5-16. Import unit values	87
5-17. Terms of trade	88

*Commodity Trade*

5-18. Forest products exports	89
5-19. Petroleum exports	90
5-20. Copper exports	91
5-21. Iron exports	92
5-22. Phosphates exports	93
5-23. Cocoa exports	94
5-24. Coffee exports	95
5-25. Cotton exports	96
5-26. Groundnut exports	97
5-27. Palm oil products exports	98
5-28. Sisal exports	99
5-29. Tea exports	100
5-30. Sugar exports	101
5-31. Tobacco exports	102
5-32. Meat exports	103
5-33. Manufactured goods exports	104
5-34. Manufactured goods exports, growth	105
5-35. Food imports	106
5-36. Food imports, growth	107
5-37. Nonfood consumer goods imports	108
5-38. Nonfood consumer goods imports, growth	109
5-39. Fuel imports	110
5-40. Fuel imports, growth	111
5-41. Primary intermediate goods imports	112
5-42. Primary intermediate goods imports, growth	113
5-43. Manufactured goods imports	114
5-44. Manufactured goods imports, growth	115
5-45. Capital goods imports	116
5-46. Capital goods imports, growth	117
5-47. Direction of trade matrix, imports, 1992	118
5-48. Direction of trade matrix, imports, 1997	121
5-49. Direction of trade matrix, imports, 2002	124

5-50. Direction of trade matrix, exports, 1992	127
5-51. Direction of trade matrix, exports, 1997	130
5-52. Direction of trade matrix, exports, 2002	133
5-53. Direction of trade matrix, current U.S. dollars, 1992	136
5-54. Direction of trade matrix, current U.S. dollars, 1997	139
5-55. Direction of trade matrix, current U.S. dollars, 2002	142
Technical notes	146

## 6. External Debt and Related Flows 151

6-1. Gross disbursements: official concessional long-term loans	153
6-2. Gross disbursements: official nonconcessional long-term loans	154
6-3. Gross disbursements: private long-term loans	155
6-4. Disbursements: long-term loans and IMF purchases	156
6-5. Amortization: official concessional long-term loans	157
6-6. Amortization: official nonconcessional long-term loans	158
6-7. Amortization: private long-term loans	159
6-8. Amortization: long-term loans and IMF repurchases	160
6-9. Interest payments: official concessional long-term loans	161
6-10. Interest payments: official nonconcessional long-term loans	162
6-11. Interest payments: private long-term loans	163
6-12. Interest payments: long-term loans and IMF charges	164
6-13. Total external debt service payments: long-term loans and IMF credit	165
6-14. Interest payments: short-term loans	166
6-15. Net flows: long- and short-term loans, including IMF	167
6-16. Net flows: long-term loans, including IMF	168
6-17. Net transfers: long- and short-term loans, including IMF	169
6-18. Net transfers: long-term loans, including IMF	170
6-19. Long-term debt: official concessional	171
6-20. Long-term debt: official nonconcessional	172
6-21. Long-term debt: private	173
6-22. Total external debt	174
6-23. Structure of external debt	175
6-24. Structure of external debt service payments	176
6-25. Average terms of new commitments in 2002	177
6-26. External debt and debt service ratios, 2002	178
Technical notes	181

## 7. Government Finance 184

7-1. Government deficit/surplus (including grants)	186
7-2. Government deficit/surplus (excluding grants)	187
7-3. Government primary deficit/surplus (-/+)	188
7-4. Government expenditure and lending minus repayments	189
7-5. Government interest payments	190
7-6. Government revenue (excluding grants)	191
7-7. Grants to government	192

7-8. Foreign financing	193	
7-9. Taxes on income and profits	194	
7-10. Taxes on international trade and transactions	195	
7-11. Indirect taxes	196	
7-12. Nontax revenue, excluding grants	197	
7-13. Government expenditure: wages and salaries	198	
7-14. Government expenditure: trends in real wages and salaries	199	
7-15. Government expenditure: other goods and services	200	
7-16. Government expenditure: interest payments	201	
7-17. Government expenditure: subsidies and current transfers	202	
7-18. Government expenditure: capital and net lending	203	
7-19. Government expenditure: trends in real defense spending	204	
7-20. Government expenditure: real per capita education spending	205	
Technical notes	207	
<b>8. Agriculture</b>	<b>211</b>	
8-1. Nominal producer prices	212	
8-2. Food price index	218	
8-3. Food production index	219	
8-4. Nonfood production index	220	
8-5. Food production per capita index	221	
8-6. Volume of food output, by major food crop	222	
8-7. Value of agricultural exports	226	
8-8. Cereal production	227	
8-9. Crop production index	228	
8-10. Fertilizer use	229	
8-11. Fertilizer imports	230	
8-12. Area under permanent crops	231	
8-13. Agricultural yields, by major crop	232	
8-14. Incidence of drought	237	
Technical notes	243	
<b>9. Power, Communications and Transportation</b>	<b>246</b>	
9-1. Electric power consumption per capita	247	
9-2. Energy production and use	248	
9-3. Telephone, radio, and television availability, 1996–2002	249	
9-4. Personal computers and Internet use	250	
9-5. Vehicle ownership	251	
9-6. Road-to-population ratio	252	
9-7. Paved primary roads	253	
9-8. Rail goods traffic-to-\$PPP GDP ratio	254	
9-9. Rail load-to-locomotive ratio	255	
9-10. Air transport	256	
Technical notes	257	

<b>10. Privatization of Public Enterprises</b>	<b>260</b>
10-1. Summary of privatization of public enterprises	261
10-2. Divestiture methods employed (to end 2002)	262
10-3. Progress in privatization: ownership and control changes	263
Technical notes	264
<b>11. Labor Force and Employment</b>	<b>267</b>
11-1. Number and gender structure of the labor force	269
11-2. Children under 14 working in the labor force	270
11-3. Unpaid family workers as share of active workers	271
11-4. Industrial structure of the labor force	272
11-5. Industrial structure of economically active population	273
11-6. Wages in agriculture	274
11-7. Wages in manufacturing	275
11-8. Wages in mining and quarrying	276
11-9. Wages in construction	277
11-10. Wages in transport, storage, and communications	278
11-11. Wages in community, social, and personal services	279
Technical notes	280
<b>12. Aid Flows</b>	<b>284</b>
12-1. Net aid from all donors, nominal	285
12-2. Net aid from DAC donors, nominal	286
12-3. Net aid from non-DAC bilateral donors, nominal	287
12-4. Net aid from multilateral donors, nominal	288
12-5. Net aid from all donors, real	289
12-6. Net aid from DAC donors, real	290
12-7. Net aid from non-DAC bilateral donors, real	291
12-8. Net aid from multilateral donors, real	292
12-9. Net aid from all donors as share of recipient GDP	293
12-10. Net aid from DAC donors as share of recipient GDP	294
12-11. Net aid from multilateral donors as share of recipient GDP	295
12-12. Net aid from all donors as share of recipient GDI	296
12-13. Net aid from DAC donors as share of recipient GDI	297
12-14. Net aid from multilateral donors as share of recipient GDI	298
12-15. Net aid per capita from all donors	299
12-16. Net aid per capita from DAC donors	300
12-17. Net aid per capita from multilateral donors	301
Technical notes	304
<b>13. Social Indicators</b>	<b>307</b>
13-1. Age and gender structure of the population	309
13-2. Poverty	310
13-3. Income distribution	311

13-4.	Urbanization	312	
13-5.	Components of population change		313
13-6.	Survival prospects	314	
13-7.	HIV/AIDS estimates and data, end 2001		315
13-8.	Immunization and ORT use	316	
13-9.	Child malnutrition	317	
13-10.	Access to sanitation facilities		318
13-11.	Access to safe water	319	
13-12.	Health expenditure	320	
13-13.	Health care	321	
13-14.	Illiteracy rate	322	
13-15.	Primary school gross enrollment ratio		323
13-16.	Pupil progression	324	
13-17.	Net primary enrollment ratio		325
13-18.	Number of school teachers		326
13-19.	Pupil/teacher ratio	327	
13-20.	Secondary school gross enrollment ratio		328
13-21.	Public expenditure on education	329	
13-22.	Economic opportunities of women		330
13-23.	Household and economic participation of women		331
	Technical notes	337	
<b>14.</b>	<b>Environmental Indicators</b>	<b>342</b>	
14-1.	Forest resources, 1990–2000		344
14-2.	Forest ecosystems, 1990–99		345
14-3.	Wood production and trade, 1999–2001		346
14-4.	Freshwater resources and withdrawals, 1970–2002		347
14-5.	Marine and freshwater catches, aquaculture, balance of trade, and fish consumption	348	
14-6.	Energy production by source	349	
14-7.	Energy consumption by economic sector		350
14-8.	CO <sub>2</sub> emissions from industrial processes, 1999		351
14-9.	Globally threatened species: mammals, birds, and higher plants, 1992–2002		352
14-10.	Globally threatened species: reptiles, amphibians, and fish, 1992–2003		353
14-11.	National protection of natural areas, 2003		354
14-12.	International protected areas, 2002		355
	Technical notes	356	
<b>15.</b>	<b>The Heavily Indebted Poor Countries (HIPC) Initiative</b>	<b>362</b>	
15-1.	HIPC Debt Initiative: flow chart		364
15-2.	Grouping of African HIPC countries: status as of July 2003		365
15-3.	External debt service for individual African HIPCs that reached decision points, by country, 1998–2005		366
15-4.	Committed debt relief and outlook for African HIPCs: status as of July 2003		368
15-5.	Poverty-reducing expenditure for African HIPCs that reached decision points		369
	Technical notes	372	

**16. Household Welfare 374**

16-1.	Burkina Faso	376
16-2.	Burundi	377
16-3.	Cameroon	378
16-4.	Côte d'Ivoire	379
16-5.	Ethiopia	380
16-6.	Gambia, The	381
16-7.	Ghana	382
16-8.	Kenya	383
16-9.	Madagascar	384
16-10.	Malawi	385
16-11.	Mozambique	386
16-12.	São Tomé and Príncipe	387
16-13.	Uganda	388
16-14.	Zambia	389
	Technical Notes	390

## Foreword

Making headway against African poverty and meeting the Millennium Development Goals (MDGs) by 2015 are raising difficult challenges in most African countries. Despite pockets of success, nearly half the region's population still lives in extreme poverty, and Africa still houses about three-fourths of the world's poorest countries. Africa urgently needs rich nations to deliver on their promises of more generous aid and wider trade opportunities to reverse the cruel effects of the HIV/AIDS pandemic, civil wars, and persistent low growth rates.

The World Bank's latest annual report on social and economic conditions across the continent, *African Development Indicators (ADI) 2004*, sounds a clear warning that the rapid spread of HIV/AIDS, anemic aid and investment flows, and weak commodity prices threaten to undo some of the hard-fought gains of recent years.

As in previous years, *ADI 2004* assembles economic, social, and environmental data from a variety of sources to present a broad picture of development across Africa. There have been some key improvements in this volume—for example, macroeconomic and other data lags have been reduced, enabling external debt reporting up to 2002, and there have been updates on the HIPC Initiative. In addition, the chapter on Aid Flows includes ODA not allocated by country, and the chapter on Household Welfare contains a new

set of standardized household indicators for selected countries.

*ADI 2004* depicts a diverse continent. Gross national income (GNI) per head for all Africa averaged \$650 in 2002, \$1644 and \$451 in North and Sub-Saharan Africa (SSA) respectively. But it stood at only \$307 per head in SSA, excluding South Africa, ranging from under \$100 per head in the Democratic Republic of Congo to over \$7,000 in Seychelles. At 2.8 percent in 2002, GDP growth in SSA barely exceeded the growth of its rapidly urbanizing population (cities grew at close to 5 percent), continuing the overall trend of the 1990s. On average, output per head has stagnated.

Yet country performance has diverged widely in SSA—thirteen have averaged more than 5 percent growth for the period 1995–2002, while a few achieved higher growth than the previous decade. Several have seen their economies contract, invariably as a result of severe civil conflict. On average, investment and trade trends have been steady, with a slight increase in the overall current account deficit. Net FDI flows to SSA rose to \$8.9 billion in 2002 but were heavily concentrated in oil exporting countries and South Africa.

Access to ICT is still limited but increasing. In 2002, there were about 12 personal computers per thousand population in SSA, over a 30 percent rise from

2000 and 16 percent from 2001. In North Africa, computer ownership was somewhat higher, at about 17 per thousand. Internet use is rising sharply, but of the 6.2 million recorded Internet users in SSA, about half were in South Africa. However, these data may not fully account for multiple user access.

Air transport has declined a bit from 2000 to 2001. All Africa recorded about 30.9 million passengers in 2001, but of this total, 21.7 million are accounted for by North and South Africa.

Net aid to Africa rose about 35 percent in 2002 because of higher DAC and multilateral flows, but on a per capita basis it is still far below (\$27 in 2002) what it was in 1992 (\$40). Aid flow was \$28 per head for SSA. As of July 2003, 16 countries had reached HIPC decision points and 7 had reached completion points. Total debt service relief represented about \$43 billion, and pro-poor expenditures had begun to increase in most of the countries. However, nine countries, mostly conflict-affected, had not yet reached the HIPC decision point.

In SSA, death rates have continued to rise because of the HIV/AIDS pandemic, causing life expectancy at birth to fall from 50 in 1990 to 46 in 2002. AIDS-related deaths were 2.2 million in 2001 (for a cumulative total close to 20 million). Almost 30 million were infected and 11 million were orphaned, including a million each in Nigeria and Ethiopia. Under-5 mortality stood at 169 per thousand for SSA; in nine countries it exceeded 200 per thousand. Only half of the children in SSA were immunized. Health expenditures averaged only \$13 per head in SSA, excluding South Africa, and were below \$10 per head in 16 countries.

But these averages in social indicators conceal wide variation between countries. Maternal mortality, for example, ranges from as low as 45 per 100,000 births to 2,300. Education trends were somewhat more favorable, with a steady fall in illiteracy, from 42 percent in 1997 to 37 percent in 2002. Although there is a lot of catching-up to do, at 87 percent, gross primary enrollment has recovered and exceeded its level in 1980 (80 percent). Social indicators were more favorable in North Africa, with life expectancy at 70 in 2002 and immunization rates near 90 percent.

*ADI 2004* draws attention to Africa's rich environmental resources, but also to the stress that environment is coming under. Many countries have large numbers of endangered species, and each year 0.7 percent of forest cover is being lost.

The detailed World Bank Africa Database 2004, consisting of almost 1,200 indicators, including the World Bank's "Country at a Glance" Tables and an electronic copy of *ADI 2004*, is also being made available on CD-ROM, together with a user-friendly interface to facilitate downloading and analysis. Directions for obtaining both the publication and the CD-ROM can be found on the World Bank's external web site ([www.worldbank.org](http://www.worldbank.org)). With increased demand for information to monitor the Poverty Reduction Strategy Papers (PRSPs), national development programs, and the Millennium Development Goals, and access to electronic media widening in Africa, *ADI* is expected to evolve further, with the goal of offering the most relevant information to monitor development progress in a combination of information in hardcopy and electronic forms. We welcome user feedback and suggestions for improving *ADI* in future years.

Alan Harold Gelb  
Chief Economist, Africa Region

## Acknowledgments

This volume was produced by the Operational Quality and Knowledge Services of the Africa Region, in collaboration with the Development Data Group of the Development Economics Vice Presidency.

The volume was prepared by a team led by Tariqul I. Khan and comprising José Delcour, Rose Mungai, Kadra Nour, Joan Pandit, Christophe Rockmore, and Vildan Verbeek-Demiraydin. Valuable guidance was provided by the Africa Chief Economist's office. The chapters on national accounts, balance of payments, trade, and government finance draw heavily on the work of World Bank Africa country desks. The chapters on power, communications and transportation, labor force, and social indicators tap the World Bank's World Development Indicators database. The chapter on external debt is heavily drawn from the Debt Reporting System (DRS) of the World Bank, while the chapter on environment was prepared with data from the World Resources Institute. The update for the chapter on privatization of public enterprises was provided by Nikolay Madinga, and the update for the

chapter on the HIPC Initiative was provided by Francis Rowe. The HIV/AIDS table was prepared with data from the Joint United Nations Programme on HIV/AIDS (UNAIDS). In addition, many World Bank staff provided information on their countries or their economic or sectoral specialties.

Lawrence Mastri provided assistance in editing and producing the volume, while the World Bank Office of the Publisher—in particular Richard A. Crabbe, Mary Fisk, and Monika Lynde—prepared and coordinated final production of the book. Other staff aided and advised on the design and content of this volume.

*ADI 2004* was produced primarily using the data reporting tool of the Africa Live Database (LDB) system. This tool was programmed to generate automatically all the tables in this volume and can be used for other publications. Using data warehousing technology, the LDB instantly recalculates all indicators and aggregates them once new information is available. This guarantees that the most recent data are reflected in this and future volumes.

## Preface

*African Development Indicators 2004* continues the data publication series started by the World Bank in 1989 with *African Economic and Financial Data* (published jointly with the United Nations Development Programme), followed by *African Development Indicators 1992, 1994/95, 1996, 1997, 1998/99, 2000, 2001, 2002, and 2003*. These data volumes are intended to provide Africans and those interested in Africa with a consistent and convenient set of data to monitor development programs and aid flows in the region. Each successive volume provides access to more focused information and represents an improvement in the quality and availability of the data.

The data in this volume derive from a variety of sources. In most cases, the original source is national statistical services in Africa. In addition, many international agencies collect or compile data on Africa and organize national data in a standardized framework. This volume draws heavily from such sources. The data have been supplemented by World Bank staff estimates to help address problems of missing or in-

consistent data from standard sources. Some of the estimation methods used here differ from methods used in other sources. This volume addresses these differences in methodologies in the chapter introductions and in the technical notes.

In the tradition of the first nine volumes, this data collection is intended to serve as a prime source of information on Africa. Its wide dissemination to African and non-African analysts and policymakers will contribute to a better understanding of Africa and to development on that continent.

SDR	Special drawing right	ZIMCO	Zambia Industrial and Mining Corporation
SIMA	Statistical Information Management and Analysis Database (World Bank)		
SITC	UN Standard International Trade Classification		

## Introduction

**T**he task of monitoring Africa's development progress and aid flows requires basic empirical data that can be readily used by analysts. This publication—which is the ninth in a series that began with *African Economic and Financial Data (AEFD)* and was followed by *African Development Indicators (ADI) 1992, 1994/95, 1996, 1997, 1998/99, 2000, 2001, 2002, and 2003*—is meant to provide a starting point to fulfill that task.

This volume has been able to extend the work of the previous volumes in this series. Chiefly,

- Most macroeconomic data (in particular, national accounts, balance of payments, government finance statistics, and trade) reflect data maintained by World Bank country desks, often referred to as operational data. These data are often more up to date and offer better country coverage than the data stored in the Bank's central files, the Statistical Information Management and Analysis Database (SIMA), which were used in publications before 1998. SIMA is a large database that contains some, but not all, data produced by Bank staff—operational and other—and some, but not all, data produced by UN agencies.

- The coverage of many of the data series has been improved, reflecting enhancements in the underlying data series, as well as estimates made by Bank staff.

However, substantial data gaps remain, notably in areas such as public enterprises, gender, and labor. Strengthening the statistical capacity in African countries is an ongoing process, and greater efforts and institutional support will be required if substantial improvements are to be made.

This volume presents the available relevant data for 1980–2002, grouped into 16 chapters: background data; national accounts; prices and exchange rates; money and banking; external sector; external debt and related flows; government finance; agriculture; power, communications, and transportation; public enterprises; labor force and employment; aid flows; social indicators; and environmental indicators. Chapter 14 (environmental indicators) was once again taken from the World Resources Institute's *World Resources 2002–2004: Decisions for Earth: Balance, Voice and Power*.

Each chapter begins with a brief introduction on the nature of the data, followed by a set of charts, statistical tables, and technical notes. These notes define the indicators and identify specific sources.

A companion CD-ROM, known as World Bank Africa Database 2004, provides year-by-year time series of most chapters back to 1980. These series will provide analysts with data needed to help place the most recent years in a historical context.

The data in this volume incorporate numerous revisions to those published previously in the series. There are several reasons for this:

- Many of the data that were based on estimates in the earlier volumes have been replaced with updated actual data or improved estimates. In most cases, these changes reflect revisions made by the original reporting authorities or sources, but this volume also includes corrections of errors in previous volumes.
- Data series expressed in constant U.S. dollars and exchange rates use a base year of 1995; previous *ADIs* were based on 1987 exchange rates and prices, and *AEFD* used 1980 exchange rate and prices.
- Some series expressed in constant prices have been revised as a result of updated or revised deflators.
- As in the 2003 volume, macroeconomic data reflect country desk information. The difference is most noticeable in the chapter on government finance, as figures reflect consolidated government data instead of only central government data.

Considerable effort has been made to standardize and to harmonize related data sets drawn from diverse sources. Because statistical methods, coverage, practices, and definitions differ widely among sources, full comparability cannot be ensured, and the indicators must be interpreted with care. In addition, the statistical systems in many developing economies are still weak, which affects the availability and reliability of the data they report. Moreover, intercountry and intertemporal comparisons always involve complex technical problems, which have no full and unequivocal solution.

The data are drawn from sources thought to be the most authoritative, but many data sources are subject to considerable margins of error. To provide reasonably timely data required for meaningful monitoring, the World Bank, the International Monetary Fund (IMF), and other agencies sometimes make estimates on the basis of available secondary information to fill critical gaps in national reporting, especially for the most recent

years, when data cannot be readily produced by national statistical sources. Nonetheless, data gaps exist for many indicators, and some countries are covered only sporadically.

Readers are urged to take these limitations into account in using the data and interpreting the indicators, particularly when making comparisons across economies. Weaknesses in the data point to the need for strengthened statistical systems throughout the region.

As a visual aid to data interpretation and cross-country comparisons, figures for selected indicators are included. As with time series, the figures should also be interpreted with caution—in particular in cross-country analysis because countries with missing data are excluded from the charts.

Throughout this volume (except when otherwise stated), the symbol “.” indicates that data are not available or not applicable. A zero (0) indicates either zero value or an insignificant value, that is, less than one-half of the smallest unit shown. The abbreviation “MR” indicates “most recent year available.” In Chapter 13, columns headed by a period (for example, 1993–97) show data for the latest available year in the period.

To facilitate cross-country comparisons, this book has converted values of many national series from the national currencies to U.S. dollars, using the *World Bank Atlas* methodology.

Indicators in this volume generally follow standard definitions as far as possible and cover years through 2002, depending on the chapter. Data for 2002 are preliminary and therefore may not be internally consistent within and across accounts; and data may not be available for all countries. Because data are continually updated, the statistics here may be different from those in other publications.

