–)

Lou Reed is an iconoclastic rock musician who was an inspiration to a generation of New Wave and punk musicians during the 1970s and 1980s, both as a founding member of the band the Velvet Underground and as a solo performer.

He was born Lewis Alan Reed on March 2, 1942, in Brooklyn, New York, the first of two children. In 1953, his conservative Jewish family moved to the middle-class suburb of Freeport, Long Island, where the rebelliously eccentric and moody Reed channeled his energies into music. Concerns about his emotional health, however, led his parents to have him undergo electroshock treatment from 1959 to 1960.

Reed entered Syracuse University in 1960. The beatnik milieu, drug culture, and writings of Beat poets and writers Allen Ginsberg, Jack Kerouac, and William S. Burroughs, as well as figures from popular culture (such as actors Marlon Brando and James Dean, comic Lenny Bruce, and folk singer-songwriter Bob Dylan) reinforced his existing penchant to challenge the conventions of contemporary college life. At Syracuse, Reed formed rock and roll bands, composed, and presented a morose persona. He also met the self-destructive poet and professor Delmore Schwartz, who became a lifelong mentor. Reed graduated from Syracuse in 1964.

A year later, Reed met the musical prodigy, bassist, and keyboardist John Cale, with whom he formed what many consider to be one of the most influential bands in rock history, the Velvet Underground. Reed received managerial direction from pop artist Andy Warhol, who ensconced the band in New York's seedy avant-garde counterculture and played off Reed's bisexuality. Warhol would remain a strong influence on Reed's life and career.

Although the Velvet Underground achieved little commercial success with the four albums it released before Reed left the group in 1970, the band's cult following continued to grow, especially in Europe. Its music, ranging from punk to rock and lyrical to experimental, is characterized by Reed's deadpan vocals and his searching lyrics about drug abuse, deviant sexuality, and bleak emotions; the dark, urban romanticism that marked Reed's identity was central to the band's distinctiveness.

From its inception, the Velvet Underground was closely associated with the avant-garde art and music scene in New York City, which was influenced by surrealism and experimental art, including underground cinema. The Velvet Underground worked with several filmmakers to create a multimedia experience of music and visual art during its performances. In 1966, the Velvet Underground began working with Warhol on his Exploding Plastic Inevitable multimedia tour. The group provided the music during screenings of Warhol's films and during dance performances. Through a suggestion by Warhol, Christa Paffgen, also known as Nico, sang a number of songs on the group's debut album *The Velvet Underground and Nico* (1967). This album became known for Warhol's progressive cover art of a banana with the words "peel slowly and see"; when it was peeled, a pink peeled banana was revealed.

The group's second album, *White Light/White Heat* (1968), embraced a more aggressive sound not found on its first album. Tension developed between Reed and Cale as they struggled to influence the musical direction of the band. By the time the group recorded its third album, *1969: The Velvet Underground Live* (recorded in 1969; released in 1974), Doug Yule had replaced Cale. Before the group released its fourth album, *Loaded* (1970), Reed left the group.

Reed's sullen intensity and unpredictability continued in his solo recordings and performing career in the 1970s. The musical styles in his numerous albums include punk, pop, glam rock, art rock, rock and roll, hints of doo-wop, heavy metal, and, in one eccentric double album, pure electronic noise. Despite growing but uneven commercial recognition (beginning especially in 1973 with the album *Transformer*, produced by music icon David Bowie), Reed's discontent and disaffection remained part of his music: he was anxiously ambivalent about fame and artistic pretension.

Rock and roll veteran Lou Reed, who founded the Velvet Underground in 1965, is accompanied by performance artist Laurie Anderson at his 2006 photography exhibit. As of 2010, Reed continues to write and record music, as well as publish poetry. (Andrew H. Walker/Stringer/Getty Images)

Reed's second marriage, to Sylvia Morales in 1980, led to some stability (the couple would later divorce) and his recording and performing continued, but he struggled to control drug-addiction problems. Since the early 1980s, a seriousness has been apparent in Reed's music and lifestyle, which includes benefits for various causes as well as recording soundtracks. In early 2008, Reed married his longtime companion, performance artist Laurie Anderson. In the years since, he has continued to tour, perform, and record.

Regulators

In the mid-eighteenth century, disgruntled farmers in the Piedmont backcountry of the Carolinas who called themselves “Regulators” challenged what they regarded as inequitable treatment at the hands of colonial elites. Active in the western territories of current-day North Carolina and South Carolina, the Regulators mobilized by the hundreds, then by the thousands, to intimidate local sheriffs and other royal officials. Their anger at the perceived tyranny of urban elites, both British and American, was testimony to the egalitarian radicalism in the colonies during the 1760s and 1770s.

Backcountry German, Scottish-Irish, and Welsh settlers fought to preserve their traditional ways of life. Rural families in the region put a premium on economic cooperation, self-sufficiency, and isolation from city affairs. The absence of hard currency in their barter system, however, placed them at the mercy of tax collectors, who demanded payments to the British Crown in silver and gold.

As taxes rose to pay for government salaries, the sheriff’s wagon filled with items from a recently foreclosed farm was an increasingly frequent and distressing sight. The settlers’ pleas for issuance of paper money with which to pay taxes fell on deaf ears among nonelected local officials, who could increase their own salaries either by collecting more taxes than required or by selling off rural property to speculators.

Piedmont farmers felt compelled to restore accountability for corrupt authority. Drawing upon longstanding European traditions of popular resistance, they proposed to “regulate” the Crown’s tyrannical hold over them. Leaders and organizers, foremost among them the outspoken Quaker Herman Husband, emerged in the early 1760s to channel rural grievances against the courts. Regulator ideology spread rapidly by means of songs and ballads. In an age when common people were expected to defer to the wisdom and virtue of political elites, thousands embraced radical democratic principles in the name of preserving their accustomed livelihoods.

New taxes to pay for an expensive statehouse and governor’s residence proved the catalyst for widespread Regulator revolt in 1768. Their petitions ignored, the farmers took up arms against perceived abuses of power. Seven hundred Regulators from Orange County marched on the town of Hillsborough in April after Husband and another Regulator were arrested for “inciting to rebellion.” Later that month, 100 men shut down the court in Anson County and refused to pay taxes.

Temporary measures by the royal governor to satisfy Regulator demands eventually broke down, and on May 16, 1771, 2,000 poorly armed and organized farmers confronted 1,000 North Carolina militiamen at the Battle of Alamance. The Regulators were quickly routed, with each side losing about nine persons. Seven leaders of the movement were executed by the state, and the spirit of Regulation quickly receded.

The Regulators vividly demonstrate the complex popular origins of the American Revolution. The same sentiments that drove farmers to resist local and state corruption would fuel the colonial break from England. In 1776, the backcountry would arise again to defend its liberties.

The Regulator drama, rehearsed in North Carolina, was reenacted after the Revolutionary War in Daniel Shays’s 1786 rebellion against the Massachusetts tax system. The last Regulator-style revolt occurred in 1791 in western Pennsylvania, where President George Washington and 15,000 cavalymen eventually arrested and then pardoned

a still-fiery Herman Husband. The Regulators are the subject of former president Jimmy Carter's historical novel, *The Hornet's Nest* (2003).

Reich, Wilhelm (1897–1957)

Wilhelm Reich was a psychoanalyst, political theorist, and experimental scientist whose theories of human sexuality and its relationship to broader social problems made him one of the boldest and most controversial figures in the history of modern psychiatry. He came to be regarded by the mainstream psychoanalytic community as a renegade, chiefly for his concept of “orgastic potency”—the surrender of the human organism to the emotion of love and sexual excitement—as the basis of mental health.

Reich was born on March 24, 1897, in Dobrzycynica, Austria. He attended medical school at the University of Vienna, where he became interested in the work of Sigmund Freud. He became a regular member of the Vienna Psychoanalytic Association in 1920 and received his M.D. degree two years later.

Reich's most important psychoanalytic work concerned character theory, in particular the observation that neurotic patients tend to develop routinized patterns of behaviors and reactions—what he termed “character armor”—as a way of deflecting the pain of traumatic events from the past. In Reich's view, character armor is a major barrier to the healthy integration of the ego.

Despite the positive reception accorded to this theory, Reich's psychoanalytic colleagues did not treat his other main interest nearly as warmly. That interest was the link between human sexuality and neurosis. Reich argued that many neurotic symptoms are not so much the result of repressed childhood trauma, as Freud had posited, but the product of an unhealthy sex life in the present. According to Reich, social mores that stigmatize sex and force people to express their sexuality only in the confines of the family lead to a deficiency of “orgastic potency.” This, in turn, contributes to the process of character armoring and helps produce neuroses.

Reich's increasing involvement in politics did not help his cause within the psychoanalytic community. In 1928, he joined the Austrian Communist Party, while in his theoretical work he increasingly made the link between sexual repression and social oppression. Indeed, he called for a sexual revolution as a necessary complement to social and political revolution. In 1930, Reich published one of his best-known books, *The Sexual Revolution*, in which he praised the sexual liberalism of the early Soviet Union.

Reich set up a number of sexological clinics designed to offer sex education and contraceptive devices specifically to working-class youth. In 1933, he published his greatest political work, *The Mass Psychology of Fascism*, in which he argued that Adolf Hitler's rise to power in Germany was made possible by his manipulation of the sexual frustration and character armor of the masses.

Reich's work was cause for embarrassment on the part of the Austrian Communist Party as well as the International Psychoanalytic Association, both of which began to view his ideas as dangerous and heretical. He was expelled from the former in 1933 and from the latter in 1934. Professional setbacks and the increasing Nazi repression of Jews and political dissidents (Reich was both) prompted him to flee Germany in 1933. He bounced between several European countries before finally landing in the United States in 1939.

By the time Reich arrived in America, the focus of his work had become more biological in orientation. Spurred by his interest in the orgasm, he embarked upon a quest to identify the biological energy source that "flowed" during orgasms. After a series of experiments, he claimed to have identified what he called "orgone energy," or the primordial energy underpinning all organic forms of life. Reich considered his discovery of paramount scientific importance, claiming that many of humankind's problems could be alleviated by using orgone energy to cure all types of diseases.

Although his ideas were not given much credence by the scientific community, Reich was able to gather around himself a dedicated group of young researchers who took his work seriously and who sought to advance this new field of "orgonomy." In succeeding years, Reich and his collaborators produced what he called an "orgone accumulator": a large wooden compartment lined with metal, with an opening through which orgone energy was said to enter; it would then accumulate. The idea was for patients to sit inside and reap the therapeutic benefits of the concentrated orgone energy.

During the 1940s and 1950s, Reich's work took on an increasingly mystical tone, as he began to regard orgone energy as a cosmic force. Humanity as a whole was suffering from an "emotional plague," he contended, and only the successful harnessing of orgone energy could cure it. Reich's marketing of the orgone accumulator as a medical device drew the attention of the U.S. Food and Drug Administration, and in 1954 he was served with a court injunction to stop selling the device. In 1956, Reich was arrested for violating the injunction and sentenced to federal prison. He died of a heart attack there on November 3, 1957.

Despite the academic discrediting of orgonomy and the prosecution for his device, many of Reich's young collaborators continued his work, training new generations of Reichian therapists and orgonomists. In the 1960s, the republication of many of Reich's political writings influenced the protest movements that challenged traditional institutions and social relationships, especially the conventional family. He was also widely cited by intellectuals exploring the relationship between Marxism and psychoanalysis.

R.E.M. is a pioneering alternative rock band. It was formed in Athens, Georgia, in 1980, and features Michael Stipe on vocals, Peter Buck on guitar, Mike Mills on bass, and Bill Berry on drums. The group became a staple of college radio and built a large fan base during the early and mid-1980s, before emerging as a superstar in the late 1980s.

The group built upon folk roots to create a rhythmic, guitar-enriched sound that was a far cry from the synthesizer-heavy Top 40 music of the time. Many R.E.M. songs contain lyrics that are hard to understand, especially those on the early albums (including the appropriately titled *Murmur*, 1983); lyrics were not provided with the albums. The band evolved as it became famous, yet it refused to become subject to the whims of pop music, instead charting its own course.

The band's style changed with each album. Its folk rock songs are infused with lush harmonies and twanging guitars, while its harder rock songs feature a relentless, electric garage-band sound (especially on the multiplatinum seller *Monster*, 1994). After Berry left the band for health reasons in 1997, it recorded the somber and dense album *Up* in 1998 without a replacement drummer.

R.E.M. addressed a number of sensitive issues in its music, in statements to the press, and through participation in the activities of left-wing-leaning nonprofit organizations. Among the topics on which R.E.M. has expressed its views are American imperialism, freedom of speech, and the destruction of ecological systems. The band felt that each of its albums should serve as a snapshot of the time during which it was recorded. During the administrations of presidents Ronald Reagan and George H.W. Bush in particular, R.E.M. found strong inspiration for social commentary. Lead singer Stipe became known for his counterculture views on a number of subjects, including the environment and the activities of the federal government.

The album *Fables of the Reconstruction* (1985) includes the song "Green Grow the Rushes," about the plight of Latino migrant workers in the United States. *Document* (1987) is packed with overtly political songs, including "Exhuming McCarthy" (a reference to the rabidly anticommunist Republican Senator Joseph McCarthy of the 1950s), "Welcome to the Occupation" (about the U.S. role in Nicaragua during the 1980s), and "Disturbance at the Heron House" (about revolution). Also on that album is the song "It's the End of the World as We Know It (and I Feel Fine)," an up-tempo laundry list of the ills of the modern world.

With the release of the album *Green* on election day in 1988, R.E.M.'s message continued to carry political and social themes. The song "Orange Crush" alludes to the use of the herbicide-defoliant Agent Orange by the U.S. military during the Vietnam War. In 1991, R.E.M. released the album *Out of Time*, which contains the hit single "Losing My Religion."

The Best of R.E.M., a greatest-hits album released in 2003, features the song "Bad Day," begun in the 1980s and finished during the presidency of George W. Bush, about the games played by both the media and the political establishment. R.E.M. toured on behalf of Democratic presidential candidate John Kerry in 2004; an album released just before the 2004 election, *Around the Sun*, contained a number of songs inspired by the U.S. war in Iraq. The band was inducted into the Rock and Roll Hall of Fame in March 2007 and released its fourteenth studio album, *Accelerate*, the following year.

R.E.M. has long favored the offbeat. Prolific outsider artist Reverend Howard Finster designed the cover art for the album *Reckoning* in 1984. The band's 1992 album *Automatic for the People* includes the song "Man on the Moon," about the eccentric comedian Andy Kaufman. When the movie *Man on the Moon* was released in 1999, the band contributed another song about Kaufman, "The Great Beyond." The *Monster* album contains the song "What's the Frequency, Kenneth?" based on the bizarre incident in October 1986 in which newscaster Dan Rather was beaten by an unknown attacker who kept asking that question. In addition, Stipe has produced several offbeat feature films, including *Being John Malkovich* (1999), *American Psycho* (2000), and *Saved!* (2004).

Rexroth, Kenneth (1905–1982)

The American poet Kenneth Rexroth, recognized as a catalyst of the post–World War II San Francisco Renaissance in poetry and art, had a major creative and intellectual influence on the Bay Area's literary and radical subcultures during the mid-twentieth century and beyond. The model he provided for younger writers and artists in both politics and aesthetics contributed to a flowering of cultural activity, establishing a link between twentieth-century modernists such as Ezra Pound and William Carlos Williams, and the West Coast wing of the iconoclastic Beat Generation.

Born on December 22, 1905, in South Bend, Indiana, Rexroth was orphaned at the age of twelve and sent to live with an aunt in Chicago. As he matured, Rexroth became increasingly involved in Chicago's radical bohemian and artistic circles; he soon decided that he would devote his life to art and poetry. When he moved to San Francisco in 1927, he carried with him the memory of Chicago's intense cultural ferment, which he ultimately tried to replicate.

San Francisco's radical political legacy, however, heightened Rexroth's interest in developing an overall social and political vision. After flirting with communism in the 1930s, he slowly pieced together an anarchist philosophy that provided a strong critique of American capitalism and militarism. He then spent much of the rest of his life trying to inculcate this vision in a new and youthful "alternative society" in the San Francisco Bay Area.

This began during World War II, when Rexroth provided a haven for conscientious objectors (COs) in the Pacific Northwest who came to the city on weekend leaves from their CO camps. Many of these were writers and artists whom he befriended. They would later play a role in the postwar cultural renaissance in San Francisco.

In the late 1940s, Rexroth held a weekly salon at his apartment, where he educated a varied group of writers and artists in the tenets of anarchism, communal living, and aesthetics. This public function continued in the 1950s through idiosyncratic book reviews he broadcast on KPFA radio. A recurring theme in these reviews was that all cultures are possessed of a transcendental social vision, carried forth in the writings of its most cultivated individuals. Rexroth also was a regular contributor to the two leading anarchist periodicals of the time, George Leite's *Circle* and the more militant *Ark* magazine.

Because of his stature in the community, Rexroth was the natural choice to be emcee of the famous Six Gallery reading of October 1955, at which Allen Ginsberg kicked off the San Francisco Renaissance by reading his poem *Howl* for the first time. Rexroth's elder statesman role in relation to the Beat poets, however, portended his decline as an active member of the San Francisco scene.

In 1968, he moved south to Santa Barbara, where he collected his poetry, essays, and social criticism in books that would continue to have a strong influence on West Coast counterculture movements. After a lifetime of activism and art, Rexroth died in Montecito, California, on June 6, 1982.

Rice, Thomas Dartmouth (1808–1860)

The actor Thomas Dartmouth (“Daddy”) Rice made a fortune “blacking up” as the rebellious, raunchy figure of Jim Crow, who mobilized his racial otherness to lambaste the white culture set on disenfranchising black subjects. In fact, Rice became the most popular actor in the United States and Britain from the 1830s to the 1850s by playing a figure whose comic unruliness thrilled audiences even while exposing to ridicule the malignant racism that led up to the American Civil War. Thus Rice came to be known as the “father of American minstrelsy.”

Rice was born on May 20, 1808, in New York City. He got his start in acting in the 1820s in Noah M. Ludlow’s company in Louisville, Kentucky, playing characters such as the subservient black Sambo in English farces. But Rice’s legacy would be the theatrical reversal of traditional black subservience, using blackface, biting satire, and elements of African American folk culture.

He returned to New York in 1830 and performed a popular song-and-dance routine as the old black slave “jumping Jim Crow” in *The Kentucky Rifle* at the Bowery Theatre. Audiences flocked to see a black character who punctured Sambo’s air of gracious servility and whose power depended on understanding black subjects as obedient figures content to exist on the periphery. In Rice’s play *Oh Hush! or, The Virginny Cupids!* (1833), his Jim Crow character smashes his minstrel’s violin over the head of the Sambo character, garnering applause through physical humor even as he smashes the way blacks were perceived. Rice’s performances were not invested in performing black authenticity, but rather in using race to critique a society of slavery. “The words Jim Crow,” one reviewer perfectly summarized, “are a nom de guerre.”

Throughout plays such as *The Virginia Mummy* (1835) and *Bone Squash* (1839), Rice engaged in theatrical warfare by exploding white Americans’ convictions about black sexuality, slavery, miscegenation, and white authority. Through the Jim Crow character, he condemned chattel slavery and championed abolitionism, all while confronting his audience with the fact that America’s dominant culture was becoming risible. In plays such as *Bone Squash*, for instance, Jim Crow evades a white devil figure through lowbrow comedy, fantasy, and stage magic, casting himself all the while as a real—and rebellious—runaway slave. Jim Crow not only dodged white

authority, but he also staged for an eager audience the methods by which one might perform one's resistance to the power of the white devil.

Perhaps Rice's most rebellious role, however, was his burlesque version of the title role in William Shakespeare's *Othello* (1604–1605), which he performed in the early 1850s. Not only did Rice mock white culture's deep investment in Shakespeare as a cultural authority, but he also used the play's focus on the relationship between black and white identity to ask pointed questions about the racial politics of antebellum America.

Rice achieved these goals by recasting *Othello* in significant ways. For instance, while Desdemona is famously murdered by Othello, who is himself killed at the end of the original, both characters live in Rice's reworked version. Thus, by presenting not racial annihilation but racial union, he underscored a theme of racial integration rather than division. Moreover, in a subversive coup de théâtre, Rice presented for his American audience Desdemona and Othello's child, a literal embodiment of interracial productivity and thus a provocative challenge to the nation's burgeoning miscegenation statutes and regulations.

Rice died on September 19, 1860. By the end of his career, he had developed a stage tradition that had taken the United States by storm and whose legacies still can be seen today in everything from television programs such as *Chappelle's Show* (2003–2006), to films such as Spike Lee's *Bamboozled* (2000), and to plays such as Suzan-Lori Parks's Pulitzer Prize-winning *Topdog/Underdog* (2001). Rice's Jim Crow provided a crucial figure in the early to mid-nineteenth century for interrogating racial stereotyping and repression, and thereby offered a productive challenge to cultural institutions that worked—and continued to work—to control and contain black culture.

Riot Grrrl

Riot Grrrl is a punk feminist movement developed primarily by white, middle-class female youth on the East Coast of the United States during the early 1990s. A subculture within the larger punk music scene, Riot Grrrl is a more complex countercultural community that involves other activities and forms of expression—group meetings, support groups, self-defense courses (such as Home Alive), and a thriving underground zine culture—as well as political activism that often involves benefit concerts. As evidenced by their allegiance to the do-it-yourself ethic, Riot Grrrls embrace a variety of radical ideologies, particularly those associated with feminism and socialism, while also reconfiguring them in an effort to galvanize, celebrate, and support female youth, a demographic group whose

members are doubly disenfranchised because of their sex and age.

Riot Grrrl formed unofficially during the spring of 1991 in Washington, D.C., where members of two Northwest punk bands, Bikini Kill and Bratmobile, were living temporarily. When a race riot erupted in the neighborhood, a local friend and early Bratmobile member, Jen Smith, suggested that the male-dominated punk scene could use a “girl riot,” or more active participation by females.

Emboldened by that concept and wanting to communicate with other female youth marginalized in the punk community, as well as in the rest of society, Allison Wolfe and Molly Neuman of Bratmobile started a zine, or underground magazine, *Riot Grrrl*. Meanwhile, Kathleen Hanna and other members of the bands solicited girls in the D.C. punk scene for weekly get-togethers. Much like feminist consciousness-raising groups of the 1960s and 1970s, these meetings allowed girls to share their experiences of the patriarchy, misogyny, and homophobia prevalent in both mainstream society and their punk communities.

As a result of the *Riot Grrrl* zine and these girls-only meetings, more friends were made, more support groups were developed, and more zines, music, and work in other media were produced, as more girls realized the political power and necessity of their self-expression and solidarity. The name eventually attached to this counterculture and its members was Riot Grrrl.

Another significant moment in early Riot Grrrl history was the August 1991 indie music festival, the International Pop Underground (IPU) convention held in Olympia, Washington. During what has come to be known as “Grrrl Night,” female members of the bands Bikini Kill, Bratmobile, Heavens to Betsy, 7 Year Bitch, Mecca Normal, Suture, and others performed as part of an all-female billing called “Love Rock Revolution Girl Style Now,” and encouraged female youth in the crowd to become politically and culturally active. At this event, many youth who had conversed by mail or phone finally met in person. As a result, more music, zines (including *Satan Wears a Bra*, *Princess Charming*, *Diabolical Clits*, *Pussycat Rag*, and *The Bad Girl Club*), and videos were created within this community, and production and distribution companies run by feminist youth, such as Horse Kitty Records, Riot Grrrl Press, and Big Miss Moviola, were founded.

In 1992, Riot Grrrls began organizing annual conventions so that larger groups of girls could meet each other, discuss issues of common concern, organize for political action, and experience an alternative culture created by and for feminist youth. One of the first Riot Grrrl conventions was held in Washington, D.C., in July and August 1992.

The mainstream press lost interest in Riot Grrrl in 1992 when its members initiated a media blackout in an effort to stop their misrepresentation and commodification. Although the Riot Grrrl movement had splintered by the mid-1990s, the counterculture continued to thrive in a number of countries in the 2000s, offering female youth a safe and supportive network through which to explore radical identities, ideologies, and cultural practices. Riot Grrrls have increasingly turned to the Internet, especially fan sites and message boards, to converse, organize, and distribute products.

Ripley, George (1802–1880)

A Unitarian minister, transcendentalist thinker, journalist, and social reformer, George Ripley is best known as the founder in 1841 of the utopian cooperative community Brook Farm in West Roxbury, Massachusetts, near Boston. Modeled on the ideas of the French socialist Charles Fourier, Brook Farm became a self-sufficient community whose economic strength lay in farming and light industry. Although Ripley's experiment in secular cooperative living flourished for less than a decade, Brook Farm is considered one of the antecedents of the antiestablishment communes prevalent in the United States during the latter part of the twentieth century.

Ripley was born in Greenfield, Massachusetts, on October 3, 1802. As the son of an affluent New England businessman, he was educated at Harvard College, graduating with highest honors. He pursued graduate studies at the Harvard Divinity School, while teaching mathematics courses for his alma mater. In 1826, he became an ordained minister and began serving at the newly formed Purchase Street Unitarian Church in Boston. The following year, Ripley married Sophia Willard Dana, who capably assisted him in the establishment of the utopian community of Brook Farm.

Ripley's breadth of knowledge and writing talents provided him entrée into the elite social and literary circles of Boston. There, he met such contemporaries as Henry David Thoreau, Ralph Waldo Emerson, Nathaniel Hawthorne, and Karl Marx; many of these notable acquaintances would lecture at the Brook Farm school. During this time, Ripley was one of the editors of the fourteen-volume work *Specimens of Foreign Standard Literature* (the first two volumes of which were published in 1838), which contained the English translations of many important works by European writers. He also assisted in editing the transcendentalist magazine *The Dial*.

According to an anonymous pamphlet, *An Essay on Transcendentalism*, often credited to Charles Mayo Ellis, "Transcendentalism... maintains that man has ideas, that come not through the five senses, or the powers of reasoning, but are either the result of direct revelation from God, his immediate inspiration, or his immanent presence in the spiritual world" and "it asserts that man has something besides the body of flesh, a spiritual body, with senses to perceive what is true, and right and beautiful, and a natural love for these, as the body for its food." As the transcendentalists became disenchanted with the Unitarian Church, their literary pursuits and common activities increased steadily. Ripley—whose own home since 1836 had been the meeting place of the Transcendentalist Club, the core of the movement—resigned from the ministry in 1841 and founded Brook Farm.

A fire that swept through Brook Farm in 1846 caused devastating damage from which the community never recovered; it disbanded the following year. George and Sophia Ripley moved to New York City, where he continued to publish and edit *The Harbinger*, a journal first issued at Brook Farm in 1845, and wrote for Horace Greeley's *New York Tribune* and the *Christian Register*. Later, Ripley helped establish and edited *Harper's New Monthly Magazine* and the *New American Cyclopaedia*.

Four years following his wife's death in 1861, Ripley married Louisa Schlossberger, and together they remained active in New York social and literary circles. During the last year of his life, he was beleaguered by ill health. On July 4, 1880, Ripley died while writing an editorial for *Harper's*.

Rivers, Larry (1923–2002)

Larry Rivers was a painter and sculptor whose works have been described by critics as a combination of abstract and pop art. His subjects were far reaching, including portraits of friends and family members; historical figures and themes, including the Russian Revolution and the Holocaust; everyday items; and sex and eroticism. Rivers's work marked a crucial transition in mid-century painting, from the abstract expressionism of the 1950s to the pop art of the 1960s. Rivers was also known in New York's mid-century bohemian counterculture as a jazz musician, filmmaker, actor, and provocateur, pushing the boundaries of taste as well as aesthetics.

Rivers was born Yitzroch Loiza Grossberg in the Bronx, New York, on August 17, 1923. His most important early passion was jazz. After serving in the U.S. Army Air Corps during World War II, he studied at the prestigious Juilliard School of Music in New York, where he met many of the finest musicians of his generation. Among these was Miles Davis, who gave Rivers an entrée into the city's flourishing jazz counterculture. Rivers subsequently began touring with various groups as a jazz saxophonist.

In 1945, an encounter with a book on modern painting redirected Rivers's interest from music to art. He took up painting, studying at the Hans Hofmann School as well as at New York University, from which he graduated in 1951. Rivers quickly became part of the New York School of painters and poets, meeting such rising stars as painter Jackson Pollock and poet and art critic Frank O'Hara, with whom he became close friends.

Rivers's best-known early works are semi-abstract paintings that reimagine traditional, historical subjects. For example, his *Washington Crossing the Delaware* (1953), a painting that measures 10 feet (3 meters) long, features washed-out colors and an urgent, half-drawn, half-painted appearance that would become a trademark style. His fifty-three-piece mixed media work *The History of the Russian Revolution: From Marx to Mayakovsky* (1965) features portraits of Russian rulers, maps, and vignettes of Russian history. Rivers's work subsequently began to incorporate images from popular culture—such as dinner menus, cigarette packs, and banknotes—prefiguring the trend of pop art to come in the 1960s.

Sex and eroticism were other frequent subjects of Rivers's works. In 1965, he was commissioned by *Playboy* magazine to interpret the playmate (the magazine's nude models) in a work of art. The result was the semi-naked *Plexi Playmate*, made of Plexiglas and vinyl. He followed that work with a graphic lamp-sculpture called *Lampman Loves It* for an erotic exhibition. Using the shock factor of sexuality to draw attention, Rivers often painted male and female nudes; the physical beauty or age of his subjects was unimportant. In 1964, he painted *The Greatest Homosexual*, a mixed-media work depicting Napoleon that was inspired by Jacques-Louis David's classic *Napoleon in His Study* (1812).

In both his art and lifestyle, Rivers earned a reputation as a contrarian. He also was well known for his uninhibited enjoyment of marijuana and sex, and for his extensive associations with other artists and writers of mid-century bohemian countercultures. Among his acting credits is a starring role in *Pull My Daisy* (1959), a short film about a raucous bohemian party written by Beat writer Jack Kerouac and costarring poet Allen Ginsberg, among others.

Rivers lived at New York's Hotel Chelsea during the 1960s, a spot famous for housing eccentric artists and writers.

Rivers continued to work on his own and collaborative projects into his seventies. He designed art for the windows of the Lord & Taylor department store in New York and attended the opening in 2001, saxophone in hand to perform for fans. The techniques of his work had changed over time, but what remained consistent was his energy in critiquing entrenched artistic styles and forms. He was and continues to be the object of harsh criticism by some, who consider his renown to be more a function of his eccentric lifestyle and famous friends than of his own artistic innovation and talent. Rivers died on August 14, 2002.

Robbins, Tom (1936–)

The American novelist Tom Robbins, known for a uniquely inventive, humorous, highly charged style, became an icon of post–World War II counterculture literature for works of offbeat social and political satire beginning in the 1970s, the best known of which is *Even Cowgirls Get the Blues* (1976; film version, 1993).

Born on July 22, 1936, in Blowing Rock, North Carolina, Thomas Eugene Robbins was the oldest child of a utility company executive, George T. Robbins, and an author of children's stories, Katherine (Robinson) Robbins. He was raised in North Carolina and Virginia but, like many characters in his novels, Robbins was an adventurer. After withdrawing from Washington and Lee University, he hitchhiked across the United States and then settled in New York's Greenwich Village, where he hoped to become a poet. Unable to support himself and facing the prospect of being drafted, he joined the U.S. Air Force and served for three years in South Korea in the late 1950s.

Upon completion of military service, he returned to school at the Richmond Professional Institute (now Virginia Commonwealth University) and received his degree in 1960. After a brief stint as a journalist in Richmond, he moved to Seattle, Washington, to pursue a master's degree in Far Eastern Studies and write for the *Seattle Times* and *Seattle Post-Intelligencer*. Even as he continued mainstream journalistic pursuits, Robbins took his adventures in new directions, including experimenting with LSD—an event that shaped his personal philosophy and writing style, and led to his friendship with Timothy Leary.

Robbins's first novel, *Another Roadside Attraction* (1971), is the wild, eccentric story of the mummified body of Jesus Christ, which ends up in a hot dog stand/wildlife preserve in the Pacific Northwest. His second novel, *Even Cowgirls Get the Blues*, solidified his reputation as an innovative storyteller and caught the attention of younger

readers and others rooted in the counterculture sensibility of the 1960s and 1970s. The novel recounts the adventures of a large-thumbed hitchhiker named Sissy Hankshaw, from the fashion scene of New York to a health spa in North Dakota, where she joins a rebellious band of feminists.

Still Life with Woodpecker (1980), subtitled “Sort of a Love Story,” is the tale of a modern-day princess and her unlikely match with a terrorist named Woodpecker. *Jitterbug Perfume* (1984) is the story of the search for the perfect scent, combining heavy doses of absurdity and mysticism with a touch of political commentary. Similar elements are also central to *Skinny Legs and All* (1990), in which a spoon, a sock, and a can of beans play roles as critical as those of their human counterparts in assessing and solving the situation in the Middle East. In *Half Asleep in Frog Pajamas* (1994), Robbins enlists another oddball cast of characters who comment collectively on the state of society, again only slightly removed from absurdity.

International intrigue, central to many of Robbins’s novels, figures prominently in *Fierce Invalids from Hot Climates* (2000) and *Villa Incognito* (2003), both of which capture the eccentricities of the Tom Robbins style. *Wild Ducks Flying Backward* (2005) is a collection of essays, short stories, and reviews. And *B is for Beer* (2009) is a children’s book about a planet whose inhabitants consume copious amounts of beer. Robbins’s major works convey many of the central themes of the counterculture—drugs, sexual promiscuity, and communal living—and track political and social trends over the course of more than three decades with consistently poignant sarcasm.

Robeson, Paul (1898–1976)

Through both his personal achievements and his radical politics, Paul Robeson defied cultures of white supremacy in America and abroad. He earned international fame as an actor and bass-baritone singer, but in the years leading up to World War II, he dedicated his efforts to the liberation of African peoples worldwide. Although Robeson is still celebrated by the American left in the twenty-first century, his outspoken criticism of President Harry S. Truman’s postwar foreign policy made him one of the nation’s most unpopular and tragic figures of the cold war era.

Paul Robeson was born on April 9, 1898, in Princeton, New Jersey, to William Drew Robeson, a pastor who was a former slave, and Maria Louisa Bustill. After the young Robeson's mother died in a household fire, he and his family settled in Somerville, New Jersey, in 1909. A distinguished student, performer, and athlete while in high school, Robeson entered Rutgers University in 1915 on a four-year scholarship, becoming the third African American ever to attend that school, and the only one on campus at the time. Facing sometimes violent racism, he nevertheless excelled in football, basketball, baseball, and track, and graduated as valedictorian of his class in 1919.

Robeson moved on to Columbia Law School, where he earned his degree in 1923, and took up the practice of law in New York City. His legal career proved short-lived. When white colleagues and office staff refused to work with him, he left the profession to pursue a full-time career in entertainment.

Performances in the title role of *The Emperor Jones* (1924) and other works by playwright Eugene O'Neill in the 1920s established Robeson as an actor of note. His rendition of the song "Old Man River" in the Jerome Kern musical *Show Boat* (1927) became legendary, and his performance in the lead role of *Othello* (1943–1945) made it the longest-running Shakespeare production in Broadway history.

From 1925 to 1942, Robeson also appeared in thirteen motion-picture films, though only four of them were made in the United States. Dismayed by the treatment of African Americans in all walks of life and increasingly attracted to radical politics, he spent much of the 1930s in England and the Soviet Union.

While abroad, Robeson befriended politically radical Africans and gained a lifelong appreciation for perceived Soviet egalitarianism and antiracism. He joined African American educator W.E.B. Du Bois and other black activists in forming the pan-African Council on African Affairs (CAA) in 1937. Its goal was to unite people of African descent in support of African liberation from Western European colonialism. As chairman of the CAA, Robeson spoke to audiences worldwide and raised funds for the cause. The United States officially supported decolonization during World War II, and few Americans seemed to object to Robeson's new political views. In fact, his performance of the patriotic "Ballad for Americans" on the CBS network in 1939 received the longest applause in radio history.

Scholar, athlete, actor, and renowned bass-baritone Paul Robeson championed the cause of oppressed peoples and became a friend of the Soviet Union. In 1949, he stirred controversy with remarks at the Communist-supported Paris World Peace Congress. (Nat Farbman/Stringer/Time & Life Pictures/Getty Images)

The resurgence of anticommunism in cold war America would prove to be Robeson's undoing. He openly criticized racial segregation after World War II and argued that American aid to Europe through the Marshall Plan would extend colonialism in Africa. Such remarks brought him under the close scrutiny of the Federal Bureau of Investigation (FBI) and the House Committee on Un-American Activities (HUAC).

With the exception of the progressive press, the white media censored Robeson's activities, and he was blacklisted from performing in the nation's concert halls. After several newspapers reported that he had made pro-Soviet remarks while attending the Paris World Peace Congress in 1949, the U.S. State Department promptly revoked his passport.

Robeson's reputation was further damaged when, at the apparent instigation of U.S. State Department officials, some of the African American press disparaged him as a Communist sympathizer. That impression seemed confirmed in 1952, when the Soviet government awarded him the Stalin Peace Prize.

When Robeson's U.S. passport finally was renewed in 1958, he left the country for Great Britain, performing and traveling extensively. He did not return to the United States until 1963, plagued by ill health and chronic depression. He made few public appearances during the remaining years of his life, not even attending a seventy-fifth birthday celebration held for him at New York's Carnegie Hall in 1973. He died of a stroke two years later, on January 23, 1976, in Philadelphia.

Rock and Roll

The term *rock and roll*, previously used as a sexual allusion in popular song lyrics, was first applied by Cleveland disc jockey Alan Freed in 1951 to an emerging wave of music that mixed both “black” and “white” American traditions. The merging of blues, hillbilly, gospel, Tin Pan Alley, and other styles is perhaps best seen in the early music of Elvis Presley, Chuck Berry, Jerry Lee Lewis, and Little Richard. In addition to mixing previously segregated musical styles, the early rock and roll performers challenged mainstream culture with their flamboyant, sexually charged, rebellious style and public personae. The focus of their lyrics on leisure-time activities from dancing to cars to sex and a casual, free lifestyle flew in the face of middle-class cultural values in postwar America.

By the beginning of the 1960s, however, a new type of rock and roll musician had emerged: the social commentator. First in folk music and later in psychedelic rock, the construct of popular music itself was challenged by singers and songwriters who had a message as well as a song in their hearts. Whether unplugged (armed just with an acoustic guitar, a voice, and maybe a harmonica) or plugged in (playing in a band with an electric guitar, bass, drums, and vocals, all projected through a microphone and amplifier), the emerging artist-critic attacked the institutions of contemporary society.

Counterculture and Social Change

Thus, in differing ways, rock and roll was at the center of the American counterculture throughout the 1950s, 1960s, and 1970s. In its early days, the music was countercultural in that it challenged the conventional norms of mainstream society and placed young people in opposition to both adults and institutions by focusing on leisure, consumption, and sexuality. The rock and roll music of the 1960s was countercultural in that it had strong political overtones, which openly opposed the foreign and domestic policies of the U.S. government and gave the youth of America—during a rebellious movement in the nation’s history—a voice, a channel through which to communicate and be heard, and a place to find a common identity. As the anti-Vietnam War movement peaked in the late 1960s and early 1970s—during the administrations of presidents Lyndon B. Johnson and Richard M. Nixon, a Democrat and a Republican, respectively—rock and roll music was an instrument of change and source of generational identity as much as a form of entertainment.

One of the main reasons rock and roll survived and continued to grow was the purchasing power of American teenagers. Songs such as Chuck Berry’s “Sweet Little Sixteen” and Little Richard’s “Lucille” (both 1957) played an important role in the creation of a distinct youth identity and consumption ethic. As the recording industry aggressively marketed its product, the new youth market became a mainstay of the American economy. The rise in annual gross revenues of the U.S. recording industry—from \$109 million in 1945 to \$213 million in 1954 to \$603 million by 1959—mirrored the explosion in overall consumer spending in the period after World War II. In the words of *American Bandstand* host Dick Clark, “Teenagers have nine billion dollars a year to spend.”

Up-and-coming folk and rock musicians in the 1950s and 1960s both heralded the political and social changes of the emerging counterculture and were products of it. Musicians who helped inspire the new way of thinking included leading voices of the folk revival such as Pete Seeger, Joan Baez, and Bob Dylan (who alienated more traditional fans by going electric in the mid-1960s), followed by British Invasion bands such as the Beatles and the Rolling Stones, and homegrown psychedelic-rock groups such as the Grateful Dead, Jefferson Airplane, and the Doors, among others.

Dylan, for one, appeared to view himself more as a poet than a singer, and the lyrics of his songs were rife with political commentary. His was the voice and music of youthful energy, political and social awareness, and challenge to the status quo. “The times they are a-changin’,” he sang, and few could disagree. For Dylan and his legions of successors and counterculture comrades-in-arms, the Vietnam War became a rallying point, and opposition to it became the basis of shared moral conviction and generational identity.

The seriousness of the times—including other heady issues such as Black Power, the plight of inner cities, political corruption, and the perceived enervation of the “establishment”—also helped transform the innocent pop entertainer of earlier times into the musical artist and earnest troubadour. By 1966, the term *artist* had begun to be applied to rock musicians, denoting a growing separation from the cultural and commercial mainstream, or bohemianism.

The evolution from “mere” entertainment to social commentary and musical artistry coincided with the replacement of the single by the LP (long-playing album) as the dominant medium, thereby giving the artist forty minutes of canvas instead of the traditional three-minute record. With the LP came eleven-minute songs and concept records, and the notion that music could be made for art’s sake, instead of primarily for commercial purposes. The Beatles and their landmark album *Sgt. Pepper’s Lonely Hearts Club Band* (1967) were seen as the catalysts of this transition.

Musical Artistry, Psychedelics, and New Directions

An example of the transition from entertainers to artists can be seen the changes in the Beatles’ cover art and music, from *Meet the Beatles* (1964) to *Sgt. Pepper’s*. As the band took a hiatus from touring to focus on studio recordings, their themes shifted from love to social criticism; the graphics, production values, and musical energy of their LP efforts reflected greater interest in artistic music than commercial sales, as well as increased drug use and spiritual searching. At this time the Beatles also began producing their own music and designing their own

cover art, rather than allowing their label to do the work. The entire transition, not coincidentally, paralleled the transition of American youth from consumer-oriented teenage frivolity to political engagement, social criticism, and increased drug use at university campuses and musical events across the country.

What followed the Beatles' explosion into mainstream rock was the movement of acid rock and psychedelic rock. Built on the social critiques of Dylan and the artistry of the Beatles, this music is perhaps best known for its association with the mind-altering drug LSD. It was a new sound that mixed jazz, Latin, and blues music with electric guitars and distortion. The vanguard of this movement—including Jimi Hendrix and his ripping guitar solos, which were full of distortion and unlike anything ever heard before in popular music—challenged the conventional notions of musical form in much the same way the Beats and the bebop jazzers had a decade earlier. Hendrix played the guitar with his teeth or behind his head. At the end of his performances, he smashed his guitar against the stage or set it on fire.

Perhaps the pinnacle of the counterculture movement in rock and roll came at the Woodstock music festival, held in Bethel, New York, in August 1969, an event that was supposed to draw only a small number of fans but instead drew hundreds of thousands and lasted three days. The festival showcased many of the icons of the counterculture, including San Francisco bands such as the Grateful Dead and Jefferson Airplane, singers such as Janis Joplin and Joan Baez, and guitarists such as Hendrix and Carlos Santana. Other musicians who performed included the Who, Joe Cocker, Sly and the Family Stone, Ravi Shankar, Richie Havens, Blood, Sweat and Tears, and Creedence Clearwater Revival.

The 1970s brought further change in rock and roll music and its connection with American youth and counterculture. Disillusionment over the perceived lack of success of the 1960s protest movements coupled with the aging of the baby boom generation—now re-entering mainstream society by finding jobs and having families—moved rock and roll in two different directions.

On the one hand, some rock music got “harder,” with a stronger emphasis on escapism—as reflected in the music of artists from Led Zeppelin to Black Sabbath. On the other hand, rock musicians took an even greater interest in technical artistry, focusing on innovative sound productions and special effects, as in the case of supergroups Pink Floyd and Genesis. In both cases, while rock and roll still appealed primarily to younger audiences, it had lost some of the rebellious and counterculture energy that was central to its identity and success in the 1960s.

Rocky Horror Picture Show, The

The Rocky Horror Picture Show, directed by Jim Sharman and released by 20th Century Fox in 1975, is considered the quintessential cult movie. Based on a stage musical by Richard O'Brien, *Rocky Horror* was first performed at the London Royal Court Theatre Upstairs in 1973. Initial enthusiasm for the play brought it to the United States, where it was adapted for the screen with many members of the original cast. At first a box-office flop, the movie developed a cult following that rescued it from obscurity. Special screenings after regular features, typically at midnight, created a highly ritualized viewing experience that has continued for more than three decades.

The plot of *Rocky Horror* involves a fresh-faced couple—Janet (played by Susan Sarandon) and Brad (Barry Bostwick)—who stumble upon a “castle” in the woods (really a spaceship) inhabited by aliens posing as an eccentric household. There, Janet and Brad encounter a parade of larger-than-life characters: Dr. Frank-N-Furter (Tim Curry), the megalomaniacal cross-dressing scientist; Rocky (Peter Hinwood), his Aryan sex toy; Magenta (Patricia Quinn) and Riff Raff (O'Brien himself), the incestuous brother-sister servant team; Columbia (Little Nell), the fuchsia-haired groupie; and Eddie (the overstuffed Meat Loaf), who is the object of Columbia's rock and roll desire.

During the course of the film, Brad and Janet, both seduced by Frank-N-Furter, become increasingly uninhibited sexually. In the film's climax, most of the cast performs the cancan in fishnets and boas, Magenta and Riff Raff take over the castle, Frank-N-Furter ostensibly repents, Rocky dies, and the castle returns to Transsexual Transylvania, leaving Brad, Janet, and their friend Dr. Scott (Jonathan Adams) dazed and confused in its wake.

A send-up of B-level science-fiction and horror movies, drag shows, coming-of-age stories, rock operas, and popular culture in general, *Rocky Horror* struck a chord with mid-1970s youth sensibility, creating a carnivalesque space where social pressures were lifted and sexuality was unleashed. Fans began to appear at screenings dressed as characters in the film, sang along with the music, ritually injected dialogue at key moments, and tossed around any number of props—from confetti to toast to teddy bears—transforming film attendance into one great costume party.

Rocky Horror is an intriguing study in cult phenomena: the film itself, and much of the audience participation, has remained consistent, while the fan base is forever changing. Many Americans admit to having gone through a “*Rocky Horror* phase” at some point in their young adulthood but—other than the diehards who claim to have seen the film hundreds of times—few make it a prolonged pastime.

Still a popular stage play in the twenty-first century, productions of *Rocky Horror* continue to be staged throughout North America and Europe. Its influence is seen in productions such as the *Sing-Along Sound of Music* (2000), the audience-participation version of the 1965 Academy Award-winning film *The Sound of Music*, which encouraged costume wearing as well as singing, and the film *Moulin Rouge* (2001), a postmodern pastiche of camp, costumes, and cultural references in a fantasy atmosphere.

Role-Playing Games

Role-playing games (RPGs) are board games that focus on storytelling, characterization, and cooperation among players, rather than on winning and competition, as in more traditional board games. In most RPGs, the game is controlled by a central storyteller, or “gamemaster,” who monitors the ebb and flow of the game. The other players control the central characters, working as a team to solve puzzles and challenges put forth by the gamemaster.

Popular role-playing games began with the first incarnation of *Dungeons and Dragons* in 1974, a high-fantasy game created by Gary Gygax and Dave Arneson, and distributed by Tactical Studies Rule (TSR). *Dungeons and Dragons* quickly gained in popularity, spawning a number of spin-offs and new editions over the next three decades. Many companies had joined the RPG market by the 1980s, when film tie-ins became especially marketable; game titles based on film franchises, such as *Star Wars*, *Star Trek*, James Bond, and *The Lord of the Rings*, all debuted in this era. Marketing tie-ins soon included popular novels, cartoons, and television series.

In the early 1980s, computer-game companies began using the RPG model of storytelling and characterization as a new paradigm for computer games, also known as RPGs. Strategic Simulations, Inc. (SSI), with its licensed *Dungeons and Dragons* games, and Sierra with its King's Quest series, were early leaders in the computer RPG market. Since then, the number of games and their sales have exploded. By the early 2000s, hundreds of computer RPGs were available. The Internet also has spawned Massively Multiplayer Online Games (MMOG), in which hundreds of players can log on and interact in the game format.

RPGs began to take on a darker cast in the 1990s, in both subject matter and graphic design. In 1991, Mark Rein-Hagen and the publishing company White Wolf introduced the revolutionary gothic-horror RPG, *Vampire: The Masquerade*. Based on its horror RPG line, White Wolf also debuted the first mass-market Live-Action Role Playing (LARP) game, in which players act out their characters' roles in a setting best described as guided improvisational theater.

Another innovation took the gaming industry by storm during the early 1990s: *Magic: The Gathering* achieved instant success as the first collectible card game (CCG). Combining elements of role playing with marketing hype for the collectibles, *Magic* cards sold in vast quantities and made Wizards of the Coast the richest game manufacturer in the United States. Many imitators followed, and, by the 2000s, tie-in CCGs were standard elements in major film and television marketing campaigns.

By the end of the 1990s, however, a slew of bankruptcies and corporate buyouts signaled a slump in the gaming industry. Industry giant TSR declared bankruptcy in 1997; it was followed by other major companies such as West End Games. New management teams were brought in, bringing a greater emphasis on commercial appeal and profit margins, and many flagging RPG manufacturers were revitalized. As of the early 2000s, the RPG industry was showing strong signs of recovery, with revivals of classic RPGs and innovative new ones leading the way.

Rolling Stone

Rolling Stone magazine rose from obscurity in the late 1960s to become the primary source for information on rock and popular music in America. The magazine was started in San Francisco by Jann Wenner—still the editor and publisher today—and the noted music critic Ralph Gleason. Its first managing editor was *Newsweek* journalist Michael Lydon, and its first photographic editor was Baron Wolman. The first issue was published on November 9, 1967, and featured the Beatles' John Lennon on the cover. Of 40,000 copies shipped to newsstands, 34,000 were returned unsold.

Despite its inauspicious beginnings, the magazine continued and eventually thrived, largely due to the tenacity of publisher Wenner, the dearth of credible youth music magazines, and advertising revenue from the major record labels. By early 1968, *Rolling Stone* could number almost every major record company among its advertising accounts, including Atlantic, Capitol, Columbia, Reprise, Elektra, A&M, Warner, and RCA.

In February 1969, the magazine's issue on the groupie subculture, often referred to as "The Groupie Issue," was published. Using the company's last \$7,000, Wenner bought a full-page ad in *The New York Times* and, with ballyhoo worthy of nineteenth-century showman P.T. Barnum, situated his magazine as the ultimate source on the subject. By November 1969, the monthly publication had turned a corner and reported a paid circulation of nearly 60,000.

Rolling Stone may have had considerable cultural capital, but its financial fortunes in the 1970s were not assured. Indeed, the magazine almost went into bankruptcy in 1977. This was also the year that *Rolling Stone* moved its offices from San Francisco to New York City; issue number 248 was the first to be produced from its new offices at 745 Fifth Avenue in Manhattan. By the close of the 1980s, Robert Draper, author of *Rolling Stone Magazine: The Uncensored History* (1990), described the magazine as "respected but no longer relied upon, a force among other forces—an institution, surely, and like many such institutions, disregarded." Despite this lukewarm analysis, *Rolling Stone* continues as a successful publication into the second decade of the twenty-first century.

To cognoscenti of the counterculture of the 1960s and early 1970s, the words *Rolling Stone* conjure up some unforgettable achievements, including the gonzo journalism of Hunter S. Thompson or the prose of Greil Marcus, both of which graced the magazine's pages. Others may wax poetic about the music reviews of Ed Ward and Lester Bangs, or the interviews of Ben Fong-Torres. Still others remember the hard-hitting investigative journalism of Joe Eszterhas and the sublime photography of chief photographer Annie Leibovitz, whose rock celebrity portraits helped define the look of the magazine. Although the focal points of their memories may vary, to people who were under thirty during this era and involved in music and the counterculture, *Rolling Stone* was a relied-upon source of news and counterculture commentary.

Rolling Stones, The

The British rock group the Rolling Stones, originally formed in 1962, has remained one of rock and roll's most enduring and popular bands on the strength of their driving, blues-influenced style, the creative songwriting of lead singer Mick Jagger and guitarist Keith Richards, high-energy concert performances, and an edgy, defiant image. First achieving notoriety alongside the Beatles and other bands from England as part of the so-called British Invasion, the Stones have consistently maintained their place in the public eye with the release of new music, frequent worldwide concert tours, and the enduring popularity of their older songs. Although they have achieved commercial success equaled by few other musical acts of any kind—with fifty-five albums released and hundreds of millions of copies sold as of 2007—the Rolling Stones have persistently flouted social convention and produced some of the most innovative, radical music of their time.

Lead singer Mick Jagger (left) and guitarist Keith Richards are original members of the Rolling Stones. The duo is

also responsible for writing many of the band's hit recordings. In their fifth decade, the Stones have released over forty original albums. (George Rose/Getty Images)

Early Days

While the Beatles began their career with cheery pop tunes, the Rolling Stones got their musical start singing about the darker side of love. Playing blues standards by the likes of Howlin' Wolf and Muddy Waters (from one of whose songs the band takes its name), the Stones quickly became one of England's best-known blues bands.

The composition of the band changed several times during its first year of existence, but by 1963 the lineup had been set. The quintet included singer and front man Michael Phillip (Mick) Jagger, guitarist Keith Richards, multiple-instrument-playing Lewis Brian Hopkin (Brian) Jones, bassist William George Perks (Bill Wyman), and drummer Charles Robert (Charlie) Watts.

It was in this form that the Rolling Stones began their first club residency, at the Crawdaddy in London, England. During their tenure at the Crawdaddy, the band attracted the attention of businessman and Beatles publicist Andrew Loog Oldham, who became their manager soon thereafter. Oldham's efforts ultimately resulted in the group's first recording contract, with Decca Records, as well as in the somewhat manufactured and highly promoted image of the Rolling Stones as the bad boys of Britain. This image stood in stark contrast to the more clean-cut appearance of the Beatles.

The group's self-titled first album, *The Rolling Stones* (1964), contained a number of blues and rock and roll covers and only one original song. The album did well, however, and, by the end of the year, the band had released two more albums, resulting in a number of hit singles and increasing airplay in England and the United States.

By the summer of 1965, the Rolling Stones began to break away from recording covers in favor of more original work. The songwriting team of Jagger and Richards gained their first big hit with "(I Can't Get No) Satisfaction" (1965), melding their blues roots with a rock and roll sound, and the group quickly rose to superstardom.

Counterculture, Exoticism, and Psychedelics

Like rock and roll music itself, the Rolling Stones were fond of thumbing their noses at societal norms, such as puritanical attitudes regarding sex and the consumerist mind-set that seemed commonplace in 1950s and 1960s America. Although their music was less overtly political than that of the Beatles and certain other groups, it was no less radical, because they sang about taboo subjects, especially sex, drugs, and disrespect for authority figures, and discussed them openly in interviews.

The Stones refused to censor themselves, and their music was aggressively frank in its portrayal of these subjects. Beyond that, band members flouted social norms in their overt sexuality and drug use, including Jagger's periodic sporting of women's clothing and makeup and Richards's flagrant drug use and multiple arrests. In short, not only did the band seem to seek out controversy in their music and public life, but they seemed to revel in the publicity and understand that they did not have to please the public in order to be highly successful.

With the growing attention being paid to Eastern thought and music in the mid-1960s, Jones began experimenting with more exotic musical sounds and instruments, especially the sitar. Following the Beatles' success with the psychedelic *Sgt. Pepper's Lonely Hearts Club Band*, the Stones released *Their Satanic Majesties' Request* in 1967. Also an experiment into psychedelia, the album was recorded soon after a visit to India by Jagger to meditate with the Maharishi Mahesh Yogi and after multiple drug arrests of Jagger, Richards, and Jones.

The foray into psychedelic music was to prove brief, however, as the music of the Rolling Stones continued to evolve. Refining what has become a signature of their sound, Richards began using open guitar tunings. This evolution led to some of the band's most recognizable sounds, such as those heard in "Honky Tonk Women,"

which appeared on their album *Get Yer Ya-Ya's Out!* (1970).

While most of the band was pleased with the emerging sound, Jones was growing disenchanted with the new directions the band was taking. He left the group in June 1969 and was found dead in his pool a month later. Mick Taylor took Jones's place in the group, and in 1975 Ron Wood replaced Taylor, creating what would become the longest-running incarnation of the Rolling Stones.

Tragedy and Resurgence

The death of Jones was not the band's only tragedy in 1969. The Woodstock music festival held in Bethel, New York, that August, and billed as "three days of peace and music," had been such a success that the Rolling Stones hoped to create a similar concert experience on the West Coast. Held at the Altamont Speedway in Northern California, the concert was planned as a free, all-day event featuring several acts and culminating with the Rolling Stones. At the suggestion of members of the Grateful Dead, the Stones hired the Hells Angels biker gang to provide security for the concert, in exchange for alcohol. By the time the Stones took the stage, there had already been altercations between the drunk and violent Hells Angels, several musicians, and the crowd. During the Rolling Stones' set, a young man was fatally beaten and stabbed before Jagger's eyes by several of the Hells Angels.

The disaster at Altamont might have been a death knell for many bands, but for the Rolling Stones it became merely a footnote. Continuing to record and perform in the aftermath of the killing, the band produced much of its most enduring music in the years immediately following, including the albums *Sticky Fingers* (1971) and *Exile on Main Street* (1972).

No longer perceived as a threat to the dominant culture, the Stones have continued to create provocative new music, as evidenced on such albums as *Some Girls* (1978) and *Tattoo You* (1981), which included such hits as "Beast of Burden," "Shattered," and "Start Me Up." In the twenty-first century, they have released *Forty Licks* (2002), a greatest-hits album with four new tracks; *A Bigger Bang* (2005), which lyrically took on neoconservative politics in America; and *Shine a Light* (2008), the soundtrack of a concert film of the same title directed by Martin Scorsese. Recording and touring to the present day, the Rolling Stones have been one of the most enduring yet innovative rock groups of all time.

The Rolling Stones. <http://www.rollingstones.com>

Rowan & Martin's Laugh-In was a comedy television series that ran on the NBC network from January 1968 to May 1973. Hosted by comedians Dan Rowan and Dick Martin, *Laugh-In* consisted primarily of short, rapid-fire, often unconnected comedy sketches filled with jokes and innuendo-laden wordplay. The program frequently ventured into political satire, lampooning current events and poking fun at politicians and other establishment figures. The title *Laugh-In* alluded to the teach-ins, be-ins, and love-ins of the 1960s hippie counterculture, as well as the sit-ins of civil rights and anti-Vietnam War protestors, invoking the irreverent and antiauthoritarian attitude of these public demonstrations.

The weekly program followed a predictable format, recycling similar scenarios and characters. Rowan and Martin highlighted their two-man stand-up comedy act, with Rowan as the straight man and Martin as his clownish comic foil. Other regular actors established recurring characters, including Goldie Hawn as a stereotypically ditzzy, giggling blonde, Lily Tomlin as an irritating telephone switchboard operator, and Flip Wilson as the cross-dressing Geraldine. During breaks between sketches, the show often featured clips of bikini-clad female cast members dancing to go-go music and displaying jokes, flowers, and other decorations painted on their bodies.

Another regular feature was "*Laugh-In* Looks at the News," a parody of network news broadcasts that commented on current events, poked fun at historical events, and predicted future events and news stories. (*Laugh-In*'s news parodies owed much to the early-1960s British satire *That Was the Week That Was* and later inspired the "Weekend Update" segments on *Saturday Night Live*.) *Laugh-In* also was known for creating a number of popular catchphrases that passed into everyday parlance:

"*Look that up in your Funk'n' Wagnalls!*" (referring to the *Funk and Wagnalls* encyclopedia, as well as hinting at the perceived obscenity of the word *funk*)

"*You bet your sweet bippie!*" (another hint at obscenity, with *bippie* replacing a crude anatomical reference)

"*Sock it to me!*" (a generally meaningless phrase used mostly for emphasis, though it also could carry a vaguely sexual meaning depending on the context)

Laugh-In's status as a counterculture media phenomenon rests on its comedic, satirical, and often flippant attitudes toward authority figures and current events, a perspective that helped to make it especially popular with younger television audiences. Federal Bureau of Investigation (FBI) files on the show were later turned up, specifically in connection with jokes made on the show about the bureau and its longtime director, J. Edgar Hoover.

Laugh-In went off the air in May 1973 after 140 episodes, but the format of the comedy-sketch variety show would appear again about two years later with the first airing of *Saturday Night Live*, which was created by Lorne Michaels, a veteran *Laugh-In* writer.

Rubin, Jerry (1938–1994)

A founder of the radical theatrical political group Youth International Party, whose adherents were known as yippies, Jerry Rubin mobilized American youth of the 1960s with his outrageous rhetoric, including “Don’t trust anyone over thirty.” His infamous use of street theater and his antics as a defendant in the Chicago Seven trial following antiwar demonstrations at the Democratic National Convention in Chicago in August 1968 put him at the forefront of the counterculture revolution.

Rubin was born on July 14, 1938, in Cincinnati, Ohio. His father was a bread delivery truck driver and a member of the International Brotherhood of Teamsters. Rubin studied at Oberlin College and the University of Cincinnati before moving with his younger, teenaged brother, Gil, to Israel upon the deaths of their parents. Rubin enrolled as a graduate student in sociology at Hebrew University.

The year 1964 marked the beginning of counterculture radicalism for Rubin. He moved back to the United States in January and began graduate studies at the University of California, Berkeley. Six weeks later, he withdrew from his graduate program to walk a picket line against a grocery store that was not hiring African Americans. Within the next few months, he volunteered to travel illegally to Cuba, where he had the opportunity to hear President Fidel Castro speak and to interview the Argentine-born Marxist revolutionary Che Guevara. Upon Rubin’s return, the U.S. government confiscated his passport.

Having been involved in the student-led Free Speech Movement at Berkeley in 1964 and 1965, Rubin sought to harness the same energy in the movement against the U.S. war in Vietnam. In 1966, subpoenaed to testify before the House Committee on Un-American Activities (HUAC), Rubin showed up for the hearings dressed as a soldier from the American Revolution and distributed copies of the Declaration of Independence to emphasize the patriotism of the antiwar movement.

Rubin’s theatrics made headlines with increasing frequency over the course of the next several years. He was sent to prison for thirty days for spilling blood on the limousine of a U.S. Army general. Upon his release in early 1967, after moving to New York City, Rubin and fellow activist Abbie Hoffman created havoc on the floor of the New York Stock Exchange, when they scattered dollar bills from a balcony above. The crush of stockbrokers scrambling for the money brought the exchange to a halt and—in the eyes of the perpetrators, at least—perfectly illustrated the rampant greed on Wall Street.

In collaboration with Hoffman’s wife, Anita, Paul Krassner, and Nancy Kurshan, Rubin and Hoffman conceived the Youth International Party to lend a more formal, organized image to the antiwar counterculture movement. In August 1968, the group’s presence in Chicago for the Democratic National Convention diverted media attention from the political proceedings and drew the spotlight to antiwar demonstrations. The yippies’ “Festival of Life” rally resulted in physical violence between protestors and police.

Among those arrested were eight protest organizers, who went on trial for conspiracy and inciting a riot. Bobby Seale, cofounder of the Black Panther Party, was gagged under order of the judge for his inflammatory courtroom remarks and tried separately; the remaining defendants, including Rubin and Hoffman, became known as the Chicago Seven. Represented by radical attorney William Kunstler, the Chicago Seven rose to national celebrity for their courtroom antics. Five of the defendants were found guilty of related offenses, but their convictions were later overturned on appeal.

Rubin summarized his antiestablishment philosophy and advocacy of revolution in a 1970 handbook, *Do It!: Scenarios of the Revolution*. The volume became a best seller, helping perpetuate the youth counterculture in a new decade. In the Yippieland of the future, Rubin wrote, "police stations will blow up. Revolutionaries will break into jail and free all the prisoners. Clerical workers will ax their computers and put chewing gum into the machines.... Kids will lock their parents out of their suburban homes and turn them into guerrilla bases, storing arms."

Rubin was accused of selling out to the mainstream establishment in the 1980s. In a startling change of stripes, he became an unabashed businessman, entrepreneur, and investor, taking a job on Wall Street and starting innovative business ventures to encourage corporate networking.

On November 14, 1994, while jaywalking on a six-lane boulevard in Los Angeles, he was hit by an automobile and seriously injured. He died fourteen days later.

Sacco and Vanzetti Case

Nicola Sacco and Bartolomeo Vanzetti, two Italian-born U.S. anarchists, were arrested on May 5, 1920, on suspicion of robbery and murder. The victims, shoe-factory employees Alessandro Berardelli and Frederick Parmenter, were shot dead in South Braintree, Massachusetts, on April 15 of that year while delivering the factory's payroll. Despite evidence of Sacco and Vanzetti's apparent innocence, another man's confession, and the fact that the money could be traced to neither of the accused, the two were found guilty at trial and executed on August 23, 1927. The case was one of the most controversial in American history, causing outrage among those who believed the defendants had been convicted because of their political beliefs and immigrant status.

Sacco and Vanzetti originally were taken into custody based only upon their loose association with a fellow anarchist who was suspected of having participated in a similar crime. Although both men provided heavily corroborated alibis for the South Braintree robbery and murders, and despite inconclusive ballistics evidence that may have been tampered with by the prosecution, Sacco and Vanzetti were found guilty after only five hours of jury deliberation.

Presiding Judge Webster Thayer, who admitted apparently faulty evidence and allowed for nearly abusive cross-examination by prosecutor Frederick Katzmann, was widely suspected of bias against the two men due to their radical political affiliations. Thayer's presumed bias may have been exacerbated by the flamboyant personality and indecorous courtroom manner of the defendants' lawyer, radical labor advocate Fred Moore. While Moore was able to turn Sacco and Vanzetti's case into a cause célèbre among the left, he was unable to save his clients.

At the time of Sacco and Vanzetti's arrest and conviction, America was in the grip of its first Red Scare, characterized by rampant fear of Communists and Communist activity, especially the infiltration of Communists into the U.S. government. After the Russian Revolution of 1917, many Americans feared that immigrants would foment a similar revolution in the United States. Europeans associated in any way with leftist politics or the labor movement were especially suspect. Terms such as *Bolshevik*, *Communist*, *anarchist*, and *radical* were used interchangeably in reference to anyone who appeared to pose an ideological or physical threat to the establishment.

Both Sacco and Vanzetti were active radicals who subscribed to the ideology of Italian anarchist Carlo Tresca, and counted among their compatriots a number of radicals who had been scooped up in recent raids by the federal government. One such compatriot, Andrea Salsedo, had died under suspicious circumstances while in police custody. When arrested, Sacco and Vanzetti were not informed of the crimes with which they were being charged; they merely were asked if they were anarchists—which they denied. Although the denials were made in fear for their lives, the defendants later testified, their credibility was cast in doubt with jurors. The tactics of the prosecution and bias of the judge, moreover, made it all but impossible for the defendants to overcome the stigma of their political leanings.

Sacco and Vanzetti's defense team submitted multiple motions for a new trial but was rebuffed each time, even when one Celestino Madeiros freely confessed to the crimes. Nor did a scathing exposé of the trial's shortcomings by *Atlantic Monthly* reporter and future U.S. Supreme Court Justice Felix Frankfurter sway the Massachusetts court system.

Leftists and civil libertarians throughout the United States made Sacco and Vanzetti a focus of public discourse from shortly after their arrest through their execution in 1927. Meanwhile, in response to extraordinary worldwide support, Massachusetts governor Alvan T. Fuller assembled an independent commission to review the case. Once again, the appeal to justice was denied. Sacco and Vanzetti finally were sentenced to death on April 9, 1927. On August 23, they were electrocuted amid a torrent of worldwide indignation and sympathy.

It was not until half a century later, in 1977, that Massachusetts governor Michael Dukakis signed a proclamation clearing the names of Sacco and Vanzetti, admitting the abuses of Judge Thayer and the prosecution, and naming August 23 Sacco and Vanzetti Day.

Salinger, J.D. (1919–2010)

J.D. (Jerome David) Salinger is a reclusive American writer best known for his only published novel, *The Catcher*

in the Rye (1951), the story of sixteen-year-old Holden Caulfield and his experiences in New York City in the days following his expulsion from preparatory school. The cynical and complex Caulfield, who abhors everything he sees as “phony” in the adult world, has become an enduring symbol of the alienation felt by many adolescents.

Salinger was born in New York City on January 1, 1919. As a child, he lived with his father, Sol, mother, Marie, and older sister, Doris, and attended public schools in Manhattan. He entered the McBurney prep school there in 1931 but failed to advance past the tenth grade. Happy to get away from his family, he attended Valley Forge Military Academy in Wayne, Pennsylvania, and received his diploma in 1936.

Following graduation, Salinger enrolled at New York University but dropped out after completing only one semester. Briefly pursuing the same trade as his father, he worked as a meat importer in Vienna, Austria, before returning to the United States in 1938 (months before the Nazis assumed power). After attending Ursinus College in Collegetown, Pennsylvania, for a semester, he took a writing class at New York’s Columbia University with Whit Burnett, the editor of the magazine *Story*. In 1940, *Story* published Salinger’s story “The Young Folks.” Drafted into the U.S. Army in 1942, shortly after the United States entered World War II, Salinger participated in the D-day invasion of Normandy in 1944 and the Battle of the Bulge. During the course of the war, he continued publishing stories in magazines, among them *The Saturday Evening Post*, *Collier’s*, *Harper’s*, *Good Housekeeping*, *Cosmopolitan*, and *The New Yorker*, where his stories were published almost exclusively by the late 1940s. One story he wrote during the war, not published in *The New Yorker* until 1946, was titled “Slight Rebellion Off Madison.” This story’s main character was Caulfield, later the protagonist of *The Catcher in the Rye*.

Near the end of the war, after helping liberate Jews from a concentration camp, Salinger suffered a nervous breakdown. Following his recovery, he married a woman he had met while serving overseas. Their marriage lasted only a few months, however, and, in 1946, he returned to New York City. In 1952, after studying the writings of religious philosopher Sri Ramakrishna and his disciple, Swami Vivekananda, Salinger converted to Advaita Vedanta Hinduism. His second marriage, to Claire Douglas in 1955, produced two children, Margaret Ann and Matthew. The couple divorced in 1967. In the following decades, Salinger was romantically linked to the actress Elaine Joyce and the writer Joyce Maynard. Then, in the late 1980s, he met his third wife, Colleen O’Neill, a nurse. These sparse details are among the few pieces of personal information known about Salinger.

The Catcher in the Rye chronicles Holden Caulfield’s activities after he is expelled from an elite private school as he heads off seeking to understand the adult world and his role in it. He checks into a New York City hotel, gets drunk in a nightclub, has an encounter with a prostitute, and attempts to rekindle several old relationships. Each event leads to disaster and takes an increasing emotional toll on the ever-sympathetic young hero.

The book was an almost immediate commercial success despite markedly mixed reviews from critics. While many praised its effective use of satire and other forms of humor and its telling portrayal of adolescence, others criticized the work for its glorification of alcohol abuse, premarital sex, prostitution, and foul language. Despite the controversy surrounding the book, it has sold hundreds of thousands of copies, and is widely regarded as a modern American literary classic.

Following the publication of *The Catcher in the Rye*, Salinger became a virtual recluse and published only sparingly. Subsequent works include three collections of short stories—*Nine Stories* (1953), *Franny and Zooey* (1961), and *Raise High the Roof Beam, Carpenters and Seymour: An Introduction* (1963)—and a novella, *Hapworth 16, 1924* (*The New Yorker*, June 19, 1965). A number of his thirty-five published short stories feature a group of characters called the Glass family. Salinger died at his home in Cornish, New Hampshire, where he lived for more than fifty years, on January 27, 2010.

San Francisco, California

Since the middle of the nineteenth century, when the forty-niners of the California Gold Rush descended upon the region to prospect for riches, San Francisco has been a haven for society's dreamers and outcasts. It thus has been the site of a variety of alternative cultural movements and activities, some of which have been labeled radical or extreme. As a port city, however, San Francisco also has been one of the foremost centers of commerce on the West Coast, and the necessity of establishing structures and institutions for the management of capitalist activities has existed in perpetual tension with the constant influx of new groups, ideas, and vitalities.

In the half century before the earthquake of 1906, San Francisco developed a reputation for boisterous living amid reckless entrepreneurship. It was the place where Samuel Clemens became Mark Twain (literally), after encountering an atmosphere that set him loose to be a thorn in the side of bourgeois society.

By the turn of the twentieth century, several bohemian and radical subcultures had grown up around Montgomery Block, a large office building in the city. Authors such as Ambrose Bierce, George Sterling, Jack London, and Edwin Markham traded ideas about socialism and utopianism while having a drink at Coppa's restaurant (later the site of the Transamerica Pyramid). The city also attracted practitioners of various occultisms, from astrology and palm reading to the nature mysticism of outdoorsmen such as John Muir.

The 1906 earthquake reshuffled the cultural deck in San Francisco. Rebuilding the city gave the upper hand to commercial interests, and most bohemian or radical activities were dispersed. A budding organized-labor movement was stopped in its tracks and did not reassert itself until the maritime and general strike of 1934.

It was not until the 1930s that countercultural activities within the city began to grow again, too. The Black Cat Café on Montgomery Street became a popular bohemian hangout, presaging the café culture of the 1950s Beat and 1960s hippie movements.

In the North Beach section of the city, Italian anarchists, still bitter about the murder convictions of Nicola Sacco and Bartolomeo Vanzetti in 1927, began to nurture a wider affinity for anarchist thought among younger writers and artists. During and after World War II, the poet Kenneth Rexroth was instrumental in forming several anarchist clubs that kept this legacy alive.

The San Francisco poetry renaissance and the Beat movement of the 1950s—which established the works of poets and novelists Allen Ginsberg, Philip Whalen, Jack Kerouac, and William S. Burroughs—were built, philosophically, on the foundation of anarchist social criticism that Rexroth and radical periodicals such as *Circle* and *Ark* helped to establish. But the demographics of San Francisco also were changing dramatically. A deep Asian influence was showing itself in the arts and in the religious perspectives of the city's counterculture, and Mexican and African American migrants chipped away at the predominately white, Anglo-Saxon character of the city's population. The deportation of Japanese Americans during World War II, along with a large contingent of conscientious objectors, solidified radical sentiments in the region.

Thus, the generation that grew up after World War II found in the Bay Area a mixture of radical dissent and mystical religion. This environment was attractive to East Coast poets and writers such as Ginsberg and Kerouac, who were transformed by their San Francisco experiences, ultimately providing a bridge between the emerging Beat, or beatnik, movements on both coasts. Though the Beats were criticized in the media for their seeming “know-nothing bohemianism,” they were actually attempting to create a synthesis of Asian religious traditions (especially Zen Buddhism) with European literary traditions, an effort which was in keeping with the way San Francisco seemed to present a combination of the two cultures. Many of the Beats’ activities were not recorded in books, however, since much occurred in poetry readings at bars such as the Cellar and the Black Hawk, where the verse often was declaimed to the accompaniment of a jazz band.

In the 1960s, with the advent of the Vietnam War era, the Beat movement gradually gave way to the hippie phenomenon in San Francisco. The word *hippie* initially was a derogatory term applied to “little hipsters” by the older, more literary Beats, but it was quickly embraced by the younger runaways and artists who congregated near the area of the city where Haight and Ashbury streets intersected.

Though the hippies were often associated negatively with drugs and psychedelic experiences, the more articulate in the Haight-Ashbury scene saw themselves as primarily concerned with mind expansion and expression of their most personal selves. This impulse can be most clearly seen in the drug experiments and road trips of writer Ken Kesey and his group of Merry Pranksters, as well as in the music of the Grateful Dead and their lead guitarist, Jerry Garcia, a native San Franciscan.

A high point of the San Francisco hippie era was an antiwar rally called the Gathering of the Tribes at Golden Gate Park in January 1967, a “Human Be-In” that brought together members of the 1960s counterculture and encouraged them to “question authority” in regard to civil, women’s, and consumer rights. During the subsequent Summer of Love, young people from all over the United States came to San Francisco to camp out, make and listen to music, take drugs, and have sex.

During the transitional period between the heydays of the Beats and the hippies, the anarchist impulse in the Bay Area also was kept alive by a group that called itself the “Diggers,” taking their name from a seventeenth-century English group of agrarian communists. The San Francisco Diggers operated stores that gave out free food and communicated their ideas through an aggressive form of street theater. The radical political stance of the Diggers, soon was engulfed in more widespread Bay Area activism against the Vietnam War. For a while, Berkeley, on the other side of the San Francisco Bay, became the center of American countercultural activity.

In the 1970s, gay pride activists in the Castro district and other neighborhoods south of Market Street in San Francisco turned the city once again into a symbol of dissent and a haven for alternative lifestyles. Yet it is possible to see their political activities as part of a larger cultural trend, centered in San Francisco, to celebrate diversity, multiculturalism, and a militant ecological ethos—a trend that continued throughout the 1980s, 1990s, and into the 2000s, despite a fervent conservative backlash.

Sanger, Margaret (1879–1966)

Social activist, author, and nurse Margaret Sanger is known for her pioneering work to help women in America gain access to birth control, a term she coined. She was the founder of the National Birth Control League (1914), the American Birth Control League (1921), and the Birth Control Clinical Research Bureau (1923), the first legal birth control clinic run by doctors in the United States. The American Birth Control League and the Birth Control Clinical Research Bureau merged in 1942 to become Planned Parenthood Federation of America, based in New York City, which, by the early 2000s, had more than 800 health centers nationwide. Sanger later (1953) served as the founding member of the International Planned Parenthood Federation. She was the author of *What Every Girl Should Know* (1916), *What Every Mother Should Know* (1916), *Family Limitation* (1916), *Woman and the New Race* (1920), *The Pivot of Civilization* (1922), *Happiness in Marriage* (1926), *My Fight for Birth Control* (1931), and *Margaret Sanger: An Autobiography* (1938). She also founded the newspapers *The Woman Rebel*, *Birth Control Review*, and *Birth Control News*.

Margaret Sanger coined the term birth control and pioneered the movement. She faced criminal charges for distributing literature on the subject through the U.S. mail and for opening the nation's first family-planning clinic in 1916. (Library of Congress)

Born Margaret Louise Higgins on September 14, 1879, in Corning, New York, she was the sixth of eleven children. Margaret attended Claverack College, the Hudson Institute, and the nursing program at White Plains Hospital. In 1902, she married architect William Sanger. Together, they had three children and, upon moving to New York City, became part of the prewar radical bohemian culture, identifying with socialist and early labor movements, including labor strikes led by the Industrial Workers of the World; the couple separated in 1914.

Margaret Sanger came to her activism for birth control due to her observations working as a nurse, her mother's early death from tuberculosis (which Sanger believed was due to eighteen pregnancies and eleven live births), and her work with social causes among New York City's working class. According to biographer Esther Katz, she came to believe that "family limitation [was] as a tool by which working-class women would liberate themselves from the economic burden of unwanted pregnancy."

Legally prosecuted for her public speaking, for mailing and distributing contraceptives and birth control information (illegal under the federal Comstock Law of 1873, which classified all contraceptive pamphlets as pornographic and forbade their distribution through the mail), and for opening the nation's first birth control clinic (in Brooklyn, New York, in 1916), Sanger was jailed several times and on other occasions fled the country. Her efforts, and the public support of her work, eventually led to changes in the legal system regarding the ways birth control information and contraceptive devices could be distributed, and allowing physicians the right to prescribe birth control for medical reasons.

Throughout her adult life, Sanger fought for cheaper, easier-to-use, more accessible means of contraception, at times smuggling devices from Europe. Her efforts ultimately led to funding for the development of the birth control pill in the mid-1950s and approval by the U.S. Food and Drug Administration in 1960. Sanger died in Tucson, Arizona, on September 6, 1966.

Santería

Santería, also known as Lukumi, is a syncretistic or “creolized” folk religion that developed among African slaves in Cuba. Santería is derived from the traditional Yoruba culture of West Africa, from which a large proportion of Cuban slaves had been captured. Lukumi, which can be translated from the Yoruba language as “friends,” is still practiced in West Africa; the term is also used to identify adherents of Yoruba beliefs who have been dispersed around the world due to slave trading and later migrations. In recent times, some practitioners of Santería have attempted to reunite the faith with seminal Lukumi beliefs of Africa, in an attempt to decrease the effects of slavery and colonialism.

During the slavery era, Cuban authorities outlawed the practice of Lukumi and compelled the slaves to convert to Christianity. Adherents of Lukumi responded by claiming that their revered spiritual leaders, the Orishas, were in fact Catholic saints—a subterfuge that allowed them to secretly worship the Orishas while carrying out the required Christian rituals. The term *Santería* was used derisively by the Spanish to describe this practice and to criticize Lukumi’s over-devotion to “saints” rather than to a single deity.

The original practitioners of Lukumi in Cuba, like slave owners, were scattered throughout the island. This led to an ongoing fragmentation and dilution of beliefs until the early eighteenth century, when Cuban authorities allowed slaves to intermingle in societies called *cabildos*. The slaves had the opportunity to reconstitute their belief systems, which came back together as Santería, essentially an evolved version of Lukumi with New World influences.

After the abolition of slavery, Santería spread beyond Cuba to other areas of the Americas with large Afro-Latin populations. Adherents were found in the United States, Canada, Mexico, several nations in South America, and many Caribbean islands. A similar religion, called Cadomble, is widely practiced in Brazil, and a number of similarities also can be found with Haitian Vodun (Voodoo), the historical development of which was comparable to that of Santería.

The core beliefs of Santería are directly descended from the Lukumi faith. A supreme deity known as Olorun or Olodumare is believed to be the creator of the universe and the immediate authority figure over the Orishas. Religious rituals include animal sacrifice and sung invocations. An initiated priest may enter a trance state brought on by music and dance, during which the priest channels an Orisha, communicates with spirits, and performs healing.

Santería does not stipulate judgments of good and evil or right and wrong; instead, it professes that all things,

people, and events are mixtures of both and must be judged in context. Most of the rituals are dedicated to respecting and communicating with one's ancestors. The belief system places great responsibility on the individual practitioner for developing good character. Santería is practiced in secret and the rituals are kept off limits to nonadherents.

There are several large American churches, particularly in the South, in which Santería is practiced in the present day. Of particular note is the Church of the Lukumi Babalu Aye in Hialeah, Florida, whose animal sacrifices were outlawed by the city in the late 1980s. The church won back the right to follow such practices in a landmark 1993 ruling by the U.S. Supreme Court (*Church of Lukumi Babalu Aye v. City of Hialeah*), in which the justices unanimously recognized Santería as a legitimate, organized, legally protected religion. While not legalizing animal sacrifice per se, it declared the Hialeah ordinance unconstitutional for targeting the practices of a particular religious group.

Other important Santería churches in the American South include South Carolina's African Theological Archministry and Florida's Church of Seven African Powers. There is also a noteworthy Santería community in New York City, where shrines and totems are highly visible in the homes and businesses of practitioners. All told, an estimated 5 million or more people in America observe Santería/Lukumi.

Saxton, Alexander P. (1919–)

A professor emeritus of history at the University of California, Los Angeles, Alexander P. Saxton spent his early years as a radical novelist and member of the American Communist Party. His novels, though constituting only one aspect of his life's work and personal history, nonetheless occupy an important place in the genre of radical literature.

Alexander Plaisted Saxton was born on July 16, 1919, into a middle-class family in Great Barrington, Massachusetts. As a college student at the University of Chicago, he joined the Communist Party in about 1940. Intensely interested in issues of socioeconomic class and labor, Saxton's firsthand observances during the Great Depression added to his desire to join the party. Saxton served in the U.S. Merchant Marine during World War II

and, upon his return, settled in California.

His first book, *Grand Crossing* (1943), was favorably received, and he immediately began work on a second, *The Great Midland*, which was published in 1948. *The Great Midland* is the story of American Communist Party activists and their attempts to unionize and promote better working conditions on the Great Midland Railroad. Saxton himself admitted that the novel was an attempt to portray the party and its participants in a favorable light. Many of the characters are based on comrades who Saxton encountered in the course of his own activities, lending a vital authenticity to the novel. Published after the conclusion of World War II, at a time when anti-Communist sentiments were running high in the United States, *The Great Midland* was shunned by reviewers, booksellers, and even the publisher. When the novel did not do well financially, Saxton began working as a carpenter to support himself, continuing to write novels and stories on the side.

Because of his membership in the Communist Party, Saxton was called before the House Committee on Un-American Activities (HUAC), the special congressional committee formed in 1938 to investigate communist and other extremist political organizations in the United States, in 1951. When questioned about his politics and comrades, Saxton revealed nothing and claimed protection under the Fifth Amendment right to avoid self-incrimination. While the committee did not charge Saxton with any crime, the fallout from his refusal to testify was severe. His third novel, *Bright Web in Darkness*, was not published until 1958.

It was around this time that Saxton resigned his membership in the Communist Party, primarily because it no longer seemed effective in meeting its goals. Earning his master's and Ph.D. degrees in history from the University of California, Berkeley, in 1962 and 1967, respectively, Saxton began his career as a history professor. In 1976, he joined the faculty of the University of California, Los Angeles, where he remained more than forty years later.

Although he discontinued writing the radical novels for which he first became known, Saxton's legacy in that genre has endured. *The Great Midland* remains a compelling examination of race, class, and gender exploitation in America during the first half of the twentieth century. His involvement in the Communist Party informed his work with a firsthand understanding of the state of radical politics in America, and his insights into racial consciousness and the immigrant working experience were reflected in fictional characters who worked side by side to promote radical politics, better working conditions, and racial and ethnic equality at a time when these values were widely sought but feared by mainstream American society.

Schools, Alternative and Experimental

Alternative education typically refers to any and all options outside the mainstream educational system. Alternative

schooling can be designed around a particular educational or life philosophy or a unique approach to curriculum, or to meet the needs of a specific population, or some combination of these. Historically, the alternatives have been offered in private school settings or outside of school entirely, as in homeschooling.

Many alternatives to mainstream schooling were introduced or revived during the 1960s and 1970s, often organized around principles of self-determination and lack of central authority. These were principles that appealed to the counterculture community of the time, which criticized conventional education for contributing to the problems of American society. In the 1970s and 1980s, critics also began to examine the reverse process—that is, how the problems of mainstream society were affecting the school system. Today, some of these alternatives are offered via the educational establishment in the form of charter schools.

Many of the alternative schooling experiments in the United States have been inspired by the work of Progressive Era educators and philosophers such as John Dewey. Dewey's writings from the early twentieth century, including *The Child and the Curriculum* (1902) and *Democracy and Education* (1916), promoted the ideal of the school as a vital component in maintaining a vibrant democracy. As such, Dewey argued, school ought to encourage self-motivation and problem-solving skills. Rather than having the teacher or administration be the locus of control, Dewey believed the focus ought to be on the learner. He also believed that school should provide an environment in which children could mature into socially responsible citizens.

While Dewey was promoting progressive education in the United States, A.S. Neill was exploring similar ideals in Europe. In 1921, he founded an alternative, coeducational boarding school in England called Summerhill, where students were not required to attend classes and everyone, staff and students alike, had one vote at weekly administrative meetings. Because the students were allowed to choose what they would do or not do, whether to study or not study, Neill called the experiment a "free" school. Summerhill did not receive much public support and had only about twenty-five students by the late 1950s. Then, in 1960, Neill published a book about the school, *Summerhill*, which was an instant sensation in the United States. Not only did the Summerhill school survive, but it inspired many other such schools around the world.