Shares and ratios are always calculated using current price series; when gross domestic product (GDP) is used as the denominator for these calculations, it is always expressed at market prices (except in Figure 2-3).

In all but the final chapter, the data are arranged by indicator to facilitate cross-country comparisons. For country-specific work, data can be arranged to show all indicators together for each country.

In this volume, the statistical tables are usually arranged as time series, by country and by country

groups. The largest country group is All Africa, consisting of two subgroups: North Africa and Sub-Saharan Africa (including South Africa). In turn, the Sub-Saharan Africa group is shown, excluding South Africa and Nigeria. These two are subgroups within the SSA group, and correspond to the Sub-Saharan Africa and Sub-Saharan Africa, excluding Nigeria groups shown in the *AEFD* and *ADI 1992*, where South Africa was listed separately.

Annual data shown for country groups are totals, averages, or medians for the countries included in the group, as indicated on the table. These group aggregates can be either simple arithmetic—where missing data are not imputed or gap-filled—or weights are used to adjust group totals for missing countries. In the latter case, when values are missing for a country or a year, estimates are made to maintain the same country composition of the groups through time. However, the implicit estimated values for the countries with missing data are not shown separately in the tables. These gap-fill estimates are made and the aggregate statistics are shown only if the countries for which data are available for a given year account for at least two-thirds of the full group, as defined by benchmarks in 1995. This procedure is standard for many World Bank statistical publications.

Most group averages are weighted according to the relative importance of the countries in the group total for that indicator, based on simple addition across countries when the indicator is expressed in reasonably comparable units. Group averages for analytical ratios (for example, imports to GDP) can be either weighted or simple (arithmetic). Usually they are calculated from the group totals for both the numerator and the denominator, which is analytically equivalent to calculating weighted averages, where the weight for each country is its share in the group total for the denominator. Sometimes, however, when it is appropriate to treat the experiences of different countries equally in

determining a representative value for the group, these group averages are arithmetic—that is, each country has equal weight.

Period averages—shown for 1975–1984, 1985–1994, and 1995 to most recent year—are calculated from time series (levels, ratios, growth rates, or medians) for both countries and country groups. They are either simple averages or average annual percentage growth rates. These growth rates always use the least-squares method and are usually computed from real-term series. In this publication, the least-squares growth rates are computed using the level for the year before the first year shown in the label. The least-squares growth rate,  $r$ , is estimated by fitting a least-squares linear regression trend line to the logarithmic annual values of the variable in the relevant period. More specifically, the regression equation takes the form:  $\log X = a + bt + e$ , where this is equivalent to the logarithmic transformation of the compound growth rate equation,  $X = X(1 + r)^t$ . In these equations  $X$  is the variable,  $t$  is time, and  $a = \log X$  and  $b = \log(1 + r)$  are the parameters to be estimated;  $e$  is the error term. If  $b^*$  is the least-squares estimate of  $b$ , then the annual average growth rate,  $r$ , is obtained as  $[\text{anti log}(b^*)] - 1$  and multiplied by 100 to express it in percentage terms. The least-squares growth rate dampens the influence of exceptional values, particularly at the end points. Least-square growth rates are calculated only if more than two-thirds of consecutive data—carrying the same sign—are present in the time series.

Throughout this volume, data for Ethiopia include Eritrea up to 1992, except when otherwise indicated. Mauritius data are reported for fiscal years ending June 30. The data are published under the second year of the reporting period—for example, July 2000 to June 2001 is published under 2001. Therefore, in some cases (e.g., government finance) data for Mauritius may appear a year off compared to last year's publication, where data were published under the first year of the reporting period.

## **Selected Background Data**

**T**he first two tables of the volume provide selected indicators, including a series on population, as background to the data in the rest of the volume. Table 1-1 provides a comparative view, across

indicators, of some of the more important indicators for all countries in the most recent year for which relatively complete information is available.

## 1-1. Basic Indicators

## Technical notes

### Tables

**Table 1-1. Basic indicators.** The data for this table are from the World Bank's Statistical Information Management and Analysis Database (SIMA), except for aid flows, which are from the Organisation for Economic Co-operation and Development (OECD), Geographic Distribution of Aid Flows to Developing Countries database (see technical notes to Chapter 12). Regional aggregates for GNP per capita, life expectancy, and education are weighted by population.

Population estimates for mid-2002 are World Bank estimates. These are usually projections from the most recent population censuses or surveys (mostly from 1980–2002). Refugees not permanently settled in the country of asylum are generally considered to be part of the population of their country of origin (see technical notes to Tables 13-1, 13-4, and 13-5).

Land area refers to the land surface area of a country, excluding inland waters.

Gross national income (GNI) per capita figures in U.S. dollars are calculated according to the *World Bank Atlas* method described below. GNI measures the total domestic and foreign value added claimed by residents. It comprises GDP (defined in the note for Table 2-5) plus net factor income from abroad, which is the income residents receive from abroad for factor services (labor and capital) less similar payments made to nonresidents who contributed to the domestic economy. The data are from the Food and Agriculture Organization (FAO).

The *World Bank Atlas* method uses a three-year average of conversion factors to convert GNI data, expressed in different national currencies, to a common denomination, conventionally U.S. dollars. The *Atlas* conversion factor for any year is the average of the official exchange rate (Table 3-4) or alternative conversion factor (Table 3-6) for that year and for

the two preceding years, after adjusting them for differences in relative inflation between that country and the United States. This three-year average smoothes fluctuations in prices and exchange rates for each country. The resulting GNI in U.S. dollars is divided by the midyear population for the latest of the three years to derive GNI per capita.

The following formulas describe the procedures for computing the conversion factor for year  $t$ :

$$e_{t-2,t}^* = \frac{1}{3} \left[ e_{t-2} \left( \frac{P_t}{P_{t-2}} / \frac{P_t^s}{P_{t-2}^s} \right) + e_{t-1} \left( \frac{P_t}{P_{t-1}} / \frac{P_t^s}{P_{t-1}^s} \right) + e_t \right]$$

and for calculating per capita GNI in U.S. dollars for year  $t$ :

$$Y_t^s = (Y_t/N_t) + e_{t-2,t}^*$$

where  $Y_t$  = current GNI (local currency) for year  $t$ ,  $P_t$  = GNI deflator for year  $t$ ,  $N_t$  midyear population for year  $t$ , and  $P_t^s$  = US GNI deflator for year  $t$ .

Growth rates of GNI per capita for this table are shown in real terms. They have been calculated by the least-squares method using constant GNI per capita series in 1995 prices in national currency (World Bank, SIMA). (See also technical notes for Table 2-19.)

Life expectancy at birth indicates the number of years a newborn infant would live if prevailing patterns of mortality at the time of its birth were to remain the same throughout its life. Figures are World Bank estimates based on data from the UN Population Division, the UN Statistical Office, and national statistical offices.

Primary school enrollment is the ratio of children of all ages enrolled in primary school to the population of children of primary school age. While many countries consider the primary school age to be 6 to 11 years, others use different age groups. These dif-

ferent country practices are also reflected in the ratios. Gross enrollment may be reported in excess of 100 percent if some pupils are younger or older than the country's standard range of primary school age. In practice, enrollment does not necessarily equal attendance, nor does it remain constant throughout the year. Data are from the United Nations Education, Scientific, and Cultural Organization (UNESCO).

Secondary school enrollment is the ratio of children of all ages enrolled in secondary schools to the population of children of secondary school age. The definition of secondary school age differs among countries. It is most commonly considered to be 12 to 17 years. Data are from UNESCO.

Total net ODA per capita consists of net disbursements of loans and grants from all official sources on concessional financial terms, divided by the midyear population for the corresponding year (see the technical notes to Chapter 12).

**Table 1-2. Population.** Average annual percentage growth shown in this table was calculated using the least-squares method.

## Figures

The following indicators have been used to derive the figures in this chapter.

**Figure 1-1.** Life expectancy (Table 1-1); access to safe water (Table 13-11); GNI per capita (Table 2-19); primary school enrollment (Table 1-1).

**Figure 1-2.** Literacy rate (Table 13-14); GNI per capita (Table 2-19); population growth (Table 1-2).

### Methodology used for regional aggregations and period averages in Chapter 1

Table	Aggregations <sup>a</sup>						Period averages <sup>b</sup>	
	(1)	(2)	(3)	(4)	(5)	(6)	(2)	(3)
Table 1-1								
Column 1	x							
Column 2	x							
Column 3				x				
Column 4				x				x
Column 5					x			
Column 6					x			
Column 7					x			
Column 8					x			
Column 9					x			
Column 10		x						
Table1-2	x						x	

*Note:* Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in column 4 for Table 1-1 and in the last three columns for Table 1-2. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## National Accounts

**N**ational accounts data provide the broadest picture of a nation's economic performance. National accounts give information on the structure of production in the form of gross domestic product (GDP) and its components by industrial origin, GDP and its components by expenditure, and information on a nation's economic relations with the outside world. These key statistics are used for assessing a nation's economic condition at a given time or the trends in a nation's economic performance over time. National accounts data also provide a quantitative basis for forecasting and policymaking and as such are used widely by analysts and policymakers.

GDP and its components by industrial origin are compiled following the widely used System of National Accounts (SNA). The SNA methodology accounts for virtually all activities pertinent to the production of goods and the provision of services in an economy by residents and nonresidents, regardless of the allocation to domestic and foreign claims. GDP does not account for the depreciation of fixed capital.

There are three methods of compiling GDP figures: income, expenditure, and production methods. Because of technical and resource constraints, the income method is not used in most developing countries. In this volume, GDP and its components by industrial origin are compiled using the production method. The three components of GDP by industrial origin are value added

in agriculture, value added in industry, and value added in services. (See the technical notes at the end of this chapter.) The national accounts are constructed in national currencies and in current prices. Figures reported in this chapter are, however, in U.S. dollars, usually converted from national currency series at the official exchange rate. If the official exchange rate is significantly different from the prevailing market rate or shows extreme volatility, the local currency is converted into U.S. dollars by using an alternative conversion factor. The conversion factors used for this purpose are presented in Table 3-6. Reporting currencies in a common denominator facilitates cross-country comparisons and aggregations in country groups.

In addition, estimates of GDP and its components by industrial origin are converted into constant prices. Reporting figures in constant prices is essential for monitoring real changes in the structure of production and for analyzing relationships among prices, production, employment, and so forth.

Constant price series in U.S. dollars use a 1995 base year and are converted from the national currency series using 1995 exchange rates. As this volume establishes a common base year for all countries, national accounts in national currencies at constant prices based on years other than 1995 have been partly rebased to 1995 by rescaling constant price series of components of GDP.

Using a single base year raises problems when there are profound structural changes or significant changes in relative prices. For example, values expressed in constant U.S. dollars necessarily reflect the exchange rates prevailing during the base year. Where subsequent exchange rate changes have been substantial, as they have for many African countries since 1980, comparisons among countries and aggregate trends will be affected. For this reason alone, the data should be used with considerable caution.

Monitoring resource allocations across sectors in any given point in time requires the use of current prices. Accordingly, in addition to GDP in constant prices, GDP in current prices is provided. Following GDP in current prices are components of GDP by expenditure. Data on consumption, investment, and savings are constructed using the SNA's convention. Conceptually, all income is either consumed or saved; as such the sum of total consumption and gross domestic saving equals GDP.

When viewed from a production point of view, by definition savings equals investment. Investment measures additions to fixed assets of an economy—whether it represents additions to the stock of capital or merely replenishes depreciated capital stock—plus net changes in the level of inventories. It is financed either through domestic savings or by drawing on the savings of foreigners. Data on gross domestic investment and gross domestic savings thus shed light not only on the nature of the domestic inter-temporal resource allocation but also on the size of the resource gap. Gross national savings, however, indicates the amount of savings generated by a nation's residents.

Although this volume includes a chapter on international trade, the fact that balance of payments is an integral part of the national accounts warrants the inclusion of the resource balance and its components in this chapter. Moreover, a closer examination of the fifth edition of the IMF's *Balance of Payments Manual* (1993) reflects differences in concepts, defi-

nitions, and classifications from the UN's SNA guidelines. For instance, in the SNA, factor services rendered by residents of another country are excluded from goods and services, but this practice is not universally followed. The tables on resource balance, and on values of exports (free on board [f.o.b.]) and imports (cost, insurance, freight [c.i.f.]) of goods and nonfactor services in current U.S. dollars provide a comprehensive and systematic framework for macroeconomic analysis in general. Those interested in a more specialized and rigorous study of international trade transactions should use the data provided in Chapter 5.

The rate of growth of real domestic product is an important indicator of economic progress and as such is widely monitored. Because these growth rates are calculated from national series, they are suitable for both cross-country comparisons and trend analysis for individual countries. Aggregate values and trends, however, reflect the choice of the base year, as explained above.

Gross national income (GNI) per capita, which is GDP per capita adjusted for changes in international terms of trade and which include net factor income from abroad, and total consumption per capita are also widely monitored indicators of economic progress. When expressed in current U.S. dollars to facilitate comparison and aggregation, however, the values for these indicators necessarily reflect exchange rate fluctuations as well as underlying economic and demographic changes. These indicators may be used with caution for cross-country comparison during any single year. They require special attention when used for trend analysis.

Data for Chapter 2 are from the World Bank's country desks. Estimates are based on data obtained from national sources, usually collected by World Bank staff who review the quality of national accounts data and, in some instances, help adjust the national series.

Note: 2002 is preliminary. Angola's drop is for weakness in nat. acct. stats. Since 1994, Nigeria's ratios are distorted because the off. ex. rt. used by the Govt. for oil exp. and oil val. added is significantly over-valued.

## 2-7. General government consumption

	Percentage of GDP											Annual average

Note: 2002 data are preliminary (see page 2). Since 1994, Nigeria's ratios are distorted because the official exchange rate used by the Government for oil exports and oil value added is significantly over-valued.

## 2-14. Exports of goods and nonfactor services, nominal

## Technical notes

### Tables

**Table 2-1. Gross domestic product, real.** Gross domestic product (GDP) measures the total output of goods and services for final use produced by residents and nonresidents, regardless of the allocation to domestic and foreign claims (World Bank country desks). It is calculated without making deductions for depreciation of “manmade” assets or depletion and degradation of natural resources. In this table, GDP figures are shown at market prices (also known as purchaser values) and have been converted to U.S. dollars using constant (1995) exchange rates. For a few countries where the official exchange rate does not effectively reflect the rate applied to actual foreign exchange transactions, an alternative currency conversion factor has been used (Table 3-6). The sum of the components of GDP by industrial origin (presented in this volume in the form of value added) will not normally equal total GDP for several reasons. First, components of GDP by expenditure are individually rescaled and summed to provide a partially rebased series for total GDP. Second, total GDP is shown at purchaser value, while value added components are conventionally reported at producer prices. As explained above, the former excludes net indirect taxes, while the latter includes indirect taxes. Third, certain items, such as imputed bank charges, are added in total GDP.

**Table 2-2. Value added in agriculture.** Value added in agriculture is shown at factor cost (World Bank country desks). It comprises the gross output of forestry, hunting, and fishing less the value of their intermediate inputs. However, for Botswana, Cameroon, Chad, Congo, Gabon, Guinea, Madagascar, Mali, Morocco, Niger, Rwanda, Senegal, Togo, Zaire, and Zambia, it is shown at market prices, that is, including intermediate inputs.

**Table 2-3. Value added in industry.** Value added in industry is shown at factor cost (World Bank country desks). It comprises the gross output of mining, manufacturing, construction, electricity, water, and gas, less the value of their intermediate inputs. However, for Botswana, Cameroon, Chad, Congo, Gabon, Guinea, Madagascar, Mali, Morocco, Niger, Rwanda, Senegal, Togo, Zaire, and Zambia, it is shown at market prices, that is, including intermediate inputs.

**Table 2-4. Value added in services.** Also shown at factor cost, this table consists of the gross output of all other branches of economic activity, including government, less the value of their intermediate inputs (World Bank country desks). However, for Botswana, Cameroon, Chad, Congo, Gabon, Guinea, Madagascar, Mali, Morocco, Niger, Rwanda, Senegal, Togo, Zaire, and Zambia, it is shown at market prices, that is, including intermediate inputs. Other items, such as imputed bank service charges (which are difficult to assess in the same fashion for all countries) and any corrections for statistical discrepancies, are not included.

**Table 2-5. Gross domestic product, nominal.** This table, presented at market prices, is obtained by converting national currency GDP series in current prices (World Bank country desks) to U.S. dollars at official annual exchange rates (Table 3-4; see also the note for Table 2-1). GDP growth rates are presented in real terms.

**Table 2-6. Total consumption.** Total consumption is the sum of private consumption (World Bank country desks) and general government consumption (Table 2-7). Private consumption, not separately shown here, is the value of all goods and services purchased or received as income in kind by households and nonprofit institutions. It excludes purchases

of dwellings, but includes imputed rent for owner-occupied dwellings. In practice, it includes any statistical discrepancy in the use of resources.

**Table 2-7. General government consumption.** This indicator includes all current expenditure for purchases of goods and services by all levels of government, including capital expenditure on national defense and security (World Bank country desks). Other capital expenditure by government is included in investment.

**Tables 2-8, 2-9, and 2-10. Gross domestic, public, and private investment.** Gross domestic investment (GDI) consists of gross domestic fixed capital formation plus net changes in the level of inventories (World Bank country desks). GDI comprises outlays by the public sector (Table 2-9) and the private sector (Table 2-10). Examples include improvements in land, dwellings, machinery, and other equipment. For some countries the sum of gross private investment and gross public investment does not add up to gross domestic investment due to statistical discrepancies.

**Table 2-11. Gross domestic savings.** Gross domestic savings (GDS) is calculated by deducting total consumption (Table 2-6) from gross domestic product in current prices (Table 2-5).

**Table 2-12. Gross national savings.** Gross national savings (GNS) is the sum of gross domestic savings (Table 2-11), net factor income from abroad (World Bank country desks), and net private transfers from abroad (Table 5-5). The estimate here also includes net public transfers from abroad (Table 5-6).

**Table 2-13. Resource balance.** The table indicates the difference between exports f.o.b. (Table 2-14) and imports c.i.f. (Table 2-15) of goods and nonfactor services (or the difference between GDS and GDI). The resource balance is shown as a share of GDP in U.S. dollars at current prices (Table 2-5).

**Tables 2-14 and 2-15. Exports and imports of goods and nonfactor services, nominal.** Data for exports and imports of goods and nonfactor services are from the World Bank country desks and refer to all goods and nonfactor services (GNFS) provided to, or by, the

rest of the world, including merchandise, freight, insurance, travel, and other nonfactor services. The value of factor services, such as investment income, interest, and labor income, is not included. These series are generally estimated on the basis of foreign trade statistics from customs declarations. They are not fully comparable with the series from the balance of payments, which are based on changes in ownership between residents of a country and the rest of the world. Exports, as well as imports of GNFS, are shown in current U.S. dollars.

**Tables 2-16 and 2-17. Exports and imports of goods and nonfactor services, real.** These are defined as in Tables 2-14 and 2-15, but expressed in constant 1995 U.S. dollars.

**Table 2-18. GDP growth.** This table (World Bank country desks) provides average annual growth rates calculated from GDP at constant 1995 prices (Table 2-1).

**Table 2-19. GNI per capita.** Figures presented here (World Bank country desks) are calculated using the *World Bank Atlas* method, as described in the technical notes for Table 1-1; they are similar in concept to GNI per capita in current prices, except that the use of three-year averages of exchange rates smoothes out sharp fluctuations from year to year.

**Table 2-20. Total consumption per capita.** This table is obtained by dividing total consumption at current U.S. dollars (Table 2-6) by the corresponding midyear population (Table 1-2).

## Figures

The following indicators have been used to derive the figures in this chapter.

**Figure 2-1.** Gross domestic product (Table 2-5); GDP per capita (Tables 1-2 and 2-5).

**Figure 2-2.** GDP growth (Table 2-1); export growth (Table 2-16).

**Figure 2-3.** Value added in agriculture (Table 2-2); value added in industry (Table 2-3); value added in services (Table 2-4); gross domestic product (Table 2-1).

## Methodology used for regional aggregations and period averages in Chapter 2

Table	Aggregations <sup>a</sup>			Period averages <sup>b</sup>	
	(3)	(4)	(5)	(1)	(2)
2-1	x				x
2-2	x				x
2-3	x				x
2-4	x				x
2-5	x			x	
2-6		x		x	
2-7		x		x	
2-8		x		x	
2-9		x		x	
2-10		x		x	
2-11		x		x	
2-12		x		x	
2-13			x	x	
2-14	x			x	
2-15	x			x	
2-16	x				x
2-17	x				x
2-18	x				x
2-19		x		x	
2-20		x		x	

*Note* : Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## Prices and Exchange Rates

Information on prices and exchange rates are important in monitoring national economic performance. This chapter provides three sets of price deflators and six exchange rate indicators. The GDP deflator for national currency series shows changes in domestic prices only. The U.S. dollar series GDP deflator includes the effects of both domestic price changes, as reflected in the national currency series GDP implicit deflator, and changes in the exchange rate between national currencies and U.S. dollars. The consumer price index measures the price changes of a selected bundle of consumer goods, which differs among countries.

The U.S. dollar exchange rate (units of national currency per US dollar) is reported because of extensive use of U.S. dollars to denominate international transactions; U.S. dollars are also widely used for statistical comparisons across countries. The special drawing right (SDR) exchange rate index (based on SDRs per unit of national currency) is a broader measure of the changes in the international value of domestic cur-

rencies because it is based on five major currencies. For Sub-Saharan Africa, it may be more representative of movements in non-dual exchange rates than that expressed in U.S. dollars alone because a large share of the region's foreign trade and debt is not denominated in U.S. dollars. A decrease in the index shows that the currency has depreciated, which indicates that foreign goods have become relatively more expensive than domestic goods. We have included information on the parallel market exchange rate and the ratio of the parallel to the official exchange rates to provide a measure of the premium on the official rate. It is tempting to view the difference between the official and parallel rates as a measure of the disequilibrium in the official exchange rate. However, this is not necessarily true. Conversion factors are sometimes used in place of official exchange rates when the latter are considered to be especially unrepresentative of rates effectively applied to international transactions.

## Technical notes

### Tables

**Table 3-1. GDP deflator (local currency series).** The implicit GDP deflator for the national currency series is obtained by dividing, for each year of the time series, the value of GDP at current prices (World Bank country desks) by the value of GDP at constant 1995 prices (World Bank country desks), both in national currency.

**Table 3-2. GDP deflator (U.S. dollar series).** The GDP deflator for U.S. dollar series (with base year 1995 = 100) (World Bank country desks) is obtained by dividing, for each year of the time series, the value of GDP at current U.S. dollars (Table 2-5) by the value of GDP at constant 1995 dollars (Table 2-1). GDP at current U.S. dollars was obtained by converting current national series at single-year exchange rates, while GDP at constant 1995 dollars was obtained by converting the constant national series at 1995 prices at a fixed (1995) exchange rate. As a result, the GDP deflator for U.S. dollar series includes both the effects of domestic price changes and the effects of exchange rate variations.

**Table 3-3. Consumer price index.** Consumer price indexes (IMF, *International Financial Statistics [IFS]*, line 64) are generally compiled using the Laspeyres formula: goods in the consumption basket selected according to consumption patterns in the base year, derived from household expenditure surveys, are weighted by their relative prices in the base year. The data often relate only to selected representative in-

come groups in capital cities or major urban areas. Thus, the consumer price indexes shown for some countries may not accurately represent price movements because the underlying consumption basket may not be representative of overall national consumption patterns, and the weights assigned to prices may be outdated.

**Table 3-4. Official exchange rate.** The official exchange rate (IMF, *IFS*, line rf) is expressed as the annual average of the official market exchange rate in national currency per U.S. dollar.

**Table 3-5. SDR exchange rate index.** This index is based on the average annual exchange rate for SDRs per unit of national currency (IMF, *IFS*, line rd-zf).

**Table 3-6. Currency conversion factor.** These are the annual exchange rates used by the World Bank (World Bank country desks) to convert the national currency series into U.S. dollars. For most countries, in most years, the conversion factor is identical to the average annual official exchange rate. However, where the official exchange rate is judged to diverge by an exceptionally large margin from the rate effectively applied to international transactions, a more appropriate conversion factor is estimated. An alternative conversion factor is used when there are egregious differences between the official and effective transaction rates, when officially recognized multiple exchange rates have analytically significant spreads, or when exchange rates need to be adjusted to a fiscal year base. The objective in estimating alternative con-

version factors is to approximate as closely as possible exchange rates actually used. For example, where multiple exchange rates are maintained, a transaction-weighted rate is calculated.

Note that national statistical compilers sometimes use an official exchange rate to assign a national currency value to international transactions originally denominated in foreign currencies. In these cases, the official rate must be used to convert the same items back to dollars, regardless of whether it was the rate actually applied to the international transactions, even if an alternative conversion factor is used for other components of GDP.

**Table 3-7. Parallel market exchange rate.** Data reported here are from *Pick's Currency Yearbooks* and *Currency Alerts* (now discontinued) and the *Global Currency Report*. They are averages of month-end rates for the period covered, based on a sample of transactions, usually in a capital city or a financial center of the country. They include the rates at the *Bureaux de Change* that have been established in some countries with auction markets as semi-official foreign exchange windows for small transactions. The current table corrects some errors contained in *ADI 1994/95*.

**Table 3-8. Ratio of parallel market to official exchange rates.** This ratio is obtained by dividing parallel market exchange rates (Table 3-7) by official

exchange rates (Table 3-4), to measure the premium on the official exchange rate. The premium is usually high in the presence of an overvalued exchange rate. This table reflects the corrected series for Table 3-7.

**Table 3-9. Real effective exchange rate index.** This index (World Bank country desks) gives a measure of price competitiveness of the country's exports relative to its trading partners. A decline (increase) in the index indicates real depreciation (appreciation) of the exchange rate. The data have been rebased to 1990. The year 1987 coincided with the early period of massive devaluations in the process of adjustment by several Sub-Saharan African countries. As a result, the substantial devaluations that continued to take place after 1987 may not be very pronounced in the data. Relative movements in the inflation rates between a country and the trading partner (or partners) may diminish the real impact of a devaluation, particularly if inflationary tendencies are stronger domestically than abroad.

## Figure

The following indicator has been used to derive the figure in this chapter.

**Figure 3-1.** Real effective exchange rate (Table 3-9).

### Methodology used for regional aggregations and period averages in Chapter 3

Table	Aggregations <sup>a</sup>			Period averages <sup>b</sup>	
	(4)	(7)	(8)	(1)	(2)
3-1		X		X	
3-2	X			X	
3-3		X			X
3-4			X	X	
3-5			X	X	
3-6			X	X	
3-7			X	X	
3-8			X	X	
3-9		X		X	

*Note:* Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## Money and Banking

**M**onetary variables directly affect prices and exchange rates and indirectly affect real economic performance. Money plays a vital role in any modern economy. Data in this chapter are concerned with the creation of the types of assets that transactors in the economy wish to hold from the types of liabilities that debtors are willing to incur. However, emphasis here is on the creation of the means of payment, that is, on the high end of the liquidity spectrum for assets.

Money and the institutions that deal in money provide cover against credit risks, limit transactions costs, help mobilize savings, allocate credit, and facilitate investment and hence growth of the economy. Data on money and banking help to assess the prevailing

financial conditions of a country and to arrive at a proper evaluation of the financial policy options open to a country for achieving its macroeconomic objectives. The government usually intervenes in finance to control the supply of money and credit. The primary objective of such intervention is to maintain price stability. However, the government may also intervene to finance a budget deficit that in turn may threaten price stability. The government also ensures that financial institutions are properly supervised to ensure continued confidence in the financial system and to avoid destabilizing runs on the banking system. Time series are provided for nine indicators in this section.

## Technical notes

### Tables

**Table 4-1. Domestic credit.** Domestic credit (IMF, *IFS*, line 32) includes all domestic assets of the banking system. It is the sum of the claims on the central government (net), on official entities, and on the private sector. Domestic credit comprises credit to the private sector (Table 4-2) and credit to the government (Table 4-3).

**Table 4-2. Credit to the private sector.** Credit to the private sector is taken from IMF, *IFS* (line 32d).

**Table 4-3. Credit to the government.** Credit to the government sector is taken from IMF, *IFS* (line 32an). Negative numbers for net claims on the central government indicate that government is a net depositor to the banking system. The government's financial position with the monetary system is always presented on a net basis because its recourse to the monetary system cannot always be analyzed meaningfully in terms of liquidity preferences or by considering debtor and creditor positions separately. Movements in net claims on the central government (that is, claims or credits less government deposits) indicate the impact of government operations on the liquidity of the rest of the economy.

**Table 4-4. Net foreign assets.** Data for net foreign assets are from the IMF, *IFS* (line 31n). As for credit to the government, the financial position of the foreign sector with the monetary system is presented on a net basis for the same reason as noted above. Movements in net for-

ign assets (that is, foreign assets less foreign liabilities) indicate the direct monetary impact of a country's transactions with the rest of the world.

**Table 4-5. Growth of money supply.** This table shows the annual percentage change in money (M1), defined as the sum of currency outside of banks and demand deposits other than those of the central government (IMF, *IFS*, line 34). The presentation of the money supply in the form of growth rates rather than levels reflects the importance from the point of view of macroeconomic stability of the rate of growth rather than the stock of money.

**Table 4-6. Discount rate.** The discount rate reported here is the nominal interest rate at which the monetary authorities lend to (or discount eligible paper from) deposit money banks (IMF, *IFS*, line 60).

**Table 4-7. Real discount rate.** The real discount rate in each year is the nominal discount rate (Table 4-6) deflated by the annual change in inflation as reflected by the consumer price index (CPI) (Table 3-3). It has been calculated using the formula:

$$\{[i + (i/100)] / [(\pi_t / \pi_{t-1})] - 1\} \times 100$$

where  $i$  is nominal interest rate and  $\partial$  is inflation rate based on the CPI.

**Table 4-8. Commercial bank lending rate.** The commercial bank lending rate (IMF, *IFS*, line 60p) is the rate charged to borrowers by commercial banks for short- and medium-term use of funds.

**Table 4-9. Commercial bank deposit rate.** The deposit rate (IMF, *IFS*, line 60l) is the rate paid to depositors on time savings and demand deposits by deposit money banks and similar financial institutions.

## Figures

The following indicators have been used to derive the figures in this chapter.

**Figure 4-1.** Credit to the private sector (Table 4-2); credit to the public sector (Table 4-3); gross domestic product (Table 2-5).

**Figure 4-2.** Real discount rate (Table 4-7).

**Methodology used for regional aggregations and period averages in Chapter 4**

Table	Aggregations <sup>a</sup>		Period averages <sup>b</sup>	
	(4)	(8)	(1)	(2)
4-1	X			X
4-2	X			X
4-3	X			X
4-4		X	X	
4-5	X			X
4-6	X		X	
4-7	X		X	
4-8	X		X	
4-9	X		X	

*Note* : Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter. The definitions of the methodologies used throughout the book are given below.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## External Sector

The external sector provides data on economic and financial relations between African countries and the rest of the world, with detailed accounting of commodity trade, one of the principal components of the current account within the balance of payments framework. Commodity trade and price data can also provide a partial basis for analyzing Africa's constraints and performance in the international marketplace, including its terms of trade. Commodity exports are a major source of foreign exchange. Other sources of foreign exchange include receipts from factor and nonfactor services, borrowing from abroad, incoming foreign investment, and foreign transfers and grants.

The balance of payments is a system of accounts covering a given period that is intended to record systematically (a) flows of real resources, including the services of the original factors of production, between the domestic economy of a country and the rest of the world; (b) changes in the country's foreign assets and liabilities that arise from economic transactions; and (c) transfer payments, which are the counterpart of real resources or financial claims provided to, or received from, the rest of the world that carry no provision for repayment.

The tables provide gross entries for goods and services and net entries for unrequited transfers (official and private) and other financial flows; a table for current account balance as traditionally defined (with transfers above the line) is also shown. The information is presented for broad aggregates; fuller detail can be found in the IMF's *Balance of Payments Manual* (1993) and *Balance of Payments Yearbook*.

Unit values for exports (f.o.b.) and imports (c.i.f.) measure changes in the aggregate price level of a country's exports and imports of goods and nonfactor services over time. Unit values reflect average price changes for broad groups of commodities, rather than for any single commodity. The terms of trade indicate relative movements in export and import unit values (here, they are based on goods and nonfactor services from the national accounts). If the prices of exports rise while the prices of imports rise more slowly, stay constant, or decline, the same quantity of exports "buys" a bigger quantity of imports. The effect of such price changes is equivalent to an increase in the real value of output (or increased productivity in value terms) of the export sector. Were import prices to rise more quickly than export prices, the reverse would be true. Export figures for specific

commodities show physical quantities rather than value in either current or constant prices. Most of the key nonagricultural primary commodities are exported from a few countries with substantial mineral resources. Variations in export prices and earnings for

the five major oil-exporting countries in Sub-Saharan Africa (which in the 1980s accounted for about half of Sub-Saharan export earnings) have dominated trends in this region as a whole.

## *Technical notes*

### **Tables**

**Tables 5-1 and 5-2. Merchandise exports and merchandise imports, f.o.b.** Merchandise exports and imports (World Bank country desks) are both valued f.o.b. and comprise all transactions involving a change of ownership of goods, including nonmonetary gold, between residents of a country and the rest of the world. These transactions include those in which ownership changes even though goods do not cross customs borders. The few types of goods not covered by the merchandise account include travelers' purchases abroad, which are included in travel, and purchases of goods by diplomatic and military personnel, which are classified under other official goods, services, and income.

**Tables 5-3 and 5-4. Exports and imports of total services.** Service exports and imports (World Bank country desks) include total nonfactor and factor services, based on transactions involving ownership changes as explained above for goods. Nonfactor services comprise shipment, passenger and other transport services, and travel, as well as current account transactions not separately reported (that is, not classified as merchandise, nonfactor services, or transfers). These include transactions with nonresidents by government agencies and their personnel abroad, as well as transactions by private residents with foreign governments and government personnel stationed in the reporting country. Factor services comprise services of labor and capital, thus covering income from direct investment abroad, interest, dividends, and

property and labor income. Net interest is recorded on an accrual basis; that is, interest obligations are included whether payments are made or not.

**Table 5-5. Net private transfers.** Net private transfers (World Bank country desks) are inflows (from private sources to either private or public recipients) less outflows from private sources to either private or public recipients that carry no provisions for repayments. They include workers' remittances; transfers by migrants; gifts, dowries, and inheritances; and alimony and other support remittances.

**Table 5-6. Net official current transfers.** Net official transfers (World Bank country desks) are the official sources counterpart of Table 5-5. They include transfers on both current and capital accounts, including government grants of real resources and financial items such as subsidies to current budgets, grants of technical assistance, and government contributions to international organizations for administrative expenses.

**Table 5-7. Current account balance, excluding net capital grants.** Current account balance (World Bank country desks), as presented here, is the difference between exports of goods and all services plus inflows of unrequited current transfers (official and private) and imports of goods and all services plus outflows of unrequited transfers to the rest of the world. Other common presentations exclude or include both current and capital official transfers. Data in previous volumes included both.

**Table 5-8. Current account balance, excluding net capital grants, as a percentage of GDP.** It is defined as the ratio of figures presented in Table 5-7 to GDP in current prices (Table 2-5).

**Table 5-9. Net capital grants.** These grants (World Bank country desks) are unrequited transfers, often used to finance balance of payments deficits.

**Table 5-10. Net foreign direct investment.** Net foreign direct investment (World Bank country desks) is the net amount invested or reinvested by nonresidents to acquire a lasting interest in enterprises in which they exercise significant managerial control. Investment includes equity capital, reinvested earnings, and other capital. The net figures subtract the value of direct investment abroad by residents of the reporting country.

**Table 5-11. Net long-term borrowing.** Net long-term borrowing is calculated as disbursements less the repayment of principal (amortization) of public, publicly guaranteed, and private nonguaranteed borrowings that have an original or extended maturity of more than one year and that are repayable in foreign currencies, goods, or services. These data are as reported in the World Bank's Debtor Reporting System (DRS) and are in accord with the data on external debt discussed in Chapter 6.

**Table 5-12. Other capital flows.** Other capital flows comprise the net balance of inflows and outflows of capital not elsewhere included. It covers, for example, changes in the stock of short-term debt, arrears, and other liabilities (all adjusted for valuation changes resulting from exchange rate changes and other factors), and errors and omissions. This table incorporates corrections to data in *ADI 1992*.

**Table 5-13. Use of reserves.** This table (World Bank country desks) shows the variation from year to year of the net balance of international reserve assets and is valued throughout at year-end London prices (for example, US\$37.37 an ounce in 1980 and US\$484.10 an ounce in 1987). Positive numbers represent a decrease or use of reserves; negative numbers represent

an increase in reserves. This table incorporates corrections to data in *ADI 1996*.

**Table 5-14. Import coverage ratio of reserves.** This ratio gives the number of months, at current import levels, that can adequately be covered by available foreign exchange reserves (World Bank country desks). It is obtained by dividing the stock of reserves by imports divided by 12.

**Tables 5-15 and 5-16. Export and import unit values.** The indexes for total export and import unit values (World Bank country desks) are based on exports and imports of goods and nonfactor services from the national accounts. These indexes are calculated by dividing the values of exports and imports expressed in current U.S. dollars (Tables 2-14 and 2-15) by the volume of exports (f.o.b.) and imports (c.i.f.) expressed in constant 1995 U.S. dollars (Tables 2-16 and 2-17). Because of the way these trade unit value indexes are calculated (Paasche indexes, with changing weights), they reflect the composition of exports and imports in each year and may not give a reliable trend in unit values when trade composition changes dramatically. By contrast, this index reflects more accurately shifts in a country's actual composition of trade than would an index using weights based on trade shares in a single year. Data may differ from those in *ADI 1992* and *ADI 1994/95* because a different source was used for this volume.

**Table 5-17. Terms of trade.** Terms of trade measure the relative movement of export and import prices. This series is calculated as the ratio of a country's export unit values or prices (Table 5-15) to its import unit values or prices (Table 5-16). It shows changes over a base year (1995) in the level of export unit values as a percentage of import unit values. Data may differ from those in *ADI 1992* and *ADI 1994/95* because a different source was used for this volume.

**Table 5-18. Forest products exports.** Exports of forest production (FAO data) are given as an aggregate including all wood from trees and forests (coniferous and nonconiferous), whether in natural form or partially processed (UN Standard International

Trade Classification [SITC] 245, 246, and 247); sawwood and sleepers (SITC 248); and wood-based panels and fiberwood, compressed or noncompressed (SITC 634 and 641).

**Table 5-19. Petroleum exports.** This table contains the volumes of crude petroleum exported (World Bank, International Energy Agency [IEA]). Data may differ from *ADI 1992* and *ADI 1994/95* because a different source was used for this volume.

**Table 5-20. Copper exports.** The table presents the unweighted sum of the metal content weights of copper ore and concentrate and of unrefined plus refined copper, metal, and alloys, unwrought (World Bank, Metals and Minerals Database [METMIN]). Data may differ from *ADI 1992* and *ADI 1994/95* because a different source was used for this volume.

**Table 5-21. Iron exports.** These are exports measured in metal content weight of iron ore (World Bank, METMIN).

**Table 5-22. Phosphates exports.** These are the volume of phosphates exports, expressed as the weight of mineral content in phosphate rock (World Bank, METMIN).

**Table 5-23. Cocoa exports.** Cocoa exports include cocoa beans, cocoa powder and cake, cocoa paste, cocoa butter, and chocolate products not elsewhere specified (FAO data).

**Table 5-24. Coffee exports.** Coffee exports are shown for green and roasted beans (FAO data).

**Table 5-25. Cotton exports.** Cotton exports refer to cotton lint only (FAO data).

**Table 5-26. Groundnut exports.** Groundnut exports include the weight of groundnuts in shelled equivalent (using a conversion factor of 70 percent), groundnut oil, and groundnut cake (FAO data).

**Table 5-27. Palm oil products exports.** Exports of palm oil products consist of palm oil and palm kernels (FAO data).

**Table 5-28. Sisal exports.** Only sisal fiber exports are included (FAO data).

**Table 5-29. Tea exports.** Tea exports figures are for processed tea (FAO data).

**Table 5-30. Sugar exports.** Sugar exports are shown in terms of raw sugar equivalent. The conversion factor to express refined sugar in raw sugar equivalent is 1.087 for all countries (FAO data).

**Table 5-31. Tobacco exports.** Only tobacco leaves are included (FAO data).

**Table 5-32. Meat exports.** Meat exports are defined as fresh, chilled, or frozen meat (SITC category 011) (FAO data).

**Tables 5-33 and 5-34. Manufactured goods exports.** Data reported in these tables follow the classification of manufacturing industries as reported in the UN *International Standard Industrial Classification of All Economic Activities* (ISIC), Revision 2 (World Bank country desks). Table 5-33 is expressed in current prices; Table 5-34 shows growth.

**Tables 5-35 and 5-36. Food imports.** Data refer to the sum of food, beverages, tobacco, oilseeds and oleaginous fruits, animal and vegetable oils, and fats (SITC sections 0, 1, and 4 and division 22) (World Bank country desks). Table 5-35 is expressed in current prices; Table 5-36 shows growth.

**Tables 5-37 and 5-38. Nonfood consumer goods imports.** Data reported in these tables show consumer goods imports other than food. Data are calculated as total merchandise imports less food, fuel, intermediate goods, and capital goods imports (World Bank country desks). Table 5-37 is expressed in current prices; Table 5-38 shows growth.

**Tables 5-39 and 5-40. Fuel imports.** Figures are defined as SITC section 3 (sum of Canada, Mexico, and United States) (World Bank country desks). Table 5-39 presents data in current prices; Table 5-40 shows growth.

**Tables 5-41 and 5-42. Primary intermediate goods imports.** Data on these tables comprise minerals, ores, and metals imports (the sum of SITC divisions 27, 28, and 68, and item 522.56) and agricultural raw materials imports (the sum of SITC section 2, less divisions 22, 27, and 28, and groups 233, 244, 266, and 267). Synthetics are excluded (World Bank country desks). Table 41 presents data in current prices; Table 42 shows growth.

**Tables 5-43 and 5-44. Manufactured goods imports.** Data reported on these tables follow the classification of manufacturing industries as reported in the UN International Standard Industrial Classification of All Economic Activities (ISIC), Revision 2 (World Bank country desks). Table 5-43 presents data in current prices; Table 5-44 shows growth.

**Tables 5-45 and 5-46. Capital goods imports.** Data shown here are for machinery and transport equipment (SITC section 7) (World Bank country desks). Table 5-45 presents data in current prices; Table 5-46 shows growth.

**Tables 5-47, 5-48, and 5-49. Direction of trade matrix, imports.** These tables show, for each importing country, the percentage of the value of its total imports that originates from each of the exporting countries for 1992, 1997, and 2002, respectively. They are calculated from Tables 5-53 to 5-55, below.

In these tables data posted under South Africa are for the Southern African Customs Union, which comprises Botswana, Lesotho, Namibia, South Africa, and Swaziland.

**Tables 5-50, 5-51, and 5-52. Direction of trade matrix, exports.** As with the foregoing, for each exporter, these tables show the percentage of the value of total exports, f.o.b., that goes to each of its trade partners for 1992, 1997, and 2002, respectively. These are calculated from Tables 5-53 to 5-55, below.

In these tables data posted under South Africa are for the Southern African Customs Union, which comprises Botswana, Lesotho, Namibia, South Africa, and Swaziland.

**Tables 5-53, 5-54, and 5-55. Direction of trade matrix, current U.S. dollars.** These are the value of trade in goods and services to or from the countries indicated. Matrices are shown for 1992, 1997, and 2002. They form the basis for the calculations in the previous six tables. Data for South Africa are for the Southern African Customs Union, which comprises Botswana, Lesotho, Namibia, South Africa, and Swaziland. The source of the data is the International Monetary Fund's Direction of Trade database. IMF staff have estimated some of these numbers in order to have a consistent time series.

## Figure

The following indicator has been used to derive the figures in this chapter.

**Figure 5-1.** Terms of trade gains or losses (Table 5-17).

### Methodology used for regional aggregations and period averages in Chapter 5

Table	Aggregations <sup>a</sup>					Period averages <sup>b</sup>

Note: Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## External Debt and Related Flows

The tables in this chapter provide a consistent presentation of the structure and terms of external debt and debt servicing. No data are presented on debt owed to domestic lenders. The aggregates and ratios provide various measures of a country's external debt situation. These measures include the size of debt and its servicing requirements, the amount of debt relative to GDP, the ratio of debt-servicing payments to exports, and the interest rate and terms of the stock of debt (including grace period, maturity, and grant element).

These tables follow the presentation in the *Global Development Finance (GDF—formerly World Debt Tables)* and therefore show IMF purchases, repurchases, charges, and net purchases separately from long- and short-term lending, repayments, interests, or net lending. While IMF purchases and repurchases are not strictly lending (they are swaps of currency), they do add to, or subtract from, the resources available for consumption or investment and do impose a liability against future income streams. For this reason, IMF transactions are included here.