Among the philosophical descendants of Summerhill is Sudbury Valley School in Framingham, Massachusetts, founded in 1968 along the philosophical lines promoted by Dewey and Neill. Sudbury is a day school, where students can choose what they want to learn and how they want to learn it. The school also has a weekly meeting at which each student and each staff member has one vote.

Another form of alternative education, emphasizing early learning, is based on the theories of the Italian physician and educator Maria Montessori. In 1907, Montessori opened a day-care center in a poor area of Rome, where she adapted the objects and materials she had used with disabled children for use with preschoolers. With the classroom arranged as a collection of activity centers designed to engage the interest and challenge the abilities of the children, young pupils were then free to move about the room at will and choose their own activities. The interior and exterior environments of the school were designed on a child-sized scale.

Montessori's methods enjoyed widespread popularity in the United States in the early 1900s, lost popularity in the 1930s and 1940s, and enjoyed a revival in the late 1950s. Today, there are approximately 4,000 Montessori schools in the United States, some of which are charter schools.

Another notable innovator in modern education was Rudolf Steiner, founder of the Waldorf School in Stuttgart, Germany, in 1919. The school was based on Steiner's spiritual-scientific theory of the developmental stages of childhood in roughly seven-year increments, with the curriculum designed accordingly. One unique feature of the Waldorf method was the teaching of eurythmy, a kind of language through movement. Introduced to the United States in 1928, Waldorf education did not catch on quickly. By 1965, the United States still had only eight Waldorf schools. Most of the more than 150 Waldorf schools in the United States today have been formed since 1980. Some of these are charter schools.

An increasing number of American parents choose to educate their children at home. They may have

philosophical or religious differences with the way schools are run, they may not live near or be able to afford alternative schools that share their views, or they may be opposed to public schooling altogether. Homeschooling was the norm in America through the nineteenth century, until compulsory education laws and the expansion of formal public schooling in the early part of the twentieth century made it all but obsolete.

In the 1960s, however, many critics of the public school system began reconsidering the homeschool option. Some were influenced by the writings of educator John Holt, including *How Children Fail* (1964) and *How Children Learn* (1967). Although these works were critical of public education, Holt did not specifically advocate homeschooling in them. Other thinkers of the time did, including Ivan Illich in his book *Deschooling Society* (1971) and Hal Zina Bennett in *No More Public School* (1972). By 1976, Holt had joined the cry for alternatives to compulsory education, and in 1977 he began publishing a magazine for homeschooling families called *Growing Without Schooling*.

In the early 1980s, more and more parents decided to school their children at home. Between 1982 and 1993, thirty-four states passed laws allowing parents to legally teach their children at home. By 1998, all fifty states had passed such laws.

Science Fiction

Science fiction (or *sci-fi*) is a broad term applied to a cluster of related yet heterogeneous subgenres of contemporary popular literature spanning virtually every medium, including novels, short fiction, film, television, comics, and games. Although precise genre definitions remain subject to vociferous debate by both writers and readers, science fiction generally speculates about scientific, technological, and ethical issues, including those related to space travel, extraterrestrial contact, robotics and artificial intelligence, telepathy and other psionic (paranormal psychic) abilities, cloning, time travel, nanotechnology, alternate history, and the general and specific effects of technological change (negative or positive) on individuals and on the human condition. Robert A. Heinlein, widely considered the dean of modern science fiction, described the genre as “realistic speculation about possible future events, based solidly on adequate knowledge of the real world, past and present, and on a thorough understanding of the nature and significance of the scientific method.”

Golden Age and Beyond

Early science fiction was characterized by turgid and inelegant prose stylings, and lurid illustrations depicting bug-eyed alien monsters menacing scantily-clad Earth women. Although it took many decades before any serious cultural respectability would accrue to the field, it nevertheless gathered much of its enduring power as an American pop-culture touchstone and countercultural force during the first half of the twentieth century.

This is largely attributable to that era's relentless, headlong march of science, technology, and industry, all of which drove the sales of innumerable pulp sci-fi periodicals from the 1920s through the post-World War II years, with *Amazing Stories* (established in 1926 and published intermittently until 2005) and *Astounding Science Fiction* (now *Analog Science Fiction and Fact*, 1930–), and later *The Magazine of Fantasy & Science Fiction* (1949–) and *Galaxy Science Fiction* (1950–1980), at the forefront. The genre spread throughout American culture, owing largely to a profusion of sci-fi comics, radio shows, feature films, and movie serials.

Prose science fiction's first great period of creative fecundity, broadly described as the Golden Age, arrived in 1937 with John W. Campbell's assumption of the editorship of *Astounding* and arguably lasted through the 1950s. Campbell nurtured some of the genre's most influential writers, including Heinlein, many of whose works comprise one of the field's first and greatest "future history" timelines (much of it available today in a volume titled *The Past Through Tomorrow*, published in 1967).

As the launch of the first space satellite, the Soviet Union's Sputnik, in 1957, catalyzed an acceleration of technological progress that would take the United States to no less a science-fictional destination than the Moon by 1969, interest in sci-fi among America's youth hit its high-water mark. This was the era of Heinlein's "juveniles," short, youth-oriented adventure novels marked as much by their inculcation of math and science (*Rocket Ship Galileo*, 1947; *Red Planet*, 1949; and *Have Space Suit, Will Travel*, 1958) as by their libertarian notions of self-reliance and individual rights (*Starship Troopers*, 1959).

In addition to Heinlein, Campbell mentored a cadre of younger up-and-coming sci-fi stylists known collectively as the "Futurians," a group that included genre luminaries such as Poul Anderson, Isaac Asimov, James Blish, Damon Knight, Judith Merril, Frederik Pohl, and Donald A. Wollheim. Campbell pushed his writers to achieve a significantly higher level of characterization and literary quality than the customary pulp-era norm, and he emphasized the use of plausible science, believable aliens, and the primacy of humanity in most human-alien conflicts. Although his influence unquestionably challenged sci-fi to transcend its adolescent roots, Campbell's belief in Earth's "cosmic manifest destiny" might have betrayed the editor's parochial racial attitudes, whether conscious or unconscious, or this belief simply may have revealed him to be a product of his time.

Other seminal authors in sci-fi's putative Golden Age included Arthur C. Clarke, most famous for writing the novel and coauthoring the screenplay for the Stanley Kubrick film *2001: A Space Odyssey* (1968), as well as for conceptualizing the modern telecommunications satellite; A.E. Van Vogt, whose feared-and-hated superhuman mutants portrayed in *Slan* (1940) provided the template for generations of fictional alienated superhumans; Jack Williamson, perhaps best remembered for his Humanoids, Legion of Space, and Legion of Time series; and L. Ron Hubbard, renowned not only for his best-selling *Battlefield: Earth* series of alien-invasion novels (which debuted in 1982), but also for founding the controversial organization known as the Church of Scientology.

Williamson scorned Scientology as "a lunatic revision of Freudian psychology," and Campbell's preoccupation with Hubbard's new belief system prompted author Alfred Bester to stop writing for *Astounding* in favor of the other pulps of the period. Whatever its merits (or lack of same), Scientology, as laid out in Hubbard's best-selling *Dianetics* (1950), proved greatly influential over Campbell, whose *Astounding* published one of Hubbard's earliest articles explicating the subject. More than two decades after his death, Hubbard maintains the distinction of being the only sci-fi writer to have created something that, arguably, amounts to a world religion.

Film and Television

The increased sophistication of the genre began creeping slowly into film and even invaded the new medium of television. Sci-fi used the visual media as an allegorical mirror for society's concerns rather than to serve up thoroughgoing escapism. Robert Wise's *The Day the Earth Stood Still* (1951) made trenchant observations about the tragic human predilection for aggression and self-destruction. George Pal's *When Worlds Collide* (1951) allowed a cosmic, Earth-destroying disaster to stand in for America's growing anxieties about nuclear annihilation. Pal's 1953 adaptation of the seminal 1898 H.G. Wells novel, *The War of the Worlds*, provided cathartic escape

from the era's seemingly omnipresent Red Menace (via a metaphorical Martian invasion), as did Don Siegel's much-imitated *Invasion of the Body Snatchers* (1956), in which pernicious humanlike alien doppelgängers represented either lurking Communists or authoritarian red-baiters of the Joseph McCarthy era.

Films such as Bruno VeSota's *The Brain Eaters* (a 1958 adaptation of Heinlein's 1951 novel of humans covertly enslaved by aliens, *The Puppet Masters*), the amusingly dreadful *Plan 9 From Outer Space* (1956) from Edward D. Wood, Jr., and *I Married a Monster from Outer Space* (1958) from Gene Fowler, Jr., all demonstrated the prevalence in the 1950s of a fear of American society being quietly subverted from within. Other general anxieties of the Atomic Age were worked out in the national pop-cultural psyche in films such as Gordon Douglas's *Them!* (1954), which depicted desert nuclear weapons tests that spawned terrifyingly destructive giant ants.

Despite its often dismal track record with sci-fi in terms of both seriousness and quality, television allowed the science-fictional literary zeitgeist to penetrate even further into the American consciousness with the advent of such generally well-crafted, anthology-format series as Rod Serling's *The Twilight Zone* (1959–1964) and *The Outer Limits* (1963–1965), both of which frequently employed significant genre writers such as Jerome Bixby, Harlan Ellison, Damon Knight, Richard Matheson, and Norman Spinrad.

September 8, 1966, marked the premiere of *Star Trek*, the brainchild of writer-producer Gene Roddenberry. Likewise retaining the services of a number of influential genre writers, including Bixby, Ellison, Theodore Sturgeon, and Robert Bloch, the series served up an optimistic and ecumenical future despite the manifold social upheavals of the day. Although low ratings killed the original *Star Trek* after three seasons, persistent fan interest resurrected the show, both as a Saturday morning animated series (1973–1974) and as a film franchise (1979–2008), ultimately leading to four more live-action television series.

Maturation and Modernity

Unsurprisingly, prose sci-fi advanced far ahead of both film and television sci-fi as the 1960s ushered in the genre's New Wave movement, named after the work of such innovative French filmmakers as Jean-Luc Godard and François Truffaut. During this period of intense creative ferment, the 1950s Beat writers and mainstream modernist and surrealist fiction such as that of William S. Burroughs also were extraordinarily influential on American writer Philip K. Dick, probably best remembered for the existentially tortured androids ("replicants") and android hunters of his 1968 novel *Do Androids Dream of Electric Sheep?* (the basis for Ridley Scott's stylish, dystopian 1982 film *Blade Runner*). Dick created a body of fiction infused with paranoia over the unreliability of memory, personal identity, and even reality itself, as in *Flow My Tears, the Policeman Said* (1974), *A Scanner Darkly* (1977), and *We Can Remember It for You Wholesale* (1966).

African American sci-fi writer Samuel R. Delany explored themes relating to social mobility, employed the "soft sciences" of linguistics and sociology, and weaved both mythology and alternative sexuality into works such as *Nova* (1968), *Dhalgren* (1975), and *Stars in My Pocket Like Grains of Sand* (1984). Groundbreaking feminist authors such as Ursula K. Le Guin, Joanna Russ, and James Tiptree, Jr. (also known as Alice B. Sheldon), gained unprecedented prominence by further opening up the genre to themes impelled by the social sciences, straying from sci-fi's more traditional stomping ground of physics, astronomy, and chemistry. Le Guin's *The Left Hand of Darkness* (1969) and *The Dispossessed* (1974) explore, respectively, the issues of gender identity and communal living versus individual rights. Russ's *The Female Man* (1975) offers a satirical feminist perspective on gender issues. And Tiptree routinely fuses sophisticated New Wave prose stylings, feminist, and "soft" (or sociological) science-fiction themes with the rivets-and-rockets tech more commonly associated with earlier epochs of "hard" science fiction (as in "Houston, Houston, Do You Read?" 1976).

New Wave sensibilities unleashed a veritable torrent of sci-fi creativity, with authors such as Spinrad, J.G. Ballard, John Brunner, Philip José Farmer, Kurt Vonnegut, Jr., and Roger Zelazny examining religion, mythology, politics, and sex to an unprecedented degree. Even the conservative Heinlein loosened up with *Stranger in a Strange Land* (1961), the saga of a man raised from childhood by Martians who becomes a religious icon upon his return to Earth. Reading and "grokking" (Martian for "understanding") *Stranger in a Strange Land* became an almost

mandatory rite of passage in the 1960s hippie counterculture.

Meanwhile, space opera collided with both ecological concerns and messianic religion with the publication of Frank Herbert's *Dune* (1965). This novel spawned an enduring series set on the harsh but resource-rich desert planet Arrakis.

Traditional hard science fiction received a new breath of life from the cutting-edge science literacy and storytelling skills of Anderson and Larry Niven. The former may be remembered best for his Time Patrol series and numerous stories and essays advocating human space exploration as a survival necessity. The latter is renowned for committing wild but scientifically plausible speculations in such novels as *Ringworld* (1970), a tale set on an artificially constructed, solar-system-sized torus built around a star, and *The Integral Trees* (1984), in which humans live weightlessly in forests suspended in a planetless bubble of atmosphere in orbit around a star. Niven also has distinguished himself by applying the rationality of hard sci-fi to the fantasy milieu, effectively transforming sorcery into an alternate form of science in *The Magic Goes Away* (1978) and its sequels.

In film, Kubrick's *2001: A Space Odyssey* (1968) set new standards for style, production values, and scientific rigor (for the first time in cinematic history, spaceships made no sound in the vacuum of space). Like the best of the era's print science fiction, Kubrick's other sci-fi-tinged works covered important sociological ground; *Dr. Strangelove or: How I Learned to Stop Worrying and Love the Bomb* (1964) commented on the absurdity of the cold war nuclear doctrine of Mutually Assured Destruction, while 1971's *A Clockwork Orange* (based on a 1962 novel by Anthony Burgess) presented a convincingly wrought future British dystopia in which street gangs and an authoritarian government vie for supremacy.

Whatever later blockbuster movies such as George Lucas's *Star Wars* (1977) and its sequels and prequels may have lacked in sophistication compared to the earlier groundbreaking sci-fi films mentioned above, they compensated for with a sense of adventurous fun that evoked the movie serials of the 1930s. The *Star Wars* franchise garnered enormous audiences, whetting the appetites of millions for more similar sci-fi film fare while spreading sci-fi tropes farther into the mainstream culture, sometimes arguably to the detriment of "real" science fiction. James Cameron's 2009 blockbuster *Avatar* (2009), screened in lush 3-D stereoscope and featuring cutting-edge computer graphics seamlessly merged with live action, lacked nothing in sophistication or audience appeal. It quickly became the top-grossing film of all time.

The Modern Era

By the 1980s, the term *science fiction* had come to encompass such a broad array of styles, subgenres, and subject matter as to nearly defy definition entirely. The fin-de-siècle anarchism of the cyberpunk subgenre, inaugurated by William Gibson's 1984 novel *Neuromancer* and continued in the works of Rudy Rucker and others, influenced the explosive real-world growth of modern Internet culture while building upon the alienation themes of earlier authors such as Bester and Dick. A related variant subgenre known as "steampunk," practiced by Gibson, Bruce Sterling, Neal Stephenson, and others, transposes cyberpunk's "rebel hacker" sensibilities onto other times and technologies, most notably the Victorian Era, thereby making Wells and Jules Verne in vogue.

Science fiction, its tropes, and its current real-world offspring (rockets, robots, computers, cell phones, etc.) now so suffuses mainstream culture that divisions within the genre are more artifacts of publishers' marketing departments than the natural creations of authors. The fact that much of the output of contemporary mainstream novelists such as Jonathan Lethem or Thomas Pynchon is considered by many to be sci-fi of the modern or postmodern stripe (Lethem's *Gun, with Occasional Music*, 1994, and Pynchon's *Gravity's Rainbow*, 1973, stand out as conspicuous examples) seems to have freed such works from their customary confinement to the sci-fi ghetto—or at least from booksellers' science-fiction sections.

What Dreams May Come

Whatever meaning the increasing trend toward cross-genre promiscuity might hold for science fiction's future, or

for its artistic purity, remains open to debate. But despite the trumpeting of impending doom so often heard among both writers and fans, whether because of allegedly declining American literacy levels or the perceived threat to “serious” science fiction posed by the proliferation of media tie-in novels (e.g., *Star Trek* and *Star Wars* “franchise fiction”), a diverse and lively core of hard science fiction—defined loosely as literature in which the absence of a story’s scientific content would cause the entire narrative to collapse—persists in reaching a robust American audience.

Science fiction partisans can draw hope from the fact that the number of sci-fi and fantasy titles published annually continues to rise, even if sci-fi unit sales do not. And while the audience for sci-fi magazines, once the genre’s very lifeblood, continues its decades-long decline, occasional smash successes such as J.K. Rowling’s Harry Potter novels suggest that the steadily graying readership of fantastic literature may replenish itself as youthful, new readers seek more challenging fare. Hope may yet remain of rejuvenating science fiction’s aging fandom, and of keeping both entropy and dystopia at bay for yet another generation.

Scientology

Conceived by American science fiction author L. Ron Hubbard in the early 1950s as an extension of his self-help system, Dianetics, Scientology is a nonmainstream religion whose adherents claim to help people achieve full awareness of their spiritual existence and, in the process, become more effective in the contemporary world. A

controversial presence in American popular and religious culture, Scientology finds its institutional identity in the beliefs and practices of the Church of Scientology (founded in 1953), essentially a network of affiliated organizations that claim sole authority to disseminate beliefs and principles and to monitor religious practice. Characterized by Hubbard as an “applied religious philosophy,” Scientology is, according to the church, “the study and handling of the spirit in relationship to itself, others and all of life.” Based on the principle that “Man is an immortal, spiritual being” whose “experience extends well beyond a single lifetime” and whose “capabilities are unlimited,” the goal of Scientology is to achieve certain knowledge of one’s spiritual existence and thereby attain “higher states of awareness and ability.”

Scientology, an “applied religious philosophy,” was founded in the early 1950s by former pulp and science fiction writer L. Ron Hubbard. He is seen here in 1968 using his Hubbard Electrometer (or E-meter) to determine if tomatoes feel pain. (Evening Standard/Stringer/Hulton Archive/Getty Images)

Church teachings, referred to as “Tech” or “Technology,” thus suggest that adherents can be relieved of their everyday miseries and become more successful in business and other areas of life. This can be accomplished by disposing of the “bank” of traumatic memories known as “engrams” said to inhibit one’s success. Through the process of “auditing,” one can reach the state of “Clear” and, following that, the even higher level of “Operating Thetan.” (Thetan is the immortal spirit, the source of life, and individual identity, akin to what other religions refer to as soul.) Each successive state represents the recovery of native spiritual abilities and confers dramatic mental and physical benefits as well.

Led by a trained Scientology counselor, each step in the process of auditing is a personal instruction session. The eventual goal is to return the human soul to its native condition of spiritual freedom, gaining direct control over matter, energy, time, and space. Many members claim that the practices of Scientology have left them with an improved intelligence quotient, a greater ability to articulate their needs, and enhanced memory. Others credit the religion with alleviating dyslexia and attention deficit problems, as well as a host of other problems. Many other members have abandoned the religion entirely.

Among Scientology’s most controversial positions is its opposition to conventional psychiatry and psychotherapy, both of which are regarded as abusive. At the same time, Scientology owes a debt to the psychological theories of Sigmund Freud and Carl Jung, while also drawing upon Buddhism, Hinduism, and the heretical form of Christianity known as Gnosticism.

This mix of doctrines and attendant practices has led many former members and outside observers to charge the

Church of Scientology with being little more than a commercial enterprise that has perverted religion, exploited its own members, and harassed defectors. Now practiced around the world, Scientology is regarded by some governments as a legitimate religious movement fully entitled to legal protections, and by others as a pseudoreligion, a dangerous cult, or, at best, a fraudulent and exploitative corporation.

Contemporary critics and some former members believe that Scientology is not a church at all, but an enormous and well-organized cult that fleeces the gullible and the vulnerable by enslaving them in an army of followers who live under a form of mind control. One means by which the group recruits new members, they maintain, is to showcase the lives and beliefs of members who happen to be Hollywood celebrities. Actors Tom Cruise, Kirstie Alley, John Travolta, and others have become fixtures in Scientology campaigns to solicit new members. Celebrity Scientologists not only help identify and locate potential new members, but they also publicly endorse the teachings of Hubbard and provide Scientology greater legitimacy in mainstream America.

The Church of Scientology claims anywhere from 7 to 15 million members worldwide—estimates that some observers regard as greatly exaggerated. Scientology organizations and missions have been established in dozens of countries, with the “worldwide spiritual headquarters” located in Clearwater, Florida, and the highest concentration of U.S. adherents and church activities in Los Angeles.

Although there is no single, formal scripture associated with the religion, its principles and practices are laid out in a number of books by, or based on the writings of, L. Ron Hubbard, beginning with *Dianetics* (1950) and including *Science of Survival* (1951), *Dianetics 55!* (1954), *Scientology: The Fundamentals of Thought* (1956), *Have You Lived Before This Life?* (1960), *Scientology: A New Slant on Life* (1965), *Dianetics Today* (1975), *The Way to Happiness* (1981), *The Future of Scientology and Western Civilization* (1985), and *The Scientology Handbook* (1994), among others.

Seattle, Washington

As the major population center of the Pacific Northwest region of the United States, the city of Seattle, Washington, has long provided a home for a diversity of thriving countercultures. At the same time, its general isolation from other American urban centers and its status as a so-called secondary city has meant that countercultural activity in Seattle developed along its own unique lines and beyond the media focus received by the counterculture in larger cities, such as New York and Los Angeles.

Given the city's status as a Pacific port and hub for resource industries, the earliest countercultures in Seattle had a strong working-class character. In the early decades of the twentieth century, Seattle was an important

organizing base for the Industrial Workers of the World (IWW), a revolutionary union that made innovative use of music, poetry, and public performance to develop a working-class counterculture in opposition to the exploitative economic culture of capitalism.

The Seattle General Strike of 1919 stands as the first citywide labor shutdown in American history. The strike began with demands by shipyard workers for increased wages and spread, through sympathy strikes, to calls for social revolution. It ended with raids on IWW social centers, union halls that served as schools, meeting spaces, and hubs of working-class culture.

During the 1960s and 1970s, Seattle was home to numerous local countercultures, echoing the development of countercultures nationally during that period. The epicenter for countercultural activity was the so-called Hippie Hill area, a piece of land on the edge of the University of Washington campus. Hippie Hill quickly became a popular counterculture destination, rivaled on the West Coast only by San Francisco's Haight-Ashbury district. Other important counterculture spaces during this period included El Centro de La Raza, a formerly abandoned school that was occupied and turned into a community center and base for Chicano organizing.

Seattle countercultures came to national prominence during the late 1980s and early 1990s with the emergence of grunge rock, also called the "Seattle sound." Locally based bands such as Nirvana, Mother Love Bone, Screaming Trees, Soundgarden, Green River, and Tad provided a creative mix of heavy metal, punk, and psychedelic rock in an era of synthesizer pop and light rock. Influenced by the earlier hippie and punk movements, grunge bands also espoused counterculture values of collaboration, independence from the mainstream music industry, and do-it-yourself recording, production, and promotion.

Seattle gained a central place in the history of early-twenty-first-century global countercultures with the tumultuous protests against the Ministerial Conference of the World Trade Organization (WTO) in November 1999. Plans by the WTO to launch a new round of trade negotiations were halted for the first time ever when demonstrators, numbering at least 50,000, blockaded streets outside the Seattle convention center and delegates' hotels and took direct action against symbols of corporate globalization. The Battle of Seattle, as it came to be known, marked the emergence into broad public consciousness of new countercultures, ones with global connections and organizing capacities, especially through the Internet and a willingness to engage in militant activities against police, corporations, and government officials.

The Battle of Seattle also stirred an old and seemingly vanquished countercultural specter, that of anarchism. Striking media coverage of angry, black-clad, balaclava-wearing youth demonstrating outside the global meetings of government and corporate power holders stirred memories of the moral panic over anarchism that marked the beginning of the twentieth century.

The so-called uncivil disobedience, especially where it concerned damage to corporate property, was attributed to "black bloc" anarchists at the 1999 WTO meetings. It returned anarchists to the headlines and landed them on the covers of *Time* and *Newsweek* in addition to a feature story on television's *Sixty Minutes II*. As well, police assaults on anarchists in Seattle, using pepper spray, tear gas, rubber bullets, and mass arrests, suggested to the general public that anarchists were something to be feared.

Seeger, Pete (1919–)

Singer, songwriter, banjo player, and music collector Pete Seeger served as a role model for many folk musicians who became prominent in the late 1950s and early 1960s, and he is a vital force in the revival of the folk music tradition in America. In the course of his long musical career, Seeger also has become known as a labor activist, outspoken advocate of peace, and ardent environmentalist.

Born on May 3, 1919, in New York City to Juilliard School of Music professors Charles and Constance Seeger, Seeger was surrounded by music from the beginning. When he was sixteen, he and his father attended a square dance festival in Asheville, North Carolina, where Pete first heard the five-string banjo. He fell in love with its sound and the folk-oriented music he heard at the festival. The five-string banjo became his instrument of choice, and folk music became his devotion.

Seeger enrolled at Harvard University in 1936 to study journalism and sociology, but left in the middle of his sophomore year to pursue his growing interest in folk music. He traveled extensively, selling original watercolors to help support himself, playing wherever he could and learning all he could about the genre.

During parts of 1939 and 1940, he worked at the Archive of American Folk Song in the Library of Congress as an assistant to folklorist John Lomax and served as a field assistant to Lomax and his son Alan, traveling around the country to record traditional folk music. On March 3, 1940, Alan Lomax introduced Seeger to legendary folk artist Woody Guthrie at a migrant-worker benefit concert in New York City. The two became fast friends and later that year formed the Almanac Singers, a folk group that also included Sonny Terry, Brownie McGhee, Lee Hays, and Sis Cunningham.

In 1941 and 1942, Seeger and Guthrie toured the United States playing for labor unions and other politically oriented groups. They both joined the American Communist Party in 1942, because they opposed the system of private profit and thought their efforts would help people find jobs. Seeger left the party in 1950, but his career would suffer for his membership and for his political and social views. In the meantime, he was drafted into the U.S. Army Special Services in 1942 and served for the rest of World War II entertaining soldiers in the South Pacific and at home.

Seeger first came to national prominence in 1948 as a member of the Weavers, a folk-singing group he formed with Hays, Ronnie Gilbert, and Fred Hellerman. The Weavers's second recording, "Goodnight Irene," went to number one on the charts in 1950 and sold more than 2 million copies. Other Weavers's hits included "On Top of Old Smokey," "So Long, It's Been Good to Know You," "Wimoweh (The Lion Sleeps Tonight)," "Rock Island Line," and "Kisses Sweeter Than Wine," all of which were recorded by numerous other artists.

With all of their success, however, the Weavers were blacklisted in 1952 because of Seeger's previous membership in the Communist Party and the left-wing political views of Seeger and other members. The group disbanded, and Seeger continued performing as a solo artist, mostly on the college circuit and to left-oriented political groups. He rejoined the resurrected Weavers in 1955 but left again in 1958 after opposing their participation in a cigarette commercial.

The House Committee on Un-American Activities (HUAC), a congressional body appointed to investigate communist and other radical groups in America, subpoenaed Seeger to testify in 1955. Many witnesses who appeared before the committee invoked their Fifth Amendment rights against self-incrimination, but Seeger refused to testify on First Amendment grounds, arguing that to be forced to discuss his political views and answer questions about his friends would violate his rights of free speech and free association. The next year, he was indicted on ten counts of contempt of Congress.

It was more than five years before the case came to trial; in 1961, Seeger was convicted and sentenced to a year in jail. He appealed the verdict, and in May 1962 the charges were dismissed. Seeger continued to be blacklisted, however, and he was barred from appearing on radio and television for more than fifteen years.

Meanwhile, Seeger worked tirelessly to promote the American folk music tradition. In 1946, he founded People's Songs, a kind of labor union for folk singers. In 1950, the organization began producing *Sing Out! The Folk Magazine*, which remains in publication in the 2000s. Seeger also helped found the music magazine *Broadside* in 1961, which helped bring attention to such folk artists as Bob Dylan, Phil Ochs, Tom Paxton, and Eric Anderson. He was also instrumental in founding the Newport Folk Festival in 1959.

Several of Seeger's songs covered by folk artists in the early 1960s became countercultural, then popular, standards. Among these were Peter, Paul and Mary's recording of "If I Had a Hammer" and the Byrds's recordings of "The Bells of Rhymney" and "Turn, Turn, Turn." Seeger himself received extensive radio play in 1964 with "Little Boxes," a song against cultural conformity written by Malvina Reynolds.

Pete Seeger also is known for his lifelong struggle for social justice. Supporting the civil rights movement in the 1960s, he spent significant time in the South as a volunteer and activist. His rendition of the old spiritual "We Shall Overcome" became the anthem of the entire movement. An early and vocal opponent of the Vietnam War, Seeger also generated overnight national controversy when he sang the protest song "Waist Deep in the Big Muddy" on the *Smothers Brothers Comedy Hour*, a popular television show, in 1967. His appearance on that program marked the end of his blacklisting by the American media, and he began appearing regularly thereafter, primarily on public television.

After reading Rachel Carson's book *Silent Spring* (1962), which called attention to environmental degradation, Seeger became more interested in environmental activism. He formed the Clearwater Organization in 1969, dedicated to cleaning up New York's highly polluted Hudson River, and helped raise money to build the *Clearwater*, a replica of the river sloops that navigated the Hudson in earlier centuries.

In addition to recording more than eighty albums, many of them for children, Seeger has compiled a number of folk songbooks. His many awards and honors include the National Medal of Arts, Kennedy Center Award, and Harvard Arts Medal (all 1994); induction into the Rock and Roll Hall of Fame (1996); and a Grammy Award for Best Traditional Folk Album, for *Pete* in 1997. In May 2009, an all-star lineup of musicians gathered at Madison Square Garden for a concert celebrating Seeger's ninetieth birthday and his advocacy of environmentalism and social justice. The words written on his famous five-string banjo exemplify Seeger's commitment to peace and freedom through his music: "This machine surrounds hate and forces it to surrender."

Settlement Houses

Settlement houses were community-based organizations that served the urban poor during the late nineteenth and early twentieth centuries. They emphasized independent, urban living and offered a range of cultural services and educational programs, including courses in English language, art, music, nutrition, and family planning. Settlement houses were considered a radical experimental approach to solving the problems of urban poverty. They directly challenged the established assumption that poverty is the result of personal shortcomings and moral failings, such as laziness, drunkenness, or gambling, and embraced the philosophy that the working poor, including recent immigrants, could learn effective methods of helping themselves. In settlement house workers' efforts to find more effective solutions to social issues relating to poverty, they pioneered the social work profession.

Rather than following the reigning model of established charity organizations, in which the more economically stable volunteers would visit those in poor neighborhoods to provide moral uplift, workers in the settlement house movement took up residency (thus, the settlement house designation) in these neighborhoods. The settlement house movement especially attracted young women who were educated in fields such as nursing, social work, and education. Through the use of such methods as group work, residence empowerment, social action, community organization, and lobbying for urban policy and legislation, young settlement house participants sought to use their skills and education to directly effect change in the poor neighborhoods of major cities.

Social settlement houses were nondenominational community centers for the urban poor, offering such services as day care, child recreation, and language instruction. The movement represented a radical, new approach to urban poverty. (Library of Congress)

The first settlement house was Toynbee Hall, founded in East London in 1883 by two Oxford University students,

Frederick Denison Maurice and Charles Kingsley, both socialists. Toynbee Hall inspired several Americans, most notably Stanton Coit, to establish the Neighborhood Guild (later the University Settlement) on the Lower East Side of New York City in 1886. By 1897, there were seventy-four settlements in the United States, and by 1910 there were 400.

The most prominent of the early settlement houses were Hull-House, founded in 1889 by Jane Addams and Ellen Gates Starr in an impoverished neighborhood of Chicago, and the Henry Street Settlement, established in New York in 1893 by Lillian Wald. Besides social services and community action efforts, activities at Hull-House included a kindergarten for children and activities for adults that focused on building social relationships. Administrators encouraged socializing by providing an environment in which people from different ethnic groups could engage in conversation, friendship, and a sense of community. Hull-House became a model for other settlement house experiments; its influence extended far into the twentieth century through the work of Dorothy Day and the Catholic Worker Movement, a social-services organization.

Settlement houses demonstrated that neighborhood organization could have a positive effect on the problems of urban poverty, and thus presented a clear challenge to conservative assumptions about the sources and nature of poverty. Beyond this, their importance to the American counterculture lies in the fact that, during the period from 1880 to 1930, America was producing a generation of talented, idealistic, and educated young women within a socioeconomic system that had no real place for them. Many of these young women found their way into the settlement house movement.

As settlement house workers, these young women had their first experiences of social independence, program management, alternative living conditions, and political organization and action. They also were exposed to the reality that there are many other ways to live than according to the norms and mores of middle-and upper-class American society. It was, in short, an entry point into public life for a number of young women, many of whom went directly into other social movements and ushered in the first wave of feminism.

Seven Arts, The

The Seven Arts was a literary journal founded by poet and author James Oppenheim in 1916 as a tool to transform American society through literature and criticism. Criticized by more mainstream publications for its

radical bias, *The Seven Arts* ceased publication in 1917 after antiwar essays and a pacifist editorial position frightened financial backers and brought threats of criminal action for treason.

The Seven Arts owed its existence to what historians refer to as the Little Renaissance between about 1910 and 1919. New styles and movements became popular in the arts, and a greater appreciation developed among many Americans for creative expression of all kinds.

Influenced by Sigmund Freud's new psychoanalytic movement, many young American artists believed that truth and value could be found in expressing their inner selves. Inspiration came from experience, many held, and art should be as realistic as possible. Additionally, writers, painters, and other artists of the Little Renaissance believed that American subjects and traditions had unique, intrinsic value and that art should adopt a "cultural nationalism" as opposed to imitating European norms.

Oppenheim was a poet and writer who subscribed to this view, and he sought to create a magazine that would help reshape American society and make it more humane. Oppenheim's dream was shared by novelist and critic Waldo Frank and musician Paul Rosenfeld, and the trio managed to convince Annette Rankine, a wealthy patron of the arts, to provide financial backing.

Rankine sold part of her art collection for start-up money and accepted a clerical position on the magazine. Oppenheim became the editor, assisted by Frank. A distinguished seven-person advisory board was named that included the literary critic Van Wyck Brooks, anthropologist and poet Louis Untermeyer, and poet Robert Frost. Oppenheim named the new magazine *The Seven Arts* in reference to medieval terminology referring to the division of knowledge into arts and sciences.

In the first issue, published in November 1916, Oppenheim laid out the purpose and principles of the magazine in a manifesto: "We have no tradition to continue; we have no school of style to build up. What we ask of the writer is simply self-expression without regard to current magazine standards. We should prefer that portion of his work which is done through a joyous necessity of the writer himself." Poetry, short stories, and plays were featured in its pages. Criticism and essays also appeared and soon became the most prominent material in the journal. Oppenheim and his contributors believed that cultural and social criticism could be used to initiate dialogue among readers and thereby promote the goals the editors espoused.

The Seven Arts attracted a number of young, unknown writers who would eventually become famous and influential, among them Amy Lowell, Robert Frost, Sherwood Anderson, Stephen Vincent Benét, and Walter Lippmann. Others whose work appeared in its pages included Eugene O'Neill, John Reed, John Dos Passos, and H.L. Mencken. Most contributors shared the anticapitalism and anti-industrial philosophy of the editors.

One of the most outspoken authors in *Seven Arts* was Randolph Bourne, who published a series of essays in its pages that opposed American involvement in World War I and eventually led to the magazine's collapse. In his most critical essay, "The War and the Intellectuals," published in the June 1917 issue, Bourne attacked liberal intellectuals, such as his own mentor, philosopher John Dewey, for changing their attitudes to support the war. He criticized the restrictions on speech and open discussion imposed by the federal government and argued that democratic freedoms were being jeopardized. Oppenheim, also a militant pacifist, did not hesitate to print Bourne's essays as well as other antiwar writings.

The journal's open antiwar position ran counter to general sentiment in the United States as well as to official government policy. The Espionage Act, passed on June 15, 1917, made it a crime to engage in disloyal acts, and Rankine, fearing prosecution for the antiwar articles, withdrew her financial support for *The Seven Arts*. The journal was never financially self-sufficient, and Oppenheim was forced to cease publication with the September 1917 issue.

Sex Trade and Prostitution

The sex trade refers to any commercial enterprise in which there is an exchange of sexual services or other sexually oriented activity for money, including prostitution, stripping, sexual massage, pornography, live and Internet sex shows, and phone sex operations. In America as elsewhere, historically the sex trade has been predominantly operated by, and for the financial benefit of, males, while prostitution and other types of sex work have been predominately feminized occupations. While rarer, men who provide sexual services to women are known as gigolos.

Today, a person who supervises mostly female prostitutes—in legal or illegal settings—is known as a pimp. Pimps take a portion of the prostitute's income as their own, perhaps providing protection and support in exchange. Supervised prostitution in brothels or so-called houses of ill repute is often under the direction of other women, referred to as madams. Male patrons of prostitutes are known as johns.

In many periods of American history, children, teenagers, and young adults in their twenties were especially desired as sex workers. Young workers were regarded as more likely to be virginal or pure, and a female's virginity was a valuable commodity—one that might be advertised and sold several times over. Youths also were regarded as less likely to carry a sexually transmitted disease, a significant concern before the advent of medical treatments such as antibiotics.

Prostitution has been a part of life in America since the early days of the republic. Historical documents of New York City and Boston indicate the existence of prostitution dating to the late eighteenth century, likely the result of soldiers being stationed there during wartime. Prostitution and sex work in various other forms became increasingly available with urbanization in the mid-to late nineteenth century, most often geared to male consumers. Prostitution was so prevalent that political and religious officials were known to frequent brothels; regarded as normative male behavior, this was hardly even noted in gossip circles.

The most prominent locale for prostitution and brothels in New York City from 1770 into the early 1800s was the Holy Ground, located uptown near King's College (later Columbia University). Other cities known for their brothels during the 1800s were St. Louis, Philadelphia, New Orleans, and Chicago. While prostitution was generally tolerated during this period, it was practiced predominantly by young women and concentrated in specific neighborhoods.

During the course of the nineteenth century, the sex trade expanded significantly, particularly with the advent of industrialization. Restricting and regulating prostitution have been attempted sporadically during the course of American history, and this was especially true during the Victorian Era of the late 1800s.

Prostitution also proliferated in Western territories during the period of settlement in the nineteenth century. The early decades, in particular, brought large numbers of men and relatively few women, a demographic skew that produced enormous economic opportunity in prostitution. The gold rushes of midcentury likewise were a boon to prostitution. And later, with the arrival of railroads and construction of port facilities, cities on the West Coast attracted growing populations and an increasing sex trade, especially for railroad workers and sailors.

The occupation of prostitution always has been characterized by several levels of prestige, today ranging from high-class call girls or escorts, who may be self-managed or work for an escort service, to streetwalkers, who may or may not be managed by a pimp. In many towns of the early West, women who worked in brothels were considered of higher prestige, while streetwalkers were regarded as having the lowest status. With the advent of the Internet, the culture and practice of prostitution and other sex work, such as pornography, has become increasingly visible and accessible.

In most of the United States today, prostitution is illegal. Notable exceptions are some counties of Nevada, where legalized “Bunny Ranches,” or brothels, provide prostitution service to men. However, legal prosecution of prostitutes has historically focused on streetwalkers, who are more visible, and less on brothel workers or escorts.

Pornography and other aspects of the sex trade, meanwhile, have become increasingly legitimized and prevalent. With the advents of still photography and then the motion picture industry, nude modeling and film pornography became areas of especially significant growth, which continued throughout the twentieth century and into the twenty-first century.

While estimates are unreliable, it is believed that more than 1 million persons in the United States are employed in prostitution today, and many millions more are involved in the rest of the sex trade. More than 100,000 arrests occur annually for illegal prostitution alone. Most likely to be arrested are the prostitutes themselves, while patrons and pimps are at much lower risk.

Sexual Revolution

The sexual revolution of the 1960s and 1970s was a movement that entailed sweeping changes in American sexual mores, encompassing a newfound acceptance of sex outside of marriage, the replacement of procreation with pleasure as the perceived function of sex, and the integration of sexual themes into the media and public discourse.

This shift was not an abrupt transition but the culmination of a lengthy process. Accelerated urbanization near the start of the twentieth century allowed for greater sexual freedom for young people. Working girls explored romance and relationships in new environments—from the workplace to amusement parks to speakeasies—with a freedom previously unknown to them, while city life also facilitated the formation of an urban gay subculture. Outside the cities, automobiles brought new opportunities for mobility, privacy, and sexual exploration to small-town and rural teens in the 1920s.

While terms such as *necking* and *petting* became familiar, however, sex itself remained highly regulated in mainstream American culture. Religious values continued to exert great influence, as did the cultural tenet that “good” girls preserved their virginity until marriage. As a practical matter, birth control methods either were unreliable (such as the rhythm method or withdrawal) or were seen as awkward (diaphragms and condoms).

Kinsey Reports and the Pill

This cultural regulation of sex maintained its hold on Americans for another two decades, but the years following World War II brought upheaval. Two groundbreaking empirical studies—*Sexual Behavior in the Human Male* (1948) and *Sexual Behavior in the Human Female* (1953), by Indiana sociologist Alfred Kinsey—revealed the true extent and variety of American sexual activity on the basis of massive research, revealing widespread premarital, extramarital, homosexual, and autoerotic activity on the parts of both men and women. These revelations shocked the nation, but the publicity the reports received ensured general public awareness of their content.

In the 1950s, American media followed Kinsey’s lead in addressing sex more frankly. Magazine publisher Hugh Hefner introduced *Playboy* in 1953, combining pictures of naked women with quality writing. Best-selling novels such as Grace Metalious’s *Peyton Place* (1956) dealt with sex overtly. Films also grew bolder. In 1953, Otto Preminger’s film *The Moon Is Blue* challenged convention by using the word *virgin*; by 1959, Russ Meyer’s *The Immoral Mr. Teas* featured bountiful shots of naked women.

These developments clearly challenged convention, but it was the 1960 approval of the birth control pill (known as “the Pill”) by the Food and Drug Administration that heralded what came to be known in the media as the sexual revolution. Suddenly, women could control their own reproduction easily and effectively. The impact of the Pill was massive; by 1965, some 5 million women—both married and single—were using it.

The technological severing of sex from procreation was mirrored by cultural indications of a new focus on pleasure. Examples include Helen Gurley Brown’s book *Sex and the Single Girl* (1962), which climbed the best-seller lists and was produced as a major motion picture two years later.

Students, Hippies, and Swingers

In universities, students challenged the *in loco parentis* tradition by which schools served as proxy parents, implementing curfews and prohibiting opposite-sex visits to dormitory rooms. Coed dorms grew increasingly common during the 1960s—even the staunchly conservative University of Kansas had two by 1964. Unmarried female students at Brown University in Providence, Rhode Island, received prescriptions for oral contraceptives from the director of the school’s health services in 1965. And in 1968, undergraduate Linda LeClair defied the rules at Barnard College in New York City by living off campus with her boyfriend; the resulting flap led Barnard to change its rules to allow off-campus living. The following year, protests by students at the University of Tennessee in Knoxville resulted in the end of dormitory curfews for female students.

While universities gradually accommodated shifting sexual mores by allowing more student freedom, other groups displayed new sexual attitudes as well. Hippies celebrated nudity and free love, while “swinging” and “wife swapping” became the marks of liberated couples in the middle-class suburbs. Sandstone, a 15-acre (6-hectare) retreat in Southern California, opened in 1969 as a swinger utopia and hosted hundreds of couples every weekend.

These new attitudes carried over into other spheres as well. In *Griswold v. Connecticut* (1965), the U.S. Supreme Court struck down a state anticontraceptive law, indicating official recognition of sex as an activity for more than procreation. Human-sexuality researchers William Masters and Virginia Johnson carried on the Kinsey tradition, overturning conventional wisdom in their groundbreaking text *Human Sexual Response* (1966), which explained that female orgasms stem from the clitoris, not the vagina. And when New York police raided the Stonewall Inn, a gay bar in Greenwich Village, in June 1969, the patrons revolted, starting a two-day riot that led to the formation of the Gay Liberation Front, the umbrella name for a number of gay liberation groups.

Much of the political radicalism of the 1960s failed to carry into the 1970s, but the sexual revolution continued unabated. By 1970, a reported two-thirds of all Catholic women were using birth control methods disavowed by the church. Alex Comfort's *Joy of Sex*, an explicit, how-to book about sex published in 1972, quickly reached best-seller status and went on to sell 12 million copies in two-dozen languages. The pornographic film *Deep Throat* (1972) earned a record-breaking box office and spawned a spate of X-rated feature films referred to as the "porno chic" movement. The following year, the U.S. Supreme Court ruling in *Roe v. Wade* institutionalized women's control over their bodies by legalizing abortion. Clubs such as Plato's Retreat, which opened in New York City in 1977, institutionalized heterosexual swinging, while a plethora of gay bathhouses offered anonymous public sex to patrons. Disco clubs, too, such as the famous Studio 54 in New York City, created sexual space for both straight and gay attendees.

Backlash

Not everyone embraced the sexual revolution. Many women felt anger at the widespread male chauvinism of 1960s, seen in such draft-protest slogans as "Girls Say Yes to Guys Who Say No." Robin Morgan's 1970 manifesto, "Goodbye to All That," dismissed the sexual revolution as a sham, used by men to obtain sexual favors from women, who could be chastised as prudish, frigid, or "unhip" if they rejected male overtures. Dissatisfaction with the sexual revolution helped the women's liberation movement coalesce and grow. Many lesbians, too, took exception to the gay male insistence on public sex as integral to gay identity, leading to tensions within the gay liberation movement.

Perhaps the most powerful voice of opposition to the sexual revolution was the New Right, a coalition of the Republican Party and the Christian conservative movement that acquired unprecedented power in the late 1970s. Antigay measures, such as singer Anita Bryant's 1977 battle to repeal a gay rights amendment in Dade County, Florida, and the failed 1978 Briggs initiative in California to allow the firing of gay teachers, became staples of the New Right. Opposition to abortion and support of abstinence-only sex education also marked the New Right, which sought to restore the connection between sex and procreation. The election of conservative Ronald Reagan as president in 1980 constituted a major victory for the New Right and highlighted the traditional values of Republican America.

Most destructive to the sexual revolution, however, were the new medical threats of the 1980s. Herpes emerged as a noncurable venereal disease in 1979, and it was quickly represented by the mainstream media as a sign of the risks of promiscuity. *Time* magazine in 1982 called it "the new scarlet letter." Far more threatening, however, was the HIV/AIDS crisis, which first appeared in the early 1980s among urban gay populations but quickly spread to other groups, especially intravenous-drug users and hemophiliacs, who contracted the disease through contaminated needles or blood samples.

While conservative politicians exploited the HIV/AIDS epidemic to advance their religiously based agendas, mainstream culture also restored some of the moral and behavioral norms of a previous generation as an imperative of public health. The sexual revolution would not be reversed or undone, as sexual activity had been divorced, perhaps forever, from its purely procreative function, but the spirit and direction of change seemed over.

Shakers

A hardworking, communal religious sect in the eastern United States that peaked in popularity during the mid-1800s, the Shakers came into existence in England as an offshoot of the Quakers during the mid-1700s. They were first called the “Shaking Quakers,” after the shaking movement they made during the “testimonial” portion of their communal prayers. Their first and most important leader was a charismatic woman known as “Mother” Ann Lee, who immigrated to America in 1774 just before the Revolutionary War, along with other Believers, as they also called themselves.

Although she was illiterate and married (her husband left her and the movement not long after arriving in America), Lee was believed to embody the feminine principle of the divine. With her guidance, the Shakers, originally known as the United Society of Believers in Christ’s Second Appearing, established a foothold in upstate New York. Their first village was built at Niskayuna (later Watervliet), near Albany, in 1776. The early days of the Shakers were marred by strife. Mother Ann was imprisoned on charges of spying for the British. As the Shakers tried to spread the word of their beliefs, they were, at times, verbally abused and physically injured by suspicious crowds. William Lee, Ann’s brother, died of a skull fracture he received in such a conflict. Despite some continued opposition, the Shakers won converts in the years following the Revolution.

Over time, the Shaker lifestyle was no longer seen as a threat to society, and the religious sect attracted hundreds of people. The first organized Shaker community, New Lebanon, was established in 1787, and became the guiding authority of all later settlements. The governing principles developed there were adopted in other Shaker villages. Each community included respected elders, men and women with seniority to whom others could go for spiritual guidance and conflict resolution. Villages were divided into two to eight distinct living groups called “families.”

During the eighteenth and early nineteenth centuries, the Shakers formed communities in New York, Connecticut, Massachusetts, Maine, New Hampshire, Kentucky, Ohio, and Indiana—more than any other religious group of the time. The last new community was formed in the mid-1820s. At its peak, in the mid-nineteenth century, the Shaker population in America numbered between 4,000 and 6,000 members.

Even after Ann Lee’s death in 1784, Shaker leaders continued to hold Mother Ann’s teachings in the highest esteem. The Shaker faith and lifestyle were based on principles of hard work and continual prayer, following the mandate of Mother Ann, who had said, “Hands to work and hearts to God.” Work was seen as a path to salvation and the most useful way to expend one’s energy. The Shakers raised their own crops, and their villages were largely self-sufficient. It was common for the Shakers to make their own nails and bricks to build meetinghouses.

The Shakers expressed prayer daily through the spoken word and numerous hymns and spirituals. They also craved simplicity. Their best-known hymn is "Simple Gifts," which begins with the words "'Tis the gift to be simple, 'tis the gift to be free." As had been dictated by Lee, order and neatness were an integral part of the Shaker lifestyle. Dirt and dust were considered mortal enemies.

The Shakers were a celibate millenarian sect that established communal settlements in upstate New York during the American Revolution. They got their name from the shaking and dancing that characterized their worship services. (Library of Congress)

Although they lived in their own communities, the Shakers did not shun contact with the outside world. Indeed, they allowed outsiders to visit and to watch their religious ceremonies. Committed pacifists, they requested and received exemption from service in the American Civil War from President Abraham Lincoln.

The Shakers cultivated a thriving trade with the outside world. They kept their hands busy in every spare moment by making craft items and furniture that could either be used within the community or labeled as "worldly goods" and sold to outsiders. Shaker design emphasized basic, straight lines and fine craftsmanship. Their furniture and crafts have been imitated for more than a century, including the ubiquitous ladder-back chair and the oval, fingered wooden box.

Although they valued handiwork, Shakers did not shun technology. By the mid-to late nineteenth century, they had adopted several modern technologies to assist them in their daily lives. In fact, they were at the forefront of the technology of the time. Their industrious nature and communal problem-solving abilities led to the invention of numerous machines and improvements in tools, including the circular-saw blade, a mechanical washing machine, and the flat broom.

Perhaps most important in distinguishing Shakers from the rest of society was one of the primary rules of their religion: Shakers were not to marry or have children. In taking the vow of celibacy and in leaving one's family behind to join the community, a new Shaker was in effect trading in his or her biological family for a new family of strangers who were fellow Believers. Thus, Shaker communities grew only by the taking in of orphaned children or by outside adults choosing to join. Personal effects and wealth also were banned; converts donated all of their worldly goods to the community.

By the 1870s, largely because of the practice of celibacy, the Shaker population in America had declined to about

2,500 members; by 1900, it had fallen to about 2,000 members. Ten Shaker settlements, once thriving, were abandoned between 1900 and 1930. By 1945, there were only a few hundred Shakers left in the United States.

Tourist interest and an appreciation for Shaker culture and arts revived in the latter decades of the twentieth century, and some villages have been preserved as museums. The last surviving Shaker community is at Sabbathday Lake Shaker Village in New Gloucester, Maine, where a few Believers still carry on the centuries-old traditions in earnest.

Shakur, Tupac (1971–1996)

Tupac Amaru Shakur was a hip-hop artist and actor known for his outlaw identity, hard-edged songs about racism and ghetto violence, and death by shooting in September 1996. Recognized as a best-selling rap recording artist, and by many fans and critics as the most accomplished of all rappers, Shakur was central to the development of West Coast rap style, which emerged in the 1990s to challenge the popularity of East Coast rap music, emphasizing bass-heavy music and “reality” lyrics that chronicle the struggles of ghetto life. Shakur remains a revered figure in hip-hop culture.

He was born Lesane Parish Crooks in East Harlem, New York City, on June 16, 1971. His mother, Afeni Shakur, was a member of the Black Panther Party who had just been acquitted of multiple charges of conspiracy against the U.S. government; his stepfather, Mutulu Shakur, later became known for planning the \$1.6 million robbery of a Brink’s Company armored truck in New York in 1981. Tupac Shakur was renamed in honor of the Incan ruler and revolutionary leader Tupac Amaru II (ca. 1742–1781), who was executed after leading an indigenous rebellion against the Spanish colonization of Peru.

After living in New York and Baltimore, Shakur and his family moved in 1988 to Marin City, California, where he served as a lyricist for the local hip-hop group Strictly Dope, before joining the Oakland-based group Digital Underground. He gained national recognition as a rap artist for his contribution to Digital Underground’s “Same Song” (1991). Shortly thereafter, Shakur launched his solo career with the album *2Pacalypse Now* (1991). He released a total of five more studio albums during his brief career: *Strictly 4 My N.I.G.G.A.Z.* (1993), *Thug Life* (1994), *Me Against the World* (1995), *All Eyez on Me* (1996), and *The Don Killuminati: The 7 Day Theory* (1996). As his music career took off, Shakur also ventured into acting, starring in such feature films as *Juice* (1992),

Poetic Justice (1993) with costar Janet Jackson, and *Above the Rim* (1994).

Shakur was the preeminent figure in the development of what was called the “East Coast versus West Coast rivalry” in rap music. Shakur signed with Death Row Records in 1995, a Los Angeles recording label headed by Suge Knight, a controversial CEO with Mob Piru Bloods gang connections and a dislike for the East Coast hip-hop label Bad Boy Records (headed by Sean Combs).

While driving with Knight in Las Vegas, Nevada, Shakur was shot. He died from the wounds six days later, on September 13, 1996, at the age of twenty-five. The murder was never solved, but many suspected the involvement of New York-based rapper Notorious B.I.G. (of Bad Boy Records), whom Shakur had earlier accused of arranging a 1994 New York recording studio robbery during which Shakur had been shot several times. The suspicions over Shakur’s murder stirred growing animosity, until Notorious B.I.G. himself was killed in Los Angeles six months later, on March 9, 1997. In the aftermath of that incident, many hip-hop artists and social activists began a concerted and successful effort to quell the East-West rivalries.

Venerated as a hip-hop cultural icon, Shakur is regarded by fans and critics of the genre as a “ghetto saint.” His songs intimately and eloquently express the joys and the pains of African American life in the inner city. On the one hand, songs such as “Brenda’s Got a Baby” (1991) and “Dear Mama” (1995) celebrate and pay homage to women, especially mothers, while “Keep Ya Head Up” (1993) and “Life Goes On” (1996) offer a broad message of hope and spiritual uplift for everyone facing hard times. On the other hand, songs such as “I Get Around” (1993) glamorize Shakur’s sexual exploits, while “Hit’Em Up” (1996) champions the violence and intimidation needed to live a successful “thug life.” The complexities and contradictions in his music and his personal life secured Shakur a loyal following among those who respected his lyrical honesty and welcomed his representation of their own lives.

More than a decade after his death, Shakur’s vocals continued to garner significant album sales. Since 1997, several successful albums have been released using previously recorded songs or lyrics. In addition, Shakur’s poetry was published in *The Rose That Grew from Concrete* (1997) and *Inside a Thug’s Heart* (2004); the documentary film *Tupac: Resurrection*, about his life and death, was released in 2003. A majority of his albums, produced both before and after his death, have achieved platinum and multiplatinum certification.

Simpsons, The

Starting its television life as a series of short, animated sketches on *The Tracey Ullman Show* in 1987, *The Simpsons* graduated to network-show status on the then-burgeoning Fox Network in 1989. An animated nuclear-family sitcom, the show has served as a richly developed mouthpiece of social, political, cultural, consumer, and media satire and parody. Challenging the very notion of counterculture, *The Simpsons* arguably has become one of the counterculture's most mainstream texts, attaining widespread fame and notoriety both in America and abroad, and becoming one of television's longest-running and most easily recognizable programs.

The Simpsons follows the lives of parents Homer and Marge and children Bart, Lisa, and Maggie in the never-precisely-located suburban landscape of Springfield, U.S.A. Originally written by Matt Groening, previously known for the subversive cartoon "Life in Hell," *The Simpsons* continued its predecessor's interest in contesting authority figures. Springfield's mayor, Joe Quimby, Principal Seymour Skinner, and local nuclear power plant owner Montgomery Burns form a triumvirate of corrupt, self-serving leadership, surpassed only by the most dysfunctional authority figure of all, Homer Simpson as father.

Creator and animator Matt Groening poses with a cutout of everyman Homer Simpson, the father character in his animated hit television series The Simpsons. The sitcom has broken new ground in satirizing politics, society, media culture, and family life. (Alan Levenson/Time & Life Pictures/Getty Images)

Harkening back to the Springfield of television's 1950s family series *Father Knows Best* and to the barrage of whitewashed, perennially happy sitcoms that preceded it, *The Simpsons* centers its family on the ignorant, overeating, ill-fated antifather, and offers up the "underachieving, yet proud of it" son, Bart, as its initial moral engine. Bart's rebellious platitudes and unruly attitude drew quick focus from parent groups and schools nationwide, and even inspired comment from family values-oriented presidential candidate George H.W. Bush, who in 1992 called for "a nation closer to the Waltons than to the Simpsons." Over time, the show challenged patriarchal authority more convincingly by shifting greater emphasis to the precocious and environmentally, ecologically, and socially aware Lisa. Indeed, one episode studies a family gene that renders all its men stupid but the women geniuses.

Ultimately, however, the program's greatest offering to the counterculture, and that which has won it a cult following among college students and liberal academics nationwide, is its predilection to comedically attack capitalist consumerist values. Frequently mocking the form and content of advertising in particular, *The Simpsons* depicts consumerism as gluttony.

Using its four-fingered yellow characters to comment on reality, the program also often lampoons other genres of television, such as the news show and the documentary, as well as celebrity. While *The Simpsons* has hosted major celebrities, including pop star Michael Jackson, *Harry Potter* author J.K. Rowling, *Star Wars* star Mark Hamill, and rock band U2, it often mocks them in the process.

Meanwhile, *The Simpsons* habitually mocks itself and its own position in the cultural and economic mainstream, even occasionally taking satiric swipes at Fox owner Rupert Murdoch. The show has spawned a wealth of commercial merchandise ranging from T-shirts to bottle openers, but similarly ridicules its own act of selling out, most notably by offering the figure of debased children's television icon and product-pusher Krusty the Clown as its on-screen stand-in.

Reflecting a certain postmodern cynical chic, *The Simpsons* is iconic of its age. It has given birth to numerous followers, most notably the animated television shows *King of the Hill* (1997–2009), *South Park* (1997–), and *Family Guy* (1999–).

Sinclair, Upton (1878–1968)

Upton Sinclair was one of America's great crusading writers and a vocal supporter of socialism in the twentieth century. A prolific author, he wrote ninety novels, thirty plays, and countless articles, stories, and pamphlets. Well known for his polemical concern for progressive reform, he was a firm believer in the power of literature to improve the human condition. As one of the prominent social critics—popularly known as “muckrakers”—of his time, he displayed an intense interest in social and industrial reform by exposing injustice and corruption with his pen.

Upton Beall Sinclair was born on September 20, 1878, in Baltimore, Maryland. He graduated from City College of New York in 1897 and attended graduate school at Columbia University while supporting himself by writing for newspapers and magazines.

In 1904, he was sent by the socialist newspaper *Appeal to Reason* to report on the unsanitary conditions in the meatpacking industry in Chicago. His report in fictional form was serialized in the paper during the summer of 1905. It was published in early 1906 as *The Jungle*, a brutally graphic novel of the Chicago stockyards in which Sinclair describes the wretched sanitary and working conditions of the industry.

The book is based on Sinclair's eyewitness accounts and interviews with workers, who revealed the tuberculosis and cholera that developed as a result of exposure to and repurposing of spoiled meat, a result of what Sinclair saw as the "monstrous disease" of industrial capitalism. After living a life of poverty, death, and destruction, the book's main character, factory worker and Lithuanian immigrant Jurgis Rudkus, turns to socialism.

The Jungle soon became a national sensation. Although Sinclair had hoped that his writing would arouse sympathy for the worker, it created tremendous public indignation at the deplorable quality of food industry standards. Sinclair was quoted as saying, "I aimed at the public's heart and by accident I hit it in the stomach." The book's popularity is believed to have been instrumental in passage of the Pure Food and Drug Act of 1906 by the U.S. Congress.

Publication of the novel placed Sinclair in the ranks of such leading muckraking writers as Ida Tarbell, Lincoln Steffens, and others. Proceeds from the book provided Sinclair with the finances to open the cooperative-living community Helicon Hall (Helicon Home Colony) in Englewood, New Jersey, a utopian-socialist project that lasted until 1907, when a fire destroyed the hall and the venture was abandoned.

Sinclair continued writing muckraking novels that attacked social evils. Representative works, in addition to *The Jungle*, include *King Coal* (1917), which reveals the conditions of Western coal miners of the time; *Oil!* (1927), loosely based on the Teapot Dome oil scandal of the Warren G. Harding administration; *Boston* (1928), about the Sacco and Vanzetti murder case; and *Little Steel* (1938), which explores union resistance in the oil industry.

He also wrote eleven historical novels, known as the Lanny Budd series, beginning with *World's End* (1940), which examines the life of an antifascist hero. One of the Lanny Budd novels, *Dragon's Teeth* (1942), about Adolf Hitler's rise to power in Nazi Germany, won Sinclair the 1943 Pulitzer Prize. His final novel in the series, *The Return of Lanny Budd* (1953), explores the United States's hostile sentiment toward post-World War II Soviet Russia.

During the Great Depression of the 1930s, Sinclair played a part in organizing a socialist reform movement in California called EPIC (End Poverty in California), which proposed that the state repurpose idle factories and farmland into cooperatives that would hire the unemployed. In 1934, he entered politics by running as a Democrat for governor of California; he lost the election to Republican candidate Frank Merriam. Upton Sinclair died on November 25, 1968, in Bound Brook, New Jersey.

Ska

Ska is an upbeat, horn-driven style of music that emerged in Jamaica during the 1950s, drawing upon aspects of mento (the indigenous folk music), calypso, jazz, and American rhythm and blues. Ska and the subcultures associated with it are often divided into three waves. Jamaican ska thrived until the mid-1960s, when it was replaced in popularity by rock steady and reggae music. The second-wave ska revival, in the form of the Two-Tone movement, occurred in the 1970s and 1980s in the United Kingdom. A third revival took place in the 1990s, this time largely based in the United States. Ska music and style were popular in the Jamaican Rude Boy subculture, as well as among some members of the punk, mod, and skinhead movements.

Jamaican ska arose in the context of the Jamaican independence movement, which inspired a nationalistic yearning for music based on island traditions. During the same period, portable sound systems (mobile discotheques) proliferated in Jamaica, playing dance music for crowds of people. As sound system operators became more competitive, they began producing their own records that emphasized a “Jamaican feel” and aesthetic; ska music flourished. Of the numerous groups of the time, the Skatalites dominated the scene as true pioneers of ska and epitomized the sound.

Others influential in the movement included Laurel Aitken, Clement “Coxsone” Dodd, Don Drummond, Desmond Dekker and the Aces, Prince Buster, Roland Alphonso, Toots and the Maytals, Bob Marley’s band the Wailers, the Duke Reid Group, the Ethiopians, and Peter Tosh, among others. While early ska music often entailed the instrumental reworking of popular American and British songs, much of it drew upon local culture and folk traditions, and sometimes took the form of social commentary, addressing the hardships faced by the poor and marginalized in Jamaican society.

In the 1960s, ska music was embraced by the Rude Boy (or “Rudie”) subculture that emerged in the ghettos of Kingston. In response to poverty, unemployment, and oppression, Rude Boys became gangsters and petty thieves with a reputation as stylish street hooligans who lived by their wits and tried to beat the system. Some Rude Boys were armed with knives or handguns and, when organized in gangs, would roam through West Kingston on foot or stripped-down chrome motorbikes.

Ska music both celebrated and criticized the Rude Boys’ subterranean lifestyle, alluding to street fights, the ghetto, crime, sexual encounters, gambling, guns, prison life, and dying young. The Rude Boys’ unique street style involved a streamlined, hard-edged, trimmed-down look, with sharply cut suits, cropped slim trousers, porkpie hats, tightly cropped haircuts, wraparound hipster sunglasses, white socks, polished black shoes, and leather jackets. Rude Boys also favored mohair, and “tonic” suits that shimmered with the two-tone effect of contrasting colors, such as black-red or electric blue.

Ska music and Rude Boy style were brought by Jamaican immigrants to the United Kingdom and North America in the late 1960s and 1970s. In the United Kingdom especially, the sound and style of ska were appealing to white youth (such as hard mods and nonracist skinheads) who disliked the styles and values of the hippies and other youth movements of the time; it also influenced a number of musicians, such as the Clash, the Police, and Elvis Costello.

In the late 1970s, the ska revival movement known as Two-Tone (after the influential 2 Tone record label) drew upon punk ethos and style, and emphasized racial harmony, societal problems, and social justice. Black and white youth, often in black and white suits, “skanked” (danced) together at dance halls to the music of racially integrated groups such as the Specials and, later, the Selecter, Madness, and the Beat (also known as the English Beat). These bands and the associated subculture did not just revitalize the style of ska; they directly confronted racial prejudices. More politically oriented than most movements of the time, they faced violent confrontations with racist skinheads, conservative nationalists, and others at dance halls and elsewhere.

The Two-Tone ska movement resulted in the formation of ska bands in the United States, such as the highly influential Toasters (in existence since the early 1980s and led by Robert Hingley, who later created Moon Ska Records). This led to the third wave of ska music, in the 1990s, further popularized by bands such as the Untouchables, Fishbone, Bim Skala Bim, Operation Ivy, the Scofflaws, the Mighty Mighty Bosstones, the Slackers, Hepcat, the Pietasters, the Voodoo Glow Skulls, Reel Big Fish, Skankin' Pickle, Let's Go Bowling, Save Ferris, Less Than Jake, and the Aquabats. Some of these bands achieved commercial success, with musical styles that reflect a range of influences including punk, hard core, heavy metal, funk, soul, surf, and others. Ska-influenced bands such as Rancid, No Doubt, and Sublime also popularized and commodified the ska sound.

After the mainstreaming of pop-ska sounds on MTV and commercial radio, popular interest peaked and then declined in the late 1990s, as other styles were promoted to capture mainstream attention. Out of the limelight, the ska scene continued to develop at a more grassroots level, with some enthusiasts taking an inclusive, hodgepodge approach in innovating on the style. Others, more traditionalist in attitude, embraced the Jamaican 1960s-style ska, while some bands and fans were deeply committed to the Two-Tone movement and Rude Boy style, sometimes with mod culture influences.

Although the American third-wave ska is often depicted as being solely party music—skanking to catchy rhythms and having fun—some of it offers relevant social commentary. The appearance of a fourth wave of ska came to be debated in fanzines and on Web pages, as subcultural events and tours of ska bands promoted the eclectic range of contemporary ska. Though separated from ska's original context and related social conditions, the various forms of ska style continued to signify a subcultural identity for some youth, offering a sense of community, creativity, and aesthetic pleasure.

Skateboarders

Skateboarders are mostly, although not exclusively, young males who practice the sport of skateboarding and who belong to a broader youth subculture defined by the “skater” identity. While the specific content of this identity has

shifted since it first emerged in the 1950s—moving from a heavily surf-and punk-inspired image of destructive rebelliousness to a more urban, hip-hop–influenced image of personal creative expression—the skater identity has consistently challenged dominant social and cultural norms and values.

While a profitable skateboard industry has existed for decades and produces some wealthy professional skateboarders, most skaters are urban and suburban youth who reject “adult” values of career advancement and who struggle to escape the discipline of alienated labor in the job market. For most skaters, life is about advancing their sport, enjoying life through the associational experience of belonging to an underground movement, and reclaiming public space through the creative use of the skateboard itself.

History

As a recreational activity, skateboarding got its start in Southern California during the late 1950s when surfers attached roller-skate wheels to wooden planks in an effort to simulate surfing on land. Dubbed “sidewalk surfing,” skateboarding was originally part of Southern California’s larger surf and beach culture.

During the 1960s and 1970s, skateboarding emerged as an independent form of recreation when several companies began to market skateboards and skating equipment to suburban youth. As part of their marketing campaigns, companies promoted skateboard competitions, which, in turn, gave rise to a number of amateur and professional skateboard athletes. During this period, the dominant technical practice of skateboarding featured mostly handstands and spins or downhill racing.

In Southern California, however, surfers continued to practice a form of skateboarding very different from that of the official contest circuit. Based largely in the ethnically diverse working-class beach communities of Venice and Santa Monica, these surfer-skaters sought to emulate the smooth-flowing style of surfing on land, developing long carving and sliding maneuvers to re-create the motion and sensation of riding the waves. These youth skated the banked and sloped terrains of the city, where they practiced a form of boarding that was aggressive and smooth at the same time. They also began a process of creatively reappropriating urban space, which has been a hallmark of skater culture ever since.

The first significant confrontation between the two poles in skateboarding culture occurred in 1975, when the Zephyr team from Santa Monica entered a slalom and freestyle contest in Del Mar, California. The Zephyr team, or “Z-Boys,” brought the aggressive style of skating they practiced on the streets into the public eye. Their maneuvers evidenced an aggressive slashing, grinding, and sliding style that was largely foreign to the figure-skating–like practice of skateboarding at the time.

During the same period, skateboarding also expanded to suburban backyards, where skaters took their craft to the smoothly sloped and vertical terrains of swimming pools drained during the drought of 1976. Often, skaters did not have the permission of the property owners, bringing them into direct conflict with police and the idea of private property itself, and indicating the subversive character skateboarding culture was taking on.

As the more aggressive style of skating became popular, corporate interests were quick to see it as an opportunity to expand their market. Many of the original members of the Z-Boys team were signed to lucrative contracts with manufacturing companies that exploited their image to increase market share. At around the same time, entrepreneurs and municipalities across the country began to open skate parks that emulated the concrete terrains of the city and the backyard pool. By the close of the 1970s, skateboarding had penetrated popular culture and become a multimillion-dollar business.

Nevertheless, in the late 1970s and early 1980s, a rash of liability and insurance problems forced many of the skate parks to close. As public interest in the sport waned and its profitability declined, skateboarding was once again driven underground. With the decline of the concrete skate parks, die-hard skaters began to build “half-pipes” from plywood and two-by-fours in backyards and in abandoned or fallow spaces. Often built to heights of 12 feet (3.7 meters) or more, these half-pipes allowed skaters to take vertical aerial maneuvers to new levels of

skill and complexity.

Following the nationwide recession of the mid-1980s, a new consumer-driven mentality took root in America, and young people across the country began to rediscover skateboarding. However, the boarding scene that emerged was quite different from the preceding one. For one thing, a widening of the skateboard allowed companies to print more elaborate graphics on the bottom of the deck, and they chose provocative, even demonic, graphics that were shocking to many suburban parents.

Tony Hawk (bottom) and other champion competitors contributed to the Generation X counterculture image of skateboarding and helped transform the sport into a mass-culture commercial phenomenon. (Matt Strohane/Getty Images)

Skating Subculture

During the mid-1980s, skateboarding solidified as more than a merely recreational activity. Spurred by manufacturers' exploitation of the emerging suburban youth market, boarding became a powerful adolescent subculture that often determined everything about skaters' personal identities—from the clothes they wore to the music they listened to and the attitudes they professed about the meaning and purpose of life.

During this time, skateboard culture existed in a kind of liminal space, somewhere between the rampant suburban consumerism of the Me Generation of the 1980s and an underground subversiveness that rejected the traditional family mores of academic success and career preparation. For many skaters, life was about living for the day and avoiding the alienation of school and work as long as possible. More politically conscious skaters even drew an explicit connection between skateboarding and the anarchist tradition of refusing labor.

As the 1980s progressed, street skaters—many from urban environments on the East Coast—continued to redefine the sport, using the “ollie” maneuver to jump over planters, slide down handrails, and even ride walls. In doing so, the street skaters of the mid-to late 1980s took skateboarding back to its origins and resumed the decolonization of urban space that their predecessors had begun a decade earlier.

A definite divide between “street skaters” and “vert skaters” became evident during the late 1980s and early 1990s. The latter were much more likely to retain links to the surf and punk cultures, while the former emerged as part of a newly insurgent urban culture that some considered part of the wider hip-hop movement. Many street skaters were young African Americans or Hispanics, and the budding rap music scene of the time became popular among street skaters of all ethnic and social backgrounds.

The rise in popularity of street skating was fueled in large measure by the release of several team videos by new, independent skateboard companies. The videos showed previously unknown amateur skaters performing skillful street maneuvers that many older, vert-skating pros could not even contemplate. With their gritty, underground feel, the videos fueled the new urban street-skating orientation of many young skaters.

Despite the economic recession of the early 1990s and the often bitter competition between newer, independent skateboard manufactures and older, vert-based firms, skateboarding has survived until the present day, even as the gap between the two distinct axes that have marked it since its inception has been exacerbated. The inclusion of skateboarding in the rising genre known as Xtreme sports during the 1990s—including in regular coverage of the annual X Games on the all-sports television network ESPN—has provided a broad media outlet and ensured that the sport itself has commercial viability and corporate sponsorship.

At the same time, a vibrant underground culture of street skaters has persisted in most major cities. Many of these skaters subscribe to the dropout philosophy of their predecessors, even as it is expressed in an increasingly urban and hip-hop-oriented idiom.

Slang

One of the main ways in which a subculture distinguishes itself from the rest of society is by devising its own vocabulary, or slang. Slang is primarily made up of words and phrases that are not part of standard, formal language but are derived from a foreign language, dialect, or other special language for informal, colloquial use. Slang terms often refer to objects or activities considered inappropriate for polite conversation, and the terms themselves sometimes are considered vulgar, obscene, or otherwise offensive by mainstream society. Over time, however, many slang words become accepted as standard language, finding their way into dictionaries and formal usage.

Even generally accepted words can be used as slang if they are given meanings other than their formal ones. For example, the original, formal definition of the word *cool* refers to temperature, but the word also developed a slang usage in which it means “excellent.” *Bad* means “the opposite of good” in formal English, or even “evil”; in contemporary street slang, however, *bad* means “excellent,” making it a synonym for *cool*.

The members of any group may invent their own slang to communicate among themselves. Hence, slang serves as a kind of secret language that cannot be readily understood by the rest of society. Members of the group can identify themselves to one another merely by their use and understanding of slang words and phrases. Slang, therefore, is particularly important to American countercultures, whose members regard themselves as outsiders, alienated from society at large.

For example, one of the earliest known forms of slang is English “criminal cant,” which originated in the sixteenth century and was used as a secret language by criminals and beggars. In the present day, members of organized crime continue to have their own semiprivate vocabulary, using the term *whacked*, for example, as a synonym for *killed*.

Slang is especially common among racial and ethnic minority groups, who use it to distinguish themselves from mainstream culture and reinforce cultural identity. African Americans have contributed countless slang words to the English language throughout their history, and today the hip-hop culture has its own extensive slang vocabulary. For example, the term *dead presidents* refers to paper currency, which features images of deceased presidents George Washington, Abraham Lincoln, and others.

The 1960s Counterculture

Traditionally, teens and young adults have developed and used slang to have a vocabulary that adults do not understand. Slang was an important element of the American counterculture created by the generation that came of age following World War II. The Beat culture of the 1950s and early 1960s generated slang words such as *cats* and *Daddy-o* (for “cool” people) and *square* (for people who were not cool). Adjectives were turned into place names, such as *dullsville* and *weirdsville*.

The youth movement of the 1960s proved to be a rich source of slang. New phrases were devised to express the counterculture philosophy of the decade, such as *do your own thing* and *turn on*, and there were new terms for the people who practiced it, including *hippies* and *yippies*.

Likewise, the underground drug culture spawned an endless series of slang words to disguise their meaning from outsiders. Marijuana has been called “pot,” “weed,” and “Mary Jane,” among a myriad of other terms. The California surfer culture of the early 1960s contributed such words as *bummer* (for depressing) and *gnarly* (for good). Young people sent to fight in Vietnam also contributed: American soldiers were “grunts,” and the Vietcong were referred to as “Charlie.”

Going Mainstream

It is not just members of countercultures who create slang. Even groups considered part of the cultural mainstream devise their own vocabularies. Regional slang is used by people across the United States. An example is the infamous Valley Girl–speak of Southern California.

Members of virtually every profession invent their own slang as well. Doctors and nurses have an extensive slang vocabulary, including *stat* (meaning immediately). In show business, the trade publication *Variety* is famous for inventing slogans and slang terms, such as *sitcom* for situation-comedy series.

The rise of the Internet has brought a new, widely used form of slang, including such now-familiar terms as *surfing the Web* or *lurker* (someone who reads posts on a Web site without contributing). Internet slang terms are distinctive in that many of them are abbreviations, such as *LOL* (laughing out loud).

When slang words become accepted parts of the language, they cease being slang. Hence, the continual development of new slang words ultimately serves to enrich and revitalize the language. In 1888, the great poet and inventor of American vernacular Walt Whitman hailed the creation of slang as “the wholesome fermentation or eructation of those processes eternally active in language, by which froth and specks are thrown up, mostly to pass away; though occasionally to settle and permanently crystallize.”

A good example of the process Whitman described is the history of *cool*. Slang use of the word to mean “excellent” originated among African Americans and was first recorded in the early 1930s. In the 1940s, the general public became aware of how African American jazz musicians used the word. White hipsters thereupon adopted this version in the 1950s, and hippies readily embraced it in the 1960s. By the 2000s, if not before, the usage had become common throughout the English-speaking world. Indeed, while this use of *cool* is still informal, it is arguably no longer slang.

Cool is also a notable exception to the rule that the majority of terms introduced as slang are ephemeral and eventually fall from fashion. If a slang term is adopted by mainstream society, it usually loses its outsider cachet.

Moreover, as each new generation invents its own slang words to distinguish its members from their elders, slang becomes dated. However hip the slang of the 1950s sounded to the youth of that time, today, much of it seems quaint, if not ridiculous. Ultimately, slang—characterized by Whitman as “the start of fancy, imagination and humor, breathing into its nostrils the breath of life”—either is assimilated into the mainstream language over time or vanishes into obscurity.

Slave Culture

Slave culture was a complex amalgamation of Central and West African traditions and practices tempered by the social, political, and economic exigencies of the British North American plantation system. Language, religion, family, and community were critical components of a largely oppositional culture that enabled slaves to endure extreme hardship, separation, and loss.

Slave culture was not monolithic, but important changes during the early national period helped forge an increasingly distinct African American slave experience. During the eighteenth century, slavery was a profitable but still relatively small institution in North America, and slave culture varied considerably by region. By the early nineteenth century, however, slavery became a distinctively Southern institution, with most slaves filling the labor needs on Southern plantations. Although three-quarters of Southerners did not own slaves, and most slaveholders owned fewer than five, three-quarters of slaves lived in groups of ten or more, and half of all slaves lived in groups of twenty or more.

Even after the constitutional ban on the African slave trade went into effect in 1808 and slavery became illegal in the North, the slave population continued to grow. Illegal imports combined with births resulted in a population of nearly 4 million slaves by 1860. Increased cotton production and the expansion of slavery into places such as Mississippi and Louisiana resulted in the growth of an internal slave trade that wreaked havoc in the lives of slaves in the Upper South, jeopardized the newly acquired freedom of many Northern blacks, and ultimately created a slave culture rooted in deep South plantation agriculture.

Language

Language played a critical role in the creation and maintenance of slave culture. The many languages of peoples from West and Central Africa often were so different that communication between Africans initially was difficult. Over time, numerous African languages and English mingled on the plantations of British North America, combining to form a language that made communication between Africans and whites possible. Slaves living in coastal South Carolina and Georgia, for example, spoke Gullah, a creole language that consisted primarily of English words but retained the pronunciation and grammar rules of various West African languages. The more time slaves lived among each other and their white masters, the more familiar they became with the English language and with the society of their captors.

African-born and American-born slaves who were able to communicate with one another, and with whites, benefited from increased knowledge of European ways and more sophisticated understanding of the slave system, which better equipped them to oppose white domination. Slaves who could communicate could form strong kinship and community networks; they could educate themselves; and, perhaps most importantly, they could sustain a distinct, oppositional slave culture rooted in their African past and traditions and their experience as slaves.

Language, like all elements of slave culture, became a complex means of resistance. Although the most readily identifiable forms of slave resistance usually involved direct confrontations or overt refusals to submit to the authority of owners or overseers, resistance also could be much more subtle. Language, as well as other forms of lyrical and nonverbal means of communication, enabled slaves to defy masters who sought to strip them of their culture and their identities.

Resistance often meant using language, song, and other gestures and postures to forge strong bonds with family, friends, and other fellow slaves, and ultimately pass on that knowledge and sense of loyalty and community to succeeding generations. Trickster tales, stories conveyed around a campfire or in the darkness of the slave quarters that pitted characters such as John the Slave or Brer (brother) Rabbit against Old Master or Brer Fox, often were used by slaves as a means of metaphorically defying or outwitting their masters and as a way of

transferring important life lessons to younger slaves.

Religion

Religion, like language, contributed to the foundation of slave culture. Often, special talents or abilities, such as storytelling or healing, helped some slaves gain respect and authority among their fellow slaves; slave conjurers and preachers who ministered to the spiritual needs of the community held a special place of privilege.

Most owners insisted that their slaves convert to Christianity, and most slaves did indeed profess a faith in Christianity by the mid-nineteenth century, but slaves did not simply adopt European religious beliefs. Those who did generally adapted their religious beliefs and practices to their own African cultural and spiritual traditions and used them for their own practical and spiritual purposes.

Slaves lived in a sacred world in which their lives and their natural environment were intimately connected to their ancestors and to powerful religious or spiritual figures that often had very human qualities. Although planters encouraged the acceptance of a form of Christianity that emphasized obedience, sin, and gentleness, slaves were drawn to stories in the Hebrew Bible such as those from Exodus that featured themes of escape from bondage and freedom from oppression. Owners hoped to use religion as a means of reinforcing their power over slaves by arguing that God commanded slaves to obey their masters and to be loyal, and used religion to justify holding slaves in bondage for life. Instead, slaves used Christianity, as well as older African traditions and beliefs, to form a powerful oppositional culture.

African Americans not only adapted Christian beliefs to their previous belief systems and present condition, but they also incorporated African styles of worship that included singing, dancing, storytelling, and the call-and-response style of communication into their Christian services. For instance, the ring shout, a ritual originally performed in Africa that remained an important part of New World slave culture, symbolized oneness with nature and with ancestors, and the solidarity of the community. Far less stolid and solemn than Europeans in their worship, Africans celebrated their religion.

Family and Community

Along with language and religion, the family proved essential to the maintenance of slave culture and community. Family life for slaves was always problematic, since they had no legal rights to protect their family or keep it intact. In slave marriages, husbands and wives survived on an equal footing: Neither had any property rights or legal standing. Slave masters had absolute authority to punish with impunity, to separate the family, and to reward a family member, theoretically making parental authority and marriage rights meaningless. Nevertheless, slaves devised their own rituals, customs, and social boundaries regarding marriage and family, and they worked hard to maintain kin networks.

Slaves performed their own marriage ceremonies, often consisting of older African traditions such as “jumping the broomstick,” in slave quarters, away from the master’s gaze. Slaves used African naming customs to honor relatives and denote familial lineage. They also followed certain prohibitions, such as not marrying one’s “blood kin,” or first cousin.

By the 1840s, three-quarters of slaves in Louisiana lived in what one historian has referred to as simple family households, consisting of a couple with or without children or a single parent, usually a mother, with children. The Louisiana slaves were not alone; most slaves lived in families. The fact that slave families existed and endured well after the tremendous upheaval caused by the Civil War and emancipation is testimony to the power of the oppositional culture formed by slaves, despite white society’s efforts to dehumanize them.

At the center of the oppositional slave culture lay the slave community. Two separate but intricately connected slave communities developed on plantations during the nineteenth century. One centered around the “big house,” where the master and his family exercised the greatest control over slaves and where slaves were most likely to

appear to acquiesce to the master's authority. This was where most white people gained their impressions of slavery and of Southern black people, as well as of the Southern slave owner as genteel and patriarchal.

There was a very different plantation community in the slave quarters, however, where white people held far less direct power and authority over their slaves. It was within the slave quarters that slaves could maintain a greater degree of dignity and control over their lives. Freed from the master's gaze, slaves developed and maintained a complex oppositional culture rooted in rituals, practices, traditions, songs, storytelling, and beliefs born in Africa and reconstituted in the New World.

Whether they were attending a clandestine religious service, participating in a wedding ceremony, or surreptitiously making plans to escape or engage in some other unlawful act, slaves acted within a complex cultural milieu that was formed in opposition to the larger white culture. Slave communities were not without conflict and confrontation, but the common bond of servitude often proved to be a powerful uniting force among slaves.

Sloan, John (1871–1951)

John Sloan was a distinguished American artist whose sympathy for the common people put him on the side of those artists hoping for progressive change in turn-of-the-twentieth-century America. His subject matter, drawn from everyday life, on many occasions challenged mainstream artistic norms and made his art a potential tool for social justice. His naturalistic style gave new aesthetic insights into the modern urban landscape.

John French Sloan was born in Lock Haven, Pennsylvania, on August 2, 1871. His family moved to Philadelphia when he was still a boy, and it was there that he was raised and educated. While at the city's Central High School, he became friends with another aspiring artist, William Glackens.

Primarily self-taught, Sloan obtained work as an illustrator with the *Philadelphia Inquirer* in 1891; he moved to the

Philadelphia Press in 1895 and remained there until 1903. Increasingly, newspaper illustrations were being replaced by photography, a reality that helped persuade Sloan to become a full-time artist.

Sloan's formal art education had begun in the early 1890s at the Pennsylvania Academy of the Fine Arts, where he studied oil painting with the influential artist and teacher Robert Henri, and with Thomas Anshutz, an equally significant masculine realist. It was also during these studies that he became friends with some of the other young artists who would later become known as The Eight—the group of painters who participated in an exhibition at the Macbeth Gallery in New York City in February 1908 in response to the National Academy's rejection of their work for its 1907 spring exhibition.

In 1904, joining other artists such as Glackens, George Luks, and Everett Shinn, Sloan settled in New York City, where the bustle of daily life provided a new creative inspiration. Sloan's newspaper work had introduced him to everyday life from the bottom up, giving him an appreciation for both narrative and naturalism in art.

Sloan began to exhibit in 1906 and joined the other members of The Eight in the Macbeth Gallery exhibit. The show helped seal the group's identity as the Ashcan School, a name associated with their realistic and challenging take on urban life. The Ashcan School stuck its collective finger in the eye of academic convention, which meant defying the art critics of the day. As a group, they embraced the urban backdrop of American life and saw that unfashionable reality could be the legitimate subject of art. Through the use of thick and rapidly applied brushstrokes, they created a dark vision, in which common people were central and everyday events and lifestyles were legitimate materials for artistic expression.