Data on debt and related flows are drawn largely from the World Bank's Debtor Reporting System (DRS), to which member countries submit detailed accounts on the annual status, transactions, and terms of debt and related flows. World Bank and IMF staff estimates based on other sources of data supplement

DRS data, especially for recent years, on debt not guaranteed by debtor governments and on short-term debt. The figures in this chapter are based mostly on data supplied by debtor countries. Other data series on debt, on which the World Bank may base some of its estimates, are maintained by the Organisation for Economic Co-operation and Development (OECD) and the Bank for International Settlements (BIS) from data provided by creditor governments and agencies. No figures are given for Libya and Namibia, which do not report debt information to the DRS. However, totals do include estimates for these countries.

The following definitions apply throughout the chapter. Long-term loans have an original or extended maturity of more than one year, while the maturity on short-term loans is one year or less. Official and private refer to the source of the foreign loans. Official loans are from multilateral organizations (excluding the IMF) and from foreign governments; these loans are either made directly to the government of the borrowing country or guaranteed by it, or its agencies, when made to a third party. Private loans are from the private sector, including foreign parent companies and their affiliates, suppliers, financial markets (such as commercial banks), and other sources. These private loans may or may not be guaranteed by creditor or debtor governments and agencies. *Public and publicly guaranteed* loans, as defined by the DRS, refer

to loans from both official and private foreign sources that are made to, or guaranteed by, the debtor government or its agencies. Almost all loans from foreign official sources are public or publicly guaranteed. Some loans from foreign private sources are made to, or guaranteed by, the debtor government or its agencies (these are labeled *private guaranteed* by the DRS). Some loans from foreign private sources are not public or publicly guaranteed (these are labeled *private nonguaranteed* by the DRS).

Concessional loans carry a grant element of 25 percent or more (based on a standard 10 percent discount rate), which is consistent with the Development Assistance Committee (DAC) of the OECD definition of ODA (see Chapter 12). Nonconcessional loans carry a grant element of less than 25 percent. In this chapter, private loans are shown separately from official nonconcessional loans.

Additional information, definitions, and methodology are available in the *Global Development Finance 2001* (formerly *World Debt Tables*) (World Bank).

Figure 6-2. Debt to GDP ratio, 2002\*

\* Sorted by concessional debt.

## *Technical notes*

### **Tables**

**Tables 6-1, 6-2, and 6-3. Gross disbursements: official concessional, official nonconcessional, and private long-term loans.** Gross disbursements are from commitments of long-term external loans by official concessional, official nonconcessional, and private sources, respectively (World Bank, DRS).

**Table 6-4. Disbursements: long-term loans and IMF purchases.** This is the sum of Tables 6-1 through 6-3, plus IMF purchases.

**Tables 6-5, 6-6, and 6-7. Amortization: official concessional, official nonconcessional, and private long-term loans.** Amortization is the actual repayment of principal made in foreign currencies, goods, or services on outstanding long-term official concessional, official nonconcessional, and private long-term loans as described above (World Bank, DRS).

**Table 6-8. Amortization: long-term loans and IMF repurchases.** This is the sum of Tables 6-5 to 6-7, plus repurchases of drawings from the IMF.

**Tables 6-9, 6-10, and 6-11. Interest payments: official concessional, official nonconcessional, and private long-term loans.** These are actual payments made in foreign currencies, goods, and services to various lenders described above on interest obligations, including IMF charges on drawings due on disbursed debt and on commitment charges due on undisbursed debt (where information is available), that is, on long-term official concessional, official nonconcessional, and private loans (World Bank, DRS).

**Table 6-12. Interest payments: long-term loans and IMF charges.** This is the sum of Tables 6-9 through 6-11, plus IMF charges on drawings.

**Table 6-13. Total external debt service payments: long-term loans and IMF credit.** Total external debt service payments include the sum of amortization on long-term loans and IMF credit and interest payments on long-term loans and IMF credit (World Bank, DRS).

**Table 6-14. Interest payments: short-term loans.** These are estimated for the respective year based on the estimated year-end stock of short-term debt (which may include interest arrears on long-term debt) and the annual average six-month London interbank offered rate (LIBOR) on notes denominated in U.S. dollars as reported in the *IFS* (with no adjustment for spreads). Actual payments may be different because the LIBOR only approximates actual interest rates on short-term loans, and because not all interest due on short-term loans is actually paid (World Bank, DRS).

**Table 6-15. Net flows: long- and short-term loans, including IMF.** These flows represent all disbursements of long- and short-term loans net of all repayments of principal on long- and short-term loans and IMF credit (World Bank, DRS).

**Table 6-16. Net flows: long-term loans, including IMF.** Net flows of long-term loans are as defined above for Table 6-15, but excluding short-term loans (World Bank, DRS).

**Table 6-17. Net transfers: long- and short-term loans, including IMF.** Net transfers are net flows (Table 6-15) less interest payments (Tables 6-12 and 6-14).

**Table 6-18. Net transfers: long-term loans, including IMF.** Net transfers include long-term loans and IMF credit only (Table 6-16 less Table 6-12).

**Tables 6-19, 6-20, and 6-21. Long-term debt: official concessional, official nonconcessional, and private.** This series reflects the total debt outstanding and disbursed of official concessional, official nonconcessional, and private loans (World Bank, DRS). The time series reflects changes in the valuation of year-end debt stocks (because of U.S. dollar exchange rate fluctuation) and debt cancellation, as well as net disbursements. Therefore, changes in debt stocks from year to year cannot be used as a measure of net borrowing or vice versa.

**Table 6-22. Total external debt.** When Tables 6-19 to 6-21 are supplemented with IMF credit and estimates of total short-term debt (which includes interest in arrears on public and publicly guaranteed long-term loans), they sum up to total external debt (World Bank, DRS).

**Table 6-23. Structure of external debt.** This table summarizes debt structure for 1980 and 2002 (World Bank, DRS). The columns cover the type of creditor and concessionality. The private debt shown includes both the private guaranteed (by an entity of the debtor government) and the private nonguaranteed debt. For each year, all components shown add up to the totals in Table 6-22.

**Table 6-24. Structure of external debt service payments.** This summary table compares debt service payments for all types of creditors in 1980 and 2002 (World Bank, DRS). Debt service payments on short-term loans are excluded, to be consistent with Table 6-13. Debt service payments are actual repayments of principal (amortization) and actual payments of interest. The column headings have the same definitions as given above for Table 6-23.

**Table 6-25. Average terms of new commitments, 2002.** This table presents the average interest rates, grace periods, maturities, and grant elements shown separately for official concessional and nonconcessional long-term loans (excluding private financing); short-term loans are excluded (World Bank, DRS). Grant elements are calculated using a standard 10 percent discount rate. The indicators are weighted averages (based on amount of commitments) across all loans in each category.

**Table 6-26. External debt and debt service ratios, 2002.** This table includes the ratio of debt outstanding and disbursed to GDP; per capita debt; the ratio of debt outstanding and disbursed to debt outstanding, including undisbursed; the ratio of debt outstanding and disbursed and the ratio of the present value of debt to exports of goods and all services, including receipts of workers' remittances; and the ratio of total debt service paid to exports of goods and all services, more commonly called the debt service ratio (World Bank, DRS). Ratios are shown separately for concessional debt and for all nonconcessional (including private) debt. Both the stock of external debt and debt service payments include short- and long-term loans and IMF credit, except for the ratio of debt outstanding to debt outstanding including undisbursed, which is calculated for public and publicly guaranteed debt only. The data for exports of goods and all services, plus receipts of workers' remittances, are taken from balance of payments data in Chapter 5. The present value of debt is the sum of all future payments discounted to the present (usually with a commercial discount rate similar to LIBOR). The debt service ratio is shown for the ex post category, showing the amount paid after debt relief and/or arrears.

## Figures

The following indicators have been used to derive the figures in this chapter.

**Figure 6-1.** Debt service ratio (Table 6-26).

**Figure 6-2.** Debt to GDP ratio (Table 6-26).

## Methodology used for regional aggregations and period averages in Chapter 6

Table	Aggregations <sup>a</sup>			Period averages <sup>b</sup>

*Note:* Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## Government Finance

**T**he data in this chapter pertain to consolidated government (except when not available) instead of to central government operations, which were reported in previous volumes.

Definitions have been taken from the IMF's *Government Finance Statistics (GFS)*. For this volume, data are taken from country desks. When not available from country desks, data are taken from *GFS* and supplemented with data from IMF and World Bank staff reports, or from other national government sources. Data from various sources have been harmonized to produce a consistent and comparable time series.

The focus of this chapter is on the principal financial transactions of government—taxing, borrowing, spending, and lending—rather than on the production and consumption of goods and services, the use of labor, or other government activities. Spending covers both current and capital transactions.

The data comprise major government finance indicators—fiscal deficit or surplus, expenditure and lending minus repayments, revenue, grants, and domestic and foreign financing—expressed as a percentage of GDP. The chapter also includes information on the major components of revenue and expenditure by economic category, shown as percentages of total revenue and as a percentage of expenditure and lending minus repayments, respectively.

Measures of fiscal deficit or surplus are among the single most important indicators of government fiscal performance. The measure is usually calculated as the difference between total revenue (including grants) and total expenditure (including lending minus repayments). As such, it measures government net financing requirements. *GFS* methodology recommends grouping grants receipts with revenue because they can be spent without incurring an obligation for future payments but lists them separately because grants can sometimes be treated as financing items. Financing includes all government borrowing from others (at home and abroad) minus amortization (government repayment of its borrowing from others and changes in cash balances). Other measures of fiscal balance include the fiscal deficit or surplus without capital grants, which measures the government's ability to operate without foreign capital transfers, and the fiscal deficit or surplus, excluding interest payments from expenditure, referred to as the primary deficit or surplus.

Revenue is divided between taxes—unrequited compulsory payments to government—and nontax revenue. It includes only non-repayable receipts other than grants. Tax revenue is also classified according to the base upon which the tax is levied (for example, income and profits).

Expenditure is classified by economic category (such as wages, purchases, and interest payments). Lending minus repayments—government lending less repayment of past government lending—is grouped with expenditure, except in certain cases (see the technical notes at the end of this chapter).

The economic classification of expenditures (for example, on wages) is presented as a percentage of total expenditure and lending minus repayments, because lending minus repayments is itself a separate economic classification.

No attempt was made to reconcile *GFS* data in this chapter with the System of National Accounts (SNA). The fundamental difference between the two systems is that *GFS* focuses on government financial transactions, whereas the SNA considers government transactions as part of total demand and value added. (For

further discussion, see World Bank 1988b, box 2.1, p. 45.) Indicators calculated as ratios to GDP use GDP at purchaser values or market prices (see technical notes to Chapter 1). Because GDP at purchaser values includes import duties (and GDP at market prices includes indirect taxes), ratios for revenues tend to understate tax burdens, especially where such taxes are an important source of government revenue.

Fiscal year data are compared with the calendar year GDP data that correspond either to the second half of the fiscal year or to the calendar year in which most of the fiscal year falls. Fiscal years do not correspond to calendar years in Botswana, Cameroon, Egypt, Ethiopia, The Gambia, and Ghana (before 1982), and Kenya, Lesotho, Liberia, Malawi, Mauritius, Niger, Nigeria, Senegal, Sierra Leone, Sudan, Swaziland, Tanzania, Uganda, and Zimbabwe (after 1985).

**Figure 7-1. Government deficit as percentage of GDP, 1993-2002\***

\* Or most recent year available.

## Technical notes

### Tables

**Table 7-1. Government deficit/surplus (including grants).** Overall surplus/deficit is the difference between total revenue plus grants (as defined in *GFS*, line A-I) and total expenditures and lending minus repayments (as defined in *GFS*, line C-I). It represents the net financing requirement of the consolidated government. This indicator is shown as a percentage of current GDP in national currency (World Bank country desks).

**Table 7-2. Government deficit/surplus (excluding grants).** This is calculated as above, except that capital grants are excluded from receipts (as defined in *GFS*, line A-II less line C-I). It is a measure of the ability of a government to fund its activities from its own resources. Because some budgetary grants may be tied to certain expenditures that would not otherwise be incurred, excluding grants may overstate the deficit or understate the surplus if no account is taken of the expenditures dependent on these grants. This indicator is shown as a percentage of current GDP in national currency (World Bank country desks).

**Table 7-3. Government primary deficit/surplus (–/+).** The primary deficit or surplus is the government deficit or surplus including grants (as presented in Table 7-1) excluding interest expenditures on both domestic and foreign debt (Table 7-5). In countries with large government interest payments, this ratio may provide a more reliable indicator for monitoring

fiscal stabilization efforts. This indicator is shown as a percentage of current GDP in national currency (World Bank country desks).

**Table 7-4. Government expenditure and lending minus repayments.** Total expenditure and lending minus repayments (as defined in *GFS*, line C-I) represents the government's total outlays for current or capital purposes. Expenditure includes all nonrepayable payments by the government. Lending minus repayments comprises government transactions in debt and equity claims upon others, acquired for purposes of public policy rather than for managing government liquidity or earning a return. It consists of gross lending and acquisition of financial equity minus repayments of past government lending and government sales of equities. (This definition differs from the concept of lending minus repayments adopted in the SNA, which is gross government lending minus repayments of past government lending minus net government borrowing.) In determining a government's deficit or surplus, lending minus repayments is grouped with expenditures rather than with financing. This indicator is shown as a percentage of current GDP in national currency (World Bank country desks).

**Table 7-5. Government interest payments.** Government interest payments (as defined in *GFS*, line C2) include interest on all borrowings, both domestic and foreign, but exclude commission charges paid for assistance in placement of debt (which would be classi-

fied as expenditure for the payment of goods and services). This indicator is shown as a percentage of current GDP in national currency (World Bank country desks).

**Table 7-6. Government revenue (excluding grants).**

Government revenue less grants (as defined in *GFS* line A-II) refers to current revenues (tax and nontax) and capital revenues, such as proceeds from the sale of real assets, including land. It does not include grant receipts from other governments or international organizations. This indicator is shown as a percentage of current GDP in national currency (World Bank country desks).

**Table 7-7. Grants to government.** These are unrequited, nonrepayable, noncompulsory government receipts from other governments or international institutions (as defined in *GFS*, line A-II). Grants of goods and services in kind are excluded. This indicator is shown as a percentage of current GDP in national currency (World Bank country desks).

**Table 7-8. Foreign financing.** This includes all government financing transactions except grants (as defined in *GFS*, line D-III) with nonresident individuals, enterprises, governments, international organizations, and other entities. It may be affected by trading in outstanding government securities between residents and nonresidents. The data also reflect changes resulting from transactions, but not revaluations, in government holdings of foreign exchange, deposits in nonresident financial institutions, and securities issued by nonresident entities held by government for liquidity purposes (reserves). This indicator is shown as a percentage of current GDP in national currency (World Bank country desks).

**Table 7-9. Taxes on income and profits.** These taxes (as defined in *GFS*, line A1) are levied on the actual or presumptive net income of individuals and profits of enterprises. Also included are taxes levied on capital gains that are realized on land sales, securities, and other assets. This indicator is shown as a percentage of total revenue (as defined in *GFS*, line A-II) (World Bank country desks).

**Table 7-10. Taxes on international trade and transactions.** These taxes include import duties, export duties, profits of export or import monopolies remitted to government, and monopoly profits of monetary authorities made in foreign exchange transactions, as well as taxes levied on the sale of foreign exchange (as defined in *GFS*, line A6). This indicator is shown as a percentage of total revenue (as defined in *GFS*, line A-II) (World Bank country desks).

**Table 7-11. Indirect taxes.** These are sales and excise taxes and duties (as defined in *GFS* line A-IV less A1). This indicator is shown as a percentage of total revenue (as defined in *GFS* line A-II) (World Bank country desks).

**Table 7-12. Nontax revenues (excluding grants).** This is all nonrepayable government receipts, other than compulsory unrequited receipts (taxes) and revenue from capital sales or government grants, plus all fines and penalties other than for noncompliance with taxes (as defined in *GFS*, line A-V). For some mineral-exporting countries in Africa, this category is quite large, since royalties on the extraction of minerals, such as petroleum in Egypt and Nigeria and bauxite in Guinea, make up significant portions of total government revenues. This indicator is shown as a percentage of total revenue (as defined in *GFS*, line A-II) (World Bank country desks).

**Table 7-13. Government expenditure: wages and salaries.** These expenditures are payments in cash, but not in kind, to employees in return for services, before withholding taxes and employee contributions to social security and pension funds are deducted (as defined in *GFS* line C1.1). Included are basic wages and salaries; pay for overtime, weekends, and nights; cost of living allowances; local allowances and expatriation allowances; and similar compensation. Reimbursement to employees for expenses incurred as part of their employment are excluded. This indicator is shown as a percentage of total expenditure and lending minus repayments (as defined in *GFS* line C-I) (World Bank country desks).

**Table 7-14. Government expenditure: trends in real wages and salaries.** This includes expenditures on wages and salaries as discussed above (as defined in *GFS*, line C1.1), deflated by the CPI. For most countries the trend is shown in index numbers beginning with 100 in 1987 (World Bank country desks).

**Table 7-15. Government expenditure: other goods and services.** These expenditures include disbursements for all goods and services (except fixed capital assets and wages and salaries) bought on the market, goods and services to be used to produce fixed capital assets, strategic or emergency stocks, stocks held by market regulatory organizations, and land and intangible assets. This category encompasses purchases of materials, office supplies, fuel and lighting, travel services, and payment of rent, as well as payments in kind to certain civil servants (as defined in *GFS*, line C1.3). This indicator is presented as a percentage of total expenditure and lending minus repayments (as defined in *GFS*, lines C-I) (World Bank country desks).

**Table 7-16. Government expenditure: interest payments.** These are payments for the use of all borrowed money, excluding commission charges paid for assistance in placing debt, which would be classified as expenditures for payment of other goods and services (as defined in *GFS*, line C2). This indicator is presented as a percentage of total expenditure and lending minus repayments (as defined in *GFS*, line C-I) (World Bank country desks).

**Table 7-17. Government expenditure: subsidies and current transfers.** These expenditures are all unrequited, nonrepayable government payments for current purposes (as defined in *GFS*, line C3). Transfers for capital purposes (that is, to permit the recipient to acquire capital assets) and transfers in kind are excluded. This indicator is presented as a percentage of total expenditure and lending minus repayments (as defined in *GFS*, line C-I) (World Bank country desks).

**Table 7-18. Government expenditure: capital and net lending.** This represents payments for acquiring land, buildings, and other nonfinancial assets to be used for more than one year in the process of production, including transfers for capital assets as well as net lending (as defined in *GFS*, line C-IV plus C-V). This indicator is presented as a percentage of total expenditure and lending minus repayments (as defined in *GFS*, line C-I) (World Bank country desks).

**Table 7-19. Government expenditure: trends in real defense spending.** Real defense spending has been calculated by deflating defense spending in current prices national currency (IMF, as defined in *GFS*, line B2) by the national GDP deflator (Table 3-1). The results are presented in the form of 1980 base indexes.

**Table 7-20. Government expenditure: real per capita education spending.** This table presents education spending (IMF, as defined in *GFS*, line B4) deflated by the national GDP deflator (Table 3-1) and divided by total population (Table 1-2). The result is converted into 1995 U.S. dollars by using the 1995 local currency/U.S. dollar conversion factor (Table 3-6).

## Figure

The following indicators have been used to derive the figure in this chapter.

**Figure 7-1.** Government deficit/surplus (Tables 7-1 and 7-2).

### Methodology used for regional aggregations and period averages in Chapter 7

Table	Aggregations <sup>a</sup>		Period averages <sup>b</sup>
	(6)	(7)	(1)
7-1	x		x
7-2	x		x
7-3	x		x
7-4	x		x
7-5	x		x
7-6	x		x
7-7	x		x
7-8	x		x
7-9	x		x
7-10	x		x
7-11	x		x
7-12	x		x
7-13	x		x
7-14		x	x
7-15	x		x
7-16	x		x
7-17	x		x
7-18	x		x
7-19		x	x
7-20	x		x

*Note:* Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter. For aggregation purposes, all data used in this chapter were converted to U.S. dollars, using the conversion factors shown in Table 3-6.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## Agriculture

**A**griculture is one of Africa's most important sectors. African agriculture has two major components: food production and export commodities. Food production, including meat, is the livelihood for most Africans. Export crops provide many African countries with their main source of foreign exchange and thus the capacity to import, invest, and develop. The information in this chapter provides a basis for assessing recent trends in producer prices, aggregate agricultural production and trade, cereal imports, and food aid in Africa.

The data in presented are estimates based on a variety of sources whose quality and reliability vary from country to country and from year to year. Furthermore, production and export data are probably underestimated for two reasons. First, it is difficult to estimate production levels of staple food crops, especially roots and tubers, when much of the output is consumed directly by farmers, rather than marketed. Second, parallel market activity, including trade, may not be fully accounted for.

Notes: The categories of crops are defined in the technical notes.

Categories are mutually exclusive, and ordering is intended to reflect relative importance of these crops as of 1986-88. In many cases official markets operate simultaneously with parallel or open market activities. Where a large majority of marketed production is believed to pass through the official channels, the official price is also reported as the farmgate price. In most cases, only very rough estimates of the share of marketed production passing through each channel are available.

The CPI is based in 1987 rescaled from price index based in 1980.

For each country one to four export crops (X1,...,X4) are presented in order of importance, in terms of value of total production.

Similarly, up to three traded food crops (F1,...,F3) and two nontraded staples (NT1,NT2) are included.

1/ Data was updated for only 10 countries by FAO

Notes: Crops shown represent same major food crops as in Table 8-1, Nominal producer prices, excluding beverages (coffee, tea, cocoa), cotton, and tobacco.

The following commodities are in their least-processed form unless otherwise indicated:

Groundnuts, unshelled                      Citrus, total for country

Rice, paddy                                      Sesame, seeds

Sunflower, seeds

For South Africa, barley production is for white areas only.

Countries excluded from listing: Cape Verde, Djibouti, Eritrea, São Tomé and Príncipe, and Seychelles.

\* The standard World Bank least square methodology was used to compute the annual percentage growth.

Notes: The following commodities are in their least-processed form unless otherwise indicated:

- Cotton, Seed cotton
- Groundnuts, unshelled
- Coffee, green or roasted
- Rice, paddy
- Cloves, whole
- Cocoa, beans
- Tobacco, leaves
- Sunflower, seeds
- 1 hectogram = 100 grams = 3.527 oz.

Countries excluded from listing: Cape Verde, Djibouti, Sao Tome and Principe, and Seychelles.

For livestock "yield", see Table 8.6 (Food output by major crops).

\* The standard World Bank least square methodology was used to compute the annual percentage growth.

## Technical notes

### Tables

**Table 8-1. Nominal producer prices.** Data on nominal producer prices are compiled from FAO. In general, the figures reflect the average annual price received by farmers in the most important producing regions. But given the wide regional and seasonal variation and the lack of precision in recording specifics about prices quoted, the data should be interpreted only as a rough indication of price levels for an entire country during an entire year.