Along with his artistic style, Sloan's politics made him something of a rebel. He moved in early socialist circles, although his independent streak would cause him to break with formal politics and pursue his own artistic style free from the dictated rigidities of socialist realism. In 1912, he joined the radical magazine *The Masses* as art director; the following year, his artwork was included in the critically important New York Armory Show. In addition, he began teaching at the Art Students League, where he taught a large number of America's next generation of artists.

During World War II, Sloan took up outdoor painting and, with his wife, Dolly, took part in the artists' colonies of Gloucester, Massachusetts, and Santa Fe, New Mexico. Sloan was elected to the National Academy in 1929, and he gained further accolades in 1931, when he became president of the Art Students League. During the Great Depression, he supported campaigns to improve artists' economic prospects but avoided association with the Communist Party USA, then exercising influence over certain artists.

After Dolly's death, in 1943, Sloan married a former student, Helen Farr, who had assisted him in assembling his thoughts and theories for his 1939 book, *The Gist of Art*. In recognition of his lifetime's contribution to American culture and his promotion of artistic independence, Sloan was awarded the Gold Medal by the American Academy of Arts and Letters in 1950.

At the time of his death on September 7, 1951, in Hanover, New Hampshire, a retrospective of Sloan's work was being planned at New York's Whitney Museum. His varied body of work remains popular and is still largely identified with urban realism. He is well represented in major national museums and collections, and the continued sale of his art has long been associated with the Kraushaar Gallery in New York.

Slow Movement

The Slow movement consists of a number of separate and diverse efforts in the 1990s and 2000s by individuals and groups who share the central goal of resisting what they perceive as the accelerating pace of modern life and the destructive effects of commercialization and globalization. In addition to a general slowing down of the pace of life, the movement's goals include preserving distinctive local customs, de-emphasizing conspicuous consumption, strengthening familial and social structures, and preserving the local physical environment.

Proponents of the Slow movement often state their goals in opposition to what they regard as the tendencies of a technology-driven modern lifestyle with an overemphasis on efficiency and uniformity, and a concomitant tendency to discard what is unique or local in favor of that which can be mass-produced and mass-distributed. Some individuals and groups within the Slow movement see themselves as part of the worldwide anti-globalization movement and have organized around causes such as opposition to the opening of fast-food restaurants in European cities. Others have chosen to focus entirely on personal concerns, such as limiting the intrusion of workplace concerns into the home, or promoting leisure activities such as yoga or gardening, rather than watching television.

The beginnings of the Slow movement have been traced to the efforts of Carlo Petrini, an Italian who in 1986 organized a demonstration against building a McDonald's restaurant near the Piazza di Spagna in Rome. Protestors brandished bowls of penne, a traditional Italian pasta dish, as a symbol of their opposition to the standardized foods to be offered by the American, corporate, fast-food restaurant. Petrini became a spokesperson for the importance of meals as a social ritual and the preservation of local foods and customs.

Another well-known spokesperson is the French farmer José (Joseph) Bové, who became famous for his role in dismantling a McDonald's restaurant in Millau, France, in 1999. Bové is an anti-globalization activist and politician who was a candidate for the French presidency in 2007 and had previously been an antimilitary and antinuclear activist. Groups such as Slow Food USA and Local Harvest, who support the principles of Petrini and Bové, came to be known as the Slow Food movement.

From its birth in the Slow Food movement, the Slow movement in the United States has grown rapidly to embrace many facets of modern life. Slow Travel advocates vacations that avoid well-known tourist destinations and long-distance, short-duration travel in favor of leisurely travel within smaller, less heavily traveled areas. The Slow Schools movement believes that American schools have become overly competitive and standardized and should instead adopt a cooperative and child-centered approach to education.

Advocates of the Slow Living movement attempt to adapt the principles of the Slow Food movement to many aspects of daily life, emphasizing the quality and individuality of each person's life rather than the amount of work accomplished or prestige garnered. They advocate a greater emphasis on family, social, and recreational activities; reserving time each day during which one is unavailable through electronic technologies such as e-mail and pagers; and taking up leisurely hobbies such as gardening or knitting.

Part of the movement's growth has been due to the recognition of common concerns among preexisting elements within U.S. counterculture. The Voluntary Simplicity movement, begun in the 1980s, advocates decreased

consumption of material goods, increased simplification of daily life, and increased focus on personal growth and awareness. It is represented by organizations such as the Simple Living Network.

The Slow movement's concern with preserving the local environment has its roots in the ecology movement of the 1960s and 1970s. The New Urbanism movement, begun in the 1980s as an alternative to the automobile-based suburban model of community development prevalent in the United States, shares with the Slow movement concerns with the human scale of design and the local quality of life. These include building or preserving traditional neighborhoods that encourage social interaction and provide a safe environment for walking and bicycling.

Smith, Joseph (1805–1844)

Joseph Smith was the founder of the Church of Jesus Christ of Latter-day Saints (commonly known as the Mormon Church) and the publisher of its defining text, the *Book of Mormon*, in 1830, which he claimed to have translated from golden plates he found buried near Palmyra, New York. As a “seer, a Translator, a Prophet, and Apostle of Jesus Christ and Elder of the Church,” Smith later moved with the growing Mormon Church to Ohio, Missouri, and, finally, Illinois, facing persecution by non-Mormons in each locale. At the time of his death in 1844, there were more than 30,000 Mormons worldwide. By the early 2000s, there were more than 10 million, making it one of the most successful new religions of the past several centuries.

Smith was born on December 23, 1805, in Sharon, Vermont. His parents, struggling farmers, moved Joseph and his nine siblings all over the Northeast, landing near Palmyra, New York, by the time Joseph was a teenager. The sectarian infighting inspired by the religious revivals sweeping across upstate New York at the time confronted Joseph and his family with the question of which Christian sect to join. In his personal history, later canonized as part of the Mormon scriptural book the *Pearl of Great Price* (1851), Smith described how, at the age of fourteen, he had a vision in which God and Jesus told him that all of the sects were wrong.

Smith's divinely appointed rejection of Protestant sectarian culture characterized Mormonism's relationship to mainstream American Christianity through the rest of Smith's life. He presented Mormonism as the true Christianity in opposition to the babble of competing sects, a view many disgruntled sectarians found appealing. With divine assistance, Smith retranslated the King James Version of the Hebrew Bible and the New Testament because, he asserted, the version Protestants were reading was corrupt. In addition, Smith offered converts the *Book of Mormon*, a more-than-500-page narrative of the 1,000-year history of a family of Israelites who fled from Jerusalem to America in 600 B.C.E.

Smith asserted that the *Book of Mormon* was an ancient compendium of historical documents written by the kings and prophets of a lost people, the only descendants of whom were Native Americans. The volume's deft combination of Hebrew Bible and New Testament milieus attributed Christian knowledge to pre-Christian characters and enabled Mormon converts to read the newly restored, entire Bible (composed of the Hebrew Bible, the *Book of Mormon*, and the New Testament) as a single, continuous Christian narrative.

Detractors pointed to the similarities between the *Book of Mormon* and nineteenth-century Christian conceptions as evidence of Smith's own authorship, but the early Mormons cited the *Book's* agreement with mainstream Christianity as proof of its authenticity. Many interpreters, Mormon and non-Mormon alike, also have asserted that the book departs from nineteenth-century Christian understandings. Smith presented his miraculous reception and translation of the *Book* as proof of the Mormon tenet that God continues to communicate divine truth to man. In this way, the very physical presence of the *Book* was said to validate Smith's later revelations.

Smith's revelations during the fourteen years he led the Mormon Church were published in the scriptural book *Doctrine and Covenants* (1835), which developed Mormonism into a complex religion that agreed with some aspects of nineteenth-century Protestantism but sharply distinguished itself from the mainstream. The practice of plural marriage, which Smith justified as a divine revelation and surrounded with secrecy, fomented controversy and posed a moral challenge to the communities in which the Mormons first settled. But it was the political dimension of Smith's leadership that would contribute most to anti-Mormon sentiment and the Mormons' expulsions from Ohio (1838), Missouri (1839), and Illinois (1846).

Instead of isolating the Mormon Church from local politics, as had other nineteenth-century American separatist religious sects, Smith aggressively pursued political control. He encouraged Mormons to run for local office and instructed them on how to vote so that, as a bloc, they could influence state politics. In Missouri, the perception that the Mormons were too numerous and politically powerful led to persecution and violent conflict, as did hostility to the practice of men having multiple wives, which Mormons claimed was divinely ordained. A full-scale war would have followed if the Mormons had not retreated to Illinois.

In 1838, the Mormons settled the river town of Nauvoo, Illinois, and instituted a town charter that gave Smith unusual control. The Nauvoo Legion, which Smith commanded, was the largest local militia in the state of Illinois. While Smith often attributed divine sanction to U.S. laws and to the Constitution itself, the combination of his near-absolute political control and the doctrine of continuous revelation left the door open to the rejection of government authority. The perception that Nauvoo was a state-sanctioned theocracy with its own army troubled the Mormons' neighbors in Illinois. Smith's earnest run for president of the United States in 1844 further exacerbated negative sentiment toward the Mormons.

Not long after the Mormons arrived in Illinois, former Missouri Governor Lilburn Boggs was assassinated, and Smith was named as a suspected conspirator in the murder. Smith avoided extradition to Missouri, but when anti-Mormon pressure climaxed in 1844, he turned himself in to Illinois authorities. An angry mob stormed the jail where Smith and his brother Hyrum were being held and, with the compliance of the guards, killed the two men on June 27, 1844.

Smith, Patti (1946–)

Patti Smith is an American poet, rock singer, songwriter, and performance artist widely regarded as a forerunner of the New York punk movement. Various referred to as the “high priestess of punk” and “punk’s poet laureate,” she is perhaps best known for a series of 1970s recordings that blurred the line between rock and roll and performance poetry, including *Horses* (1975). Long a leading figure in New York City’s downtown art and music scene, Smith first gained prominence for her poetry readings and performances in such East Village venues as the Poetry Project at St. Mark’s Church and the club CBGB. Her work, which also includes visual art, theater, rock criticism, and several books of poetry, has had significant international influence, particularly in such genres as alternative rock, spoken word, and performance art. Smith is also known for her activism in support of various environmental, social justice, and human rights causes; some consider her a feminist icon.

Patricia Lee Smith was born in Chicago, Illinois, on December 30, 1946, the oldest of four children. Her father, Grant Smith, was a factory worker, and her mother, Beverly, was a waitress. Raised in Woodbury, New Jersey, near Philadelphia, in high school Smith was drawn to the work of Arthur Rimbaud, Bob Dylan, James Brown, and the Rolling Stones.

Dropping out of Glassboro State College (now Rowan University), she moved to New York City in 1967, where she worked as a clerk at the Strand bookstore, frequented the Hotel Chelsea and Max’s Kansas City nightclub, wrote rock criticism for publications such as *Creem*, and lived with the photographer Robert Mapplethorpe, who would go on to design the cover of her first album. During this period, she also lived with the playwright Sam Shepard, with whom she collaborated on the play *Cowboy Mouth* (1971). Shortly thereafter, she published her first volumes of poetry, *Seventh Heaven* (1972) and *Witt* (1973).

In 1971, backed by guitarist and rock critic Lenny Kaye, Smith opened for poet Gerald Malanga at the Poetry Project. The collaboration was a success, and Smith and Kaye continued playing throughout the city, eventually recruiting piano player Richard Sohl. The trio soon developed a potent mix of rock, jazz, and poetry, epitomized by their early track “Piss Factory” (1974) and fleshed out the following year in her debut album, *Horses*, produced by John Cale, former cellist for the Velvet Underground. Critics praised the album’s bold merger of garage rock abandon with Beat and symbolist sensibility, and it has since become a rock classic. Around the same time, Smith and her group began playing with the band Television at CBGB, ushering in the era of New York punk and New Wave.

Smith followed up the success of *Horses* with three more albums—*Radio Ethiopia* (1976), *Easter* (1978), and *Wave* (1979)—and the Patti Smith Group, as it was now called, toured extensively in the United States and Europe. In 1978, the song “Because the Night,” a collaboration with singer Bruce Springsteen, became Smith’s only Top 20 hit—a rare instance of a punk-identified artist crossing over into the pop charts.

Soon thereafter, Smith married Fred Smith, the former guitarist of the influential 1960s rock band MC5, and she withdrew from the spotlight. She released only one album in the 1980s, focusing instead on raising her two children.

In the mid-1990s, following the deaths of her husband and brother, Smith resumed recording and touring. By 2007, she had released four more albums and several compilations and had toured and collaborated with such artists as Bob Dylan, R.E.M., and Television. In 2005, France named Smith a *Commandeur dans l’Ordre des Arts*

et des Lettres, and in 2007 she was inducted into the Rock and Roll Hall of Fame. Her 2007 autobiography *Just Kids*, about her early days in New York City and her friendship with the young art student and photographer Robert Mapplethorpe, was published to rave reviews.

Smoking, Tobacco

The use of tobacco has been tainted by controversy ever since the Native Americans who were encountered by Christopher Columbus gifted him and his fellow European adventurers with the plant. When tobacco use is in general favor, opponents tend to be overlooked as a sometimes vocal minority. Historically, however, tobacco has been unpopular with the majority of American society, and proponents of its use have had to fight to have their views heard or respected. Public opinion on the subject of tobacco use has often been hostage to clashes between big government and big businesses, and their struggles over profits, taxes, and the general health and welfare of the American population.

History and Countercultural Roots

The true nature of smoking was misunderstood by the European explorers who ventured to the Americas and were introduced to tobacco by Native Americans. Smoking tobacco had traditionally been part of a ceremonial ritual, but Europeans regarded it as a vice.

From colonial times, many European Americans considered smoking a filthy habit. Its value as an export to the Old World outweighed its vileness, however, and tobacco plantations flourished in America. Indeed, it became an economic mainstay, escalating the slave trade from Africa even before the infamous cotton plantations that proliferated across the South during the early years of nationhood.

Photographs of former slaves often show both men and women smoking, their pipes hand carved from corncobs. It is not inconceivable that many slaves smoked clandestinely, gaining a small consolation from partaking of the master's fortune and reducing, however infinitesimally, the profit of the plantation—and perhaps, thereby, creating an early counterculture of smoking.

In the early twentieth century, most smokers were men; smoking tobacco continued to be viewed as immoral and a sign of especially bad character among women. The 1920s, however, was a time of sweeping change for American women, who had just won the right to vote (under the Nineteenth Amendment, ratified in 1920) and were determined to show their independence in other ways as well. Tobacco companies encouraged them to

smoke, and “flappers,” the modern women of the Roaring Twenties, wore skimpy clothes, drank (prohibited) alcohol, and openly smoked cigarettes and cigars.

The encouragement to smoke was perhaps the impetus to engage in other independent behaviors as well. Women drank, wore what they wanted to, owned property, and were no longer content to stand on the pedestal of virtuous wife and mother. This, it is important to note, applied exclusively to well-to-do white women; poorer white women and women of color remained beneath the notice of the elite and powerful (white men). Nevertheless, disenfranchised women enjoyed a freedom in their powerlessness that rich white women tried to emulate. Photographs of poor rural women in the early twentieth century often showed them with corncob pipes between their lips.

Cigarette smoking emerged more visibly among the economically distressed people of the Great Depression as a way to escape their dire circumstances. Another popular escape was going to the movies, in which heroes and heroines indulged heavily in smoking. Theatergoers in those days would light up in sympathy with smoking protagonists. Vicariously through smoking, desperately poor men and women prevailed against evil, lived, loved, and even died with their celluloid counterparts, forgetting the hardships of the day and gaining a feeling of command over events beyond their control.

In films and in the theater of the era, the trappings and mannerisms of smoking—filling, tamping, and lighting a pipe, tamping down a cigarette and lighting it, or clipping the end of a cigar—were emphasized. These activities enabled the smoker to take control of situations, to punctuate words and silences with subtle meaning, and to underscore points and create emphasis where needed.

Mid-Twentieth Century to the Present

During World War II, soldiers fighting in the trenches, in ships, and in the air were issued free cigarettes from the maker of Lucky Strikes. Women working in factories during the war also were encouraged to smoke. Indeed, cigarette ads helped to popularize “Rosie the Riveter,” a cultural icon extolling the ability of women to keep the economy going at home while the men were away fighting for freedom. Smoking in this instance was seen as a symbol of competence.

When the men came back from fighting overseas, advertisements encouraged women to return to the home, while continuing to smoke. Smoking was promoted as a social activity, and advertisements reinforced this. The characters portrayed by tough-guy film star Humphrey Bogart, in *Casablanca* (1941) and other popular releases of that decade, lent a particular cachet and nightclub glamour to smoking cigarettes.

After World War II, free thinkers such as the Beat writers offered an alternative to the prevailing conservative lifestyle of the 1950s, and were often seen with cigarettes dangling from their mouths. The nonconformist, rebellious young man was further exemplified by the brief career and tragic death of movie actor James Dean, best known for his role in *Rebel Without a Cause* (1955) and often pictured with cigarette in hand. Tobacco advertising was quick to target smoking as *de rigueur* for young men who wanted to show off their own nonconformist, rebellious ways. The onslaught of ads focused on teenagers as consumers who would smoke to emulate popular antiheroes.

Smokers in the 1960s rebelled vicariously, emulating fictional superspy James Bond and other larger-than-life characters of the big screen. To smoke was to become a hero. Cigarette ads reflected this, and the branding of the Marlboro Man tapped into the American ideals of rugged individualism and the romance of life on the open range. Camel, a rival company, used the phrase “I’d Walk a Mile for a Camel” to signify determination in the face of obstacles, again appealing to men. With the rise of the feminist movement in the 1960s, Virginia Slims targeted liberated women with slogans such as “You’ve Come a Long Way, Baby!” All in all, smoking became a more accepted social activity, a means of bonding, through the shared enjoyment of smoking, and projecting a desired image in atmospheres as diverse as the workplace, the restaurant, and the bar.

Meanwhile, hippies preferred smoking marijuana to smoking tobacco, certain that marijuana, not being physically addictive, was less damaging physically than tobacco and its nicotine. Nor was tobacco deemed to fit their search for a natural, simple lifestyle. Many dreamed of a day when tobacco would be illegal and marijuana would be the smoke of respectability.

By the 1970s, the pendulum of smoking in America began to swing back to the status of unacceptable, for both men and women. Congress passed the Federal Cigarette Labeling and Advertising Act in 1965, followed by the requirement to print a warning from the Surgeon General on all cigarette packs, advising purchasers of the health risks associated with smoking.

Tobacco companies persisted in downplaying the health risks of smoking and the addictiveness of nicotine for the next several decades, but by the end of the century, class-action suits won large reparations from the industry. In 1998, forty-six states signed an agreement with America's five largest tobacco corporations, whereby the states would receive \$206 billion over twenty-five years to use at their discretion to educate the public about the risks of smoking and to discourage tobacco use.

As of 2008, New York, Boston, and Chicago were among the major U.S. cities that had banned smoking in indoor public places. At issue is the right of the individual to breathe clean air versus an individual's right to smoke in the pursuit of happiness. Belmont, a city near San Francisco, proposed an even stricter ban, effectively forbidding smoking any place other than on the property of a single-family, detached home.

Smokers have banded together in the face of widespread ostracism, as tobacco use has once again become the underdog rather than an accepted social activity. Groups such as FORCES (Fight Ordinances and Restrictions to Control and Eliminate Smoking), Cigar World, the United Smokers Association, American Smokers Alliance, and the National Smokers Alliance view antismoking measures as infringements on individual rights as guaranteed by the Constitution. Moreover, say such groups, the antismoking movement is commercially motivated, benefiting large corporations such as pharmaceutical companies that manufacture nicotine-replacement therapy products, such as patches and gum.

Other groups, including the MATCH (Mobilize Against Tobacco for Children's Health) Coalition, the Foundation for a Smokefree America, Action on Smoking and Health (ASH), Children Opposed to Smoking Tobacco (COST), and numerous others, claim that breathing clean air and living in a smoke-free environment, as well as other benefits from banning smoking, are the rights of every American. As such, they have pushed to make the general public aware of other issues related to smoking, such as secondhand smoke, to which children and young adults are especially susceptible.

Smothers Brothers

The folk singing comedy duo of Tom and Dick Smothers, known as the Smothers Brothers, stood up against network television censorship in the 1960s and were important in promoting the disaffected youth culture of the time. The Smothers Brothers first performed professionally as a music-and-comedy team at San Francisco's Purple Onion club in 1958, and made their national television debut on *The Jack Paar Show* in 1961. Tom, the older of the two (born on February 2, 1937), played guitar and portrayed himself as mentally slow; his catchphrase was "Mom always loved you best." Dick (born on November 20, 1938) played stand-up bass and was the straight man in their routines. They usually began with a song duet, which was interrupted by Tom or Dick and led to a comedy dialogue, and then a return to the song.

The brothers had made several successful albums and numerous television appearances before their own show, *The Smothers Brothers Comedy Hour*, debuted on the CBS television network on February 5, 1967. Some politically and culturally sensitive material was aired the first season, but it was mostly diffused by comedic counterpoints. The show proved to be a ratings success, especially with the youth demographic of sixteen-to twenty-four-year-olds, and was renewed for a second season.

Then, the tenor of the show changed dramatically. The second show of the new season, aired on September 1, 1967, featured folk singer and political activist Pete Seeger, who had been blacklisted from television for more than fifteen years for his political beliefs. Seeger was to sing "Waist Deep in the Big Muddy," a thinly disguised criticism of the war in Vietnam. CBS censored the song, but strong opposition from the public and the press prompted the network to backtrack and let Seeger perform the song on the February 16, 1968, show.

Throughout the season the Smothers Brothers continued to include material designed to denounce the war and mock mainstream American culture. The recurring routine "Share a Little Tea with Goldie" featured Leigh French portraying a pothead named Goldie O'Keefe. Ironically, most of these segments got past the censors, because they did not understand the code language being used, such as "tea" for marijuana.

The third season, premiering on September 19, 1968, marked a sharp escalation of the show's political radicalism and the network's attempts to silence its dissenting voice. The spring of that year had seen the assassinations of civil rights leader Martin Luther King, Jr., and Democratic presidential candidate Robert F. Kennedy, and the Chicago police had publicly beaten demonstrators at the Democratic National Convention in August. As a sign that their own attitudes had also changed, Tom and Dick returned to the air with longer hair, moustaches, and unconventional clothing. On the season's opening show, Harry Belafonte's song "Don't Stop the Carnival" was censored, because he had changed the lyrics to refer to events in Chicago. CBS, meanwhile, also had refused to air any convention footage that showed police violence.

Throughout the season, the brothers pushed material that seemed to dare CBS to censor them. Their musical guests also were geared to the views of counterculture youth, with appearances by the Beatles, Jefferson Airplane, the Doors, Donovan, and Peter, Paul and Mary.

On March 9, 1969, CBS refused to show an entire episode in which singer Joan Baez spoke about her husband's imprisonment on draft-evasion charges. Finally, on April 3, 1969, the network canceled the show entirely. The Smothers Brothers sued for breach of contract and eventually won, but the radical programming so loved by the counterculture was gone.

The Smothers Brothers had short-lived series in later years on ABC and NBC, and they even returned to CBS for a twenty-year reunion show. But none of the revivals was particularly successful in terms of viewer ratings, nor important in terms of political or cultural commentary. They continue to perform live in the 2000s.

Snoop Dogg (1971–)

Snoop Dogg, formerly known as Snoop Doggy Dogg, is a leading figure in West Coast rap culture as an artist, record producer, and actor. He personifies 1990s gangsta rap, a subgenre of hip-hop associated with urban gangs and characterized by violent and misogynistic lyrics. Terse, laid-back, hip-hop rhyming is a defining feature of this controversial artist, whose lyrics about violence and pimping seem to both reflect and foreshadow events that have marked his everyday life off stage. Many of his song lyrics have played out in his own life, and his appearances in feature films and video games placed him squarely in the mold of the underground, streetwise hustler and smooth-talking player.

Snoop Dogg was born Calvin Broadus in Long Beach, California, on October 20, 1971. He was given the name “Snoopy” by his mother after the dog in the comic strip *Peanuts*. He became a member of the Long Beach Rollin’ 20s Crips, one of several street gangs that sprang from the original Crips.

In his post-high school years, he was jailed for several offenses, including drug trafficking. Meanwhile, he was recording his own rap tapes and eventually worked with Dr. Dre, a hip-hop artist formerly of the band N.W.A. (Niggaz With Attitude), performing on Dre’s popular album *The Chronic* (1992).

Doggystyle (1993) was Snoop Dogg’s first solo album, released on the heels of his arrest in the shooting death of a member of a rival gang. It entered the charts at number one and set a trend in terms of graphic language, allusions to violence, and gangsta motifs. A video with fellow artist Tupac Shakur, *2 of Amerikaz Most Wanted* (1996), captured the anguish and bravado of the era, featuring the two artists posturing and enveloped in a chaotic world of hustling and gunplay. A concept video, *Murder Was the Case* (1994), dramatized Snoop Dogg’s death. That year, during a tour in England, tabloid newspapers and some members of Parliament requested that the government expel the rapper for his growing notoriety.

California hip-hop artist and producer Snoop Dogg (Calvin Broadus) was a leading figure in the rise of gangsta rap, the controversial subgenre known for violent, misogynistic, sexually explicit lyrics. (Greetsia Tent/WireImage/Getty Images)

Snoop Dogg was a participant in the gangsta rap feud between the East Coast's Bad Boy Records and the West Coast's Death Row Records, which turned violent in the mid-1990s. Snoop's stage persona and alter ego offstage were at the heart of the all-out contest for power, money, and notoriety. The rivalry culminated in the murder of West Coast rap icon Shakur in November 1996 and East Coast counterpart Notorious B.I.G. six months later. Snoop Dogg's second album, *The Doggfather* (1996), did not sell as well as his first, partly because the industry and fan base seemed tired of the East Coast–West Coast feud.

In the aftermath, Snoop Dogg began altering his image, appearing to move away from purely gangsta motifs, broadening his audience and influence. The effort included participation in the 1997 tour of Lollapalooza, the traveling music festival. But Snoop did not give up his radical posture and lifestyle. In fact, he only seemed to further embed his career in controversy. In 2000, he directed the near-pornographic film *Snoop Dogg's Doggystyle*, and, two years later, released the film *Snoop Dogg's Hustlaz: Diary of a Pimp*.

In 2003, he was embroiled in a highly publicized civil rape case, and in 2006, he and members of his entourage were arrested at London's Heathrow airport for unruly behavior and vandalizing a shop. Thereafter, he was variously charged with and arrested for possession of firearms and drugs and with disruptive behavior. In April

2007, he was found guilty of gun and drug charges, and sentenced to five years on probation.

In 2004, meanwhile, Snoop Dogg had left Death Row Records and signed with Geffen Records, releasing *R&G: Rhythm & Gangsta* with Geffen that year. Critics hailed the album—which featured the enormously popular song “Drop It Like It’s Hot”—as hardcore and commercially appealing, featuring jazz guitars and mainstream collaborations.

Snoop Dogg hosted a kind of peace summit for the hip-hop community in 2005, calling on West Coast rappers to “end all their beefs” and “protect the West.” The event also attracted some rival artists and led Snoop Dogg to end his rivalries with Death Row founder Suge Knight and rappers Jayo Felony and Kurupt. In 2009, he was hired by EMI to head its hip-hop label Priority Records and, late that year, released his own tenth studio album, *Malice n Wonderland*.

By 2009, Snoop Dogg’s albums had sold in excess of 20 million copies in the United States alone. Throughout his career, his public persona has exuded both the cool and the perverse, a paradox he brought to the rap stage and to hip-hop culture in general. In spite of his overtures to other genres and subgenres within hip-hop, his work is still widely known for espousing violence and misogyny.

Snyder, Gary (1930–)

Poet Gary Snyder is one of the most prominent figures to emerge from the San Francisco Renaissance of the 1950s. In 1975, he became the first poet of the American West to be awarded the Pulitzer Prize, for his collection *Turtle Island*. By merging his practice of Buddhism with an ecological perspective rooted in Native American understandings and an intimate knowledge of western U.S. topography, Snyder became a modern-day Henry David Thoreau whose writings and personal example helped shape American countercultural thought from the 1950s onward.

Gary Sherman Snyder was born on May 8, 1930, in San Francisco and raised in Lake City, Washington, and Portland, Oregon. As a youth, he became deeply interested in the wilderness of the surrounding mountain ranges and in Native American lifestyles and approaches to the land. He graduated from Reed College in 1951 with a double major in anthropology and literature, and spent the next few years taking graduate classes, writing poetry, and working as a lookout at various national forests.

Soon after taking part in the famous October 1955 Six Gallery reading in San Francisco at which Allen Ginsberg

first recited his poem *Howl*, Snyder boarded a freighter for Kyoto, Japan. He lived in Japan for most of the next twelve years, deepening his understanding of Buddhist practice under the tutelage of Zen master Oda Sesso Roshi and continuing to write the poems that would be published in *Riprap* (1959), *Myths and Texts* (1960), *Mountains and Rivers Without End* (1965), *A Range of Poems* (1966), and *The Back Country* (1967; first U.S. edition, 1968).

During these years, Snyder was able to maintain his relationships with the Beat writers he had helped launch in the mid-1950s. He often gave readings with Ginsberg, and he participated in such antiwar demonstrations as the Gathering of the Tribes in San Francisco's Golden Gate Park in 1967. During the 1970s, 1980s, and 1990s, Snyder became increasingly outspoken about ecological concerns and collected his essays on Buddhism, poetry, and land use in such influential volumes as *Earth House Hold* (1969), *The Real Work* (1980), and *The Practice of the Wild* (1990). He also continued to collect his poetry in several more volumes.

In a 1977 interview published in *East-West Journal*, Snyder commented: "What it comes down to simply is this: If what the Hindus, the Buddhists, the Shoshone, the Hopi, [and] the Christians are suggesting is true, then all of industrial/technological civilization is really on the wrong track, because its drive and energy are purely mechanical and self-serving—real values are someplace else. The real values are within nature, family, mind, and into liberation."

Snyder's life, politics, and poetry consistently have been devoted to elucidating the "real" values that he discerns within the core of every truly holistic religion. The meditative calm, zest for life, and wise humor he brought to this task has made him one of the most admired and iconic figures of the late-twentieth-century American counterculture.

Social Gospel

The Social Gospel, arising in the second half of the nineteenth century, refers to the ideology of social service promoted by a broad, transatlantic movement of Protestants. (Roman Catholics maintained their own social Christian tradition at that time.) Advocates of the Social Gospel would proceed to challenge America to apply the ethical imperatives of Judeo-Christianity creatively to their economic, political, and international activities during the Progressive Era (1890–1919) and after. Pastors, theologians, and lay activists united in demanding a "beloved community" characterized by respect for workers, civil rights for minorities, and an end to war.

Nineteenth and Early Twentieth Centuries

The Social Gospel crusade emerged after the American Civil War in response to problems arising from unregulated industrialization and urbanization. Episcopalians, Congregationalists, Methodists, and Baptists in the Northeast and Midwest, witnessing firsthand the hardships of new working and immigrant classes, were its earliest proponents. Through sermons and numerous books, Ohio pastor Washington Gladden championed “Applied Christianity” in opposition to unjust employers and corrupt urban politicians. Frances Willard, leader of the Woman’s Christian Temperance Union (WCTU), argued that the Christian middle classes should “do everything” to combat class inequalities. For them, the “fatherhood” of God and resulting “brotherhood” of humankind negated all exploitative relationships.

Gladden and Willard were soon joined by pioneering social scientists such as University of Wisconsin professor Richard T. Ely, who founded the American Economic Association (AEA) in 1885 on a Christian socialist foundation. Ely and other Social Gospel pioneers received significant inspiration from British and German social Christians, including journalist William T. Stead. Reprints of Stead’s 1893 address, “If Christ Came to Chicago,” described and condemned the horrible conditions under which millions in European and U.S. cities were living.

The Social Gospel also was spread at this time by popular fiction. Elizabeth Stuart Phelps Ward, a feminist author and the daughter of a prominent Massachusetts theologian, won instant celebrity for her 1868 novel, *The Gates Ajar*. She called upon middle-class churchgoers to become involved in labor movements, temperance, and other social reforms through novels such as *The Silent Partner* (1871) and *A Singular Life* (1894). The latter highlighted the New Testament command to follow Christ’s example of sacrificial service and suffering. In that regard, Ward’s work was superseded by that of Kansas pastor Charles Sheldon, whose collection of sermon-stories, *In His Steps* (1896), asked readers, “What would Jesus do?” Sheldon’s work eventually sold 30 million copies and remains the ninth best-selling book of all time.

The Social Gospel was institutionalized between 1900 and 1920, as leading Protestant denominations followed the Catholic Church in formulating public statements on Christian involvement in social justice efforts. The Federal Council of Churches (FCC), representing thirty-three denominations and roughly 20 million Protestants, issued its first “Social Creed of the Churches” in 1908. The Social Creed, borrowed from Northern Methodists, endorsed many of the aims of Progressive reformers, especially recognition of the rights of labor, minimum wage legislation, and federal social insurance programs.

FCC members could be found working to effect social justice in each of the major political parties (including many through the Progressive and Socialist parties), as well as through their own religious organizations, such as the WCTU. “Labor” and “socialist” churches also were established in several major cities to represent the concerns of working-class families before local and state officials. Pacifism became an integral component of the Social Gospel in light of the devastation of World War I, as the FCC campaigned hard for the success of the new League of Nations.

The countercultural aspects of the Social Gospel at this time were most clearly articulated in the writings of New York pastor and seminary professor Walter Rauschenbusch. In his landmark *Christianity and the Social Crisis* (1907), Rauschenbusch demonstrated how passion for social justice had been central to the Old Testament prophets and the Gospels. To Protestant churches long preoccupied with personal salvation from hell, he counseled greater concern for “Christianizing” economic and political life in the here and now. The Kingdom of God was not merely an object of prophecy but something to be made a lived reality in the world.

For Rauschenbusch and other adherents, the Social Gospel demanded the rewriting of old theologies, reconstruction of church practices, and the overcoming of class, racial, and ethnic barriers in religious fellowships. Social Christians, furthermore, prayed for America to replace its competitive and acquisitive society with one founded upon cooperation and social service. Whether through membership in the Socialist Party (Rauschenbusch), the preaching of socially relevant sermons (Gladden), or following the lead of Jesus (Sheldon), they hoped religion might make significant contributions to a better future throughout the world.

Post-World War I

The Social Gospel continued to grow in the tumultuous decades after World War I. The pacifists of the Fellowship of Reconciliation (FOR) coordinated and defended social Christian thought nationwide during the 1920s. College-student Christian groups, led by the Young Men's Christian Association (YMCA), lent their support to various experiments in interracial cooperation and radical economic reform.

Given the worldwide collapse of capitalism during the 1930s, Protestant and Catholic leaders alike celebrated President Franklin D. Roosevelt's New Deal program as either the embodiment of Judeo-Christian concern for the oppressed, or as a trend toward that concern. German American pastor and New York seminary professor Reinhold Niebuhr, in his controversial *Moral Man and Immoral Society* (1932), criticized utopian social Christian expectations even as he reiterated Rauschenbusch's main point that the Social Gospel was the only gospel there ever was. Niebuhr later led several church leaders in a break from pure pacifism when the need to resist Nazi aggression militarily presented itself. Nevertheless, millions of Americans supported the FCC's position of a "just and durable peace," developed during the war years, which set out postwar goals eventually fulfilled by the creation of the United Nations in 1945.

The Social Gospel movement split into competing camps under cold war pressures. Veteran social Christians opposed Soviet Communism yet refused to bless unprecedented militarization and national security measures. Rather, through the newly formed World Council of Churches (WCC) in 1948, they advocated a "Responsible Society" characterized by decentralized economic power, extensive welfare programs, and superpower coexistence. That Social Gospel tradition was challenged during the 1960s by South American liberation theologians, Black Power theologians, and younger Protestants involved in civil rights and anti-Vietnam War protests. The voices of young and old social Christians alike were quickly drowned out, however, by the flood of religiously and politically conservative Christians during the ascendancy of President Ronald Reagan in the 1980s.

Today, the Social Gospel movement has become so diverse and contradictory that one term can hardly be applied to it. All the same, the host of resilient social Christians bears witness to a desire voiced by their brothers and sisters more than a century ago that their faith has relevance beyond one's belief about the afterlife.

Socialism

Advocates of socialism—a political philosophy with a long history in many countries—believe that society should not be divided into social classes and that social wealth should be shared equally by all. Many socialists today trace their roots to the philosophy of the German economist and revolutionary Karl Marx, but they distinguish themselves from communists, who also trace their heritage to Marx, in their belief that social transformation can be achieved through democratic politics.

In many countries, the Socialist Party is a major national political organization that regularly competes for and often wins national political office. This is not the case in the United States. Indeed, why there is no socialist party of national importance in the United States has been a source of fascination and discussion among comparative historians and sociologists for some time. Few academics disagree, however, that, with the exception of a brief period of relative national importance in the early twentieth century, socialism as a political ideology and way of life has been relegated to the sidelines of American history and culture.

Early History

As a counterculture on the margins of American politics and society, socialism—or at least its core principles—has a long history in the United States. It dates back to the colonial era, when those at the bottom of society rose up on several occasions to challenge the class-based societies that were taking shape in both the North and the South. As early as the late seventeenth century, frontier rebels in Virginia led by Nathaniel Bacon rose up against the colonial authorities to protest against high taxes, high prices for imported goods, and the monopolization of farmland by the coastal elites.

Although the immediate causes of Bacon's Rebellion were complex, many historians argue that it is a powerful symbol of the alternative lifestyle that developed among frontier people during the colonial era. This lifestyle emphasized freedom from state oppression and economic cooperation in a way that challenged the highly regulated class societies of the Atlantic Coast.

Although Bacon's Rebellion was ultimately defeated, similar episodes of organized protest from frontier people continued throughout the next three centuries of American history. These protests reflected the stark disconnect between the highly structured class relationships of the coasts and the more level communities of the frontiers. Often influenced by Native American ways of life, many frontier communities lived by a social ethic that reflected the cooperation and principles of equitable distribution championed by socialists.

Still, it was not until the early nineteenth century that socialism as a distinct social and political doctrine arrived in the United States from Europe. In the 1820s, the British social reformer Robert Owen—who was influenced by a brand of socialism that would later be called “utopian socialism”—arrived in the United States to set up a community that would live by a new set of moral standards radically different from the greed and competition that marked the newly emerging industrial capitalism of the day.

Having already set up a model communitarian factory town in Scotland, Owen purchased land in Indiana with the goal of establishing an ideal society there. He envisioned the settlement, called New Harmony, as a respite from the world where residents would work cooperatively and abide by a code of social ethics that excluded money and most commodities. Owen's experiment did not last long, but his example stood out for other utopian-and religious-inspired socialists, many of whom established ideal communities of their own on a smaller scale in subsequent decades.

In many ways, the utopian socialists of the nineteenth century were an extension of the frontier communities for the industrial age. They also prefigured the dropout culture that would develop in the twentieth century, whose proponents chose to isolate themselves from the outside world in what they viewed as their citadels of moral virtue.

Turn of the Century

In the later half of the nineteenth century, with industrial capitalism spreading across the country at a rapid pace, socialism entered the American lexicon for the first time in a specifically political and programmatic fashion. The development of an industrial working class gave the Marxist version of socialism, first articulated in Europe, a social base in America.

Initially, the new form of socialism would be marked by many specifically American features, in particular the heavily immigrant composition of the new working class. For much of the nineteenth century, socialism mostly was expressed in the form of small clubs of immigrant workers, many from Germany, who had become radicalized during the frequent revolutionary outbreaks in Europe during this period.

The new type of socialism, which emphasized class struggle from below in order to change the state and economy over self-imposed isolation, gained an increasingly loud echo among American workers as the nineteenth century progressed and the industrial working class congealed. In 1876, the first specifically socialist political party in the United States was founded in Newark, New Jersey. Originally called the Workingmen's Party of America (WPA), it was renamed the Socialist Labor Party (SLP) the following year. The SLP reflected the heavily immigrant character of American socialism at the time, as it was largely a federation of small groups of radical German workers.

In 1890, the SLP came under the leadership of Daniel De Leon, a lawyer who left the profession to devote himself full-time to socialist politics. De Leon's name still is heard frequently in socialist circles as the founder of "De Leonism." This is an interpretation of Marxism that rejects war and accommodation with capitalist political parties, but argues that the path to a socialist society lies in winning a majority in Congress and amending the U.S. Constitution to recognize the importance of industrial unions in organizing society.

The SLP remained a relatively small party in the last decades of the nineteenth century, but it did run candidates for various political offices, including president (with little success). In addition, its members worked inside trade unions in the effort to spread socialist ideas among the working class.

A new American socialist party founded toward the end of the nineteenth century, the Social Democratic Party (SDP), was modeled on the many European socialist parties that were rapidly growing and becoming more active in the political life of their nations. The SDP, however, was a small party compared to its European cousins. In 1901, elements from the SLP and the SPD united to form the Socialist Party of America (SPA).

Socialist Party of America

With industrial capitalism spreading rapidly and the American working class growing increasingly radicalized, the SPA quickly developed a significant level of importance in national political life during the first two decades of the twentieth century. One of the original members of the SDP, Eugene V. Debs, emerged as the party's main spokesman and strategist. Coming from a labor union background, Debs was a skillful orator who knew how to stoke a crowd. The SPA ran Debs as its candidate for president a total of four times during this period (1904–1912, 1920). Although he never came close to winning office, he received hundreds of thousands of votes on every occasion.

During this period, the SPA, and Debs in particular, presided over a growing counterculture movement that challenged the prevailing social norms of the time. Industrial capitalism, with its emphasis on material acquisition and personal gain, was at its height. Socialists preached a new social creed that emphasized the collective solidarity of humanity led by the working class.

Socialists, firmly rooted in the traditions of the labor movement, published numerous periodicals and pamphlets dedicated to the new gospel, including the *Appeal to Reason*, which reached a circulation of up to 600,000 copies. Debs and other leaders traveled the country, giving impassioned speeches to motivate support for the party's

political candidates, but also to inspire a sense of optimism among the exploited workers that the world could be a better place.

In areas where there was a high concentration of workers, Socialists often set up schools and meeting halls to serve as the infrastructure of the new culture. They also led retreats in order to give life to the idea of social solidarity. On occasion, it was difficult to determine the SPA's exact role in this, as much of the activity emanated from the local, grassroots level, with only guidance and support from the national political organization.

SPA candidates did win a number of local offices, including the mayoralty of such cities as Bridgeport, Connecticut, and Milwaukee, Wisconsin. Several SPA members even won election to Congress. All in all, however, the SPA did not play a central role in the national political culture, its influence generally limited to ethnic enclaves in working-class areas.

During this period, American Socialists developed a somewhat tense relationship with the labor movement. Most shunned the established American Federation of Labor (AFL), and both De Leon and Debs participated in the founding of the competing Industrial Workers of the World (IWW) in 1905. The IWW was set up as a different type of union, one that would regroup workers regardless of race, origin, sector, or nation. However, the emergence of the IWW sparked an intense debate and even a theoretical crisis in the workers' movement, about the relative importance of politics and political parties versus industrial action and the unions. Eventually, most socialist leaders would break with the IWW's philosophy of direct industrial action and argue for the continued importance of electoral politics for the attainment of socialism.

The outbreak of World War I was a watershed moment in the history of socialism. While most European socialist parties abandoned the principle of working-class internationalism and supported their own nation's war effort, most American Socialist leaders opposed the nation's involvement in the war. Debs was one of the most outspoken critics of the war and the capitalist system that had produced it.

In 1919, Debs was convicted of violating the 1917 Espionage Act for his speeches against the war, and he was sentenced to ten years in federal prison. This did not stop him from running for president from prison, and he received nearly 1 million votes in the 1920 election. Since the World War I era, antimilitarism has been a key component of American socialism; many socialists took a central role in the movement against the Vietnam War some fifty years later.

Nevertheless, the crisis that gripped the world socialist movement as a result of World War I also would affect the SPA. Radicals, inspired by the Russian Revolution of 1917, the new Communist regime, and the ideology of its new leader, Vladimir Lenin, split off from the Socialist Party and founded several American communist parties in the early 1920s. From that point on, communists and socialists would exist in a tenuous relationship on the extreme left of American politics.

The events of the war years, the leftist split, and Debs's death in 1926 took their toll on the American socialist movement. While the SPA and the SLP continued to exist, they would never duplicate the electoral influence achieved in previous decades. As the century progressed, American socialism slipped further and further into the counterculture, even as the ideology became more and more mainstream in Europe.

Socialists would play a part in both the 1948 presidential bid of Henry Wallace on the Progressive Party ticket and in the antiwar movement of the 1960s. For the most part, however, the torch of the left was passed to the communists, whose strict theories on party discipline helped ensure some level of organizational continuity in the face of the factional disputes and splits that would rock the left during the twentieth century.

Mid-Twentieth-Century Activism

In terms of social activism, the 1960s saw socialists play a key part in the opposition to the Vietnam War, as they had to World War I. However, socialist ideas tended to become subsumed to more strictly pacifist ones and there was no specifically socialist opposition to the war. This did not prevent individual socialists from playing key roles

in various organizations such as the War Resisters League (WRL), but there was no socialist party of any size or influence opposing the war.

The 1960s and 1970s did see a burgeoning of socialist intellectual life in the United States, primarily in the universities, with many leftist intellectuals attempting to merge socialist theory with other theories in vogue at the time. These ideas would come to play key roles in the emerging dropout counterculture of the late 1960s and early 1970s.

Such theories as “socialist feminism” (which argues that women’s oppression cannot be solved by mere legal and political reform, and that true women’s liberation requires the creation of a society based not on capitalist competition but on socialist solidarity) and “socialist humanism” (which argues that capitalist society is responsible for dehumanizing civilization and that only a socialist society would allow people to assume their full creative human potential) were popular among many on the left at the time.

Even today, adherents of these attempts to merge socialist ideas with other radical philosophies can be found on many university campuses. In the 2000s, one of the most popular of these hybrid philosophies merges socialist ideas with radical environmental theory in so-called eco-socialism. This version blames capitalism for the degradation of the biosphere and argues that only a socialist society, by controlling greed and profit, can protect and rehabilitate the environment.

Despite the theoretical advances of the 1960s and 1970s, the widening of the counterculture represented another watershed for socialism in the United States. While many innovative ideas were incorporated in the new dropout culture, members of the old line socialist parties tended to regard the young hippies with suspicion and kept their distance. For the most part, socialist culture in the United States split into three groups: members of the old line socialist parties, with tenuous links to the labor movement; socialist academics and intellectuals, largely confined to university campuses; and the dropout counterculture, which was not specifically socialist in all of its aspects, but instead hearkened back in some ways more to anarchist ideas of personal fulfillment than socialist ones of collective solidarity.

By the 1980s, the SPA changed its name to the Social Democrats USA and began to function more as a discussion circle than a political party. The SLP continues to function in the twenty-first century, with De Leonism still a point of reference for those who seek a less authoritarian alternative to Marxism.

Legacy

There is no longer much of a socialist counterculture in twenty-first-century America. The SLP continues to exist, and some communist groups call themselves socialist in order to avoid identification with the discredited Soviet Union. However, most socialist theorizing has been subsumed by the academic trend of “radical democracy,” which claims to continue socialism’s emphasis on the equitable distribution of power and resources without reference to the industrial working class.

While there are still individuals who practice a form of dropout culture influenced by socialist ideas, there is no singular socialist counterculture outside of the SLP and other small groups. Moreover, the absence of any real organizational discipline in these groups problematizes the identification of those individuals who adhere to socialist culture and others who “visit” temporarily as they sample different radical ideas.

Perhaps the most important remainder of socialist counterculture in the United States is the annual Socialist Scholars Conference (SSC) held at the Cooper Union school in New York City. Renamed in 2005 the Global Left Forum (GLF) following a split in the organizing committee, the GLF gathers a very eclectic group of academics, activists, and organizations, only some of whose commitments can properly be called socialist in the legacy of Robert Owens, Daniel De Leon, or Eugene V. Debs.

South Park

Trey Parker and Matt Stone's animated cable television show, *South Park*, began as a video Christmas card for Fox Television executive Brian Graden in 1995, and two years later premiered as a half-hour animated sitcom on the cable television channel Comedy Central. The premier tells the story of the alien abduction of third grader Eric Cartman and the subsequent implantation of a massive satellite beacon into his anus. It illustrated why all of network television passed on the show and why *South Park* would soon become one of cable television's most controversial and objectionable shows. Focused on young Eric and fellow third graders Kyle, Stan, and Kenny, living in the seemingly wholesome rural nowhere of South Park, Colorado, the program became best known for its utter vulgarity and defiant disinterest in respecting social taboos.

South Park uses its crudely drawn animation to transgress social boundaries that its live-action brethren are forced to observe. Over its multiple-year run, it has broached all manner of scatological and risqué topics, including preteen breast implants, bestiality, child abuse in a scouting group, exploitation of the physically and mentally handicapped, child drug use, and anti-Semitism. More than just a collection of bathroom humor and shock value, though, most episodes mount a wry and intelligent satiric attack on multiple aspects of American life, particularly small-town conservative values and cultural delusions.

The show's deep-seated suspicion of authority and of American-Dream optimism shows itself most visibly in the town's parents, all of whom are too ineffective, ignorant, self-righteous, or morally bankrupt to serve as adequate role models. Eric's mother is a prostitute and porn actress, and the teacher, the mayor, the principal, the school counselor, and even Jesus Christ (starring in a local public-access-channel talk show) prove similarly ineffective. The only adult figure respected by the children is Chef, his "wisdom" taking the form of graphically explicit songs about his sexual escapades and fantasies.

Media savvy to the core, the show reserves much of its satire for contemporary media culture. Taking aim at televisual rules of political correctness, for instance, the lone black child in town is named simply Token, while the sitcom's impervious disregard for chronology is mocked by the weekly murder and uncommented-upon resurrections of Kenny. Other episodes examine moral panics surrounding violence in the media, irrational parental fears of the media, and media-inspired cultlike activity. Meanwhile, the show has savagely attacked

numerous celebrities, turning Sally Struthers into a grotesquely overweight glutton, for example, and Mel Gibson into a psychotically disturbed narcissist, obsessed with torture.

Despite widespread condemnation by church groups, parents, and cultural conservatives, and even occasional censorship from Comedy Central, the show's fame grew over time, spawning a feature film that grossed \$53 million domestically, and multiple T-shirts, toys, CDs, and other tie-in merchandise. Moreover, although primarily for adults, the program attracts a large following among children.

Arguably one of the first television shows truly to exploit the leeway allowed by cable television, *South Park* remains one of that medium's bolder experiments, as well as a loud and well-respected, if simultaneously filthy and crude, voice of dissension against accepted cultural and televisual norms of propriety, conduct, and thought.

Spiritualism

Spiritualism, the belief that it is possible to communicate with the spirits of the dead, has long been an element of folk religious practice. In the 1850s, however, spiritualism became a national obsession and part of the mainstream popular culture of the United States. Mediums, those who purport to communicate with the dead, toured the country performing for large and small audiences. Many others were exposed to spiritualism through articles and editorials in newspapers such as *The New York Times* and popular magazines such as *Harper's* and *The Atlantic Monthly*. Spiritualist themes also found their way into the work of such notable authors as Nathaniel Hawthorne, Ralph Waldo Emerson, and Henry James. During the 1850s, thousands of Americans were active believers in spiritualism; as many as 1 million explored the movement in some way. The belief in a contactable spirit realm and the perfectibility of humanity became part of a reformist counterculture movement during the nineteenth century.

Although ghost stories had long been a part of American culture, the emergence of the modern spiritualist movement is commonly dated to events at Hydesville, New York, on March 28, 1848. Young sisters Kate and Margaret Fox reported hearing loud raps on the walls and floorboards of their bedroom in the family farmhouse near town. Assuming that the noises were being made by spirits attempting to communicate, the girls asked questions out loud. The spirits, according to their account, rapped their answers in a code. Reports of these "manifestations" spread quickly, and the Fox sisters became famous. It was not long before they were appearing before large audiences in New York City and staying at the posh Barnum Hotel.

The Fox girls were only the first of a number of well-known mediums during that time. Other men and women soon claimed to be able to contact the world beyond the grave. Some performed elaborate physical manifestations

in front of large audiences, including automatic writing, the production of mysterious noises, the movement of furniture by unseen forces, the evocation of ghostly figures, and claims of clairvoyance or clairaudience (the ability to see and hear things happening at great distances).

Other spiritualists moved beyond demonstrations of spiritual contact, exploring the philosophical and social ramifications of spiritual manifestations. Among the most notable of these was Andrew Jackson Davis, who became famous in New York as the “Poughkeepsie Seer.” Even before the events in Hydesville, Davis had used mesmerism, an early form of hypnosis, to explore the world of the spirits. In 1847, he published *The Principles of Nature, Her Divine Revelation, and a Voice to Mankind*, a collection of communications he delivered while in a mesmerized state.

Seizing on the popularity generated by the performances of mediums such as the Foxes, Davis began to lay out his spiritual system, which he called Harmonialism. This philosophy, and the view of the spirit world he described, borrowed heavily from religious thinkers such as Emanuel Swedenborg, the Swedish visionary who had also described his encounters with spiritual beings. Davis saw his contacts with the spiritual realm as a way to better society, using the wisdom of the higher spirit realms to perfect and harmonize religion, medicine, and all of American society. Like many other spiritualists, Davis believed that the spirits condemned traditional systems of medicine, economics, and religion as barbaric and endorsed alternative medical systems such as homeopathy and social reforms such as the abolition of slavery.

The popularity of spiritualism derived partly from its flexibility. It was a religious movement with no dogma that adherents were forced to accept, no priests or authority figures, and no formal places of worship. Séances, intimate gatherings where people met to contact the spirit world, could take place at anyone's home, and people could either visit mediums or try to contact the spirit world on their own. Some Americans regarded the entire affair as a parlor game; others viewed it as a scientific form of religion and saw the séance room as a laboratory in which the existence of an afterlife could be proven. Still others made spiritual communication part of existing Christian practice, and a few organized communal spiritualist societies, for example in Mountain Cove, Virginia. Because of the considerable authority that spiritualism gave female mediums, thought to be better spirit channelers than men because of their more “passive” nature, spiritualism also became associated with the movement for women's rights.

For all its popularity, the spiritualist movement also caused a backlash. As adherents claimed spiritual authority for controversial social reforms, and as the physical demonstrations became more and more dramatic, skeptics and critics began to expose mediums as frauds. The claim that séances provided indisputable evidence of spirit communication invited scrutiny by skeptics. Several magazine and newspaper exposés during the 1850s showed how many of the most popular manifestations were performed. In later decades, even the Fox sisters would admit that they had faked the rappings that had started the movement—though Margaret Fox would later retract the confession.

The popularity of spiritualism declined after the American Civil War. Although it never again reached the pinnacle of popularity it had reached in the 1850s, the movement's notoriety rose and fell throughout the rest of the nineteenth century. Even when interest waned, small groups of spiritualists continued to meet.

The investigation of the spirit world continued in other forms, including the scientific exploration of paranormal phenomena by Harvard professor William James (brother of novelist Henry James) and the founding of the American Society for Psychical Research in 1885. Spiritualism remained an issue of debate and speculation, bringing together ardent devotees such as author Arthur Conan Doyle and equally dedicated debunkers such as the illusionist Harry Houdini.

In 1893, spiritualists, who had long debated the value of organizing themselves into a more coherent church, founded the National Spiritualist Association of Churches (NSAC). A number of churches still exist in this loose framework, and the NASC continues to offer minister education, provide organizational assistance, and publish a national magazine for children, *The Lyceum Spotlight*. Beyond formal spiritualist churches, mediums continue to

contact the spirits in communities dedicated to spiritualism such as Lily Dale, New York, and Cassadaga, Florida.

Spock, Benjamin (1903–1998)

Benjamin McLane Spock was an American pediatrician and the author of the best-selling book *The Common Sense Book of Baby and Child Care* (1946), a groundbreaking text said to mold the character of the entire baby boom generation in America. The first American practitioner to have completed training in both pediatrics and psychiatry, Spock applied theories of psychology to understanding the needs of children within the family and the dynamics between parents and children. The wildly popular book—which was retitled *Dr. Spock's Baby and Child Care* and which has sold more than 50 million copies throughout the world—calls for greater leniency and permissiveness on the part of parents and advocates a commonsense, pragmatic approach to child-rearing, in which parents are encouraged to trust themselves and treat their children as equals.

Spock was born on May 2, 1903, in New Haven, Connecticut, and studied medicine as an undergraduate at Yale University. In 1924, he and seven fellow Yale rowers competed at the Olympic Games in Paris and won the gold medal for the United States. Spock went on to attend medical school at New York's Columbia University, graduating at the top of his class in 1929. He had residency training in both pediatrics and psychiatry, and served as a psychiatrist for the U.S. Navy during World War II.

Although many young parents of the 1950s and 1960s regarded him as the ultimate authority on proper parenting, Spock's philosophy came under fire when his political views and public activities began running counter to the prevailing mood of the day. Spock was one of the founders of the Committee for a Sane Nuclear Policy, created in 1957 to protest the Dwight D. Eisenhower administration's nuclear weapons policy and to campaign for nuclear disarmament. He was also an active anti-Vietnam War protestor, writing letters to the White House and frequently attending antiwar demonstrations. In 1967, he was arrested in New York City for crossing a police line in an act of civil disobedience and protest against a military recruitment center.

Spock's conspicuous role in the antiwar movement eventually brought him into conflict with the federal government. In 1968, he and four other men were prosecuted by Attorney General Ramsey Clark for conspiracy to promote resistance to the draft and to aid young men who wished to avoid conscription. Spock had been one of

the signers of “A Call to Resist Illegitimate Authority,” an antiwar petition carrying the names of more than 20,000 individuals and printed in newspapers across the country the previous year. Signing the declaration was prosecuted as a criminal misdemeanor and used against him at trial. Despite the lack of hard evidence to support the charge of conspiracy, Spock and three of the others were convicted. He was sentenced to two years in prison, but he appealed, and a federal court overturned the conviction in 1969.

Spock remained active in the antiwar movement, even as top military, political, and social leaders blamed the outpouring of social and political discontent among American youth on the lenient, permissive style of parenting that Spock had advocated in *Baby and Child Care*. Conservative commentators such as Vice President Spiro T. Agnew and Christian author Norman Vincent Peale blamed Spock for the disobedient and rebellious attitudes of “Spock-marked” American teenagers and young adults in the late 1960s—and, by extension, for the excesses of counterculture. Spock claimed to have had only a mild influence on the changes in American attitudes toward child-rearing, but his opponents declared that the generation of children who had been brought up under his theories had learned that it was acceptable to defy authority and ignore traditional social values.

In 1972, Spock ran in the U.S. presidential election on the People's Party ticket, capturing barely 78,000 votes. In the years that followed, he continued to speak out against nuclear weapons and criticize American foreign policy, and he called for greater women's rights and the legalization of homosexuality, abortion, and marijuana. Spock died at his home in La Jolla, California, on March 15, 1998.

Sports

If sports are a microcosm of society, as is often observed, they will include reflections of the counterculture as well as the mainstream. Indeed, while spectator sports in America have come to represent big business as well as being a source of popular entertainment, issues of politics and social justice have made their way onto the ball field and gym floor for decades.

In the realm of professional sports, individual athletes frequently spark national debates when they use their celebrity to confront social conventions regarding issues such as race, gender, sexuality, or even public health. Examples of twentieth-century American sports figures who, intentionally or unintentionally, served as spokespersons or symbols of political and social causes are legion—from the black boxing champions Jack Johnson and Muhammad Ali to baseball's Jackie Robinson, who broke the game's so-called color line in 1947, to women's tennis player Billie Jean King and basketball stars Dennis Rodman and Magic Johnson.

Race and Politics

Among the most outspoken sports figures to openly address the issues of race, war, and religion in America is the gregarious boxer Cassius Clay, now Muhammad Ali. He was inspired by the daring Jack Johnson, the first African American heavyweight champion (1908), who brushed aside personal fears of white supremacist threats, brazenly flaunted his wealth and celebrity status, and openly dated white women (which landed him in a federal penitentiary in 1920).

In the 1960s and 1970s, Clay gained notoriety for joining the Nation of Islam (Black Muslims) and changing his name to Muhammad Ali, then refusing to serve in the U.S. Army after being drafted for the Vietnam War. Banned from professional boxing as a result, he continued to speak out against the war, the draft, and racial discrimination in America. He would refuse to fight in the war, he declared in 1966, because “no Vietcong ever called me nigger.” And, he added, “I am not going 10,000 miles to help murder, kill, and burn other people to simply help continue the domination of white slavemasters over dark people the world over.”

Following Ali’s example, two U.S. track-and-field stars at the 1968 Olympic Games in Mexico City, Tommie Smith and John Carlos, used the medal-awarding ceremony (they had won the gold and bronze medals, respectively, for the 200-meter dash) to spotlight the cause of Black Power. As the U.S. national anthem began playing, the two athletes bowed their heads and raised their black-gloved fists defiantly into the air.

Whereas Ali, Smith, and Carlos had boldly declared their political views and racial pride, earlier athletes inclined to challenge the forces of racism in America relied on their mere participation on the field of play to make their point. The Penobscot Indian Louis Sockalexis and Colombian native Louis Castro defied daily harassment and abuse from players, fans, and the media to succeed as the first Native American (in 1897) and Latino (in 1902) players in professional baseball. Likewise, when Jackie Robinson joined the Brooklyn Dodgers in 1947, he ushered in the official era of desegregation in professional baseball. “America’s pastime” had actively barred African Americans to that time.

Gender, Homosexuality, and HIV/AIDS

Athletes and activists also have used sports as a vehicle for exposing and challenging gender inequities. In 1973, tennis professional Billie Jean King championed the burgeoning women’s movement and scored a public victory in the so-called Battle of the Sexes, in which she took on and defeated former men’s champion Bobby Riggs before a national television audience. In 1972, federal legislation known as Title IX (authored by Japanese American Congresswoman Patsy Mink of Hawaii) mandated a balance between the educational resources spent on men and women (including for athletics) and set off a national debate about the roles of men and women in society, the scope of gender inequities, and the impact of sexism. One major result has been an exponential increase in the number and variety of women’s sports in American public schools and universities, as well as the growth of professional women’s sports, as with the Women’s National Basketball Association (formed in 1996).

Male-dominated sports traditionally have demanded hyper-masculinity from participants, but some male athletes have openly challenged the boundaries of “acceptable manhood.” In the 1960s, for example, quarterback Joe Namath of football’s New York Jets was a prototypically brash, hard-partying playboy who drew heavy criticism from some quarters—and ridicule behind locker-room doors—for his willingness to appear in a television commercial wearing a pair of women’s pantyhose.

Still, if Namath’s leg display bothered many viewers, countless more were repulsed in the 1980s and 1990s by the public rebellion against mainstream values of masculinity on the part of all-star basketball player Dennis Rodman. As a player for the San Antonio Spurs and the Chicago Bulls of the National Basketball Association, Rodman sported bold, elaborately-dyed hair, elaborate tattoos, and prominent body piercings. In 1997, when he promoted his first autobiography, *As Bad as I Wanna Be*, Rodman signed books while in full makeup, wearing a white wedding dress and bride’s veil.

Billie Jean King, after her triumph in the Battle of the Sexes, struck a second blow to mainstream values in 1981, when she publicly confirmed that she was a lesbian, bringing attention to antigay sentiment in the sports world and society at large. Like King, tennis star Martina Navratilova, who came out as bisexual in 1981, expressed the view that athletes “have a responsibility” to be activists and vocal spokespersons for important social and cultural issues. Houston Comets basketball all-star and former Olympic gold medalist Sheryl Swoopes came out as a lesbian in 2005, her status as a celebrity athlete making her a model of defying homophobia.

By contrast, no major American male sports figure has announced his homosexuality during his playing days (a number came out of the closet after retiring). Like athletes of earlier generations who faced overt racial and gender discrimination, gay male athletes remain reluctant to directly confront the aggressive homophobia in male sports.

Postretirement announcements of homosexuality by male athletes began in the early 1970s, when former professional football player David Kopay threw aside a potential coaching career by becoming one of the first male athletes to come out. Since then, public admissions have been made by former football players Roy Simmons (1992), who talked about feeling “tortured” during his playing years, and Esera Tuaolo (in 2006), who was hired by the National Football League to promote sensitivity training in the sport. However, as recently as 2007, former basketball player John Amaechi’s autobiography about his experiences as a gay player met with harsh criticism by other players, including one who stated publicly that he would not want a gay teammate and that he “hate[s] gays.”

Basketball legend Magic Johnson announced in 1991 that he had contracted HIV (human immunodeficiency virus), and became one of the most prominent athletes to address the health issues of the virus. Johnson used his immense celebrity to help dispel lingering beliefs that HIV was a “gay disease” that only affected homosexuals and to bring much-needed attention to the increasing rates of contraction among African Americans. Continuing a productive life as an athlete, coach, businessman, and public speaker, Johnson also has fostered greater awareness of the viability of living with HIV.

Squatters and Squatting

Squatting is the act of occupying property, either public or private, without authorization or payment. A squatter, therefore, is a person who occupies an uninhabited area, abandoned building, or other vacant space that he or she does not own, rent, or otherwise have permission to inhabit. Squatting is typically an urban phenomenon, closely linked to poverty, the lack of adequate, affordable housing, and other social and economic ills.

Squatters may occupy property individually or in communities; squatter settlements are often referred to as shantytowns or tent cities. Such properties typically are located at the margins of mainstream communities and, due to their unsanctioned and often illegal nature, are lacking in sanitation and utilities such as electricity, heat, and running water. Other critical social services are typically unavailable, such as schools and health care. Squatters generally fall into lower socioeconomic groups. Those who have jobs at all are typically employed in wage labor or informal employment, typically the social sectors deemed most at risk for homelessness.

Although squatting in America dates to the nineteenth-century practice of settling land on the Western frontier—which, under the Preemption Act of 1841, squatters became entitled to buy—the modern urban practice is a relatively recent phenomenon. As an ideological construct and counterculture, squatting in North America dates to the mid-1960s and the writings of Charles Abrams on housing reform and civil rights. The term generally carries the implication and stigma of violating social and cultural norms; that is, operating outside expected and acceptable behavior. As such, squatting also can be a political statement, in response to the cultural, social, political, and economic causes of homelessness and marginalization in urban areas. Abrams, for example, who referred to squatting as the necessary “conquest” of urban properties for shelter, advocated support and legal protection rather than hostility and resistance.

The new perspective was evident in the case of Tompkins Square Park in New York City during the late 1980s, when residents of the East Village neighborhood, displaced by gentrification, actively relocated to the park in a refusal to relinquish their neighborhood. Hundreds of squatters, with support from other groups and community members, resisted local officials’ attempts to remove them. This gave rise to the Tompkins Square Park riots in August 1988, which ended with dozens of injuries and the forcible displacement of hundreds of squatters.

This practice of “open squatting” is far less common than its covert counterpart. The most common practice is the “back window (or back door) squat,” in which the squatters attempt to conceal their residence. The “front door squat,” in which squatters are open about their occupation of a property, as in Tompkins Square Park and other settlements, is increasingly less common, as cities enact increasingly rigid laws against vagrancy. In a front door squat, squatters often consult with neighbors prior to taking up residence, creating an alternative approach to constructing a community.

The modern squatters' rights movement in America—in which unauthorized occupants of land or buildings, generally in cities, claim rightful possession—entails a political and social statement against gentrification, treatment of the homeless, and economic injustice. (Carolyn Schaefer/Getty Images)

A number of advocacy and awareness-raising initiatives have emerged from the increasing prevalence of squatting in urban areas. One example is Homes Not Jails, an activist group with chapters in Boston, San Francisco, and Washington, D.C., that has actively occupied abandoned properties with the intent of transforming them into housing for the homeless. At least two independent documentaries, *The Homeless Home Movie* (1996) and *Dark Days* (2000), have provided awareness-raising narratives about the lives of homeless individuals squatting in tunnels, parking lots, partially occupied buildings, and abandoned properties.

Stein, Gertrude (1874–1946)

Although she fashioned herself a literary genius and published a number of books and plays in her own right, Gertrude Stein generally is remembered as a patron of the arts and literature whose legendary home in Paris was a center for expatriate artists and writers between the two world wars. A celebrated personality, Stein befriended,

encouraged, helped, and influenced—through her patronage and her works—many literary and artistic figures.

Stein was born on February 3, 1874, in Allegheny, Pennsylvania (now part of Pittsburgh), the last of five children of a German Jewish family. Hers was a somewhat unsettled childhood. She was raised in Vienna and Paris. Her parents died in 1888 and 1891, and Stein was left with a modest income.

At the age of nineteen, she entered Radcliffe College in Cambridge, Massachusetts, and majored in psychology, studying under William James. After graduating in 1897, she went to Johns Hopkins Medical School in Baltimore, Maryland. Relinquishing her studies, she moved to London in 1902 and to Paris the following year.

In Paris, Stein became a permanent expatriate, establishing a literary salon in the city's bohemian Left Bank. Except for time spent in the French village of Culoz during World War II, Paris was her home for the rest of her life.

With America providing the subject matter and France the freedom to write, she eventually made herself into one of the most original figures of twentieth-century literature. Early on, Stein also became interested in the fledgling modern art movement. She and her brother, art critic Leo Stein, were among the first to appreciate and collect the works of such modernist painters as Pablo Picasso, Paul Cézanne, and Henri Matisse.

In addition to her involvement in the arts, Stein entertained writers such as Ernest Hemingway and F. Scott Fitzgerald, and authored experimental works that fit Mark Twain's definition of a classic, "a work that everyone admires and nobody reads." Her early works include the novel *The Making of Americans*, written between 1903 and 1911 and published in 1925. Her first published book, *Three Lives* (1909), describes the lives of three working-class women.

Her best-known work is *The Autobiography of Alice B. Toklas* (1933). Although the name in the title refers to Stein's secretary and lover, the book is by and about Stein herself. Alice B. Toklas's own autobiography, *What Is Remembered* (1963), was published seventeen years after Stein's death. Stein also wrote the librettos for two operas by Virgil Thomson, *Four Saints in Three Acts* (1934) and *The Mother of Us All* (1947). *Brewsie and Willie* (1946), her last book, is based on her memory of visits by American servicemen during the war.

Inspired by the stream-of-consciousness psychology of William James and the geometry of Cézanne and the cubist painters in Paris, Stein developed a "continuous present" style characterized by constant repetition and variation of simple phrases. Her work had great influence on other expatriate American writers such as Hemingway, Fitzgerald, and Sherwood Anderson. Stein died on July 27, 1946, in Paris from stomach cancer.

The straight edge movement, popularly known by the acronym sXe, emerged during the 1980s out of the East Coast hard-core punk scene. Straight edge rejected the hedonistic substance abuse associated with punk rock, proclaiming self-improvement and discipline as its central tenets. Most straight edgers share a rejection of alcohol, tobacco, drugs, and sexual promiscuity. While committed to individual self-discipline, members of the straight edge culture rely heavily on communities of mutual support to maintain their alternative lifestyle, utilizing peer pressure and positive cultural reinforcement within the straight edge hard-core scene. Over the years, straight edge has evolved in distinct ways, while retaining a common self-help morality based on sobriety and responsibility. Although it started as a secular movement, straight edge has incorporated elements of Eastern philosophy and has influenced Christian youth culture.

Straight edge culture originated in the Washington, D.C., hard-core music scene around 1980 in reaction to a policy of local club owners to mark the hands of minors with Xs to prevent them from purchasing alcohol. The X mark was co-opted as a rallying symbol for punks, both minors and legal adults, who rejected the substance abuse associated with punk. Ian MacKaye, lead singer of the band Minor Threat, popularized straight edge themes and symbols in his poignant lyrics and album art. The straight edge movement expanded north to Boston through bands such as DYS and to the West Coast through Uniform Choice and 7 Seconds.

In 1985, a new breeding ground for straight edge coalesced around the band Youth of Today and the New York hard-core scene. The membership of Youth of Today was in constant flux, but the band maintained consistent positive messages of straight edge and vegetarianism through the lyrics of Ray Cappo. Revelation Records, Cappo's label, became the main promoter of straight edge hard-core music, supporting influential bands such as Gorilla Biscuits, Bold, Chain of Strength, Shelter, Side by Side, and Judge.

During the 1990s, straight edge and hard-core music went through a profound transition. Diverging from its punk origins, hard-core music began borrowing stylistic elements from heavy metal, adding a more aggressive edge to its sound. Victory Records and the band Earth Crisis began promoting a militant style of hard core, blending together traditional straight edge values with activist themes of veganism, antiracism, and environmentalism. Some critics claimed that Earth Crisis had abandoned the "positive hard-core" vision of straight edge, inadvertently encouraging a subculture based on militancy and intolerance, which was called "hardline."

The most notorious hardline scene emerged in Salt Lake City during the 1990s, as Utah law enforcement officials claimed that straight edge "gangs" were physically assaulting smokers and drinkers in public. Another militant trend emerged out of Dayton, Ohio, with the formation of the Courage Crew, a group that was intended by its founders to be a defensive organization but instead became known for the violent behavior of some of its members. Most straight edgers express hostility or outright condemnation of these intolerant and aggressively masculine minorities in the movement.

Despite its controversial elements, straight edge continues to thrive as a distinct youth culture with adherents throughout the world in the 2000s. The movement's unique blend of youth rebellion, Eastern spiritualism, secular humanism, social consciousness, and positive lifestyles is likely to continue making it an attractive counterculture.

Streaking

Streaking is the act of running nude—alone or en masse—from one point to another in public view. The term gained its modern cultural connotation in the early 1970s, as the streaking fad became a popular symbol of the sexual revolution. Unlike nudists (who typically shy away from public attention) or flashers (who often gain sexual gratification from randomly shocking members of the public), streakers of the 1970s often practiced the act in support of the era's loosening of repressed standards of sexuality.

The trend gained popularity in the early 1970s on many newly coed college campuses. In celebration of coed life, students of both genders often gathered to streak through campus libraries and dormitories, across school grounds, and through active class sessions. Beyond mere celebration, many early-1970s college students saw streaking as a fun and inventive way to meet members of the opposite sex.

The trend started on campuses in and around Los Angeles, including the University of California, Los Angeles (UCLA), and quickly spread to other regions of the country. Students at schools such as Florida State University and the University of Missouri engaged in mass streaks, with participants numbering in the hundreds or thousands. In 1974, University of Notre Dame students went so far as to establish a “streaking Olympic games” race.

The streaking fad gained a wealth of media coverage in the 1970s, appearing, for example, in a late-1973 issue of *Time* magazine. The trend became so popular that Maine enacted a law against streaking. In other areas, streakers often were arrested and simply charged with indecent exposure.

Popular novelty-music artist Ray Stevens recorded a song about the fad, “The Streak,” which reached number one on American pop music charts in 1974. Around the same time, Robert Opel streaked across the stage of the 1974 Academy Awards ceremony flashing a peace sign to the audience. Opel's act occurred so quickly that broadcasters were unable to censor the national telecast. Streaking also became a hallmark of early 1970s sporting events, and devoted sports fans still occasionally streak at contemporary games.

Although it is practiced far less frequently in the 2000s, the tradition of streaking remains an occasional student activity at schools such as Princeton University, Lewis and Clark College, Dartmouth College, and others. At the University of Michigan, for example, students gather every April to streak across campus in the “Naked Mile.” Contemporary groups of stalker students from rival universities often organize into teams and compete to see who can stage the largest and most public instances of streaking.

Although some schools (beginning with Lewis and Clark in 1999) have started to dissuade students from participating by ordering campus police to arrest streakers, many students simply view this as encouragement to run faster. At Lewis and Clark, students have taken to “streaking” in underwear to avoid the threat of campus police.

In the 2000s, the streaking fad has been memorialized as a quirky, lighthearted moment in the annals of 1970s popular culture, as in such television series as *That'70s Show* (1998–2006) and such films as *Old School* (2003). Despite its occasional, sudden reappearance, the trend is fondly recalled as one of the benign expressions of the American sexual revolution.

Students for a Democratic Society

Students for a Democratic Society (SDS) was one of the largest and most influential American New Left organizations of the 1960s. The group took a prominent activist role, especially on college and university campuses, in protesting the U.S. role in the Vietnam War and the Selective Service draft of young men to fight in it. With more than 100,000 members, the SDS grew from an organization that sought to reform American society into a radical one that called for political and social revolution. From its first national convention in 1962, to its factional split in 1969, the SDS set the context and political agenda for the radical counterculture of that decade.

The origins of the organization date to 1960 and the annual congress of the National Student Association, at which University of Michigan student Alan Haber began mobilizing student activists. Haber had been a member of the youth auxiliary of the liberal, prolabor organization League for Industrial Democracy (LID). From its inception, the SDS took an important step distancing itself from older, anticommunist leftist groups, particularly the LID, which was damaged by 1950s government investigations. Within a year or two, Haber had recruited a core membership from various colleges and universities.

At the first national SDS convention, its members, both undergraduates and graduate students, produced the Port Huron Statement, a manifesto named after the Michigan town in which the convention was held. A core document of the American New Left, it began: "We are the people of this generation, bred in at least modest comfort, housed now in universities, looking uncomfortably to the world we inherit." The text went on to call for "participatory democracy," that is, the full voice of all members of society in decisions that affect them.

The SDS advocated nonviolent civil disobedience and was heavily critical of both U.S. foreign policy and the government's failure to address civil rights reform and poverty. In addition to Haber, early leaders included Tom Hayden (the drafter of the Port Huron Statement and SDS president, 1962–1963), Todd Gitlin, Rennie Davis, Bob Ross, Sharon Jeffrey, and Paul Potter.

In the early 1960s, the SDS drew inspiration from the civil rights movement and began to focus on urban community projects. Among these was the Economic Research and Action Project (ERAP), which sought to

provide disenfranchised blacks and whites with jobs, education, and housing. By 1965, as President Lyndon B. Johnson escalated the war in Vietnam, SDS chapters across the country led localized demonstrations in protest, culminating in the first March on Washington that April, in which 25,000 people participated. Later that year, SDS members helped organize more than 100,000 protestors in the International Days of Protest (October 15–16) and a second March on Washington (November 27). By this time, many of the founding members were no longer students and a new generation of campus leadership had taken over, including Carl Oglesby, an Akron, Ohio, student.

The year 1966 marked a turning point, with a new influx of members from the Midwest and large state institutions, bringing with them new priorities for the organization. The new members also were more connected to the emerging counterculture of rock music and drugs, with a particular emphasis on personal freedom and challenging societal norms.

The SDS began to develop a broader social critique, linking multiple struggles. In this radical new perspective, all of American society and culture was regarded as flawed, corrupt, and immoral. In the face of the ever-escalating war in Southeast Asia, the membership in 1968 and 1969 began to see itself as part of a worldwide revolutionary struggle.

SDS rhetoric became more politically radical and explicitly Marxist. Its activities became more militant, moving from protest rallies to the occupation or burning of buildings. The occupation of administrative offices at Columbia University in the spring of 1968 epitomized the shift. SDS students led by Mark Rudd seized the buildings in response to the university's sponsorship of war-related research and a perceived disrespect for the nearby impoverished black area of Harlem.

At the SDS national conference in 1969, the group split into two factions over the direction of the counterculture and the tactics of the movement. The Progressive Labor (PL) faction stressed traditional organizing of the working class and the building of a mass party. The other faction eventually emerged as the revolutionary guerrilla group the Weathermen, later renamed the Weather Underground; its most famous members included Rudd, Bill Ayers, and Bernardine Dohrn. PL was antagonistic to the counterculture. The Weathermen wanted to create a sense of a common cause between themselves and working-class youth. During the 1960s, they engaged in a campaign of radical, violent protest, including rioting and the bombings of government buildings.

While the factional split effectively ended the SDS as a national organization, individual chapters continued

working for several years. Even in its splintered state, the SDS formed the context against which the counterculture of the 1960s framed itself. Drawing on old members for guidance and a blessing, high school and college students in 2006 who opposed the U.S. military occupation of Iraq began efforts to reconstitute the SDS, declaring their intentions in a public statement on Martin Luther King, Jr., Day.

Studio 54

The epicenter of New York City nightlife during the late 1970s and early 1980s, Studio 54 was the most famous disco in the United States, with a worldwide reputation as a notorious den of decadence and celebrity excess. The nightclub was housed at 254 West 54th Street in a building that was originally built as the Gallo Opera House in 1927. The structure served as a theater under various names until the 1950s, when the Columbia Broadcasting System (CBS) purchased it and turned it into a radio and television studio. The company used the location for about twenty years before Steve Rubell and Ian Schrager purchased the building and made plans to open a nightclub. Rubell and Schrager were entrepreneurs who owned a chain of steak houses and nightspots in Boston and New York.

After an expensive renovation of the building, Studio 54 opened on April 26, 1977. It was an immediate success from the standpoint of being perceived as the place to be seen in New York City. The nightclub drew celebrities and New Yorkers who were screened by doormen, and sometimes by Rubell himself, outside the entrance.

Every night, crowds gathered in front of the club with many people literally begging to be allowed in the door. Inside, there was loud disco music, flashing lights, an expansive dance floor, semi-clad bartenders, and an ample supply of alcohol and drugs. A large, decorative “man in the moon” (complete with a cocaine spoon) hung over the dance floor, and men and women routinely had sex in the balcony. The outgoing Rubell, in particular, was in his element as he personally played host to pop-culture icons Liza Minnelli, Cher, Andy Warhol, Bianca Jagger, and other celebrities who frequented the club.

Mismanagement and Rubell’s uninhibited personality finally brought down Studio 54 as the 1970s drew to a close. After he suggested in an interview that the business had not paid its share of taxes to the Internal Revenue Service, dozens of federal agents raided the nightclub in December 1979. Among other things, they found

garbage bags full of unreported currency stashed in the ceiling and elsewhere. The Studio, as it had become known, shut down in February 1980, and Rubell and Schrager eventually served time in prison for tax evasion.

The club reopened in September 1981 under new ownership, but it failed to generate the unbridled excitement—or hedonism—that had made it famous originally. The disco craze itself began to fade, and Studio 54 closed its doors permanently in 1986. Since then, the building has hosted a variety of tenants. As for the owners, Rubell died in 1989 of complications from AIDS, and Schrager later found success in the hotel business. In 1998, Mike Myers starred as Rubell in the motion picture *54*, depicting Studio 54 at its peak of popularity.

Suffragists

The term *suffragist* generally refers to those, mostly women, who agitated on behalf of women's voting rights in the nineteenth and early twentieth centuries. Sometimes referred to as "suffragettes" (especially for more radical activists in England), the suffragists constituted the first wave of American feminists.

Suffrage itself was initially part of a larger complex of issues aimed at reversing women's social, political, and economic liabilities. By the late nineteenth century, suffrage overshadowed other women's issues, in part because women had been granted some legal rights at midcentury and their educational opportunities had expanded, and in part because proponents held that suffrage would make the other pro-woman reforms possible.

Roots

Historians generally cite the 1848 Seneca Falls Convention in upstate New York, under the guidance of reformers Elizabeth Cady Stanton and Lucretia Mott, as the beginning of the campaign for woman suffrage. At the time, however, it was the most controversial issue on the woman's rights agenda.

In fact, woman suffrage was the only issue cited in the Seneca Falls Convention's Declaration of Sentiments that did not receive the unanimous approval of the assembly. Modeled after the Declaration of Independence, the new document declared "that all men and women were created equal." Nevertheless, in the days following the

convention, many attendees revoked their pledge for suffrage; the thought of women voting was simply too radical for the time.

A series of national conventions were held during the decade after Seneca Falls, with one occurring each year except from 1857 until 1860, near the start of the American Civil War. Many of the most prominent woman's rights advocates devoted themselves to the Union cause, in the belief that they would be awarded their full citizenship rights after the war. When the fighting was over, however, the radical Republicans who had been promoting the rights of former slaves claimed it was "the Negro's Hour" and that women would have to wait for the franchise.

This mindset split the emerging movement for woman suffrage: The American Woman Suffrage Association (AWSA), led by suffragists Lucy Stone, her husband, Henry Blackwell, and Julia Ward Howe, was formed in 1869 to champion the rights of former slaves and women. Feeling betrayed by the politicians, Stanton and reformer Susan B. Anthony created the National Woman Suffrage Association (NWSA), also in 1869, to promote woman's rights exclusively and to work for a woman suffrage amendment to the Constitution. The two organizations maintained separate memberships until 1890, when they merged as the National American Woman Suffrage Association (NAWSA).

The two organizations also differed on other cultural and political matters. For example, the AWSA allowed men to assume leadership roles in the organization and focused on achieving suffrage on a state-by-state basis. In the NWSA, by contrast, males were not permitted to hold top offices in the organization, and its focus was on a federal approach to woman suffrage. Both organizations published a journal, petitioned the government, and held meetings; some women, such as Anthony, attempted to vote and were promptly arrested. Their appeals to lawmakers fell on deaf ears.

Beginning in the 1890s, suffrage began the long, slow process of state passage in the West, where the harsh conditions were felt equally by women and men. In the more culturally settled, urban East, the doctrine of separate spheres segregated the sexes and relegated women to the home. Sporadic victories and defeats at the state level continued for the next thirty years.

Twentieth-Century Victories

The new century claimed the lives of many of the founding mothers, who did not live long enough to realize their dreams of woman suffrage. With renewed energy and leadership, however, the movement was revived.

In the 1910s, Anna Howard Shaw and Carrie Chapman Catt expanded the membership base of NAWSA and began organizing at the state level. Alice Paul and Lucy Burns, two young, well-educated activists who had participated in the suffrage movement in England, in 1913 assumed control of the NAWSA's Congressional Union (CU), a committee created to press the U.S. Congress to pass a woman suffrage amendment.

The CU stole president-elect Woodrow Wilson's thunder by staging a parade in Washington, D.C., on the eve of his March 1913 inauguration. But the parade turned ugly: Men in the streets harassed and harangued the marchers, while the police stood idly by.

Suffragists in New Jersey lobby for the women's vote in 1915. The measure was defeated there, though the movement had achieved victories in other states. Final success came with ratification of the Nineteenth Amendment in 1920, granting the right nationwide. (FPG/Hulton Archive/Getty Images)

The methods of the CU, influenced by the often violent actions of the English movement, were too radical for the growing NAWSA. As the latter organization expanded, it brought in more conservative women, including many from the South and the larger Woman's Christian Temperance Union (WCTU). This change in composition came at the cost of including black women, who were forced into segregated clubs and organizations.

Before long, the CU broke with the mother organization over differences of opinion regarding membership and tactics. NAWSA President Catt urged respectability and continued organizing. CU suffragists eschewed mere public speaking for the publicity of the spectacle, including parades, pageants, and picketing. Aiming for a national amendment, the CU believed that only militant tactics could awaken the complacency of the NAWSA and uncommitted American women. A true counterculture was born.

When the United States entered World War I in 1917, many NAWSA women engaged in war work. Paul's CU crowd refused to abandon its commitment to suffrage, however, holding bonfires and pickets at the White House and silently displaying placards that described their plight: "Resistance to Tyranny Is Obedience to God"; "Mr. Wilson, How Long Must Women Wait for Liberty?"; and even an inflammatory reference to "Kaiser Wilson." The public was enraged. The protestors were harassed by passersby and their patriotism impugned. Eventually, the women were jailed for their activism, only to be replaced by fresh CU legions.

Local law enforcement officials enhanced the punishment for the protestors' public campaigning by ordering them to fulfill their sentences at the Occoquan Workhouse in Virginia. There, the women endured harsh conditions. Claiming they were political prisoners, Paul demanded like treatment and refused to eat her rancid daily rations, resulting in violent force-feedings. When news of the women's treatment became public, President Wilson intervened and the suffragists were released, having served hard time on the trumped-up charge of obstructing traffic. The brutality both radicalized the protestors and roused the public's sympathy.