The data do not differentiate between official producer prices and farmgate prices. In most cases they are the same.

Crop years for most countries span parts of two calendar years; planting takes place in the first calendar year, while harvest and marketing take place at the end of the first year and beginning of the second year. For consistency, producer prices are listed corresponding to the calendar year during which planting decisions are made. For example, producer prices for the crop year 1987/88 are listed as 1987.

For each country, up to four export crops and five food crops are included, which represent the most important commodities for that country in terms of value of total production during the early 1980s. The food crops include up to three cereals of “traded” grains (those commonly imported or exported) and up to two “nontraded” staples—generally roots and tubers—which are not normally imported or exported by African countries. In the table, these categories of crops are designated by the following symbols: X1 through X4 for export crops; F1 through F3 for traded food crops; and NT1 and NT2 for nontraded staple

food crops. The categorization is consistent across countries, but the numbering of crops within categories in each country depends on which crops are most important.

Where commodities may be marketed in several different forms, the form is generally specified (for instance, shelled or unshelled groundnuts). When not specified, the form of the commodity is the most common (for instance, shelled and dried maize). Where commodities are graded, an average grade has been used unless otherwise specified.

**Table 8-2. Food price index.** This is a subindex of the consumer price index. It reflects the cost to the average consumer of acquiring a fixed basket of food (IMF, *IFS*).

**Table 8-3. Food production index.** This index is based on 169 commodities that provide calories when consumed (FAO data). Some of these (such as cottonseed, cocoa, and vanilla) are not, however, a significant part of African diets, but are produced primarily for export.

**Table 8-4. Nonfood production index.** Data in this table are derived from 29 products that are not considered nutritious, including coffee, rubber, cotton lint, and tobacco leaves (FAO data).

**Table 8-5. Food production per capita index.** These data are derived as the ratio of the food production index (Table 8-3) to estimated total midyear population figures (Table 1-2).

**Table 8-6. Volume of food output, by major food crop.** The table covers, with only a few differences, the same major food crops as presented in Table 8-1, excluding beverages (coffee, tea, cocoa), cotton, and tobacco. Also included are figures for livestock, which represent the combined total number of cattle, sheep, goats, pigs, horses, asses, mules, and rabbits (FAO data).

**Table 8-7. Value of agricultural exports.** The value of agricultural exports is expressed in current U.S. dollars at f.o.b. prices (FAO data).

**Table 8-8. Cereal production.** This refers to crops harvested for dry grain only. Cereal crops harvested for hay or harvested green for food, feed, or silage and those used for grazing are excluded (FAO data).

**Table 8-9. Crop production index.** This table shows agricultural production for each year relative to the base period 1989–91. It includes all crops except fodder crops (FAO data).

**Tables 8-10 and 8-11. Fertilizer use and imports.** Figures are in metric tons and represent the aggregate of nitrogenous, phosphate, and potash fertilizers (FAO database for the *Fertilizer Yearbook*).

**Table 8-12. Area under permanent crops.** Data in this table reflect land under permanent crops as defined and reported by FAO.

**Table 8-13. Agricultural yields, by major crop.** This table closely follows the selection of commodities in Table 8-1. Units are in thousands of hectograms (which are equivalent to hundreds of kilograms) per hectare. Most of the data come from the database for the FAO's *Production Yearbook*, with additional information from World Bank agricultural sector reports.

**Table 8-14. Incidence of drought.** This is the only indicator in this chapter based on subjective considerations. Data on rainfall levels from other sources are usually presented to suit different purposes, without considering seasonal and regional characteristics of the producing regions. A low rainfall level might not harm agricultural production if it did not adversely affect the regions where the main crops are produced, whereas an average rainfall level might be associated with difficulties in the producing regions—due to delay, for example. Therefore, simply presenting the annual rainfall levels would not necessarily enrich the agricultural data.

For each country, a binary classification was thus created. A “D” was assigned to a country if a significant shortage of rain unfavorably affected its agricultural production. For normal or average rainfall, the standard sign was given, as in the cases of insufficient information or “not applicable.” (Specialists who work on the relevant countries were surveyed, as well as World Bank agricultural and environmental experts. In addition, the Famine Early Warning System Project of the U.S. Agency for International Development provided information for 1993–94 for about half of the countries listed.) FAO's Global Information and Early Warning System on Food and Agriculture provided information for 1999–2003.

## Figures

The following indicators have been used to derive the figures in this chapter.

**Figure 8-1.** Food price index (Table 8-2).

**Figure 8-2.** Food production per capita index (Table 8-5).

**Figure 8-3.** Food production index (Table 8-3); non-food production index (Table 8-4).

**Figure 8-4.** Agriculture exports (Table 8-7).

**Figure 8-5.** Drought (Table 8-14).

### Methodology used for regional aggregations and period averages in Chapter 8

Table	Aggregations <sup>a</sup>				Period averages <sup>b</sup>
	(1)	(6)	(7)	(8)	(2)
8-1				X	
8-2			X		X
8-3		X			X
8-4			X		
8-5			X		X
8-6				X	X
8-7	X				X
8-8	X				X
8-9		X			X
8-10	X				X
8-11	X				X
8-12	X				X
8-13				X	X
8-14				X	

*Note:* Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## Power, Communications and Transportation

**A**n adequate and reliable supply of power is a vital ingredient for the economic development of African countries. This chapter provides data on the power, communications, and transportation sectors of the economy. Data are from the International Energy Agency's (IEA's) *Energy Statistics and Balances of Non-OECD Countries*, and from the United Nations Statistics Division's *Energy Statistics Yearbook*.

Telecommunications, computers, and the Internet are also essential ingredients of a modern economy. In this chapter, telephone main lines represent the supply side of the system, which in Africa is well short of demand. In fact, waiting time for telephone lines is longer in Africa than in any other region. Because of the growing importance of computers on development, a new table on computers and the Internet was added. Data on telecommunications are from the In-

ternational Telecommunications Union's (ITU's) *World Telecommunication Development Report* (2003), *Challenges to the Network: Internet for Development* (1999), and the *World Telecommunication Development Report* (2003b). The data on Internet hosts are from the Internet Software Consortium ([www.isc.com](http://www.isc.com)).

In addition to power and communications, countries must have a solid transportation sector to underpin expansion of their economies and ensure support to the activities of households, producers, and government. This chapter presents data on vehicle use, roads, and railway traffic. Data are from World Bank databases, the International World Road Federation's *World Road Statistics*, and Eurostat ([europa.eu.int/comm/eurostat](http://europa.eu.int/comm/eurostat)). The air transport data are from the International Civil Aviation Organization's (ICAD's) *Civil Aviation Statistics of the World* and ICAO staff estimates.

## Technical notes

### Tables

**Table 9-1. Electric power consumption per capita.**

This table refers to per capita electricity consumption, which means the production of power plants and combined heat and power plants, less distribution losses, and own use by heat and power plants (IEA and UN *Energy Statistics Yearbook*).

**Table 9-2. Energy production and use, 1980 and 2000.**

This table presents three indicators. *Energy production* refers to commercial forms of primary energy—petroleum (crude oil, natural gas liquids, and oil from nonconventional sources), natural gas, solid fuels, and primary electricity—all converted into oil equivalent (IEA and UN *Energy Statistics Yearbook*). *Commercial energy use* is indigenous production plus imports and stock changes, minus exports and international marine bunkers (IEA and UN *Energy Statistics Yearbook*). *Electric power transmission and distribution losses* include losses in transmission between sources of supply and points of distribution and in the distribution to consumers, including pilferage. Production less transmission and distribution losses, own use, and transformation losses is equal to end-use electricity consumption (IEA and UN *Energy Statistics Yearbook*).

**Table 9-3. Telephone, radio, and television availability, 1995–2002.**

This table presents data for six communication indicators. Telephone main lines (ITU) refer to telephone lines connecting a customer's equipment to the public-switched telephone network,

where main line is normally identified by a unique number. Mainlines are presented for every 1,000 people (Table 1.2). *Waiting list* shows the number of applications (in thousands) for a connection to a main line that have been held up by a lack of technical capacity (ITU). *Cost of local call* is the cost of a three-minute call within the same exchange area using the subscriber's equipment (that is, not from a public phone) (ITU). *Mobile phones* refer to users of portable telephones who subscribe to an automatic public mobile telephone service using cellular technology that provides access to the public switched-telephone network, per 1,000 people (Table 1.2)(ITU). *Radios* are the estimated number of radio receivers in use for broadcast to the general public, per 1,000 people (Table 1.2) (*UNESCO Statistical Yearbook*). *Television sets* are the estimated number of television sets in use, per 1,000 people (Table 1.2) (ITU).

**Table 9-4. Personal computers and Internet use.**

*Personal computers* are self-contained computers designed to be used by a single individual. *Internet hosts* are computers with active Internet Protocol (IP) addresses connected to the Internet. All hosts without a country code identification are assumed to be located in the United States. *Internet users* are people with access to the worldwide network. The data on personal computers and Internet users are from the ITU. They are reported in the ITU's *World Telecommunication Development Report* (2003), and the *World Telecommunication Indicators Database* (2003b). The data on Internet hosts are from the Internet Software Consortium ([www.isc.org](http://www.isc.org)).

**Table 9-5. Vehicle ownership.** Vehicles (International Road Federation) include all forms of road transportation, except buses. They are expressed as the number of vehicles per 1,000 people (Table 1.2).

**Table 9-6. Road-to-population ratio.** This table presents the ratio of 1,000 kilometers of paved or unpaved road (International Road Federation) per 1 million people (Table 1.2).

**Table 9-7. Paved primary roads.** This table presents paved primary roads, that is, those that have been sealed with asphalt or similar road-bonding material (International Road Federation) as a ratio to total roads and then shows the percentage that is in good condition (World Bank data).

**Table 9-8. Rail goods traffic-to-\$PPP GDP ratio.** This measures the tonnage of goods per million dollars of GDP measured in purchasing power parity (PPP) terms (World Bank data).

**Table 9-9. Rail load-to-locomotive ratio.** This is the volume of rail-transported goods (measured in millions of metric tons per kilometers traveled) per single locomotive (World Bank data).

**Table 9-10. Air transport.** *Aircraft departures* are the number of domestic and international takeoffs of air carriers registered in the country. *Passengers carried* include both domestic and international aircraft passengers of air carriers registered in the country. *Air freight* is the sum of the metric tons of freight, express, and diplomatic bags carried on each flight stage (the operation of an aircraft from takeoff to its next landing) multiplied by the stage distance for air carriers registered in the country. The air transport data are from the International Civil Aviation Organization's (ICAO's) *Civil Aviation Statistics of the World* and ICAO staff estimates.

### Methodology used for regional aggregations and period averages in Chapter 9

Table	Aggregations <sup>a</sup>				Period averages <sup>b</sup>
	(1)	(6)	(7)	(8)	(1)
9-1		x			x
9-2					
Columns 1-4	x				
Columns 5-6				x	
9-3					
Columns 1-2, 4-6		x			
Column 3				x	
9-4					
Columns 1-2		x			
Column 3	x				
9-5		x	x		x
9-6		x	x		x
9-7					
Columns 1-8				x	
Column 9		x			
9-8				x	x
9-9		x	x		x
9-10	x				

Note: Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## Privatization of Public Enterprises

In the past, the dominance of the public enterprise sector in most African economies warranted the collection and publication of the sector's performance. With its diminishing size and importance due to privatization, it is no longer informative to produce such data. Instead, as privatization programs advance to maturity, it will become important to track the performance of private sector businesses. In the meantime, measurement of the level of privatization activity is a useful gauge of the decreasing role of governments in commercial business; conversely, it indicates how much of state-owned commercial activity has been transferred to the private sector. To the extent that data are available, it is also possible to measure how privatization has, over time, contributed to government revenues and mobilized savings and investment. However, this measurement is by no means precise or easy to obtain, partly because of incomplete and inconsistent data but also because of redefinitions of the public enterprise sector. For example, some enterprises, notably those formerly in a monopolistic position, are being split in order to separate their commercial, social, developmental, and regulatory activities. In some cases, separate operating divisions or geographically distinct assets are sold separately. And in yet other cases, commercial and semi-commercial activities are being separated out from government ministries and other agencies to become redefined as "commercial

enterprises." These include, for example, business centers, media, and some training institutes. So, the public enterprise sector, as defined several years ago, has changed. Nevertheless, the well over 3,500 privatization transactions that were reported across Africa up to the end of 2002 have brought about fundamental changes:

- The fiscal burden of public enterprises has been reduced or eliminated.
- Privatization receipts have contributed to a reduction in fiscal deficits.
- Privatization has attracted foreign direct investment both to acquire enterprises and for post-privatization investment in those businesses.
- The process has stimulated private sector development by making investment opportunities available, spurring capital market development, and contributing to a more competitive business environment.
- Because it is a politically sensitive subject, the process has highlighted the need for transparency and public accountability.

The tables presented in this chapter summarize data contained in the World Bank's Africa Privatization Database, which is accessible through the Internet:

[www4.worldbank.org/afr/database/afrpriv/plquery.cfm](http://www4.worldbank.org/afr/database/afrpriv/plquery.cfm)

## 10-1. Summary of privatization of public enterprises

	Total number of trans- actions	Total sales		Transactions completed					Transactions by sector

## Technical notes

### Tables

**Table 10-1. Summary of privatization of public enterprises.** For purposes of monitoring and reporting on privatization activity, all reported transactions involving a sale of assets or shares (however small) or the formal yielding of management control (as through a management contract) are included in the World Bank's Africa Privatization Database. Hence, in the table, *privatization* is used generically to include (a) the sale or disposal of some or all of the assets of public enterprises, (b) the sale of government-owned shares in enterprises, (c) the reduction in equity percentage held by a government through share dilutions or through transfer of enterprise assets to a new joint venture, (d) liquidations, (e) leases, and (f) management contracts. Sometimes, the process of privatizing an enterprise involves several consecutive transactions (for example, a sale of a block of shares to a core investor and a subsequent initial public offering). The table summarizes the data contained in the Africa Privatization Database, which originate from national privatization agencies and other sources. The data are frequently updated, and changes to previous entries occur as more information becomes available. There are a few instances where previously reported privatizations are removed from the database because a transaction has been nullified on account of non-fulfillment of contractual conditions on the part of one of the parties. For financial data, the term *sale value* is preferred since the use of the term *proceeds* might imply the value of amounts actually paid. In practice, some deals are structured

so that new investors may acquire assets or shares on deferred terms. Also, it should be noted that (a) in the cases of some subsidiary companies, the cash proceeds are not paid to government but instead go to the parent company; and (b) for official liquidations, the proceeds are paid to the liquidator who first applies them toward settling enterprise debts.

During the revision of the Africa Privatization Database, the data in the category "Other" from previous ADI versions were reallocated across the Financial, Manufacturing, and Services sectors. Simultaneously, data in "Trade" were incorporated into "Industry." The improvement resulted in a lower total number of transactions, but the data quality is improved.

**Table 10-2. Divestiture methods employed (to end 2002).** The table shows the various privatization methods employed in each country. The methods employed could not be confirmed for all transactions. *Direct sales* refers to a transaction which was negotiated directly with one party and which was not the outcome of a competitive bidding process. However, in some cases a direct sale was concluded (on a non-competitive basis) as a result of a failure of an earlier competitive bidding process. *Preemptive right* refers to transactions whereby a government has sold shares to an existing private shareholder (or shareholders) who exercised preemptive rights to acquire those shares in accordance with specific provisions of the company's charter (Articles of Association). In some cases, the charter specified the amount to be paid per share or the formula for calculating that

amount; in other cases it has been the subject of negotiation. *Joint ventures* refer to the type of transaction whereby a government concluded a deal (usually with a foreign investor) involving the formation of a new company in which the government's equity contribution was in the form of the major assets or all assets of a public enterprise. The remaining shell company would then be maintained only as a book company or would be liquidated; if it were liquidated it would not be included as a liquidation since this would be double counting. Transactions labeled *Trustees* refer to privatizations achieved by transference of shares of a public enterprise to a trustee for onward sale—at a later date or over a period—to the public or to selected segments of the public. *Restitutions* are those transactions whereby a company has been handed back to a previous owner from whom the company had been expropriated. *Other sales* includes sundry methods, such as enterprises donated by governments to local communities, but principally comprises transactions where the method of privatization was not reported.

**Table 10-3. Progress in privatization: ownership and control changes (2002).** This table presents the inferred outcome of privatization transactions on the ownership and control of enterprises or their assets.

Ownership changes are important in indicating the effect that privatization transactions may or may not have on the enterprises and in indicating the extent of a government's willingness and/or ability to exit from equity participation in commercial activity. Although a government's influence is not necessarily restricted by its equity participation, it is generally assumed that once a government owns less than 50 percent of the voting shares of a company, that company is "private" and the private shareholders (except in the instance of exercise of golden share rights) have management control of the company. Ownership control is usually unaffected when government continues to be a majority shareholder or sells a minority interest. Concessions, leases, and management contracts are assumed not to have affected ownership rights but to have transferred management control to the private sector for a defined period. The table shows the number of reported transactions where governments have (a) fully sold wholly- or majority-owned enterprises, (b) sold shares and transferred ownership control but retained a minority equity interest, (c) sold shares but retained ownership control, (d) sold a proportion of a minority stake, and (e) conducted other transactions where management control has been ceded.

### Methodology used for regional aggregations and period averages in Chapter 10

<i>Table</i>	<i>Aggregations<sup>a</sup></i>		<i>Period averages<sup>b</sup></i>
	<i>(1)</i>	<i>(2)</i>	<i>(1)</i>
10-1	X		
10-2	X		
10-3	X		

Note: Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## Labor Force and Employment

**T**his chapter presents data on the level and structure of the labor force. The distribution of the labor force into various industrial activities is also given, as well as the participation rates of the population in economic activities. Information is also presented on average wages in different sectors.

The treatment of statistics on public sector employment is not consistent among countries. The scope covered often varies. While some countries include the education and health sectors, others leave them out. Staff of local, regional, and state or provincial governments are likewise treated differently.

The stipulations on wages take different forms among African countries. While some countries have a minimum wage per hour worked, others stipulate a minimum monthly wage for a worker. To permit some measure of comparability, we have computed and reported the monthly average earnings per wage earner. These earnings are further converted to U.S. dollars at the *Atlas* exchange rate. These data should be used with caution because some countries have more than one minimum wage rate based on the industry and the occupation within the industry as well as on the region of the country concerned.

The definition of labor force or economically active population is that used by the International Labor Organization (ILO), which follows the UN System of National Accounts (SNA). The labor force is measured by dividing economically active persons into two categories: employed and unemployed. Caution in the use of the data is necessary because, as pointed out in the ILO's *World Labour Report 1* (1987), many persons do not clearly come within one of these categories or the other. Many are visibly underemployed in that they work less than full time. Others work full time but earn less than a subsistence income. Some of the unemployed may even be voluntarily idle.

The comparability of the data is further hampered by the fact that practices vary among countries as regards the treatment of such groups as armed forces, inmates of institutions, persons living on reservations, persons seeking their first job, seasonal workers, and persons engaged in part-time economic activities. In some countries, all or part of these groups are included among the economically active, while in others they are treated as inactive. In addition, the extent to which family workers, particularly females, who assist in family enterprises are included among the enumer-

ated economically active population varies considerably from country to country. Further, in some countries the statistics of the economically active relate only to employed and unemployed persons above a specified age, while in others there is no such age provision.

The reference period is also an important factor of difference, especially in regard to the classification of the labor force according to industry. In some coun-

tries, such classification refers to the actual position of each individual on the day of the census or survey date, while in others the data recorded refer to the usual position of each person, generally without reference to any given period of time.

The sources for the tables in this chapter are various issues of the ILO's *Yearbook of Labour Statistics*, and electronic ILO files kept in World Bank SIMA.

## Technical notes

### Tables

**Table 11-1. Number and gender structure of the labor force.** The data presented here (ILO data) provide the total number of persons in the labor force and the percentage that is female. *Labor force* refers to “economically active” persons, including the armed forces and the unemployed but excluding housewives and students. The *economically active* population comprises all persons who furnish the labor to produce economic goods and services, as defined by the SNA, during a specified period. The production of economic goods and services should include all production and processing of primary products, whether for the market, for barter, or for own consumption; the production of all other goods and services for the market; and, for households that produce such goods and services for the markets, the corresponding production for own consumption.

**Table 11-2. Children under 14 working in the labor force.** This table (ILO data) shows the percentage of children between the ages of 10 to 14 who participate in the labor force.

**Table 11-3. Unpaid family workers as share of active workers.** This table (ILO data) shows the percentage of family members—male and female—who are active workers but receive no compensation for their services.

**Table 11-4. Industrial structure of the labor force.** The industrial structure of the labor force can often indicate the relative level of development of the

economy. This table (ILO data) shows the distribution of the labor force among the various sectors of economic activities. The agriculture sector includes farming, animal husbandry, hunting, forestry, and fishing. The industry sector includes mining and quarrying, manufacturing, construction and public works, electricity, water, and gas. All other branches of activity are included in services.

**Table 11-5. Industrial structure of economically active population.** This is the percentage of the economically active population working in agriculture, industry, or services. Data are shown for males and females (ILO data).

**Table 11-6. Wages in agriculture.** Data are from the *ILO Yearbook of Labour Statistics* (1988, 1993, 1994, 1995, 1998, and 2003) and show the monthly earnings at the average wage converted to U.S. dollars at the official exchange rates in the countries concerned. Earnings here are limited to wages and salaries of employees, unless otherwise specified. They include remuneration for time not worked, such as for annual vacation, other paid leave or holidays, bonuses and gratuities, and housing and family allowances paid by the employer. They exclude employers’ contributions to social security and pension schemes and the benefits received by employees under these schemes, as well as severance and termination pay.

These earnings do *not* reflect workers’ disposable or net earnings since they include gross wages before deductions, such as taxes or social security contributions.

International comparisons of wages in agriculture should be interpreted with caution because of the wide variety of coverage variations, mainly as a result of the form of remuneration, the nature of the work, and the length of the working day.

Data for Botswana are for nationals only. Data for Egypt are for establishments with 10 or more persons employed. Data for Kenya include the value of payments in kind. Data for Malawi include forestry and fishing. Data for the Seychelles exclude hunting. Data for Swaziland are for skilled male workers. Data for Zimbabwe refer to all persons engaged.

The following countries' data are based upon ISIC Revision 2: Ghana, Guinea, Kenya, Malawi, Namibia, South Africa, Sudan, Swaziland, and Zimbabwe.

The following countries' data are based upon ISIC Revision 3: Algeria, Botswana, Egypt, Eritrea, The Gambia, Mauritius, and the Seychelles.