After many years and many failed attempts, the Nineteenth Amendment to the U.S. Constitution—according to which the right to vote "shall not be denied by the United States or by any State on account of sex"—passed both the Senate and the House in 1919, and was sent to the states for ratification. Catt's organizing paid off, as advocates were in place to petition the statehouses. In 1920, with two-thirds of state legislatures voting for approval, the Nineteenth Amendment was officially ratified, and women joined the American electorate with the same rights and responsibilities as men.

The 1920 elections showed little difference in voting patterns between men and women, but the cultural contributions of the suffragist movement are undeniable. Women's activism inspired both Indian spiritual leader Mohandas Gandhi and civil rights leader Martin Luther King, Jr., and served as a living testament to the power of nonviolent civil disobedience. In addition, the suffrage movement exploded the myth that women were shrinking violets in need of protection, and it empowered many women to take charge of their own lives.

Once suffrage was achieved, many women were assimilated into mainstream political organizations. Others began to agitate for the Equal Rights Amendment, a hallmark of the second wave of American feminism. By the 1980s, a distinct gender gap in voting patterns began to emerge, promising the political potential of women as a voting bloc.

Surfing and Surfer Culture

Surfing, the sport of standing on a flat board while gliding along the crest of a breaking wave, made its way from Polynesia to the Hawaiian Islands by approximately 400 C.E. At first a religious ritual of native nobles, surfing would thrive in Hawai'i, unseen by Western eyes, until the English explorer Captain James Cook arrived nearly 1,400 years later.

Early explorers and visitors to the islands were impressed by the skill and daring of the surfers, but native customs were repressed with the arrival of Christian missionaries and European and American settlers. Surfing was all but eliminated by the early nineteenth century, kept alive only by a few locals as a means of passive resistance to the moral values espoused by the Westerners. The sport languished until the turn of the century, when American businessmen began to replace missionaries as the controlling force on the Hawaiian Islands. Entrepreneurs called on the few Hawaiians who still possessed the ability to surf to revitalize the sport as a means of catalyzing the islands' tourism appeal.

One of these locals was young Duke Kahanamoku, the grandson of a native chief and an Olympic swimming champion. While hardly the only Hawaiian to take part in the revival of the pastime, Kahanamoku was surfing's most visible figure and effective popularizer. A superb surfer from childhood, he went on to establish the first surfing club in Waikiki and gave exhibitions around the world. His demonstrations in Southern California laid the foundations of the sport in the mainland United States.

Surfing took firm root in America in the late 1950s and early 1960s, as teenagers took to the waves at beach towns such as Santa Monica, Huntington Beach, and Malibu, California, and developed leisure-centered lifestyles that embraced surfing as both sport and catharsis. Shaggy-haired, suntanned surfers in Hawaiian shirts descended on the beach in Volkswagen vans. They developed their own jargon as well, including such terms of the art as *peak* and *offshores* and *mellow*.

Films such as *Gidget* (1959) and *Beach Party* (1963) glorified the carefreeness of surfer life, the camaraderie between surfers and beach girls, and the nights of bonfires and beach parties. Even documentaries on surfing became box-office successes. For example, Bruce Brown's masterpiece, *The Endless Summer* (1966), about two surfers going around the globe in search of the "perfect wave," was embraced by audiences across the United States.

Musical artists such as Dick Dale, the Chantays, the Ventures, and the Surfari's pioneered "surf rock," a genre noted for its rapidly oscillating guitar instrumentals and loud, fast beat. The surfing influence on pop music reached its zenith in the 1960s with the Beach Boys, who performed such family-friendly songs as "Surfin' U.S.A.," "Surfin' Safari," and "Surfer Girl."

The popular success of surfing, however, did not sit well among the core members of the subculture. With the establishment of a competitive professional circuit in 1976 came money, sponsorships, and throngs of aspiring surfers threatening to compromise the sport's ideals of a serene and private experience. "Soul surfers" began to distinguish themselves by shunning technological advances in the sport—primarily by refusing to wear a wet suit to stay warm or a leash to keep the board nearby after a wipeout.

Likewise, dramatic increases in the sheer numbers of surfers led to the social phenomenon of "localism." Outsiders to an area's usual crowd generally were unwelcome by the core fraternity and sometimes were driven off by violence in the water, or returning to broken car windows and slashed tires.

Into the 2000s, surfing remains a popular source of entertainment for much of America. Yet the sport's underlying cliquishness remains strong among hard core participants.

Surrealists

A term coined by French writer Guillaume Apollinaire in 1917, *surrealism* refers to an avant-garde cultural movement in the early twentieth century most prominently manifested in the realms of literary and visual arts. The movement's arrival in the United States, through exhibitions such as the Newer Super Realism show (1931) in Hartford, Connecticut, coincided with the personal presence of European surrealists such as André Masson and Marcel Duchamp, who in their opposition to Fascism and Nazism sought exile in the United States and joined forces with the American art community. Highly publicized and celebrated artists such as Salvador Dali, as well as art and museum patrons such as Peggy Guggenheim (who was married to émigré German surrealist Max Ernst), helped to popularize surrealism, which became a vital force in American art during the Great Depression and the cold war.

From its arrival on U.S. shores, many critical voices attacked surrealism as a foreign and even mad decadence in danger of corrupting American ideals and national art. With Freudian psychoanalysis becoming increasingly fashionable, however, others, in search of creative freedom and techniques for gaining access to the unconscious mind, enthusiastically turned to surrealism's openness to formal experimentation and personal interpretation.

While typically associated with the arts, surrealism has never been restricted to them. Indeed, from the start, proponents have aimed at transcending the arts. Like the earlier Dada movement, from which it partly derived, surrealism took part in a modernist avant-garde aesthetics of forcefully disrupting traditional rationalist ways of thinking, seeing, and feeling. But whereas the Dadaists, shell-shocked by the disillusionment and mass destruction of World War I, produced anti-art defying reason, the surrealists believed strongly in the positive, mind-changing

force of artistic expression and assaulted public sensibility.

Drawing heavily on Freudian theory, as well as Marxist thinking and the Marquis de Sade's and Arthur Rimbaud's radically sexualized poetics, French poet André Breton, the major spokesperson of the surrealist movement and later a New York refugee himself, declared in "The Surrealist Manifesto" (1924) that surrealism is "psychic automatism in its pure state, by which one proposes to express—verbally, by means of the written word, or in any other manner—the actual functioning of thought. Dictated by the thought, in the absence of any control exercised by reason, exempt from any aesthetic or moral concern."

For Breton and the group of artists surrounding him (among them Louis Aragon, Philippe Soupault, Paul Éluard, Robert Desnos, Pierre Naville, Roger Vitrac, Gala Éluard, Man Ray, Hans Arp, Antonin Artaud, Raymond Queneau, Joan Miró, Jacques Prevert, and Yves Tanguy), the term *surreality* aimed at a revolutionary unification of conscious and unconscious realms of experience into one new and marvelous "absolute reality." A more precise translation of French *surréalisme*, therefore, would thus correspond more closely with the English *supernatural* or *super real*. As much as surrealism stems from artistic roots, Breton made it clear that surrealist activity can be performed in any circumstance of life—making practitioners thoroughgoing nonconformists.

From the movement's center in Paris, surrealism by the end of the 1920s began to spread around the globe, with North and South America getting their fair share of major surrealist artists. While surrealism as a historical avant-garde movement formally came to an end with Breton's death in 1966, its influence lasted long after.

One proof of this was the founding in the same year of the Chicago Surrealist Group by Franklin and Penelope Rosemont as an official offshoot of the Paris group. Initially coming from left-wing or anarchist backgrounds, the Chicago Group, which includes photographer Clarence John Laughlin, artist Gerome Kamrowski, and poet Philip Lamantia, became an agitating force in the arts sector and beyond. The Chicago Group has continually identified itself with the cause of black liberation, including its early participation in the civil rights movement of the 1960s, the struggle against white supremacists in Chicago's Marquette Park neighborhood and elsewhere in the 1970s, and efforts to free African American political prisoner Mumia Abu-Jamal in the early 2000s.

It also has been associated with the Chicago-based labor organization Industrial Workers of the World (IWW), especially with the publication of the periodical *Rebel Worker* in the 1960s; it was allied with the antiwar activist group Students for a Democratic Society (SDS) in the 1960s, with an entire issue of the group's leading journal, *Radical America*, devoted to the Chicago surrealists; and it was directly linked to the women's movement, specifically with Penelope Rosemont's groundbreaking anthology *Surrealist Women* (1998), the first and largest collection ever to represent the many women who participated in surrealism from its origins.

Social Surrealism

Besides the California post-surrealists Lorser Feitelson, Helen Lundeborg, Philip Guston, Reuben Kadish, Harold Lehman, and Knud Merrild—who in the 1930s used such surrealist devices as scale contrasts and odd juxtapositions of objects, but rejected European surrealism's irrationality—the first distinct manifestation of a genuine American surrealist movement adopted a political agenda: American social surrealism.

In the 1930s, during the Great Depression, artists such as O. Louis Guglielmi, Walter Quirt, James Guy, Peter Blume, Francis Criss, and David Smith drew on the experience of everyday life as nightmare, employing the radical aesthetics of surrealism to intensify the power of their social-political critique. Lacking the sexual overtones of European surrealism, the American social surrealists concentrated on presenting familiar aspects of American life in new, frightening, and hallucinatory perspectives. Attacking national problems such as poverty, workers' rights, and, later, the threat of fascism, the social surrealists created easy-to-read art with clear messages.

The group thus followed an overall trend of aligning leftist politics with communism. It supported Leon Trotsky and his International Left Opposition (including communist artists like Mexican Frida Kahlo, whose paintings of physical pain and suffering combined personal experience with the depictions of indigenous culture from a decidedly

feminine and surrealist perspective). It also supported the negritude movement and anticolonial, revolutionary writers such as Aimé Césaire of Martinique, taking up surrealism as a method of cultural critique.

American social surrealism followed the veristic branch of surrealism by stressing representation and clarity over automatism and abstraction. At times merging with magic realism (notably Jared French, Henry Koerner, George Tooker, Charles Rain) in its reliance on mystery and the marvelous, and translating everyday experience into strangeness as well as celebrating a revival of Renaissance techniques like tempera painting, veristic surrealism has resurfaced since the 1960s. Key artists, such as Irving Norman, Paul Pratchenko, Lynn Randolph, Phyllis Davidson, and Vaclav Vaca, claim a century-long tradition of art as symbolic narration, disparate juxtapositions of representational imagery, concern for audience, personal content, and classical technique.

Post-Surrealists

During the 1940s, the other main strand of surrealism in its American variation developed the idea of psychic automatism into the New York School of abstract expressionism. Arshile Gorky, Jackson Pollock, Robert Motherwell, Adolph Gottlieb, Mark Rothko, Roberto Matta, and Barnett Newman, among others, celebrated the instantaneous human act (free play and improvisation) as the wellspring of creativity. Later developments of this strand, taking up the humorous aspects of surrealism, developed into 1950s pop art (as seen in the work of Andy Warhol). Robert Rauschenberg was a key transitional figure, making use of surrealism in his Combine Paintings (collages of found objects bridging the gap of life and art by including everyday objects).

Already Breton's assumption that surrealism "acts on the mind very much as drugs do... and can push man to frightful revolts," as well as his observation that a surrealist act is like "dashing down into the street, pistol in hand, and firing blindly, as fast as you can pull the trigger, into the crowd," account for the movement's appeal to post-World War II counterculture and antibourgeois generations. All aimed to revolutionize multiple aspects (personal, cultural, social, political, sexual, religious) of human experience. False rationality and restrictive customs were sworn enemies of the surrealists' successors.

Latter-day surrealists can be found in diverse artistic fields, as in the works of the Beat Generation writers (Ted Joans, Bob Kaufman, Gregory Corso, Allen Ginsberg, and William S. Burroughs); free jazz (Don Cherry, Sun Ra, and Cecil Taylor); popular and experimental music (Bob Dylan and Laurie Anderson); film and television (David Lynch's *Twin Peaks* television series, 1990–1991, and Gregg Araki's New Queer Cinema films, such as *The Doom Generation*, 1995); and the stage, ranging from Richard Foreman's Ontological-Hysteric Theater and the camp and transvestite aesthetics of the Ridiculous Theater (Kenneth Bernard, Ronald Tavel, Charles Ludlam) in the 1970s to dance theater (Merce Cunningham, Meredith Monk) and Robert Wilson's Theater of Images. French surrealist Louis Aragon praised Wilson as being "what we, from whom Surrealism was born, dreamed would come after us and go beyond us."

Surrealism from the start has been criticized as artistically avant-garde yet ultimately chauvinistic, misogynist, and male centered. Thus, whenever women have adopted surrealism as their chosen method, they have done so mostly with ironic and parodic intent. Feminist subversion of patriarchal hierarchies has been a driving force in surrealist works as different in time, form, and content as Gertrude Stein's landscape plays of the 1920s and 1930s (with their radical aesthetics all but veiling their inherent homosexual politics), Cindy Sherman's *Untitled Film Stills* series (1977–1980), and Kathy Acker's post-punk porn novels.

In turning stereotypical sexist attitudes toward women into ironic commentaries on society's misgivings, these post-surrealists take part in the overall surrealist notion of a counterculture movement—one that links radical aesthetics with revolutionary politics by emphasizing the links between freeing imagination and mind and liberation from repressive and archaic social structures.

Survivalists

Survivalists are individuals or groups who aim to outlast an anticipated widespread catastrophe by stockpiling goods, learning self-sufficiency skills, and/or arranging to defend themselves from the government or those who did not prepare. Elements of survivalism are found among more radical groups on both the left (including Earth First! and homesteaders) and the right (including Aryan Nations, Michigan Militia) of the political spectrum, although white supremacist groups have received the vast majority of media and academic attention. Expected calamity can take a number of permutations, ranging from religious millennial events to nuclear holocaust, environmental destruction (such as that brought by Hurricane Katrina in 2005 to areas of the Gulf Coast), or societal collapse. The defining aspects of the movement, however, are the intended responses to the perceived threats. Survivalism most commonly entails such actions as the storage of extra water and food in case of an emergency, but it can escalate to engaging with other survivalists to prepare for catastrophic scenarios. At the most extreme end, this entails living “off the grid” of the normal power supply in a communal situation, such as a militia or cult. The survivalist movement is dominated by white males.

Modern examples of the survivalist movement began during the cold war over fears of an impending nuclear holocaust. Government agencies urged preparedness and the construction of fallout shelters in case of an attack within the United States. In the 1960s and 1970s, with the rise and peak of the counterculture movement, survivalists became increasingly focused on other forms of collapse such as environmental and economic ones.

In the 1980s, attention shifted back to nuclear weapons amid their proliferation in the final years of the cold war. During this time, survivalist conventions (often sponsored by, and advertised in, gun magazines) also proliferated. The 1990s saw an increasing dependence on information technology, giving rise to a growing sense of impending “technocalypse.” Survivalists started to focus more on surviving without the complexities of a technology-driven society around them. Earth First!, which had held regional training camps since the 1970s, began to shift attention toward sustainable lifestyles and wilderness skills.

The most recent popular manifestation of the survivalist movement came after the terrorist attacks of September 11, 2001, with a focus on preparing for widespread devastation at the hands of Islamic fundamentalists. In the early 2000s, “freegans” (people whose aim is to survive a prospective crisis of capitalism by scavenging food from

dumpsters and other free sources) received increased media attention.

In the United States, the federal government often has been involved in the popular survivalist movement, providing guides on surviving multiple forms of catastrophes. The advice of government agencies is almost always geared toward short-term survival, a period of several days at most, which is why more serious survivalists often disregard these suggestions. Emergency response workers, who work with the government to prepare for disasters and emphasize working with others to restore order, often disparage survivalists who foresee a longer-term collapse of civilization.

Although mainstream survivalists often focus on ways to respond to disasters at their homes, more extreme survivalists tend to focus on ways to escape urban areas and head for rural retreats where they can survive long-term societal collapse. To this end, many survivalists form semi-clandestine clubs with whom they plan to meet up during a catastrophe and escape to a less densely populated area. At the most extreme end of this spectrum are militias such as the Montana Freemen, millennial cults such as the Branch Davidians, and back-to-earthers who attempt to live outside U.S. society in preparation for the coming apocalypse.

Literature of the movement proliferates on both sides of the spectrum, with the radical right producing the likes of Andrew MacDonald's novel *The Turner Diaries* (1978) and *Soldier of Fortune* magazine, and the left producing books and zines on urban salvaging, wilderness survival, and cultural resistance.

The survivalist community is heavily represented on the World Wide Web, which disseminates information on products (often with a focus on firearms), strategies, and works of literature, and provides space for the interaction of different points of view among survivalists. Survivalist themes are occasionally presented in the American mass media, as in the case of Edward Abbey's novel *Good News* (1980), the hit movie *Red Dawn* (1984), and the television series *Lost* (2004–).

Swedenborgianism

The writings and teachings of the eighteenth-century visionary Emanuel Swedenborg became the basis of a religious system called Swedenborgianism. Swedenborg's religious writings describe an accessible spiritual world populated by entities that interact with humans and offer guidance and wisdom. His encounters with this world inspired various countercultural thinkers and artists and influenced later movements that claimed contact with spiritual teachers and guides.

Swedenborg's Life

Swedenborg was born in Stockholm, Sweden, on January 29, 1688, to a wealthy and prominent Lutheran family. Since his father was a Lutheran bishop, he received an excellent education and grew up intensely aware of the conflicts between Catholics and Protestants and the many divisions among Protestant denominations that roiled the religious world of the late seventeenth century. Swedenborg showed promise as a student and graduated at an early age from the University of Uppsala. Following graduation, he traveled in Europe while studying astronomy, physics, mathematics, and physiology. Taking careful notes during his travels, he returned to Sweden and published books on chemistry, mathematics, and mineralogy.

In 1744, Swedenborg began a period of spiritual transformation that started with a series of increasingly powerful dreams. These nighttime visions expanded into his waking hours, where he encountered a divine being who explained that he was to receive the true meaning of the Bible. After these experiences, Swedenborg claimed, he was able to look into the spirit or heavenly realm and converse with the wide variety of beings he found there.

Over the next decade, Swedenborg wrote and published his eight-volume work *Arcana Coelestia* (1749–1756), which began to lay out his spiritual system. He wrote of his encounters and documented them as meticulously as his physical journeys and produced several works of mystical theology, producing nearly twenty works after his spiritual awakening. Among the most important was *Heaven and Its Wonders and Hell* (1758), which presented his vision of a spiritual realm divided into an organized hierarchy of seven spheres of ascending purity and divinity, with the mundane physical world at the center.

While producing this large body of written material, Swedenborg also worked in various scientific fields, edited a scientific magazine, served in the Swedish legislature, and held a government position as assessor to the Royal College of Mines. He later resigned the latter post to pursue his writing and lived an ascetic life on half-pension.

Although he published his spiritual works anonymously, the 1768 revelation of his identity as the author of the books and pamphlets that had become something of a sensation in Europe led Swedish Lutheran ministers to accuse him of heresy. Swedenborg, known and respected by many prominent political, religious, and scientific figures in Sweden, used his connections to escape punishment.

He continued to travel, write, and publish until 1771, when he suffered a stroke while visiting London. He died there the following year.

Swedenborgianism in the United States

Following Swedenborg's death, many of his followers organized a branch of Christianity modeled on his works that they called the Church of the New Jerusalem. Although it had some popularity in France and Central Europe, Swedenborgianism as an organized religious movement had its greatest successes in England and the United States. The Church of the New Jerusalem remained a small but viable denomination throughout the nineteenth and twentieth centuries, but Swedenborgianism's greatest impact on countercultural groups occurred outside the boundaries of any organized church.

Swedenborg's writings became popular in the United States during the nineteenth century, and he became a notable influence on many who would become involved in such counterculture movements as transcendentalism and spiritualism. His vivid descriptions of a world both internal and spiritual led to his popularity among a wide variety of Americans who were pursuing an interest in mesmerism, communal settlements, and medical practices such as homeopathy.

Some of those who were active in disseminating Swedenborg's ideas in the United States during the 1840s, such as New York University professor of theology George Bush, became attracted to the emerging spiritualist movement, which centered on communications with the dead. Over the next decade, many spiritualists praised Swedenborg as a seer and medium, arguing that the angelic communications he described in his writings actually were the same types of contacts with the spirit world that they experienced. Andrew Jackson Davis, one of the

most prominent of the antebellum spiritualists, claimed that the spirit of Swedenborg appeared to him in the 1840s as a kind of spiritual guide.

Swedenborg's reputation as a serious scholar, his erudite theological works, and his systematic treatment of the spirit world made him a revered figure among many spiritualists. Some, like the Reverend Thomas Lake Harris, made Swedenborgianism a major part of their own spiritual systems. However, this popularity eventually created tensions. While spiritualists were happy to consider Swedenborg's experiences a harbinger of the manifestations of the mid-nineteenth century, more doctrinaire Swedenborgians objected to having him treated as simply another medium.

Swedenborg's influence also extended to transcendentalist thinkers such as Ralph Waldo Emerson, who was so impressed by the Swedish seer that he included an essay titled "Swedenborg, the Mystic" (alongside essays on Plato, Napoleon, and Shakespeare) in his 1859 book *Representative Men*. Long before the appearance of that essay, however, several well-known figures associated with transcendentalism, such as the writer Margaret Fuller and the New England teacher Amos Bronson Alcott, read and discussed Swedenborg's works and theological system. Another prominent New England intellectual, philosopher Henry James, Sr. (the father of Harvard professor of psychology William James and novelist Henry James), became one of the most well-known and ardent devotees of Swedenborg.

Beyond his obvious influence on familiar counterculture movements such as spiritualism and transcendentalism, Swedenborg's writings have inspired poets and artists in the United States and overseas for more than two centuries, including William Blake, William Butler Yeats, and Honoré de Balzac. Outside the arts, Swedenborg influenced the development of New Thought, the late-nineteenth-century religious movement that taught that spirit was the only reality and that individual thoughts exercised power over the physical world, and other alternative philosophical systems.

While the most important influence of Swedenborgianism, both on mainstream culture and on counterculture movements, was exercised by Swedenborg's writings, churches organized around his beliefs remain active to the present day. Since their founding, these churches have faced a number of schisms over whether Swedenborg's writings should be seen as a lens through which to understand the Christian Scriptures or should be considered infallible, divinely inspired documents.

By the twenty-first century, such divisions fractured the Church of the New Jerusalem into a number of smaller groups. Two of the largest are the General Church of the New Jerusalem, headquartered near Philadelphia, which claims about 5,000 members, and the Swedenborgian Church of North America, based near Boston, which has about 1,500 members. Swedenborgian-influenced denominations in Europe, Asia, and Africa brought the total number of members to about 30,000 as of 2008.

Talking Heads

The Talking Heads were seminal figures in the history of the New York punk music scene, pioneering the more commercially friendly New Wave genre. More than any other band in this musical milieu, the Talking Heads had an exceptionally enduring connection to the avant-garde of New York. Musically, the band members became early innovators in incorporating dance rhythms, both funk and African polyrhythms, into their sound.

Singer David Byrne, bassist Tina Weymouth, and drummer Chris Franz (who later married Weymouth), attended the Rhode Island School of Design in Providence, Rhode Island, where they formed the band in 1974. In 1976, they achieved early success, based on riveting live performances at Hilly Kristal's club on Bowery Street in New York City, CBGB, the epicenter of New York's burgeoning punk movement. Seymour Stein of Sire Records was so impressed that he immediately signed the group. The following year, guitarist Jerry Harrison, who had studied architecture at Harvard University, joined them, and that same year, the band released its first album, *Talking Heads '77*.

The Talking Heads' early minimalist, terse sound was based on Byrne's yelping vocals and Weymouth's deliberate bass lines. Harrison had played with Jonathan Richman and the Modern Lovers, and the Talking Heads were influenced by the Modern Lovers' preppy visual style and simple, pared-down music, which was often accompanied by surreal and naive lyrics. The Talking Heads, in contrast to most early New York City punk bands, did not embrace the rebellious, romantic rock aesthetic or pose as anti-intellectual, working-class toughs or dissipated junkies.

The Talking Heads' edgy pop music and surreal lyrics of alienation evolved from the tradition of New York City art rock that originated in the late 1960s with the Velvet Underground, and later the New York Dolls and Patti Smith—all of whom had strong connections with the art and literary worlds. Byrne was inspired by the creative strategies of the Dadaists and surrealists, and he used games and chance elements to create lyrics. From the band's inception, every album design was conceived and created by some or all of the band members. Later, pop artist Robert Rauschenberg was enlisted to design a limited-edition LP package for *Speaking in Tongues* (1983). *True Stories* (1986) was a full-length film conceived by, directed by, and starring Byrne.

In 1983, the band found mass popularity with the hit "Burning Down the House." The cable television network MTV (Music Television) had been launched just two years earlier, and the Talking Heads' popularity was enhanced by their visually arresting music videos.

Alternative-music producer Brian Eno had introduced the band to African music, which is reflected on the albums *Fear of Music* (1979) and *Remain in Light* (1980). Byrne and Eno further explored the use of sub-Saharan and northern African sounds in *My Life in the Bush of Ghosts* (1981) and a collaboration with dancer-choreographer Twyla Tharp titled *The Catherine Wheel* (1981). The three other members of the band all released side projects, and Weymouth and Franz were unexpectedly successful with their white rap project, the Tom Tom Club.

As the Talking Heads found commercial success, however, the members grew increasingly at odds with each other. Soon after producing a final album in 1988, *Naked*, the band broke up. Its legacy of musical boundary breaking has influenced the work of such later performers as Beck, Radiohead, Phish, and others.

Taos, New Mexico

First in the 1920s and again in the 1960s, the remote mountain village of Taos, New Mexico, acquired an international reputation for artistic experimentation, while hosting such well-known counterculture residents as American patron of the arts Mabel Dodge Luhan and actor Dennis Hopper.

Pueblo Indians have inhabited Taos Pueblo, the multifamily, adobe structure on the edge of town, since the pueblo's construction in about 1400 C.E. Spanish settlers, priests, and soldiers arrived in the 1500s. The Taos Revolt in 1680 led to their expulsion, but the Spanish returned in 1690. Taos then became a fortified trade city, bustling with the activity of Spanish merchants from Chihuahua, French and American fur trappers, and Indian traders from tribes across the region. Kit Carson, the American scout who settled in town in the 1840s, was typical of many in Taos in having an interethnic marriage.

The flags displayed in town changed with Mexican independence in 1821, and again upon U.S. annexation in 1846, but little else changed until railroad construction connected Taos with other parts of the country in the 1880s. It was during this time that popular fascination with Western and Native American themes drove Taos's rebirth as an art colony. Artists Ernest Blumenschein and Bert Phillips settled there in 1889, and in 1915 they joined with recently arrived artists Joseph Henry Sharp, Bert Harwood, Nicholai Fechin, and Joseph A. Fleck in founding the Taos Society of Artists cooperative. The Atchinson, Topeka and Santa Fe railroad purchased much of their work to promote regional tourism.

The 1916 arrival of Mabel Dodge, a wealthy New York socialite, transformed Taos. Soon thereafter, Dodge married local Pueblo Indian Tony Lujan (Luhan), and over the next decade built a rambling complex in which she housed painters, writers, and photographers. Her financial independence allowed her to offer guests (who sometimes stayed years) a respite from the commercial art market, resulting in a vibrant center of avant-garde experimentation. During the 1920s and 1930s, Dodge hosted a cross-section of the most innovative minds of the era, among them Ansel Adams, Willa Cather, John Collier, Carl Jung, D.H. Lawrence, John Marin, Georgia O'Keeffe, Elsie Clews Parsons, Gertrude Stein, Alfred Stieglitz, and Paul Strand. She remained in Taos until her death in 1962.

In the 1960s, Taos again became a center of cultural experimentation. The population doubled as more than two dozen communes appeared on the outskirts of town, including Morningstar, Lama, and the Reality Construction Company. The communes varied widely in terms of philosophy and lifestyle, but all were perceived as being more accepting of experimentation with drugs and sex than was the broader Taos community. Iris Keltz's *Scrapbook of a Taos Hippie* (2000) is one of several memoirs on the Taos commune scene, where, the author recalls, young people hoped to change the direction of American culture by rejecting materialism and violence.

The New Buffalo Commune became the most famous of the Taos communities when it provided the backdrop for the 1969 film *Easy Rider*, which brought actors Dennis Hopper and Jack Nicholson to town. Hopper bought the

Dodge-Luhan ranch and used the “Mud Palace” as a studio for experimental filmmaking, while hosting Bob Dylan, Janis Joplin, Timothy Leary, Andy Warhol, and other icons of the era.

Despite the national attention, this was a tense time. Some of what communalists viewed as natural human behavior—including nudity, free love, and religious syncretism—the Pueblo Indians considered offensive to their indigenous traditions, and the town blamed newcomers for rising rates of drug use and delinquency. Federal Bureau of Investigation (FBI) investigations of the communes, tribal political groups, and Chicano activists, who sought to organize Hispanic residents of the town to resist discrimination, contributed to the tension.

By the 1970s, the commune era was in decline, but Taos retained its reputation as a center of creativity. Writer John Nichols (author of *The Milagro Beanfield War*, 1974) and Navajo artist R.C. Gorman acquired national reputations with their New Mexico-centered art. By the 1990s, many of the town’s communes had evolved into centers for sustainable agriculture, New Age spiritualism, and global education.

In the twenty-first century, these communities have continued to attract visitors interested in alternative lifestyles, while the many workshops run by these groups help spread the Taos ethic of cultural experimentation. The local art community remains active, and the town remains home to the Taos Pueblo Indians, as it has for centuries.

Television

Although television technology had been successfully demonstrated as early as 1927 and the first regular programming began in 1939, the medium did not become a popular source of entertainment and news in the United States until after World War II. In the years that followed, however, television’s popularity increased dramatically. As of 1948, an estimated 1 million U.S. households had television sets; by 1969, some 95 percent of homes contained a television, and Americans watched an average of six hours of television daily.

As a function of its universality and audiovisual format, television has been regarded as an extremely effective medium for the dissemination of information and maintaining mainstream values and ideologies. Nevertheless, in the history of the medium, countercultures have wrought significant changes in the structure and content of

television programming.

The 1960s, when television was still relatively young and counterculture groups were growing in popularity, was a particularly important period for such changes. News coverage of counterculture movements and entertainment content drawing on countercultural stereotypes represented commercial efforts to profit from the public interest. Ultimately, however, the countercultures of the period succeeded in changing television, especially by making it a medium more attuned to youth culture. As the civil rights, anti-Vietnam War, and hippie movements succeeded in bringing their goals and values into American living rooms via the small screen, television itself had a direct and dramatic impact on the strategies of the political counterculture and the course of events.

Television is alluring to anyone with a message to spread, because its extensive and intimate penetration into the daily lives of Americans makes it an effective way to share ideas on a large scale. At the same time, many of the practices that have come to be associated with television—including situation comedies that reinforce the nuclear family and heterosexuality, entertainment programming with racist depictions of minorities, the perceived bias of mainstream news, and the use of commercials to support the costs of most programming—represent values that countercultures have opposed.

Moreover, with large corporations owning the three major networks in the United States during the 1960s, counterculture groups had little direct access to the means of production or channels of distribution. Direct, objective representations of alternative political, social, and cultural points of view thus depended largely, and tenuously, on the objectivity of news organizations.

The youth-based movements of the period prompted the quest for programming that relied on rock music and other cultural artifacts to capture the interest of younger viewers. NBC launched *The Monkees* (1966–1968) in an attempt to capture some of the hysteria over the Beatles. The Monkees were purely a TV creation with recording spin-offs; the show consisted of band members portraying themselves in comical fashion. The series was devoid of any politically, socially, or morally objectionable content, but it strove to retain the style of the hip culture associated with rock music.

This tendency to repackage the culture of recreational drug use and brazen sexuality into a harmless, stylish entertainment product was dominant. Other popular programs that presented a sanitized version of the rock world included the Beatles' Saturday morning cartoon show (1965–1968), Dick Clark's *American Bandstand* (1952–1989), and *The Partridge Family* (1970–1974).

The Mod Squad (1968–1973) made clear that youth counterculture was changing traditional television. The show took a conventional format, the buddy cop show, and altered it by including a woman character and an African American character in addition to a white male. Though juvenile delinquents recruited to do police work to save themselves from jail, the three were hip and fashionable, and they mingled easily with the Southern California youth subculture to fight crime. The show's logline, or capsule summary, advertised its multicultural emphasis: "One black, one white, one blonde." *Mod Squad* was an instant hit, perhaps because it could not only draw interest from countercultural viewers, but also seem to give a mainstream viewer entrée into the youth subculture while maintaining the strong sense of morality that drove cop shows in its era.

Some television personalities earnestly sought to infuse their programs with countercultural messages, though generally with minimal success. The Smothers Brothers used the platform of their comedy variety show *The Smothers Brothers Comedy Hour* (1967–1969) to protest against the Vietnam War. As a result, the Columbia Broadcasting System (CBS) network president decided to censor the show, and the withdrawal of advertisers finally forced cancellation. Gene Roddenberry, creator of NBC's science fiction series *Star Trek* (1966–1969), was likewise prevented from writing shows that implied opposition to the Vietnam War.

Television programs also lampooned the counterculture for entertainment value. *The Many Loves of Dobie Gillis* (1959–1963) featured a recurring beatnik character named Maynard G. Krebs, a harmless free spirit who loved jazz and playing the bongos and had an aversion to work of any kind. *Rowan & Martin's Laugh-In* (1968–1973)

was a sketch comedy show that drew on hip imagery of the swinging 1960s for laughs. And many other series included single episodes in which the main characters encountered versions of beatniks, hippies, feminists, or Black Power activists, who would inevitably display markers of countercultural stereotypes without giving voice to the substance.

The televised media also effected change in mainstream political perceptions and was a factor in precipitating strategies adopted by the New Left. As the nightly television news brought the Vietnam War into the living rooms of the American people, the antiwar movement found ways to use media coverage to their own ends.

Organizers, especially, came to appreciate the value of visual spectacle in protest events, recognizing that outrageous or unusual stunts could lead to increased coverage by the televised media. Notable among the counterculture groups who recognized the power of televised spectacle were the yippies. In October 1967, the March on Washington to protest the Vietnam War attracted an estimated 100,000 activists. Still, the claim by yippie leader Abbie Hoffman that he would “levitate” the Pentagon, accompanied by poet Allen Ginsberg’s Tibetan chants and a musical “exorcism” by the band the Fugs, drew as much media attention as the march itself.

Another event—among many—that reflected the counterculture’s recognition of the power of television was the protest of track-and-field athletes Tommie Smith and John Carlos at the 1968 Olympic Games. By lowering their heads and raising their fists on the medal stand during the playing of the national anthem, Smith and Carlos created a visual image of Black Power that was broadcast globally and became instant history.

Since the 1960s, television has continued to be a medium that caters to interests of youth culture and tends to represent threatening social movements in a politically neutered manner for its own financial profit. Advances such as color television and the advent of cable and satellite service have only made television a more profitable and ubiquitous source of information. Countercultures have most recently seen representation on cable networks, whose proliferation has meant an increasingly diverse representation of U.S. cultures on television. Notably, Home Box Office (HBO) brought viewers seemingly realistic depictions of mob life in *The Sopranos* (1999–2007) and polygamous countercultures in *Big Love* (2006). Showtime’s *Queer as Folk* (2000–2005) opened up a frank look at gay culture, and its *The L Word* (2004–2009) did the same for lesbian culture. Reality television also sometimes attempts to offer insight into the lives of marginalized groups previously unrepresented on television.

Despite the presence of independent public television stations, the ongoing trend has been toward consolidation of television network ownership by multinational corporations. And this trend is likely to continue making television an even narrower platform for direct resistance to mainstream culture.

Temperance Movement

Emerging in the early decades of the nineteenth century, the U.S. temperance movement sought to limit consumption of alcohol, moving between an emphasis on voluntary individual behavior and coercive legislation. The movement focused on alcohol's negative impact on both society and individuals, especially the moral, economic, and medical effects of overindulgence. Gaining momentum in the latter part of the nineteenth century, the struggle culminated in ratification of the Eighteenth Amendment to the U.S. Constitution, which became law on January 16, 1920. National Prohibition lasted until the amendment was repealed, with ratification of the Twenty-First Amendment in 1933, but the ban on alcohol remained a local option and remained in effect in some locations.

Origins

After independence, American annual per capita consumption of absolute alcohol rose from 3 gallons (11 liters) in 1790 to 4 gallons (15 liters) in 1830. Although there had been efforts to restrict alcohol sales during the colonial period, the publication of Dr. Benjamin Rush's *An Inquiry Into the Effects of Ardent Spirits* (1784), which advocated total abstinence from distilled liquors, provided the intellectual basis for the temperance movement.

The Massachusetts Society for the Suppression of Intemperance, founded in 1813, advocated moderation, but the American Society for the Promotion of Temperance, founded in 1826, followed Rush in calling for complete abstinence from distilled spirits. Appealing to the masses through tracts, newspapers, and circulars, the latter organization gained 1.5 million members by 1835. It soon became clear that no legitimate distinction could be made between distilled and fermented beverages; by 1836, the American Temperance Union, as the national society renamed itself, was promoting teetotalism. The movement proved effective, with the nation's annual per capita consumption of alcohol dropping to 2 gallons (7.5 liters) by 1840.

The 1840s saw both the growth of temperance efforts and the broadening of their appeal. The Washingtonian Total Abstinence Society, or Washingtonians, an organization of reformed alcoholics, originated in Baltimore in 1840; by the following year, it was sending speakers to cities throughout the Northeast. Recounting their personal struggles with drink, the Washingtonians developed a support network for common people who sought help in overcoming alcohol dependence.

In Maine, industrialist Neal Dow worked through the Washingtonian movement to achieve both local and statewide restrictions on the sale of alcohol by 1846. In 1851, he obtained stronger state legislation that outlawed the manufacture of alcohol and limited its use to medicine and industry. Over the next four years, twelve additional states and territories adopted similar prohibition laws. This legislation prompted organized opposition, however, which succeeded in eliminating or weakening prohibitions in five of these states and territories prior to the American Civil War.

Between 1850 and 1900, American drinking habits stabilized, as annual per capita consumption of absolute alcohol dropped to about 1.5 gallons (5.7 liters). While the decline was accounted for in part by the increasing popularity of beer over whiskey with the influx of German immigration, this change also reflected the influence of

the temperance movement.

Tactics

With the stalling of early prohibition efforts, temperance forces moved in several directions. In the 1850s, Dr. Joseph E. Turner began describing habitual drunkenness as a disease and called for the establishment of specialized treatment facilities, the first of which was the New York State Inebriate Asylum, established in 1864. In the 1870s, lectures by Dr. Dio Lewis helped inspire the Women's Temperance Crusade, which organized mass marches that focused on closing down saloons and other liquor retailers. Appearing in thirty-one states and the District of Columbia, the crusade involved at least 56,000 women.

Meanwhile, prohibition advocates continued their efforts, organizing the Prohibition Party in 1869 and achieving prohibition in six states toward the end of the century. With the emergence of the Populist Party in the early 1890s and the failure of the Prohibition Party to form a coalition with it, the Prohibition Party was relegated to permanent minor-party status.

More significant was the Woman's Christian Temperance Union (WCTU), established in 1874. Under the leadership of educator and reformer Frances Willard, the WCTU approached alcohol as a social problem. The organization ran jail visitation programs, established departments to work with miners and timber laborers, encouraged children to take temperance pledges, and promoted "scientific temperance instruction" in the public schools. In addition, the WCTU circulated petitions for statewide prohibition as well as local option laws that allowed counties to prohibit the sale of alcohol. Its efforts helped push Kansas in 1880 and Iowa in 1881 to adopt prohibition. Although the WCTU was a largely white, upper middle-class organization, lower-class women were active on the state and local levels, and the organization's Departments of Colored Work took part in both national efforts and in several state unions. The temperance activities of the WCTU also brought it into contact with a variety of social problems that widened its concerns, leading the organization to seek such additional objectives as woman suffrage and an increase in the legal age for sexual consent.

Responding to lax enforcement of prohibition in Kansas, temperance agitator Carry Nation helped organize a local chapter of the WCTU in Medicine Lodge in 1900. Claiming to be inspired by visions, she launched a campaign of direct action in which she entered local saloons wielding an ax, destroying liquor bottles, kegs, and furnishings. She soon expanded her actions to other cities in Kansas and eventually to such places as San Francisco and New York City. Although she gained national notoriety, Nation was a controversial figure within the temperance movement itself, and she had little lasting influence.

Members of the Woman's Christian Temperance Union join in song as part of its dry California activities of 1914. From its founding in 1874, the WCTU played a leading role in the campaign for prohibition. (Peter Stackpole/Time & Life Pictures/Getty Images)

In contrast to the WCTU, the Anti-Saloon League of America (1905) focused on the single issue of prohibition. It argued that the way to achieve this goal was through national policy rather than attempting to change personal behavior. Although it ultimately sought an end to all trafficking in liquor, it chose its goals pragmatically, seeking local option in some places and statewide prohibition in others. The league worked through local churches, both to solicit financial pledges and to identify church members willing to vote for “dry” political candidates. It organized voters at the precinct level, sought to influence the caucuses and conventions of both the Democratic and Republican parties, distributed circulars to industrial employees, and published a variety of papers in several languages. By 1915, it had helped pass prohibition legislation in several Southern and Western states. Meanwhile, in 1913, the league gained passage of a federal law that prohibited the interstate shipment of alcohol into dry counties.

This success led the Anti-Saloon League to begin lobbying for a constitutional amendment to establish national Prohibition—a goal achieved in December 1917, when Congress voted to submit the Eighteenth Amendment to the states. The ratification process was completed in January 1919, and the amendment went into effect one year later. Annual alcohol consumption in America fell from 1.7 gallons (6.43 liters) per capita in 1916 and 1917 to about 0.75 gallons (2.8 liters) in 1921 and 1922, rising again to 1.1 gallons (4.2 liters) in the years 1927 through 1930.

Resistance to Prohibition arose quickly. Opponents, known as “wets,” argued that the restriction was ineffective and impossible to enforce, as well as an unnecessary restriction on personal freedom. Bootlegging, rum-running, and speakeasies (illegal underground drinking establishments) all flourished, giving rise to unprecedented levels of organized crime.

By 1932, nine states had repealed their prohibition laws. The following year, thirty-seven states held referenda on an amendment that would repeal national Prohibition, and thirty-five states voted for repeal (the exceptions being North Carolina and South Carolina). The national experiment was over upon ratification of the Twenty-First Amendment, but the annual per capita consumption of alcohol changed little until after World War II, when it again leveled off at about 1.5 gallons (5.7 liters).

Although its efforts to establish permanent Prohibition were ultimately unsuccessful, the temperance movement had a major effect on American drinking behavior. By the mid-twentieth century, U.S. consumption of alcohol had dropped to approximately half of what it had been in the early days of the republic.

Theater, Alternative

Alternative theater—variously referred to as experimental, avant-garde, or fringe theater—has provided a counterpoint to the commercialism, conventionality, and high ticket prices of mainstream American theater, including Broadway and off-Broadway, since at least the early twentieth century. Among the hallmarks of American alternative theater in its many forms and expressions are the use of the stage to dramatize a particular ideology or point of view, whether political, social, or artistic; innovative approaches to staging and production; and affordability for ordinary people. Early institutions of this type were founded in New York City, including the experimental Provincetown Playhouse (1917) and Cherry Lane Theatre (1924). From these, the alternative theater movement of the 1950s and 1960s would evolve and achieve more enduring success.

Committed to a democratic model, postwar alternative theater has tended to adhere to a policy of low-price or even free entry fees. At the same time, producers and others working in the business have explored new methods, materials, and dramatic devices, using a variety of physical spaces for performances, erasing boundaries between production crew and actors by making each participant perform a variety of roles, and otherwise resisting the commercialism of middle-class theater.

As a vital element of the postwar American counterculture, the alternative theater also has been a venue for addressing such political and social issues as race relations, U.S. involvement in the Vietnam War, women's rights, and economic justice. Prominent examples include political street theater, epitomized in the 1960s in rural California by El Teatro Campesino, a bilingual farmworkers' theater that criticized the exploitation of farmworkers by grape growers; and the Diggers in San Francisco, an improvisational guerrilla theater group that opposed private property and provided free food, medical supplies, and transportation for the urban poor.

Early Twentieth Century

With antecedents in European traveling shows and other improvisational groups, experimental theater in America took root in New York's Greenwich Village in 1917 with the arrival of the Provincetown Players. The group had been organized two years earlier under the leadership of playwrights Susan Glaspell and George Cram Cook in Cape Cod, Massachusetts, with the shared goal of breaking away from contemporary commercial melodrama and supporting new voices and new directions in American drama. The Provincetown Players produced the early works of Eugene O'Neill, among others, and became closely associated with the little theater movement of the times, with its themes of left-wing politics, feminism, and the bohemian lifestyle. After closing for three years in the early 1920s, the Provincetown Players disbanded in 1929.

Meanwhile, in Greenwich Village, the bohemian poet and playwright Edna St. Vincent Millay, with other members of the Provincetown Players, opened another venue of experimental theater, the Cherry Lane Theatre, in a converted warehouse in March 1924. Now the oldest extant off-Broadway theater in New York, the Cherry Lane has showcased the works of countless aspiring playwrights who became leading innovators of American drama.

Nor was the movement confined to New York. Among the notable innovative theater groups to spring up around the country, some of which still operate, were the Little Theatre of Chicago (1912), the Vagabond Players in Baltimore (1916), the Arts and Crafts Theatre of Detroit (1916), the Des Moines (Iowa) Playhouse (1919), and many others.

Postwar Era

The period following World War II brought a kind of revival in alternative American theater, which continued to gain momentum in the 1950s, 1960s, and onward. Innovative new productions were being mounted by the Living Theatre, founded in 1947 by actress Judith Malina and her husband, painter Julian Beck. The Living Theatre was

among the first American companies to stage modernist European works by the likes of Bertolt Brecht and Antonin Artaud, and it remains the oldest experimental theater group still operating in the United States. Also noteworthy in the immediate postwar years was Theatre'47 in Dallas, Texas, founded in 1947 by the innovative stage director and regional-theater pioneer Margo Jones.

It was in the early 1960s, however, that American alternative theater began to recognize itself as an independent group and cohesive movement. Much of the alternative theater forged during the 1960s and 1970s remains very much alive in the twenty-first century, if in different forms.

The work of Judith Malina and colleagues at the Living Theatre was especially noteworthy for questioning the terms of conventional theatrical performance and subverting the psychological realism that had dominated mainstream stage drama in America. Plays such as Paul Goodman's *Faustina* (1952) and Jack Gelber's *The Connection* (1959) experimented with forms of "direct address," in which actors speak directly to the audience and make it part of the play, in some cases suggesting that the actors were not acting at all. Highly experimental in form, the Living Theatre often patterned its performances on readings and interpretations of modernist poetry and art, including the work of such writers as Gertrude Stein.

The New York City–based Open Theater, founded in 1963 by playwright Joseph Chaikin, director Peter Feldman, and a group of actors, pursued many of the same directions as the Living Theatre. A primary emphasis from the outset was on improvisational live performance, focusing on the actors rather than the characters; the cooperative method brought together the impulses and creative directions of individual actors in a kind of living collage. The Open Theater also was groundbreaking in its exploration of contemporary political, social, and cultural issues, exemplified by such productions as *Viet Rock* (1966) and *The Serpent* (1967).

The San Francisco Mime Troupe, founded in 1959 by R.G. Davis, extended the idea that theater can advance a political agenda through such works as the anti–Vietnam War drama *L'Amant militaire* and a critique of American racism in *The Minstrel Show, or Civil Rights in a Cracker Barrel*, both in 1965. Emphasizing physical action on stage, the troupe invokes the imagery and style of the circus, carnival, parades, and medieval European *commedia dell'arte* (which featured the use of masks and exaggerated movements). Emerging from Davis's original mime troupe, the guerrilla theater movement of the 1960s took a consistent and radical political position with the student-led New Left, opposing the Vietnam War, mocking the cultural establishment, and promoting Marxism. In addition to the Diggers, local guerrilla theater groups included the aptly named Haight-Ashbury Vietnam Committee and the San Francisco Red Theater.

Luis Valdez's El Teatro Campesino, or Farmworkers' Theater, developed out of his involvement in the San Francisco Mime Troupe. In 1965, his ideas to explore the subject of workers' rights led him first to join Davis's company and then to begin envisioning his own theater group, with a separate social agenda. As a playwright, Valdez began drafting *actos*, or brief scenarios in Spanish and English that were meant to support striking Latino farmworkers on the picket line. That year labor activist César Chávez organized a strike against grape growers in Delano, California, the same place where Valdez organized and created his theater in conjunction with union members. El Teatro Campesino later incorporated Aztec and Mayan traditions in dramatizing themes and events in Latino culture.

The Free Southern Theatre was established in 1963 as a cultural extension of the civil rights movement, advancing the causes of desegregation and freedom by staging works, starting that year, such as Martin Duberman's *In White America* and Beckett's *Waiting for Godot*. Founded by Gilbert Moses and John O'Neal, the company was established at Toogaloo University in Jackson, Mississippi, with the intention of bringing live theater to people who had never experienced it before. The company toured in predominantly rural, black areas of the South before moving to New Orleans in 1965.

Many African Americans took a more radical political position, promoting an African American theater movement completely organized and run by their own community. Seeing the potential to effect real political and social change through the theater, poet and playwright Amiri Baraka (LeRoi Jones) founded the Black Arts Repertory

Theater (1965) in Harlem and Spirit House (1967) in Newark, New Jersey. Baraka's best-known plays include *Dutchman* (1964), in which a middle-class African American man is murdered by a white woman, and *Slave Ship* (1967), about the suppression of a slave revolt on the Middle Passage.

Theater groups whose primary objective has been to promote change in the perception of gender and sexuality include such feminist companies as It's Alright to Be a Woman Theatre, the Spiderwoman Theatre Workshop, Lilith: A Woman's Theatre, Women's Experimental Theatre, and Split Britches; gay and lesbian companies such as the Gay Theatre Collective, the Cockettes, and the San Francisco Angels of Light; and transvestite and transsexual groups such as the Play-House of the Ridiculous and the Ridiculous Theatrical Company. The Women's Experimental Theatre is best known for a trilogy of plays, *The Daughters Cycle* (1977–1981)—*Daughters*, *Sister/Sister*, and *Electra Speaks*—which recast classical tragedy from a woman's perspective. Both the Play-House of the Ridiculous's *Indira Gandhi's Daring Device* (1966), about overpopulation and the malnourishment of India's Untouchables (lower caste), and the San Francisco Angels of Light's *Razzmatazz* (1974), an example of gay theater that includes the intentional misremembering of lines, push the boundaries of sexuality in live performance, with a strong dose of absurdity and humor.

Pacifist theater groups are tied together by the innovative use of physical space for staging performances, integrating their plays into such settings as peace marches, college campuses, and even laundromats. Another innovation is "invisible theater," in which the production is seamlessly integrated into its setting so that viewers do not know they are watching a performance. The group most associated with the Pacifist movement is the Bread & Puppet Theater, established in New York City (later relocated to Glover, Vermont) by artist Peter Schumann in 1962. While the majority of Pacifist theater groups developed out of the anti-Vietnam War protest movement, the Bread & Puppet Theater pursued a unique aesthetic vision and emphasized more basic human needs—reflected by its practice of distributing free fresh bread at its performances. New York's Pageant Players, on the other hand, levied more direct political criticisms in productions such as *The Paper Tiger Pageant* (1965), meant to be performed at peace rallies, and an anti-corporation play, *King Con* (1966).

The late 1970s brought a surge of formalist theater—that is, theater that is self-conscious about how it is represented and perceived—with a series of plays about human thought and perception. Robert Wilson, a painter, architect, and director whose work encouraged varying levels of attention and participation from the audience; Richard Foreman, who wrote plays about his thought process; Michael Kirby, a sculptor and theorist of structuralist drama; and the Wooster Group, established in Soho, New York City, in 1980, all played a role in re-conceptualizing the theater as formalist. Productions such as *Deafman Glance* (1970), which used no sound and whose central character was a deaf-mute, and *Photoanalysis* (1976), which employed multiple projectors and the repetition of lines by each character, forced audiences to consider and question their own perceptions of what was taking place on stage.

The formalist trend reflected a transition in American alternative theater from an emphasis on political and social themes in the 1960s and early 1970s to a greater focus on the individual in the late 1970s and 1980s. Actors and playwrights such as Spalding Gray of the Wooster Group made themselves the central focus of the performance; each of Gray's plays is based on an experience in his own life, so much so that he ultimately resisted ever playing a character other than himself.

By the 1990s, however, nonmainstream American theater returned to the more political-social impulse of the 1960s and 1970s. Thus, reflecting the trend toward globalization—and the counterculture movement against it—the San Francisco Mime Troupe's *Off Shore* (1993) addressed issues of foreign policy and free trade. Other alternative theatrical groups continue to explore themes and trends in public life, innovations in stage production and the theater (or non-theater) experience, and original, new themes and voices in the dramatic arts.

Theosophy

Theosophy—from the Greek *theos* ("God") and *sophos* ("wise"), and thus literally translated as "knowledge of the divine"—is a term used in reference to any number of religious or philosophical systems professing mystical knowledge of the nature of God and the universe. Religious mystics and philosophers Jacob Boehme and Emanuel Swedenborg, for example, are commonly referred to as Theosophists. Although true believers trace the origin of Theosophy to the writings of the ancient Greek philosopher Plato and the Roman Neoplatonic philosopher Plotinus, Theosophy gained its greatest notoriety in the nineteenth century with the founding of the Theosophical Society by Helena Petrovna Blavatsky in New York City in 1875.

Blavatsky's books *Isis Unveiled* (1877), based on her extensive travels in Asia, Europe, and the Middle East, and *The Secret Doctrine* (1888), based on esoteric Buddhism and Hinduism, became the fundamental texts of the nontheistic theosophical movement. Madame Blavatsky, who claimed numerous psychic powers, eventually settled in India, where she established the headquarters of the Theosophical Society. Directly or in spirit, the late-twentieth-century New Age movement, with its emphasis on meditation, reincarnation, the mystical properties of crystals, and psychic phenomena, is based significantly on the teachings of Madame Blavatsky.

A central principle of Theosophy is the belief that a boundless, unchanging reality and immutable truth—akin to what people have called God—is inherent in all life and transcends human understanding. Another central, and related, tenet is that nothing happens by chance; all events—past, present, and future—occur as a result of the universal laws of nature. Thirdly, Theosophists believe in the principle of reincarnation; that is, human development is guided by the law of karma and the attainment of spiritual growth through innumerable reincarnations of spirit. Good and evil are understood as the result of separation of the spirit and the body throughout the life cycle. The soul, or spirit, is a universal, unifying aspect of nature, joining all humanity in brotherhood.

With Blavatsky's death in 1891, several theosophical societies emerged, following a cycle of numerous schisms. English social reformer Annie Besant became leader of the society based in Adyar, India, while Irish-born mystic William Quan Judge directed the American Section of the Theosophical Society in New York, which later relocated to Pasadena, California, under a succession of leaders. At its peak in the 1920s, the parent Theosophical Society (or Theosophical Society Adyar) had approximately 7,000 members in the United States. The largest branch of the

Theosophical Society, the Indian section, at one time had more than 20,000 members; as of the early 2000s, the figure stood at just under 10,000. In India, Theosophy was closely associated with the Indian independence movement from the early days of both; indeed, the Indian National Congress was founded during a theosophical conference in 1885.

Membership in the Theosophical Society is open to all who support its Three Objects: a universal brotherhood regardless of race, creed, sex, caste, or color; the comparative study of religion, philosophy, and science; and investigation into the unexplained laws of nature. Members, who are not required to renounce the teachings and beliefs of their own faiths, either belong to a local lodge or study center or are members-at-large. Lodges are formally organized groups that consist of a minimum of seven members and meet regularly to study Theosophy and arrange theosophical programs for the public. Study centers are informal groups of at least three members who meet regularly and who may offer occasional public programs.

The study of Theosophy directly influenced the works of several well-known composers, artists, and authors, including Ruth Crawford-Seeger, Alexander Scriabin, Wassily Kandinsky, Piet Mondrian, Franz Kafka, and T.S. Eliot. References to Theosophy, often in satire or parody, have appeared in a number of literary, dramatic, and cinematic works, including E.M. Forster's novel *Howard's End* (1910), James Joyce's novel *Ulysses* (1922), Sean O'Casey's play *Juno and the Paycock* (1924), H.P. Lovecraft's short story "The Call of Cthulhu" (1928), Mohandas Gandhi's autobiography, *The Story of My Experiments with Truth* (1927–1929), John Crowley's novel *Little, Big* (1981), Mark Frost's novel *The List of 7* (1993), and the film *FairyTale: A True Story* (1997), directed by Charles Sturridge.

Thoreau, Henry David (1817–1862)

Transcendentalist essayist and theorist Henry David Thoreau was a radical abolitionist and anti-imperialist who pioneered the practice of civil disobedience in America. He was perhaps best known for his 1854 book *Walden, or Life in the Woods*, an account of his two-year experiment in “simple living” in a cabin in the woods. A philosopher and practitioner of American individualism in a pure sense, an advocate of ethics over conformity and of nature over materialism, and a critic of the “busyness” of American life, he was a counterculture of one for his brief adult life.

Born on July 12, 1817, in Concord, Massachusetts, Thoreau inhabited his home there perhaps more intensively than anyone before or since has ever inhabited a locale. He claimed he had “traveled a good deal in Concord” and applied his searching, critical mind to everything he encountered. He addressed his fellow townspeople throughout his life, asking them about their “condition or circumstances in this world, in this town, what it is, whether it is necessary that it be as bad as it is, whether it cannot be improved....”

Concord was the site of one of the first battles of the American Revolution in April 1775. During Thoreau’s life, the egalitarian ideals that had inspired the Revolution not only had been deeply undermined by the spread of slavery, but also faced a new challenge. Industrialization had produced new kinds of class inequality and poverty for workers in the rapidly growing cities of the Northeast. When Thoreau graduated from Harvard University in 1837, the United States had just entered an economic depression that left many out of work. Americans began to wonder whether the new capitalist social order could deliver on its promises of prosperity.

Thoreau addressed this question in his Harvard commencement essay, titled “The Commercial Spirit of Modern Times,” declaring “this world is a place of business. What an infinite bustle! I am awaked almost every night by the panting of the locomotive. It interrupts my dreams.... I think that there is nothing, not even crime, more opposed to poetry, to philosophy, ay, to life itself, than this incessant business.” Thoreau believed that in such a materialistic world, writers and artists had an especially important role to play: to keep in view transcendental truths that had been forgotten in a competitive scramble for profit and prestige.

For the first decade of his life as a writer, Thoreau thought of himself mainly as a poet working in the tradition of the English Romantic William Wordsworth. At first, Thoreau’s themes and style were closely modeled after the transcendental idealism of American essayist and Concord neighbor Ralph Waldo Emerson, but he soon began to develop his own voice and vision. At its best, his verse is firmly anchored in the physical specifics of New England, and its angular rhythms combine with striking vernacular to produce musical language that was innovative and powerful for its time.

Thoreau’s most widely read book, *Walden*, is a kind of long poem in prose. It records his two years, two months, and two days living in a one-room cabin on the shores of a small pond outside of Concord. Thoreau explains, “I went to the woods because I wished to live deliberately, to front only the essential facts of life, and see if I could not learn what it had to teach, and not, when I came to die, discover that I had not lived.”

Henry David Thoreau's Walden, or Life in the Woods (1854), an account of his two years living alone at Walden Pond, Massachusetts, is a criticism of the "busyness" of American life and a reflection on the simple joys and transcendental laws of nature. (Library of Congress)

During his sojourn at the pond, Thoreau experimented with cultivating beans for personal consumption and for sale. If this smacked too much of competition and consumerism, he scaled back his farming during the second year, replacing it with walks in the woods to harvest wild huckleberries. He advocated vegetarianism, abstinence from sex, and stimulant beverages such as coffee, tea, and alcohol. Above all, his work at the pond was to write, and he completed many poems, several essays, the manuscript of *A Week on the Concord and Merrimac Rivers* (1849), and the first draft of *Walden*.

As a response to the bleak reality of life during the depression, *Walden* makes a sustained exploration of the religious philosophy of pantheism. According to this way of thinking, the physical world incarnates the transcendental laws of nature ordained by God. The poet or writer who walks or lives in the woods can become sensitively attuned to these higher laws. He (this was imagined as a gendered role) can then use them to understand and reform a society that has slid into avarice, greed, and hypocrisy.

One way that American society demonstrated its loss of contact with the divinity in nature, in Thoreau's eyes, was by its treatment of the land. *Walden* features meditations on the railroad's invasion of the woods and on the destructive profit seeking of ice packers. It is from Thoreau's essay "Walking" that the influential environmental organization, the Sierra Club, takes its motto, "In wildness is the preservation of the world."

In Thoreau's view, chattel slavery was the most outrageous example of the depths to which a materialistic society could slide. Following his belief that individual conscience overrides social law, he frequently acted as a conductor on the Underground Railroad, concealing escaped slaves in his home and accompanying them to the next safe haven northward. He also turned his talents to supporting the abolitionist cause, publishing fiery antislavery essays that began as lectures.

"Slavery in Massachusetts" (1854), for instance, delivers an unrelentingly harsh attack on Northern complicity with

the slavocracy, especially criticizing those who obeyed Fugitive Slave Laws that required Northerners to return escaped slaves. Thoreau concluded the essay by describing a white water lily as an “emblem of purity” growing from “the slime and muck of earth”—a symbol of the redemption he felt was possible should his audience break unjust laws and take direct action to abolish slavery.

During the last decade of his life, Thoreau dedicated himself to learning as intimately as possible the natural cycles of the woods around Concord. He took long daily walks and gathered voluminous notes for a “Kalendar,” or guidebook to the seasons, that he hoped would help his neighbors regain their communal intimacy with nature. He was unable to complete this ambitious project, nor did he live to see the end of the Civil War and the emancipation of the slaves.

On his deathbed in Concord in spring 1862, he was asked if he could see the other side. He replied, “One world at a time.” Henry David Thoreau died on May 6, 1862.

Tramps and Hoboes

The terms *tramp* and *hobo* refer to members of the American subculture of wanderers, in particular those whose movement from place to place is tied to the railroad system. The tramp and hobo also exist as cultural tropes, familiar figures in the mythology of the American West—on one hand valued for symbolizing freedom and the pioneer spirit; on the other vilified for resisting the conventions of the American work ethic and meritocracy.

The beginnings of tramp and hobo culture generally are traced to post–Civil War America, with their roots in the expansion of the railroad system, the Depression of 1873, the arrival of the Industrial Revolution, and the movement West to explore the frontier, seek adventure, and find jobs. The construction of a national rail network, along with general westward expansion, meant an abundance of work for men willing to travel significant distances from job to job, creating a culture of mobility and flexibility in wage earning. With the financial panic of 1873, that new culture of mobility was adapted by unemployed workers, who used the rail system to “hop rides” to whatever location promised the next month’s wages.

By 1890, train-hopping became an art and a culture unto itself, existing outside the boundaries of mainstream American culture, with its own norms, values, and codes. The hobo culture, with its distinctive “rules of the road” and techniques for survival, was passed from veteran to fledgling wanderer via stories, songs, and slang in “jungle

camps”—squatter campsites on the outskirts of towns, near the railway tracks, where hoboes could eat, sleep, and create a community in relative safety. All were welcome, so long as the rules of the “jungle” were obeyed.

A particularly significant aspect of hobo and tramp culture was the complex system of signs, which resembled hieroglyphs, used for communication. For the most part, hoboes and tramps did not use mainstream means of communication, such as mail, telegraph, and telephone; these signs were used to pass along insider information to other members of the subculture. Hobo signs communicated positive messages about safe and welcoming resting places and where food might be easily obtained, as well as warnings about thieves, vicious dogs, or police.

The terms *hobo* and *tramp* originally held little of the social stigma or exoticism they took on in the latter part of the twentieth century. They merely signified individuals, usually men, who “tramped” from town to town in search of work.

Within the subculture itself, however, distinctions were sometimes made. Hoboes were typically unskilled migrant laborers or seasonal workers who traveled by rail from one job to the next. Tramps wandered but, unlike the hobo, did not work. Tramps typically relied more on their wiles, as well as handouts and petty crime. The actual social boundaries between the two groups, however, were more fluid, depending upon the availability of work.

Small numbers of self-ascribed hoboes and tramps continue to maintain the subculture today, although they are socially and statistically subsumed in the wider homeless population.

Transcendental Meditation

Transcendental meditation (TM) is a relaxation technique that was introduced to the United States in 1958 by Maharishi Mahesh Yogi, an Indian Hindu monk, and popularized by the Beatles and other celebrities who visited the Maharishi’s ashram in the 1960s and 1970s. Transcendental meditation, a proprietary term in the United States, is said to promote relaxation through chanting a mantra, or secret Sanskrit word, assigned to the individual by a TM instructor. Meditators chant for twenty minutes twice a day in a relaxed, comfortable position of their choosing, with eyes closed.

According to its founder, TM is based on ancient Vedic traditions from India; daily practice leads to a higher level of consciousness and a state of “true bliss.” The Maharishi claims that TM allows practitioners to transcend their own consciousness, rising to a state of “restful alertness.” He describes seven states of consciousness, which

range from the commonly understood to those reached through the long-time practice of TM, after which one arrives at a state of true enlightenment.

Maharishi consistently has rejected any notion that TM is a form of religious mysticism, denying any connection to a particular belief or creed and insisting that TM requires no change in lifestyle. However, TM can only be learned from a qualified program teacher, who is the only authorized source for an individualized mantra. The costs of the initial program in the United States begin at \$2,500 (as of July 2007); optional lifetime follow-up programs are available to meditators at an additional charge.

Adherents of TM claim substantial positive results from the practice, including improved physical and mental health due to lowered blood pressure, increased heart function, and reduced stress. Additional claims include reduced cigarette and alcohol use, decreased insomnia and anxiety, and an increased sense of well-being and calmness. Much research has been done on the benefits of TM, including a 1999 study on its effects on heart disease funded by the National Institutes of Health. Although TM has been found to lower blood pressure, reduce stress, and promote good health, similar meditation techniques have been found to be equally effective.

Surrounded by controversy from its introduction in the United States, TM has been accused of such practices as overstating its benefits, including a type of levitation supposedly achieved by advanced practitioners called Yodic Flying. It also has been condemned outright as a cult, although research has shown that TM adherents do not demonstrate behaviors traditionally associated with cults.

In 1973, the Maharishi founded the Maharishi University of Management, located in Fairfield, Iowa, a "consciousness-based" educational institution relying heavily on the practice of TM. Through its adherence to and daily practice of TM, the university and adjacent secondary school, the Maharishi's School of the Age of Enlightenment, claim to have won academic and athletic recognition and awards. In the twenty-first century, the Maharishi has expanded the practice of Vedic tradition to include the incorporation of Maharishi Vedic City, Iowa, where transcendental meditation is used to promote peace and harmony.

Transcendentalism

A prominent intellectual, literary, and cultural movement in New England during the 1830s and 1840s, American transcendentalism was an idealist reaction against British empiricism, or the idea that all knowledge comes from the senses, reason, and reflection on experience, as well as a turning against the dominant Protestant doctrine and secular intellectualism of the time. As America's first cultural revolution, transcendentalism emphasized the

innate, intuitive power of the human mind, a spiritual state that transcends the material plane, the immanence of the divine, and the moral insight and creative energy of the individual.

Challenging contemporary religious beliefs, literary norms, and even social practices, New England transcendentalists such as Amos Bronson Alcott, Ralph Waldo Emerson, Margaret Fuller, and Henry David Thoreau, changed the way Americans thought about culture and society, including religion, community, education, literature, and politics, and the individual. These men and women elevated the borrowing and melding of religions, philosophies, and literatures into a literary, intellectual, and educational renaissance. The impact of transcendental idealism on the national culture was widespread and enduring, producing a new voice and direction in American letters.

While the movement never had a written set of rules or became popular with the masses, transcendentalism was a powerful idea that confounds many people to the present day. The only certainty is the depth and variety of thought among proponents and the sharing of a few broad principles regarding the question “How do we see the world?” The root word, *transcendent*, is sometimes mistaken as suggesting its traditional religious association with a divine being above or apart from life on earth. For the transcendentalists, by contrast, the immanence of the divine, in living creatures and in objects considered inanimate, is a shared spiritual conviction, realized not by material sense perception but by a higher, innate intuition.

Among the underlying principles and influences were those of Eastern religions; the *Bhagavadgita*, the ancient Hindu spiritual text, was revered and referenced by several of the transcendentalists. Unitarianism was another powerful influence, with its belief in revealed religion based on history and the development of an active individual mind—a culture of the self, independent thinking, and creative expression that, in the mind of Emerson at least, called for a radical break from European tradition, the Bible, and any other handed-down constraints.

In addition to religion, morality was also a central concern, with transcendentalists espousing the individual’s responsibility for his or her own morality, the necessity of being true to one’s own divine nature, and distinguishing between doing good and being good (in other words, doing good deeds because religion or law demands it does not make an individual good).

Transcendentalists believed that nature was the ultimate source of knowledge and moral clarity, the only true place to discover God’s will, because God and nature are one. To immerse oneself in the natural world was good for the soul. As a result, utopian social experiments such as Walden and Brook Farm embodied this ideal oneness with nature and the divine.

Walden Woods and Brook Farm

Walden Woods outside Concord, Massachusetts, was the location of Thoreau’s experiment in transcendental living from 1845 to 1847. *Walden, or Life in the Woods* (1854) is his record of those two years, during which he lived in a one-room cabin on the shores of a small pond. In that account, Thoreau made his intention clear: to prove “the mass of men lead lives of quiet desperation” in the overcrowded cities. He set out to “live deliberately” in the woods by the strength of his back and will alone.

Indeed, as Americans were flooding to cities in search of work and wealth, Thoreau embodied the transcendental ideal by becoming one with nature and his own mind, referring to “wildness” as a “tonic.” He sought to experience only the necessities of life—food, shelter, clothing, and fuel—in a state of “voluntary poverty.” Emerson owned property around Walden Pond and also valued the area, walking there often. With the publication of *Walden*, reading Americans were exposed to Thoreau’s rebellious lifestyle and inward-directed mindset, causing some to question the value of urbanization and the health of their own minds and spirits.

Another attempt at social reform was Brook Farm, which operated from 1841 to 1847 in West Roxbury, Massachusetts. Unlike Thoreau’s solitary pursuit of moral self-improvement, Brook Farm sought to change society by combining the thinker and the worker, the intellectual and the laborer, into one person via communal effort.

Author Nathaniel Hawthorne was an original member and shareholder, staying six months before losing interest in the visionary, but ultimately impractical, community. (His 1852 novel, *The Blithedale Romance*, is based heavily on his experiences there.)

The early years at Brook Farm were characterized by the transcendentalist goal of self-culture and spiritual renewal. The farm, while providing a high quality of life and enjoyment for members, eventually shifted from transcendentalist ideals to the more rigid structure of Charles Fourier's socialist utopian doctrines, which blended with financial troubles to end farm operations by 1847. Later counterculture movements in the United States referred to the Brook Farm experiment for communal living ideas.

Antislavery

While transcendental idealism in physical form, such as Walden and Brook Farm, may have faltered under the weight of unrealistic expectations, the new way of thinking had an enormous and beneficial impact on the abolition movement, adding momentum and moral fortitude to the fight in the antebellum period.

Many Bostonians of the early 1800s had considered abolitionists to be extremists. The efforts on the part of the transcendentalists, however, contributed significantly to the spread of the movement and its mainstreaming in the Boston area. Their efforts took largely written and verbal form, the most explosive example being Thoreau's "Resistance to Civil Government" (1849). In this aggressive essay, Thoreau railed against unjust laws, government hypocrisy, and the right of men "to refuse allegiance to and to resist the government, when its tyranny or its inefficiency are great and unendurable."

Other influential antislavery writings by transcendental thinkers include William Ellery Channing's "Slavery" (1835), Thoreau's "A Plea for Captain John Brown" (1859), and Theodore Parker's "Letter to a Southern Slaveholder" (1848). In addition to their essays, speeches, and letters, the Emersons, Alcotts, Thoreaus, and other families in and around Concord covertly offered safe haven and passage for runaway slaves as part of the Underground Railroad.

Education Reform

In a time when rote repetition of facts and figures dominated American education, Alcott used the Socratic method of questioning to draw out his students' knowledge, rather than treating them as empty containers to be filled with dates and formulas. Alcott's Temple School, which he opened in Boston in 1834, went decidedly against the grain of 1800s American education.

Elizabeth Palmer Peabody recorded Alcott's organic teaching methods on such subjects as sexuality, religion, geography, writing, math, and languages in her book, *Record of a School: Exemplifying the General Principles of Spiritual Culture* (1836). Particularly disturbing to Alcott's traditional contemporaries were his discussions with students about the human body and his two-volume *Conversations with Children on the Gospels* (1836–1837).

Despite shock at Alcott's methods, the public clamored for educational reform beginning in the 1820s. Now, teacher training, curriculum, discipline, teacher salaries, and working conditions all seemed ripe for reform. In 1837, the Massachusetts Board of Education was created to address the demands for improvement. Alcott, Peabody, and other transcendental reformers believed in students' inherent moral goodness, but they felt that industrialization had weakened the ability of church and family to influence young people. Encouraging individual moral development as part of the school curriculum thus became a transcendentalist benchmark in education reform.

Literature

In addition to effecting fundamental changes in educational philosophy, the transcendentalists breathed new vitality into American literature, placing greater emphasis on private thoughts, the intuitive sense of spiritual immanence,

and, perhaps above all, an original, organic, native, *American* voice that eventually evolved into literary realism. A greater premium was placed on life and nature as they are experienced and observed firsthand, without the inhibitions and moral strictures of Old World religious, cultural, and literary traditions.

The new intellectual freedom was declared by Emerson in his groundbreaking address at Harvard University in 1837, "The American Scholar," which Oliver Wendell Holmes called "America's intellectual Declaration of Independence." The spiritual underpinnings of transcendentalism were articulated in Emerson's essay of the previous year, "Nature," which literary and intellectual historians widely regard as the closest thing to a fundamental text of the movement. Thoreau's writings explored another broad theme, the distinctions between wild nature and the humanized landscape.

Also notable was a journal called *The Dial* (1840–1844), a quarterly publication edited first by Fuller and Emerson. Notable transcendental thinkers whose writings appeared in its pages included James Freeman Clarke, Orestes Augustus Brownson, George Ripley, Jones Very, Frederic Henry Hedge, Peabody, Channing, Theodore Parker, as well as Fuller, Emerson, Thoreau, and Alcott.

In addition to writing for publication, the transcendentalists also valued conversation, a frequent theme throughout their works. Much of the published work was originally written for the pulpit and lyceum circuit, or public oratory and educational venues. The transcendentalists, to a person, sought to communicate in real, spoken language, valuing the democratic give-and-take quality of personal conversation.

In November 1839, Peabody and Fuller began hosting meetings for women at which participants could discuss a wide array of philosophical issues, such as "What are we born to do?" and "How shall we do it?" Alcott held meetings throughout his life for male participants to discuss topics such as planets, talents, temptations, and culture and tendencies.

Women's Rights

One institutionalized conversation that involved transcendental ideals with a positive and long-term result had to do with the women's rights movement. Arguably, the most influential transcendentalist woman was Fuller, a journalist, critic, and educator who had taught at Alcott's Temple School and edited *The Dial* for its first two years.

The primary intent of Fuller's parlor sessions with Peabody and others was nothing more or less than to promote women's right to think. Through conversation, she sought to influence the way men and women thought about women in America by focusing on the female identity; namely, that women had an identity beyond sex and gender definitions, based on an independent, individually discovered relationship with God. In consonance with the broader spiritual principles of the movement, women were recognized as intelligent, rational, independent beings with value outside of men's regard, worthy of an equal voice in politics, art, religion, and community.

Radical Ideology

Ultimately, American transcendentalism promoted a hard-line individualism, protesting traditional social, religious, and intellectual systems of the early nineteenth century. From social and education reform to literature and politics, transcendentalism introduced Americans to a new way of thinking. Relying on one's individual intuition, trusting oneself to discover truth and make the right decisions without the external influence of church and state, and recognizing God's immanent presence in nature remain radical ideas in many intellectual, religious, and social circles to the present day.

Transsexuals

Transsexuals are individuals who identify with a gender other than the physical one with which they were born and who alter their bodies to achieve the physical norms associated with the chosen gender. The emphasis on bodily transformation is essential to the definition. Generally, *transsexual* refers specifically to those people who, with the aid of surgery and hormone therapy, transform their bodies in order to more comfortably inhabit another gender. The term *transsexual* should not be conflated with *transgender*, which also refers to an identification with non-birth gender but does not imply surgical or hormonal transformation. *Transgender* thus has broader applicability than *transsexual*, with some people using it as an umbrella term for a wide array of gender variance, including people who identify as transsexual. According to a 1998 article in *The New York Times*, more than 50,000 Americans at that time were living in a gender other than their birth gender; approximately 28,000 Americans had undergone sex-change surgery.

Dr. David O. Cauldwell is credited with introducing the term *transsexual* in a 1949 journal article titled "Psychopathia Transexualis." Dr. Harry Benjamin popularized the term in the early 1950s and developed standards of medical care still in use in the twenty-first century. The medical community initially considered these standards radical because Benjamin's treatments accommodated his patients' desires to transition into another gender, rather than use electroshock therapy and medication to subdue the desires.

In the early 1970s, the American Psychological Association introduced into its *Diagnostic and Statistical Manual (DSM)* the condition "gender dysphoria," later changed to "gender identity disorder," as the standard diagnosis for a range of cross-gender identifications that might produce a desire to change physical sex. Like Benjamin's treatments, the introduction of this condition into the *DSM* was perceived as a departure from previous psychological perspectives, which insisted on the immutability of assigned biological gender (often defined according to reproductive capacity).

Since the 1980s, many self-identified transsexuals have protested the persistence of diagnoses such as gender identity disorder, as well as the strict medical processes through which one must proceed in order to have surgery. Many transsexuals argue against the classification of transsexuality as a disorder subject to medical intervention. They suggest instead that transsexuality should be understood as one of many commonplace variations of gender and sex that can be addressed with a range of therapeutic options. In the 1990s and 2000s,

organizations such as Transsexual Menace and the Gender Public Advocacy Coalition (GenderPAC), have provided education, support, and legal action to improve the quality of life, standards of care, and civil rights of transsexuals.

Transsexual Menace was founded in 1994 by Riki Wilchins in response to the failure to name the transgendered community as part of Stonewall 25, a festival celebrating the 1969 Stonewall riots in New York, which many consider the birth of the contemporary queer movement. Since its founding, Transsexual Menace has organized protests against trans exclusion, held vigils to remember transgendered people who have been victims of physical violence, including murder, and raised awareness by encouraging members to “out” (reveal) themselves as transgendered in their daily lives.

Wilchins founded GenderPAC, a public advocacy group based in Washington, D.C., that lobbies for the rights of transsexuals and the greater transgender community, in 1995. GenderPAC also maintains a youth education program to reach out to transgender youth, who may be isolated and lack support in their homes. Mainstream media coverage of transsexual people and the discrimination they face has increased in recent years, for example in popular depictions such as the film *Boys Don't Cry* (1999), which documents the life and murder of Brandon Teena.

Transsexual and transgendered groups frequently organize with gay and lesbian or queer groups, and transsexuals were centrally involved in the seminal gay and lesbian protests of the 1960s and 1970s. However, these communities remain distinct in many ways and, at times, even may be hostile. For example, the Michigan Womyn's Festival, a well-known lesbian music festival, continues to refuse entry to transsexual women, who protest the policy annually by setting up Camp Trans across the street from the festival.

Transvestites

The term *transvestite*, coined in 1910 by German sex researcher Magnus Hirschfeld, refers to a person who regularly wears clothing associated in his or her society with the opposite sex. It is equivalent to the English term *cross-dresser*, although *transvestite* is more often used in psychiatric, medical, legal, and academic contexts, while *cross-dresser* is more often the term of choice for those who engage in the practice. The slang term *tranny* is used to refer to all transvestites, transsexuals, and transgendered people. Although cross-dressing is often equated with homosexuality, many experts believe that more heterosexuals than homosexuals engage in cross-

dressing.

Cross-dressing is known in many societies and has been practiced throughout history. Thus, any attempt to assign a meaning to this behavior must consider carefully the historical and cultural context. Today, people engage in cross-dressing for many reasons: as a source of sexual satisfaction, a generalized protest against social norms, a refusal to accept the dichotomous division of gender or gender identity, an expression of identification with the opposite sex, or preparation for gender-reassignment surgery, among others.

Some people customarily dress in accordance with their biological gender and only occasionally engage in cross-dressing, while for others cross-dressing is the norm. Although both men and women engage in cross-dressing, it is more associated with men, in part because in modern Western countries it is socially acceptable for women to wear men's clothing while the reverse is less often the case.

Virginia Charles Prince is generally regarded as the founder of the transvestite movement in the United States. Born in Los Angeles to an upper-middle-class family in 1913, Prince, a biological male, began secretly cross-dressing at home in his late teens. In 1961, he founded Hose and Heels (also known as the Society for Personal Expression), the first support group for male cross-dressers. Heterosexuals, including Prince, formed the majority of members of Hose and Heels. In subsequent years, hundreds of social and support groups that cater to heterosexually identified male cross-dressers have emerged in the United States. Additionally, scores of conventions provide the opportunity for transvestites from all over the country to meet one another and cross-dress for extended periods of time.

The gay community has long had an equivocal relationship with cross-dressers, who were sometimes despised for their nonconformity and the unwanted attention they drew to the community. This has led to the ironic consequence that some gay cross-dressers keep the transvestite aspect of their identity concealed within the gay community, or only reveal it among selected peers known to be sympathetic. One might say that they are "out of the closet" as gay men but still "in the closet" as transvestites.

Heterosexual cross-dressers face even greater social disapproval. The overall lack of social acceptance encouraged transvestites to form their own networks, support groups, and communities, which in the 2000s include Web sites such as Trannyweb.com and organizations such as Tri-Ess, the Society for the Second Self and the Renaissance Transgender Association. Such organizations perform many functions, including counseling and support to cross-dressers, providing a social context and community, educating others about transvestite issues, and advocating for social and legal acceptance of cross-dressing.

At the start of the twenty-first century, one of the best-known transvestite organizations was the International Foundation for Gender Education (IFGE) in Waltham, Massachusetts. Transgender activist Merissa Sherrill Lynn founded IFGE in 1987 as a nonprofit advocacy organization to combat ignorance that encourages intolerance of transvestitism and transsexualism. IFGE has subsequently expanded to educate all people about restrictive gender viewpoints. IFGE publishes a quarterly journal, *Transgender Tapestry*.

Trekkies

Trekkies is the familiar term for the large, enthusiastic (some might say obsessed or cultlike) fan base of the *Star Trek* science-fiction television shows and movie series. While the original show failed to find long-lasting network success, it attracted devoted fans who worked to keep the show and its progressive, multicultural view of the future on the air. The Trekkies' devotion to and participation in the *Star Trek* franchise demonstrates the deep cultural connection that can develop between a television show and its audience.

The *Star Trek* television series debuted on the NBC network in 1966, at a time when the concept of space exploration and science in general were permeating American popular culture. Audiences, reeling from the effects of the ongoing Vietnam conflict and civil unrest at home, connected with the vision of *Star Trek* in which humanity had overcome its social woes and embraced a philosophy of tolerance toward those—including aliens—outside the mainstream.

Science fiction itself also was in the process of evolving from a genre that extolled the virtue of technological utopias to one that focused on the cultural relevance of the societies portrayed in its stories. Americans who had been turned off by tech-heavy sci-fi literature were attracted to the social and cultural messages of *Star Trek*. At the surface, the show—pitched as a “wagon train to the stars,” according to creator Gene Roddenberry—was an action series geared toward the young; however, the provoking philosophical debates between thoughtful characters, dressed in edgy costumes and presented in campy and alien settings, prompted viewers of all ages to consider the shortcomings of modern-day culture.

Cancellation rumors plagued the show from its beginning, as studio executives failed to see its appeal. Fans, led by Los Angeles science-fiction aficionado Bjo (Betty Jo) Trimble, mounted a spirited write-in campaign to keep the show on the air. Estimates of the number of fan letters that arrived at the studio range from 114,000 to 500,000. The response from viewers countered the common industry belief that Nielsen ratings were the best measure of television audiences and demonstrated the connection between the show's audience and its creators. Before the show even aired, Roddenberry had courted the fanzine community, in which fans wrote their own stories, thereby building a devoted audience infrastructure. Upon cancellation of the show by NBC in June 1969—after three seasons and seventy-nine episodes—devotees of the series, led by the fanzine community, united in an effort to meet at conventions. The first was held in New York City in 1972, with organizers expecting about 300 attendees. Several thousand showed up, and the zeal of fans became evident to the creators and the press. The term *Trekkies* is believed to have been coined by a science-fiction editor, Art Saha, after he saw attendees at a science convention wearing pointy ears (in honor of the pointy-eared character Spock, half-human, half-Vulcan, played by Leonard Nimoy).

Trekkies saw in the series a call to change their lives for the better, to seek infinite possibilities, question them, and build a better future. Many credited the show with inspiring them to become activists for civil rights, peace, women's rights, or gay and lesbian rights; others were inspired to seek careers in the sciences.

Thanks to their efforts, the original *Star Trek* series grew into a popular media franchise that included four additional live-action television series, an animated series, ten feature films, books, comics, and conventions across the country where Trekkies (many of whom prefer to be called Trekkers) could meet the stars and purchase the latest *Star Trek* merchandise.

Turner, Nat (1800–1831)

Nat Turner was a leader in the slave community of eastern Virginia who issued a call for rebellion after witnessing a solar eclipse in 1831. His rebellion led to the deaths of nearly sixty white people and almost 300 black people, most of whom were unconnected to the uprising. Captured and sentenced to death, Turner comported himself with dignity and left a moving final statement, the publication of which made him a martyr and inspiration to antislavery forces.

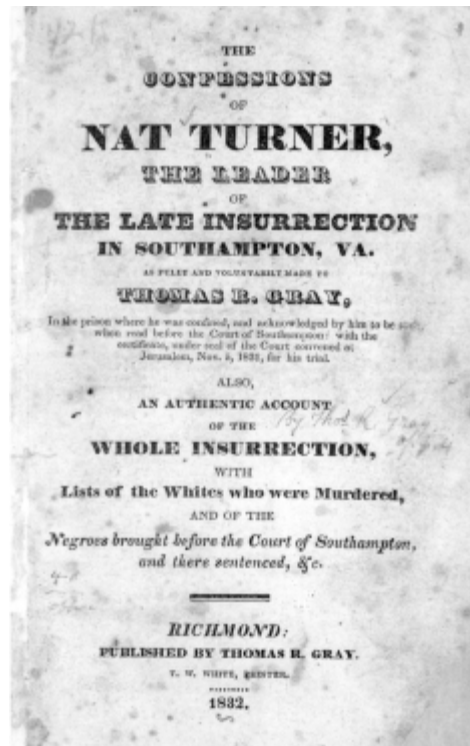

Turner was born on the plantation of Benjamin Turner in Southampton County, Virginia, on October 2, 1800. A skilled carpenter and exhorter, or lay preacher, he displayed a keen intellect and sense of conviction that made him a leader to fellow slaves, who referred to him as “The Prophet” or “General Nat.” In February 1831, Turner interpreted a solar eclipse as a sign from God that he was an instrument through whom his people could achieve violent retribution against slave owners and gain their freedom.

Launching the rebellion on August 22, 1831, Turner and six fellow slaves murdered the family that owned his plantation and moved through the area from farm to farm, gathering a force of about seventy slaves. Over the course of four days, the rebels killed approximately sixty white people—making theirs the deadliest slave uprising in U.S. history—before being routed by white militia.

Poorly armed and untrained, Turner’s men were unable to withstand the militia guarding the county seat of Jerusalem. Turner, who fled and was captured in mid-October, was executed on November 11. In the general hysteria that followed the revolt, hundreds of slaves were killed by white mobs or their own owners.

During his imprisonment, Turner made a lengthy statement that was published as *The Confessions of Nat Turner* (1832). Spelling out the brutality and inhumanity of growing up and living as a slave, *Confessions* describes the

night of the rebellion and Turner's life before it in stark terms. It is, perhaps above all, the portrait of a man secure in his convictions and confident in the rightness of his actions. This work, and his reputation as the leader of America's most significant slave rebellion, made Turner a hero to slaves throughout the United States and to many who were working to end slavery.

The *Confessions of Nat Turner* (1832) is an account of the deadliest slave uprising in U.S. history. The book recounts Turner's life as a slave and the revolt of August 1831, as described to his lawyer during imprisonment. (Library of Congress)

There were more than 200 similar attempts to raise slave rebellions throughout the United States before the abolition of slavery in 1865. Other than Turner's, only a handful achieved even relative success. In 1739, an uprising in South Carolina led by a slave named Cato gathered about eighty followers at the Stono River (the incident came to be called the Stono Rebellion), resulting in the deaths of twenty whites and forty-four slaves. In 1800, Gabriel Prosser, a slave, planned to seize Richmond, Virginia, but he was captured before he was able to execute his strategy. A plan to capture Charleston, South Carolina, was devised in 1822 by freed slave Denmark Vesey, who was hanged with more than thirty followers when their plan was betrayed. In 1859, the white abolitionist John Brown led an assault on the federal arsenal at Harpers Ferry, Virginia (now West Virginia), hoping to arm a slave militia that would negotiate or shoot its way to freedom; finally surrounded and forced to surrender, Brown was sentenced to death and executed—gaining instant status as a martyr to the abolitionist cause.

Outright rebellion was the most visible form of slave resistance; murder, arson, and theft were everyday worries for slave owners throughout the United States, who understood that Turner's example was all too easy to replicate. Turner's rebellion and the reprisals that followed galvanized both slave owners and the abolition movement. Many slave owners believed that white abolitionists had incited the rebellion or aided Turner, and the U.S. Senate called for the arrest of abolitionist leader William Lloyd Garrison. State governments throughout the South passed harsh laws controlling the behavior of slaves and free blacks. Liberal leaders, who believed that Turner's rebellion was part of a larger movement toward liberty, used Turner as an example of the violence that would continue if the United States failed to end slavery. In this larger context, Turner's rebellion helped to solidify

the divide between the North and South that led to the American Civil War.

Twain, Mark (1835–1910)

Mark Twain was the pen name of Samuel Langhorne Clemens, a self-taught humorist, novelist, and social observer who rose from lowly printer's apprentice in his native Missouri to internationally celebrated author of several works that continue to grace canon lists. In these writings, Twain spared no theme or subject, bringing an often jaundiced eye and stinging satiric perspective to mainstream social mores and controversial issues of the time. His fearlessness in exploring sometimes sensitive subjects and ideas in a winningly blunt, down-to-earth way was anathema to some contemporaries but helped make his works timeless and essential reading. Nevertheless, some of Twain's works have found their way onto lists of banned reading in some U.S. schools and libraries.

Twain was born on November 30, 1835, in Florida, Missouri. His family moved four years later to nearby Hannibal, a town on the banks of the Mississippi River that would appear prominently as a setting in his books. When his father died, in 1847, he quit school and joined his brother's printing business. He set type for local and national newspapers as well as literary and humor volumes.

The humor pieces published in these works sparked the boy's interest and figured prominently in his later writings. A commission to write comic travel letters for an Iowa weekly under the pen name Thomas Jefferson Snodgrass allowed him to develop his satirical style, in which he creatively used misspellings, grammar, and syntax. Twain also served as a local and traveling reporter for many weekly publications as he crossed the United States following his interests.

As Twain's writings turned from journalism to autobiographical sketches and fiction, the many sides of his personality began to shine through. Sensitive, humane, and conscientious, his writings also were known to shock readers with their irreverence toward traditional religious and cultural beliefs. Two of his most famous novels, *The Adventures of Tom Sawyer* (1876) and *The Adventures of Huckleberry Finn* (1884), for instance, promote youth mischief, deception, and manipulation of authority figures, openly satirize religious affiliation, and accentuate the racist leanings of many late-nineteenth-century Americans.

In 1873, Twain's playful social critiques turned toward social criticism. *The Gilded Age* (1873), written by Twain in collaboration with Charles Dudley Warner, attacked political corruption and the vices of wealth, even as its author was building a lavish home in Hartford, Connecticut. While some of his literary works—such as *Tom Sawyer*,

Huckleberry Finn, and *Life on the Mississippi* (1883)—brought to life fond memories and imaginings of his Missouri childhood, Twain's criticism of American society became acute. *Huck Finn*, perhaps his most famous and most controversial novel, is also a powerful satire of Southern slavery and racism, the failures of Reconstruction, and evangelical spiritualists, among other elements of post-Civil War life.

Following the deaths of two of his four children, Twain's writings took a dark turn. Human failings and inhumanity became the focus in place of the lighthearted sarcasm for which he had been known, as evident in works such as *What Is Man?* (1906). Antigovernment writings and speeches included his introduction of Winston Churchill at a reception committee meeting on December 13, 1900, during which he declared the United States a meddling sinner in global affairs. Such inflammatory remarks led some to call Twain a traitor. Others merely dismissed him, and several of his works were denied publication during his lifetime.

Twain's global travels opened his eyes to the exploitation of weaker nations by the Western world, a perspective highlighted in subsequent writings. In 1900, he declared himself an anti-imperialist. In 1901, he became vice president of the American Anti-Imperialist League (established in 1898 to fight the U.S. annexation of the Philippines and other territories); he held that position until his death on April 21, 1910, near Redding, Connecticut.

Beyond the characters he created, the times and places he evoked, and the cultural sensibilities he portrayed, Twain's greatest legacy, perhaps, lay precisely in bucking tradition, speaking down-home truth in the American vernacular, and giving birth to a unique, unfettered national literature. There is perhaps no better example of a countercultural writer whose works became mainstream.

UFOs

UFOs are mysterious airborne objects whose nature and origin remain unknown even after close investigation. Their name is a military acronym that stands for “unidentified flying object.” While the vast majority of UFOs are explainable as misidentified aircraft or natural meteorological or astronomical phenomena (becoming “identified flying objects,” or IFOs), the more difficult-to-categorize UFOs are thought by believers and advocates—known as UFOlogists—to be extraterrestrial spacecraft.

Stories of UFO sightings date back to ancient times. UFOlogists have posited that an 8,000-year-old painting from the Sahara Desert depicts an extraterrestrial visitor. Tales of inexplicable objects have been widely documented throughout history, ranging from China in the twentieth century B.C.E. to Rome in the third century C.E., Japan in the twelfth, thirteenth, and eighteenth centuries, and North America in the late nineteenth and early twentieth centuries.

UFOs of the familiar “flying saucer” variety seem to be a phenomenon of the nuclear age. They achieved widespread publicity after pilot Kenneth Arnold spotted what he described as nine circular airborne objects on June 24, 1947, while flying near Washington State’s Mount Rainier. Arnold likened the motions of these mysterious flyers to those of saucers being skipped across water, and his account gave rise to the term *flying saucer*. Since Arnold’s encounter, thousands of sightings of saucer-shaped UFOs have been reported all over the world, as well as observations of flying objects resembling cigars, squares, triangles, and more irregular shapes.

On July 8, 1947, newspapers reported the recent crash of a flying saucer near New Mexico’s Roswell Army Air Field. Although the fallen craft was most likely part of a U.S. military surveillance program intended to spy on the Soviet Union, the shroud of cold war secrecy with which the government surrounded the crash gave rise to an all-but-inexhaustible wellspring of UFO legend and mythology. UFOlogists believe that the crashed object was an alien spacecraft and that the debris and bodies of the dead alien crew had been whisked away to a high-security government installation for study. No amount of scientific debunking (such as that of the fraudulent alien autopsy videos of the mid-1990s) has been sufficient to dissuade those who subscribe to this theory.

An officer at Roswell Army Air Field in New Mexico examines debris from a nearby crash in July 1947. The military identified the material as the remains of a radar surveillance system. To this day, UFOlogists insist it was the wreckage of an alien spacecraft. (AFP/Getty Images)

Over the years since the Roswell incident, countless science fiction films, pulp magazine stories, novels, television shows, and comic books have bolstered the popular image of UFOs and their alien occupants. Believers frequently posit that the aliens responsible for the UFOs in our skies are concerned about humankind’s propensity toward violence, as is Klaatu in Robert Wise’s 1951 film *The Day the Earth Stood Still*. Other alien visitors are reputed to have less altruistic motives for visiting us, such as the exploitation of Earth’s resources or even the plundering of the human genome.

Some aliens are portrayed as being preoccupied with briefly abducting humans, conducting invasive but impermanent medical procedures on them, then releasing their victims with convenient memory gaps that are later filled in via hypnosis. The case of Betty and Barney Hill, a New Hampshire couple who claimed to have been kidnapped for several hours in 1961 by aliens from the Zeta Reticuli star system, are perhaps the most famous of these so-called alien abductees. Although the physical descriptions of the aliens allegedly encountered vary, the

tall, slender, hairless humanoids seen by millions in films such as Steven Spielberg's *Close Encounters of the Third Kind* (1977) and television's *The X-Files* (1993–2002) appear frequently enough in the abduction literature to suggest a strong pattern of pop-cultural influence over the UFO phenomenon.

Like many other episodes of mass hysteria, UFO reports tend to occur in waves, such as the flying saucer heyday of the few years following the Roswell crash, or the “ancient astronaut” UFO renaissance of the early 1970s, which was fueled greatly by the success of the U.S. edition of Erich von Däniken's *Chariots of the Gods?* (1970), a best-selling book of speculations about alien visitations of Earth during ancient times.

Despite the complete absence of definitive proof of extraterrestrial visitation thus far, the sheer volume of UFO reports has received attention from many legitimate scholars and investigators over the years, including agencies of the federal government. In 1948, the U.S. Air Force launched Project Sign, a task force formed to evaluate UFO sightings. The government evidently placed enough credence in the UFO phenomenon to follow up its initial investigations with Project Grudge (1948) and Project Blue Book (1952–1970). After years of gathering and sifting through eyewitness reports, however, these investigative bodies found no conclusive answers to the UFO question. Other countries also have studied the phenomenon, though none have actually endorsed the idea of “aliens among us” as yet.

Several “contactee cults” have arisen since Roswell, beginning in the 1950s. These UFO-oriented spiritual sects usually have formed around a leader who claimed to have made either direct or telepathic contact with alien visitors. George Adamski, who in 1965 established a UFO-inspired foundation that still exists, built a cult around his alleged relationship with Orthon, a Venusian committed to preventing Earth's nuclear destruction. The Unarius Foundation and the Aetherius Society were formed in 1954 and 1956, respectively, around a similar message of altruistic aliens determined to save us from the dangers of nuclear proliferation. During recent years, UFO cults such as Heaven's Gate and the Raëlians have garnered sensational headlines, the former by committing mass suicide in 1997 with the expectation of deliverance by an alien mothership, and the latter by making yet-unproven claims in 2001 about creating human clones.

The existence of such cults suggests that the UFO phenomenon may be rooted in the human religious impulse rather than in the vastness of the cosmos. The aliens that UFO adherents report encountering simply may be the angels, devils, and gods of antiquity dressed up in the modern pseudoscientific raiment of popular culture. To those who believe in alien visitations, they may be as real and as emotionally affecting as any deeply religious experience inspired by belief in a Supreme Being.

Theodore John Kaczynski, the notorious and elusive Unabomber of the 1990s, was responsible for developing and sending sixteen mail bombs that claimed the lives of three people and injured another twenty-three. The motivation for this self-proclaimed anarchist and former mathematics professor, as articulated in letters and a lengthy manifesto sent to government authorities and the press, was to attract attention to the dangers of high-tech industrial society. His targets therefore tended to be associated with universities, airlines, and computers. The Unabomber moniker was derived from the FBI code name UNABOMB (university and airline bomber) during the early years of the case.

He was born to Richard and Wanda Kaczynski in Chicago on May 22, 1942. When he was ten years old, the family moved from Chicago to suburban Evergreen Park. His childhood was generally uneventful, although he later attested to being maltreated by his family and having suffered permanent emotional harm.

Kaczynski was described as a bright child—he scored 167 on an intelligence quotient (IQ) test before entering high school—but not very sociable. Ironically, it was his superior aptitude that propelled him away from his peers at a young age, possibly exacerbating his antisocial predisposition. Kaczynski skipped the sixth and eleventh grades and was admitted to Harvard University when he was only sixteen.

College life was without significant incident, although there are records of his participation in a longitudinal (years-long) study on stress that may have affected him negatively. Otherwise, during his four years at Harvard, Kaczynski studied intensely, joined the swimming and wrestling teams, and played the trombone, while apparently avoiding social bonds. Later, most of his peers could not recall Kaczynski with any specificity. After graduating from Harvard in 1962, he attended graduate school at the University of Michigan, where he completed his Ph.D. in mathematics by the age of twenty-five.

In the fall of 1967, he accepted an assistant professorship at the University of California, Berkeley, where he taught math until 1969. He resigned as a result of apathy toward a profession he believed lacked “relevancy.”

In 1971, Kaczynski moved to Lincoln, Montana, after purchasing a piece of land with his brother, David. Kaczynski later said he was inspired by Henry David Thoreau, the nineteenth-century naturalist and writer whose two years alone in a cabin are recounted in *Walden, or Life in the Woods* (1854), to build a 10-by-12-foot (about 3.05-by-3.66-meter) cabin on the plot. The Lincoln community came to refer to him as “the hermit” because of his reclusive lifestyle.

Meanwhile, in his self-imposed isolation, Kaczynski was committing terrorist acts against individuals he believed were perpetuating the destruction of society. He rationalized the sometimes-fatal bombings as the only remedy to societal problems impelled by technology and those who sought to advance it. Kaczynski was a nihilist who objected to all forms of technological development that, in his view, had become an end rather than a means to greater social good. Society valued individuals only in accordance with the “social machine” of modern capitalism, he argued, and the prevailing institutions exacerbated the ills of the human condition while pretending to do the opposite. Consequently, he did not regard his victims as innocent, seeing them as leaders in the technology industry that was most responsible for the incremental destruction of mankind and nature.

The first bombing incident took place in May 1978 when Kaczynski mailed a bomb to Professor Buckley Crist of Northwestern University. Upon receiving the package, Crist was immediately suspicious of the contents and contacted campus police. Officer Terry Marker responded and suffered minor injuries when he opened the package and a bomb exploded. Over the next seventeen years, Kaczynski sent sixteen more bombs. The last one sent before his capture resulted in the death of Gilbert P. Murray, a timber-industry lobbyist from Sacramento, California, on April 25, 1995.

The Unabomb case entailed the longest and costliest search for a serial killer in U.S. history, including 3,600 volumes of information, 20,000 telephone tips, 200 suspects, 175 computer databases, 82 million records, 12,000

event documents, and 9,000 evidence photographs. Kaczynski was meticulous in engineering the explosives and employed several measures to elude detection. He removed identification numbers from all batteries used in bombing devices, used only wires that were no longer in production, and never licked stamps so that he could not be identified by DNA testing.

In the summer of 1995, Kaczynski threatened to bomb a plane during the Fourth of July weekend unless his essay *Industrial Society and Its Future* was published in *The New York Times* and the *Washington Post*. The U.S. Justice Department urged publication to avoid risking public safety, but the appearance of the 35,000-word manifesto was criticized in other circles for setting a precedent of appeasement for future terrorists.

As it turned out, publishing the essay proved to be the critical step in solving the case, because the Unabomber's brother David Kaczynski recognized the ideology and rhetoric. They resembled the ideas and language in writings by Theodore that had been discovered in their mother's attic. David's attorney contacted the FBI and provided them with information leading to his brother's arrest on April 3, 1996.

The FBI confiscated more than seven hundred pieces of incriminating evidence from the cabin, including a half-constructed and a fully assembled bomb, as well as the typewriter used to draft the manifesto. In return, David Kaczynski received the \$1 million reward, which he apportioned to the families of victims and his brother's defense counsel.

A court-appointed psychiatrist diagnosed Theodore Kaczynski as a paranoid schizophrenic prone to delusions and violence, but found him mentally competent to stand trial. A full trial was precluded, however, when Kaczynski pleaded guilty to thirteen federal bombing offenses. After insisting that his faculties were rational, he conceded to pleading insanity to circumvent the death penalty.

In May 1998, the Unabomber was sentenced to four consecutive life terms and remanded to a maximum-security facility in Florence, Colorado. He continued appealing the case to the United States Court of Appeals for the Ninth Circuit on various grounds, including the grounds that his Sixth Amendment rights—including the right to a speedy and public trial by an impartial jury—were violated.

Underground Railroad

The Underground Railroad was a vast, secret network of individuals and safe houses and other facilities that helped slaves escape from their owners in the American South to freedom in the North and Canada before and during the Civil War. A scattered system had begun to take shape in the late eighteenth century, but it was not referred to as the Underground Railroad until the early 1830s. In the decades that followed, the network helped tens of thousands of slaves reach freedom.

The early system consisted primarily of free blacks, escaped or freed slaves, and a few white abolitionists. With the spread of the abolitionist movement, more whites joined in the clandestine effort. The network was most active in Ohio, Pennsylvania, and Indiana, with efforts and facilities throughout the Northern states.

The Underground Railroad was neither underground nor a railroad, but adopted the nomenclature of the newly emerging rail system. Individuals who helped slaves begin their journey to freedom were termed "agents." Those moving fugitives between stations were called "conductors," and the places providing food and shelter were known as "stations." The "stationmasters" who ran them were themselves undertaking great risk by their involvement. Once escaping slaves made connection with the railroad or "obtained a ticket," they were referred to as "passengers" or "cargo." Others, not directly associated with the railroad itself, provided financial support and were referred to as "stockholders."

Although the connections to the North were well organized, utilizing regular routes, individuals were seldom aware of stations beyond their own immediate locations, which provided security for those working the railroad and for those escaping to freedom. Demand from the South for effective legislation to reduce escapes resulted in the Fugitive Slave Law of 1850 requiring runaways to be returned to their owners, thus increasing the danger for those trying to escape to the North as well as for those assisting them.

Fugitives generally would travel from 10 to 20 miles (16 to 32 kilometers) a day, mostly at night and by foot or wagon. Occasionally, transportation was arranged and paid for by Northern supporters, who would provide appropriate clothing for the fugitives to be transported by ship or rail. Routes often were indirect to avoid discovery, with information passed only by word of mouth; however, fugitives frequently followed routes parallel to common landmarks, such as the Appalachian Mountains or the Mississippi River.

The Underground Railroad spanned a number of states, including Kentucky and Virginia, Ohio and Indiana, and traversed north from Maryland, across Pennsylvania to New York and New England. Often, the journey was too arduous for women and children, whose numbers were far below those of men who successfully fled north. According to some estimates, between 80,000 and 100,000 slaves escaped to the North between 1800 and 1850. Once freed, many men worked to earn sufficient funds to purchase their families out of slavery.

Charles Webber's painting Fugitives Arriving at Levi Coffin's Indiana Farm (1850) dramatizes the ordeal of runaway slaves and the Underground Railroad operatives who led them to freedom. The secret network constituted America's first civil rights movement. (MPI/Stringer/Hulton Archive/Getty Images)

Religious supporters of the Underground Railroad belonged to several denominations including Congregationalists, Methodists, Presbyterians, Quakers, and Wesleyans. Additionally, Northern vigilance committees were established in many of the larger cities to raise money to support the railroad. Well-known figures associated with the Underground Railroad include Isaac Hopper, David Ruggles, William Still, Josiah Henson, John Fairfield, Levi Coffin, the legendary Harriet Tubman, and many others.

Hopper, a Quaker, began helping slaves escape north in the late 1890s. He was active in the antislavery movement in New York and Philadelphia and utilized nonviolent methods for hiding and protecting fugitives.

By the late 1830s, Hopper was joined in the antislavery movement by Ruggles, a New Yorker and America's first black bookseller, publisher of the antislavery magazine *Mirror of Liberty*, and author of several antislavery pamphlets, including *Extinguisher, Extinguished* (1834) and *Abrogation of the Seventh Commandment by the American Churches* (1835). Ruggles is credited with helping escaped slave Frederick Douglass upon his arrival in New York as well as with assisting over 1,000 slaves who traveled on the New York portion of the Underground Railroad.

Still, a slave until his family's escape to New Jersey, taught himself to read and eventually became the secretary of the Pennsylvania Abolition Society; his home became one of the busiest stations on the Underground Railroad. Known as the "father of the Underground Railroad," Still is credited with helping more than 600 slaves to freedom, the account of which he published in the most comprehensive contemporary book on the subject, *The Underground Railroad* (1872).

Henson, like Still, had been born a slave (in Maryland). He escaped to Canada. His life changed when he was introduced to Harriet Beecher Stowe and became the inspiration for Uncle Tom in Stowe's novel *Uncle Tom's Cabin* (1852). Henson traveled extensively throughout the remainder of his life, lecturing and writing about his experiences as Uncle Tom.

Douglass, born a slave and hired out by his master, learned to read under the tutelage of his master's wife. After many years of enslavement, Douglass eventually escaped to New York, where he became one of the nation's

most prominent abolitionists and spokesmen against slavery. Also one of the most sought-after runaway slaves, eventually he was forced to flee to England, where his freedom was purchased by other abolitionists. Upon his return to America, as a free man, Douglass began publishing the influential antislavery newspaper *The North Star*. His home in Rochester became a frequent station on the Underground Railroad.

Another Quaker and abolitionist well known for his work on the Underground Railroad was Coffin, often referred to as the “president of the Underground Railroad.” His home in Fountain City (then Newport), Indiana, became known as the “Grand Central Station” of the Underground Railroad. With his wife, Catharine, Levi Coffin assisted over 2,000 slaves to safety, most going north to Canada.

The best-known conductor on the railroad was undoubtedly Tubman, a former slave who became known as “Moses” for the nineteen trips she made into the South to escort hundreds of slaves, including her parents and other family members, to freedom. A resolute leader, Tubman carried a revolver, navigated by the North Star, told time by the positions of the sun and moon, and outwitted pursuing slave catchers. With the passage of the Fugitive Slave Law in 1850, Tubman was forced to escort fugitives farther north into Canada. During the Civil War, she worked as a Union spy, commanding a group of black soldiers who worked as spies and scouts. Sometimes referred to as “Old Chariot” because of the spirituals she sang to inform slaves of her presence, Tubman remained active after the war, working for the rights of blacks and women and establishing a home for the aged and indigent in Auburn, New York.

The Underground Railroad was perhaps the largest act of civil disobedience to take place in the United States in support of the rights of black Americans, and it constituted an unparalleled protest against slavery. At the conclusion of the Civil War, in 1865, with the Underground Railroad no longer needed, many of the conductors and other volunteers, like Tubman, turned their attention to working for the economic, social, and political equality of the newly freed Americans.

Unitarianism

In the broadest and earliest sense, Unitarianism refers to a version of Christian belief that rejects the concept of

trinitarianism (the belief that God is a singular being who exists simultaneously as a holy trinity—Father, Son, and Holy Ghost), a dominant doctrine in Western Christianity since it was declared at the Council of Nicea in 325 C.E. More narrowly, however, Unitarianism describes a liberal Christian denomination that over the years has become a creedless religious community that attracts people from across the spectrum of belief. It emerged in the late eighteenth century and has, at various times, been an important part of the counterculture of the United States.

Rejection of Orthodoxy

American Unitarianism emerged primarily from a schism among the Calvinist Congregationalist churches of New England during the eighteenth century. One issue that set the stage for the development of Unitarianism was the emotional revivals of the Great Awakening that swept through the American colonies between about 1720 and 1750. In New England, these religious revivals stressed traditional aspects of Calvinist theology—the need for faith, the salvation offered to a select few through the death of Jesus Christ, and the damnation that awaited those not of the elect.

Many questioned this theology, and some ministers began to reject Calvinist orthodoxy. As these religious liberals gained ground in New England, they came into conflict with more conservative religious leaders. The antagonism erupted into open combat when a religious liberal, Henry Ware, was appointed to the prestigious Hollis Chair of Divinity at Harvard University in 1805. Many conservatives left the university in protest and formed their own institution, the Andover Theological Seminary, in 1808. In the years that followed, Harvard became the center of nineteenth-century American Unitarianism.

The antagonism between conservatives and Unitarians among New England Congregationalists continued for decades. One crucial moment came in 1819, when the prominent minister William Ellery Channing gave his sermon “Unitarian Christianity,” setting out the tenets of this brand of liberal faith. Then in 1825, the Unitarians broke away and formed the American Unitarian Association (AUA). By this time, Unitarianism had become very popular in New England, and the vast majority of Congregationalist churches in Massachusetts joined the new organization.

Although Unitarianism started as a liberal Christian denomination, adherents gradually rejected more concepts associated with Christian orthodoxy. In the decades following the organization of the AUA, they abandoned original sin, the virgin birth, the inerrancy of the Bible, the belief in Jesus Christ as a divine savior and belief in his miracles, the tenet of predestination, the anticipation of Judgment Day, and the existence of hell. In place of traditional doctrine, Unitarian ministers presented a rational form of Christianity that celebrated human nature and human reason and made no claims for exclusive possession of religious truth. Unitarians held that both religion and reason were essential to determining truth and believed that science, far from being a challenge to religious belief, offered another way to better understand God and nature.

In the nineteenth century, Unitarianism’s abandonment of many traditional Christian doctrines made it an attractive denomination for those with radical religious beliefs or reformist goals. Many of the most well-known counterculture movements of the period had extensive connections with Unitarianism. In the 1830s, many notable transcendentalists, including minister Theodore Parker and poet Ralph Waldo Emerson, were Harvard-trained Unitarian clergymen. Both movements were centered in New England, and Unitarianism’s views of God and nature drew strongly from transcendentalist writers and thinkers. During the antebellum years, the Unitarian rejection of tradition also made it a natural home for many like Adin Ballou, who worked for the abolition of slavery, and Susan B. Anthony, who campaigned for women’s rights and suffrage.

Modern Developments

Since the nineteenth century, Unitarians have held as one of their primary tenets that the church should not impede each individual’s freedom of conscience in spiritual matters. Because of this belief, the Unitarians abandoned expectations that members have any particular beliefs, including in the existence of God. Unitarianism, therefore, attracts many who believe in the importance of communal cooperation to reach individual spiritual or

social goals but reject the imposition of religious dogma.

In 1961, the American Unitarian Association united with the Universalist Church of America to form the Unitarian Universalist Association (UUA), bringing together two liberal denominations with a shared opposition to the imposition of doctrine. Since that time, Unitarian Universalists have described themselves in a variety of ways, most often claiming identities as humanist, agnostic, atheist, Buddhist, Pagan, and Christian. Given their varied identifications, Unitarians have been champions of religious pluralism and have sought to build bridges among various denominations and religious groups.

The wide variance of individual beliefs, however, has not prevented Unitarians from working together for social causes. In the twentieth century, the UUA was an active part of movements for peace, environmental protection, human rights, and social justice. During the 1960s, many Unitarian Universalist churches were outspoken in their opposition to the Vietnam War and joined the effort to freeze nuclear-weapons production. In 1967, the General Assembly of the UUA passed a resolution to urge the federal government to “broaden the concept of conscientious objection” and formally extended “support to those persons who in the exercise of their moral choice... refuse to register for Selective Service.”

Unitarians were also a vocal part of the campaign for civil and political rights for African Americans. James Reeb, a Unitarian minister serving in Washington, D.C., was beaten to death by segregationists during the march on Selma, Alabama, in 1965. His murder added to the national outrage over the violence that met the civil rights movement in the Deep South.

More recently, Unitarian ministers have played a leading role in performing wedding ceremonies for same-sex couples and in 2004 presided over the first legally sanctioned same-sex marriage, at the Arlington Street Church in Boston, Massachusetts.

Throughout the twentieth century, the membership of the UUA has varied greatly, expanding significantly after the merger in 1961 before declining in the following decade. At the beginning of the twenty-first century, there were more than 1,000 UUA congregations in the United States, with the estimated number of Unitarian Universalists ranging from 250,000 to 500,000.

United Farm Workers

The United Farm Workers Organizing Committee (UFWOC) emerged during the formational years of the Chicano Movement, the unprecedented mobilization of Chicanos across the United States on behalf of their civil rights in the 1960s and 1970s. Formed in August 1966, the UFWOC became the leading force for farmworkers' rights in the United States, especially the Southwest. Although some attempts at organizing farmworkers in California predated the UFWOC (which later changed its name to the United Farmworkers of America, or UFW), it was not until 1966 that these attempts merged under the union affiliation of the American Federation of Labor–Congress of Industrial Organizations (AFL-CIO).

Origins

The struggles for worker rights in the California agricultural system during the 1960s were about more than labor. The larger target was the ideology of a dominant American culture that treated migrant workers as less than human, robbing them of fair wages, education, and basic living conditions.

In the early 1960s, two groups worked diligently to redress institutional discrimination against field workers, the majority of whom were Mexicans, Mexican Americans, and Filipinos, with small minorities of blacks and whites. One of the two groups, the Agricultural Workers Organizing Committee (AWOC), largely a Filipino organization, was having trouble standing up to California growers, especially grape growers in the Delano area. The other group, cofounded by César Chávez and Dolores Huerta in 1962, was called the National Farm Workers Association (NFWA). In 1965, the NFWA, a heavily Mexican American organization, voted to join the Filipinos in their strike against grape growers.

Together, the AWOC and the NFWA fought discrimination and stereotypes, while also pressing for the right to unionize. Chávez led the striking workers in nonviolent demonstrations as they tried to enlist the support of more workers. This was an uphill battle, as the growers had access to strikebreakers and injunctions against the picketing. However, the Chicano Movement as a larger cultural phenomenon was emerging at about the same time, with Chicanos from all walks of life becoming committed to the cause of economic and social freedom. One of the most significant alliances formed during this period was between the NFWA/AWOC and El Teatro Campesino (The Farmworkers' Theater), an activist theater group under the leadership of Luis Valdez, himself a native of Delano and son of migrant laborers.

El Teatro Campesino had members who traveled with the NFWA/AWOC into the fields and on marches, and it was central to the effort, recruiting workers as actors in its plays and then into the movement. The early productions were of short, one-act plays (called *actos*) designed to allow workers to express themselves and describe their conditions by taking on a variety of roles and improvising based on their experiences.

Other artistic alliances also were formed, as artists created posters and banners to be carried in the fields and displayed in the cities in support of the cause. Many plays and art pieces recalled Mexican and Aztec heritage, celebrating the Chicanos' "brown" racial ancestry. Thus, rather than being ashamed of their racial identity, Chicanos reminded themselves through art that they could be and would be proud of that heritage.

Also central to the UFW's formation was a march led by Chávez from Delano to Sacramento, California, in early 1966. The march took demonstrators across a stretch of the San Joaquin Valley, which was notoriously hostile to the workers' cause, and constituted a direct challenge to the segregation historically practiced and enforced there.

Moreover, the identity of the workers as Mexican Americans was evident in many aspects of this march and throughout the campaign. A banner of the Virgin of Guadalupe, the patroness of Mexicans and a figure central to their native heritage, was held high at the front of the procession. At the same time, however, the workers expressed their dual heritage as both Mexicans and Americans—while not fitting completely in either culture or social milieu.

From this contradiction emerged the Chicano voice and sensibility. Signs and flags representing Chicano identity, from the Aztec eagle to the Mexican and U.S. flags, along with such slogans as "*Peregrina, Penitencia, Revolución*" ("Pilgrimage, Penitence, Revolution"), called attention to the history and determination of the Mexican American people.

Here and elsewhere, Chávez and his followers also professed their Roman Catholic faith by attending mass regularly, sometimes daily. This often angered the growers, whose families attended the same churches as workers and who resented the strikers' use of religious imagery to suggest that God was on their side.

César Chávez, the founder and leader of the United Farm Workers, leads a union rally in California during the late 1970s. Chávez and the UFW won gains for migrant workers through strikes, boycotts, protests, and lobbying. (FPG/Hulton Archive/Getty Images)

Growth and Merger

After the NFWA and AWOOC officially merged under the UFW in mid-1966, its leaders and members had much work ahead with respect to the grape strikes. Their efforts for fair working conditions and an end to racism and oppression in labor ultimately brought national attention to the organization and much of national sentiment to their side. Young Chicano activists, including the influential Eliseo Medina, traveled east and eventually rallied a number of mayors and other civic leaders to the farmworkers' cause. The boycott of California non-union-label grapes even extended overseas. Finally, in 1970, the grape growers, who had held out for years, sat down to sign new contracts.

While the issue of racism against Mexican American workers was not fully resolved by the farmworkers' victory, it was significant that the UFW had managed to convince wholesalers and retailers, not just shoppers, to boycott nonunion grapes. This was a sign that mainstream American society was listening to a greater degree than ever before to what Chicanos were saying about the work they did and the treatment they received in the fields. The strikes and demonstrations became the foundation of the fledgling Chicano civil rights movement and labor organization across the United States.

Significantly, strides on behalf of civil rights continued to be made under Chávez's model of nonviolent organizing. Beyond the successes on behalf of Chicano workers in the 1960s and 1970s and its continued advocacy on behalf of all field workers, the legacy of the UFW is far-reaching. Where it continues to operate, the UFW lobbies for fair living and working conditions for field workers and their communities, along with serving outreaches such as La Campesina Radio Network (Farmworker radio). As one of the moving forces in the social, economic, and cultural history of the American Southwest, the UFW continues to pursue the vision of Chávez and Huerta, and to serve their legacy of hope for marginalized peoples.

Universal Negro Improvement Association

The Universal Negro Improvement Association (UNIA) was a black nationalist organization of the early twentieth century that advocated building commercial ties between African Americans and Africa, as well as the emigration of African Americans to Africa. The association was founded in Jamaica by the charismatic black separatist Marcus Garvey in 1914, and it moved its headquarters to New York City in 1916, eventually expanding internationally.

Beginnings

Garvey, a native of Jamaica, had just returned from four years of travel in Central America and Europe when he organized the association, originally intended as a benevolent organization devoted to social and economic reform. Garvey had witnessed the racism that pervaded the “new imperialism” of Europeans in Africa and the massive pressures that expanding capitalism and governments placed on rural blacks, whether from America, the West

Indies, or Africa. For workers who felt disenfranchised from society at large, the UNIA, like other nationalist and Pan-African organizations, provided a sense of belonging.

When Garvey relocated to New York in 1916, the UNIA was still a fledgling organization, not having yet amassed a substantial membership. This changed when Garvey settled in Harlem and brought the UNIA headquarters to New York. Starting with fewer than twenty members, its strong advocacy for black economic and political independence attracted many new members within the first year. New branches began to emerge across the country and would later take hold worldwide. To circulate the ideas of the organization, the UNIA began publishing *The Negro World*, a weekly newspaper, in 1918; circulation would eventually exceed 500,000. By 1920, membership had so expanded that there were nearly 1,000 branches in over forty countries throughout the Americas and Africa.

In 1920, the UNIA held its first international convention, at Madison Square Garden in New York City. At the convention, members promulgated the *Declaration of Rights of the Negro Peoples of the World*, seeking to uplift the black race by encouraging self-reliance and nationhood. The declaration listed a number of grievances and demanded their resolution. Demands were made for ending racially motivated practices such as lynching, standardizing the capitalization of the N in the word Negro, and teaching children black history in public schools. Among the declarations was the adoption of a red, black, and green flag as the official banner of the UNIA and a symbol of the entire African race.

Culture

In an attempt to unify the black community, the UNIA sought inclusive participation by creating a place for men, women, and children in the organization. Male members were able to join the Universal African Legion and the Black Eagle Flying Corps, both uniformed paramilitary groups.

Women, although subordinate to male members, were given a place of their own within the movement: membership in the Black Cross Nurses and the Universal African Motor Corps. The Black Cross Nurses, modeled on the Red Cross, were organized at the local level. The group performed benevolent work, providing public health-care services in black communities. The Universal African Motor Corps was a female auxiliary that was affiliated with the all-male African Legion. Members of the Motor Corps were trained in military discipline and automobile driving and repair.

Youth divisions were organized according to age and, after the age of seven, by gender. The youngest children, ages one through seven, were taught the Bible, the doctrine of the UNIA, and the history of Africa. Between the ages of eight and thirteen, all children received further education in black history and etiquette. After the age of thirteen, education for girls included lessons on hygiene and domestic service in preparation for participation in the Black Cross Nurses. Boys of this age received military training, preparing them for admission to the African League.

Garvey instituted several auxiliary business ventures within the UNIA. The Negro Factories Corporation, incorporated in 1919 with capitalization of \$1 million, generated income and provided jobs in its varied commercial enterprises—grocery stores, restaurants, laundries, tailor and dress-making shops, and a publishing house. The Black Star Steamship Line, a Delaware corporation financed by selling shares to UNIA members and public investors, was also incorporated in 1919. The Black Star Line did not have unanimous support, however, and opponents questioned Garvey's veracity, calling for an accounting of UNIA funds.

The Back to Africa Program, endorsed by the UNIA, had a multifaceted purpose. On one hand, the goal was to uplift and redeem Africa with American blacks taking the lead. From another perspective, the goal was to repatriate African Americans. Beginning in 1921, efforts were made to establish a site in Liberia for UNIA members who were interested in living in Africa. In 1921, an official delegation traveled to Liberia to survey a potential location for those desiring to immigrate.

Initial interaction between the UNIA and Liberian officials was positive. Later, however, Liberian president Charles D.B. King ordered all of the nation's ports closed to members of the UNIA. Some have suggested that King's reversal of attitude was the result of an agreement between Liberia and the Firestone Rubber Company granting Firestone the use of land originally intended for the UNIA. In any event, the lockout by the Liberian government dealt a harsh blow to the UNIA and virtually ended the African repatriation program.

While the UNIA was likely the largest unified black organization of its time, it was not without its problems. Garvey governed the association absolutely, intolerant of even the smallest challenges to his authority, a fact that caused dissension among some of its members. The U.S. government, meanwhile, suspected the UNIA of being subversive and allowed J. Edgar Hoover and the Bureau of Investigation (the forerunner of the Federal Bureau of Investigation, or FBI) to investigate the activities of the association, coordinating their efforts with other federal agencies. European governments distrusted Garvey and his organization because they threatened European colonization. The National Association for the Advancement of Colored People (NAACP) and other organizations advocating integration spoke out against the UNIA because it favored black separatism rather than integration.

Perhaps the greatest blows to the association were Garvey's incarceration (1925–1927) for federal mail fraud in connection with the Black Star Line and his subsequent deportation. Upon his return to Jamaica, Garvey continued his involvement with the UNIA until his death in 1940.

As subsequent leaders directed the UNIA, Garvey's ideas continued to hold sway with the black masses in America. Roi Ottley, a Harlem journalist, explained this influence, noting that Garvey was responsible for instigating the race and color consciousness that continues to inspire black reform efforts.

Up Against the Wall Motherfucker

Up Against the Wall Motherfucker (UAW/MF) was an artistically oriented, anarchist street gang that formed in New York City's Lower East Side in 1967. Colloquially referred to as the Motherfuckers, the group championed an aggressive "politics of confrontation" and was well known in the neighborhood until its demise in mid-1969.

Although the UAW/MF had no formal hierarchy, many regard Ben Morea as the group's de facto leader. Morea, who grew up on the streets of New York City, became friends in the early 1960s with Julian Beck and Judith Malina, cofounders of the Living Theatre, an experimental, politically radical stage group.

In 1966, Morea launched *Black Mask*, a short-lived, crudely mimeographed arts magazine. He also was peripherally involved with Angry Arts Week, a January 1967 festival that brought together hundreds of New York City artists in condemnation of the Vietnam War. The UAW/MF emerged out of *Black Mask*, Angry Arts Week, and the influence of the militant Black Power movement of the late 1960s, which inspired an outpouring of Afrocentric expression in the realms of art, literature, fashion, verbal expression, and other cultural arenas.

The Motherfuckers, which took its name from a poem by LeRoi Jones (later Amiri Baraka) titled "Black People," never had more than a few dozen full-time members. Their ranks included an Ivy League dropout, autodidacts, and barely literate street people, who together carved out a unique niche in the counterculture. While generally sympathetic to the hippies, they often chided the flower children for weakness. The Motherfuckers had a tenuous connection with the Students for a Democratic Society (SDS), the New Left's main political organization, but they recoiled from the group's sectarian political debates and regarded even the most militant students as cloistered and unreliable. Probably the countercultural group the UAW/MF most resembled was the Diggers, an artistically inclined, utopian-minded collective that championed an ethos of maximum personal freedom and set up various counterinstitutions around the Haight-Ashbury neighborhood of San Francisco.

For all their connections to other counterculture movements, the UAW/MF set itself apart with a dark and angry temperament. Some members owned guns and knives, and their broadsheets—frequently published in a militant underground newspaper, *The Rat*—trumpeted the most extreme formulations of the counterculture cosmology. Some of their actions included dumping garbage near the fountain at Lincoln Center for the Performing Arts in midtown Manhattan; cutting the fences and raiding the concession stands at the August 1969 Woodstock music festival in Bethel, New York; strong-arming promoter Bill Graham into letting East Village denizens have free use of his rock club, the Fillmore East; and building support for Valerie Solanas, the tormented feminist who tried to assassinate pop artist Andy Warhol in 1968. The group also set up crash pads for teenage runaways, and it briefly ran a "free store" and a radical coffee shop, the Common Ground.

In 1968, Morea was involved in a melee on Boston Common in which two men were stabbed; in January 1969, he was acquitted of assault and battery with a dangerous weapon. By early 1969, many Motherfuckers sensed that increasing crackdowns by New York City's Ninth Precinct's Tactical Police Force (TPF) and the influx of heroin and amphetamines into the Lower East Side meant that the neighborhood was no longer ideal as a base of operations. As a result, the group slowly disbanded.

A few former members affiliated with the Hog Farm, a famous commune in Northern California. Others spent time in Canjilón, New Mexico, among followers of the militant Indio-Hispanic activist Reies Tijerina (also known as "King Tiger"). Morea and his wife moved to the Sangre de Cristo Mountains in the American Southwest, where they lived, illegally and traveling mostly on horseback, for several years.

Utopianism

Utopianism is the pursuit of an ideal society or community in which the inhabitants live under seemingly perfect conditions. Hence *utopia* and *utopian* are words used to denote an ideal that is likely to be unrealistic and ultimately unattainable.

The word *utopia* first appeared as the title of Sir Thomas More's book-length essay, published in Latin in 1516, about an ideal island community called Utopia. More fashioned the name for his mythical island from an amalgamation of the Greek words *ou* (no) and *topos* (place), and thus "utopia" was "nowhere." However, the concept of utopia is considerably older than its name; Plato's *Republic*, written during the fourth century B.C.E., was perhaps the first comprehensive description of an ideal society. Plato's version of utopia served as the model for countless others, including Tomaso Campanella's *The City of the Sun* (1623), Sir Francis Bacon's *The New Atlantis* (1627), Samuel Butler's *Erewhon* (1872), Edward Bellamy's *Looking Backward: 2000–1887* (1888), William Morris's *News from Nowhere* (1891), and H.G. Wells's *A Modern Utopia* (1905).

Utopianism in the United States, whether based on religious tenets, secular idealism, or economic necessity, has been manifested most often in planned residential communities founded and run by individuals who desired to withdraw from society and to live together harmoniously in their quest for perfection. For nonconformists forced to flee Europe for reasons of religious and political persecution, pre-colonial America—with its vast and relatively inexpensive land and an ideology of tolerance espoused by William Penn in Pennsylvania, Lord Baltimore in Maryland, and Roger Williams in Rhode Island, among others—was an extremely attractive refuge.

The first documented utopian community in the United States was founded in 1663 on the Delaware shore, near the present-day town of Lewes. Dutch Mennonite Pieter Cornelisz Plockhoy van Zierikzee established the settlement, known as the Valley of the Swans or Horekill. At that site, Plockhoy attempted to realize his utopian vision, as outlined in his treatise of 1659, *The Way to the Peace and Settlement of These Nations*. The text included two petitions for peaceful utopian existence to England's lord protector, Oliver Cromwell. Although the community failed after one year, the Valley of the Swans is recognized as the first colony in North America to ban slavery.

Religious Utopias

Many religious utopian societies established in North America were millennial groups preparing for the Second Coming of Christ. Johann Conrad Beissel established the community of Ephrata in Lancaster County, Pennsylvania, in 1732. The celibate brothers and sisters of Ephrata subscribed to an ideal of moral perfectionism that could be attained only through self-denial and strenuous labor. Noted for its printing facilities and accomplishments in calligraphy and choral music, the community declined after the American Revolution and was legally disbanded in 1814. However, smaller settlements in the Ephrata tradition flourished well into the nineteenth

century.

The most successful of the nineteenth-century American utopian communities was established by the Shakers, officially known by several names, including the United Society of Believers in Christ's Second Appearing and the Shaking Quakers. Led by Ann Lee, they were a radical offshoot of English Quakers who had adopted the French Camisards' ritual practices of shaking, shouting, dancing, whirling, and singing in tongues when the Spirit came upon them. Shakers attempted to create a utopian existence in which feminism, pacifism, and abolitionism were the ideals. The first Shaker community was established in 1776 at Niskayuna (later Watervliet), New York. At its zenith in the 1840s, between 4,000 and 6,000 members resided in twenty Shaker villages from Maine to Indiana and Kentucky. Known for the simple beauty and craftsmanship of their furniture, the Shakers flourished economically. Two communities, in Maine and New Hampshire, existed into the late 1970s. The practice of celibacy, along with the inability to attract new members, led to increasingly fewer numbers of Shaker followers.

Several other religious utopian communities prospered in the United States during the nineteenth century. The attempt to create "heaven on earth" while striving to attain spiritual and physical perfection were ideals common to such societies as Harmony, Zoar, Amana, and Oneida.

Johann Georg Rapp's Harmony Society, similar to the Shakers in core beliefs, was one of the most successful. It flourished in Harmony, Pennsylvania (1805–1814), New Harmony, Indiana (1815–1825), and Economy, Pennsylvania (1825–1906). In Economy (present-day Ambridge), Rapp and his followers, known as Rappites, purchased 3,000 acres (1,214 hectares) of land and established themselves as industrious leaders on an ideal trade route on the Ohio River near Pittsburgh. In 1906, a century after its founding, the Harmony Society was officially dissolved.

Joseph Bimeler's Society of Separatists of Zoar, established in 1817, was another economic success. The Zoarites purchased a 5,500-acre (2,200-hectare) tract of land along the Tuscarawas River in east central Ohio. Its magnificent community garden, which occupied an entire village square, symbolized their desire to create an Eden-like utopia. By 1852, the society's assets were valued at more than \$1 million. In 1898, the remaining members decided to dissolve the society.

The Community of True Inspiration, later known as the Amana Society, established at Ebenezer, New York in 1844, and reestablished in Iowa in 1854, differed from the other religious communal societies in at least one key respect. The group did not have one strong individual as leader; rather, its Grand Council made the operational decisions. For the Inspirationists, the economic activity was subordinate to their religious ideal of living a devout and pious life. Money, property, and goods were shared by all members, as in other utopian organizations. In 1932, however, the members voted to disband the communal society and adopted a capitalistic economy.

John Humphrey Noyes's Oneida Perfectionists, relocated from Putney, Vermont, to Oneida, New York, in 1848, also differed from the other religious utopian societies. Noyes believed that only by living in a perfect environment could one live a life without sin. The inhabitants at Oneida lived together with all things, including marriage partners, in common. Noyes' belief in so-called complex marriage was viewed by outsiders as adulterous and sexually immoral. In 1881, Oneida became a joint-stock company involved primarily in the production of flatware, which has continued to the present.

Secular Utopias

Generally more short-lived than their religious counterparts, secular utopias typically were connected with a political or economic revolution. Significant secular communities included New Harmony, established in 1825 in Posey County, Indiana, by Robert Owen, a Welsh industrialist, who purchased the 30,000-acre (12,150-hectare) community, buildings and all, from the Harmony Society for the sum of \$150,000 in an attempt to create a social utopia there; and Brook Farm, founded in 1841 at West Roxbury, Massachusetts, by George Ripley, a Unitarian minister and journalist who based his ideas on those of the French socialist Charles Fourier in an attempt to create a transcendentalist utopia.

Even though both New Harmony and Brook Farm became well established as self-sufficient communities with economic strength in agriculture and industry, these communities lasted less than a decade. However, these secular utopias were the ancestors of the anti-establishment communes prevalent in the United States during the twentieth century. These communes, most popular during the late 1960s, were largely created by antiestablishment protesters opposed to the Vietnam War, capitalism, and mainstream culture. Most of these communes, whose inhabitants were called hippies, dissolved within a few years. Several still flourish today.

Vegetarianism

Vegetarianism—the practice of eating only foods from plants and avoiding all red meats, poultry, and even dairy products—dates back thousands of years. It has been variously adopted for religious, spiritual, ethical, and nutritional reasons. In the United States, the practice first gained a major following in the nineteenth century, out of concern for general health, wellness, and psychological well-being. It was not until the counterculture movement of the 1960s and 1970s, however, that vegetarianism became a widespread movement—albeit one still out of the mainstream.

The potential health benefits of vegetarianism began to be noted in eighteenth-century America, with Benjamin Franklin being an early advocate. General practice was limited, however, until various reform movements of the nineteenth century provided the catalysts for broader awareness.

Among the earliest of these was a dietary reform and temperance campaign initiated by a Presbyterian minister, Sylvester Graham, in the 1830s. Later called the “Father of Vegetarianism” in America, Graham preached on the dangers of alcohol and declared a link between the consumption of meat and the craving for alcohol. During the cholera epidemic of 1832, Graham began advocating a meatless diet to combat the general ill effects of meat on the human body. He went on to advocate a diet that banned not only meat but coffee, tea, spices, and white flour, as well as alcohol and tobacco. The coarse, whole wheat flour preferred by the Grahamites was made into a special bread, which eventually led to the development of the graham cracker.

Some advocates of other reform movements during the mid-nineteenth century, such as abolitionism and

feminism, also adopted vegetarianism, as did members of various utopian communities in the 1840s. One such settlement was the Fruitlands community in Harvard, Massachusetts, founded in 1843 by the educator and transcendentalist Bronson Alcott. Residents of the community followed a strict vegetarian diet and ate Graham bread with fruit and vegetables grown on site. Although Fruitlands lasted less than two years, many of the ideas put into practice at the community would carry over to other reform activities.

Alcott helped to establish the Physiological and Health Association, essentially a vegetarian society. The Vegetarian Society of the United Kingdom was founded in 1847, followed three years later by the American Vegetarian Society. These organizations highlighted the interest in vegetarianism from several quarters, including the Grahamites, followers of Bronson, and advocates of a growing number of other health reform trends, such as hydrotherapy, or water cure. Also significant during this period was the rise of such religious groups as the Seventh-Day Adventists, who adopted vegetarianism under the leadership of cofounder Ellen G. White.

Following the American Civil War, vegetarianism continued to be advocated in a wide range of organizations, publications, and communities, such as Joyful News in California. Individuals such as brothers Dr. John Harvey Kellogg and W.K. (Will Keith) Kellogg helped push vegetarianism to new levels of awareness and acceptance, primarily concerning health-related issues. At the Battle Creek Sanitarium, run by John Harvey Kellogg in Michigan, the brothers developed toasted wheat flakes and other health foods that became popular with vegetarians. In 1906, W.K. Kellogg founded the Battle Creek Toasted Corn Flake Company (later the Kellogg Company) to merchandise the products.

Other aspects of vegetarianism became the principal causes of other groups, including animal rights; Professor J. Howard Moore, in particular, was one of the leading activists in the ethical treatment of animals in the early twentieth century. During the Progressive Era, the issue of the treatment of animals became a focal point of muckrakers such as Upton Sinclair, whose novel *The Jungle* (1905) presented a graphic representation of animal slaughter in the meatpacking plants in Chicago. And the early twentieth century also saw a number of other individuals picking up the message of vegetarianism, including the Boston socialite Maude R.L. Sharpe (later Freshel). Sharpe hosted vegetarian dinners and showed films of slaughterhouses at her home, and was known in the community for organizing an annual vegetarian Thanksgiving dinner at Boston's Copley Plaza Hotel.

From the Great Depression to the early 1960s, vegetarianism faded in popularity in the United States. The economic decline of the Depression era certainly played a role, but the influence of the medical profession and promotional efforts by the meat industry also were important factors. Physicians argued for the health benefits of eating meat, and the meat industry used an aggressive advertising campaign to promote its products. Vegetarian societies and publications continued to attract interest in some quarters, and the American Vegetarian Party was founded in 1948, but popular interest in vegetarianism remained minimal overall.

The rise of the youth counterculture in the mid-1960s led to a revival in vegetarianism for several reasons. The nonviolent focus of the movement and the emphasis on pacifism went beyond an antiwar focus to include the treatment of animals and their consumption. Coincidental with this was a rediscovery of Eastern philosophies and belief systems that endorsed meatless diets.

There also was increased concern about the health aspects of eating meat, poultry, and fish, not just because of the nature of the foods but also because the use of chemicals in the raising of these animals and of preservatives in packaging and distribution was increasing. Colorful personalities, such as Gypsy Boots, emerged on the West Coast, advocating a meatless diet and organic foodstuffs. To the ethical, religious, and health factors previously connected to vegetarianism was added that of concern for the environment, another movement rising from the counterculture movement.

Venice, California

Venice, California, an incorporated part of the city of Los Angeles, is located 14 miles (22 kilometers) west of downtown on the Pacific Ocean, directly south of Santa Monica. A vibrant tourist destination whose Ocean Front Walk has attracted beachgoers, shops and restaurants, and a lively bohemian culture, Venice has been home to several distinctive countercultures, including the Beats of the 1950s and skate culture in the 1970s.

The Pacific beach community of Venice, California—a haven for bohemians, Beat writers, artists, musicians,

surfers, bodybuilders, and skateboarders through the twentieth century—continues to thrive on its counterculture image. (David McNew/Getty Images)

At the turn of the twentieth century, tobacco millionaire Abbot Kinney envisioned a “Venice of America” in the image of Italy’s famous city of canals. Kinney had canals dug to drain marshland near the beach on which to build the town, creating an instant tourist attraction. When it opened on the Fourth of July in 1905, Venice of America featured an amusement pier, as well as gondolas and an arcaded street in the Venetian style. While the beach was a significant attraction, the town continued to grow in popularity with the addition of more amusement park attractions in the years that followed.

Local political problems plagued Venice in the early years, and it was annexed by the city of Los Angeles in October 1925. Most of the canals were filled in by the city, and the popular Venice Amusement Pier was closed when its lease expired in 1946. Little money was invested to rebuild the infrastructure of Venice, and the resulting cheap rents began attracting both European immigrants and young artists and writers.

As a result, Venice emerged during the 1950s as Southern California’s most vibrant countercultural literary community. It is often linked with San Francisco’s North Beach and New York’s Greenwich Village as a center of Beat culture and art.

This movement centered on coffeehouse poetry readings, for which two notable venues in the area were the Gas House on Ocean Front Walk and the Venice West Café on Dudley Street. Lawrence Lipton, whose book *The Holy Barbarians* (1959) helped popularize the Beats, was a prominent figure in the Venice literary scene and an early proponent of poetry as an oral practice. Other writers associated with the scene included Charles Foster, “Mad Mike” Magdalani, Stuart Perkoff, and Alexander Trocchi.

The Los Angeles municipal government, meanwhile, came to regard the countercultural community as a threat and worked tirelessly to harass the young writers and artists in Venice. In 1961, the city adopted a new building code with the intent of tearing down 1,600 buildings in Venice. By 1965, one-third of the buildings had been razed.

During the 1970s, the area of Venice around the former Pacific Ocean Park, known as Dogtown, became home to a vibrant surf and skateboard community. The local Z-boys, a skateboarder team, are now credited with the creation of the skateboard counterculture, as well as with the practice of aerial skateboarding. Initially evincing the punk rock values of do-it-yourself culture, many of the Z-boys parlayed their passions for skating and surfing into lucrative careers as both sports skyrocketed in popularity during the 1980s and 1990s.

Venice also is well known as the home of Muscle Beach, the center of the postwar bodybuilding and fitness subculture. Originally based in Santa Monica and moving south in the 1950s, Muscle Beach Venice originally featured a small weight pen, which was replaced by a more modern facility in the 1990s. Despite rapid gentrification in recent years, Venice still remains home to many artists, surfers, skaters, and a variety of colorful personalities.

Vietnam War Protests

In response to the U.S. military involvement in the Vietnam War—specifically President Lyndon B. Johnson's decision to escalate fighting, by increasing the number of American troops in Southeast Asia in 1964 and 1965, and the drafting of young men to fight the war—protests involving thousands of antiwar and peace organizations sprang up across the United States. The protestors included citizens of all ethnicities, of all ages, and from all socioeconomic backgrounds. And although the antiwar campaign represented only one element of the broader civil rights and counterculture movements of the era, its actions generated much greater visibility, changed perceptions of the war at home, and caused a significant rent in American political and social life.

In spring 1965, faculty and activists at the University of Michigan organized the first of many “teach-ins,” consisting of lectures and seminars aimed at educating the public about the Vietnam War and focusing attention on the issue of U.S. involvement. The practice soon spread to dozens of universities and colleges around the nation, attracting tens of thousands of participants who came to hear and see such well-known figures as radical journalist I.F. Stone, Dr. Benjamin Spock, novelist Norman Mailer, Senator Ernest Gruening (D-AK), well-known pacifist A.J. Muste, folk singers Phil Ochs and Joan Baez, and scores of other intellectuals, academics, and artists.

As the war escalated, it tended to consume the energies of activists involved in other groups and movements. Thus, established organizations such as the Students for a Democratic Society (SDS), the Women's International League for Peace and Freedom (WILPF), the Fellowship of Reconciliation (FOR), the War Resisters League (WRL), the American Friends Service Committee (AFSC), and others refocused their efforts on bringing about an end to the Vietnam War. These were just a few of the approximately 17,000 organizations that, by 1969, helped focus dissent and organize opposition to U.S. military efforts in Southeast Asia.

The proliferation of organizations reflected a highly decentralized, amorphous antiwar campaign. Decentralization, in fact, was perhaps the one constant and most outstanding feature of the movement. Anyone could belong to the movement, simply through his or her participation in an event. Thus, both large and small protests retained a local quality, while remaining part of large-scale national efforts such as the annual Spring Mobilizations, primarily nonviolent demonstrations involving people in cities across the nation.

Participation took a variety of forms. Protestors expressed their views by signing petitions, refusing to pay taxes, boycotting, marching, burning draft cards, attending teach-ins, refusing induction into the armed services, writing letters to political leaders, engaging in guerrilla street theater, and, on at least eight occasions, burning themselves to death in public. Such was the nature of the movement. No national-level organization could hope to set a specific agenda or control the activities of countless individuals around the nation, each of whom held an indeterminate level of personal commitment.

The portrayal of the movement by the national media helped to create a caricature of its participants that has persisted into the twenty-first century: Antiwar counterculture types wore bell-bottomed blue jeans, sported facial

hair and long manes, smoked marijuana and used other psychedelic drugs to excess, and generally were societal dropouts. In reality, participants in the antiwar movement came from all walks of American life. They were hippies, socialists, liberals, radicals, students, housewives, and working people. The anti-Vietnam War movement was one of the few social movements in American history in which anyone could find a place.

The movement continued to gain momentum and was increasingly a thorn in the side of the federal government, which was spending \$1 million per day on the war and downplaying the number of dead being returned home. The movement grew in legitimacy as well, as figures such as Senator Robert Kennedy (D-NY) and the Reverend Martin Luther King, Jr., publicly broke with the Johnson administration over its Vietnam policies in 1967.

Civil rights groups such as the Congress of Racial Equality (CORE) and the Student Nonviolent Coordinating Committee (SNCC) also denounced the government, condemned the war, and demanded the immediate withdrawal of all U.S. forces. In 1967, returning GIs formed the Vietnam Veterans Against the War (VVAW), adding considerable clout to the movement. The Spring Mobilization of 1967 attracted 250,000 protestors to a demonstration in New York City, while other events around the country attracted tens of thousands of marchers each.

In October 1967, tens of thousands of Vietnam War protestors took part in an action called the March on the Pentagon. The declared intent was to physically levitate the building by exorcising the evil contained inside. Armed federal troops stood guard on the roof. (Dick Swanson/Time & Life Pictures/Getty Images)

Despite such momentum, the war continued. Antiwar activists grew increasingly frustrated and impatient with a federal government that seemed indifferent to the demands of millions of people.

The peace movement and the government fought an increasingly divisive and bitter battle over the war in Vietnam from the late 1960s to the early 1970s. As part of its Counter Intelligence Program, COINTELPRO, the Federal Bureau of Investigation (FBI) conducted a fierce secret campaign against movement members and participants. Thousands of Americans were spied on, harassed, intimidated, and jailed.

As the movement began to splinter in the late 1960s, activists fought back. Some, such as the radical Weathermen, resorted to violence. Others continued to express their views through public demonstrations and marches. A relative few quit altogether. The movement against the Vietnam War continued to fracture, however, its various factions pursuing different agendas and employing different tactics. By 1971, the movement was in complete disarray.

The antiwar campaign essentially ended as a national political force before the end of the war in 1975, but its influence was certain, if an enduring matter of controversy among participants and historians alike. To many in the military community, proponents of the war, and critics of the counterculture, the Vietnam War protestors had undermined the military effort, cast shame on the soldiers who had served their country, and abetted the interests of the enemy. In the view of participants and sympathizers, however, the protest movement hastened the end of an ill-fated, politically mistaken, immoral war.

Village Voice, The

The Village Voice is a weekly, tabloid-sized, free, alternative newspaper based in New York City. Taking an antiestablishment perspective from the outset, *The Voice* has maintained a gadfly stance toward politics, government, and culture despite evolving into a larger, more commercial publishing enterprise. The paper was acquired in 2005 by the publishing conglomerate New Times Media.

The Voice was founded in New York's Greenwich Village in October 1955 by novelist Norman Mailer, journalist Dan Wolf, and financier Ed Fancher. Although its original focus was the cultural, political, and social scene in the Village, the focus of its investigative reporting, cultural criticism, and social commentary expanded over the years to include New York City and the nation. Originally an independent newspaper, *The Voice* has been owned by several successive corporations, among them Rupert Murdoch's News Corporation from 1977 to 1985, and by businessman Leonard Stern from 1985 to 2005, when it was sold to the Southwest-based alternative newspaper chain New Times Media.

The Voice is sometimes confused with the underground newspapers of the late 1960s, such as *Yarrowstalks* and *The East Village Other*. While clearly and intentionally an alternative newspaper, *The Voice* has always maintained a highly professional approach to its political and arts coverage, winning numerous Pulitzer Prizes and other journalistic awards.

Its news writers and political commentators over the years have included such notables as Murray Kempton, Wayne Barrett, and Nat Hentoff; writers on the arts have included theater critic John Lahr, movie critic Andrew Sarris, dance writer Deborah Jowitz, gossip columnist Michael Musto, and press critic Alexander Cockburn. The paper ran a cartoon strip by Jules Feiffer for many years; cartoonists Lynda Barry and Robert Crumb have also

contributed. Prestigious contributors from the literary world have ranged from Ezra Pound, Henry Miller, and E.E. Cummings to James Baldwin, Allen Ginsberg, and Tom Stoppard.

The Obie Awards, which the paper has bestowed annually since 1956, honor the best of off-Broadway theater. Its Pazz & Jop music awards recognize alternatives to the mainstream music honored by the Grammy Awards.

When the 1960s counterculture began to supplant the Beat movement of the 1950s, *The Voice* was there to chronicle social protest in New York City. Theater critic John Lahr, for example, covered the Living Theatre and other alternatives to traditional Broadway fare; in film, Jonas Mekas covered experimental filmmakers such as Jordan Belson and Stan Brakhage; and, in general, the newspaper chronicled, sometimes with cynicism, the rise of celebrities associated with Andy Warhol's The Factory, such as Viva.

The Voice has always aligned itself with left-wing causes. Editorially, it supported the civil rights movement and opposed the war in Vietnam. Later, it supported the feminist movement and gay liberation, while covering and advocating for the city's diverse ethnic communities. Even its sports coverage was unpredictable, emphasizing the inequities caused by corporate ownership and featuring peculiar sports stars over conventional heroes.

Through its numerous editors, the paper has sometimes strayed toward strict political correctness, especially in the late 1970s. In recent years, it has strayed into conventionality, highlighted by competition from such papers as the *New York Press* and from the Internet.

Volkswagen Beetle

The Volkswagen Beetle, affectionately known as the Bug, was a German import that became one of the most popular cars in America during the 1960s. Economic, efficient, and quirkily designed—shaped like a beetle, with a round frame—it appealed to the masses of counterculture youth coming of age in the late 1960s and 1970s.

In the mid-1930s, German dictator Adolf Hitler had requested the creation of an affordable automobile that could be mass-produced for the German population. A prototype of the compact, two-door Volkswagen “People’s Car,” developed in Germany by Dr. Ferdinand Porsche, was test-driven extensively (a total of 3 million miles, or 4.8 million kilometers). Construction of a factory model began in 1938, but production was halted due to World War II. Production resumed in 1945, but only about 10,000 cars were produced in that first year. Once full-fledged production began in the late 1940s, the Beetle was quickly embraced by the German public.

By 1951, Volkswagens were being exported to twenty-nine countries but had not yet reached the U.S. market. Imports continued to lag through mid-decade, with only about 1,000 of the cars making it to U.S. shores.

In the early 1960s, however, a clever and highly effective advertising campaign began highlighting the benefits of the Beetle and changing its image. Unlike large American cars, for which new models were introduced every year, the Beetle gained cachet for being small (economical) and unchanging (reliable). A print ad in 1963, for example, depicted the “Volkswagen Theory of Evolution” by showing the Beetle unchanged year after year. An ad in 1964 proclaimed, “It makes your house look bigger.”

By the early 1960s, the popularity of the VW was soaring, as many Americans rejected the hulking, gas-guzzling cars made in Detroit and embraced the Beetle with its small, air-cooled engine. The Beetle, which reached a top speed of 82 miles (131 kilometers) per hour, became especially popular with the baby boom generation as they came of driving age and attended college, for both its aesthetics and affordability. The 1969 Walt Disney film *The Love Bug*, starring a Beetle named Herbie with a mind of its own, helped cement the Beetle’s place in American counterculture.

By 1978, annual American sales of the Beetle had fallen to only 5 percent of what they had been during the peak year of 1968, when 400,000 had been sold in the United States. Japanese imports and the decline of the free-lifestyle hippie culture had taken a toll on sales. The last German model rolled off the assembly line in 1978, but the Beetle continued to be made in Mexico for many years thereafter.

In 1972, a modified model called the Cabriolet was introduced; a convertible, it was instantly popular with college students and beachgoers. Other related Volkswagen models have been the larger fastback and wagonback, and the VW minibus, itself a cultural icon of the 1960s and 1970s. In 1998 a more streamlined and somewhat larger, more powerful model—called the New Beetle (made in Mexico)—was introduced. Consumer reaction to the New Beetle, in part based on nostalgia for the original model, was favorable.

Vonnegut, Kurt, Jr. (1922–2007)

Kurt Vonnegut, Jr., was an American novelist and essayist best known for blending science fiction archetypes with social observation and dark satire. Vonnegut is widely credited with helping to move the genre of science fiction away from escapism and adventure and into more political and humanistic themes. His idiosyncratic plots and writing style, as well as his antiwar politics, made him especially popular with counterculture youth.

Born on November 11, 1922, in Indianapolis, Indiana, Vonnegut began his writing career at Shortridge High School, where he worked on the first daily student newspaper in the United States. He later worked as an editor of the student newspaper at Cornell University and served with the U.S. Army during World War II. His wartime experiences, particularly after he was captured by the Nazis, would heavily influence his literary works.

Vonnegut served time as a prisoner of war at a meatpacking facility in Dresden, Germany, that was nicknamed Slaughterhouse Five. He was on hand during the massive Allied bombing of Dresden in 1945 and was one of the few prisoners of war to survive. The Nazis then put Vonnegut to work collecting and disposing of civilian bodies. This horrific experience led him to ruminate on the violence and futility of war, which became the major theme of the semiautobiographical novel *Slaughterhouse-Five* (1969), as well as the focus of several later works.

After returning from the war, Vonnegut attended the University of Chicago and worked as a reporter in that city. He turned to writing science fiction in his spare time, and his first short story was published in 1950. His first novel, *Player Piano* (1952), was a dystopian tale of human workers being replaced by machines. A similar theme was later the centerpiece for Vonnegut's best-selling, breakthrough novel, *Cat's Cradle* (1963), in which he explored ideas of technological hubris and its effects on human society.

Vonnegut further expanded the field of science fiction by adding absurd and surreal elements, one of which is the literary device of including himself as a character that interacts with his own alter ego, an unsuccessful science fiction writer named Kilgore Trout. These elements were introduced in the best-selling *Breakfast of Champions* (1973), with Trout and Vonnegut becoming recurring characters in subsequent works.

Vonnegut's novels and short stories are widely cited both inside and outside the science fiction community for their explorations of humanity and humanism, moral issues, and the influence of the state on the individual. His short story "Harrison Bergeron" (in the 1968 collection *Welcome to the Monkey House*) is a particularly influential look at the repression resulting from even the most egalitarian social structures, while the novel *Jailbird* (1979) is a thinly veiled commentary on the social effects of the Watergate scandal.

Vonnegut announced his retirement from writing upon publication of his 1997 novel *Timequake*. He then began contributing essays periodically to the left-wing political magazine *In These Times*. Many of these essays are sharply critical of the George W. Bush administration and the Iraq War; others address more whimsical matters, including the art of writing and everyday experiences.

Vonnegut's last book was an essay collection titled *A Man Without a Country* (2005). Before his death on April 11, 2007, he served as honorary president of the American Humanist Association.

Voodoo, Hoodoo, and Conjure

In the United States, the terms *voodoo*, *hoodoo*, and *conjure* are used more or less synonymously for syncretistic folk religions or magic systems of communities of the African diaspora.

Voodoo, or vodou, is a West African belief system adopted in Haiti and elsewhere. When the term is used in the U.S. South, it refers to a system of magic highly syncretized with Christianity (especially Catholicism, because of its popularity in Louisiana). By any spelling, voodoo is an essentially practical system. That is, it focuses not on self-betterment, enlightenment, or moral guidance, but on changing the course of events in the world.

This is demonstrated by the popular image of the voodoo doll: The principle of sympathetic magic is a simple and evocative one, whereby the target can be controlled or influenced through some connection (such as the hair or blood) and by manipulating a look-alike doll. Other voodoo practices incorporate the Catholic notions of the novena, the intercession of saints, and the lighting of candles to aid in bringing about a desired effect.

A shop window in the French Quarter of New Orleans displays voodoo dolls and other ritual objects. An African folk religion that evolved in the West Indies, voodoo found its strongest U.S. following in and around New Orleans.

(David Seelig/Time & Life Pictures/Getty Images)

This influence is key. Much of what a voodoo practitioner does is called “rootwork,” referring to the use of the roots of plants such as mandrake and High John the Conqueror (*Ipomoea jalapa*, taking its familiar name from an African prince who was sold into slavery). Such roots may be used medicinally, making the line between folk magic and folk medicine a thin one. In times when professional doctors called for the letting of blood, the shock of hot and cold baths, and the application of leeches, folk medicine’s use of natural remedies was no less “scientific” or effective. But what has kept voodoo popular—especially when it is called “conjure,” referring to the conjuration of or communion with spirits and other supernatural entities—is its claim to influence the lives of unwilling individuals.

Love charms always have been popular, but so have curses. Indeed, much of the language and lore of voodoo concerns charms and curses. The mojo bag (containing one or more magical items) of a rootworker or his or her client not only brings good luck, it provides protection from evil and curses. A cursed mojo bag can render a man sick, unlucky, or impotent (a popular curse upon men guilty of sexual transgressions).

New Orleans is famous for its voodoo, a reputation that is justified. For generations, Catholic clergy in the city have been scandalized, at least in the pulpit, by the popularity of voodoo among whites. Therein lies much of the durability of folk magic. It provided a source of power and influence to otherwise disenfranchised African Americans.

Two women named Marie Laveau were the most prominent voodoo practitioners in the city for most of the nineteenth century. The elder Laveau was born to a white man and a free Creole. Her date of birth is placed anywhere from the 1780s to the turn of the nineteenth century. She married Jacques Paris, also a free Creole, in Saint Louis Cathedral in 1819. It is widely speculated that the second Marie Laveau was her daughter, perhaps born out of wedlock. The existence of a daughter is not confirmed, however, although someone continued to use the name after the elder Laveau’s death in 1881, and two different New Orleans cemeteries have authentic gravestones bearing the name.

The elder Laveau was instrumental in emphasizing the syncretic Catholic/African/magical nature of voodoo, using rituals to invoke Catholic saints and claiming that benefiting from her work was not at odds with being a Catholic. While many rootworkers in the South catered mostly to the rural poor and working class, those desperate to buy affection or revenge, Laveau worked for the wealthy whites of the city, discovering their secrets by offering free or cheap services to their Creole servants and slaves. For at least two generations, she could be said to be the most well-informed person in the city when it came to the lives of the elite. And this was at a time when those lives were especially rich and secretive, with the traditions of Mardi Gras and krewes forming during the course of the century. Laveau was well respected and, whatever she did to keep her clients happy, it worked well enough to keep her and her successor in business from the beginning of Louisiana’s statehood (1812) through the Civil War, Reconstruction, and the early days of the Progressive Era.

In the twentieth century, the visibility of voodoo decreased significantly, even—or especially—in New Orleans, where it became muddled in the city’s tourist trade. Certainly one explanation for the decline was the dismantling, intentional and otherwise, of the church’s monopoly on moral authority in the first few decades of the century. As a countercultural magical practice, voodoo thrives in climates governed by strict authorities that it can subvert or bypass for its clients. But the enfranchisement of blacks also may have something to do with it. The black middle and upper classes have thrived in Louisiana, and there is less need for the sort of unofficial influence wielded by voodoo practitioners.

Those are local explanations. Nationally, the end of the nineteenth century and beginning of the twentieth saw the end of the Third Great Awakening—the cyclical, climactic shift in American religion that brought the renewal of old faiths and the creation of new ones. Though the obvious effects of this were the birth of fundamentalism, Reform Judaism, and other major religious denominations, the Awakening also brought with it a strong interest in

mysticism, the occult, and various European magical practices.

This interest was at first associated with secret societies and parlor games, such as the Ouija board, but, by the end of the twentieth century, every major bookstore had a New Age or mysticism section. Such groups and practices answered the same practical concerns that voodoo had, often without requiring an intermediary. Thus, while voodoo continues to be practiced in some quarters, it has become even more decentralized. Hundreds of books are available on the subject, some more dubious than others, for the would-be practitioner; anthropological studies have demystified much of it; and it must compete with more than just the mainstream church to attract newcomers.

Though associated by some with animal sacrifice, in the United States this is more often the province of Santería, a similar folk religion but one with a distinct history of its own. The animal sacrifices publicized and litigated in the last decades of the twentieth century—such as in *Church of the Lukumi Babalu Aye v. City of Hialeah* (Florida), decided by the U.S. Supreme Court in 1993—have involved Santería or Lukumi ritual, not voodoo.

Vorse, Mary Heaton (1874–1966)

As a pioneer of labor journalism and a correspondent on international events from 1912 to the late 1940s, Mary Heaton Vorse appealed to readers' emotions by humanizing strikers, while making the news of labor unrest palatable to the general public. The publicity methods she developed during the Passaic, New Jersey, textile strike of 1926, the first major strike in the United States in which workers accepted Communist leadership, provided a prototype for successful labor protests of the next decade.

Born in New York City on October 9, 1874, to Hiram Heaton and Ellen Cordelia Blackman, she was raised in Amherst, Massachusetts, during the summer and in Europe during the winter. Schooled mostly at home, at age sixteen she studied art in Paris as a means to escape parental control. Moving to New York City, she immersed herself in the Art Students League, which was the heart of the bohemian movement in Greenwich Village. A charter member of the Liberal Club, Vorse was also active in the Heterodoxy Club, a proto-consciousness-raising gathering of New Women.

After marrying Albert White Vorse, a journalist and writer, in 1898, she began writing. Her talent eventually

surpassed her spouse's, and she became the sole support of the family. In 1905, she published work in *The Atlantic Monthly* that she later developed into a novel, *The Breaking of a Yachtsman's Wife* (1908).

Vorse and her husband helped establish the A Club, an experiment in communal living that drew liberal reformers and visitors such as novelists Mark Twain and Theodore Dreiser, labor leader Mother Jones, and Russian writer Maxim Gorky. In 1910, when her mother and her husband tragically died within a day of each other, Mary Heaton Vorse entered the ranks of single working mothers.

The magazines *Harper's*, *Scribner's*, and *The Atlantic Monthly* bought almost every short story Vorse wrote. For several decades, she was one of the most popular writers of women's fiction in America. Impassioned by the Lawrence, Massachusetts, textile strike of 1912, she turned her interest to labor journalism and placed articles on the subject in *The Nation*, *The New Republic*, and *The Masses*.

What distinguished Vorse from other labor journalists was that she befriended the workers and marched in the strikes, sometimes being arrested and assaulted in the process. Present at all the major strikes of the period, she organized shirtmakers in Pennsylvania in 1919 and served as publicist of the Great Steel Strike the same year. She also lent her writing and publicity skills at major strikes in Gastonia, North Carolina (1929), Harlan, Kentucky (1937), and Flint, Michigan (1939). Her pen also illuminated the forgotten victims of labor unrest: women and children. In her writings, Vorse emphasized the vital assistance of women in advancing the cause of labor unionism, a perspective not covered by male journalists.

Vorse played a key role in the founding of the Woman's Peace Party in 1915, in the cause of woman suffrage, and in the pacifist movement during World War II. In the arts, her summer home at Provincetown, Massachusetts, became a gathering spot for left-wing and bohemian writers; her wharf was transformed into the initial stage venue of the Provincetown Players, an experimental theater group that introduced the plays of Eugene O'Neill and others.

By the end of her career, Vorse had published sixteen books, two plays, 190 short stories, and numerous articles in national, international, and radical magazines and newspapers. Despite her notable involvement in groundbreaking movements in labor, pacifism, feminism, literature, and theater, she fell into relative obscurity upon her death on June 14, 1966.

Ward, Nancy (ca. 1738–1822)

As a tribal leader and revered figure of the Cherokee Nation, Nancy Ward—or Nanye'hi Ward—served as a

peacemaker between the Cherokee and white settlers in Tennessee during a tumultuous period of cultural shift at the end of the eighteenth century. She challenged Anglo-American assumptions about the roles of women in leadership and in the military.

She was born in Chota, Tennessee, in about 1738 to Tame Doe, a member of the Wolf Clan, and Francis Ward, a white man. Raised by her mother, Ward entered a society troubled by issues of encroaching settlers and forced assimilation into white culture. Her uncle, Little Carpenter, compromised with the whites by accepting missionaries into the village, but only on Cherokee terms. As a biracial child, Ward learned languages of the Cherokee and the English, which later facilitated her position in connecting both worlds.

When she was still a teenager, Ward married a warrior named Kingfisher, a member of the Deer Clan, with whom she had two children. At his side in battle, Ward maintained his firearms, chewing the lead bullets to render them more lethal to the enemy. During the Battle of Taliwa in 1755, in which the Cherokee fought the Creek, Kingfisher received a mortal wound. Grabbing his firearm, Ward assumed his place in combat and rallied the other Cherokee warriors. For her valor, she was bestowed the honorific *Ghihau* ("Beloved Woman") and became a member of the tribal council.

Entering each tribal decision or negotiation with a pacifist viewpoint, which was in part modeled after her uncle's, Ward sided with white settlers when her cousin, Dragging Canoe, fought with the British against the settlers in 1775. In July of the next year, Ward warned white settlers near the Holston River along Virginia's southwest border of a planned attack by the Cherokee. Ward's village was spared militia retaliation because she rescued a Mrs. Bean, who introduced Ward to the principles of dairy farming, which Ward then shared with the Cherokee. Again in 1780, Ward warned American soldiers of Cherokee plans to attack; she was taken as a prisoner of war and returned to Chota.

Ward's successful peace negotiations between the Cherokee and Americans brought military occupation of their villages to an end, while allowing the army to reallocate soldiers to the front lines of the American Revolution. In the 1785 Treaty of Hopewell, Ward promoted partnership between the Cherokee and settlers by advancing her idea that the Cherokee become farmers, which would make them more like the white settlers and allow them to cement their property rights with legal deeds.

Ward's second husband was her cousin, Bryant Ward, with whom she had two more children. After he deserted them, she opened an inn near Benton, Tennessee.

Ultimately, Ward believed that it was not in the Cherokee's best financial or social interests to sell land to settlers. In 1817, Ward, too ill to travel, sent a letter to the tribal council, urging them to enlarge their farms, never part with tribal land, and stay where they belonged rather than move to the west. She died in 1822.

Warhol, Andy (1928–1987)

A pioneering avant-garde artist, filmmaker, magazine publisher, and celebrity, Andy Warhol revolutionized the American and international art world during the post–World War II era. He was a founder and leading creative force of the pop art movement, which supplanted abstract expressionism as the prevailing trend in the Western visual arts of the mid-twentieth century.

Controversial for his public persona and fascination with celebrity no less than for his creative vision, Warhol became known for his repetitive depictions of everyday commercial objects, colorful portraits of famous people, and prediction that “In the future everyone will be famous for fifteen minutes.” Fascinated with fame, Warhol became a celebrity of the 1960s counterculture.

Pop artist, experimental filmmaker, and exemplar of the celebrity culture on which he commented, Andy Warhol was a counterculture of one. His life was as controversial as his art; his techniques were as groundbreaking and unfettered as his creative vision. (Jill Kennington/Hulton Archive/Getty Images)

Born Andrew Warhola on August 6, 1928, in Pittsburgh, Pennsylvania, to working-class parents of Eastern European descent, Warhol earned a bachelor of arts degree in pictorial design from the Carnegie Institute of Technology (now Carnegie Mellon University) in 1949. Soon after graduation, he left Pittsburgh for New York, where he lived for the rest of his life. Changing his surname to Warhol, he established himself as a highly successful commercial artist in the early 1950s, designing advertisements, magazine illustrations, book jackets,

and covers for record albums. His work appeared in such upscale, high-profile magazines as *Vogue*, *Glamour*, and *Harper's Bazaar*.

Warhol's early work in the pop art genre mirrored postwar America's emphasis on consumerism, individualism, and celebrity. By the early 1960s, he gained notoriety by producing pieces that depicted commonplace items such as Campbell's soup cans and Coca-Cola bottles in a variety of formats. He also produced colorful images of celebrities such as Marilyn Monroe, Elizabeth Taylor, and Jacqueline Kennedy. The silk-screened, repetitious, nearly identical and often colorful images reflected the American value of mass production and elevated the mundane to high art. By mid-decade, Warhol, now a celebrity in his own right, produced sculptures based on Brillo soap pad and Kellogg's Corn Flakes boxes. He also created a series of death and disaster paintings that revealed the contemporary American preoccupation with violent death.

The Factory, Warhol's downtown studio, whose walls were covered in aluminum foil and silver paint, became the center of the artist's activity and the place where he often found creative inspiration. It also became famous for attracting celebrities and for its lavish, star-studded parties. Artists, musicians, and celebrities frequented the loft, where Warhol's assistants produced his work in assembly-line fashion. The spirit was captured by *The New Yorker* magazine: "Warhol became a hero to many young people in the sixties because he seemed to be the ultimate anti-parent. Anything you did was O.K. even if you killed yourself doing it." The Factory thus became an icon of the counterculture movement of the 1960s.

Buoyed by his newfound celebrity status in the mid-1960s, Warhol began to concentrate his creative energies on filmmaking. Producing more than sixty films between 1963 and 1974, he addressed a variety of subjects, from the routine to the controversial. His work was influential in the underground cinema, reflecting the values and aesthetic of the avant-garde counterculture.

Sleep (1963), for example, shows one of his male lovers sleeping for six hours; *Empire* (1964) records eight hours in the life of the Empire State Building. Other controversial films include *Blow Job* (1963), *Bike Boy* (1967–1968), and *Lonesome Cowboys* (1968), which highlight homosexuality, an unacceptable topic for film during the 1960s. Sexual themes were also explored in works such as *Blue Movie* (1969), a film that depicts Viva, one of Warhol's superstars and frequent guests at The Factory, engaging in an extended sexual encounter with a male partner. *Andy Warhol's Frankenstein* (1973), a horror-comedy, and *Andy Warhol's Dracula* (1974), a horror film, were directed by Paul Morrissey and enjoyed limited commercial success. Warhol's own most innovative film was *The Chelsea Girls* (1966), a production consisting of two different stories exhibited simultaneously on split screens.

Warhol also ventured into the world of magazine publishing, cofounding *Andy Warhol's Interview* (now *Interview*) in 1969. The large-format publication featured interviews with prominent celebrities and was on the cutting edge of popular culture. In 1966, Warhol became the manager of the Velvet Underground, a rock band that provided the music for his multimedia presentation titled *Exploding Plastic Inevitable*.

On June 5, 1968, Valerie Solanas, the founder of the radical feminist organization S.C.U.M. (Society for Cutting Up Men) and a Warhol acquaintance, shot the artist in the chest and abdomen while visiting The Factory. "He had too much control over my life" was all she offered by way of explanation. The assassination attempt required Warhol to remain in the hospital for two months, and he never completely recovered from the wounds.

The 1970s marked the low point of Warhol's career. In order to support his endeavors, he focused primarily on portraits commissioned by wealthy clients such as rock stars Mick Jagger and Michael Jackson. He also produced two photographic collections and pieces created by urinating on bronze, a technique that shocked many people. His photography appeared in two collections: *Andy Warhol's Exposures* (1979) and *Andy Warhol: Portraits of the '70s* (1979).

Warhol died on February 22, 1987, in New York of complications following routine gall bladder surgery. By the 1980s, his paintings, sculptures, and other works had been added to the collections of major museums throughout the world, and his philosophy of the mass production of art as a moneymaking enterprise was well established. In

The Philosophy of Andy Warhol (1975) he wrote, "Making money is art, and working is art and good business is the best art."

An inveterate shopper and collector, Warhol amassed an eclectic assemblage of objects such as artworks, jewelry, and cookie jars over the course of his life. Following his death, an auction of his possessions at Sotheby's netted more than \$25 million. The auction benefited the Andy Warhol Foundation for the Visual Arts, an organization dedicated to fostering innovative artistic expression. In 1994, the Andy Warhol Museum opened in Pittsburgh; it is the largest museum in the United States dedicated to a single artist.

Waters, John (1946–)

Generally associated with the transgressive cinema of the 1970s, John Waters is a film producer, director, screenwriter, and actor whose works have carried him to iconic cult status in American cinema. Waters's work is widely recognized, celebrated, and vilified for its exploitation and mockery of social norms, taboos, and traditional middle-class sensibilities. His projects typically champion the marginalized and excluded, particularly those with low social status, who are cast as pioneers of bad taste.