Figures for Egypt were converted from weekly to monthly earnings using a rate of 4.3 weeks per month. Figures for Tunisia were converted from daily to monthly using a rate of 22 days per month.

**Table 11-7. Wages in manufacturing.** Data are from *ILO Yearbook of Labor Statistics* (1988, 1993, 1994, 1995, 1998, and 2003). Refer to the definitions in Table 11-6.

Data for Botswana are for nationals only. Data for Egypt are for establishments with 10 or more persons employed. Data for The Gambia were collected in enterprises with five or more employees, and the survey results are influenced by a low response rate. Data for Kenya include the value of payments in kind. Data for Swaziland are for skilled male workers. Data for Zimbabwe refer to all persons engaged.

Figures for Egypt were converted from weekly to monthly earnings using a rate of 4.3 weeks per month.

**Table 11-8. Wages in mining and quarrying.** Data are from the *ILO Yearbook of Labour Statistics* (1988, 1993, 1994, 1995, 1998, and 2003). Refer to the definitions in Table 11-6.

Data for Botswana are for nationals only. Data for Egypt are for establishments with 10 or more persons employed. Data for Kenya include the value of payments in kind. Data for the Seychelles include con-

struction. Data for Swaziland are for skilled male workers. Data for Zimbabwe refer to all persons engaged.

Figures for Egypt were converted from weekly to monthly earnings using a rate of 4.3 weeks per month.

**Table 11-9. Wages in construction.** Data are from *ILO Yearbook of Labor Statistics* (1988, 1993, 1994, 1995, 1998, and 2003). Refer to the definitions in Table 11-6.

Data for Botswana are for nationals only. Data for Egypt are for establishments with 10 or more persons employed. Data for The Gambia were collected in enterprises with five or more employees, and the survey results are influenced by a low response rate. Data for Kenya include the value of payments in kind. Data for Swaziland are for skilled male workers. Data for Zimbabwe refer to all persons engaged.

Figures for Egypt were converted from weekly to monthly earnings using a rate of 4.3 weeks per month.

**Table 11-10. Wages in transport, storage, and communications.** Data are from the *ILO Yearbook of Labour Statistics* (1988, 1993, 1994, 1995, 1998, and 2003). Refer to the definitions in Table 11-6.

Data for Botswana are for nationals only. Data for Egypt are for establishments with 10 or more persons employed. Data for the Gambia were collected in enterprises with five or more employees, and the survey results are influenced by a low response rate. Data for Kenya include the value of payments in kind. Data for Swaziland are for skilled male workers. Data for Zimbabwe refer to all persons engaged.

Figures for Egypt were converted from weekly to monthly earnings using a rate of 4.3 weeks per month.

**Table 11-11. Wages in community, social, and personal services.** Data are from the *ILO Yearbook of Labour Statistics* (1988, 1993, 1994, 1995, 1998, and 2003). Refer to the definitions in Table 11-6. This sector comprises public administration and defense; sanitary and similar services; educational services; research and scientific institutes; medical, dental, and other health services; welfare institutions; business, professional, and labor associations; and other social and community services.

Data for Botswana are for nationals only. Data for Egypt are for establishments with 10 or more persons employed. Data for The Gambia were collected in enterprises with five or more employees, and the survey results are influenced by a low response rate.

Data for Kenya include the value of payments in kind. Data for Swaziland are for skilled male workers. Data for Zimbabwe refer to all persons engaged.

Figures for Egypt were converted from weekly to monthly earnings using a rate of 4.3 weeks per month.

## Methodology used for regional aggregations and period averages in Chapter 11

Table	Aggregations <sup>a</sup>		
	(1)	(6)	(8)
11-1			
Columns 1-3	x		
Columns 4-6		x	
11-2		x	
11-3			x
11-4		x	
11-5		x	
11-6			x
11-7			x
11-8			x
11-9			x
11-10			x
11-11			x

*Note:* Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

## Aid Flows

Official development assistance (ODA) consists of concessional financial flows that aim to promote economic development and welfare. ODA disbursements from bilateral and multilateral sources became increasingly important to Africa in the second half of the 1980s. For many countries, the foreign savings made available through ODA flows are equivalent to a sizable share of GDP and to the bulk of their domestic investment. Thus, monitoring aid flows is of special importance because of their significance to the economic performance of the region.

The tables in this chapter show data on net ODA flows and their relative importance to key economic and demographic indicators in recipient countries, real growth in net ODA flows to Sub-Saharan Africa from major donors or donor groups, and the share of each donor's worldwide aid portfolio allocated to Sub-Saharan Africa.

These flows are concessional in character and contain a grant element of at least 25 percent (based on a standard 10 percent discount rate). Net ODA disbursements equal gross ODA disbursements less principal repayments (amortization) of previous ODA loans.

ODA includes both grants (inflows of unrequited transfers from official sources) for current and capi-

tal expenditures and disbursements of concessional loans. However, because of different sources and definitions of data, ODA flows shown in this chapter will not necessarily equal those that could be calculated by adding net disbursements of official concessional long-term loans (Table 6-1 less Table 6-4) and net official transfers (Tables 5-6 and 5-9). For example, one of the reasons for differences is that the flows shown here include "off-shore" disbursements of grants, primarily for technical cooperation, which are generally excluded from transfers as recorded in the balance of payments (Tables 5-6 and 5-9). Other reasons include possible differences in the timing of the recording of disbursements and in the recording of multilateral ODA.

The data on net ODA disbursements are taken from the most recent electronic version of the OECD's *Geographic Distribution of Aid Flows to Developing Countries*. The tables include only those flows for which the recipient is specified in creditor reports.

To determine growth rates (based on constant price series), import price deflators (from the World Bank) have been used to deflate the current price series, regardless of the type of donor, to indicate the volume of imports that aid can finance over time.

## Technical notes

### Tables

**Table 12-1. Net aid from all donors, nominal.** This table represents the total of Tables 12-2 through 12-4.

**Table 12-2. Net aid from DAC donors, nominal.** This table shows net aid from OECD's Development Assistance Committee (DAC) donors, which include Australia, Austria, Belgium, Canada, Denmark, Finland, France, the Federal Republic of Germany before reunification, Italy, Japan, the Netherlands, Norway, Sweden, Switzerland, the United Kingdom, and the United States (OECD data). (Ireland and New Zealand have been excluded in this compilation because their aid to Africa is negligible.)

**Table 12-3. Net aid from non-DAC bilateral donors, nominal.** This is net aid from Organization of Petroleum Exporting Countries (OPEC), the former Council for Mutual Economic Assistance (CMEA) countries, and China (OECD data). OPEC countries are Algeria, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. The former CMEA countries are Bulgaria, Czechoslovakia, the former German Democratic Republic, Hungary, Poland, Romania, and the former Soviet Union.

**Table 12-4. Net aid from multilateral donors, nominal.** This includes net aid, most notably from the African Development Fund, the European Development Fund for the Commission of the European Communities, the International Development Asso-

ciation (IDA), the International Fund for Agricultural Development, Arab/OPEC-financed multilateral agencies, and UN programs and agencies (OECD data). The UN programs and agencies include mainly the UN Technical Assistance Programme, the UN Development Programme (UNDP), the UN High Commissioner for Refugees, the UN Children's Fund (UNICEF), and the World Food Programme. Arab/OPEC-financed multilateral agencies include the Arab Bank for Economic Development in Africa, the Arab Fund for Economic and Social Development (AFESD), the Islamic Development Bank, the OPEC Fund for International Development, the Arab Authority for Agricultural Investment and Development, the Arab Fund for Technical Assistance to African and Arab Countries, and the Islamic Solidarity Fund. Aid flows from the IMF Trust Fund and Structural Adjustment Facility (SAF) are also included.

**Tables 12-5, 12-6, 12-7, and 12-8. Net aid from all donors, from DAC donors, from non-DAC bilateral donors, and from multilateral donors (OECD data).**

**Tables 12-9, 12-10, and 12-11. Net aid from all donors, from DAC donors, and from multilateral donors as a share of recipient GDP.** These tables show the relative importance of these aid flows to recipients' economies. They are obtained by dividing figures in Tables 12-1, 12-2, and 12-4 by GDP data from Table 2-5, which reflect current prices and exchange rates. For a given level of aid flows, devalua-

tion of a recipient's currency may inflate the ratios shown in the table. Thus, trends for a given country and comparisons across countries that have implemented different exchange rate policies should be interpreted carefully.

**Tables 12-12, 12-13, and 12-14. Net aid from all donors, from DAC donors, and from multilateral donors as a share of recipient GDI.** These tables are obtained by dividing figures in Tables 12-1, 12-2, and 12-4 by GDI (World Bank country desks). These data highlight the relative importance of the indicated aid flows in maintaining and increasing investment in these economies. The same caveats mentioned above apply to their interpretation. Furthermore, aid flows do not exclusively finance investment (for example, food aid finances consumption), and the share of aid going to investment varies across countries.

**Tables 12-15, 12-16, and 12-17. Net aid per capita from all donors, from DAC donors, and from multilateral donors.** These data are calculated by dividing figures in Tables 12-1, 12-2, and 12-4 by midyear population (Table 1-2). These ratios offer some indication of the importance of aid flows in sustaining per capita income and consumption levels (shown in Tables 2-19 and 2-20, respectively), although bearing in mind that exchange rate fluctuations, the actual rise of aid flows, and other factors vary across countries and over time.

## Figures

The following indicators have been used to derive the figures in this chapter.

**Figure 12-1.** Total net aid as a share of recipient GDP (Table 12-9).

**Figure 12-2.** Total net aid per capita (Table 12-15).

### Methodology used for regional aggregations and period averages in Chapter 12

Table	Aggregations <sup>a</sup>		Period averages <sup>b</sup>	
	(1)	(2)	(1)	(2)
12-1	x		x	
12-2	x		x	
12-3	x		x	
12-4	x		x	
12-5	x			x
12-6	x			x
12-7	x			x
12-8	x			x
12-9		x	x	
12-10		x	x	
12-11		x	x	
12-12		x	x	
12-13		x	x	
12-14		x	x	
12-15		x	x	
12-16		x	x	
12-17		x	x	

*Note:* Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## Social Indicators

**T**his chapter provides indicators in the areas of demography, health, education, and gender issues in development. These indicators can be useful in evaluating and monitoring the social impact of development progress, aid flows, and structural adjustment policies.

The chapter presents such indicators as dependency ratio, urbanization, crude death rate, life expectancy at birth, infant mortality rate, child mortality rate, immunization rates for children, maternal death rate, and number of people per physician. These indicators are an indirect measure of the physical well-being of the population. In the same vein, such indicators as literacy rate among adults, school enrollment ratios by gender, and pupil-teacher ratio give some picture of the progress being made in education and training. Social indicators refer to phenomena that are inherently more qualitative than macroeconomic variables and thus need to be interpreted cautiously. Further caution is called for because of the particular limitations of the data. One of these limitations is the paucity—or even nonexistence—of data on certain indicators in many of the countries covered. This is especially true of indicators dealing with gender issues. Many countries have no data showing the gender breakdown of several social indicators.

Even when data are available, comparison among countries is limited because of varied practices in data gathering and reporting. Often the countries report survey data that cover different portions of the nation. Sometimes surveys are limited to only the urban areas—the largest cities—or the capital city alone. This is especially true of the health indicators. Such indicators as immunization rates for children under one year of age, percentage of births attended by health personnel, infant mortality rate, child mortality rate, and maternal death rate are often based on surveys of a handful of hospitals in the urban areas.

Another source of limitation is the definition of terms, which may differ from country to country. Some countries, for example, consider an institution as a “private school” only if it receives no form of financial support from the government, while others classify as “private” all schools not run by the government, whether or not they receive financial support from the government. In like manner, some countries include personnel other than doctors and trained nurses under “medical personnel.”

Cultural norms may also affect the reported data. This is especially true for gender issues. In some countries, it is assumed that no woman can be the head of any household that also contains an adult male. In

population censuses, therefore, enumerators and respondents simply take such assumptions for granted, reporting a male rather than a female as head of the household or family (see United Nations, *The World's Women: Trends and Statistics (1970–90)*). This distorts the true picture of the percentage of households headed by women.

The main source for this chapter is the *World Development Indicators* in the World Bank Statistical Information Management Analysis Database (SIMA), which contains electronic information as reported by a number of institutions and agencies in the socio-

economic field, such as the United Nations, UNICEF, UNESCO, World Health Organization (WHO), the UNDP, the Joint United Nations Programme on HIV/AIDS (UNAIDS), and the Economic Commission for Africa (ECA). Other sources of data also include reports and publications on children, health, human development, education, and population from various agencies, including the World Bank.

In this chapter, columns headed by a period (for example, 1995–99) show data for the latest available year within the period.

## 13-1. Age and gender structure of the population

## *Technical notes*

### **Tables**

**Table 13-1. Age and gender structure of the population.** Age and gender structure of the population (UN and World Bank data) is the distribution of the total population according to age and gender. Only the female composition of the population is presented, as the male composition can easily be figured as the residual. Figures relate to midyear populations as estimated from the latest censuses. Age dependency ratio is calculated as the ratio of dependents—population under age 15 and above age 65—to the working age population—those aged 15 to 64.

**Table 13-2. Poverty.** This table presents selected indicators for comparing the incidence and extent of urban and rural poverty. The first indicator uses purchasing power parities rather than official exchange rates to calculate GDP per capita: a measure of the overall mean level of poverty at the national level. The next indicator is the national poverty head count, which shows the percentage of the population living below the poverty line deemed appropriate for the country by its authorities. The poverty line is defined as the level below which adequate standards of nutrition, shelter, and personal amenities cannot be assured. Since these levels are country specific, cross-country comparisons cannot be made. The next indicator, however, uses a relative concept of poverty, which does allow such comparisons. It shows the percentage of the urban and rural populations living on less than two-thirds of the mean national per capita income. Associated with these indicators are the urban and rural

Gini coefficients, which describe the level of inequality in urban and rural income distributions. The last indicator shows the percentage of household income spent on food (UNDP, World Bank, Penn World Tables, and National Household Surveys).

**Table 13-3. Income distribution.** These data present the share of income held by the richest and poorest population groups in a country (World Bank data and national household surveys).

**Table 13-4. Urbanization.** This table presents the number of persons living in urban areas as a percentage of the total population. Average annual percentage growth rates are shown separately for the urban population and the total population. The urban population percentages are based on the number of persons living in areas defined as “urban” according to national definitions of this concept. Since national definitions differ, cross-country comparisons should be made with caution (World Bank data).

**Table 13-5. Components of population change.** Three determinants of population change are presented here: total fertility rate, crude birth rate, and crude death rate. Crude birth rate is the number of births per 1,000 population in a given year. Crude death rate is the number of deaths per 1,000 population in a given year. Total fertility rate is the average number of children that would be born alive to a woman during her lifetime, if she were to bear children at each age in accordance with prevailing age-specific fertility rates (World Bank data).

**Table 13-6. Survival prospects.** This table shows four health-related indicators: life expectancy at birth, infant mortality rate, child mortality rate, and maternal mortality rate.

Life expectancy at birth is the number of years a newborn infant would live if prevailing patterns of mortality at the time of its birth were to stay the same throughout its life. Infant mortality rate is the number of deaths of infants under one year of age per 1,000 live births in a given year. Child mortality rate is the number of deaths of children under five years of age per 1,000 live births in a given year. Maternal mortality rate is the annual number of deaths of women from pregnancy-related causes per 100,000 live births.

**Table 13-7. HIV/AIDS estimates and data, end 2001.** Data reported on this table give the estimated number of people living with HIV/AIDS. The data are broken down into adults aged 15 and above, and children below the age of 15. Adult rate is the total number of adults (men and women) living with HIV/AIDS divided by the corresponding midyear population. Orphans are defined as children who lost their mother or both parents to AIDS when they were under the age of 15 (UNAIDS data).

**Table 13-8. Immunization and ORT use.** This is the percentage of children under one year of age immunized against tuberculosis, DPT, polio, and measles. It also gives the use rate of oral rehydration therapy (ORT) among children under five years of age. DPT refers to diphtheria, pertussis (whooping cough), and tetanus. ORT use is the percentage of all cases of diarrhea in children under five years of age treated with oral rehydration salts or an appropriate household solution (WHO data).

**Table 13-9. Child malnutrition.** Data reported in this table give the percentage of children and babies suffering from the nutrition-related problems of having low birthweight and being underweight, or suffering from wasting and stunting. Figures are also given on the extent of breastfeeding among nursing mothers.

*Low birthweight* refers to babies born weighing less than 2,500 grams. *Underweight* refers to children under the age of five weighing two standard deviations

below the median weight for age of the reference population. *Wasting* refers to children of ages 12 through 23 months weighing two standard deviations below the median weight for height of the reference population. *Stunting* refers to children of ages 24 through 59 months standing two standard deviations below the median height-for-age of the reference population (UNDP various years, WHO and World Bank data).

**Table 13-10. Access to sanitation facilities.** Table 13-10 shows the percentage of the population with access to sanitation facilities (WHO data). Urban areas with access to sanitation facilities are defined as urban populations served by connections to public sewers or household systems, such as pit privies, pour-flush latrines, septic tanks, communal toilets, and other such facilities. Rural populations with access were defined as those with adequate disposal, such as pit privies and pour-flush latrines. Application of these definitions may vary, and comparisons can therefore be misleading.

**Table 13-11. Access to safe water.** This table refers to the percentage of the population with reasonable access to safe water supply, which includes treated surface waters or untreated but uncontaminated water, such as that from springs, sanitary wells, and protected boreholes. In an urban area, this may be a public fountain or standpost located not more than 200 meters away. In rural areas, it implies that members of the household do not have to spend a disproportionate part of the day fetching water. Data are presented separately for total, urban, and rural population (WHO data).

**Table 13-12. Health expenditure.** This table shows total health expenditure as percentage of GDP and on a per capita basis—both in U.S. dollars and PPP terms. The ratio to GDP is also shown for public and private expenditure. *Total expenditure* is the sum of public and private health expenditures. It covers the provision of health services (preventive and curative), family planning activities, nutrition activities, and emergency aid designated for health, but does not include provision of water and sanitation. *Public expenditure*

consists of recurrent and capital spending from government (central and local) budgets, external borrowings and grants (including donations from international agencies and nongovernmental organizations, and social (or compulsory) health insurance funds. *Private expenditure* includes direct household (out-of-pocket) spending, private insurance, charitable donations, and direct service payments by private corporations (WHO, IMF, and World Bank data).

**Table 13-13. Health care.** Indicators presented here are population per physician, population per hospital bed, the percentage of births attended by trained health personnel, and access to health services. The figure for physicians includes, in addition to the total number of registered practitioners in the country, medical assistants whose medical training is less than that of qualified physicians, but who nevertheless dispense similar medical services, including simple surgical operations. The definition of recognized medical practitioners differs among countries. Hospital beds include inpatient beds available in public, private, general, and specialized hospitals and in rehabilitation centers. In most cases acute and chronic care are included. *Births attended* refers to births attended by physicians, nurses, midwives, trained primary healthcare workers, or trained traditional birth attendants. *Access to health services* refers to the percentage of the population that can reach appropriate local health services by the local transport in no more than one hour (WHO and World Bank data).

**Table 13-14. Illiteracy rate.** This table shows the share of illiterate adults in the total adult population aged 15 years and over. Literacy is defined as the ability to read and write. A person who can, with understanding, both read and write a short, simple statement about his everyday life is literate. Persons who can read, but cannot write, are included with illiterates. Figures are shown separately for males, females, and both genders combined (UNESCO data).

**Tables 13-15. Primary school gross enrollment ratio.** This is the total number of pupils enrolled at the primary level of education, regardless of age, ex-

pressed as a percentage of the population corresponding to the official school age of primary education in a given country. Data are given separately for males, females, and both genders combined. Figures shown may be more than 100 percent since total enrollment includes pupils above and pupils below the primary school age, as well as repeaters (UNESCO data).

**Tables 13-16. Pupil progression.** This table provides two education indicators. *Percentage of cohort reaching grade 5* shows the percentage of children starting primary school who eventually attain grade 4. The estimate is based on the Reconstructed Cohort Method, which uses data on enrollment and repeaters for two consecutive years. *Progression to secondary school (general)* is the number of new children in the first grade of secondary school (general) divided by the number of children enrolled in the final grade of primary school in the previous year (according to the country's duration of primary education (UNESCO and World Bank data).

**Table 13-17. Net primary enrollment ratio.** This is the ratio of the number of children of official school age enrolled in school to the number of children of official school age in the population (UNESCO data).

**Table 13-18. Number of school teachers.** Teachers in both public and private schools are covered in this table. Data refer to both full-time and part-time teachers, excluding other instructional personnel without teaching functions. Figures are shown here separately for primary and secondary schools. *Percentage females* means the number of female teachers expressed as a percentage of total teaching staff (UNESCO data).

**Table 13-19. Pupil/teacher ratio.** This ratio gives the average number of pupils per teacher. Figures are given separately for primary and secondary schools. As teaching staff includes both full-time and part-time teachers, comparability of this ratio between countries may be affected as the proportion of part-time teachers varies greatly from one country to another (UNESCO data).

**Table 13-20. Secondary school gross enrollment ratio.** This is the secondary school equivalent of the data presented in Table 13-15. It gives the total number of students enrolled at the secondary level of education, regardless of age, expressed as a percentage of the population corresponding to the official school age of secondary education. Data are presented separately for males, females, and both genders combined. *Secondary general education* refers to education in secondary schools that provides general or specialized instruction based upon at least four years of previous instruction at the first or primary level, but that does not specifically aim at preparing the pupils directly for a given trade or occupation. Such schools may be called high schools, middle schools, or lycées and offer courses of study whose completion is a minimum condition for admission into universities. In some countries, some of these schools provide both academic and vocational training. These composite secondary schools are considered as equivalent to the academic type of secondary school and are thus classified as secondary *general* (UNESCO data).

**Table 13-21. Public expenditure on education.** This table presents public expenditure on education (UNESCO) first as a percentage of total public expenditure (IMF/*GFS*) and then as a percentage of current GDP (Table 2-5).

**Table 13-22. Economic opportunities of women.** This table shows two indicators. *Female/male ratio*

*of participation in economic activity* shows the number of female workers in relation to the number of male workers. *Female/male ratio in occupational group* shows the breakdown of the first indicator for occupational categories (UNDP data).

**Table 13-23. Household and economic participation of women.** This table presents indicators on gender issues in development. *Households headed by women* (World Bank data) refers to families in which a woman is acknowledged as the head by the other members. The occupational statistics are based on the UN's, *Statistical Yearbook*.

## Figures

The following indicators have been used to derive the figures in this chapter.