He was born John Samuel Waters on April 22, 1946, in Baltimore, Maryland, to a working-class family. In his youth, Waters began his friendship with Harris Glenn Milstead, who would become his long-time collaborator and later gained infamy as the overweight drag queen Divine. Waters received his first 8mm film camera for his sixteenth birthday.

Waters attended New York University for "about five minutes," soon realizing that he was drawn to the fringe films he attended in the city, rather than the classics discussed in the classroom. He was expelled from the university in 1966 for smoking marijuana on school grounds.

At the time of his departure, Waters had already created his first film, the 8mm *Hag in a Black Leather Jacket* (1964), an ironic tale of an African American man who courts a Caucasian woman by carrying her around in a trash can and later weds her, in a ceremony conducted by a Ku Klux Klansman. This film, along with his other early black-and-white films, *Roman Candles* (1966) and *Eat Your Makeup* (1968), would chart Waters's course into transgressive cinema. Each of these films was set in Baltimore, a location he favored as the ideal low-culture backdrop for his ironic social commentary on classism, social pretension, and unabashed bad taste.

Waters's aesthetic arose from a period of cultural self-reflexiveness in American art. Artifice, exaggeration, and the parody of values and icons were mobilized as significant components of artistic theory and production in the 1960s, celebrating that which mainstream culture had cast off or rejected. Among the key influences on Waters's career are American exploitation directors Herschell Gordon Lewis, William Castle, George and Mike Kuchar, and Russ Meyer, all known for their visually shocking, low-budget productions. Also important are Kenneth Anger and Andy Warhol, icons of the underground art and social scene whose films and photography drew the everyday into sharp focus and dealt with controversial subject matter such as the occult, exclusion, and death, revolutionizing the relationship between art and society.

Widespread distribution of Waters's films began in 1969, with the feature-length *Mondo Trasho*, starring Divine. Waters's successive films with Divine in the 1970s, *Pink Flamingos* (1972) and *Female Trouble* (1974), which feature all manner of grotesque fetishism, sexual and religious perversion, and fringe criminality, soon earned the filmmaker a reputation for transgressing the boundaries of good taste.

The 1980s, however, marked a turn toward the mainstream for Waters. With films such as *Polyester* (1981) and *Hairspray* (1988)—the latter of which inspired the Tony Award-winning Broadway musical and 2007 feature-film remake of the same name—Waters's camp sensibility took aim at suburban America in more circumspect fashion, toning down his leanings toward the shocking and grotesque in favor of more ironic social commentary.

This moviemaking formula continued into the 1990s, with his musical homage to juvenile delinquency, *Cry-Baby* (1990), the dark celebrity-killer satire, *Serial Mom* (1994), and *Pecker* (1998), which exploits the eccentricities of a working-class family in ways that transform them into caricatures of low-life outsiders. In spite of Waters's move into more mainstream filmmaking, his films in the 2000s—such as *Cecil B. DeMented* (2000) and *A Dirty Shame* (2004)—retain his trademark focus on bad taste, sexuality, and his characters' descents into darkness.

Waters's controversial career in cinema has spanned more than three decades and has included seventeen films, numerous television shows, including a 1997 episode of *The Simpsons*, five publications of his writings, CD music collections, a one-man touring show, and commentary on a number of DVD releases. Harkening back to pop-art icon Andy Warhol's influence on his career, Waters turned his attention to visual media besides film in the 1990s, creating photography-based artwork and installations that have been exhibited nationally and internationally, including in a retrospective of his art at New York City's New Museum in 2004.

In 2007, Waters became the host (called "The Groom Reaper") of *Til Death Do Us Part*, a program on America's Court TV network featuring dramatizations of real-life marriages that ended in murder.

Watson, Thomas E. (1856–1922)

As a champion of the farm protest movement of the nineteenth century and an outspoken opponent of wealth and privilege, Thomas E. Watson rallied crowds to his side with an inveterate passion and gift for oratory. He attacked the complementary Southern institutions of the Democratic Party and segregation, but the failure of his efforts caused him to turn toward the very things he had attacked. Watson's career demonstrated both the great potential and the inherent difficulties of upsetting the established order during the Populist era of the 1890s.

Thomas Edward Watson was born in Thomson, Georgia, on September 5, 1856, to an upwardly mobile slaveholding family. His parents suffered financially along with many others in the South after the Civil War, but they managed to spare enough money to send him to Mercer University in October 1872. Even as a student, Watson displayed a passion for speaking to an audience.

After studying law and gaining admission to the Georgia bar in 1875, Watson joined the Democratic Party and won election to the state General Assembly in 1882. As a member of the legislature, he fought several losing battles against the exploitation of sharecroppers and convict laborers. Meanwhile, the Farmers' Alliance movement was spreading across the agrarian states, a trend regarded by the Democratic Party as harmless until farmers began forming cooperatives, organizing politically, and working together across racial lines. For years, the Democratic Party had controlled the South by exploiting white fears of "Negro domination" to prevent Southern farmers from uniting against it. Watson never joined the alliance himself, but he was involved in some of its activities, including an 1888 boycott of the jute-bag monopoly.

The spirit of farm protest during this period expressed itself politically as the Populist movement. Watson ran for U.S. Congress in 1890 on a Populist platform, embracing agrarianism, declaring war on the elites who ran the South, and promising an alliance with black farmers. His Congressional career mirrored his time as a state legislator, marked by doomed attempts to end special treatment for elites and to obtain protections for farmers and workers. As a Populist in Congress, Watson was at odds with both the Democratic and Republican parties; as a Southerner, his fight lay with the Democrats who ran the South as a feudal state.

Watson fought against several attempts to merge the Populists with the Democratic Party, realizing that this would mean the death of populism as an independent movement. He was defeated for reelection in 1894 after local Democrats employed mostly illegal campaign tactics. The Populists finally merged with the Democrats by endorsing their candidate, William Jennings Bryan, in the 1896 presidential election. Watson, who ran as the Populist vice-presidential nominee in that contest, was forced to preside over the disintegration of the movement he had fought so long to preserve.

Watson's career reflected the anger of American farmers, who had been pushed to the brink during the late nineteenth century. The lean decades of the 1880s and 1890s caused farmers and those who sympathized with them, such as Watson, to revolt against the Democratic Party, racism, and the elite. Their continued electoral defeats and their inability to overcome the race issue eventually returned many Populists to the Democratic Party. Watson reflected this as well, emerging by 1908 as a bitter racist who championed the Ku Klux Klan and ranted against blacks, Jews, and Catholics. The transformation was complete in 1920, when Watson rejoined the Democratic Party and won reelection to the U.S. Senate.

Less than two years into his term, Watson died, on September 26, 1922. His rise and fall reflected the fortunes of the protest movement that attempted to unite the laboring classes in the South during the Populist era.

Watts, Alan (1915–1973)

The American philosopher and theologian Alan Watts was instrumental in bringing awareness of Asian cultures to the West and in explaining and popularizing Eastern religious philosophies, particularly Taoism and Zen Buddhism. Watts's writings and lectures on Eastern religious philosophy found a receptive audience in the American youth culture of the 1950s and 1960s.

Born in Chislehurst, England, on January 6, 1915, Watts became interested in Eastern cultures and Buddhism during his early teenage years. After graduating from public school in 1932, he moved to London, where he immersed himself in the study of religion and psychology and began his lifelong attempt to synthesize Eastern and Western thought as a basis for psychological healing. Largely self-taught, he was active in the Buddhist Lodge and guided by the Buddhist scholars Christmas Humphreys and D.T. Suzuki. He published his first book, *The Spirit of Zen: A Way of Life, Work and Art in the Far East* (1936) at age twenty-one.

In 1938, he married Eleanor Everett, daughter of American Buddhist Ruth Fuller Everett, and moved to the United States the following year. He first lived in New York City and then moved to Illinois, where he attended Seabury-Western Theological Seminary in Evanston. After completion of his studies, he was ordained in the Episcopal Church and from 1944 to 1950 served as a chaplain at Northwestern University. He became disaffected with Christianity and left the church and divorced his wife in 1950. He moved temporarily to Millbrook, New York, with his new wife, Dorothy DeWitt, and then to San Francisco in 1951, where he taught comparative philosophy and psychology at the American Academy of Asian Studies (AAAS).

It was in the San Francisco Bay Area that Watts began to exert a significant influence on the emerging counterculture. He met poet and Zen Buddhist Gary Snyder, who introduced him to people who would form the nucleus of the Beat Generation. In addition to teaching, he lectured regularly throughout the Bay Area and became a popular speaker, noted for his clarity, wit, and entertaining style. In 1953, he began *Way Beyond the West*, a weekly radio show on KPFA in Berkeley that spread his influence even farther. *The Way of Zen*, published in 1957, became a best seller and gave him the financial freedom to leave the AAAS and devote his full attention to writing and lecturing.

In 1958, Watts began experimenting with the mind-altering drug LSD. He thought it useful as a tool for expanding consciousness, though he cautioned against its casual use. In 1959, he hosted *Eastern Wisdom and Modern Life*, a weekly program broadcast nationally on public television for two years. He divorced again in 1963 and married Mary Jane Yates.

Watts was a central figure in the cultural phenomenon known as the San Francisco Renaissance, which he characterized in his autobiography as “a huge tide of spiritual energy in the form of poetry, music, philosophy, painting, religion, communication techniques in radio, television, and cinema, dancing, theater, and general life-style [which] swept out of this city and its environs to affect America and the whole world.” His interpretations of Asian philosophies played a prominent role in the development of Beat counterculture philosophy and the hippie subculture of the 1960s, but his influence went far beyond those movements.

His twenty-five books, his radio and television shows, and his extensive public lectures were vital in bringing knowledge of Eastern philosophies to Western consciousness. Watts was at the height of his popularity when he died of heart failure on November 16, 1973, at age fifty-eight.

Wavy Gravy (1936–)

Wavy Gravy is the founder of the Hog Farm Collective—identified as the longest-running hippie commune in the United States—and a hippie activist strongly identified with the Woodstock music festival of August 1969. His clown-like antics, irreverent attitude toward authority, and eccentric personality have made him a notable figure of the 1960s American counterculture.

Born Hugh Romney on May 15, 1936, in East Greenbush, New York, he grew up in and around New York City. The German-born physicist Albert Einstein was a family friend and took young Hugh on walks around the neighborhood. Romney was educated at William Hall High School in West Hartford, Connecticut, and by the time he finished his schooling he was already attracted to the Greenwich Village counterculture of Beat and jazz poetry.

In his early adult years, he befriended counterculture entertainment figures such as folk musician Bob Dylan, writer Ken Kesey, activist Paul Krassner, and comedian Lenny Bruce. He moved to San Francisco in 1963 as the hippie movement was just beginning to gain momentum.

In 1965, he founded the Hog Farm Collective on top of a mountain near Tujunga, California. As its name suggests, daily life in the commune included the job of breeding and raising pigs. As more people joined the commune, Wavy Gravy helped form a traveling show called “Hog Farm and Friends in Open Celebration.” He and the other members of the collective began to tour the country giving free performances, protesting the Vietnam War, and emphasizing the need to address poverty and social injustice in America.

Members of the collective acted as an unofficial security team at the 1969 Woodstock music festival in Bethel, New York. They were later dubbed the “Please Force,” referring to their habit of politely requesting that festivalgoers follow certain rules for safety and security. Wavy Gravy served as an unofficial master of ceremonies for Woodstock (and at the anniversary festivals that took place in subsequent years); his high-profile position at the event firmly established him as a well-known member of the hippie counterculture.

Wavy Gravy is also known as the founder of Camp Winnarainbow, a performing arts summer camp near Laytonville, California. The volunteer-run camp teaches a variety of performing arts, particularly circus arts such as juggling and tightrope walking, to children and adults in separate summer sessions. The camp offers scholarships

for financially disadvantaged children, and many of the volunteers who run the camp are former campers themselves.

People who are unaware of Wavy Gravy's status as a counterculture icon may recognize his name in another context: the Ben and Jerry's ice-cream flavor named after him. Wavy Gravy ice cream, first produced in 1991 and dedicated to the "Woodstock Generation's ultimate camp counselor," features a combination of caramel, cashews, almonds, and chocolate hazelnut fudge. Though the ice cream was later taken out of production, Wavy Gravy has remained one of the most popular Ben and Jerry's ice-cream flavors ever sold. It was so well liked that fans successfully petitioned Ben and Jerry's to bring it back and sell it by the scoop in local retail outlets. A portion of the proceeds from the sale of the ice cream goes to Camp Winnarainbow to fund camp programs and activities.

A documentary film about the hippie humorist, *Saint Misbehavin': The Wavy Gravy Movie*, was released in 2008.

Weathermen

The Weathermen—officially Weatherman, later the Weather Underground Organization—was a radical, leftist organization of the late 1960s and early 1970s that was an offshoot of Students for a Democratic Society (SDS). The group took its name from the Bob Dylan song "Subterranean Homesick Blues," which contained the lyrics "You don't need a weatherman to know which way the wind blows," reflecting its members' conviction that the necessity for world revolution was obvious.

The collective referred to itself as a "revolutionary organization of communist women and men" and dedicated itself to carrying out a series of militant actions, including bombings and armed robberies, in hopes of overthrowing the U.S. government. The Weathermen represented a broader turn toward violent resistance by late 1960s activists who were frustrated with the lack of progress achieved through peaceful protest.

Formed in 1960, SDS was initially a small group of primarily middle-class college students who adopted protest strategies from the civil rights movement. By the late 1960s, SDS had a membership of more than 100,000 and

was one of the most powerful opponents of the Vietnam War. At its annual meeting in 1969, the escalating violence in America's cities, as well as the escalating war in Vietnam, led the Weathermen, a group within SDS's Revolutionary Youth Movement, to demand more aggressive forms of antiwar action than the then-prevalent methodology of sit-ins and peaceful demonstrations of civil disobedience. This debate and others led to the fragmentation and effective collapse of SDS at the height of its power, and the members of the Weathermen seized the remains of the organization.

The leaders of the Weathermen were among the most charismatic figures of the New Left, which was in no small part a factor in their initial success. They were considered alluring because of their perceived combination of youth, physical attractiveness, and radical strength. Leader Bernardine Dohrn was a lawyer known for her aggressive statements to the press. Mark Rudd led demonstrations that closed down Columbia University in 1968. Other prominent members of the group include Kathy Boudin, a former community organizer for the Economic Research and Action Project (ERAP); Cathy Wilkerson, editor of the SDS newspaper *New Left Notes* and a founder of the SDS regional office in Washington, D.C.; Bill Ayers, a University of Michigan graduate; and Naomi Jaffe, Eleanor Raskin, David Gilbert, Bob Tomashevsky, and Laura Whitehorn.

In the summer of 1969, several hundred Weathermen moved into group homes in major U.S. cities in order to implement the group's agenda of executing large-scale violent demonstrations. The Weathermen hoped to organize and revolutionize U.S. working-class youth, but such efforts were largely unsuccessful. The first major event planned by the Weathermen was the October 1969 "Days of Rage" protest in Chicago, at which they claimed tens of thousands of young people would violently rise up and oppose the police. Only several hundred protesters showed up, but the small number of participants charged into Chicago's wealthy Gold Coast, breaking windows. The protesters were violently subdued by Chicago police, and six people were shot.

Members of the radical Weathermen group threatened violence against Chicago police during the so-called Days of Rage in October 1969. Organized in response to the Chicago Seven trial, the four-day event resulted in widespread property damage. (David Fenton/Hulton Archive/Getty Images)

After the December 1969 murder of Black Panther Fred Hampton by a Cook County State Attorney's Office unit and the Chicago Police, the Weathermen adopted the name Weather Underground Organization (WUO) and made efforts at becoming a more covert group. This was in part because the Federal Bureau of Investigation (FBI) now perceived the Weathermen as a credible threat, and began harassing them.

One of the covert actions being planned by a Weathermen unit was the bombing of a noncommissioned officers' dance at Fort Dix in New Jersey. On March 6, 1970, during the preparation of the bomb at a Greenwich Village townhouse, it exploded, killing members Terry Robbins, Ted Gold, and Diana Oughton. Members Wilkerson and Boudin survived the bombing and immediately disappeared underground.

After this event, membership in the Weather Underground declined significantly, and those who remained went fully underground, adopting fake identities and abandoning their families and friends in hopes of evading arrest. A secretive leadership group called the Weather Bureau coordinated information among various Underground

groups.

After the townhouse disaster, later bombings were scrupulously planned so as to damage property, but not to hurt or kill people. A bombing was planned to protest the shooting of prisoner George Jackson, a Black Panther, in 1971 at the Ferry Building offices of the state police in San Francisco. The bombing was executed successfully, and without injury.

Other WUO bombings included those of May 1970 at the National Guard Office to protest the student killings at Kent State; June 1970 at New York City Police headquarters to protest police brutality; July 1970 at the Presidio Army Base in San Francisco to mark the eleventh anniversary of the Cuban Revolution; October 1970 at the Harvard Center for International Affairs to protest the Vietnam War; and March 1971 at the U.S. Capitol to protest the invasion of Laos. Communiqués to the press usually accompanied these bombings, and none of them resulted in injury or death.

One of the group's most famous acts was to help LSD guru and counterculture icon Timothy Leary escape from a California prison in 1970, for which the WUO was given \$20,000 by the pro-drug group the Brotherhood of Eternal Love. The FBI eventually captured and re-imprisoned Leary.

The remaining members of the group continued to evade police and set off bombs at strategic locations in protest until 1975. With the withdrawal of troops from Vietnam, a key organizing principle of many New Left groups ceased to exist, and activism around identity-based groups began to flourish. The burden of living underground led the remaining members of the Underground to turn themselves in or attempt to reintegrate into society. Few WUO members were ever imprisoned, because the evidence gathered against them by the FBI had been collected using illegal methods.

White Supremacists

Proponents of the white supremacy movement subscribe to the racist ideology that whites are inherently superior to members of other races, and take organized action, including acts of violence, to advance their beliefs. While the movement is fragmented and acts of racial violence have been perpetrated by ad hoc organizations or mobs, the fundamental beliefs of white supremacy have remained constant throughout American history.

Origins

White supremacy as an organized movement in the United States dates to the beginning of Reconstruction and the birth of the Ku Klux Klan (KKK) in Pulaski, Tennessee, in 1865. While the political goal of the organization was to thwart newly enfranchised black Southerners from putting Republicans in power, Klan members routinely indulged in gratuitous and clandestine beatings, rapes, and lynchings of African American citizens.

In the twentieth century, the assumptions and justifications that underlay institutional racism began to crumble as black Americans and then other minorities gained political power and visibility. This provoked a series of violent backlashes, beginning with a resurgence of the Klan in the 1920s. The civil rights movement of the 1950s and 1960s likewise spawned a violent reaction from supremacist groups, such as the next generation of the Ku Klux Klan, the States Rights Party, and the American Nazi Party.

Despite local victories and defiant gestures, however, the white supremacist groups of the 1950s and 1960s failed to stop the collapse of institutionalized racism. The failures of the white supremacist movement and the continued shift in public opinion against its ideals and goals finally drove the Klu Klux Klan and other white supremacist groups underground.

Reemergence

The failure of organized white supremacist groups led to a vacuum on the far right, and it took several decades for the white supremacist movement with which Americans are now familiar to take shape. A strong early influence was the Posse Comitatus, a right-wing militia group founded in 1971. Posse Comitatus adherents believe that the federal government has illegally usurped powers belonging to American citizens, that there is no legitimate government in America above the county level, and that all actions undertaken by the federal government since the Civil War—including the abolition of slavery and the extension of civil rights to nonwhite Americans—are therefore void. Building on anger in rural areas, where the economic slowdown of the 1970s hit hard, Posse Comitatus spread rapidly.

The mid-1980s brought another major influence: the skinhead movement. The skinheads took their signature shaved-head look—along with a loose, gang-like organization, music, and brutal racism—from working-class British teens. The British skinhead movement had been galvanized by the music and lyrics of Skrewdriver, which mixed heavy metal with the cultural ideals of Nazism.

In the United States, Tom Metzger, a television repairman and former leader of the Knights of the Ku Klux Klan, reinvented himself as the organizer and spokesman of an American skinhead movement he called White Aryan Resistance. The group quickly expanded, with a magazine and a public access television program disseminating white supremacist views and helping to build a small California skinhead gang into a nationwide movement. Metzger and his son, John, were also instrumental in establishing an online presence through bulletin boards and text archives. The anonymity and ease of organization and communication over the Internet was a major spur to the white supremacy movement in general, enabling isolated adherents and groups to coordinate and communicate as never before possible. In the 2000s, the World Wide Web is home to a thriving white supremacist subculture.

The 1980s, meanwhile, also saw the rise of the Aryan Nations, an international neo-Nazi organization founded by Richard Girnt Butler. The Aryan Nations espoused the idea of Christian Identity, a belief that Anglo-Saxons are the lost tribe of Israel and that they, not the Jews, are God's Chosen People. While this belief was first laid out in the nineteenth century, it was not until Butler's Aryan Nations began to disseminate it that the ideology of Christian Identity gained wide acceptance.

The white supremacist movement of the 1980s and 1990s was thus a fusion of three separate cultural trends: the right-wing populist libertarianism of Posse Comitatus, the street muscle of the skinhead movement, and the Christian Identity movement. The combination of racism with a cult of individualism led to the development of

armed compounds and entire communities. The archetype was the Aryan Nations compound in Hayden Lake, Idaho. Although there were never more than a handful of these compounds, with a combined population in the hundreds, they seized the public imagination.

The drumbeat of attention played directly into the hands of Metzger, Butler, and other white supremacist leaders. The various white supremacist movements continued to gain supporters and media attention into the 1990s. The militia movement, which adopted the antigovernment views of Posse Comitatus and at its fringes spawned several small secessionist groups such as Montana's Justus Township, often shared views and members with white supremacist movements.

In 1995, militia sympathizers Timothy McVeigh and Terry Nichols were responsible for the massive truck bombing of the Alfred P. Murrah Federal Building in Oklahoma City, killing 168 and wounding more than 800 people. The militia movement virtually collapsed—or went farther underground—in the aftermath of that incident, as the federal government imprisoned some leaders, many members left, and public opinion turned even more strongly against them. The vision of armed resistance lost its appeal for many would-be white supremacists.

Clumsily handled government interventions at places such as northern Idaho's Ruby Ridge in 1992 and the Branch Davidian compound in Waco, Texas, in 1993, which had helped to recruit new members, suddenly became object lessons. The revelation that the two students who killed thirteen people at Columbine High School in Colorado in 1999 were fascinated with white supremacy was another major blow to the movement. In the wake of these events, the federal government stepped up efforts to infiltrate and monitor white supremacist and antigovernment groups.

In 2001, the Aryan Nations lost their property (in a lawsuit by an Idaho woman and her son who had been attacked by Aryan Nations guards) and declared bankruptcy. Also, the terrorist attacks of September 11, 2001, made talk of secession extremely unpopular. The organization splintered, went into decline, and essentially collapsed after Butler's death in 2004. Several of the few remaining militia groups disbanded, and those that survived were subject to intensified federal surveillance.

Despite these and other setbacks, a number of white supremacist groups continue to exist in the twenty-first century, albeit in more decentralized and secretive form. Large-scale demonstrations, terrorist attacks, and other highly visible acts have dropped significantly. A new generation of white supremacist leaders, much warier of government interference and publicity, presides over a movement that is smaller and much more fragmented than that of the previous decades.

Whitman, Walt (1819–1892)

Walt Whitman was the most famous, influential, and controversial American poet of the nineteenth century. Abandoning literary conventions and creating a distinctive American idiom, he captured in verse the pulse of a young nation with subject matter as free as the democratic principles he championed, rhythms and forms as unfettered as the masses of humanity, and a breaking of cultural barriers that was shocking to many contemporaries. His attention to everyday experience—labor, sexuality, and the joys of living—evoked images that some believed threatened American social values but ultimately others embraced, including aspiring writers and artists.

Abandoning literary and cultural convention, nineteenth-century poet Walt Whitman is credited with nothing less than the invention of a national idiom. His verse was an affirmation of the freedom and energy of the “American masses.” (Library of Congress)

The son of a Quaker carpenter, Whitman was born on May 31, 1819, on Long Island in New York. While growing up in Huntington and Brooklyn, New York, he wrote various works of fiction and was published in the magazines *American Review* and *Democratic Review*. Early in his life, he enjoyed a successful career as a newspaper journalist in and around New York City, editing and writing for a variety of publications, including the *Brooklyn Daily Eagle* (1846–1848).

As a contributor to the *New Orleans Crescent* in 1848, Whitman made an extended trip to the South, where he witnessed slavery firsthand, experienced the music and nightlife of the French Quarter, and was inspired by the majestic Mississippi River. Upon returning to New York in 1859, Whitman began to write and study an increasing

amount of poetry. He created his own style of writing, using more free verse than had ever been used before.

His first and most famous collection, *Leaves of Grass*, consisting of twelve poems, was published in 1855. Whitman continued to revise, extend, and republish the collection for the rest of his life; at least six editions were published over the course of the next three decades. Among the original twelve poems was one that would become his most famous, "Song of Myself" (untitled in the first edition).

Each new edition of *Leaves of Grass*, universally acclaimed as one of the seminal works of American literature, depicted the changing face of the American people, tested the limits of artistic expression in new ways, and forced readers to recognize new aspects of the emerging national counterculture. With each expanded edition, Whitman included more extensive portrayals of and allusions to sexuality, including homoerotic themes. Many credit Whitman with writing some of the first openly gay American literature.

During the American Civil War, Whitman served as a nurse for the Union Army in Washington, D.C. He wrote poems that focused on the war, many of which were included in his book *Drum-Taps* (1865, later incorporated in *Leaves of Grass*). His writings of this period focus mainly on battle experiences, especially the devastating effects on individual soldiers that became apparent after the smoke cleared from the battlefields. His now-classic poem of 1865, "O Captain, My Captain," pays homage to President Abraham Lincoln after his assassination in April of that year.

When the war was over, Whitman worked as a clerk in the office of the U.S. attorney general in Washington, D.C., where he was said to be involved in a romantic relationship with Peter Doyle, a former Confederate soldier, that would last a number of years. Whitman continued to write literary pieces about the state of the United States, celebrating the American workingman in the poem "Passage to India" and expressing his frustration with Reconstruction in "Democratic Vistas."

Moving to Camden, New Jersey, in 1873 after suffering a stroke, Whitman began to study photography; subsequent editions of *Leaves of Grass* included photographs of himself. By this time, Whitman was famous throughout the world, not least among homosexual activists in Great Britain and elsewhere. Among those who visited Whitman at his Camden home were homosexual activist Edward Carpenter and Irish writer Oscar Wilde.

The 1881–1882 edition of *Leaves of Grass* was arguably the most controversial. The book was banned in Boston because of its many sexual innuendos, but Whitman stood firm in not changing the controversial verses. His final edition—referred to as the "deathbed edition"—appeared in 1892. Whitman died on March 26 of that year in Camden.

Whole Earth Catalog

The *Whole Earth Catalog*, described by publisher Stewart Brand as “a survival manual for the citizens of planet earth,” appeared twice annually from 1968 to 1972 and intermittently thereafter, becoming a counterculture standard manual of the early environmental movement, and, according to Apple Computer founder Steve Jobs, an antecedent of the Internet search engine. Brand, a biologist by training, was disenchanted with the cold war political establishment and offered his catalog as a sourcebook of tools for “conducting one’s own education, finding one’s own inspiration, and shaping one’s own environment.”

Winner of a National Book Award in 1972, the *Whole Earth Catalog* appealed to former radicals who had lost faith in their ability to effect social change and were pursuing radical self-sufficiency. As a University of Chicago student explained in 1969, “the point is that it’s the culture that’s sick.... One way to change that is to live differently... just drop out and live in the way you think it ought to be.”

Some of these pioneers went “back to the land,” and the catalog became their guidebook. It advertised mail-order wood stoves, wind generators, well-digging and welding equipment, farm implements, maps, waterproof boots, Danish Earth shoes, amplifiers, and strobe lights. It featured articles on home construction, building hot water heaters (and guitars), organic gardening, glass blowing, natural childbirth, and meditation. Brand used five criteria for choosing the items he included in the catalog: usefulness as a tool, relevance to independent education, high quality, low cost, and easy accessibility by mail.

From the first issue in 1968, Brand offered such high-tech tools as hand calculators and radio telephones. Unlike many disillusioned hippies, who considered computers dehumanizing instruments of governmental and organizational control, Brand was optimistic that collaborative networking could link like-minded individuals and actually enhance personal liberation. The introduction of the Internet and the World Wide Web in the mid-1990s affirmed that faith. Brand was also confident that alternative technologies could deal with long-standing environmental issues, and indeed the energy crisis of the 1970s revived interest in wind power, solar energy, biofuels, and waste recycling as environmentalism found a place on the national agenda.

The *Whole Earth Catalog* essentially linked the technological legacy of cold war military and industrial engineering with the counterculture’s vision of personal liberation. The outcome was not entirely positive, however, since the resulting techno-revolution inspired a generation of young entrepreneurs whose commercial over-reaching led to the dot-com bust of the early 2000s.

In his 2005 commencement address at Stanford University, Steve Jobs cited the *Whole Earth Catalog* as one of the bibles of his generation. It was “like Google in paperback,” he said, “overflowing with neat tools and great notions” whose message was “Stay hungry. Stay foolish.”

Wilkinson, Jemima (1752–1819)

Jemima Wilkinson was a charismatic eighteenth-century female evangelist who began the first communal society founded by a native-born American, in western New York State. Born into a Quaker family, Wilkinson had a visionary experience in her early twenties that led her to adopt the name “Publick Universal Friend” and to begin an itinerant preaching mission focused primarily in New England and eastern Pennsylvania. As the number of her followers grew, Wilkinson, aided by a few wealthy converts, bought land in western New York and established the community where she would spend the rest of her life. Although most of her religious messages were not particularly innovative or heretical—a mix of Quaker ideals, millennialism, and a belief in personal divine revelation—her appearance and lifestyle indeed created controversy. Some of the outlandish claims made about her parallel similar claims about leaders of other dissenting religious communities.

Wilkinson was born on November 29, 1752, the daughter of Jeremiah Wilkinson and Amey Whipple Wilkinson, and the eighth of twelve children. Growing up on a farm in Rhode Island likely contributed to many of the skills Wilkinson became known for as the Publick Universal Friend, including horseback riding and the use of herbs for medical purposes.

Wilkinson also had an outstanding memory. She read the Bible and books of Quaker theology in depth and was reputed to be able to quote at length from both. Her Quaker heritage clearly was a major influence on her later religious messages, particularly the notion that God could make the divine will known directly through the individual.

In the early 1770s, Wilkinson joined a group of New Light Baptists, religious enthusiasts known for emphasizing individual enlightenment through direct connections with God’s spirit. Wilkinson’s association with this group led to her removal from the Quaker Society in August 1776. Approximately two months after that, the illness that would lead her to become the Publick Universal Friend began. During that pivotal period of illness, which may have been typhus, Wilkinson claimed to see angels proclaiming messages of universal salvation for humanity. She emerged from the illness convinced she was the host of a spirit sent from God to spread that message.

Taking the name Publick Universal Friend, Wilkinson began holding meetings and traveling to nearby towns to spread her message, a remarkable feat for a young woman during the Revolutionary War. Riding sidesaddle, dressed in the black of a clergyman’s costume with a white kerchief around her neck, and accompanied by a small but intensely devoted group, Wilkinson preached repentance, advocated celibacy, practiced faith healing, and interpreted dreams and prophecies.

By 1789, her movement, known as the Universal Friends, had grown to a recognized religious group with about 200 members, mostly former Quakers. As her popularity grew, so did the scurrilous charges against her: that she believed she was the second coming of Jesus; that she cheated her followers out of their money; and that she failed to adhere to her own admonitions to be celibate.

In 1788, a small group of Wilkinson’s followers established a settlement on Lake Seneca in western New York; Wilkinson herself joined the settlement permanently two years later. In 1794, after a series of land disputes, the group moved 12 miles (19 kilometers) to the west, where the members founded a community known as Jerusalem on Keuka Lake. The Publick Universal Friend and her community thus played an important role in opening western New York to settlement by European Americans. Wilkinson died at her residence in Jerusalem on July 1, 1819.

Williams, Roger (ca. 1603–1683)

An early champion of religious freedom and the separation of church and state, Roger Williams was born in London in about 1603 and educated at Cambridge. He sailed with his wife Mary to the Massachusetts Bay Colony, arriving in early 1631.

In Boston, he refused to join the established Puritan congregation on the grounds that it was not fully separated from the Church of England, which he regarded as apostate. Shortly thereafter, he moved to Plymouth, where he ministered to a separatist congregation.

Acquaintance with indigenous leaders in the Plymouth area led Williams to support Native American rights to land more than did other colonial leaders. When the General Court of Massachusetts convicted him of the crime of “teaching dangerous opinions” and banished him from the Massachusetts Bay Colony in 1635, Williams fled to a Native American community. The following year, he settled at the head of Narragansett Bay, buying land from the Narragansett people and establishing a new colony he called Providence. The colony later became known as Rhode Island.

Williams’s Rhode Island was founded on a deep suspicion of any alliance between a particular church and the coercive authority of government. He was passionately concerned for the purity of religion. After a brief flirtation with the doctrine of the Baptists, which led him to found the first American Baptist congregation in 1639, Williams seems to have decided that no established congregation could be pure enough. For the rest of his life, he worshipped in his own household rather than as part of any congregation. A millenarian, Williams believed that true churches could be reestablished on earth only by God’s agents, as in the days of the apostles.

Williams’s generally good relations with Native Americans continued after the founding of Providence. He was the author of one of the first English books on native languages, *A Key to the Language of America* (1643). The work was published in London on the first of two journeys Williams made to get recognition of his new colony from the English government.

During the same trip, Williams also published a rebuttal of “A Letter of Mr. John Cottons” (1643), by the Massachusetts minister John Cotton. In Williams’s rebuttal, titled “Mr. Cotton’s Letter Lately Printed, Examined and Answered” (1644), he uses biblical language to portray himself as a witness of the truth in his struggles with corrupt Massachusetts ministers. He also published a book attacking persecution, *The Bloody Tenent of Persecution* (1644).

During Williams's second visit to England, from 1651 to 1653, he became friends with the English Puritan ruler Oliver Cromwell and published another book on persecution, *The Bloody Tenent yet more Bloody* (1652). On his second return to Rhode Island, Williams served as governor of the colony from 1654 to 1658.

He continued to champion religious freedom as the new sect of Quakers began to enter New England, although he was suspicious of what he regarded as the Quakers' rejection of the Bible in favor of the promptings of the Holy Spirit. Williams published his debates with the Quakers under the title "George Foxe Digg'd out of His Burrows" (1676), punning on the name of the Quaker leader George Fox.

Roger and Mary Williams had six children. She died in 1676, and he died sometime in 1683. Their descendents continued to thrive and help build what would become the state of Rhode Island.

Witchcraft and Wicca

The term *witchcraft* is derived from the Old English verb *wiccian*, which referred to the art of bewitching, casting spells, or manipulating the forces of nature in any supernatural way. Until the fifteenth century, witchcraft could hardly be considered countercultural, as it was at first universally, and then widely, practiced in one form or another throughout the West. Thereafter, it was practiced largely in secret and in defiance of the dominant Christian culture, sometimes resulting in bloody persecution.

A more modern form of witchcraft, commonly referred to as Wicca, took root in Europe at the close of the nineteenth century, and flourished in Britain and the United States in the second half of the twentieth century. Estimates by the American Religious Identity Survey in the early twenty-first century set the number of Wiccan adherents in the United States at just over 130,000.

The Great European Witch Hunt

That form of witchcraft with which most in the West are familiar is that wherein beliefs and rituals are associated with Satan, or the devil. This definition, which took 1,500 years to construct, is referred to as the "cumulative

concept of witchcraft.” It came to dominate Western thought in the fifteenth century and gave rise to the Great European Witch Hunt, which lasted more than two centuries and crossed the Atlantic to the New World.

In the fifteenth century, witches were pictured as women who rose from their beds in the dark of the night to attend the Sabbat, a witches’ version of the Christian sabbath. Witches were believed to have renounced their Christian faith and signed a pact with the devil, who presided over them. In exchange for worshipping him, witches were granted supernatural powers, which they used to commit diabolical acts, raise havoc, seduce other Christians into their cult, and otherwise undermine Christianity—and with it the political, social, and cultural structures of Western civilization.

The Great European Witch Hunt, consisting of hundreds of separate incidents, each involving anywhere from one to thousands of suspects, began in the mid-fifteenth century. Many of the incidents were led by professional witch hunters, whose sole job it was to seek out and prosecute witches. The absence of complete records makes it difficult to establish the exact number of prosecutions during the Great European Witch Hunt. Estimates vary greatly for the 250-year period, with the most plausible figures ranging from 110,000 to 180,000 prosecutions and 60,000 to 100,000 executions. As many as 75 percent of witchcraft prosecutions occurred in Central Europe; conviction and execution rates were highest in this area as well. Over time, however, accusations and executions spread to other parts of Europe and the Western Hemisphere.

The largest outbreak of witch trials in British North America occurred in Salem, Massachusetts, in 1692. A total of nineteen people were hanged, one man was pressed to death, and more than 150 others were jailed. Compared to witch hunts in Europe, it was a minor affair, or, as one historian put it, “a small incident in the history of a great superstition.” Nevertheless, the Salem witch hunts have never lost their place in the popular imagination, and the term is still frequently invoked as a metaphor for the extralegal persecution of societal outcasts—such as Communists in cold war America.

Certain elements of the population were disproportionately represented among those accused of witchcraft. Most came from the poorest, weakest, and most vulnerable elements of the population. Seventy-five to 80 percent of the accused were female. Witches commonly identified were women over fifty years of age, and either widowed or never married. They tended to have accumulated a record of what was considered antisocial behavior, including petty crime, and they were seen as sharp-tongued, bad tempered, and prone to quarrels with neighbors and be absent from church.

Cotton Mather's 1693 pamphlet The Wonders of the Invisible World offered an account and defense of the Salem witch trials. The term witch hunt still is invoked as a metaphor for the searching out and persecution of persons with unconventional views. (Library of Congress)

Some have argued that witchcraft is universally specific to women, but others have shown that such gender identification is more common in the patriarchal societies of the West. Still others point to Christianity's characterization of women as morally weaker than men and therefore more likely to succumb to the diabolical temptations of the devil.

The Salem episode signaled the end of witch hunting, at least as so identified and legally sanctioned in the United States. The people of Massachusetts, like most in the West, continued to believe in witches, but they abandoned any hope of prosecuting them in court. Moreover, as historian John Demos has argued, the very portrayal of witches changed.

Whereas until the seventeenth century witches were portrayed as powerful, formidable, and dangerous adversaries in league with the devil, by the nineteenth century they were identified as "hag-witches," characteristically old, ugly, and decrepit, and living as isolates with little or no human contact. Once a source of fear, they increasingly became a target for contempt, ridicule, and mockery.

Wicca in the Modern World

Beginning in the late nineteenth century, there was a renewed surge of interest, especially among literary and artistic figures, in witchcraft. This interest is sometimes referred to as an occult revival. In the 1920s and 1930s, the Briton Aleister Crowley, who styled himself "the Great Beast," concocted a mix of magic, sorcery, and hedonism often called Satanism, to which, in the 1940s, Margaret Murray added a fertility-cult phenomenon. The two strains were merged and promoted by the English occultist Gerald Gardner beginning in the 1950s.

Gardner gave Wicca its biggest boost with his books *Witchcraft Today* (1954) and *The Meaning of Witchcraft* (1959). He claimed that he had encountered a secret pagan group, into which he had been initiated, that was a remnant of the old witchcraft religion dating to pre-Christian Europe. Thus, Wicca is still commonly referred to as the "Old Religion." Such direct historical roots have been largely discounted, but Gardner's books nevertheless provided the basis upon which modern Wicca has been built.

Modern Wicca became popular in the United States largely due to the efforts of an expatriate Briton, Raymond Buckland, beginning in the early 1960s. The movement evolved eclectically and gained its greatest strength, however, as an outgrowth of the counterculture movements of the 1960s and 1970s. Commonly included in the category of New Age religions, it attracted adherents with its feminine principle and reverence for nature, as opposed to what followers regarded as a patriarchal and environmentally insensitive Christianity. Some found Wicca's rejection of absolute truths appealing.

Modern Wicca is neither a centralized organization nor a single belief system, but rather a wide range of beliefs and practices. In general, Wicca can be divided into two groups. Lineaged Wicca, sometimes called British Traditional Wicca, follows practices outlined by Gardner. Nonlineaged, or Eclectic Wicca, is now the larger of the two groups, especially in the United States. Most Wiccans are organized into largely autonomous covens led by priests and priestesses, many of which have been spun off—or "hived"—from other covens that have grown too large. The ideal size is held to be thirteen members.

In general, Wiccans believe in an ultimate life force called "The One" or "The All," out of which the male and female aspects of life emerged. Most Wiccans worship a goddess and a god, who are seen as complementary in that they represent a balance in nature, sometimes symbolized as the sun and moon. Some Wiccans, especially feminist Wiccans (Dianic Wiccans), reject the male counterpart altogether, preferring to see the goddess as

complete in her divinity.

Wiccans believe that the gods are able to manifest themselves in human form through the bodies of the priests or priestesses. In rituals such as drawing down the moon or sun, Wiccans believe that the priestess or priest is able to call down the deity into her or his body in a form of divine possession.

Wiccans practice initiation rites for priests, priestesses, and members, and follow an annual calendar of religious observances or festivals that includes eight Sabbats. Sabbats are Wicca's main religious holidays. Four of them, Samhain, Beltane, Imbolic, and Lammas, are seen as greater than the others; the remaining four are Litha (Summer Solstice), Yule (Winter Solstice), Ostara (Spring Equinox), and Mabon (Autumn Equinox). In addition, Wiccans mark each full moon with a ceremony called Esbats.

Wiccans recognize four elements in nature: earth, air, fire, and water; some add a fifth element, spirit. The five elements are symbolized by the five points on a pentagram, or pentacle, commonly used in Wiccan rituals, with spirit always located at the top. In the casting of the magic circle, the first step in most Wiccan rituals, the four elements are believed to derive their powers from their association with the four cardinal directions of the compass.

Typically, Wiccans fast for a day or ritually bathe before gathering inside the purified circle. Some worship in the nude, or "skyclad"; most wear robes or just street clothing. They pray to the deity or deities, who are welcome guardians of the north, south, east, and west. An altar is erected within the magic circle, on which are placed the tools of the ritual, commonly including a broom, cauldron, chalice, wand, Book of Shadows, altar cloth, athame (a knife use to channel energy), boline (a knife used for cutting), candles, crystals, a pentacle, and incense. The objects have no power in themselves, but each is dedicated to a particular purpose. When the ritual ends, thanks are given to the god and goddess and the circle is closed.

The Wiccan code of ethics is commonly explained as being based on the Wiccan Rede and the Law of Threefold Return, both of which suggest that adherents are free to act as they wish, as long as they take responsibility for their actions and do no harm, lest what they do return to them three times over. More specifically, they adhere to eight virtues—mirth, reverence, honor, humility, strength, beauty, power, and compassion—and 161 laws. Wiccans believe in reincarnation and flatly deny any association between them and practitioners of Black Magic or Satanism. As Wiccans point out repeatedly, they do not believe in the existence of the devil or any similar entity as recognized by Christians. Although misunderstood and viewed with suspicion in some quarters, adherents to this latter-day reincarnation of nature worship coexist relatively peacefully with their Christian neighbors.

Wiccans, despite sometimes inaccurate and negative perceptions and their countercultural status, have attained a certain level of acceptance in American society. In 1986, in the precedent-setting case *Dettmer v. Landon*, the United States Court of Appeals for the Fourth Circuit upheld a lower court decision that ruled that Wicca is a legally recognized religion and therefore to be afforded all the benefits accorded to other recognized religions by law. In 2007, the U.S. Department of Veterans Affairs adopted a policy allowing the pentacle, as an "emblem of belief," to be placed on grave markers in military cemeteries.

Woodhull, Victoria (1838–1927)

Between her birth into poverty and her death as the widow of a wealthy British banker, Victoria Claflin Woodhull was a woman who acted in ways that were years ahead of her time. She was a successful newspaper editor, the first American woman stockbroker, and the first woman to be nominated as a candidate for president of the United States. Although her forward-looking activities took their toll on Woodhull's reputation and financial health, she remained steadfast in her resolve to be an example of independence and self-actualization to all women.

Born on September 23, 1838, into a family of nine children in Homer, Ohio, she remained closest to her sister, Tennessee Claflin, throughout her life. Daughters of an alcoholic and abusive braggart, the two girls performed as spiritualists when Victoria was eleven years old in their father's attempt to cash in on that craze. By the age of fifteen, Victoria was married for the first time, to patent-medicine salesman Canning Woodhull, who similarly used the girl to sell his wares.

Eleven years later, she divorced Woodhull, married Colonel James Blood, and moved to New York City along with her sister. The wealthy financier Cornelius Vanderbilt soon provided funding for the sisters to embark on their own careers.

With Vanderbilt's \$7,000, the women opened Woodhull, Claflin and Company, a highly successful brokerage firm. Victoria became wealthy and channeled her funds into a candidacy for president under the auspices of the Equal Rights Party in 1872; the abolitionist Frederick Douglass was her running mate. The campaign was doomed because her main supporters—women—did not have the right to vote. Woodhull still spoke out energetically about her beliefs, including the need for woman suffrage, the value of free love, and the evils of racism and economic inequality.

As part of their brokerage venture, the sisters also published a radical newspaper, *Woodhull & Claflin's Weekly*, which advocated on behalf of such countercultural causes as socialism, universal suffrage, free love, birth control, and vegetarianism. In 1872, the newspaper published the first English translation of Karl Marx and Friedrich Engels's *Communist Manifesto*. Most Americans were aghast at the audacity of women engaging such unseemly topics; among those who decried the paper was the popular preacher Henry Ward Beecher.

When Beecher's attacks continued and increased in their ferocity, Woodhull struck back, exposing what would come to be known as the Scandal of the Century: a case of marital infidelity involving Beecher and the wife of his protégé, Theodore Tilton. Anthony Comstock, widely recognized as the nation's self-appointed guardian of

morality, took up Beecher's cause. Victoria, Tennessee, and the colonel were repeatedly arrested and charged with libel under the Comstock Act of 1873, a federal law that prohibited sending obscene material through the mail. Although legal fees led to the insolvency of the sisters' brokerage firm and newspaper, they were eventually acquitted of all charges. Interestingly, many who had originally opposed Woodhull came to her defense on the basis of protecting her First Amendment rights.

Despite the defamation and the financial difficulties that came with it, Woodhull never wavered in her belief that women deserved the full recognition and rights accorded to men, including the right to sexual and marital self-fulfillment. By her example and in direct advocacy, Victoria Woodhull was a forerunner of the feminist movements of the late nineteenth and early twentieth centuries. She died on June 9, 1927, in Worcester, England.

Woodstock Music and Art Fair

The Woodstock Music and Art Fair, commonly known as the Woodstock festival or simply Woodstock, was held from August 15 to 18, 1969, on a 600-acre (240-hectare) dairy farm in Bethel, New York, owned by Max Yasgur. The concert lineup attracted some of the biggest names in rock music, including Jimi Hendrix, Jefferson Airplane, and the Grateful Dead, along with folk artists such as Joan Baez and Arlo Guthrie. More than 400,000 spectators listened to music in the largest open-air music festival of the 1960s. Much more than a musical concert, however, Woodstock represents the confluence of cultural and social movements concerned with the war in Vietnam, politics, and civil rights.

Four investors organized Woodstock Ventures in March 1969: concert producer Michael Lang, recording engineer Artie Kornfeld, and venture capitalists John Roberts and Joel Rosenman. The original idea was to build a recording studio in the small, upstate New York town of Woodstock, where several rock musicians had moved by the late 1960s. The four organizers proposed a concert, and then a two-day festival accommodating 50,000 to 100,000 fans, to fund the studio.

Due to objections from local residents, the town of Woodstock was discarded as a location for the event. A similar fate awaited Woodstock Ventures concerning the town of Wallkill, New York, and its zoning board, whose apprehensions were heightened by rumors of possible marijuana use. Searching for a suitable venue, Woodstock Ventures advertised in local newspapers and finally heard from Yasgur, who responded through a realtor, Morris Abraham. Yasgur's farm featured a natural amphitheater, removed from the urban setting of earlier music festivals, and a deal was struck with the event organizers.

The festival's slogan was "Three Days of Peace and Music... ?An Aquarian Exposition," and the venture group created posters that would draw attention to the event without naming all of the performers. After negotiations with

activist Abbie Hoffman and his Youth International Party (whose adherents were called “yippies”), Woodstock Ventures provided a concession for the distribution of leftist literature.

Woodstock took on a character different from previous rock music festivals, which were mostly regional events. With widespread marketing and advertising, Woodstock attracted the attention of the entire nation. By mid-July 1969, \$500,000 worth of tickets had been sold. Due to lack of advance preparation, however, it was not possible to collect tickets—the crowd was estimated at 400,000 people. The audience was predominantly white and middle class, with more males in attendance than females.

When the festival began, highway closures and rainy weather prevented some of the bands from appearing on time. The first performer was folk singer Richie Havens, who performed the antiwar songs “Handsome Johnny” and “Freedom.” With several groups continuing to experience difficulty arriving at the venue, Country Joe McDonald sang several solo songs, including the satirical and antiwar “I-Feel-Like-I’m-Fixin’-To-Die Rag.” McDonald and John Sebastian performed impromptu sets.

Without ticket booths, Woodstock became a free festival. This sparked rumors that musicians, who had been asked to perform longer sets than originally agreed upon, would not be paid. The Who and the Grateful Dead demanded cash, which was not on hand, although cashier’s checks were in a bank. These were retrieved and sent via helicopter to the festival.

The music featured at Woodstock also was influenced by the “back-to-the-land” movement, characterized by a migration from cities to rural locales. This was reflected by Alan Wilson’s song “Going Up the Country,” performed by Canned Heat. Others who reflected this philosophy were the ensemble Crosby, Stills, Nash and Young, and Joan Baez.

Counterculture values were deeply ingrained in many musicians who performed at Woodstock and wrote, spoke, and sang of social idealism and anticommmercialism; among these were Guthrie, Janis Joplin, Jefferson Airplane, and Joe Cocker. Hendrix’s solo performance of “The Star-Spangled Banner” carried a powerful antiwar message.

Due to inadequate food and sanitation, the audience adopted a communal approach to life at the festival, with sharing and cooperation. Area resorts helped to alleviate the food shortage with contributions. The eighty farmers of the Hog Farm Collective, an early cooperative commune of the counterculture era, assisted the concertgoers and provided a free kitchen to attendees. Hog Farmer Lisa Law instructed attendees in how to live off the land. Hog Farmer Hugh Romney (later known as activist Wavy Gravy) stood on the stage and announced, “What we have in mind is breakfast in bed for 400,000!” Tom Law taught yoga each morning.

Other Hog Farmers assisted with security. New York Police Department (NYPD) Commissioner Howard Leary had forbidden NYPD officers’ participation as off-duty security. In response, many joined the Woodstock Peace Officers using fictitious names.

Marijuana use was rampant at Woodstock among performers and concertgoers alike. LSD (lysergic acid diethylamide, or acid) also was plentiful. Hog Farmers assisted medical personnel treating those experiencing bad LSD trips in special “freak-out tents.” The Hog Farmers had previous experience with negative reactions to LSD.

Rain, mud, and poor sanitation were part of the Woodstock experience. Traffic jams blocked back roads and forced major highways to be closed. Nevertheless, those in attendance regarded the festival as an extension of the communal life that had permeated the early 1960s. Even if many festivalgoers had never taken part in communal living for longer than three days, Woodstock came to epitomize the free-love philosophy and hippie lifestyle. The event, incidentally, lost more than \$1 million.

In an effort to re-create some of the original Woodstock experience, organizers launched Woodstock’94, also called Woodstock II, at the 840-acre (340-hectare) Winston farm in Saugerties, New York, about 60 miles (96 kilometers) northeast of the original festival site. While featuring newer bands, a younger audience (about 250,000 attended), and greatly improved sound technology, Woodstock II, by many accounts, re-created much of the drug

use experienced at the original event. More commercial in terms of on-site vendors than the first event, this event also was overcrowded for the site and suffered from rain, deep mud, and sanitary issues.

The thirtieth-anniversary festival, Woodstock 1999, was held on the former site of Griffiss Air Force Base in Rome, New York. The three-day July event, carried on pay-per-view television, fell victim to logistical errors, from high ticket prices to inadequate facilities. Incidents of violence and arson finally forced the show to be shut down.

Woolman, John (1720–1772)

Itinerant Quaker minister John Woolman was one of the first prominent American abolitionists, a leader of the antislavery movement of the eighteenth century, and an advocate of pacifism and radical Christianity both in his writings, including a popular autobiography, and in his life.

He was born in Northampton, New Jersey, on October 19, 1720. In his posthumously published *Journal* (1774), Woolman traced his opposition to slavery to misgivings he had had when an early employer asked him to draw up a bill of sale for a slave woman. He reluctantly acquiesced, but refused any further involvement in slavery and spoke out against it during his travels.

Woolman's concern for the deprived extended to other communities as well. A journey across the Atlantic Ocean led to reflections on the poverty and spiritual deprivation of sailors. In his account of a missionary journey among Native Americans, he viewed native society in a way differently than other white writers of the eighteenth century: not in terms of its differences from Anglo-European society, but emphasizing what the two cultures had in common. In his view, the "warrior spirit," said to have wrought damage to Native Americans, also deformed white society.

Woolman's analyses of the miserable state of slaves, of Native Americans oppressed by white authority, and of the poor all laid blame on the rich for their greed and love of luxury, although he tended to depict his adversaries not as wicked sinners, but as poor creatures in need of truth. His remedy for social evils was individual reformation, which extended to all aspects of life. For instance, he urged nonpayment of taxes if they were to be

spent on war.

His hatred of luxury and unnecessary consumption led him to condemn much that others might have seen as harmless diversion, such as colorful clothing. Concerned about the oppression of enslaved workers in the dye trades, Woolman wore only undyed cloth. His disapproval extended even to such “follies” as a magic show at a tavern.

But not all of Woolman’s *Journal* was devoted to social analysis. Like other Quaker writers, he recounted his dreams, visions, and spiritual experiences. He wrote very little about his private or family life.

Woolman’s first antislavery tract was *Some Considerations on the Keeping of Negroes Recommended to the Professors of Christianity of Every Denomination* (1754), in which he emphasized both the inhumanity of slavery and the insidious way it corrupted the morality of white slave owners. Mastery, he contended, contributed to pride and the love of domination, the vices Woolman most reviled. By being inextricably implicated in the cruelty of slavery, masters hardened their hearts; by living off the labor of slaves, moreover, they and their children became lazy. Slavery could never be justified, Woolman maintained, as black Africans possessed the same natural and god-given right of freedom as white English people.

As implied in his address to “Christians,” Woolman made extensive use of the Bible in demonstrating the evil and unlawfulness of slavery. He was a leader in convincing the Quakers’ Philadelphia Yearly Meeting to prohibit its members from buying and selling slaves, and, in 1762, he published *Considerations on Keeping Negroes; Recommended to the Professors of Christianity, of Every Denomination, Part Second*. Woolman died on October 7, 1772, in York, England, while on a missionary journey.

Wright, Frances (1795–1852)

During the early to mid-1800s, Scottish-born Frances Wright was an active and respected advocate for a range of social reform movements in America, including feminism, the abolition of slavery, universal and equal education, and the rights of children. The freethinking social critic also was an outspoken opponent of organized religion, authoritarianism, and capitalism. Inspired by the utopian socialism of Robert Owen and his son Robert Dale Owen, Wright became an active proponent of cooperative living and social planning. In addition, she is credited with being the first woman to deliver a public lecture before a mixed audience, an Independence Day speech at the Owens’s utopian socialist community New Harmony in 1828.

Wright was born in Dundee, Scotland, on September 6, 1795. Orphaned at the age of three, she, along with her younger sister, went to live with their uncle James Mylne, a progressive professor of moral philosophy at the

University of Glasgow. In 1818, she visited the United States for the first time. Upon her return to England she published her observations of American cultural life in *Views of Society and Manners in America* (1821), an early and overlooked example of modern sociology. In part a celebration of attempts to define and practice democracy in the United States, the book was taken up by parliamentary reformers in England who sought to transform their own country's politics.

In 1824, Frances Wright and her sister joined the Marquis de Lafayette during his travels to the United States, taking American citizenship the following year. Of great significance was Frances's visit to the community of New Harmony in Indiana. New Harmony was a real-world example of Robert Owen's philosophy of socialism through cooperative labor and communal living.

In 1825, Wright helped found the Nashoba Commune, a 2,000-acre (800-hectare) woodland settlement in western Tennessee that she envisioned as an autonomous, self-sufficient, multiracial community made up of former slaves, free blacks, and whites. Controversially, Wright's undertaking involved the purchase of slaves from their owners, who would be paid from the production of slave labor in the fields of Nashoba. Wright believed that such a venture could be more profitable than slavery, given the greater efficiency of "free" labor over slave labor, and that demonstrating this could help render the slave labor system obsolete.

The experiment was, from the outset, beset by difficulties. Not the least of these was the suspicion with which urban free blacks and slaves viewed the project and its stated goals of recolonization. Slaves were skeptical regarding claims that the people who held their ownership papers, and indeed gained materially from their labor, were devoted to their liberation. Urban free blacks questioned the prospects for practicing sustainable agriculture on unsuitable lands. Slaves and free blacks alike expressed concern about being moved to an unfamiliar part of the country, where the language differed from the dialect they themselves spoke. By 1828, the experiment was largely abandoned; in 1839, Wright chartered a vessel, the *John Quincy Adams*, and accompanied the commune's thirty freed slaves to Haiti.

The general failure of Nashoba did not discourage Wright from remaining involved in social activism. She soon embarked on what would be credited as the first public-speaking tour by a woman in the United States. In her lectures, Wright explained her libertarian views on issues such as sexual equality, free love, marriage as domination, and birth control. She also spoke out against the growing tide of religious revivalism, asserting the need for rational debate and empirical observation against the unobservable authorities of faith and tradition.

Following the collapse of Nashoba, Wright moved to New Harmony, which was facing its own imminent demise. There, she joined Robert Dale Owen, who had remained at the commune despite his father's departure, as coeditor of the *New Harmony Gazette*. In 1829, Wright and Owen moved the newspaper to New York City, re-launching it under a new title, the *Free Enquirer*.

During this period, Wright, now in closer contact with the urban poor and working classes, developed her strongest advocacy of socialism and working-class organizations. She viewed cooperative labor and universal education as the dual mechanisms by which the abolition of slavery and the freedom of the working classes might be achieved. Owen and Wright founded the first labor-oriented U.S. political party, the Working Men's Party, in New York. Among the projects Wright developed was a day school for the children of workers and a dispensary for working-class families.

Wright also spoke out against capital punishment in society at large and corporal punishment within the home, linking social punishment with the development of authoritarianism in interpersonal relationships, especially involving the authority of the parent over the child. Wright became an advocate of equal education in free schools in which children would be able to enjoy a holistic education, receiving academic as well as technical training free from any religious doctrine. She envisioned this arrangement as one that freed parents from the economic burdens of raising children, while freeing children from their status as familial possessions. During the 1830s and 1840s, Wright became active in the Popular Health movement, a broad-based social movement that focused on educating individuals about their health and how to prevent disease. The movement aimed its education efforts at

women, as the caretakers of their families and communities, and promoted a healthy diet, exercise, dress reform to eliminate corsets, and the use of sexual abstinence in marriage to limit family size.

In 1831, Wright married a French doctor, Guillaume D'Arusmont, with whom she had a daughter; they were divorced in 1850. Following a short time living in Paris, during which time she dropped out of the public sphere, Wright returned to America in 1835 to resume her lecture tours. During the time she had spent abroad, her influence had diminished, however, and the lectures were disappointingly attended.

Wright died in relative obscurity on December 13, 1852. Her epitaph proclaimed her lifelong commitment to social justice: "I have wedded the cause of human improvement, staked on it my fortune, my reputation and my life."

Wright, Richard (1908–1960)

Richard Wright was an acclaimed and controversial African American novelist, short-story writer, essayist, and poet who portrayed and bluntly criticized the racial and social oppression of African Americans in urban societies, espoused Third World liberation, and found solace as an expatriate in France after World War II. Regarded as one of the leading lights of modern African American fiction, Wright is best known for his novel *Native Son* (1940), about the life of a young black man raised in Chicago who falls victim to white-dominated society, and *Black Boy* (1945), an autobiography of his unhappy youth in the Deep South.

A prominent voice of the modern African American experience, Richard Wright wrote powerful and controversial narratives of racial oppression and social isolation. His work directly influenced younger black novelists and poets. (Library of Congress)

Richard Nathaniel Wright was born on September 4, 1908, near Natchez, Mississippi, to Ella Wilson, a teacher, and Nathaniel Wright, a sharecropper. His father abandoned the household when the boy was five, and his mother worked as a maid to support the family. Ella Wilson became ill in 1914, and Wright was shuffled among his maternal relatives until he moved in with his maternal grandmother in Jackson, Mississippi, in 1920. Although his grandmother discouraged his interest in literature, Wright published his first story, "The Voodoo of Hell's Half-Acre" in the *Southern Register*, a local black newspaper, in 1924. After graduating from the ninth grade in 1925, he pursued his literary fascination by reading H.L. Mencken's critiques of racism and the naturalistic fiction then in vogue among American writers.

In 1927, Wright moved to Chicago, where he became involved in radical politics. Drawn to its philosophy of racial and social equality, he joined the Communist party in 1932 and published his proletarian poems in leftist-liberal magazines such as *Left Front* and *Partisan Review*. When, in 1937, a group of Chicago Communists accused him of betraying the party, Wright left for New York.

In New York, he became the editor of Harlem's *Daily Worker* newspaper. Shortly after his arrival, he received an award from the Works Progress Administration (WPA), the New Deal work-relief agency, for *Uncle Tom's Children* (1938), a collection of novellas based on his childhood. He also won a Guggenheim Fellowship in 1939 to finish *Native Son* (1940). In 1941, the National Association for the Advancement of Colored People (NAACP) honored Wright with the Springarn Medal for *Native Son*, a stage version of which he coproduced on Broadway. Wright's literary accomplishments continued with *Twelve Million Voices* (1941), a folk history. About this time, his marriage to Rose Dhima Meadman, a white dancer, ended, and, in 1941, Wright married Ellen Poplar, a daughter of Polish Jewish immigrants and a fellow leftist.

Disappointed with the Communist Party's weakening position against segregation, Wright left the organization in 1944 and wrote "I Tried to Be a Communist" in the *Atlantic Monthly*. He later described his involvement with communism and his encounters with racial prejudice in the acclaimed *Black Boy* (1945).

In 1946, Wright moved to Paris, where he was greeted by existentialist writers Jean-Paul Sartre and Simone de Beauvoir. After returning briefly to the United States, he settled there permanently, becoming a French citizen, in 1947. In France, he supported the Pan-African organization *Présence Africaine* (African Presence) and backed the

anti-Stalin Rassemblement Démocratique Révolutionnaire (Revolutionary Democratic Group). He incorporated his political beliefs into his next two novels, *The Outsider* (1953), which denounces communism and fascism, and *Black Power* (1954), which criticizes British colonialism and espouses African independence. Later texts include *The Color Curtain* (1956), an account of the 1955 conference of nonaligned nations in Bandung, Indonesia; *White Man, Listen!* (1957), a collection of essays on race; and the novel *The Long Dream* (1958).

Despite suffering from amoebic dysentery, which he contracted on a trip to Africa in 1957, Wright organized a final work, the short-story collection *Eight Men*, published posthumously in 1961. He died of a heart attack in Paris on November 28, 1960. He was buried there with a copy of *Black Boy*.

X-Files, The

The X-Files was a popular science-fiction television series (1993–2002) created by writer-director-producer Chris Carter that helped solidify the burgeoning Fox Network's market share of evening network television. The 201 shows in the series follow the exploits of Federal Bureau of Investigation (FBI) Special Agents Fox Mulder (played by David Duchovny) and Dana Scully (Gillian Anderson) as they attempt to unravel unsolved cases involving strange, unexplained, or paranormal events.

Set in the contemporary United States, the show featured stories that played to late-twentieth-century fascinations with conspiracy theories, the possibility of extraterrestrial life, and the occult. These phenomena reached a peak in American culture shortly after the premiere of *The X-Files*, which parlayed cold war paranoia into a winning blend of skepticism and conjecture. Building on such real-life events as the assassinations of President John F. Kennedy, civil rights leader Martin Luther King, Jr., and Senator Robert Kennedy in the 1960s, and the Watergate scandal of the 1970s, *The X-Files* painted a picture of a monolithic shadow government dictating domestic and international policy.

By the end of its first season, *The X-Files* had captured a substantial market share and had a loyal fan base. The Internet played a major role in the show's popularity, as hundreds of online fan sites and discussion groups sprang up, and fans lobbied their local Fox Network affiliate stations to carry the new series.

Over subsequent seasons, the appeal and popularity of *The X-Files* broadened even further, and the fan base became even more committed. Eventually acquiring the nickname X-Philes, fans of the show began to hold conventions, publish online newsletters, and speculate about the depth and breadth of the series' conspiratorial storylines. Further fan speculation was encouraged as *The X-Files* featured crossovers and references to other

Fox Network shows, such as *Millennium* and *Strange Luck*.

The X-Files reached the zenith of its popularity in 1998 with the release of a feature film that attempted to advance most of the show's important storylines simultaneously. The film, titled *The X-Files*, met with lukewarm reaction from fans and critics alike. Most fans of the TV show, in fact, mark the creative peak in the fifth season (1997–1998), immediately before the film's release. Along with the film came innumerable merchandising efforts, tie-in novels, toys, and games, diluting the program's original niche appeal and alienating many fans. A spin-off series, *The Lone Gunmen*, ran for thirteen episodes in 2001 and featured minor recurring characters from the original show.

The X-Files came to an end after the ninth season, in May 2002. In the final two seasons, according to fans and TV critics, major cast changes and a loss of overall tone and focus contributed to the series' decline. Today, X-Philes continue to hold conventions across the globe, and the Internet fan culture is still active. A second feature film based on the TV franchise, *The X-Files: I Want to Believe*, was released in 2008.

Yippies

The yippies, members of the Youth International Party (YIP), were a loosely affiliated group of individuals who envisioned themselves as the politically radical answer to hippies—bohemian youth disillusioned with the nature of American life—and aimed to politicize the 1960s counterculture. Known for their use of guerrilla theater, pranks, and outright absurdity to gain the attention of the American public and media, the yippies were among the most imaginative of the 1960s-era activists.

Beginnings

The term *yippie* was coined in 1967 by radical journalist Paul Krassner, to distinguish himself and fellow activists who participated in the youth counterculture from the often apolitical hippies and the radical, student-oriented New Left. *Yippie* was intended as both a play on the word *hippie* and to express the joy members experienced in carrying out their inventive forms of protest.

The de facto leadership of the yippies included Krassner and activists Jerry Rubin, Abbie and Anita Hoffman, and

Stewart (Stew) Albert, among others, but there was no formal hierarchy or structure to the group. The yippies also had little unified purpose or philosophy, allowing each individual to determine for himself or herself what being a yippie meant.

Abbie Hoffman and Rubin were the most recognizable figures among the yippies, each spending considerable time writing and speaking, in addition to demonstrating. Though the two are often considered the brains behind the yippies' actions, each had his own opinion about the goals of the Youth International Party.

For Hoffman, the yippies represented a merging of the hippie and New Left philosophies, uniting the counterculture with political action. The intent was to make a statement through what Hoffman termed "revolutionary action-theater" and leave the interpretation of the statement up to the individual. Rubin's view was less structured. He insisted that *yippie* meant "an excuse to rebel" and that there was no specific aim to a yippie's actions. Although their visions of the group did not entirely coincide, both Hoffman and Rubin agreed that *yippie* could mean anything one wanted it to—that the interpretation was in the eye of the beholder.

Tactics

The use of guerrilla theater, which Hoffman learned from the Diggers (a late-1960s San Francisco-based radical community-action group of improvisational actors), was among the most popular of the yippies' tactics to draw attention to what they considered the absurdities of American life and culture in the Vietnam War era. Their actions during 1967 and 1968 ranged from participating in the March on Washington against the Vietnam War in October 1967—during which they promised to "levitate" the Pentagon, using psychic energy in order to exorcise its bad spirits—to nominating a pig ("Pigastus the Immortal") for president of the United States. ("Why vote for half a hog when you can have the whole thing?" they asked.)

Among their most notable actions was an August 1967 demonstration at the New York Stock Exchange in which they sent a shower of dollar bills onto the trading floor from the visitors' gallery. Stock traders stopped their work in shock and scrambled to catch the money falling from above. While it caused only a brief pause in the frantic pace of the stock exchange, the yippies regarded the event as a huge success—they had caused a sort of hiccup in the normal functioning of the American capitalist system. Aside from causing a disruption, however, the demonstration achieved another of their main goals: gaining attention from the news media and the public.

The yippies also relied on dramatic public discourse—exaggerations, provocations, and put-ons—to gain attention and publicity for their demonstrations. During the months leading up to the 1968 Democratic National Convention in Chicago, yippie handbills and speeches invited protesters to a Festival of Life during the convention and suggested that those demonstrating have sex in the streets and release LSD into the water supply, among other propositions. Most incitements were intentionally vague in order to gain more media attention and to allow for broader interpretation—thereby enabling each participant to feel a greater personal connection with the event.

Members of the Youth International Party (“yippies”) introduce their presidential candidate for 1968—Pigasus the Immortal—while in Chicago for the Democratic National Convention. (Julian Wasser/Time & Life Pictures/Getty Images)

The Festival of Life led to a significant altercation between protesters and police almost immediately. Mayor Richard Daley and the city of Chicago had refused to issue permits for any demonstration, and police began arresting protesters before any trouble began. Believing the yippie provocations, police acted to prevent any public danger, such as drugs in the water supply. The response proved extreme. Early confrontations devolved into what was later termed a “police riot,” with law enforcement officers attacking and beating hundreds of protesters, bystanders, and representatives of the news media. The events were captured on film, though not widely broadcast, and word of the police riot spread quickly. The nation was shocked by the brutality of the Chicago police force. Although the violence left many protesters injured, the publicity alone made the demonstration a success for the yippies.

The demonstrations in Chicago also resulted in the arrest and trial of Hoffman and Rubin, along with other demonstration organizers. This group later became known as the Chicago Seven. The demonstrators were charged with conspiracy and inciting a riot. Represented by radical attorney William Kunstler, the defendants became national celebrities for their courtroom antics, including open ridicule of Judge Julius Hoffman and the donning of judges’ robes in mockery of the American judicial system.

Legacy

The yippies gradually disbanded, as most members departed to pursue different goals. Following a major drug bust in 1973, Hoffman went underground for almost seven years, initially with the assistance of the Weathermen, a radical leftist organization that was composed of former members of the Students for a Democratic Society. He remained politically active until his suicide in 1989. Rubin, who later became a businessman, died in 1994 after being hit by a car while jaywalking. Others went on to become notable writers, scholars, politicians, and activists.

The yippies pointed to some success in their attempts to politicize the youth of the counterculture. Still, in later years, both Rubin and Hoffman expressed regrets about their yippie pasts. Rubin had altered his political views entirely, while Hoffman lamented how little change they had been able to effect. Regardless, the yippies were among the most noteworthy of the counterculture groups of the 1960s for their ability to convince others to join their fight and to have as much fun as possible in the process.

Yoga

Yoga is the practice of physical and mental exercise to promote physical, psychological, and spiritual health. The word *yoga* is a Sanskrit term, and the practice has cultural and historic ties to Hinduism and other Indian belief systems dating back thousands of years. Although there are many varieties of yoga, emphasizing different types of exercise, the form generally practiced outside India in modern times is most closely associated with hatha yoga, emphasizing the practice of physical postures (*asanas*), slow breathing, relaxation, and meditation. While yoga in contemporary America is a mainstream activity for physical health and relaxation, it has historic roots in countercultural groups seeking to challenge mainstream religious and political beliefs.

The introduction of yoga to the Western world, and the United States in particular, occurred in the late 1800s, corresponding to the introduction of Hinduism. In 1893, Swami Vivekananda spoke in Chicago at the Parliament of World Religions, engaging an audience curious about Eastern practices. In 1894, he established the Vedanta Society of New York, a spiritual organization rooted in Hinduism, for the purpose of sharing spiritual knowledge. The Vedanta Society continues to thrive into the twenty-first century, with study centers located around the world.

Through the 1910s, however, yoga faced a precarious situation in American media and culture, largely due to nativist response to ongoing waves of immigration. Initially regarded as a curiosity, yoga was now demonized, charged with the corruption of youth, enslavement of white women, and other social problems. Interest increased as federal immigration restrictions loosened in the early 1920s, giving limited access to Indian yoga masters, but the practice was largely confined to small circles of adherents from mid-decade through the 1940s.

Yoga underwent a resurgence as a secular form of exercise during the 1950s and 1960s, with books such as *Sport and Yoga* (1953) by Selvarajan Yesudian and *Richard Hittleman's Yoga: 28 Day Exercise Plan* (1969) engaging a wider audience. Classes began to be held at community centers, at Young Men's Christian Associations (YMCAs), and on television. Early celebrity practitioners, including Marilyn Monroe and Gary Cooper, further fueled the public interest. In 1961, the *Los Angeles Times* ran a multipart series, "What's Yoga," which also expanded the audience. Hittleman's *Yoga for Health* began appearing as a daily television program in Los Angeles in 1961, then in New York in 1966. Hittleman's fame was furthered by time spent with countercultural celebrities such as Buddhist philosopher-writer Alan Watts and Beat novelist Jack Kerouac.

During the 1960s, segments of the counterculture movement began to recognize and embrace yoga, seeking not

only the physical benefits but also the spiritual uplift it offered. In early 1968, the Beatles became enthralled with meditation and yoga, and they traveled to India to study with the Maharishi Mahesh Yogi—reports of which spread interest in Eastern spiritualism throughout the youth counterculture. The popularity of yoga grew as publicity increased and as more celebrities, such as Mia Farrow, Mick Jagger, Marianne Faithful, and Donovan, helped make it chic. In August 1969, crowds at the Woodstock music festival in upstate New York were introduced to meditation and yoga by Swami Satchidananda, who opened the festival with guided meditation and introduced the sacred Hindu mantra “om” (or “aum”) into the counterculture lexicon.

During the 1970s and 1980s, yoga began falling out of favor in American culture, at least in relative terms, re-emerging on the cultural landscape in the early 1990s as the “new” physical fitness fad. Into the twenty-first century, yoga became increasingly commercialized with the establishment of exercise centers and classes throughout the United States, with magazines such as *Yoga*, *Yoga Journal*, and *Ascent*, with television shows such as *Inhale* and *The Morning Yoga Show*, and a steady stream of instructional home videos. A new round of celebrity practitioners—Madonna, Ricky Martin, and Meg Ryan among them—spoke publicly of their personal experiences with yoga.

From an esoteric practice in the nineteenth century and an expression of the counterculture in the 1950s and 1960s, yoga in America has emerged as a mainstream cultural phenomenon in the 2000s. According to one study, the number of practitioners climbed from an estimated 7 million in 1998 to 16 million in 2008, with 75 percent of the nation’s health clubs offering yoga classes. Practitioners of yoga come from diverse social and religious backgrounds, taking part for physical development and exercise, stress management, and spiritual growth.

Young, Brigham (1801–1877)

A central figure in the early Mormon movement—the successor to founder Joseph Smith and second president of the Church of Jesus Christ of Latter-day Saints—Brigham Young orchestrated the group’s migration to and settlement in Utah in 1847. As head of the church and the first territorial governor of Utah, he played a key role in defending the religion, its people, and its primary prophet against persecution by non-Mormon neighbors and the U.S. government. His leadership stabilized the movement and guided Mormon society in the pursuit of its modern convictions.

Young was born in Whitingham, Vermont, on June 1, 1801. In 1829, he settled in Mendon, New York, near where

founder “Prophet” Joseph Smith published *The Book of Mormon* the following year. A carpenter and blacksmith by trade, and a Methodist by faith, Young read *The Book of Mormon* shortly after it appeared and was immediately drawn to its precepts. He took his baptism in April 1832 and set out to Canada as a missionary.

In the succeeding years, Young led a number of successful missionary expeditions in the United States and Canada, extending the church’s following and helping dispossessed followers regain lost land. He later succeeded in converting and bringing to America approximately 40,000 English men and women.

Young’s organizational skills and devotion to the church and Smith led to his selection as one of the governing body called the Council of Twelve, or Twelve Apostles, in February 1835. When Smith was assassinated in 1844, Young emerged as the Mormons’ spiritual leader, directing the great migration of 1846 to 1847. Inspired by Young’s idea that building a kingdom of God required more than preaching and converting others to the religion, but also demanded the establishment of a permanent, formal home, the Mormons finally settled in Salt Lake City, Utah.

Young became the director of the Salt Lake City settlement and controlled much of the communal theocracy. The settlement grew at a rapid pace, and Young coordinated the development of codes to govern the actions and behaviors of its members. As president of the Mormon church, he also regularly held hundreds of so-called fireside chats with his followers, reflecting upon clothing, dining, and other cultural concerns.

After the establishment of the Utah Territory and its provisional government, Young also served as governor and superintendent of Indian affairs, extending his influence throughout the region. When fear and resentment of their alternative lifestyle and social philosophies threatened the Mormon community, Young defended Mormons against military and social persecution.

In 1857, Young led a convocation that declared the settlement’s independence from the United States. In the Utah War of 1857 to 1858 between the U.S. government and the Mormons—with each side seeking control of Mormon land—Young declared martial law after President James Buchanan appointed a non-Mormon, Alfred Cumming, governor of the Utah Territory. The Mormons, under the displaced Young, fought for their property, periodically attacking the encamped U.S. military.

In April 1858, Buchanan sent representatives to work out a settlement between the parties, and peace was restored. Young’s defense of Mormon interests brought praise from within the church and ultimately helped avoid a complete split between the Mormon’s Utah territory and the United States.

Mormon society retained a generally self-sustaining lifestyle, producing necessities and providing for each other through communal efforts. Although Young valued the adaptation of current technology for the benefit of Mormon society, the advent of a railroad line connecting the otherwise independent society to outside resources and competition prompted Young to promote local production and encourage education for his community members—efforts to insulate Mormon culture from outside scrutiny. Brigham Young University, founded in 1875 in Provo, remains a prominent and enduring symbol of these efforts.

Although the Mormon church formally ended the practice of plural marriage in 1890, Young had been one of its leading polygamists. He had married a total of twenty-seven women, sixteen of whom bore his fifty-six children. Young divorced some of his wives and some predeceased him. Upon his death on August 29, 1877, he was survived by seventeen wives and forty-seven children.

Zappa, Frank (1940–1993)

One of the most versatile and distinctive figures of rock music, Frank Zappa was known for his talents as a performer and composer, his skills as an audio engineer, and his scathing satire, which targeted both the establishment and the counterculture alike. His compositional style, which he characterized as “conceptual continuity,” drew from nearly every genre of music, combining satirical lyrics with pop melodies, jazz improvisation, doo-wop, and rhythm and blues.

Zappa also produced highly original collage, or “pastiche,” sequences that mixed sound effects, conversation, and music. And he was known for quoting (later called “sampling”) riffs from music that had influenced him, including the perennial favorite “Louie Louie.” Zappa sampled works as diverse as television-show themes, advertising jingles, classical masterpieces, and the band Devo’s song “Whip It.”

As the founder of the “freak band” Mothers of Invention in the 1960s and in his long solo career, Zappa brought a non-mainstream compositional style to popular music and an avant-garde style to performance. He recorded more than fifty albums.

Organized Sound

Frank Vincent Zappa was born in Baltimore, Maryland, on December 21, 1940, to scientist Francis Vincent Zappa and his wife, Rose Marie. Frank was raised in Florida and Maryland before moving to California with his family at age twelve.

His musical career began when he took up the drums in high school. The turning point came in 1954 when he discovered the work of avant-garde classical composer Edgar Varèse, whose music was known for its attempts to sublimate sound through new arrangements of rhythm and timbre. Writing prolifically while he was still in high school, Zappa sought to incorporate new forms of instrumentation and electronic sound into his compositions. He received his first guitar in 1957, and his first band, the Blackouts, played mostly country blues. After high school, Zappa spent a brief period in 1959 studying music theory at Chaffey College in Rancho Cucamonga, California.

His first recordings were scores for low-budget films in the early 1960s, which raised the funds necessary to buy a cheap recording studio in Rancho Cucamonga, called Studio Z. In 1964, he joined a local band called the Soul Giants, which eventually evolved into the Mothers and, after the intervention of nervous record executives, the Mothers of Invention. Their first album, *Freak Out!*, was released in 1966 and parodied the pop music of the day.

Freak Out! was groundbreaking in that it represented the first time Zappa had employed his experimental sound-collage technique in an attempt to capture the freak subculture of Los Angeles. The album was also important because it was one of the first based on a unifying theme, paving the way for such later works as the Who’s rock opera *Tommy* (1969) and Pink Floyd’s *The Wall* (1979). It also was only the second double LP of rock music ever released. (The first rock double album, and first studio double album, ever released generally is cited as Bob

Dylan's *Blonde on Blonde*, also released in 1966.) For all of these reasons, *Freak Out!* established Zappa early on as an inventive new force in rock.

Output

The year 1967 saw the release of three Zappa and Mothers of Invention albums, *Absolutely Free*, *Lumpy Gravy*, and *Cruisin' with Reuben and the Jets*. The first includes the single "Plastic People," which expresses Zappa's belief that phoniness is an inherent trait in all humans and human establishments. *Absolutely Free* served as a platform for Zappa's sermonizing to the American people; on it he argues that not only is American society inherently hypocritical, but the status quo in America is continually suppressing all alternatives and countercultures. *Lumpy Gravy* was Zappa's first experimentation with orchestral arrangements, while *Cruisin'* was a tribute to and parody of doo-wop music.

These early successes were followed in 1968 by *We're Only in It for the Money*. With a cover parodying that of the Beatles's *Sgt. Pepper's Lonely Hearts Club Band*, the album is regarded as Zappa and the Mothers' seminal work and one of the best rock albums of the 1960s. In addition to showcasing his prowess as an engineer, the album brutally satirizes the hippie movement of the day.

A self-described political and cultural subversive, Zappa was known for standing up against authority in both spheres. In 1985 he testified before a committee of the U.S. Senate that was considering the censorship of music. He was outspoken in his opposition to the Parents' Music Resource Center (PMRC), a group of concerned mothers (led by Tipper Gore, the wife of Democrat Al Gore, then a senator from Tennessee) that had convinced the major record companies to put parental advisory labels on music deemed objectionable. In his testimony before Congress, and throughout his life, Zappa was a prominent advocate of First Amendment protection for all forms of communication. He continued his attack on the PMRC by including audio cuts from the PMRC hearings in the song "Porn Wars" on the 1985 album *Frank Zappa Meets the Mothers of Prevention*.

Throughout his career, Zappa urged his listeners to maintain a healthy skepticism regarding the political and ideological machinations of the status quo. As a social commentator and critic, he constantly pushed against the socially erected barriers of so-called good taste. After his run-in with the PMRC, Zappa's interest in the workings of government increased. In an attempt to correct what he saw as a "fascist bias" in American government, he spent much of 1988 working to get young Americans to register to vote.

In 1990, at the request of Czech Republic President Václav Havel, a lifelong fan, Zappa served as special ambassador of that government on trade, culture, and tourism. Despite pressure from the George H.W. Bush administration, Havel kept Zappa on as cultural attaché until 1991, when he was diagnosed with prostate cancer. Zappa died on December 4, 1993.

Countercultural Legacy

The musicianship and ideology demonstrated on Zappa's steady stream of albums of the 1960s, 1970s, and 1980s, in addition to his onstage theatrics, cemented his reputation as an important underground musician. Zappa and the Mothers of Invention served as the inspiration for a plethora of underground artists who followed, including the Velvet Underground, Nico, and the Tubes. His combination of visual imagery and verbal pastiche established many of the stylistic conventions that would become MTV icons in the 1980s. Perhaps the most interesting aspect of his legacy is the deconstruction-fueled paranoia and caustic satire that has continued to serve as the lyrical base for a multiplicity of contemporary bands that wish to be seen as countercultural.

Zines

In a society notoriously influenced by homogenized mass media and said to be afflicted with impersonal isolation, zines represent a form of written communication that is more scathingly critical of current affairs but significantly less professionally produced or widely read than independent or alternative-media publications such as *The Nation* and *The Atlantic Monthly*. Often the work of one author and either free or nominally priced, zines offer an intensely personal, highly affordable, and often subversive method of independent grassroots communication.

Although many zines are connected to the 1970s hardcore-punk music scene, their roots can be traced to 1920s science fiction fanzines. These independently produced publications distinguished themselves from professionally manufactured magazines by adopting the label “fanzines,” a term that has since been shortened simply to “zines.” Despite this history, contemporary zine authors, or zinesters, locate themselves not in the sci-fi tradition but in the empowering do-it-yourself ethic of the hardcore-punk music scene.

Although an argument can be made that a zine is any independent publication, there is an obvious difference between Thomas Paine’s revolutionary pamphlet *Common Sense* (1776) or the International Socialist Organization’s weekly, *Socialist Worker*, and actual zines such as *Punk Planet*, *Suburban Voice*, *Slug & Lettuce*, or *Message from the Homeland*. There appears to be no limit to the creativity in format and size of zines. They have been published on everything from intricately folded vellum paper to standard-size newsprint. Despite the availability of affordable offset printing from the Florida-based Small Publisher’s Co-Op, which expressly caters to zines, many such publications continue to be illicitly reproduced on photocopy machines, with “donated” copies passed along by a sympathetic shop worker.

Just as zines feature a variety of formats, their content has proven to be nearly unlimited. In general, they feature some blend of personal reflection, social commentary, fringe culture, poetry, incessant babbling, and reviews of or interviews with independent rock bands. Ideologically driven zines such as *Retrogression* and *Impact!* are, or were, published somewhat regularly and combine publicity about the independent music scene with advocacy for gay rights, revolutionizing gender roles, combating racism, and making conscious (anticorporate) consumer choices. Other zines, such as *Thrift Score* and *Mystery Date*, espouse the joys of thrift-store shopping or republish ridiculous sections from 1950s etiquette books. In short, so long as zines are independently published and not profit driven, they can be radical, humorous, or frivolous and still be recognized as a legitimate voice within the zine reading community.

Although there is no centralized clearinghouse for these largely underground publications, *Factsheet Five* (1982–1991) attempted to list and comment on a large sample of zines during its tenure as the zine world’s equivalent of the Yellow Pages. Estimates have placed the number of zines in publication as high as 50,000. The accuracy of that figure, however, is made uncertain by the very nature of the publications. Often irregularly published, with press runs ranging from a few dozen to several thousand, many exist under the radar for all but the most dedicated zine aficionados.

Zoarites

In 1817, a group of 300 religious separatists arrived in Philadelphia from Württemberg in southwest Germany, near Switzerland. Although they were befriended by Quakers, who provided basic necessities and assisted the refugees in locating employment and property, the leader of the new group, Joseph Michael Bäumeler (anglicized to Bimeler), desired a separate community for his followers. Trained as a weaver, Bimeler contracted to buy a 5,500-acre (2,225-hectare) tract of land along the Tuscarawas River in east-central Ohio, agreeing to pay the purchase price over a fifteen-year period. The town was named Zoar, meaning “sanctuary from evil,” after the biblical account of Lot, who escaped to Zoar from Sodom. The scarcity of food during the first winter prompted the group to establish a communal society, and on April 19, 1819, the Society of Separatists of Zoar was formed. Members donated all property and material goods to the community, in exchange for food, clothing, and shelter.