**Figure 13-1.** Life expectancy (Table 13-6).

**Figure 13-2.** GDP per capita, based on PPP, 2002 (Table 13-2).

**Figure 13-3.** Urban population as a percentage of total population (Table 13-4).

**Figure 13-4.** Primary school gross enrollment ratio (Table 13-15).

**Figure 13-5.** Maternal mortality (Table 13-6).

### Methodology used for regional aggregations and period averages in Chapter 13

Table	Aggregations <sup>a</sup>					Period averages <sup>b</sup>

*Note:* Regional aggregations are shown in the rows for Sub-Saharan Africa, North Africa, and All Africa. Period averages are shown in the last three columns. This table shows only the methodologies used in this chapter.

a. Regional aggregations: (1) simple total; (2) simple total of the first indicator divided by the simple total of the second indicator (same country coverage); (3) simple total of the gap-filled indicator; (4) simple total of the gap-filled main indicator divided by the simple total of the gap-filled secondary indicator; (5) simple total of the first gap-filled main indicator less the simple total of the second gap-filled main indicator, all divided by the simple total of the secondary indicator; (6) weighted total (by population); (7) median; (8) no aggregation; (9) simple arithmetic mean.

b. Period averages: (1) arithmetic mean (using the same series as shown in the table; i.e., ratio if the rest of the table is shown as ratio, level if the rest of the table is shown as level, growth rate if the rest is shown as growth rate); (2) least-squares growth rate (using main indicator); (3) least-squares growth rate (using main indicator in constant terms, with the rest of the table in current terms).

## Environmental Indicators

**D**ata for this chapter were drawn entirely from the World Resources Institute and reflects tables published in their *World Resources 2002–2004: Decisions for Earth: Balance, Voice and Power*. It includes data on natural resources, their use by sector and the trends in their use, protected resources and those in danger of extinction, commercial energy production and its components, globally threatened species and protection, and management programs.

Until the early 1970s, environmental issues were mainly focused on problems of industrial countries and on such issues as water and air pollution, acid rain, and greenhouse gas emissions. Since the publication of the Club of Rome's *The Limit to Growth* in 1972, however, issues of natural resource depletion and degradation have received considerable attention in assessing environmental factors and their impacts on the development prospects of developing nations. At the national level, environmental concerns revolve around population expansion, desertification, deforestation, and the by-products of energy consumption.

Environmental destruction is not, however, confined by geographic borders. For instance, global warming, said to be caused by greenhouse gas emissions, has become a major global environmental concern. The issue of the greenhouse effect may be subject to controversy at the theoretical level and difficult to prove at the practical level. The fact that industrial wastes

generated in one country cross frontiers and cause environmental damage to other nations is, however, widely acknowledged. Common interests, therefore, compel the international community to jointly work toward a common goal of preserving the environment.

Increasing emphasis on the links between the environment and development, both at the national and international levels, is reflected in the growing number of scientific and analytical studies. Challenging the hegemony of the SNA national income accounting convention, numerous scholarly endeavors are under way to integrate environmental consequences into national income calculations. The argument is made that the SNA methodology overstates national income levels for two reasons. First, it does not account for both the direct and indirect costs of drawing down natural resources. Second, it counts expenditure on resources for environmental protection activities as income. The changes both in methodology and emphasis have created an urgent demand for physical data. The information in this chapter aims to meet this growing demand, notwithstanding the limitations in data coverage and reliability.

The rate of deforestation is of particular concern because the cost of deforestation goes far beyond the losses of forest products, such as timber and fuelwood. There are equally significant indirect costs, including soil erosion; the substitution of animal and

agricultural residues for cooking, which would otherwise be used for fertilizer; and climate changes. Deforestation is caused by many factors, including increased demand for settlement area, cultivation, fuelwood, or a combination thereof. The information in this chapter provides an empirical framework for assessing policy alternatives in reversing the continuing depletion of natural resources.

Data on roundwood production and consumption are important in monitoring the causes of deforestation. In addition, since roundwood is a primary source of energy in developing nations, data on roundwood consumption is essential in analyzing air pollution. For instance, for 1985–87, Africa used close to 88 percent of its roundwood production for fuel and charcoal production, while approximately 12 percent of the roundwood production went to industrial uses. To put these figures in perspective, the corresponding figures for Europe are 16 and 84 percent.

Information on freshwater resources available and on the extent and the methods of their uses can provide a partial basis for analyzing Africa's agricultural

performance, its potential hydroelectric power, and its population's health conditions. Almost all Sub-Saharan African countries use a very small fraction of their internal renewable water resources. For example, Ethiopia, a nation that has suffered from repeated droughts, uses only 2 percent of its water resources. The major problem rests in the uneven geographic distribution of water resources with respect to population density and the state of freshwater drawing technology. The quality of water is as important as the quantity of water available. Water-related disease accounts for 80 percent of all sicknesses and for 90 percent of the 15 million deaths in developing countries each year.

Data on energy production are shown because of related environmental consequences. Biomass fuel, comprising wood fuel and animal and agricultural residues, accounts for 40 to 90 percent of total energy used in Sub-Saharan Africa.

Data on protected areas and endangered species indicate the intentions of countries to safeguard the environment and protect the use of natural resources for future generations.

## 14-1. Forest resources, 1990-2000

	Forest area

Notes: a. Original forest is that estimated to have covered the planet 8,000 years ago given current climate conditions.  
b. Includes frontier and nonfrontier forests.  
c. Frontier forests are large, relatively undisturbed forest ecosystems  
0 = zero or less than half of the unit of measure; .. = not available

## Technical notes

### Tables

These notes are based on technical notes for each table as presented in *World Resources 2002–2004*. They have been edited and shortened for this volume. Readers are urged to consult the original source for details.

**Table 14-1. Forest resources, 1990–2000.** *Total forest* comprises all forest area for temperate countries and the sum of natural forest and plantation area categories.

FAO defines a *natural forest* as a forest composed primarily of indigenous (native) tree species. Natural forests include closed forest, where trees cover a high proportion of the ground and where grass does not form a continuous layer on the forest floor (e.g., broad-leaved forests, coniferous forests, and bamboo forests), and open forest, which FAO defines as mixed forest/grasslands with at least 10 percent tree cover and a continuous grass layer on the forest floor. Natural forests encompass all stands except plantations and include stands that have been degraded to some degree by agriculture, fire, logging, and other factors.

*Plantation* refers to a forest stand established artificially by afforestation and reforestation for industrial and nonindustrial usage. Reforestation does not include regeneration of old tree crops (through either natural regeneration or forest management), although some countries may report regeneration as reforestation. Many trees are also planted for nonindustrial uses, such as village wood lots. Reforestation data often exclude this component. The data presented here reflect plantation survival rates as estimated by FAO.

*Annual percentage change* is shown as a percentage of the exponential growth rate. If negative, these figures reflect net deforestation, which is defined as the clearing of forest lands for all forms of agricultural uses (shifting cultivation, permanent agriculture, and ranching) and for other land uses such as settlements, other infrastructure, and mining. In tropical countries, this includes clearing that reduces tree crown cover to less than 10 percent. Deforestation, as defined here, does not reflect changes within the forest stand or site, such as selective logging (unless the forest cover is permanently reduced to less than 10 percent).

**Table 14-2. Forest ecosystems, 1990–99.** *Closed forests* exclude some woodlands and wooded savanna.

*Original forest as a percentage of land area* refers to the estimate of the percentage of land that would have been covered by closed forest about 8,000 years ago, assuming current climatic conditions, before large-scale disturbance by human society began.

*Current forests* refer to estimated closed forest cover within roughly the past 10 years (this varies by country). Only closed moist forests are given for Africa.

*Frontier forests* are large, relatively intact forest ecosystems. They represent undisturbed forest areas that are large enough to maintain all of their biodiversity, including viable populations of wide-ranging species associated with each forest type.

*Percentage of frontier forests threatened* refers to frontier forests where ongoing or planned human activities such as logging, mining, and other large-scale disturbances will eventually degrade the ecosystem through species decline or extinction, drastic changes

in the forest's age structure, and so forth., and would result, if continued, in the violation of one of the above-mentioned criteria.

*Tropical forests* include all forests located between the Tropics of Cancer and Capricorn. All other forests are put into the *nontropical* category.

*Percentage protected* includes forest areas that fall within the protected areas in the world that are listed as the International Union for Conservation of Nature and Natural Resources' (IUCN's) management categories I-V.

**Table 14-3. Wood production and trade, 1999–2001.**

*Total roundwood production* refers to all wood in the rough, whether destined for industrial or fuelwood uses.

*Industrial roundwood* comprises all roundwood products other than fuelwood and charcoal.

*Processed wood production* includes sawn wood and panels.

*Paper and paperboard* includes newsprint, printing and writing paper, and other paper and paperboard.

*Trade in forest products* is the balance of imports minus exports.

**Table 14-4. Freshwater resources and withdrawals, 1970–2002.**

Annual internal renewable water resources refer to the average annual flow of rivers and groundwater generated from endogenous precipitation. Caution should be used when comparing different countries because these estimates are based on differing sources and dates. These annual averages also disguise large seasonal, inter-annual, and long-term variations. When data for annual river flows from and to other countries are not shown, the internal renewable water resources figure may include these flows. Per capita annual internal renewable water resource data were calculated using 2001 population estimates.

Annual withdrawals as a percentage of water resources refer to total water withdrawals, not counting evaporative losses from storage basins, as a percentage of internal renewable water resources and river flows from other countries. Water withdrawals also include water from desalination plants in countries where that source is a significant part of all water withdrawals.

Per capita annual withdrawals were calculated using national population data for the year of data shown for withdrawals.

Sectoral withdrawals are classified as domestic (drinking water, homes, commercial establishments, public services [for example, hospitals], and municipal use or provision); industry (including water withdrawn to cool thermoelectric plants); and agriculture (irrigation and livestock).

**Table 14-5. Marine and freshwater catches, aquaculture, balance of trade, and fish consumption.**

*Marine and freshwater catches* data refer to marine and freshwater fish, killed, caught, trapped, collected, bred, or cultivated for commercial, industrial, and subsistence use (catches from recreational activities are included where available). Crustaceans and mollusks are included. Statistics for mariculture, aquaculture, and other kinds of fish farming are included in the country totals. Figures are the national totals averaged over a three-year period; they include fish caught by a country's fleet anywhere in the world. Catches of freshwater species caught in low-salinity seas are included in the statistics of the appropriate marine area. Marine catch includes catches of diadromous (migratory between saltwater and freshwater) species.

Data are represented as nominal catches, which are the landings converted to a live-weight basis, that is, the weight when caught.

Landings for some countries are identical to catches.

*Aquaculture* is defined by FAO as "the farming of aquatic organisms, including fish, mollusks, crustaceans, and aquatic plants. Farming implies some form of intervention in the rearing process to enhance production, such as regular stocking, feeding, and protection from predators, etc. [It] also implies ownership of the stock being cultivated. . . ." Aquatic organisms that are exploitable by the public as a common property resource are included in the harvest of fisheries.

*Marine fish* include a variety of species groups such as mullets, sea basses, groupers, snappers, tunas, and mackerels. *Diadromous fish* include sturgeons, river eels, salmons, and trouts. *Freshwater fish* include carps, perches, catfish, and tilapias, among others. Mollusks include freshwater mollusks, oysters, mussels, scallops, clams, abalones, and cephalopods. *Crustaceans* include, among others, freshwater crustaceans, crabs, lobsters, shrimps, and prawns. Data on whales and other marine mammals are excluded from this table.

*Balance of trade* is defined as exports minus imports. Figures are the national totals averaged over a three-year period in millions of U.S. dollars. Imports are usually on a cost, insurance, and freight basis (c.i.f.) (i.e., insurance and freight costs added in). Exports are generally on a free-on-board basis (f.o.b.)—i.e., not including insurance or freight costs. A surplus of imports over exports is shown in parentheses. Trade in *fish* includes fish that is fresh, frozen, chilled, salted, or smoked, as well as fish products and preparations. Trade in *mollusks and crustaceans* includes mollusks and crustaceans that are fresh, chilled, smoked, or derived products. Trade in *fish meal* includes meals, solubles, and so on.

*Per capita annual food supply from fish and seafood* is the quantity of both freshwater and marine fish, seafood, and derived products available for human consumption. Data on aquatic plants and whale meat are excluded from the totals. The amount of fish and seafood actually consumed may be lower than the figures provided, depending on how much is lost during storage, preparation, and cooking, and on how much is discarded. Data are presented in kilograms per capita. Years shown are three-year averages.

**Table 14-6. Energy production by source.** All energy data are shown in a common unit of 1,000 metric tons of oil equivalent (toe) to facilitate comparisons of energy sourcing, consumption, substitution, and conservation. A toe is defined as 41.868 gigajoules.

*Energy production from all sources* is the amount of energy from all sources produced by each country in the year specified. In addition to solid, liquid, and gaseous fuels and nuclear electricity, the total also includes hydropower, geothermal, solar, wind, tidal, wave, combustible renewables and waste, and indigenous heat production from heat pumps. *Per capita* shows the amount produced per person for that country.

Energy production from *solid fuels* is the energy produced from all types of primary coal (i.e., hard coal or lignite). Peat is also included in the category.

Energy production from *liquid fuels* is energy produced from liquid fuels such as crude oil or natural gas liquids.

Energy production from *gaseous fuels* is the amount of energy produced from natural gas.

Energy production from *nuclear fuels* shows the primary heat equivalent of the electricity produced by nuclear power plants. Heat-to-electricity conversion efficiency is assumed to be 33 percent.

*Total electricity generated* is the toe equivalent of the electrical energy produced by thermal, nuclear, geothermal, hydropower (excluding pumped storage production), and other power plants. Electricity generated is not a primary energy source and should not be mistakenly added to the energy production from primary sources presented in this table. These data were converted from gigawatt-hours to toe using a conversion rate of 1Gwh = 86 toe.

**Table 14-7. Energy consumption by economic sector.** The *industry* sector includes energy consumption by the iron and steel industry, chemical industry, nonferrous metals basic industries, nonmetallic mineral products (glass, ceramic, cement, etc.), transport equipment, machinery, mining and quarrying, food and tobacco, paper, pulp and print, wood and wood products, construction, textile and leather, and any unspecified industry.

*Iron and steel* consumption is the energy consumed by the iron and steel industry as a percentage of the total energy consumed by the country.

The *transportation* sector includes all fuel for air, road, and water transport except fuel used for international marine bunkers and for ocean, coastal, and inland fishing. *Air* transportation includes both international and domestic civil aviation. *Road* transportation includes all human and cargo transport along national road networks.

*Agriculture* refers to all agricultural and forestry activity, including ocean, coastal, and inland fishing.

*Commercial and public services* refer to service sectors such as stores, repair shops, and restaurants.

The *residential* sector includes household energy use.

The IEA reports that it can be difficult to distinguish accurately between the agriculture, commercial, and public services sectors and that a figure for “total energy use” is more accurate than totals for the individual sectors.

**Table 14-8. CO<sub>2</sub> emissions from industrial processes, 1999.** This table includes data on industrial additions to the carbon dioxide flux from solid fuels, liquid fuels, gas fuels, gas flaring, and cement manufacturing. The International Energy Agency (IEA) annually calculates emissions of carbon dioxide (CO<sub>2</sub>) from the burning of fossil fuels for most of the countries of the world. The IEA presents data in four categories.

*Total carbon dioxide emissions.* Include emissions from combustion of all fossil fuels (whether solid, liquid, or gaseous) used by a country. Values are reported in thousand metric tons of CO<sub>2</sub>.

*Emissions from solid fuels.* This shows the mass of CO<sub>2</sub> released in the combustion of all coal and coal-based products. Both primary (hard coal and lignite) and derived fuels (patent fuel, coke oven coke, gas coke, BKB, coke oven gas, gas works gas, and blast furnace gas) are included. Peat is also included in this category.

*Liquid fuels.* This represents emissions from combustion of crude oil, natural gas liquids, motor gasoline, gas/diesel oil, aviation gasoline, jet fuels, kerosene, refinery feedstocks, additives, refinery gas, ethane, LPG, heavy fuel oil, naphtha, white spirit, lubricants, bitumen, paraffin waxes, petroleum coke and other petroleum products.

*Gaseous fuels.* This shows emissions from combustion of natural gases (excluding natural gas liquids), occurring in underground deposits, consisting mainly of methane.

*Per capita CO<sub>2</sub> emissions.* These are the amount of CO<sub>2</sub> emitted, on average, from all sources for each person living in the specified country. These estimates do not include bunker fuels used for international transportation due to the difficulty of apportioning these fuels among the countries benefiting from that transport. Emissions are calculated by WRI using data from the IEA and population data from the Population Division of the Department of Economic and Social Affairs of the United Nations Secretariat.

Values for CO<sub>2</sub> emissions by source are calculated by the IEA using the methods and emission factors in the *Revised 1996 IPC Guidelines for National Greenhouse Gas Inventories* (available at <http://www.ipc-nggip.iges.or.jp/public/gl/invs1.htm>). The figures provided here are based on the reference approach, which calculates emissions from the carbon content of fuels supplied to a country's economy.

The reference approach captures refining, flaring, and other "fugitive emissions" that do not result directly from end-use fossil fuel combustion. Apparent consumption of fuel is calculated as production minus exports plus imports. Net stock changes are either added or subtracted. International marine and aviation bunkers (fuel used for international transport) are subtracted from national totals as well, as these figures are accounted for separately. The production of secondary fuels is not accounted for because the carbon contained in those fuels is already included in the primary fuel. However, imports and exports of secondary fuels are included in calculations. Stored carbon from fuels used for non-energy purposes is subtracted from the total carbon emissions. Emissions from biomass fuels are not included in these because the IPCC assumes that such emissions are equal sequestration during regrowth.

The Carbon Dioxide Information Analysis Center (CDIAC) calculates emissions of CO<sub>2</sub> from the burning of fossil fuels and the manufacture of cement in most of the countries of the world. During cement manufacture, cement is calcined to produce calcium oxide. In the process, 0.498 metric tons of CO<sub>2</sub> are released for each metric ton of cement produced.

Combustion of different fossil fuels releases CO<sub>2</sub> at different rates for the same levels of energy production. Burning oil released 1.5 times the amount of CO<sub>2</sub> released from burning natural gas; burning coal released about twice as much CO<sub>2</sub> as from burning natural gas.

**Table 14-9. Globally threatened species: mammals, birds, and higher plants, 1992–2002.** The total number of known species may include introductions in some instances. Data on mammals exclude cetaceans (whales and porpoises), except where otherwise indicated. Threatened bird species are listed for countries included within their breeding or wintering ranges. Higher plants refer to numbers of native vascular plant species, as totals are of full species only, rather than of species and subspecies. The number of endemic species refers to those species known to be found only within the countries listed. Figures are not necessarily comparable among countries because taxonomic concepts and the extent of knowledge vary (for the latter reason, country totals of species and

endemics may be underestimates). In general, numbers of mammals and birds are fairly well known, while plants have not been as well inventoried.

The World Conservation Union classifies threatened and endangered species in six categories.

*Endangered.* “Taxa in danger of extinction and whose survival is unlikely if the causal factors continue operating.”

*Vulnerable.* “Taxa believed likely to move into the endangered category in the near future if the causal factors continue operating.”

*Rare.* “Taxa with world populations that are not at present endangered or vulnerable, but are at risk.”

*Indeterminate.* “Taxa known to be endangered, vulnerable, or rare but where there is not enough information to say which of the three categories is appropriate.”

*Out of danger.* “Taxa formerly included in one of the above categories, but which are now considered relatively secure because effective conservation measures have been taken or the previous threat to their survival has been removed.”

*Insufficiently known.* “Taxa that are suspected but not definitely known to belong to any of the above categories.”

The number of threatened species listed for all countries includes full species that are endangered, vulnerable, rare, indeterminate, and insufficiently known, but excludes introduced species or those known to be extinct.

Number of species per 10,000 square kilometers provides a relative estimate for comparing numbers of species among countries of differing size. Because the relationship between area and species number is nonlinear (that is, as the area sampled increases, the number of new species located decreases), a species-area curve has been used to standardize these species numbers.

**Table 14-10. Globally threatened species: reptiles, amphibians, and fish, late 1990s.** Threatened marine turtles and marine fish are excluded from country totals. Endangered fish species numbers do not include approximately 250 haplochromine and 2 tilapiine species of Lake Victoria cichlids, since the ranges of these species are undetermined.

The number of species per 10,000 square kilometers provides a relative estimate for comparing numbers of species among countries of differing size.

**Table 14-11. National protection of natural areas, 2003.** All protected areas combine natural areas in five World Conservation Union (formerly the International Union for Conservation of Nature and Natural Resources, [IUCN]), management categories (areas at least 1,000 hectares).

Totally protected areas are maintained in a natural state and are closed to extractive uses. They encompass the following three management categories: *category I*, scientific reserves and strict nature reserves; *category II*, national parks and provincial parks; and *category III*, natural monuments and natural landmarks.

Partially protected areas are areas that may be managed for specific uses, such as recreation or tourism, or areas that provide optimum conditions for certain species or communities of wildlife. Some extractive use within these areas is allowed. They encompass two management categories: *category IV*, managed nature reserves wildlife sanctuaries; and *category V*, protected landscapes and seascapes.

Protected areas between at least 100,000 hectares and 1 million hectares in size refer to all IUCN category I–V protected areas that fall within these two classifications.

IUCN has an additional management category, category VI, which includes areas “managed mainly for the sustainable use of natural ecosystems.” These areas contain predominantly unmodified natural systems, managed to ensure long-term protection and maintenance of biological diversity, while also providing a sustainable flow of natural products and services to meet community needs.

*Marine protected areas* include protected areas in any of the IUCN categories (I–VI) that are marine or have a marine component. IUCN defines a “marine protected area” as “any area of intertidal or subtidal terrain, together with its overlying water and associated flora and fauna, historical and cultural features, which has been reserved by law or other effective means to protect part or all of the enclosed environ-

ment.” Marine protected areas (MPAs) include areas that are fully marine as well as areas that have only a small area of intertidal land. Many of these MPAs have large terrestrial areas. The extent of the marine portion of most protected areas is rarely documented. The degree of protection varies from one country to another, and it may bear little relationship to the legal status of any site. The categories of *marine* and *littoral* are not exclusive. One protected area can be littoral and marine, therefore adding numbers under these two different categories may produce a higher number than the total for MPAs. Littoral is defined as any site that is known to incorporate at least some intertidal area. Such sites can also include marine and/or terrestrial elements. All sites with mangrove and saltmarsh communities are recorded as littoral. Marine is defined as any site that is known to incorporate at least some subtidal area permanently submerged under the ocean. Such sites can also include littoral and terrestrial elements. All sites with coral reefs and seagrasses are recorded as marine.

The values in this table do not include locally or provincially protected sites, or privately owned areas.

**Table 14-12. International protected areas, 2002.**

Internationally protected areas usually include sites that are listed under national protection systems.