The Zoarites were pacifists and refused military service. They did not observe any holidays or traditional religious sacraments, such as baptism or marriage. A couple wishing to marry simply presented themselves before witnesses. One of the most interesting features of the community was the garden, which occupied the entire village square and was designed to represent the New Jerusalem as described in the Book of Revelation. A Norway spruce planted in the center symbolized eternal life; circling the spruce was an arbor representing heaven. Twelve juniper trees, one for each of the apostles, formed a third concentric ring. This area was enclosed by a circular path, with twelve radials signifying the twelve tribes of Israel.

In 1822, concerned that the population might increase too rapidly for its economy, the community adopted the practice of celibacy, which ultimately was abandoned in 1830. For many years, children between the ages of three and fourteen lived in separate nurseries from their families, allowing their mothers to continue to work in the community.

By the mid-1830s, Zoar was almost entirely self-sustaining and sold surplus from its farms to other towns. Its flour mills, two iron foundries, textile factory, and several stores manufactured and sold a variety of goods for general sale. Additional revenue was generated when the Zoarites contracted to build a 7-mile portion of the Ohio and Erie Canal that crossed their property. By 1852, the society's assets were valued at more than \$1 million.

Bimeler's death in 1853, combined with the changing social and economic environment, had a major impact on the community. The arrival of the railroad in the 1880s brought greater interaction with the outside world, and the rise of mass production rendered Zoar's small manufacturing businesses obsolete. In 1898, the remaining members decided to dissolve the society. Common property was divided, with each member receiving about 50

acres (20 hectares) and \$200.

In 1942, the Ohio Historical Society began acquiring and restoring some of the original town buildings. Today, a number of the Zoarite buildings are open to the public as an historic site.

Zoot-Suiters

Zoot-suiters were an amorphous youth counterculture that emerged in the United States during the late 1930s and early to mid-1940s. They are associated with a style of clothing and grooming popular during that time among African American, Mexican American, and other minority youths.

Zoot-suiters were young men, and some young women, who expressed their individuality, ethnic pride, and resistance to the norms of white society through shared cultural markers. The central component of zoot-suiter style and wardrobe was the flashy, custom-made “zoot suit,” designed to express the individuality of the wearer.

The jacket of the basic suit had exaggeratedly broad shoulders and long sleeves that extended over the fingers. It was purposefully baggy and elongated as compared to the business suit fashion of the time, often completely covering the thighs and flaring out from the waist. The pants were loose through the hips and tapered or cuffed at the ankles, to swing and move with the man as he danced or walked in style. A long chain hung from the waist, looping back up to the pocket and generally attached to a watch or knife.

The outfit might be topped with a stylish flat-topped hat and dress shoes. African Americans would slick their hair back to make it as smooth as possible; Mexican Americans often chose to comb their hair from the sides to meet in a line at the back of the head called a ducktail. The sum total of the wardrobe was intended to portray a cool, macho air of leisure and maturity.

The zoot suit—featuring a long, broad-shouldered jacket; loose, tapered pants; and a stylish, brimmed hat—exuded a cool, macho air of leisure and maturity. For minorities, it was a means of gaining visibility while defying assimilation. (Douglas Miller/Hulton Archive/Getty Images)

Much more than a fad, the clothing and lifestyle of the zoot-suiters were linked to serious attempts by African American and Mexican American youths to gain visibility and validation in American society. Social mobility was still very limited for minority youth in America. While many were encouraged by their parents to follow the rules and abide by accepted practices, the zoot-suiters embraced an alternative lifestyle and subculture. Speech was as much a part of this as clothes and grooming, emphasizing street slang and the lingo of jazz and swing.

The popularity of the zoot-suiter counterculture went hand in hand with the rise of dance halls that featured jazz, boogie-woogie, swing, and the like—all music that had yet to receive wide cultural approval. Important performers and bandleaders wore versions of the zoot suit, including Duke Ellington and Count Basie, who rose to fame in the 1930s and 1940s. As African Americans, even such up-and-coming musicians felt the effects of racism, which restricted where they could play music, where they could eat, and where they could find lodging. At the same time, Mexican Americans suffered similarly discriminatory practices in education and the workplace, especially in California. Zoot-suiters looked up to and emulated the bandleaders and pachuco (Latino) gang leaders who had achieved success or cachet in their respective communities.

Mainstream reaction against the zoot-suiters was present from the beginning of the movement, as minority youth in general were painted as delinquents. The public flamboyance of the zoot-suiters, as well as the visibility of their outfits, made them easy targets for local thugs and police alike. This was compounded by the fact that some of the young zoot-suiters in urban areas also had turned to crime.

In 1942, as part of the national rationing of materials during World War II, the War Production Board placed restrictions on fabric used in clothing. All at once, the zoot suit, with its long jacket and flowing slacks, was against federal regulations. This contributed further to the negative view of zoot-suiters, who defiantly continued to wear the extravagant suits. Beginning in Los Angeles, where the City Council successfully petitioned the federal government to make the suit illegal, violent clashes broke out between law enforcement authorities (both the police and military) and zoot-suiters. The fighting spread to urban centers across the country during the next two years.

Over time, the trend spread nationally into “hip” youth culture in the United States. Zoot-suiter culture—or versions

of it—also emerged internationally. It was visible in such places as Quebec Province in Canada, Italy, and France during the 1940s, and Great Britain during the 1950s, especially in the Teddy Boys culture.

Indeed, remnants of zoot-suiter style have remained evident in certain entertainers' fashions into the twenty-first century. For most, the original countercultural statement has been subsumed by the mass market. For others, especially African American and Hispanic American entertainers, it remains a way to express personal style and cultural identity.

The Trial of Anne Hutchinson (1637)

Anne Hutchinson, a Puritan layperson, challenged the religious and political orthodoxy of the Massachusetts Bay Colony in the 1630s. In addition to holding informal group discussions that questioned ministerial teachings, Hutchinson openly professed views that were regarded as heretical. Under Governor John Winthrop, Hutchinson was brought to trial in November 1637 at General Court in Newton. She was convicted of sedition and contempt and banished from the colony. The following is an excerpt from her trial transcript.

Mr. [John] Winthrop, Governor: Mrs. Hutchinson, you are called here as one of those that have troubled the peace of the commonwealth and the churches here; you are known to be a woman that hath had a great share in the promoting and divulging of those opinions that are the cause of this trouble, and to be nearly joined not only in affinity and affection with some of those the court had taken notice of and passed censure upon, but you have spoken divers things, as we have been informed, very prejudicial to the honour of the churches and ministers thereof, and you have maintained a meeting and an assembly in your house that hath been condemned by the general assembly as a thing not tolerable nor comely in the sight of God nor fitting for your sex, and notwithstanding that was cried down you have continued the same. Therefore we have thought good to send for you to understand how things are, that if you be in an erroneous way we may reduce you that so you may become a profitable member here among us. Otherwise if you be obstinate in your course that then the court may take such course that you may trouble us no further. Therefore I would intreat you to express whether you do assent and hold in practice to those opinions and factions that have been handled in court already, that is to say, whether you do not justify Mr. Wheelwright's sermon and the petition.

Mrs. Hutchinson: I am called here to answer before you but I hear no things laid to my charge.

Gov.: I have told you some already and more I can tell you.

Mrs. H.: Name one, Sir.

Gov.: Have I not named some already?

Mrs. H.: What have I said or done?

Gov.: Why for your doings, this you did harbor and countenance those that are parties in this faction that you have heard of.

Mrs. H.: That's matter of conscience, Sir.

Gov.: Your conscience you must keep, or it must be kept for you.

Mrs. H.: Must not I then entertain the saints because I must keep my conscience.

Gov.: Say that one brother should commit felony or treason and come to his brother's house, if he knows him guilty and conceals him he is guilty of the same. It is his conscience to entertain him, but if his conscience comes into act in giving countenance and entertainment to him that hath broken the law he is guilty too. So if you do countenance those that are transgressors of the law you are in the same fact.

Mrs. H.: What law do they transgress?

Gov.: The law of God and of the state.

Mrs. H.: In what particular?

Gov.: Why in this among the rest, whereas the Lord doth say honour thy father and thy mother.

Mrs. H.: Ey Sir in the Lord.

Gov.: This honour you have broke in giving countenance to them.

Mrs. H.: In entertaining those did I entertain them against any act (for there is the thing) or what God has appointed?

Gov.: You knew that Mr. Wheelwright did preach this sermon and those that countenance him in this do break a law.

Mrs. H.: What law have I broken?

Gov.: Why the fifth commandment.

Mrs. H.: I deny that for he [Mr. Wheelwright] saith in the Lord.

Gov.: You have joined with them in the faction.

Mrs. H.: In what faction have I joined with them?

Gov.: In presenting the petition.

Mrs. H.: Suppose I had set my hand to the petition. What then?

Gov.: You saw that case tried before.

Mrs. H.: But I had not my hand to [not signed] the petition.

Gov.: You have counselled them.

Mrs. H.: Wherein?

Gov.: Why in entertaining them.

Mrs. H.: What breach of law is that, Sir?

Gov.: Why dishonouring the commonwealth.

Mrs. H.: But put the case, Sir, that I do fear the Lord and my parents. May not I entertain them that fear the Lord because my parents will not give me leave?

Gov.: If they be the fathers of the commonwealth, and they of another religion, if you entertain them then you dishonour your parents and are justly punishable.

Mrs. H.: If I entertain them, as they have dishonoured their parents I do.

Gov.: No but you by countenancing them above others put honor upon them.

Mrs. H.: I may put honor upon them as the children of God and as they do honor the Lord.

Gov.: We do not mean to discourse with those of your sex but only this: you so adhere unto them and do endeavor to set forward this faction and so you do dishonour us.

Mrs. H.: I do acknowledge no such thing. Neither do I think that I ever put any dishonour upon you.

Gov.: Why do you keep such a meeting at your house as you do every week upon a set day?

Mrs. H.: It is lawful for me to do so, as it is all your practices, and can you find a warrant for yourself and condemn me for the same thing? The ground of my taking it up was, when I first came to this land because I did not go to such meetings as those were, it was presently reported that I did not allow of such meetings but held them unlawful and therefore in that regard they said I was proud and did despise all ordinances. Upon that a friend came unto me and told me of it and I to prevent such aspersions took it up, but it was in practice before I came. Therefore I was not the first....

Mrs. H.: If you please to give me leave I shall give you the ground of what I know to be true. Being much troubled to see the falseness of the constitution of the Church of England, I had like to have turned Separatist. Whereupon I kept a day of solemn humiliation and pondering of the thing; this scripture was brought unto me—he that denies Jesus Christ to be come in the flesh is antichrist. This I considered of and in considering found that the papists did not deny him to be come in the flesh, nor we did not deny him—who then was antichrist? Was the Turk antichrist only? The Lord knows that I could not open scripture; he must by his prophetic office open it unto me. So after that being unsatisfied in the thing, the Lord was pleased to bring this scripture out of the Hebrews. He that denies the testament denies the testator, and in this did open unto me and give me to see that those which did not teach the new covenant had the spirit of antichrist, and upon this he did discover the ministry unto me; and ever since, I bless the Lord, he hath let me see which was the clear ministry and which the wrong. Since that time I confess I have been more choice and he hath left me to distinguish between the voice of my beloved and the voice of Moses, the voice of John the Baptist and the voice of antichrist, for all those voices are spoken of in scripture. Now if you do condemn me for speaking what in my conscience I know to be truth I must commit myself unto the Lord.

Mr. Nowel [assistant to the Court]: How do you know that was the spirit?

Mrs. H.: How did Abraham know that it was God that bid him offer his son, being a breach of the sixth commandment?

Dep. Gov. [Thomas Dudley]: By an immediate voice.

Mrs. H.: So to me by an immediate revelation.

Dep. Gov.: How! an immediate revelation.

Mrs. H.: By the voice of his own spirit to my soul. I will give you another scripture, Jer[emiah] 46: 27–28—out of which the Lord showed me what he would do for me and the rest of his servants. But after he was pleased to reveal himself to me I did presently, like Abraham, run to Hagar. And after that he did let me see the atheism of my own heart, for which I begged of the Lord that it might not remain in my heart, and being thus, he did show me this (a twelvemonth after) which I told you of before.... Therefore, I desire you to look to it, for you see this scripture fulfilled this day and therefore I desire you as you tender the Lord and the church and commonwealth to consider and look what you do. You have power over my body but the Lord Jesus hath power over my body and soul; and assure yourselves thus much, you do as much as in you lies to put the Lord Jesus Christ from you, and if you go on in this course you begin, you will bring a curse upon you and your posterity, and the mouth of the Lord hath spoken it.

Dep. Gov.: What is the scripture she brings?

Mr. Stoughton [assistant to the Court]: Behold I turn away from you.

Mrs. H.: But now having seen him which is invisible I fear not what man can do unto me....

Gov.: I am persuaded that the revelation she brings forth is delusion.

[The trial text here reads:] All the court but some two or three ministers cry out, we all believe it—we all believe it. [Mrs. Hutchinson was found guilty.]

Gov.: The court hath already declared themselves satisfied concerning the things you hear, and concerning the troublesomeness of her spirit and the danger of her course amongst us, which is not to be suffered. Therefore if it be the mind of the court that Mrs. Hutchinson for these things that appear before us is unfit for our society, and if it be the mind of the court that she shall be banished out of our liberties and imprisoned till she be sent away, let them hold up their hands.

[All but three did so.]

Gov.: Mrs. Hutchinson, the sentence of the court you hear is that you are banished from out of our jurisdiction as being a woman not fit for our society, and are to be imprisoned till the court shall send you away.

Mrs. H.: I desire to know wherefore I am banished?

Gov.: Say no more. The court knows wherefore and is satisfied.

John Woolman's *Journal* (1757)

John Woolman, a Quaker minister from New Jersey, was an early opponent of slavery and an outspoken pacifist. In the 1750s, during a series of missionary expeditions in the Southern, Middle Atlantic, and New England colonies, he witnessed the conditions endured by slaves and began advocating for emancipation with the slaveholders he met. He recounted his travels—as well as other life experiences and personal views—in his classic autobiography, Journal.

Feeling the exercise in relation to a visit to the Southern Provinces to increase upon me, I acquainted our Monthly Meeting therewith, and obtained their certificate. Expecting to go alone, one of my brothers who lived in Philadelphia, having some business in North Carolina, proposed going with me part of the way; but as he had a view of some outward affairs, to accept of him as a companion was some difficulty with me, whereupon I had conversation with him at sundry times. At length feeling easy in my mind, I had conversation with several elderly Friends of Philadelphia on the subject, and he obtaining a certificate suitable to the occasion, we set off in the Fifth Month, 1757. Coming to Nottingham week-day meeting, we lodged at John Churchman's, where I met with our friend, Benjamin Buffington, from New England, who was returning from a visit to the Southern Provinces.

Thence we crossed the river Susquehanna, and lodged at William Cox's in Maryland.

Soon after I entered this province, a deep and painful exercise came upon me, which I often had some feeling of since my mind was drawn toward these parts, and with which I had acquainted my brother before we agreed to join as companions. As the people in this and the Southern Provinces live much on the labour of slaves, many of whom are used hardly, my concern was that I might attend with singleness of heart to the voice of the true Shepherd, and be so supported as to remain unmoved at the faces of men.

Ninth of Fifth Month.—A Friend at whose house we breakfasted setting us a little on our way, I had conversation with him, in the fear of the Lord, concerning his slaves, in which my heart was tender; I used much plainness of speech with him, and he appeared to take it kindly. We pursued our journey without appointing meetings, being pressed in my mind to be at the Yearly Meeting in Virginia. In my travelling on the road, I often felt a cry rise from the centre of my mind, thus: "O Lord, I am a stranger on the earth, hide not thy face from me."

On the 11th, we crossed the rivers Patowmack and Rapahannock, and lodged at Port Royal. On the way we had the company of a colonel of the militia, who appeared to be a thoughtful man. I took occasion to remark on the difference in general betwixt a people used to labour moderately for their living, training up their children in frugality and business, and those who live on the labour of slaves; the former, in my view, being the most happy life. He concurred in the remark, and mentioned the trouble arising from the untoward, slothful disposition of the negroes, adding that one of our labourers would do as much in a day as two of their slaves. I replied that free men, whose minds were properly on their business, found a satisfaction in improving, cultivating, and providing for their families; but negroes, labouring to support others who claim them as their property, and expecting nothing but slavery during life, had not the like inducement to be industrious.

After some further conversation I said, that men having power too often misapplied it; that though we made slaves of the negroes, and the Turks made slaves of the Christians, I believed that liberty was the natural right of all men equally. This he did not deny, but said the lives of the negroes were so wretched in their own country that many of them lived better here than there. I replied, "There is great odds in regard to us on what principle we act"; and so the conversation on that subject ended. I may here add that another person, some time afterwards, mentioned the wretchedness of the negroes, occasioned by their intestine wars, as an argument in favour of our fetching them away for slaves. To which I replied, if compassion for the Africans, on account of their domestic troubles, was the real motive of our purchasing them, that spirit of tenderness being attended to, would incite us to use them kindly, that, as strangers brought out of affliction, their lives might be happy among us. And as they are human creatures, whose souls are as precious as ours, and who may receive the same help and comfort from the Holy Scriptures as we do, we could not omit suitable endeavours to instruct them therein; but that while we manifest by our conduct that our views in purchasing them are to advance ourselves, and while our buying captives taken in war animates those parties to push on the war and increase desolation amongst them, to say they live unhappily in Africa is far from being an argument in our favour.

I further said, the present circumstances of these provinces to me appear difficult; the slaves look like a burdensome stone to such as burden themselves with them; and that, if the white people retain a resolution to prefer their outward prospects of gain to all other considerations, and do not act conscientiously toward them as fellow-creatures, I believe that burden will grow heavier and heavier, until times change in a way disagreeable to us. The person appeared very serious, and owned that in considering their condition and the manner of their treatment in these provinces he had sometimes thought it might be just in the Almighty so to order it.

Having travelled through Maryland, we came amongst Friends at Cedar Creek in Virginia, on the 12th; and the next day rode, in company with several of them, a day's journey to Camp Creek. As I was riding along in the morning, my mind was deeply affected in a sense I had of the need of divine aid to support me in the various difficulties which attended me, and in uncommon distress of mind I cried in secret to the Most High, "O Lord, be merciful, I beseech Thee, to Thy poor afflicted creature!" After some time I felt inward relief, and soon after a Friend in company began to talk in support of the slave-trade, and said the negroes were understood to be the offspring of Cain, their blackness being the mark which God set upon him after he murdered Abel, his brother; that

it was the design of Providence they should be slaves, as a condition proper to the race of so wicked a man as Cain was. Then another spake in support of what had been said.

To all which I replied in substance as follows: that Noah and his family were all who survived the flood, according to Scripture; and as Noah was of Seth's race, the family of Cain was wholly destroyed. One of them said that after the flood Ham went to the land of Nod and took a wife; that Nod was a land far distant, inhabited by Cain's race, and that the flood did not reach it; and as Ham was sentenced to be a servant of servants to his brethren, these two families, being thus joined, were undoubtedly fit only for slaves. I replied, the flood was a judgment upon the world for their abominations, and it was granted that Cain's stock was the most wicked, and therefore unreasonable to suppose that they were spared. As to Ham's going to the land of Nod for a wife, no time being fixed, Nod might be inhabited by some of Noah's family before Ham married a second time; moreover the text saith "That all flesh died that moved upon the earth" (Gen. vii.21). I further reminded them how the prophets repeatedly declare "that the son shall not suffer for the iniquity of the father, but every one be answerable for his own sins."

I was troubled to perceive the darkness of their imaginations, and in some pressure of spirit said, "The love of ease and gain are the motives in general of keeping slaves, and men are wont to take hold of weak arguments to support a cause which is unreasonable. I have no interest on either side, save only the interest which I desire to have in the truth. I believe liberty is their right, and as I see they are not only deprived of it, but treated in other respects with inhumanity in many places, I believe He who is a refuge for the oppressed will, in His own time, plead their cause, and happy will it be for such as walk in uprightness before Him." And thus our conversation ended.

Message by Nancy Ward to the Cherokee Council (1817)

Tribal leader Nancy Ward, known for her efforts to establish peace between the Cherokee and white settlers during the 1780s, later attained the status of "Beloved Woman" and held a seat on the Cherokee Council of Chiefs. On May 2, 1817, Ward addressed the council and urged members of the tribe not to give up the land that had sustained them for generations.

Amovey [Tenn.] in Council 2nd May 1817

A True Copy The Cherokee ladys now being present at the meeting of the Chiefs and warriors in council have thought it their duties as mothers to address their beloved Chiefs and warriors now assembled.

Our beloved children and head men of the Cherokee nation we address you warriors in council we have raised all of you on the land which we now have, which God gave us to inhabit and raise provisions we know that our country has once been extensive but by repeated sales has become circumscribed to a small tract and never thought it our duty to interfere in the disposition of it till now, if a father or mother was to sell all their lands which they had to depend on which their children had to raise their living on which would be indeed bad and to be removed to another country we do not wish to go to an unknown country which we have understood some of our children wish to go over the Mississippi but this act of our children would be like destroying your mothers. You mothers your sisters ask and beg of you not to part with any more of our lands, we say ours you are descendants and take pity on our request, but keep it for our growing children for it was the good will of our creator to place here and you know our father the great president will not allow his white children to take our country away only keep your hands off of paper talks for it is our own country for if it was not they would not ask you to put your hands to paper for it would be impossible to remove us all for as soon as one child is raised we have others in our arms for such is our situation and will consider our circumstance.

Therefore children don't part with any more of our lands but continue on it and enlarge your farms and cultivate and raise corn and cotton and we your mothers and sisters will make clothing for you which our father the

president has recommended to us all we don't charge anybody for selling our lands, but we have heard such intentions of our children but your talks become true at last and it was our desire to forewarn you all not to part with our lands.

Nancy Ward to her children Warriors to take pity and listen to the talks of your sisters, although I am very old yet cannot but pity the situation in which you will hear of their minds. I have great many grand children which I wish they to do well on our land.

***The Confessions of Nat Turner* (1832)**

Believing he was the chosen servant of a vengeful god, thirty-year-old Nat Turner led an uprising of Virginia slaves in August 1831 that left hundreds of people dead and caused rampant fear among Southern whites. Tried and convicted that November, Turner recounted his life story—including his divine revelation—and the details of the rebellion to his lawyer, Thomas R. Gray, while awaiting execution. The published work, The Confessions of Nat Turner, appeared the following year.

SIR,—

YOU have asked me to give a history of the motives which induced me to undertake the late insurrection, as you call it—To do so I must go back to the days of my infancy, and even before I was born.

I was thirty-one years of age the 2nd of October last, and born the property of Benj. Turner, of this county. In my childhood a circumstance occurred which made an indelible impression on my mind, and laid the ground work of that enthusiasm, which has terminated so fatally to many, both white and black, and for which I am about to atone at the gallows. It is here necessary to relate this circumstance—trifling as it may seem, it was the commencement of that belief which has grown with time, and even now, sir, in this dungeon, helpless and forsaken as I am, I cannot divest myself of....

And about this time [1825 at age twenty-five] I had a vision—and I saw white spirits and black spirits engaged in battle, and the sun was darkened—the thunder rolled in the Heavens, and blood flowed in streams—and I heard a voice saying, "Such is your luck, such you are called to see, and let it come rough or smooth, you must surely bear it." I now withdrew myself as much as my situation would permit, from the intercourse of my fellow servants, for the avowed purpose of serving the Spirit more fully—and it appeared to me, and reminded me of the things it had already shown me, and that it would then reveal to me the knowledge of the elements, the revolution of the planets, the operation of tides, and changes of the seasons.

After this revelation in the year 1825, and the knowledge of the elements being made known to me, I sought more

than ever to obtain true holiness before the great day of judgment should appear, and then I began to receive the true knowledge of faith.

And from the first steps of righteousness until the last, was I made perfect; and the Holy Ghost was with me, and said, "Behold me as I stand in the Heavens"—and I looked and saw the forms of men in different attitudes—and there were lights in the sky to which the children of darkness gave other names than what they really were—for they were the lights of the Savior's hands, stretched forth from east to west, even as they were extended on the cross on Calvary for the redemption of sinners.

And I wondered greatly at these miracles, and prayed to be informed of a certainty of the meaning thereof—and shortly afterwards, while laboring in the field, I discovered drops of blood on the corn as though it were dew from heaven—and I communicated it to many, both white and black, in the neighborhood—and I then found on the leaves in the woods hieroglyphic characters, and numbers, with the forms of men in different attitudes, portrayed in blood, and representing the figures I had seen before in the heavens.

And now the Holy Ghost had revealed itself to me, and made plain the miracles it had shown me—For as the blood of Christ had been shed on this earth, and had ascended to heaven for the salvation of sinners, and was now returning to earth again in the form of dew—and as the leaves on the trees bore the impression of the figures I had seen in the heavens, it was plain to me that the Savior was about to lay down the yoke he had borne for the sins of men, and the great day of judgment was at hand....

And on the 12th of May, 1828, I heard a loud noise in the heavens, and the Spirit was loosened, and Christ had laid down the yoke he had borne for the sins of men, and that I should take it on and fight against the Serpent, for the time was fast approaching when the first should be last and the last should be first.

And by signs in the heavens that it would make known to me when I should commence the great work—and until the first sign appeared, I should conceal it from the knowledge of men—And on the appearance of the sign (the eclipse of the sun last February), I should arise and prepare myself, and slay my enemies with their own weapons.

And immediately on the sign appearing in the heavens, the seal was removed from my lips, and I communicated the great work laid out for me to do, to four in whom I had the greatest confidence, (Henry, Hark, Nelson, and Sam)—

It was intended by us to have begun the work of death on the 4th July last—Many were the plans formed and rejected by us, and it affected my mind to such a degree, that I fell sick, and the time passed without our coming to any determination how to commence— Still forming new schemes and rejecting them, when the sign appeared again, which determined me not to wait longer.

"Plan of the West Roxbury Community" or Brook Farm (1842), Elizabeth

Palmer Peabody

Educator and writer Elizabeth Palmer Peabody operated a bookstore in Boston that became a frequent meeting place and intellectual center for members of the transcendentalist movement. In January 1842, Peabody published an article in The Dial that articulated the underlying principles of Brook Farm, the transcendentalists' experiment in utopian communal living in West Roxbury, Massachusetts.

In the last number of *The Dial* were some remarks, under the perhaps ambitious title, of "A Glimpse of Christ's Idea of Society;" in a note to which, it was intimated, that in this number, would be given an account of an attempt to realize in some degree this great Ideal, by a little company in the midst of us, as yet without name or visible existence. The attempt is made on a very small scale. A few individuals, who, unknown to each other, under

different disciplines of life, reacting from different social evils, but aiming at the same object,—of being wholly true to their natures as men and women; have been made acquainted with one another, and have determined to become the Faculty of the Embryo University.

In order to live a religious and moral life worthy the name, they feel it is necessary to come out in some degree from the world, and to form themselves into a community of property, so far as to exclude competition and the ordinary rules of trade;—while they reserve sufficient private property, or the means of obtaining it, for all purposes of independence, and isolation at will. They have bought a farm, in order to make agriculture the basis of their life, it being the most direct and simple in relation to nature.

A true life, although it aims beyond the highest star, is redolent of the healthy earth. The perfume of clover lingers about it. The lowing of cattle is the natural bass to the melody of human voices.

On the other hand, what absurdity can be imagined greater than the institution of cities? They originated not in love, but in war. It was war that drove men together in multitudes, and compelled them to stand so close, and build walls around them. This crowded condition produces wants of an unnatural character, which resulted in occupations that regenerated the evil, by creating artificial wants....

The plan of the Community, as an Economy, is in brief this; for all who have property to take stock, and receive a fixed interest thereon; then to keep house or board in commons, as they shall severally desire, at the cost of provisions purchased at wholesale, or raised on the farm; and for all to labor in community, and be paid at a certain rate an hour, choosing their own number of hours, and their own kind of work. With the results of this labor, and their interest, they are to pay their board, and also purchase whatever else they require at cost, as the warehouses of the Community, which are to be filled by the Community as such. To perfect this economy, in the course of time they must have all trades, and all modes of business carried on among themselves, from the lowest mechanical trade, which contributes to the health and comfort of life, to the finest art which adorns it with food or drapery for the mind.

All labor, whether bodily or intellectual, is to be paid at the same rate of wages; on the principle, that as the labor becomes merely bodily, it is a greater sacrifice to the individual laborer, to give his time to it; because time is desirable for the cultivation of the intellect, in exact proportion to ignorance. Besides, intellectual labor involves in itself higher pleasures, and is more its own reward, than bodily labor.

Another reason, for setting the same pecuniary value on every kind of labor, is, to give outward expression to the great truth, that all labor is sacred, when done for a common interest. Saints and philosophers already know this, but the childish world does not; and very decided measures must be taken to equalize labors, in the eyes of the young of the community, who are not beyond the moral influences of the world without them. The community will have nothing done within its precincts, but what is done by its own members, who stand all in social equality;—that the children may not “learn to expect one kind of service from Love and Goodwill, and another from the obligation of others to render it,”—a grievance of the common society stated, by one of the associated mothers, as destructive of the soul’s simplicity. Consequently, as the Universal Education will involve all kinds of operation, necessary to the comforts and elegances of life, every associate, even if he be the digger of a ditch as his highest accomplishment, will be an instructor in that to the young members. Nor will this elevation of bodily labor be liable to lower the tone of manners and refinement in the community. The “children of light” are not altogether unwise in their generation. They have an invisible but all-powerful guard of principles. Minds incapable of refinement will not be attracted into this association. It is an Ideal community, and only to the ideally inclined will it be attractive; but these are to be found in every rank of life, under every shadow of circumstance. Even among the diggers in the ditch are to be found some, who through religious cultivation, can look down, in meek superiority, upon the outwardly refined, and the book-learned.

Besides, after becoming members of this community, none will be engaged merely in bodily labor. The hours of labor for the Association will be limited by a general law, and can be curtailed at the will of the individual still more; and means will be given to all for intellectual improvement and for social intercourse, calculated to refine

and expand. The hours redeemed from labor by community, will not be reapplied to the acquisition of wealth, but to the production of intellectual goods. This community aims to be rich, not in the metallic representative of wealth, but in the wealth itself, which money should represent; namely, LEISURE TO LIFE IN ALL THE FACULTIES OF THE SOUL. As a community, it will traffic with the world at large, in the products of Agricultural labor; and it will sell education to as many young persons as can be domesticated in the families, and enter into the common life with their own children. In the end, it hopes to be enabled to provide—not only all the necessaries, but all the elegances desirable for bodily and for spiritual health; books, apparatus, collections for science, works of art, means of beautiful amusement. These things are to be common to all; and thus that object, which alone gilds and refines the passion for individual accumulation, will no longer exist for desire, and whenever the Sordid passion appears, it will be seen in its naked selfishness. In its ultimate success, the community will realize all the ends which selfishness seeks, but involved in spiritual blessings, which only greatness of soul can aspire after.

And the requisitions on the individuals, it is believed, will make this the order forever. The spiritual good will always be the condition of the temporal. Every one must labor for the community in a reasonable degree, or not taste its benefits. The principles of the organization therefore, and not its probable results in future time, will determine its members. These principles are cooperation in social matters, instead of competition or balance of interests; and individual self-unfolding, in the faith that the whole soul of humanity is in each man and woman. The former is the application of the love of man; the latter of the love of God, to life. Whoever is satisfied with society, as it is; whose sense of justice is not wounded by its common action, institutions, spirit of commerce, has no business with this community; neither has any one who is willing to have other men (needing more time for intellectual cultivation than himself) give their best hours and strength to bodily labor, to secure himself immunity therefrom. And whoever does not measure what society owes to its members of cherishing and instruction, by the needs of the individuals that compose it, has no lot in this new society. Whoever is willing to receive from his fellow men that, for which he gives no equivalent, will stay away from its precincts forever.

But whoever shall surrender himself to it[s] principles, shall find that its yoke is easy and its burden light.... The principle, with regard to labor, lies at the root of moral and religious life; for it is not more true that “money is the root of all evil,” than that *labor is the germ of all good*....

A single farm, in the midst of Massachusetts, does not afford range enough for men to create out of the Earth a living, with no other means; as the wild Indians, or the United States Army in Florida may do. This plan, of letting all persons choose their own departments of action, will immediately place the Genius of Instruction on its throne. Communication is the life of spiritual life. Knowledge pours itself out upon ignorance by a native impulse. All the arts crave response. “Wisdom cries.” If every man and woman taught only what they loved, and so many hours as they could naturally communicate, instruction would cease to be a drudgery, and we may add, learning would be no longer a task. The known accomplishments of many of the members of this association have already secured it an interest in the public mind, as a school of literary advantages quite superior. Most of the associates have had long practical experience in the details of teaching, and have groaned under the necessity of taking their method and law from custom and caprice, when they would rather have found it in the nature of the thing taught, and the condition of the pupil to be instructed. Each instructor appoints his hours of study or recitation, and the scholars, or the parents of the children, or the educational committee, choose the studies for the time, and the pupils submit, as long as they pursue their studies with any teacher, to his regulations....

It seems impossible that the little organization can be looked on with any unkindness by the world without it. Those who have not the faith that the principles of Christ’s kingdom are applicable to real life in the world will smile at it as a visionary attempt. But even they must acknowledge it can do no harm, in any event. If it realizes the hope of its founders, it will immediately become a manifold blessing. Its moral *aura* must be salutary. As long as it lasts, it will be an example of the beauty of brotherly love.

The Declaration of Sentiments, Seneca Falls Convention (1848)

The women's rights movement in America is said to have begun with the Seneca Falls Convention in upstate New York in July 1848. The 100 delegates—sixty-eight women and thirty-two men—signed a document called the Declaration of Sentiments demanding equal rights for women in society. Modeled after the American Declaration of Independence, the text was written by convention organizer Elizabeth Cady Stanton.

When, in the course of human events, it becomes necessary for one portion of the family of man to assume among the people of the earth a position different from that which they have hitherto occupied, but one to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes that impel them to such a course.

We hold these truths to be self-evident: that all men and women are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted, deriving their just powers from the consent of the governed. Whenever any form of government becomes destructive of these ends, it is the right of those who suffer from it to refuse allegiance to it, and to insist upon the institution of a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their duty to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of the women under this government, and such is now the necessity which constrains them to demand the equal station to which they are entitled. The history of mankind is a history of repeated injuries and usurpations on the part of man toward woman, having in direct object the establishment of an absolute tyranny over her. To prove this, let facts be submitted to a candid world.

He has never permitted her to exercise her inalienable right to the elective franchise.

He has compelled her to submit to laws, in the formation of which she had no voice.

He has withheld from her rights which are given to the most ignorant and degraded men—both natives and foreigners.

Having deprived her of this first right of a citizen, the elective franchise, thereby leaving her without representation in the halls of legislation, he has oppressed her on all sides.

He has made her, if married, in the eye of the law, civilly dead.

He has taken from her all right in property, even to the wages she earns.

He has made her, morally, an irresponsible being, as she can commit many crimes with impunity, provided they be done in the presence of her husband. In the covenant of marriage, she is compelled to promise obedience to her husband, he becoming, to all intents and purposes, her master—the law giving him power to deprive her of her liberty, and to administer chastisement.

He has so framed the laws of divorce, as to what shall be the proper causes, and in case of separation, to whom the guardianship of the children shall be given, as to be wholly regardless of the happiness of women—the law, in all cases, going upon a false supposition of the supremacy of man, and giving all power into his hands.

After depriving her of all rights as a married woman, if single, and the owner of property, he has taxed her to support a government which recognizes her only when her property can be made profitable to it.

He has monopolized nearly all the profitable employments, and from those she is permitted to follow, she receives but a scanty remuneration. He closes against her all the avenues to wealth and distinction which he considers most honorable to himself. As a teacher of theology, medicine, or law, she is not known.

He has denied her the facilities for obtaining a thorough education, all colleges being closed against her.

He allows her in church, as well as state, but a subordinate position, claiming apostolic authority for her exclusion from the ministry, and, with some exceptions, from any public participation in the affairs of the church.

He has created a false public sentiment by giving to the world a different code of morals for men and women, by which moral delinquencies which exclude women from society, are not only tolerated, but deemed of little account in man.

He has usurped the prerogative of Jehovah himself, claiming it as his right to assign for her a sphere of action, when that belongs to her conscience and to her God.

He has endeavored, in every way that he could, to destroy her confidence in her own powers, to lessen her self-respect, and to make her willing to lead a dependent and abject life.

Now, in view of this entire disfranchisement of one-half the people of this country, their social and religious degradation—in view of the unjust laws above mentioned, and because women do feel themselves aggrieved, oppressed, and fraudulently deprived of their most sacred rights, we insist that they have immediate admission to all the rights and privileges which belong to them as citizens of the United States.

“Where I Lived, and What I Lived For,” *Walden* (1854), Henry David Thoreau

In Henry David Thoreau's classic account of two years living in the woods, Walden, he offers an idyllic vision of his return to nature and “the essential facts of life.” In doing so, Thoreau criticizes the “busyness” of mid-nineteenth-century society and “the lives of quiet desperation” being led by many Americans. In Chapter Two of the book, he describes the setting of his cabin and the values he brought to his life there.

When first I took up my abode in the woods, that is, began to spend my nights as well as days there, which, by accident, was on Independence Day, or the Fourth of July, 1845, my house was not finished for winter, but was merely a defence against the rain, without plastering or chimney, the walls being of rough, weather-stained boards, with wide chinks, which made it cool at night. The upright white hewn studs and freshly planed door and window casings gave it a clean and airy look, especially in the morning, when its timbers were saturated with dew, so that I fancied that by noon some sweet gum would exude from them. To my imagination it retained throughout the day more or less of this auroral character, reminding me of a certain house on a mountain which I had visited a year before. This was an airy and unplastered cabin, fit to entertain a travelling god, and where a goddess might trail her garments. The winds which passed over my dwelling were such as sweep over the ridges of mountains, bearing the broken strains, or celestial parts only, of terrestrial music. The morning wind forever blows, the poem of creation is uninterrupted; but few are the ears that hear it. Olympus is but the outside of the earth everywhere.

The only house I had been the owner of before, if I except a boat, was a tent, which I used occasionally when making excursions in the summer, and this is still rolled up in my garret; but the boat, after passing from hand to hand, has gone down the stream of time. With this more substantial shelter about me, I had made some progress toward settling in the world. This frame, so slightly clad, was a sort of crystallization around me, and reacted on the builder. It was suggestive somewhat as a picture in outlines. I did not need to go outdoors to take the air, for the atmosphere within had lost none of its freshness. It was not so much within doors as behind a door where I sat, even in the rainiest weather. The Harivansa says, “An abode without birds is like a meat without seasoning.” Such was not my abode, for I found myself suddenly neighbor to the birds; not by having imprisoned one, but having caged myself near them. I was not only nearer to some of those which commonly frequent the garden and the orchard, but to those smaller and more thrilling songsters of the forest which never, or rarely, serenade a villager—the wood thrush, the veery, the scarlet tanager, the field sparrow, the whip-poor-will, and many others.

I was seated by the shore of a small pond, about a mile and a half south of the village of Concord and somewhat higher than it, in the midst of an extensive wood between that town and Lincoln, and about two miles south of that our only field known to fame, Concord Battle Ground; but I was so low in the woods that the opposite shore, half a mile off, like the rest, covered with wood, was my most distant horizon....

This small lake was of most value as a neighbor in the intervals of a gentle rain-storm in August, when, both air and water being perfectly still, but the sky overcast, mid-afternoon had all the serenity of evening, and the wood thrush sang around, and was heard from shore to shore. A lake like this is never smoother than at such a time; and the clear portion of the air above it being, shallow and darkened by clouds, the water, full of light and reflections, becomes a lower heaven itself so much the more important. From a hill-top near by, where the wood had been recently cut off, there was a pleasing vista southward across the pond, through a wide indentation in the hills which form the shore there, where their opposite sides sloping toward each other suggested a stream flowing out in that direction through a wooded valley, but stream there was none. That way I looked between and over the near green hills to some distant and higher ones in the horizon, tinged with blue.... When I looked across the pond from this peak toward the Sudbury meadows, which in time of flood I distinguished elevated perhaps by a mirage in their seething valley, like a coin in a basin, all the earth beyond the pond appeared like a thin crust insulated and floated even by this small sheet of intervening water, and I was reminded that this on which I dwelt was but *dry land*.

Though the view from my door was still more contracted, I did not feel crowded or confined in the least. There was pasture enough for my imagination. The low shrub oak plateau to which the opposite shore arose stretched away toward the prairies of the West and the steppes of Tartary, affording ample room for all the roving families of men. "There are none happy in the world but beings who enjoy freely a vast horizon," said Damodara, when his herds required new and larger pastures.

Both place and time were changed, and I dwelt nearer to those parts of the universe and to those eras in history which had most attracted me. Where I lived was as far off as many a region viewed nightly by astronomers. We are wont to imagine rare and delectable places in some remote and more celestial corner of the system, behind the constellation of Cassiopeia's Chair, far from noise and disturbance. I discovered that my house actually had its site in such a withdrawn, but forever new and unprofaned, part of the universe. If it were worth the while to settle in those parts near to the Pleiades or the Hyades, to Aldebaran or Altair, then I was really there, or at an equal remoteness from the life which I had left behind, dwindled and twinkling with as fine a ray to my nearest neighbor, and to be seen only in moonless nights by him....

Every morning was a cheerful invitation to make my life of equal simplicity, and I may say innocence, with Nature herself. I have been as sincere a worshipper of Aurora as the Greeks. I got up early and bathed in the pond; that was a religious exercise, and one of the best things which I did. They say that characters were engraven on the bathing tub of King Tching-thang to this effect: "Renew thyself completely each day; do it again, and again, and forever again." I can understand that. Morning brings back the heroic ages. I was as much affected by the faint burn of a mosquito making its invisible and unimaginable tour through my apartment at earliest dawn, when I was sailing with door and windows open, as I could be by any trumpet that ever sang of fame. It was Homer's requiem; itself an Iliad and Odyssey in the air, singing its own wrath and wanderings. There was something cosmical about it; a standing advertisement, till forbidden, of the everlasting vigor and fertility of the world. The morning, which is the most memorable season of the day, is the awakening hour. Then there is least somnolence in us; and for an hour, at least, some part of us awakes which slumbers all the rest of the day and night. Little is to be expected of that day, if it can be called a day, to which we are not awakened by our Genius, but by the mechanical nudgings of some servitor, are not awakened by our own newly acquired force and aspirations from within, accompanied by the undulations of celestial music, instead of factory bells, and a fragrance filling the air—to a higher life than we fell asleep from; and thus the darkness bear its fruit, and prove itself to be good, no less than the light. That man who does not believe that each day contains an earlier, more sacred, and auroral hour than he has yet profaned, has despaired of life, and is pursuing a descending and darkening way. After a partial cessation of his sensuous life, the soul of man, or its organs rather, are reinvigorated each day, and his Genius

tries again what noble life it can make. All memorable events, I should say, transpire in morning time and in a morning atmosphere.... To him whose elastic and vigorous thought keeps pace with the sun, the day is a perpetual morning. It matters not what the clocks say or the attitudes and labors of men. Morning is when I am awake and there is a dawn in me. Moral reform is the effort to throw off sleep. Why is it that men give so poor an account of their day if they have not been slumbering? They are not such poor calculators. If they had not been overcome with drowsiness, they would have performed something. The millions are awake enough for physical labor; but only one in a million is awake enough for effective intellectual exertion, only one in a hundred millions to a poetic or divine life. To be awake is to be alive. I have never yet met a man who was quite awake. How could I have looked him in the face?...

I went to the woods because I wished to live deliberately, to front only the essential facts of life, and see if I could not learn what it had to teach, and not, when I came to die, discover that I had not lived. I did not wish to live what was not life, living is so dear; nor did I wish to practice resignation, unless it was quite necessary. I wanted to live deep and suck out all the marrow of life, to live so sturdily and Spartan-like as to put to rout all that was not life, to cut a broad swath and shave close, to drive life into a corner, and reduce it to its lowest terms, and, if it proved to be mean, why then to get the whole and genuine meanness of it, and publish its meanness to the world; or if it were sublime, to know it by experience, and be able to give a true account of it in my next excursion. For most men, it appears to me, are in a strange uncertainty about it, whether it is of the devil or of God, and have somewhat hastily concluded that it is the chief end of man here to "glorify God and enjoy him forever."

Still we live meanly, like ants; though the fable tells us that we were long ago changed into men; like pygmies we fight with cranes; it is error upon error, and clout upon clout, and our best virtue has for its occasion a superfluous and evitable wretchedness. Our life is frittered away by detail. An honest man has hardly need to count more than his ten fingers, or in extreme cases he may add his ten toes, and lump the rest. Simplicity, simplicity, simplicity! I say, let your affairs be as two or three, and not a hundred or a thousand; instead of a million count half a dozen, and keep your accounts on your thumb-nail. In the midst of this chopping sea of civilized life, such are the clouds and storms and quicksands and thousand-and-one items to be allowed for, that a man has to live, if he would not founder and go to the bottom and not make his port at all, by dead reckoning, and he must be a great calculator indeed who succeeds. Simplify, simplify. Instead of three meals a day, if it be necessary eat but one; instead of a hundred dishes, five; and reduce other things in proportion.... The nation itself, with all its so-called internal improvements, which, by the way are all external and superficial, is just such an unwieldy and overgrown establishment, cluttered with furniture and tripped up by its own traps, ruined by luxury and heedless expense, by want of calculation and a worthy aim, as the million households in the land; and the only cure for it, as for them, is in a rigid economy, a stern and more than Spartan simplicity of life and elevation of purpose. It lives too fast. Men think that it is essential that the Nation have commerce, and export ice, and talk through a telegraph, and ride thirty miles an hour, without a doubt, whether they do or not; but whether we should live like baboons or like men, is a little uncertain. If we do not get out sleepers, and forge rails, and devote days and nights to the work, but go to tinkering upon our lives to improve them, who will build railroads? And if railroads are not built, how shall we get to heaven in season? But if we stay at home and mind our business, who will want railroads? We do not ride on the railroad; it rides upon us. Did you ever think what those sleepers are that underlie the railroad? Each one is a man, an Irishman, or a Yankee man. The rails are laid on them, and they are covered with sand, and the cars run smoothly over them. They are sound sleepers, I assure you. And every few years a new lot is laid down and run over; so that, if some have the pleasure of riding on a rail, others have the misfortune to be ridden upon. And when they run over a man that is walking in his sleep, a supernumerary sleeper in the wrong position, and wake him up, they suddenly stop the cars, and make a hue and cry about it, as if this were an exception. I am glad to know that it takes a gang of men for every five miles to keep the sleepers down and level in their beds as it is, for this is a sign that they may sometime get up again.

Why should we live with such hurry and waste of life? We are determined to be starved before we are hungry. Men say that a stitch in time saves nine, and so they take a thousand stitches today to save nine tomorrow.... Hardly a man takes a half-hour's nap after dinner, but when he wakes he holds up his head and asks, "What's the news?" as if the rest of mankind had stood his sentinels. Some give directions to be waked every half-hour,

doubtless for no other purpose; and then, to pay for it, they tell what they have dreamed. After a night's sleep the news is as indispensable as the breakfast....

For my part, I could easily do without the post-office. I think that there are very few important communications made through it. To speak critically, I never received more than one or two letters in my life—I wrote this some years ago—that were worth the postage. The penny-post is, commonly, an institution through which you seriously offer a man that penny for his thoughts which is so often safely offered in jest. And I am sure that I never read any memorable news in a newspaper. If we read of one man robbed, or murdered, or killed by accident, or one house burned, or one vessel wrecked, or one steamboat blown up, or one cow run over on the Western Railroad, or one mad dog killed, or one lot of grasshoppers in the winter—we never need read of another. One is enough. If you are acquainted with the principle, what do you care for a myriad instances and applications?...

Shams and delusions are esteemed for soundest truths, while reality is fabulous. If men would steadily observe realities only, and not allow themselves to be deluded, life, to compare it with such things as we know, would be like a fairy tale and the Arabian Nights' Entertainments. If we respected only what is inevitable and has a right to be, music and poetry would resound along the streets. When we are unhurried and wise, we perceive that only great and worthy things have any permanent and absolute existence, that petty fears and petty pleasures are but the shadow of the reality. This is always exhilarating and sublime. By closing the eyes and slumbering, and consenting to be deceived by shows, men establish and confirm their daily life of routine and habit everywhere, which still is built on purely illusory foundations. Children, who play life, discern its true law and relations more clearly than men, who fail to live it worthily, but who think that they are wiser by experience, that is, by failure.... I perceive that we inhabitants of New England live this mean life that we do because our vision does not penetrate the surface of things. We think that that is which appears to be....

Let us spend one day as deliberately as Nature, and not be thrown off the track by every nutshell and mosquito's wing that falls on the rails. Let us rise early and fast, or break fast, gently and without perturbation; let company come and let company go, let the bells ring and the children cry—determined to make a day of it. Why should we knock under and go with the stream? Let us not be upset and overwhelmed in that terrible rapid and whirlpool called a dinner, situated in the meridian shallows. Weather this danger and you are safe, for the rest of the way is down hill. With unrelaxed nerves, with morning vigor, sail by it, looking another way, tied to the mast like Ulysses. If the engine whistles, let it whistle till it is hoarse for its pains. If the bell rings, why should we run? We will consider what kind of music they are like. Let us settle ourselves, and work and wedge our feet downward through the mud and slush of opinion, and prejudice, and tradition, and delusion, and appearance, that alluvion which covers the globe, through Paris and London, through New York and Boston and Concord, through Church and State, through poetry and philosophy and religion, till we come to a hard bottom and rocks in place, which we can call reality, and say, This is, and no mistake.... If you stand right fronting and face-to-face to a fact, you will see the sun glimmer on both its surfaces, as if it were a cimeter, and feel its sweet edge dividing you through the heart and marrow, and so you will happily conclude your mortal career. Be it life or death, we crave only reality. If we are really dying, let us hear the rattle in our throats and feel cold in the extremities; if we are alive, let us go about our business.

Time is but the stream I go a-fishing in. I drink at it; but while I drink I see the sandy bottom and detect how shallow it is. Its thin current slides away, but eternity remains. I would drink deeper; fish in the sky, whose bottom is pebbly with stars. I cannot count one. I know not the first letter of the alphabet. I have always been regretting that I was not as wise as the day I was born. The intellect is a cleaver; it discerns and rifts its way into the secret of things. I do not wish to be any more busy with my hands than is necessary. My head is hands and feet. I feel all my best faculties concentrated in it. My instinct tells me that my head is an organ for burrowing, as some creatures use their snout and fore paws, and with it I would mine and burrow my way through these hills. I think that the richest vein is somewhere hereabouts; so by the divining-rod and thin rising vapors I judge; and here I will begin to mine.

Hand-Book of the Oneida Community (1867)

The Oneida Community in central New York State was a Christian utopian settlement established in 1848 by religious and social radical John Humphrey Noyes. Believing in the perfectibility of human life and society, members owned all possessions and property communally, shared the work and governance of the community, and practiced a form of complex (group) marriage. The guiding principles and doctrines were summarized in the Hand-Book of the Oneida Community, excerpts of which follow.

Means of Government

The measures relied upon for good government, in these Community families are, first, *daily evening meetings*, which all are expected to attend, and in which religious, social and business matters are freely discussed; and secondly, the system of mutual criticism. This system takes the place of backbiting in ordinary society, and is regarded as one of the greatest means of improvement and fellowship. All of the members are accustomed to voluntarily invite the benefit of criticism from time to time. Sometimes persons are criticized by the entire family; at other times by a committee of six, eight, twelve, or more, selected by themselves from among those best acquainted with them, and best able to do justice to their character. In these criticisms the most perfect sincerity is expected; and in practical experience it is found best for the subject to receive his criticism without replying. There is little danger that the general verdict in respect to his character will be unjust. This ordinance is far from agreeable to those whose egotism and vanity are stronger than their love of truth. It is an ordeal which reveals insincerity and selfishness; but it also often takes the form of commendation, and reveals hidden virtues as well as secret faults. It is always acceptable to those who wish to see themselves as others see them.

These two agencies, viz. daily evening meetings and criticism, are found quite adequate to the maintenance of good order and government in the Communities. Those who join the Communities understanding their principles, and afterward prove refractory and inharmonic, and also those who come into the Communities in childhood, and afterwards develop characters antagonistic to the general spirit, and refuse to yield to the governmental agencies mentioned, either voluntarily withdraw or are expelled. Only one case of expulsion has, however, been recorded....

The Social Organization

of the Oneida Community and its branches, and the intercourse of the sexes, are also easily explained and readily understood. In the first place, the Communities believe, contrary to the theory of the novelists and others, that the affections can be controlled and guided, and that they will produce far better results when rightly controlled and rightly guided than if left to take care of themselves without restraint. They entirely reject the idea that love is an inevitable and uncontrollable fatality, which must have its own course. They believe the whole matter of love and its expression should be subject to enlightened self-control, and should be managed for the greatest good. In the Communities it is under the special supervision of the fathers and mothers, or, in other words, of the wisest and best members, and is often under discussion in the evening meetings, and is also subordinate to the institution of criticism. The fathers and mothers are guided in their management by certain general principles which have been worked out, and are well understood in the Communities. One is termed the principle of the ascending fellowship. It is regarded as better for the young of both sexes to associate in love with persons older than themselves, and, if possible, with those who are spiritual and have been some time in the school of self-control, and who are thus able to make love safe and edifying. This is only another form of the popular principle of contrasts. It is well understood by physiologists, that it is undesirable for persons of similar characters and temperaments to mate together. Communists have discovered that it is not desirable for two inexperienced and unspiritual persons to rush into fellowship with each other; that it is far better for both to associate with persons of mature character and sound sense.

Another general principle well understood in the Communities, is, that it is not desirable for two persons, whatever may be their standing, to become exclusively attached to each other—to worship and idolize each other—however popular this experience may be with sentimental people generally. They regard exclusive, idolatrous attachment as unhealthy and pernicious wherever it may exist. The Communities insist that the heart should be kept free to

love all the true and worthy, and should never be contracted with exclusiveness or idolatry, or purely selfish love in any form....

The great aim is to teach every one self-control. This leads to the greatest happiness in love, and the greatest good to all....

Free Love

This terrible combination of two very good ideas—freedom and love—was first used by the writers of the Oneida Community about eighteen years ago, and probably originated with them. It was however soon taken up by a very different class of speculators scattered about the country, and has come to be the name of a form of socialism with which we have but little affinity. Still it is sometimes applied to our Communities; and as we are certainly responsible for starting it into circulation, it seems to be our duty to tell what meaning we attach to it, and in what sense we are willing to accept it as a designation of our social system.

The obvious and essential difference between marriage and licentious connections may be stated thus:

Marriage is permanent union. Whoredom is a temporary flirtation.

In marriage, communism of property goes with communism of persons. In whoredom, love is paid for by the job.

Marriage makes a man responsible for the *consequences* of his acts of love to a woman. In whoredom a man imposes on a woman the heavy burdens of maternity, ruining perhaps her reputation and her health, and then goes his way without responsibility.

Marriage provides for the maintenance and education of children. Whoredom ignores children as nuisances, and leaves them to chance.

Now in respect to every one of these points of difference between marriage and whoredom, *we stand with marriage*. Free love with us does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep our property to ourselves; nor freedom to freight a woman with our offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Our Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds us together is as permanent and sacred, to say the least, as that of marriage, for it is our religion. We receive no members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property is pledged for the maintenance and protection of the women, and the education of the children of the Community. Bastardy, in any disastrous sense of the word, is simply impossible in such a social state. Whoever will take the trouble to follow our track from the beginning, will find no forsaken women or children by the way. In this respect we claim to be a little ahead of marriage and common civilization.

We are not sure how far the class of socialists called "free lovers" would claim for themselves anything like the above defense from the charge of *reckless* and *cruel* freedom; but our impression is that their position, scattered as they are, without organization or definite separation from surrounding society, makes it impossible for them to follow and care for the consequences of their freedom, and thus exposes them to the just charge of licentiousness. At all events their platform is entirely different from ours, and they must answer for themselves. We are not "free lovers" in any sense that makes love less binding or responsible than it is in marriage.

Woman's Christian Temperance Union "Do Everything" Policy (1893)

In a speech to the Second Biennial Convention of the World Woman's Christian Temperance Union (WCTU) in October 1893, Frances Willard—president of the American WCTU—declared the necessity of the "Do Everything"

policy she had been advocating in the campaign for abstinence and public morals.

Beloved Comrades of the White Ribbon Army:

WHEN we began the delicate, difficult, and dangerous operation of dissecting out the alcohol nerve from the body politic, we did not realize the intricacy of the undertaking nor the distances that must be traversed by the scalpel of investigation and research. In about seventy days from now, twenty years will have elapsed since the call of battle sounded its bugle note among the homes and hearts of Hillsboro, Ohio. We have all been refreshing our knowledge of those days by reading the "Crusade Sketches" of its heroic leader, Mrs. Eliza J. Thompson, "the mother of us all," and we know that but one thought, sentiment and purpose animated those saintly "Praying Bands" whose name will never die out from human history. "Brothers, we beg you not to drink and not to sell!" This was the one wailing note of these moral Paganinis, playing on one string. It caught the universal ear and set the key of that mighty orchestra, organized with so much toil and hardship, in which the tender and exalted strain of the Crusade violin still soars aloft, but upborne now by the clanging cornets of science, the deep trombones of legislation, and the thunderous drums of politics and parties. The "Do Everything Policy" was not of our choosing, but is an evolution as inevitable as any traced by the naturalist or described by the historian. Woman's genius for details, and her patient steadfastness in following the enemies of those she loves "through every lane of life," have led her to antagonize the alcohol habit and the liquor traffic just where they are, wherever that may be. If she does this, since they are everywhere, her policy will be "Do Everything."

A one-sided movement makes one-sided advocates. Virtues, like hounds, hunt in packs. Total abstinence is not the crucial virtue in life that excuses financial crookedness, defamation of character, or habits of impurity. The fact that one's father was, and one's self is, a bright and shining light in the total abstinence galaxy, does not give one a vantage ground for high-handed behavior toward those who have not been trained to the special virtue that forms the central idea of the Temperance Movement. We have known persons who, because they had "never touched a drop of liquor," set themselves up as if they belonged to a royal line, but whose tongues were as biting as alcohol itself, and whose narrowness had no competitor save a straight line. An all-round movement can only be carried forward by all-round advocates; a scientific age requires the study of every subject in its correlations. It was once supposed that light, heat, and electricity were wholly separate entities; it is now believed and practically proved that they are but different modes of motion. Standing in the valley we look up and think we see an isolated mountain; climbing to its top we see that it is but one member of a range of mountains many of them of well-nigh equal altitude.

Some bright women who have opposed the "Do-Everything Policy" used as their favorite illustration a flowing river, and expatiated on the ruin that would follow if that river (which represents their do-one-thing policy) were diverted into many channels, but it should be remembered that the most useful of all rivers is the Nile, and that the agricultural economy of Egypt consists in the effort to spread its waters upon as many fields as possible. It is not for the river's sake that it flows through the country but for the sake of the fertility it can bring upon adjoining fields, and this is pre-eminently true of the Temperance Reform....

In the conflict with the liquor traffic, the policy of the W.C.T.U. is to attack not only the chief foe, but also its notorious and open allies. This is the course dictated not only by common sense, but by absolute necessity. If the home is to be protected, not only must the dram-shop be made an outlaw, but its allies, the gambling hells, the houses of unreportable infamy, the ignorance of the general population as to alcoholics and other narcotics, the timidity of trade, the venality of portions of the press, and especially the subserviency of political parties to the liquor traffic, must be assailed as confederates of the chief enemy of the home.... It is certain that the broad and progressive policy of the W.C.T.U. in the United States makes the whiskey rings and time-serving politicians greatly dread its influence. They honor the Union by frequent and bitter attacks. It is a recognized power in international affairs. If its policy were made narrow and non-partisan, its influence would immensely wane in practical matters of great importance.

The department of Scientific Temperance Instruction, conducted by the W.C.T.U., and led by Mrs. Mary H. Hunt, of Boston, has now made such instruction mandatory in thirty-six States of the Republic. This is a very large and

substantial triumph of the broad and progressive policy. Instead of the National W.C.T.U. having lost the confidence of the churches by its broad policy, I believe, after much travel and years of observation, that it never had more of that confidence than at the present hour. At a recent Congressional Hearing, in Washington, I heard a distinguished Presbyterian Professor of Theology, Rev. Dr. Herrick Johnson, of Chicago, call the W.C.T.U. the most powerful, the most beneficent, and the most successful organization ever formed by women. Similar testimony abounds in all the most enlightened circles of the land.

Let us not be disconcerted, but stand bravely by that blessed trinity of movements, Prohibition, Woman's Liberation and Labor's uplift.

Everything is not in the Temperance Reform, but the Temperance Reform should be in everything.

There is no better motto for the "Do-Everything-Policy," than this which we are saying by our deeds: "Make a chain, for the land is full of bloody crimes and the city of violence."

If we can remember this simple rule, it will do much to unravel the mystery of the much controverted "Do-Everything-Policy," viz: that every question of practical philanthropy or reform has its temperance aspect, and with that we are to deal....

Methods that were once the only ones available may become, with the passage of years, less useful because less available. In earlier times the manly art of hunting was most helpful to civilization, because before fields could be cleared and tilled, they had to be free from the danger of wild beasts, and no method of obtaining food was more important than the chase; but when the forests have been cleared away and the pastoral condition of life has supervened, nay, more, when the highest civilization peoples the hills and valleys, it certainly evinces a lack of imagination to present such a spectacle as do the hunters who in England today place a poor stag in a van, convey him on four wheels to a wood, let him out through a door, and set trained dogs upon him, while they follow with guns and halloos, and call it "sport"! The same absurdity has been illustrated by Baron Hirsch, who recently imported 6,000 caged partridges to his country place, let them loose in the groves, and set himself and friends peppering away at them. Surely such conduct is the reverse of manly, and must bring what was once a noble occupation into contempt. But, in a different way, we illustrate the same principle, when we forget that "New occasions teach new duties, Time makes ancient good uncouth."...

The Temperance cause started out well nigh alone, but mighty forces have joined us in the long march. We are now in the midst of the Waterloo battle, and in the providence of God the Temperance army will not have to fight that out all by itself. For Science has come up with its glittering contingent, political economy deploys its legions, the woman question brings an Amazonian army upon the field, and the stout ranks of labor stretch away far as the eye can reach. As in the old Waterloo against Napoleon, so now against the Napoleon of the liquor traffic, no force is adequate except the allied forces.

Speech at Founding Convention of the Industrial Workers of the World

(1905), Eugene V. Debs

Former railroad worker Eugene V. Debs, a leader of the fledgling labor movement and socialist politics in America, was a cofounder of the Industrial Workers of the World (IWW) in 1905. On June 29 of that year, Debs addressed the IWW's founding convention in Chicago, which was attended by some 200 socialists and radical trade unionists.

Fellow Delegates and Comrades:

As the preliminaries in organizing the convention have been disposed of, we will get down to the real work before this body. We are here to perform a task so great that it appeals to our best thought, our united energies, and will

enlist our most loyal support; a task in the presence of which weak men might falter and despair, but from which it is impossible to shrink without betraying the working class.

I am much impressed by this proletarian gathering. I realize that I stand in the presence of those who in the past have fought, are fighting, and will continue to fight the battles of the working class economically and politically, until the capitalist class is overthrown and the working class are emancipated from all of the degrading thralldom of the ages. In this great struggle the working class are often defeated, but never vanquished. Even the defeats, if we are wise enough to profit by them, but hasten the day of the final victory.

In taking a survey of the industrial field of today, we are at once impressed with the total inadequacy of working-class organization, with the lack of solidarity, with the widespread demoralization we see, and we are bound to conclude that the old form of pure and simple unionism has long since outgrown its usefulness; that it is now not only in the way of progress, but that it has become positively reactionary, a thing that is but an auxiliary to the capitalist class.

They charge us with being assembled here for the purpose of disrupting the union movement. It is already disrupted, and if it were not disrupted we would not behold the spectacle here in the very city of a white policeman guarding a black scab, and a black policeman guarding a white scab, while the trade unions stand by with their hands in their pockets wondering what is the matter with union labor in America. We are here today for the purpose of uniting the working class, for the purpose of eliminating that form of unionism which is responsible for the conditions as they exist today.

The trades-union movement is today under the control of the capitalist class. It is preaching capitalist economics. It is serving capitalist purposes. Proof of it, positive and overwhelming, appears on every hand. All of the important strikes during the textile workers at Fall River, that proved so disastrous to those who engaged in it; the strike of the subway employees in the city of New York, where under the present form of organization the local leaders repudiated the local leaders and were in alliance with the capitalist class to crush their own followers; the strike of the stockyard's employees here in Chicago; the strike of the teamsters now in progress—all, all of them bear testimony to the fact that the pure and simple form of unionism has fulfilled its mission, whatever that may have been, and that the time has come for it to go.

The American Federation of Labor has numbers, but the capitalist class do not fear the American Federation of Labor; quite the contrary. The capitalist papers here in this very city at this very time are championing the cause of pure and simple unionism. Since this convention met there has been nothing in these papers but a series of misrepresentations. If we had met instead in the interest of the American Federation of Labor these papers, these capitalist papers, would have had their columns filled with articles commending the work that is being done here. There is certainly something wrong with that form of unionism which has its chief support in the press that represents capitalism; something wrong in that form of unionism whose leaders are the lieutenants of capitalism; something wrong with that form of unionism that forms an alliance with such a capitalist combination as the Civic Federation, whose sole purpose it is to chloroform the working class while the capitalist class go through their pockets. There are those who believe that this form of unionism can be changed from within. They are very greatly mistaken. We might as well have remained in the Republican and Democratic parties and have expected to effect certain changes from within, instead of withdrawing from those parties and organizing a party that represented the exploiting working class. There is but one way to effect this great change, and that is for the workingman to sever his relations with the American Federation and join the union that proposes upon the economic field to represent his class, and we are here today for the purpose of organizing that union. I believe that we are capable of profiting by the experiences of the past. I believe it is possible for the delegates here assembled to form a great, sound, economic organization of the working class based upon the class struggle, that shall be broad enough to embrace every honest worker, yet narrow enough to exclude every fakir.

Now, let me say to those delegates who are here representing the Socialist Trade & Labor Alliance that I have not in the past agreed with their tactics. I concede that their theory is right, that their principles are sound; I admit and cheerfully admit the honesty of their membership. But there must certainly be something wrong with their tactics or

their methods of propaganda if in these years they have not developed a larger membership than they have to their credit.

Let me say in this connection, I am not of those who scorn you because of your small numbers. I have been taught by experience that numbers do not represent strength. I will concede that the capitalist class does not fear the American Federation of Labor because of their numbers. Let me add that the capitalist class does not fear your Socialist Trade & Labor Alliance. The one are too numerous and the other are not sufficiently numerous. The American Federation of Labor is not sound in its economics. The Socialist Trade & Labor Alliance is sound in its economics, but in my judgment it does not appeal to the American working class in the right spirit. Upon my lips there has never been a sneer for the Socialist Trade & Labor Alliance on account of the smallness of its numbers. I have been quite capable of applauding the pluck, of admiring the courage of the members of the Socialist Trade & Labor Alliance, for though few in numbers, they stay by their colors....

Now, I believe that there is a middle ground that can be occupied without the slightest concession of principle. I believe it is possible for such an organization as the Western Federation of Miners to be brought into harmonious relation with the Socialist Trade & Labor Alliance. I believe it is possible that that element of the organizations represented here have the conviction, born of experience, observation and study, that the time has come to organize a new union, and I believe it is possible for these elements to mingle, to combine here, and to at least begin the work of forming a great economic or revolutionary organization of the working class so sorely needed in the struggle for their emancipation. The supreme need of the hour, as the speaker who preceded me so clearly expressed it in his carefully and clearly thought address—the supreme need of the hour is a sound, revolutionary working-class organization. And while I am not foolish enough to imagine that we can complete this great work in a single convention of a few days' duration, I do believe it is possible for us to initiate this work, to begin it in a way for the greatest promise, with the assurance that its work will be completed in a way that will appeal with increasing force to the working class of the country.

I am satisfied that the great body of the working class in this country are prepared for just such an organization. I know, their leaders know, that if this convention is successful their doom is sealed. They can already see the hand-writing upon the wall, and so they are seeking by all of the power at their command to discredit this convention, and in alliance with the cohorts of capitalism they are doing what they can to defeat this convention. It may fail in its mission, for they may continue to misrepresent, deceive and betray the working class and keep them in the clutches of their capitalist masters and exploiters.

They are hoping that we will fail to get together. They are hoping, as they have already expressed it, that this convention will consist of a prolonged wrangle; that such is our feeling and relations toward each other that it will be impossible for us to agree upon any vital proposition; that we will fight each other upon every point, and that when we have concluded our labors we will leave things in a worse condition than they were before.

If we are true to ourselves we will undeceive those gentlemen. We will give them to understand that we are animated by motives too lofty for them in their baseness and sordidness to comprehend. We will give them to understand that the motive here is not to use unionism as a means of serving the capitalist class, but that the motive of the men and women assembled here is to serve the working class by so organizing that class as to make their organization the promise of the coming triumph upon the economic field and the political field and the ultimate emancipation of the working class....

I have not the slightest feeling against those who in the past have seen fit to call me a fakir. I can afford to wait. I have waited, and I now stand ready to take by the hand every man, every woman that comes here, totally regardless of past affiliations, whose purpose it is to organize the working class upon the economic field, to launch that economic organization that shall be the expression of the economic conditions as they exist today; that organization for which the working class are prepared; that organization which we shall at least begin before we have ended our labors, unless we shall prove false to the object for which we have assembled here.

Now, I am not going to take the time to undertake to outline the form of this organization. Nor should I undertake

to try your patience by attempting to elaborate the plan of organization. But let me suggest, in a few words, that to accomplish its purpose this organization must not only be based upon the class struggle, but must express the economic condition of this time. We must have one organization that embraces the workers in every department of industrial activity. It must express the class struggle. It must recognize the class lines. It must of course be class-conscious. It must be totally uncompromising. It must be an organization of the rank and file. It must be so organized and so guided as to appeal to the intelligence of the workers of the country everywhere. And if we succeed, as I believe we will, in forming such an organization, its success is a foregone conclusion.

I have already said the working class are ready for it. There are multiplied thousands in readiness to join it, waiting only to see if the organization is rightly grounded and properly formed; and this done there will be no trouble about its development, and its development will take proper form and expand to its true proportions. If this work is properly begun, it will mean in time, and not a long time at that, a single union upon the economic field. It will mean more than that; it will mean a single party upon the political field; the one the economic expression, the other the political expression of the working class; the two halves that represent the organic whole of the labor movement.

Now, let me say in closing, comrades—and I have tried to condense, not wishing to tax your patience or to take the time of others, for I believe that in such conventions as this it is more important that we shall perform than that we shall make speeches—let me say in closing that you and I and all of us who are here to enlist in the service of the working class need to have faith in each other, not the faith born of ignorance and stupidity, but the enlightened faith of self-interest. We are in precisely the same position; we depend absolutely upon each other. We must get close together and stand shoulder to shoulder. We know that without solidarity nothing is possible, that with it nothing is impossible.

And so we must dispel the petty prejudices that are born of the differences of the past, and I am of those who believe that, if we get together in the true working-class spirit, most of these differences will disappear, and if those of us who have differed in the past are willing to accord to each other that degree of conciliation that we ourselves feel that we are entitled to, that we will forget these differences, we will approach all of the problems that confront us with our intelligence combined, acting together in concert, all animated by the same high resolve to form that great union, so necessary to the working class, without which their condition remains as it is, and with which, when made practical and vitalized and renewed, the working class is permeated with the conquering spirit of the class struggle, and as if by magic the entire movement is vitalized, and side by side and shoulder to shoulder in a class-conscious phalanx we move forward to certain and complete victory.

***The Woman Rebel* (1914), Margaret Sanger**

In March 1914, reproductive rights crusader Margaret Sanger began publication of an eight-page monthly newspaper called The Woman Rebel. In its pages, where she coined the term birth control, Sanger sought to unite women around the issues of sexual and reproductive freedom, safe contraception, and the feminist movement in general. The following passages appeared in the newspaper's inaugural issue.

This paper will not be the champion of any "ism."

All rebel women are invited to contribute to its columns.

The majority of papers usually adjust themselves to the ideas of their readers but the WOMAN REBEL will obstinately refuse to be adjusted.

The aim of this paper will be to stimulate working women to think for themselves and to build up a conscious fighting character.

An early feature will be a series of articles written by the editor for girls from fourteen to eighteen years of age. In

this present chaos of sex atmosphere it is difficult for the girl of this uncertain age to know just what to do or really what constitutes clean living without prudishness. All this slushy talk about white slavery, the man painted and described as a hideous vulture pouncing down upon the young, pure and innocent girl, drugging her through the medium of grape juice and lemonade and then dragging her off to his foul den for other men equally as vicious to feed and fatten on her enforced slavery—surely this picture is enough to sicken and disgust every thinking woman and man, who has lived even a few years past the adolescent age. Could any more repulsive and foul conception of sex be given to adolescent girls as a preparation for life than this picture that is being perpetuated by the stupidly ignorant in the name of “sex education”!

If it were possible to get the truth from girls who work in prostitution to-day, I believe most of them would tell you that the first sex experience was with a sweetheart or through the desire for a sweetheart or something impelling within themselves, the nature of which they knew not, neither could they control. Society does not forgive this act when it is based upon the natural impulses and feelings of a young girl. It prefers the other story of the grape juice procurer which makes it easy to shift the blame from its own shoulders, to cast the stone and to evade the unpleasant facts that it alone is responsible for. It sheds sympathetic tears over white slavery, holds the often mythical procurer up as a target, while in reality it is supported by the misery it engenders.

If, as reported, there are approximately 35,000 women working as prostitutes in New York City alone, is it not sane to conclude that some force, some living, powerful, social force is at play to compel these women to work at a trade which involves police persecution, social ostracism and the constant danger of exposure to venereal diseases. From my own knowledge of adolescent girls and from sincere expressions of women working as prostitutes inspired by mutual understanding and confidence I claim that the first sexual act of these so-called wayward girls is partly given, partly desired yet reluctantly so because of the fear of the consequences together with the dread of lost respect of the man. These fears interfere with mutuality of expression—the man becomes conscious of the responsibility of the set and often refuses to see her again, sometimes leaving the town and usually denouncing her as having been with “other fellows.” His sole aim is to throw off responsibility. The same uncertainty in these emotions is experienced by girls in marriage in as great a proportion as in the unmarried. After the first experience the life of a girl varies. All these girls do not necessarily go into prostitution. They have had an experience which has not “ruined” them, but rather given them a larger vision of life, stronger feelings and a broader understanding of human nature. The adolescent girl does not understand herself. She is full of contradictions, whims, emotions. For her emotional nature longs for caresses, to touch, to kiss. She is often as well satisfied to hold hands or to go arm in arm with a girl as in the companionship of a boy.

It is these and kindred facts upon which the WOMAN REBEL will dwell from time to time and from which it is hoped the young girl will derive some knowledge of her nature, and conduct her life upon such knowledge.

It will also be the aim of the WOMAN REBEL to advocate the prevention of conception and to impart such knowledge in the columns of this paper....

The Prevention of Conception

Is there any reason why women should not receive clean, harmless, scientific knowledge on how to prevent conception? Everybody is aware that the old, stupid fallacy that such knowledge will cause a girl to enter into prostitution has long been shattered. Seldom does a prostitute become pregnant. Seldom does the girl practicing promiscuity become pregnant. The woman of the upper middle class has all available knowledge and implements to prevent conception. The woman of the lower middle class is struggling for this knowledge. She tries various methods of prevention, and after a few years of experience plus medical advice succeeds in discovering some method suitable to her individual self. The woman of the people is the only one left in ignorance of this information. Her neighbors, relatives and friends tell her stories of special devices and the success of them all. They tell her also of the blood-sucking men with M. D. after their names who perform operations for the price of so-and-so. But the working woman's purse is thin. Its far cheaper to have a baby, “though God knows what it will do after it gets here.” Then, too, all other classes of women live in places where there is at least a semblance of

privacy and sanitation. It is easier for them to care for themselves whereas the large majority of the women of the people have no bathing or sanitary conveniences. This accounts too for the fact that the higher the standard of living, the more care can be taken and fewer children result. No plagues, famine or wars could ever frighten the capitalist class so much as the universal practice of the prevention of conception. On the other hand no better method could be utilized for increasing the wages of the workers.

As is well known, a law exists forbidding the imparting of information on this subject, the penalty being several years' imprisonment. Is it now time to defy this law! And what fitter place could be found than in the pages of the WOMAN REBEL!

"I Didn't Raise My Boy to Be a Soldier (1915)"

With the outbreak of World War I in Europe, American pacifists, isolationists, socialists, and other antimilitarists came together in opposition to U.S. involvement. In 1915, "I Didn't Raise My Boy to Be a Soldier" was a popular antiwar song.

Ten million soldiers to the war have gone,
Who may never return again.
Ten million mothers' hearts must break,
For the ones who died in vain.
Head bowed down in sorrow in her lonely years,
I heard a mother murmur thro' her tears:

Chorus:

I didn't raise my boy to be a soldier,
I brought him up to be my pride and joy,
Who dares to put a musket on his shoulder,
To shoot some other mother's darling boy?
Let nations arbitrate their future troubles,
It's time to lay the sword and gun away,
There'd be no war today,
If mothers all would say,
I didn't raise my boy to be a soldier.

(Chorus)

What victory can cheer a mother's heart,
When she looks at her blighted home?
What victory can bring her back,
All she cared to call her own?
Let each mother answer in the year to be,
Remember that my boy belongs to me!

(Chorus)

"Anarchism: What It Really Stands For" (1917), Emma Goldman

With life partner and revolutionary comrade Alexander Berkman, Russian immigrant Emma Goldman was the leading voice and advocate of anarchism in Progressive Era America. Despite her disavowal of violence, Goldman's radical ideas and incendiary rhetoric were a source of fear to the general public and federal government. She expressed her views in countless speeches and published works, including the following exposition in Anarchism and Other Essays.

The history of human growth and development is at the same time the history of the terrible struggle of every new idea heralding the approach of a brighter dawn. In its tenacious hold on tradition, the Old has never hesitated to make use of the foulest and cruelest means to stay the advent of the New, in whatever form or period the latter may have asserted itself. Nor need we retrace our steps into the distant past to realize the enormity of opposition, difficulties, and hardships placed in the path of every progressive idea. The rack, the thumbscrew, and the knout are still with us; so are the convict's garb and the social wrath, all conspiring against the spirit that is serenely marching on.

Anarchism could not hope to escape the fate of all other ideas of innovation. Indeed, as the most revolutionary and uncompromising innovator, Anarchism must needs meet with the combined ignorance and venom of the world it aims to reconstruct.

To deal even remotely with all that is being said and done against Anarchism would necessitate the writing of a whole volume. I shall therefore meet only two of the principal objections. In so doing, I shall attempt to elucidate what Anarchism really stands for.

The strange phenomenon of the opposition to Anarchism is that it brings to light the relation between so-called intelligence and ignorance. And yet this is not so very strange when we consider the relativity of all things. The ignorant mass has in its favor that it makes no pretense of knowledge or tolerance. Acting, as it always does, by mere impulse, its reasons are like those of a child. "Why?" "Because." Yet the opposition of the uneducated to Anarchism deserves the same consideration as that of the intelligent man.

What, then, are the objections? First, Anarchism is impractical, though a beautiful ideal. Second, Anarchism stands for violence and destruction, hence it must be repudiated as vile and dangerous. Both the intelligent man and the ignorant mass judge not from a thorough knowledge of the subject, but either from hearsay or false interpretation.

A practical scheme, says Oscar Wilde, is either one already in existence, or a scheme that could be carried out under the existing conditions; but it is exactly the existing conditions that one objects to, and any scheme that could accept these conditions is wrong and foolish. The true criterion of the practical, therefore, is not whether the latter can keep intact the wrong or foolish; rather is it whether the scheme has vitality enough to leave the stagnant waters of the old, and build, as well as sustain, new life. In the light of this conception, Anarchism is indeed practical. More than any other idea, it is helping to do away with the wrong and foolish; more than any other idea, it is building and sustaining new life.

The emotions of the ignorant man are continuously kept at a pitch by the most blood-curdling stories about Anarchism. Not a thing too outrageous to be employed against this philosophy and its exponents. Therefore Anarchism represents to the unthinking what the proverbial bad man does to the child,—a black monster bent on swallowing everything; in short, destruction and violence.

Destruction and violence! How is the ordinary man to know that the most violent element in society is ignorance; that its power of destruction is the very thing Anarchism is combating? Nor is he aware that Anarchism, whose roots, as it were, are part of nature's forces, destroys, not healthful tissue, but parasitic growths that feed on the life's essence of society. It is merely clearing the soil from weeds and sagebrush, that it may eventually bear healthy fruit.

Someone has said that it requires less mental effort to condemn than to think. The widespread mental indolence, so prevalent in society, proves this to be only too true. Rather than to go to the bottom of any given idea, to examine into its origin and meaning, most people will either condemn it altogether, or rely on some superficial or prejudicial definition of non-essentials.

Anarchism urges man to think, to investigate, to analyze every proposition; but that the brain capacity of the average reader be not taxed too much, I also shall begin with a definition, and then elaborate on the latter.

ANARCHISM:—The philosophy of a new social order based on liberty unrestricted by man-made law; the theory that all forms of government rest on violence, and are therefore wrong and harmful, as well as unnecessary.

The new social order rests, of course, on the materialistic basis of life; but while all Anarchists agree that the main evil today is an economic one, they maintain that the solution of that evil can be brought about only through the consideration of *every phase* of life,—individual, as well as the collective; the internal, as well as the external phases....

Anarchism is the only philosophy which brings to man the consciousness of himself; which maintains that God, the State, and society are non-existent, that their promises are null and void, since they can be fulfilled only through man's subordination. Anarchism is therefore the teacher of the unity of life; not merely in nature, but in man. There is no conflict between the individual and the social instincts, any more than there is between the heart and the lungs: the one the receptacle of a precious life essence, the other the repository of the element that keeps the essence pure and strong. The individual is the heart of society, conserving the essence of social life; society is the lungs which are distributing the element to keep the life essence—that is, the individual—pure and strong.

Harlem Renaissance Poetry (1922)

A cultural flowering in New York's African American community during the 1920s and 1930s, the Harlem Renaissance featured works of literature, music, and art that portrayed and celebrated the African American experience in new and vibrant ways. Among the prominent literary voices were those of Langston Hughes, Jean Toomer, and Claude McKay; a sampling of their poems—all published in 1922—appears below.

The Negro Speaks of Rivers

By Langston Hughes

I've known rivers:

I've known rivers ancient as the world and older than the flow of human blood in human veins.

My soul has grown deep like the rivers.

I bathed in the Euphrates when dawns were young.

I built my hut near the Congo and it lulled me to sleep.

I looked upon the Nile and raised the pyramids above it.

I heard the singing of the Mississippi when Abe Lincoln went down to New Orleans, and I've seen its muddy bosom turn all golden in the sunset.

I've known rivers:

Ancient, dusky rivers.

My soul has grown deep like the rivers.

Reapers

By Jean Toomer

Black reapers with the sound of steel on stones

Are sharpening scythes. I see them place the hones

In their hip-pockets as a thing that's done,

And start their silent swinging, one by one.

Black horses drive a mower through the weeds,

And there, a field rat, startled, squealing bleeds,

His belly close to ground. I see the blade,

Blood-stained, continue cutting weeds and shade.

America

By Claude McKay

Although she feeds me bread of bitterness,
And sinks into my throat her tiger's tooth,
Stealing my breath of life, I will confess
I love this cultured hell that tests my youth!
Her vigor flows like tides into my blood,
Giving me strength erect against her hate.
Her bigness sweeps my being like a flood.
Yet as a rebel fronts a king in state,
I stand within her walls with not a shred
Of terror, malice, not a word of jeer.
Darkly I gaze into the days ahead,
And see her might and granite wonders there,
Beneath the touch of Time's unerring hand,
Like priceless treasures sinking in the sand.

House Committee on Un-American Activities, Testimony of Screenwriter

Albert Maltz (1947)

The Hollywood Ten was a group of screenwriters and directors called before the House Committee on Un-American Activities (HUAC) in October 1947 to testify about their own political views and about alleged Communist influence in the motion-picture industry. All ten defied the fervor of the McCarthy era by refusing to state whether or not they were Communists; all ten were held in contempt and served time in jail. What follows is part of the testimony of one of the Hollywood Ten, screenwriter Albert Maltz.

Chairman [Congressman J. Parnell Thomas]: Mr. Maltz, the committee is unanimous in permitting you to read the statement.

Mr. Maltz: Thank you.

I am an American and I believe there is no more proud word in the vocabulary of man. I am a novelist and screen writer and I have produced a certain body of work in the past 15 years. As with any other writer, what I have written has come from the total fabric of my life—my birth in this land, our schools and games, our atmosphere of freedom, our tradition of inquiry, criticism, discussion, tolerance. Whatever I am, America has made me. And I, in turn, possess no loyalty as great as the one I have to this land, to the economic and social welfare of its people, to the perpetuation and development of its democratic way of life.

Now at the age of 39, I am commanded to appear before the House Committee on Un-American Activities. For a full week this committee has encouraged an assortment of well-rehearsed witnesses to testify that I and others are subversive and un-American.

It has refused us the opportunity that any pickpocket receives in a magistrate's court—the right to cross-examine these witnesses, to refute their testimony, to reveal their motives, their history, and who, exactly, they are. Furthermore it grants these witnesses congressional immunity so that we may not sue them for libel for their slanders.

I maintain that this is an evil and vicious procedure; that it is legally unjust and morally indecent—and that it places in danger every other American, since if the right of any one citizen can be invaded, then the constitutional guaranties of every other American have been subverted and no one is any longer protected from official tyranny.

What is it about me that this committee wishes to destroy? My writing? Very well, let us refer to them.

My novel, *The Cross and the Arrow*, was issued in a special edition of 140,000 copies by a wartime Government agency, the armed services edition, for American servicemen abroad.

My short stories have been reprinted in over 30 anthologies, by as many American publishers—all subversive, no doubt.

My film, *The Pride of the Marines*, was premiered in 28 cities at Guadalcanal Day banquets under the auspices of the United States Marine Corps.

Another film, *Destination Tokyo*, was premiered aboard a United States submarine and was adopted by the Navy as an official training film.

My short film, *The House I Live In*, was given a special award by the Academy of Motion Picture Arts and Sciences for its contribution to racial tolerance.

My short story, *The Happiest Man on Earth*, won the 1938 O. Henry Memorial Award for the best American short story.

This, then, is the body of work for which this committee urges I be blacklisted in the film industry—and tomorrow, if it has its way in the publishing and magazine fields also.

By cold censorship, if not legislation, I must not be allowed to write. Will this censorship stop with me? Or with the others now singled out for attack? If it requires acceptance of the ideas of this committee to remain immune from the brand of un-Americanism, then who is ultimately safe from this committee except members of the Ku Klux Klan?

Why else does this committee now seek to destroy me and others? Because of our ideas, unquestionably. In 1801, when he was President of the United States, Thomas Jefferson wrote: "Opinion, and the just maintenance of it, shall never be a crime in my view; nor bring injury to the individual."

But a few years ago, in the course of one of the hearings of this committee, Congressman J. Parnell Thomas said, and I quote from the official transcript: "I just want to say this now, that it seems that the New Deal is working along hand in glove with the Communist Party. The New Deal is either for the Communist Party or it is playing into the hands of the Communist Party."