Biosphere reserves are representative of terrestrial and coastal environments that have been internationally recognized under the Man and the Biosphere Programme of UNESCO.

World heritage sites represent areas of “outstanding universal value” for their natural features, their cultural value, or for both natural and cultural values. The table includes only natural and mixed natural and cultural sites.

Any party to the Convention on Wetlands of International Importance, especially as it pertains to waterfowl habitat, agrees to respect the site’s integrity and to establish wetland reserves can designate wetlands of international importance.

Marine and coastal protected areas refer to all protected areas greater than 1,000 hectares with littoral, coral, island, marine, or estuarine components. The area given is the whole protected area.

## The Heavily Indebted Poor Countries (HIPC) Initiative

The Heavily Indebted Poor Countries (HIPC) debt initiative was proposed by the World Bank and IMF, and agreed to by governments around the world in the fall of 1996. It was the first comprehensive approach to reduce the external debt of the world's poorest, most heavily indebted countries, and represented an important step forward in placing debt relief within an overall framework of poverty reduction. While the initiative yielded significant early progress, multilateral organizations, bilateral creditors, HIPC governments, and civil society have been engaged in an intensive dialogue about the strengths and weaknesses of the program. A major review in 1999 has resulted in a significant enhancement of the original framework, and has produced a HIPC Initiative which is "deeper, broader, and faster."

### Which countries qualify?

- The poorest countries, those that are only eligible for highly concessional assistance from the International Development Association (IDA)—the part of the World Bank that lends on highly concessional terms—and from the IMF's Poverty Reduction and Growth Facility (previously the Enhanced Structural Adjustment Facility).

- Those that also face an unsustainable debt situation even after the full application of traditional debt relief mechanisms (such as application of Naples terms under the Paris Club Agreement).

### How the HIPC Initiative works

Under the enhanced framework, countries for which existing mechanisms would not achieve debt sustainability at the decision point will now receive assistance under the HIPC Initiative starting at the decision point.

In contrast to the original framework, where debt reduction was calculated on projections of debt stock at the completion point, relief under the new framework will be committed based on actual data at the decision point. This modification not only adds greater certainty to the calculations, but will in most cases increase the amount of relief actually provided, since most countries will reduce their net present value (NPV) debt-to-export and debt-to-revenue ratios between the decision and completion points.

In short, under the enhanced framework, the benefits of export and central government revenue will accrue fully to the country, allowing for greater investment in poverty reduction strategies.

**Creditor participation**

All creditors participate in providing exceptional assistance beyond current mechanisms as required to reach debt sustainability. Creditors share the costs of HIPC assistance based on broad and equitable burden sharing, and provide relief that is proportional to their share of the debt after the full application of traditional forms of debt relief; these forms include Naples terms from Paris Club creditors, which provide a 67 percent NPV reduction on eligible debt.

**HIPC Eligible Countries (42 countries)****Africa** (34 countries)

Angola  
Benin  
Burkina Faso  
Burundi

**Middle East**

Yemen, Republic of

## 15-1. HIPC Initiative: flow chart

### *First Stage* *Eligibility Requirements*

- Paris Club provides flow rescheduling as per current Naples terms, i.e. rescheduling of debt service on eligible debt falling due during the three-year consolidation period (up to 67 percent reduction on eligible maturities on a net present value basis).
- Other bilateral and commercial creditors provide at least comparable treatment.
- Multilateral institutions continue to provide concessional financing in the framework of World Bank and IDMF-supported adjustment program.
- Country establishes three-year track record of good performance and develops together with civil society a Poverty Reduction Strategy Paper (PRSP); in early cases, an interim PRSP may be sufficient to reach the decision point.

### *Second Stage* *The Interim Period*

- Paris Club creditors provide interim relief (Cologne terms flows, i.e., 90% NPV of debt reduction on eligible debt) and other bilateral and commercial creditors provide at least comparable treatment.
- Some multilateral institutions, including World Bank and IMF, provide interim assistance (e.g., debt service reduction).
- Donors support interim assistance.
- Country establishes a second track record by implementing the Bank/IMF-supported programs, including the one-year implementation of a full PRSP (triggers). Length of this stage is determined by the speed by which country implements the triggers.
- Country also take steps to strengthen debt management.

### "Floating" Completion Point

- Timing of completion point is tied to the implementation of policies determined at the decision point.
- All creditors provide the assistance determined at the decision point; interim debt relief provided between decision and completion points counts toward this assistance. Assistance is provided without further policy conditionality.

## 15-2. Grouping of African HIPC countries: status as of July 2003

<b>African Heavily Indebted Poor Countries (32) <sup>1</sup></b>			
Benin	Congo, Rep. of *	Madagascar	Senegal

\* Status as of July 2003.

## Technical notes

### Tables

**Table 15.3 Debt service for individual African HIPCs that reached decision points, by country, 1998–2005**

1. Debt service due after the full use of traditional debt relief mechanism and assistance under the enhanced HIPC Initiative. For Mozambique, these figures are also after additional bilateral assistance beyond HIPC.

2. On fiscal year basis (i.e., 2000 column shows FY 1999/2000).

3. The debt service figures for 2000 largely reflect pre-HIPC relief debt service because these countries did not reach their decision point until late in 2000 or later. Thus, the full impact of relief did not take effect until 2001 and thereafter.

4. Debt service is higher than anticipated at the decision point due to higher new borrowing than previously projected.

5. Debt service is lower than anticipated at the decision point due to lower financing needs than previously projected.

6. The relief for Madagascar is indicative and subject to change. The Madagasy authorities and Paris Club creditors would have to revisit the outstanding bilateral debt numbers. Also, minor adjustments must be incorporated in the case of three multilateral creditors. Consequently, the IMF Board approved US\$790 million in HIPC relief with the understanding that Madagascar's exact level of HIPC assistance will be determined once such revisions are made.

7. Debt service figures differ from those in the decision point document because of exchange rate changes.

8. Debt service reflects some payments to commercial creditors and payments on moratorium interest not reflected in the completion point document.

Note: Debt service figures for 1998 and 1999 reflect debt relief already provided to Mozambique, and Uganda under the original framework.

The sources for this table are HIPC country documents and World Bank and IMF staff estimates.

**Table 15.5 Poverty-reducing expenditure for African HIPCs that reached decision points**

In 11 countries, poverty-reducing spending refers exclusively to public expenditure on health and education. In addition, poverty-reducing spending includes new programs to be financed partly with HIPC assistance in Benin, basic sanitary infrastructure in Bolivia, rural development and water supply in Burkina Faso, poverty-reducing affairs in Chad, poverty-related activities such as de-mining and rural development in Guinea-Bissau, funding for the Poverty-Reducing Impact Amelioration Program and Basic Needs Trust Fund in Guyana, Poverty-reducing safety net and rural development programs in Honduras, poverty reduction programs in Mauritania, other spending, including promotion of women in Senegal, water supply in both Tanzania and Uganda, and poverty-reducing safety nets, water and sanitation and disaster relief in Zambia.

1. The coverage of poverty-reducing expenditure varies across countries. If not indicated otherwise, poverty-reducing expenditure data refer to central government spending on health and education.

2. Data refer to central government spending on health care, primary education, promotion of women, "Solidarity" (employment program), social security, rural security, and other programs.

3. The figures for 2000 largely reflect social expenditure before HIPC relief, because these countries reached their decision points in late 2000 or in 2001. Thus, the full impact of HIPC relief for them will not be felt until 2001 and thereafter. Sierra Leone and the Democratic Republic of Congo reached their decision points in 2002 and 2003, respectively.

4. Data refer to domestically financed central government spending on health, education, rural development, infrastructure, and good governance.

5. Data refer to central government spending on health, education, and social protection.

6. Data refer to general government spending on education, health, and agriculture, and to poverty-related road spending.

7. Data refer to central government spending on education, health, and agriculture.

8. Data refer to central government expenditures on health and education. However, data may be incomplete because of missing data on donor support and internally generated funds.

9. Data refer to central government spending on justice, agriculture, fisheries and aquaculture, public works, urbanization, health and social affairs, primary education, and professional and technical education.

10. Previous estimates for Guinea-Bissau were based on budget data. Because of a very low execution rate those numbers tend to overstate the actual level of social spending and have been omitted here. The new estimate for 2002 is based on poverty-reducing expenditure outlays. These expenditures include outlays by the central government on education and health sectors.

11. Data refer to central government spending on health, education, and water.

12. Data refer to spending on education, health, social security and welfare services, and community and poverty-reducing development.

13. Data refer to central government spending on education and health, and funding for social safety nets.

14. Data refer to spending by central and local government on health, education, and poverty-reduction programs.

15. From 2000 onwards, data refer to general government spending on education, health, infrastructure, governance, agriculture, and macroeconomic management.

16. Data coverage has been revised to include only central government spending on health and education.

17. Data refer to recurrent priority expenditures by the central government, which include specified programs in the domains of internal affairs, agriculture, commerce, education, youth and sports, health, transport and communication, energy and water resources, gender, public service, lands and settlement, and support to local government.

18. From 2000 onwards, data refer to general government spending on health, education, social welfare, some economic services, and security-related spending.

19. Data refer to central government spending on education, health, water, agricultural research and extension, lands, roads, and judiciary.

20. Data refer to general government spending on education, health, Poverty Action Fund, and some donor-funded projects.

21. From 2001 onwards, the definition of poverty-reducing spending has been broadened to include housing, resettlement, and urban development; health; information services; employment and welfare; education and training; and general social expenditures.

*Sources:* HIPC country documents; and IMF staff estimates.

*Note:* The coverage of poverty-reducing expenditure varies across countries. All Poverty-Reducing data includes spending on health and education.

## Household Welfare

**W**hile macroeconomic data about many African countries are published often, more disaggregated data are not frequently reported in statistical abstracts such as the *African Development Indicators*. This chapter addresses that issue by presenting statistics on poverty and some of its correlates at a sub-national level. These statistics are based upon household surveys rather than ministry-level data. The presentation of indicators is linked to the Millennium Development Goals to help in understanding the statistics. The tables that follow contain data for fourteen countries of Sub-Saharan Africa: Burundi, Burkina Faso, Côte d'Ivoire, Cameroon, Ethiopia, The Gambia, Ghana, Kenya, Madagascar, Mozambique, Malawi, São Tomé and Príncipe, Uganda, and Zambia.

This chapter is similar to one published in the 2000 *Africa Development Indicators*, but the underlying set of definitions and variables has changed. In addition, the presentation of this new set of indicators has been organized along the Millennium Development Goals. The definitions used in this presentation (see below) reflect the work of an ongoing project in the Africa Region's Operational Quality and Knowledge Services Unit: the Standardized Files and Standardized Indicators. The project, which builds upon earlier work, takes national statistical agencies' raw data files, as stored in the Africa Household Survey Databank, and performs consistency checks prior to

harmonizing the data, using a common dictionary. This process may include the computation of expenditure aggregates when they are not available to the unit. For more information on this project, please see the technical notes at the end of the chapter.

The definitions presented herein may diverge from those used in other publications, whether by the World Bank or a country's national statistical organization. This means that certain statistics may differ from those previously published. An example of this is enrollment rates; if the country bases them upon one definition of the age at which children should attend primary school while this report uses another, it is unlikely that the two statistics will be identical. Neither statistic is wrong; they are just different metrics and cannot be necessarily compared.

### **Selected definitions**

National definitions of households are used, although most definitions do not differ markedly from those set forth by the United Nations. Additional information is available in the technical notes.

*Expenditure quintiles* are derived by ranking weighted sample individuals according to annual deflated per capita expenditure. When regional deflators are available, they are used, otherwise nominal expenditure is used. Individuals are used as the basis for estimating quintiles. Quintiles are constructed such

that the first quintile represents the poorest 20 percent of the population, the second quintile the next poorest 20 percent (less poor), and so on; the fifth quintile represents the richest 20 percent of the population. The definition of expenditure varies from survey to survey. Please consult the technical notes for each survey for more details. The following surveys' data are presented with deflated expenditure quintiles: Côte d'Ivoire, Cameroon, Ghana, Kenya, Madagascar, Mozambique, and Malawi.

### Demographic indicators

*Number of households in each quintile* varies because of differences in household size, although the total number of individuals in each quintile is the same.

*Total population* is a sampled population weighted by the cluster weights to give an estimate of the actual population size.

### Education and literacy indicators (drawn from UNESCO definitions)

*Net primary enrollment rate* is the total number of children of primary school age enrolled in primary school as a proportion of the total number of children of primary school age. The age range varies by country. Please consult the technical notes for details.

*Net secondary enrollment rate* is the total number of children of secondary school age enrolled in secondary school as a proportion of the total number of children of secondary school age. The age range varies by country. Please consult the technical notes for details.

*Literacy (adult)* means the percentage of people aged 15 and above who can read and write a short, simple statement on their everyday life. The survey may have tested individuals to verify this, or may have used other methods. Please consult the technical notes for details.

### Head of household indicators

*Polygamous male-headed* refers to male-headed household with more than one spouse. However, differences exist in the way in polygamous households are defined. Please consult the technical notes for details on each country's definition of a household.

*De facto female-headed* is defined as either (a) a household without a resident male head or where the husband is not present and the wife is the head by default and the main decision-maker in his absence; or (b) a household where the resident male head has lost most of his functions as the economic provider due to infirmity, inability to work, and so forth.

*De jure female-headed* refers to a single female-headed household where the household head has never been married, or is divorced or separated or widowed.

### Household expenditure indicators

These indicators provide information on per capita expenditure in local currency (including the value of own-produced food consumed in the household and the imputed rent of homeowners when possible) and the share of food in household expenditures. These are computed as weighted averages of each household's per-capita expenditure, or as weighted ratios in the case of the shares.

### Employment indicators

The *employment ratio* includes only persons who are employed and the unemployed aged 15–64 (inclusive), excluding the following categories: homemakers, retired, dependent, student, and other.

*Formal employment* is defined as wage employees in the government or formal private sector.

*Informal employment* is defined as those whose employment status is "informal" or "self-employed."

### Anthropometric indicators

All three indicators are calculated for children who are less than 60 months old. Z-scores two standard deviations below the mean of reference population indicate that a child is *stunted* (height-for-age), *wasted* (weight-for-height), or *underweight* (weight-for-age). The reference is defined jointly by the National Center for Health Statistics and the Centers for Disease Control (both United States).

Zambia Living Conditions Monitoring Survey II, 1998.

## Technical notes

### Burkina Faso

*Data source.* Burkina Faso's Institut National de la Statistique et de la Démographie carried out the "Enquête Prioritaire II sur les Conditions de Vie des Ménages au Burkina." Data were collected between May 1998 and August 1998. The project was funded by the Government of Burkina Faso, the World Bank, the African Development Bank (ADB), and the United Nations through the UNDP.

*Household* was defined as the basic socio-economic unit in which the different members—related or living in the same house or property—put together their resources and jointly meet their basic needs, including food, under the authority of one person who is recognized as the head.

*Literacy.* Household members aged five and up who could both read and write a simple sentence in any language were considered literate.

*The survey had no information on the following topics:* birth assistance and immunization.

### Burundi

*Data source.* The Institut de Statistiques et d'Études économiques of Burundi, in conjunction with the UNDP, carried out the "Enquête Prioritaire—Étude nationale sur les conditions de vie des populations."

*Household* was defined as those people who habitually live and eat their meals in the same compound. One member is recognized as the head.

*Literacy.* Household members aged five and up who could both read and write were considered literate.

*The survey had no information on the following topics:* birth assistance, health provider ownership, and immunizations.

### Cameroon

*Data source.* Cameroon's Bureau Central des Recensements et des Enquêtes of the Direction de la Statistique et de la Comptabilité carried out the "Enquête Camerounaise auprès des Ménages."

*Household.* Defined by the survey to be those people who live under the same roof, take their meals together or in little groups, put some or all of their incomes together for the group's spending purposes, at the head of household's discretion.

*Literacy.* Household members aged five and up who could both read and write were considered literate.

*The survey had no information on the following topics:* access to primary services.

### Côte d'Ivoire

*Data source.* The Institut National de la Statistique carried out the "Enquête Niveau de Vie," a priority survey, in 1998.

*Household.* This was defined as a person or a group of people who live under the same roof, share the same meals, and recognize one person as the head.

*Literacy.* Household members aged five and up who could both read and write a simple sentence in any language were considered literate.

*The survey had no information on the following topics:* access to primary services, child survival and malnutrition, employment categories and job types, and health provider ownership.

### Ethiopia

*Data source.* "The 1999/2000 Household Income, Consumption, and Expenditure Survey (HICES)" was

carried out by the Central Statistical Office. The data collection process was carried out between June 1999 to February 2000.

*Household.* This was defined as a person or a group of people who live under the same roof, share the same meals, and recognize one person as the head.

*Literacy.* Persons were considered as literate if they could read and write a sentence in the national language.

*The survey had no information on the following topics:* access to primary school, and birth assisted by trained staff.

### **The Gambia**

*Data source.* The Central Department of Statistics of the Ministry of Economic Planning and Industrial Development of Ghana carried out the "1998 National Household Poverty Survey," an integrated survey. Data was collected between April 1998 and May 1998.

*Household.* This was defined as the set of people who normally ate and lived together for six out of the twelve months prior to the survey.

*Literacy.* Such information is not reliably available for this survey; less than one in 1,100 who could have answered this question did so.

*The survey had no information on the following topics:* access to primary services, birth assisted by trained staff, cooking fuel, and immunization.

### **Ghana**

*Data source.* The Ghana Statistical Service carried out the "Ghana Living Standards Survey IV," an integrated survey. Data collection was done between April 1988 and March 1989.

*Household.* In this survey, a household was defined as a group of people who have usually slept in the same dwelling and have taken their meals together for at least nine of the twelve months preceding the interview.

*Literacy.* Household members aged five and up who could both read and write a simple sentence in English or any local language were considered literate.

*The survey had no information on the following topics:* access to health center and primary school, and child survival and malnutrition.

### **Kenya**

*Data source.* The Kenya Central Bureau of Statistics carried out data collection for the 1997 Welfare Monitoring Survey III, a priority survey, in March and April 1997.

*Sample.* Due to logistical and financial constraints, the survey did not adequately cover the North Eastern and parts of the Eastern provinces.

*Household.* This was defined as the set of people who normally ate and lived together for six out of the twelve months prior to the survey.

*Literacy.* Literacy was defined as the ability to read and write.

### **Madagascar**

*Data source.* The Institut National de la Statistiques carried out the "Enquête Prioritaire auprès des ménages" in 1999. The project was funded by the government of Madagascar and the World Bank (IDA).

*Household.* This was defined as the set of people who have or do not have family links between them, who live and sleep in the same housing, and take their meals together regularly. The housing may be an individual house, an apartment, or one or more rooms in a larger building. The household is headed by one individual whose authority is recognized by all in the household.

*Literacy.* Household members aged five and up who had completed at least four years of primary school or could read and write were considered to be literate.

*The survey had no information on the following topics:* access to primary services, birth assisted by trained staff, immunization against measles, and owner occupancy rates.

### **Malawi**

*Data source.* The Malawi National Statistics Office carried out the Integrated Household Survey from November 1997 to October 1998.

*Household.* This survey defined household as either a person living alone or a group of people, either related or unrelated, who lived together as a single unit in the sense that they have common housekeeping arrangements (that is, shared or were supported by a common budget). Someone who did not live with the household during the survey period was not counted as a current member of the household.

*Literacy* was defined as the ability to read and write a simple sentence for those who had not attended school in the past two months, and defined based upon educational attainment for those who had attended school in the past two months.

*The survey had no information on the following topics:* access to primary school, access to a water source, access to sanitation facilities, birth assisted by trained staff, and health provider ownership.

### **Mozambique**

*Data source.* The Instituto Nacional de Estatística carried out the Inquérito Nacional aos Agregados Familiares sobre as Condições de Vida, an integrated survey.

*Household* was defined as the set of people who partly or totally shared their expenditures, had not been absent for more than six months out of the previous year, and were not domestic help. In the case of polygamous households, each wife and her children were considered to be a separate household.

*Literacy.* Literacy was defined as their ability to read and write in Portuguese.

*The survey had no information on the following topics:* access to a health center, access to market, access to primary school, birth assisted by trained staff, immunization coverage, and expenditure on health or education.

### **São Tomé and Príncipe**

*Data source.* The Instituto Nacional de Estatística of the Ministério de Planamento, Finanças e Cooperação carried out the Enquête sur les Conditions de Vie des Ménages in 2000. The project was financed by the Government of São Tomé and Príncipe with assistance from the African Development Bank and the United Nations Development Program. Technical assistance was provided by the International Labor Organization.

*Household.* Defined by the survey as the set of people, related or not, who live together under the same roof, put their resources together, and address as a unit their primary needs, under the authority of one person whom they recognize as the head of the household.

*Literacy.* Defined as the ability to read and write a simple sentence.

*The survey had no information on the following topics:* child survival and malnutrition, and self-employment.

### **Uganda**

*Data source.* The Uganda Bureau of Statistics carried out the National Household Survey. Data collection occurred between August 1999 and July 2000. The project was funded by the Government of Uganda and the World Bank. Statistics Denmark and the World Bank provided consultants for technical support.

*Sample.* The survey did not collect data in the Kitgum, Gulu, Kasese, and Bundibugio districts.

*Household.* Defined by the survey as those individuals who normally eat and live together.

*Literacy.* If individuals had answered questions about the ability to read and write, they were considered to be literate if they could do both. Otherwise, the level of education was used to make this determination.

*The survey had no information on the following topics:* access to primary school, access to a health center, access to market, and birth assisted by trained staff.

### **Zambia**

*Data source.* The Zambian Central Statistical Office carried out the "Living Conditions Monitoring Survey II." Data collection was done between November 1998 and December 1998.

*Household.* A household was defined as a group of persons who normally cooked, ate, and lived together.

These people may or may not be related by blood, but make common provision for food or other essentials for living, and they have one person whom they all regarded as the head of the household.

*Literacy.* No information on literacy is available in the survey.

*The survey had no information on the following topics:* access to primary school, health provider ownership, and birth assisted by trained staff.

## Notes:

(\*) These are the sample sizes for the Standardized Files; the original sample size may be different.

(\*\*) The abbreviation "WB" means that the data were aggregated at the World Bank; the abbreviation "NSO" means that the aggregation was done by the country's national statistical office. Rent was imputed for Kenya and São Tomé and Príncipe.

# African Development Indicators 2004

*African Development Indicators 2004* offers the most detailed collection of data on Africa available in one volume. It contains more than 500 macroeconomic, sectoral, social, and environmental indicators, covering 53 African countries. The companion CD-ROM, *World Bank Africa Database 2004*, provides additional data on about 1,200 indicators from 1965 to 2002, Country At-A-Glance tables, and Executive Summary Briefings.