Very well, then, here is the other reason why I and others have been commanded to appear before this committee—our ideas. In common with many Americans, I supported the New Deal. In common with many Americans I supported, against Mr. Thomas and Mr. Rankin, the anti-lynching bill.

I opposed them in my support of OPA controls and emergency veteran housing and a fair employment practices law. I signed petitions for these measures, joined organizations that advocated them, contributed money, sometimes spoke from public platforms, and I will continue to do so. I will take my philosophy from Thomas Payne, Thomas Jefferson, Abraham Lincoln, and I will not be dictated to or intimidated by men to whom the Ku Klux Klan, as a matter of committee record, is an acceptable American institution.

I state further that on many questions of public interest my opinions as a citizen have not always been in accord with the opinions of the majority. They are not now nor have my opinions ever been fixed and unchanging, nor are they now fixed and unchangeable; but, right or wrong, I claim and I insist upon my right to think freely and to speak freely; to join the Republican Party or the Communist Party, the Democratic or the Prohibition Party; to publish whatever I please; to fix my mind or change my mind, without dictation from anyone; to offer any criticism I think fitting of any public official or policy; to join whatever organizations I please, no matter what certain legislators may think of them. Above all, I challenge the right of this committee to inquire into my political or religious beliefs, in any manner or degree, and I assert that not the conduct of this committee but its very existence are a subversion of the Bill of Rights.

If I were a spokesman for General Franco, I would not be here today. I would rather be here. I would rather die than be a shabby American, groveling before men whose names are Thomas and Rankin, but who now carry out activities in America like those carried out in Germany by Goebbels and Himmler.

The American people are going to have to choose between the Bill of Rights and [this] committee. They cannot have both. One or the other must be abolished in the immediate future.

Chairman [pounding gavel]: Mr. Stripling. Mr. Stripling.

Mr. Stripling: Mr. Maltz, what is your occupation?

Mr. Maltz: I am a writer.

Mr. Stripling: Are you employed in the motion-picture industry?

Mr. Maltz: I work in various fields of writing and I have sometimes accepted employment in the motion-picture industry.

Mr. Stripling: Have you written the scripts for a number of pictures?

Mr. Maltz: It is a matter of public record that I have written scripts for certain motion pictures.

Mr. Stripling: Are you a member of the Screen Writers Guild?

Mr. Maltz: Next you are going to ask me what religious group I belong to.

Chairman: No, no; we are not.

Mr. Maltz: And any such question as that... is an obvious attempt to invade my rights under the Constitution.

Mr. Stripling: Do you object to answering whether or not you are a member of the Screen Writers Guild?

Mr. Maltz: I have not objected to answering that question. On the contrary, I point out that next you are going to ask me whether or not I am a member of a certain religious group and suggest that I be blacklisted from an industry because I am a member of a group you don't like.

[The chairman pounds gavel.]

Mr. Stripling: Mr. Maltz, do you decline to answer the question?

Mr. Maltz: I certainly do not decline to answer the question. I have answered the question.

Mr. Stripling: I repeat, Are you a member of the Screen Writers Guild?

Mr. Maltz: And I repeat my answer, sir, that any such question is an obvious attempt to invade my list of organizations as an American citizen and I would be a shabby American if I didn't answer as I have.

Mr. Stripling: Mr. Maltz, are you a member of the Communist Party?

Mr. Maltz: Next you are going to ask what my religious beliefs are.

Mr. [John] McDowell: That is not answering the question.

Mr. Maltz: And you are going to insist before various members of the industry that since you do not like my religious beliefs I should not work in such industry. Any such question is quite irrelevant.

Mr. Stripling: I repeat the question. Are you now or have you ever been a member of the Communist Party?

Mr. Maltz: I have answered the question, Mr. Stripling. I am sorry. I want you to know—

Mr. Mcdowell: I object to that statement.

Chairman: Excuse the witness. No more questions. Typical Communist line....

Port Huron Statement (1962)

The Port Huron Statement, named for the Michigan convention site where it was written in June 1962, was the founding document of the leftist protest group Students for a Democratic Society (SDS). The manifesto was written chiefly by University of Michigan student Tom Hayden, the first president of the SDS and later one of the Chicago Seven.

We are people of this generation, bred in at least modest comfort, housed now in universities, looking uncomfortably to the world we inherit.

When we were kids the United States was the wealthiest and strongest country in the world: the only one with the atom bomb, the least scarred by modern war, an initiator of the United Nations that we thought would distribute Western influence throughout the world. Freedom and equality for each individual, government of, by, and for the people—these American values we found good, principles by which we could live as men. Many of us began maturing in complacency.

As we grew, however, our comfort was penetrated by events too troubling to dismiss. First, the permeating and victimizing fact of human degradation, symbolized by the Southern struggle against racial bigotry, compelled most of us from silence to activism. Second, the enclosing fact of the Cold War, symbolized by the presence of the Bomb, brought awareness that we ourselves, and our friends, and millions of abstract “others” we knew more directly because of our common peril, might die at any time. We might deliberately ignore, or avoid, or fail to feel all other human problems, but not these two, for these were too immediate and crushing in their impact, too challenging in the demand that we as individuals take the responsibility for encounter and resolution.

While two-thirds of mankind suffers undernourishment, our own upper classes revel amidst superfluous abundance. Although world population is expected to double in forty years, the nations still tolerate anarchy as a major principle of international conduct and uncontrolled exploitation governs the sapping of the earth’s physical resources. Although mankind desperately needs revolutionary leadership, America rests in national stalemate, its goals ambiguous and tradition-bound instead of informed and clear, its democratic system apathetic and manipulated rather than “of, by, and for the people.”

In a participatory democracy, the political life would be based in several root principles:

- that decision-making of basic social consequence be carried on by public groupings;
- that politics be seen positively, as the art of collectively creating an acceptable pattern of social relations;
- that politics has the function of bringing people out of isolation and into community, thus being a necessary, though not sufficient, means of finding meaning in personal life;
- that the political order should serve to clarify problems in a way instrumental to their solution; it should provide outlets for the expression of personal grievance and aspiration; opposing views should be organized so as to illuminate choices and facilitate the attainment of goals....

The economic sphere would have as its basis the principles:

- that work should involve incentives worthier than money or survival. It should be educative, not stultifying; creative, not mechanical; self-directed, not manipulated, encouraging independence, a respect for others, a sense of dignity and a willingness to accept social responsibility, since it is this experience that has crucial influence on habits, perceptions and individual ethics;
- that the economic experience is so personally decisive that the individual must share in its full determination;
- that the economy itself is of such social importance that its major resources and means of production should be open to democratic participation and subject to democratic social regulation.

Like the political and economic ones, major social institutions—cultural, education, rehabilitative, and others—should be generally organized with the well-being and dignity of man as the essential measure of success.

In social change or interchange, we find violence to be abhorrent because it requires generally the transformation of the target, be it a human being or a community of people, into a depersonalized object of hate. It is imperative that the means of violence be abolished and the institutions—local, national, international—that encourage nonviolence as a condition of conflict be developed.

These are our central values, in skeletal form. It remains vital to understand their denial or attainment in the context of the modern world....

The bridge to political power will be built through genuine cooperation, locally, nationally, and internationally, between a new left of young people, and an awakening community of allies. In each community we must look within the university and act with confidence that we can be powerful, but we must look outwards to the less exotic but more lasting struggles for justice.

To turn these possibilities into realities will involve national efforts at university reform by an alliance of students and faculty. They must wrest control of the educational process from the administrative bureaucracy. They must make fraternal and functional contact with allies in labor, civil rights, and other liberal forces outside the campus. They must import major public issues into the curriculum—research and teaching on problems of war and peace is an outstanding example. They must make debate and controversy, not dull pedantic cant, the common style for educational life. They must consciously build a base for their assault upon the loci of power.

As students, for a democratic society, we are committed to stimulating this kind of social movement, this kind of vision and program in campus and community across the country. If we appear to seek the unattainable, as it has been said, then let it be known that we do so to avoid the unimaginable.

"I Have a Dream" (1963), Martin Luther King, Jr.

The Reverend Martin Luther King, Jr., delivered his famous "I Have a Dream" speech on the steps of the Lincoln Memorial during the March on Washington for Jobs and Freedom on August 28, 1963. Galvanizing the crowd of 250,000, the address helped transform the struggle for civil rights into a national movement.

Five score years ago, a great American, in whose symbolic shadow we stand signed the Emancipation Proclamation. This momentous decree came as a great beacon light of hope to millions of Negro slaves who had been seared in the flames of withering injustice. It came as a joyous daybreak to end the long night of captivity. But one hundred years later, we must face the tragic fact that the Negro is still not free.

One hundred years later, the life of the Negro is still sadly crippled by the manacles of segregation and the chains of discrimination. One hundred years later, the Negro lives on a lonely island of poverty in the midst of a vast ocean of material prosperity. One hundred years later, the Negro is still languishing in the corners of American

society and finds himself an exile in his own land.

So we have come here today to dramatize an appalling condition. In a sense we have come to our nation's capital to cash a check. When the architects of our republic wrote the magnificent words of the Constitution and the Declaration of Independence, they were signing a promissory note to which every American was to fall heir....

Let us not wallow in the valley of despair. I say to you today, my friends, that in spite of the difficulties and frustrations of the moment, I still have a dream. It is a dream deeply rooted in the American dream.

I have a dream that one day this nation will rise up and live out the true meaning of its creed: "We hold these truths to be self-evident: that all men are created equal." I have a dream that one day on the red hills of Georgia the sons of former slaves and the sons of former slaveowners will be able to sit down together at a table of brotherhood. I have a dream that one day even the state of Mississippi, a desert state, sweltering with the heat of injustice and oppression, will be transformed into an oasis of freedom and justice. I have a dream that my four children will one day live in a nation where they will not be judged by the color of their skin but by the content of their character. I have a dream today.

I have a dream that one day the state of Alabama, whose governor's lips are presently dripping with the words of interposition and nullification, will be transformed into a situation where little black boys and black girls will be able to join hands with little white boys and white girls and walk together as sisters and brothers. I have a dream today. I have a dream that one day every valley shall be exalted, every hill and mountain shall be made low, the rough places will be made plain, and the crooked places will be made straight, and the glory of the Lord shall be revealed, and all flesh shall see it together. This is our hope. This is the faith with which I return to the South. With this faith we will be able to hew out of the mountain of despair a stone of hope. With this faith we will be able to transform the jangling discords of our nation into a beautiful symphony of brotherhood. With this faith we will be able to work together, to pray together, to struggle together, to go to jail together, to stand up for freedom together, knowing that we will be free one day.

This will be the day when all of God's children will be able to sing with a new meaning, "My country, 'tis of thee, sweet land of liberty, of thee I sing. Land where my fathers died, land of the pilgrim's pride, from every mountainside, let freedom ring." And if America is to be a great nation, this must become true. So let freedom ring from the prodigious hilltops of New Hampshire. Let freedom ring from the mighty mountains of New York. Let freedom ring from the heightening Alleghenies of Pennsylvania! Let freedom ring from the snowcapped Rockies of Colorado! Let freedom ring from the curvaceous peaks of California! But not only that; let freedom ring from Stone Mountain of Georgia! Let freedom ring from Lookout Mountain of Tennessee! Let freedom ring from every hill and every molehill of Mississippi. From every mountainside, let freedom ring.

When we let freedom ring, when we let it ring from every village and every hamlet, from every state and every city, we will be able to speed up that day when all of God's children, black men and white men, Jews and Gentiles, Protestants and Catholics, will be able to join hands and sing in the words of the old Negro spiritual, "Free at last! free at last! thank God Almighty, we are free at last!"

"The Times They Are A-Changin'" (1964), Bob Dylan

Folk and rock musician Bob Dylan (born Robert Zimmerman) was acclaimed as a "spokesman" of his generation and "bard" of the 1960s counterculture—labels he rejected—for such controversial songs as "The Times They Are A-Changin'." Released on his 1964 album of the same name, the composition was said to reflect the spirit of upheaval and generational conflict that characterized the decade. Dylan refused to accept what many came to call the song: an anthem.

Come gather'round people
Wherever you roam
And admit that the waters
Around you have grown
And accept it that soon
You'll be drenched to the bone.
If your time to you
Is worth savin'
Then you better start swimmin'
Or you'll sink like a stone
For the times they are a-changin'.

Come writers and critics
Who prophesize with your pen
And keep your eyes wide
The chance won't come again
And don't speak too soon
For the wheel's still in spin
And there's no tellin' who
That it's namin'.
For the loser now
Will be later to win
For the times they are a-changin'.

Come senators, congressmen
Please heed the call
Don't stand in the doorway
Don't block up the hall
For he that gets hurt
Will be he who has stalled
There's a battle outside
And it is ragin'.
It'll soon shake your windows
And rattle your walls
For the times they are a-changin'.

Come mothers and fathers
Throughout the land
And don't criticize
What you can't understand
Your sons and your daughters
Are beyond your command
Your old road is
Rapidly agin'.
Please get out of the new one
If you can't lend your hand
For the times they are a-changin'.

The line it is drawn
The curse it is cast
The slow one now
Will later be fast
As the present now

Will later be past
The order is
Rapidly fading.
And the first one now
Will later be last
For the times they are a-changin'.

"An End to History" (1964), Mario Savio

Mario Savio, then a philosophy student at the University of California, Berkeley, was a vocal leader of the Free Speech Movement and a member of its steering committee during the angry student protests that erupted on campus in the fall and winter of 1964. The following article, expressing his views on bureaucracy, democracy, and the fight for free speech, first appeared in a publication called Humanity in December 1964.

Last summer I went to Mississippi to join the struggle there for civil rights. This fall I am engaged in another phase of the same struggle, this time in Berkeley. The two battlefields may seem quite different to some observers, but this is not the case. The same rights are at stake in both places—the right to participate as citizens in democratic society and the right to due process of law. Further, it is a struggle against the same enemy. In Mississippi an autocratic and powerful minority rules, through organized violence, to suppress the vast, virtually powerless majority. In California, the privileged minority manipulates the university bureaucracy to suppress the students' political expression. That "respectable" bureaucracy masks the financial plutocrats; that impersonal bureaucracy is the efficient enemy in a "Brave New World."

In our free-speech fight at the University of California, we have come up against what may emerge as the greatest problem of our nation—depersonalized, unresponsive bureaucracy. We have encountered the organized status quo in Mississippi, but it is the same in Berkeley. Here we find it impossible usually to meet with anyone but secretaries. Beyond that, we find functionaries who cannot make policy but can only hide behind the rules. We have discovered total lack of response on the part of the policy makers. To grasp a situation which is truly Kafkaesque, it is necessary to understand the bureaucratic mentality. And we have learned quite a bit about it this fall, more outside the classroom than in.

As bureaucrat, an administrator believes that nothing new happens. He occupies an a-historical point of view. In September, to get the attention of this bureaucracy which had issued arbitrary edicts suppressing student political expression and refused to discuss its action, we held a sit-in on the campus. We sat around a police car and kept it immobilized for over thirty-two hours. At last, the administrative bureaucracy agreed to negotiate. But instead, on the following Monday, we discovered that a committee had been appointed, in accordance with usual regulations, to resolve the dispute. Our attempt to convince any of the administrators that an event had occurred, that something new had happened, failed. They saw this simply as something to be handled by normal university procedures.

The same is true of all bureaucracies. They begin as tools, means to certain legitimate goals, and they end up feeding their own existence. The conception that bureaucrats have is that history has in fact come to an end. No events can occur now that the Second World War is over which can change American society substantially. We proceed by standard procedures as we are.

The most crucial problems facing the United States today are the problem of automation and the problem of racial injustice. Most people who will be put out of jobs by machines will not accept an end to events, this historical plateau, as the point beyond which no change occurs. Negroes will not accept an end to history here. All of us must refuse to accept history's final judgment that in America there is no place in society for people whose skins are dark. On campus students are not about to accept it as fact that the university has ceased evolving and is in

its final state of perfection, that students and faculty are respectively raw material and employees, or that the university is to be autocratically run by unresponsive bureaucrats.

Here is the real contradiction: the bureaucrats hold history as ended. As a result significant parts of the population both on campus and off are dispossessed and these dispossessed are not about to accept this a-historical point of view. It is out of this that the conflict has occurred with the university bureaucracy and will continue to occur until that bureaucracy becomes responsive or until it is clear the university cannot function.

The things we are asking for in our civil-rights protests have a deceptively quaint ring. We are asking for the due process of law. We are asking for our actions to be judged by committees of our peers. We are asking that regulations ought to be considered as arrived at legitimately only from the consensus of the governed. These phrases are all pretty old, but they are not being taken seriously in America today, nor are they being taken seriously on the Berkeley campus.

I have just come from a meeting with the Dean of Students. She notified us that she was aware of certain violations of university regulations by certain organizations. University friends of Student Non-violent Coordinating Committee, which I represent, was one of these. We tried to draw from her some statement on these great principles, consent of the governed, jury of one's peers, due process. The best she could do was to evade or to present the administration party line. It is very hard to make any contact with the human being who is behind these organizations.

The university is the place where people begin seriously to question the conditions of their existence and raise the issue of whether they can be committed to the society they have been born into. After a long period of apathy during the fifties, students have begun not only to question but, having arrived at answers, to act on those answers. This is part of a growing understanding among many people in America that history has not ended, that a better society is possible, and that it is worth dying for.

This free-speech fight points up a fascinating aspect of contemporary campus life. Students are permitted to talk all they want so long as their speech has no consequences.

One conception of the university, suggested by a classical Christian formulation, is that it be in the world but not of the world. The conception of Clark Kerr by contrast is that the university is part and parcel of this particular stage in the history of American society; it stands to serve the need of American industry; it is a factory that turns out a certain product needed by industry or government. Because speech does often have consequences which might alter this perversion of higher education, the university must put itself in a position of censorship. It can permit two kinds of speech, speech which encourages continuation of the status quo, and speech which advocates changes in it so radical as to be irrelevant in the foreseeable future. Someone may advocate radical change in all aspects of American society, and this I am sure he can do with impunity. But if someone advocates sit-ins to bring about changes in discriminatory hiring practices, this cannot be permitted because it goes against the status quo of which the university is a part. And that is how the fight began here.

The administration of the Berkeley campus has admitted that external, extra-legal groups have pressured the university not to permit students on campus to organize picket lines, not to permit on campus any speech with consequences. And the bureaucracy went along. Speech with consequences, speech in the area of civil rights, speech which some might regard as illegal, must stop.

Many students here at the university, many people in society, are wandering aimlessly about. Strangers in their own lives there is no place for them. They are people who have not learned to compromise, who for example have come to the university to learn to question, to grow, to learn—all the standard things that sound like cliches because no one takes them seriously. And they find at one point or other that for them to become part of society, to become lawyers, ministers, businessmen, people in government, that very often they must compromise those principles which were most dear to them. They must suppress the most creative impulses that they have; this is a prior condition for being part of the system. The university is well structured, well tooled, to turn out people with all

the sharp edges worn off, the well-rounded person. The university is well equipped to produce that sort of person, and this means that the best among the people who enter must for four years wander aimlessly much of the time questioning why they are on campus at all, doubting whether there is any point in what they are doing, and looking toward a very bleak existence afterward in a game in which all of the rules have been made up, which one cannot really amend.

It is a bleak scene, but it is all a lot of us have to look forward to. Society provides no challenge. American society in the standard conception it has of itself is simply no longer exciting. The most exciting things going on in America today are movements to change America. America is becoming ever more the utopia of sterilized, automated contentment. The “futures” and “careers” for which American students now prepare are for the most part intellectual and moral wastelands. This chrome-plated consumers’ paradise would have us grow up to be well-behaved children. But an important minority of men and women coming to the front today have shown that they will die rather than be standardized, replaceable and irrelevant.

***Unsafe at Any Speed* (1965), Ralph Nader**

Consumer and environmental advocate Ralph Nader began his campaign for product safety and consumer rights in the early 1960s. In his book Unsafe at Any Speed, Nader accused the giant automobile manufacturers of building and selling vehicles with deadly safety defects in the interest of greed. A work of modern muckraking, Unsafe at Any Speed was influential in the passage of federal legislation and helped launch the American consumer rights movement.

For over a half century the automobile has brought death, injury, and the most inestimable sorrow and deprivation to millions of people. With Medea-like intensity, this mass trauma began rising sharply four years ago, reflecting new and unexpected ravages by the motor vehicle. A 1959 Department of Commerce report projected that 51,000 persons would be killed by automobiles in 1975. That figure will probably be reached in 1965, a decade ahead of schedule....

Highway accidents were estimated to have cost this country in 1964, \$8.4 billion in property damage, medical expenses, lost wages, and insurance overhead expenses. Add an equivalent sum to comprise roughly the indirect costs and the total amounts to over two percent of the gross national product. But these are not the kind of costs which fall on the builders of motor vehicles (excepting a few successful law suits for negligent construction of the vehicle) and thus do not pinch the proper foot. Instead, the costs fall to users of vehicles, who are in no position to dictate safer automobile designs.

In fact, the gigantic costs of the highway carnage in this country support a service industry. A vast array of services—medical, police, administrative, legal, insurance, automotive repair, and funeral—stand equipped to handle the direct and indirect consequences of accident injuries. Traffic accidents create economic demands for these services running into billions of dollars. It is in the post-accident response that lawyers and physicians and other specialists labor. This is where the remuneration lies and this is where the talent and energies go. Working in the area of prevention of these casualties earns few fees. Consequently our society has an intricate organization to handle direct and indirect aftermaths of collisions. But the true mark of a humane society must be what it does about *prevention* of accident injuries, not the cleaning up of them afterward.

Unfortunately, there is little in the dynamics of the automobile accident industry that works for its reduction. Doctors, lawyers, engineers and other specialists have failed in their primary professional ethic: to dedicate themselves to the prevention of accident injuries. The roots of the unsafe vehicle problem are so entrenched that the situation can be improved only by the forging of new instruments of citizen action. When thirty practicing physicians picketed for safe auto design at the New York International Automobile Show on April 7, 1965, their unprecedented action was the measure of their desperation over the inaction of the men and institutions in

government and industry who have failed to provide the public with the vehicle safety to which it is entitled. The picketing surgeons, orthopedists, pediatricians and general practitioners marched in protest because the existing medical, legal and engineering organizations have defaulted.

A great problem of contemporary life is how to control the power of economic interests which ignore the harmful effects of their applied sciences and technology. The automobile tragedy is one of the most serious of these man-made assaults on the human body. The history of that tragedy reveals many obstacles which must be overcome in the taming of any mechanical or biological hazard which is a by-product of industry or commerce. Our society's obligation to protect the "body rights" of its citizens with vigorous resolve and ample resources requires the precise, authoritative articulation and front-rank support which is being devoted to civil rights.

This country has not been entirely laggard in defining values relevant to new contexts of a technology laden with risks. The postwar years have witnessed an historic broadening, at least in the courts, of the procedural and substantive rights of the injured and the duties of manufacturers to produce a safe product. Judicial decisions throughout the fifty states have given living meaning to Walt Whitman's dictum, "If anything is sacred, the human body is sacred." Mr. Justice Jackson in 1953 defined the duty of the manufacturers by saying, "Where experiment or research is necessary to determine the presence or the degree of danger, the product must not be tried out on the public, nor must the public be expected to possess the facilities or the technical knowledge to learn for itself of inherent but latent dangers. The claim that a hazard was not foreseen is not available to one who did not use foresight appropriate to his enterprise."

It is a lag of almost paralytic proportions that these values of safety concerning consumers and economic enterprises, reiterated many times by the judicial branch of government, have not found their way into legislative policy-making for safer automobiles. Decades ago legislation was passed changing the pattern of private business investments to accommodate more fully the safety value on railroads, in factories, and more recently on ships and aircraft. In transport, apart from the motor vehicle, considerable progress has been made in recognizing the physical integrity of the individual. There was the period when railroad workers were killed by the thousands and the editor of *Harper's* could say late in the last century: "So long as brakes cost more than trainmen, we may expect the present sacrificial method of car-coupling to be continued." But injured trainmen did cause the railroads some operating dislocations; highway victims cost the automobile companies next to nothing and the companies are not obligated to make use of developments in science-technology that have demonstrably opened up opportunities for far greater safety than any existing safety features lying unused on the automobile companies' shelves.

A principal reason why the automobile has remained the only transportation vehicle to escape being called to meaningful public account is that the public has never been supplied the information nor offered the quality of competition to enable it to make effective demands through the marketplace and through government for a safe, nonpolluting and efficient automobile that can be produced economically. The consumer's expectations regarding automotive innovations have been deliberately held low and mostly oriented to very gradual annual style changes. The specialists and researchers outside the industry who could have provided the leadership to stimulate this flow of information by and large chose to remain silent, as did government officials.

The persistence of the automobile's immunity over the years has nourished the continuance of that immunity, recalling Francis Bacon's insight. "He that will not apply new remedies must expect new evils, for time is the greatest innovator."

The accumulated power of decades of effort by the automobile industry to strengthen its control over car design is reflected today in the difficulty of even beginning to bring it to justice. The time has not come to discipline the automobile for safety; that time came over four decades ago. But that is not cause to delay any longer what should have been accomplished in the nineteen-twenties.

Student Nonviolent Coordinating Committee Position Paper: On Vietnam

(1966)

In January 1966, with U.S. escalation of the Vietnam War under way for more than a year, the antiwar movement at home was beginning to mobilize and gain momentum. Among the earliest and most active protest groups was the Student Nonviolent Coordinating Committee (SNCC), a civil rights organization founded in 1960. Under more radical leadership beginning in mid-decade, the SNCC adopted a radical Black Power philosophy and took a strong position against the war. It issued this statement on January 6, 1966.

The Student Nonviolent Coordinating Committee has a right and a responsibility to dissent with United States foreign policy on any issue when it sees fit. The Student Nonviolent Coordinating Committee now states its opposition to the United States' involvement in Vietnam on these grounds:

We believe the United States government has been deceptive in its claims of concern for the freedom of the Vietnamese people, just as the government has been deceptive in claiming concern for the freedom of colored people in other countries as the Dominican Republic, the Congo, South Africa, Rhodesia, and in the United States itself.

We, the Student Nonviolent Coordinating Committee, have been involved in the black peoples' struggle for liberation and self-determination in this country for the past five years. Our work, particularly in the South, has taught us that the United States government has never guaranteed the freedom of oppressed citizens, and is not yet truly determined to end the rule of terror and oppression within its own borders.

We ourselves have often been victims of violence and confinement executed by United States governmental officials. We recall the numerous persons who have been murdered in the South because of their efforts to secure their civil and human rights, and whose murderers have been allowed to escape penalty for their crimes.

The murder of Samuel Young in Tuskegee, Alabama, is no different than the murder of peasants in Vietnam, for both Young and the Vietnamese sought, and are seeking, to secure the rights guaranteed them by law. In each case, the United States government bears a great part of the responsibility for these deaths.

Samuel Young was murdered because United States law is not being enforced. Vietnamese are murdered because the United States is pursuing an aggressive policy in violation of international law. The United States is no respecter of persons or law when such persons or laws run counter to its needs or desires.

We recall the indifference, suspicion and outright hostility with which our reports of violence have been met in the past by government officials.

We know that for the most part, elections in this country, in the North as well as the South, are not free. We have seen that the 1965 Voting Rights Act and the 1966 Civil Rights Act have not yet been implemented with full federal power and sincerity.

We question, then, the ability and even the desire of the United States government to guarantee free elections abroad. We maintain that our country's cry of "preserve freedom in the world" is a hypocritical mask, behind which it squashes liberation movements which are not bound, and refuse to be bound, by the expediencies of United States cold war policies.

We are in sympathy with, and support, the men in this country who are unwilling to respond to a military draft which would compel them to contribute their lives to United States aggression in Vietnam in the name of the "freedom" we find so false in this country.

We recoil with horror at the inconsistency of a supposedly "free" society where responsibility to freedom is equated with the responsibility to lend oneself to military aggression. We take note of the fact that 16 percent of the draftees from this country are Negroes called on to stifle the liberation of Vietnam, to preserve a "democracy"

which does not exist for them at home.

We ask, where is the draft for the freedom fight in the United States?

We therefore encourage those Americans who prefer to use their energy in building democratic forms within this country. We believe that work in the civil rights movement and with other human relations organizations is a valid alternative to the draft. We urge all Americans to seek this alternative, knowing full well that it may cost them their lives—as painfully as in Vietnam.

Black Panther Party Platform and Program (1966)

The transition from the civil rights movement of the 1950s and the early 1960s—an essentially peaceful campaign for integration and equal rights—to the militant Black Power movement of the late 1960s was epitomized by the founding of the Black Panther Party for Self-Defense in October 1966. The Oakland-based organization, which called upon the African American community to take up arms in the struggle against white oppression, issued a statement of founding principles.

What We Want

What We Believe

1. *We want freedom. We want power to determine the destiny of our Black Community.*

We believe that black people will not be free until we are able to determine our destiny.

2. *We want full employment for our people.*

We believe that the federal government is responsible and obligated to give every man employment or a guaranteed income. We believe that if the white American businessmen will not give full employment, then the means of production should be taken from the businessmen and placed in the community so that the people of the community can organize and employ all of its people and give a high standard of living.

3. *We want an end to the robbery by the white man of our Black Community.*

We believe that this racist government has robbed us and now we are demanding the overdue debt of forty acres and two mules. Forty acres and two mules was promised 100 years ago as restitution for slave labor and mass murder of black people. We will accept the payment as currency which will be distributed to our many communities. The Germans are now aiding the Jews in Israel for the genocide of the Jewish people. The Germans murdered six million Jews. The American racist has taken part in the slaughter of over twenty million black people; therefore, we feel that this is a modest demand that we make.

4. *We want decent housing, fit for shelter of human beings.*

We believe that if the white landlords will not give decent housing to our black community, then the housing and the land should be made into cooperatives so that our community, with government aid, can build and make decent housing for its people.

5. *We want education for our people that exposes the true nature of this decadent American society. We want education that teaches us our true history and our role in the present-day society.*

We believe in an educational system that will give to our people a knowledge of self. If a man does not have knowledge of himself and his position in society and the world, then he has little chance to relate to anything

else.

6. *We want all black men to be exempt from military service.*

We believe that Black people should not be forced to fight in the military service to defend a racist government that does not protect us. We will not fight and kill other people of color in the world who, like black people, are being victimized by the white racist government of America. We will protect ourselves from the force and violence of the racist police and the racist military, by whatever means necessary.

7. *We want an immediate end to **police brutality and murder** of black people.*

We believe we can end police brutality in our black community by organizing black self-defense groups that are dedicated to defending our black community from racist police oppression and brutality. The Second Amendment to the Constitution of the United States gives a right to bear arms. We therefore believe that all black people should arm themselves for self defense.

8. *We want freedom for all black men held in federal, state, county and city prisons and jails.*

We believe that all black people should be released from the many jails and prisons because they have not received a fair and impartial trial.

9. *We want all black people when brought to trial to be tried in court by a jury of their peer group or people from their black communities, as defined by the Constitution of the United States.*

We believe that the courts should follow the United States Constitution so that black people will receive fair trials. The 14th Amendment of the U.S. Constitution gives a man a right to be tried by his peer group. A peer is a person from a similar economic, social, religious, geographical, environmental, historical and racial background. To do this the court will be forced to select a jury from the black community from which the black defendant came. We have been, and are being tried by all-white juries that have no understanding of the "average reasoning man" of the black community.

10. *We want land, bread, housing, education, clothing, justice and peace. And as our major political objective, a United Nations-supervised plebiscite to be held throughout the black colony in which only black colonial subjects will be allowed to participate for the purpose of determining the will of black people as to their national destiny.*

When in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly, all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security.

National Organization for Women, Statement of Purpose (1966)

A pivotal year in the decade's political and social counterculture, 1966 also saw the establishment of the National Organization for Women (NOW) in Washington, D.C. A formal statement of purpose, written by NOW president Betty Friedan, was adopted at the organization's first national conference on October 29.

We, men and women who hereby constitute ourselves as the National Organization for Women, believe that the time has come for a new movement toward true equality for all women in America, and toward a fully equal partnership of the sexes, as part of the world-wide revolution of human rights....

The purpose of NOW is to take action to bring women into full participation in the mainstream of American society... exercising all the privileges and responsibilities thereof in truly equal partnership with men.

We believe the time has come to move beyond the abstract argument, discussion and symposia over the status and special nature of women which has raged in America...; the time has come to confront, with concrete action, the conditions that now prevent women from enjoying the equality of opportunity and freedom of choice which is their right, as individual Americans, and as human beings....

NOW is dedicated to the proposition that women, first and foremost, are human beings, who, like all other people in our society, must have the chance to develop their fullest human potential. We believe that women can achieve such equality only by accepting to the full the challenges and responsibilities they share with all other people in our society, as part of the decision-making mainstream of American political, economic and social life.

We organize to initiate or support action, nationally, or in any part of this nation, by individuals or organizations, to break through the silken curtain of prejudice and discrimination against women in government, industry, the professions, the churches, the political parties, the judiciary, the labor unions, in education, science, medicine, law, religion and every other field of importance in American society....

Despite all the talk about the status of American women in recent years, the actual position of women in the United States has declined... to an alarming degree throughout the 1950's and 60's....

Official pronouncements of the advance in the status of women hide not only the reality of this dangerous decline, but the fact that nothing is being done to stop it.... Discrimination in employment on the basis of sex is now prohibited by federal law, in Title VII of the Civil Rights Act of 1964. But although nearly one-third of the cases brought before the Equal Employment Opportunity Commission during the first year dealt with sex discrimination and the proportion is increasing dramatically, the Commission has not made clear its intention to enforce the law with the same seriousness on behalf of women as of other victims of discrimination.... The National Organization for Women must therefore begin to speak.

WE BELIEVE that the power of American law, and the protection guaranteed by the U.S. Constitution to the civil rights of all individuals, must be effectively applied and enforced to isolate and remove patterns of sex discrimination, to ensure equality of opportunity in employment and education, and equality of civil and political rights and responsibilities on behalf of women, as well as for Negroes and other deprived groups....

WE DO NOT ACCEPT the token appointment of a few women to high-level positions in government and industry as a substitute for serious continuing effort to recruit and advance women according to their individual abilities. To this end, we urge American government and industry to mobilize the same resources of ingenuity and command with which they have solved problems of far greater difficulty than those now impeding the progress of women.

WE BELIEVE that this nation has a capacity... to innovate new social institutions which will enable women to enjoy the true equality of opportunity and responsibility in society, without conflict with their responsibilities as mothers and homemakers....

WE BELIEVE that it is as essential for every girl to be educated to her full potential of human ability as it is for every boy—with the knowledge that such education is the key to effective participation in today's economy and that, for a girl as for a boy, education can only be serious where there is expectation that it will be used in society....

WE REJECT the current assumptions that a man must carry the sole burden of supporting himself, his wife, and family, and that a woman is automatically entitled to lifelong support by a man upon her marriage, or that marriage, home and family are primarily woman's world and responsibility.... We believe that proper recognition should be given to the economic and social value of homemaking and child-care. To these ends, we will seek to open a reexamination of laws and mores governing marriage and divorce, for we believe that the current state of "half-equity" between the sexes discriminates against both men and women....

WE BELIEVE that women must now exercise their political rights and responsibilities as American citizens....

IN THE INTERESTS OF THE HUMAN DIGNITY OF WOMEN, we will protest, and endeavor to change, the false image of women now prevalent in the mass media, and in the texts, ceremonies, laws, and practices of our major social institutions. Such images perpetuate contempt for women by society and by women for themselves....

NOW WILL HOLD ITSELF INDEPENDENT OF ANY POLITICAL PARTY in order to mobilize the political power of all women and men intent on our goals. We will strive to ensure that no party, candidate, president, senator, governor, congressman, or any public official who betrays or ignores the principle of full equality between the sexes is elected or appointed to office.

WE BELIEVE THAT women will do most to create a new image of women by acting now, and by speaking out in behalf of their own equality, freedom, and human dignity... in an active, self-respecting partnership with men. By so doing, women will develop confidence in their own ability to determine actively, in partnership with men, the conditions of their life, their choices, their future and their society.

"A Walk on the Wild Side of Stonewall" (1969), Robert Amsel

The gay rights/gay pride movement in America often is said to have begun with the Stonewall riots in New York's Greenwich Village in 1969. In the early morning of June 28, municipal police raided the Stonewall Inn, the city's largest gay bar, and began arresting patrons. The gay clientele, frustrated by ongoing harassment, responded by pelting police with debris. The result was several days of protest and violence. To "set the record straight" on the incident, participant and gay rights activist Robert Amsel wrote a detailed account for the September 15, 1987 edition of The Advocate.

The legend of the Stonewall was born as another legend died. On Sunday, June 22, 1969, Judy Garland was found dead from a pill overdose in her London home. An older generation of homosexuals had idolized Judy, as much for her suffering as her talent. Her unsuccessful marriages, her dependence on pills and liquor, and her resilience—the ability to rise when she was down—gave them hope that whatever their oppression, they too could find the strength to carry on. But now Judy was down and would stay down, and the old gay way of endurance seemed to pass with her.

But while the flags hung at half-mast on Fire Island, new flags were about to be raised on the streets of Greenwich Village. Friday afternoon, June 27, Judy was buried. Saturday morning, June 28, the raid on the Stonewall Inn began. "We will endure" became "We shall overcome."

The Stonewall Inn was located at 53 Christopher Street, off Sheridan Square. It was an after-hours "private club" for members only. Anyone who could scrounge up three bucks could become a member for the evening. The place was reputed to be Mafia-owned (as were most of the gay bars in those days) and liquor was sold on the

premises without benefit of a liquor license. This made it a perfect target for the authorities.

There were many gay people at the time who supported the raid on the Stonewall. They wanted gay bars to be gay-owned and operated. They wanted the Mafia out of the business. They failed to appreciate one thing: the reason the Mafia was in the gay bar business to begin with. The Mafia's traditional sphere of influence centered around any illegal activity. Without the Mafia's money, there might not have been any gay bars to legitimize.

This hardly excuses the Stonewall or its condition. The former owners had been burned out and the bar had remained vacant for a year. Its new owners slapped black paint on the already smoke-blackened walls, and with minimum overhauling were ready for business. It was still a firetrap. It was also a dope drop and the suspected source of a minor hepatitis epidemic six months prior to the raid. Its two large rooms—one a dance area, the other a bar—were generally sardine-packed with young men, including drag queens, hippies, street people, and uptown boys slumming. Many customers were under 18, the legal drinking age. Some were runaways, some had nowhere else to go.

For whatever strange reason, the police that summer decided to launch an all-out attack on illegal clubs throughout the city. They did not limit themselves to gay clubs—straight black and Hispanic clubs were also raided. They did, however, seem to specialize in places frequented by members of minorities. Prior to the Stonewall, there had been raids on other gay after-hours clubs, the Sewer and the Snake Pit, both aptly named. The Tele-Star and the Checkerboard had closed down not long before. By the time the cops hit the Stonewall, the customers were angry, frustrated, and, more important, running out of places to go.

Deputy Inspector Seymour Pine led eight plainclothes officers (including two women) into the Stonewall at 3 a.m. It was a hot night and a full moon was shining over Sheridan Square. The employees were arrested for selling liquor without a license. The customers were allowed to leave, one at a time. They waited outside for their friends. Many had been in such raids before, some in the past few weeks.

One straight observer referred to the gathering as “festive,” with those exiting the club striking poses, swishing and camping. Then he noted a sudden mood change when the paddywagon arrived and the bartender, doorman, three drag queens and a struggling lesbian were shoved inside. There were catcalls and cries to topple the paddy wagon. Pine hurriedly told the wagon to take off, drop the prisoners off at the Sixth Precinct and rush back. The crowd threw coins at the police and shouted “Pigs!” Coins progressed to bottles. The crowd was closing in. Pine and his detectives moved quickly back into the Stonewall and locked themselves in....

Police reinforcements had arrived en masse.... [*Village Voice* reporter] Howard Smith went outside and took notes. He returned inside to discover that the police had vented their anger by smashing all the mirrors, juke boxes, phones, toilets, and cigarette machines. No one but the police had been inside, but the courts would later find them innocent of vandalism.

[Saturday night riot]

Stonewall management found it difficult to keep their customers inside Saturday night, since all the action was outside. Shouts of “Gay Power!” and “Liberate Christopher Street!” echoed along Sixth and Seventh avenues, and Greenwich Avenue (where incarcerated lesbians in the House of Detention shouted support from their barred windows). The battle cry raged the length of Christopher Street.

There was a strong feeling of gay community and a strong fighting spirit, an intoxicating sense of release. It was “us against them, and by God, we’re winning.” Crowds were growing, as if from the pavement. There was kissing, hugging, fondling. Tanned bodies merged together like some orgy scene in a Cecil B. DeMille epic. Craig Rodwell, owner of a gay bookstore in the Village, reported that some gay men were barricading the streets and not allowing heterosexual drivers to pass. A car of newlyweds was half lifted before the openmouthed bride and groom were allowed to drive on.

New York's Tactical Police Force (TPF) arrived on the scene. They were helmeted and carried clubs. They had

rescued Pine and his men the morning before, but were unprepared for the guerrilla warfare that awaited them.

These streets were gay territory. Gay people knew every doorway, alley and side street and where they would lead. They knew how to split up the TPF and run them in circles. Men on roofs or in rooms overlooking Christopher Street hurled bottles at the cops. When the cops looked up, no one could be seen.

Two TPF men chased a gay guy down a side street. Gay bystanders started running with their brother. Before long a large group was running. A man at the head of the group suddenly held out his arms and yelled, "Stop!" The group stopped. "There are two pigs and how many of us?" A moment of meaningful silence. The two cops had also stopped, were looking at one another and then at the crowd. The group leader grinned. "Get the bastards!" About face. The cops were now running at full gallop, a lynch mob on their heels. "Catch'em! Fuck'em!"

The crowd dispersed by 3 a.m.

Sunday night was quiet. Monday and Tuesday nights crowds started to gather again, but outbreaks were few.... The next night, Wednesday, July 2, events took a brutal turn. The TPF men used their nightsticks indiscriminately. "At one point," [Dick] Leitsch [of the *Mattachine Newsletter*] wrote, "7th Avenue from Christopher to West 10th looked like a battlefield in Vietnam. Young people, many of them queens, were lying on the sidewalk, bleeding from the head, face, mouth, and even the eyes. Others were nursing bruised and often bleeding arms, legs, backs and necks."...

After Wednesday the riots petered out and the politicizing began. [The] Gay Liberation Front (GLF) was a new group of young male and female homosexuals, which formed in late July... [The] GLF had a leftist ideology and an anarchic structure. They were sort of a gay SDS, and opted for revolution and whatever means were necessary to achieve it. They aligned themselves with and supported all other radical groups of the period.... Many smaller groups sprang up as well. All the groups suffered from infighting, out-fighting and egos in conflict. But age-old barriers were breaking down. Gay people in other parts of the country were starting to emerge from their closets. California's heavily gay cities of San Francisco and Los Angeles had their own gay renaissance. New organizations spread throughout the land. A year later, diverse gay groups and independent gays marched in brotherhood and sisterhood. Annual gay pride days would follow....

A decade after Stonewall, in this carefree, extra-fertile soil, a deadly virus was imported. It quietly, swiftly spread before anyone was the wiser.

AIDS produced a backlash stronger and more lethal than anything we knew in our cozy closets. Homophobes always feared that gayness might rub off. Now they fear that death might rub off along with it.... And that is why the Stonewall should be remembered today. It doesn't matter that it was a firetrap, that the police may have been doing us a favor. It doesn't matter that the gutsier fighters were drags and street kids.... What matters is the communal gay spirit born during that time.... Unless we recapture that spirit and do battle, we'll be ripe for a time when "camp" is something that follows "concentration."

Filmography

The feature films, documentaries, and experimental works contained in this filmography correspond to the broadest possible definition of what this work identifies as countercultural. In addition to providing information on each of the films included in the encyclopedia's main text, the list includes movies relevant to entries that do not explicitly mention motion pictures. Selections include mainstream feature films, television documentaries, experimental short films, art films, international co-productions (most of which treat American themes or were made in part with American funding), agitprop documentaries, historically censored works, and a number of cult classics. Many of the works depict or comment on movements, people, ideas, or historical references relevant to multiple entries in *American Countercultures*.

Across the Universe. Directed by Julie Taymor. 2007. Available on DVD from Sony Home Entertainment, 2008. An

original film musical based on songs by The Beatles, with the 1960s counterculture providing the milieu for a romance between a boy from Liverpool and a girl from the New York suburbs; cameo performance by Joe Cocker, Bono, and others.

Adventures of Priscilla, Queen of the Desert, The. Directed by Stephan Elliot. 1994. Available on DVD from MGM Home Entertainment, 2000. A dramatized road movie about two drag queens and a transsexual encountering an unprepared world.

Alice's Restaurant. Directed by Arthur Penn. 1969. Available on DVD from MGM Home Entertainment, 2001. A cinematic adaptation of Arlo Guthrie's satiric, antiwar song-story of 1967.

All the President's Men. Directed by Alan J. Paluka. 1976. Available on DVD from Warner Home Video, 2006. The dramatization of Carl Bernstein and Bob Woodward's investigative work that led to the breaking of the Watergate scandal and the impeachment and resignation of President Richard M. Nixon.

Almost Famous. Directed by Cameron Crowe. 2000. Available on DVD from Universal Home Entertainment, 2001. This semiautobiographical feature film explores the experiences of a young rock and roll journalist in the early 1970s.

Altered States. Directed by Ken Russell. 1980. Available on DVD from Warner Home Video, 1998. A cult film about a scientist's experiments with primal consciousness.

American Roots Music. Directed by Jim Brown. 2001. Available on DVD from Palm Pictures, 2001. A documentary about emerging musical styles in the twentieth century.

American Splendor. Directed by Shari Springer Berman and Robert Pulcini. 2003. Available on DVD from Warner Home Video, 2004. This stylized biopic of comic book personality Harvey Pekar combines documentary footage and fictional dramatization.

Amistad. Directed by Steven Spielberg. 1997. Available on DVD from Dreamworks/Universal Home Entertainment, 1999. A historical feature film about an 1839 uprising aboard a Spanish slave ship and the aftermath.

An Inconvenient Truth. Directed by Davis Guggenheim. 2006. Available on DVD from Paramount Home Video, 2006. An Academy Award-winning documentary, written by and starring Al Gore, about global warming that urges environmental activism.

Apocalypse Now. Directed by Francis Ford Coppola. 1979. Available on DVD from Paramount Home Video, 2006. This lyrical film about the Vietnam War doubles as a re-imagination of Joseph Conrad's 1902 novel *Heart of Darkness*.

Assault on Gay America: The Life and Death of Billy Jack. Directed by Claudia Pryor Malis. 2000. Available on DVD from PBS Home Video, 2006. A television documentary about the roots of homophobia in the United States.

Atomic Café, The. Directed by Kevin Rafferty. 1982. Available on DVD from Docurama, 2002. An experimental antinuclear documentary comprising footage from 1940s and 1950s U.S. government-issued propaganda films.

Autobiography of Miss Jane Pittman, The. Directed by John Korty. 1974. Available on DVD from Classic Media, 2005. This celebrated television drama explores an African American woman's memories, often of struggle, from the Civil War through the civil rights era.

Basket Case. Directed by Frank Henenlotter. 1982. Available on DVD from Something Weird Video, 2001. A cult horror film about a vengeful set of former conjoined twins.

Beat Generation, The: An American Dream. Directed by Janet Forman. 1987. Available on VHS from Fox Lorber Home Video, 1998. A documentary about the lives and views of major players in the Beat movement, including Allen Ginsberg, Neal Cassady, and Jack Kerouac.

Beat Street. Directed by Stan Lathan. 1984. Available on DVD from MGM Home Entertainment, 2003. A dramatic youth film about the street-level cultural scene—including hip-hop, break dancing, and graffiti—in 1980s New York City.

Before Stonewall: The Making of a Gay and Lesbian Community. Directed by John Scagliotti, et al. 1984. Available on DVD from First Run Features, 2004. A documentary concerned with the practice and reception of homosexuality in America up to 1969.

Beloved. Directed by Jonathan Demme. 1998. Available on DVD from Touchstone Home Video, 1998. This feature film adaptation of the Pulitzer Prize–winning Toni Morrison novel of the same title examines the costs of slavery through the story of an escaped slave and the persistent reexamination of her past.

Berkeley in the Sixties. Directed by Mark Kitchell. 1990. Available on DVD from First Run Features, 2002. A political documentary that examines the campus and community activist movements of the University of California, Berkeley, in the 1960s.

Big Lebowski, The. Directed by Ethan Coen and Joel Coen. 1998. Available on DVD from Universal Home Entertainment, 2005. An offbeat comedy about a mystical loser know as “The Dude.”

Billy Jack. Directed by Tom Laughlin. 1971. Available on DVD from Warner Home Video, 2004. A feature film about a half-Indian Vietnam veteran and loner who protects an endangered school.

Birth of a Nation, The. Directed by D.W. Griffith. 1915. Available on DVD from Kino Video, 2002. This groundbreaking narrative feature film contrasts the effects of the American Civil War on two families and is notorious for its portrayal of the Ku Klux Klan.

Bitch Slap. Directed by Rick Jacobson. 2009. Available on DVD from 20th Century Fox Home Entertainment, 2010. A throwback to the Blaxploitation movies of the 1970s, an action film about three bad girls who make their way to a desert hideaway to extort a fortune in diamonds from an underworld kingpin.

Black Gold. Directed by Marc Francis and Nick Francis. 2006. Available on DVD from California Newsreel, 2006. A documentary about the cultural history and economic legacy of coffee.

Black Mountain Revisited. Directed by Joe Cardarelli. 1990. Available on VHS from Maisonneuve Press and Viridian Video Productions, 1996. A retrospective documentary chronicling the glory years of North Carolina’s famous Black Mountain College.

Black Press, The: Soldiers Without Swords. Directed by Stanley Nelson. 1999. Available on DVD from Half Nelson Productions/California Newsreel, 1999. A documentary history of black newspapers.

Blackboard Jungle. Directed by Richard Brooks. 1955. Available on DVD from Warner Home Video, 2005. A dramatic literary adaptation about a dedicated teacher working at a troubled urban school.

Blowup. Directed by Michelangelo Antonioni. 1966. Available on DVD from Warner Home Video, 2004. Set amid the verve of swinging London, this trendsetting art film is about a hip photographer’s unraveling of what seems to be a murder mystery.

Blue Collar and Buddha: A Documentary. Directed by Taggart Siegel. 1987. Available on VHS from NAATA Distribution, 1996. A documentary concerning Laotian immigrants and the cultural clashes that occur with their resettlement in the American Midwest.

Bluegrass Journey. Directed by Ruth Oxenberg. 2003. Available on DVD from Blue Stores Films, 2004. A documentary about the contemporary bluegrass scene told through interviews and performances.

Bob & Carol & Ted & Alice. Directed by Paul Mazursky. 1969. Available on DVD from Columbia Tristar Home

Video, 2004. An offbeat 1960s feature film about repression and liberation through sexual coupling.

Bonnie and Clyde. Directed by Arthur Penn. 1967. Available on DVD from Warner Home Video, 1999. Youth, exuberance, and graphic violence color this romanticized retelling of the story of outlaws Bonnie Parker and Clyde Barrow in this celebrated revival of the gangster genre.

Boogie Nights. Directed by Paul Thomas Anderson. 1997. Available on DVD from New Line Home Video, 1998. Critically acclaimed drama about the pornography industry and the rise to stardom of a nightclub dishwasher.

Borat: Cultural Learnings of America for Make Benefit Glorious Nation of Kazakhstan. Directed by Larry Charles. 2006. Available on DVD from 20th Century Fox Home Entertainment, 2007. A “mockumentary” starring British comic Sasha Baron Cohen as a Kazakh journalist traveling across America.

Bound for Glory. Directed by Hal Ashby. 1976. Available on DVD from MGM Home Entertainment, 2000. This film about the life of folksinger Woody Guthrie was adapted from his autobiography.

Bowling for Columbine. Directed by Michael Moore. 2002. Available on DVD from MGM Home Entertainment, 2003. Documentary on America’s gun culture in the aftermath of the 1999 Columbine (Colorado) High School massacre.

Boys Don’t Cry. Directed by Kimberly Peirce. 1999. Available on DVD from 20th Century Fox Home Entertainment, 2000. A dramatized feature film about a transgendered youth’s life and struggles with sexual identity.

Brokeback Mountain. Directed by Ang Lee. 2005. Available on DVD from Universal Home Entertainment, 2006. Groundbreaking drama about the romantic relationship between two cowboys.

Bukowski: Born into This. Directed by John Dullaghan. 2003. Available on DVD from Magnolia Home Entertainment, 2006. A documentary biography of controversial Los Angeles street poet Charles Bukowski.

Burning Man Festival. Directed by Joe Winston. 1997. Available on DVD from Ow Myeye Productions, 2001. A documentary about Nevada’s Burning Man Festival, a celebration of collective consciousness, artistic and musical expression, and unfettered creativity.

Burning Man: Beyond Black Rock. Directed by Damon Brown. Available on DVD from Lightyear. 2006. A behind-the-scenes documentary about the Nevada desert festival, its organization, philosophy, and social experience.

Cabinet of Dr. Caligari, The. Directed by Robert Weine. 1920. Special Collector’s Edition available on DVD from Image Entertainment, 1997. A classic silent film in the horror genre.

Capitalism: A Love Story. Directed by Michael Moore. 2009. Available on DVD from Starz/Anchor Bay, 2010. Documentary on the U.S. financial system and economic order during the credit crisis and recession of 2007–2009.

Carter Family, The: Will the Circle Be Unbroken?. Directed by Kathy Conkwright. 2005. Available on DVD from PBS Home Video, 2005. A television documentary about the life and times of country music’s Carter family.

Cat’s Cradle. In *By Brakhage: An Anthology*. Directed by Stan Brakhage. 1959. Available on DVD from Criterion Collection, 2003. An avant-garde experimental short featuring a couple, a cat, and the inside of a house.

Cecil B. DeMented. Directed by John Waters. 2000. Available on DVD from Artisan Entertainment, 2001. A cult film about an insane independent motion picture director and his renegade group of teenage filmmakers who kidnap an A-list Hollywood actress and force her to star in their underground film.

Celebration at Big Sur. Directed by Johanna Demetrakas. 1971. This documentary about the 1969 Big Sur Folk Festival in California features such performing artists as Joan Baez, Joni Mitchell, and Graham Nash.

Chappaqua. Directed by Conrad Rooks. 1966. Available on DVD from Fox Lorber Home Video, 1997. A psychedelic 1960s feature film about expanded consciousness through the use of alcohol and drugs and metaphysical experimentation.

Che. Directed by Steven Soderbergh. 2010. Available on DVD from Criterion Collection, 2008. Two-part, 268-minute biopic about the Latin American revolutionary, starring Benicio del Toro.

Cheech & Chong's Still Smokin. Directed by Tommy Chong. 1983. Available on DVD from Paramount Home Video, 2000. Following the success of *Up in Smoke*, this film includes more marijuana-fueled pratfalls from the comedy duo Cheech & Chong.

Cheech & Chong's Up in Smoke. Directed by Lou Adler and Tommy Chong. 1978. Available on DVD from Paramount Home Video, 2000. The comedy duo Cheech Marin and Tommy Chong embark on a series of drug-induced hijinks in this feature film.

Chelsea Girls. Directed by Paul Morrissey and Andy Warhol. 1966. Available on DVD from Raro Video, 2003. A banal, experimental epic (over four hours in length) that serves as a time capsule for participants in Warhol's studio, The Factory, and examines their lives at the famous Hotel Chelsea.

Chicago 10. Directed by Brett Morgen. 2007. Available on DVD from Participant Productions, 2007. A hybrid film that uses animation, dramatized voice acting, archival footage, and music to explore the antiwar protests at the 1968 Democratic National Convention, the arrest and trial of several leaders of the protests, including Abbie Hoffman, Jerry Rubin, David Dellinger, and Tom Hayden, and the legacy of those events.

Chicano! History of the Mexican-American Civil Rights Movement. Various directors. 1996. Available on VHS from NLCC Educational Media, 1996. This polyvocal documentary about the struggle for Mexican American rights during the 1960s and 1970s focuses on the legacy of César Chávez and the need for labor solidarity.

City Kids Meet Ashcan Art. Directed by Robert W. Snyder. 1998. Available on VHS from Carousel Film & Video, 1998. A documentary about students from the Bronx in New York City viewing and reacting to artwork created by the Ashcan school of American painters.

Clerks. Directed by Kevin Smith. 1994. Available on DVD from Miramax Home Entertainment, 2004. A quirky independent comedy about a day in the life of retail workers in suburban New Jersey.

Confessions of a Nazi Spy. Directed by Anatole Litvak. 1939. A somewhat propagandistic dramatic feature about the discovery of a Nazi spy ring in the United States.

Conspiracy Theory. Directed by Richard Donner. 1997. Available on DVD from Warner Home Video, 1998. A thriller about an offbeat New York City taxi driver/conspiracy theorist who finds himself caught up in a real-life conspiracy.

Convention City. Directed by Archie Mayo. 1933. Released before the Hays Code on moral standards was in effect, this feature was noted for its salacious subject matter.

Cradle Will Rock. Directed by Tim Robbins. 1999. Available on DVD from Touchstone Home Video, 2000. A broad dramatization of changing mores, cultural production, and the pervasiveness of New Deal programs in 1930s New York City.

Cruising. Directed by William Friedkin. 1980. Available on DVD from Warner Home Video, 2007. A controversial police drama about a murder investigation in the sadomasochist haunts of New York's 1980s gay subculture.

Crumb. Directed by Terry Zwigoff. 1994. Available on DVD from Sony Home Entertainment, 2006. A documentary portrayal of the life, loves, and obsessions of iconoclastic cartoonist R. Crumb.

Cry-Baby. Directed by John Waters. 1990. Available on DVD from Universal Home Entertainment, 2005. This cult

classic about a group of juvenile delinquents parodies teen musicals and 1950s Elvis Presley movies.

Desistfilm. In *By Brakhage: An Anthology*. Directed by Stan Brakhage. 1954. Available on DVD from Criterion Collection, 2003. A short, surrealistic film in the horror genre, focusing on a group of young adults isolated in a house in the woods.

Dirty Pictures. Directed by Frank Pierson. 2000. Available on DVD from MGM Home Entertainment, 2000. A dramatization of the 1990 trial of controversial photographer Robert Mapplethorpe.

Dirty Shame, A. In *Very Crudely Yours: John Waters Collection*. Directed by John Waters. 2004. Available on DVD from New Line Home Entertainment, 2005. A repressed middle-aged Baltimore woman turns into a sex addict and becomes part of the city's underground subculture.

Do the Right Thing. Directed by Spike Lee. 1989. Available on DVD from Criterion Collection, 2001. An explosive drama about a day of mounting racial tension in Brooklyn, New York.

Donnie Darko. Directed by Richard Kelly. 2001. Available on DVD from 20th Century Fox Home Entertainment, 2005. A modern sci-fi cult classic about a bipolar teen, his visions of Doomsday, time travel, and God.

Don't Look Back. Directed by D.A. Pennebaker. 1967. Available on DVD from New Video Group, 2007. A groundbreaking rock documentary about Bob Dylan's 1965 tour of England.

Dr. Strangelove or: How I Learned to Stop Worrying and Love the Bomb. Directed by Stanley Kubrick. 1964. Available on DVD from Sony Home Entertainment, 2001. A suspense comedy in which an insane general initiates a process leading to nuclear holocaust that a room full of politicians and generals frantically try to stop.

Drugstore Cowboy. Directed by Gus Van Sant. 1989. Available on DVD from Lions Gate Home Entertainment, 1999. A gritty road movie about a group of drug addicts and their descent into crime.

Easy Rider. Directed by Dennis Hopper. 1969. Available on DVD from Columbia Tristar Home Video, 2004. A road movie of the 1960s about two free spirits on a cross-country quest for an "authentic" American experience, famously doused in sex, drugs, and rock and roll.

Eat a Bowl of Tea. Directed by Wayne Wong. 1989. Available on DVD from Columbia Tristar Home Video, 2003. A dramatic saga of Chinese American assimilation in the 1940s.

Edward Scissorhands. Directed by Tim Burton. 1990. Available on DVD from 20th Century Fox Home Entertainment, 2000. A modern fairy tale that tells the story of Edward, a man created by an inventor who dies before finishing Edward and leaves him with scissors in place of hands.

El Mariachi. Directed by Robert Rodriguez. 1992. Available on DVD from Sony Home Entertainment, 2003. A seminal low-budget action film that is part of the celebrated independent film movement of the 1990s.

El Topo. In *The Films of Alejandro Jodorowsky*. Directed by Alejandro Jodorowsky. 1970. Available on DVD from ABKCO Films/Anchor Bay Entertainment, 2007. A quintessential cult film—part European art film and part revisionist Western—about a transcendental hero who undertakes a mythopoetic vision quest.

Elephant Man, The. Directed by David Lynch. 1980. Available on DVD from Paramount Home Entertainment, 2001. An American auteur's take on the story of a physically deformed man rescued from a life as a freak show attraction.

Eraserhead. Directed by David Lynch. 1977. Available on DVD from Absurda/Subversive Cinema, 2005. A stylistically obscure midnight movie about an odd man's domestic hell.

Eternal Sunshine of the Spotless Mind. Directed by Michel Gondry. 2004. Available on DVD from Universal Home Entertainment, 2004. A wacky drama about a couple that undergoes a procedure to erase each other from their

memories when their relationship turns sour.

Even Cowgirls Get the Blues. Directed by Gus Van Sant. 1993. Available on DVD from New Line Home Entertainment, 2004. The film adaptation of a Tom Robbins novel about a hitchhiker with a comically enlarged thumb who ends up participating in a feminist rebellion.

Ever Since the World Ended. Directed by Calum Grant and Joshua Atesh Lee. 2001. Available on DVD from BFS Entertainment and Multimedia, 2007. A pseudo-documentary about establishing a commune in postapocalyptic San Francisco.

Exorcist, The. Directed by William Friedkin. 1973. Available on DVD from Warner Home Video, 2000. This feature horror film, based on William Peter Blatty's 1971 novel of the same name, fictionalizes the allegedly true story of a young girl who is possessed by the devil.

Eyes on the Prize. Directed by Henry Hampton. 1986, 1990. Available on DVD from PBS Home Video, 2006. A multipart documentary that chronicles the civil rights movement.

Faces. In *John Cassavetes: Five Films*. Directed by John Cassavetes. 1968. Available on DVD from Criterion Collection, 2004. This seminal independent feature film explores the passion of a marriage gone awry.

Fahrenheit 9/11. Directed by Michael Moore. 2004. Available on DVD from Columbia Tristar Home Video, 2004. This polemical documentary about President George W. Bush's conflicted allegiances and problematic foreign ties is set in the immediate post-9/11 period.

Far From Heaven. Directed by Todd Haynes. 2002. Available on DVD from Universal Home Entertainment, 2003. A dramatic feature film about a racially mixed relationship in the 1950s.

Fear and Loathing in Las Vegas. Directed by Terry Gilliam. 1998. Available on DVD from Universal Home Video, 1998. Based on the counterculture classic by Hunter S. Thompson, an oddball journalist and his psychopathic lawyer travel to Las Vegas for a series of psychedelic escapades.

Female Trouble. In *Very Crudely Yours: John Waters Collection*. Directed by John Waters. 1974. Available on DVD from New Line Home Entertainment, 2005. A cult classic about a spoiled schoolgirl who runs away from home, gets pregnant, and ends up as a fashion model for a pair of beauticians who like to photograph women committing crimes.

Festival Express. Directed by Bob Smeaton. 1970, 2004. Available on DVD from New Line Home Entertainment, 2004. This documentary about a concert tour of Canada by San Francisco–scene bands traveling by train features Janis Joplin, the Grateful Dead, The Band, and others.

54. Directed by Mark Christopher. 1998. Available on DVD from Miramax Home Entertainment, 1999. A fictional account of New York's famous Studio 54 discotheque.

Fight Club. Directed by David Fincher. 1999. Available on DVD from 20th Century Fox Home Entertainment, 2000. A cult literary adaptation about a man's dissatisfaction with his mainstream lifestyle and foray into a semisecret underground movement.

Fight in the Fields, The: Cesar Chavez and the Farmworkers' Struggle. Directed by Rick Tejada-Flores and Ray Telles. 1996. Available on DVD from Cinema Guild, 2003. A documentary chronicling the legacy of César Chávez and the fight for Chicano self-determination.

Film About a Woman Who... ? Directed by Yvonne Rainer. 1974. Available on VHS from Zeitgeist Films, 1990. An experimental film concerned with attempts to construct a feminist form of subjectivity.

Filth and the Fury, The. Directed by Julien Temple. 2000. Available on DVD from New Line Films/Sunset Home Visual Entertainment, 2005. Documentary about the Sex Pistols from the point of view of band members.

Fireworks. In *The Films of Kenneth Anger, Volume 1*. Directed by Kenneth Anger. 1947. Available on DVD from Fantoma Films, 2007. A classic experimental film infamous for its exploration of the intersections between homosexuality and sadomasochism.

Flaming Creatures. Directed by Jack Smith. 1964. Available on VHS from Facets Video, 1997. This mid-length experimental film is known for its lyrical and polymorphous screen sexuality.

Forrest Gump. Directed by Robert Zemeckis. 1994. Available on DVD from Paramount Home Video, 2001. A well-meaning man, limited in IQ, finds himself unwittingly part of counterculture events and meets key figures from the 1950s through the 1970s.

Freaks. Directed by Tod Browning. 1932. Available on DVD from Warner Home Video, 2004. A shocking cult movie about real circus sideshow performers who take revenge on a "normal" couple after suffering sustained degradation.

Friendly Persuasion. Directed by William Wyler. 1956. Available on DVD from Warner Home Video, 2000. Based on a 1945 novel of the same title by Jessamyn West, this acclaimed film stars Gary Cooper as the patriarch of a family of pacifist Quakers living in Indiana during the American Civil War.

Fritz the Cat. Directed by Ralph Bakshi. 1972. Available on DVD from MGM Home Entertainment, 2001. An animated feature film about an amorously bold and anthropomorphized cat in early 1970s New York.

Gang War: Bangin' in Little Rock. Directed by Marc Levin. 1971. Available on DVD from HBO Home Video, 2006. A documentary about the encroachment of gang activity in Little Rock, Arkansas.

Getting Straight. Directed by Richard Rush. 1970. Drama of a frustrated, liberal teacher in the era of campus violence.

Gimme Shelter. Directed by Albert Maysles and David Maysles. 1970. Available on DVD from Criterion Collection, 2003. A rock music documentary about the 1969 Rolling Stones tour, including the tragic events that took place at the Altamont Speedway concert in Northern California.

Glorifying the American Girl. Directed by John Harkrider and Millard Webb. 1929. Available on VHS from Alpha Video Distributors, 1997. A narrative feature film about a department store salesgirl's rise to fame.

Glory. Directed by Edward Zwick. 1989. Available on DVD from Sony Home Entertainment, 2006. A dramatized account of the 54th Massachusetts Infantry, the first all-black regiment in the American Civil War.

Godfather, The. Directed by Francis Ford Coppola. 1972. Available on DVD from Paramount Home Video, 2001. The Academy Award-winning drama of the Corleones, a fictional New York Mafia family, based on Mario Puzo's novel of the same name.

Graduate, The. Directed by Mike Nichols. 1967. Available on DVD from MGM Home Entertainment, 2007. This feature film stars Dustin Hoffman in the critically acclaimed role of Benjamin Braddock, a confused college graduate who has an affair with a much older woman.

Grapes of Wrath, The. Directed by John Ford. 1940. Available on DVD from 20th Century Fox Home Entertainment, 2004. An acclaimed film adaptation of John Steinbeck's novel of the same name about Dust Bowl migrants during the Great Depression of the 1930s.

Grateful Dead Movie, The. Directed by Jerry Garcia and Leon Gast. 1977. Available on DVD from Monterey Video, 2004. The laboriously edited concert documentary of the Grateful Dead's first round of farewell concerts in October 1974.

Great Day in Harlem, A. Directed by Jean Bach. 1994. Available on DVD from Image Home Entertainment, 2005.

A documentary that examines the personalities and social circumstances responsible for the most famous jazz photograph in history: a group photograph of the top jazz musicians in New York City in 1958, which was taken for a piece in *Esquire* magazine.

Grindhouse. Directed by Robert Rodriguez and Quentin Tarantino. 2007. Available on DVD from Weinstein Company, 2007. A two-part exploitation feature film, consisting of *Planet Terror* (Rodriguez) and *Death Proof* (Tarantino).

Groove. Directed by Greg Harrison. 2000. Available on DVD from Columbia Tristar Home Video, 2000. A dramatic feature about one crazy night in the throes of San Francisco's burgeoning rave scene.

Hackers. Directed by Iain Softley. 1995. Available on DVD from MGM Home Entertainment, 1998. A technologically overloaded action film about computer hackers who find themselves embroiled in a sinister plot involving big business and the Federal Bureau of Investigation.

Hag in a Black Leather Jacket. Directed by John Waters. 1964. A dark farce about an African American man who courts a Caucasian woman by carrying her around in a trash can and later marries her in a ceremony conducted by a Ku Klux Klansman.

Hairspray. In *Very Crudely Yours: John Waters Collection*. Directed by John Waters. 1989. Available on DVD from New Line Home Entertainment, 2005. A campy film that addresses racial segregation with the director's signature humor.

Happiness. Directed by Todd Solondz. 1998. Available on DVD from Lions Gate Home Entertainment, 2003. An edgy independent feature film about the dissatisfactions and sexual transgressions of three middle-class New Jersey sisters.

Harder They Come, The. Directed by Perry Henzell. 1972. Available on DVD from Xenon, 2006. This midnight movie, following the precipitous rise of an upstart con man in Jamaica, features music by Jimmy Cliff.

Harlan County, U.S.A. Directed by Barbara Kopple. 1976. Available on DVD from Criterion Collection, 2006. A documentary about a group of miners who are pitted against an exploitive corporation.

Harold and Maude. Directed by Hal Ashby. 1971. Available on DVD from PBS Home Video, 2000. Cult classic about a death-obsessed teenager and his relationship with a free-spirited septuagenarian.

Hearts and Minds. Directed by Peter Davis. 1974. Available on DVD from Criterion Collection, 2002. A controversial documentary about the failures and immediate legacy of the war in Vietnam.

Heavy Traffic. Directed by Ralph Bakshi. 1973. Available on DVD from MGM Home Entertainment, 2000. An experimental animated feature chronicling a randy teenager's hopes of leaving home and living on his own terms.

Henry & June. Directed by Philip Kaufman. 1990. Available on DVD from Universal Home Video, 1999. A dramatized re-creation of the relationship between writers Henry Miller and Anaïs Nin.

Hester Street. Directed by Joan Micklin Silver. 1975. Available on DVD from Home Vision Entertainment, 2004. The tale of a young Jewish woman coming to terms with 1890s American culture.

High Noon. Directed by Fred Zinnemann. 1952. Available on DVD from Republic Pictures, 1998. An iconic Western starring Gary Cooper as a frontier lawman and the newlywed husband of a pacifist Quaker (Grace Kelly) who finds himself standing alone against a revenge-seeking enemy.

Hitchhiker's Guide to the Galaxy. Directed by Garth Jennings. 2005. Available on DVD from Buena Vista Home Entertainment, 2005. A feature film based on the sci-fi comedy book series by Douglas Adams, which follows the adventures of hapless Englishman Arthur Dent, who escapes the demolition of Earth by a bureaucratic alien race called the Vogons.

Hollywood Aliens and Monsters. Directed by Kevin Burns. 1997. Available on VHS from A&E Home Video, 1997. A history of science fiction moviemaking, with an emphasis on the relationship between political and social paranoia and the subject matter of the films.

Holy Mountain, The. In *The Films of Alejandro Jodorowsky*. Directed by Alejandro Jodorowsky. 1973. Available on DVD from ABKCO Films/Anchor Bay Entertainment, 2007. A cult film about the trials and destiny of a messianic figure (portrayed by the director).

Malcolm X. Directed by Spike Lee. 1992. Available on DVD from Warner Home Video, 2000. This epic biopic dramatizes the life of Malcolm X, a leader in the Nation of Islam whose ideas helped inspire the Black Power movement.

Manhatta. In *Avant-Garde: Experimental Cinema of the 1920s and '30s*. Directed by Charles Sheeler and Paul Strand. 1921. Available on DVD from Kino Video, 2005. An early avant-garde short film that explores the aesthetic potential for representing the New York cityscape.

Manufacturing Consent: Noam Chomsky and the Media. Directed by Mark Achbar and Peter Wintonick. 1992. Available on DVD from Zeitgeist Video, 2002. A biographical documentary about Noam Chomsky's work in

assessing the hidden ideological manipulations employed by Western democracies.

*M*A*S*H*. Directed by Robert Altman. 1970. Available on DVD from 20th Century Fox Home Entertainment, 2004. A dark comedy about staff members of a Korean War field hospital who use humor and hijinks to keep their sanity amid the horror of war.

Matewan. Directed by John Sayles. 1987. Available on DVD from Artisan Home Entertainment, 2001. This historical feature film dramatizes the hostilities toward organized labor in West Virginia's coal-mining country in 1920.

Matrix, The. Directed by Andy Wachowski and Larry Wachowski. 1999. Available on DVD from Warner Home Video, 2001. A cyberpunk science fiction film about the enslavement of humanity by its own computer creations that is, by turns, technophobic and technophilic.

Mazes and Monsters. Directed by Steven Hilliard Stern. 1982. Available on DVD from Trinity/905 Entertainment, 2005. This dramatic youth film about the pleasures and pains of role-playing games was made during the height of concern over the game *Dungeons & Dragons*.

Medium Cool. Directed by Haskell Wexler. 1969. Available on DVD from Paramount Home Video, 2001. A highly political dramatic feature film about a cameraman's engagement with the events of the 1968 Democratic National Convention.

Men with Guns. Directed by John Sayles. 1997. Available on DVD from Columbia Tristar Home Entertainment, 2003. This dramatic feature film underscores the difficulties of effecting change in poor, agricultural communities.

Meshes of the Afternoon. In *Maya Deren: Experimental Films*. Directed by Maya Deren. 1943. Available on DVD from Mystic Fire Video, 2002. A revelatory avant-garde short film by one of America's leading female filmmakers.

Midnight Cowboy. Directed by John Schlesinger. 1969. Available on DVD from Sony Home Entertainment, 2006. A dramatic feature film about a would-be male prostitute thrust into an unlikely friendship with a streetwise hustler.

Mighty Wind, A. Directed by Christopher Guest. 2003. Available on DVD from Warner Home Video, 2003. A largely improvised pseudo-documentary about the staging of a folk music tribute concert.

Miles of Smiles, Years of Struggle. Directed by Paul Wagner and Jack Santino. 1983. Available on VHS from California Newsreel, 1983. A documentary about the unionization of African American porters and their impact on the civil rights movement.

Milk. Directed by Gus Van Sant. 2008. Available on DVD from Universal Home Entertainment, 2009. Sean Penn's acclaimed portrayal of gay rights activist and politician Harvey Milk, who served as a city supervisor of San Francisco and was assassinated in 1978.

Mod Squad, The. Directed by Scott Silver. 1999. Available on DVD from MGM Home Entertainment, 1999. This feature-film remake of the popular 1960s television show follows three young undercover agents infiltrating the Los Angeles underworld.

Mondo Trasho. Directed by John Waters. 1969. A day in the lives of a hit-and-run driver and her victim, featuring an array of bizarre events.

Monterey Pop. Directed by D.A. Pennebaker. 1967. Available on DVD from Criterion Collection, 2002. A documentary film about hijinks—onstage and off—at the famous 1968 rock, pop, blues, and jazz festival.

Mormons, The. Directed by Helen Whitney. 2007. Available on DVD from PBS Home Video, 2007. A television documentary about the history and contemporary practice of Mormonism.

Mothlight. In *By Brakhage: An Anthology*. Directed by Stan Brakhage. 1963. Available on DVD from Criterion

Collection, 2003. An experimental short film featuring so-called found bits of insects, leaves, and other detritus sandwiched between two strips of perforated tape.

Motorcycle Diaries, The. Directed by Walter Salles. 2004. Available on DVD from Universal Home Entertainment, 2005. The dramatization of a motorcycle road trip that Cuban revolutionary Che Guevara took with a friend in his youth, which revealed his life's calling.

MTV Uncensored. Directed by David P. Levin. 1999. This documentary features stories about MTV, as told by the people who were a part of the cable television network, including producers, video jockeys, and stars such as Cindy Crawford, Janeane Garafalo, and Jon Stewart.

National Lampoon's Animal House. Directed by John Landis. 1978. Available on DVD from Universal Home Entertainment, 2003. A feature-film comedy known for its riffs on the tropes of American fraternity and sorority life.

Neal Cassady. Directed by Noah Buschel. 2007. Biopic about the Beat Generation hero and friend of Jack Kerouac, Ken Kesey, and the Merry Pranksters.

Night of the Living Dead. Directed by George A. Romero. 1968. Available on DVD from Elite Entertainment, 2002. This cult horror feature about the mysterious animation of dead bodies has been praised for its allegorization of racism, the Vietnam War, and the political climate of late-1960s America.

Not a Love Story: A Motion Picture About Pornography. Directed by Bonnie Sherr Klein. 1981. Available on VHS from National Film Board of Canada Video, 1991. A strongly feminist documentary about the harmful effects of pornography on American cultural discourse.

On the Waterfront. Directed by Elia Kazan. 1954. Available on DVD from Columbia Tristar Home Video, 2001. A feature-film drama about labor and organized crime in postwar urban America.

One Flew Over the Cuckoo's Nest. Directed by Milos Forman. 1975. Available on DVD from Warner Home Video, 2002. The acclaimed film adaptation of Ken Kesey's cult novel, grounded in a man's challenges to the oppressive governance of a mental institution.

Oneida Family of John Humphrey Noyes, The. Directed by Milton H. Jannone. 1975. Available on VHS from M.H. Jannone Video, 1991. A documentary about the history of the Oneida utopian community in upstate New York and its founder.

Outlaw, The. Directed by Howard Hughes and Howard Hawks. 1943. Available on VHS from Front Row Entertainment, 1993. A scandalous Western noted for its circumvention of Hays Code moral strictures.

Panic in Needle Park, The. Directed by Jerry Schatzberg. 1971. Available on DVD from on 20th Century Fox Home Entertainment, 2007. An unglamorized portrayal of life among a group of heroin addicts who frequent New York City's "Needle Park."

Parallax View, The. Directed by Alan J. Pakula. 1974. Available on DVD from Paramount Home Entertainment, 1999. A dramatic thriller centered around the witnessing of the assassination of a political candidate.

Parting Glances. Directed by Bill Sherwood. 1986. Available on DVD from First Run Features, 1999. This dramatic feature film tells a gay love story set amid the ravages of the AIDS virus.

Party Monster. Directed by Fenton Baily and Randy Barbato. 2003. Available on DVD from 20th Century Fox Home Entertainment, 2004. A dramatic feature film about the New York club scene of the 1980s and 1990s.

Pecker. In *Very Crudely Yours: John Waters Collection*. Directed by John Waters. 1998. Available on DVD from New Line Home Entertainment, 2005. A comedy about a Baltimore sandwich shop employee who becomes an overnight sensation when his family photographs become the latest rage in the art world.

Philadelphia. Directed by John Demme. 1993. Available on DVD from Columbia Tristar Home Video, 1997. A man with AIDS, fired by a conservative law firm, hires a homophobic small-time lawyer for a wrongful dismissal suit.

Pink Flamingos. Directed by John Waters. 1972. Available on DVD from New Line Home Entertainment, 2004. A transvestite vies for the title of "filthiest person alive" in this cult classic glorified for its transcendence of so-called good taste.

Planet of the Apes. Directed by Franklin J. Schaffner. 1968. Available on DVD from 20th Century Fox Home Entertainment, 2006. Astronauts crash land on a planet in the distant future, where intelligent talking apes are the dominant species and humans are the oppressed and enslaved.

Plow that Broke the Plains, The. Directed by Pare Lorentz. 1936. Available on DVD from Naxos, 2007. A New Deal-era documentary about the plight of America's agricultural West due to abuse of the land.

Poison. Directed by Todd Haynes. 1991. Available on DVD from Fox Lorber Home Video, 1999. This obscure, poetic feature film tells three intercut stories of murder, transgressive sexuality, and alienation.

Polyester. In *Very Crudely Yours: John Waters Collection*. Directed by John Waters. 1981. Available on DVD from New Line Home Entertainment, 2005. A cult classic about a suburban housewife's breakdown when her husband admits he's been unfaithful.

President's Analyst, The. Directed by Theodore J. Flicker. 1967. Available on DVD from Paramount Home Entertainment, 2004. A cold war comedy about attempts to wrestle national secrets out of the U.S. president's former psychotherapist.

Psych-Out. Directed by Richard Rush. 1968. Available on DVD from MGM Home Entertainment, 2003. A hippie exploitation feature chronicling a runaway girl's introduction to the communal philosophies of the free love generation as she searches for her long-lost brother.

Pull My Daisy. Directed by Robert Frank. 1959. Available on VHS from Kultur Video, 1998. A short film created by and starring members of the Beat movement, including Allen Ginsberg, Larry Rivers, and Jack Kerouac.

Pulp Fiction. Directed by Quentin Tarantino. 1994. Available on DVD from Miramax Home Entertainment, 2002. A seminal film of the 1990s independent movement showcasing several interwoven tales of life, death, drugs, and sex.

Pump Up the Volume. Directed by Allan Moyle. 1990. Available on DVD from New Line Home Video, 1999. A dramatic feature about a teenager's liberation through his persona on pirate radio.

Pumping Iron. Directed by George Butler and Robert Fiore. 1977. Available on DVD from Warner Home Video, 2003. A documentary about bodybuilding, which is famous for helping to launch Arnold Schwarzenegger's celebrity career.

Punishment Park. Directed by Peter Watkins. 1971. Available on DVD from New Yorker Video, 2005. An incendiary pseudo-documentary about the U.S. government's interrogation and abuse of those it identifies as politically undesirable.

Putney Swope. Directed by Robert Downey, Sr. 1969. Available on DVD from Image Entertainment, 2006. A satirical feature film in which a group of black militants takes over a Madison Avenue advertising firm and stages an ideological assault on white America.

Quadrophenia. Directed by Franc Roddam. 1979. Available on DVD from Rhino/WEA, 2001. The story of a working-class London mod, set against the soundtrack of the Who's 1973 concept album *Quadrophenia*.

Queen of Sheba Meets the Atom Man, The. Directed by Ron Rice. 1963. Available on VHS from Arthouse, 1996. This experimental feature film criticizes mainstream representational modes and subjects.

Rainbow Bridge. Directed by Chuck Wein. 1972. Available on DVD from Rhino Home Video, 2000. This fictional feature film—built around documentary concert footage—tells a story about a center for alternative consciousness that extends its message by hosting a Jimi Hendrix concert near a volcano.

Rebel Without a Cause. Directed by Nicolas Ray. 1955. Available on DVD from Warner Home Video, 2005. This dramatic James Dean vehicle details a rebellious teenager's desire to fit in with his peers, to the dismay of his family.

Rebels With a Cause. Directed by Helen Garvy. 2000. Available on DVD from Zeitgeist Films, 2003. A documentary history of Students for a Democratic Society.

Reds. Directed by Warren Beatty. 1981. Available on DVD from Paramount Home Video, 2006. A dramatic love story that portrays the relationship between radical American journalist John Reed and activist-feminist Louise Bryant, set in the epic milieu of the 1917 Bolshevik Revolution.

Reefer Madness. Directed by Louis J. Gasnier. 1936. Available on DVD from 20th Century Fox Home Entertainment, 2004. Ostensibly about the dangers of marijuana use, this midnight movie is beloved by audiences for its camp, kitsch, and ineptly didactic style.

Rendition. Directed by Gavin Hood. 2007. Available on DVD from New Line Home Video, 2008. Based on a true story of “extraordinary rendition,” the CIA practice of secretly transferring a suspected terrorist from one country to another for the purpose of extrajudicial interrogation and torture—in this case based on a mistaken identity.

Repo Man. Directed by Alex Cox. 1984. Available on DVD from Universal Home Entertainment, 2006. A thoroughly punk science fiction feature about a man who repossesses cars and his brushes with a conspiracy by an extraterrestrial government.

River, The. Directed by Pare Lorentz. 1938. Available on DVD from Naxos, 2007. A New Deal–era documentary about the role of the Mississippi River in American life.

Rock'n' Roll High School. Directed by Allan Arkush. 1979. Available on DVD from Buena Vista Home Entertainment, 2005. A comedic tale of youthful rebelliousness, starring the iconoclastic rock group the Ramones.

Rocky Horror Picture Show, The. Directed by Jim Sharman. 1975. Available on DVD from 20th Century Fox Home Entertainment, 2002. The quintessential cult musical, noted for the persistence of its theatrical screenings and for its audience-participation element.

Roger and Me. Directed by Michael Moore. 1989. Available on DVD from Warner Home Video, 2003. Documentary on the local economic effects of the decision by General Motors Chairman Roger Smith to close several automotive plants in Flint, Michigan.

'Round Midnight. Directed by Bertrand Tavernier. 1986. Available on DVD from Warner Home Video, 2001. A feature film about a fictional American jazz musician's life and music in 1950s Paris.

Sacco and Vanzetti. Directed by Peter Miller. 2005. Available on DVD from First Run Features/Icarus Films, 2006. A documentary film about two of America's most well-known anarchists, Nicola Sacco and Bartolomeo Vanzetti.

Saint Misbehavin': The Wavy Gravy Movie. Directed by Michelle Esrick. 2008. Documentary about the hippie cult personality and unofficial “host” of the Woodstock Music Festival.

Saturday Night Fever. Directed by John Badham. 1977. Available on DVD from Paramount Home Entertainment, 2002. This dramatic feature film is largely responsible for bringing disco music and culture into the mainstream.

Scorpio Rising. In *Kenneth Anger, Volume II*. Directed by Kenneth Anger. 1964. Available on VHS from BFI Video, 2000. A keystone work of the American avante-garde, largely responsible for the profusion of the combination of

“high” (formal playfulness, stylistic excess) and “low” (popular music, comic books, the icon of James Dean) culture in film.

Scratch. Directed by Doug Pray. 2000. Available on DVD from Palm Pictures, 2002. This concert documentary, featuring world-renowned disk jockeys in competition, doubles as a history of the turntablist in popular music.

Serial Mom. Directed by John Waters. 1994. Available on DVD from HBO Home Video, 1999. A dark comedy about a suburban housewife who murders her neighbors and creates a media sensation as the town’s serial killer mom.

Seven Days in May. Directed by John Frankenheimer. 1964. Available on DVD from Warner Home Video, 2000. A dramatic feature film in which a bold general contemplates a coup d’état during a crucial moment in the cold war.

sex, lies, and videotape. Directed by Steven Soderbergh. 1989. Available on DVD from Columbia Tristar Home Video, 1998. This dramatic feature, widely recognized as the catalyst and prototype for the American independent film movement of the 1990s, tells a frank story of sexual intimacy and dissolving relationships.

Shadows. In *John Cassavetes: Five Films*. Directed by John Cassavetes. 1959. Available on DVD from Criterion Collection, 2004. An artistic feature film about an interracial relationship at the height of the Beat era.

Shaft. Directed by Gordon Parks. 1971. Available on DVD from Warner Home Video, 2000. This iconic blaxploitation film follows the adventures of Detective John Shaft.

Shakers, The: Hands to Work, Hearts to God. Directed by Amy Stechler Burns and Ken Burns. 1984. Available on DVD from PBS Home Video, 2004. An historical documentary about the religious beliefs, cultural practices, and national legacy of the Shakers.
